Part two of two-quarter project course jointly offered by School of Engineering and Graduate School of Business. Second quarter emphasizes prototyping and implementation of specific projects identified in first quarter. Students work in cross-disciplinary project teams. Industry and adviser interaction, weekly design reviews; final course presentation. Prerequisite: 206A. (Jointly offered as GSB OIT333B) Design Institute class; see <http://dschool.stanford.edu>.

**ME 207. Movie Design. 2 Units.**

Learn the ins and outs of high-speed filmmaking in the digital age; writing, directing, shooting, and editing. We'll do it through a rapid prototyping approach to filmmaking. Whether you have tons of experience or none, you'll leave with new tactics that will up your storytelling, filmmaking, and design chops simultaneously. These techniques are useful whether you plan to move to Hollywood or create a video for the web. Project-based: students will design, write, shoot, edit, and screen a short film in the span of one week. It's going to be quick but intense, kind of like cross-fit for your storytelling and video creating muscles. You'll sweat a bit, but you'll feel confident afterwards. Students should be prepared to spend significant amount of out of class work-time creating movies: for one week + one weekend, see "Notes" for specific dates. Admission by application. See [dschool.stanford.edu](http://dschool.stanford.edu)/classes for more information.

**ME 208. Patent Law and Strategy for Innovators and Entrepreneurs. 2-3 Units.**

Inventors and entrepreneurs have four concerns related to patent law: protecting their inventions in the very early stages of product development, determining the patentability of their invention, avoiding infringement of a competitor's patent, and leveraging their patent as a business asset. This course will address each of these concerns through the application of law cases and business cases to an invention of the Student's choice. Although listed as a ME/MSE course, the course is not specific to any discipline or technology. Same as: MS&E 278

**ME 209. Imperfections in Crystalline Solids. 3 Units.**

To develop a basic quantitative understanding of the behavior of point, line and planar defects in crystalline solids. Particular attention is focused on those defects that control the thermodynamic, structural and mechanical properties of crystalline materials.

**ME 210. Introduction to Mechatronics. 4 Units.**

Technologies involved in mechatronics (intelligent electro-mechanical systems), and techniques to apply this technology to mecatronic system design. Topics include: electronics (A/D, D/A converters, op-amps, filters, power devices); software program design, event-driven programming; hardware and DC stepper motors, solenoids, and robust sensing. Large, open-ended team project. Prerequisites: ENGR 40, CS 106, or equivalents. Same as: EE 118

**ME 211. ReMake: Design Lessons from Restoration. 1 Unit.**

Focus is on the restoration of the 1962 Cadillac DeVille project car as a design investigation. Topics include: What makes a car a classic? How does this car express luxury, and how is that different from contemporary luxury products? What does the car say about the American identity, and how has that changed over the past half-century? Every student can expect to get their hands dirty; prior automotive experience is not required. Goal is to have the car operational again by the end of Autumn Quarter. Preference to early graduate and advanced undergraduate students. Enrollment limited to 15.

**ME 212. Calibrating the Instrument. 1 Unit.**

For first-year graduate students in the Joint Program in Design. Means for calibrating the designer's mind/body instrument through tools including improvisation, brainstorming, creative imaging, educational kinesiology, and Brain Gym. Current design issues; guest speakers; shared stories; and goal setting.

**ME 214. Good Products, Bad Products. 3-4 Units.**

The characteristics of industrial products that cause them to be successes or failures: the straightforward (performance, economy, reliability), the complicated (human and cultural fit, compatibility with the environment, craftsmanship, positive emotional response of the user), the esoteric (elegance, sophistication, symbolism). Engineers and business people must better understand these factors to produce more successful products. Projects, papers, guest speakers, field trips. Same as: ME 314

**ME 215. From Maps to Meaning. 3 Units.**

One of the oldest visual tools created by humans to make sense of the complexities of our world, maps are unique in their ability to synthesize data, convey meaning through spatial logic, and deliver information at high resolution. They are also incredible tools for communication, data sorting and insight finding. This is an intensive, hands-on course that uses mapping techniques to navigate the intersection of data and design. Students will tackle three main projects and several shorter assignments over 10 weeks. Perfect attendance and completion of projects is absolutely mandatory. You will: collect, sort and organize quantitative and qualitative data - create maps to synthesize complex information - use mapping as a tool to work on design problems - explore biases in map-making - create design interventions based on data and maps. While no specific prior experience is necessary, this class is for you if you are comfortable with the ambiguity of learning new skills on and off the computer, if you geek out about design and data, and if you are not intimidated by the idea of creating analog and digital maps. Admission by application. See [dschool.stanford.edu/classes](https://dschool.stanford.edu/classes) for more information.

**ME 216A. Advanced Product Design: Needfinding. 3-4 Units.**

Human needs that lead to the conceptualization of future products, environments, systems, and services. Field work in public and private settings; appraisal of personal values; readings on social ethnographic issues; and needfinding for a corporate client. Emphasis is on developing the flexible thinking skills that enable the designer to navigate the future. Prerequisites for undergraduates: ME115A, ME115B and ME203, or consent of the instructor.

**ME 216B. Advanced Product Design: Implementation 1. 4 Units.**

Summary project using knowledge, methodology, and skills obtained in Product Design major. Students implement an original design concept and present it to a professional jury. Prerequisite: 216A.

**ME 216C. Advanced Product Design: Implementation 2. 4 Units.**

ME216C: Implementation II is a continuation of ME216B. Students would develop project from ME216B to a further state of completion. Design will be completed, details about manufacturing, cost and production will be developed. Students will validate their projects by making them real in the world. Prerequisites for class are ME216A and ME216B. Prerequisite: 216A and 216B.

**ME 217. Design & Construction in Wood. 3 Units.**

Exploration of the design and construction of objects using wood including the rich history and current trends for furniture. Taught in the Product Realization Lab. Limited enrollment via application; see [stanford.edu/class/me217](https://stanford.edu/class/me217).

**ME 218A. Smart Product Design Fundamentals. 4-5 Units.**

Lecture/Lab. Team design project series on programmable electromechanical systems design. Topics: transistors as switches, basic digital and analog circuits, operational amplifiers, comparators, software design, state machines, programming in C. Lab fee. Limited enrollment.

**ME 218B. Smart Product Design Applications. 4-5 Units.**

Lecture/lab. Second in team design project series on programmable electromechanical systems design. Topics: user I/O, timer systems, interrupts, signal conditioning, software design for embedded systems, statecharts, sensors, actuators, noise, and power supplies. Lab fee. Limited enrollment. Prerequisite: 218A or passing the smart product design fundamentals proficiency examination.

**ME 218C. Smart Product Design Practice. 4-5 Units.**

Lecture/lab. Advanced level in series on programmable electromechanical systems design. Topics: inter-processor communication, system design with multiple microprocessors, architecture and assembly language programming for the PIC microcontroller, controlling the embedded software tool chain, A/D and D/A techniques, electronic manufacturing technology. Team project. Lab fee. Limited enrollment. Prerequisite: 218B.

**ME 218D. Smart Product Design: Projects. 3-4 Units.**

Lecture/lab. Industrially sponsored project is the culmination of the Smart Product Design sequence. Student teams take on an industrial project requiring application and extension of knowledge gained in the prior three quarters, including prototyping of a final solution with hardware, software, and professional documentation and presentation. Lectures extend the students' knowledge of electronic and software design, and electronic manufacturing techniques. Topics: chip level design of microprocessor systems, real time operating systems, alternate microprocessor architectures, and PCB layout and fabrication. Prerequisite: 218C.

**ME 219. The Magic of Materials and Manufacturing. 3 Units.**

Intended for design-oriented students who anticipate imagining and then creating new products with a focus on materiality and brand or design and business. Assumes basic knowledge of materials and manufacturing processes which results from taking ENGR 50, ME 203, or equivalent course/life experience. Goal is to acquire professional foundation information about materials and materiality from a product design point-of-view, manufacturing processes and business systems inside a factory, and story-telling by book authorship, essay writing, and multimedia presentation. Goal is for students to exhibit a deep and life-long love of materials and manufacturing in order to make great products and tell a good story about each one.

**ME 220. Introduction to Sensors. 3-4 Units.**

Sensors are widely used in scientific research and as an integral part of commercial products and automated systems. The basic principles for sensing displacement, force, pressure, acceleration, temperature, optical radiation, nuclear radiation, and other physical parameters. Performance, cost, and operating requirements of available sensors. Elementary electronic circuits which are typically used with sensors. Lecture demonstration of a representative sensor from each category elucidates operating principles and typical performance. Lab experiments with off-the-shelf devices.

**ME 221. Green Design Strategies and Metrics. 2 Units.**

Foundation in sustainable product design principles, reinforced by conceptual design projects. Discuss what aspects of sustainability matter most for different products. Application of dozens of strategies to improve product sustainability. Frameworks, measurements, and decision-making tools to navigate the complexities of designing greener products. Life-cycle analysis, materials, energy use, biomimicry, product-service systems, persuasive design, design for end-of-life, and systems thinking.

**ME 222. Design for Sustainability. 2-3 Units.**

Lecture/lab. Role of design in building a sustainable world. How to include sustainability in the design process considering environmental, cultural, and social impacts. Focus is on a proactive design approach, and the tools and techniques needed to translate theory into artifact.

**ME 224. The Consumer Mind and Behavior Design. 3 Units.**

This course will introduce new theories and research concerning neuroscience and behavioral psychology to examine models for designing user habits. Students will learn how to use the latest behavior change methodologies from industry-leading experts to design or re-design a customer experience. Course topics will be taught in the context of design thinking: empathize-define-ideate-prototype-test. Students will leave the class having prototyped, tested, and improved a user behavior.

**ME 225. Mystery of Manufacturing. 3 Units.**

Mystery of Manufacturing is intended for design- and engineering-oriented students who anticipate or have an interest in launching products. Where the cousin of this class, ME219, is an overview of fabrication and factory systems, this course will look at manufacturing systems more holistically: what does it take to get a product from your idea into peoples' hands? We'll look at factors that drive location, distribution, and supply chain decisions, and we'll look closely at the inner workings of factories. This course assumes basic knowledge of materials and manufacturing processes resulting from ENGR 50, ME 203, ME 219 or equivalent course/life experience. The goal is to acquire a professional foundation in factory manufacturing systems and the business of manufacturing through story-telling, essay writing, and multimedia presentation. We hope students will exhibit a deep and life-long love of the complexity and flexibility of manufacturing systems in order to launch great products into the world.

**ME 226. Designing Sustainable Behavior. 1 Unit.**

How do you design a product so people will use it in the most sustainable way? Through practical design exercises you experience how selected design tools can help you affect the behavior of your target group. The course consists of an 8-hour workshop on Saturday April 6th in Studio2 at the d.school, followed by a group project finishing April 24th. Students may request to only audit the workshop by emailing [jdaae@stanford.edu](mailto:jdaae@stanford.edu). The course builds upon and contributes to an ongoing research project. Prerequisite: training in product design.

**ME 227. Vehicle Dynamics and Control. 3 Units.**

The application of dynamics, kinematics, and control theory to the analysis and design of ground vehicle behavior. Simplified models of ride, handling, and braking, their role in developing intuition, and limitations in engineering design. Suspension design fundamentals. Performance and safety enhancement through automatic control systems. In-car laboratory assignments for model validation and kinesthetic understanding of dynamics. Limited enrollment. Prerequisites: ENGR 105, consent of instructor.

**ME 228. The Future of Mechanical Engineering. 1 Unit.**

This seminar series provides an overview of current research in mechanical engineering and of its interface with other engineering and non-engineering disciplines. The seminar is targeted at senior mechanical engineering undergraduates and mechanical engineering graduate students. Presenters will be selected external speakers who feature exciting, cutting-edge applications of mechanical engineering.

**ME 229. Design Evangelism. 1-2 Unit.**

Students work with Ambidextrous staff and magazine professionals to edit and produce Ambidextrous, Stanford University's Journal of Design. Topics include design processes and innovation, storytelling, writing and editing for an audience, magazine production and project leadership. Hands-on projects, in-class exercises, and guest lectures.

**ME 231. Educating Young STEM Thinkers. 3-5 Units.**

The course introduces students to the design thinking process, the national conversations about the future of STEM careers, and opportunities to work with middle school students and K-12 teachers in STEM-based after-school activities and intercession camps. The course is both theory and practice focused. The purpose is twofold; to provide reflection and mentoring opportunities for students to learn about pathways to STEM careers and to introduce mentoring opportunities with young STEM thinkers.

Same as: EDUC 139, EDUC 239, ME 139

**ME 234. Introduction to Neuromechanics. 3 Units.**

Understanding the role of mechanics in brain development, physiology, and pathology. Mechanics of brain cells: neurons, mechanobiology, mechanotransduction. Mechanics of brain tissue: experimental testing, constitutive modeling, computational modeling. Mechanics of brain development: gyrification, cortical folding, axon elongation, lissencephaly, polymicrogyria. Mechanics of traumatic brain injury: high impact loading, neural injury. Mechanics of brain tumors, brain cancer, tumor growth, altered cytoskeletal mechanics. Mechanics of neurological disorders: autism, dementia, schizophrenia. Mechanics of brain surgery.

**ME 235. Understanding Superfans and their Heroes. 2-3 Units.**

Harness the power of the hero coefficient through a radical team-based, hands-on, multidisciplinary class. Students will learn and utilize the principles of Empathy-Define-Ideate-Prototype-Test components of the d.thinking process. Why do superfans love their heroes? You'll get to prototype and explore how superfans connect with their heroes, understanding this connective tissue works will give your own ideas a boost. We'll be studying heroes the likes of Dale Earnhardt, Michael Jordan and Stephen Colbert. Expect to leave this class ready to spread the word about heroes and superfans and make everyone at your company or on your team feel like one. You will hear from special guests and take a field trip to a racetrack. Sponsored by the Revs Program. Limited enrollment. FAQ and apply here: <http://revs.stanford.edu/course/693>.

**ME 236. Tales to Design Cars By. 1-3 Unit.**

Students learn to tell personal narratives and make connections between popular and historic media using the automobile. Explores the meaning and impact of personal and preserved car histories. Storytelling techniques serve to make sense of car experiences; replay memories; examine engagement; understand user interviews. This course celebrates car fascination, and leads the student through finding and telling a car story through the REVS photographic archives, ethnographic research, interviews, and diverse individual and collaborative narrative methods-verbal, non-verbal, and film. Methods draw from socio-cognitive psychology, design thinking, and fine art and are applied to car storytelling. Course culminates in a final story presentation and showcase. Restricted to co-term and graduate students. Class Size limited to 18.

**ME 237. 3D Printing for Non-Technical Innovators. 1-3 Unit.**

3D Printing is a method of creation that requires only some basic computer skills and a few rules of thumb. This class will allow students to discover for themselves the potential and limitations of 3D Printing through a build intensive design project. This course is an excellent option for anyone who ever wanted to prototype an invention, create a work of art, customize a product or just make something cool – and yet lacked the skills or a fully equipped workshop. Students may enroll for 1 unit to attend the lectures or 3 units for the complete project course. No prior technical knowledge needed. Note: Course material is targeted toward non-ME Design and non-PD majors. An application is required for the 3-unit course option. Please complete the online application by Friday, March 25th. The application is available on the course website: [web.stanford.edu/class/me137](http://web.stanford.edu/class/me137). Same as: ME 137

**ME 238. Patent Prosecution. 2 Units.**

The course follows the patent application process through the important stages: inventor interviews, patentability analysis, drafting claims, drafting a specification, filing a patent application, and responding to an office action. The subject matter and practical instruction relevant to each stage are addressed in the context of current rules and case law. The course includes four written assignments: an invention capture, a claim set, a full patent application, and an Office Action response. Prerequisites: Law 326 (IP:Patents), Law 409 (Intro IP), ME 208, or MS&E 278.

**ME 239. Mechanics of the Cell. 3 Units.**

Understanding cells as the fundamental building blocks of life. Cell biomechanics: understanding how cell biology and biochemistry influence the mechanical properties of the cell. Cell mechanobiology: understanding how the mechanical environment, load, pressure, stress or strain can influence the cell's shape and integrity, and eventually its biology and biochemistry. Characterizing, modeling, and simulating cell behavior: energy and entropy of biopolymers and biomembranes. Characterizing mechanotransduction.

**ME 240. Introduction to Nanotechnology. 3 Units.**

Nanotechnology as multidisciplinary with contributions from physical sciences, engineering, and industry. Current topics in nanotechnology research; developments in nanomaterials, mechanics, electronics, and sensors; and applications. Nanoscale materials building blocks, fabrication and assembly processes, characterization and properties, and novel system architectures. Implications for future development.

**ME 242B. Mechanical Vibrations. 3 Units.**

For M.S.-level graduate students. Covers the vibrations of discrete systems and continuous structures. Introduction to the computational dynamics of linear engineering systems. Review of analytical dynamics of discrete systems; undamped and damped vibrations of N-degree-of-freedom systems; continuous systems; approximation of continuous systems by displacement methods; solution methods for the Eigenvalue problem; direct time-integration methods. Prerequisites: AA 242A or equivalent (recommended but not required); basic knowledge of linear algebra and ODEs; no prior knowledge of structural dynamics is assumed.

Same as: AA 242B

**ME 243. Designing Emotion-Reactive Car Interfaces. 1-3 Unit.**

How to design in car interfaces that take into account the emotional state of the driver in the moment of driving? Participants will be prototyping and testing interfaces for an industry partner. The challenge is to take real time responsive data to infer the emotional state of a driver and to lever these to improve the driving experience. We will cover topics on design methodology, psychology of emotions, and human machine interaction to reflect and work on the emotionally charged car experience of today to imagine the car of tomorrow. Class meetings will include: prototyping, discussions and presentations. Participants will have access to tools, prototyping materials, and a car. Students from all ENG majors but also beyond are encouraged to join. Bring your drivers license, if you have one.

**ME 244. Mechanotransduction in Cells and Tissues. 3 Units.**

Mechanical cues play a critical role in development, normal functioning of cells and tissues, and various diseases. This course will cover what is known about cellular mechanotransduction, or the processes by which living cells sense and respond to physical cues such as physiological forces or mechanical properties of the tissue microenvironment. Experimental techniques and current areas of active investigation will be highlighted.

Same as: BIOE 283, BIOPHYS 244

**ME 250. Internal Combustion Engines. 1-5 Unit.**

Internal combustion engines including conventional and turbocharged spark ignition, and diesel engines. Lectures: basic engine cycles, engine components, methods of analysis of engine performance, pollutant emissions, and methods of engine testing. Lab involves hands-on experience with engines and test hardware. Limited enrollment. Prerequisites: 140.

**ME 257. Turbine and Internal Combustion Engines. 3 Units.**

Principles of design analysis for aircraft gas turbines and automotive piston engines. Analysis for aircraft engines performed for Airbus A380 type aircraft. Design parameters determined considering aircraft aerodynamics, gas turbine thermodynamics, compressible flow physics, and material limitations. Additional topics include characteristics of main engine components, off-design analysis, and component matching. Performance of automotive piston engines including novel engine concepts in terms of engine thermodynamics, intake and exhaust flows, and in-cylinder flow.

Same as: ME 357

**ME 260. Fuel Cell Science and Technology. 3 Units.**

Emphasis on proton exchange membrane (PEM) and solid oxide fuel cells (SOFC), and principles of electrochemical energy conversion. Topics in materials science, thermodynamics, and fluid mechanics. Prerequisites: MATH 43, PHYSICS 55, and ENGR 30 or ME 140, or equivalents.

**ME 261. Dynamic Systems, Vibrations and Control. 3-4 Units.**

(Graduate students only enroll in 261.) Modeling, analysis, and measurement of mechanical and electromechanical systems. Numerical and closed form solutions of ordinary differential equations governing the behavior of single and multiple degree of freedom systems. Stability, resonance, amplification and attenuation, and control system design. Demonstrations and laboratory experiments. Prerequisite: Calculus (differentiation and integration), ordinary differential equations (e.g., CME 102 or MATH53), basic linear algebra (determinants and solving linear equations), and familiarity with basic dynamics ( $F=m*a$ ) and electronics ( $v=i*R$ ). ME undergraduates must enroll for 4 units with lab. All others should enroll for 3 units without lab.

Same as: ME 161

**ME 262. Physics of Wind Energy. 3 Units.**

An introduction to the analysis and modeling of wind energy resources and their extraction. Topics include the physical origins of atmospheric winds; vertical profiles of wind speed and turbulence over land and sea; the wind energy spectrum and its modification by natural topography and built environments; theoretical limits on wind energy extraction by wind turbines and wind farms; modeling of wind turbine aerodynamics and wind farm performance. Final project will focus on development of a new wind energy technology concept. Prerequisites: CEE 262A or ME 351A. Same as: CEE 261

**ME 263. The Chair. 4 Units.**

Students design and fabricate a highly refined chair. The process is informed and supported by historical reference, anthropometrics, form studies, user testing, material investigations, and workshops in wood steam-bending, plywood forming, metal tube bending, TIG & MIG welding, upholstery & sewing. Pre-req: ME 203 Design and Manufacturing. May be repeat for credit.

**ME 264. d.science: Design for Science. 3-4 Units.**

Where does design fit into scientific research? In this class, we will design for how data are collected, how data are communicated, and how to apply scientific insights to community-based projects. This year's projects are inspired by the Citizen Science movement and The Year of the Bay. We will use human-centered design methods to understand the needs of bay area citizens through hands-on data collection, public data exploration and collaboration with local industry, government and research partners. With guest lectures from the design and science community, research mentors, and skills workshops, you will develop an actionable understanding of the challenges of collecting good data, the complexities of creating engaging stories with quantitative data, and the challenges of balancing insights from both human-centered design research and scientific research. One of the three class projects will involve visualizing and mapping big data. No prior programming or statistics experience required. Enrollment limited to 24. This course is open to graduate students from all schools and departments. Apply the first day of class.

**ME 265. Technology Licencing and Commercialization. 3 Units.**

How to profit from technology; processes and strategies to commercialize functional or artistic inventions and creations (not limited to mechanical engineering). Business and legal aspects of determining what can be owned and licensed, how to determine commercial value, and what agreements are necessary. Contract and intellectual property law; focus is on provisions of license agreements and their negotiation.

**ME 266. Introduction to Physiology and Biomechanics of Hearing. 3 Units.**

Hearing is fundamental to our ability to communicate, yet in the US alone over 30 million people suffer some form of hearing impairment. As engineers and scientists, it is important for us to understand the underlying principles of the auditory system if we are to devise better ways of helping those with hearing loss. The goal of this course is to introduce undergraduate and graduate students to the anatomy, physiology, and biomechanics of hearing. Principles from acoustics, mechanics, and hydrodynamics will be used to build a foundational understanding of one of the most complex, interdisciplinary, and fascinating areas of biology. Topics include the evolution of hearing, computational modeling approaches, fluid-structure interactions, ion-channel transduction, psychoacoustics, diagnostic tools, and micrometer to millimeter scale imaging methods. We will also study current technologies for mitigating hearing loss via passive and active prostheses, as well as future regenerative therapies.

Same as: BIOE 287, ME 166

**ME 271. Aerial Robot Design. 3 Units.**

An introduction to the aerodynamic design of rotor-based drones, for students with a background in robotics, aerospace, or fluids. Focus is on rotor-based drones operating at low Reynolds numbers, but material is applicable to drones, aviation and wind energy in general. Topics include: airfoil simulation, fundamentals of rotor aerodynamics, blade element analysis, rotor simulation and performance (e.g. mission duration, distance, maneuverability, and reliability). Midterm is the design of an airfoil for a drone, final is the aerodynamic design of a rotor for a drone; these projects will be peer-reviewed by students in the class. Prereqs: background in fluid mechanics or aerodynamics; fluency with MATLAB. Recommended: take ME202 or AA241X before or after ME271, for practical applications in drone prototyping and control theory.

**ME 277. Graduate Design Research Techniques. 3-4 Units.**

Students from different backgrounds work on real-world design challenges. The Design Thinking process with emphasis on: ethnographic techniques, need finding, framing and concept generation. The Design Thinking process as a lens to explore ways to better understand people and their culture. Cultural differences as a source of design inspiration, with the understanding that design itself is a culturally embedded practice.

**ME 280. Skeletal Development and Evolution. 3 Units.**

The mechanobiology of skeletal growth, adaptation, regeneration, and aging is considered from developmental and evolutionary perspectives. Emphasis is on the interactions between mechanical and chemical factors in the regulation of connective tissue biology. Prerequisites: BIO 42, and ME 80 or BIOE 42.

Same as: BIOE 280

**ME 281. Biomechanics of Movement. 3 Units.**

Experimental techniques to study human and animal movement including motion capture systems, EMG, force plates, medical imaging, and animation. The mechanical properties of muscle and tendon, and quantitative analysis of musculoskeletal geometry. Projects and demonstrations emphasize applications of mechanics in sports, orthopedics, and rehabilitation.

Same as: BIOE 281

**ME 283. Tissue Mechanics and Mechanobiology. 3 Units.**

Introduction to the application of mechanical engineering analysis to understand human physiology and disease. Topics include basics of musculoskeletal force analysis, cell mechanics, blood flow, and mechanical behaviors of tissues. Undergraduates should have taken ME 70 and ME 80 or equivalents.

**ME 284B. Cardiovascular Bioengineering. 3 Units.**

Continuation of ME/BIOE 284A. Integrative cardiovascular physiology, blood fluid mechanics, and transport in the microcirculation. Sensing, feedback, and control of the circulation. Overview of congenital and adult cardiovascular disease, diagnostic methods, and treatment strategies. Engineering principles to evaluate the performance of cardiovascular devices and the efficacy of treatment strategies.

Same as: BIOE 284B

**ME 287. Mechanics of Biological Tissues. 4 Units.**

Introduction to the mechanical behaviors of biological tissues in health and disease. Overview of experimental approaches to evaluating tissue properties and mathematical constitutive models. Elastic behaviors of hard tissues, nonlinear elastic and viscoelastic models for soft tissues.

**ME 288. ReDesigning Theater: Live & Digital Performance. 3 Units.**

This quarter's version of ReDesigning Theater looks at Live and Digital Performance. We will examine the use of digital technology in collaboration with live performance. Students will learn and employ the design thinking process as well as improv and theatrical techniques. We aim to create user-centric, interactive experiences where technology enables the audience to become part of and/or influence the outcome of the story or its presentation. Student projects will begin with the concepts enabled by personal technology such as smart phones and expand to animation, video projection, and other media. Students will work in small groups to investigate and experiment with formats that blur the lines between live and digital, performer and audience, and physical and virtual platforms. This project-based course is accessible to students of all backgrounds interested in exploring and transforming the frontiers of technology, art, and live performance.

Same as: TAPS 130

**ME 289A. Interactive Art / Performance Design. 2 Units.**

This class is for those who want the experience of designing and creating interactive art and performance pieces for public audiences, using design thinking as the method, and supported by guest speakers, artist studio visits and needfinding trips to music festivals, museums and performances. Drawing on the fields of design, art, performance, and engineering, each student will ideate, design, plan and lead a team to build an interactive art and/or performance piece to be showcased to audience of 5000 at the Frost Music and Art Festival held on the Stanford campus on May 17th 2014. Projects can range from interactive art to unconventional set design, and from site-specific sculpture to immersive performance. This is a two-quarter long commitment during which students will first learn the design, planning, story boarding, budgeting, engineering, proposal creation and concept pitching of projects for applying for grants and presenting to funders. The second quarter will concentrate on prototyping, maquette making, testing, team forming, project management, creative leadership, construction, site installation and documentation. Part one of a two course series: ME 289A&B.

Same as: TAPS 289A

**ME 289B. Interactive Art / Performance Creation. 3-4 Units.**

This class is the continuation of ME289A where students experience the designing and creating of interactive art and performance pieces for public audiences, using design thinking as the method, and supported by guest speakers, artist studio visits and needfinding trips to music festivals, museums and performances. Drawing on the fields of design, art, performance, and engineering, each student will ideate, design, plan and lead a team to build an interactive art and/or performance piece to be showcased to audience of 5000 at the Frost Music and Art Festival held on the Stanford campus on May 17th 2014. Projects can range from interactive art to unconventional set design, and from site-specific sculpture to immersive performance. During this second quarter students will concentrate on prototyping, maquette making, testing, team forming, project management, creative leadership, construction, site installation and documentation. Part two of a two course series : ME 289A&B.

Same as: TAPS 289B

**ME 290. GIVE BIG OR GO HOME. 3-4 Units.**

When individuals or organizations attempt to solve social problems by giving money, they often overlook the people at the center of the situation. The bigger the problem, the more removed the donors or funding institutions become from the human experience. You will learn how to use human centered design to shape your giving, while also considering the roles of larger systems. Students will learn design thinking methods, how to conceptualize a system in which you want to make a difference, and creative ways to think about financing change.

**ME 292. Humanize My Ride: Investigations in User-Centric Vehicle Design. 3 Units.**

Humanize My Ride is vehicle design for the extreme user. We will explore the relationship between specialized vehicles and their user's needs to inform a deep dive into designing and prototyping a unique purpose modified ride for a new type of user. Utilizing the designing thinking approach and emerging technology such as Google GLASS, student teams will interview drivers and users of specific purpose cars and trucks and then choose a new user to design and build for. Teams will work collectively on different elements of one vehicle to test with their user's needs. This project-based course is accessible to students of all backgrounds interested in exploring and transforming the intersection of user-centric design, automotive technology, creative customization and hands-on building.

**ME 297. Forecasting for Innovators: Technology, Tools & Social Change. 3 Units.**

Technologies from the steam engine to the microprocessor have been mixed gifts, at once benefitting humankind and creating many of the problems facing humanity today. This class will explore how innovators can use forecasting methods to identify new challenges, develop responsive innovations and anticipate unintended consequences. Students will produce a long-range forecast project, applying a variety of methodologies including research, expert interviews and graphical exploration.

**ME 298. Silversmithing and Design. 3-4 Units.**

Skills involved in working with precious metals at a small scale. Investment casting and fabrication techniques such as reticulation, granulations, filigree, and mokume gane.

**ME 299A. Practical Training. 1 Unit.**

For master's students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the Student Services Office does not sponsor CPT. Students are allowed only two quarters of CPT per degree program. Course may be repeated twice.

**ME 299B. Practical Training. 1 Unit.**

For Ph.D. students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the student services office does not sponsor CPT. Students are allowed only two quarters of CPT per degree program. Course may be repeated twice.

**ME 300A. Linear Algebra with Application to Engineering Computations. 3 Units.**

Computer based solution of systems of algebraic equations obtained from engineering problems and eigen-system analysis, Gaussian elimination, effect of round-off error, operation counts, banded matrices arising from discretization of differential equations, ill-conditioned matrices, matrix theory, least square solution of unsolvable systems, solution of non-linear algebraic equations, eigenvalues and eigenvectors, similar matrices, unitary and Hermitian matrices, positive definiteness, Cayley-Hamilton theory and function of a matrix and iterative methods. Prerequisite: familiarity with computer programming, and MATH51. Same as: CME 200

**ME 300B. Partial Differential Equations in Engineering. 3 Units.**

Geometric interpretation of partial differential equation (PDE) characteristics; solution of first order PDEs and classification of second-order PDEs; self-similarity; separation of variables as applied to parabolic, hyperbolic, and elliptic PDEs; special functions; eigenfunction expansions; the method of characteristics. If time permits, Fourier integrals and transforms, Laplace transforms. Prerequisite: CME 200/ME 300A, equivalent, or consent of instructor. Same as: CME 204

**ME 300C. Introduction to Numerical Methods for Engineering. 3 Units.**

Numerical methods from a user's point of view. Lagrange interpolation, splines. Integration: trapezoid, Romberg, Gauss, adaptive quadrature; numerical solution of ordinary differential equations: explicit and implicit methods, multistep methods, Runge-Kutta and predictor-corrector methods, boundary value problems, eigenvalue problems; systems of differential equations, stiffness. Emphasis is on analysis of numerical methods for accuracy, stability, and convergence. Introduction to numerical solutions of partial differential equations; Von Neumann stability analysis; alternating direction implicit methods and nonlinear equations. Prerequisites: CME 200/ME 300A, CME 204/ME 300B. Same as: CME 206

**ME 301. LaunchPad:Design and Launch your Product or Service. 4 Units.**

This is an intense course in product design and development offered to graduate students only (no exceptions). In just ten weeks, we will apply principles of design thinking to the real-life challenge of imagining, prototyping, testing and iterating, building, pricing, marketing, distributing and selling your product or service. You will work hard on both sides of your brain. You will experience the joy of success and the (passing) pain of failure along the way. This course is an excellent chance to practice design thinking in a demanding, fast-paced, results-oriented group with support from faculty and industry leaders. This course may change your life. We will treat each team and idea as a real start-up, so the work will be intense. If you do not have a passionate and overwhelming urge to start a business or launch a product or service, this class will not be a fit. Teams must visit office hours in winter quarter (Wednesday's 3p-4:30p) in order to be considered for the course.

**ME 302. The Future of the Automobile. 1 Unit.**

This quarter, the seminar will take a specific focus on "Advanced Driver Assistance Systems", which help drivers to maneuver their vehicles through traffic. Those systems range from navigation systems, adaptive cruise control, night vision, lane departure warning over automated parking, traffic jam assistance, to self-driving cars. With this breadth of applications, advanced driver assistance systems play an important role in making traffic safer, more efficient, and more enjoyable. This course, lectured by an industry expert, will introduce students to technology behind the systems, the benefits, challenges, and future perspectives of this exciting field. At the end of the quarter, students will have developed a technical understanding as well as an understanding for the interactions of the technology, business, and society with a specific automotive focus.

**ME 302A. Introduction to Automotive and Transportation Innovation at Stanford. 1 Unit.**

The objective of this course is to survey the innovative automotive and transportation community within Stanford. Stanford University has become one of the best universities on earth to to change the future of transportation and this course is a 'who's who' of that world. This is the first part of a 3-quarter seminar series, which build on one another but can be taken independently. This quarter, the seminar will feature talks from Stanford experts in focus areas as varied as autonomous vehicles, entrepreneurship, design, ethics, aerodynamics, neuroscience, communications and security. At the end of the quarter, students will have developed an understanding of Stanford's portfolio of transportation work and know the specific individuals who are key to its future. To obtain credit, students must attend the first class (no exceptions) plus 7 additional classes for a total of 8 classes.

**ME 302B. The Future of the Automobile- Driver Assistance and Automated Driving. 1 Unit.**

The objective of this course is to develop an understanding for the requirements that go into the design of a highly complex yet easy-to-use product, i.e. the automobile. Students will learn about very different interdisciplinary aspects that characterize the automobile and personal mobility. This is the second part of a 3-quarter seminar series, which build on one another but can be taken independently. This quarter, the seminar will discuss how various vehicle systems help drivers to maneuver their vehicles through traffic. Advanced driver assistance systems range from navigation, adaptive cruise control, night vision, and lane departure warning to automated parking, traffic jam assistance, and eventually self-driving cars. These systems play an important role in making traffic safer, more efficient, and more enjoyable. This course, lectured by an industry expert, will introduce students to the technology behind the systems, the benefits, challenges, and future perspectives of this exciting field. Students will develop an understanding for the interactions of the technology, business, and society with a specific automotive focus.

**ME 302C. The Future of the Automobile- Mobility Entrepreneurship. 1 Unit.**

The objective of this course is to develop an understanding for the requirements that go into the design of a highly complex yet easy-to-use product, i.e. the automobile. Students will learn about very different interdisciplinary aspects that characterize the automobile and personal mobility. This is the third part of a 3-quarter seminar series, which build on one another but can be taken independently. This quarter, students will learn from 9 different founders / C-level executives about how they built their mobility startup to change the world of transportation. Founders from Tesla, Faraday Future, Zendrive, Renovo Motors and more will be featured. In hearing these founder stories, students will get an insight not only into the world of entrepreneurship but also the multidisciplinary nature of the transportation industry. The course consists of 50-minute discussions with founders, with students encouraged to participate and ask questions of the founders. To obtain credit, students must attend 7 out of 9 classes including the first class (no exceptions.).

**ME 303. Biomechanics of Flight. 3 Units.**

Study of biological flight as an inspiration for designing robots. The goal is to give students a broad understanding of the biomechanics of natural flight, and an in-depth understanding of bird flight. This course elucidates how students can pick and choose exciting biological questions, use biological and engineering techniques to answer them, and use the results to identify bio-inspired design applications. Prerequisites: Fluid mechanics OR Aerodynamics AND Fluent Matlab skills. Course website URL: [http://lentinklab.stanford.edu/impact/stanford\\_teaching](http://lentinklab.stanford.edu/impact/stanford_teaching).

**ME 304. The Designer's Voice. 1 Unit.**

This course for Masters students in the Stanford Design Program helps students develop a point of view about their design career that will enable them to articulate their design vision, inspire a design studio, or infect a business with a culture of design-thinking. This class focuses on the integration of work and worldview, professional values, design language, and the development of the designer's voice. Includes seminar-style discussions, role-playing, short writing assignments, guest speakers, and individual mentoring and coaching.

**ME 306. Engineering Design Theory in Practice. 3 Units.**

Introduction to theories and frameworks underlying engineering design practice. Why do we do the things we do in engineering design thinking? How can we improve performance using design frameworks? Four perspectives on design thinking & design as social activity, cognitive activity, prototyping and learning. Practice of effective team behaviors for concept generation, decision-making, and conflict-handling. C-K Theory and its application to design practice. Media cascade and boundary object frameworks for prototyping. Application of Perception-Action framework and Social Learning Theory. Students engage in multiple projects to apply theories to practical situations.

**ME 308. Spatial Motion. 3 Units.**

The geometry of motion in Euclidean space. Fundamentals of theory of screws with applications to robotic mechanisms, constraint analysis, and vehicle dynamics. Methods for representing the positions of spatial systems of rigid bodies with their inter-relationships; the formulation of Newton-Euler kinetics applied to serial chain systems such as industrial robotics.

**ME 309. Finite Element Analysis in Mechanical Design. 3 Units.**

Basic concepts of finite elements, with applications to problems confronted by mechanical designers. Linear static, modal, and thermal formulations emphasized; nonlinear and dynamic formulations introduced. Application of a commercial finite element code in analyzing design problems. Issues: solution methods, modeling techniques, features of various commercial codes, basic problem definition. Individual projects focus on the interplay of analysis and testing in product design/development. Prerequisites: Math 51, or equivalent. Recommended: ME80 or CEE101A, or equivalent in structural and/or solid mechanics; some exposure to principles of heat transfer.

**ME 310A. Product-Based Engineering Design, Innovation, and Development. 4 Units.**

Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America on product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

**ME 310B. Product-Based Engineering Design, Innovation, and Development. 4 Units.**

Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America on product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

**ME 310C. Project-Based Engineering Design, Innovation, and Development. 4 Units.**

Three quarter sequence; for engineering graduate students intending to lead projects related to sustainability, automotive, biomedical devices, communication, and user interaction. Student teams collaborate with academic partners in Europe, Asia, and Latin America on product innovation challenges presented by global corporations to design requirements and construct functional prototypes for consumer testing and technical evaluation. Design loft format such as found in Silicon Valley consultancies. Typically requires international travel. Prerequisites: undergraduate engineering design project; consent of instructor.

**ME 310I. The Essential Elements of New Product Development: Business and Industry Perspectives. 1 Unit.**

Restricted to graduate students. Topics include new product development agenda, new product management skills, leadership and team management, cultural awareness, organizational culture, industrial challenges and opportunities. Seminar will include in-class discussions and guest speakers from industry.

**ME 310X. New Product Management. 1 Unit.**

Restricted to graduate students. Focus is on the role of the product manager in industry. Topics include product management skills, leadership and team management, getting a product management job, corporate and project finance for engineers, sales and marketing for engineers and business strategy. Seminar with in-class exercises and guest speakers from industry. Limited to 50. Prerequisite: Enrolled ME310 students only.

**ME 312. Advanced Product Design: Formgiving. 3 Units.**

Lecture/lab. Small- and medium- scale design projects carried to a high degree of aesthetic refinement. Emphasis is on form development, design process, and model making.

**ME 313. Human Values and Innovation in Design. 3 Units.**

Introduction to the philosophy, spirit, and tradition of the product design program. Hands-on design projects used as vehicles for design thinking, visualization, and methodology. The relationships among technical, human, aesthetic, and business concerns. Drawing, prototyping, and design skills. Focus is on tenets of design philosophy: point of view, user-centered design, design methodology, and iterative design.

**ME 314. Good Products, Bad Products. 3-4 Units.**

The characteristics of industrial products that cause them to be successes or failures: the straightforward (performance, economy, reliability), the complicated (human and cultural fit, compatibility with the environment, craftsmanship, positive emotional response of the user), the esoteric (elegance, sophistication, symbolism). Engineers and business people must better understand these factors to produce more successful products. Projects, papers, guest speakers, field trips.

Same as: ME 214

**ME 315. The Designer in Society. 3 Units.**

This class focuses on individuals and their psychological well being. The class delves into how students perceive themselves and their work, and how they might use design thinking to lead a more creative and committed life. As a participant you read parts of a different book each week and then engage in exercises designed to unlock learnings. In addition, there is a self-selected term project dealing with either eliminating a problem from your life or doing something you have never done before. Apply the first day during class. Attendance at first session is mandatory; otherwise, at most one absence is acceptable. Admission by application. See [dschool.stanford.edu/classes](http://dschool.stanford.edu/classes) for more information.

**ME 316A. Product Design Master's Project. 2-6 Units.**

For graduate Product Design or Design (Art) majors only. Student teams, under the supervision of the design faculty, spend the quarter researching master's project topics. Students are expected to demonstrate mastery of design thinking methods including; needfinding, brainstorming, field interviews and synthesis during this investigation. Masters projects are selected that involve the synthesis of aesthetics and technological concerns in the service of human need. Design Institute class; see <http://dschool.stanford.edu>. Prereq: ME277, ME312, ME313.

**ME 316B. Product Design Master's Project. 2-6 Units.**

Design Garage is a Winter/Spring class (a two quarter commitment is required). The class is a deep dive in design thinking that uses student-led projects to teach design process and methods. The projects come from investigations conducted during the Fall quarter where the preliminary need finding, customer research, and product or service ideas have been developed to provide the seed projects for the student design teams. Students will learn the methodologies of design thinking by bringing a product, service, or experience to market. Students apply to Design Garage in the Fall, and teams are formed after interviews and applications are reviewed. Prerequisite: graduate student standing.

**ME 316C. Product Design Master's Project. 2-6 Units.**

This is the second half of the two quarter Design Garage sequence. Students will complete projects begun in ME316B the prior quarter. Prerequisite: ME316B and graduate student standing. Design Institute class; see <http://dschool.stanford.edu>.

**ME 317A. Design Methods: Product Definition. 4 Units.**

Systematic methodologies to define, develop, and produce world-class products. Student team projects to identify opportunities for improvement and develop a comprehensive product definition. Topics include value engineering, quality function deployment, FMEA and risk analysis, robustness, design for variety, design for life-cycle quality, financial analysis and Monte Carlo simulation. Students must take 317B to complete the project and obtain a letter grade. On-campus enrollment limited to 25; SCPD class size is limited to 75.

**ME 317B. Design Methods: Quality By Design. 4 Units.**

Building on 317A, focus is on the implementation of competitive product design. Student groups apply structured methods to optimize the design of an improved product, and plan for its manufacture, testing, and service. The project deliverable is a comprehensive product and process specification. Topics: concept generation and selection (Pugh's Method), Poka Yoke, design for robustness, Monte Carlo and Design for Six Sigma, process capability analysis, financial analysis, and prototyping. On-campus class limited to 25. For SCPD students, limit is 75. Prerequisite: 317A.

**ME 318. Computer-Aided Product Creation. 4 Units.**

Design course focusing on an integrated suite of computer tools: rapid prototyping, solid modeling, computer-aided machining, and computer numerical control manufacturing. Students choose, design, and manufacture individual products, emphasizing individual design process and computer design tools. Field trips demonstrate Stanford Product Realization Lab's relationship to the outside world. Structured lab experiences build a basic CAD/CAM/CNC proficiency. Limited enrollment. Prerequisite: consent of instructor.

**ME 319. Fundamentals of Design for Design Thinkers. 2-4 Units.**

This course is an introduction to the fundamental principles of Design, geared toward graduate students involved and invested in innovation and design thinking. Core concepts include Contrast, Color, Materiality, Form, Proportion, Transitions, and more. Students will be introduced to the major philosophical concepts of design in readings and in class, and will practice techniques in class and via weekly hands-on projects out of class, culminating in a final personal project. Students will also be introduced to many hands-on prototyping and making skills via access to the Product Realization Lab and Room 36 ([webshop.stanford.edu](http://webshop.stanford.edu)).

**ME 320. Introduction to Robotics. 3 Units.**

Robotics foundations in modeling, design, planning, and control. Class covers relevant results from geometry, kinematics, statics, dynamics, motion planning, and control, providing the basic methodologies and tools in robotics research and applications. Concepts and models are illustrated through physical robot platforms, interactive robot simulations, and video segments relevant to historical research developments or to emerging application areas in the field. Recommended: matrix algebra. Same as: CS 223A

**ME 321. Optofluidics: Interplay of Light and Fluids at the Micro and Nanoscale. 3 Units.**

Many optical systems in biology have sophisticated designs with functions that conventional optics cannot achieve: no synthetic materials, for example, can provide the camouflage capability exhibited by some animals. This course overviews recent efforts—some inspired by examples in biology—in using fluids, soft materials and nanostructures to create new functions in optics. Topics include electrowetting lenses, electronic inks, colloidal photonic crystals, bioinspired optical nanostructures, nanophotonic biosensors, lens-less optofluidic microscopes. The use of optics to control fluids is also discussed: optoelectronic tweezers, particle trapping and transport, microrheology, optofluidic sorters, fabrication and self-assembly of novel micro and nanostructures.

**ME 322. Kinematic Synthesis of Mechanisms. 3 Units.**

The rational design of linkages. Techniques to determine linkage proportions to fulfill design requirements using analytical, graphical, and computer based methods.

**ME 323. Modeling and Identification of Mechanical Systems for Control. 3 Units.**

Lecture/Lab. The art and science behind developing mathematical models for control system design. Theoretical and practical system modeling and parameter identification. Frequency domain identification, parametric modeling, and black-box identification. Analytical work and laboratory experience with identification, controller implementation, and the implications of unmodeled dynamics and non-linearities. Prerequisites: linear algebra and system simulation with MATLAB/SIMULINK; ENGR 105.

**ME 324. Precision Engineering. 4 Units.**

Advances in engineering are often enabled by more accurate control of manufacturing and measuring tolerances. Concepts and technology enable precision such that the ratio of overall dimensions to uncertainty of measurement is large relative to normal engineering practice. Typical application areas: non-spherical optics, computer information storage devices, and manufacturing metrology systems. Application experience through design and manufacture of a precision engineering project, emphasizing the principles of precision engineering. Structured labs; field trips. Prerequisite: consent of instructors.

**ME 325. Making Multiples: Scaled Manufacturing Tooling. 3 Units.**

Design course focusing on the process of injection molding as a prototyping and manufacturing tool. Coursework will include creating and evaluating initial design concepts, detailed part design, mold design, mold manufacturing, molding parts, and testing and evaluating the results. Students will work primarily on individually selected projects, using each project as a tool to continue developing and exercising individual design process. Lectures and field trips will provide students with context for their work in the Stanford Product Realization Lab. Prerequisite: ME318 or consent of instructors.

**ME 326. Telerobotics and Human-Robot Interactions. 3 Units.**

Focus is on dynamics and controls. Evaluation and implementation of required control systems. Topics include master-slave systems, kinematic and dynamic similarity; control architecture, force feedback, haptics, sensory substitutions; stability, passivity, sensor resolution, servo rates; time delays, prediction, wave variables. Hardware-based projects encouraged, which may complement ongoing research or inspire new developments. Limited enrollment. Prerequisites: ENGR 205, 320 or CS 223A, or consent of instructor. (Niemeyer).

**ME 327. Design and Control of Haptic Systems. 4 Units.**

Study of the design and control of haptic systems, which provide touch feedback to human users interacting with virtual environments and teleoperated robots. Focus is on device modeling (kinematics and dynamics), synthesis and analysis of control systems, design and implementation, and human interaction with haptic systems. Coursework includes homework/laboratory assignments and a research-oriented project. Directed toward graduate students and advanced undergraduates in engineering and computer science. Prerequisites: dynamic systems and MATLAB programming. Suggested experience with programming, feedback control design, and hardware prototyping.

**ME 328. Medical Robotics. 3 Units.**

Study of the design and control of robots for medical applications. Focus is on robotics in surgery and interventional radiology, with introduction to other healthcare robots. Delivery is through instructor lectures and weekly guest speakers. Coursework includes homework and laboratory assignments, an exam, and a research-oriented project. Directed toward graduate students and advanced undergraduates in engineering and computer science; no medical background required. Prerequisites: dynamic systems and MATLAB programming. Suggested experience with C/C++ programming, feedback control design, and linear systems. Cannot be taken concurrently with CS 571.

**ME 330. Advanced Kinematics. 3 Units.**

Kinematics from mathematical viewpoints. Introduction to algebraic geometry of point, line, and plane elements. Emphasis is on basic theories which have potential application to mechanical linkages, computational geometry, and robotics.

**ME 331A. Advanced Dynamics & Computation. 3 Units.**

Newton, Euler, momentum, and road-map methods and computational tools for 3-D force and motion analysis of multibody systems. Power, work, and energy. Numerical solutions (e.g., MATLAB, etc.) of nonlinear algebraic and differential equations governing the static and dynamic behavior of multiple degree of freedom systems.

**ME 331B. Advanced Dynamics, Simulation & Control. 3 Units.**

Advanced methods and computational tools for the efficient formulation of equations of motion for multibody systems. D'Alembert principle. Power, work, and energy. Kane's and Lagrange's method. Computed torque control. Systems with constraints. Quaternions. Numerical solutions (e.g., MATLAB, etc.) of nonlinear algebraic and differential equations governing the behavior of multiple degree of freedom systems. Team-based computational multi-body lab project (inclusion of feed-forward control optional).

**ME 332. Introduction to Computational Mechanics. 3 Units.**

Provides an introductory overview of modern computational methods for problems arising primarily in mechanics of solids and is intended for students from various engineering disciplines. The course reviews the basic theory of linear solid mechanics and introduces students to the important concept of variational forms, including the principle of minimum potential energy and the principles of virtual work. Specific model problems that will be considered include deformation of bars, beams and membranes, plates, and problems in plane elasticity (plane stress, plane strain, axisymmetric elasticity). The variational forms of these problems are used as the starting point for developing the finite element method (FEM) and boundary element method (BEM) approaches providing an important connection between mechanics and computational methods.

Same as: CME 232

**ME 333. Mechanics. 3 Units.**

Goal is a common basis for advanced mechanics courses. Introduction to variational calculus. Formulation of the governing equations from a Lagrangian perspective for finite and infinite dimensional mechanical systems. Examples include systems of particles and linear elastic solids. Introduction to tensors. Definition and interpretation of Cauchy stress tensor.

**ME 333A. Mechanics - Fundamentals and Lagrangian Mechanics. 3 Units.**

Goal is a common basis for advanced mechanics courses. Introduction to variational calculus. Formulation of the governing equations from a Lagrangian perspective for finite and infinite dimensional mechanical systems. Examples include systems of particles and linear elastic solids. Introduction to tensors. Definition and interpretation of Cauchy stress tensor.

**ME 333B. Mechanics - Elasticity and Inelasticity. 3 Units.**

Introduction to the theories of elasticity, plasticity and fracture and their applications. Elasticity: Definition of stress, strain, and elastic energy; equilibrium and compatibility conditions; and formulation of boundary value problems. Stress function approach to solve 2D elasticity problems and Green's function approach in 3D. Applications to contact and crack. Plasticity: Yield surface, associative flow rule, strain hardening models, crystal plasticity models. Applications to plastic bending, torsion and pressure vessels. Fracture: Linear elastic fracture mechanics, J-integral, Dugdale-Barrenblatt crack model. Applications to brittle fracture and fatigue crack growth. Computer programming in Matlab is used to aid analytic derivation and numerical solutions.

**ME 333C. Mechanics - Continuum Mechanics. 3 Units.**

Introduction to linear and nonlinear continuum mechanics of solids. Introduction to tensor algebra and tensor analysis. Kinematics of motion. Balance equations of mass, linear and angular momentum, energy, and entropy. Constitutive equations of isotropic and anisotropic hyperelastic solids. Introduction to numerical solution techniques.

**ME 335A. Finite Element Analysis. 3 Units.**

Fundamental concepts and techniques of primal finite element methods. Method of weighted residuals, Galerkin's method and variational equations. Linear elliptic boundary value problems in one, two and three space dimensions; applications in structural, solid and fluid mechanics and heat transfer. Properties of standard element families and numerically integrated elements. Implementation of the finite element method using Matlab, assembly of equations, and element routines. Lagrange multiplier and penalty methods for treatment of constraints. The mathematical theory of finite elements.

**ME 335B. Finite Element Analysis. 3 Units.**

Finite element methods for linear dynamic analysis. Eigenvalue, parabolic, and hyperbolic problems. Mathematical properties of semi-discrete (t-continuous) Galerkin approximations. Modal decomposition and direct spectral truncation techniques. Stability, consistency, convergence, and accuracy of ordinary differential equation solvers. Asymptotic stability, over-shoot, and conservation laws for discrete algorithms. Mass reduction. Applications in heat conduction, structural vibrations, and elastic wave propagation. Computer implementation of finite element methods in linear dynamics. Implicit, explicit, and implicit-explicit algorithms and code architectures.

**ME 335C. Finite Element Analysis. 3 Units.**

Newton's method for nonlinear problems; convergence, limit points and bifurcation; consistent linearization of nonlinear variational forms by directional derivative; tangent operator and residual vector; variational formulation and finite element discretization of nonlinear boundary value problems (e.g. nonlinear heat equation, nonlinear elasticity); enhancements of Newton's method: line-search techniques, quasi-Newton and arc-length methods.

**ME 337. Mechanics of Growth. 3 Units.**

Introduction to continuum theory and computational simulation of living matter. Kinematics of finite growth. Balance equations in open system thermodynamics. Constitutive equations for living systems. Custom-designed finite element solution strategies. Analytical solutions for simple model problems. Numerical solutions for clinically relevant problems such as: bone remodeling; wound healing; tumor growth; atherosclerosis; heart failure; tissue expansion; and high performance training.

**ME 338. Continuum Mechanics. 3 Units.**

Linear and nonlinear continuum mechanics for solids. Introduction to tensor algebra and tensor analysis. Kinematics of motion. Balance equations of mass, linear and angular momentum, energy, and entropy. Constitutive equations of isotropic and anisotropic hyperelasticity. Recommended as prerequisite for Finite Element Methods.

**ME 338B. Continuum Mechanics. 3 Units.**

Constitutive theory; equilibrium constitutive relations; material frame indifference and material symmetry; finite elasticity; formulation of the boundary value problem; linearization and well-posedness; symmetries and configurational forces; numerical considerations.

**ME 339. Introduction to parallel computing using MPI, openMP, and CUDA. 3 Units.**

This class will give hands on experience with programming multicore processors, graphics processing units (GPU), and parallel computers. Focus will be on the message passing interface (MPI, parallel clusters) and the compute unified device architecture (CUDA, GPU). Topics will include: network topologies, modeling communication times, collective communication operations, parallel efficiency, MPI, dense linear algebra using MPI. Symmetric multiprocessing (SMP), pthreads, openMP. CUDA, combining MPI and CUDA, dense linear algebra using CUDA, sort, reduce and scan using CUDA. Pre-requisites include: C programming language and numerical algorithms (solution of differential equations, linear algebra, Fourier transforms).

Same as: CME 213

**ME 340. Theory and Applications of Elasticity. 3 Units.**

This course provides an introduction to the elasticity theory and its application to material structures at microscale. The basic theory includes the definition of stress, strain and elastic energy; equilibrium and compatibility conditions; and the formulation of boundary value problems. We will mainly discuss the stress function method to solve 2D problems and will briefly discuss the Green's function approach for 3D problems. The theory and solution methods are then applied to contact problems as well as microscopic defects in solids, such as voids, inclusions, cracks, and dislocations. Computer programming in Matlab is used to aid analytic derivation and numerical solutions of elasticity problems.

**ME 341. Design Experiments. 3 Units.**

Design experiments to learn about the relationship between users and products, with an emphasis on quantitative output that is tested with statistics. Students will be exposed to all components of the experimental design process: research proposition, literature review, detailed hypotheses, method selection, experimental instruments, subject selection, pilot studies, analysis approaches, reporting results, and discussing conclusions. Students will receive human subjects training and complete the IRB certificate. Possible experiment design tools include in-person observation and interviews, web surveys, and eye-tracking.

**ME 342. Theory and Application of Inelasticity. 3 Units.**

Theories of plasticity and fracture phenomena from both phenomenological and micromechanical viewpoints. Yield surface, flow rules, strain hardening models, and applications to creep. Plastic zone near crack tip. Linear fracture mechanics and other criteria for crack initiation and growth. Application to fatigue. Classical analytic solutions will be discussed together with numerical solutions of plane elastoplastic problems by Matlab.

**ME 342A. Mechanobiology and Biofabrication Methods. 3 Units.**

Cell mechanobiology topics including cell structure, mechanical models, and chemo-mechanical signaling. Review and apply methods for controlling and analyzing the biomechanics of cells using traction force microscopy, AFM, micropatterning and cell stimulation. Practice and theory for the design and application of methods for quantitative cell mechanobiology. Weekly lecture and hands-on laboratory sessions. Same as: BIOPHYS 342A

**ME 342D. MEMS Fabrication/Projects. 1-3 Unit.**

Emphasis is on process planning, in process testing, nanofabrication training, exposure to MEMS industry applications. Prerequisite: ENGR 341.

**ME 345. Fatigue Design and Analysis. 3 Units.**

The mechanism and occurrences of fatigue of materials. Methods for predicting fatigue life and for protecting against premature fatigue failure. Use of elastic stress and elastic-plastic strain analyses to predict crack initiation life. Use of linear elastic fracture mechanics to predict crack propagation life. Effects of stress concentrations, manufacturing processes, load sequence, irregular loading, multi-axial loading. Subject is treated from the viewpoints of the engineer seeking up-to-date methods of life prediction and the researcher interested in improving understanding of fatigue behavior. Prerequisite: undergraduate mechanics of materials.

**ME 346A. Introduction to Statistical Mechanics. 3 Units.**

The main purpose of this course is to provide students with enough statistical mechanics background to the Molecular Simulations classes (ME 346B,C), including the fundamental concepts such as ensemble, entropy, and free energy, etc. The main theme of this course is how the laws at the macroscale (thermodynamics) can be obtained by analyzing the spontaneous fluctuations at the microscale (dynamics of molecules). Topics include thermodynamics, probability theory, information entropy, statistical ensembles, phase transition and phase equilibrium. Recommended: PHYSICS 110 or equivalent.

**ME 346B. Introduction to Molecular Simulations. 3 Units.**

Algorithms of molecular simulations and underlying theories. Molecular dynamics, time integrators, modeling thermodynamic ensembles (NPT, NVT), free energy, constraints. Monte Carlo simulations, parallel tempering. Stochastic equations, Langevin and Brownian dynamics. Applications in solids, liquids, and biomolecules (proteins). Programming in Matlab.

**ME 346C. Advanced Techniques for Molecular Simulations. 3 Units.**

Advanced methods for computer simulations of solids and molecules. Methods for long-range force calculation, including Ewald methods and fast multipole method. Methods for free energy calculation, such as thermodynamic integration. Methods for predicting rates of rare events (e.g. nucleation), including nudged elastic band method and umbrella sampling method. Students will work on projects in teams.

**ME 347. Mathematical Theory of Dislocations. 3 Units.**

The mathematical theory of straight and curvilinear dislocations in linear elastic solids. Stress fields, energies, and Peach-Koehler forces associated with these line imperfections. Anisotropic effects, Green's function methods, and the geometrical techniques of Brown and Indenborn-Orlov for computing dislocation fields and for studying dislocation interactions. Continuously distributed dislocations and cracks and inclusions.

**ME 348. Experimental Stress Analysis. 3 Units.**

Theory and applications of photoelasticity, strain sensors, and holographic interferometry. Comparison of test results with theoretical predictions of stress and strain. Discussion of other methods (optical fiber strain sensors, digital image correlation, thermoelasticity, brittle coating, Moire interferometry, residual stress determination). Six labs plus mini-project. Limited enrollment. Lab fee.

**ME 349. Variational Methods in Elasticity and Plate Theory. 3 Units.**

An introduction to variational calculus methods and their applications to the theories of elasticity and plates.

**ME 350A. Design @ the Intersection of Science, Technology, and Entrepreneurship. 1 Unit.**

This 1 credit class is for graduate students who are passionate about turning their research into a product or service. This is a chance to explore the potential impact of your work beyond your lab or research group. We are looking for students from the sciences, engineering, or mathematics, or students who have business acumen or start-up experience focused on technology driven companies. If you want to get out of your lab, away from your machine, and start to design your future come join us. The class will begin your journey from research to product conceptualization and user centered design through exercises and group activities. We'll meet once a week over the quarter in 10 self-contained 2 hour workshops where students will focus on their own work as well as explore the practical applications of fellow students' ideas, experience team formation and collaboration, and begin to explore product and service design. Aside from class time you will need to commit up to one hour per week outside the class on customer and market exploration. Advisors from industry and academia will mentor student teams. The class will be structured for individuals with team formation optional.

**ME 351A. Fluid Mechanics. 3 Units.**

Exact and approximate analysis of fluid flow covering kinematics, global and differential equations of mass, momentum, and energy conservation. Forces and stresses in fluids. Euler's equations and the Bernoulli theorem applied to inviscid flows. Vorticity dynamics. Topics in irrotational flow: stream function and velocity potential for exact and approximate solutions; superposition of solutions; complex potential function; circulation and lift. Some boundary layer concepts.

**ME 351B. Fluid Mechanics. 3 Units.**

Laminar viscous fluid flow. Governing equations, boundary conditions, and constitutive laws. Exact solutions for parallel flows. Creeping flow limit, lubrication theory, and boundary layer theory including free-shear layers and approximate methods of solution; boundary layer separation. Introduction to stability theory and transition to turbulence, and turbulent boundary layers. Prerequisite: 351A.

**ME 352A. Radiative Heat Transfer. 3 Units.**

The fundamentals of thermal radiation heat transfer; blackbody radiation laws; radiative properties of non-black surfaces; analysis of radiative exchange between surfaces and in enclosures; combined radiation, conduction, and convection; radiative transfer in absorbing, emitting, and scattering media. Advanced material for students with interests in heat transfer, as applied in high-temperature energy conversion systems. Take 352B,C for depth in heat transfer. Prerequisites: graduate standing and undergraduate course in heat transfer. Recommended: computer skills.

**ME 352B. Fundamentals of Heat Conduction. 3 Units.**

Physical description of heat conduction in solids, liquids, and gases. The heat diffusion equation and its solution using analytical and numerical techniques. Data and microscopic models for the thermal conductivity of solids, liquids, and gases, and for the thermal resistance at solid-solid and solid-liquid boundaries. Introduction to the kinetic theory of heat transport, focusing on applications for composite materials, semiconductor devices, micromachined sensors and actuators, and rarefied gases. Prerequisite: consent of instructor.

**ME 352C. Convective Heat Transfer. 3 Units.**

Prediction of heat and mass transfer rates based on analytical and numerical solutions of the governing partial differential equations. Heat transfer in fully developed pipe and channel flow, pipe entrance flow, laminar boundary layers, and turbulent boundary layers. Superposition methods for handling non-uniform wall boundary conditions. Approximate models for turbulent flows. Comparison of exact and approximate analyses to modern experimental results. General introduction to heat transfer in complex flows. Prerequisite: 351B or equivalent.

**ME 354. Experimental Methods in Fluid Mechanics. 4 Units.**

Experimental methods associated with the interfacing of laboratory instruments, experimental control, sampling strategies, data analysis, and introductory image processing. Instrumentation including point-wise anemometers and particle image tracking systems. Lab. Prerequisites: previous experience with computer programming and consent of instructor. Limited enrollment.

**ME 355. Compressible Flow. 3 Units.**

Topics include quasi-one-dimensional isentropic flow in variable area ducts, normal shock waves, oblique shock and expansion waves, flow in ducts with friction and heat transfer, unsteady one-dimensional flow, and steady two-dimensional supersonic flow.

**ME 357. Turbine and Internal Combustion Engines. 3 Units.**

Principles of design analysis for aircraft gas turbines and automotive piston engines. Analysis for aircraft engines performed for Airbus A380 type aircraft. Design parameters determined considering aircraft aerodynamics, gas turbine thermodynamics, compressible flow physics, and material limitations. Additional topics include characteristics of main engine components, off-design analysis, and component matching. Performance of automotive piston engines including novel engine concepts in terms of engine thermodynamics, intake and exhaust flows, and in-cylinder flow.

Same as: ME 257

**ME 358. Heat Transfer in Microdevices. 3 Units.**

Application-driven introduction to the thermal design of electronic circuits, sensors, and actuators that have dimensions comparable to or smaller than one micrometer. The impact of thin-layer boundaries on thermal conduction and radiation. Convection in microchannels and microscopic heat pipes. Thermal property measurements for microdevices. Emphasis is on Si and GaAs semiconductor devices and layers of unusual, technically-promising materials such as chemical-vapor-deposited (CVD) diamond. Final project based on student research interests. Prerequisite: consent of instructor.

**ME 359. Designing for Safety in Labor and Delivery. 3 Units.**

Designing For Safety In Labor & Delivery will inform students about challenges in the L&D environment through direct observation in a simulated environment and the hospital. Simultaneously, we will be studying the users: their environment, standard protocols, communication and behavior. Our goal is to identify need spaces that will lead to product, system or service innovation and improve safety and quality of care. Student groups will have structured access to OB/GYN, pediatric and neonatology clinicians at Lucile Packard Children's Hospital, as well as parents for conducting ethnography. Field trips to Lucile Packard Children's Hospital and The Kaiser Garfield Healthcare Innovation Center are planned as well. Physical prototypes and/or scenarios can be tested and presented at CAPE's simulation lab in order to give students a realistic environment in which to evaluate and present their ideas. Prior design process experience is helpful but not a prerequisite. Collaboration with teammates is required and critical for student success. To be considered for admission, you must complete the application by 12/15/16 AND attend the first class. Admission by application. See [dschool.stanford.edu/classes](http://dschool.stanford.edu/classes) for more information.

**ME 359A. Advanced Design and Engineering of Space Systems I. 4 Units.**

The application of advanced theory and concepts to the development of spacecraft and missile subsystems; taught by experts in their fields. Practical aspects of design and integration. Mission analysis, systems design and verification, radiation and space environments, orbital mechanics, space propulsion, electrical power and avionics subsystems, payload communications, and attitude control. Subsystem-oriented design problems focused around a mission to be completed in groups. Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related engineering field or consent of instructor.

**ME 359B. Advanced Design and Engineering of Space Systems II. 4 Units.**

Continuation of 359A. Topics include aerospace materials, mechanical environments, structural analysis and design, finite element analysis, mechanisms, thermal control, probability and statistics. Tours of Lockheed Martin facilities. Limited enrollment. Prerequisites: undergraduate degree in related field, or consent of instructor.

**ME 361. Turbulence. 3 Units.**

The nature of turbulent flows, statistical and spectral description of turbulence, coherent structures, spatial and temporal scales of turbulent flows. Averaging, two-point correlations and governing equations. Reynolds averaged equations and stresses. Free shear flows, turbulent jet, turbulent kinetic energy and kinetic energy dissipation, and kinetic energy budget. Kolmogorov's hypothesis and energy spectrum. Wall bounded flows, viscous scales, and law of the wall. Turbulence closure modeling for Reynolds averaged Navier Stokes equations. Direct and large eddy simulation of turbulent flows. Subgrid scale modeling.

**ME 362A. Physical Gas Dynamics. 3 Units.**

Concepts and techniques for description of high-temperature and chemically reacting gases from a molecular point of view. Introductory kinetic theory, chemical thermodynamics, and statistical mechanics as applied to properties of gases and gas mixtures. Transport and thermodynamic properties, law of mass action, and equilibrium chemical composition. Maxwellian and Boltzmann distributions of velocity and molecular energy. Examples and applications from areas of current interest such as combustion and materials processing.

**ME 362B. Nonequilibrium Processes in High-Temperature Gases. 3 Units.** Chemical kinetics and energy transfer in high-temperature gases. Collision theory, transition state theory, and unimolecular reaction theory. Prerequisite: 362A or consent of instructor.

**ME 363. Partially Ionized Plasmas and Gas Discharges. 3 Units.** Introduction to partially ionized gases and the nature of gas discharges. Topics: the fundamentals of plasma physics emphasizing collisional and radiative processes, electron and ion transport, ohmic dissipation, oscillations and waves, interaction of electromagnetic waves with plasmas. Applications: plasma diagnostics, plasma propulsion and materials processing. Prerequisite: 362A or consent of instructor.

**ME 364. Optical Diagnostics and Spectroscopy. 3 Units.** The spectroscopy of gases and laser-based diagnostic techniques for measurements of species concentrations, temperature, density, and other flow field properties. Topics: electronic, vibrational, and rotational transitions; spectral lineshapes and broadening mechanisms; absorption, fluorescence, Rayleigh and Raman scattering methods; collisional quenching. Prerequisite: 362A or equivalent.

**ME 367. Optical Diagnostics and Spectroscopy Laboratory. 4 Units.** Principles, procedures, and instrumentation associated with optical measurements in gases and plasmas. Absorption, fluorescence and emission, and light-scattering methods. Measurements of temperature, species concentration, and molecular properties. Lab. Enrollment limited to 16. Prerequisite: 362A or 364.

**ME 368. d.Leadership: Design Leadership in Context. 1-3 Unit.** d.Leadership is a course that teaches the coaching and leadership skills needed to drive good design process in groups. d.leaders will work on real projects driving design projects within organizations and gain real world skills as they experiment with their leadership style. Take this course if you are inspired by past design classes and want skills to lead design projects beyond Stanford. Preference given to students who have taken other Design Group or d.school classes. Admission by application. See [dschool.stanford.edu/classes](http://dschool.stanford.edu/classes) for more information. Same as: MS&E 489

**ME 368A. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.** This is the first quarter of a two-quarter course series. In this two-quarter course (BIOE 374A/B, MED 272A/B, ME 368A/B, OIT 384/5), multidisciplinary student teams identify real-world unmet healthcare needs, invent new medtech products to address them, and plan for their development into patient care. During the first quarter (winter 2016), students select and characterize an important unmet healthcare problem, validate it through primary interviews and secondary research, and then brainstorm and screen initial technology-based solutions. In the second quarter (spring 2016), teams select a lead solution and move it toward the market through prototyping, technical re-risking, strategies to address healthcare-specific requirements (regulation, reimbursement), and business planning. Final presentations in winter and spring are made to a panel of prominent medtech experts and investors. Class sessions include faculty-led instruction and case demonstrations, coaching sessions by industry specialists, expert guest lecturers, and interactive team meetings. Enrollment is by application only, and students are expected to participate in both quarters of the course. Visit <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp> to access the application, examples of past projects, and student testimonials. More information about the Biodesign program, which has led to the creation of more than 30 venture-backed healthcare companies and has helped hundreds of student launch medtech careers, can be found at <http://biodesign.stanford.edu/>. Same as: BIOE 374A, MED 272A

**ME 368B. Biodesign Innovation: Concept Development and Implementation. 4 Units.**

This is the second quarter of a two-quarter course series. In this two-quarter course (BIOE 374A/B, MED 272A/B, ME 368A/B, OIT 384/5), multidisciplinary student teams identify real-world unmet healthcare needs, invent new medtech products to address them, and plan for their development into patient care. During the first quarter (winter 2016), students select and characterize an important unmet healthcare problem, validate it through primary interviews and secondary research, and then brainstorm and screen initial technology-based solutions. In the second quarter (spring 2016), teams select a lead solution and move it toward the market through prototyping, technical re-risking, strategies to address healthcare-specific requirements (regulation, reimbursement), and business planning. Final presentations in winter and spring are made to a panel of prominent medtech experts and investors. Class sessions include faculty-led instruction and case demonstrations, coaching sessions by industry specialists, expert guest lecturers, and interactive team meetings. Enrollment is by application only, and students are expected to participate in both quarters of the course. Visit <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp> to access the application, examples of past projects, and student testimonials. More information about the Biodesign program, which has led to the creation of more than 30 venture-backed healthcare companies and has helped hundreds of student launch medtech careers, can be found at <http://biodesign.stanford.edu/>. Same as: BIOE 374B, MED 272B

**ME 369. Cracks, Dislocations, and Waves. 3 Units.** The 6-dimensional formalism of A. N. Stroh will be developed to treat two-dimensional problems in elastically anisotropic media. Stress fields of straight dislocations will be developed, from which the elastic fields of line cracks (treated as continuous distributions of straight dislocations) will be obtained along with stress intensity factors and energy release rates. Steady waves including plane waves, Rayleigh waves, and Stoneley waves will be treated along with problems of reflection and refraction of incident plane waves in joined anisotropic half-spaces. Anisotropic boundary element methods will be discussed. Assignments will include both analytical and semi-analytical work as well as simple numerical methods to implement Stroh's formalism. Class notes and readings will be provided.

**ME 370A. Energy Systems I: Thermodynamics. 3 Units.** Thermodynamic analysis of energy systems emphasizing systematic methodology for and application of basic principles to generate quantitative understanding. Exergy, mixtures, reacting systems, phase equilibrium, chemical exergy, and modern computational methods for analysis. Prerequisites: undergraduate engineering thermodynamics and computer skills such as Matlab.

**ME 370B. Energy Systems II: Modeling and Advanced Concepts. 4 Units.** Development of quantitative device models for complex energy systems, including fuel cells, reformers, combustion engines, and electrolyzers, using thermodynamic and transport analysis. Student groups work on energy systems to develop conceptual understanding, and high-level, quantitative and refined models. Advanced topics in thermodynamics and special topics associated with devices under study. Prerequisite: 370A.

**ME 370C. Energy Systems III: Projects. 3-5 Units.** Refinement and calibration of energy system models generated in ME 370B carrying the models to maturity and completion. Integration of device models into a larger model of energy systems. Prerequisites: 370A,B, consent of instructor.

**ME 371. Combustion Fundamentals. 3 Units.** Heat of reaction, adiabatic flame temperature, and chemical composition of products of combustion; kinetics of combustion and pollutant formation reactions; conservation equations for multi-component reacting flows; propagation of laminar premixed flames and detonations. Prerequisite: 362A or 370A, or consent of instructor.

**ME 372. Combustion Applications. 3 Units.**

The role of chemical and physical processes in combustion; ignition, flammability, and quenching of combustible gas mixtures; premixed turbulent flames; laminar and turbulent diffusion flames; combustion of fuel droplets and sprays. Prerequisite: 371.

**ME 373. Nanomaterials Synthesis and Applications for Mechanical Engineers. 3 Units.**

This course provides an introduction to both combustion synthesis of functional nanomaterials and nanotechnology. The first part of the course will introduce basic principles, synthesis/fabrication techniques and application of nanoscience and nanotechnology. The second part of the course will discuss combustion synthesis of nanostructures in zero-, one- two- and three- dimensions, their characterization methods, physical and chemical properties, and applications in energy conversion systems.

**ME 374. Dynamics and Kinetics of Nanoparticles. 3 Units.**

Part 1: Thermodynamics, transport theories and properties, aerosol dynamics and reaction kinetics of nanoparticles in fluids. Nucleation, gas kinetic theory of nanoparticles, the Smoluchowski equation, gas-surface reactions, diffusion, thermophoresis, conservation equations and useful solutions. Part 2: Introduction to soot formation, nanoparticles in reacting flows, particle transport and kinetics in flames, atmospheric heterogeneous reactions, and nanocatalysis.

**ME 375A. StoryViz: COMMUNICATION REDESIGNED. 2-3 Units.**

StoryViz is about creating authentic & compelling communication in many media: this year's topics include sketching, video, visual design & performance. Fantastic guests and a bevy of assignments will prepare students to communicate their work and ideas genuinely, concisely, and with a keen sense of wit. Limited enrollment; application required; see <http://dschool.stanford.edu/classes>. Please see notes.

**ME 375B. Institute of Design Project 2. 1-6 Unit.**

Hands-on, project-based series for d.school students emphasizing innovation and design thinking. Resolving constraints among technical, business, and human concerns to create solutions that benefit society. Real-world design projects in areas such as K-12 education, social entrepreneurship, business prototyping, sustainability, and health and wellness. Design reviews and final course presentations. Industry and adviser interaction. Limited enrollment; application required; see <http://dschool.stanford.edu/classes>.

**ME 375C. Institute of Design Project 3. 1-6 Unit.**

Hands-on, project-based series for d.school students emphasizing innovation and design thinking. Resolving constraints among technical, business, and human concerns to create solutions that benefit society. Real-world design projects in areas such as K-12 education, social entrepreneurship, business prototyping, sustainability, and health and wellness. Design reviews and final course presentations. Industry and adviser interaction. Limited enrollment; application required; see <http://dschool.stanford.edu/classes>.

**ME 376A. Imagining the Future of Learning: SparkTruck - Designing Mobile Interventions for Education. 4 Units.**

Created at the d.school last year, SparkTruck has traveled over 15,000 miles across the USA, teaching thousands of kids how to build stuff and unleash their creativity. In this class, students will explore the potential of a mobile platform for affecting change in the educational ecosystem. Topics will include introductions to the design process, modern prototyping tools, and the complex education ecosystem. Students will work in teams in this project-based class, and an emphasis will be placed on real-world prototyping through hands-on field work in local schools. Interested and qualified students will have the opportunity to embark on a cross-country road trip in the SparkTruck this summer. Open to all graduate students and well-qualified undergrads of any major. Enrollment is limited. Apply at [www.sparktruck.org/apply](http://www.sparktruck.org/apply). Same as: EDUC 333B

**ME 376C. Institute of Design Project 2. 1-6 Unit.**

Hands-on, project-based series for d.school students. Design thinking, design processes, innovation methodologies, need finding, human factors, rapid prototyping, team dynamics, negotiation, and project management. Focus is on resolving constraints among technical, business, and human concerns to create solutions that benefit society. Real-world design projects. Weekly design reviews, final course presentations. Industry and adviser interaction. Limited enrollment; application required; see <http://dschool.stanford.edu/classes>.

**ME 377. Design Thinking Studio: Experiences in Innovation and Design. 3-4 Units.**

Design Thinking Studio is an immersive introduction to design thinking. You will engage in the real world, with your eyes, with your mind, with your hands, and with classmates to learn, practice, and use the tools and attitudes of design. The fundamental goal of the class is to cultivate the creative, synthetic, and divergent thinking of students. This is a project-based class, asking students to take on new behaviors of work: collaboration, experimentation, empathizing, visualization, craft and inference. Field work and collaboration with teammates are required and critical for student success. Winter 2016: This quarter, we will work on exercising your design muscles, the things designers do everyday (outside of projects or process) that shape their practice. In addition to teamwork, we will practice different core design capacities to stimulate creativity, and make you a better communicator and collaborator. Admission by application. See [dschool.stanford.edu/classes](http://dschool.stanford.edu/classes) for more information.

**ME 378. Tell, Make, Engage: Action Stories for Entrepreneurship. 1-3 Unit.**

Individual storytelling action and reflective observations gives the course an evolving framework of evaluative methods, formed and reformed by collaborative development within the class. Stories attached to an idea or a discovery, are considered through iterative narrative work and small group research projects. This course will use qualitative and quantitative methods for story engagement, assessment, and class determined research projects with practice exercises, artifacts, short papers and presentations.

**ME 379. Fail Faster. 1 Unit.**

Fail Faster will dive deeply into one of design thinking's key tenets: Fail early, fail often. Students will explore ways to: [1] become comfortable with uncertainty, [2] develop tools to navigate situations of failure, and [3] learn to turn failures into opportunities. This exercised-based workshop will examine the physiological impact of failure and practice the psychological traits and the power of resilience through hands-on activities. Participants will acquire techniques to help them navigate, bounce back, grow and even flourish in the face of their failures.

**ME 381. Orthopaedic Bioengineering. 3 Units.**

Engineering approaches applied to the musculoskeletal system in the context of surgical and medical care. Fundamental anatomy and physiology. Material and structural characteristics of hard and soft connective tissues and organ systems, and the role of mechanics in normal development and pathogenesis. Engineering methods used in the evaluation and planning of orthopaedic procedures, surgery, and devices. Same as: BIOE 381

**ME 385. Tissue Engineering Lab. 1-2 Unit.**

Hands-on experience in the fabrication of living engineered tissues. Techniques include sterile technique, culture of mammalian cells, creation of cell-seeded scaffolds, and the effects of mechanical loading on the metabolism of living engineered tissues. Theory, background, and practical demonstration for each technique. Lab.

**ME 386. Neuromuscular Biomechanics. 3 Units.**

The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with movement disorders. Same as: BIOE 386

**ME 387. Soft Tissue Mechanics. 3 Units.**

Structure/function relationships and mechanical properties of soft tissues, including nonlinear elasticity, viscoelasticity, and poroelasticity.

**ME 388. Transport Modeling for Biological Systems. 3 Units.**

Introduction to electric fields, fluid flows, transport phenomena and their application to biological systems. Maxwell's equations, electrostatics, electro-chemical-mechanical driving forces in physiological systems. Ionic diffusion in electrolytes and membrane transport. Fluid and solid continua theory for porous, hydrated biological tissues. Applications include ionic and molecular transport in tissues and cells, electrophoresis, electromechanical and physicochemical interactions in cells and the extracellular matrix of connective tissue.

**ME 389. Biomechanical Research Symposium. 1 Unit.**

Guest speakers present contemporary research on experimental and theoretical aspects of biomechanical engineering and bioengineering. May be repeated for credit.

**ME 390. Thermosciences Research Project Seminar. 1 Unit.**

Review of work in a particular research program and presentations of other related work.

**ME 390A. High Temperature Gasdynamics Laboratory Research Project Seminar. 1 Unit.**

Review of work in a particular research program and presentations of other related work.

**ME 391. Engineering Problems. 1-10 Unit.**

Directed study for graduate engineering students on subjects of mutual interest to student and staff member. May be used to prepare for experimental research during a later quarter under 392. Faculty sponsor required.

**ME 392. Experimental Investigation of Engineering Problems. 1-10 Unit.**

Graduate engineering students undertake experimental investigation under guidance of staff member. Previous work under 391 may be required to provide background for experimental program. Faculty sponsor required.

**ME 393. Topics in Biologically Inspired or Human Interactive Robotics. 1 Unit.**

Application of observations from human and animal physiology to robotic systems. Force control of motion including manipulation, haptics, and locomotion. Weekly literature review forum led by student. May be repeated for credit. (Cutkosky, Waldron, Niemeyer).

**ME 395. Seminar in Solid Mechanics. 1 Unit.**

Required of Ph.D. candidates in solid mechanics. Guest speakers present research topics related to mechanics theory, computational methods, and applications in science and engineering. May be repeated for credit. See <http://mc.stanford.edu>.

**ME 397. Design Theory and Methodology Seminar. 1-3 Unit.**

What do designers do when they do design? How can their performance be improved? Topics change each quarter. May be repeated for credit.

**ME 399. Fuel Cell Seminar. 1 Unit.**

Interdisciplinary research in engineering, chemistry, and physics. Talks on fundamentals of fuel cells by speakers from Stanford, other academic and research institutions, and industry. The potential to provide high efficiency and zero emissions energy conversion for transportation and electrical power generation.

**ME 400. Thesis. 2-15 Units.**

Investigation of some engineering problems. Required of Engineer degree candidates.

Same as: Engineer Degree

**ME 405. Asymptotic Methods in Computational Engineering. 3 Units.**

This course is not a standard teaching of asymptotic methods as thought in the applied math programs. Nor does it involve such elaborate algebra and analytical derivations. Instead, the class relies on students' numerical programming skills and introduces improvements on numerical methods using standard asymptotic and scaling ideas. The main objective of the course is to bring physical insight into numerical programming. Majority of the problems to be explored involve one- and two-dimensional transient partial differential equations. Topics include: 1- Review of numerical discretization and numerical stability, 2- Implicit versus explicit methods, 3- Introduction to regular and singular perturbation problems, 4- Method of matched asymptotic expansions, 5- Stationary thin interfaces: boundary layers, Debye layers, 6- Moving thin interfaces: shocks, phase interfaces, 7- Reaction-diffusion problems, 8- Directional equilibrium and lubrication theory.

**ME 406. Turbulence Physics and Modeling Using Numerical Simulation Data. 2 Units.**

Prerequisite: consent of instructor.

**ME 408. Spectral Methods in Computational Physics. 3 Units.**

Data analysis, spectra and correlations, sampling theorem, nonperiodic data, and windowing; spectral methods for numerical solution of partial differential equations; accuracy and computational cost; fast Fourier transform, Galerkin, collocation, and Tau methods; spectral and pseudospectral methods based on Fourier series and eigenfunctions of singular Sturm-Liouville problems; Chebyshev, Legendre, and Laguerre representations; convergence of eigenfunction expansions; discontinuities and Gibbs phenomenon; aliasing errors and control; efficient implementation of spectral methods; spectral methods for complicated domains; time differencing and numerical stability. Same as: CME 322

**ME 410A. Introductory Foresight and Technological Innovation. 3 Units.**

Learn to develop long-range, technology-based innovations (5+ years based on industry). This course offers an intensive, hands-on approach using multiple engineering foresight strategies and tools. Model disruptive opportunities and create far-to-near development plans. Three quarter sequence.

**ME 410B. Advanced Foresight and Technological Innovation. 1 Unit.**

Continuation of ME410A. Students will continue developing their invention, integrate additional engineering foresight, and develop an intrinsic innovation mindset. Ongoing discussion of industry examples and contemporary events demonstrate foresight principals and engineering leadership in action.

**ME 410C. Advanced Foresight and Technological Innovation. 1 Unit.**

Continuation of ME410B. Students will continue developing their invention, integrate additional engineering foresight, and develop an intrinsic innovation mindset. Ongoing discussion of industry examples and contemporary events demonstrate foresight principals and engineering leadership in action.

**ME 411. Advanced Topics in Computational Solid Mechanics. 3 Units.**

Discussion of the use of computational simulation methods for analyzing and optimizing production processes and for developing new products, based on real industrial applications in the metal forming industry. Brief review of linear and nonlinear continuum mechanics and the use of finite element methods to model solid mechanics problems, constitutive relations for metals, coupled thermo-elasto-plastic (viscoplastic) problems, modeling metal production processes: bulk metal forming processes using rigid/viscoplastic material models, application examples: hot rolling of plates and the Mannesmann piercing processes and modeling the service behavior of steel pipes. Prerequisites: ME 338A, ME 335A,B,C, or consent of instructor.

**ME 412. Engineering Functional Analysis and Finite Elements. 3 Units.** Concepts in functional analysis to understand models and methods used in simulation and design. Topology, measure, and integration theory to introduce Sobolev spaces. Convergence analysis of finite elements for the generalized Poisson problem. Extensions to convection-diffusion-reaction equations and elasticity. Upwinding. Mixed methods and LBB conditions. Analysis of nonlinear and evolution problems. Prerequisites: 335A,B, CME 200, CME 204, or consent of instructor. Recommended: 333, MATH 171.  
Same as: CME 356

**ME 413. Quantum Confinement Structures: Physics and Fabrication. 3 Units.** Quantum mechanics principles and the thermodynamics of confinement structures. Focus is on potential applications such as solar cells and catalysis. Student presentations. Lab demonstrations. Prerequisite: background in quantum mechanics and statistical thermodynamics.

**ME 414. Solid State Physics for Mechanical Engineering Experiments. 3 Units.** Introductory overview of principles of statistical mechanics, quantum mechanics and solid-state physics. Provides graduate Mechanical Engineering students with the understanding needed to work on devices or technologies which rely on solid-state physics. (Alternate years, not offered summer 2012).

**ME 417. Total Product Integration Engineering. 4 Units.** For students aspiring to be product development executives and leaders in research and education. Advanced methods and tools beyond the material covered in ME 317: quality design across global supply chain, design for robustness, product development risk management, Monte Carlo simulation and product financial analysis, and decision analysis. Small teams or individuals conduct a practical project that produces a case study or enhancement to existing development methods and tools. Enrollment limited to 12. Prerequisites: 317A, B.

**ME 420. Applied Electrochemistry at Micro- and Nanoscale. 3 Units.** Applied electrochemistry with a focus on energy conversion and storage. Basic concepts of thermodynamics, electrochemistry, and first principal calculations are presented, of which today's fundamentals of electrochemical energy conversion/storage are built. Conventional as well as advanced Li battery concepts/systems and their applications will be a main subject area. intercalation and conversion cathode and anode material families will be introduced and electrochemical function/challenges for energy storage of these materials will be highlighted. Conventional electrolyte materials such as carbonate based liquid electrolyte system and advanced solid-state material will be a topic in class.

**ME 421. European Entrepreneurship and Innovation Thought Leaders Seminar. 1 Unit.** Lessons from real-world experiences and challenges in European startups, corporations, universities, non-profit research institutes and venture finance organizations. Speakers include entrepreneurs, leaders from global technology companies, university researchers, venture capitalists, legal experts, senior policy makers and other guests from selected European countries and regions. Geographic scope encompasses Ireland to Russia, and Scandinavia to the Mediterranean region. Enrollment open to undergraduates and graduates in any school or department at Stanford.

**ME 429. COMMERCIAL MEMS DEVICE DESIGN. 3 Units.** This course will provide insight into designing MEMS based devices for use in commercial/consumer and automotive sensor applications. Topics to be covered in this MEMS sensor design course will include electromechanical modeling/simulation, compensation for cross-wafer and wafer-to-wafer fabrication variations in a high volume semiconductor manufacturing facility, design for extreme environments (drop shock, temperature, etc.), and some discussion of the unique challenges with respect to consumer and automotive sensor markets. Student teams will develop a MEMS sensor/transducer design (capacitive 3-axis accelerometer), electro-mechanical system model (Matlab based), fabrication process flow with manufacturing analysis (Excel based) in response to a provided design specification sheet.

**ME 440. Electronic States and Transitions In Quantum Confined Structures. 3 Units.** Summary of selected quantum mechanical concepts with focus on phenomena related to charge separation and transfer. The physics and thermodynamics of excitons described and related to experimental observations. The energy state of electrons as function of confinement size and strength. Presentations include on electron tunneling, measuring the density of electronic states, dielectric behavior of materials, Bose Einstein condensation of quasi particles, and excitons in quantum wells and dots.

**ME 450. Advances in Biotechnology. 3 Units.** Guest academic and industrial speakers. Latest developments in fields such as bioenergy, green process technology, production of industrial chemicals from renewable resources, protein pharmaceutical production, industrial enzyme production, stem cell applications, medical diagnostics, and medical imaging. Biotechnology ethics, business and patenting issues, and entrepreneurship in biotechnology.

**ME 451A. Advanced Fluid Mechanics Multiphase Flows. 3 Units.** Single particle and multi-particle fluid flow phenomena, mass, momentum and heat transfer, characteristic time and length scales, non-dimensional groups; collection of dispersed-phase elements: instantaneous and averaged descriptions for multiphase flow, Eulerian-Eulerian and Lagrangian-Eulerian statistical representations, mixture theories; models for drag, heat and mass transfer; dilute to dense two-phase flow, granular flows; computer simulation approaches for multiphase flows, emerging research topics. Prerequisites: graduate level fluid mechanics and engineering mathematics, and undergraduate engineering mechanics and thermodynamics.

**ME 451B. Advanced Fluid Mechanics Flow Instability. 3 Units.** Waves in fluids: surface waves, internal waves, inertial and acoustic waves, dispersion and group velocity, wave trains, transport due to waves, propagation in slowly varying medium, wave steepening, solitons and solitary waves, shock waves. Instability of fluid motion: dynamical systems, bifurcations, Kelvin-Helmholtz instability, Rayleigh-Benard convection, energy method, global stability, linear stability of parallel flows, necessary and sufficient conditions for stability, viscosity as a destabilizing factor, convective and absolute instability. Focus is on flow instabilities. Prerequisites: graduate courses in compressible and viscous flow.

**ME 451C. Advanced Fluid Mechanics. 3 Units.** Compressible flow: governing equations, Crocco-Vazsonyi's equations, creation and destruction of vorticity by compressibility effects, shock waves. Modal decomposition of compressible flow, linear and nonlinear modal interactions, interaction of turbulence with shock waves. Energetics of compressible turbulence, effects of compressibility on free-shear flows, turbulent boundary layers, Van Driest transformation, recovery temperature, and shock/boundary layer interaction. Strong Reynolds analogy, modeling compressible turbulent flows. Prerequisites: 355, 361A, or equivalents.

**ME 451D. Microhydrodynamics. 3 Units.**

Transport phenomena on small-length scales appropriate to applications in microfluidics, complex fluids, and biology. The basic equations of mass, momentum, and energy, derived for incompressible fluids and simplified to the slow-flow limit. Topics: solution techniques utilizing expansions of harmonic and Green's functions; singularity solutions; flows involving rigid particles and fluid droplets; applications to suspensions; lubrication theory for flows in confined geometries; slender body theory; and capillarity and wetting. Prerequisites: 120A,B, 300, or equivalents.

Same as: CHEMENG 310

**ME 453A. Finite Element-Based Modeling and Simulation of Linear Fluid/Structure Interaction Problems. 3 Units.**

Basic physics behind many fluid/structure interaction phenomena. Finite element-based computational approaches for linear modeling and simulation in the frequency domain. Vibrations of elastic structures. Linearized equations of small movements of inviscid fluids. Sloshing modes. Hydroelastic vibrations. Acoustic cavity modes. Structural-acoustic vibrations. Applications to liquid containers and underwater signatures. Prerequisite: graduate course in the finite element method or consent of instructor.

**ME 453B. Computational Fluid Dynamics Based Modeling of Nonlinear Fluid/Structure Interaction Problems. 3 Units.**

Basic physics behind many high-speed flow/structure interaction phenomena. Modern computational approaches for nonlinear modeling and simulation in the time domain. Dynamic equilibrium of restrained and unrestrained elastic structures. Corotational formulation for large structural displacements and rotations. Arbitrary Lagrangian-Eulerian description of inviscid and viscous flows. Time-accurate CFD on moving and deforming grids. Discrete geometric conservation laws. Discretization of transmission conditions on non-matching discrete fluid/structure interfaces. Coupled fluid/mesh-motion/structure time integration schemes. Application to divergence, flutter, and buffeting. Prerequisites: graduate course in the finite element method, and in computational fluid dynamics.

**ME 455. Complex Fluids and Non-Newtonian Flows. 3 Units.**

Definition of a complex liquid and microrheology. Division of complex fluids into suspensions, solutions, and melts. Suspensions as colloidal and non-colloidal. Extra stress and relation to the stresslet. Suspension rheology including Brownian and non-Brownian fibers. Microhydrodynamics and the Fokker-Planck equation. Linear viscoelasticity and the weak flow limit. Polymer solutions including single mode (dumbbell) and multimode models. Nonlinear viscoelasticity. Intermolecular effects in nondilute solutions and melts and the concept of reptation. Prerequisites: low Reynolds number hydrodynamics or consent of instructor.

Same as: CHEMENG 462

**ME 457. Fluid Flow in Microdevices. 3 Units.**

Physico-chemical hydrodynamics. Creeping flow, electric double layers, and electrochemical transport such as Nernst-Planck equation; hydrodynamics of solutions of charged and uncharged particles. Device applications include microsystems that perform capillary electrophoresis, drug dispersion, and hybridization assays. Emphasis is on bioanalytical applications where electrophoresis, electro-osmosis, and diffusion are important. Prerequisite: consent of instructor.

**ME 458. Advanced Topics in Electrokinetics. 3-5 Units.**

Electrokinetic theory and electrokinetic separation assays. Electroneutrality approximation and weak electrolyte electrophoresis theory. Capillary zone electrophoresis, field amplified sample stacking, isoelectric focusing, and isotachopheresis. Introduction to general electrohydrodynamics (EHD) theory including the leaky dielectric concept, the Ohmic model formulation, and electrokinetic flow instabilities. Prerequisite: ME 457.

**ME 461. Advanced Topics in Turbulence. 3 Units.**

Turbulence phenomenology; statistical description and the equations governing the mean flow; fluctuations and their energetics; turbulence closure problem, two-equation turbulence models, and second moment closures; non-local effect of pressure; rapid distortion analysis and effect of shear and compression on turbulence; effect of body forces on turbulent flows; buoyancy-generated turbulence; suppression of turbulence by stratification; turbulent flows of variable density; effect of rotation on homogeneous turbulence; turbulent flows with strong vortices. Prerequisites: 351B and 361A, or consent of instructor.

**ME 463. Advanced Topics in Plasma Science and Engineering. 3 Units.**

Research areas such as plasma diagnostics, plasma transport, waves and instabilities, and engineering applications.

**ME 469. Computational Methods in Fluid Mechanics. 3 Units.**

The last two decades have seen the widespread use of Computational Fluid Dynamics (CFD) for analysis and design of thermal-fluids systems in a wide variety of engineering fields. Numerical methods used in CFD have reached a high degree of sophistication and accuracy. The objective of this course is to introduce  $\zeta$ classical $\zeta$  approaches and algorithms used for the numerical simulations of incompressible flows. In addition, some of the more recent developments are described, in particular as they pertain to unstructured meshes and parallel computers. An in-depth analysis of the procedures required to certify numerical codes and results will conclude the course.

**ME 469B. Computational Methods in Fluid Mechanics. 3 Units.**

Advanced CFD codes. Geometry modeling, CAD-CFD conversion. Structured and unstructured mesh generation. Solution methods for steady and unsteady incompressible Navier-Stokes equations. Turbulence modeling. Conjugate (solid/fluid) heat transfer problems. Development of customized physical models. Batch execution for parametric studies. Final project involving solution of a problem of student $\zeta$ s choosing. Prerequisite: ME 300C/CME 206.

**ME 470. Uncertainty Quantification. 3 Units.**

Uncertainty analysis in computational science. Probabilistic data representation, propagation techniques and validation under uncertainty. Mathematical and statistical foundations of random variables and processes for uncertainty modeling. Focus is on state-of-the-art propagation schemes, sampling techniques, and stochastic Galerkin methods. The concept of model validation under uncertainty and the determination of confidence bounds estimates. Prerequisite: basic probability and statistics at the level of CME 106 or equivalent.

**ME 471. Turbulent Combustion. 3 Units.**

Basis of turbulent combustion models. Assumption of scale separation between turbulence and combustion, resulting in Reynolds number independence of combustion models. Level-set approach for premixed combustion. Different regimes of premixed turbulent combustion with either kinematic or diffusive flow/chemistry interaction leading to different scaling laws and unified expression for turbulent velocity in both regimes. Models for non-premixed turbulent combustion based on mixture fraction concept. Analytical predictions for flame length of turbulent jets and NO<sub>x</sub> formation. Partially premixed combustion. Analytical scaling for lift-off heights of lifted diffusion.

**ME 472. Computational Modeling of Radiative Transfer. 3 Units.**

Overview of physical modeling and computational methods for radiation heat transfer in participating media. Review of surface transfer. Radiation hydrodynamics and the radiative transfer equation. Constitutive relations for transport coefficients of participating media. Formal solution and one-dimensional transfer. Moment methods: diffusion and spherical harmonics. The discrete ordinates method: spatial and angular discretization, false scattering and ray effects, the finite volume method, parallelization. Monte Carlo ray tracing: ray tracing, Monte Carlo simulations, surface transfer, transfer in participating media, variance reduction techniques, parallelization. Additional topics covered time permitting: spectral modeling, collimated sources, transient radiative transfer, reverse ray-tracing. Pre-requisites: ME 300C or equivalent; STATS 116 or equivalent; undergraduate heat transfer; ME 352A strongly recommended but not required.

**ME 484. Computational Methods in Cardiovascular Bioengineering. 3 Units.**

Lumped parameter, one-dimensional nonlinear and linear wave propagation, and three-dimensional modeling techniques applied to simulate blood flow in the cardiovascular system and evaluate the performance of cardiovascular devices. Construction of anatomic models and extraction of physiologic quantities from medical imaging data. Problems in blood flow within the context of disease research, device design, and surgical planning.  
Same as: BIOE 484

**ME 485. Modeling and Simulation of Human Movement. 3 Units.**

Direct experience with the computational tools used to create simulations of human movement. Lecture/labs on animation of movement; kinematic models of joints; forward dynamic simulation; computational models of muscles, tendons, and ligaments; creation of models from medical images; control of dynamic simulations; collision detection and contact models. Prerequisite: 281, 331A,B, or equivalent.  
Same as: BIOE 485

**ME 491. Ph.D. Teaching Experience. 3 Units.**

Required of Ph.D. students. May be repeated for credit.

**ME 492. Mechanical Engineering Teaching Assistance Training. 1 Unit.****ME 495A. ME Seminar Series: Product Design. 1 Unit.**

Seminars will feature accomplished product designers and product design researchers. Guest speakers will come from the U.S. and internationally, and will present on topics of current interest to the Product Design Community.

**ME 495B. ME Seminar Series: At the Interface between Mechanical Engineering and Biology. 1 Unit.**

Seminars will feature early career mechanical engineers working on leading edge problems in biomechanical engineering. Topics include mechanobiology, cell mechanics, transport phenomena in biological systems, bio-inspired design, design and analysis of biodevices or bioinstrumentation, biomaterials, and modeling of physiological systems. Guest speakers will come from top universities within the U.S. and internationally, and will discuss both their past research and plans for building a research program in the future.

**ME 500. Thesis. 1-15 Unit.**

Same as: Ph.D.

**ME 571. Surgical Robotics Seminar. 1 Unit.**

Surgical robots developed and implemented clinically on varying scales. Seminar goal is to expose students from engineering, medicine, and business to guest lecturers from academia and industry. Engineering and clinical aspects connected to design and use of surgical robots, varying in degree of complexity and procedural role. May be repeated for credit.  
Same as: CS 571

**ME 801. TGR Project. 0 Units.****ME 802. TGR Dissertation. 0 Units.****Medicine Courses****MED 1A. Leadership in Multicultural Health. 2 Units.**

Designed for undergraduates serving as staff for the Stanford Medical Youth Science Summer Residential Program (SRP). Structured opportunities to learn, observe, participate in, and evaluate leadership development, multicultural health theories and practices, and social advocacy. Utilizes service learning as a pedagogical approach to developing an understanding of the intersections between identity, power and privilege and disparities (health, education, environment), fostering knowledge and skills to become social advocates to address forms of inequities. Students explore approaches for identifying and tackling issues of equity (health and education) as well as learn fundamental skills necessary to implement activities for the Summer Residential Program.

**MED 1B. Identity, Power and Privilege in Multicultural Health. 1 Unit.**

An independent study service learning course designed to develop students' understanding of the intersection between identity, power, privilege, and disparities (health, education, environment). Students submit a written reflective term paper based on their experience as staff for the Summer Residential Program as well as their understanding of how constructs of identity, power and privilege impact low-income and underrepresented students in their pursuit of higher education.  
Prerequisite MED 1A.

**MED 10SC. Responses to the AIDS Epidemic. 2 Units.**

This course focuses on the HIV epidemic, contrasting the origin and spread of HIV and AIDS in Africa and the emergence of HIV in the U.S., in particular the history of HIV in San Francisco and the Bay Area. We will meet the people and visit the institutions which played key roles in the Public Health prevention, care, and treatment of HIV in San Francisco and consider the impact of HIV globally in our thinking about epidemic disease and the international responses to HIV. This will include key locations in the City, including the AIDS Grove, San Francisco General Hospital, the San Francisco Department of Public Health, the Castro, and local AIDS service organizations. Students will also hear from patients, physicians, and activists who are living with AIDS. We will also meet with scientists at UCSF, Stanford, and local pharmaceutical companies who are at the forefront of new prevention, therapeutic, and diagnostic research. By examining the relationship between the emergence of Gay activism and AIDS in California and New York and the pandemic in Southern Africa, the course will emphasize the multi-disciplinary and multi-sector approach to epidemic infectious disease. How scientists, patients, epidemiologists, pharmaceutical companies, and policymakers develop effective responses to the AIDS epidemic? What are we learning from Africa and what can Africa learn from us about how communities react to deadly threats from infectious disease? AIDS experts from the Stanford community and Africa are invited to share their perspectives with us. In preparation for the seminar, you will be required to read *And the Band Played On* and Barnett and Whiteside's *AIDS in the Twenty-First Century* and selected scientific articles. As part of a group, you will also develop an AIDS-related project of your choice which you will present on the last day of class. Sophomore College course, applications required, due 12noon April 5, 2016. To apply, see <http://soco.stanford.edu>.

**MED 23. ASB The Cuisine of Change: Promoting Child Health and Combating Food Insecurity. 1 Unit.**

Topics include obesity rates in America, the health and food education in our schools, the fundamentals of nutrition, the challenges of processed foods, the various lifestyle choices and fads surrounding healthy eating, and the complex ecology of food insecurity and welfare.

**MED 27SI. Alternative Spring Break: Healthcare of Underserved Communities in Central California. 1 Unit.**

Pre-field group directed reading for Alternative Spring Break: Healthcare of Underserved Communities in Central California.

**MED 28SI. Alternative Spring Break: Health Accessibility. 1 Unit.**

Alternative Spring Break class. Pre-field course for students participating in the Health Accessibility Alternative Spring Break trip. Focuses on the Bay Area and the current state of the U.S. healthcare system, how it has developed, and how it can be transformed to ensure greater accessibility for all.

**MED 50N. Translating Science to Disease Treatment. 3 Units.**

Investigates how scientific research informs how physicians take care of patients and how clinical research informs how scientific experiments are conducted. Topics include how these two processes have improved health and have resulted in innovation and scientific progress; specific human disease areas in allergy and immunology that affect all ages of patients globally, including food allergy; scientific concepts of research that helped in discovery of novel diagnostics and treatment of disease; ethical roles of physicians and scientists in conducting translational research in human disease.

**MED 50Q. Respiration. 3 Units.**

Preference to sophomores. Topics include: the biological basis for use of oxygen for aerobic metabolism in animals, human lung physiology and pathophysiology, comparative physiology of respiration in fish, birds and mammals, new insights into mammalian lung development, current challenges in human respiratory health including air pollution and lung cancer. Student presentations on specific topics based on literature research developed in consultation with the instructor. Application required.

**MED 51Q. Palliative Medicine, Hospice and End of Life Care for Diverse Americans. 3 Units.**

Introduces students to changing demographics of the aging and dying population in the United States. Topics include current issues in palliative medicine, hospice and end-of-life care for an increasingly diverse population. Includes simulated video case studies, real patient case discussions and collaborative field project. Application required.

**MED 70Q. Cancer and the Immune System. 2 Units.**

Preference to sophomores. Myths and facts surrounding the idea that the immune system is capable of recognizing malignant cells. The biological basis and function of effector arms of the immune system; how these mechanisms may be used to investigate the biological basis and potential therapy of cancer. How the immune system functions.

**MED 71N. Hormones in a Performance-Enhanced Society. 3 Units.**

(Formerly 117Q) Preference to freshmen. Explores how the availability of hormone therapy has affected various aspects of daily lives. Topics include the controversies concerning menopause and its treatment; use of hormones in athletics; cosmetic use of hormones to enhance growth, strength, and libido; use of hormones as anti-aging drugs; and how the hormone system has influenced our notions of gender. Includes the biochemistry and physiology of the human endocrine system; how hormones influence behavior, and how to read a scientific paper.

**MED 73N. Scientific Method and Bias. 3 Units.**

Offers an introduction to the scientific method and common biases in science. Examines theoretical considerations and practical examples where biases have led to erroneous conclusions, as well as scientific practices that can help identify, correct or prevent such biases. Additionally focuses on appropriate methods to interweave inductive and deductive approaches. Topics covered include: Popper's falsification and Kuhn's paradigm shift, revolution vs. evolution; determinism and uncertainty; probability, hypothesis testing, and Bayesian approaches; agnostic testing and big data; team science; peer review; replication; correlation and causation; bias in design, analysis, reporting and sponsorship of research; bias in the public perception of science, mass media and research; and bias in human history and everyday life. Provides students an understanding of how scientific knowledge has been and will be generated; the causes of bias in experimental design and in analytical approaches; and the interactions between deductive and inductive approaches in the generation of knowledge.

**MED 86Q. Seeing the Heart. 2 Units.**

Introduction to biomedical technology, science, clinical medicine, and public policy through cardiovascular imaging. Invasive and noninvasive techniques to detect early stage heart disease and to see inside the heart and blood vessels. Topics include: common forms of heart disease, how they develop, and why they affect so many people; imaging technologies such as ultrasound, CT, MRI, PET, and optical; a cost-effective public screening program. Field trips to Stanford Medical Center imaging centers.

**MED 87Q. Women and Aging. 5 Units.**

Preference to sophomores. Biology, clinical issues, social and health policies of aging; relationships, lifestyles, and sexuality; wise women and grandmothers. Sources include scientific articles, essays, poetry, art, and film. Service-learning experience with older women. Service Learning Course (certified by Haas Center).

**MED 88Q. Dilemmas in Current Medical Practice. 3 Units.**

Preference to sophomores. Social, political, scientific, and economic forces influencing medical practice. Spiraling costs, impaired access to health care, and disillusionment toward the health care system. Attempts by government and medical insurers to control costs through managed care and health maintenance organizations. Medical education and how it has affected the practice of medicine. Alternative health care, preventive medicine, and the doctor-patient relationship. The paradox of health in America: why do so many people who are healthy feel unhealthy? Mandatory observation of instructors in their medical practices.

**MED 94Q. Hormones, Health, and Disease. 2 Units.**

Preference to sophomores. The role of hormones in maintaining health; how abnormalities in hormones cause disease. Topics include: the pituitary, the master gland; thyroid hormones and metabolism; insulin and diabetes; adrenal steroids and hypertension; vitamin D, parathyroid hormone, and osteoporosis; sex hormones, birth control, pregnancy, and menopause; androgens, erectile dysfunction, and athletic performance; cholesterol, obesity, and cardiovascular risk. Recommended: background in human biology and physiology.

**MED 108Q. Human Rights and Health. 3 Units.**

Preference to sophomores. History of human-rights law. International conventions and treaties on human rights as background for social and political changes that could improve the health of groups and individuals. Topics such as: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Possible optional opportunities to observe at community sites where human rights and health are issues. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva. PowerPoint presentation on topic of choice required.

**MED 120N. Pathophysiology of Diseases of the Heart. 3 Units.**

Preference to freshmen. Introduces students to the anatomy, physiology, pathology and clinical aspects that comprise the discipline of cardiovascular medicine. Topics will include explanations of such pathologic states as heart attack, stroke, congestive heart failure, cardiac rhythm disturbances, and sudden cardiac death. Introduction to the underlying principles of diagnosis and treatment of heart disease are included in the syllabus.

**MED 121. Translational Research and Applied Medicine. 3 Units.**

(Same as MED 221; graduate and medical students enroll in MED 221) Open to undergraduate students, this course enables students to learn basic principles in the design, performance and analysis of translational medical research studies. The course includes both didactic seminars from experts in translational medicine as well as the opportunity to design and present a translational research project.

**MED 129. Health Care Systems Around the World. 4 Units.**

This course will explore the role of health care systems in societies around the world, identifying the common challenges facing health care systems and how different institutional structures in different countries perform in response to these challenges. We will structure the course around general conceptual frameworks related to key health system institutions (including financing, insurance, provider payment, patient cost-sharing, and the regulation of medical technology). From this foundation, we will draw on the experience of individual countries (high and low income, with heavy chronic disease and infectious disease burdens) to illustrate the function of these institutions under real-world circumstances observed around the globe.

Same as: HUMBIO 129W

**MED 130. Yesplus: Meditation practices for wellbeing. 1 Unit.**

The Practice of Happiness is a 1-unit credit course that provides students with tools and strategies to develop a sustainable approach to their happiness and well-being. Students will learn breathwork- and meditation-based processes to decrease stress and increase happiness and peace. In addition, students will also engage in community-building group discussions, interactive processes, and study happiness-based research to discover for themselves what happiness is, and how it can be sustained as a personal practice. In addition to weekly sessions, there are 3 mandatory back-to-back sessions over a weekend in the quarter-hours will be Friday: 6:30pm - 10pm; Saturday/Sunday: 1pm - 5pm (exact dates TBD). See [yesplus.stanford.edu](http://yesplus.stanford.edu) for further insight into the program. Enrollment limited; priority to residents of Castano Hall; others selected by application.

**MED 143A. Patient Health Education in Community Clinics. 2 Units.**

Open to undergraduate, graduate, and medical students. Principles of health education, health coaching, theories of behavior change, methods for risk reduction. Presentations of health education modules, focusing on topics prevalent among underserved populations. Students apply theoretical frameworks to health education activities in the Cardinal Free Clinics. Application required.

Same as: MED 243A

**MED 143B. Patient Health Education in Community Clinics - Practicum. 2 Units.**

Open to undergraduate, graduate, and medical students. For students who have completed MED 143A/243A and currently volunteer in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections.

Prerequisite: successful completion of MED 143A/243A.

Same as: MED 243B

**MED 143C. Patient Health Education in Community Clinics - Practicum. 2 Units.**

Open to undergraduate, graduate, and medical students. For students currently volunteering in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections. Pre-requisites: MED 143A/243A, Med 143B/243B.

Same as: MED 243C

**MED 145. Alternative Spring Break: Confronting HIV/AIDS in San Francisco. 1 Unit.**

Preparation for the Alternative Spring Break trip. Current issues regarding HIV/AIDS worldwide and in the United States, with a specific focus on San Francisco. Topics include biology, transmission, prevention, pharmaceutical development, discrimination, stigma, access to health care, and perspectives of affected communities. Students enrolling for 3 units attend both Monday and Wednesday sections; medical students who can only attend Wednesday session have option to enroll for 2 units. See [asb.stanford.edu](http://asb.stanford.edu) for more information.

**MED 147. Methods in Community Assessment, Evaluation, and Research. 3 Units.**

Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.

Same as: CHPR 247, MED 247

**MED 149. Medical Interpreting at the Cardinal Free Clinics: The Qualified Bilingual Student Program. 2 Units.**

The quality of health care often depends as much on the interpreter as the provider. This foundation courses prepares bilingual students to work as medical interpreters in hospital and clinic settings. Students learn basic interpreting skills; ethics; communication techniques; medical vocabulary; key healthcare information; communication skills for advocacy; how to draft practical, working solutions, and professional development. By application only; must be an accepted Cardinal Free Clinic (CFC) interpreter volunteer. Applications accepted in Fall for Winter quarter and in Winter for Spring quarter. Students registering for this 2-unit course are required to interpret at the clinic a minimum of 2 weekend sessions; upon completion of this course, students can continue to volunteer at CFC for academic credit.

**MED 150. Clinical Foundations for Patient Navigators at Arbor Free Clinic. 1 Unit.**

Addresses key areas of learning for patient navigator volunteers at Arbor Free Clinic. Prepares patient navigators for their clinical role. Enrollment limited to current, active patient navigator volunteers.

**MED 157. Foundations for Community Health Engagement. 3 Units.**

Open to undergraduate, graduate, and MD students. Examination and exploration of community health principles and their application at the local level. Designed to prepare students to make substantive contributions in a variety of community health settings (e.g. clinics, government agencies, non-profit organization, advocacy groups). Topics include community health assessment; health disparities; health promotion and disease prevention; strategies for working with diverse, low-income, and underserved populations; and principles of ethical and effective community engagement.

**MED 158A. From Foodies to Freegans: Food Popular Topics in the Silicon Valley. 2 Units.**

This is a discussion-based survey course to introduce the complexities of many "pop topics" in food, such as obesity, sustainability, and local vs. organic food. Course offered over two quarters; second part is MED 158B. The course focuses on Silicon Valley and is taught through a food justice lens. The goal is to provide knowledge and new frameworks for conceptualizing food that transform the way students think about, eat, and purchase food. Furthermore, course content is aligned with Community Engaged Learning (CEL) so that students have the opportunity to collaborate with local partners to complete community-based projects relevant to course topics. Coursework involves class participation, critical reflection, and three papers written for different audiences in the food space.

**MED 158B. From Foodies to Freegans Practicum. 2 Units.**

Students work toward making change in the food system. This course matches students with a community partner in the local area who is working to address food issues, broadly defined. There are many ways to make meaningful impact, including working at Second Harvest Food Bank as a Health Ambassador, or to assist with the Healthy Cornerstore initiatives or Garden to Table with the Hispanic Chamber of Commerce. Provides students with the opportunity to apply their academic area of concentration within a community-based context that fits their interests. Med 158A highly recommended but not required as a prerequisite.

**MED 159A. Service-Learning in Migrant Health. 2 Units.**

Examines the intersection of migration, poverty and health; provides opportunities for engagement directly with community partners working with Bay Area Mexican migrant populations. Weekly knowledge and skills-building sessions covering the process of migration; the demographic characteristics of the local migrant population; the health and socioeconomic status of local migrant populations; current initiatives to improve their quality of life and well-being. Service opportunities include participation in community organizing; health education seminars; and health screening activities. Prerequisite: intermediate/advanced level of Spanish language proficiency.

**MED 159B. Service-Learning in Migrant Health. 2 Units.**

Second quarter of two-quarter series. Examines the intersection of migration, poverty and health; provides opportunities for engagement directly with community partners working with Bay Area Mexican migrant populations. Weekly knowledge and skills-building sessions covering the process of migration; the demographic characteristics of the local migrant population; the health and socioeconomic status of local migrant populations; current initiatives to improve their quality of life and well-being. Service opportunities include participation in community organizing; health education seminars; and health screening activities. Prerequisites: intermediate/advanced level of Spanish language proficiency, MED 159A.

**MED 160. Physician Shadowing: Stanford Immersion in Medicine Series. 1 Unit.**

Undergraduates are paired with a physician mentor at Stanford Hospital and Clinics, Lucile Packard Children's Hospital, or the Veteran's Administration Hospital. May be repeated for credit. Prerequisite: Application and acceptance to the SIMS program. Same as: SIMS

**MED 182. Early Clinical Experience at the Cardinal Free Clinics. 1-2 Unit.**

The Cardinal Free Clinics, consisting of Arbor and Pacific Free Clinic, provide culturally appropriate, high quality transitional medical care for underserved patient populations in the Bay Area. Students volunteer in various clinic roles to offer services including health education, interpretation, referrals, and labs. Clinical students are guided in the practice of medical interviews, history-taking and physical examinations as appropriate, and work with attending physicians to arrive at a diagnosis and management plan. By application only. Visit <http://cfc.stanford.edu> for more information. Same as: MED 282

**MED 184A. Team Leadership in the Cardinal Free Clinics I. 1 Unit.**

Introduction to skills for effective leadership, including: conflict resolution, team dynamics, leadership styles, personality types, giving and receiving feedback, and group decision-making. Utilizes hands-on-activities and real-life clinic scenarios. Applied learning through shifts at the Cardinal Free Clinics and related project work. Enrollment limited to Cardinal Free Clinic Managers. Same as: MED 284A

**MED 184B. Team Leadership in the Cardinal Free Clinics II. 1 Unit.**

Continuation of MED 184A/MED 284A. Introduction to skills for effective leadership, including: conflict resolution, team dynamics, leadership styles, personality types, giving and receiving feedback, and group decision-making. Utilizes hands-on-activities and real-life clinic scenarios. Applied learning through shifts at the Cardinal Free Clinics and related project work. Enrollment limited to Cardinal Free Clinic Managers. Same as: MED 284B

**MED 184C. Team Leadership in the Cardinal Free Clinics III. 1 Unit.**

Continuation of MED 184A/MED 284A and MED 184B/MED284B. Introduction to skills for effective leadership, including: conflict resolution, team dynamics, leadership styles, personality types, giving and receiving feedback, and group decision-making. Utilizes hands-on-activities and real-life clinic scenarios. Applied learning through shifts at the Cardinal Free Clinics and related project work. Enrollment limited to Cardinal Free Clinic Managers. Same as: MED 284C

**MED 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**MED 200. The Medical Device Entrepreneur's Course Primer. 1 Unit.**

This course provides students and entrepreneurs a solid understanding of the complex US regulatory framework governing medical devices, in vitro diagnostics and drug-device combination products. Through class lectures, research and team assignments, class participants learn the key regulatory, clinical and ethical issues in biomedical product innovation. Focuses specifically on US investigational and marketing submission types and preparation of submission outlines, key steps to develop a product that will meet US regulatory requirements and development of regulatory strategy for a novel product. While there are no technical prerequisites, the course projects are challenging, and thus are more suitable for graduate and advanced undergraduate students.

**MED 200A. Practical Applications for Qualitative Data Analysis. 2 Units.**

(Same as PEDS 202A) First quarter of a two-quarter course. Gain experience analyzing qualitative data using qualitative analysis software (i.e. Nvivo, Dedoose). Conduct analysis using your own or existing data sources. Explore multiple qualitative data analysis topics through class lectures, foundational readings and hands-on learning. Core topics include: grounded theory, qualitative data analysis approaches, software-based analysis, cleaning and coding of data, and interpreting data. Note: Preference will be given to medical students and undergraduate students that have successfully completed an introductory qualitative methods course. Enrollment in subsequent MED 202B required.

**MED 200B. Practical Applications for Qualitative Data Analysis. 2 Units.**

(Same as PEDS 202B) Second quarter of a two-quarter course provides hands-on experience summarizing qualitative data and describing findings for dissemination. Final course product will be a draft manuscript for submission with students listed as co-authors. Core topics include: identifying themes and representative quotes, community-engaged dissemination, abstract submission, posters, oral presentations, manuscript writing, and journal selection. Prerequisite: Successful completion of MED 202A.

**MED 201. Internal Medicine: Body as Text. 1 Unit.**

Body as Text refers to the idea that every patient's body tells a story. The narrative includes the past and present of a person's social and medical condition; it is a demonstration of the phenotype. The art of reading the body as text was at its peak in the first half of the 20th century, but as technology has become ascendant, bedside skills and the ability to read the text have faded. Beyond scientific knowledge and medical facts, it is this often forgotten craft which is at the heart of the excitement of being an internist. This course introduces students to the art of the clinical exam, to developing a clinical eye, and learning to see the body in a completely different way.

**MED 202. Alternative Spring Break: Rosebud Resilience: Community, Health and Learning in Lakota Nation. 1 Unit.**

Open to MD, graduate, and undergraduate students. Classroom preparation followed by a one week spring break service learning experience on a reservation in South Dakota. Introduces students to the challenges and promise of Native American and rural health care, and the role of communities as leaders and problem solvers. Includes lectures, discussion and readings pertaining to Native American culture, current research in Native American health, and the methods and practice of community based participatory research.

**MED 203. Patient Partner Skills: in Care Transitions. 1 Unit.**

A clinical and quality improvement experience for pre-clerkship medical students. The course provides early clinical experience for pre-clerkship medical students, to engage with patients in multiple healthcare environments (inpatient medicine/outpatient medicine/skilled nursing facilities/patients' homes). Students gain an understanding of the challenges patients face during the transitions, and learn and help design quality improvement initiatives to improve patient outcomes and reduce readmissions. Course features include working as part of an interdisciplinary healthcare team and promoting patient empowerment. Students work closely with Stanford Department of Medicine faculty and with Stanford Internal Medicine residents, and are trained to use health coaching, motivational interviewing, and shared decision-making skills.

**MED 204. Access and Delivery of Essential Medicines to Poor and Underserved Communities. 1 Unit.**

Student initiated lecture series. Guest speakers. Topics include: neglected diseases, underserved and impoverished markets, disease profiles of lower and middle income countries, pricing and distribution of biomedical end products, intellectual property in medicine and its effect on delivery of healthcare.

**MED 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.**

Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics. Same as: CHPR 206, HRP 206, STATS 211

**MED 207. History of Medicine. 1 Unit.**

Begins with studying Shamanistic medicine, practiced by humans throughout the globe, for millennia. Covers magico-religious medicine developed in ancient Egypt, Mesopotamia and Greece; the 4th Century BC with Hippocrates beginning to separate medicine from religion and magic; the slow progress in ancient Rome, the medieval period, and during the Renaissance; and the acceleration in the pace of discoveries in the last few centuries, as medicine became more scientific, complex, and specialized as Pasteur developed the germ theory of disease, Darwin and Mendel publications begin the development of Evolution and of Genetics, Watson and Crick solved the mystery of DNA structure, organ transplants began, and imaging procedures such as CT and MRI came into being. Lectures are profusely illustrated, and, for the sake of comparison, two equally ancient systems of medicine, the traditional Chinese and the Vedic, are briefly reviewed.

**MED 209. Health Law: Quality and Safety of Care. 3 Units.**

(Same as LAW 727) Concerns about the quality of health care, along with concerns about its cost and accessibility, are the focal points of American health policy. Considers how legislators, courts, and professional groups attempt to safeguard the quality and safety of the health care patients receive. The course approaches "regulation" in a broad sense. Focuses on regimes for determining who may deliver health care services (e.g. licensing and accreditation agencies), legal and ethical obligations providers owe to patients (e.g. confidentiality, informed consent), individual and institutional liability for substandard care, and various proposals for reforming the medical malpractice system. Includes discussion of the Patient Protection and Affordable Care Act (aka, "Obamacare"), which is launching many new initiatives aimed at assuring or improving health care quality.

**MED 212. Methods for Health Care Delivery Innovation, Implementation and Evaluation. 2 Units.**

Preference given to postgraduate fellows and graduate students. Focus is on implementation science and evaluation of health care delivery innovations. Topics include implementation science theory, frameworks, and measurement principles; qualitative and quantitative approaches to designing and evaluating new health care models; hybrid design trials that simultaneously evaluate implementation and effectiveness; distinction between quality improvement and research, and implications for regulatory requirements and publication; and grant-writing strategies for implementation science and evaluation. Students will develop a mock (or actual) grant proposal to conduct a needs assessment or evaluate a Stanford/VA/community intervention, incorporating concepts, frameworks, and methods discussed in class. Priority for enrollment for CHPR 212 will be given to CHPR master's students. Same as: CHPR 212, HRP 218

**MED 213. Compassion Cultivation for the Physician-in-Training. 1 Unit.**

Provides mentored practice and growth in students' knowledge, skills and attitudes in compassion cultivation for one's self and others. Integrates traditional contemplative practices with contemporary psychology and scientific research on compassion.

**MED 215A. Health Policy PhD Core Seminar I--First Year. 2 Units.**

Seminar series is the core tutorial for first-year Health Policy and Health Services Research graduate students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study. Same as: HRP 201A

**MED 215B. Health Policy PhD Core Seminar II--First Year. 2 Units.**

Second in a three-quarter seminar series is the core tutorial for first-year Health Policy and Health Services Research graduate students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study. Same as: HRP 201B

**MED 215C. Health Policy PhD Core Seminar III--First Year. 2 Units.**

Third in a three-quarter seminar series is the core tutorial for first-year Health Policy and Health Services Research graduate students. Major themes in fields of study including health insurance, healthcare financing and delivery, health systems and reform and disparities in the US and globally, health and economic development, health law and policy, resource allocation, efficiency and equity, healthcare quality, measurement and the efficacy and effectiveness of interventions. Blocks of session led by Stanford expert faculty in particular fields of study. Same as: HRP 201C

**MED 220. Literature and Human Experimentation. 3-5 Units.**

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann and Vivien Spitz's Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care.

Same as: AFRICAAM 223, COMPLIT 223, CSRE 123B, HUMBIO 175H

**MED 221. Translational Research and Applied Medicine. 2-3 Units.**

(Same as MED 121; undergraduate students enroll in MED 121) Open to graduate students and medical students, this course enables students to learn basic principles in the design, performance and analysis of translational medical research studies. The course includes both didactic seminars from experts in translational medicine as well as the opportunity to design and present a translational research project. Students enrolling for 3 units are paired with a TRAM translational research project and work as a team with TRAM trainees and faculty on a weekly basis, as arranged by the instructor, and present a final project update at the end of the quarter.

**MED 222. The Medical Malpractice System. 2 Units.**

Focus is on policy and law pertaining to the medical malpractice system in the U.S. Readings include a mix of articles from the medical, law and health policy literatures, as well as some legal cases. Includes problem-based learning and small group work.

**MED 223. Cardiovascular and Pulmonary Sciences Seminar. 3 Units.**

Focus is to fine tune critical thinking skills by analyzing original publications and understanding the current complexities of the cardiovascular system. Students attend a lecture series presented by prominent external speakers one day of the week and learn new approaches and medical advances from Stanford faculty during the other class meeting. Medical and graduate students interested in cardiovascular medicine and research, technology development, genetics and immunology are encouraged to enroll.

**MED 225. U.S. Human Rights NGOs and International Human Rights. 1 Unit.**

(Same as LAW 782) Many US human rights non-government organizations, including the US philanthropic sector, work on international human rights. The US government also engages with the private sector in "partnerships" that twins US foreign aid human rights action with corporate expertise. This weekly series will feature speakers who lead these human rights NGOs, philanthropic enterprises, and corporate partnerships, and also policy experts and scholars, to explore the pro's and con's of this scenario.

Same as: ETHICSOC 15R, IPS 271A, POLISCI 203

**MED 226. Practical Approaches to Global Health Research. 3 Units.**

Enrollment limited to graduate students; undergraduates in their junior or senior year may enroll with consent of instructor only. Introduces research methods for conducting studies involving health in low-income context. Focuses on developing a concept note to support a funding proposal. addressing research question of student's interest. Skills developed include developing a compelling research question; synthesizing a focused literature review; selecting and adapting appropriate study design, target population, sampling methods, data collection and analysis; addressing human subject issues; developing productive cross-collaboration.

Same as: HRP 237, IPS 290

**MED 227. Bedside Ultrasound. 1-2 Unit.**

For preclinical or clinical medical students, and others with permission. Introduces students to diagnostic ultrasound at the bedside. The normal anatomy of the heart, abdomen, and pelvis pertinent to ultrasound is taught. Some pathology involving these areas is also introduced. As the students' proficiency increases, those electing to can visit the Pacific Free Clinic to be introduced to scanning patients. 1 unit for class attendance only 2 units for class attendance and observation in Stanford Echo Labs.

**MED 228. Physicians and Social Responsibility. 1 Unit.**

Social and political context of the roles of physicians and health professionals in social change; policy, advocacy, and shaping public attitudes. How physicians have influenced governmental policy on nuclear arms proliferation; environmental health concerns; physicians in government; activism through research; the effects of poverty on health; homelessness; and gun violence. Guest speakers from national and international NGOs.

**MED 229. Introduction to Global Health. 1 Unit.**

Provides an overview of global health and how it is similar to and different from public health and tropical medicine. Topics include the evolution, economics, politics of global health, major players in global health, and issues of geography, politics, humanitarianism, human rights, science, research, culture and disease.

**MED 232. Discussions in Global Health. 2 Units.**

The goal of this interactive series is to encourage students to think broadly about the variety of activities encompassed within global health and the roles of various entities, including NGOs, governments, and healthcare providers, in responding to large-scale health crises, building health systems, and caring for patients in developing countries. Examines challenges in global health such as organizing medical responses to natural disasters, providing healthcare to societies in conflict, and integrating traditional and modern approaches to healing. Case studies are used to critique strategies employed by organizations that work to improve medical care in poor settings.

**MED 233. Global Health: Beyond Diseases and International Organizations. 4 Units.**

Provides multidisciplinary trainees insight into over-arching themes of global health. Topics include systemic issues affecting healthcare progress globally, ethical and thoughtful approaches to solving these issues, as well as economics, water sanitation, public health, organizations in global health, human rights, involvement in NGOs, ethics of overseas work, and other non-medical aspects of this subject. This course will cover some of the essentials of patient care while working in the field as well including child health care, malaria, TB, and HIV.

**MED 234. Literature and Global Health. 3-5 Units.**

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with a call made by the editor-in-chief of *The Lancet* for a literature of global health, namely fiction modeled on the social reform novels of the nineteenth century, understood to have helped readers develop a conscience for public health as the field emerged as a modern medical specialty. We will then spend the quarter understanding how colonial, postcolonial, and world literatures have answered and complicated this call. Readings will include prose fiction by Albert Camus, Joseph Conrad, Tsitsi Dangaremba, Amitav Ghosh, Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese, Paul Farmer. And each literary reading will be paired with medical, philosophical, and policy writings that deeply inform the field of global health.

Same as: AFRICAAM 229, AFRICAST 229, COMPLIT 229, CSRE 129B, FRENCH 229, HUMBIO 175L

**MED 235. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.**

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students. Same as: AFRICAST 135, AFRICAST 235, EDUC 135, EDUC 335, HRP 235, HUMBIO 26

**MED 236. Economics of Infectious Disease and Global Health. 3 Units.**

Introduction to global health topics such as childhood health, hygiene, drug resistance, and pharmaceutical industries from an economic development perspective. Introduces economic concepts including decision-making over time, externalities, and incentives as they relate to health.

Same as: HUMBIO 124E

**MED 237. Health Law: Improving Public Health. 3 Units.**

(Same as Law 762) Examines how the law can be used to improve the public's health. Major themes explored include: what authority does the government have to regulate in the interest of public health? How are individual rights balanced against this authority? What are the benefits and pitfalls of using laws and litigation to achieve public health goals? Investigates these issues in several contexts, including the control and prevention of infectious disease, laws aimed at preventing obesity and associated noncommunicable diseases, tobacco regulation, ensuring access to medical care, reproductive health, lawsuits against tobacco, food and gun companies, and public health emergencies.

**MED 240. Sex and Gender in Human Physiology and Disease. 2-3 Units.**

(HumBio students must enroll in HumBio 140.) Chromosomal, hormonal and environmental influences that lead to male and female reproductive systems and neuroendocrine regulation and intersex variants. Masculinizing and feminizing effects of endogenous and exogenous sex hormones and other factors, in particular gender, on the musculoskeletal, neurological, cardiovascular, immunological and other systems and tissues, e.g. adipose, skin, etc. over the lifecourse, from conception to puberty, through reproductive phases (including changes during the menstrual cycle up to and beyond menopause in women, and with aging in both sexes). Transgender health issues. Guest lecturers. Prerequisite: Human Biology core or equivalent, or consent of instructor. HUMBIO students must enroll for 3 units.

Same as: FEMGEN 241, HUMBIO 140

**MED 241. Clinical Skills for Patient Care in Free Clinics. 1 Unit.**

Enrollment in this course is by application only for advanced volunteers at the Cardinal Free Clinics. Focus is on preparing students to gain early clinical experience by teaching basic skills such as taking patient histories, working with interpreters, providing motivational interviewing, and presenting cases to medical students or physicians. Students learn through classroom lectures and practice sessions. Upon successful completion of a competency assessment, students are able to serve in a clinic role in the Cardinal Free Clinics. Prerequisite: Advanced standing as a volunteer at the Cardinal Free Clinics.

**MED 242. Physicians and Human Rights. 1 Unit.**

Weekly lectures on how human rights violations affect health. Topics include: regional conflict and health, the health status of refugees and internally displaced persons; child labor; trafficking in women and children; HIV/AIDS; torture; poverty, the environment and health; access to clean water; domestic violence and sexual assault; and international availability of drugs. Guest speakers from national and international NGOs including Doctors Without Borders; McMaster University Institute for Peace Studies; UC Berkeley Human Rights Center; Kiva.

**MED 243A. Patient Health Education in Community Clinics. 2 Units.**

Open to undergraduate, graduate, and medical students. Principles of health education, health coaching, theories of behavior change, methods for risk reduction. Presentations of health education modules, focusing on topics prevalent among underserved populations. Students apply theoretical frameworks to health education activities in the Cardinal Free Clinics. Application required.

Same as: MED 143A

**MED 243B. Patient Health Education in Community Clinics - Practicum. 2 Units.**

Open to undergraduate, graduate, and medical students. For students who have completed MED 143A/243A and currently volunteer in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections.

Prerequisite: successful completion of MED 143A/243A.

Same as: MED 143B

**MED 243C. Patient Health Education in Community Clinics - Practicum. 2 Units.**

Open to undergraduate, graduate, and medical students. For students currently volunteering in one of the course-affiliated clinic sites. Objective is to expand health education skills, discuss more complex health education topics, and reflect upon experiences in the clinic. Includes readings and online reflections. Pre-requisites: MED 143A/243A, Med 143B/243B.

Same as: MED 143C

**MED 246. The Medical Interview for Spanish Speakers. 1 Unit.**

Student led forum for practicing and learning medical Spanish related specifically to the medical interview. Prepares clinical students to interact more effectively with Spanish speaking patients in clinics. Classes are topical; each class includes a demonstration, medical vocabulary practice, and conversational practice on the topic of the day.

**MED 247. Methods in Community Assessment, Evaluation, and Research. 3 Units.**

Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.

Same as: CHPR 247, MED 147

**MED 248. Student Rounds. 1 Unit.**

Teams of preclinical students meet weekly with a clinical student to hear the history and physical of a recent case the clinical student encountered on the wards. Following the presentation, the preclinical students work together under the guidance of the clinical student to develop a problem list and plan, which are then compared with the problem list, plan, and orders made by the actual admitting team. In the course of presenting the cases, the clinical student describes personal experiences and practical components of ward work and daily clinical routine.

**MED 252. Outcomes Analysis. 4 Units.**

Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics. Same as: BIOMEDIN 251, HRP 252

**MED 253. Applied Grant-Writing Skills for Community and Clinical Research. 2 Units.**

Skill-building in writing scientific research proposals. Topics include: grant proposal preparation; scientific literature review; developing research aims; decision-making on study design & methodology; planning statistical analyses; determining research compliances, timelines and resources. Students develop drafts of potential projects, peer-review and critique writing samples, and receive detailed feedback from instructor on all aspects of research projects.

**MED 255. The Responsible Conduct of Research. 1 Unit.**

Forum. How to identify and approach ethical dilemmas that commonly arise in biomedical research. Issues in the practice of research such as in publication and interpretation of data, and issues raised by academic/industry ties. Contemporary debates at the interface of biomedical science and society regarding research on stem cells, bioweapons, genetic testing, human subjects, and vertebrate animals. Completion fulfills NIH/ADAMHA requirement for instruction in the ethical conduct of research. Prerequisite: research experience recommended.

**MED 255C. The Responsible Conduct of Research for Clinical and Community Researchers. 1 Unit.**

Engages clinical researchers in discussions about ethical issues commonly encountered during their clinical research careers and addresses contemporary debates at the interface of biomedical science and society. Graduate students required to take RCR who are or will be conducting clinical research are encouraged to enroll in this version of the course. Prerequisite: research experience recommended. Same as: CHPR 255

**MED 257A. Community Health Advocacy. 2 Units.**

First of a three-quarter course series providing students with knowledge and concrete skills for working with and advocating for underserved populations. Through coursework and placements in community health clinics and social service organizations, students broaden and deepen their understanding of the social and economic determinants of health, how they impact underserved populations, and the various levels at which these challenges can be addressed. Fellows engage in structured activities centered around supporting the mission of placement organizations. Students must apply and be accepted into the program the winter preceding enrollment; application information at [och.stanford.edu](http://och.stanford.edu). Additional prerequisites: Med 157 or equivalent coursework. Spanish language proficiency required for most placements.

**MED 257B. Community Health Advocacy. 2 Units.**

Second of a three-quarter course series that provides students with knowledge and concrete skills for working with and advocating for underserved populations. Through coursework and placements in community health clinics and social service organizations, student will broaden and deepen their understanding of the social and economic determinants of health, how they impact underserved populations, and the various levels at which these challenges can be addressed. Student will engage in structured activities that center around supporting the mission of their placement organization: direct service with clients and design and implementation of a capacity-building project. Weekly Monday evening classroom meetings serve as a forum for teaching and training, discussion of class readings and placement experiences, project development, and troubleshooting and support. Prerequisites: MED 257A.

**MED 257C. Community Health Advocacy. 2 Units.**

Third of a three-quarter course series that provides students with knowledge and concrete skills for working with and advocating for underserved populations. Through coursework and placements in community health clinics and social service organizations, students broaden and deepen their understanding of the social and economic determinants of health, how they impact underserved populations, and the various levels at which these challenges can be addressed. Student engage in structured activities that center around supporting the mission of their placement organization: direct service with clients and design and implementation of a capacity-building project. Weekly evening classroom meetings serve as a forum for teaching and training, discussion of class readings and placement experiences, project development, and troubleshooting and support. Prerequisites: MED 257A/B.

**MED 258A. Policy Advocacy in Community Health. 2 Units.**

In order to affect broad-based change in the health of populations, advocates must look upstream to the social and economic factors that impact health. Most powerful among these factors are the policies that shape our lives and the context in which we make individual and collective decisions. This course gives students the skills and tools to influence the policy process through various avenues, including legislative and media advocacy. Students select a current community health issue of interest and track relevant policy initiatives and media coverage of the issue to serve as the foundation for the application of real-time advocacy strategies. Prerequisites: MED 257A or consent of instructor.

**MED 259. Oaxacan Health on Both Sides of the Border. 2 Units.**

Required for students participating in the Community Health in Oaxaca summer program. Introduction to the health literacy and health-seeking behaviors of Oaxacan and other Mexican migrants; the health challenges these groups face. Through discussion and reflection, students prepare for clinical work and community engagement in Oaxaca, while also gaining knowledge and insight to make connections between their experiences in Mexico and their health-related work with Mexican immigrants in the Bay Area. Service Learning Course (certified by Haas Center). Prerequisite: application and acceptance into the Community Health in Oaxaca Summer Program (<http://och.stanford.edu/oaxaca.html>).

**MED 260. HIV: The Virus, the Disease, the Research. 3-4 Units.**

Open to medical students, graduate students in biological sciences, undergraduates with strong biological background. Topics: immunopathogenesis immune deficits, opportunistic infections including TB, and malignancies; genomics viral genetic analyses that have traced the origin of HIV-1 and HIV-2 to primates, dated the spread of infection in humans, and characterized the evolution of the virus within infected individuals; antiretroviral drug development identification of drug targets, structure-based drug design, overcoming drug resistance, pivotal clinical trials, and role of community activism; clinical management solutions in high- and low-income countries; vaccine development learning from past failures and the future of engineering the human immune response. 4 units includes a final project assigned in consultation with the instructor to fit the individual student's background and area of HIV interest. Same as: IMMUNOL 260

**MED 262. Economics of Health Improvement in Developing Countries. 5 Units.**

Application of economic paradigms and empirical methods to health improvement in developing countries. Emphasis is on unifying analytic frameworks and evaluation of empirical evidence. How economic views differ from public health, medicine, and epidemiology; analytic paradigms for health and population change; the demand for health; the role of health in international development. Prerequisites: ECON 50 and ECON 102B.

Same as: ECON 127

**MED 263. Advanced Decision Science Methods and Modeling in Health. 3 Units.**

Advanced methods currently used in published model-based cost-effectiveness analyses in medicine and public health, both theory and technical applications. Topics include: Markov and microsimulation models, model calibration and evaluation, and probabilistic sensitivity analyses. Prerequisites: a course in probability, a course in statistics or biostatistics, a course on cost-effectiveness such as HRP 392, a course in economics, and familiarity with decision modeling software such as TreeAge.

Same as: HRP 263

**MED 264. Social Epidemiology. 2 Units.**

Preference to graduate students with prior coursework in Epidemiology. Focuses on understanding the theory and empirical evidence that shows support for the relationships between social environments and health. Covers four main topics: the historical development of social epidemiology, and a survey of the major theories in social epidemiology; the three main empirical approaches used to generate new knowledge in social epidemiology: traditional observational studies, quasi-experimental studies and experimental approaches; how the constructs of social class, race/ethnicity and gender are used in social epidemiology; new emerging empirical approaches within the field including the application of causal, machine learning and complex systems methods.

**MED 271. Global Biodesign: Medical Technology in an International Context. 3 Units.**

(Same as OIT 587) This course examines the development and commercialization of innovative medical technologies in different global settings. Faculty and guest speakers from the medtech field will discuss the status of the industry, as well as opportunities in and challenges to medical technology innovation unique to seven primary geographic regions: Africa, China, Europe, India, Japan, United States and Latin America. Students will be exposed to the biodesign innovation process, which provides a proven approach for identifying important unmet medical needs and inventing meaningful solutions to address them. They will also explore key differences between the covered geographies, which range from emerging markets with vast bottom-of-the-pyramid and growing middle class populations, to well-established markets with sophisticated demands and shifting demographics. The class will utilize real-world case studies and class projects (for 3-unit students) to promote engagement and provide a hands-on learning experience. There is no 2 unit option for this course.

Same as: BIOE 371

**MED 272A. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.**

This is the first quarter of a two-quarter course series. In this two-quarter course (BIOE 374A/B, MED 272A/B, ME 368A/B, OIT 384/5), multidisciplinary student teams identify real-world unmet healthcare needs, invent new medtech products to address them, and plan for their development into patient care. During the first quarter (winter 2016), students select and characterize an important unmet healthcare problem, validate it through primary interviews and secondary research, and then brainstorm and screen initial technology-based solutions. In the second quarter (spring 2016), teams select a lead solution and move it toward the market through prototyping, technical re-risking, strategies to address healthcare-specific requirements (regulation, reimbursement), and business planning. Final presentations in winter and spring are made to a panel of prominent medtech experts and investors. Class sessions include faculty-led instruction and case demonstrations, coaching sessions by industry specialists, expert guest lecturers, and interactive team meetings. Enrollment is by application only, and students are expected to participate in both quarters of the course. Visit <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp> to access the application, examples of past projects, and student testimonials. More information about the Biodesign program, which has led to the creation of more than 30 venture-backed healthcare companies and has helped hundreds of student launch medtech careers, can be found at <http://biodesign.stanford.edu/>.

Same as: BIOE 374A, ME 368A

**MED 272B. Biodesign Innovation: Concept Development and Implementation. 4 Units.**

This is the second quarter of a two-quarter course series. In this two-quarter course (BIOE 374A/B, MED 272A/B, ME 368A/B, OIT 384/5), multidisciplinary student teams identify real-world unmet healthcare needs, invent new medtech products to address them, and plan for their development into patient care. During the first quarter (winter 2016), students select and characterize an important unmet healthcare problem, validate it through primary interviews and secondary research, and then brainstorm and screen initial technology-based solutions. In the second quarter (spring 2016), teams select a lead solution and move it toward the market through prototyping, technical re-risking, strategies to address healthcare-specific requirements (regulation, reimbursement), and business planning. Final presentations in winter and spring are made to a panel of prominent medtech experts and investors. Class sessions include faculty-led instruction and case demonstrations, coaching sessions by industry specialists, expert guest lecturers, and interactive team meetings. Enrollment is by application only, and students are expected to participate in both quarters of the course. Visit <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp> to access the application, examples of past projects, and student testimonials. More information about the Biodesign program, which has led to the creation of more than 30 venture-backed healthcare companies and has helped hundreds of student launch medtech careers, can be found at <http://biodesign.stanford.edu/>.

Same as: BIOE 374B, ME 368B

**MED 273. BIODESIGN FOR MOBILE HEALTH. 1-3 Unit.**

This seminar examines the emerging mobile health industry. Mobile health is the provision of health services and information via mobile technologies such as mobile phones and wearable sensors. Faculty from Stanford University and other academic institutions and guest lecturers from the mobile health industry discuss the driving needs, opportunities and challenges that characterize the emerging mobile health innovation landscape, and present an overview of the technologies, initiatives and companies that are transforming the way we access health care today. Same as: BIOE 273

**MED 274. Design for Service Innovation. 4 Units.**

(Same as OIT 343/01) Open to graduate students from all schools and departments. An experiential project course in which students work in multidisciplinary teams to design new services to address the needs of medically patients. Project teams partner with "safety net" hospitals and clinics to find better ways to deliver care to the low income and uninsured patients these institutions serve. Students learn proven innovation processes from experienced GSB, d. school, and SoM faculty, interface with students from across the university, and have the opportunity to see their ideas translated into improvements in the quality and efficiency of healthcare in the real world. Prerequisite: admission to the course is by application only. Applications available at <http://DesignForService.stanford.edu>. Applications must be submitted by November 16, 2011.

Same as: BIOE 372, HRP 274

**MED 275B. Biodesign: Medical Technology Innovation. 4 Units.**

An introduction to medical technology design, ideation and prototyping. Students will work in teams on open-ended technology design projects that aim to address areas of under-met clinical need. Lecture topics will also include regulatory affairs, intellectual property, marketing and venture capital. Final deliverables include presentation of needs and solutions to an outside panel of experts in medical technology. This course is open to engineering and non-engineering students of all levels.

**MED 282. Early Clinical Experience at the Cardinal Free Clinics. 1-2 Unit.**

The Cardinal Free Clinics, consisting of Arbor and Pacific Free Clinic, provide culturally appropriate, high quality transitional medical care for underserved patient populations in the Bay Area. Students volunteer in various clinic roles to offer services including health education, interpretation, referrals, and labs. Clinical students are guided in the practice of medical interviews, history-taking and physical examinations as appropriate, and work with attending physicians to arrive at a diagnosis and management plan. By application only. Visit <http://cfc.stanford.edu> for more information.

Same as: MED 182

**MED 284A. Team Leadership in the Cardinal Free Clinics I. 1 Unit.**

Introduction to skills for effective leadership, including: conflict resolution, team dynamics, leadership styles, personality types, giving and receiving feedback, and group decision-making. Utilizes hands-on-activities and real-life clinic scenarios. Applied learning through shifts at the Cardinal Free Clinics and related project work. Enrollment limited to Cardinal Free Clinic Managers.

Same as: MED 184A

**MED 284B. Team Leadership in the Cardinal Free Clinics II. 1 Unit.**

Continuation of MED 184A/MED 284A. Introduction to skills for effective leadership, including: conflict resolution, team dynamics, leadership styles, personality types, giving and receiving feedback, and group decision-making. Utilizes hands-on-activities and real-life clinic scenarios. Applied learning through shifts at the Cardinal Free Clinics and related project work. Enrollment limited to Cardinal Free Clinic Managers.

Same as: MED 184B

**MED 284C. Team Leadership in the Cardinal Free Clinics III. 1 Unit.**

Continuation of MED 184A/MED 284A and MED 184B/MED284B. Introduction to skills for effective leadership, including: conflict resolution, team dynamics, leadership styles, personality types, giving and receiving feedback, and group decision-making. Utilizes hands-on-activities and real-life clinic scenarios. Applied learning through shifts at the Cardinal Free Clinics and related project work. Enrollment limited to Cardinal Free Clinic Managers.

Same as: MED 184C

**MED 289. Introduction to Bioengineering Research. 1-2 Unit.**

Preference to medical and bioengineering graduate students with first preference given to Bioengineering Scholarly Concentration medical students. Bioengineering is an interdisciplinary field that leverages the disciplines of biology, medicine, and engineering to understand living systems, and engineer biological systems and improve engineering designs and human and environmental health. Students and faculty make presentations during the course. Students expected to make presentations, complete a short paper, read selected articles, and take quizzes on the material.

Same as: BIOE 390

**MED 290. Independent Study with the Program in Bedside Medicine. 1-5 Unit.**

Students work with their faculty mentor on projects and studies that are broadly centered around the following questions: How do we teach and emphasize to students, residents, physicians (and beyond) in the medical field the need to master bedside skills? How does bedside medicine effect patient care? How has patient care changed with the omnipresence of technology in our lives? How is bedside medicine going to change in the next few decades, centuries? In investigating these questions, students utilize scientific articles and data, engage patients, and collaborate with BedMed faculty and staff. Independent study projects culminate in a presentation to the BedMed team, with the potential for posters or manuscripts. Students paired with faculty based on their area of interest and faculty/project needs. As the Program in Bedside Medicine emphasizes the human connection with patients, students are encouraged to engage patients within our program for teaching sessions, research studies, among other projects. Most of the faculty students with whom students will work are a part of the Stanford Medicine 25 Initiative: <http://stanfordmedicine25.stanford.edu/about/>. Students are encouraged to develop relevant projects with the initiative as a foundation. Enrollment varies with and is limited to faculty need. Repeatable for credit; more than one quarter of commitment expected.

**MED 295. Advanced Cardiac Life Support. 2 Units.**

(For clinical MD students only) Prepares students to manage the victim of a cardiac arrest. Knowledge and skills necessary for resuscitation of critically ill patients. Clinical scenarios and small group discussions address cardiovascular pharmacology, arrhythmia recognition and therapy, acute coronary syndrome including myocardial infarction, ventricular dysrhythmias and defibrillation, and acute ischemic stroke. Requires pre-course preparation and an intensive two-day session on a Friday and Saturday. Students should get the approval of their Clerkship Coordinator before registering for the course. Recommended prerequisites: Medicine 300A, Pediatrics 300A, or Surgery 300A.

**MED 299. Directed Reading in Medicine. 1-18 Unit.**

Prerequisite: consent of instructor.

**MED 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**MED 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**Medicine Interdisciplinary Courses****INDE 200. The Future of Academic Medicine. 1 Unit.**

Required for and limited to first-year MSTP students. Presentations of research directions and opportunities by chairs of basic science, clinical departments, and PhD programs. Prerequisite: instructor consent.

**INDE 201. Practice of Medicine I. 11 Units.**

Six quarter series extending throughout the first two years of the MD program, interweaving core skills training in medical interviewing and the physical examination with other major threads addressing the context of medical practice: information literacy, nutrition principles, clinical epidemiology and biostatistics, evidence-based practice, psychiatry, biomedical ethics, health policy, population health. Core clinical skills are acquired through hands-on practice, and evaluated through an extensive program of simulated medical encounters, in which students interview, examine, and manage patients in a mock clinic. The information literacy thread introduces students to informatics and knowledge management, biomedical informatics, and evidence-based medicine searching. Nutrition principles are acquired through interactive, web-based instruction, and reinforced through problem-based learning cases, which run in parallel to the basic science components over the first year. In epidemiology students learn the taxonomy of epidemiological studies, how to critically read a journal article, and how to recognize and understand the concepts behind different clinical study designs. Topics include bias, confounding, diagnostic testing and screening, and "how statistics can lie." Psychiatry introduces students to the unique role of medical students in talking with patients, the difference between process and content in patient communication, how to respond to breaks in the patient-physician relationship, and the relationship between the quality of the patient-physician interaction and health outcomes. Health care policy covers such topics as health insurance, physician payment, health care costs, access, measurement and improvement of quality, regulation and health care reform. Biomedical ethics includes important ethical issues in medical practice, such as confidentiality, privacy, and ethical issues relating to medical students. The population health curriculum exposes students to concepts of public health, community action, and advocacy, and includes a year-long, community-based project. At the end of this quarter students participate in a performance-based assessment of the medical interview skills.

**INDE 202. Practice of Medicine II. 8 Units.**

Medical interview and physical examination skills, information literacy, nutrition principles, evidence-based practice, health policy, and population health are covered. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series.

**INDE 203. Practice of Medicine III. 8 Units.**

Medical interview and physical examination skills, biomedical literature retrieval and appraisal, nutrition principles, evidence-based practice, biomedical ethics, and population health are covered. Students begin clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students begin transition from comprehensive to problem-focused patient encounters. Students also gain exposure to geriatrics, pediatrics, and interprofessional healthcare teams, and practice mental health interview skills. At the end of this quarter, students participate in a performance-based assessment of their medical interview and physical examination skills. See INDE 201 for a complete description of the Practice of Medicine course series.

**INDE 204. Practice of Medicine IV. 10 Units.**

The second year of the Practice of Medicine series (INDE 204 and 205) emphasizes clinical reasoning, clinical practicum, and clinical procedures. Students continue clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students spend one-half day per week in a clinical setting, practicing medical interview, physical examination skills, oral presentations, and clinical note-writing under the mentorship of a clinical tutor. In the practicum, students also gain experience with other practical aspects of patient care. The Clinical Procedures segment introduces common and important procedures in clinical practice, including phlebotomy, intravenous line insertion, and electrocardiography.

**INDE 205. Practice of Medicine V. 8 Units.**

Continued emphasis on clinical reasoning, clinical practicum, and clinical procedures. Students continue clinical problem-solving sessions to learn the approach to common and important clinical problems. Cases integrate other course themes of population health, evidence-based practice, clinical ethics, nutrition, health policy, and behavioral medicine. Students spend one-half day per week in a clinical setting, practicing medical interview, physical examination skills, oral presentations, and clinical note-writing under the mentorship of a clinical tutor. In the practicum, students also gain experience with other practical aspects of patient care. For the Clinical Procedures segment, students will have an opportunity in the Emergency Department to practice performing procedures learned in the previous quarter. At the end of this quarter, students participate in a comprehensive four-station objective structured clinical examination (OSCE) performance-based assessment of their medical interview, physical examination, and clinical problem-solving skills.

**INDE 206. Practice of Medicine VI. 9 Units.**

This last segment of the Practice of Medicine series is an intensive, four-week learning experience to consolidate clinical skills from prior quarters, and a final preparation for transition to clerkships. An extensive series of workshops covers topics such as dermatology, ophthalmology, advanced clinical reasoning, advanced presentations, bedside skills, ethics, palliative medicine, advanced sexual history, electronic medical record, ekg interpretation, intravenous fluid and electrolyte management. Students practice clinical procedures with task trainers and on a cadaver. This quarter also includes a professionalism series to prepare students for entry into clinical practice. Special clinical practice sessions are held as a capstone to clinical skills preparation.

**INDE 207A. Medical Mandarin I: Beginning. 2-3 Units.**

Develops conversational communication skills and essential medical vocabularies. Teaches in pinyin pronunciation system, which provides an accessible method of learning basic phrases. The foundations of taking a comprehensive patient history in Mandarin and doing medical interviews at individual hospital divisions, including making introductions, soliciting symptoms, explaining health concepts (e.g. diseases and prescriptions) as well as daily survival conversations. Main goals are to improve rapport with Chinese patients through Mandarin fluency in the medical setting and to promote understanding of Chinese culture in the context of health care as well as daily life. Students registering for 3 units participate in clinic visits and field activities.

**INDE 207B. Medical Mandarin II: Intermediate. 2-3 Units.**

For students who already have a basic command of spoken Chinese. Conversational communication skills practiced in a more advanced setting, including more sophisticated assessment of patient history and different tasks such as giving medical instructions and doing labs and tests. Builds working vocabulary for organ system, disease assessment to conduct a full physical exam, and to describe treatment modalities for Chinese-speaking patients (diagnostic and therapeutic). Students registering for 3 units participate in clinic visits and field activities. Prerequisite: one year of college-level Chinese or instructor assessment of fluency.

**INDE 207C. Medical Mandarin III: Advanced. 2-3 Units.**

Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. Students registering for 3 units participate in clinic visits, field activities or projects. Prerequisite: completion of Medical Mandarin II, or advanced Chinese proficiency.

**INDE 207D. Professional Mandarin I. 2-3 Units.**

Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed- upon workload approved by the instructor. Prerequisite: sound preparation in Mandarin as assessed by the instructor.

**INDE 208A. Medical Mandarin I: Beginning. 2-3 Units.**

Continuation of 207A. See description for 207A. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

**INDE 208B. Medical Mandarin II: Intermediate. 2-3 Units.**

Continuation of 207B. See description for 207B. Students participating in classroom and online instruction only register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

**INDE 208C. Medical Mandarin III: Advanced. 2-3 Units.**

Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. 3 units Includes clinic visits and field activities. Prerequisite: completion of 207C, or advanced Chinese proficiency.

**INDE 208D. Professional Mandarin II. 2-3 Units.**

Continuation of INDE 207D. Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed- upon workload approved by the instructor. Prerequisite: INDE 207D.

**INDE 209A. Medical Mandarin III: Beginning. 2-3 Units.**

Continuation of 207A/208A. See description for 207A. Students participating only in classroom and online instruction register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

**INDE 209B. Medical Mandarin III: Intermediate. 2-3 Units.**

Continuation of 207B/208B. See description for 207B. Students participating only in classroom and online instruction register for 2 units. Students registering for 3 units participate in clinic visits and field activities as well.

**INDE 209C. Medical Mandarin III: Advanced. 2-3 Units.**

Access advanced professional medical vocabulary, conduct medical research, and engage in discussions in Chinese. Aims at a proficiency level of medical interpreting or doing other independent work in Chinese. Students are also assisted in doing a project or projects related to a specific field of medicine. 3 units Includes clinic visits and field activities. Prerequisite: completion of 208C or advanced Chinese proficiency.

**INDE 209D. Professional Mandarin III. 2-3 Units.**

Continuation of INDE 208D. Designed for students who seek professional development via Mandarin. Coursework includes lectures, online classes, language partnerships, selected topics, projects and field activities. Goal is to enhance students' language abilities as professionals and facilitate a career. Students choose to enroll for 2 units or 3 units depending upon an agreed- upon workload approved by the instructor. Prerequisite: INDE 208D.

**INDE 211. Creative Writing. 1 Unit.**

For medical students - all levels of writing skill. Examines uses of creative writing, including understanding the experience of medical training. May be repeated for credit.

**INDE 212. Medical Humanities and the Arts. 2 Units.**

The interdisciplinary field of medical humanities: the use of the arts and humanities to examine medicine in personal, social, and cultural contexts. Topics include the doctor/patient relationship, the patient perspective, the meaning of doctoring, and the meaning of illness. Sources include visual and performing arts, film, and literary genres such as poetry, fiction, and scholarly writing. Designed for medical students in the Biomedical Ethics and Medical Humanities Scholarly Concentration, but all students are welcome.

**INDE 214. Stanford Medical Student Journal. 1 Unit.**

Provides an opportunity for editors of all levels to cultivate their skills and assist in preparing pieces submitted by colleagues for publication in the Stanford Medical Student Journal. Students enrolled in the course work closely with student authors as well as other editors. Editors examine multiple categories of writing, including opinion pieces, poetry, memoirs, book reviews, case reports and investigative reports. The Journal is published two to three times per year and highlights the diverse talents of Stanford medical students in both scientific writing and the humanities.

**INDE 215. Queer Health and Medicine. 1 Unit.**

Explores specific, pertinent, and timely issues impacting the health of the lesbian, gay, bisexual, and transgender community; examines the role of the primary care physician in addressing the health care needs of this community. Guest lecturers provide a gender-sensitive approach to the medical care of the LGBT patient, breaking down homophobic barriers and reaffirming patient diversity. May be repeated for credit.

**INDE 216. Cells to Tissues. 3 Units.**

Focuses on the cell biology and structural organization of human tissues as self-renewing systems. Topics include identification and differentiation of stem cells, regulation of the cell cycle and apoptosis in normal and cancerous cells, cell adhesion and polarity in epithelial tissues, intracellular transport, and cell migration. Histology laboratory sessions examine normal and abnormal samples of blood, epithelia, connective tissue, muscle, bone and cartilage. Patient presentations and small group discussions of current medical literature illustrate how cell biology influences medical practice.

**INDE 217. Physician Scientist Hour. 1 Unit.**

Enrollment is limited to MD, PhD, or MD-PhD students interested in careers as physician scientists. Focus is on aspects of developing careers in biomedical research through a mix of research lectures, clinical case presentations, and physician-scientist guest speakers.

**INDE 221. Human Health and Disease I. 12 Units.**

First course in three-sequence Human Health and Disease block. Focus is on structure, function, disease, and therapeutics of the respiratory system and the cardiovascular system. The Human Health and Disease block presents organ system-based histology, pathology, physiology, pharmacology, and infectious disease in a sequence of interdisciplinary courses. Each organ-specific integrated course includes a review of the anatomy and related histology, normal function of that organ system, how the organ system is affected by and responds to disease including infection, and how diseases of that organ system are treated (therapeutics).

**INDE 222. Human Health and Disease III. 15 Units.**

Structure, function, disease, and therapeutics of the renal/genito-urinary system, the gastrointestinal system, the endocrine system, male and female reproductive systems, and women's health. See INDE 220 for a description of the Human Health and Disease block .

**INDE 223. Human Health and Disease IV. 11 Units.**

Structure, function, disease, and therapeutics of the central nervous system, hematologic system and multi-systemic diseases. See INDE 220 for a description of the Human Health and Disease block.

**INDE 225. Popular and Clinical Nutrition: Food Facts, Fads, and Pharmacology. 1 Unit.**

Designed for medical students and other health care professionals. Lunchtime lectures review the epidemiological and clinical research related to eating patterns and misconceptions of the public, the mechanisms of pharmacological effects of food, and related topics common to patient nutritional concerns. Topics include fad diets, the impact of dietary addiction, longevity associated with caloric restriction, toxins in foods and the action of phytonutrients. Epidemiological, clinical, and biochemical studies are reviewed in the discussion of these and other topics.

**INDE 226. History of Medicine Online. 1 Unit.**

Via Internet. Topics include: ancient medicine, Egypt and Babylonia, ancient Greece and Rome, Europe in the Middle Ages and the Renaissance, 18th-century schools of thought, and technological medicine. Sources include Kleinman's core clinical functions, and text, pictures, hypertext links, and sound clips. For assistance accessing the course, email: cwpsupport@lists.stanford.edu. Enroll in Axxess, then ask cwpsupport to be added to the course site as a student.

**INDE 227. Careers in Medicine: Pathways in the Medical Sciences. 1 Unit.**

Open to medical students, graduate and undergraduate students. Interactive, seminar-style sessions expose students to diverse career opportunities and the challenges of developing work-life balance in medicine. Recognized experts in clinical medicine and biomedical research who have been innovators in their careers discuss their work, decision-points in their career pathways, and lifestyle aspects of their choices.

**INDE 228. Career Transition Planning: Taking Action Today for a Successful Tomorrow. 1 Unit.**

Open to School of Medicine MD and graduate students; post-docs and clinical fellows may audit by consent of instructor. How to prioritize career goals and develop an effective job search campaign. Topics: translating scientific and clinical training into a variety of workplace environments, professional network development, professional interest assessment, recruiters' perspectives, credentials development, and creating a marketing plan. Guest speakers from myriad career fields. May be repeated for credit.

**INDE 229. Managing Difficult Conversations. 1 Unit.**

(Same as GSBGEN 568) Dealing effectively with difficult interpersonal situations in medical contexts. Focus is on improving students' judgment as to how to prepare for and confront difficult discussions in medical situations. Relevant principles of professionalism, leadership, and psychology underlie the course pedagogy. Case-based; student-to-student and student-to-instructor role-playing in actual medical situations. Patient and physician-expert participation as class guests. Enrollment limited to 20 medical students (2nd year and beyond) and 15 2nd year MBA students.

**INDE 230. Topics in Scientific Management. 1 Unit.**

Designed for postdocs and advanced graduate students. Reviews management skills necessary for successfully assuming leadership roles in scientific research. Addresses some of the most difficult aspects of developing, directing, and managing people and projects and running a research group, especially issues that new faculty have traditionally learned by trial and error over a number of years. Topics include: the faculty job search process and strategies, key elements in starting a lab, basic principles regarding legal dimensions of scientific activity (intellectual property, royalties, links with industry), team science, research ethics, communication and negotiation skills, and writing and securing grants.

**INDE 231A. Career Transitions: Academia. 1 Unit.**

Preference to PhD students in their fourth year or beyond and postdocs/fellows in their intended final year. Restricted to students in Biosciences and the School of Medicine. Focus is on practical, hands-on preparation of application materials (including interview and job talk) for academic positions. Provides practical, hands-on preparation for Bioscience PhD students, postdoctoral fellows and research/clinical trainees ready to apply to academic positions. It not only previews the academic hiring process, including tips from experienced faculty from different types of institutions, but also guides participants in the preparation and polishing of their application materials for success on the job market.

**INDE 231B. Career Prep and Practice: Academia. 1 Unit.**

Open to all Biosciences PhD students, postdocs/fellows and medical students/residents/fellows planning to pursue academic careers. Focus is on gaining a deeper understanding of faculty roles and responsibilities. Topics include how to balance teaching, research, service, lab set-up, grantwriting and publishing at different types of institutions. Features panels of experienced faculty members from different academic environments. More information available on course website: [web.stanford.edu/class/inde231b](http://web.stanford.edu/class/inde231b).

**INDE 232. Introduction to Academic Medicine for Physician-Scientists. 3 Units.**

Open only to accepted MSTP students. Presentations by Stanford faculty on professional development topics, including: choosing a dissertation advisor, giving oral presentations, writing a grant proposal, attending scientific meetings, developing a research career. Substantial writing component.

**INDE 233. Medical Education Seminar Series. 1 Unit.**

For pre-clinical and clinical medical students. A series of sessions rotating among the following formats: Medical Education journal club; education works-in-progress; topics in medical education design, implementation, and evaluation; teaching M&M; hot topics and controversies in medical education. May be repeated for credit.

**INDE 234. Introduction to Writing Research Proposals. 3 Units.**

Practical instruction in research proposal writing. Suitable for advanced graduate students. Substantial writing component. Enrollment by instructor approval only.

**INDE 235. Wilderness Leadership and Mentorship Skills for Medical Students. 2 Units.**

For MD/Master of Medicine wilderness pre-orientation trip (SWEAT) leaders. Training to engage with and prepare incoming first-year medical students for the rigors of medical school. Topics include: fundamentals of wilderness survival, wilderness equipment use, wilderness first aid, camping, outdoor leadership, mentorship, team building, improvisation, risk management, cultural competency, professionalism as a physician, reflection and resiliency, first-year curriculum, stress management and coping. Guest lectures from Stanford faculty, emergency medicine physicians, National Outdoor Leadership School wilderness instructors, learning strategy specialists, and mentorship development specialists.

**INDE 236. Introduction to Teaching and Mentoring. 1 Unit.**

Enrollment limited to medical students. An introduction to medical education teaching principles and skills. Topics include assessment of current teaching skills, reviews of performance, giving appropriate learner feedback, and best practices for interactive teaching. Also introduces the literature around the value of peer mentoring in the medical setting and how to apply this information. Recommended for medical students interested in or currently serving as teaching assistants or interested in future academic positions.

**INDE 255A. Health Policy, Finance and Economics I. 1 Unit.**

Open to medical students and resident physicians. Introduction to basic concepts and current issues in health policy, health finance, and health economics. Goals are to promote understanding of the forces that shape healthcare; to integrate medical students with graduate medical education (residents); to motivate participants to pursue further scholarly activity in these subjects through coursework, graduate programs or research. Team taught by world-renowned experts in their respective fields. Prerequisite: instructor consent.

**INDE 255B. Health Policy, Finance and Economics II. 1 Unit.**

Continuation of INDE 255A. Open to medical students and resident physicians. Introduction to basic concepts and current issues in health policy, health finance, and health economics. Goals are to promote understanding of the forces that shape healthcare; to integrate medical students with graduate medical education (residents); to motivate participants to pursue further scholarly activity in these subjects through coursework, graduate programs or research. Team taught by world-renowned experts in their respective fields. For medical students 255A is not prerequisite to 255B. Prerequisite: instructor consent.

**INDE 260. Journeys in Women's Health and Sex and Gender in Medicine. 1 Unit.**

Sponsored by the Stanford WSDM Center. Course focuses on health research on women and sex differences in medicine, acknowledges the "wisdom" of research and education on sex (e.g. chromosomes, gonads, gonadal hormones) and gender (sociocultural) factors influencing health. Brings alumni to share their professional journeys in the world of Women and Sex Differences in Medicine. Meets Women's Health Scholarly Concentration Requirement. Same as: FEMGEN 260X

**INDE 263. Microbiology and Infectious Diseases I. 4 Units.**

First course in a four-course series exploring microbiology, pathogenesis, and clinical issues associated with infectious diseases. Patient cases springboard discussion on viral, bacterial, fungal, protozoal and helminthic pathogens. Online videos and self-assessments followed by interactive sessions and problem sets.

**INDE 295. Bioethics and Anthropology Interdisciplinary Directed Individual Study. 3-5 Units.**

Supervised individualized study in bioethics and anthropology for a qualifying paper, research proposal, or project with an individual faculty member. May be repeated for credit.

**INDE 297. Reflections, Research, and Advances in Patient Care. 4 Units.**

Required for all MD students enrolled in clerkships at Stanford affiliated sites. Two-year curriculum designed to provide structured time for students to step back from clerkships, in order to promote reflection on and reinforcement for their learning in the clinical environment. Goals are: to discuss and reflect upon critical experiences in clerkships; to provide continuity of instruction in translational science topics across the curriculum; to reinforce and extend the study of behavioral, cultural, ethical, social and socioeconomic topics introduced in the Practice of Medicine course sequence; to expose students to recent advances in medical discoveries, emphasizing their application to clinical practice (translational medicine); and to develop research and critical thinking skills, acquiring new information in areas related to the Scholarly Concentrations. Components of this curriculum include Doctoring with CARE small groups, the Advances and Reflections in Medicine lecture/seminar series, and Scholarly Concentration breakout groups. The Friday afternoon lecture/seminars explore advances in biomedical sciences with applications to medical practice (translational medicine) as well as faculty career pathways, reflections on doctoring, and the context of medicine in society. All students in clinical clerkships must participate in all aspects of RRAP Days. Prerequisite: Concurrent enrollment in clinical clerkships.

**INDE 298. Women's Health Independent Project. 1 Unit.**

Women's Health Scholarly Concentration. Students pursue individual projects under the supervision of a faculty member. Prerequisite: consent of instructor.

## Medieval Studies Courses

### Microbiology & Immunology Courses

**MI 18SC. The Coming Influenza Pandemic. 2 Units.**

Examines the H1N1 influenza virus from molecular, clinical, societal, historical, demographic, economic, and political perspectives. Examines the unique genetic, epidemiological, virologic, and pathogenic features of the influenza virus that allow it to continue to reinvent itself and re-emerge on an annual basis. Discusses past successes and failures, the current status of influenza, and the critical factors to consider to avert the coming influenza pandemic. Explores whether or not the lessons learned from influenza can be applied to other diseases. Includes guest lectures, field trips, student presentations.

**MI 19SC. Measles and Sneezles and Things That Go Mumps in the Night. 2 Units.**

A study of measles (until recently one of the leading causes of death in the world and the most contagious disease agent ever studied) and its relatives in the paramyxovirus family, including mumps, respiratory syncytial virus, hendra, and nipah, as well as a number of important animal pathogens. Investigates the nature of viruses using the paramyxoviruses as a paradigm. Topics include: the history of this devastating group of pathogens; basic aspects of paramyxovirus taxonomy and molecular virology; viral epidemiology, emergence, and eradication, including the pioneering studies of Peter Panum; the use, misuse, and abuse of science; the interactions between pathogen and host and how this interplay leads to disease, including the appearance of a bizarre brain complication with 100% mortality; the politics and economics of infection; how a putative link between the measles vaccine and autism entered the public eye, and how it refuses to disappear despite overwhelming evidence to the contrary. Field trips, guest speakers, student presentations. No science background necessary.

**MI 27SC. Viruses in the News. 2 Units.**

Viruses are unique biological entities that resemble both living and inanimate objects. Despite their simple structure they include some of the most devastating and ubiquitous causes of human disease. The compelling nature of this topic is illustrated by the recent Ebola epidemic, which emerged coincident with the last time this class was offered. From smallpox to measles to HIV to the common cold, viruses have literally changed the course of human history and impacted evolution. They have also been important experimental tools for probing the molecular nature of key biological processes, and they have been utilized in many key discoveries and Nobel Prize-winning research programs. In books, movies, newspapers, and electronic feeds, viruses continue to make the news on a daily basis. Using contemporary media, content experts, model building, interactive sessions, and field trips, we will explore the essential nature of viruses, what makes them unique, how they are classified, how they cause disease, key molecular processes, breakthroughs in prevention and treatment, current efforts in trying to eradicate viruses, and cultural iconography pertaining to viruses. In short, this seminar is intended to go viral. Sophomore College course, applications required, due at noon on April 5, 2016. Apply at <http://soco.stanford.edu>.

**MI 70Q. Photographing Nature. 3 Units.**

Utilizes the idiom of photography to learn about nature, enhance observation, and explore scientific concepts. Builds upon the pioneering photographic work of Eadweard J. Muybridge on human and animal locomotion. A secondary goal is to learn the grammar, syntax, composition, and style of nature photography to enhance the use of this medium as a form of scientific communication and also to explore the themes of change across time and space. Scientific themes to be explored include: taxonomy, habitat preservation, climate change; species diversity; survival and reproductive strategies; ecological niches and coevolution, carrying capacity and sustainability, population densities, predation, and predator-prey relationships, open-space management, the physics of photography. Extensive use of field trips and class critique.

**MI 104. Innate Immunology. 3 Units.**

Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants. Same as: IMMUNOL 204, MI 204

**MI 115B. The Vaccine Revolution. 6 Units.**

Advanced seminar. Human aspects of viral disease, focusing on recent discoveries in vaccine development and emerging infections. Journal club format: students choose articles from primary scientific literature, write formal summaries, and synthesize them into a literature review. Emphasis is on analysis, experimental design, and interpretation of data. Oral presentations. Enrollment limited to 8. Prerequisite: prior enrollment in HumBio 155H Humans and Viruses or MI 116, The Human ViroSphere. Same as: HUMBIO 155B

**MI 115C. Human Virology Inquiry Project I. 1-3 Unit.**

Advanced topics in human virology focuses on current issues in the field. Topics will include: clinical features of infection, epidemiology, molecular virology, drug development and policy, vaccinology, pathogenesis, host modulation, and media representations of viral infection. Student presentations and discussion in a small group setting.

**MI 116. The Human ViroSphere. 5 Units.**

Focus on interaction of humans and viruses from a number of perspectives: historical, cultural, political, and demographic. Organismal, molecular biological, biochemical, human and viral interactions; clinical aspects of viral disease, epidemiology and risk factors, public and international health, aspects of virology including emerging viruses and biological weapons. Case studies involving particular viruses: human herpes viruses, retroviruses, oncogenic viruses; vaccination and disease eradication, evolution of viruses as tools for research and therapy. Emphasis on general principles of biology and matters of decision making policy. Prerequisite: Biology core, Human Biology core, or consent of instructor. Same as: MI 216

**MI 120. Bacteria in Health and Disease. 3 Units.**

Enrollment limited to junior and senior undergraduates, graduate students and medical students. Introduces students to the bacteria that live in and on humans and, in some cases, can cause disease and sometimes death. Topics include the biology of the interaction of the simple microbe with complex human biology and the factors that determine whether or not we coexist relatively peacefully, suffer from overt disease, or succumb to the bacterial onslaught. Same as: BIO 120

**MI 155H. Humans and Viruses I. 6 Units.**

Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis is on host pathogen interactions and policy issues. Topics: polio and vaccination, smallpox and eradication, yellow fever and history, influenza and genomic diversity, rubella and childhood infections, adenovirus and viral morphology, ebola and emerging infection, lassa fever and immune response. Same as: HUMBIO 155H

**MI 155V. Humans and Viruses II. 6 Units.**

Introduction to human virology integrating epidemiology, molecular biology, clinical sciences, social sciences, history, and the arts. Emphasis on host pathogen interactions and policy issues. Topics: measles and viral epidemiology, rotavirus and world health, rabies and infections of the brain, HPV and cancer-causing viruses, herpes simplex and viral latency, CMV and viral teratogenesis, retrovirology and endogenous viral sequences, HIV and viral treatment, viral hepatitis and chronic infections, prions and diseases of life style. Prerequisite: MI155H.

**MI 185. Topics in Microbiology. 3 Units.**

For advanced undergraduates and graduate students. 1/3rd of the course consists of lectures by the instructor/colleagues. These cover, at an advanced level, with emphasis on bacteria, topics not covered elsewhere, e.g., phylogeny, molecular regulation, and bioenergetics. The remainder of the course involves interactive discussion of a topic of current interest in microbiology, chosen with student participation, and includes student presentations. (The topic last year was: Gene therapy.) Satisfies Central Menu Area 3 for BIO majors. Prerequisites: CHEM 31X, Biology core. Same as: MI 285

**MI 198. Directed Reading in Microbiology and Immunology. 1-15 Unit.**

Fields of study are decided in consultation with sponsoring professor. Prerequisite: consent of instructor.

**MI 199. Undergraduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Possible fields: microbial molecular biology and physiology, microbial pathogenicity, immunology, virology, and molecular parasitology. Prerequisite: consent of instructor.

**MI 204. Innate Immunology. 3 Units.**

Innate immune mechanisms as the only defenses used by the majority of multicellular organisms. Topics include Toll signaling, NK cells, complement, antimicrobial peptides, phagocytes, neuroimmunity, community responses to infection, and the role of native flora in immunity. How microbes induce and defeat innate immune reactions, including examples from vertebrates, invertebrates, and plants.

Same as: IMMUNOL 204, MI 104

**MI 209. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites: Part I. 4 Units.**

For graduate students and advanced undergraduates; required of first-year graduate students in Microbiology and Immunology. Emphasis is on mechanisms to establish infection in the host and responses of the host to infection. Current literature. Prerequisite: background in biochemistry and molecular biology.

**MI 210. Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites. 4 Units.**

For graduate and medical students, and advanced undergraduates; required of first-year graduate students in Microbiology and Immunology. The molecular mechanisms by which microorganisms invade animal and human hosts, express their genomes, interact with macromolecular pathways in the infected host, and induce disease. Current literature. Undergraduate students interested in taking this class must meet with the instructor to obtain approval before enrolling.

**MI 211. Advanced Immunology I. 3 Units.**

For graduate students, medical students and advanced undergraduates. Topics include the innate and adaptive immune systems; genetics, structure, and function of immune molecules; lymphocyte activation and regulation of immune responses. Prerequisites: undergraduate course in Immunology and familiarity with experimental approaches in biochemistry, molecular biology, and cell biology.

Same as: IMMUNOL 201

**MI 215. Principles of Biological Technologies. 3 Units.**

The principles underlying novel as well as commonly utilized techniques to answer biological questions. Lectures and primary literature critiques on topics such as fluorescence microscopy, including applications such as FRET and single-cell analysis; human and murine genetic analysis; FACS; proteomics and analysis of noncoding RNAs. Class participation is emphasized. Prerequisite: biochemistry. Required of first-year graduate students in Microbiology and Immunology and the Immunology program.

Same as: IMMUNOL 215

**MI 216. The Human Virophere. 5 Units.**

Focus on interaction of humans and viruses from a number of perspectives: historical, cultural, political, and demographic. Organismal, molecular biological, biochemical, human and viral interactions; clinical aspects of viral disease, epidemiology and risk factors, public and international health, aspects of virology including emerging viruses and biological weapons. Case studies involving particular viruses: human herpes viruses, retroviruses, oncogenic viruses; vaccination and disease eradication, evolution of viruses as tools for research and therapy. Emphasis on general principles of biology and matters of decision making policy. Prerequisite: Biology core, Human Biology core, or consent of instructor.

Same as: MI 116

**MI 218. Computational Analysis of Biological Information: Introduction to Python for Biologists. 2 Units.**

Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience.

Same as: GENE 218, PATH 218

**MI 221. Gut Microbiota in Health and Disease. 2-3 Units.**

Preference to graduate students. Focus is on the human gut microbiota. Students enrolling for 3 units receive instruction on computational approaches to analyze microbiome data and must complete a related project.

**MI 225. Viral Hemorrhagic Fevers. 4 Units.**

Explores four families of human viruses (falvivirus, filovirus, bunyavirus, arenavirus) that share certain clinical and pathological features. These families used to illustrate more general features of human virology ranging from molecular virology, viral replication cycles, transmission, clinical presentation, pathogenesis, diagnosis, treatment, epidemiology, public health responses, public policy, economics. After general introduction, each family will be presented, followed by sessions focused on comparisons and integration. Specific case studies focus on current events. Student assignments include problem sets, model-building, blogging, and comprehensive examinations. In-class sessions will include interactive lectures, guest speakers, students presentations, discussions.

**MI 233. The Biology of Small Modulatory RNAs. 2 Units.**

Open to graduate and medical students. Explores recent progress and unsolved questions in the field of RNA interference and microRNA biology. Students are required to read assigned primary literature before each class and actively participate in guided discussions on related technical and conceptual issues during class meetings. Assignments include critiques of assigned papers and developing a novel research proposal.

Same as: GENE 233, PATH 233

**MI 234. Fundamentals of RNA Biology. 2 Units.**

For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students.

Same as: GENE 234, PATH 234

**MI 245. Computational Modeling of Microbial Communities. 4 Units.**

Provides biologists with basic computational tools and knowledge to confront large datasets in a quantitative manner. Students learn basic programming skills focused on Matlab, but also are introduced to Perl and Python. Topics include: image analysis, bioinformatics algorithms, reaction diffusion modeling, Monte Carlo algorithms, and population dynamics. Students apply computational skills to a miniature research project studying the human gut microbiota.

Same as: BIOE 115

**MI 250. Frontiers in Microbiology and Immunology. 1 Unit.**

Required of first- and second-year students in Microbiology and Immunology. How to evaluate biological research. Held in conjunction with the Microbiology and Immunology Friday noon seminar series. Before the seminar, students and faculty discuss one or more papers from the speaker's primary research literature on a related topic. After the seminar, students meet informally with the speaker to discuss their research.

**MI 285. Topics in Microbiology. 3 Units.**

For advanced undergraduates and graduate students. 1/3rd of the course consists of lectures by the instructor/colleagues. These cover, at an advanced level, with emphasis on bacteria, topics not covered elsewhere, e.g., phylogeny, molecular regulation, and bioenergetics. The remainder of the course involves interactive discussion of a topic of current interest in microbiology, chosen with student participation, and includes student presentations. (The topic last year was: Gene therapy.) Satisfies Central Menu Area 3 for BIO majors. Prerequisites: CHEM 31X, Biology core.

Same as: MI 185

**MI 299. Directed Reading in Microbiology and Immunology. 1-18 Unit.**

Prerequisite: consent of instructor.

**MI 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**MI 399. Graduate Research. 1-18 Unit.**

Students who have completed the necessary foundation courses undertake investigations in general bacteriology, bacterial physiology and ecology, bacterial genetics, microbial pathogenicity, immunology, parasitology, or virology sponsored by individual faculty members. Prerequisite: consent of instructor.

**MI 801. TGR Master's Project. 0 Units.**

.

**MI 802. TGR PhD Dissertation. 0 Units.**

.

**Modern Thought & Literature Courses****MTL 299. Edgework: New Directions in the Study of Culture. 1-3 Unit.**

Workshop. Required of first-year students in the doctoral program. Methodologies of different disciplines, the possibility and difficulty of interdisciplinary work within these disciplines, and their connection with the individual projects of students in Modern Thought and Literature. May be repeated for credit.

**MTL 334A. Concepts of Modernity I: Philosophical Foundations. 5 Units.**

In the late eighteenth century Immanuel Kant proclaimed his age to be "the genuine age of criticism." He went on to develop the critique of reason, which set the stage for many of the themes and problems that have preoccupied Western thinkers for the last two centuries. This fall quarter course is intended as an introduction to these themes and problems. We begin this course with an examination of Kant's philosophy before approaching a number of texts that extend and further interrogate the critique of reason. In addition to Kant, we will read texts by Hegel, Marx, Nietzsche, Weber, Freud, Lukács, and Heidegger. This course is the first of a two-course sequence. Priority to graduate students in MTL and English. The course will be capped at 12 students.

Same as: ENGLISH 334A

**MTL 334B. Concepts of Modernity II: Culture, Aesthetics, and Society in the Age of Globalization. 5 Units.**

Emphasis on world-system theory, theories of coloniality and power, and aesthetic modernity/postmodernity in their relation to culture broadly understood.

Same as: COMPLIT 334B, ENGLISH 334B

**MTL 390. Qualifying Paper. 1-5 Unit.**

Preparation and writing of the qualifying paper for the Ph.D. in Modern Thought and Literature. nn (Staff).

**MTL 398. Graduate Independent Study. 1-15 Unit.**

Students pursue a special subject of investigation under supervision of a member of the committee or another faculty member. May be repeated for credit.

**MTL 399. Reading for Orals. 1-15 Unit.**

Reading in preparation for the University Oral Examination. May be repeated for credit.

**MTL 802. TGR Dissertation. 0 Units.**

.

**Molecular & Cellular Physiology Courses****MCP 126. Neurons and Disease. 4 Units.**

Diseases of the nervous system. First lecture of each week focuses on the clinical, epidemiological and behavioral aspects of a selected disease or syndrome. Second lecture exposes the cell biological, electrophysiological, biochemical and/or molecular biological processes that underlie each disease presented. Instructors maintain some flexibility in the diseases chosen for elucidation, but students can expect those covered to range from the relatively straightforward, for example Multiple Sclerosis (MS) or Amyotrophic Lateral Sclerosis (ALS), to the more complex, for example, Schizophrenia or Obsessive Compulsive Disorder (OCD). Prerequisite: Biology or Human Biology core.

**MCP 156. How Cells Work: Energetics, Compartments, and Coupling in Cell Biology. 4 Units.**

Open to graduate and medical students, and advanced undergraduates. Dynamic aspects of cell behavior and function, including cellular energetics, homeostasis, heterogeneity of membranes, structure and function of organelles, solute and water transport, signaling and motility. Emphasis is on the principles of how coupling of molecular processes gives rise to essential functions at the cellular level. Mathematical models of cell function. Student presentations.

Same as: MCP 256

**MCP 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**MCP 202. Advanced Immunology II. 3 Units.**

Readings of immunological literature. Classic problems and emerging areas based on primary literature. Student and faculty presentations. Prerequisite: IMMUNOL 201/MI 211.

Same as: IMMUNOL 202

**MCP 207. MCP Bootcamp. 3 Units.**

Hands-on, week-long immersion in methods and concepts related to the physiology of cell signaling. Required of all first-year MCP students; other PhD students may enroll with consent of instructor.

**MCP 221. Advanced Cell Biology. 4 Units.**

For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, and differentiation. Weekly reading of current papers from the primary literature. Preparation of an original research proposal.

Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor.

Same as: BIO 214, BIOC 224

**MCP 222. Imaging: Biological Light Microscopy. 3 Units.**

Survey of instruments which use light and other radiation for analysis of cells in biological and medical research. Topics: basic light microscopy through confocal fluorescence and video/digital image processing. Lectures on physical principles; involves partial assembly and extensive use of lab instruments. Lab. Prerequisites: some college physics, Biology core.

Same as: BIO 152

**MCP 256. How Cells Work: Energetics, Compartments, and Coupling in Cell Biology. 4 Units.**

Open to graduate and medical students, and advanced undergraduates. Dynamic aspects of cell behavior and function, including cellular energetics, homeostasis, heterogeneity of membranes, structure and function of organelles, solute and water transport, signaling and motility. Emphasis is on the principles of how coupling of molecular processes gives rise to essential functions at the cellular level. Mathematical models of cell function. Student presentations.

Same as: MCP 156

**MCP 287. Connectomes. 1-3 Unit.**

(Same as PSYCH 287) Neural circuitry can be measured over a huge range of spatial scales, from sub-synaptic to whole brain connectomes. The methods used to measure these scales differ enormously, and scientists working at one scale should be able to understand and communicate with those measuring at other scales. Reviews methods, principal results, and ideas for integrating findings across scales by large-scale computation modeling.

**MCP 299. Directed Reading in Molecular and Cellular Physiology. 1-18 Unit.**

Prerequisite: consent of instructor.

**MCP 300. Neuroscience Journal Club and Professional Development Series. 1-2 Unit.**

Neuroscience Journal Club and Professional Development Series New description: Required of Neurosciences Ph.D. students in Autumn, Winter, and Spring of the first three years of study. Recent papers in neuroscience literature presented by graduate student.

**MCP 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**MCP 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Research fields include endocrinology, neuroendocrinology, and topics in molecular and cellular physiology. Prerequisite: consent of instructor. (Staff).

**MCP 801. TGR Project. 0 Units.**

.

**MCP 802. TGR Dissertation. 0 Units.**

.

**Music Courses****MUSIC 1A. Music, Mind, and Human Behavior. 3 Units.**

An introductory exploration of the question of why music is a pervasive and fundamental aspect of human existence. The class will introduce aspects of music perception and cognition as well as anthropological and cultural considerations.

**MUSIC 1SI. Introduction to Indian Classical Music. 1 Unit.**

This is an introductory course in the classical music of India, with emphasis on learning to listen to and appreciate Indian classical music concerts. It will cover a broad overview of the two main genres of Indian classical music - Carnatic and Hindustani. We will have several in-class demonstrations of instruments unique to the Indian classical music tradition. Class meetings will include discussions of landmark performances and artists as well as fundamentals of this music style, such as Raaga (melody), Taala (rhythm), song structure, and improvisation.

**MUSIC 2C. An Introduction to Opera. 3 Units.**

The lasting appeal of opera as a lavishly hybrid genre from the 1600s to the present. How and why does opera set its stories to music? What is operatic singing? Who is the audience? How do words, music, voices, movement, and staging collaborate in different operatic eras and cultures? Principal works by Monteverdi, Handel, Mozart, Verdi, Wagner, Strauss, Britten, and Adams. Class studies and attends two works performed by the San Francisco Opera.

**MUSIC 4SI. Interactive Introduction to North American Taiko. 1 Unit.**

Taught by Stanford Taiko members. Techniques and history. No experience necessary. May be repeated for credit. This course was initiated by Mitchell Fukumoto and Stanford Taiko.

**MUSIC 5SI. Insiders Guide to Music Production: The Modern Applications of Digital Audio. 2 Units.**

Learn how to produce music on computer. Class focus on achieving fluency in a digital audio workstation and fostering creativity within the music-making process. Practical mixing techniques, fundamental audio editing practices, and how to create sounds from scratch. Final project (song) that utilizes techniques taught in class. No prior music production experience is required.

**MUSIC 6F. Art is My Occupation: Professional Development in Music. 1 Unit.**

Open to majors and non-majors. This course is designed for students who are considering careers in performance or the music industry to explore their personal and artistic identity. Weekly guest speakers provide real world insight on topics related to professional advancement.

**MUSIC 7B. Musical Cultures of the World. 3 Units.**

An overview of selected musical cultures from Africa, Asia, Europe, and the Americas. Course objectives: cultivate an appreciation for the diversity of human musical expression; discover how music is used to shape social interactions and systems of meaning; develop active listening skills that can be used when encountering any music; gain a preliminary understanding of ethnomusicological concepts and vocabulary. No musical experience is necessary. Class format: Lecture, discussion, listening, guest performances, musical participation, and a concert analysis.

**MUSIC 8A. Rock, Sex, and Rebellion. 3 Units.**

Development of critical listening skills and musical parameters through genres in the history of rock music. Focus is on competing aesthetic tendencies and subcultural forces that shaped the music. Rock's significance in American culture, and the minority communities that have enriched rock's legacy as an expressively diverse form. Lectures, readings, listening, and video screenings. Attendance at all lectures is required.

**MUSIC 10AX. Science of Sound. 2 Units.**

Science of Sound will explore sound and sound-related technology from the perspectives of mathematics, physics, and acoustics. Scientists and engineers will have a chance to apply their technical knowledge to the field of music while musicians will learn how sound behaves physically and how it can be recorded, processed, and reproduced. Using the newly opened Bing Concert Hall as a focal point, we will study the science of sound recording, room acoustics, and multi-channel mixing and playback. Students will use what they learn to create short multi-channel compositions using special techniques to place sounds spatially. These pieces will be performed during the annual outdoor Summer CCRMA Transitions concert and again during the Fall 2014 CCRMA concert at Bing Concert Hall. We will use the textbook by Jay Kadis entitled Science of Sound Recording as our primary text and incorporate plenty of hands-on experience with sound equipment and electronics.

**MUSIC 11A. Orchestral Repertoire and Technique for Violin. 1 Unit.**

Open to major and non-majors who would like to learn orchestral pieces and performance technique, including the works from the Stanford Symphony Orchestra's concert program. Priority is given to students who sign up for SSO and SPO. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 11AZ. Orchestral Repertoire and Technique for Violin. 0 Units.**

Open to major and non-majors who would like to learn orchestral pieces and performance technique, including the works from the Stanford Symphony Orchestra's concert program. Priority is given to students who sign up for SSO and SPO. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 11N. A View from the Podium: The Art of Conducting. 3 Units.**

How a conductor interprets music, realizes a personal vision through the rehearsal process, and communicates with orchestra and audience. Conducting as based on human communication skills. How to apply these lessons to other fields of endeavor.

**MUSIC 12A. Introductory Piano Class. 1 Unit.**

"(A=level 1; B=level 2; C=level 3)There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Preference to department majors. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 12AS. Introductory Piano Class, Level 1. 1 Unit.**

Piano: Introductory Level 1 (Group; 10 students to a section) (A=Level 1; B=Level 2; C=Level 3). Class is closed by design. Please register on the wait-list and show up on the first day of class to receive a permission number for enrollment. Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

Same as: Group

**MUSIC 12AZ. Introductory Piano Class. 0 Units.**

"(A=level 1; B=level 2; C=level 3)There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Preference to department majors. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeat for credit for 0 unit and total completion allowed 99.

**MUSIC 12B. Introductory Piano Class. 1 Unit.**

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3) Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 12BS. Introductory Piano Class, Level 2. 1 Unit.**

Piano: Introductory Level 2 (Group; 10 students to a section) (A=Level 1; B=Level 2; C=Level 3). Class is closed by design. Please register on the wait-list and show up on the first day of class to receive a permission number for enrollment. Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

Same as: Group

**MUSIC 12BZ. Introductory Piano Class. 0 Units.**

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3) Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 12C. Introductory Piano Class. 1 Unit.**

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3.) May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 12CS. Introductory Piano Class, Level 3. 1 Unit.**

Piano: Introductory Level 3 (Group; 10 students to a section) (A=Level 1; B=Level 2; C=Level 3). Class is closed by design. Please register on the wait-list and show up on the first day of class to receive a permission number for enrollment. Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

Same as: Group

**MUSIC 12CZ. Introductory Piano Class. 0 Units.**

This class is closed by design. To enroll, please sign up on the Axxess waitlist and show up on the first day to receive a permission number for re-enrollment. Your place on the waitlist will be considered a reservation. If the waitlist is closed, there are no more spaces in the class. (A=level 1; B=level 2; C=level 3.). There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 12SC. Musical Collisions and Radical Creativity. 2 Units.**

The margins of musical culture; nonconformist, maverick, and eccentric creative impulses that expand the definition of art. Laboratory atmosphere and daily rehearsals in which students create collaborative works with a final public concert involving collaborations with local musicians and presentations of student-composed works created during the course.

**MUSIC 12SZ. Introductory Piano. 0 Units.**

Introductory Piano (zero-unit option). Complete registration form available for download at: <http://tinyurl.com/q43c48g>. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 13N. Bollywood and Beyond: South Asian Popular and Folk Music. 3 Units.**

This seminar is an introduction to regional and popular music of South Asia (India, Pakistan, Sri Lanka, Bangladesh, and Nepal). An immense variety of South Asian music—everything from drumming to wedding songs to movie scores—is woven into the social lives of both audiences and performers. Through their music, people across South Asia express social criticism, bring about political change, engage in worship, mark rites of passage, and cope with rapid and unsettling socio-economic changes. For example, Marathi kirtan, a form of devotional song/storytelling from Western India, has been used to teach spiritual lessons and oppose colonial occupation; musicians from South Indian oppressed castes enlist drums to protest their low social status; and the ever-popular Bollywood dance music creates a sense of home for Indians living abroad. In this seminar you will have the opportunity to acquire listening skills that will enhance your appreciation of the variety and depth of South Asian folk and popular music. We will draw on areas such as folklore and ethnomusicology to gain an understanding about what makes these musical practices thrive. And we will go on three field trips, which will give you an opportunity to engage first-hand with South Asian music and musicians in our local community. No musical experience is required.

**MUSIC 13Q. Classical Music and Politics: Western Music in Modern China. 3 Units.**

Preference to sophomores. Social history, cultural studies, China studies, international relations, and music. From the Italian Jesuit, Matteo Ricci who presented a clavichord to the Chinese emperor to the emergence of a modern generation of Chinese musicians.

**MUSIC 13SC. Performing America: The Broadway Musical. 2 Units.**

This seminar explores how the themes, characters, stories, and, above all, the songs of the Broadway musical have played a key role in forming ideas of American identity from the early 20th century to the present. Musical theater is a perennial site for negotiating social themes of race, class, gender roles, and sexual identity. The American musical has been in constant dialogue with vernacular song and dance idioms, from ragtime and early jazz to rock, pop, disco, hip-hop, and electronic dance music. Jazz musicians have regularly looked to musical theater for their standards, as have talent shows from the vaudeville era to American Idol. Disney musicals, the television series *Glee* and *Smash*, and the High School Musical franchise all illustrate how musicals serve as a medium for negotiating personal identity from childhood through early adulthood, staging the conflicts and attachments that define our everyday lives while connecting these with the culture we live in through the collective medium of song. We will look at a variety of influential historical musicals (*Oklahoma*, *Guys and Dolls*, *Gypsy*, *The Music Man*, *West Side Story*) and a few recent shows such as *Wicked*, *Hairspray*, *Bloody Bloody Andrew Jackson*, *American Idiot*, and *The Book of Mormon*, asking what the relation is between individual numbers and the overall themes and structures of the shows. How do lyrics and music combine in a successful song, and how does a song contribute to shape of the show? How do the dynamics of live theater relate to the presentation of musicals in the mediums of film and television? In addition to working on selected songs and scenes with the help of Stanford voice and drama faculty, students will attend, discuss, and review Bay area productions (San Jose, San Francisco), including the Broadway by the Bay (Redwood City) production of *Cabaret* opening on September 13, 2013. Grading will be based on class discussion, production analysis and reviews, and a choice between a final creative project and a short research paper.

**MUSIC 14N. Women Making Music. 3 Units.**

Preference to freshmen. Women's musical activities across times and cultures; how ideas about gender influence the creation, performance, and perception of music.

**MUSIC 15N. The Aesthetics of Data. 3 Units.**

Focus on visual and auditory display of data, specifically, the importance of aesthetic principles in effective data display, and the creative potential of scientific, biological, environmental and other data as inspiration for artistic expression.

**MUSIC 17N. The Operas of Mozart. 3 Units.**

Preference to freshmen. Four of Mozart's mature operas, the earliest works in the operatic repertoire never to go out of fashion. What accounts for this extraordinary staying power? Focus on the history of their composition, performance, and reception, and their changing significance from Mozart's time to the present.

**MUSIC 17Q. Perspectives in North American Taiko. 4 Units.**

Preference to sophomores. Taiko, or Japanese drum, is a newcomer to the American music scene. Emergence of the first N. American taiko groups coincided with increased Japanese American activism, and to some it is symbolic of Japanese American identity. N. American taiko is associated with Japanese American Buddhism. Musical, cultural, historical, and political perspectives of taiko. Hands-on drumming. Japanese music and Japanese American history, and relations among performance, cultural expression, community, and identity. Same as: ASNAMST 17Q

**MUSIC 18A. Jazz History: Ragtime to Bebop, 1900-1940. 3 Units.**

From the beginning of jazz to the war years. Same as: AFRICAAM 18A

**MUSIC 18B. Jazz History: Bebop to Present, 1940-Present. 3 Units.**

Modern jazz styles from Bebop to the current scene. Emphasis is on the significant artists of each style. Same as: AFRICAAM 18B

**MUSIC 19A. Introduction to Music Theory. 3 Units.**

For non-music majors and Music majors or minors unable to pass the proficiency test for entry to MUSIC 21. The fundamentals of music theory and notation, basic sight reading, sight singing, ear training, keyboard harmony; melodic, rhythmic, and harmonic dictation. Skill oriented, using piano and voice as basic tools to develop listening and reading skills.

**MUSIC 19B. Intermediate Music Theory. 3 Units.**

This course is an introduction to music theory geared toward students who have basic literacy skills (i.e. fundamental notation, identifying major and minor scales, keys, etc). Using musical materials from repertoire selected from campus and area concerts, and incorporating the opportunity to attend these concerts, the course will introduce elements of harmony, melody, form, orchestration and arrangement. The course is an appropriate successor to Music 19A. Students who successfully complete Music 19B can go on directly to Music 21.

**MUSIC 20A. Jazz Theory. 3 Units.**

Introduces the language and sounds of jazz through listening, analysis, and compositional exercises. Students apply the fundamentals of music theory to the study of jazz. Prerequisite: 19 or consent of instructor. Same as: AFRICAAM 20A

**MUSIC 20B. Advanced Jazz Theory. 3 Units.**

Approaches to improvisation through listening and transcribing, and developing familiarity with important contributors to this music. Topics: scale theory, altered dominants, and substitute harmony. Prerequisite: 20A or consent of instructor.

**MUSIC 20C. Jazz Arranging and Composition. 3 Units.**

Jazz arranging and composition for small ensembles. Foundation for writing for big band. Prerequisite: 20A or consent of instructor.

**MUSIC 21. Elements of Music I. 3 Units.**

Preference to majors. Introduction to tonal theory. Practice and analysis. Diatonic harmony focusing on melodic and harmonic organization, functional relationships, voice-leading, and tonal structures. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Enrollment limited to 40. Prerequisites: (1) Piano Proficiency Exam (must be passed within the first two weeks of the term) or MUSIC 12A (may be taken concurrently); (2) Passing grade on a basic musical skills proficiency examination on the first day of class or MUSIC 19.

**MUSIC 22. Elements of Music II. 3 Units.**

Preference to majors. Introduction to chromatic harmony focusing on secondary functions, modulations, harmonic sequences, mode mixture, and the Neapolitan, and augmented sixth chords. Analysis of musical forms and harmonizations complemented by harmonic and melodic dictation, sight singing, and other practical skills. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Prerequisites: (1) MUSIC 21; (2) Piano Proficiency Exam or MUSIC 12B (may be taken concurrently).

**MUSIC 23. Elements of Music III. 3 Units.**

Preference to majors. Continuation of chromatic harmony and complex forms of late Romantic period. Students must concurrently enroll in an Ear-training and musicianship lab (MUSIC 24a, 24b, or 24c as appropriate). Music majors must take 4 courses in ear training, and pass an ear training exit exam in their Junior year. Prerequisites: (1) MUSIC 22; (2) Piano Proficiency Exam or MUSIC 12C (may be taken concurrently).

**MUSIC 24A. Ear Training I. 1-2 Unit.**

Class is closed by design. Please contact instructor Erika Arul (mailto:earul@stanford.edu) for permission to enroll.

**MUSIC 24B. Ear Training II. 1-2 Unit.**

Class is closed by design. Please contact instructor Erika Arul (mailto:earul@stanford.edu) for permission to enroll.

**MUSIC 24C. Ear Training III. 1-2 Unit.**

Class is closed by design. Please contact instructor Erika Arul (mailto:earul@stanford.edu) for permission to enroll.

**MUSIC 24K. Keyboard Harmony. 1 Unit.**

In this practical introduction to keyboard harmony, students learn to play, analyze and improvise chord progressions at the keyboard. The course covers reading figured bass, playing chord progressions in all major and minor keys, and score reading. Students also analyze and perform solo repertoire that progresses through the semester from simple pieces to the level of a Bach invention and chorale. Preference given to majors. Keyboard harmony supports material learned in MUSIC 24B and 24C and counts as an ear training course. Prerequisites: (1) Piano Proficiency Exam, (2) MUSIC 24A.

**MUSIC 27N. The British Invasion. 3 Units.**

Examination of three generations of British popular music in the '60s and '70s: the Beatles (and the Rolling Stones, the Kinks, the Who); progressive rock (art rock) as embodied in Pink Floyd, Yes, King Crimson, Genesis, and Emerson, Lake, and Palmer; the emergence of punk in its revolutionary (the Clash) and nihilistic (the Sex Pistols) forms. Among other issues, the manner in which marginal American culture (particularly African-American blues) is neglected by Americans and venerated by foreigners and the subsequent mainstream consumption of a transformed and repackaged American minority culture is discussed.

**MUSIC 28N. Queer Lives in Music. 3 Units.**

Queer Lives in Music examines music by queer musicians in genres including punk, opera, rock, symphony, musical theater, folk, and jazz. We will study lesbian, gay, bisexual, transgender, and queer composers, performers, and listeners, to learn how queer people have expressed individual identity and built communities through music. We will learn how sexual stigma, taboo, oppression, and resistance have impacted musical creativity and music history. Class is designed for students interested in music, social history, cultural studies, and gender/sexuality studies.

Same as: FEMGEN 28N

**MUSIC 30N. A Stranger in a Strange Land: Jewish Musics in Translation. 3 Units.**

What does it mean to be a stranger in a strange land? For centuries Jewish people have struggled to shape their identities in unfamiliar surroundings, using music to remember the past and generate new, hybrid identities. In this class we adopt the metaphor of translation to think about how minority Jewish communities bridge distinct languages, musical idioms, and cultural practices. Our theme will take us on a journey across time and space; from Italy to India, New York, Syria, Russia, and Israel. We consider the case of Salamone Rossi, a 17th-century Italian Jewish composer who moved uneasily between dual careers in the synagogue and a secular/Christian court. We also explore a group of Indian Jews (Bene Israel) who combine idioms learned from Jewish and Christian missionaries with local Hindu musical traditions. In all our examples musicians translate languages, musical styles, and cultures to unite memories of a Jewish past with the realities of minority status in the present. The class format includes listening, discussion, some singing, student presentations, and guest lectures.

**MUSIC 32N. Sculpting with Sounds, Images, and Words. 3 Units.**

Throughout history and from East to West, cultures abound in multimedia forms. Whether in Coldplay's Music Video or Fantasia, Pepsi TV ads or Wagner's opera, Miyazaki anime or traditional Noh Theater of Japan, the three modes of expression; sounds, images, and words; are interwoven in distinctive ways. What are their individual and combined powers? How can one harness them in an online context? Can Web be a stage for multimedia theater? What is unique about the poetry of intermodal metaphor? The course will be an opportunity to face these questions in creative web-based projects as well as through in-class viewing of multimedia works, analysis and debates, readings, and student presentations. The seminar will be taught at the Center for Computer Research in Music and Acoustics where students will have access to new media technologies. Prior experience in music, literature, art practice or computer programming is welcome but not required.

**MUSIC 33N. Beethoven. 3 Units.**

This seminar is designed as an in-depth introduction to the music of Ludwig van Beethoven. In addition to exploring the composer's principal works in a variety of genres (symphonies, piano sonatas, string quartets, opera, etc.), we will consider broader questions of biography and reception history. How have images of the composer and the fortunes of his music changed over time? How did his compositions come to define the paradigm of Western classical music? What impact has he had on popular culture? The class is open to all levels of musical expertise; the ability to read music is not a requirement. Come prepared to discover – or rediscover – some great music!.

**MUSIC 34N. Performing America: The Broadway Musical. 3 Units.**

Musical theater as a site for the construction of American identity in the twentieth century to the present. Issues of class, race, gender, and sexuality; intersections with jazz, rock, and pop; roles of lyricist, composer, director, choreographer, producer, performers. Individual shows (Showboat, Oklahoma, South Pacific, Guys and Dolls, West Side Story, Wicked, Bloody Bloody Andrew Jackson, Book of Mormon), show tunes in jazz performance, film musicals, and television. Opportunities for performance and attendance at local productions.

**MUSIC 36N. Humor in Music. 3 Units.**

Through theoretical readings the course will touch on psychological and neurological bases of humor, explore contingent, tactical, modal, and ontological difficulties in the apprehension of humor, and address ethical issues surrounding humor in music. In addition to in-class listening and screening sessions, analytic discussions will be led by students who will find and present examples of humor in music. Students will also be invited to compose original humorous song lyrics and to create collaborative works of musical humor.

**MUSIC 38N. Singing Early Music. 3 Units.**

Preference to freshmen. 15th- and 16th-century musical repertoires and their contexts; performance practice.

**MUSIC 39A. Music, Health, and Medicine. 3 Units.**

Explore how music relates to health and medicine surveying recent medical literature. Review different techniques in music therapy, music-related health problems, and issues related to educational and medical applications. Course materials are chosen to clearly identify music as a component of health related activity or occupation, to describe responses to music in our mind and body, and to think about the roles of music in our health. The seminars also discuss related basics in psychology and neurology. Students learn how to do literature search and write essays about relevant topics.

**MUSIC 39N. The Classical String Quartet: Haydn, Mozart, Beethoven & Schubert. 3 Units.**

This seminar, an in-depth historical survey of canonic works from the string quartet repertory, is intended for performers and non-performers alike. Topics to be explored include the origins of the genre in the pre-classical period; the establishment of enduring conventions in the early quartets of Haydn; aesthetic criteria that distinguish the approaches of Haydn and Mozart; the epoch-defining shifts in musical composition that are reflected in Beethoven's works for the medium; the tension between classicism and romanticism in the chamber music of Schubert; and issues of historical performance practice. Field trips will include a visit to the Beethoven Center in San Jose and attending chamber music concerts on campus. The St. Lawrence String Quartet (Stanford's ensemble-in-residence) will be joining the seminar on a regular basis to provide live demonstrations and coaching. Students who are string players are strongly encouraged to bring their instruments to class. Class activities will cover history, criticism, analysis, and performance (usually in combination). Informed listening is a primary goal of the seminar. Assignments will be tailored to student interests and abilities.

**MUSIC 40. Music History to 1600. 4 Units.**

Pre- or corequisite: 21.

**MUSIC 41. Music History 1600-1830. 4 Units.**

Pre- or corequisite: 22.

**MUSIC 42. Music History Since 1830. 4 Units.**

Pre- or corequisite: 23.

**MUSIC 60. Singing: How it's done, how to learn to do it, and how to work with people who do it.. 1 Unit.**

A weekly lecture course for singers, pianists, directors, conductors, and anyone who is interested in the art and craft of the voice. Students will learn about the vocal instrument, how to use it efficiently and keep it healthy, how to lead and participate in vocal productions and ensembles of all periods and styles. Ability to sing and/or read music is not required; this is not a voice class. Required readings. Taught by Music Department Faculty; coordinated by Wendy Hillhouse.

**MUSIC 65A. Voice Class I. 1 Unit.**

Group (7 students to a section) beginning voice (A = level 1; B = level 2). May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 65AS. Voice Class 1: Beginning Voice, Level 1. 1 Unit.**

Group (7 students to a section) beginning voice (A = level 1; B = level 2). Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University. Same as: Group

**MUSIC 65AZ. Voice Class I. 0 Units.**

Group (7 students to a section) beginning voice (A = level 1; B = level 2). There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for 0 unit and total completion allowed 99.

**MUSIC 65B. Voice Class II. 1 Unit.**

Group (7 students to a section) beginning voice for the non-major (A = level 1; B = level 2). May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 65BS. Voice Class 2: Beginning Voice, Level 2. 1 Unit.**

Group (7 students to a section) beginning voice (A = level 1; B = level 2). Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University. Same as: Group

**MUSIC 65BZ. Voice Class II. 0 Units.**

Group (7 students to a section) beginning voice for the non-major (A = level 1; B = level 2). There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeat for credit for 0 units and total completion of 99.

**MUSIC 65SZ. Beginning Voice. 0 Units.**

Beginning Voice (zero-unit option). Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 72A. Intermediate Piano Class. 1 Unit.**

For intermediate students. May be repeated for credit a total of 14 times. Prerequisites: 12C or equivalent, audition. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72AS. Intermediate Piano Class. 1 Unit.**

Piano: Intermediate Level (Group; 10 students to a section) Class is closed by design. Please register on the wait-list and show up on the first day of class to receive a permission number for enrollment. Complete registration form available for download at: <http://tinyurl.com/q43c48g>. May be repeated for credit 5 times. Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University. Same as: Group

**MUSIC 72AZ. Intermediate Piano Class. 0 Units.**

For intermediate students. Prerequisites: 12C or equivalent, audition. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee and signup information. This class is closed by design. Please register on the waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72C. Harpsichord Class. 1 Unit.**

For beginning harpsichord students who have keyboard skills. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Admission based on instructor consent. Contact instructor prior to enrolling to discuss availability. Class meets in Braun 201. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72CZ. Harpsichord Class. 0 Units.**

For beginning harpsichord students who have keyboard skills. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Admission based on instructor consent. Contact instructor prior to enrolling to discuss availability. Class meets in Braun 201. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72D. Jazz Piano Class. 1 Unit.**

By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72DZ. Jazz Piano Class. 0 Units.**

By invitation only; priority to majors and jazz-ensemble participants. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 72G. Gu-Zheng Class. 1 Unit.**

Introduction to Chinese music through learning how to play Gu-Zheng, a 21-stringed traditional Chinese instrument. The cultural, social, and historical significance of Gu-Zheng. 15 Gu-Zheng techniques, how to read Chinese music and Gu-Zheng notation, and two simple classic Gu-Zheng pieces. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee information. All participants must enroll. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 72GZ. Introduction to Gu-Zheng. 0 Units.**

Introduction to Chinese music through learning how to play Gu-Zheng, a 21-stringed traditional Chinese instrument. The cultural, social, and historical significance of Gu-Zheng. 15 Gu-Zheng techniques, how to read Chinese music and Gu-Zheng notation, and two simple classic Gu-Zheng pieces. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fee information. All participants must enroll. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 72SZ. Intermediate Piano. 0 Units.**

Intermediate Piano (zero-unit option). Zero unit enrollment option available with instructor permission. See website: (<http://tinyurl.com/posmuhn>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 73. Intermediate Voice Class. 1 Unit.**

For intermediate students. Admission by audition. May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the Axxess waitlist and show up on the first day of class to receive a permission number for enrollment. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 73Z. Intermediate Voice Class. 0 Units.**

For intermediate students. Admission by audition. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. This class is closed by design. Please register on the Axxess waitlist and show up on the first day of class to receive a permission number for enrollment.

**MUSIC 74A. Introductory Violin Class. 1 Unit.**

(74A.1=Level 1 beginners; 74A.2=Level 2 continuing) Open to majors and non-majors. Focus is on beginning violin skills. Topics include brief history and physics of the instrument, and survey of repertoire. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74AZ. Introductory Violin Class. 0 Units.**

(74A.1=Level 1 beginners; 74A.2=Level 2 continuing) Open to majors and non-majors. Focus is on beginning violin skills. Topics include brief history and physics of the instrument, and survey of repertoire. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74C. Classical Guitar Class. 1 Unit.**

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74CZ. Classical Guitar Class. 0 Units.**

There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74D. Harp Class. 1 Unit.**

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 74DZ. Harp Class. 0 Units.**

There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 75B. Renaissance Wind Instruments Class. 1 Unit.**

May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 75BZ. Renaissance Wind Instruments Class. 0 Units.**

May be repeated for credit. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 76. Brass Instruments Class. 1 Unit.**

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 76A. Tuba Class. 1 Unit.**

Basic brass techniques as they apply to the tuba including warmups, breathing, and developing a daily routine. For beginning through intermediate players. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit.

**MUSIC 76AZ. Tuba Class. 0 Units.**

Basic brass techniques as they apply to the tuba including warmups, breathing, and developing a daily routine. For beginning through intermediate players. This course includes a fee of \$175 for Music majors and minors, and \$200 for non Music majors. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for 0 unit.

**MUSIC 76Z. Brass Instruments Class. 0 Units.**

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 77. Percussion Class. 1 Unit.**

May be repeated for credit a total of 14 times. There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 77Z. Percussion Class. 0 Units.**

There is a fee for this class. Please visit <http://music.stanford.edu> for class fees and signup information. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 80T. Jewish Music in the Lands of Islam. 4 Units.**

An Interdisciplinary study of Music, Society, and Culture in communities of the Jewish Diaspora in Islamic countries. The course examines the diverse and rich musical traditions of the Jews in North Africa and the Middle East. Based on the "Maqamat" system, the Arabic musical modes, Jewish music flourished under Islamic rule, encompassing the fields of sacred music, popular songs, and art music. Using musicological, historical, and anthropological tools, the course compares and contrasts these traditions from their original roots through their adaptation, appropriation, and re-synthesis in contemporary art music and popular songs.

Same as: JEWISHST 80T

**MUSIC 112. Creative Expression: Musical Theater. 4 Units.**

Students begin to create pieces that are fresh and innovative forms of musical theater that do not necessarily appeal to specifically popular audiences but perhaps to audiences more associated with high art, opera, or even contemporary independent music. Musical theater is an untapped resource of potential artistic innovation and has unfortunately become stuck in an ideal of universal accessibility. In present popular culture and the culture of contemporary art forms, musical theater almost exclusively refers to popular productions such as Phantom of the Opera, Rent, Wicked, Jesus Christ Superstar. Although excellent pieces of art in their own way, both dramaturgically and in their ability to evoke emotion through catchy melodies, for the most part each of them have their basis in popular and traditional musical idioms and theatrical forms, seldom exploring more advanced or avant-garde and experimental compositional and theatrical techniques.

Same as: TAPS 112

**MUSIC 122A. Counterpoint. 4 Units.**

Analysis and composition of contrapuntal styles from the Renaissance and Baroque periods. Use of keyboard, ear training, and sight singing underlies all written work. Prerequisites: MUSIC 23 and MUSIC 24C; passing piano-proficiency examination; or, consent of instructor.

**MUSIC 122B. Analysis of Tonal Music. 4 Units.**

Complete movements, or entire shorter works of the 18th and 19th centuries, are analyzed in a variety of theoretical approaches. Prerequisites: MUSIC 23 and MUSIC 24C; passing piano-proficiency examination; or, consent of instructor.

**MUSIC 122C. Introduction to 20th-Century Composition. 4 Units.**

Contemporary works, with emphasis on music since 1945. Projects in free composition based on 20th-century models. Prerequisites: MUSIC 23 and MUSIC 24C; passing piano-proficiency examination; or, consent of instructor.

**MUSIC 123. Undergraduate Seminar in Composition. 3 Units.**

Current trends in composition. May be repeated for credit a total of 7 times. Prerequisites: Music major; 23 or consent of instructor.

**MUSIC 124A. Songwriters Workshop. 1-2 Unit.**

Laboratory for composers of any kind of vernacular music: singer-songwriters; folk singers; laptop dance music composers; rock and pop bands; rappers; writers of instrumentals or music with lyrics; solo artists and collaborators; etc. Compositional strategies for songwriting, overview of exemplars, discussion of aesthetic issues, and development of artistic personae. Weekly critique session for students and faculty to share work and offer feedback. Music theory and literacy not required. Aimed, however, at those with at least some experience as writers, whether casual or extensive. For bands at least half of members must be enrolled.

**MUSIC 124B. Songwriters Workshop. 3 Units.**

Laboratory for composers of any kind of vernacular music: singer-songwriters; folk singers; laptop dance music composers; rock and pop bands; rappers; writers of instrumentals or music with lyrics; solo artists and collaborators; etc. Compositional strategies for songwriting, overview of exemplars, discussion of aesthetic issues, and development of artistic personae. Weekly critique session for students and faculty to share work and offer feedback. Music theory and literacy not required. Aimed, however, at those with at least some experience as writers, whether casual or extensive. For bands at least half of members must be enrolled. Enrollment in 3-unit course is by permission of, and invites lessons with instructor.

**MUSIC 125. Individual Undergraduate Projects in Composition. 1-3 Unit.**

May be repeated for credit a total of 14 times. Prerequisites: music major, and one quarter of 123.

**MUSIC 126. Introduction to Thoroughbass. 1-3 Unit.**

The development of continuo techniques and skills for figured-bass realization. Performance and analysis of selected repertoire, using thoroughbass principles and exercises based on historical theoretical treatises. Prerequisite: 21.

**MUSIC 127. Instrumentation and Orchestration. 3 Units.**

Individual instruments, instrumental groups within the orchestra, and combinations of groups. Arrangements from piano to orchestral music. Score analysis with respect to orchestration. Practical exercises using chamber ensembles and school orchestra. Prerequisite: 23.

**MUSIC 128. Stanford Laptop Orchestra: Composition, Coding, and Performance. 1-5 Unit.**

Classroom instantiation of the Stanford Laptop Orchestra (SLOrk) which includes public performances. An ensemble of more than 20 humans, laptops, controllers, and special speaker arrays designed to provide each computer-mediated instrument with its sonic identity and presence. Topics and activities include issues of composing for laptop orchestras, instrument design, sound synthesis, programming, and live performance. May be repeated four times for credit. Same as: CS 170

**MUSIC 129. Advanced Ear-Training/Musicianship. 1-2 Unit.**

A course in advanced aural analysis and musicianship skills for students who have completed the Music 24 series. Topics of study include analysis by ear of large scale forms, chromatic or extended-tertiary harmony, modulations to distantly related keys, chromatic or atonal melodies, modal harmony and melody, as well as alternative forms of aural analysis.

**MUSIC 130A. Introduction to Conducting. 3 Units.**

Baton techniques and rehearsal procedures. The development of coordination of the members of the body involved in conducting; fluency in beat patterns and meters; dynamics, tempi, cueing, and use of the left hand in conducting. Prerequisites: 122B and diagnostic musicianship exam given first day of class.

**MUSIC 130B. Elementary Orchestral Conducting. 3 Units.**

Prerequisites: 127 or previous orchestral performance experience, 130A.

**MUSIC 130C. Elementary Choral Conducting. 3 Units.**

Techniques specific to the conducting of choral ensembles: warm-ups, breathing, balance, blend, choral tone, isolation principles, recitative conducting, preparation, and conducting of choral/orchestral works. Prerequisite: 130A.

**MUSIC 140J. Studies in Music of the Middle Ages: Music and Memory. 3-4 Units.**

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.). Same as: MUSIC 240J

**MUSIC 141J. Studies in Music of the Renaissance. 2-4 Units.**

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.). Same as: MUSIC 241J

**MUSIC 142J. Studies in Music of the Baroque: Monteverdi's Theater Music. 3-4 Units.**

Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.). Same as: MUSIC 242J

**MUSIC 143J. Studies in Music of the Classical Period: Franz Joseph Haydn. 3-4 Units.**

Music and Musicians in the Age of Enlightenment Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.). Same as: MUSIC 243J

**MUSIC 144J. Studies in Music of the Romantic Period: Faust in 19th-century Music. 3-4 Units.**

Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.). Same as: MUSIC 244J

**MUSIC 145J. Studies in Western Art Music Since 1900: The Music & Ideas of Charles Ives. 4 Units.**

Prerequisites: MUSIC 23, MUSIC 42. (WIM at 4-unit level only.). Same as: MUSIC 245J

**MUSIC 146J. Studies in Ethnomusicology: Listening to the Local: Music Ethnography of the Bay Area. 3-5 Units.**

An introduction to music ethnography through student research on musical life in the Bay Area. Focus is on the intersections of music, social life, and cultural practice by engaging with people as they perform music and culture in situ. Techniques taught include participant-observation, interviewing and oral history, writing fieldnotes, recording, transcription, analysis, and ethnographic writing. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.). Same as: MUSIC 246J

**MUSIC 147J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.**

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.). Same as: AFRICAAM 19, AMSTUD 147J, CSRE 147J, MUSIC 247J

**MUSIC 147K. Studies in Music, Media, and Popular Culture: Music and Urban Film. 3-4 Units.**

How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.). Same as: MUSIC 247K

**MUSIC 147L. Studies in Music, Media, and Popular Culture: Latin American Music and Globalization. 3-4 Units.**

Focuses on vernacular music of Latin America and the Caribbean, including Mexico, Cuba, Dominican Republic, Peru, Brazil, Colombia, and Argentina. Musical examples discussed in relation to: globalization, migration, colonialism, nationalism, diaspora, indigeneity, politics, religion, dance, ethnicity, and gender. How music reflects and shapes cultures, identities, and social structures. Genres addressed: bachata, bossa nova, cumbia, forro, ranchero, reggaeton, rock, salsa, tango, and others. Seminar, guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.). Same as: CHILATST 147L, CSRE 147L, MUSIC 247L

**MUSIC 148J. Studies in Perf Practice: Reactions to the Record: Early Recordings, Lost Styles, and Music's Future. 3-4 Units.**

This is a seminar on the transformation of musical style in the era of recordings in light of their roots in cultural trends, including shifting hierarchies between composer and performer, work and notation, text and act. Early recordings will be studied as documents of musical values and conceptions different from those around us today. Methodologies of performance analysis will be explored and used to contextualize sources, which include historic recordings from Stanford's Archive of Recorded Sound, performance documents, and field research with performers, composers, critics, and listeners. Repertoire includes works for orchestra, piano, strings, chamber ensemble and voice. Outstanding contributions from seminar members may be featured in the Music Department's May 2014 Reactions to the Record symposium. May be repeated for credit. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4-unit level only.).

Same as: MUSIC 248J

**MUSIC 150. Musical Acoustics. 3 Units.**

The physics of vibrating systems, waves, and wave motion. Time- and frequency-domain analysis of sound. Room acoustics, reverberation, and spatialization. The acoustics of musical instruments: voice, strings, and winds. Emphasis is on the practical aspects of acoustics in making music. Hands-on and computer-based lab. See <http://ccrma.stanford.edu/courses/150/>.

**MUSIC 150D. The Paradigm Shift. 1 Unit.**

Examination of the idea of 'paradigm shift' by considering paradigm shifts in different academic fields of inquiry. Serial accumulation of guest lectures by distinguished faculty representing the University's many and varied departments, each asking and answering the question 'What is the most important paradigm shift in the history of my field? Are paradigm shifts revolution or evolution? Do they move us closer to truth? How frequently do they occur? Can humans plan for, cause, or resist them?'. Same as: POLISCI 133D

**MUSIC 151R. Beyond Musical Notes: Analyzing and Contextualizing Orchestral Repertoire. 1-3 Unit.**

The origin story of Gustav Mahler's first symphony begins, not with the composer, but with the history of orchestral music: how the symphony evolved from a set of court dances to a piece of philosophical contemplation. This course introduces analysis and historical contextualization of musical works by examining repertoire performed by the Stanford Symphony Orchestra and Stanford Philharmonia during the 2015-2016 academic year. The course is open to current members of Stanford's orchestra program as well as students with an interest in musical performance. Prerequisite: ability to read musical notation.

**MUSIC 152A. Careers in Media Technology. 1 Unit.**

Careers in Media Technology explores how leading audio, music, and video technology companies, such as Pandora, Adobe, Sonos, Dolby, Gracenote, iZotope, and Avid bring products from idea to market. We examine best practices, roles, day-to-day responsibilities, desired skillsets, and department/team function. This seminar is intended for all students considering full-time positions or internships in media technology industry. No prior engineering background required. Topics include: product management, project management (agile), software development in large organizations, UX/UI design, marketing, hardware development, R&D, sales, operations (HR, IP/patents), and the hiring process. Online lectures available. Class time includes discussion and meetings with industry professionals.

**MUSIC 154. History of Electronic Music. 1-5 Unit.**

What is electronic music? Acoustic, computer music, algorithmic composition, tape music, glitch, electronic, musique concrète, noise, laptop music, DJ'ing, organized sound...what do these labels mean? This course will provide a brief historical survey of electroacoustic music and discuss some of the most salient questions associated with it, from both a compositional and musicological point of view. Topics to be covered include: definitions of musical sounds; Schaefferian theory and musique concrète; serialism and elektronische Musik; tape music and computer music in the USA; analysis of electroacoustic music; sampling and intellectual property; algorithmic and computer-assisted composition; live-electronics and improvisation. The course does not require previous experience in the field. Classes will be based on discussion of selected listening and reading materials, as well as hands-on digital experimentation with sounds.

**MUSIC 154A. Sound Art I. 4 Units.**

Acoustic, digital and analog approaches to sound art. Familiarization with techniques of listening, recording, digital processing and production. Required listening and readings in the history and contemporary practice of sound art. (lower level).

Same as: ARTSTUDI 131

**MUSIC 154B. Aesthetics of Experimental Electronic Music, 1980 to Today. 3-5 Units.**

In this course, students will listen to, analyze, and interpret experimental electronic music since 1980. We will explore how technologies influence music making, audiences' experiences, distribution outlets and performance contexts for electronic music. How do artists generate meaning and expressivity when using experimental tools and styles? Emphasis on developing vocabulary and frameworks for informed discourse surrounding electronic music, drawing from both academic and journalistic traditions. Topics include electronic dance music, dubstep, hip hop, internet music culture, drone, noise, microsound, electroacoustic, and sound art. Highly recommended for music majors taking the MST specialization. For upper-level undergraduates and graduate students.

**MUSIC 154D. Symposium on Manufacturing Techniques for Music and Art. 1-3 Unit.**

A guided symposium on the many techniques for making music and art objects. The course will be tailored to student interest and needs as it covers computer controlled machining, traditional techniques, and innovative methods of creating physical objects for music and art.

**MUSIC 155. Intermedia Workshop. 3-4 Units.**

Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit.

Same as: ARTSTUDI 239, MUSIC 255

**MUSIC 156. "sic": Improvisation Collective. 1 Unit.**

Small ensemble devoted to learning trans-idiomatic improvisation techniques and composing indeterminate pieces in a workshop setting. One major concert. Prerequisite: access to an instrument. Improvisational experience and conventional instrumental virtuosity not required. May be repeated for credit for a total of 3 times.

**MUSIC 156Z. "sic": Improvisation Collective. 0 Units.**

Small ensemble devoted to learning trans-idiomatic improvisation techniques and composing indeterminate pieces in a workshop setting. One major concert. Prerequisite: access to an instrument. Improvisational experience and conventional instrumental virtuosity not required. May be repeated for credit for a total of 3 times.

**MUSIC 158. Stanford Community Chorus. 1 Unit.**

Chorus members explore many different types of music and singing in a fun and supportive environment, including folk, spirituals, popular songs, and traditional choral music. The course culminates in an informal performance. No audition is required to join; experienced music readers and non-readers alike are welcome. The ensemble is open to both Stanford students and community members. There is a \$25 fee for music. Offered in collaboration with Stanford Continuing Studies. Enrollment limited to 15 students and 30 community members. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 159. Early Music Singers. 1 Unit.**

Small choir specializing in Medieval, Renaissance, and early Baroque vocal music. One major concert per quarter. May be repeated for credit for a total of 15 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 159J. Performance as Analysis: Late-Medieval Music in Action. 1-3 Unit.**

This experimental course channels embodied musical knowledge into text-based analysis and reflection. Part I features an intensive period of seven workshops and rehearsals: working closely with members of Cut Circle (<http://cutcircle.org>) as well as specialists in computer science and art history, students prepare a concert to be held during Week 2 of the quarter. Part II (Weeks 3-5) comprises a more typical twice-a-week schedule in which we reflect on, contextualize, and analyze the music and our experience performing it. A final paper is due in about Week 7; regular meetings conclude after Week 5. Prerequisites: good sight-singing skills; at least one quarter's experience in MUSIC 165 (Chamber Chorale) or an ensemble of a similar caliber. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University. Week 1: Mon 4 January: 4:30 - 7:00, MemChu; Wed 6 January: 4:30 - 7:00, MemChu; Fri 8 January: 4:30 - 7:00, DinkReh; Sat 9, and Sun 10 January: 2:30 - 6pm, BRH moving to MemChu; Week 2: Tues 12 January: 4:30 - 7:00, MemChu; Wed 13 January: 6pm call for 7:30p concert, MemChu;; Weeks 3-5: Tues/Thurs, 4:30 - 5:50 Braun 105; Weeks 6-10: No class meeting. Final paper due in week 7.

**MUSIC 159K. Stanford Facsimile Singers. 1 Unit.**

Small vocal ensemble performing late-medieval and Renaissance music from original sources. Exposes students to unfamiliar notational systems through often lavish music manuscripts and prints; builds sight-singing skills. May be repeated for credit for a total of three times. Zero-unit enrollment option available with instructor permission. Prerequisites: basic sight-singing. Prior training in voice not required.

**MUSIC 159KZ. Stanford Facsimile Singers. 0 Units.**

Small vocal ensemble performing late-medieval and Renaissance music from original sources. Exposes students to unfamiliar notational systems through often lavish music manuscripts and prints; builds sight-singing skills. May be repeated for credit for a total of three times. Zero-unit enrollment option available with instructor permission. Prerequisites: basic sight-singing. Prior training in voice not required.

**MUSIC 159Z. Early Music Singers. 0 Units.**

Small choir specializing in Medieval, Renaissance, and early Baroque vocal music. One major concert per quarter. May be repeated for credit for a total of 15 times for 0 unit. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160. Stanford Symphony Orchestra. 1 Unit.**

70- to 100-member ensemble performing major orchestral works; minimum one concert per quarter. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://sso.stanford.edu>). All participants must enroll. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160A. Stanford Philharmonia. 1 Unit.**

Prerequisite: audition, one year of 160, or consent of instructor. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://sso.stanford.edu>). All participants must register. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160AZ. Stanford Philharmonia. 0 Units.**

Prerequisite: audition, one year of 160, or consent of instructor. May be repeated for credit. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://www.stanford.edu/group/sso/cgi-bin/wordpress/member-login/>). All participants must register. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160B. Stanford New Ensemble. 1 Unit.**

Performing compositions of the 20th century, recent works of this century, and new works by Stanford faculty and student composers. Musicians collaborate with composers and artists visiting and performing at Stanford. One concert per quarter. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://www.stanford.edu/group/sso/cgi-bin/wordpress/member-login/>). All participants must register. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160BZ. Stanford New Ensemble. 0 Units.**

Performing compositions of the 20th century, recent works of this century, and new works by Stanford faculty and student composers. Musicians collaborate with composers and artists visiting and performing at Stanford. One concert per quarter. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://www.stanford.edu/group/sso/cgi-bin/wordpress/member-login/>). All participants must register. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160C. Stanford Baroque Soloists. 1 Unit.**

Elite string group focusing on concerti by Corelli, Vivaldi and other Italians, Bach, Handel and other Germans, as well as theater music by Purcell and Lully. Each member expected to solo as well as play backup. Performances each quarter, played standing, student-led without conductor. Coaching will emphasize leadership and ensemble techniques, intonation and blend, particulars of eighteenth century notation and performance practice. Modern instruments, modern pitch, baroque bows as available. Limited to six violins, three violas, three cellos, bass, admission by audition. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. Contact instructor for audition and enrollment information: [apmartin@stanford.edu](mailto:apmartin@stanford.edu). May be repeated for credit for total completion of 15 and total 15 units. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 160CZ. Stanford Baroque Soloists. 0 Units.**

Elite string group focusing on concerti by Corelli, Vivaldi and other Italians, Bach, Handel and other Germans, as well as theater music by Purcell and Lully. Each member expected to solo as well as play backup. Performances each quarter, played standing, student-led without conductor. Coaching will emphasize leadership and ensemble techniques, intonation and blend, particulars of eighteenth century notation and performance practice. Modern instruments, modern pitch, baroque bows as available. Limited to six violins, three violas, three cellos, bass, admission by audition. **MUSIC 160Z. Stanford Symphony Orchestra. 0 Units.**

70- to 100-member ensemble performing major orchestral works; minimum one concert per quarter. Admission and enrollment based on audition. For audition and contact information, please refer to the SSO/SPO/SNE website at (<http://www.stanford.edu/group/sso/cgi-bin/wordpress/member-login/>). All participants must enroll. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161A. Stanford Wind Symphony. 1 Unit.**

40- to 50-member ensemble performing transcriptions of symphonic music, brass band music, and repertoire composed specifically for symphonic band. One concert per quarter. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161AZ. Stanford Wind Symphony. 0 Units.**

40- to 50-member ensemble performing transcriptions of symphonic music, brass band music, and repertoire composed specifically for symphonic band. One concert per quarter. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161B. Jazz Orchestra. 1 Unit.**

Jazz Orchestra is an undergraduate large ensemble performance class. Admission is by audition and/or permission of instructor. The class meets three times per week and presents a minimum of one formal concert per quarter with a major jazz artist. The class endeavors to provide students with the opportunity to perform, at the highest level, jazz compositions and arrangements of a serious nature, and provide opportunities for challenging and creative improvisational situations. Emphasis is placed on the understanding of the structural, psychological, and emotional components of the materials studied and performed. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for total of 15 times. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161BZ. Jazz Orchestra. 0 Units.**

Jazz Orchestra is an undergraduate large ensemble performance class. Admission is by audition and/or permission of instructor. The class meets three times per week and presents a minimum of one formal concert per quarter with a major jazz artist. The class endeavors to provide students with the opportunity to perform, at the highest level, jazz compositions and arrangements of a serious nature, and provide opportunities for challenging and creative improvisational situations. Emphasis is placed on the understanding of the structural, psychological, and emotional components of the materials studied and performed. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for total completion of 15 and 0 (zero) unit. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161C. Red Vest Band. 1 Unit.**

A small ensemble of the Leland Stanford Junior University Marching Band open to members of the LSJUMB by audition and consent of instructor. Members perform at all men's and women's home basketball games and travel to some away and post-season games. Twice-weekly rehearsals focus on introduction of new student arrangements and the LSJUMB's repertoire of rock, funk, and traditional styles. May be repeated for credit a total of 7 times. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161CS. Red Vest Band Traveling. 2 Units.**

A small ensemble of the Leland Stanford Junior University Marching Band open to members of the LSJUMB by audition and consent of instructor. Members perform at all men's and women's home basketball games and travel to some away and post-season games. Students will also participate to the weekly rehearsal focused on introduction of new student arrangements and the LSJUMB's repertoire of rock, funk, and traditional styles. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161D. Stanford Brass Ensemble. 1 Unit.**

Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. Performance of works for full brass choir and for smaller ensembles of brass instruments. Once weekly rehearsals. May be repeated for credit. Prerequisite: audition and consent of instructor. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161DZ. Stanford Brass Ensemble. 0 Units.**

Performance of works for full brass choir and for smaller ensembles of brass instruments. Once weekly rehearsals. May be repeated for credit. Prerequisite: audition and consent of instructor. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161E. Stanford Afro-Latin Jazz Orchestra. 1 Unit.**

Ensemble dedicated to the performance, interpretation and study of Afro-Latin music and its fusion with North American jazz. Repertoire includes the music of Brazil, Cuba, Dominican Republic, Puerto Rico, Peru and Argentina, as well as the United States. Idioms studied include Latin Jazz, Danzon, Son Montuno, Samba, Bossa, Traditional and Modern Salsa, Timba, Lando, and Candombe. African roots of the music are also presented including songs and rhythms from the Lucumi and Arara traditions. Focus is placed on learning rhythms, associated syncopations and also clave phrasing. One weekly rehearsal and a concert are required per quarter. Other playing opportunities available at the discretion of the group. Regular openings for brass/wind players, drummers, percussionists, pianists, bassists, and vocalists. Guest openings on violin, guitar and vibraphone. Inclusion of other instruments at the discretion of the director. Members should have basic reading ability and some related ensemble experience (e.g. jazz band). Ability to read and play complex syncopations are mandatory. Percussionists with experience in bongo, congas, timbales and pandeiro desired. Vocalists with fluency or exposure to Spanish and/or Portuguese also preferred. May be repeat for credit. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 161EZ. Stanford Afro-Latin Jazz Orchestra. 0 Units.**

Ensemble dedicated to the performance, interpretation and study of Afro-Latin music and its fusion with North American jazz. Repertoire includes the music of Brazil, Cuba, Dominican Republic, Puerto Rico, Peru and Argentina, as well as the United States. Idioms studied include Latin Jazz, Danzon, Son Montuno, Samba, Bossa, Traditional and Modern Salsa, Timba, Lando, and Candombe. Ability to read and play complex syncopations are mandatory. Percussionists with experience in bongo, congas, timbales and pandeiro desired. Vocalists with fluency or exposure to Spanish and/or Portuguese also preferred. May be repeat for credit for total of 0 (zero) unit. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 162. Symphonic Chorus. 1 Unit.**

180- to 200-voice choral ensemble, performing major choral masterworks with orchestra. One concert per quarter. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 162Z. Symphonic Chorus. 0 Units.**

180- to 200-voice choral ensemble, performing major choral masterworks with orchestra. One concert per quarter. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 163. Memorial Church Choir. 1 Unit.**

Official choir of Memorial Church, furnishing music for Sunday services and special occasions in the church calendar. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 163Z. Memorial Church Choir. 0 Units.**

Official choir of Memorial Church, furnishing music for Sunday services and special occasions in the church calendar. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 165. Chamber Chorale. 1 Unit.**

Select 24-voice choral ensemble, specializing in virtuoso choral repertoire from all periods of Western art music. Annual touring commitment required. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 165Z. Chamber Chorale. 0 Units.**

Select 24-voice choral ensemble, specializing in virtuoso choral repertoire from all periods of Western art music. Annual touring commitment required. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 167. University Singers. 1 Unit.**

Select, 50-voice choral ensemble, performing choral repertoire from all periods of Western art music. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 167S. Summer Chorus. 1 Unit.**

80- to 100-voice non-auditioned ensemble, performing major choral masterworks and choral repertoire from all periods of Western art music. Concert July 31, 2015 in Memorial Church. Details at: <https://music.stanford.edu/academic-programs/summer-studies-stanford-music/summer-session-ensembles>. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for a total of 0(zero) unit. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 167SZ. Summer Chorus. 0 Units.**

80- to 100-voice non-auditioned ensemble, performing major choral masterworks and choral repertoire from all periods of Western art music. Concert July 31, 2015 in Memorial Church. For details see: <https://music.stanford.edu/academic-programs/summer-studies-stanford-music/summer-session-ensembles>. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. May be repeated for credit for a total of 0 (zero) unit. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 167Z. University Singers. 0 Units.**

Select, 50-voice choral ensemble, performing choral repertoire from all periods of Western art music. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 169. Stanford Taiko. 1 Unit.**

Select 15- to 18-member North American taiko ensemble, performing all-original repertoire for Japanese drums. Multiple performances in Winter and Spring quarters, also touring; instrument construction and maintenance. Admission by audition in Autumn Quarter only. May be repeated for credit a total of 14 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 169Z. Stanford Taiko. 0 Units.**

Select 15- to 18-member North American taiko ensemble, performing all-original repertoire for Japanese drums. Multiple performances in Winter and Spring quarters, also touring; instrument construction and maintenance. Admission by audition in Autumn Quarter only. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 170. Collaborative Piano. 1 Unit.**

Performance class in a workshop setting. Techniques of collaboration with vocalists and instrumentalists in repertoire ranging from songs and arias to sonatas and concertos. Prerequisite: private-lesson proficiency level in piano, or consent of instructor.

**MUSIC 171. Chamber Music. 1 Unit.**

Admission based on audition. Weekly one-hour coachings from Music department faculty. Search for instructor section in Axess. Classical string quartets and piano/string groups are supervised by the St. Lawrence String Quartet. Two masterclasses and one performance per quarter are required. May be repeated for credit. All participants must enroll. Zero unit enrollment option available with instructor permission. See website for policy, procedure, and audition sign up: <http://music.stanford.edu/> By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 171Z. Chamber Music. 0 Units.**

Admission based on audition. Weekly one-hour coachings from Music department faculty. Search for instructor section in Axess. Classical string quartets and piano/string groups are supervised by the St. Lawrence String Quartet. Two masterclasses and one performance per quarter are required. May be repeated for credit. **MUSIC 172A. Piano. 1-3 Unit.**

Private lessons and group master class weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 175A. Flute. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 175B. Oboe. 1-3 Unit.**

May be repeated for credit a total of 15 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 175C. Clarinet. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 175D. Bassoon. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 175E. Recorder/Early Winds. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 175F. Saxophone. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 175G. Baroque Flute. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 175H. Jazz Saxophone. 1-3 Unit.**

May be repeated for credit a total of 15 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 176A. French Horn. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 176B. Trumpet. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 176C. Trombone. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 176D. Tuba. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 176E. Jazz Trumpet. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 177. Percussion. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 177A. Drum Set Lessons. 1-3 Unit.**

These lessons will be geared toward the individual student's desires and needs. All levels are welcome, but students should contact instructor to set up initial meeting, prior to enrolling in the course. Students will explore drumset technique, coordination, reading and a study various styles including, Jazz, Rock, R&B, Blues, Latin and Brazilian music. Students will use different texts as needed. These texts may include: Syncopation by Ted Reed, Modern Reading Text in 4/4 by Louis Bellson, A Funky Primer by Charles Dowd, Advanced Techniques for the Modern Drummer by Jim Chapin, and others. Students will also use material created by David for his classes "Around the World on a Drumset" and "Chart Reading Demystified." These lessons are designed to be both fun and challenging. Students will play along with recordings and are encouraged to bring in recordings of music that they enjoy. May be repeated for credit a total of 15 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 179Z. Applied Music Private Lessons. 0 Units.**

Students enroll in appropriate instructor section for private instrumental/vocal lessons using this zero unit enrollment option. Available only with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information.

**MUSIC 182. Diction for Singers. 1 Unit.**

The international phonetic alphabet and its application to German, French, and Italian vocal literature. Open also to pianists interested in vocal coaching and choral conducting.

**MUSIC 183A. German Art Song Interpretation. 1 Unit.**

By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Beethoven, Schubert, Wolf and Strauss. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).

**MUSIC 183B. French Art Song Interpretation. 1 Unit.**

By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Fauré, Debussy, Ravel and Poulenc. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).

**MUSIC 183C. Interpretation of Musical Theater Repertoire. 1 Unit.**

By audition only; ability to read music required. For singers and pianists as partners. Performance class in a workshop setting. Composers include Kern, Porter, Gershwin, Rodgers, Sondheim, Lloyd Weber, Jason Robert Brown and others. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists).

**MUSIC 184A. Editing and Performing Early Music. 1-3 Unit.**

This course is a practical workshop in early music vocal repertoire. The main focus of this course is to use original source material to explore editorial practice. Having prepared the score, students learn to perform the piece from an historically informed performance practice point of view. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal for performance and/or recording. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 184AZ. Editing and Performing Early Music. 0 Units.**

This course is a practical workshop in early music vocal repertoire. The main focus of this course is to use original source material to explore editorial practice. Having prepared the score, students learn to perform the piece from an historically informed performance practice point of view. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal for performance and/or recording. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

**MUSIC 185. Music Across Media: Music Video to Postclassical Cinema. 4 Units.**

What makes music videos, YouTube clips and musical numbers in today's films engaging? What makes them tick? Emphasis is on aesthetics and close reading. How music videos and its related forms work. Uses of the body, how visual iconography operates, what lyrics and dialogue can do, how and what music can say, and how it can work with other media. Questions of representation such as how class, ethnicity, gender, race, and nationality function. Viewership and industry practices. Same as: FILMSTUD 141, FILMSTUD 341, MUSIC 385

**MUSIC 186. Religion and Music in South Asia. 4-5 Units.**

How music and other arts in South Asia are intertwined with religion. Classical, devotional, folk, and popular examples introduce Gods as musicians, sound as God, music as yoga, singing as devotion, music as *ζecstasyζ*-inducing, music as site for doctrinal argument, music and religion as vehicles for nationalism. Co-taught by professors of Music and Religious Studies, focusing Hinduism and Islam in India, Pakistan, and the diaspora. Music practice along with academic study; guest artists and films; no background required. Same as: MUSIC 286, RELIGST 259

**MUSIC 186A. Music and Religious Experience in the Contemporary World. 3-5 Units.**

Explores the central role of music in the performance and experience of religion, positioning music not as an adjunct to silent rituals and liturgy, but as the catalyst and carrier of religious experience, indeed as religious experience itself. Topics include: trance, spirit possession, heightened religious experience, sacred sound and chant, shamanism, politics, and identity. Musical traditions include: Zimbabwean mbira music, African-American church music, Southeast Asian Buddhist ritual music, South Asian Hindu and Islamic devotional music, shamanistic music of Southeast Asia.

Same as: MUSIC 286A, RELIGST 156, RELIGST 256

**MUSIC 186B. American Song in the 20th Century and after. 3-4 Units.**

Critical and creative exploration of song in the Americas. About twenty-five key examples will guide discussion of the interactions between words, music, performance and culture. Weekly listening, reading and assignments will be organized around central themes: love, sex and romance; war and politics; labor and money; place; identity; society and everyday life. Genres include art song; blues, gospel, jazz and country; pop, soul, rock and hip-hop; bossa nova, nueva canción and salsa; electronic and experimental. Takehome and in-class assignments will include critical and creative writing, and music composition, production and performance; final projects may emphasize any of the above. Same as: AMSTUD 186B, MUSIC 286B

**MUSIC 187. Music and Culture from the Land of Fire: Introduction to Azerbaijani Mugham. 1-5 Unit.**

Nestled in the Caucasus, Azerbaijan is a crossroads between East and West; its rich musical heritage contains threads of Turkish, Central Asian, Persian, Caucasian, Russian, and Arabic traditions. In this course, master-musician Imamyar Hasanov teaches students to perform and appreciate Azeri music. Content includes classical mugham, Eastern theory, improvisation and microtonality. We'll discuss Azeri music culture, supplemented by guest lecturers and Skype interviews with musicians in Azerbaijan. Open to students with any experience playing a musical instrument (including voice). No previous experience with Azeri music necessary. Supported by the SF World Music Festival. Questions? Email [schultz@stanford.edu](mailto:schultz@stanford.edu).

**MUSIC 192A. Foundations of Sound-Recording Technology. 3 Units.**

For upper division undergraduates and graduate students; preference given to Music majors with MST specialization. Topics: elementary electronics; the physics of sound transduction and microphone operation, selection, and placement; mixing consoles; connectors and device interconnection; grounding and shielding; principles of analog magnetic recording; operation maintenance of recording equipment; and principles of recording engineering. Enrollment limited. Prerequisites: MUSIC 150, algebra, physics basics, and consent of instructor.

**MUSIC 192B. Advanced Sound Recording Technology. 3 Units.**

Topics: noise reduction techniques; dynamics and time-delay audio effects; the principles of digital audio; disk- and tape-based digital recorders; digital audio workstations and editing; advanced multitrack techniques; SMPTE and MIDI time code and device synchronization; MIDI sequencing and synchronization. See <http://ccrma.stanford.edu/courses/>. Prerequisite: 192A.

**MUSIC 192C. Session Recording. 1-2 Unit.**

Independent engineering of recording sessions. May be repeated for credit a total of 14 times. Prerequisites: 192A,B.

**MUSIC 197. Undergraduate Teaching Apprenticeship. 1-2 Unit.**

Work in an apprentice-like relationship with faculty teaching a student-initiated course. Prerequisite: consent of instructor. (Staff).

**MUSIC 198. Concentrations Project. 4 Units.**

For concentration program participants only. Must be taken in senior year. Multiple concentrators may enroll in one section of 198 per concentration.

**MUSIC 199. Independent Study. 1-5 Unit.**

For advanced undergraduates and graduate students who wish to do work outside the regular curriculum. Before registering, student must present specific project and enlist a faculty sponsor. May be repeated for credit a total of 14 times.

**MUSIC 200A. Proseminar in Musicology and Music Bibliography. 3-4 Units.**

Introduction to research in music, bibliographical materials, major issues in the field, philosophy, and methods in music history. Guest lecturers and individual research topics.

**MUSIC 200B. Proseminar in Ethnomusicology. 3-5 Units.**

A graduate-level introduction to the field of ethnomusicology. Issues and debates are traced through the history of the discipline, with emphasis on influences from anthropology, performance studies, linguistics, and cultural studies. Topics include music and: social organization, "culture," structure, practice, comparison, representation, globalization, identity, transcription, and embodiment.

**MUSIC 201. CCRMA Colloquium. 1 Unit.**

Weekly review of work being done in the field, research taking place at CCRMA, and tools to make the most of the CCRMA technical facilities.

**MUSIC 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

**MUSIC 220A. Fundamentals of Computer-Generated Sound. 2-4 Units.**

What are the basic tools that computer music researchers and artists use to create sound? This course will include a summary of digital synthesis techniques (additive, subtractive, wavetable, frequency modulation and physical-modeling), signal processing techniques for digital effects, (reverberation, panning, filters), and basic psychoacoustics. Programming experience is recommended, but not required. Course will use the ChuckK computer music language. Majors (undergraduate or graduate) must take for 4 units. See <http://ccrma.stanford.edu/>.

**MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Computational Music. 2-4 Units.**

The use of high-level programming language as a compositional aid in creating musical structures. Advanced study of sound synthesis techniques. Simulation of a reverberant space and control of the position of sound within the space. See <http://ccrma.stanford.edu/>. Prerequisite: 220A.

**MUSIC 220C. Research Seminar in Computer-Generated Music. 2-4 Units.**

Individual projects in composition, psychoacoustics, or signal processing. See [http://ccrma.stanford.edu](http://ccrma.stanford.edu/). May be repeated for credit. Prerequisite: 220B.

**MUSIC 220D. Research in Computer-Generated Music. 1-10 Unit.**

Independent research projects in composition, psychoacoustics, or signal processing. See <http://ccrma.stanford.edu/>. May be repeated for credit. Prerequisite: 220C.

**MUSIC 221. Topics in the History of Theory. 3-5 Units.**

The intersection of music theory and compositional practice in different eras of Western music history. Primary sources in music theory and issues such as notation, rhythm, mode, dissonance treatment, counterpoint, tonality, form, rhetoric, affect and imitation, expression, linear analysis, 12-tone and set theory, in light of relevant repertoire and modern scholarship. May be repeated for credit a total of 5 times.

**MUSIC 222. Sound in Space. 1-4 Unit.**

Historical background, techniques and theory on the use of space in music composition and diffusion. Listening and analysis of relevant pieces. Experimental work in spatialization techniques leading to short studies to be diffused in concert at the end of the quarter.

**MUSIC 223. Composition for Electronic Musicians. 1-4 Unit.**

Composition for any combination of acoustic and electroacoustic instrumentation, computer-generated sound, invented instruments, sound-sculptures, and multi-disciplinary elements including theater and visual media. Project-based laboratory to advance original student works, supported by lectures on the fundamentals of composition. Concert performance of final works. Taught at CCRMA with a focus on engendering deliberate conversation on the enrichment of a cultural context for new media. Open to undergraduates and graduates.

**MUSIC 223T. Computer Music Improvisation and Algorithmic Performance. 2-4 Units.**

This seminar will investigate how to approach configuring a set of composition tools for real time composition. Composition programming, ensemble rehearsal, and performance. Determining algorithmic composition beginning by imagining a process or a structure, applying a mapping process to transform that structure (which resides in the conceptual domain), into sound (which may reveal the original conception). Investigation of gestural mapping that occurs when a sonic result is achieved by an act of interpretation, whether it be reading a score and/or improvising.

**MUSIC 230. Advanced Orchestral Conducting. 2-4 Units.**

May be repeated for credit a total of 8 times. Prerequisite: 130B.

**MUSIC 231. Advanced Choral Conducting. 2-4 Units.**

Individual instruction continuing trajectory of Music 130C. Focus on gestural technique and analysis of works by genre and historical period. May be repeated for credit a total of 8 times. Prerequisite: 130C.

**MUSIC 236. Future Media, Media Archaeologies. 3-4 Units.**

Hand-on. Media technologies from origins to the recent past. Students create artworks based on Victorian era discoveries and inventions, early developments in electronic media, and orphaned technologies. Research, rediscover, invent, and create devices of wonder and impossible objects. Readings in history and theory. How and what media technologies mediate.

Same as: ARTSTUDI 236

**MUSIC 240J. Studies in Music of the Middle Ages: Music and Memory. 3-4 Units.**

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.).  
Same as: MUSIC 140J

**MUSIC 241J. Studies in Music of the Renaissance. 2-4 Units.**

Prerequisites: MUSIC 21, MUSIC 40. (WIM at 4-unit level only.).  
Same as: MUSIC 141J

**MUSIC 242J. Studies in Music of the Baroque: Monteverdi's Theater Music. 3-4 Units.**

Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.).  
Same as: MUSIC 142J

**MUSIC 243J. Studies in Music of the Classical Period: Franz Joseph Haydn. 3-4 Units.**

Music and Musicians in the Age of Enlightenment Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.).  
Same as: MUSIC 143J

**MUSIC 244J. Studies in Music of the Romantic Period: Faust in 19th-century Music. 3-4 Units.**

Prerequisites: MUSIC 23, MUSIC 42 (WIM at 4-unit level only.).  
Same as: MUSIC 144J

**MUSIC 245J. Studies in Western Art Music Since 1900: The Music & Ideas of Charles Ives. 4 Units.**

Prerequisites: MUSIC 23, MUSIC 42. (WIM at 4-unit level only.).  
Same as: MUSIC 145J

**MUSIC 246J. Studies in Ethnomusicology: Listening to the Local: Music Ethnography of the Bay Area. 3-5 Units.**

An introduction to music ethnography through student research on musical life in the Bay Area. Focus is on the intersections of music, social life, and cultural practice by engaging with people as they perform music and culture in situ. Techniques taught include participant-observation, interviewing and oral history, writing fieldnotes, recording, transcription, analysis, and ethnographic writing. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.).  
Same as: MUSIC 146J

**MUSIC 247J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.**

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.).  
Same as: AFRICAAM 19, AMSTUD 147J, CSRE 147J, MUSIC 147J

**MUSIC 247K. Studies in Music, Media, and Popular Culture: Music and Urban Film. 3-4 Units.**

How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.).  
Same as: MUSIC 147K

**MUSIC 247L. Studies in Music, Media, and Popular Culture: Latin American Music and Globalization. 3-4 Units.**

Focuses on vernacular music of Latin America and the Caribbean, including Mexico, Cuba, Dominican Republic, Peru, Brazil, Colombia, and Argentina. Musical examples discussed in relation to: globalization, migration, colonialism, nationalism, diaspora, indigeneity, politics, religion, dance, ethnicity, and gender. How music reflects and shapes cultures, identities, and social structures. Genres addressed: bachata, bossa nova, cumbia, forro, ranchero, reggaeton, rock, salsa, tango, and others. Seminar, guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.).  
Same as: CHILATST 147L, CSRE 147L, MUSIC 147L

**MUSIC 248J. Studies in Perf Practice: Reactions to the Record: Early Recordings, Lost Styles, and Music's Future. 3-4 Units.**

This is a seminar on the transformation of musical style in the era of recordings in light of their roots in cultural trends, including shifting hierarchies between composer and performer, work and notation, text and act. Early recordings will be studied as documents of musical values and conceptions different from those around us today. Methodologies of performance analysis will be explored and used to contextualize sources, which include historic recordings from Stanford's Archive of Recorded Sound, performance documents, and field research with performers, composers, critics, and listeners. Repertoire includes works for orchestra, piano, strings, chamber ensemble and voice. Outstanding contributions from seminar members may be featured in the Music Department's 2014 Reactions to the Record symposium. May be repeated for credit. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4-unit level only.).  
Same as: MUSIC 148J

**MUSIC 250A. Physical Interaction Design for Music. 3-4 Units.**

This lab and project-based course explores how we can physically interact with real-time electronic sound. Students learn to use and design sensors, circuits, embedded computers, communication protocols and sound synthesis. Advanced topics include real-time media, haptics, sound synthesis using physical model analogs, and human-computer interaction theory and practice. Course culminates in musical performance with or exhibition of completed design projects. A \$50 lab fee will be added to your bill upon enrollment in this course. See <http://ccrma.stanford.edu/>.

**MUSIC 250B. Interactive Sound Art. 1-4 Unit.**

A project based course where students will create Interactive Sound Art Installations focusing on the acoustical properties of reverberation. See <http://ccrma.stanford.edu/courses/250b/>.

**MUSIC 251. Psychophysics and Music Cognition. 1-5 Unit.**

Lecture, lab and experiment-based course in perception, psychoacoustics, cognition, and neuroscience of music. (WIM at 4 or 5 units only).

**MUSIC 252. Introduction to Music Notation Software. 1-2 Unit.**

Learn to use music notation programs Finale®, Sibelius® and open-source alternatives.

**MUSIC 253. Symbolic Musical Information. 2-4 Units.**

Focus on symbolic data for music applications including advanced notation systems, optical music recognition, musical data conversion, and internal structure of MIDI files.

Same as: CS 275A

**MUSIC 254. Music Query, Analysis, and Style Simulation. 2-4 Units.**

Leveraging off three synchronized sets of symbolic data resources for notation and analysis, the lab portion introduces students to the open-source Humdrum Toolkit for music representation and analysis. Issues of data content and quality as well as methods of information retrieval, visualization, and summarization are considered in class. Grading based primarily on student projects. Prerequisite: 253 or consent of instructor. Same as: CS 275B

**MUSIC 255. Intermedia Workshop. 3-4 Units.**

Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit.

Same as: ARTSTUDI 239, MUSIC 155

**MUSIC 256A. Music, Computing, Design I: Art of Design for Computer Music. 3-4 Units.**

Creative design for computer music software. Programming, audiovisual design, as well as software design for musical tools, instruments, toys, and games. Provides paradigms and strategies for designing and building music software, with emphases on interactive systems, aesthetics, and artful product design. Course work includes several programming assignments and a "design+implement" final project. Prerequisite: experience in C/C++ and/or Java.

Same as: CS 476A

**MUSIC 256B. Music, Computing, Design II: Virtual and Augmented Reality for Music. 3-4 Units.**

Aesthetics, design, and exploration of creative musical applications of virtual reality (VR) and augmented reality (AR), centered around VR and mobile technologies. Comparison between AR, VR, and traditional software design paradigms for music. Topics include embodiment, interaction design, novel instruments, social experience, software design + prototyping. Prerequisite: MUSIC 256A / CS 476A.

Same as: CS 476B

**MUSIC 257. Neuroplasticity and Musical Gaming. 3-5 Units.**

What changes in a musician's brain after hours and years of daily practice? How do skills that make a great violinist transfer to other abilities? Can directed neuroplasticity be used to target skill learning? This course will include fundamentals of psychoacoustics and auditory neuroscience. Focus will be development of video games that use perceptually motivated tasks to drive neural change. Emphasis will be on music, linguistic, and acoustic based skills. Programming experience is highly recommended, but not required.

**MUSIC 260. Music of South Asia. 3-4 Units.**

Focuses on the history, theory, and practice of South Asian music with particular emphasis on the classical traditions of North and South India. Also addresses regional folk, popular, and devotional musical styles of India, Pakistan, and Afghanistan. Topics include: raga, tala, vocal and instrumental genres, improvisation, aesthetics, music transmission, musical nationalism, social organization of musicians, music and ritual, music and gender, and technology. Lecture with discussion, some singing (no experience necessary), guest performances, reading, listening, and analysis.

**MUSIC 264. Musical Engagement: Use correlation analysis and big data to identify and predict musical behaviors. 1-3 Unit.**

The course will use data analysis to explore why people engage in music. The course will be one part lab, one part seminar, meeting once a week for two hours. Students will learn to apply correlation analysis to a vast corpus of actual performance data using the latest analytics and query tools, developing insights into what motivates the musical preferences and behaviors of both performers and listeners. A basic proficiency in Java, MatLab, and SQL query language will be developed along the way.

**MUSIC 269. Research in Performance Practices. 1-5 Unit.**

Directed reading and research. May be repeated for credit a total of 5 times.

**MUSIC 272A. Advanced Piano. 1-3 Unit.**

Private lessons and group masterclass weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 272B. Advanced Organ. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 272C. Advanced Harpsichord. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 272D. Advanced Jazz Piano. 1-3 Unit.**

By invitation only; priority to majors and jazz-ensemble participants. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 275E. Advanced Recorder/Early Winds. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. <http://music.stanford.edu/Academics/LessonSignups.html>.

**MUSIC 275F. Advanced Saxophone. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. <http://music.stanford.edu/Academics/LessonSignups.html>.

**MUSIC 275G. Advanced Baroque Flute. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 275H. Advanced Jazz Saxophone. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 276A. Advanced French Horn. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 276B. Advanced Trumpet. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 276C. Advanced Trombone. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 276D. Advanced Tuba. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 276E. Advanced Jazz Trumpet. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 277. Advanced Percussion. 1-3 Unit.**

May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 277A. Advanced Drum Set. 1-3 Unit.**

May be repeated for credit a total of 15 times. There is a fee for this class. Please visit <http://music.stanford.edu/Academics/LessonSignups.html> for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (<http://music.stanford.edu>) for policy and procedure.

**MUSIC 280. TA Training Course. 1 Unit.**

Required for doctoral students serving as teaching assistants. Orientation to resources at Stanford, guest presentations on the principles of common teaching activities, supervised teaching experience. Students who entered in the Autumn should take 280 in the Spring prior to the Autumn they begin teaching.

**MUSIC 286. Religion and Music in South Asia. 4-5 Units.**

How music and other arts in South Asia are intertwined with religion. Classical, devotional, folk, and popular examples introduce Gods as musicians, sound as God, music as yoga, singing as devotion, music as *ecstasy*-inducing, music as site for doctrinal argument, music and religion as vehicles for nationalism. Co-taught by professors of Music and Religious Studies, focusing Hinduism and Islam in India, Pakistan, and the diaspora. Music practice along with academic study; guest artists and films; no background required.

Same as: MUSIC 186, RELIGST 259

**MUSIC 286A. Music and Religious Experience in the Contemporary World. 3-5 Units.**

Explores the central role of music in the performance and experience of religion, positioning music not as an adjunct to silent rituals and liturgy, but as the catalyst and carrier of religious experience, indeed as religious experience itself. Topics include: trance, spirit possession, heightened religious experience, sacred sound and chant, shamanism, politics, and identity. Musical traditions include: Zimbabwean mbira music, African-American church music, Southeast Asian Buddhist ritual music, South Asian Hindu and Islamic devotional music, shamanistic music of Southeast Asia.

Same as: MUSIC 186A, RELIGST 156, RELIGST 256

**MUSIC 286B. American Song in the 20th Century and after. 3-4 Units.**

Critical and creative exploration of song in the Americas. About twenty-five key examples will guide discussion of the interactions between words, music, performance and culture. Weekly listening, reading and assignments will be organized around central themes: love, sex and romance; war and politics; labor and money; place; identity; society and everyday life. Genres include art song; blues, gospel, jazz and country; pop, soul, rock and hip-hop; bossa nova, nueva canción and salsa; electronic and experimental. Takehome and in-class assignments will include critical and creative writing, and music composition, production and performance; final projects may emphasize any of the above.

Same as: AMSTUD 186B, MUSIC 186B

**MUSIC 300A. Medieval Notation. 3-4 Units.**

Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.

**MUSIC 300B. Renaissance Notation. 4 Units.**

Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.

**MUSIC 300C. Medieval Methodologies. 1-3 Unit.**

An introduction to the essential tool-kit for medievalists, this course will give all medievalists a great head start in knowing how to access and interpret major works and topics in the field. Stanford's medieval faculty will explain the key sources and methods in the major disciplines from History to Religion, French to Arabic, English to Chinese, and Art History to German and Music. In so doing, students will be introduced to the breadth and interdisciplinary potential of Medieval Studies. A workshop devoted to Digital Technologies and Codicology/Palaeography will offer elementary training in these fundamental skills.

Same as: DLCL 300, ENGLISH 300

**MUSIC 302. Research in Musicology. 1-5 Unit.**

Directed reading and research. May be repeated for credit a total of 14 times.

**MUSIC 305A. Analysis and Repertoire: Medieval and Renaissance. 4 Units.**

Analytical approaches to genres, styles, forms, and techniques of Western music from [chant and early polyphony through the sixteenth century]. Issues of aesthetics, history, and interpretation viewed through representative repertoire, readings, and analytical methods.

**MUSIC 305B. Analysis and Repertoire: Baroque to Early Romantic. 4 Units.**

Analytical approaches to genres, styles, forms, and techniques of Western music from the seventeenth through the mid-nineteenth centuries. Issues of aesthetics, history, and interpretation viewed through representative repertoire, readings, and analytical methods.

**MUSIC 305C. Analysis and Repertoire: Late-Romantic to Contemporary. 4 Units.**

Analytical approaches to genres, styles, materials and techniques of Western music from the mid-nineteenth century through the present. Questions of aesthetics, history and performance explored through musical analysis. Representative repertoire and readings, and a range of analytical methods.

**MUSIC 310. Research Seminar in Musicology. 3-5 Units.**

For graduate students. Topics vary each quarter. May be repeated for credit a total of 8 times.

**MUSIC 310A. Music and Critical Theory. 3-5 Units.**

The seminar provides an opportunity to study some of the seminal texts of Critical Theory dealing with music. Concentrating on Theodor Adorno's writings on music, we will also include key philosophers who informed Adorno's thinking (in particular Kant, Hegel and Nietzsche), influential nineteenth-century aesthetics of music (Hoffmann, Schopenhauer and Hanslick), other contemporaries of Adorno (for example, Ernst Bloch), and some later authors whose work was influenced by the Frankfurt School (such as Carl Dahlhaus). We will also consider the impact of Critical Theory on recent scholarship. Weekly meetings will be organized around various topics, ranging from central concepts such as "Enlightenment" and "musical material" to individual composers. Music by Wagner, Mahler, Schoenberg, Stravinsky and Weill will feature prominently on the syllabus.

Same as: GERMAN 310A

**MUSIC 312A. Aesthetics and Criticism of Music, Ancients and Moderns: Plato to Nietzsche. 4 Units.**

For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.

**MUSIC 312B. Aesthetics and Criticism of Music, Contemporaries: Heidegger to Today. 4 Units.**

For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.

**MUSIC 318. Advanced Acoustics. 1-5 Unit.**

Current topics. May be repeated for credit.

**MUSIC 319. Research Seminar on Computational Models of Sound Perception. 1-3 Unit.**

All aspects of auditory perception, often with emphasis on computational models. Topics: music perception, signal processing, auditory models, pitch perception, speech, binaural hearing, auditory scene analysis, basic psychoacoustics, and neurophysiology. See <http://ccrma.stanford.edu/courses/>. May be repeated for credit a total of 14 times.

**MUSIC 320A. Introduction to Audio Signal Processing Part I: Spectrum Analysis. 3-4 Units.**

Digital signal representations and transforms for music and audio research. Topics: complex numbers, sinusoids, spectrum representation, sampling and aliasing, the Discrete Fourier Transform (DFT), Fourier theorems, z transform, Laplace transform, and associated Matlab software. See <http://ccrma.stanford.edu/courses/320/>.

**MUSIC 320B. Introduction to Audio Signal Processing Part II: Digital Filters. 3-4 Units.**

Digital filters for music and audio research. Topics: digital filter structures, frequency response, z transforms, transfer-function analysis, and associated Matlab software. See <http://ccrma.stanford.edu/courses/320/>.

**MUSIC 321. Readings in Music Theory. 1-5 Unit.**

Directed reading and research. May be repeated for credit a total of 15 times.

**MUSIC 323. Doctoral Seminar in Composition. 3-4 Units.**

Illustrated discussions of compositional issues and techniques. Presentation of relevant topics, including students' own compositional practice. May be repeated for credit a total of 14 times.

**MUSIC 324. Graduate Composition Forum. 1 Unit.**

Community forum for all graduate student composers. Discussion of completed and in-progress work by students, faculty, and visiting composers. Repertoire listening sessions. Planning of upcoming Department events. Special area exam topic presentations, final doctoral project presentations, and review of portfolios. Many sessions are open to the public. May be repeated for credit.

**MUSIC 325. Individual Graduate Projects in Composition. 1-5 Unit.**

May be repeated for credit.

**MUSIC 330. Musicology Dissertation Colloquium. 1-4 Unit.**

Weekly meetings for all musicology students 4th year and beyond to discuss research and writing strategies, share and critique work in progress, and discuss issues in professional development (preparing abstracts, conference papers, C.V. and job interviews, book reviews, submitting articles for publication). Open to 3rd-year students.

**MUSIC 341. Ph.D Dissertation. 1-10 Unit.**

May be repeated for credit a total of 5 times.

**MUSIC 351A. Seminar in Music Perception and Cognition I. 1-3 Unit.**

A seminar on topics in music perception and cognition. Students will study and discuss recent research as well as design and implement experiments.

**MUSIC 351B. Seminar in Music Perception and Cognition II: Musical Gesture. 1-3 Unit.**

Exploring how musical activities are related to gestural communication by surveying recent human behavioural literature and forming own interest-driven research questions. Reviewed research topics include different techniques in music gesture recording and analysis, auditory perception related to gesture, and issues related to educational and therapeutic applications. The class activities involve discussions on articles and on experimental designs for possible research proposals.

**MUSIC 364. Data-Driven Research in Music Cognition. 2-4 Units.**

Project-based course exploring the impact of music on human behavior using evidence of user engagement with music in large-scale datasets including publicly available industrial and social-media data and corpuses published for research purposes. Data-driven research complements laboratory-based behavioral and imaging research by focusing on framing and addressing music-related questions using pre-existing datasets. Class meetings include lectures, guest speakers, and student discussions of background literature and projects. Assignments include weekly readings, labs, and a final project. Basic musical proficiency is required. Experience with programming, data visualization, statistics, or music cognition is desirable.

**MUSIC 385. Music Across Media: Music Video to Postclassical Cinema. 4 Units.**

What makes music videos, YouTube clips and musical numbers in today's films engaging? What makes them tick? Emphasis is on aesthetics and close reading. How music videos and its related forms work. Uses of the body, how visual iconography operates, what lyrics and dialogue can do, how and what music can say, and how it can work with other media. Questions of representation such as how class, ethnicity, gender, race, and nationality function. Viewership and industry practices. Same as: FILMSTUD 141, FILMSTUD 341, MUSIC 185

**MUSIC 390. Practicum Internship. 1 Unit.**

On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.

**MUSIC 399. D.M.A. Final Project. 1-10 Unit.**

May be repeated for credit a total of 5 times.

**MUSIC 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 208C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

**MUSIC 420A. Signal Processing Models in Musical Acoustics. 3-4 Units.**

Computational methods in musical sound synthesis and digital audio effects based on acoustic physical models. Topics: mass-spring-dashpot systems; electric circuit analogies; finite difference schemes; state-space models and the modal representation; impedance; ports; acoustic simulation using delay lines, digital filters, and nonlinear elements; interpolation and sampling-rate conversion; delay effects; wave digital filters; real-time computational models for musical instruments and effects, both acoustic and electronic. See <http://ccrma.stanford.edu/courses/420/>. Prerequisites: MUSIC 320A and MUSIC 320B or equivalent; PHYSICS 21 or equivalent course applying Newton's laws of motion; and CS 106B or equivalent programming in C and C++.

**MUSIC 421A. Audio Applications of the Fast Fourier Transform. 3-4 Units.**

Spectrum analysis and signal processing using Fast Fourier Transforms (FFTs) with emphasis on audio applications. Topics: Fourier theorems; FFT windows; spectrum analysis; spectrograms; sinusoidal modeling; spectral modeling synthesis; FFT convolution; FIR filter design and system identification; overlap-add and filter-bank-summation methods for short-time Fourier analysis, modification, and resynthesis. See <http://ccrma.stanford.edu/courses/421/>. Prerequisites: Music 320A and Music 320B or equivalent background in spectrum analysis and linear systems. Same as: FFT

**MUSIC 422. Perceptual Audio Coding. 3 Units.**

History and basic principles: development of psychoacoustics-based data-compression techniques; perceptual-audio-coder applications (radio, television, film, multimedia/internet audio, DVD, EMD). In-class demonstrations: state-of-the-art audio coder implementations (such as AC-3, MPEG) at varying data rates; programming simple coders. Topics: audio signals representation; quantization; time to frequency mapping; introduction to psychoacoustics; bit allocation and basic building blocks of an audio codec; perceptual audio codecs evaluation; overview of MPEG-1, 2, 4 audio coding and other coding standards (such as AC-3). Prerequisites: knowledge of digital audio principles, familiarity with C programming. Recommended: 320, EE 261. See <http://ccrma.stanford.edu/>.

**MUSIC 423. Graduate Research in Music Technology. 1-10 Unit.**

Research discussion, development, and presentation by graduate students, visiting scholars, and CCRMA faculty in the areas of music and/or audio technology. Permission of instructor required. See <http://ccrma.stanford.edu/courses/423/> for latest information. May be repeated for credit.

**MUSIC 424. Signal Processing Techniques for Digital Audio Effects. 3-4 Units.**

Techniques for dynamic range compression, reverberation, equalization and filtering, panning and spatialization, digital emulation of analog processors, and implementation of time-varying effects. Single-band and multiband compressors, limiters, noise gates, de-essers, convolutional reverberators, parametric and linear-phase equalizers, wah-wah and envelope-following filters, and the Leslie. Students develop effects algorithms of their own design in labs. Prerequisites: digital signal processing, sampling theorem, digital filtering, and the Fourier transform at the level of 320 or EE 261; Matlab and modest C programming experience. Recommended: 420 or EE 264; audio effects in mixing and mastering at the level of 192.

**MUSIC 451A. Basics in Auditory and Music Neuroscience. 2-5 Units.**

Understanding basic concepts and techniques in cognitive neuroscience using electroencephalography (EEG) specific to auditory perception and music cognition via seminar and laboratory exercise work. Acquiring and practicing skills in experimental design, data analysis, and interpretation, writing for scientific reports and research proposals, and giving a critical review of others' scientific work. Seminar discusses related literature in neuroanatomy, neurophysiology, psychology, and neuroimaging. Laboratory focuses on electroencephalography (EEG) techniques, classic paradigms for recording evoked response, and associated data analysis methods.

**MUSIC 451B. Advanced Research in Auditory and Music Neuroscience. 2-5 Units.**

Advancing research skills in cognitive neuroscience specific to auditory perception and music cognition by doing individual research project. Activities include surveying literature, designing own study, discussing other's research and giving constructive criticisms, writing research proposals, reports and critical reviews. Laboratory works covers advanced electroencephalography (EEG) recording and analysis techniques. Seminar discusses related literature in basic and clinical research in neurophysiology and neuropsychology. Final project is aimed at producing presentable data based on hypothesis-driven experiment. Prerequisite: Music 451A.

**MUSIC 451C. Auditory EEG Research III: Coordinated Actions and Hyperscanning. 2-5 Units.**

Advancing EEG research skills in cognitive neuroscience specific to music cognition by conducting a group research project. In particular, this course focuses on basics for 2-person EEG (hyperscanning) paradigms and explores how coordinated actions and social interactions during musical ensemble are processed in the two brains. Laboratory works covers advanced electroencephalography (EEG) recording and analysis techniques specifically for oscillation and phase coherence across brain areas and between subjects. Seminar activities include surveying literature, discussing research articles and giving criticisms, and writing research reports. Lab scheduled separately Prerequisite: Music 451A.

**MUSIC 801. TGR Project. 0 Units.****MUSIC 802. TGR Dissertation. 0 Units.****Native American Studies Courses****NATIVEAM 16. Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America. 5 Units.**

What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural collapse, and assimilation, the relationships between Native Americans and American society. Focus is on three themes leading to in-class moot court trials: colonial encounters and colonizing discourses; frontiers and boundaries; and sovereignty of self and nation. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popular culture.

Same as: ANTHRO 16, ANTHRO 116C, ARCHLGY 16

**NATIVEAM 76SI. The Art and Artifacts of the Battle of the Little Bighorn. 2 Units.**

This course will prepare students for the opening of *Red Horse: Drawings of the Battle of the Little Bighorn* at the Cantor Arts Center in January 2016. The exhibit will feature twelve ledger art pieces by Red Horse, a Minneconjou Lakota warrior who fought against Custer and the 7th Cavalry at the Battle of the Little Bighorn in June 1876. Students will learn about the historical and artistic significance of these works and engage in critical discussion of the role that history, aesthetics, and anthropology should play in the showing of Red Horse's work. Students will select art and artifacts to be included in an accompanying "student response" exhibit at the Cantor, and their final research papers will be edited and compiled to create supplementary materials for the museum to use.

**NATIVEAM 103S. Native American Women, Gender Roles, and Status. 5 Units.**

Historical and cultural forces at work in traditional and contemporary Native American women's lives through life stories and literature. How women are fashioning gendered indigenous selves. Focus is on the diversity of Native American communities and cultures.

Same as: CSRE 103S, FEMGEN 103S

**NATIVEAM 108S. American Indian Religious Freedom. 5 Units.**

The persistence of tribal spiritual beliefs and practices in light of legal challenges (sacred geography and the 1st Amendment), treatment of the dead and sacred objects (repatriation), consumerism (New Age commodification), and cultural intellectual property protection (trademark, copyright, patent law). Focus is on contemporary issues and cases, analyzed through interdisciplinary scholarship and practical strategies to protect the fundamental liberty of American Indian religious freedom.

Same as: CSRE 108S

**NATIVEAM 109A. Federal Indian Law. 5 Units.**

Cases, legislation, comparative justice models, and historical and cultural material. The interlocking relationships of tribal, federal, and state governments. Emphasis is on economic development, religious freedom, and environmental justice issues in Indian country.

Same as: CSRE 109A

**NATIVEAM 109B. Indian Country Economic Development. 3 Units.**

The history of competing tribal and Western economic models, and the legal, political, social, and cultural implications for tribal economic development. Case studies include mineral resource extraction, gaming, and cultural tourism. 21st-century strategies for sustainable economic development and protection of political and cultural sovereignty.

Same as: CSRE 109B

**NATIVEAM 111B. Muwékma: Landscape Archaeology and the Narratives of California Natives. 3-5 Units.**

This course explores the unique history of San Francisco Bay Area tribes with particular attention to Muwékma Ohlone- the descendent community associated with the landscape surrounding and including Stanford University. The story of Muwékma provides a window into the history of California Indians from prehistory to Spanish exploration and colonization, the role of Missionaries and the controversial legacy of Junipero Serra, Indigenous rebellions throughout California, citizenship and land title during the 19th century, the historical role of anthropology and archaeology in shaping policy and recognition of Muwékma, and the fight for acknowledgement of Muwékma as a federally recognized tribe. We will visit local sites associated with this history and participate in field surveys of the landscape of Muwékma.

Same as: ANTHRO 111B, ARCHLGY 111B

**NATIVEAM 115. Introduction to Native American History. 5 Units.**

This course incorporates a Native American perspective in the assigned readings and is an introduction to Native American History from contact with Europeans to the present. History, from a Western perspective, is secular and objectively evaluative whereas for most Indigenous peoples, history is a moral endeavor (Walker, Lakota Society 113). A focus in the course is the civil rights era in American history when Native American protest movements were active. Colonization and decolonization, as they historically occurred are an emphasis throughout the course using texts written from the perspective of the colonized at the end of the 20th century in addition to the main text. Students will be encouraged to critically explore issues of interest through two short papers and one longer paper that is summarized in a 15-20 minute presentation on a topic of interest relating to the course.

**NATIVEAM 117S. History of California Indians. 5 Units.**

Demographic, political, and economic history of California Indians, 1700s-1950s. Processes and events leading to the destruction of California tribes, and their effects on the groups who survived. Geographic and cultural diversity. Spanish, Mexican, and Anglo-American periods. The mission system.

Same as: CSRE 117S, HISTORY 250A

**NATIVEAM 121. Discourse of the Colonized: Native American and Indigenous Voices. 5 Units.**

Using the assigned texts covering the protest movements in the 20th century to the texts written from the perspective of the colonized at the end of the 20th century, students will engage in discussions on decolonization. Students will be encouraged to critically explore issues of interest through two short papers and a 15-20 minute presentation on the topic of interest relating to decolonization for Native Americans in one longer paper. Approaching research from an Indigenous perspective will be encouraged throughout.

Same as: CSRE 121

**NATIVEAM 123A. American Indians and the Cinema. 5 Units.**

Hollywood and the film industry have had a major influence on American society for nearly a century. Initially designed to provide entertainment, the cinema broadened its impact by creating images perceived as real and essentialist. Hollywood's Indians have been the main source of information about who American Indians are and Hollywood has helped shape inaccurate and stereotypical perceptions that continue to exist today. This course looks chronologically at cinematic interpretations and critically examines accurate portrayals of American Indians and of American history.

Same as: CSRE 123A

**NATIVEAM 134. Museum Cultures: Material Representation in the Past and Present. 3-5 Units.**

Students will open the "black box" of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores "museum cultures": representations of self and other within museums and institutional cultures of the museum world itself. 3 credits (no final project) or 5 credits (final project). May be repeat for credit.

Same as: AMSTUD 134, ARCHLGY 134, ARCHLGY 234, ARTHIST 284B, CSRE 134, EDUC 214

**NATIVEAM 138. American Indians in Comparative Historical Perspective. 4 Units.**

(Graduate students register for 238.) Demographic, political, and economic processes and events that shaped relations between Euro-Americans and American Indians, 1600-1890. How the intersection of these processes affected the outcome of conflicts between these two groups, and how this conflict was decisive in determining the social position of American Indians in the late 19th century and the evolution of the doctrine of tribal sovereignty.

Same as: SOC 138, SOC 238

**NATIVEAM 139. American Indians in Contemporary Society. 4 Units.**

(Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history.

Same as: SOC 139, SOC 239

**NATIVEAM 143A. American Indian Mythology, Legend, and Lore. 3-5 Units.**

(English majors and others taking 5 units, register for 143A.) Readings from American Indian literatures, old and new. Stories, songs, and rituals from the 19th century, including the Navajo Night Chant. Tricksters and trickster stories; war, healing, and hunting songs; Aztec songs from the 16th century. Readings from modern poets and novelists including N. Scott Momaday, Louise Erdrich, and Leslie Marmon Silko, and the classic autobiography, "Black Elk Speaks."

Same as: ENGLISH 43A, ENGLISH 143A

**NATIVEAM 163. Endangered Languages and Language Revitalization. 3-4 Units.**

Languages around the world are dying at such a rapid rate that the next century could see half of the world's 6800 languages and cultures become extinct unless action is taken now. This course looks at how and why languages die, and what is lost from a culture when that occurs. We will investigate how this trend can be reversed by methods of language documentation and description, the use of innovative technologies, multimodal fieldwork, writing dictionaries and grammars for different audiences, language planning, and data creation, annotation, preservation, and dissemination. We will focus on a number of current programs around the world to revitalize languages. Finally, the course will examine ethical modes of fieldwork within endangered language communities, and the possibilities of successful collaborations and capacity building, focusing especially on Northern California Indian peoples and their languages.

Same as: ANTHRO 163A, ANTHRO 263A, LINGUIST 163A, LINGUIST 263

**NATIVEAM 167. Performing Indigeneity on Global Stage. 4 Units.**

Explores how indigeneity is expressed and embodied through performance on the global stage.

Same as: DANCE 167

**NATIVEAM 170. Introduction to American Indian Literature. 5 Units.**

This course provides a general introduction to American Indian literatures, beginning with early translations, including oral literatures and autobiographies, and continuing with contemporary poetry and fiction written by American Indian writers. We will want to pay particular attention to the American Indian writers' connections to a specific locale or place. In what ways are the stories and poems evocative of a long-standing relationship to a "home landscape"? What is the nature of the relationship? How is that relationship to place similar to or different from our own? At the same time, we will want to pay attention to the nature and scope of the various representations of American Indians in the texts we examine, and ask how the representations reinforce and/or dispel popular and often stereotypical images of American Indian people. Finally, we will want to be aware of and understand our position as readers, particularly as readers who come from and are constituted by historical, social, political, cultural, and ethnic worlds different from or similar to the worlds we find in the books that we are reading.

Same as: CSRE 170

**NATIVEAM 200R. Directed Research. 1-5 Unit.**

.

**NATIVEAM 200W. Directed Reading. 1-5 Unit.**

.

**NATIVEAM 240. Psychology and American Indian Mental Health. 3-5 Units.**

Western medicine's definition of health as the absence of sickness, disease, or pathology; Native American cultures' definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities.

Same as: EDUC 340

**NATIVEAM 255. Native American Identity in the American Imagination: 19th Century to Present. 5 Units.**

Because cultural identity is similar to and overlaps with identity politics, this course will examine Native American identity in current culture through American imagination and perspective as to what it is to be Native American today. Historic perspectives from the 19th century to the present will be covered as well.

## Neurobiology Courses

### **NBIO 101. Social and Ethical Issues in the Neurosciences. 2-4 Units.**

Influences on public debate and policy of scientific advances in the study of the brain and behavior: theories of brain function; philosophical and scientific approaches; advances in the neurosciences, possible uses in medical therapy, and interventions involving genetic screening, genetic selection, enhancement of neurological functioning, and manipulation of behavior; questions related to medical therapy, social policy, and broader considerations of human nature such as consciousness, free will, personal identity, and moral responsibility. May be taken for 2 units without a research paper. Prerequisite: Neuroscience, Biology, or Symbolic Systems major; or Human Biology core; or consent of instructor.

Same as: NBIO 201

### **NBIO 198. Directed Reading in Neurobiology. 1-18 Unit.**

Prerequisite: consent of instructor. (Staff).

### **NBIO 199. Undergraduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

### **NBIO 201. Social and Ethical Issues in the Neurosciences. 2-4 Units.**

Influences on public debate and policy of scientific advances in the study of the brain and behavior: theories of brain function; philosophical and scientific approaches; advances in the neurosciences, possible uses in medical therapy, and interventions involving genetic screening, genetic selection, enhancement of neurological functioning, and manipulation of behavior; questions related to medical therapy, social policy, and broader considerations of human nature such as consciousness, free will, personal identity, and moral responsibility. May be taken for 2 units without a research paper. Prerequisite: Neuroscience, Biology, or Symbolic Systems major; or Human Biology core; or consent of instructor.

Same as: NBIO 101

### **NBIO 206. The Nervous System. 8 Units.**

Structure and function of the nervous system, including neuroanatomy, neurophysiology, and systems neurobiology. Topics include the properties of neurons and the mechanisms and organization underlying higher functions. Framework for general work in neurology, neuropathology, clinical medicine, and for more advanced work in neurobiology. Lecture and lab components must be taken together.

### **NBIO 206A. The Nervous System: Lab. 3 Units.**

Enrollment limited to Neurosciences graduate students. Lab component of NBIO 206; MD students enroll in NBIO 206. Provides a survey of human neuroanatomy, with a focus on gross anatomy and histology. Students work with human brain samples.

### **NBIO 218. Neural Basis of Behavior. 5 Units.**

Advanced seminar. The principles of information processing in the nervous system and the relationship of functional properties of neural systems with perception, behavior, and learning. Original papers; student presentations. Prerequisite: NBIO 206 or consent of instructor.

### **NBIO 220. Central Mechanisms in Vision-based Cognition. 2-4 Units.**

Contemporary cognitive neuroscience, emphasizing the use of the primate visual and oculomotor systems to explore neural mechanisms underlying perception, attention, learning, and decision-making. Eight foundational topics in cognitive neuroscience; intensive study and critical discussion of selected papers from the contemporary literature. Student presentations, seminar-style discussions. Class enrollment is limited to 12 students. First priority will be given to students from the neurosciences graduate program.

### **NBIO 227. Understanding Techniques in Neuroscience. 2 Units.**

Topics include molecular, genetic, behavioral, electrophysiological, imaging, and computational approaches used in the field of neuroscience. Presentations and discussions led by senior graduate students, assigned readings from the primary neuroscience literature, and optional laboratory demonstrations. Intended for graduate students from any discipline and for advanced undergraduates in the biosciences, engineering, or medicine.

### **NBIO 228. Mathematical Tools for Neuroscience. 2 Units.**

Student-instructed. For students with no math background beyond basic calculus, or as a review for more advanced students. Techniques useful for analysis of neural data including linear algebra, Fourier transforms, probability and statistics, signal detection, Bayesian inference, and information theory.

### **NBIO 254. Molecular and Cellular Neurobiology. 3-5 Units.**

For graduate students. Includes lectures for BIO 154. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases.

Same as: BIO 254

### **NBIO 258. Information and Signaling Mechanisms in Neurons and Circuits. 4 Units.**

How synapses, cells, and neural circuits process information relevant to a behaving organism. How phenomena of information processing emerge at several levels of complexity in the nervous system, including sensory transduction in molecular cascades, information transmission through axons and synapses, plasticity and feedback in recurrent circuits, and encoding of sensory stimuli in neural circuits.

### **NBIO 299. Directed Reading in Neurobiology. 1-18 Unit.**

Prerequisite: consent of instructor.

### **NBIO 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

### **NBIO 399. Graduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

## Neurology & Neurological Sciences Courses

### **NENS 67N. Intracellular Trafficking and Neurodegeneration. 3 Units.**

Preference to freshmen. Cell structures and functions, the intracellular trafficking system that maintains exchanges of materials and information inside cells, and clinical features and pathologies of neurodegenerative diseases. Techniques for examining cellular and subcellular structures, especially cytoskeletons; functional insights generated from structural explorations. Prerequisite: high school biology.

### **NENS 199. Undergraduate Research. 1-18 Unit.**

Students undertake research sponsored by an individual faculty member. Prerequisite: consent of instructor.

### **NENS 202. Longevity. 4 Units.**

Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists.

Same as: HUMBIO 149L, PSYCH 102

**NENS 204. Stroke Seminar. 1 Unit.**

Standing at the intersection of many fields of medicine, including neurology, internal medicine, cerebrovascular surgery, diagnostic and interventional radiology, and emergency medicine, as the third leading cause of death and the leading cause of disability, stroke is a critical topic for all practitioners of medicine. This seminar draws upon Stanford's leaders in stroke research to present and discuss the causes, presentation, treatment, and imaging characteristics of the disease.

**NENS 205. Neurobiology of Disease Seminar. 3 Units.**

Case demonstrations of selected disorders, discussion of the pathophysiological basis of the disorder, presentation of the basic principles underlying modern diagnostic and therapeutic management, and a discussion of recent research advances for each disease entity. Prerequisite: Neurobiology 206 or consent of instructor.

**NENS 206. Introduction to Neurology Seminar. 1 Unit.**

Exploration of aspects of neurology, including subspecialties. Current issues, clinical cases, and opportunities in the field.

**NENS 207. Neuroscience Core Curriculum: Translational Neuroscience. 1 Unit.**

Emphasis on basic and preclinical research in selected categories of neurological disease, and understanding how these discoveries are being translated into therapies. Readings include primary scientific literature in mechanisms of disease and translational approaches and selected current reviews. Enrollment limited to 20 students. For first year Neuroscience graduate students, open to other graduate students as space permits with preference given to Neurosciences students. Same as: NEPR 214

**NENS 220. Computational Neuroscience. 4 Units.**

Computational approaches to neuroscience applied at levels ranging from neurons to networks. Addresses two central questions of neural computation: How do neurons compute; and how do networks of neurons encode/decode and store information? Focus is on biophysical (Hodgkin-Huxley) models of neurons and circuits, with emphasis on application of commonly available modeling tools (NEURON, MATLAB) to issues of neuronal and network excitability. Issues relevant to neural encoding and decoding, information theory, plasticity, and learning. Fundamental concepts of neuronal computation; discussion focus is on relevant literature examples of proper application of these techniques. Final project. Recommended for Neuroscience Program graduate students; open to graduate, medical, and advanced undergraduate students with consent of instructor. Prerequisite: NBIO 206. Recommended: facility with linear algebra and calculus.

**NENS 230. Analysis Techniques for the Biosciences Using MATLAB. 2 Units.**

Data analysis and visualization techniques commonly encountered in biosciences research. Fundamentals of the MATLAB computing environment, programming and debugging, data import/export, data structures, plotting, image analysis, introduction to statistical tools. Examples and assignments draw from a range of topics applicable to bioscience research: frequency analysis, genetic data mining, ion channel kinetics, neural spike rasters and spike-triggered averages, cell counting in fluorescence images, regression, PCA, and stochastic simulation. Assignments are practical in nature and demonstrate how to implement specific analyses that a biosciences student is likely to encounter. Assumes no previous programming experience.

**NENS 267. Molecular Mechanisms of Neurodegenerative Disease. 4 Units.**

The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.

Same as: BIO 267, GENE 267

**NENS 299. Directed Reading in Neurology and Neurological Science. 1-18 Unit.**

Prerequisite: consent of instructor.

**NENS 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**NENS 399. Graduate Research. 1-18 Unit.**

Students undertake research sponsored by individual faculty members. Includes laboratory work in neurophysiology and neurochemistry.

**Neurosciences Program Courses****NEPR 201. Neuro-Cellular Core. 2 Units.**

Focuses on fundamental aspects of cellular neurophysiology. Topics include exploration of electrophysiological properties of neurons, synaptic structure and function and synaptic plasticity. The course consists of didactic lectures and student-led discussions of classical papers. Incorporates simulation program Neuron. Enrollment restricted to students enrolled in Neurosciences Graduate Program. Same as: COMPMED 201

**NEPR 202. Neurosciences Development Core. 2 Units.**

For first-year Neurosciences graduate students; open to other graduate students as space permits with preference given to Neuroscience students. Introductory course covers all aspects of nervous system development, from cell fate determination, axon guidance, synapse development and critical periods to neurodevelopmental diseases. The goal is to understand what kinds of questions are asked in developmental neurobiology and how researchers use different tools and model systems to answer these questions. Overview of neural development, experimental approaches, and model organisms; signaling pathways regulating neural development; neural stem cell and neurogenesis during embryonic and adult life.

**NEPR 203. Neuroscience Systems Core. 2 Units.**

Open to first-year neuroscience graduate students and to other qualified students by permission of the instructors. Introduction to encoding and processing of information by neural systems. Focus is on sensory and motor circuits.

**NEPR 204. Neuroscience Molecular Core. 2 Units.**

For first-year Neurosciences graduate students; open to other graduate students as space permits with preference given to Neuroscience students. Course provides an overview of molecular neuroscience by focusing on a few selected key topics, such as molecular neuroscience methods, voltage-gated ion channels, synaptic transmission, neuronal gene expression, and signal transduction pathways.

**NEPR 205. Neurosciences Anatomy Core. 2 Units.**

For first-year Neuroscience graduate students; open to other graduate students as space permits with preference given to Neuroscience students. Focus is on fundamentals of the functional architecture of the human brain. Covers spinal cord, brainstem, thalamus, cerebellum, basal ganglia, frontal lobe, parietal lobe, occipital lobe, temporal lobe, and insula as well as the major white matter tracts. Students learn the anatomical connections of their assigned brain region and build a brain model.

**NEPR 207. Neurosciences Cognitive Core. 2 Units.**

For first-year Neurosciences graduate students; open to other graduate students as space permits with preference given to Neuroscience students. Focus is on several domains of cognitive function where cognitive neuroscience approaches have been successfully applied across many different model systems from mice to monkeys to humans: attention, decision-making, and memory.

**NEPR 208. Neuroscience Computational Core. 2 Units.**

For first-year Neurosciences graduate students; open to other graduate students as space permits with preference given to Neurosciences students. Introduces students to computational and theoretical methods in neuroscience. Emphasis on what questions are important, and how those questions can be answered with quantitative methods. Topics range from cellular/molecular to cognitive, and emphasizes similarity and differences of methods across neural scales.

**NEPR 213. Neurogenetics Core. 2 Units.**

For first-year Neurosciences graduate students; open to other graduate students as space permits with preference given to Neurosciences students. Intensive introduction to genetics. Classical and modern genetics with an emphasis on their application to neurosciences research. Topics include: model organisms, genetic screens, genome editing, genetically-encoded tools, GWAS, next-generation sequencing, epigenetics, genetic interactions, human genetics, and neurological disease genetics. Interactive class with student-led discussions, presentations, and group work, including next-generation sequencing workshops and data analysis tutorials. Limited enrollment.

**NEPR 214. Neuroscience Core Curriculum: Translational Neuroscience. 1 Unit.**

Emphasis on basic and preclinical research in selected categories of neurological disease, and understanding how these discoveries are being translated into therapies. Readings include primary scientific literature in mechanisms of disease and translational approaches and selected current reviews. Enrollment limited to 20 students. For first year Neuroscience graduate students, open to other graduate students as space permits with preference given to Neurosciences students. Same as: NENS 207

**NEPR 299. Directed Reading in Neurosciences. 1-18 Unit.**

Prerequisite: consent of instructor.

**NEPR 399. Graduate Research. 1-18 Unit.**

Student investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**NEPR 801. TGR Project. 0 Units.**

.

**NEPR 802. TGR Dissertation. 0 Units.**

.

**Neurosurgery Courses****NSUR 70Q. Experimental Stroke. 2 Units.**

Preference to sophomores. How stroke is studied in the laboratory; advances in stroke research over the last two decades; and future directions. Topics include: cellular and molecular mechanisms of neuronal death and survival in the brain after stroke, including necrosis, apoptosis, inflammation, and cell signaling pathways; experimental tools for stroke treatment, such as gene therapy, cell therapy, hypothermia, preconditioning, postconditioning, and other pharmacological treatments; the gap and barrier between laboratory research and clinical translation.

**NSUR 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**NSUR 200. Narratives in Neurosurgery. 1 Unit.**

Introduces medical, non-medical graduate and undergraduate students to careers in neurosurgery. Focuses on a progressive walk through the educational milestones of a neurosurgical career, starting with perspectives of 4th year medical students and working up to day-to-day functions and lifestyles of senior neurosurgical faculty. Additional topics covered include: global health neurosurgery, private practice neurosurgery, and academic neurosurgery.

**NSUR 261. Principles and Practice of Stem Cell Engineering. 3 Units.**

Quantitative models used to characterize incorporation of new cells into existing tissues emphasizing pluripotent cells such as embryonic and neural stem cells. Molecular methods to control stem cell decisions to self-renew, differentiate, die, or become quiescent. Practical, industrial, and ethical aspects of stem cell technology application. Final projects: team-reviewed grants and business proposals. Same as: BIOE 261

**NSUR 280. Early Clinical Experience in Neurosurgery. 1-2 Unit.**

Provides an observational experience as formulated by the instructor and student. Prerequisite: consent of instructor.

**NSUR 287. Brain Machine Interfaces - Theory and Technology Course Information. 1-3 Unit.**

(Same as MCP 287) There is a growing number of methods to interact with the living nervous system. This seminar will review methods, principal results, and ideas for designing devices that either act on or read out data from the nervous system. A principal objective of designing these devices is to use them for sensory prosthetics (retinal implants and motor control units), and also for reducing the symptoms of different diseases (Parkinsons, Depression, Epilepsy). We will consider a wide variety of applications, but our emphasis will be on electronic devices that either stimulate or read-out from the human brain. Same as: PSYCH 287

**NSUR 299. Directed Reading in Neurosurgery. 1-18 Unit.**

Prerequisite: consent of instructor.

**NSUR 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**NSUR 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**Obstetrics & Gynecology Courses****OBGYN 81Q. Perspectives on the Abortion Experience in Western Fiction. 3 Units.**

Explores the role of media in delivering abortion-related messages as well as the broader questions of how abortion and related issues are fundamentally integrated into the social fabric of US and global societies. Abortion remains one of the most controversial and polarizing challenges of our time. Yet, it has been a clinical, social, political, and cultural fact in a broad swath of societies for centuries. As is common for such lightning rod issues, the topic of abortion has featured prominently in novels and films. Each treatment provides a unique perspective on at least one aspect of abortion, whether it be clinical, social, political or cultural. How abortion is portrayed in novels and films provides the student of history, anthropology, and biology with insights into the author's or director's perspectives, and into societal attitudes and mores.

**OBGYN 199. Undergraduate Research in Reproductive Biology. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**OBGYN 202. Assisted Reproductive Technologies. 1-3 Unit.**

Primary and current literature in basic and clinical science aspects of assisted reproductive technologies (ART), and demonstrations of current ART techniques including in vitro fertilization and embryo culture, and micromanipulation procedures such as intracytoplasmic sperm injection and embryo biopsy and cryopreservation. Class only may be taken for 1 unit. 2 units includes papers and attendance at clinical demonstrations. 3 units includes a term paper. Recommended: DBIO 201, or consent of instructors.

Same as: HUMBIO 150A

**OBGYN 216. Current Issues in Reproductive Health. 1 Unit.**

Reproductive Health is a broad subject encompassing many concepts and practices. Issues and services within the context of reproductive health include such diverse topics as fertility, pregnancy, contraception, abortion, sexuality, menopause and parenting. Course focuses on topics related to abortion services, fertility and contraception; current research and practices in family planning; legislation and issues of access.

**OBGYN 256. Current Topics and Controversies in Women's Health. 2-3 Units.**

Interdisciplinary. Focus is primarily on the U.S., with selected global women's health topics. Topics include: leading causes of morbidity and mortality across the life course; reproductive (e.g. gynecologic & obstetric) health issues; sexual function; importance of lifestyle (e.g. diet, exercise, weight control), including eating disorders; mental health; sexual and relationship abuse; issues for special populations. In-class Student Debates on key controversies in women's health. Guest lecturers. HUMBIO students must enroll in HumBio 125 for 3 units. PhD minor in FGSS, enroll in FEMGEN 256 for 2 - 3 units and for a letter grade. Med students enroll in OBGYN 256 for 2 units. Same as: FEMGEN 256, HUMBIO 125

**OBGYN 280. Early Clinical Experience in Obstetrics and Gynecology. 1-2 Unit.**

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

**OBGYN 282. Pregnancy, Birth, and Infancy. 3 Units.**

Comprehensive clinical experience where pre-clinical medical students follow pregnant women receiving care at Stanford hospitals to attend prenatal visits, delivery, and postnatal visits. Continuity clinic format, combined with didactic lessons and discussion seminars. Students are exposed to clinical activities in a meaningful context, bolstering classroom studies in anatomy, physiology, embryology and human development, and emphasizing social, economic, and personal issues related to medicine. This program spans one quarter, covering topics related to pregnancy, labor and delivery and newborn care. In addition to clinic experiences, students are expected to spend 1-2 hours/week in lectures and to complete a reflection of their experiences in the course. Prerequisite: pre-clinical medical student. Same as: PEDS 282

**OBGYN 299. Directed Reading in Obstetrics and Gynecology. 1-18 Unit.**

Prerequisite: consent of instructor.

**OBGYN 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**OBGYN 399. Graduate Research in Reproductive Biology. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**Operations Information & Technology Courses****OIT 245. Optimization and Simulation Modeling. 3 Units.**

This course provides basic skills in quantitative modeling. The objective is to familiarize students with the main steps in an analytical approach to business decision making: constructing an abstract model for a relevant business problem, formulating it in a spreadsheet environment such as Microsoft Excel, and using the tools of optimization, Monte Carlo simulation and sensitivity analysis to generate and interpret recommendations. The class will be taught in a lab style, with short in-class exercises done in small teams, focusing on a variety of applications drawn from advertising, healthcare, finance, supply chain management, revenue and yield optimization.

**OIT 247. Optimization and Simulation Modeling - Accelerated. 3 Units.**

The course is similar in content and emphasis to OIT 245, but is aimed at students who already have background or demonstrated aptitude for quantitative analysis, and thus are comfortable with a more rapid coverage of the topics, in more depth and breadth.

**OIT 249. MSx: Data and Decisions. 2 Units.**

Data and Decisions (OIT 249) is the introductory course in Data Analytics and Applied Statistics for senior managers in the MSx program at the Graduate School of Business. The focus of the class is to provide students with hands on experience with the foundations of applied statistics for business strategy as well as perspective about how data science can be used for achieving advantage in a highly competitive marketplace. The class follows a three pillar framework called DPC (Describe, Predict and Change). The DPC framework corresponds to the three broad uses of data in business decision making: Describing the past, Predicting the future, and Changing the future. Topics from applied statistics covered in the course will include data summary and visualization, applied probability, expected values, distributions, sampling theory, hypothesis testing, predictive modeling with regression, and A/B testing and experimentation. The course will have a theoretical component which will be taught through lectures, a textbook and additional reading. There will also be an applied component which come from online videos and in-class time in the technology enabled classroom in the Bass Center. The course will conclude with a data science project designed and executed by your assigned team. The project will require you to collect data from a real organization or setting, analyze it using the basic tools learned in the class, and create a final presentation for the last day of the course.

**OIT 256. Electronic Business. 2 Units.**

This course focuses on the way information technology affects the structure of business models. It considers the impact of information technology on industries ranging from retail to logistics and from healthcare to smartphones. It considers how you can take advantage of new technology opportunities and how they change the structure of firms, industries and value chains, with an emphasis on business issues. Classes combine lecture and case study discussions and the workload is above the GSB average. The course is designed to help you make a transition into technology-related fields. Same as: Accelerated

**OIT 258. Incentive Mechanisms for Societal Networks. 2 Units.**

In many of the challenges faced by the modern world, from overcrowded road networks to overstretched healthcare systems, large benefits for society come about from small changes by very many individuals. This course survey the problems and the cost they impose on society. It describes a series of pilot projects which aim to develop principles for inducing small changes in behavior in Societal Networks—transportation networks, wellness programs, recycling systems and, if time permits, energy grids. Students will learn how low-cost sensing and networking technology can be used for sensing individual behavior, and how incentives and social norming can be used to influence the behavior. The effectiveness of this approach in pilots conducted in Bangalore (commuting), Singapore (public transit system), Stanford (congestion and parking), and a wellness program at Accenture-USA will be discussed. Students may experience the incentive platform as participants.

**OIT 262. Operations. 3 Units.**

This course focuses on basic managerial issues arising in the operations of both manufacturing and service industries. The objectives of the course are to familiarize students with the problems and issues confronting operations managers and to introduce language, conceptual models, and analytical techniques that are broadly applicable in confronting such problems. The spectrum of different process types used to provide goods and services is developed and then examined through methods of process analysis and design.

**OIT 265. Data and Decisions. 3 Units.**

This is the base version of D&D. This course introduces the fundamental concepts and techniques for analyzing risk and formulating sound decisions in uncertain environments. Approximately half of the course focuses on probability and its application. The remainder of the course examines statistical methods for interpreting and analyzing data including sampling concepts, regression analysis, and hypothesis testing. Applications include inventory management, demand analysis, portfolio analysis, surveys and opinion polls, A/B testing, environmental contamination, online advertising and the role of analytics in business settings more generally. The course emphasizes analytical techniques and concepts that are broadly applicable to business problems.

**OIT 267. Data and Decisions - Accelerated. 3 Units.**

Data and Decisions - Accelerated is a first-year MBA course in probability, statistics, multiple regression analysis, and decision trees for students with strong quantitative backgrounds. Probability provides the foundation for modeling uncertainties. Statistics provides techniques for interpreting data, permitting managers to use small amounts of information to answer larger questions. Regression analysis provides a method for determining the relationship between a dependent variable and predictor variables. Decision tree analysis consists of quantitative approaches to decision making under uncertainty. Students taking this course need to be comfortable with mathematical notation, algebra, and some calculus. If you are not confident with your quantitative abilities, then you should enroll in OIT 265. Accelerated D&D will cover material covered in OIT 265 plus some additional topics such as discrete dependent variable models. While OIT 267 focuses on real world applicability, we will explore the mathematical underpinnings of these topics in more depth than OIT 265 as an avenue for deeper understanding. The group regression project is a key component of the course.

**OIT 268. Making Data Relevant. 4 Units.**

Data is everywhere. Firms collect it. Data on customers' preferences are collected through websites or loyalty programs or cash registers. Data on employees' traits are collected through in-house databanks or social networking sites. All of us are used to thinking about data. How can you make data relevant to doing your job? How can data analysis serve to increase your competitive advantage over that of others? This class goes beyond graphing data in bar charts or time trends. It makes you think about causal relationships. The examples we use are primarily taken from talent management, because it's easy to think about our own careers or those of our employees. But the tools covered extend to all contexts, and your project is on an idea of your choosing. The class focuses on the use of regressions to think experimentally. To take the class, you should have covered regression analysis in a former class (such as an econometrics course for economics majors) or be comfortable with learning basic math concepts quickly. You also should understand distributions of data (such as the Bell curve, or normal distribution), but this topic is not covered. There are no required proofs or derivations; you've done that as undergraduates. This is about using data: we use cases, examples, Notes written for the class, and a quiz, final exam, and several assignments in which you play with data sets to answer questions. Note that this 4-unit course, if successfully completed, counts for the Data Analysis foundations requirement.

**OIT 269. MSx: Operations. 3 Units.**

This course focuses on basic managerial issues arising in the operations of both manufacturing and service industries. The objectives of the course are to familiarize students with the problems and issues confronting operations managers and to introduce language, conceptual models, and analytical techniques that are broadly applicable in confronting such problems. The spectrum of different process types used to provide goods and services is developed and then examined through methods of process analysis and design.

**OIT 273. Value Chain Innovations in Developing Economies. 2 Units.**

This course is about how to use entrepreneurship and innovations in the value chains to create values in developing economies. The course will cover important principles and ways in which the value chains can be re-engineered or new business models can be designed to create values. In addition to materials covering a diversity of industries and geographical regions, the course will also enable students to be exposed to some of the interventions that the Stanford Institute of Innovation in Developing Economies (SEED) is working on in West Africa. Work and exam requirements: Students are expected to develop a project report on either portfolio companies related to SEED or other enterprises to show how value chain innovations can be advanced.

**OIT 333. Design for Extreme Affordability. 4 Units.**

This course is a Bass Seminar. Project course jointly offered by School of Engineering and Graduate School of Business. Students apply engineering and business skills to design product or service prototypes, distribution systems, and business plans for entrepreneurial ventures that meet that challenges faced by the world's poor. Topics include user empathy, appropriate technology design, rapid prototype engineering and testing, social technology entrepreneurship, business modeling, and project management. Weekly design reviews; final course presentation. Industry and adviser interaction. Limited enrollment via application; see <http://extreme.stanford.edu/index.html> for details.

**OIT 334. Design for Extreme Affordability. 4 Units.**

This course is a Bass Seminar. Project course jointly offered by School of Engineering and Graduate School of Business. Students apply engineering and business skills to design product or service prototypes, distribution systems, and business plans for entrepreneurial ventures that meet that challenges faced by the world's poor. Topics include user empathy, appropriate technology design, rapid prototype engineering and testing, social technology entrepreneurship, business modeling, and project management. Weekly design reviews; final course presentation. Industry and adviser interaction. Limited enrollment via application; see <http://extreme.stanford.edu/index.html> for details.

**OIT 343. D-Lab: Design for Service Innovation. 4 Units.**

Students in multidisciplinary teams work with a partner organization to design new services that address the needs of an underserved population of users. Teams identify an unmet customer needs, develop and prototype new service designs (e.g. web services, services with a product component, educational campaigns), test these services with real customers and develop an implementation plan. Fundraising strategies are also explored and tested. We will offer two sections: financial services (MW: 1:15 pm - 3:00 pm); health services (MW: 4:15 pm - 6:00 pm). The specific domains for the two sections will be announced in the fall based on the needs of partner organizations. Possible domains for financial services: financial literacy for young adults, planning for major expenses at retirement, financial services for the underserved. For health services: transition to adulthood of pediatric patients with chronic conditions, transitions to nursing care for elderly patients. See <http://designforservice.stanford.edu/>.

**OIT 344. Design for Service Innovation. 4 Units.**

Design for service innovation is an experiential course in which students work in multidisciplinary teams to design new services (including but not limited to web services) that will address the needs of an underserved population of users. Through a small number of lectures and guided exercises, but mostly in the context of specific team projects, students will learn to identify the key needs of the target population and to design services that address these needs. Our projects this year will focus on services for young adult survivors of severe childhood diseases. For the first time ever, children who have cystic fibrosis, rheumatoid arthritis, major cardiac repairs, organ transplants, genetic metabolic disorders, and several forms of cancer are surviving. The first wave of these survivors is reaching young adulthood (ages 18-25). Many aspects of the young adult world are not yet user-friendly for them: applying to and then entering college, adherence to required medication and diet, prospects for marriage and parenthood, participation in high school or college sports, driving, drinking, drugs, and more. Our aspiration is to develop services to improve these young adults' options for a fulfilling and satisfying life. The course is open to graduate students from all schools and departments: business (MBA1, MBA2, PhD, Sloan), Medicine (medical students, residents, fellows and postdocs), engineering (MS and PhD), humanities, sociology, psychology, education, and law. Students can find out more about this course at: <http://DesignForService.stanford.edu>; GSB Winter Elective BBL Jan 10th, 12 noon - 1 pm; D-School Course Exposition Feb 3rd, time TBA. Admission into the course by application only. Applications will be available at <http://DesignForService.stanford.edu> on Jan 13th. Applications must be submitted by Feb 4th midnight. Students will be notified about acceptance to the course by Feb 7th. Accepted students will need to reserve their slot in the course by completing an online privacy training course. Details about online training will be provided to accepted students. The training is related to the protection of our partners' privacy. Application Deadline: Noon, Feb 4th.

**OIT 356. Electronic Business. 2 Units.**

This course focuses on the way information technology affects the structure of firms, industries and business models. It considers the impact of information technology on multiple industries and how you can take advantage of new opportunities that are enabled by new technologies. The course is a compressed 2-unit course, where each session comprises a lecture followed by the application of the concepts to specific companies or industries. The workload is above the GSB average. The course assumes a good understanding of business applications of information technology. Topics include: Electronic platforms, business models for online retail, electronic commerce logistics, disruptive technologies, value chain coordination in healthcare, and mobile value chains.

**OIT 361. Technology Concepts for Managers. 4 Units.**

Electronics, computing, networks and software applications have become an integral part of business. The course is aimed at the student who wishes to learn those electronic and computer science concepts needed to understand how computers, networks, and the software that runs them operate, but who lacks background in engineering or computer science. The premise of the course is that adequate knowledge of technology is now a prerequisite for a successful manager, but that knowledge does not have to be at the level of rigor required in the practice of engineering or computer science. This course is intended to provide a basic literacy in these areas, with an emphasis on implications for managers and organizations. A meaningful course that focuses on particular technologies is difficult because rapid changes in any technology can quickly render today's lessons obsolete. Therefore, this course will stress fundamentals and trends, rather than a snapshot of the current status of different technologies. As a result, classroom coverage of current "hot" topics in technology is subordinate to giving the technology concepts necessary for one to learn such current (and future) topics on their own. Investigation of technology will be facilitated by lectures readings and homework assignments. Students will have an opportunity to investigate and learn more about a particular technology in more depth as part of a term project. The general flow of the course will focus upon four areas approximately as follows: Part I Electronic Systems: Fundamental Electronics (2 sessions), Digital and Microelectronics (2 sessions), Computer Hardware and Systems (2 sessions), Technology Trends (1 session), Communications including wireless (2 sessions); Part II Networks: Networked Computing (1 session), the Internet (2 sessions); Part III Software: Software and software development (3 sessions), Data Base Technology (1 session); and Part IV The Web: Clients and Servers (1 session), Case study of a web site (1 session), Video/Multimedia (1 session). The course is specifically designed for students with liberal arts or soft science backgrounds who have career ambitions in high-tech or who wish to be more technically aware as managers. Students with hard science, engineering or computer science backgrounds are welcome but must avoid redirecting the class discussion into narrow or advanced material that causes dysfunction to less technical colleagues. Students may elect either to take a final exam or do a term project. Students electing to do a term project will create it as a Web page. Separate training for building a Web page will be offered.

**OIT 364. Global Operations. 3 Units.**

Globalization of businesses has resulted in companies having to manage global networks of suppliers, integrators, contract manufacturers, logistics service providers, distributors, and service support operators in geographically dispersed locations. The customer network is also globally distributed. This course will focus on (1) how global and international companies can overcome the geographical, cultural, and organizational barriers, and leverage the strengths of the network to create values, and (2) how these companies may use different ways to manage operations in different regions to take full advantage of the local strengths and limitations. The course will be based on cases on innovative strategies and tactics used by global and international companies.

**OIT 367. Business Intelligence from Big Data. 3 Units.**

The objective of this course is to analyze real-world situations where significant competitive advantage can be obtained through large-scale data analysis, with special attention to what can be done with the data and where the potential pitfalls lie. Students will be challenged to develop business-relevant questions and then solve for them by manipulating large data sets. Problems from advertising, eCommerce, finance, healthcare, marketing, and revenue management are presented. Students learn to apply software (such as R and SQL) to data sets to create knowledge that will inform decisions. The course covers fundamentals of statistical modeling, machine learning, and data-driven decision making. Students are expected to layer these topics over an existing facility with mathematical notation, algebra, calculus, probability, and basic statistics.

**OIT 384. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.**

This is the first quarter of a two-quarter course series. In this two-quarter course (BIOE 374A/B, MED 272A/B, ME 368A/B, OIT 384/5), multidisciplinary student teams identify real-world unmet healthcare needs, invent new medtech products to address them, and plan for their development into patient care. During the first quarter (winter 2016), students select and characterize an important unmet healthcare problem, validate it through primary interviews and secondary research, and then brainstorm and screen initial technology-based solutions. In the second quarter (spring 2016), teams select a lead solution and move it toward the market through prototyping, technical re-risking, strategies to address healthcare-specific requirements (regulation, reimbursement), and business planning. Final presentations in winter and spring are made to a panel of prominent medtech experts and investors. Class sessions include faculty-led instruction and case demonstrations, coaching sessions by industry specialists, expert guest lecturers, and interactive team meetings. Enrollment is by application only, and students are expected to participate in both quarters of the course. Visit <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp> to access the application, examples of past projects, and student testimonials. More information about the Biodesign program, which has led to the creation of more than 30 venture-backed healthcare companies and has helped hundreds of student launch medtech careers, can be found at <http://biodesign.stanford.edu/>.

**OIT 385. Biodesign Innovation: Concept Development and Implementation. 4 Units.**

This is the second quarter of a two-quarter course series. In this two-quarter course (BIOE 374A/B, MED 272A/B, ME 368A/B, OIT 384/5), multidisciplinary student teams identify real-world unmet healthcare needs, invent new medtech products to address them, and plan for their development into patient care. During the first quarter (winter 2016), students select and characterize an important unmet healthcare problem, validate it through primary interviews and secondary research, and then brainstorm and screen initial technology-based solutions. In the second quarter (spring 2016), teams select a lead solution and move it toward the market through prototyping, technical re-risking, strategies to address healthcare-specific requirements (regulation, reimbursement), and business planning. Final presentations in winter and spring are made to a panel of prominent medtech experts and investors. Class sessions include faculty-led instruction and case demonstrations, coaching sessions by industry specialists, expert guest lecturers, and interactive team meetings. Enrollment is by application only, and students are expected to participate in both quarters of the course. Visit <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp> to access the application, examples of past projects, and student testimonials. More information about the Biodesign program, which has led to the creation of more than 30 venture-backed healthcare companies and has helped hundreds of student launch medtech careers, can be found at <http://biodesign.stanford.edu/>.

**OIT 522. Field Trips to Grassroots Innovators in Health Care: Improving Access & Outcomes for the Underserved. 2 Units.**

Some of the most impressive innovations in health care are developed at hospitals and other non-profit organizations by dedicated health care professionals (drs, nurses, administrators) who are not afraid to roll up their sleeves and work hard to solve an important health care problem they face in their everyday patient encounters. Because of limited financial resources and because they often target underserved market segments, these innovations lack a validated business model and commercialization pathway. In this seminar we will gain hands-on experience of some of these grassroots innovations through field trips to a local public hospital (a candidate hospital is San Francisco General Hospital) and a non-profit product incubator (hopelab.org). We will then work in teams to identify and address the main barriers to commercialization for two specific innovations presented in these field trips: An electronic referral system to promote access to specialist care in underserved communities; A video game to promote healthy lifestyles in at-risk youth. We will learn and apply the brainstorming approach to come up with innovative solutions to overcome these barriers. On the last day we will meet key executives in both organizations to present our recommendations.

**OIT 530. Advanced Modeling Seminar. 2 Units.**

Modern spreadsheet and simulation software now makes it possible for general managers themselves to model complex and uncertain business situations on their personal computers. This seminar will consist of hands-on experience with advanced applications for modeling situations that include both uncertainty and discontinuous change. These situations often are called "ill-behaved" because they defeat the traditional tools of analysis covered in the Foundations Modeling courses. For example, financial spreadsheet models involving discontinuous change, such as winning an auction or unexpectedly altering a production process or marketing campaign (so-called "black swan" events), may arise in business projections, but actual models of such events are rarely, if ever, considered for optimization under uncertainty. As another example, the Operations formulas used to estimate throughput times in models involving congestion and delay often cannot be applied to systems that include unexpected service interruptions or complex routing of items (e.g., modern hospitals). The mission of this seminar is to utilize recent advances in software and the speed of modern multi-core PC's that have produced easy-to-use tools for interactively building and analyzing such models. Each day, students will build models of these more-realistic situations, using the software tools "hands-on" and working with the instructors as coaches in a laboratory setting. We will use a more advanced version of the Excel Solver add-in, called Risk Solver, which combines optimization with Monte Carlo simulation, as well as ExtendSim, a graphical tool for constructing and analyzing discrete event simulation models. Exercises will include optimization under uncertainty such as Value at Risk in financial statement projections, capacity expansion plans involving Real Options, customer service and manufacturing workflow systems, courtroom scheduling, and airport security policies. The first 2.5 sessions of the course will focus on learning and using Risk Solver to analyze risk-based spreadsheet models with an emphasis on interpreting Value at Risk and Conditional Value at Risk constraints in such models. The second 2.5 sessions will focus on learning and using ExtendSim to model operational situations in services and manufacturing, with an emphasis on dealing with congestion and delay in complex settings. Who should take this seminar? Our intended audience consists of students who: a. Want to develop a deeper appreciation for how discontinuous change, risk, and uncertainty affect decision-making in financial and operational settings, and b. Want to learn how advanced optimization and simulation software allows you to examine easily the effects of such events directly, rather than through complex and unwieldy mathematical approximations. How much computer background is necessary? We want the seminar to be illuminating, fun, and easy to master. The seminar is designed specifically for both non-technical ("poet") and technical ("quant") students who have completed the introductory concepts of optimization with Excel Solver, as covered in Foundations Modeling (either basic or advanced), and are comfortable building Excel spreadsheets. We will assume that students have no prior experience with optimization of risk-based models or with discrete event simulation software, and would like to gain that experience now in a hands-on, build-your-own-model setting. Students will use the software both for individual preparation via tutorial documents and for classroom exercises. Each session will be team-taught by Professors Moore and Patell and will be a combination of lectures, demonstration, and coaching to help you experiment with the tools.

**OIT 536. Data for Action: From Insights to Applications. 2 Units.**

Data for Action is an MBA compressed course dedicated to identifying value in and creating value from data. It deals with the technical, legal, regulatory and business strategic decisions that must be considered when delivering solutions to customers.

**OIT 537. Introduction to Programming for Data Analysis. 2 Units.**

Many post-MBA jobs require the ability to analyze very large data sets and proficiency with Microsoft Excel is no longer sufficient. MBA graduates frequently shy away from more advanced analysis tools because of the need to write computer code to manipulate data. The course will seek to break that mental barrier by introducing students to the basic programming skills that would allow them to be productive later on. The focus of the course will be on SQL and R. This course assumes no prior programming experience.

**OIT 538. Environmental Science for Managers - Accelerated. 3 Units.**

This course satisfies the MBA distribution requirement in Optimization and Simulation Modeling (OSM). It is challenging but doable for students without an undergraduate degree in science or engineering; it does not assume experience in environmental science or quantitative analysis beyond admission requirements for the MBA program. Students will learn fundamental science of ecosystems, climate and energy systems, by building decision-support models for managing these systems. In so doing, students will develop widely-applicable skills in model representation in a spreadsheet, optimization, and Monte Carlo simulation. Students are strongly encouraged to take the follow-on course on renewable energy, OIT 540 Environmental Science for Managers II. For the joint MBA-MS in Environment and Resources degree, students are required to take OIT 540, and either OIT 538 or OIT 539.

**OIT 539. Environmental Science for Managers - Advanced. 3 Units.**

Fundamental science of ecosystems, climate and energy. Spreadsheet modeling, optimization, and Monte Carlo simulation applied to resource management and environmental policy. Similar to OIT 338, but allocates more class time to environmental/energy science and implications for management and policy, and less class time to fundamentals of modeling/optimization/simulation.

**OIT 540. Environmental Science for Managers II. 1 Unit.**

This course provides an introduction to renewable sources of electricity and fuel, and is required for the joint MBA-MS in Environment and Resources degree. Students are strongly encouraged, but not required, to take OIT 538 or OIT 539 prior to taking this course.

**OIT 542. Price and Revenue Optimization. 2 Units.**

This is the Advanced Application option in the menu of courses that satisfy the Management Foundations requirement in Optimization and Simulation Modeling(OSM). Three core modeling topics are covered in rapid-review fashion - model representation in a spreadsheet environment, optimization theory, and stochastic models - but primary emphasis is on the application domain described immediately below. OIT 542 is a two-unit course, with nine class sessions plus a final exam. nnnSystems for price and revenue optimization - also called yield management, dynamic pricing, or revenue management - combine the use of information technology, statistical forecasting, and mathematical optimization to make tactical decisions about pricing and product availability. A familiar example is the passenger airline industry, where a carrier may sell seats on the same flight at many different fares, with fare availability changing as time advances and uncommitted capacity declines. Over the last 30-35 years, revenue optimization practices have transformed the transportation and hospitality industries, where fixed capacity and advance reservations by customers are important structural factors. But model-based, data-driven pricing systems are increasingly common in other industries that have different structures, such as financial services and retail clothing. nnnIn this course students learn about the model structures and modelling techniques that underlie systems for price and revenue optimization. Two topics are given roughly equal emphasis: model-based tactical pricing, including customized pricing and retail markdown management; and classical revenue management, where automated logic is used for booking control (that is, to make yes-or-no decisions in response to booking requests from customers), rather than to set prices explicitly. nnnOIT 542 is tailored to students who already have command of basic modelling techniques and wish to learn about their application in an important business context. To be specific, a prior college course on optimization modelling is assumed as background. (Typically, such courses focus on linear programming, or linear optimization, with secondary coverage of non-linear programming and discrete optimization.) Various aspects of optimization theory will be covered in quick-review format, along with the basics of spreadsheet model representation and stochastic modelling, in order to standardize terminology and establish certain conventions that facilitate grading. In exceptional cases, for students who have strong math background and high mathematical aptitude but no prior coursework on optimization, the background knowledge assumed in OIT 542 may be acquired through self-study; appropriate study materials will be suggested by the instructor upon request. The course is entirely appropriate for second-year MBA students who have completed either base or accelerated MODS in their first year. nnnOIT 542 draws on knowledge acquired and skills developed in two other Management Foundations courses that are taken simultaneously: Data and Decisions (OIT 265) and Microeconomics (MGTECON 200 or 203). Students are required to construct and analyze at least one model for every class session.

**OIT 554. Seminar on IT for Business. 2 Units.**

This course offers an overview of information technologies for enterprises and supply chain management. The course has two key components - a series of guest speakers and a set of readings. Students are expected to have read the assigned note on related technologies before class, and prepare to discuss technologies with the guest speaker in class. We will not discuss the technology per se in class, so students who enroll are expected to have some exposure to technologies in order to digest the materials on their own. The main topics of technologies are: DBMS (Database Management System), ERP (Enterprise Resource Planning), EAI (Enterprise Application Interface), data mining, Big Data, cloud computing, RFID/NFC, mobile technologies, and mobile payment. In particular, students are encouraged to think hard about potential new businesses around the technology and discuss them in class.

**OIT 558. Designing Large-Scale Nudge Engines. 1 Unit.**

In many of the challenges faced by the modern world, from overcrowded road networks to overstretched healthcare systems, large benefits for society come about from small changes by very many individuals. This course survey the problems and the cost they impose on society. It describes a series of pilot projects which aim to develop principles for inducing small changes in behavior in Societal Networks--transportation networks, wellness programs, recycling systems and, if time permits, energy grids. Students will learn how low-cost sensing and networking technology can be used for sensing individual behavior, and how incentives and social norming can be used to influence the behavior. The effectiveness of this approach in pilots conducted in Bangalore (commuting), Singapore (public transit system), Stanford (congestion and parking), and a wellness program at Accenture-USA will be discussed. Students may experience the incentive platform as participants. nnnThis course significantly overlaps with OIT 258 - Incentive Mechanisms for Societal Networks. If you took this class last year, you may not take OIT 558.

**OIT 562. Supply Chain Management & Technology. 2 Units.**

This course offers an overview of eight technologies for enterprise computing. They are: ERP (Enterprise Resource Planning), EAI (Enterprise Application Interface), data mining, cloud computing, eCommerce, RFID/ NFC, mobile technologies, and social network data analytics. On each topic, we discuss underlying technologies and applications using a variety of business cases.

**OIT 563. Advanced Topics in Supply Chain Management and Technologies. 2 Units.**

In this course we will have a series of guest speakers who will discuss real businesses applying various technologies. Students come to class prepared by reading the assigned material and discuss the topic with the speakers in class. The course will provide opportunities to learn how different technologies are integrated to create values to end users. Students are expected to have some basic understanding of technologies and review them with readings on their own, so we will not discuss the technology per se in class.

**OIT 565. The Role of Information Technology in the New Energy Economy. 2 Units.**

One of the most interesting and underexplored areas in modern technology is, as Dan Reicher at Stanford has put it, "where energy technology (ET) meets information technology (IT)". The main driver of widespread use of computing in the modern age is the rapid reduction in the cost of computing services caused by Moore's law. At the same time, a substantial increase in the energy efficiency of computing (doubling every year and a half for more than six decades) has led to a proliferation of mobile computers, sensors, and controls, with implications that have only recently begun to be understood. nnnThis class will explore the direct and indirect implications of applying information technology to the production, delivery, and use of energy and associated services. It will first review current knowledge about the direct energy use associated with information technology, including data centers, personal computers, cellular telephones, mobile sensors, and other IT equipment. It will also summarize the state of knowledge about the types, amount, and growth rates of energy services delivered in the US and globally. Finally, it will explore the applications to which information technologies have been put in the energy industry, ranging from the use of visualization and analysis techniques to improve the results of oil and gas exploration, to the computer-aided design of wind turbines and automobiles, to the implications of wireless sensors and controls for the more efficient and effective use of energy. The class will culminate in student projects, typically business plans for new ventures using IT to radically transform how we understand and respond to the world around us.

**OIT 571. Homeland Security: Operations, Strategy and Implementation. 2 Units.**

This course is a Bass Seminar. This course covers a variety of topics in homeland security: bioterrorism (attacks with contagious agents such as smallpox or non-contagious agents such as anthrax, and attacks on the food supply), pandemic influenza, nuclear security at ports and around cities, the biometric aspects of the US-VISIT Program, the intersection of homeland security and immigration, and suicide bombings. For each of these topics, students will typically read one academic paper that focuses on the operations aspects of the problem, and one reading about the strategic aspects of the problem. For each topic, the professor will spend part of the class lecturing on the problem (including how the results of the academic paper were implemented), and a student will be assigned as a discussant (in addition to a classwide discussion).

**OIT 581. Biodesign Innovation: Needs Finding and Concept Creation. 2 Units.**

OIT581 is a two-unit version of the Biodesign Innovation course (OIT384). In this course, students learn how to develop comprehensive solutions (most commonly medical devices) to some of the most significant medical problems. In OIT581, students learn the basic principles of biodesign innovation: methods of validating medical needs; techniques for analyzing intellectual property; basics of regulatory (FDA) and reimbursement planning; early market analysis; design principles; brainstorming and early prototyping; university licensing. Course format includes expert guest lecturers and faculty-led practical demonstrations. Students apply the concepts learned by serving as "commercialization and marketing consultants" to multidisciplinary teams of students in the four-unit course (OIT 384). Consultants interact with their teams on a regular basis and provide a consulting report on market analysis and competitive dynamics. Projects from previous years included: prevention of hip fractures in the elderly; methods to accelerate healing after surgery; less invasive procedures to perform bariatric surgery; low cost healing devices for diabetic ulcers; point of care diagnostics to improve emergency room efficiency; novel devices to bring specialty-type of care to primary care community doctors. More than 40,000 patients have been treated to date with technologies developed as part of this program and more than ten venture-backed companies were started by alums of the program. Students must apply and be accepted into the course. The application is available online at <http://www.stanford.edu/group/biodesign/courseapplication.html>, and the application deadline is November 20, 2010. Students must indicate whether they are applying for the four-unit version (OIT384) or two-unit version (OIT581).

**OIT 582. Biodesign Innovation, Project A. 2 Units.**

Students work in multidisciplinary teams at the intersection of medicine, engineering and business to develop a comprehensive solution to an important medical need of their choice. With coaching from faculty and real-world experts, the teams identify an important medical need and through brainstorming they develop several potential conceptual approaches to solving the need and pursue initial prototyping, along with planning for regulatory and reimbursement pathways. The project culminates with a presentation to a panel of venture investors and entrepreneurs. In previous years, student teams examine needs in emergency and acute care, orthopedics, cardiovascular, wound closure etc. Concurrent registration at OIT581 is required. An application needs to be submitted online.

**OIT 583. Biodesign Innovation Core, Spring. 2 Units.**

Two quarter sequence (continuation of OIT581 – see OIT 581 for a general description of the Biodesign Innovation course and OT384/385 for a description of the four unit option). The second quarter focuses on how to take a conceptual solution to an important medical need forward from early concept to technology translation, development and possible commercialization. Students expand on the topics they learned in OIT581 to learn about prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation and commercialization route (licensing vs. start-up); marketing, sales and distribution strategies; ethical issues including conflict of interest; fundraising approaches and cash requirements; financial modeling; essentials of writing a business or research plan; strategies for assembling a development team. Students serve as "commercialization consultants" to a multidisciplinary team in OIT385. Students interact regularly with their team and prepare a consulting report that outlines a funding strategy and validates the financial model developed by the team. (OIT581 or OIT384 are a pre-requisite). New students (i.e. students who did not take OIT581/OIT384) in the winter quarter will need to submit an application at <http://www.stanford.edu/group/biodesign/courseapplication.html> by February 19, 2011. In the application they should indicate whether they are applying for the 2-unit or 4-unit version. Students who took OIT581/OIT384 in the winter quarter are automatically accepted into the spring quarter and they can choose the version they want: 2 unit or 4 unit.

**OIT 584. Biodesign Innovation Project, Spring. 2 Units.**

Students work in multidisciplinary teams at the intersection of medicine, engineering and business to further develop and refine the solutions they identified in OIT 582. The focus this quarter is on implementation. The teams select the most promising solution from the concepts of the first term and move forward into prototyping and project planning. Teams develop specific strategies for patenting, FDA submission, commercialization and third-party reimbursement, along with funding strategies (e.g. licensing agreement or launching a start-up). The project culminates with a presentation to a panel of venture investors. OIT 583 should be taken concurrently. Permission of instructor needed if student has not taken OIT 582.

**OIT 587. Global Biodesign: Medical Technology in an International Context. 3 Units.**

This course examines the development and commercialization of innovative medical technologies in different global settings. Faculty and guest speakers from the medtech field will discuss the status of the industry, as well as opportunities in and challenges to medical technology innovation unique to seven primary geographic regions: Africa, China, Europe, India, Japan, Latin America, and the United States. Students will be exposed to the biodesign innovation process, which provides a proven approach for identifying important unmet medical needs and inventing meaningful solutions to address them. They will also explore key differences between the covered geographies, which range from emerging markets with vast bottom-of-the-pyramid and growing middle class populations, to well-established markets with sophisticated demands and shifting demographics. The class will utilize real-world case studies and class projects to promote engagement and provide a hands-on learning experience.

**OIT 601. Fundamentals of OIT. 3 Units.**

The goal of this course is to provide first-year Ph.D. students in OIT with sufficient fundamentals to subsequently take advanced research seminars. The course covers the very basics of six topics: queueing theory, inventory theory, multi-echelon inventory theory, game theory, stochastic dynamic programming and econometrics. Lectures will be given by advanced Ph.D. students in OIT.

**OIT 602. Dynamic Pricing and Revenue Management I. 2 Units.**

In tandem with OIT 603, this course explores the application of stochastic modeling and optimization to two closely related problem areas: (a) dynamic price selection, and (b) dynamic allocation of limited capacity to competing demands. As background, students are assumed to know stochastic process theory at the level of Statistics 217-218, microeconomics at the level of Economics 202N, and optimization theory at the level of MS&E 211, and to have some familiarity with the basic ideas of dynamic programming. Additional dynamic programming theory will be developed as needed for the applications covered. Emphasis will be on current research topics, especially in the realm of airline revenue management.

**OIT 603. Dynamic Pricing and Revenue Management II. 2 Units.**

In tandem with OIT 602, this course explores the application of stochastic modeling and optimization to two closely related problem areas: (a) dynamic price selection, and (b) dynamic allocation of limited capacity to competing demands. As background, students are assumed to know stochastic process theory at the level of Statistics 217-218, microeconomics at the level of Economics 202N, and optimization theory at the level of MS&E 211, and to have some familiarity with the basic ideas of dynamic programming. Additional dynamic programming theory will be developed as needed for the applications covered. Emphasis will be on current research topics, especially involving customized pricing of financial services. OIT 602 is not a prerequisite for OIT 603 but is highly recommended.

**OIT 624. Models and Applications of Inventory Management. 3 Units.**

The first part of the course reviews fundamental models in inventory management. Topics include deterministic models (EOQ, power-of-two policies, ELS, serial and assembly networks), Newsvendor, multi-period stochastic models under backlogging and lost-sales, multi-echelon and supply chain models, and infinite-horizon formulations. In the process, the course also reviews several fundamental mathematical concepts in inventory theory, including convexity, duality, finite / infinite state Markov decision processes, and comparative statics. The second part discusses advanced modeling concepts, and several new application areas. Topics include distribution-free and robust models, supply uncertainty and disruptions, flexibility and supply chain design, joint pricing and inventory, and problems at the interface of supply chains and finance.

**OIT 643. Special Topics in Supply Chain Management. 3 Units.**

To compete successfully in today's market place, companies need to manage effectively the efficiency of activities to design, manufacture, distribute, service and recycle their products or services to their customers. Supply chain management deals with the management of materials, information and financial flows in a network consisting of suppliers, manufacturers, distributors, and customers. The coordination and integration of these flows within and across companies are critical in effective supply chain management. In parallel to the development of new practices and concepts in industry, there have been emerging research that are based on (1) structuring new processes and supply chain networks with the new technologies; (2) exploring ways to do planning and make decisions consequently; (3) quantifying the benefits as a result; and (4) aligning the incentives of multiple players in a supply chain when the costs and benefits to these players are different. This course will examine evolutionary research that focuses on the above themes. We will explore how such problems can be formulated, models can be structured, and analysis can be performed to address information-based supply chain management issues. You are all challenged to think, discuss, share, and debate on the issues brought up. The end result of this course is, hopefully, that we can start defining new, interesting and exciting research paths, and maybe even beginning to pursue some of the research ideas generated.

**OIT 655. Foundations of Supply Chain Management. 3 Units.**

This course provides an overview of research in supply chain management (SCM). It has three parts. The first part reviews basic tools of SCM research through selected readings in economics, IT and operations research. The second part reviews the literature in SCM, covering topics such as inventory models, information sharing, information distortion, contract design, value of integration, performance measurement, risk management, and the use of markets for procurement. The last part is devoted to recent advances in SCM research.

**OIT 660. Applied OIT. 4 Units.**

Description is currently unavailable because of ongoing review of the OIT PhD program by OIT faculty. Description will become available when the review is completed at the end of the Summer.

**OIT 663. Methods of Operations/Information Systems. 4 Units.**

This course covers basic analytical tools and methods that can be used in research in operations and information systems. The emphasis is on foundations of stochastic inventory theory. Basic topics include convexity, duality, induced preference theory, and structured probability distributions. Much of the course is devoted to Markov decision processes, covering finite and infinite horizon models, proving the optimality of simple policies, bounds and computations, and myopic policies.

**OIT 664. Stochastic Networks. 3 Units.**

Queueing models may be used to represent service delivery systems, manufacturing processes, or data processing networks. The first half of this two-unit course consists of lectures on performance analysis (e.g., estimating congestion and delay) and control of queueing systems using asymptotic methods, both in the traditional heavy traffic regime and in the Halfin-Whitt regime. The second half consists of student presentations of recent papers in asymptotic methods in queueing systems. Prerequisites: Statistics 217 and 218, or consent of instructor; some prior exposure to stochastic models in general, and queueing theory in particular, is useful but not essential.

**OIT 665. Seminar on Information-Based Supply Chain Management. 3 Units.**

This seminar will highlight the research evolution and advances on the smart use of information in supply chain management. Advances in technologies like real-time information systems, decision support methodologies, the internet and mobile technologies such as RFID (radio-frequency identification) have also enabled visibility and structural changes that result in significant supply chain performance enhancements. In parallel to the development of new practices and concepts in industry, we will examine emerging research that are based on (1) structuring new processes and supply chain networks with the new technologies; (2) exploring ways to do planning and make decisions consequently; (3) quantifying the benefits as a result; and (4) aligning the incentives of multiple players in a supply chain when the costs and benefits to these players are different.

**OIT 668. Dynamic Pricing and Revenue Management. 3 Units.**

The goal of this course is to provide a comprehensive introduction to the theory and practice of revenue management. It will comprise of a set of lectures that will cover the theoretical fundamentals of the area as well as an overview of current research developments through the presentation and discussion of recent papers. Topics include capacity control (single-resource and network), consumer behavior and market response models, dynamic pricing, procurement auctions, price experimentation, supply chain management and pricing.

**OIT 672. Stochastic Control in Operations and Economics. 3 Units.**

The first half of this course will cover (i) the basic theory of Brownian motion, (ii) Ito stochastic calculus, and (iii) the rudiments of continuous-time stochastic control, all undertaken at a brisk pace, aimed at students who already know the basics or else have a strong enough math background to learn them quickly. The text for this part of the course will be *Brownian Models of Performance and Control*, by J. Michael Harrison, Cambridge University Press, 2013, which can be ordered from Amazon: [http://www.amazon.com/Brownian-Performance-Control-Michael-Harrison/dp/1107018390/ref=sr\\_1\\_1?ie=UTF8&qid=1395420072&sr=8-1&keywords=Brownian+Models+of+Performance+and+Control](http://www.amazon.com/Brownian-Performance-Control-Michael-Harrison/dp/1107018390/ref=sr_1_1?ie=UTF8&qid=1395420072&sr=8-1&keywords=Brownian+Models+of+Performance+and+Control). The second half of the course will explore in depth some models arising in operations research, finance and economic theory, such as the McDonald-Siegel investment model (an optimal stopping problem, treated in Chapter 5 of the textbook), Brownian versions of the classic cash balance problem (a family of stochastic control problems, treated in Chapter 7 of the textbook), and Yuliy Sannikov's continuous-time principal-agent model (*Review of Economic Studies*, 2008). The course will be rather informally organized, more of a collaboration between students and instructor than a top-down lecture format, with at least half of the class time devoted to presentation of problems by students and auditors.

**OIT 673. Data-driven Decision Making and Applications in Healthcare. 4 Units.**

This course aims to introduce students to research topics in data-driven decision making with specific attention to healthcare applications. However, most concepts are applicable in areas beyond healthcare as well. Examples of topics are: prediction and risk adjustment, computational and statistical challenges associated with large-scale data, and dynamic decision making under uncertainty.

**OIT 691. PhD Directed Reading. 1-15 Unit.**

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, POLECON 691, STRAMGT 691

**OIT 692. PhD Dissertation Research. 1-15 Unit.**

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, POLECON 692, STRAMGT 692

**OIT 698. Doctoral Practicum in Teaching. 1 Unit.**

Doctoral Practicum in Teaching.

**OIT 699. Doctoral Practicum in Research. 1 Unit.**

Doctoral Practicum in Research.

**OIT 802. TGR Dissertation. 0 Units.**

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, POLECON 802, STRAMGT 802

**Ophthalmology Courses****OPHT 199. Undergraduate Research. 1-18 Unit.**

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**OPHT 201. Clinical Topics in Ophthalmology. 1 Unit.**

Introduction to the professional opportunities available to the ophthalmologist in the areas of clinical research, community health, biotech and pharmaceutical development, international blindness prevention, graduate and post-graduate education.

**OPHT 202. Clinical Topics in Ophthalmology. 1 Unit.**

(Continuation of 201) Professional opportunities available to the ophthalmologist in the areas of clinical research, community health, biotech and pharmaceutical development, international blindness prevention, graduate and post-graduate education.

**OPHT 203. Introduction to Ophthalmology. 1 Unit.**

(Continuation of 202) Introduction to the practical skills used within the field of ophthalmology. Diagnostic tools and instruments; applications of these tools; practice using instruments under the guidance of faculty and residents; practice in microsurgical techniques with one-on-one guidance.

**OPHT 280. Early Clinical Experience in Ophthalmology. 1-2 Unit.**

Provides an observational experience as formulated by the instructor and student. Prerequisite: consent of instructor.

**OPHT 299. Directed Reading in Ophthalmology. 1-18 Unit.**

Prerequisite: consent of instructor.

**OPHT 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**OPHT 399. Graduate Research. 1-18 Unit.**

Students to undertake investigations sponsored by individual faculty members. Opportunities are available at both predoctoral and postdoctoral levels. Prerequisite: consent of instructor.

**Oral Communications Courses****ORALCOMM 10C. Debate Club. 1 Unit.**

Enrollment in this course is limited to students selected as members of Stanford Debate Club. All enrollees must complete at least 30 hours of participation evidenced by traveling to at least one competition during the quarter and attending regular practices. Participation must be verified by the Debate Club leadership in order to receive credit.

**ORALCOMM 91. The Mythic Life. 3 Units.**

Why in the twenty-first century do many of our most acclaimed and popular stories carry narrative forms that are thousands of years old? Star Wars, The Lord of the Rings, Titanic, Batman, all are deeply informed by ancient myth, folklore, and oral traditions. One reason is that the deep stories of myth and folklore act as a bridge between our personal lives and the profoundest aspects of the human condition; they offer a way to understand our lives and how to live them. This course offers an in-depth study and experience of myth and folklore, the roots of modern story and the roots of our own stories. You will hear these myths live, as people have for thousands of years; from Trickster folk tales to the medieval Arthurian grail epic Parzival. You will also draw from these epics to create and tell a mythic story of your own. This will give you an appreciation for myth as a living principle, not just something from a long time ago. It will also help you become a good storyteller by developing your memory, improvisation, and image-based thinking. This ability to tell a story well is at the root of authentic leadership and helps us bring a powerful, embodied perspective to championing a cause or just debating over coffee.

**ORALCOMM 105. Voice and Articulation Intensive for Non-Native English Speakers. 1-2 Unit.**

Workshop focusing on exercises designed to help foreign students improve their articulation and delivery in English. Work includes breath, sound, enunciation, melody, and colloquialism. Course was previously offered as CTL 105.

**ORALCOMM 115. Voice Workshop. 1-2 Unit.**

Focus is on breath, voice production, expansion of vocal range and stamina, and clarity of articulation. Geared toward public speaking including presentations, lectures, and job talks. May be taken in conjunction with ORALCOMM 117. ORALCOMM 115/215 was previously listed as CTL 115/215.

Same as: ORALCOMM 215

**ORALCOMM 117. The Art of Effective Speaking. 3 Units.**

The principles and practice of effective oral communication. Through formal and informal speaking activities, students develop skills framing and articulating ideas through speech. Strategies for speaking extemporaneously, preparing and delivering multimedia presentations, formulating persuasive arguments, refining critical clarity of thought, and enhancing general facility and confidence in oral self-expression. ORALCOMM 117/217 was previously listed as CTL 117/217.

Same as: ORALCOMM 217

**ORALCOMM 118. Public Speaking: Romancing the Room. 3 Units.**

A practical approach to the art of public speaking. Emphasis is on developing skills in speech types including impromptu, personal experience, interviewing, demonstration, persuasive, and special occasion. Materials include videotape, texts of famous speeches, and a final dinner program of speeches. Students evaluate presentations by others. \$55 materials fee. Course was previously offered as CTL 118.

**ORALCOMM 119. Oral Communication Tutor Teaching Practicum. 2 Units.**

Seminar. For students with a strong background in public speaking who wish to train as public speaking tutors for the Oral Communication Program. Readings, exercises, and supervised teaching refine speaking skills. Preparation to serve as a peer tutor in a variety of academic disciplines. Prerequisite: application and consent of instructor. Course was previously offered as CTL 119.

**ORALCOMM 122. "The TED Commandments": The Art and Heart of Effective Public Speaking. 3 Units.**

Designed around the presentation principles of TED talks, this course approaches public speaking as an art of engagement and possibility. Students will learn a range of strategies – both traditional and innovative – for crafting a compelling message and delivering it with clarity, authenticity, and power. Limited enrollment. Course was previously offered as CTL 122/222.

Same as: ORALCOMM 222

**ORALCOMM 126. Oral Documentary Workshop. 1 Unit.**

This workshop will lead students through the process of turning interviews, archival tape, and other recorded material into an accomplished audio documentary suited for public radio and major podcasts. Students will learn how to build story out of their materials, design and create a script, edit and mix sound, and distribute their final product. Suited especially to students returning from summer documentary and oral history research projects. Instructor Permission Required.

**ORALCOMM 177. Performance of Power: Oratory and Authority from the Ancient World to the Postmodern. 4 Units.**

Speech as action has long been seen as essential to leadership. Theories and examples of oratory, from Aristotle to Barack Obama, assessing each as model of voice-activated authority. The impact of mass media technologies as they transform the public space of oratory. Course was previously offered as CTL 177.

**ORALCOMM 215. Voice Workshop. 1-2 Unit.**

Focus is on breath, voice production, expansion of vocal range and stamina, and clarity of articulation. Geared toward public speaking including presentations, lectures, and job talks. May be taken in conjunction with ORALCOMM 117. ORALCOMM 115/215 was previously listed as CTL 115/215.

Same as: ORALCOMM 115

**ORALCOMM 217. The Art of Effective Speaking. 3 Units.**

The principles and practice of effective oral communication. Through formal and informal speaking activities, students develop skills framing and articulating ideas through speech. Strategies for speaking extemporaneously, preparing and delivering multimedia presentations, formulating persuasive arguments, refining critical clarity of thought, and enhancing general facility and confidence in oral self-expression. ORALCOMM 117/217 was previously listed as CTL 117/217.

Same as: ORALCOMM 117

**ORALCOMM 219. Oral Communication for Graduate Students. 1-2 Unit.**

(Formerly CTL 219.) Graduate student speaking activities such as teaching (delivering lectures, guiding discussion, and facilitating small groups), professional presentations and conference papers, and preparing for oral exams and defenses. In-class projects, discussion, and individual evaluation assist students in developing effective techniques for improving oral communication skills.

**ORALCOMM 221. STEM Speak: Oral Communication for Technical Fields. 3 Units.**

This course addresses the principles and practices of effective oral communication and is tailored specifically to those students coming from STEM (science, technology, engineering and math) fields. Students will learn to speak about technical topics to a variety of audiences, will develop their own visual aids, will participate in multiple in-class presentations and will receive both group and one-on-one feedback throughout this course. Special attention will be paid to the effective presentation of data as part of an oral presentation.

**ORALCOMM 222. "The TED Commandments": The Art and Heart of Effective Public Speaking. 3 Units.**

Designed around the presentation principles of TED talks, this course approaches public speaking as an art of engagement and possibility. Students will learn a range of strategies – both traditional and innovative – for crafting a compelling message and delivering it with clarity, authenticity, and power. Limited enrollment. Course was previously offered as CTL 122/222.

Same as: ORALCOMM 122

**Organizational Behavior Courses****OB 115N. Games, Decisions and Negotiations. 3 Units.**

This seminar is intended for students who are interested in how decisions happen and wish to expand their knowledge about the interactive processes involved in strategic decision-making. The course will draw on behavioral game theory to analyze and make sense of individual and group decision-making in negotiations, disputes, auctions, markets and other strategic interactions. To understand how decisions happen, we will use a combination of experiential exercises in class and in-depth discussions of theory and new and exciting research findings on cognitive and emotional aspects of decision making (e.g., what does "bounded-rationality" mean? how does power shape our negotiation behavior? how do our emotions influence our decisions?). We will play interactive games in our meetings to understand how various conditions, such as time pressure, power and uncertainty, influence our decisions. So, if you enjoy in-class exercises, you will enjoy our simulations. At the same time, if you enjoy analyzing human behavior and social interactions, you will like the readings and our discussions. After taking this course, you will be better able to identify and avoid common traps in strategic decision making and have a deeper understanding of other people's thinking and decision making processes.

**OB 205. Managing Groups and Teams. 1 Unit.**

This course introduces you to the structures and processes that affect group performance and highlights some of the common pitfalls associated with working in teams. Topics include team culture, fostering creativity and coordination, making group decisions, and dealing with a variety of personalities. You will participate in a number of group exercises to illustrate principles of teamwork and to give you practice not only diagnosing team problems but also taking action to improve total team performance.

**OB 206. Organizational Behavior. 2 Units.**

Building on the discipline of social psychology, this course helps you cultivate mindsets and build skills to understand the ways in which organizations and their members affect one another. You will learn frameworks for diagnosing and resolving problems in organizational settings. The course relates theory and research to organizational problems by reviewing basic concepts such as individual motivation and behavior; decision making; interpersonal communication and influence; small group behavior; and dyadic, individual, and inter-group conflict and cooperation.

**OB 209. Leadership Laboratory. 2 Units.**

In the Leadership Labs class we ask you to consider the question, "Why would someone follow YOU?" This is a course in which you consider what kind of leader you want to be, what kind of leader you are, and how to align your leadership behavior with your leadership goals. In this class you will have an opportunity to lead your squad and in doing so to discover your strengths and challenges as a leader. You will receive feedback about your approach to leadership and you will have the opportunity to try out new skills and tools. Students will be placed into 5-6 person "squads" and the majority of class time will be spent in these squads. Your squad will meet to work on basic leadership challenges (e.g. managing conflict, assessing a team's progress). There will be the opportunity for a lot of feedback so you can achieve a deeper understanding of the impact of your behavior on others. The squads will do role-play cases and group exercises designed to help you think more deeply about the dynamics in your workgroup and to allow you to practice and experiment with new ways of leading. Each session will be divided into two segments, and one squad member will be the leader for each segment. MBA1 squad members will rotate through the segment leader position. Your squad will have an MBA2 Leadership Fellow assigned to it and he or she will also be present for these meetings in order to provide coaching to the leader and to the squad as whole. Over the course of the quarter your squad will work together on the group project for your Strategy Class. While the deliverable on this project is for your Strategy class, the experience of working together as a team provides a rich opportunity for learning about peer leadership. A number of activities in the weekly Lab will be focused on assessing and reflecting on how you are working together in both the Labs and on your Strategy project. Finally, the quarter culminates with the Executive Challenge. The Executive Challenge will be an opportunity for you to further refine your leadership skills by engaging with alumni judges in role plays that test your ability to lead effectively. The alumni will provide you feedback and evaluate your performance.

**OB 219. MSx: Organizational Design. 2 Units.**

This course examines fundamental issues of general management and leadership within an organization. You will learn about setting an organization's strategic direction, aligning structure to implement strategy, and leading individuals within the firm. You will study the interplay among formal structure, routines, informal networks, and culture in shaping organizational performance.

**OB 259. Sloan: High Performance Leadership. 4 Units.**

This course asks the question: What does it take to build a high-performance unit? The focus is on middle and upper-middle management in contemporary complex organizations. These are organizations that have complex tasks, exist in a rapidly changing environment, and have highly skilled subordinates. The premise of the course is that traditional methods of management may produce adequate levels of performance but prevent excellence from developing. New approaches to leadership will be presented that are more likely to lead to a truly high-performing system. Time will be spent discussing the components of effective leadership, what a manager can do to build a high-performing department, and what members can do to support the leader who wants to initiate such changes. The first two classes are required. In addition to class, students will meet for 2 1/2 hours each week in a Skill Development Group to apply the course material to their own personal development. (While there is minimal overlap in content between OB 259 and OB 374 and these two classes are highly complimentary, both require Journals and an evening group. We therefore recommend against taking both classes in the same quarter for workload reasons.)

**OB 278. MSx: Organizational Behavior. 2 Units.**

Building on the discipline of social psychology, this course helps you cultivate mindsets and build skills to understand the ways in which organizations and their members affect one another. You will learn frameworks for diagnosing and resolving problems in organizational settings. The course relates theory and research to organizational problems by reviewing basic concepts such as individual motivation and behavior; decision making; interpersonal communication and influence; small group behavior; and dyadic, individual, and inter-group conflict and cooperation.

**OB 289. MSx: Negotiations. 2 Units.**

This course is designed to improve students' skills in all phases of a negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multi-party settings, buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy and the management of integrative and distributive aspects of the negotiation process. This course is based on a series of simulated negotiations in a variety of contexts, including one-on-one, multiparty, and team negotiations. When playing a role in a simulated conflict, you will be free to try out tactics that might feel uncomfortable in a real negotiation. You will get feedback from your classmates about how you come across. In sum, you can use this course to expand your repertoire of conflict management and negotiation skills, to hone those skills, and to become more adept in choosing strategies and tactics that are appropriate for a particular negotiation situation. This course is an intense, more compact version to the elective OB381 and is almost identical to the OB581 immersion course. Thus, students should not take either of these courses as there is considerable overlap among the three. Attendance and participation in the negotiation exercises are mandatory.

**OB 317. Leading Creativity and Innovation. 3 Units.**

This course helps students become more effective leaders of creativity and innovation in organizations. Successful innovations begin as creative ideas, but creative ideas can be difficult to generate and accurately evaluate. Based on the latest research, this course teaches students a set of data-driven tools for generating creative ideas, forecasting which ideas are most likely to succeed, and implementing new ideas successfully. Through experiential exercises, students learn about their own personal strengths in developing and evaluating new ideas, and how to leverage the strengths of individuals, teams, and crowds to foster creativity and innovation in their organizations.

**OB 322. Networks. 4 Units.**

This course is designed to improve your effectiveness as a manager by introducing you to both the concepts and tools that are part of the "new science of social networks" as they apply to organizations. In this course, you will develop the skills to understand social networks and recognize social capital, both offline and online, as well as be able to identify key elements of your own and others' social networks that enhance competitive capabilities. Topics to be covered include how social networks affect power and influence, leadership, innovation and the generation of novel ideas, careers, organizational change and competitive advantage. Additional topics to be covered include the increasing importance of online social networks in organizational life and the importance of social cognition and how it can be used to enhance social capital. At the conclusion of this course you will have the skills to map out social networks, diagnose features of the networks that either help or hinder the performance of individuals, groups and companies, and be able to manage important features of social networks in organizations.

**OB 324. The Psychology of Startup Teams. 3 Units.**

The psychology of startup teams is a major determinant of their ultimate success. In this course, we explore the psychological dynamics specific to startup teams and identify ways to effectively lead startup teams to their optimal performance. We will discuss topics such as creating the 'dream team', leadership in start-ups, the art of vision in startups, managing a startup's culture and climate, navigating virtual interactions, and solving common interpersonal problems in startup teams. To address these topics, the course will use a mix of experiential exercises, cases, and exciting guest speakers (including well-known CEOs, venture capitalists, and specialty start-up consultants from Silicon Valley).

**OB 330. Leadership Fellows I. 4 Units.**

The Arbuckle Leadership Fellows Program plays an integral role in the GSB leadership curriculum by bringing together a group of talented second years to support the leadership development of the first-year class. OB330, an 8 unit two-quarter MBA2 elective course (in combination with OB331), is the academic component of this program and runs the entirety of both Autumn and Winter Quarters. Both quarters must be completed to receive any units of credit. The course is open only to those students who have applied and been accepted into the Leadership Fellows Program. Interested students apply at the start of Winter Quarter of their first year and undergo a competitive application process, after which successful applicants are invited to take part in the program. Informational meetings are held late in Autumn Quarter and during the first week of Winter Quarter and Fellows are selected from the first year class in mid-Winter Quarter. Knowing how to develop others is a crucial leadership competency. In this class, Fellows develop the advanced leadership skills of leading leaders and developing others through coaching and mentoring. Among the competencies developed in this class are: 1) Team Coaching Skills (e.g. facilitating a group, diagnosing group dynamics, debriefing, coaching without undermining the leader), 2) Individual Coaching Skills (e.g. effective inquiry, asking powerful questions, balancing support and challenge, providing effective feedback, holding others accountable, utilizing, valuing and connecting across differences and power differentials, using oneself in service of another's development) and 3) Personal Development Skills (e.g. self-reflection and self-awareness, leveraging strengths, stretching outside one's comfort zone). In the Autumn Quarter Fellows are assigned to a squad of six MBA1s in Leadership Labs. Fellows guide their MBA1 squad through the learning process in the Labs and provide both individual and team coaching to their MBA1 squad members. In addition to the work with their MBA1 squad, Fellows provide in-depth 1:1 coaching to three additional MBA1 students who are not members of their squad. This 1:1 coaching begins after Autumn midterms and continues through the end of Winter Quarter. Fellows classes meet twice a week for 105 minutes. There will be a reading list of conceptual material which will be supplemented during class with lectures, discussions and activities. Students will apply concepts through role-playing and experiential exercises during class time as well as in their coaching and mentoring of their MBA1 coachees. Additionally, Fellows will attend weekly Leadership Labs with the first year squad to which they have been assigned and meet 1:1 with MBA1 coachees. Fellows meet regularly with five of their peers in "clinics," standing groups led by Leadership Labs Instructors who are also GSB Leadership Coaches. Fellows meet with their Leadership Coach and clinic approximately every other week during regular class time to discuss specific strategies for working with their first year students. Fellows also periodically meet with their Leadership Coach one-on-one to hone their skills and explore their areas for specific improvement. Note: OB374, Interpersonal Dynamics, is a PRE-REQUISITE for this course; students who want to be Fellows are advised to assess whether that is a class they want to take in the spring quarter of their first year. Additionally, signing up for 1:1 coaching by a Fellow as an admit strengthens a MBA1 student's application to the Arbuckle Leadership Fellows program.

**OB 331. Leadership Fellows II. 4 Units.**

This course is the continuation of Leadership Fellows I, an 8-unit course that begins in Autumn Quarter. During this quarter Fellows will continue to deepen their coaching and mentoring skills, and will focus exclusively on in-depth 1:1 coaching with three MBA1 coachees (who were not members of their MBA1 squad.) Classes and clinics continue as in Autumn Quarter.

**OB 333. Acting with Power. 3 Units.**

The ability to function effectively within a hierarchy is a crucial determinant of managerial success, yet many people struggle with "authority issues" that make certain hierarchical roles and positions difficult for them. This course draws on the craft of acting and the science of psychology to help students learn to use themselves to develop the characters that can play these roles effectively. This class is designed specifically for students who have trouble "playing" authoritative roles: those who find it difficult to act with power, status, and authority. It will also be useful for students who find it difficult to share power and authority, which involves accepting and deferring to the power and authority of others. Participants will be asked to read, think deeply about, and share some of their own feelings about power and authority, and the origins of those feelings. They will also be asked to prepare for and present a series of in-class performances that involve playing characters with and without power, in scenes that highlight the interactions and relationships between high and low power characters. These performances will take up much of our time during class. Out-of-class assignments will include reading important works on psychology, and on the theory and practice of acting, as well as writing short essays analyzing their own and others' performances.

**OB 336. Insight to Outcome. 3 Units.**

Getting from "strategic insight" to "desired outcome" (achieving the right result) continues to be a core challenge for many organizations and leaders. In this course, we develop a framework and approach for the "insight to outcome" sequence, study some of the key levers available to managers, and learn from some common pitfalls. The bulk of the course will be devoted to the practical application of the approach to a number of important business processes, such as merger integration, corporate and business unit transformation, and strategy development. Some class sessions will involve class visits by topical experts in these applications. The course is designed for second-year MBAs. It will appeal to students interested in an exploratory course - more of a "how to think about it" course than a "toolkit" course. Grades will be based on class participation and a group project. Class size is limited to 30.

**OB 343. Scaling up Excellence in Organizations. 4 Units.**

A problem for every manager is to make 'good' behaviors spread quickly and to shrink 'undesirable' behaviors quickly. This course provides you practical frameworks to accomplish these managerial goals. We will examine issues such as scaling Idea generation, scaling knowledge sharing, scaling the adoption of ideas across firms, scaling change in global firms. We will be using a newly written series of cases for this course and also draw on guest speakers. We will be require a project that may involve design thinking - so we encourage those who have not had exposure to design thinking to apply.

**OB 345. Leadership Coaching. 3 Units.**

The ability to coach others is an often over-looked core competency for leaders. This course will give second year MBA students an opportunity to learn the fundamental skills of coaching, so they can become coaching managers. This course is designed to be very experiential. While conceptual frameworks will be introduced through readings, lectures, demonstrations and discussions, the only real way to learn coaching skills is to both practice coaching, and to be coached. Every class session will provide opportunities to do both: coach and be coached. Because the in-class coaching practice will not be role plays but will actually be real coaching sessions between students, this course will demand a high level of engagement and participation from each student. While OB374 is not required, we highly recommend students take OB374 either previously or concurrently with taking this course in order to maximize your learning.

**OB 346. Inside Life and Leadership. 3 Units.**

We created this class around three premises that 1) you have great potential, 2) you have had, and will continue to have, numerous opportunities to affect the world, and 3) to maximize your potential you need a reliable framework to gain self-insight and develop yourself and those around you. In this class we seek to provide a framework that will help you increase your self-knowledge and guide your development. In particular, this framework is designed to help you swiftly identify and resolve gaps between your current and desired state, and to help you help others do the same. We will accomplish this through interactive exercises, case studies, and self-reflection to better align your thoughts, words, and actions to maximize results for yourself and as a leader of others.

**OB 353. Cultural Imperative: The Ideal of Organizational Design. 3 Units.**

Business doesn't just happen, significant amounts of time are spent creating business plans, executing them, and ultimately trying to figure out what went wrong in order to correct them. This class argues, that similarly, organizational culture shouldn't be allowed to just happen; organizational culture should be designed. In this class we suggest that there is an ideal, a cultural imperative, which organizations should strive for. We believe that individuals have near infinite problem-solving ability, and, that all else equal, organizations that tap into this potential will outperform those that only see people in terms of labor hours and dollars. Thus, the class focuses on learning to see the role of organizational culture in creating an environment that engages, stimulates, and drives growth of the people in the organization, and aligns this engagement with the organization's mission. We will accomplish this through class discussion, case analyses, and a group project designed to provide hands-on experience.

**OB 362. Leadership Coaching and Mentoring. 3 Units.**

This two-quarter course is offered for 6 units and runs for the Winter and Spring Quarters. Both quarters must be completed to receive any units of credit. THERE IS BOTH A PREQUALIFICATION AND A PRE/CO-REQUISITE for this course. It is open to a maximum of 24 MBA2s who have passed an assessment of their potential to coach effectively, though they need not have been coached as first years. (The number of students may be increased to 36 if sufficient first-year coachees are identified.) The pre/co-requisite is OB 374-Interpersonal Dynamics. (If taken as a co-requisite, OB 374 must be taken in the winter quarter.) There will be a reading list of conceptual material which will be supplemented during class with lectures and discussions. Students will have the opportunity to apply those concepts through role-playing and exercises during class time. Each MBA2 will be assigned three MBA1s to coach. The MBA2 coaches will meet with their MBA1s five times each quarter (i.e. a total of 10 coaching sessions) in a series of semi-structured coaching activities. In addition, the MBA2 students will meet, in groups of 6, with a Master Coach for a two-hour clinic approximately every other Friday during the Winter Quarter during class time. During Spring Quarter, students will meet every Monday (only) from 3:15 to 5:00 pm (alternating between class and clinics) with two additional Friday classes to be held on Friday, April 1, and Friday, April, 15 from 3:15 to 5:00 pm. Note: Students MUST attend the first class (including waitlisted) or they will be dropped. The drop deadline for this course is Friday, January 7, at 11:59 p.m. (i.e. earlier than standard GSB add/drop deadline).

**OB 363. Leadership Perspectives. 4 Units.**

What does it mean to be a principled leader? What role do values play in an organization, and how do successful leaders apply their values in their daily business lives? This course examines the concept of principled leadership and the various ways that leaders try to institutionalize particular values within the organizations they lead. Equally important, it explores the difficult challenges that leaders sometimes face when trying to apply their principles in a tough, fast-paced business environment, where others may not share the same expectations. Through assigned readings, interactive lectures with visiting executives, and weekly small group discussions, students will learn how practicing leaders implement their principles, while reflecting the realities of different cultural expectations and meeting business demands. The course will provide a forum for students to learn directly from practicing leaders and to think introspectively about their own personal values, leadership styles, and long-term aspirations.

**OB 368. How to Make Ideas Stick. 4 Units.**

Having a good idea is not enough, we must also be able to convey our ideas in a way that people can understand and act on them. But often our messages don't persuade or persist. This course assumes that we can craft more effective messages by understanding the principles that make certain ideas stick in the natural social environment: Urban legends survive in the social marketplace without advertising dollars to support them or PR professionals to spin them. How could we make true or useful information survive as well as bogus rumors? We will use research in sociology, folklore, and psychology to analyze what kinds of ideas survive the selection process in the marketplace of ideas and to develop a set of strategic tools to craft ideas that are more likely to survive. Topics covered include crafting messages for complex information that don't exceed the capacity of human attention and memory, using emotional appeals that inspire people and motivate action, acquiring attention in a crowded environment, and gaining legitimacy for new ideas, approaches, and technologies.

**OB 372. High-Performance Leadership. 4 Units.**

This course asks the question: "What does it take to build high-performance?" The focus is on middle and upper-middle management in contemporary organizations that have complex tasks, exist in a rapidly changing environment, and have highly skilled subordinates. The premise of the course is that traditional methods of management may produce adequate levels of performance but prevent excellence from developing. New approaches to leadership will be presented that are more likely to lead to a truly high-performing system. Time will be spent discussing the components of effective leadership, what a manager can do to build a compelling vision, strong teams, and mutual influence sideways and upwards as well as with direct reports. Also, what members can do to support the leader who wants to initiate such changes. In addition to class, students will meet for 2 1/2 hours each week in a Skill Development Group to apply the course material to their own personal development. (While there is minimal overlap in content between OB 372 and OB 374 and these two classes are highly complementary, both require Journals and an evening group. We recommend against taking both classes in the same quarter for workload reasons.) Students will have a choice as to when their SDG will meet. The expectation is full attendance at all SDG meetings. Only one excused class absence. Class on the day of the EIS Simulation is required.

**OB 374. Interpersonal Dynamics. 5 Units.**

PRE-QUALIFICATION IS REQUIRED BY THE DEADLINE (APPROXIMATELY FIVE WEEKS BEFORE THE QUARTER BEGINS). The focus of this course is to increase one's competencies in building more effective relationships. Learning is primarily through feedback from other group members. This course is very involving and, at times, can be quite emotional. However, this course is not a substitute for therapy; we deal more with interpersonal issues than with intra-personal ones. If you are in therapy, please talk this over with your therapist and get their advice before enrolling in this course. The students are divided into three 12-person T-groups that meet the same evening of the class. It is very important to note that when you decide to take this course, you make an explicit contract to be actively involved. Attendance to the first class is required for the 1-day/week sections of this class. Attendance to the first two classes is required for the 2-day/week sections of this class. Failure to attend the first class(es) will result in an automatic drop. Students who are waitlisted must attend the first meeting of each section they are waitlisted for in order to secure a place in the course should space open up. It is the student's responsibility to notify respective OB 374 faculty of your attendance and wish to fulfilling your waitlist requirement. T-group meetings for all sections will meet for 3 hours the same evening as 1-day/week class and the same evening of the first day of the 2-day/week section. The class has a weekend retreat the seventh or eighth week (check your specific section) of the course. Because of the highly interactive nature of this course, it is very important that all students attend all sessions. Missing class, class T-group, evening T-group, or any portion of the weekend will negatively influence your grade and may result in a student's grade being dropped one grade level (for each absence). Arriving late on Friday to the weekend will negatively influence your grade level - missing any more of the weekend beyond that will result in a U. Students must pre-qualify before taking this course. Qualification assignments are due approximately five weeks prior to the quarter. For exact due dates and complete assignment details, see: <https://sites.google.com/a/stanford.edu/ob374-prequalification/>.

**OB 377. The Paths to Power. 3 Units.**

Power and influence processes are ubiquitous and important in organizations, so leaders need to be able both to understand power and to act on that knowledge. This course has three objectives: 1) increasing students' ability to diagnose and analyze power and politics in organizational situations; 2) increase students' skills in exercising power effectively; and 3) helping students come to terms with the inherent dilemmas and choices, and their own ambivalence, involved in developing and exercising influence. Topics covered include: the sources of power, including individual attributes and structural position; dealing with resistance and conflict; obtaining allies and supporters; maintaining power; how and why power is lost; living in the limelight—the price of having power; preparing oneself to obtain power; and the use of language and symbolism in exercising power. The class involves a reasonably large number of written, self-reflective assignments as well as two individual projects (doing a power diagnosis on an external organization that is important to the person) and a doing-power project (using the class material during the quarter to gain power in some group or organization). The class emphasis is on both learning the conceptual material and also incorporating it into one's own strategies and behaviors.

**OB 381. Conflict Management and Negotiation. 3 Units.**

Conflict is unavoidable in every organization. The key question is how it will be handled: will it escalate to dysfunctional levels or will it be effectively managed? Hence, a first aim of the course is to develop your ability to analyze conflicts, to look beneath the surface rhetoric of a conflict, to isolate the important underlying interests, and to determine what sort of agreement (if any) is feasible. We'll analyze which negotiation strategies are effective in different conflicts. We'll also examine psychological and structural factors that create conflict and often pose a barrier to its resolution. But understanding how to analyze a conflict is not enough. To manage conflict effectively, you need a broad repertoire of behavioral skills. Developing these is the second aim of the course. To achieve this, negotiation exercises are used in every session. When playing a role in a simulated conflict, you will be free to try out tactics that might feel uncomfortable in a real one. You will get feedback from your classmates about how you come across. In sum, you can use this course to expand your repertoire of skills, to hone your skills, and to become more adept in choosing when to apply each skill.

**OB 383. Lives of Consequence: How Individuals Discover Paths to Meaningful Engagement. 3 Units.**

This Bass Seminar and Experiential Workshop will examine what it means to live a life of consequence. Using theories and evidence from the latest and best research on happiness and meaning, we will collectively develop a conceptual framework for thinking about how you personally can design a happier and more meaningful life for yourself. In addition to building a solid conceptual foundation on which to think about your life, you will have substantial opportunities to work individually and in small groups on a variety of reflective and experiential exercises designed to stimulate your imagination regarding how to create greater happiness and meaning in your own life. These engaging and enjoyable exercises include personal writing and public speaking exercises, as well as out-of-class experiential exercises. The seminar will be very discussion oriented and student participation quite lively. The goal of this seminar and workshop is to change how you think about yourself and your life! THIS WORKSHOP IS AVAILABLE ONLY TO FIRST- AND SECOND- YEAR MBA STUDENTS. NO EXCEPTIONS WILL BE PERMITTED.

**OB 387. Redesigning Work for 21st Century Men and Women. 4 Units.**

Research on the Millennial Generation (i.e., those born between 1980-2000) shows that millennials, as compared to earlier generations, have quite different values and priorities when it comes to work. For instance, millennials report that they place a high value on autonomy and creativity at work, and prefer to self-manage their personal productivity. They also report that they value being a good parent and having a good marriage over having a high-paying career. Despite this research, our organizations have been slow to respond to a new generation of workers. This has led to high levels of disengagement, and lower levels of productivity in many organizations. This class will explore the gap between how our organizations are designed, and what a new generation of workers desire in terms of work. Students will work in teams to design a new workplace that is reflective of what workers want in terms of their work. The first part of the course will focus on what the issues and problems are in how organizations are designed for an earlier generation of workers, while the second part of the course will be set aside for team-based project work and presentations.

**OB 388. Leadership in the Entertainment Industry. 3 Units.**

The entertainment industry is one of the largest and most important industries in the world. It is an industry characterized by tremendous opportunities and great uncertainties. The industry is currently undergoing tremendous change as new technologies transform the way entertainment is produced and disseminated throughout the world. For all of these reasons, the dynamic industry creates tremendous challenges for entrepreneurial students interested in leaving an artistic or creative imprint on the world. This course is designed to help prepare students for careers in the media industries, and to explore leadership within them. The industry is truly an intersection of art and commerce, and a major portion of the course will involve bringing to the class leaders who represent key areas of the entertainment industry, both on the business and creative sides. As with any business, the entertainment industry is driven by the vision of its leaders. These leaders make financial and artistic decisions daily, and manage staff and productions with the goal of producing entertainment product meant to be seen as widely as possible, and meant to make a profit. It is hoped that through interaction with these speakers, students taking this course will gain a greater understanding of the industry and what it takes to succeed in it. Further, the students will see the potential of strong leadership and how it works to advance entertainment companies and the films and TV programming they produce. Topics to be examined include the process of project development, production, and marketing; emerging technologies and their impact on the industry; the roles studio and network executives, directors, film and television producers, writers, actors, agents, and others play in the making and distribution of film and television productions.

**OB 392. Leadership Coaching and Mentoring II. 3 Units.**

This course is the continuation of a 6 unit course that runs for the Winter and Spring Quarters. Classes/clinics meet 10 times in the spring. It is open to up to 24 MBA2 students who have been selected on the basis of their having passed a screening to assess their potential to coach effectively. They also need to have taken OB 374 - Interpersonal Dynamics or will take OB 374 in the Autumn or Winter. There will be a reading list. That conceptual material will be supplemented during class time with lectures and discussions. Students will have the opportunity to apply those concepts through role-plays and exercises during class time. Each second-year student will be assigned three first-year students. The second-year coaches will meet with their coaches 5 times each quarter in a series of semi-structured coaching activities. In the spring there will be two mandatory Friday sessions, on April 1 and April 15 in addition to Monday afternoon classes.

**OB 393. Leadership in Diverse Organizations. 4 Units.**

How improve capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. Premise is that diversity presents challenges and opportunities that push students to develop leadership skills relevant across a variety of situations. What social and psychological obstacles limit people's ability to work effectively across identity-based differences? What can people do to build the relational and organizational capacity to enable these differences to be a resource for learning and effectiveness within teams and organizations? Focus is on dynamics of race and gender; attention to other dimensions of identity and difference in organizations, including sexual orientation, nationality, class, and religion.

**OB 503. Games and Decisions. 1 Unit.**

This course is intended for individuals who are interested in how decisions happen in organizations, and wish to expand their knowledge about the interactive processes involved in strategic decision-making. The course will draw on behavioral game theory to analyze and make sense of individual and group decision-making. To understand how decisions happen, we will use analyses of in-class exercises and in-depth discussions of new and exciting research findings on cognitive and emotional aspects of decision making (e.g., what does "bounded-rationality" really mean? how do our emotions influence our decisions? What is unconscious thought and how can it be used to improve decisions? What drives erroneous market-entry decisions?). We will play strategic games in all our meetings to understand how various conditions (e.g., time pressure, uncertainty, information complexity, accountability) influence our decisions, but we will also read and discuss theory and research on bargaining and interdependent decision-making. So, if you enjoy in-class exercises, you will enjoy our simulations. At the same time, if you enjoy analyzing human behavior and social interactions, you will like the reading and our discussions. After taking this course, you will: (a) be better able to identify and avoid common traps in strategic decision making; (b) be able to draw on a diverse "tool-box" of skills and techniques to make you a more effective decision maker; and (c) have a deeper understanding of other people's thinking and decision making processes.

**OB 504. Culture & Organizations. 1 Unit.**

This course is designed for individuals who are interested in learning about the multitude of ways by which culture influences core organizational processes, including leader emergence and effectiveness, communication and social influence, decision making and negotiation. The course will also address the challenges associated with cross-cultural business interactions. To dig deep into culture's consequences, we will use analyses of real-world cases, in-class exercises, and in-depth discussions of new and exciting research findings. For example, we will discuss why some cross-cultural joint ventures succeed while others fail; engage in exercises that illustrate the challenges of working across cultural boundaries; review common pitfalls in cross-cultural interactions; and discuss when cultural variation within the organization can be an advantage, as well as how leaders can effectively manage it. Thus, class experience will include a balanced mix of hands-on exercises aimed at illustrating what culture is, and discussions aimed at analyzing its implications. After taking this course, you will: (a) be better able to identify, understand, and avoid common traps in cross-cultural business interactions; (b) learn how culture can affect and be used to enhance organizational performance; (c) possess a larger repertoire of behavioral skills to apply in various cross- and intra-cultural interactions; and (d) understand why culture can be sticky, and how to leverage it for the purpose of organizational change.

**OB 512. Creating, Building, and Sustaining Breakthrough Ventures. 2 Units.**

This course is designed to provide students with a summary of entrepreneurial processes that have successfully created, developed, and sustained breakthrough ventures. By "breakthrough" we mean ventures that have had a lasting and positive impact, touching millions of lives. We consider ventures that are not only software related, but also ones based on technology and business models that impact markets ranging from medical devices to small satellites to home robotics systems to clean water and more. The examples are based on the experiences of Norman Winarsky, formerly President of SRI Ventures, and Henry Kressel, Partner Emeritus at Warburg Pincus. They include companies like Siri, Nuance, Intuitive Surgical, Sandisk, and others. The course leads us from the source of breakthrough venture ideas, to building a great value proposition and business plan, recruiting a team, finding investors and board members, deciding whether to sell or go IPO, and ends with what it takes to build a company that can sustain itself through continuous innovation. At each step, we follow examples of companies we've helped build, and provide lessons of success as well as failure. We compare and contrast the strategies of these ventures with other popular strategies, such as those proposing "fail fast, develop minimal viable products, and pivot often..." The course will be highly interactive, and engage students in discussing their own experiences and future plans. Invited speakers will include venture capitalists and entrepreneurs who have created breakthrough companies.

**OB 518. Leading Through Culture. 2 Units.**

This course examines organization culture, how and why managers can use culture to maximize results within an organization, and how culture can undermine results. The course begins by situating cultural leadership and management within a culture-shaping framework and the opportunities, obligations and methods for leaders to impact culture. It also focuses on what is different in cultural management and why so many contemporary firms attempt to use it. We analyze the relationship between culture and strategy, seeking alignment between the two. The course also explores different kinds of cultures seen in high performing and low performing organizations, and seeks to understand how cultural content affects behavior and business results. Students will be asked to describe and define the culture of an organization needed for a given business and strategy, and to define the role of executives in shaping culture. The class identifies and analyzes the tools or levers that leaders can use to build an effective culture. We will spend a session on each of the following: culture and strategy alignment, architecture for shaping culture, selecting people for cultural alignment, aligning organizational practices, culture and society, cultural inflection points from start-up to scale, cultural aspects of high performance and cultural diagnostics. The course will end with a session on culture issues in merger and acquisition.

**OB 522. Managing Social Networks in Organizations. 2 Units.**

This course is designed to improve your effectiveness as a manager by introducing you to both the concepts and tools that are part of the "new science of social networks" as they apply to organizations. In this course, you will develop the skills to understand social networks and recognize social capital, both offline and online, as well as be able to identify key elements of your own and others' social networks that enhance competitive capabilities. Topics to be covered include how social networks affect power and influence, leadership, innovation and the generation of novel ideas, careers, organizational change and competitive advantage. Additional topics to be covered include the increasing importance of online social networks in organizational life and the importance of social cognition and how it can be used to enhance social capital. At the conclusion of this course you will have the skills to map out social networks, diagnose features of the networks that either help or hinder the performance of individuals, groups and companies, and be able to manage important features of social networks in organizations.

**OB 527. The Art of Self-Coaching. 2 Units.**

In 2009 a graduating student said to me, "A number of coaching resources here at the GSB have helped me develop as a person over the last two years. But after I leave school and no longer have access to those resources, how will I continue to coach myself?" This course is an attempt to help you answer that question. We'll define "self-coaching" as the process of guiding our own growth and development, particularly through periods of transition, in both the professional and personal realms. In this course you'll explore a range of practices and disciplines intended to help you build on what you've learned about yourself over the last two years and continue that process after graduation. While this is a self-directed process, it's NOT a solitary one, and you'll work with classmates in pairs and small groups, so be prepared to discuss meaningful personal issues with your fellow students.

**OB 537. Advanced Topics in Teams. 2 Units.**

This course offers a deeper examination of team dynamics than was provided in Groups and Teams. The course goal is to provide you with tips and tools to maximize the performance of your teams at work. Topics include forming start-up teams, capitalizing on diversity in teams, managing virtual teamwork, facilitating effective discussion and debate in creative teams, and navigating informal leadership processes within top management teams. Group exercises and cases will help you learn how to create and maintain highly effective teams.

**OB 541. How to Change Things When Change is Hard. 2 Units.**

This course will explore case studies and research about how to create behavior change from a position without much formal authority or power: e.g., a middle manager trying to change a failing unit of a big firm or a social entrepreneur trying to influence the behavior of a community. We'll use principles from social psychology, clinical psychology, and behavioral economics to analyze cases like the following: How a new head of the equities research department at Lehman Brothers changed his group's ranking in the Institutional Investor polls from #15 to #1 over a four year period. How Teach for America teachers take unmotivated kids in neglected schools and manage on standardized tests to gain more than two year's progress in one year of schooling. How a clever application of behavioral economics managed to triple employee savings rates.

**OB 543. Scaling Change. 2 Units.**

A problem for every manager is to make 'good' behaviors spread quickly and to shrink 'undesirable' behaviors quickly. This course provides you practical frameworks to accomplish these managerial goals. We will examine issues such as scaling Idea generation, scaling knowledge sharing, scaling the adoption of ideas across firms, scaling change in global firms. We will be using a newly written series of cases for this course and also draw on guest speakers.

**OB 547. Entrepreneurial Leadership: The Six Essential Skills of Extraordinary Entrepreneurs. 2 Units.**

How do some people turn ideas into enterprises that endure? Why do some people succeed why so many others fail? Based on more than 200 interviews with leading entrepreneurs conducted over the past five years by Amy Wilkinson, this course will focus on the six skills of successful entrepreneurs. The class will include brief lectures and class discussions with a set of the successful entrepreneurs featured in a recent book authored by the instructor, "The Creator's Code." The class is designed to help students integrate these skills into their own future ventures.

**OB 552. The Quest for Happiness: Exploring the Psychology of Human Fulfillment. 2 Units.**

In this seminar, we will explore the nature of human happiness. We will examine recent theories and new evidence from psychological research indicating who among us is likely to achieve deep and enduring happiness and why. We also will review what we know about the determinants of happiness throughout the lifespan. We will discuss how happiness is created and sustained, even in the face of adversity and tragedy. We will describe the "geography" of happiness, examining different cultural conceptions of happiness and variations in the distribution of happiness around the globe. We will also discuss some prevalent misconceptions regarding the antecedents of human happiness—why so many people, in short, stumble in their quest for happiness. We will explore how leaders can use happiness research to create more satisfying work places. To illustrate these ideas, we will examine in detail a number of fascinating individuals, including Bill Gates, Warren Buffet, Oprah Winfrey, venture capitalist Tom Perkins, Steven Spielberg, Martha Stewart, and the Nobel physicist Richard Feynman. Students will also work, either individually or in small self-selected teams, on a case study of an individual or organization they find interesting. There will also be several reflective exercises designed to probe students' self-conceptions regarding their own happiness. This seminar will be very discussion-oriented and our time will be spent engaging in lively, provocative debate of controversial ideas and evidence about happiness.

**OB 555. Mastering Life's Moments: The Challenge of Optimizing your Experience. 2 Units.**

Our personal and professional lives are made up of a series of moments. Some of these moments present great opportunity, with the prospect of personal change and even transformative growth. Other moments contain the seeds of setback and even derailment of our most coveted plans. Some of life's moments are planned, while others catch us completely by surprise. Whatever moments we are afforded, we must make the most of them. This new seminar will explore what we know about the psychology of "optimal experience." We will examine how and why some individuals harvest so much joy, zest and sense of attainment from their moments, while others squander their moments or dig themselves into deeper holes when trying to respond to them. We will also examine how and why some people respond brilliantly to adversity, mastering even the most tragic moments that life presents, while others flounder and fold. To inform our thinking on this vital topic, the seminar will include a series of rich and provocative readings from psychology, behavioral economics, organizational theory and philosophy. Additionally, the seminar will include a series of compelling video cases illustrating both optimal and suboptimal responses to experience. To make the seminar more personally involving and useful to you, you will also engage in a series of reflective writing and experiential exercises. Whenever I offer a new course, I make a promise to the students who take it. For this course I promise you an intellectually deep and personally meaningful exploration of what it means to "use up" your life well. Put another way, I promise you some great educational moments in your GSB life!.

**OB 568. How to Make Ideas Stick. 2 Units.**

This class will explore the properties shared by ideas that stick with people and change the way they think and act. The course is based on the framework in the book *Made to Stick* and focuses on hands-on exercises that will teach you how to transform your messages to make them stick: How do you get attention for your idea in a crowded marketplace of ideas? How can you convey complex information quickly? How do you make a broad, abstract idea concrete and tangible enough for people to understand? How do you provide credibility for your idea without resorting to dry statistics? Although the exercises in this course are fun and generally short, students in the past have said that they do require a lot of thinking time outside of class in order to apply the course principles to a specific message. This is particularly true of the final project which involves improving the message of a specific live client (e.g., a friend with a start-up business, the recruiting materials of a former employer). This course will be especially useful for entrepreneurs who must pitch their ideas to customers, investors, and potential employees and for students in the nonprofit sector where resources for spreading ideas are often thin.

**OB 569. Strategy and Management in Developing Economies. 2 Units.**

This course will explore the strategic and managerial challenges involved in running for-profit companies in developing economies. Particular emphasis will be given to understanding the challenges of running enterprises that touch the lives of the poor or the extreme poor, either by employing them or producing goods and services that improve their lives. A central theme will be the ways in which features of these economies shape the ability of firms to thrive and grow. Among the issues that may be considered are how the economic and social context affects the ability of firms to formulate successful strategies for creating and capturing value and how the context impacts the process of management within the organization.

**OB 570. Psychological Assessment: Principles, Methods, and Applications in HR and Marketing. 2 Units.**

This course will provide students with the theoretical background and practical skills necessary to design and deliver a psychological test. We will cover the basic principles of psychological testing (validity, reliability, standardization, and freedom of bias) and introduce the methods and tools used in test development and scoring. In an extensive hands-on part of the course, students will design and deliver an online test. The course will also briefly introduce advanced assessment methods, including Item Response Theory and Computerized Adaptive Testing. Finally, we will cover ethical and legal issues associated with administering tests and interpreting their results.

**OB 571. Diversity, Dynamics, and Influence. 2 Units.**

The course is based on the premise that diversity can present unique challenges and opportunities thereby compelling students to expand their sensitivity and develop a wider repertoire of skills, many of which are relevant across a variety of situations. The course is intended for students who plan to work in culturally diverse groups or organizations and will be equally relevant to those who work in the not-for-profit, public, and for-profit sectors. Through the presentation of new concepts, participation in experiential group activities, and faculty facilitated debriefing, students are expected to improve their ability to better assess and intentionally influence and to be influenced inclusive of five fundamental differences presented by peers - social identity, values, power roles, cognitive styles, emotional literacy. Students will be taught how to practice 'authentic discourse' during regular faculty facilitated small task group debriefings. 'Authentic discourse' is a skill stressed in Interpersonal Dynamics (OB374).

**OB 572. High Performance Leadership for Family Business Leaders. 2 Units.**

This course examines the unique leadership problems faced in family businesses. What is unique is that there are two overlapping systems; the family system and the business system. These can be congruent or at cross-purposes. For example, the latter might stress promotion on merit while the other values family ties. There also can be difference in purpose. Is the organization to maximize shareholder value or to provide employment for family members? These and other related issues impact the communication process, how decisions are made and how power is distributed. The course will be case based. The content will overlap that of OB372 so it is not advised to take both courses. Because of the shortened nature of 572, there would be minimal overlap with OB374 Interpersonal Dynamics. In addition to class, students will meet for 1 1/2 hours each week in a Skill Development Group to apply the course material to their own personal development.

**OB 574. Interpersonal Dynamics at Work. 2 Units.**

This course is open to students who have taken OB 374 Interpersonal Dynamics or GSBGEN 374 Interpersonal Influence and Leadership. The objectives of OB 574 is to take what was learned in the introductory Interpersonal Dynamics course further with a specific emphasis on how those approaches are applicable in a work setting. Specifically how issues of fuller self-expression/disclosure, feedback, resolution of interpersonal difficulties and building effective relationships can apply to working with peers and one's manager as well as in a team setting. The course will meet Thursdays 3:15-5:00 for five sessions starting April 2nd and running until April 30th. The T-groups will meet that evening, 7:00-9:30. In addition, there will be one all-day meeting (instead of a weekend), Saturday, April 4th running from 9:00 a.m. to 9:30 p.m. Attendance in all class sessions, evening meetings, and the Saturday retreat is required. Any absence will result in lowering of the grade. In addition to a modest amount of reading, students will keep an on-going self-diagnostic log. One-third of the grade will be on the log and the remaining 2/3 on the extent of participation in class, risk-taking in the group, and helping building learning conditions for self and others.

**OB 581. Negotiations. 2 Units.**

This course is designed to improve students' skills in all phases of a negotiation: understanding prescriptive and descriptive negotiation theory as it applies to dyadic and multiparty negotiations, to buyer-seller transactions and the resolution of disputes, to the development of negotiation strategy and to the management of integrative and distributive aspects of the negotiation process. The course is based on a series of simulated negotiations in a variety of contexts including one-on-one, multi-party, and team negotiations. When playing a role in a simulated conflict, you will be free to try out tactics that might feel uncomfortable in a real one. You will get feedback from your classmates about how you come across. You will have an opportunity to reflect on your experience in your negotiation paper. In sum, you can use this course to expand your repertoire of conflict management and negotiation skills, to hone your skills, and to become more adept in choosing when to apply each skill. This course represents a shorter, more intense version of OB 381-Conflict Management and Negotiations. Students should not take both courses, as there is considerable overlap in course content. Attendance and participation in the negotiation exercises is mandatory.

**OB 582. Leading Social Change: Educational and Social Entrepreneurship. 2 Units.**

The course provides an overview of different approaches to change, drawing primarily on entrepreneurial initiatives in education. The course will equip students with an appreciation for different mechanisms of change as well as some of the challenges of initiating and sustaining change in social sectors such as education. The course will draw on readings and case studies, and we will benefit from the wisdom of an inspirational group of guest lecturers. While the course will benefit any student concerned with making a positive impact, it is particularly appropriate for students in the joint MA/MBA program as well as those who will lead social change through nonprofit consulting or entrepreneurship.

**OB 586. Organizational Learning. 2 Units.**

This is a course about how firms learn from their experiences and the opportunities created by flawed learning. It will explore common mistakes in learning and barriers to the adoption of effective practices. Understanding learning problems will help future managers avoid common mistakes and build organizations that learn more effectively; learning is particularly important for entrepreneurs who are trying out new ideas and so must adapt correctly to feedback from the environment. But understanding common mistakes is also useful for identifying possible opportunities in markets; opportunities exist when firms make mistakes and when they fail to learn effective practices. The course will introduce concepts and findings from organization theory, psychology, decision theory, and statistics. A variety of exercises, cases, and readings will be used to illustrate barriers to learning and the opportunities they create, including the book "Moneyball" by Michael Lewis which discusses market-level mistakes in professional baseball.

**OB 591. Advanced Negotiation. 1 Unit.**

This course is designed for individuals who have taken one of the basic negotiation courses (OB 381 or OB 581) and are interested in honing their negotiation and conflict management skills and expanding their knowledge about bargaining and dispute resolution. To dig deeper into the minds of negotiators, we will use analyses of in-class exercises and in-depth discussions of new and exciting research findings. Thus, we will play strategic games and negotiate in all our meetings, but we will also read and discuss theory and research on bargaining. So, if you enjoy negotiating, you will enjoy the classes. At the same time, if you enjoy analyzing human behavior and social interactions, you will like the reading and our discussions. We will start off the class by launching a week-long entrepreneurial negotiation assignment that will allow you to test your bargaining skills outside of class. Our in-class exercises and in-depth discussions will subsequently tackle critical issues in negotiation, including the role of power and norms in negotiation; cross-cultural negotiations; accountability, emotions, and information processing in negotiation; and creativity in negotiation. After taking this course, you will: (a) be better able to identify and avoid common traps in negotiation; (b) have a larger repertoire of behavioral skills to apply in various negotiations; and (c) have a deeper understanding of other people's behavior in negotiation.

**OB 593. Leadership in Diverse Organizations. 2 Units.**

This course is designed to help students improve their capacity to exercise leadership and work effectively with others within the context of culturally diverse groups and organizations. The course is based on the premise that diversity can present unique challenges and opportunities and thereby pushes students to develop crucial leadership skills, many of which are relevant across a variety of situations. The class will address two primary questions: 1) What social and psychological obstacles limit people's ability to work effectively across identity-based differences? 2) What can you do to create contexts that enable differences to be used as a resource for learning and effectiveness within teams and organizations? Students should be prepared to experiment with various conceptual and analytic skills inside and outside of the classroom. While the course focuses on dynamics of race and gender, there will be opportunities for students to explore a variety of other dimensions of identity and difference in organizations, including (but not limited to) sexual orientation, nationality, class, and religion. The course is intended for students who expect to work in culturally diverse groups or organizations and will be equally relevant to those who plan to work in the not-for-profit, public, and for-profit sectors. The course is cross listed in the School of Education.

**OB 601. Organizational Ecology. 3 Units.**

This seminar examines theoretical and methodological issues in the study of the ecology of organizations. Particular attention is given to the dynamics that characterize the interface between organizational populations and their audiences.  
Same as: SOC 366A

**OB 622. Topics in Social Network Analysis: Structure and Dynamics. 2 Units.**

This course provides coverage of both introductory and intermediate topics in social network analysis with a primary focus on recent developments in theory, methods and substantive applications. We will begin the course with a brief overview of introductory themes and concepts from various disciplines that have contributed to social network theory, including sociology, anthropology, social psychology, and organizations. Introductory topics to be included: centrality, cliques, structural and regular equivalence and cognitive social structures. The primary topics to be covered in this course include the application of network theory to the study of careers, competition, innovation, inequality/stratification, and recent research on IT mediated networks, as well as an examination of network formation and dynamics. The course will also provide hands-on experience applying social network methods in empirical research. Students will have an opportunity to learn some modern network analysis methods and apply them to network data using the R programming language. No prior experience with social network analysis or software is required.

**OB 623. Stratification in Organizations. 2 Units.**

Racial and sexual segregation within firms and other organizations is persistently decried as a social problem. Yet there is persistent scholarly debate about the causes, effects, and remedies for such segregation. Over five weeks this course will review several dominant economic, psychological and sociological theories of organizational stratification. We will explore how organizational scholars identify stratification as arising both from individual-level biases and from organizational policies that enable and reinforce actions stemming from those biases. The focus will be on research that has tried to identify policy interventions to reduce such stratification. nn.

**OB 625. Economic Development and Economic Sociology. 4 Units.**

As a field, economic sociology has had little to say about economic development. Much of this quietude stems from the latter's identification with "backward," "poor" or "developing" economies, and the former's interest in many of the advanced features of the richer economies.

This state of affairs not only sets up a false dichotomy but also makes it difficult by construction to theorize or research the issue of economic decline, seemingly a necessary piece of any coherent theory of development. The (admittedly ambitious) goal of this seminar is to move toward a better theory of economic development. We will review several of the more common strands of thought on development in related literatures and then consider some alternative perspectives that might bridge this research and contemporary sociology. No guarantees are made that we will have a full-fledged theory by the end of the quarter, but with luck we will have breathed some new life into an often marginalized but critically important strain of social thought and research. The class will be a seminar based around the readings. Grading will be a combination of class participation, a take-home midterm and a final paper.

**OB 626. Strategy and Organizations. 3 Units.**

Why are some organizations more competitive than others? This is the defining question of the interdisciplinary research field known as strategic management. In this PhD seminar, we will survey the field of strategic management as seen from the perspective of macro organizational behavior. The course takes a broad view of the field of strategic management, reflecting the diversity of perspectives that is seen in this field worldwide. Across this diversity, however, it is possible to identify four distinct theoretical approaches by noting the mechanisms that researchers think are generating outcomes. The course is structured around these four theoretical approaches, and one of the main objectives of the course is to help you identify, critique, and improve these theoretical approaches. Most work in strategic management pays less attention to particular theoretical perspectives, and is organized more by the topic of the phenomenon being studied such as market exit, growth, performance, mergers and acquisitions, innovation, and the like. I have catalogued the research in strategic management both according to theoretical perspective and topic, and the skeleton of that structure can be seen in this syllabus. I encourage you to use a similar structure as you try to make sense out of the strategy field.

**OB 630. Social Norms. 3 Units.**

This course covers research and theory on the origins and function of social norms. Topics include the estimation of public opinion, the function of norms as ideals and standards of judgment, and the impact of norms on collective and individual behavior. In addition to acquainting students with the various forms and functions of social norms the course will provide students with experience in identifying and formulating tractable research questions.

**OB 632. Social Movements. 3 Units.**

Social movement actors have helped initiate some of the major social, cultural, and political changes of the modern era. It is hard to imagine a major political or social reform that did not find its origins in a social movement or collective action. Social movement scholarship has flourished in political sociology and has recently gained a foothold in organizational theory as an explanation for innovation and organizational change. The purpose of this course is to provide you a roadmap for you to roam the terrain of movements and organizations, and be prepared to generate original research ideas that extend inquiry in your chosen area of research. Organizations and industries are frequent targets of collective action. Social movement activists frequently target organizations (e.g., corporations, universities) in order to bring about political and social change. Because most organizations are not democracies, movements must find ways to penetrate their closed boundaries if they are to have an influence inside organizations. At the same time, social movements make good use of organizations to carry out their own goals, creating structures that help them carry out their goals, reproduce their missions and tactics, and effectively generate collective action. Social movement organizations develop as vehicles for social change. One purpose of this course is to examine the complex relationship between social movements and organizations. In order to understand the empirical link between movements and organizations, we will rely on social movement and organizational theory. Like the phenomena they seek to explain, these theories are strongly intertwined. Since the 1970s, organizational theory has strongly influenced social movement theory. Mayer Zald, John McCarthy, and others imported ideas from the burgeoning field of organizational theory to move social movement scholarship beyond naive conceptions of collective action and crowd behavior. Under the umbrella of resource mobilization and political process theory, organizational theory strongly influenced our understanding of the structural underpinnings of collective action. In recent years, social movement scholars have also begun examining the culture and social psychological dimensions of social movement organizations. During most of the 1980s and 1990s, the link between social movement theory and organizational theory was a one-way road. Social movement scholars did most of the conceptual borrowing and organizational theorists, for the most part, ignored political sociology. However, in the last decade the opposing lane has been opened. The rise of economic sociology, a large theoretical domain interested in the overlap between market, political, and social processes and a growing demand among organizational theorists (especially in institutional theory) for mechanisms that explain purposeful, strategic action (i.e., agency) created fertile grounds for social movement theory. In the first part of the 2000s, leading scholars from both fields began holding conferences and workshops and a few articles were published seeking to show the value of social movement concepts to organizational theory. This effort to link the two literatures has been well received. As more scholars began importing social movement concepts to explain organizational phenomena, organizational scholarship turned its attention (again) to issues related to power, politics, and contestation. The convergence of the two research streams has also begun to spur theoretical innovation, especially in bridging structural and cultural explanations for organizational change. In this course we will cover topics that explore how movements use organizations to propel change and that examine how movements help generate social change by targeting organizations. We will also evaluate the theoretical developments at the nexus of these two literatures, identifying the major innovations as well as looking for new research opportunities.

**OB 635. Social Movements and Organizations. 4 Units.**

This research seminar is intended for students seeking to learn more about how collective action underpins institutional change in organizations and industries, and how the success of collective action, in turn, hinges on organizational structures and processes to recruit and mobilize individuals. The purpose of this course is to provide you a roadmap for you to roam the terrain of movements and organizations, and be prepared to generate original research ideas that extend inquiry in your chosen area of research.

**OB 637. Modeling Culture. 3 Units.**

What is culture, and how can we model it? This course will survey theoretical frameworks for studying culture from a multidisciplinary perspective, ranging from evolutionary biology through sociology to economics. We will explore various methods for measuring culture and modeling cultural processes, including ethnography and survey data. Our focus, however, will be on measurement and modeling strategies that are made possible by the internet revolution and big data, including agent-based modeling, natural language processing and machine learning. Our class discussions will transition between theoretical abstraction and hands-on data analysis.

**OB 652. Statistical Methods for Behavioral and Social Sciences. 5 Units.**

For students who seek experience and advanced training in empirical research methods. Analysis of experimental data with methods ranging from simple chi-square to multiple regression models, including an introduction to mixed models. Uses the free statistical computing package R. Prerequisite: An intro stats class (Same as Psych 252 – Co-taught with Ewart Thomas).

**OB 653. Categories in Markets. 3 Units.**

This seminar investigates the ways in which categories emerge in markets and shape market behavior. It covers recent theoretical and empirical work on the sociology of categories and its foundations in cognitive science. Particular attention is given to formalization.

**OB 654. Organizational Behavior Pro Seminar. 1 Unit.**

This pro-seminar is primarily for OB-macro PhD students who are developing dissertation ideas. The focus is on the theoretical argument underpinning the dissertation research. Students will regularly present and comment upon one another's ideas. Students can and are encouraged to take the pro-seminar multiple times.

**OB 660. Topics in Organizational Behavior: Individual processes. 3 Units.**

This course will focus on psychological processes that occur within individuals that cannot be seen but whose existence can be inferred on the basis of people's behavior. Such processes, referred to as individual processes, include personality, emotions, perception, and learning. This course aims to introduce students to both theoretical and applied background on individual processes, with a special emphasis on their assessment, importance for person-job fit, and career planning. The course will include a hands-on section aimed at practicing test/survey development and delivering it in the online environment.

**OB 662. Topics in Organizational Behavior: Intergroup Processes. 3 Units.**

This seminar is intended for Ph.D. students who want to explore theoretical ideas and empirical findings related to intergroup processes, including conflict and cooperation; stereotypes, prejudice and discrimination; diversity, social identity, and group-based ideologies. The class is centered on graduate-level discussion of psychological and organizational perspectives on this broad topic. Participants are expected to (a) complete all readings and be prepared to discuss them in class; (b) submit weekly reaction papers based on the readings; (c) co-lead a portion of the class discussions; (d) write a final paper and present its main ideas to the group.

**OB 670. Designing Social Research. 3 Units.**

This is a course in the design of social research, with a particular emphasis on research field (i.e., non-laboratory) settings. As such, the course is a forum for discussing and developing an understanding of the different strategies social theorists employ to explain social processes, develop theories, and make these theories as believable as possible. In general, these issues will be discussed in the context of sociological research on organizations, but this will not be the exclusive focus of the course. A range of topics will be covered, for example: formulating and motivating research questions; varieties of explanation; experimental and quasi-experimental methods, including natural experiments; counterfactual models; conceptualization and measurement; sampling and case selection; qualitative and quantitative approaches. This course is particularly oriented toward developing an appreciation of the tradeoffs of different approaches. It is well suited to Ph.D. students working on qualifying papers and dissertation proposals.

**OB 671. Social Psychology of Organizations. 3 Units.**

This seminar focuses on social psychological theories and research relevant to organizational behavior. It reviews the current research topics in micro-organizational behavior, linking these to foundations in cognitive and social psychology and sociology. Topics include models of attribution, decision making, emotion, coordination, influence and persuasion, and the psychology of power and culture. Prerequisites: Enrollment in a PhD program. Also listed as Sociology 361.

**OB 672. Organization and Environment. 3 Units.**

This seminar considers the leading sociological approaches to analyzing relations of organizations and environments, with a special emphasis on dynamics. Attention is given to theoretical formulations, research designs, and results of empirical studies. Prerequisite: Enrollment in a PhD program. Also listed as Sociology 362.

**OB 673. Perspectives on the Social Psychology of Organizations. 3 Units.**

This seminar focuses on topics relevant to organizational behavior, drawing primarily on social psychological and some sociological research. Topics vary from year to year. In Fall 2014 the seminar will focus on group and team dynamics. Topics will include diversity, power and status dynamics in teams, expertise and knowledge utilization, information processing, trust and respect in teams, team leadership, and multi-level perspectives on team and group dynamics, among others. Prerequisites: Enrollment in a PhD Program. Cannot be audited or taken pass/fail.

**OB 674. Perspectives on Organization and Environment: Social Movement Organizations and Environments. 3 Units.**

This course examines the interaction between organizations and their environments. It is given every year by a different faculty member. What follows is the description of the course for the academic year 2012-13: This research seminar explores recent theory and research on social movement organizations and their environments. We'll consider the way in which organizational theories help us to explain social movement phenomena, and the way in which social movement theories help us to explain organizational phenomena.

**OB 675. Micro Research Methods. 3 Units.**

The purpose of this course is to develop students' skill at designing, executing, interpreting, and describing micro-organizational and social psychological research. The course will have a practical focus and will focus on questions such as how to identify and formulate a tractable research question, how to decide on an appropriate research design and strategy; how to operationalize independent and dependent variables, and how to build a research paper.

**OB 676. Social and Political Processes in Organizations. 4 Units.**

Social psychological and sociological research at the meso, or intermediate between micro and macro, level of analysis. Topics vary from year to year, but usually include organizational routines and learning; mobility and attainment processes; gender and race inequality and discrimination; social networks; cultural perspectives on organizations, and related topics. Prerequisite: Ph.D. student.

**OB 678. The Design and Process of Experimental Research. 2 Units.**

This year-long course takes a hands-on approach to learning about experimental research. It will cover the entire process of experimental research from idea and hypothesis generation to study design, analysis, and publication. The topical content will be customized to the specific interests of the enrolled students, but generally will be concerned with questions about behavioral phenomena in organizational contexts.

**OB 679. Work and Employment in Organizations. 2 Units.**

Most macro-organizational theories draw on assumptions about how work is performed within organizations; yet organizational scholarship has for a generation been filled with descriptions of how work and the employment relationship have been transformed. This course will review current scholarship on trends in employment with organizations. The focus will be on trying to trace how changes at the level of work and the job aggregate to changes in macro-level outcomes such as the distribution of wages, career opportunities and other outcomes.

**OB 683. Models of Social Dynamics. 4 Units.**

This seminar provides an introduction to several important theoretical and formal models in sociology, psychology, and organization theory. The purpose is, in part, to provide an overview of commonly used models. More important, participants will learn to read, criticize, and formulate models for their own research questions. The focus is on model development, deriving implications from models, comparing models, but also on how models can be and have been tested. Topics include models of size distributions, network evolution, contagion, group formation, conceptual structures, decision making, and learning.

**OB 690. Organizations in Competition. 3 Units.**

When organizations compete, why do some fail while others succeed? This is one of the defining questions of the interdisciplinary research field known as strategic management. In this seminar, we will address this question from a sociological perspective. Seen from this vantage point, the field of strategic management can be understood as the study of organizations in competition. Over the past 30 years, a considerable amount of research in organizational sociology has addressed this topic, only some of which has been explicitly framed as being aimed at the field of strategic management. This course studies the central themes that have emerged from this sociological research on organizations in competition.

**OB 691. PhD Directed Reading. 1-15 Unit.**

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OIT 691, POLECON 691, STRAMGT 691

**OB 692. PhD Dissertation Research. 1-15 Unit.**

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OIT 692, POLECON 692, STRAMGT 692

**OB 698. Doctoral Practicum in Teaching. 1 Unit.**

Doctoral Practicum in Teaching.

**OB 699. Doctoral Practicum in Research. 1 Unit.**

Doctoral Practicum in Research.

**OB 802. TGR Dissertation. 0 Units.**

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OIT 802, POLECON 802, STRAMGT 802

**Orthopedic Surgery Courses****ORTHO 97Q. Sport, Exercise, and Health: Exploring Sports Medicine. 3 Units.**

Preference to sophomores. Sports medicine is the practice of clinical medicine at the interface between health and performance, competition and well-being. While sports medicine had its origins in providing care to athletes, medical advances developed in care of athletes exerted a great effect on the nature and quality of care to the broader community. Topics include sports injuries, medical conditions associated with sport and exercise, ethics, coaching, women's issues, fitness and health, and sports science. Case studies.

Same as: HUMBIO 97Q

**ORTHO 102. Orthopaedic Surgical Anatomy. 2 Units.**

Open to medical, graduate and undergraduate students. Opportunity to enhance knowledge of anatomy as it pertains to the practice of Orthopaedic Surgery and to improve dissection skills. Follows the surgical anatomy syllabus used by the Stanford Orthopaedic Surgery Residency Program. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic sessions, prosection review, dissection.

Same as: ORTHO 202

**ORTHO 110. Practical Sports Medicine and Orthopaedic Exam. 1-2 Unit.**

Designed for students considering a career in sports medicine, orthopaedics, physical medicine and rehabilitation, emergency medicine, internal medicine, family practice, or physical therapy. Focus is on diagnosis and treatment of the most common injuries encountered in sports medicine, from head to toe and from acute trauma to chronic overuse. Students gain competence performing an efficient sports medicine exam, developing a differential diagnosis, and a treatment plan on how to safely return athletes back to their sport. Focused physical exam skills are taught for the neck, shoulder, elbow, wrist and hand, low back, hip, knee, leg, ankle and foot. Most sessions consist of anatomy review, case discussion, and hands-on exam practice in small groups. A few sessions cover specific hot topics in sports medicine such as concussion, athletic heart syndrome, and advanced performance techniques. Students enrolling for two units prepare an in-class presentation or short review paper.

Same as: ORTHO 210

**ORTHO 120. Introduction to Lifestyle Medicine. 1-2 Unit.**

Lifestyle medicine is an exciting new movement to empower practicing clinicians and aspiring physicians to facilitate behavioral change and promote a culture of health and wellness in patients. Focus is on both concrete, evidence-based findings and tangible, practical tools to readily translate into everyday clinical practice. A series of leading experts and guest lectures guide students through interactive, patient-focused activities in topics including, but not limited to: nutrition, exercise, sleep, motivational interviewing, meditation, and acupuncture. Students enrolling for 2 units use a fitness and lifestyle monitoring wristband and prepare a report on your results.

Same as: ORTHO 220

**ORTHO 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**ORTHO 201. Musculoskeletal Exam Practicum. 1 Unit.**

Student initiated course. Opportunity to enhance knowledge and skills for conducting musculoskeletal exams. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic introductions followed by hands-on practice of specific aspects of the musculoskeletal exam.

**ORTHO 202. Orthopaedic Surgical Anatomy. 2 Units.**

Open to medical, graduate and undergraduate students. Opportunity to enhance knowledge of anatomy as it pertains to the practice of Orthopaedic Surgery and to improve dissection skills. Follows the surgical anatomy syllabus used by the Stanford Orthopaedic Surgery Residency Program. Sessions led by Stanford Orthopaedic Surgery attendings and residents. Didactic sessions, prosection review, dissection.

Same as: ORTHO 102

**ORTHO 210. Practical Sports Medicine and Orthopaedic Exam. 1-2 Unit.**

Designed for students considering a career in sports medicine, orthopaedics, physical medicine and rehabilitation, emergency medicine, internal medicine, family practice, or physical therapy. Focus is on diagnosis and treatment of the most common injuries encountered in sports medicine, from head to toe and from acute trauma to chronic overuse. Students gain competence performing an efficient sports medicine exam, developing a differential diagnosis, and a treatment plan on how to safely return athletes back to their sport. Focused physical exam skills are taught for the neck, shoulder, elbow, wrist and hand, low back, hip, knee, leg, ankle and foot. Most sessions consist of anatomy review, case discussion, and hands-on exam practice in small groups. A few sessions cover specific hot topics in sports medicine such as concussion, athletic heart syndrome, and advanced performance techniques. Students enrolling for two units prepare an in-class presentation or short review paper.

Same as: ORTHO 110

**ORTHO 220. Introduction to Lifestyle Medicine. 1-2 Unit.**

Lifestyle medicine is an exciting new movement to empower practicing clinicians and aspiring physicians to facilitate behavioral change and promote a culture of health and wellness in patients. Focus is on both concrete, evidence-based findings and tangible, practical tools to readily translate into everyday clinical practice. A series of leading experts and guest lectures guide students through interactive, patient-focused activities in topics including, but not limited to: nutrition, exercise, sleep, motivational interviewing, meditation, and acupuncture. Students enrolling for 2 units use a fitness and lifestyle monitoring wristband and prepare a report on your results.

Same as: ORTHO 120

**ORTHO 260. Tissue Engineering. 3 Units.**

Principles of tissue engineering and design strategies for practical applications for tissue repair. Topics include tissue components and dynamics, morphogenesis, stem cells, cellular fate processes, cell and tissue characterization, controlled drug and gene delivery, bioreactors, cell-materials interactions, and host integration. Present research proposal to solve a real life tissue engineering problem.

Same as: BIOE 260

**ORTHO 270. Orthopaedic Tissue Engineering. 1-2 Unit.**

Biological principles underlying the use of engineering strategies and biocompatible materials for tissue repair and regeneration. Structure, physiology, and mechanics of articular cartilage, bone, and dense soft connective tissues. Current ideas, approaches, and applications being implemented as therapeutic regimens for arthritis, spinal deformities, and limb salvage. Multidisciplinary constraints on the design and creation of tissue constructs. Students enrolling for 2 units prepare a presentation and final project. Prerequisite: familiarity with basic cell and molecular mechanisms underlying tissue differentiation.

**ORTHO 280. Early Clinical Experience in Orthopedic Surgery. 1-2 Unit.**

Provides an observational experience in a surgical specialty. Prerequisite: consent of instructor.

**ORTHO 290. Introductory Clinical Mentorship. 1 Unit.**

Preclinical elective designed to increase early clinical exposure to Orthopaedic Surgery for medical students. The elective provides opportunities for students to participate in the operating room, on surgery rounds and in surgical clinics. It will also include mentoring from attendings, residents and fellows. Prerequisite: consent of instructor.

**ORTHO 299. Directed Reading in Orthopedic Surgery. 1-18 Unit.**

Consists of studies in progress including circulatory problems; hemostatic disorders; homotransplantation; orthopedic pathology; bone growth; radiation injury; immunology; bacteriology; nasal function; muscular and nerve disorders and their effect on function, hand kinetics and hand function. Prerequisite: consent of instructor.

**ORTHO 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**ORTHO 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**Otolaryngology Courses****OTOHNS 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**OTOHNS 200. Introduction to Otolaryngology-Head and Neck Surgery. 1 Unit.**

Seminar series designed to expose students to the field, including its subspecialties and commonly performed procedures. Goals: supplement anatomical knowledge with clinical correlates; understand basic diagnosis, pathophysiology, and management of ENT problems commonly seen in primary care practice; how to perform a thorough head and neck examination. Seminars, given by faculty experts, cover major topics relating to each of the subdivisions within ENT. May be repeated for credit.

**OTOHNS 299. Directed Reading in Otolaryngology. 1-18 Unit.**

Prerequisite: consent of instructor.

**OTOHNS 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**OTOHNS 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**Outdoor Education Courses****OUTDOOR 100. Sociocultural Dynamics of Adventure. 3 Units.**

An examination of the historical, psychological, social, and philosophical foundations of adventure experiences in American culture, folklore, and landscape. Experience adventure in a variety of contexts.

**OUTDOOR 101. Introduction to Outdoor Education. 1 Unit.**

This course explores the historical and philosophical foundations of Outdoor Education and how these concepts have influenced the development of programs at Stanford. Students will be introduced to the varied avenues of outdoor education application across campus.

**OUTDOOR 105. Outdoor Living Skills. 1-2 Unit.**

Introduction to essential skills for individual and group sustainability in a backcountry setting including shelter in outdoor environments, equipment selection and use, travel techniques, water and nutrition needs, planning and preparation, and risk management. Course includes the participation in a weekend backcountry experience.

**OUTDOOR 106. Outdoor Leadership Practicum. 1-2 Unit.**

Outdoor education and leadership theory integration through intensive field-based experiences. During these field-based experiences, students will engage with critical self-assessment process to better understand their own levels of competence leading others. Co-requisite: OUTDOOR 101, OUTDOOR 105.

**OUTDOOR 410. ART OF FACILITATION. 1 Unit.**

This experiential education style course allows participants to develop and test their group facilitation skills. Students will experience and deliver group initiatives surrounding popular leadership topics and learn how to help their group take away valuable learning from an educational experience. Topics include: evaluating risk, assessing the physical, human and social environment to improve group effectiveness, and case studies in team effectiveness. Prerequisites: None.

**OUTDOOR 415. Adventure Experience Management. 1 Unit.**

This course covers the effective design and delivery of courses and multi-day outdoor experiences. Students will learn the fundamentals of: emergency action plans; how to manage local operating procedures (LOP); standard operating procedures; Instructional design and delivery. Prerequisite: OUTDOOR 406A, OUTDOOR 406B, OUTDOOR 406C, OUTDOOR 406D or Instructor Permission.

**OUTDOOR 416. Outdoor Educator Apprenticeship. 1-2 Unit.**

This course provides the student an opportunity to lead a multi-day outdoor experiences in an official capacity. Experience includes: outdoor living skills, planning and logistics, leadership, risk management, environmental integration, and education. Students will plan and co-lead field outings. Prerequisites: OUTDOOR 106 or OUTDOOR 406; OUTDOOR 415.

**OUTDOOR 495. Outdoor Education: Assistant Instructor. 1-2 Unit.**

Assist Instructor Outdoor Leadership Courses. Instructor Approval and Defined Student Goals/Benchmarks Required Prior to instructing.

**Overseas Studies General Courses****OSPGEN 32. The Amsterdam Trans-Idiomatic Arts Practicum. 2 Units.**

Reflection on the difference between "home" and "away" through the prism of art. Review arts events throughout Amsterdam in varying media and create similarly varied original art projects in response. Lectures, discussion, "atelier laboratories," walking tours, and regional field trips. Location: Amsterdam, The Netherlands.

**OSPGEN 37. Brazil Technology and Engineering. 2 Units.**

Two-week study trip to Brazil accompanied by a Stanford professor and graduate student lead. Offered by the School of Engineering in partnership with the Bing Overseas Studies Program (BOSP). First-hand insights into technology and engineering based businesses in Brazil. Participants will: 1) gain knowledge of a wide spectrum of technology-based companies in India; 2) understand, in a comparative approach, how western companies localize to stay competitive; and 3) experience first-hand the social and environmental impact of these businesses. Prior to departure, students will go through a curriculum targeted at understanding the state of technology business in Brazil in order to maximize the learning experience students will have on the ground.

**OSPGEN 39. India Technology and Engineering. 2 Units.**

Two-week study trip to India accompanied by a Stanford professor and graduate student lead. Offered by the School of Engineering in partnership with the Bing Overseas Studies Program (BOSP). First-hand insights into technology and engineering based businesses in India. Participants will: 1) gain knowledge of a wide spectrum of technology-based companies in India; 2) understand, in a comparative approach, how western companies localize to stay competitive; and 3) experience first-hand the social and environmental impact of these businesses. Prior to departure, students will go through a curriculum targeted at understanding the state of technology business in India in order to maximize the learning experience students will have on the ground.

**OSPGEN 49. Conservation Photography. 2 Units.**

Introduction to conservation photography and the strategic use of visual communication in addressing issues concerning the environment and conservation. Basic digital photography and the theory and application of photographic techniques. Case studies of conservation issues examined through photographs and multimedia platforms including images, video, and audio. Lectures, tutorials, demonstrations, and field trips culminating in individual and group projects. Location: Costa Rica.

**OSPGEN 53. Corals of Palau: Ecology, the Physical Environment, and Reefs at Risk. 2 Units.**

Science-based understanding of modern threats to coral reefs through coral reef ecology, biogeochemistry, and physics. Field-based understanding of the complex array of organisms, structures, and physical and biological processes that constitute a healthy coral reef system. Skills for measuring biological, physical, and chemical time series changes on a coral reef. Proposed policy and management solutions as an entry into systems analysis and Earth Systems type thinking. Extensive field work components on small boats and/or in the water. Location: Republic of Palau.

**OSPGEN 55. Island Biogeography and History of Tasmania. 2 Units.****OSPGEN 56. Food, Water and War: Life in the Mekong. 2 Units.****OSPGEN 57. History, Arts and Culture of Southeastern Europe. 2 Units.****OSPGEN 58. Magna Carta 1215 and 2015: Land, Law, Liberty. 2 Units.****OSPGEN 59. Going Medieval: Freiburg im Breisgau. 2 Units.****OSPGEN 62. St. Petersburg: Crucible of Russian History and Culture. 2 Units.****OSPGEN 63. Bio-Cultural Diversity and Community-Based Conservation in Oaxaca. 2 Units.**

Examine the conservation and use of natural resources by indigenous communities through the disciplines of ecology and indigenous culture. Test if/how academic institutions and rural indigenous institutions can jointly undertake the challenge of sustainably managing biological resources. Two complementary experiences: i) short components at the beginning and end, visiting Mexico's National Commission of Biodiversity and UNAM in Mexico City; and ii) work in the City of Oaxaca and two indigenous communities, Ixtlán and San Juan Jayacatlán, which are regarded as exemplary in sustainable use of biodiversity.

**OSPGEN 137. Brazil Technology and Engineering. 2 Units.**

Two-week study trip to Brazil accompanied by a Stanford professor and graduate student lead. Offered by the School of Engineering in partnership with the Bing Overseas Studies Program (BOSP). First-hand insights into technology and engineering based businesses in Brazil. Participants will: 1) gain knowledge of a wide spectrum of technology-based companies in India; 2) understand, in a comparative approach, how western companies localize to stay competitive; and 3) experience first-hand the social and environmental impact of these businesses. Prior to departure, students will go through a curriculum targeted at understanding the state of technology business in Brazil in order to maximize the learning experience students will have on the ground.

**OSPGEN 139. India Technology and Engineering. 2 Units.**

Two-week study trip to India accompanied by a Stanford professor and graduate student lead. Offered by the School of Engineering in partnership with the Bing Overseas Studies Program (BOSP). First-hand insights into technology and engineering based businesses in India. Participants will: 1) gain knowledge of a wide spectrum of technology-based companies in India; 2) understand, in a comparative approach, how western companies localize to stay competitive; and 3) experience first-hand the social and environmental impact of these businesses. Prior to departure, students will go through a curriculum targeted at understanding the state of technology business in India in order to maximize the learning experience students will have on the ground.

**OSPGEN 259. Community Health in Oaxaca. 2 Units.**

Continuation of MED 259. Close observation of clinicians at work in community health settings in Oaxaca and service with local community health organizations. Combination of classroom study and discussion with cultural immersion, language training, clinical shadowing, and community service. Topics include: Mexican healthcare system; cultural, socioeconomic and educational factors impacting health of Mexicans and Mexican immigrants to U.S.; Mexican cultural and health beliefs; Mexican migration as a multi-ethnic process. Prerequisite: Acceptance into program and successful completion of MED 259 (Spring quarter 2015).

**Overseas Studies in Australia Courses****OSPAUSTL 10. Coral Reef Ecosystems. 3 Units.**

Key organisms and processes, and the complexity of coral reef ecosystems. Students explore the Great Barrier Reef from the southern end which demonstrates the physical factors that limit coral reefs, to the northern reef systems which demonstrate key aspects of these high biodiversity ecosystems. Human-related changes. Emphasis is on research experiences and development of analytical skills. Two units only counted for the Biology major.

**OSPAUSTL 25. Freshwater Systems. 3 Units.**

Integrated water resource management and how this applies across the globe, comparing strategies and results in the developing and more developing world. Ethics, values and politics of water and the management of extremes such as drought and flood. Ecology and hydrology in an urban context, along with important current issues such as stormwater and water sensitive urban design. Construction of a well, a water tank, and a pit latrine. Community service working with a local catchment management group on riparian and wetland restoration work. Field work complements lectures.

**OSPAUSTL 30. Coastal Forest Ecosystems. 3 Units.**

Prehistory of Australian rainforest and how rainforest structure and biodiversity change with altitude, latitude, and geology. Tropical coastal marine wetlands, mangrove forests, and the relationship between land- and sea-based biota. Biology and ecology of marine plants, mangroves, and tropical salt marsh. Introduction to specialized fields of marine plant biology and ecology including biogeography and evolution, aquatic plant ecophysiology, water quality and bioindicator techniques, pollution and eutrophication, and environmental control of marine plant distribution and productivity. Two units only counted for the Biology major.

**OSPAUSTL 40. Australian Studies. 3 Units.**

Introduction to Australian society, history, culture, politics, and identity. Social and cultural framework and working understanding of Australia in relationship to the focus on coastal environment in other program courses. Field trips.

**OSPAUSTL 50. Targeted Research Project. 4 Units.**

Prior to arriving in Australia, students establish a link with University of Queensland faculty to develop project ideas that combine personal interests and career goals with opportunities presented by the Australian Coastal Studies program, such as how mangrove roots find sediment rich zones of the shore, or the dynamics of ecotourism in southern and northern coastal Queensland. Project report and presentation in Australia.

**Overseas Studies in Barcelona Courses****OSPBARCL 101. Language and Culture in Catalonia. 4 Units.**

Preparation for students to function in the academic and social environment of Barcelona. Basic listening, reading, and comprehension in Catalan; review of Spanish with focus on writing academic papers and listening to lectures. Introduction to Barcelona with emphasis on contemporary history, culture, and politics. Bilingualism; multiculturalism; varieties of nationalism and globalization in context of Barcelona.

**OSPBARCL 114. The Spanish Civil War and Historical Memory. 5 Units.**

The Spanish Civil War's memory and legacy as seen in today's society, culture and politics in the context of Western Europe. Current reality of Spain and Catalonia and the value of history and its construction in the formation of the political culture of a country. Two thematic blocks: historical evolution of Spain from the Second Republic until the end of Franco and the transition to democracy; relationship between history and memory focusing on the Catalan-Spanish case.

**OSPBARCL 128. The Sagrada Família by Gaudí. 5 Units.**

Works by Gaudí in Barcelona including Sagrada Família, the Cripta Güell, the Palau Güell, the Casa Batilló, the Casa Milá, and Güell Park. How the Sagrada Família temple represents the synthesis of Gaudí's work.

**OSPBARCL 140A. Universitat de Barcelona: Humanities 1. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 140B. Universitat de Barcelona: Humanities 2. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 140C. Universitat de Barcelona: Humanities 3. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 142A. Universitat de Barcelona: Social Science 1. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 142B. Universitat de Barcelona: Social Science 2. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 142C. Universitat de Barcelona: Social Science 3. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 144A. Universitat de Barcelona: Natural Science 1. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 144B. Universitat de Barcelona: Natural Science 2. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 144C. Universitat de Barcelona: Natural Science 3. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 146A. Universitat de Barcelona: Engineering 1. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 146B. Universitat de Barcelona: Engineering 2. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 146C. Universitat de Barcelona: Engineering 3. 5 Units.**

Student selection from course catalog of Universitat de Barcelona.

**OSPBARCL 150A. Universitat Autònoma de Barcelona: Humanities 1. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 150B. Universitat Autònoma de Barcelona: Humanities 2. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 150C. Universitat Autònoma de Barcelona: Humanities 3. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 150D. Universitat Autònoma de Barcelona: Humanities 4. 10 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 152A. Universitat Autònoma de Barcelona: Social Science 1. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 152B. Universitat Autònoma de Barcelona: Social Science 2. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 152C. Universitat Autònoma de Barcelona: Social Science 3. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 154A. Universitat Autònoma de Barcelona: Natural Science 1. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 154B. Universitat Autònoma de Barcelona: Natural Science 2. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 154C. Universitat Autònoma de Barcelona: Natural Science 3. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 156A. Universitat Autònoma de Barcelona: Engineering 1. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 156B. Universitat Autònoma de Barcelona: Engineering 2. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 156C. Universitat Autònoma de Barcelona: Engineering 3. 5 Units.**

Student selection from course catalog of Universitat Autònoma de Barcelona.

**OSPBARCL 160A. Universitat Pompeu Fabra: Humanities 1. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 160B. Universitat Pompeu Fabra: Humanities 2. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 160C. Universitat Pompeu Fabra: Humanities 3. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 162A. Universitat Pompeu Fabra: Social Science 1. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 162B. Universitat Pompeu Fabra: Social Science 2. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 162C. Universitat Pompeu Fabra: Social Science 3. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 164A. Universitat Pompeu Fabra: Natural Science 1. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 164B. Universitat Pompeu Fabra: Natural Science 2. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 164C. Universitat Pompeu Fabra: Natural Science 3. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 166A. Universitat Pompeu Fabra: Engineering 1. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 166B. Universitat Pompeu Fabra: Engineering 2. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 166C. Universitat Pompeu Fabra: Engineering 3. 5 Units.**

Student selection from catalog of Universitat Pompeu Fabra.

**OSPBARCL 170A. Universitat Politècnica de Catalunya: Engineering 1. 5 Units.**

Student selection from course catalog of Universitat Politècnica de Catalunya.

**OSPBARCL 170B. Universitat Politècnica de Catalunya: Engineering 2. 5 Units.**

Student selection from course catalog of Universitat Politècnica de Catalunya.

**OSPBARCL 170C. Universitat Politècnica de Catalunya: Engineering 3. 5 Units.**

Student selection from course catalog of Universitat Politècnica de Catalunya.

**Overseas Studies in Beijing Courses****OSPBEIJ 1C. First-Year Modern Chinese, First Quarter. 5 Units.**

Conversation, grammar, reading, elementary composition.

**OSPBEIJ 3C. First-Year Modern Chinese, Third Quarter. 5 Units.****OSPBEIJ 6C. Beginning Conversational Chinese, First Quarter. 2 Units.**

Three quarter sequence. Basic language skills in Mandarin to function abroad.

**OSPBEIJ 8C. Beginning Conversational Chinese, Third Quarter. 2 Units.**

Continuation of CHINLANG 7. Basic language skill in Mandarin to function abroad. Prerequisite: CHINLANG 7 or consent of instructor.

**OSPBEIJ 9. Chinese Language Tutorial. 2 Units.****OSPBEIJ 17. Chinese Film Studies. 4 Units.**

Stages of Chinese cinema from the establishment of P.R. China in 1949 to the present. State policies, filmmaking trends, representative filmmakers and films, and the state of the industry in the different periods, with close readings of some important films. Historical perspective and broad knowledge of Chinese cinema; academic approaches to film studies.

**OSPBEIJ 20. Communication, Culture, and Society: The Chinese Way. 4 Units.**

How people communicate, what they achieve through their communications, and the social and cultural consequences of these communicative behaviors. Focus on the interactive relationship between communication, culture and society in China. How communication habits are influenced by the individual's culture and how communication acts help to change and transform the society in which we live.

**OSPBEIJ 21. Chinese Society in the Post-Mao Era. 5 Units.**

A survey of the major social trends that have implications for China's political and economic future. Topics range from inequality to social change, corruption, religion, nationalism, and various forms of rural and urban conflict. The course is a seminar, and enrollment is limited.

**OSPBEIJ 21C. Second-Year Modern Chinese. 5 Units.****OSPBEIJ 22. Independent Study on Contemporary China. 3-5 Units.**

Possible topics include: 1) Political trends in the 1980s and after; 2) Urban and rural protest; 3) Poverty alleviation and inequality; 4) The problem of corruption and anti-corruption campaigns; 5) Rise of organized religion; 6) Public opinion and popular nationalism.

**OSPBEIJ 23C. Second-Year Modern Chinese. 5 Units.****OSPBEIJ 42. Chinese Media Studies. 4 Units.**

Fundamental changes in Chinese media. Issues such as: how Chinese media emerge and evolve against the background of modern Chinese history; how they interact with government, sponsors, receivers, and other social institutions; and implications for Chinese social development.

**OSPBEIJ 48. Chinese Literature: Tradition in Transformation. 4 Units.**

Classical Chinese literature from the beginning (ca. 1000 BC) to the 14th century. Primary texts in translation with attention to the poetic works that feature Chinese literary tradition. Understanding of past experience of Chinese people living in another cultural space through observation, analysis, and reconstruction.

**OSPBEIJ 53. Independent Studies. 3-5 Units.**

Independent topics may be related to different aspects of the Chinese society, politics, urbanization processes, NGOs, economic development, organizations and management, among others. Students will choose a research topic in consultation with the instructor, develop a reading list and/or research design, and meet and discuss with the instructor on a regular basis.

**OSPBEIJ 54. Formal Organizations. 3-5 Units.**

Formal organizations are ubiquitous in contemporary societies, such as firms, schools, hospitals, and government agencies. They educate us, manage our financial accounts and structure our daily routines, and they distribute resources, status, and opportunities among social groups. This course introduces dimensions and aspects of formal organizations and basic concepts and theoretical logics for analyzing them. A multidisciplinary approach is adopted to understand organizational phenomena, with special attention to complementary perspectives drawn from economics, psychology, and sociology. Organization research literature and specific cases, especially those in the Chinese context, are used to illustrate the applications of the analytic models and concepts in the real world of organizations.

**OSPBEIJ 58. China in the World Economy: Han Dynasty to the Present. 5 Units.**

China's economic and commercial interaction with the outside world through history, providing a more thorough and nuanced understanding of China's role in the world economy since the founding of the People's Republic in 1949. How Chinese elites and common people responded to the challenges and opportunities presented by a world economy. China's post-reform economy and how it has shaped and been shaped by the emergent global economy.

**OSPBEIJ 60. Chinese Philosophies and Modern China. 4 Units.**

Introduction to Chinese philosophy. Daoism, Confucianism, the Confucian development in the Song and Ming periods, the "liberal" and Legal school of thought, Buddhism, the Confucian thinkers of the Modern period, and "Dialectical Materialism." Chinese form of "liberalism" since the 1980s and the future of Confucian scholarship in the postmodern era. How central questions of Western philosophy pertain to the Chinese tradition, and how relevant Chinese philosophy is to the differences in approaches taken to such issues as truth, good, beauty, mind, body, spirit, being, cosmology, ontology, and epistemology.

**OSPBEIJ 67. China-Africa and Middle East Relations. 4 Units.**

China's relations with the outside world, with a focus on Africa and the Middle East. Historically contextualized relations; evolution of relations within the international climate during different periods, especially in the present; impact of geopolitical and geoeconomic relations on the existing international order.

**OSPBEIJ 82. Globalization and the Chinese City. 4 Units.**

Dynamics of China's urban transformation and contemporary city life in the context of globalization. Applying interdisciplinary and comparative perspectives to selected themes related to the distinctive characteristics of China's urban development, students gain critical knowledge and understanding of how Chinese urban space is transformed by the forces of globalization, urbanization, marketization, and political decentralization; socio-spatial implications upon urban residents and the migrant population. Opportunities and challenges that Chinese cities face, given its current urban development strategies and trajectories. Field trips and site visits.

**OSPBEIJ 101C. Third-Year Modern Chinese. 5 Units.****OSPBEIJ 103C. Third-Year Modern Chinese. 5 Units.****OSPBEIJ 199A. Directed Reading A. 1-4 Unit.**

Course may be repeated for credit.

**OSPBEIJ 199B. Directed Reading B. 1-4 Unit.**

Course may be repeated for credit.

**OSPBEIJ 211C. Fourth-Year Modern Chinese. 5 Units.****OSPBEIJ 213C. Fourth-Year Modern Chinese. 5 Units.**

Discussions based on short stories, essays and newspaper articles, and academic journal articles. Emphasis on social and cultural issues in contemporary China. Speed-reading techniques and subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language.

**Overseas Studies in Berlin Courses****OSPBER 1Z. Accelerated German: First and Second Quarters. 8 Units.**

A jump start to the German language, enabling students with no prior German to study at the Berlin Center. Covers GERLANG 1 and 2 in one quarter.

**OSPBER 2Z. Accelerated German, Second and Third Quarters. 8 Units.**

Qualifies students for participation in an internship following the study quarter. Emphasis is on communicative patterns in everyday life and in the German work environment, including preparation for interviews.

**OSPBER 3B. German Language and Culture. 7 Units.**

Grammar, composition, and conversation. Increases fluency in German as rapidly as possible to help students take advantage of the many opportunities in Berlin.

**OSPBER 12. The Politics of Memory. 3 Units.**

Why is the urban landscape of Berlin so crowded with memorials of WW II, its victims, perpetrators, and the resistance? Exploration of the politics surrounding the memorialization of WW II, with a focus on the city of Berlin: the nature of collective memory and its representation; the function of the memorial in public consciousness; the importance of memory of WW II in German political culture; the changing political landscape of WWII in the context of European politics; comparison of American and European memorialization of war. Material: Films and literary texts; field trips to memorials and museums, including the concentration camp Sachsenhausen; historical accounts and political analyses.

**OSPBER 13. Jewish and Muslim Berlin. 3 Units.**

Politics of religion and religious minorities in contemporary German/Berlin culture, with a focus on Jews and Muslims. Consideration of political, historical, social and cultural perspectives: differences between American and German separation of religion and political structures; the historical establishment of Jewish culture in comparison to the contemporary rise of Islam to second-largest religious community in Germany; antisemitism and Islamophobia in Germany and Europe; recent religious controversies (mosques, circumcision, the veil, etc.) Material: Literature, site visits in Berlin, meetings with representatives of the Jewish and Muslim communities.

**OSPBER 15. Shifting Alliances? The European Union and the U.S.. 4-5 Units.**

The development of European integration, a model for global security and peace, and a possible replacement for the U.S. position as unilateral superpower. Competing arguments about the state of transatlantic relations.

**OSPBER 16. Technology and Policy for Sustainable Energy in Germany. 3 Units.**

Fundamental technologies for sustainable development, conversion, transmission, and use of energy in buildings, transportation, and industry. Diverse stakeholder involvement in the formulation and implementation of policy for sustainable energy. Key differences between Germany and the U.S. and other countries with energy-intensive economies regarding energy supply, use, policy, and results. Field trips and guest speakers to learn about German suppliers of energy technology, energy facilities, and decision makers and stakeholders in processes for energy policymaking.

**OSPBER 17. Split Images: A Century of Cinema. 3-4 Units.**

20th-century German culture through film. The silent era, Weimar, and the instrumentalization of film in the Third Reich. The postwar era: ideological and aesthetic codes of DEFA, new German cinema, and post-Wende filmmaking including *Run Lola Run* and *Goodbye Lenin*. Aesthetic aspects of the films including image composition, camera and editing techniques, and relation between sound and image.

**OSPBER 21B. Intermediate German. 7 Units.**

Grammar review, vocabulary building, writing, and discussion of German culture, literature, and film.

**OSPBER 24B. Advanced German Grammar. 2 Units.**

Syntax and organizational patterns (connectors, structuring and cohesive devices) for various types of texts and arguments, contrastive vocabulary practice, and reading strategies. Skills for writing well-structured critical essays, giving effective presentations, and reading extensively as well as intensively.

**OSPBER 25. Architecture, Memory, Commemoration. 5 Units.**

Exploration of questions about architectural form together with a sense of place in Berlin and surrounding regional cities. Interdisciplinary approach to the study of urbanism and memory through the concerns of cultural geography, anthropology, history, fiction and films. Trips to sites to explore how memory is visualized in the built environment. Themes of the course include: "About Form," "Mapping the City," and "Heritage and Commemoration."

**OSPBER 28. German Opera. 4 Units.**

This course is designed to provide an introduction to opera in general and German opera in particular. The syllabus is linked specifically to productions of German operas currently being presented at Berlin's opera houses. During class we will prepare ourselves for the various performances by discussing each work in detail, looking at the libretto, analyzing the relationship between music and text, listening to recordings, and reading secondary literature. We will also share our post-performance impressions. The principal aim of the course is informed appreciation of the genre of opera.

**OSPBER 29. Topics in German Music and Culture. 3-5 Units.**

Weimar Culture The recommended textbook for this independent study is Weimar Republic Sourcebook, ed. Anton Kaes (Berkeley: U of California P, 1994), an excellent collection of contemporaneous texts that is still in print and available as a reasonably priced paperback. Topics for particular study could include "expressionism," "phenomenology," "Neue Sachlichkeit," the Bauhaus, "epic theater," proletarian art, and early German cinema, more or less following the organization of the Sourcebook. The syllabus will be tailored to any relevant cultural events in Berlin and neighboring cities planned for the quarter in question. Students will be encouraged to base their written projects on these events and on research at local archives, such as the Deutsche Kinemathek and the Bauhaus-Museum. Trips to institutions in other cities (Dessau, Weimar, etc.) could also be considered. Primarily in English, but some topics might require German. n nThe Symphony Material covered in this independent study could be adjusted to the student's interest and knowledge, depending on his/her level of musical literacy. He/she could focus on cultural history or on more technical, analytical issues. The aim will be to trace the history of the genre from its roots in the early 18th century to the present day using mainly works from the established repertory as examples. Visits to live performances in Berlin may also be included. n nBeethoven in German Culture Following last year's elections in Germany, the draft coalition contract included the following statement: "The 250th birthday of Ludwig van Beethoven in 2020 offers excellent opportunities for profiling German culture at home and abroad. Preparing for this important anniversary is thus of national concern." How and why did Beethoven become so crucially important in German culture? In trying to answer this question, the course will begin with a survey of Beethoven's life and works, and then focus on his legacy via key moments in reception history. Primarily in English, but some topics might require German.

**OSPBER 30. Berlin vor Ort: A Field Trip Module. 1 Unit.**

The cultures of Berlin as preserved in museums, monuments, and architecture. Berlin's cityscape as a narrative of its history from baroque palaces to vestiges of E. German communism, from 19th-century industrialism to grim edifices of the Sachsenhausen concentration camp.

**OSPBER 33. Topics in German Engineering. 1-2 Unit.**

Berlin Airlift: Technical analysis of the Berlin Airlift, including challenges, alternatives evaluated, technical capabilities and limitations, solutions adopted, results. n nGermany in Motorsports: Technical analysis of challenges and successes for German motorsports teams in Grand Prix, Formula 1, and sports car racing, with emphasis on technical advancement. n nGermany's Transportation System: Technical analysis of Germany's transportation system including mileage and use by mode (overview or detailed analysis of mode selected by student), operational performance, plans for expansion and improvement, lessons for the United States. n nGerman Manufacturing: Technical analysis of German manufacturing including history and current state of technology for integrated product design and automated manufacturing, with an example of current practice from an industry segment selected by the student.

**OSPBER 37. Leading from Behind? Germany in the International Arena since 1945. 4-5 Units.**

Germany's changing role in European and world politics. Have old principles based on lessons from World War II become obsolete? Can Germany be a leading power in global affairs?

**OSPBER 39. Globalization and the Fate of Western Art Music. 2 Units.**

An activity based directed group. Attendance of several concert performances required.

**OSPBER 40M. An Intro to Making: What is EE. 3-5 Units.**

Is a hands-on class where students learn to make stuff. Through the process of building, you are introduced to the basic areas of EE. Students build a "useless box" and learn about circuits, feedback, and programming hardware, a light display for your desk and bike and learn about coding, transforms, and LEDs, a solar charger and an EKG machine and learn about power, noise, feedback, more circuits, and safety. And you get to keep the toys you build. Prerequisite: CS 106A.

**OSPBER 41. Directed Reading on Global Issues/International Relations. 3 Units.**

Directed reading/tutorial on a wide range of international relations topics including China's rise, grand strategy, nuclear proliferation, and climate change. Students will be expected to demonstrate understanding of key ideas, core issues, and possible implications of alternative hypotheses. Choice of topic will determine whether a paper is required or mastery of subject can be demonstrated through discussion alone.

**OSPBER 44. Berlin and its Artists. 4 Units.**

Visual environment of Berlin, shaped and reshaped by artists who in turn were transformed by the city. Links between their biographies and Berlin. Retracing artists' lives to unveil contemporary background and characteristic circumstances under which their work was created. Images of Berlin through the eyes of those who contributed to shaping it: from Schlüter to Liebermann to Elíasson. Visits to museums and locations related to the life and work of the artists complement the theoretical discussions. Introduction to the art of drawing, using sketchbooks as a tool for exploring the artworks in Berlin and for understanding what moved the artist to create them.

**OSPBER 46. Gardens of Earthly Delight: Berlin's Culture of Landscape and Public Space. 1-2 Unit.**

This course examines the cultural geography of Germany's social spaces as sites for the development of the personal, social, and political experiences of a German cultural identity. Focusing on literary forms, landscape art, and garden history in Berlin and its environs, we consider the roles of landscape and garden design and how they represent the cultural and social ideology of their times. Activities include readings and field trips. Additional writing for students who choose the 2 unit option.

**OSPBER 50M. Introductory Science of Materials. 4 Units.**

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

**OSPBER 60. Cityscape as History: Architecture and Urban Design in Berlin. 5 Units.**

Diversity of Berlin's architecture and urban design resulting from its historical background. Architect Ludwig Mies van der Rohe and his artistic ancestors. Role of the cultural exchange between Germany and the U.S. Changing nature of the city from the 19th century to the present.

**OSPBER 66. Theory from the Bleachers: Reading German Sports and Culture. 3 Units.**

German culture past and present through the lens of sports. Intellectual, societal, and historical-political contexts. Comparisons to Britain, France, and the U.S. The concepts of *Körperkultur*, *Leistung*, *Show*, *Verein*, and *Haltung*. Fair play, the relation of team and individual, production and deconstruction of sports heroes and heroines, and sports nationalism. Sources include sports narrations and images, attendance at sports events, and English and German texts. Taught in English.

**OSPBER 68. Protestant Reformation. 4 Units.**

New forms of Christian religious thought and practice that emerged in Western Europe in the early to mid-sixteenth century and decisively shaped the course of Western history. Religious status quo and other forms of religious dissent that challenged late medieval Christendom; proposals for reform exemplified by Martin Luther, Andreas Karlstadt, Thomas Müntzer; impact of the changes in religion and the conflicts over religion for society more broadly.

**OSPBER 70. The Long Way to the West: German History from the 18th Century to the Present. 4-5 Units.**

Battles still current within Germany's collective memory. Sources include the narrative resources of museums, and experts on the German history in Berlin and Potsdam. Field trips.

**OSPBER 100B. Berlin Heute. 2 Units.**

Required for students enrolled in OSPBER 21B; open to students in other German language classes. Active use of German, including vocabulary from a variety of fields and disciplines, and discussion of current issues.

**OSPBER 101A. Contemporary Theater. 5 Units.**

Texts of plays supplemented by theoretical texts or reviews. Weekly theater visits, a tour of backstage facilities, and discussions with actors, directors, or other theater professionals. In German. Prerequisite: completion of GERLANG 3 or equivalent.

**OSPBER 101B. Advanced German. 5 Units.**

For intermediate and advanced students. Focus is on Berlin through film, literature, music, live performance, news media, and field trips. Essay writing, vocabulary building, and in-class presentations. Reading literature and news stories, essay writing, vocabulary building, and in-class presentations.

**OSPBER 115X. The German Economy: Past and Present. 4-5 Units.**

The unsteady history of the German economy in the Wilhelmine Empire, the Weimar Republic, the Third Reich, the post WWII divided and united Germany. Special attention on the economic policy of the Third Reich and the present role of Germany in the world economy.

**OSPBER 126X. A People's Union? Money, Markets, and Identity in the EU. 4-5 Units.**

The institutional architecture of the EU and its current agenda. Weaknesses, strengths, and relations with partners and neighbors. Discussions with European students. Field trips; guest speakers.

**OSPBER 161X. The German Economy in the Age of Globalization. 4-5 Units.**

Germany's role in the world economy: trade, international financial markets, position within the European Union; economic relations with Eastern Europe, Russia, the Third World, and the U.S. International aspects of German economic and environmental policies. The globalization of the world's economy and Germany's competitiveness as a location for production, services, and R&D, focusing on the German car industry.

**OSPBER 174. Sports, Culture, and Gender in Comparative Perspective. 5 Units.**

Theory and history of mass spectator sports and their role in modern societies. Comparisons with U.S., Britain, and France; the peculiarities of sports in German culture. Body and competition cultures, with emphasis on the entry of women into sports, the modification of body ideals, and the formation and negotiation of gender identities in and through sports. The relationship between sports and politics, including the 1936 Berlin Olympic Games. In German. Prerequisite: completion of GERLANG 3 or equivalent.

**OSPBER 198D. Humboldt Universität: Humanities 2. 1-3 Unit.**

Course may be repeated for credit.

**OSPBER 198F. Humboldt Universität: Social Sciences 2. 1-3 Unit.**

.

**OSPBER 198H. Freie Universität: Humanities 3. 1-5 Unit.**

Course may be repeated for credit.

**OSPBER 198K. Weissensee Art University 1. 1-4 Unit.**

Course may be repeated for credit.

**OSPBER 198L. Weissensee Art University 2. 1-4 Unit.**

Course may be repeated for credit.

**OSPBER 198M. Weissensee Art University 3. 1-4 Unit.**

Course may be repeated for credit.

**OSPBER 199A. Directed Reading A. 2-4 Units.**

Course may be repeated for credit.

**OSPBER 199B. Directed Reading B. 2-3 Units.**

Course may be repeated for credit.

**OSPBER 199C. Directed Reading C. 1-3 Unit.**

.

**OSPBER 199D. Humboldt Universität: Humanities. 1-3 Unit.**

Course may be repeated for credit.

**OSPBER 199F. Humboldt Universität: Social Sciences. 1-3 Unit.**

Course may be repeated for credit.

**OSPBER 199G. Freie Universität: Social Sciences 1. 1-3 Unit.**

Course may be repeated for credit.

**OSPBER 199H. Freie Universität: Humanities 1. 1-3 Unit.**

Course may be repeated for credit.

**OSPBER 199J. Freie Universität: Natural Sciences 1. 1-3 Unit.**

Course may be repeated for credit.

**OSPBER 199K. Freie Universität: Social Sciences 2. 1-3 Unit.**

Course may be repeated for credit.

**OSPBER 199L. Freie Universität: Humanities 2. 1-3 Unit.**

Course may be repeated for credit.

**OSPBER 199M. Freie Universität: Natural Sciences 2. 1-3 Unit.**

Course may be repeated for credit.

## Overseas Studies in Cape Town Courses

### OSPCPTWN 16. Sites of Memory. 3 Units.

Relation between conventional histories and different kinds of individual and collective memory that are focused on places and spaces, testing the relation between grand narratives and more particularized pasts. Questions of cultural heritage, in particular its contestations among individual, familial, local, national, and international interests.

### OSPCPTWN 18. Xhosa Language and Culture. 2 Units.

History of the Xhosa language; understanding Xhosa culture and way of life. Listening, speaking, reading and writing, combined with the social uses of the language in everyday conversations and interactions. Intercultural communication. Content drawn from the students' experiences in local communities through their service learning/volunteer activities to support the building of the relationships in these communities. How language shapes communication and interaction strategies. Course may be repeated for credit.

### OSPCPTWN 24A. Targeted Research Project in Community Health and Development. 3 Units.

Two-quarter sequence for students engaging in Cape Town-sponsored community based research. Introduction to approaches, methods and critical issues of partnership-based, community-engaged research and to the community-based research partners. Qualitative data gathering and analysis methods in community-based research; effective collaboration with community partners and data sources; race and privilege in community-based research. Preparation of research proposals and plans for research carried out during the second quarter through OSPCPTWN 24B.

### OSPCPTWN 24B. Targeted Research Project in Community Health and Development. 5 Units.

Two-quarter sequence for students engaging in Cape Town-sponsored community-based research. Substantive community health or development investigations in collaboration with the Stanford Centre's community partners: Western Cape NGOs or government agencies, or community-based organizations or groups. Students' research supported through methods workshops, sharing of progress and problems, and data and findings presentations. Prerequisite: OSPCPTWN 24A.

### OSPCPTWN 29. Stay Woke: An Introduction to Critical Race Theory in Everyday Life. 3 Units.

### OSPCPTWN 30. Engaging Cape Town: Internship Seminar. 5 Units.

Community engaged learning course inviting students to think critically about core concepts in community engagement. Specifically focus on issues of identity and diversity. Students are called upon to evaluate (and modulate) their engaged learning practice in terms of these concepts. Examination of models of engaged practice and cultivation of a critical consciousness about the meaning and implications of community engaged practice. Ways in which self and other are positioned within prevailing power structures, when working with so-called "communities". Ethics of engaging diverse communities; existing assumptions and practices. Drawing on their own experiences, identity politics, prescribed reading material, applied reading material and their engaged learning practice, students will interrogate how their identities and those of community partners are produced and reproduced.

### OSPCPTWN 31. Political Economy of Foreign Aid. 3 Units.

Political economy approach to foreign aid. Context of debate on development: differences between developed and less developed countries, concept of poverty, how to measure development. History of foreign aid; main actors and characteristics of official development assistance. Theoretical and empirical impact of aid with regard to economic growth and governance. Benefits and problems associated with aid.

### OSPCPTWN 33. Southern Africa: from Liberation Struggles to Region-Building. 4 Units.

Process by which the region moved from colonialism/apartheid to majority rule through a series of liberation struggles, and the outcomes of those struggles. Cases of Angola and Mozambique, Zimbabwe, Namibia and South Africa. Transitions from apartheid to democracy in Namibia and South Africa through negotiated settlements. Topics include: Truth and Reconciliation Commission; role of the Southern African Development Community; challenges in region today; influence of violent past and legacies of struggle against colonialism and apartheid on present situation.

### OSPCPTWN 36. The Archaeology of Southern African Hunter Gatherers. 4 Units.

Archaeology, history and ethnography of the aboriginal hunter gatherers of southern Africa, the San people. Formative development of early modern humans and prehistory of hunters in southern Africa before the advent of herding societies; rock paintings and engravings of the subcontinent as situated in this history. Spread of pastoralism throughout Africa. Problems facing the descendants of recent hunter gatherers and herders in southern Africa, the Khoisan people.

### OSPCPTWN 38. Genocide: African Experiences in Comparative Perspective. 3-5 Units.

Genocide as a major social and historical phenomenon, contextualized within African history. Time frame ranging from the extermination of indigenous Canary Islanders in the fourteenth and fifteenth centuries to more recent mass killings in Rwanda and Darfur. Emphasis on southern African case studies such as Cape San communities and the Herero people in Namibia. Themes include: roles of racism, colonialism and nationalism in the making of African genocides. Relevance of other social phenomena such as modernity, Social Darwinism, ethnicity, warfare and revolution. Comparative perspective to elucidate global dimensions.

### OSPCPTWN 43. Public and Community Health in Sub-Saharan Africa. 4 Units.

Introduction to concept of public health as compared with clinical medicine. Within a public health context, the broad distribution of health problems in sub-Saharan Africa as compared with U.S. and Europe. In light of South Africa's status as a new democracy, changes that have occurred in health legislation, policy, and service arenas in past 16 years. Topics include: sector health care delivery, current distribution of infectious and chronic diseases, and issues related to sexual and reproductive health in South Africa. Site visits to public sector health services and health related NGOs.

### OSPCPTWN 48. Photographing Cape Town. 3 Units.

This class will use the idiom of photography to scrutinize the natural history and culture of Cape Town. We will discuss the rhetoric of photography, as well as photographic composition, syntax, grammar and style. We will use individual pictures as the starting point for scholarly investigations of what makes Cape Town unique both in terms of its nature and its culture. Class assignments will consist of a series of weekly presentations by each student, five presentation write-ups, weekly contributions to the class blog and the class Twitter account, active participation both in-class and online including responses to blog posts, a final exam, a class exhibit, and a complete dossier of each student's work. The presentations write-ups will include photographic and written essays, including scholarly references, on specific topics motivated by what the students have observed. Individual classes will explore specific themes such as Table Mountain, Robben Island, the townships, the history of South Africa, the Cape Floristic Region, South African fauna, local markets, food of South Africa, African penguins, and other birds of South Africa. Enrollment is limited.

**OSPCPTWN 50. [Independent Study] Conservation & Resources in Sub-Saharan Africa. 2-3 Units.**

Independent research and writing on topics related to conservation and resources in Sub-Saharan Africa. Potential topics include climate change and adaptation to South Africa, community-based conservation in Sub-Saharan Africa (examining conservation experiments such as the Lewa Conservancy and the Northern Rangeland Trust in Kenya), the provision of energy in South Africa, and citizen rights to healthy environment in African nations.

**OSPCPTWN 57. Directed Study in Health Systems and Policy. 1-3 Unit.**

Directed study projects focusing on some aspect of health systems and policy in the Southern African context. Example topics include analysis of: local HIV control policies; the South African health care system; health care delivery patterns; investments in health infrastructure as an enabler of health care delivery; health systems strengthening and concomitant improvements in population health; and social networks and influences in disease risk. Students will be expected to write an in-depth term paper that carefully analyzes the problem under consideration. Analyses that include the development of mathematical or analytical models are encouraged.

**OSPCPTWN 59. Major Issues in Conflict Resolution in Africa. 3 Units.**

This course examines Issues surrounding mediation and implementation of peace agreements, peacekeeping, refugee management, and justice and accountability in Africa's recent civil wars. This course uses several case studies of wars and peace processes to examine what is needed to end wars and build peace in Africa. The course will examine successful and failed mediation of wars by African diplomats, American and European diplomats, and international organizations. It will compare and contrast peace processes that successfully brought wars to an end with those that failed to bring peace, and in some cases brought dramatic escalation.

**OSPCPTWN 60. Hip Hop in Post-apartheid South Africa. 3 Units.**

Politics of multilingualism, diversity and hip-hop identity performances and practices in a transforming South Africa. How far has social change been realized given that South Africa's citizens still grapple with racial, ethnic, cultural and cultural marginalization and exploitation?

**OSPCPTWN 61. Independent Study in Community Health. 2-4 Units.**

Independent study in community health. Topics may include major health issues in sub-saharan Africa; social and behavioral determinants of health; stress and health. Topics addressed through guided readings and interviews with relevant local stakeholders. Weekly meetings to discuss issues and progress.

**OSPCPTWN 62. Topics in South African Politics. 2-3 Units.**

Possible topics include: South Africa's Democratic Performance, 1994-2016; Evaluating the Truth and Reconciliation Process; Nelson Mandela and the Art of Leadership; South African Politics and Society through Literature.

**OSPCPTWN 63. Socio-Ecological Systems. 3 Units.****OSPCPTWN 64. Behavior Change for Promoting Health. 4 Units.**

South Africa suffers high rates of morbidity and mortality from illnesses and injuries that could be prevented or managed through behavior change. This class will bring psychological theory and research to bear on the question of why people do not engage in health-promoting behaviors, even when they have the knowledge and resources for performing the behavior. Once potential answers to this question have been explored, strategies for effectively bringing about health-promoting behavior change will be addressed. Strategies will be developed in collaboration with local public agencies and community health organizations.

**OSPCPTWN 67. Lessons from ICT Usage in Developing Countries. 3 Units.**

Use of information and communication technologies (ICTs) in developing countries, highlighting new ways that the technologies are being used. Use of techniques such as context mapping; how new uses of technology can be applied in other contexts. Design and prototype a technology (website, mobi-site, app) in a previously disadvantaged community in South Africa.

**OSPCPTWN 69. Comparatively Assessing South Africa's Transition to Democracy: Past, Present and Future. 3 Units.**

South Africa's transition to democracy, its past, its current political and human rights situation, and what the future might hold. Progress South Africa has made in the areas of constitutional and democratic development, human rights and issues of truth, justice, and reconciliation. Also South African experience from a comparative perspective with the experiences of other countries, including Bangladesh, Bosnia-Herzegovina, Chile, Kenya, Namibia, Peru, Rwanda, Sierra Leone, Sri Lanka, Timor-Leste, Uganda, and Zimbabwe.

**OSPCPTWN 70. Youth Citizenship and Community Engagement. 5 Units.**

Critical thinking about core concepts in community engagement such as community, self, and identity. The course aims to cultivate a critical consciousness about the meaning of charity, caring, social justice and the aims of engagement with communities to enhance self awareness, awareness of others who are different, awareness of social issues, and an ethic of care where students can be change agents. The meaning of youth citizenship as it relates to engagement with communities will be explored.

**OSPCPTWN 75. Giving Voice to the Now: Studies in the South African Present. 3 Units.**

How to make sense of present-day South Africa, its various forms of cultural expression, and what its common project might be. Through analysis of literature and film, explore the pluralities, intersections and crossings that come together to make up the complex state of being one inhabits in South Africa. Imagining spatial structures (cities, campuses) as imagined forms invested with meaning by the people who occupy them. How spaces (and South Africa itself may be thought of as a space) are affected by people, and vice versa.

**OSPCPTWN 78. Postcolonial Modernist Art Movements in Africa. 3 Units.**

Introduction to the complexities and contradictions of 'modernity' and 'modernism(s)' in postcolonial Africa. With a focus on ideology-driven interdisciplinary artistic movements in Senegal, Nigeria, Sudan, Congo, Egypt, Ethiopia and South Africa, examine various schools of thought that were part of modern consciousness that characterised the independence decades. Role that art centres, workshops, collectives and mission schools played in histories of European expansion and colonialism. Debates regarding notions of 'appropriation,' 'natural synthesis' and 'assimilation' interpreted in the context of postcolonial theory. Different modes of production and methodological approaches.

**OSPCPTWN 79. Creative Cityness in the Global South. 3 Units.**

Critical exploration of culture-led urban development in postapartheid Cape Town and beyond. Introduction to the rise of the creative economy in South Africa and Cape Town; current local development of Woodstock. Ways and forms of conflict but also new social interfaces between the new creative tenants and the old established community, on the one hand pointing to problematic issues like lingering gentrification, sociospatial polarisation and lopsided cultural representation while also trying to flesh out some of the opportunities for finding the right frequency of engagement between creative industries and spaces of vernacular creativity within Cape Town's post-apartheid urban realm.

**OSPCPTWN 199A. Directed Reading A. 2-4 Units.**

Course may be repeated for credit.

**OSPCPTWN 199B. Directed Reading B. 1-5 Unit.**

Course may be repeated for credit.

## Overseas Studies in Florence Courses

### OSPFLOR 1A. Accelerated First-Year Italian, Part 1. 5 Units.

Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: advanced-level proficiency in another Romance language Prerequisite: Placement .

### OSPFLOR 1F. First-Year Italian, First Quarter. 5 Units.

All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities.

### OSPFLOR 2A. Accelerated First-Year Italian, Part 2. 5 Units.

Continuation of ITALLANG 1A. Accelerated sequence that completes first-year Italian in two rather than three quarters. For students with previous knowledge of Italian or with a strong background in another Romance language. Prerequisite: Placement Test, ITALLANG 1A or consent of instructor. Fulfills the University language requirement.

### OSPFLOR 2F. First-Year Italian, Second Quarter. 5 Units.

Continuation of ITALLANG 1. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: Placement Test, ITALLANG 2.

### OSPFLOR 3F. First-Year Italian, Third Quarter. 5 Units.

Continuation of ITALLANG 2. All-in-Italian communicative and interactive approach. Emphasis is on the development of appropriate discourse in contemporary cultural contexts. Interpretation of authentic materials, written and oral presentations, and plenty of conversational practice. Language lab, multimedia, and online activities. Prerequisite: Placement Test, ITALLANG 2 or consent of instructor. Fulfills the University language requirement.

### OSPFLOR 8. Migration and Cultural Diversity in Contemporary Italy. 5 Units.

Exploration of the media as an arena where Italian national and individual identities (of both migrants and natives) are being redefined in an age of globalization, massive migration flows and increasing social diversity. Over the last thirty years, Italy has been transformed from a country of exclusive emigration into a country where recent immigration is becoming one of the most controversial issues faced by Italian society and the political system today.

### OSPFLOR 10. The Use and Abuse of Drugs and Nutrients in Sports. 4 Units.

The course will provide students with an understanding of the practice and principles of the use and abuse of drugs in sports. Drugs are used by athletes for a number of reasons, including the need to treat diseases just as non-athletes do, but very often these drugs are abused in forms that are dangerous for an athlete's health and contrary to the ethical principles of sports. Since the use of drugs in sports varies greatly from country to country, we will also look closely at the European and Italian approaches to this problem, and compare them with the American point of view. Particular attention will be devoted to the concept of doping, the rules and regulations of the World Anti-Doping Agency, and its impact on athletes' careers, both at an amateur and at a professional level. The ethical implications of doping in sports will be thoroughly and carefully considered, as described in the World Anti-Doping Code, the core document that lays out anti-doping policies, rules and regulations within sport organizations and among public authorities around the world. The differences between anti-doping regulations in the United States and Italy will be highlighted, taking examples from the history of sports and also from the latest news and reports that appear in sports media. The course will also provide information on the dietary requirements of both professional athletes and those who train and exercise. The correct intake of nutrients, as well as the use of dietary supplements, will be covered, underscoring the impact that European and Italian nutrition principles and eating habits have on an athlete's performance. The course will also trace the basic aspects of human biology and physiology that are needed to comprehend fully the topics at hand. In this way, students, by the end of the course, will acquire a broad and in-depth knowledge of the many principles of drug use and abuse in sports as well as under other circumstances. They will also gain a good understanding of the social and ethical implications of doping and drug addiction.

### OSPFLOR 11. Film, Food and the Italian Identity. 4 Units.

Food in Italian cinema staged as an allegory of Italy's social, political and cultural milieu. Intersections between food, history and culture as they are reflected in and shaped by Italian cinema from the early 1900s until today. Topics include: farmer's tradition during Fascism; lack of food during WWII and its aftermath; the Economic Miracle; food and the Americanization of Italy; La Dolce Vita; the Italian family; ethnicity, globalization and the re-discovery of regional culinary identity in contemporary Italy. Impact of cinema in both reflecting and defining the relationship between food and culture.

### OSPFLOR 12. Constituting a Republic: Machiavelli, Madison, and Modern Issues. 5 Units.

Looking back to the worlds of Machiavelli and Madison, consider citizenship and constitutional design today. How should government today be constructed to serve the public good? What are our responsibilities as citizens with respect to public policy? Readings from central works of Niccolò Machiavelli, Discourses on Livy and Discourse on Florentine Affairs and of James Madison, Federalist Papers.

**OSPFLOR 14. Growing up American; Growing up Italian. 3 Units.**

To what extent is it possible to characterize and describe the experience of growing up either "American" or "Italian"? This course will explore our self-constitution as "Americans," while discovering how the interactional, institutional, and ideational differences of the Italian cultural context produce individuals with related, but different, ways of being a self. By engaging in both aesthetic and experiential learning, we hope to learn about: 1) the sociocultural constitution of selves; 2) the specificity of the American self; 3) an appreciation for the historical and cultural specificity of the Italian self. The course will be organized around several key social practices and institutions that shape selves and cultures. After first examining hypotheses about different models of the self, students will walk out into the city of Florence to investigate different domains of life through analyses of cultural products and visits to schools, churches, sporting events, museums, government offices, grocery stores, street markets, retail shops, restaurants and cafes. Each week will focus on a different topic, among which will be Family, Food, Religion, School, Sports, Dating, Literature and Culture, and Art and Architecture. The course will end with a wrap-up where students can present to the class their preliminary findings. Course requirements include 200-word weekly postings, participation in assigned activities, one 5-page paper, and a short final paper as part of a final group presentation.

**OSPFLOR 17. The Evolution of Modern Italian Design. 4 Units.**

Cultural context that gave rise to the globally recognized phenomenon of "Italian Design" in the 20th century. Historical complexity of Italian design through an analysis of selected case studies. Several on-site visits to important areas of design innovation and production offer students hands-on opportunities.

**OSPFLOR 18. Independent Study Topics in Law. 3-5 Units.**

Independent study with focus on any aspect of American law or comparative. Potential topics: constitutional questions such as freedom of speech or religion, rights to privacy, voting rights, or racial justice; public policy issues such regulation of new technologies; or particular statutory questions. Topic can also be comparative: for example, comparing U.S. and Italian law regarding artists' rights or comparing the selection of elected officials in the U.S. and the Venetian Republic.

**OSPFLOR 19. Florence for Foodies: Discovering the Italian Culinary Tradition. 1 Unit.**

Factors that shape modern Italian cuisine such as historical heritage, foreign influences, and the "Mediterranean diet." Explore the Italian culinary tradition as well as its more modern face, open to innovation and to technology. Four cooking classes, tastings, on-site visits, and meetings with guest speakers who are experts in their fields.

**OSPFLOR 20. Design Driven Innovation: Italian Excellence. 4 Units.**

Focus on fashion, furniture and food, the three F&S of Italian style. Historical knowledge combined with contemporary analysis; tools to understand the role of Italian design and its contribution to the innovation process. Masters and masterpieces of each discipline starting from the point of view of design itself with case studies specifically dedicated to each of the three F&S. On-site classes complement lectures.

**OSPFLOR 21F. Accelerated Second-Year Italian, Part A. 5 Units.**

Review of grammatical structures; grammar in its communicative context. Listening, speaking, reading, and writing skills practiced and developed through authentic material such as songs, newspaper articles, video clips, and literature. Insight into the Italian culture and crosscultural understanding. Prerequisite: one year of college Italian if completed within two quarters of arriving in Florence, or ITALLANG 21.

**OSPFLOR 22F. Accelerated Second-Year Italian Part B. 5 Units.**

Grammatical structures, listening, reading, writing, speaking skills, and insight into the Italian culture through authentic materials. Intermediate to advanced grammar. Content-based course, using songs, video, and literature, to provide cultural background for academic courses. Prerequisite: ITALLANG 21 within two quarters of arriving in Florence or ITALLANG 21A or OSPFLOR 21F.

**OSPFLOR 26. The Politics of the European Crisis: from the Maastricht Treaty to the Greek Crunch. 5 Units.**

The course will discuss and analyze the European Crisis, which started in Greece in 2009 and is still going on. The main objective is to help students develop a critical comprehension of the inner functioning of the European Union's economics, politics and institutions, so as to understand the reasons for the crisis and the solutions undertaken. This course is divided into three main parts. The first part will explore the ways in which the crisis has affected the functioning of the European institutions, in particular how it has changed the role of the European Parliament, of the European Commission and of the European Council. By analyzing the European financial crisis we will be able to understand the specific institutional framework of the European Union and how it differs from the U.S. The second part of this course will examine the ways in which Europe has addressed the crisis through its policies (fiscal, monetary and banking policies), and how they have consequently evolved. A comparative analysis with the United States will show the complexity entailed in having one monetary policy and nineteen distinct national budgets. The third part of the class will come to grips with the bail-out programs implemented in five European countries (Greece, Ireland, Portugal, Spain and Cyprus). We will consider both successful examples such as Spain and Ireland, and more problematic ones, such as Greece and Portugal. The rise of populist parties, in Greece and in many European countries, is addressed as one of the key challenges in Europe. The course concludes by looking at the next steps in the progress of European integration: how far away (and how difficult) is the creation of a true Political Union in Europe, similar to the United States? Are the 28 Member States ready to give up more sovereignty? And if so, in which areas? If further steps are not accomplished, what are the risks of moving backwards? What are the risks of a potential disruption of the Euro? Should the U.S. be more engaged with the current European situation in light of the broader geopolitical risks?

**OSPFLOR 27. Gardens of Florence. 1-2 Unit.**

This course will examine the cultural geography of Florence's social spaces as sites for the development of the personal, social, and political experiences of an Italian cultural identity. Focusing on literary forms, landscape art, and garden history primarily in Florence and its environs, we will consider the roles of landscape and garden design and the ways that these arts represent the cultural and social ideology of their times. Florence is the home to a range of magnificent gardens, including the Giardino Bardini, Giardino di Boboli, Giardino delle Rosa, and the Giardino di Villa Gamberaia. To understand fully Italy's historic gardens it is important to appreciate both the political and social aspirations of the garden makers. How is the reality of landscape design related to the imaginary structures of aesthetic sensibility? How do both real landscapes and imaginary forms interact with social structures and economic models? These are the kinds of questions that we will pose as we explore the gardens, country estates, and city gardens of Florence to understand both their formal structures and the social aesthetics of their eras. It will also introduce the work of "social geography," especially as it relates to the study of landscape design, gardens, and the social use of public spaces in the Florence and Italian context.

**OSPFLOR 28. Between Art and Science: the Evolution of Techniques from Antiquity to Leonardo da Vinci. 4 Units.****OSPFLOR 31F. Advanced Oral Communication: Italian. 3 Units.**

Refine language skills and develop insight into Italian culture using authentic materials. Group work and individual meetings with instructor. Minimum enrollment required. Prerequisite: ITALLANG 22A, 23 or placement.

**OSPFLOR 34. The Virgin Mother, Goddess of Beauty, Grand Duchess, and the Lady: Women in Florentine Art. 4 Units.**

Influence and position of women in the history of Florence as revealed in its art. Sculptural, pictorial, and architectural sources from a social, historical, and art historical point of view. Themes: the virgin mother (middle ages); the goddess of beauty (Botticelli to mannerism); the grand duchess (late Renaissance, Baroque); the lady, the woman (19th-20th centuries).

**OSPFLOR 41. The Florentine Sketchbook: A Visual Arts Practicum. 4 Units.**

The ever-changing and multifaceted scene of contemporary art through visual and sensorial stimulation. How art is thought of and produced in Italy today. Hands-on experience. Sketching and exercises on-site at museums and exhibits, plus workshops on techniques. Limited enrollment.

**OSPFLOR 42. Academic Internship. 1-5 Unit.**

Mentored internships in banking, education, the fine arts, health, media, not-for-profit organizations, publishing, and retail. May be repeated for credit.

**OSPFLOR 46. Images of Evil in Criminal Justice. 5 Units.**

Iconographic component of criminal law; reasons and functions of the visual representation of criminal wrongdoing. Historical roots of "evil typecasting;" consideration of its variations with respect to common law and civil law systems. Fundamental features of the two legal systems. Sources, actors, enforcement mechanisms of the criminal law compared; study of cases in the area of murder, sex offences, organized crime and terrorism. Different techniques of image typecasting highlighted and discussed. International criminal law, which takes the burden to describe, typecast and punish forms of "enormous, disproportionate evil," such as genocide and other mass atrocities.

**OSPFLOR 48. Sharing Beauty in Florence: Collectors, Collections and the Shaping of the Western Museum Tradition. 4 Units.**

The city's art and theories of how art should be presented. The history and typology of world-class collections. Social, economic, political, and aesthetic issues in museum planning and management. Collections include the Medici, English and American collectors of the Victorian era, and modern corporate and public patrons.

**OSPFLOR 49. On-Screen Battles: Filmic Portrayals of Fascism and World War II. 5 Units.**

Structural and ideological attributes of narrative cinema, and theories of visual and cinematic representation. How film directors have translated history into stories, and war journals into visual images. Topics: the role of fascism in the development of Italian cinema and its phenomenology in film texts; cinema as a way of producing and reproducing constructions of history; film narratives as fictive metaphors of Italian cultural identity; film image, ideology, and politics of style.

**OSPFLOR 50M. Introductory Science of Materials. 4 Units.**

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

**OSPFLOR 54. High Renaissance and Mannerism: the Great Italian Masters of the 15th and 16th Centuries. 4 Units.**

The development of 15th- and early 16th-century art in Florence and Rome. Epochal changes in the art of Michelangelo and Raphael in the service of Pope Julius II. The impact of Roman High Renaissance art on masters such as Fra' Bartolomeo and Andrea del Sarto. The tragic circumstances surrounding the early *maniera*: Pontormo and Rosso Fiorentino and the transformation of early Mannerism into the elegant style of the Medicean court. Contemporary developments in Venice.

**OSPFLOR 55. Academy of Fine Arts: Studio Art. 1-5 Unit.**

Courses through the *Accademia delle Belle Arti*. Details upon arrival. Minimum Autumn and Winter Quarter enrollment required; 1-3 units in Autumn. May be repeated for credit.

**OSPFLOR 56. University of Florence Courses. 1-5 Unit.**

May be repeated for credit.

**OSPFLOR 58. Space as History: Social Vision and Urban Change. 4 Units.**

A thousand years of intentional change in Florence. Phases include programmatic enlargement of ecclesiastical structures begun in the 11th century; aggressive expansion of religious and civic space in the 13th and 14th centuries; aggrandizement of private and public buildings in the 15th century; transformation of Florence into a princely capital from the 16th through the 18th centuries; traumatic remaking of the city's historic core in the 19th century; and development of new residential areas on the outskirts and in neighboring towns in the 20th and 21st centuries.

**OSPFLOR 67. The Celluloid Gaze: Gender, Identity and Sexuality in Cinema. 4 Units.**

Film in the social construction of gender through the representation of the feminine, the female, and women. Female subjects, gaze, and identity through a historical, technical, and narrative frame. Emphasis is on gender, identity, and sexuality with references to feminist film theory from the early 70s to current methodologies based on semiotics, psychoanalysis, and cultural studies. Advantages and limitations of methods for textual analysis and the theories which inform them.

**OSPFLOR 69. Abstract Art: Creativity, Self-Expression and Depicting the Unimaginable. 4 Units.**

Overview of the birth and evolution of abstract art with visual background necessary to produce works of art free of a realistic representation. Movements and trends in abstract art; experimentation with different media and techniques.

**OSPFLOR 71. A Studio with a View: Drawing, Painting and Informing your Aesthetic in Florence. 4 Units.**

Recent trends in art, current Italian artistic production, differences and the dialogue among visual arts. Events, schools, and movements of the 20th century. Theoretical background and practical training in various media. Work at the Stanford Center and on site at museums, exhibits, and out in the city armed with a sketchbook and camera. Emphasis is on drawing as the key to the visual arts. Workshops to master the techniques introduced. Limited enrollment.

**OSPFLOR 75. Florence in the Renaissance: Family, Youth and Marriage in the Fourteenth and Fifteenth Centuries. 5 Units.**

Using a series of texts written by 14th and 15th century Florentines, look at the urban values of the city's citizens. Topics include: thinking about urban space; social relations; the values attached to politics, money, family, religion. How meanings of words such as "state", "government", and "family" might have changed over time.

**OSPFLOR 77. The Convergence of the Arts and Sciences Since the Renaissance. 3 Units.**

The integration of scientific inquiry and artistic expression is widely considered to be a principal feature of the Renaissance. Anatomical drawing melded scientific and aesthetic goals. New astronomical and physical theories demanded novel means of representation and expression. Complex geometric proportions became integral to architecture, painting, and music. We will explore aesthetic, scientific, and perceptual principles that arose in 15th century Florence with particular focus on music, architecture, and the visual arts. Students' residency in Florence provides a distinct and unique opportunity to combine historical, cultural, and aesthetic perspectives on the arts and sciences. We will make full use of the city, with regular visits to museums and architectural landmarks, and attendance at concerts and performances. Students will conduct acoustic experiments to replicate and validate renaissance principles including the visual and musical representations developed by Galileo and Kepler. We will study basic perceptual principles in vision and audition as understood in Renaissance Italy and their neuro-scientific correlates as understood today.

**OSPFLOR 77A. Independent Study Topics in Music. 2-4 Units.**

Possible topics include: (1) The roots of opera; (2) History, literature and theory of early music; (3) Historical performance practices in music; (4) Through bass accompaniment; (5) Topics in music perception and cognition; (6) Music analysis; (7) Theoretical topics in music. Additional topics possible. Regular meetings to discuss progress.

**OSPFLOR 78. The Impossible Experiment: Politics and Policies of the New European Union. 5 Units.**

Institutional design of EU, forthcoming changes, and comparison of the old and new designs. Interactions between the EU, member states, organized interests, and public opinion. Major policies of the EU that affect economics such as competition or cohesion policies, market deregulation, and single currency. Consequences of the expansion eastwards. The role of institutions as a set of constraints and opportunities for the economic actors; relationships between political developments and economic change in the context of regional integration; lessons for other parts of the world.

**OSPFLOR 85. Bioethics: the Biotechnological Revolution, Human Rights and Politics in the Global Era. 4 Units.**

Birth and development of the philosophical field of bioethics based on advances in several fundamental fields of science and technology, including molecular and cell biology, information technology, neurosciences and converging technologies. Challenges for society and ethical and political issues created by new advances and opportunities for individuals and populations. Philosophical approaches developed in the Italian as well as in the European debate; special attention to controversy about the freedom of scientific research, new conditions of procreation, birth, cures, and death. Complexity of the challenges posed by the "biotechnological revolution".

**OSPFLOR 111Y. From Giotto to Michelangelo: The Birth and Flowering of Renaissance Art in Florence. 4 Units.**

Lectures, site visits, and readings reconstruct the circumstances that favored the flowering of architecture, sculpture, and painting in Florence and Italy, late 13th to early 16th century. Emphasis is on the classical roots; the particular relationship with nature; the commitment to human expressiveness; and rootedness in the real-world experience, translated in sculpture and painting as powerful plasticity, perspective space, and interest in movement and emotion.

**OSPFLOR 115Y. Building the Cathedral and the Town Hall: Constructing and Deconstructing Symbols of a Civilization. 4 Units.**

The history, history of art, and symbolism of the two principal monuments of Florence: the cathedral and the town hall. Common meaning and ideological differences between the religious and civic symbols of Florence's history from the time of Giotto and the first Guelf republic to Bronzino and Giovanni da Bologna and the Grand Duchy.

**OSPFLOR 199A. Directed Reading A. 1-4 Unit.**

Course may be repeated for credit.

**OSPFLOR 199B. Directed Reading B. 1-4 Unit.**

Course may be repeated for credit.

**OSPFLOR 199C. Directed Reading C. 1-5 Unit.****Overseas Studies in Istanbul Courses****OSPISTAN 10. Beginning Turkish. 3 Units.**

Alphabet and sound systems of Turkish. Basic numbers, colors and days of the week; simple sentence forms; locative form; present continuous tense and past tense; simple adjectives, possessive pronouns, compound nouns, and case endings.

**OSPISTAN 20. Intermediate Turkish. 3 Units.**

General present tense; conditionals; imperative; while and when as prepositions; relative clauses.

**OSPISTAN 30. Advanced Turkish. 3 Units.**

Focus on reading and listening using authentic materials; work on grammar, speaking and vocabulary to support readings and listenings. Past perfect tense; DIS as emphatic or terminator participle; obligation forms; conjunctions; conditionals: past and hypotheticals; causative form.

**OSPISTAN 62. Business Policy and Strategy in a Global Environment. 4 Units.**

Management problems from the perspective of the entire enterprise in a domestic and international setting; strategy formulation, environmental analysis and strategy implementation applied to actual companies. Course relies heavily on cases and on presentations to business leaders.

**OSPISTAN 64. Travels in the Ottoman History with Evliya Çelebi. 4 Units.**

Studies by modern historians related to Ottoman history compared to writings of Evliya Çelebi.

**OSPISTAN 72. Religion, Secularism and Democracy in the World. 4 Units.**

Why religion and religious politics (and their counterparts, secularity and secular politics) have become increasingly important aspects of national and international politics, and how this affects, and will affect democracy, development, and secularism in the world. General and comparative perspective with emphasis on Muslim politics, Muslim majority countries and Turkey. Cultural, ideological, institutional and political meanings of secularism, the commonalities and differences between secularism and laicism. Relationships between religious and secular forms of politics, democracy and development, social policy and international relations in Turkey and the rest of the world.

**OSPISTAN 74. Dreaming of a Cosmopolitan Sea: The Mediterranean in History. 4 Units.**

Relations and interconnectedness between the different Mediterranean cultures from the Early Modern period to the end of WWII. Ways in which historians and anthropologists have used the Mediterranean as a privileged terrain to rethink the communication, circulation and exchanges between the Christian and Muslim worlds, often represented as antagonistic. Other forms of tension such as wars between empires, privateering, the exploitation of captive labor force, slave trade and the wars of colonial conquest. Ways in which interactions of economic, commercial and political interests contributed to the formation of multi-religious states and favored religious syncretism and linguistic and cultural hybridizations.

**OSPISTAN 75. Films on Istanbul and Istanbul in Films. 4 Units.**

Istanbul as a unique cinematic backdrop, as a subject and a mirage. Cultural and historical significance of Istanbul through the art of cinema. Basic rules of film analysis and application to discussions. How to "read" a film.

**Overseas Studies in KCJS Kyoto Courses****OSPKYOCT 103A. Third-Year Japanese I. 12 Units.**

Preparation for function beyond basic level in a Japanese-speaking environment by developing and enhancing communicative competence through: review of basic grammar; new grammar; reading short essays and articles with help of dictionary; short writing and speaking assignments using formal style to describe, explain, and discuss sociocultural topics; enhancing listening comprehension.

**OSPKYOCT 103B. Third-Year Japanese II. 12 Units.**

Preparation for function beyond basic level in a Japanese-speaking environment by developing and enhancing communicative competence through: review of basic grammar; new grammar; reading short essays and articles with help of dictionary; short writing and speaking assignments using formal style to describe, explain, and discuss sociocultural topics; enhancing listening comprehension.

**OSPKYOCT 104A. Fourth-Year Japanese I. 12 Units.**

Emphasis on applications of correct grammar and strengthening academic communication skills through: reading longer essays, articles, and novels with some dictionary work; reading and writing assignments in paragraph format using formal style to describe, explain and discuss sociocultural topics; developing listening comprehension.

**OSPKYOCT 104B. Fourth-Year Japanese II. 12 Units.**

Emphasis on applications of correct grammar and strengthening academic communication skills through: reading longer essays, articles, and novels with some dictionary work; reading and writing assignments in paragraph format using formal style to describe, explain and discuss sociocultural topics; developing listening comprehension.

**OSPKYOCT 105A. Fifth-Year Japanese I. 12 Units.**

For students with advanced proficiency. Goals include advanced command of grammar, composition, and stylistics. Emphasis is on academic Japanese preparing students to audit classes at a Japanese university.

**OSPKYOCT 105B. Fifth-Year Japanese II. 12 Units.**

For students with advanced proficiency. Goals include advanced command of grammar, composition, and stylistics. Emphasis is on academic Japanese preparing students to audit classes at a Japanese university.

**OSPKYOCT 118. Political Economy of Japan. 6 Units.**

Introduction to contemporary Japanese political economy, in a comparative framework, discuss and debate issues such as government role in economic growth, political participation, and party politics.

**OSPKYOCT 128. Families and Work in Post-war Japan. 6 Units.**

Factors that promoted both change and continuity in the social division of labor between the interdependent spheres of work and family. How cultural strategies for organizing contemporary Japanese social life were conditioned 1) by rapid industrialization and growth and 2) by later economic stasis. Class, gender, and regional variations; role of social psychology in Japanese responses to work-family conflicts.

**OSPKYOCT 131. International Business Strategies in Japan and Asia. 6 Units.**

Regional as opposed to national approaches for business strategies. Interconnectedness of the region's economies and businesses. International business strategies with particular relevance to Japan and Asia; key players in Asian business; how to utilize knowledge of Japan in greater Asian international business context.

**OSPKYOCT 146. Postwar Japanese Cinema and Visual Culture. 6 Units.**

Films of Japanese directors Ozu Yasujiro, Mizoguchi Kenji and Kurosawa Akira from the late 1940s and 1950s and their focus on the human condition and the perception of truth, history, beauty, death in the postwar period. Connections to other visual media such as painting, photography, and printmaking.

**OSPKYOCT 179. Kyoto Artisans and their Worlds. 6 Units.**

Textile workshops of Nishijin in the northwest of the city; ceramic workshops in the southeast around Gojozaka; and web of artisans supporting traditional artist guilds such as pigment producers, papermakers, stencil cutters, gold and silver foil craftsmen, carvers and printers. Historical, cultural, and technological background for each topic. Visits to studios and museums for first-hand experience of not only the crafts, but also their changing role in supporting the lifeblood of Kyoto as a city.

**OSPKYOCT 180. The Arts of Japan. 6 Units.**

Introduction to the major artistic traditions of Japan, from the Neolithic period to the present. How arts developed in and through history and how art and architecture were used for philosophical, religious and material ends. Topics include: places of Shinto and impact of Buddhism; narrative illustration; changing roles of aristocratic, monastic, shogunal and merchant patronage.

**OSPKYOCT 197. Independent Studies. 6 Units.**

Focused research using the Japanese language and taking advantage of local Kyoto resources. Directed reading and research, weekly meetings with professor, and final research paper. For full-year students with language skills adequate for the proposed research.

**Overseas Studies in Kyoto Courses****OSPKYOTO 2K. First-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.**

Continuation of JAPANLNG 1. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Prerequisite: JAPANLNG 1 if taken 2012-13 or later (JAPANLNG 7 if taken 2011-12 or earlier).

**OSPKYOTO 3K. First-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.**

(Formerly OSPKYOTO 9K). Continuation of 2K. First-year sequence enables students to converse, write, and read essays on topics such as personal history, experiences, familiar people. Fulfills University Foreign Language Requirement. Prerequisite: JAPANLNG 2 or OSPKYOTO 2K if taken 2012-13 or later (JAPANLNG 8 if taken 2011-13 or earlier).

**OSPKYOTO 13. Contemporary Japanese Religion. 4 Units.**

Japanese attitudes to religion and popular forms of religiosity. Syncretic nature of beliefs and practices drawn on a variety of interwoven concepts, beliefs, customs and religious activities of native Japanese, Korean, Chinese, and Indian origins as background. Topics include: pursuit of worldly benefits, religion and healing, fortune-telling, ascetic practices, pilgrimage, festivals (matsuri), new religions and their image, impact of the internet, response of religion in times of crisis.

**OSPKYOTO 17R. Religion and Japanese Culture. 4-5 Units.**

Major religious traditions of Japan. Topics include: relation between religion and culture; ancient Japanese religion and Shinto; Buddhist schools of Heian Japan; Zen Buddhism as it flourished in the Kamakura period; Confucianism, as originally conceived in ancient China and as transmitted to Japan in the Edo period in its neo-Confucian form; characteristic modern practices. Field trips to religious centers to observe current religious practices.

**OSPKYOTO 21K. Second-Year Japanese Language, Culture, and Communication, First Quarter. 5 Units.**

(Formerly OSPKYOTO 17K.) Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: JAPANLNG 3 if taken 2012-13 or later (JAPANLNG 7 if taken 2011-12 or earlier).

**OSPKYOTO 22K. Second-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.**

(Formerly OSPKYOTO 18K). Continuation of JAPANLNG 21. Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: JAPANLNG 21 if taken 2012-13 or later (JAPANLNG 17 if taken 2011-12 or earlier).

**OSPKYOTO 23K. Second-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.**

(Formerly OSPKYOTO 19K). Goal is to further develop and enhance spoken and written Japanese in order to handle advanced concepts such as comparison and contrast of the two cultures, descriptions of incidents, and social issues. 800 kanji, 1,400 new words, and higher-level grammatical constructions. Readings include authentic materials such as newspaper articles, and essays. Prerequisite: JAPANLNG 22 or OSPKYOTO 22K if taken 2012-13 or later (JAPANLNG 18 if taken 2011-12 or earlier).

**OSPKYOTO 24. Independent Research in Robotics and Haptics. 1-3 Unit.**

Possible topics include: (1) Development of novel haptic virtual environments for education, (2) Design of robot control strategies for rehabilitation, (3) Human perceptual and performance experiments with robotics/haptic devices. Additional topics are possible. Regular meetings between student (or student team) and instructor will be used to discuss goals and progress. A project of appropriate scope will be designed in collaboration with the instructor.

**OSPKYOTO 25. Japan and China in the Early Modern World. 5 Units.**

Japan and China before and during their transition to modernity. Topics include: China's impact on the formation of Japanese civilization in the 6th through 15th centuries CE; the 16th century, when European merchants and missionaries first reached East Asia; early twentieth century, when European and American steamships dominated the Pacific. Historical dynamics of Japanese and Chinese societies during these centuries, their connections and contrasts, as well as the profound impact that each has had on the other. How did Sino-Japanese relations in the early modern era lay the foundations for the current fraught relationship between these two East Asian powers?.

**OSPKYOTO 27. Japanese Popular Culture. 4 Units.**

Introduction to forms and categories of Japanese popular culture including: Japanese movies and television, animation and manga, magazines, newspapers and other printed materials, characters and product brands, sports and other entertainment industries, music and idols, fashion, food and drink, consumer goods, shopping malls and other places for consumption. Using a cultural studies framework, analyze these various forms of popular culture considering the following: different groups in society; historical variability; industry, government and media interests; and advertising policies.

**OSPKYOTO 29. The Culinary Arts of Japan. 2 Units.**

As the seat of Japan's Imperial Court for over a thousand years, Kyoto has a rich culinary tradition which ranges from the aristocratic haute cuisine of kaiseki ryori, to the vegetarian shojin ryori of the city's monks, to everyday obanzai ryori home cooking. Focusing on Kyoto's culinary heritage, this experiential course will introduce students to the principle ingredients and methods used in Japanese cuisine. Most sessions will involve field trips to select local producers and purveyors organized around related food groups including tea and wagashi; dashi; tofu, miso and shoyu; seasonal vegetables and seafood; tsukemono and rice. Visits to shops and artisan workshops specializing in culinary tools such as cutlery, kitchen utensils and tableware are also scheduled, as is a final hands-on cooking lesson with one of Kyoto's leading chefs. Students will be asked to complete weekly field reports and prepare a final presentation and paper on a related topic of their choice. Enrollment limited.

**OSPKYOTO 32. Independent Study - Gender and Sexuality in East Asia. 3-5 Units.**

Students may focus on either China or Japan, or pursue a comparative perspective covering both. Possible topics include: period focus (early modern era, twentieth century, contemporary); the "New Woman"/"Modern Girl" in the early twentieth century; feminism and "the woman question"; masculinity; queer history; sex work and the entertainment industry; reproduction, fertility control, abortion; images in fiction and film.

**OSPKYOTO 38. From Chashitsu to Muji: a Creative Introduction to the Roots of Contemporary Japanese Design. 5 Units.**

The chashitsu (Japanese tea house) and other Japanese traditional buildings in the sukiya style as keys to understanding the guiding principles of Japanese design and social aesthetics as they have evolved to the present day. Combination of the practical, creative and experiential, allowing students to engage with the subject of sensory design in the timeless Japanese context. Visits to Japanese traditional buildings to learn about and experience their spatial, material and sensory qualities from a historical, cultural, design and non-visual perspective.

**OSPKYOTO 40M. An Intro to Making: What is EE. 3-5 Units.**

Is a hands-on class where students learn to make stuff. Through the process of building, you are introduced to the basic areas of EE. Students build a "useless box" and learn about circuits, feedback, and programming hardware, a light display for your desk and bike and learn about coding, transforms, and LEDs, a solar charger and an EKG machine and learn about power, noise, feedback, more circuits, and safety. And you get to keep the toys you build. Prerequisite: CS 106A.

**OSPKYOTO 45. Japan's Energy-Environment Conundrum. 4 Units.**

Japan's energy-environment challenges and their consequences for Japan's wider society and economy. Question of how Japan's policy makers will balance energy and environmental needs and how the answers will affect the country's future as a leading regional power. Students will gain a sound understanding of the structure of Japan's energy-environment challenges and a practical analytical framework by which they can evaluate these challenges and develop their own balanced assessments.

**OSPKYOTO 54. Innovation in Japan's Old and New Industries. 4 Units.**

Changing paradigms in Japan's patterns of innovation. Key factors driving Japan's recent innovation boom; 'wisdom innovation' model, retaining Japan's traditional emphasis on quality, craftsmanship and service while adding a new focus on wider applicability to the globalized economy. Industries leading this change, including telecommunications, e-commerce, finance, energy, media, tourism and retail. Insights into Japanese business culture.

**OSPKYOTO 58. A Journey into the Buddhist Visual Arts of Japan. 4 Units.**

Impact of Buddhism on the arts and culture of Japan as seen in the ancient capital of Kyoto. Image production, iconography, representational strategies, as well as the ritual and visual functions of Buddhist sculpture and painting with a focus on selected historical temples and their icons. Also examination of architectural and landscape elements of temple layouts, within which iconographic programs are framed, images are enlivened, and practices centered on these devotional and ritual art.

**OSPKYOTO 66. Robotics: Technology and Culture. 3 Units.**

This course provides an introduction to robotics technology and its relationship to culture. Students will learn how to build, program, and control robotic devices using kits that facilitate development of hands-on skills. In addition, we will examine the influence of robotics on culture and vice versa. In the process, students will gain an appreciation for the capabilities and limitations of robots, develop practical interdisciplinary engineering skills, and understand how the design of robots is driven by culture. In-class laboratories will give students hands-on experience in assembling mechanical systems, making circuits, programming Arduino micro controllers, and testing robot behaviors. Tours to robotics laboratories in the Kyoto, Japan area will give students the chance to observe cutting-edge robotics research and interview Japanese researchers about how their environment influences the robots they design. Students will learn to assemble and program simple robotic devices, read and discuss original works and commentaries about robotics and Japanese culture, and work in teams to complete projects that examine an existing robot, its technical capabilities, and its relationship to Japanese culture.

**OSPKYOTO 102K. Third-Year Japanese Language, Culture, and Communication, Second Quarter. 5 Units.**

Continuation of JAPANLNG 101. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: JAPANLNG 101 if taken 2012-13 or later (JAPANLNG 117 if taken 2011-12 or earlier).

**OSPKYOTO 103K. Third-Year Japanese Language, Culture, and Communication, Third Quarter. 5 Units.**

(Formerly OSPKYOTO 119K). Continuation of 118K. Goal is to express thoughts and opinions in paragraph length in spoken and written forms. Materials include current Japanese media and literature for native speakers of Japanese. Cultural and social topics related to Japan and its people. Prerequisite: JAPANLNG 102 or OSPKYOTO 102K if taken 2012-13 or later (JAPANLNG 118 if taken 2011-12 or earlier).

**OSPKYOTO 199A. Directed Reading A. 1-4 Unit.**

May be repeated for credit.

**OSPKYOTO 199B. Directed Reading B. 1-4 Unit.**

May be repeated for credit.

**OSPKYOTO 210K. Advanced Japanese. 5 Units.****Overseas Studies in Madrid Courses****OSPMADRD 8A. Architecture, Culture and Nature in Madrid: Towards a Sustainable City. 2 Units.**

Architecture and the city, with a focus on recent currents in the progress of both, such as sustainability, environmentalism and the relationship with nature. Topics underpinned by discussion of theory, and illustrated by a study of the city of Madrid: an example of a hybrid architectural/planning experiential environment that looks to the future with an ambition for modernization.

**OSPMADRD 8B. Debating Design: Spanish and International Fashion. 2 Units.**

Culture and society in Spain as viewed through the lens of the fashion industry. Social changes, trends, and the evolution of life styles. Industrial, commercial and media involvement in the internationalization of the industry.

**OSPMADRD 8C. Appreciating Spanish Music. 2 Units.**

Unique aspects of Spanish art music. Participation in concert outings and field trips for live performances of studied repertoire. No previous knowledge of music required.

**OSPMADRD 12M. Accelerated Second-Year Spanish I. 5 Units.**

Intensive sequence integrating language, culture, and geo/sociopolitics of Spain. Emphasis is on achieving advanced proficiency in oral and written discourse, including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: one year of college Spanish or 11 or 21B more than two quarters (six months) prior to arriving in Madrid.

**OSPMADRD 13M. Accelerated Second-Year Spanish II. 5 Units.**

Intensive sequence integrating language, culture, and geo/sociopolitics of Spain. Emphasis is on achieving advanced proficiency in oral and written discourse, including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: 11 or 21B within two quarters (six months) of arriving in Madrid or 12 or 22B.

**OSPMADRD 14. Introduction to Spanish Culture. 1 Unit.**

Required for all Madrid students. Lectures and activities covering a wide selection of culturally and academically significant topics to understand Spain, as well as its international context. Requirements include orientation, study trip, and language pledge compliance.

**OSPMADRD 15. Flamenco Dance. 1 Unit.**

Practical instruction. The rhythms and styles of flamenco and the expression of feelings proper to this art form which synthesizes song, music, and dance. *Zapateado* (footwork), *braceo* (arm positions and movement technique), and choreographies, including Rumba flamenca and Sevillanas. Enrollment limited. May be repeated for credit.

**OSPMADRD 22. Spain on Stage: La cartela de 2014. 5 Units.**

Students attend theater and analyze works currently in performance in Madrid, including canonical plays, and performances at smaller historical and alternative theaters. History of Spanish theater; background on the plays. Skills and strategies for reading dramatic works as literature and analyzing scenic languages of performance.

**OSPMADRD 25. Politics of "Culture/s" in the Iberian's World: the Multicultural Debate. 4 Units.**

Exploration of the category of "culture" as an arena of political debate and social imaginary across history in the Iberian Peninsula. Use of history of this part of the world, where the Mediterranean and Atlantic worlds have historically converged, to better understand and deal with contemporary debates of multiculturalism. Multidisciplinary approach, bringing political philosophy, history, anthropology and comparative cultural studies into a dialog. Continuities and major changes in the Iberian ethnoscares. Debate on European contemporary backlash against multiculturalism.

**OSPMADRD 31. Hip Hop Madrid: La Globalizacion de la Cultura, Arte, y Politica de Hip Hop. 3 Units.**

Hip Hop Culture has become both the most profound and the most perplexing cultural, musical, and linguistic movement of our times. This course, which functions as an exploratory research group, considers how youth in Spain, including immigrant youth from North Africa and South Asia, are creating and consuming Hip Hop cultural texts (spoken word, music, film, video, other forms of visual and media arts). In addition to reading texts and analyzing films, our collective work as a class is to explore Hip Hop in Spain, a vibrant, richly-diverse Hip Hop scene. How are youth in Spain making use of Hip Hop to address contemporary social, political, and economic realities? How are they expressing their concerns and their multifaceted identities (across, race, class, gender, sexuality, religion, citizenship, etc.) through Hip Hop cultural production and consumption? How are local community organizations and Hip Hop activists harnessing the cultural power of Hip Hop for education and social justice? This course will include a field trip to Barcelona to visit with La Llama Rap Colectivo, a group of immigrant youth who produce Hip Hop that speaks to contemporary sociopolitical issues in their neighborhood like police brutality, racism/sexism, religious discrimination, immigration and education. Enrollment limited, instructor permission required. Prerequisite: SPANLANG 13C, 13R or 23B.

**OSPMADRD 33. Spanish Language Tutorial. 2 Units.**

May be repeated for credit. Prerequisite: three years of Spanish at Stanford or placement.

**OSPMADRD 42. A European Model of Democracy: The Case of Spain. 4 Units.**

Current Spanish political system, its main judicial and political institutions, outstanding actors' and the political process of the last decade. Historic antecedents; immediate precedents; and the current political system and life. Relation between the elements that constitute a political system; results of the process of democratization; integration to the EU.

**OSPMADRD 43. The Jacobean Star Way and Europe: Society, Politics and Culture. 5 Units.**

The Saint James' Way as a tool to understand historic dynamics from a global perspective. Its effect on the structures that form a political and institutional system, and its society, economy, and ideology.

**OSPMADRD 45. Women in Art: Case Study in the Madrid Museums. 4 Units.**

Viewing the collections at the Prado Museum through study and analysis of the representations of women. Contemporary literary texts and images that situate paintings in the historical, social, and political conditions that produced the works.

**OSPMADRD 46. Drawing with Four Spanish Masters: Goya, Velazquez, Picasso and Dali. 3 Units.**

Approaches, techniques, and processes in drawing. Visits to Madrid museums to study paintings and drawings by Goya, Velázquez, Picasso, and Dalí and to explore the experience of drawing. Subject matter: the figure, still life, interiors, landscape, and non-representational drawing. No previous experience required. Enrollment limited.

**OSPMADRD 49. Structure and Shape: From the Middle Ages to the Present. 3 Units.**

In any trip to Europe, it is impossible not to wonder how the magnificent and monumental buildings of the middle age were constructed without the availability of the omnipresent cranes and construction elevators of nowadays. More perplexing yet, is how the architects of yesteryear managed to design them without the understanding of structural mechanics we have today. The course will explore some of the considerations behind these designs, and how they affected the shape of the buildings, moving through the ages up to today's structures. In the process, we will introduce basic ideas on strength of materials and structural mechanics. We will also touch upon similar observations on the relation between shape and function in some biological structures. Classes will consist of lectures, hands-on designs, discussions, and visits to some landmark structures.

**OSPMADRD 54. Contemporary Spanish Economy and the European Union. 4 Units.**

Concepts and methods for analysis of a country's economy with focus on Spain and the EU. Spain's growth and structural change; evolution of Spain's production sectors, agriculture, industry, and services; institutional factors such as the labor market and public sector; Spain's economic international relations, in particular, development of the EU, institutional framework, economic and monetary union, policies related to the European economic integration process, and U.S.-EU relationship.

**OSPMADRD 57. Health Care: A Contrastive Analysis between Spain and the U.S.. 4 Units.**

History of health care and evolution of the concept of universal health care based on need not wealth. Contrast with system in U.S. Is there a right to health care and if so, what does it encompass? The Spanish health care system; its major successes and shortcomings. Issues and challenges from an interdisciplinary perspective combining scientific facts with moral, political, and legal philosophy.

**OSPMADRD 60. Integration into Spanish Society: Service Learning and Professional Opportunities. 4 Units.**

Engagement with the real world of Madrid through public service work with NGOs and public service professions such as teaching. Depending on availability, topics relevant to present-day Spain may include: the national health plan, educational system, immigration, prostitution, refugees, youth, and fair trade. Fieldwork, lectures, and research paper. Limited enrollment. May be repeated for credit. Prerequisite: two years of college level Spanish or equivalent.

**OSPMADRD 61. Society and Cultural Change: The Case of Spain. 4 Units.**

Complexity of socio-cultural change in Spain during the last three decades. Topics include: cultural diversity in Iberian world; social structure; family in Mediterranean cultures; ages and generations; political parties and ideologies; communication and consumption; religion; and leisure activities.

**OSPMADRD 62. Spanish California: Historical Issues. 4 Units.**

Spanish exploration and colonization of California from the 16th century to the end of the Spanish colonial period in 1821. Themes include: geographical explorations in the context of European colonial expansion; demographic evolution of Native American inhabitants and immigrant population; general social and economic development of the colony; controversies surrounding the mission system; role of the Pacific coasts of North America in the Spanish enlightenment and in strategies for imperial defense and development in the revolutionary era of the late 18th and early 19th centuries.

**OSPMADRD 68. Madrid Through the Lens of Cinema. 3-5 Units.**

The objective of this course is to better understand Madrid and the "madrileños", as they were seen through the lens of the best contemporary filmmakers. Starting with the fifties, and reaching the present day, we will analyze the different ways Madrid has been depicted in melodramas, as well as social and political stories. Key issues: what kind of narratives and film aesthetics the filmmakers chose to depict of their city, and how this society has developed over almost seven decades. Some objectives of the course are for students to understand how societal changes are presented through cinema. Moreover, we will invite at least one film director to discuss his or her film with the students.

**OSPMADRD 71. Sociology of Communication. 5 Units.**

Understanding the sociocultural diversity of communication in Spain with the help of theoretical and practical tools. How communication happens through language and other means; significance of images in today's world; vision of the world produced by media; problems of social communication from perspective of reception. Offered at the Universidad Complutense with an additional tutorial for Stanford students.

**OSPMADRD 72. Issues in Bioethics Across Cultures. 4 Units.**

Ethical dilemmas concerning the autonomy and dignity of human beings and other living creatures; principles of justice that rule different realms of private and public life. Interdisciplinary approach to assessing these challenges, combining scientific facts, health care issues, and moral philosophy. Sources include landmark bioethics papers.

**OSPMADRD 74. Islam in Spain and Europe: 1300 Years of Contact. 4 Units.**

Primary problems and conflicts in the contemporary Islamic world and its relations with the West, as well as the relationship between Spain and Islam throughout history. Special attention to the history of al-Andalus, an Islamic state in the Iberian Peninsula during the Middle Ages, evaluating the importance of its legacy in Europe and in contemporary Spain. Spain's leading role in relations between Europe and the Mediterranean Islamic states from the Modern Era to the present day.

**OSPMADRD 75. Sefarad: The Jewish Community in Spain. 4 Units.**

The legacy of Sefarad, the Jewish community in Spain. Historical evolution of the Sephardic community, under both Muslim and Christian rule, including the culmination of Anti-Semitism in 1492 with the expulsion of the Jews. Cultural contribution of the Hebrew communities in their condition as a social minority, both in al-Andalus, the peninsular Islamic State, and in the peninsular Christian kingdoms.

**OSPMADRD 78. Topics in Spanish Literature and History. 1-3 Unit.**

Independent study offered on topics in Spanish literature or modern history. Students propose a topic to the instructor who will help craft a reading list and appropriate on-site field trips or archives. Student and instructor will meet weekly; outside work will be tailored to student interest.

**OSPMADRD 79. Earth and Water Resources' Sustainability in Spain. 4 Units.**

Interdisciplinary focus on the relationship between earth systems and human activities. Nature and distribution of natural resources, their uses and exploitation, environmental impacts associated with exploitation, and sustainable development initiatives, including the restoration and rehabilitation of the land affected by extraction activities. Water management: understanding of the resource and its location; the development of efficient tools; an associated regulatory apparatus; and economics.

**OSPMADRD 80. Word, Image and Power. 4 Units.**

Relationships and uses of oral discourse, art, and iconography in politics in different countries through history. Case studies from ancient Egypt, the Greek Paideia, Cesar Augustus, medieval Europe, Spanish modern empire, French revolutionary discourse, and proletarian national identity in Russia and China.

**OSPMADR 83. Narrating the Nation: National and Post-National Spanish and Latin American Literature. 4 Units.**

Basic themes and issues required to understand the connections between literature and nationalism in modern Spain and Latin America: main political and philosophical concepts and theories about national identity; narrative, stylistic and conceptual strategies that conform the rhetoric of nationalism, as well as those that try to lead to a postnational paradigm. Textual and discourse analysis of Spanish and Latin American journalistic and literary works related to nationalism and postnationalism, with attention paid to real historic and political contexts. Readings in Spanish.

**OSPMADR 85. Independent Study in Engineering. 2-3 Units.**

Possible independent study topics include: 1) Directed reading on an advanced topic in engineering selected jointly with the student, such as Continuum Mechanics, Advanced Dynamics, Numerical Methods for Engineers, or Optimization, 2) Creation of an App to serve as a visual guide to interesting structures in Madrid and surroundings accompanied by a brief description of their history and the structural considerations behind them.

**OSPMADR 102M. Composition and Writing Workshop for Students in Madrid. 3-5 Units.**

Advanced. Writing as craft and process, emphasizing brainstorming, planning, outlining, drafting, revising, style, diction, and editing. Students choose topics related to their studies. Prerequisite: 13, 23B, or equivalent placement.

**OSPMADR 199A. Directed Reading. 1-5 Unit.****Overseas Studies in Moscow Courses****Overseas Studies in Oxford Courses****OSPOXFRD 15. British Architecture and the Renaissance: 1500-1850. 4-5 Units.**

The influence of classicism and the Renaissance. Insights into European art and architecture and the history of Britain from the Tudor era to the Industrial Revolution. Study trips to London and elsewhere in England.

**OSPOXFRD 17. Novels of Sensation: Gothic, Detective Story, Prohibition, and Transgression in Victorian Fiction. 5 Units.**

Literary and moral value of transgressive sub-genres of the novel; what they reveal about Victorian society's anxiety over prohibited elements in the domestic and public spheres. Sources include gothic and detective novels.

**OSPOXFRD 18. Making Public Policy: An Introduction to Political Philosophy, Politics, and Economics. 4-5 Units.**

UK and U.S. What should society look like? How should incomes be distributed? How should it be taxed? How much inequality is acceptable? The overlap of economics with practical politics through political philosophy behind the government decisions; how public policy ought to be formulated. Issues include poverty, environmental policy, trade and globalization, and transport.

**OSPOXFRD 21. British and American English: History, Dialects, and Structure. 3-4 Units.**

Differences between U.S. and British dialects of English. History of English language, noting the factors which have led to similarities and divergences among the English spoken in the UK and the United States. Variation in English as it is used by different people and groups of people and attitudes toward language variation. Introduction to core concepts in linguistics, which focuses on rigorous study of language as a social, historical, grammatical, and cognitive phenomenon.

**OSPOXFRD 22. British Politics Past and Present. 4-5 Units.**

The political system of the United Kingdom; contemporary scholarly debates about UK politics and the UK constitution; and critical analysis of these debates and of current issues in UK politics (including constitutional reform), using contemporary political science and political theory.

**OSPOXFRD 24. British and American Constitutional Systems in Comparative Perspective. 4-5 Units.**

Introduction to the study of constitutions and constitutional systems of government. The workings of the British and American systems of government. Comparative study of the most important constitutional issues facing Britain and the U.S. such as how suspected terrorists should be treated in a time of war. How to think about fundamental constitutional questions.

**OSPOXFRD 25. Topics in Language and Cognition. 4 Units.**

Independent study tailored to students' interests in topics related to language studies, linguistic theory, and cognitive science. Possible topics include formal theories of grammar and meaning; discourse pragmatics; pragmatics and sociolinguistics; philosophy of language; cognitive science of language; psycholinguistics; and the grammatical structure of specific languages (instructor's knowledge extends to English, German, French, Spanish, Latin, and ancient Greek, but self-motivated students should not hesitate to choose other languages to research). Weekly meetings to discuss research directions, set goals and review progress.

**OSPOXFRD 27. Medical Ethics through Literature and Film. 4 Units.**

Readings by authors who were or are physicians including Anton Chekhov, Mikhail Bulgakov, William Carlos Williams, Audry Shafer, and Atul Gawande - poems, short and long fiction. Works about medicine or characters who have medical conditions affecting their lives and interactions with others. Practice of medicine and its effects on both physicians and patients, with attention to the ethical and moral issues intrinsic to health and disease. We will also consider movies and plays. Topics: doctor patient relationship; infectious disease such as plague and TB; mental illness; death and dying; disability; surgery.

**OSPOXFRD 34. American and British Politics: a Critical Comparison. 5 Units.**

Similarities and differences in American and English political institutions, political practice, political parties, public opinion and policy outcomes. How and why do differences arise: what role do we ascribe to political institutions, history, culture or caprice? Just how different is the American experience from the corresponding outcome in England and how might have "things turned out differently"? Topics include parliament vs Congress, the Crown vs the Executive, policy differences spanning economic inequality and the welfare state, health care, criminal justice, innovation and entrepreneurship, parochialism, cosmopolitanism and anti-Americanism, regionalism.

**OSPOXFRD 55. Independent Study. 5 Units.**

Possible independent study topics: (1) differences between the structure and roles of political parties in Westminster and the U.S. Congress; (2) mapping the structure of British public opinion, examining particular interests in social class, the size of role of government, racial prejudice, immigration and Europe; (3) the role of re-districting in both the United States and the United Kingdom, looking at extent of partisan gerrymandering and malapportionment in both countries; (4) voter turnout and political participation in Britain and the United States; (5) new and old media in British politics and public opinion; (6) origins and history of policy differences between Britain and the United States.

**OSPOXFRD 57. The Rise of the Woman Writer 1660-1860. 5 Units.**

Emergence and rise of the professional woman writer from playwright and Royalist spy Aphra Behn (1640-89) to novelist and proto-feminist Charlotte Bronte (1816-55). How women writers dealt with criticism for writing publicly, placing each author and text in its historical and literary context. Range of poets, playwrights, and novelists including Eliza Haywood, Frances Burney, and Mary Elizabeth Braddon. Topics: gender roles and proto-feminism, the public versus the private sphere, sexuality, courtship and marriage.

**OSPOXFRD 60. Shakespeare and his Contemporaries. 5 Units.**

Study of Shakespeare's work alongside that of his contemporaries. Characteristics of his art as well as insight into this period of British history. Visits to performances of plays.

**OSPOXFRD 70. The History of London. 5 Units.**

London's physical growth, emphasizing characteristics which set it apart from other capitals, and its economic, social and political development, including the problems of poverty and the inner city, the provision of public services, and the growth of suburbs and public transport. Challenges facing London in modern times. Walking tours, especially less frequented areas.

**OSPOXFRD 87. The Archaeology of Britain. 5 Units.**

Introduction to the archaeology of the of the British Isles, with particular attention to prehistory, Roman Britain and early medieval period. Themes: peopling of Britain and emergence of hunter-gatherer society; spread of farmers into Britain and role of ritual and community; growth of social hierarchies associated with the first metallurgy; growth of settled farming and layout of fields; growth of Iron Age tribes with their regional centers; arrival of Roman legions and transformation of the British landscape; Anglo-Saxon and Viking invasions and their response to them. Field trips to sites in southern England as well as hands-on lab sessions in the Ashmolean and Pitt-Rivers Museums in Oxford.

**OSPOXFRD 91. Independent Study Projects or Directed Reading. 3-5 Units.**

Independent study projects on current topics in economic policy. Possible topics to include: government policy to foster economic growth and fight recessions, inequality and the role of the tax system in redistributing income, social insurance,.

**OSPOXFRD 93. Collecting the World. 3 Units.**

The art, science, and culture of the creation, transmission and collection of valuable, useful and informative objects and texts before the twentieth century, and the associated theories, purposes, and methods for collecting 'worldly' goods and other valuables. Means by which local academic practices engaged with global developments in the arts and sciences through examination of primarily early modern material and intellectual culture in and around Oxfordshire. Assessments of quality, meaning, usage, cultural significance and the reception of material 'treasures' in the storage rooms, vaults, and on display in museums, galleries, and libraries.

**OSPOXFRD 94. Directed Reading in the History of Neurology and Neuroscience. 1-3 Unit.**

Readings will cover aspects of how thinking about the brain and the functions of thought and sensation evolved from ancient times to the present, including the influence of political and religious history on scientific development. There will be a focus on the period of the 17th century when developments in Oxford were a major force in the birth and early development of modern medicine and physiology. In Oxford, Thomas Willis played a central role in the birth of neurology as a field within medicine. Readings can include works about Thomas Willis and the natural philosophers with whom he interacted. Selected topics in modern neuroscience and the role of new techniques in addressing questions in brain function can be explored.

**OSPOXFRD 117W. Gender and Social Change in Modern Britain. 4-5 Units.**

Changes in the social institutions, attitudes, and values in Britain over the past 20 years with specific reference to shifts in gender relations. Demographic, economic and social factors; review of theoretical ideas. Men's and women's shifting roles in a fast-moving society.

Course may be repeated for credit.

**OSPOXFRD 221Y. Art and Society in Britain. 4-5 Units.**

Themes in 18th-, 19th-, and 20th-century British art. Painting, sculpture, and design. Comparisons between the British experience and that of continental Europe and the U.S. Readings address questions related to the role of art in modern society. Limited Enrollment.

**Overseas Studies in Paris Courses****OSPPARIS 1P. Accelerated First-Year French, Part 1. 5 Units.**

Completes first-year language sequence in two rather than three quarters. All-in-French communicative and interactive approach. Emphasis on the development of French in a contemporary cultural context. Interpretation of diversified materials, written and oral presentations.

**OSPPARIS 2P. Accelerated First-Year French, Part 2. 5 Units.**

Continuation of FRENLANG 1A. Completes first-year language sequence in two rather than three quarters. All-in-French communicative and interactive approach. Emphasis is on the development of French in a contemporary cultural context. Interpretation of diversified materials, written and oral presentations. Prerequisite: French 1A.

**OSPPARIS 10A. Engineering Research Internship. 6 Units.**

For Paris Program students with academic experience in electronics, telecommunications or signal and image processing. Under direct guidance of researchers at Institut Supérieur d'Electronique de Paris (ISEP), and where applicable, in collaboration with other French and international graduate students, contribute to the ISEP's ongoing research projects.

**OSPPARIS 10B. Biology and Bio-Engineering Research Internship. 6 Units.**

Laboratory of the National Museum of Natural History. Work with international research team on project elucidating the origin of the diversity of animal form. Modern techniques in functional genomics. Applied questions on human development in an environment where embryology, paleontology and medicine converge. Two days a week commitment required.

**OSPPARIS 10D. Climate Change Research Internship. 6 Units.**

Work with the CDC Climat center (a subsidiary of the French financial organization Caisse de Depots et Consignations), which serves as an important Paris-based think tank devoted to innovative scientific investigation and publication. Carbon offsetting; bio-economy and climate mitigation policies and projects. Work three days a week for six months; produce and post a research report on one aspect of climate and energy policy.

**OSPPARIS 10F. Journalism Internship. 6 Units.**

Rue89 is a French online news website founded by former journalists of the French daily, Libération . The site is composed of young journalists, and is very well known in France. It received the Online Journalism award in 2012 in the category of Non-English sites. Rue89 is open to all areas of interest, from sports to politics, from culture to environment. Considerable space is devoted to photos, videos, internautes participation and new technology. Any student interested in journalism in France, should consider this unique opportunity, if able to meet the requirements involved. Students will be expected to work independently and creatively, and to conceive of a project that the team can benefit from. For example, a student may want to do innovative research on climate change, or on security and the internet. Alternatively, a student may offer to redesign the web site. It is up to the student to consider (and demonstrate) how best s/he can contribute to the team in a short period of time (eight weeks).

**OSPPARIS 10G. Oceanography Research Internship. 6 Units.**

Evaluating the sensitivity of marine habitats to physical pressures caused by human activities. In 2014, the Conservation Services (SPN) of the Museum of Natural History in Paris (MNHN) launched a project to evaluate the sensitivity of marine habitats (such as reefs) to physical pressures caused by human activities. These include the pressures of physical loss and physical damage associated with activities such as fishing, aggregate extraction, wind farms, anchoring and coastal development. This project is funded by the French Ministry of Ecology, who consider habitat sensitivity information essential to the management of Marine Protected Areas (MPAs) and the wider marine environment, both of which are obligatory under the European Habitats Directive and Marine Strategy Framework Directive. France is not the first European country to undertake sensitivity assessments for marine habitats. Equivalent evaluations exist or are in the process of development in neighbouring EU countries, including the UK. The SPN-MNHN wants to insure that we effectively draw on these existing information sources as well as identify data gaps. All EU information would also need to be 'translated' in a way that fits with how habitats are defined and classified here in France. This internship would consist of working with the SPN-MNHN team in the analysis of the existing knowledge base, with a focus on Atlantic and English Channel habitats in France. This will support the population of "habitat sensitivity matrices" and highlight gaps in evidence that would require further literature review/expert judgement. This stage follows up on an earlier study undertaken by a Stanford student in summer 2014, entitled "Review of recent methodologies to evaluate the physical impacts of fishing on marine benthic habitats" which helped the SPN-MNHN and its scientific experts decide on an appropriate methodology for assessing habitat sensitivity in France in early 2015.

**OSPPARIS 11. Special Internship. 1-6 Unit.**

Often initiated by special contacts between students and professionals in France. Involvement may be based more on field work, and activity, rather than on fulfilling traditional academic requirements. Prerequisites: Written permission from the program director.

**OSPPARIS 12. Paris Photography Workshop. 3 Units.**

Exploration of Paris through camera and lab techniques. Both theoretical and practical aspects of creative photography. Extensive field work. Students must bring camera or phone with camera. Enrollment limited. Taught in English.

**OSPPARIS 12C. French Through Songs Workshop. 3 Units.**

French culture and language through songs. Classics of French songs as well as their composers and singers. Working in teams, learn lyrics through games, quizzes and riddles. Phonetics, vocalization and breathing exercises in preparation for final production. Enrollment limited; minimum of five for the course to be offered.

**OSPPARIS 12D. Public Speaking in French Workshop: Phonetics, Rhythm and Confidence. 3 Units.**

Reading texts such as poems, theater scenes and speeches aloud in French. Analysis of ideas, words, punctuation and rhythm of texts. Importance of gestures and body language while speaking. Optional public presentation at end of quarter. Enrollment limited, but minimum enrollment of five for course to be offered.

**OSPPARIS 14. Media Internship. 3 Units.**

Case studies and independent research as groundwork for comparative analysis of media on both sides of the Atlantic. Nature of media in the U.S. and in France. Media as a means for understanding culture.

**OSPPARIS 15. Hospital Internship. 3 Units.**

Observation of medical services in Paris hospitals. How hospital teams work in France; how medical decisions are made; how patients are treated by nurses and doctors.

**OSPPARIS 16A. French Schooling Internship. 2-3 Units.**

Working with French schoolchildren in one of three settings: a neighborhood support association in the outskirts of Paris; or two after-school support association in the city. Commitment for a minimum of three hours a week on site plus meetings with internship instructor and a final paper. Number of placements depends on the needs of the sponsoring institutions. Previous work with children advised.

**OSPPARIS 19. Arranged Internship 1. 3-6 Units.**

Two-quarter stay required unless student places into French 23P or above upon arrival. Internships can be arranged in a number of areas including the arts, architecture, politics, engineering, marketing and PR, media and journalism, health and psychological services, IT, NGO's, research, and hospitality administration.

**OSPPARIS 22P. Intermediate French I. 5 Units.**

Prerequisite: one year of college French if completed within two quarters of arriving in Paris, or FRENLANG 21C.

**OSPPARIS 23P. Intermediate French II. 5 Units.**

Prerequisite: FRENLANG 21C within two quarters of arriving in Paris, or FRENLANG 22C or OSPPARIS 22P.

**OSPPARIS 24. Introduction to French Society. 2 Units.**

Required for Paris program participants. Exploration of meaningful aspects of French society and culture through lectures on history of France, participation in on-site cultural projects with French students, and a series of special encounters, venues and activities through the quarter. May be repeated for credit.

**OSPPARIS 30. The Avant Garde in France through Literature, Art, and Theater. 4 Units.**

Multiple artistic trends and esthetic theories from Baudelaire to the Nouveau Roman, from the Surrealists to Oulipo, from the theater of cruelty to the theater of the absurd, from the Impressionists to Yves Klein. Interdisciplinary approach to reflect on the meaning of avant garde and modernity in general, and on the question of why revolutionary artists in France remained in search of institutional recognition, nonetheless.

**OSPPARIS 32. French Politics in Cross-National Perspective. 5 Units.**

Key aspects of French politics including the constitutional framework, institutions, political parties and ideology, elections, political cultures, religion and politics, political elites and public policy-making, grass-root citizen participation, decentralization and local politics, and the major issues that structure and inform public debate, including attitudes and policies vis-à-vis the US.

**OSPPARIS 34. Franco-American Encounters: Paris-New York in the 20th Century. 4 Units.**

Double vision of American artists and intellectuals of Paris, as well as their French counterparts of New York, throughout the 20th century. Exploration of Franco-American relations through two very problematic itineraries. Superposing the two will create a rich and complex image of the interaction between the two cultures. Migration of American artists and intellectuals to Paris in the 1920s and of French artists and intellectuals to New York during the Second World War. Through study of films, texts and images, view the two cities through eyes of immigrants, both temporary and permanent. Major figures such as Hemingway, Josephine Baker, and Louis-Ferdinand Céline.

**OSPPARIS 36. French Writing Workshop. 3 Units.**

Offered upon request for students who have completed an Advanced French course. Focus on French writing style, enabling students to understand and master the subtleties of French writing.

**OSPPARIS 40M. An Intro to Making: What is EE. 3-5 Units.**

Is a hands-on class where students learn to make stuff. Through the process of building, you are introduced to the basic areas of EE. Students build a "useless box" and learn about circuits, feedback, and programming hardware, a light display for your desk and bike and learn about coding, transforms, and LEDs, a solar charger and an EKG machine and learn about power, noise, feedback, more circuits, and safety. And you get to keep the toys you build. Prerequisite: CS 106A.

**OSPPARIS 40P. Introductory Electronics. 5 Units.**

Electrical quantities and their measurement, including operation of the oscilloscope. Function of electronic components including resistor, capacitor, and inductor. Analog circuits including the operational amplifier and tuned circuits. Digital logic circuits and their functions. Lab assignments. Prerequisite: PHYSICS 43.

**OSPPARIS 41. EAP: Perspective, Volume, and Design. 2 Units.**

Mastering the techniques of spatial representation and developing a good visualization of volume. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

**OSPPARIS 41E. EAP: Sculpture. 2 Units.**

Control of volume through use of materials such as clay or plaster in order to master three dimensional representations. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

**OSPPARIS 42. EAP: Drawing with Live Models. 2 Units.**

Solid foundation in drawing; concepts of proportions, composition and analysis through observation. Perception of space, movement and forms. Techniques include: graphite, charcoal, chalk, pastel, watercolor, monotype, markers. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

**OSPPARIS 43. EAP: Painting and Use of Color. 2 Units.**

Different painting techniques for pictorial representation through various themes supporting the development of creativity. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

**OSPPARIS 44. EAP: Analytical Drawing and Graphic Art. 2 Units.**

Focus on observation of a model to be copied. Analysis of one aspect of a general structure while using various materials and techniques in a limited amount of time. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

**OSPPARIS 44E. EAP: Computer Art. 2 Units.**

Learn and develop efficient technique of modern graphic design. Offered by a major studio arts school in Paris, the "Ecole d'Arts Plastiques" (EAP). Preference for Art Practice, Art History, Product Design, Architecture or STS majors or minors with good language skills. In French. May be repeated for credit.

**OSPPARIS 50M. Introductory Science of Materials. 4 Units.**

Topics include: the relationship between atomic structure and macroscopic properties of man-made and natural materials; mechanical and thermodynamic behavior of surgical implants including alloys, ceramics, and polymers; and materials selection for biotechnology applications such as contact lenses, artificial joints, and cardiovascular stents. No prerequisite.

**OSPPARIS 51. Development and Education of Young Children. 4 Units.**

In this course, we will compare French and U.S. policies related to the education of young (preschool age) children and the political, economic and cultural issues underlying these policies, such as beliefs about the role and interests of the state in children's development and education any more specifically about the goals of early childhood education. We will also review research evidence on the qualities of preschool environments that promote self-regulation and social and cognitive development in children.

**OSPPARIS 52. Practicum in Early Childhood Education. 2 Units.**

Students will spend two hours a week in an early childhood education setting, at first observing, but increasingly engaged directly with children under the supervision of the teacher. Accompanying the practicum experience will be weekly meetings to discuss observations. Readings and specific assignments will be designed to focus attention on particular practices, such as how social-emotional skills are promoted, how discipline problems are dealt with, what opportunities students have to develop literacy, math and science skills, how teachers address varying student skill levels, and whether and how parents participate. Students will also do focused observations of one child. Written requirements will involve brief summaries of observations as they relate to the seminar readings. Prerequisite: FRENLANG 3 or equivalent.

**OSPPARIS 54. The Artist's World: The Workshop, Patronage and Public in 19th and 20th Century France. 4 Units.**

Synergy between artists, their workshops, patrons, models and the public in 19th and 20th century France. Weekly sessions in museums, artists' studios, and special venues within and around Paris, attempting to understand the world of the artist, and how, in many cases, this world became not only a place of refuge, but a metaphor of the artistic creation itself.

**OSPPARIS 61. Independent Study. 2 Units.**

Possible Independent Study Topics include:  
 (1) Albert Camus and Jacques Monod: The intertwined paths of a philosopher and a scientist from the French Resistance to Nobel Prizes. [Sean Carroll's Brave Genius and other readings]  
 (2) The history of molecular biology. [Horace Judson's Eighth Day of Creation and other readings]  
 (3) Readings in cancer biology. [selected papers from the primary literature] (Biology or Human Biology majors)  
 (4) Readings in epigenetics. [selected papers from the primary literature] (Biology or Human Biology majors).

**OSPPARIS 72. The Ceilings of Paris. 4 Units.**

Seventeenth century transformation of the ceilings of Paris, religious, private and public. Itinerary of this transformation from artists' initial drawings to their finished work. In conjunction with an exhibition in the Louvre on this topic, study the original drawings as well as the venues in and around Paris. Sites vary from the most illustrious (Versailles) to the lesser known (Hôtel Lauzun). Reflection on the changing religious, social and political aspirations as represented in these new artistic forms.

**OSPPARIS 81. France During the Second World War: Between History and Memory. 5 Units.**

French politics and society from the causes of the collapse of the French Third Republic and the emergence of the French State at Vichy. The political and cultural measures of this regime in the shadow of Nazi Germany. Anti-Jewish laws and action; deportations by Vichy, the Germans, the French Fascists, and reactions to the fate of the Jews. Visions of the Resistance, the combat for liberation, and WW II in the collective memory of France.

**OSPPARIS 83. The Cancer Problem: Causes, Treatment, and Prevention. 4-5 Units.**

Ways of thinking used by scientists in the fields of laboratory research, clinical research, epidemiology, and public health. Discussion of various aspects of cancer, a disease that affects nearly every family: estimated that approximately 1 in 3 Americans will develop invasive cancer during their lifetime, and approximately 1 in 5 will die as a result of this disease.

**OSPPARIS 86. Measuring Well-Being and Sustainability in Today's World. 5 Units.**

Explore well-being and sustainability through the lens of the new indicators that are being developed in all corners of social sciences and at the frontier with natural and physical science. Lab to learn how to build an indicator of well-being or sustainability. Historical perspective on well-being and sustainability thinking since Aristotle; overview of standard economic indicators and their limits. Well-being indicators focusing on health, education, happiness, trust, inequality and governance. New research in sustainability indicators. How building new indicators changes policy at the global, national and local level.

**OSPPARIS 88. Principles of Biochemistry. 3 Units.**

Biochemical pathways governing the metabolism of proteins, carbohydrates, fatty acids and lipids, and nucleic acids. Basic enzymology, bioenergetics, and energy storage and release. Individual student projects involving interaction with scientists at laboratories in Paris, such as the Institut Pasteur and Institut Curie, and benefiting from the rich scientific resources Paris has to offer.

**OSPPARIS 89. Bestiaries, Drôleries and Other Curiosities in Medieval Art. 4 Units.**

This course will immerse the students into the universe of Medieval bestiaries, shedding light on aspects of Greco-Roman, Biblical, and Eastern traditions. These images of fantastic creatures belong to the earthly, celestial, and aquatic spheres, are present in all the mediums of the medieval period, from the 11th to the 15th century.

**OSPPARIS 90. Computers, Ethics, and Public Policy. 4 Units.**

Ethical and social issues related to the development and use of computer technology. Ethical theory, and social, political, and legal considerations. Scenarios in problem areas: privacy, reliability and risks of complex systems, and responsibility of professionals for applications and consequences of their work. Prerequisite: 106A.

**OSPPARIS 91. Globalization and Its Effect on France and the European Union. 5 Units.**

Economic and political impact of globalization on France and the EU and influence of France and the EU on the process of globalization. Issues of sovereignty and national identity for France; protection from versus integration into the network of globalization.

**OSPPARIS 92. Building Paris: Its History, Architecture, and Urban Design. 4 Units.**

The development of Parisian building and architecture from the 17th century to the present. Interaction of tradition and innovation in its transformation and its historical, political, and cultural underpinnings. Visits and case studies throughout Paris illustrate the formation of the city landscape and its culture.

**OSPPARIS 103A. French Lecture Series 1. 1 Unit.**

May be repeated for credit.

**OSPPARIS 104A. French Lecture Series 2. 1 Unit.**

May be repeated for credit.

**OSPPARIS 105A. French Lecture Series 3. 1 Unit.**

May be repeated for credit.

**OSPPARIS 122X. Challenges of Integration in the European Union. 4-5 Units.**

European integration is now an economic, social, and political reality. This integration has a history of mutation and a transformation of its very foundation. Topics: the evolution of welfare states, elites, political parties, and systems in Europe; lobbies, trade unions, voluntary associations, social movements, popular protest, citizenship, democracy.

**OSPPARIS 124P. Advanced French I. 5 Units.**

Complexities of French grammar and precise use of syntactic structures. Introduction to French essay-writing. Intensive Language course is included. Intensive component required of all Paris students; Advanced French I is optional. Prerequisite: FRENLANG 23C or OSPPARIS 23P or equivalent placement.

**OSPPARIS 125P. Advanced French II. 5 Units.**

Prerequisite: FRENLANG 23C, or OSPPARIS 23P or equivalent placement.

**OSPPARIS 153X. Health Systems and Health Insurance: France and the U.S., a Comparison across Space and Time. 5 Units.**

Should health systems be organized or left to the free market? What is the role of the state in the delivery of health care? The evolution of the health profession, health policy, and reform in France and the U.S.; measures restraining professional autonomy such as prescription guidelines in the French Medical Convention. Is the solution to the increase of health expenditures and reduced access to health care the end of autonomy for the medical profession?.

**OSPPARIS 180. Paris Special Topics. 1-6 Unit.**

May be repeated for credit.

**OSPPARIS 186F. Contemporary African Literature in French. 4 Units.**

Focus is on African writers and those of the diaspora, bound together by a common history of slave trade, bondage, colonization, and racism. Their works belong to the past, seeking to save an oral heritage of proverbs, story tales, and epics, but they are also contemporary.

**OSPPARIS 195C. Paris University: Health and Science 1. 1-6 Unit.**

May be repeated for credit.

**OSPPARIS 195D. Paris University: Health and Science 2. 1-6 Unit.**

May be repeated for credit.

**OSPPARIS 196C. Paris University: Humanities 1. 1-6 Unit.**

May be repeated for credit.

**OSPPARIS 196D. Paris University: Humanities 2. 1-6 Unit.**

May be repeated for credit.

**OSPPARIS 196E. Paris University: Humanities 3. 1-6 Unit.**

May be repeated for credit.

**OSPPARIS 197C. Paris University: Social Science 1. 1-6 Unit.**

.

**OSPPARIS 197D. Paris University: Social Science 2. 1-6 Unit.**

.

**OSPPARIS 198A. International Design and Construction Project. 1-6 Unit.**

Working as part of a French team of designers and engineers, invent a new product and present it to a jury of professors from French Institutes. While engineers insure the product functions and designers insure ease of use, Stanford students additionally help assess whether product will be used locally or globally. Winter and Spring enrollment required.

**OSPPARIS 198C. Paris University: Engineering 1. 1-6 Unit.**

.

**OSPPARIS 198D. Paris University: Engineering 2. 1-6 Unit.**

.

**OSPPARIS 199A. Directed Reading A. 1-6 Unit.**

.

**OSPPARIS 199B. Directed Reading B. 1-6 Unit.**

.

**OSPPARIS 199C. Directed Reading: C. 1-6 Unit.**

.

**Overseas Studies in Santiago Courses****OSPSANTG 12S. Accelerated Second-Year Spanish, Part I: Chilean Emphasis. 5 Units.**

Intensive sequence integrating language, culture, and sociopolitics of Chile. Emphasis is on achieving advanced proficiency in oral and written discourse including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: one year of college Spanish, or 11 or 21B if taken more than two quarters prior to arriving in Santiago.

**OSPSANTG 13S. Accelerated Second-Year Spanish, Part II: Chilean Emphasis. 5 Units.**

Intensive sequence integrating language, culture, and sociopolitics of Chile. Emphasis is on achieving advanced proficiency in oral and written discourse including formal and informal situations, presentational language, and appropriate forms in academic and professional contexts. Prerequisite: 11 or 21B within two quarters of arriving in Santiago, or 12 or 22B.

**OSPSANTG 14. Women Writers of Latin America in the 20th Century. 4-5 Units.**

Key figures in poetry, narrative fiction, theater, and testimonio, such as Mistral, Garro, Lispector, Poniatowska, Valenzuela, Eltit and Menchú. Close reading technique. Issues raised in literary texts that reflect the evolution of the condition of women in Latin America during the period. Topics include gender differences and relationships, tradition versus transgression, relationship between changes in the status of women and other egalitarian transformations, and women writers and the configuration of literary canons.

**OSPSANTG 25. Topics in Literature and Creative Writing. 2-3 Units.**

Spirit of Place in reading and writing short fiction and memoir; nnTopics in Philosophy of Ecology (stability and diversity, ecological explanation, organism and environment, etc.).

**OSPSANTG 28. The Literature and Philosophy of Place. 4 Units.**

Literature and philosophy, primarily, but not exclusively from Latin America, that raises questions about place and displacement through migration and exile, about how location shapes our understanding of ourselves and of our responsibilities to society and environment, about the multiple meanings of home. Among the questions we will consider are the difference between the experiences of people who are at "home" and those who are "away," how one person's claim on home can be another's experience of being invaded, the interdependence of self and place, the multiple meanings of "environment." Readings by Gabriela Mistral, Pablo Neruda, Carmen Lyra, Jorge Gracia, Otavio Paz, Maria Lugones, among others.

Same as: PHIL 28

**OSPSANTG 29. Sustainable Cities: Comparative Transportation Systems in Latin America. 4-5 Units.**

Energy and environmental challenges resulting from the growing size and complexity in Latin American cities. Key issues: way in which public authorities deal with the dynamics of urban growth and complexity; related environmental and energy issues, particularly related to different public transportation models. Systemic approach as seen in Curitiba, Bogota, Santiago, and Medellin. Analysis centering on different approaches used to tackle these related issues; different institutional strategies.

**OSPSANTG 30. Short Latin American Fiction of the 20th Century. 4-5 Units.**

Introduction to short narrative fiction produced in Latin America during the 20th Century. Key features of the short story genre, as defined by Chekhov in the 19th Century and redefined by Kafka and Borges in the 20th Century. Main literary movements of the period in Latin America, including Regionalism, Social Realism, the Avant-Garde, the Boom of the 1960s and Magical Realism, the Post-Boom, etc. Close reading course with strong emphasis on analysis and discussion of the required texts. Readings placed in the context of the main developments in Latin American history and culture in the period.

**OSPSANTG 32. Global Work. 4 Units.**

History and challenges of global work as well as on the technologies that support it. Topics include strategic reasons for distributing work, challenges associated with geographic distance, time zone differences, language and cultural differences, and the implications of using various collaboration technologies to work together across national boundaries. Examination of group dynamics, interpersonal relationships, how to structure distributed work, how to work more effectively as a global team member, and how to lead more effectively in these situations. Guest speakers from and/or visits to international firms located in and around Santiago for discussions about experiences in managing and working on global teams.

**OSPSANTG 33. Spanish Language Tutorial. 2 Units.**

Prerequisite: two years of college Spanish or equivalent placement. May be repeated for credit.

**OSPSANTG 34. Independent Study Topics. 5 Units.**

Range of topics related to history, economics and sociology. Historical projects examining politics of inequality in Chile over time; micro-level evidence evaluating plausibility of either economic resource curse or political resource curse. Other possible topics include Politics of Globalization, International Political Economy, Comparative Political Behavior, and Political Economy of Taxation, each with a focus on Chile or Latin America. Other areas to be discussed with instructor.

**OSPSANTG 35. Independent Study in Organizational Behavior. 2-4 Units.**

Focus on one of the following topics based on the interest of the student: 1) Team Dynamics; 2) Technology & Work; 3) Topics in Organizational Behavior. Students conduct review of relevant research on the topic selected and, for 4 units, conduct original empirical research of their own (such as interviews with relevant people).

**OSPSANTG 39. INDEPENDENT STUDY OPTIONS. 1-2 Unit.**

.

**OSPSANTG 40. Academic Internship. 2-3 Units.**

May be repeated for credit.

**OSPSANTG 41. Political Economy: Chile in Comparative Perspective. 5 Units.**

Why are some countries rich while others are poor? Why do some countries regularly adopt bad economic policies? What is the impact of political institutions on the policies countries implement? Why do some countries have institutions associated with policies that promote development and human welfare? Examine determinants of economic and political development with a focus on the historical experience of Chile and Latin America more generally. Factors influencing choices in a variety of policy areas including international trade, foreign direct investment, fiscal and monetary policy, education, and social insurance.

**OSPSANTG 47. Modern Latin American Myths and Icons. 3-5 Units.**

What is the status of myths in modern Latin America? Is myth necessarily pre-modern? How does myth, which is essentially narrative, meet icons, which are essentially visual and tactile? How do myths and icons operate politically? These are some of the questions we will explore. The course is organized in modules, each devoted to a central "mythical" and iconic figure: Che Guevara, Violeta Parra, García Márquez, and Eva Perón. The goal of the course is twofold: on the one hand, we would like students to become familiar with some of the most popular modern Latin American myths/icons and how they cut across genres, periods, and media. On the other, beyond familiarity, students will become participants, both creatively and critically, in the recreation of such figures. We will consider a variety of sources and make extensive use of local opportunities, such as visiting museums or attending concerts.

**OSPSANTG 58. Living Chile: A Land of Extremes. 5 Units.**

Physical, ecological, and human geography of Chile. Perceptions of the Chilean territory and technologies of study. Flora, fauna, and human adaptations to regional environments. Guest lectures; field trips; workshops.

**OSPSANTG 62. Topics in Chilean History. 4-5 Units.**

Independent study topics concerning any aspect of Chilean history such as independence and nation building, social and economic development, ideas and culture, dictatorship and democracy. Research paper based on primary and secondary sources.

**OSPSANTG 68. The Emergence of Nations in Latin America. 4-5 Units.**

Major themes of 19th-century Latin American history, including independence from Spain, the emergence of nation states, and the development of a new social, political, and economic order.

**OSPSANTG 70. The Trail of Memory. 3-5 Units.**

Independent visits to sites of memory throughout Santiago de Chile, followed by discussion. Sites include the Museo de la Memoria, monuments, archives, and former detention and torture centers. Topics include: the politics of memory, museification effects, aesthetic choices, acting out and working through trauma. Short written reports are required. Students will prepare and carry out an interview. Readings by Susana Draper, Pierre Nora, Nelly Richard, and Idelber Avelar.

**OSPSANTG 71. Santiago: Urban Planning, Public Policy, and the Built Environment. 4-5 Units.**

Santiago's growth and development over time and in comparison to other mega cities in the world; impact of urban highways on the built environment; shopping malls and the development of new urban sub-centers. Topics: brief history of the city, from 1541 to 1940; urban development since 1940; the 1960 Inter-communal Urban Plan; planning and the configuration of modern Santiago; housing policy as an instrument to combat poverty; social housing policy and Santiago's built environment.

**OSPSANTG 85. Marine Ecology of Chile and the South Pacific. 5 Units.**

Relationships among physical processes in the ocean, biological productivity, and the exploitation of resources by high-trophic-level predators including human beings. Characterization of ecological patterns; identification of processes operating on marine systems. Open ocean ecosystems, intertidal and benthic regions of the world's oceans, and ecological research developed along coastal regions, focusing on Chile's 4,000 km coastline.

**OSPSANTG 102S. Composition and Writing Workshop for Students in Santiago. 3-5 Units.**

Advanced. Writing as craft and process: brainstorming, planning, outlining, drafting, revising, style, diction, and editing. Non-Spanish majors or minors may choose topics related to their studies. Prerequisite: SPANLANG 13C, 13R, 13S, 23B, or equivalent.

**OSPSANTG 116X. Modernization and its Discontents: Chilean Politics at the Turn of the Century. 5 Units.**

Chile's strides towards becoming a developed country have engendered high levels of alienation and disaffection among significant sectors of the population. The roots of this apparent paradox of modernization, focusing on newly emerging actors in the Chilean political scene: Mapuche organizations, women's groups, the environmental movement, and new features of the established ones like trade unions and human rights activists.

**OSPSANTG 118X. Artistic Expression in Latin America. 5 Units.**

Elite, mass-media, and popular cultural changes in Chile under conditions of economic and political liberalization. The reception of cultural meanings from the center of the world social system (U.S., EU, and Japan), reformulation to respond to local conditions, and export in the shape of cultural artifacts. Innovative elements rooted in the regional and local culture.

**OSPSANTG 119X. The Chilean Economy: History, International Relations, and Development Strategies. 5 Units.**

The Chilean economy in five stages, taking into account: the international economic position of Chile; internal economic structures closely related to the inherited historical conditions and to the changing international economic position of the country; and the economic strategies prevalent during the period and the concrete development policies conducted by government authorities.

**OSPSANTG 129X. Latin America in the International System. 4-5 Units.**

Latin America's role in world politics, with emphasis on the history of and models for explaining U.S.-Latin American relations. Latin America's evolving relationship in the international system.

**OSPSANTG 130X. The Chilean Economy in Comparative Perspective. 5 Units.**

Introduction to the main debates and approaches developed to understand and analyze the economies of Latin America. Recent processes of transition to market economies. Common characteristics among countries of the region; the differences and special traits of individual countries. Historical, analytical, and empirical perspectives on topics at the center of controversies and specific policy problems over several decades. Recommended: ECON 1, 51, and 52.

**OSPSANTG 199A. Directed Reading A. 1-4 Unit.**

May be repeated for credit.

**Pathology Courses****PATH 101. Cancer Biology. 4 Units.**

Experimental approaches to understanding the origins, diagnosis, and treatment of cancer. Focus on key experiments and discoveries with emphasis on genetics, molecular biology, and cell biology. Topics include carcinogens, tumor virology, oncogenes, tumor suppressor genes, cell cycle regulation, angiogenesis, invasion and metastasis, cancer genomics, cancer epidemiology, and cancer therapies. Discussion sections based on primary research articles that describe key experiments in the field. Satisfies Central Menu Areas 1 or 2 for Bio majors. Prerequisite: Biology or Human Biology core or equivalent, or consent of instructor. Same as: CBIO 101

**PATH 103Q. Lymphocyte Migration. 1 Unit.**

Preference to sophomores. Lymphocytes migrate from blood vessels into tissues to participate in immune surveillance and the development of inflammation. The lymphocyte and blood vessel endothelia molecules that control lymphocyte migration, and are implicated in the development of human diseases such as asthma, type 1 diabetes, and multiple sclerosis are discussed.

**PATH 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**PATH 210. Stem Cells in Development and Disease. 1-2 Unit.**

Molecular and cellular mechanisms underlying the basic self-renewal and differentiation properties of stem cells in multiple tissues and organisms. How abnormal stem cell behavior may contribute to diseases such as cancer. How to manipulate stem cell behavior in vitro or in vivo for therapeutic purposes. Classical papers and recent literatures in the field of stem cell biology. Open to graduate, medical, and advanced undergraduate students. Prerequisite: consent of instructor.

**PATH 213. Gross Autopsy Pathology Laboratory. 2-3 Units.**

Examine/discuss unfixed dissected organs from current autopsies and correlate morphologic findings with the clinical history. Students view postmortem examinations and may participate (in a small group) in one postmortem examination with the assistance of residents and staff, and present the case to the class. Class scheduling is flexible. Additional unit for participation in a postmortem examination. Class may not be repeated. Prerequisite: HHD220.

**PATH 218. Computational Analysis of Biological Information: Introduction to Python for Biologists. 2 Units.**

Computational tools for processing, interpretation, communication, and archiving of biological information. Emphasis is on sequence and digital microscopy/image analysis. Intended for biological and clinical trainees without substantial programming experience. Same as: GENE 218, MI 218

**PATH 233. The Biology of Small Modulatory RNAs. 2 Units.**

Open to graduate and medical students. Explores recent progress and unsolved questions in the field of RNA interference and microRNA biology. Students are required to read assigned primary literature before each class and actively participate in guided discussions on related technical and conceptual issues during class meetings. Assignments include critiques of assigned papers and developing a novel research proposal.

Same as: GENE 233, MI 233

**PATH 234. Fundamentals of RNA Biology. 2 Units.**

For graduate or medical students and (if space allows) to active participants from other segments of the Stanford Community (e.g., TGR students); undergraduates by instructor consent. Fundamental issues of RNA biology, with the goal of setting a foundation for students to explore the expanding world of RNA-based regulation. Each week a topic is covered by a faculty lecture and journal club presentations by students.

Same as: GENE 234, MI 234

**PATH 240. Clinical Studies in Pathology I. 3-9 Units.**

A broad exposure to the practice of pathology in an academic medical center. Students are assigned a faculty mentor and work closely with pathology residents, fellows and faculty. Two months are spent in surgical pathology where students help examine surgical resection specimens and biopsies and participate in making a final diagnosis. One month is spent in autopsy pathology where students perform autopsy prosecutions and formulate final anatomic diagnoses under the supervision of faculty. This course must be combined with Clinical Studies in Pathology II, and two additional quarters of PATH 399, Directed Research, to fulfill a 12 month Post-Sophomore year Fellowship in Pathology. Prerequisite: MD candidate; instructor consent.

**PATH 241. Clinical Studies in Pathology II. 3-9 Units.**

An in-depth exposure to the practice of pathology for students who have completed Clinical Studies in Pathology I. Students are assigned a faculty mentor and work closely with pathology residents, fellows and faculty. Two months are spent in surgical pathology where students help examine surgical resection specimens and biopsies and participate in making a final diagnosis. One month is spent in sub-specialty areas of pathology that include dermatopathology, neuropathology, renal pathology, lymph node pathology or cytology. This course must be combined with Clinical Studies in Pathology I and two additional quarters of PATH 399, Directed Research, to fulfill a 12-month Post-Sophomore year Fellowship in Pathology. Prerequisite: consent of instructor and successful completion of Clinical Studies in Pathology I (PATH 240).

**PATH 280. Early Clinical Experience in Pathology. 1-2 Unit.**

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

**PATH 290. Pediatric Nonmalignant Hematology and Stem Cell Biology. 2 Units.**

Pediatric hematologic disorders provide an important paradigm to study other developmental systems. Subjects covered include hematopoiesis, basic stem cell biology, endothelial cell development, alternative models to study nonmalignant hematology and stem cell biology (zebrafish and drosophila), defects in white cell function, basic research in stem cell transplantation, state of the art methods in nonmalignant hematology and stem cell biology (genomics, proteomics, and gene therapy), and bioinformatics. The course is also open to graduate students and junior and senior undergraduate students who are pre-med.

**PATH 299. Directed Reading in Pathology. 1-18 Unit.**

Prerequisite: consent of instructor.

**PATH 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**PATH 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Opportunities at the molecular, cellular, and clinicopathologic levels. Prerequisite: consent of instructor.

**Pediatrics Courses****PEDS 51N. How Discovery and Innovation Have Transformed Medicine. 3 Units.**

Topics include the science behind vaccines and why some refuse vaccination, how antibiotics are discovered and what can be done about increasing resistance to antibiotics, stem cells and their potential use, the role of genomics in modern medicine, development of drugs to treat HIV/AIDS, discovery of surfactant, personal responsibility in health and wellness and how technology relates to the "cost conundrum" of healthcare in the U.S. Appreciate important connections between science, discovery and human health and think critically about the potential impact of new discoveries on life and death, and their ethical and spiritual boundaries.

**PEDS 60Q. Famine in the Modern World. 3 Units.**

This seminar is devoted to an investigation of famine  $\zeta$  mass starvation  $\zeta$  which throughout recorded history has been more lethal than war. Students will assess the relative weight of natural, economic, and political factors as causes of famine over the past two centuries. Students will acquire a background into the central facts about and controversies surrounding the major famines of modern history. Case studies include the Great Irish Famine of the 1840s, the Bengal famine of 1943-44, the Soviet famines of 1921-22 and 1932-33, the Great Famine in China in 1959-61, and the famines in Ethiopia and Somalia since the 1970s.

**PEDS 65N. Understanding Children's Health Disparities. 3 Units.**

The social and economic factors that affect children and their health status. The principal sources of disparities in the health of children in the U.S. are not biologic, but social and economic. Topics include ethnic, cultural, and behavioral factors that affect children's health, both directly and indirectly; lack of health insurance; and current proposals for health care reform, focusing specifically on how they will impact existing health disparities among children.

**PEDS 65Q. Understanding Children's Health Disparities. 3 Units.**

The social and economic factors that affect children and their health status. The principal sources of disparities in the health of children in the U.S. are not biologic, but social and economic. Topics include ethnic, cultural, and behavioral factors that affect children's health, both directly and indirectly; lack of health insurance; and current proposals for health care reform, focusing specifically on how they will impact existing health disparities among children. Includes instruction addressing written assignments and required oral presentations.

**PEDS 105. Health Promotion and the Campus Culture. 4 Units.**

Multidisciplinary perspectives of public health and health psychology. The prevalence of health risk behaviors on the contemporary college campus and the challenges of risk reduction. Students apply theoretical frameworks to peer health promotion campus projects. Limited enrollment. Prerequisite: consent of instructor following first meeting. Same as: PEDS 215

**PEDS 106. Exploring Happiness and Health. 3 Units.**

Evidence-based research findings, theoretical concepts and applied experiences related to emotional well-being, and physical and mental health. Topics include basic cognitive neuroscience and psychological research in pro-social emotions, such as gratitude, compassion, forgiveness and mindfulness practice. Course offers lecture, readings, and applied practices that enhance mental health, resiliency and well-being. Emphasis on issues relevant to high-achieving young adults. Same as: PEDS 206

**PEDS 116. Alcohol Issues and the Campus Culture. 4 Units.**

Multidisciplinary perspectives of public health, health psychology, and sociology. The prevalence and scope of alcohol-related problems; challenges of risk reduction and intervention strategies. Students apply theoretical frameworks to alcohol-related research topics and projects. Limited enrollment. Prerequisite: consent of instructor following first meeting.

**PEDS 118. The Art of Creating Digital Health Education Content. 2 Units.**

Online educational content is becoming an increasingly important part of the way in which people learn. This course explores the process of making digital health education videos aimed at effectively supporting the learning of medical students, undergraduates, international community health workers and the general public. Knowing how to engage learners and effectively deliver important health education messages is a fundamental skill for future physicians, teachers and anyone who wishes to promote the health of those around them. Students work on creating their own digital content in pairs, outside of class meetings. Project-specific consultations with the instructor also take place outside of class time. Enrollment in PEDS 218 limited to MD students; undergraduates enroll in PEDS 118. Same as: PEDS 218

**PEDS 130. Pediatrics Journal Club. 1 Unit.**

Open to MD, graduate, and undergraduate students. Each session focuses on a current article in pediatric medicine. Discussions led by faculty experts in the area covered that session. Topics may range widely, depending on the available literature and students' interests. Students are expected to review the chosen article before class and participate in discussion. Discussion includes methodology and statistical analysis of each study and its relevance to pediatric practice. Same as: PEDS 230

**PEDS 150. Social and Environmental Determinants of Health. 3 Units.**

How race/ethnicity and SES contribute to health disparities, how vulnerable populations are uniquely at health risk, and how the built environment relates to health and wellness. Topics include: gender, age, race/ethnicity, language, education, individual SES and neighborhood SES as related to health; individual and structural race bias; health needs of vulnerable populations (e.g., the homeless, the incarcerated, immigrant populations, children, and uninsured/underinsured); and environmental forces (e.g., urban design/planning, traffic/car culture, green space, housing, food access/culture, law enforcement, and media). Same as: PEDS 250

**PEDS 159A. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.**

First quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Application required. Same as: PEDS 259A

**PEDS 159B. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.**

Second quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159A/259A. Same as: PEDS 259B

**PEDS 159C. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.**

Third quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159B/259B. Same as: PEDS 259C

**PEDS 199. Undergraduate Directed Reading/Research. 1-18 Unit.**

Prerequisite: consent of instructor.

**PEDS 202A. Practical Applications for Qualitative Data Analysis. 3 Units.**

(Same as MED 200A) First quarter of a two-quarter course. Gain experience analyzing qualitative data using qualitative analysis software (i.e. Nvivo, Dedoose). Conduct analysis using your own or existing data sources. Explore multiple qualitative data analysis topics through class lectures, foundational readings and hands-on learning. Core topics include: grounded theory, qualitative data analysis approaches, software-based analysis, cleaning and coding of data, and interpreting data. Note: Preference will be given to medical students and undergraduate students that have successfully completed an introductory qualitative methods course. Enrollment in subsequent PEDS 202B required.

**PEDS 202B. Practical Applications for Qualitative Data Analysis. 3 Units.**

(Same as MED 200B) Second quarter of a two-quarter course provides hands-on experience summarizing qualitative data and describing findings for dissemination. Final course product will be a draft manuscript for submission with students listed as co-authors. Core topics include: identifying themes and representative quotes, community-engaged dissemination, abstract submission, posters, oral presentations, manuscript writing, and journal selection. Prerequisite: Successful completion of PEDS 202A.

**PEDS 202C. Qualitative Research Methods and Study Design. 3 Units.**

Introduction to qualitative research methods and study design. Students gain practical experience designing a qualitative study. Explore qualitative methods through class lectures, foundational readings and hands-on learning. Core topics include: theoretical frameworks, research questions, methodological approaches (i.e. interviews, focus groups, participant observation, photovoice), data collection, sampling, reliability and validity, and IRB protocols. This course is designed for students needing support to plan and design an independent research project (i.e. Med Scholars, Honors Thesis). Prerequisite: Consent from instructor for undergraduates.

**PEDS 203. Flu Crew: Advanced Vaccinator Education. 1 Unit.**

Students receive clinically relevant advanced training as preparation for Flu Crew clinic shifts both on- and off-campus during Autumn Quarter. Course includes informational sessions, speakers, and hands-on workshops focusing on the most clinically relevant influenza knowledge and skills. Topics covered include influenza epidemiology, misconceptions, patient education, vaccine selection, vaccinator Spanish, and advanced vaccination technique. Students required to attend three clinics.

**PEDS 206. Exploring Happiness and Health. 3 Units.**

Evidence-based research findings, theoretical concepts and applied experiences related to emotional well-being, and physical and mental health. Topics include basic cognitive neuroscience and psychological research in pro-social emotions, such as gratitude, compassion, forgiveness and mindfulness practice. Course offers lecture, readings, and applied practices that enhance mental health, resiliency and well-being. Emphasis on issues relevant to high-achieving young adults. Same as: PEDS 106

**PEDS 211. Medical-Legal Issues in Children's Health. 2-4 Units.**

(Same as LAW 643) Explores the link between poverty and children's health and how the medical and legal fields can work together to improve health outcomes for low income children. Weekly class meetings covering medical legal issues such as asthma immigration, health insurance; intake interviews with patient families and analysis of their medical legal issues; group project focused on a medical legal policy issue; final paper cowritten by law and medical students. May be taken for 2 units (weekly 2.5 hour seminar meetings only), 3 units (participation in either intake interviews or policy work) or 4 units (full participation in all course components). Prerequisite: instructor consent. Preference to students committed to full participation.

**PEDS 212. Challenges of Human Migration: Health and Health Care of Migrants and Autochthonous Populations. 3 Units.**

An emerging area of inquiry. Topics include: global migration trends, health Issues/aspects of migration, healthcare and the needs of immigrants in the US, and migrants as healthcare providers: a new area of inquiry in the US. Class is structured to include: lectures lead by the instructor and possible guest speakers; seminar, discussion and case study sessions led by students.

Same as: HUMBIO 122M

**PEDS 213. Critical Issues in Child Health. 2 Units.**

Develop an integrated understanding of the physical and psychosocial health factors from birth through adolescence that result in a healthy child. Uses a multidisciplinary perspective to review the basic physiology and pathophysiology associated with common childhood illnesses and integratenthis with socio-environmental factors that influence child health. Students gain perspective on child health challenges around the world and develop a broad understanding of how the cultural context influences and defines the individual living therein.

**PEDS 214. Introduction to Pediatrics Lecture Series. 1 Unit.**

Introduction to the various aspects of pediatrics, directed at pre-clinical MD students, undergraduates, or graduate students. Course composed of interactive lectures conducted by pediatric faculty on subjects ranging from normal development to topics in different pediatric subspecialties. current issues in the field, and opportunities for students considering this specialty. Speakers also touch on their career paths and choices and are available to answer questions about their areas of interest. By special arrangement students may have the opportunity to shadow general pediatricians or pediatric specialists. Intended to stimulate interest in pediatrics and to inform students about the breadth of the field.

**PEDS 215. Health Promotion and the Campus Culture. 4 Units.**

Multidisciplinary perspectives of public health and health psychology. The prevalence of health risk behaviors on the contemporary college campus and the challenges of risk reduction. Students apply theoretical frameworks to peer health promotion campus projects. Limited enrollment. Prerequisite: consent of instructor following first meeting. Same as: PEDS 105

**PEDS 218. The Art of Creating Digital Health Education Content. 2 Units.**

Online educational content is becoming an increasingly important part of the way in which people learn. This course explores the process of making digital health education videos aimed at effectively supporting the learning of medical students, undergraduates, international community health workers and the general public. Knowing how to engage learners and effectively deliver important health education messages is a fundamental skill for future physicians, teachers and anyone who wishes to promote the health of those around them. Students work on creating their own digital content in pairs, outside of class meetings. Project-specific consultations with the instructor also take place outside of class time. Enrollment in PEDS 218 limited to MD students; undergraduates enroll in PEDS 118.

Same as: PEDS 118

**PEDS 222. Beyond Health Care: Seeking Health in Society. 3 Units.**

Available evidence at the national and cross-country level linking social welfare interventions and health outcomes. If and how non-health programs and policies could have an impact on positive health outcomes. Evaluation of social programs and policies that buffer the negative health impact of economic instability and unemployment among adult workers and their children. Examination of safety nets, including public health insurance, income maintenance programs, and disability insurance. Prerequisites: HumBio 4B or equivalent, and some background in research methods and statistics, or Instructor permission.

Same as: HUMBIO 122

**PEDS 223. Human Rights and Global Health. 3 Units.**

Open to medical students, graduate students, and advanced undergraduates. Examines the newly emerging field of human rights and global health, beginning with the essential background into the field of human rights, and the recent emergence of health as a human right. Emphasis is on the pioneering work of Dr. Paul Farmer and Partners in Health and the challenge he and his organization have posed to the conventional wisdom about approaches to combating poor health and disease worldwide. Topics include the "big three" infectious diseases – tuberculosis, malaria, and HIV/AIDS – as well as emerging infectious diseases, clean water and sanitation, and malnutrition and famine.

**PEDS 224. Genocide and Humanitarian Intervention. 3 Units.**

Open to medical students, graduate students, and undergraduate students. Traces the history of genocide in the 20th century and the question of humanitarian intervention to stop it, a topic that has been especially controversial since the end of the Cold War. The pre-1990s discussion begins with the Armenian genocide during the First World War and includes the Holocaust and Cambodia under the Khmer Rouge in the 1970s. Coverage of genocide and humanitarian intervention since the 1990s includes the wars in Bosnia, Rwanda, Kosovo, the Congo and Sudan.

Same as: HISTORY 224C, HISTORY 324C, JEWISHST 284C, JEWISHST 384C

**PEDS 225. Humanitarian Aid and Politics. 3 Units.**

Open to medical students, graduate students, and undergraduate students. Examines the moral dilemmas and political realities that complicate the delivery of humanitarian aid, especially when undertaken by the United Nations and non-governmental organizations (NGOs). Emphasis is on what humanitarians call "complex humanitarian emergencies": crises often characterized by famine and/or epidemic disease and typically the result of war and/or civil war. Provides background into the history of humanitarian aid, though focus is on the post-Cold War era, up to the recent crises in Libya and Syria.

**PEDS 226. Famine in the Modern World. 3 Units.**

Open to medical students, graduate students, and undergraduate students. Examines the major famines of modern history, the controversies surrounding them, and the reasons that famine persists in our increasingly globalized world. Focus is on the relative importance of natural, economic, and political factors as causes of famine in the modern world. Case studies include the Great Irish Famine of the 1840s; the Bengal famine of 1943-44; the Soviet famines of 1921-22 and 1932-33; China's Great Famine of 1959-61; the Ethiopian famines of the 1970s and 80s, and the Somalia famines of the 1990s and of 2011. Same as: HISTORY 226E, HISTORY 326E

**PEDS 230. Pediatrics Journal Club. 1 Unit.**

Open to MD, graduate, and undergraduate students. Each session focuses on a current article in pediatric medicine. Discussions led by faculty experts in the area covered that session. Topics may range widely, depending on the available literature and students' interests. Students are expected to review the chosen article before class and participate in discussion. Discussion includes methodology and statistical analysis of each study and its relevance to pediatric practice. Same as: PEDS 130

**PEDS 246. Developmental Disabilities: From Biology to Policy. 3 Units.**

Fifteen percent of US children have disabilities. While advances in medicine and technology have increased life expectancy for these children, health care delivery, education, and public attitudes have not kept pace. Students in this course will learn the possibilities and limitations of new biomedical treatments of Down syndrome, cerebral palsy, and autism. Students will also evaluate the impact of public policy initiatives, such as the Individuals with Disabilities Education Act and Americans with Disabilities Act on inclusion and participation in society. Same as: HUMBIO 146D

**PEDS 250. Social and Environmental Determinants of Health. 3 Units.**

How race/ethnicity and SES contribute to health disparities, how vulnerable populations are uniquely at health risk, and how the built environment relates to health and wellness. Topics include: gender, age, race/ethnicity, language, education, individual SES and neighborhood SES as related to health; individual and structural race bias; health needs of vulnerable populations (e.g., the homeless, the incarcerated, immigrant populations, children, and uninsured/underinsured); and environmental forces (e.g., urban design/planning, traffic/car culture, green space, housing, food access/culture, law enforcement, and media). Same as: PEDS 150

**PEDS 251A. Medical Ethics I. 2 Units.**

Required for Scholarly Concentration in Biomedical Ethics and Medical Humanities. The field of bioethics, including theoretical approaches to bioethical problems. Contemporary controversies and clinical cases. Values that arise in different situations and clinical encounters. Issues include: genetics and stem cell research, rationing, ethical issues in care at the end of life, organ transplantation issues.

**PEDS 251B. Medical Ethics II. 2 Units.**

The integration of ethical theory with applications of theory or conceptual issues in medicine, health care, and the life and social sciences. Topic varies by year. Possible topics include: ethical issues in stem cell research; death and dying; genetics and ethics; concepts of health and disease; the ethics of international research; and ethical implications of new reproductive technology.

**PEDS 254. Pediatric Physical Findings Rounds. 1 Unit.**

Pediatric patients with specific physical findings and hospitalized at LPHC are identified and introduced to students. Students in small groups examine patients at the bedside to note the physical finding and discuss it within the context of the patient's clinical problem. Emphasis is on basic science discussion to understand the cause of the finding.

**PEDS 258. Developing and Defining Strong Community-Academic Partnerships. 2 Units.**

Applying the principles of community-based participatory research to medical scholars research projects. Strategies for developing strong, equitable and sustainable community-academic partnerships. Identify and assess proposed faculty mentors and community partners, and establish proposed goals and objectives for med scholars research.

**PEDS 259A. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.**

First quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Application required. Same as: PEDS 159A

**PEDS 259B. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.**

Second quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159A/259A. Same as: PEDS 159B

**PEDS 259C. Addressing Child Health Disparities through Community-based Service Learning. 2 Units.**

Third quarter of a three-quarter service-learning practicum providing opportunities to engage in local community-academic projects aimed at reducing child health disparities. Stanford pediatric residents provide mentorship and guidance during the development and implementation of a community service and/or research project. Topics include principles of community engagement, community-engaged research methodologies, and practical aspects of working with community partners. Interest in health disparities, community engagement, community-based participatory research, reflective learning, and civic responsibility desired. Prerequisite: PEDS 159B/259B. Same as: PEDS 159C

**PEDS 260. Clinical Excellence and Best Practice in Delivering Health Care to Diverse Populations. 1 Unit.**

Course enhances student understanding of health inequities and the structural and cultural competencies that impact health care quality and distribution. Topics covered include: structural competency vs cultural competency; changes in primary care; adverse childhood events; bioethics and race; physician bias; criminal justice and health; effective health interventions and steps forward; resource distribution.

**PEDS 280. Early Clinical Experience. 2-4 Units.**

Provides students an opportunity to see patients and correlate clinical findings with preclinical coursework. Students spend a half day or a full day in a pediatric subspecialty clinic (e.g., infectious diseases, endocrine, gastroenterology), participate in conferences and accompany attending physicians. Students have directed reading and meet with faculty for one hour per week to discuss their reading.

**PEDS 281. Childhood Chronic Illness: Impact on Family Development. 1 Unit.**

The Pals Program is a volunteer activity serving Lucile Packard Children's Hospital chronically ill patients and their siblings. Modeled after the Big Brother/Big Sister Program, Pals matches first- and second-year medical students with pediatric patients or their siblings. The patients and/or their siblings enjoy the support and companionship of their Pals, and the medical students learn firsthand about the emotional and social aspects of chronic illness during childhood. Pals meet regularly throughout the year to participate in fun activities such as movies, ball games, museums, and picnics. The activities and personal relationships are overseen by the LPCH Pals social worker. Bimonthly class meetings introduce the students to pediatric chronic diseases such as leukemia, cystic fibrosis and pulmonary hypertension. The class brings in physicians to give the medical perspective as well as patients and families to get their perspective. Prerequisite: approval of the LPCH social worker for Pals.

**PEDS 282. Pregnancy, Birth, and Infancy. 3 Units.**

Comprehensive clinical experience where pre-clinical medical students follow pregnant women receiving care at Stanford hospitals to attend prenatal visits, delivery, and postnatal visits. Continuity clinic format, combined with didactic lessons and discussion seminars. Students are exposed to clinical activities in a meaningful context, bolstering classroom studies in anatomy, physiology, embryology and human development, and emphasizing social, economic, and personal issues related to medicine. This program spans one quarter, covering topics related to pregnancy, labor and delivery and newborn care. In addition to clinic experiences, students are expected to spend 1-2 hours/week in lectures and to complete a reflection of their experiences in the course. Prerequisite: pre-clinical medical student. Same as: OBGYN 282

**PEDS 299. Directed Reading in Pediatrics. 1-18 Unit.**

Prerequisite: consent of instructor.

**PEDS 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**PEDS 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members.

**Philosophy Courses****PHIL 1. Introduction to Philosophy. 5 Units.**

Is there one truth or many? Does science tell us everything there is to know? Can our minds be purely physical? Do we have free will? Is faith rational? Should we always be rational? What is the meaning of life? Are there moral truths? What are truth, reality, rationality, and knowledge? How can such questions be answered? Intensive introduction to theories and techniques in philosophy from various contemporary traditions. Students must enroll in lecture AND one of the 4 discussion sections listed.

**PHIL 2. Introduction to Moral Philosophy. 5 Units.**

A survey of moral philosophy in the Western tradition. What makes right actions right and wrong actions wrong? What is it to have a virtuous rather than a vicious character? What is the basis of these distinctions? Why should we care about morality at all? Our aim is to understand how some of the most influential philosophers (including Aristotle, Kant, and Mill) have addressed these questions, and by so doing, to better formulate our own views. No prior familiarity with philosophy required. Same as: ETHICSOC 20

**PHIL 5N. The Art of Living. 4 Units.**

Whether we realize it or not, all of us are forced to make a fundamental choice: by deciding what is most valuable to us, we decide how we are going to live our life. We may opt for a life of reason and knowledge; one of faith and discipline; one of nature and freedom; one of community and altruism; or one of originality and style. We may even choose to live our lives as though they were works of art. In every case, hard work is required: our lives are not just given to us, but need to be made. To live well is, in fact, to practice an art of living. Where, however, do such ideals come from? How do we adopt and defend them? What is required to put them into practice? What do we do when they come into conflict with one another? And what role do great works of art play in all this? "The Art of Living" will explore the various ways in which it is possible to live well and beautifully, what it takes to implement them, and what happens when they come under pressure from inside and out.

**PHIL 6N. Pictures and the Imagination. 3 Units.**

Paintings, drawings, and photographs often function as pictures or images of the preexisting things they take as subjects. They represent these subjects from specific spatial vantage points in ways that may be more or less definite, more or less detailed, and more or less faithful to what the subjects are actually like. One longs to know how this works: how vision, imagination, and background knowledge come together when we experience a picture as a picture. Certain forms of imagining and remembering involve mental picturing, mental imagery. Sometimes we imagine or remember things in visual terms from a specific spatial vantage point, with the result that we feel brought face to face with the things imagined or remembered, however far away they may actually be. How is the physical picturing that goes on in paintings, drawings, and photographs both like and unlike the mental picturing that goes on when things swim before the mind's eye? What role does mental picturing play in physical picturing? What kinds of artistic value and interest attach to paintings, drawings, and photographs in virtue of what they picture and how they picture it?

**PHIL 7Q. What is Truth. 3 Units.**

This question can be answered precisely in some important cases. We begin with the language of propositional logic where truth is defined by simple tables. This is already sufficient for description of many important problems and leads to a famous (\$1 000 000) problem  $P=NP$ . We use Sudoku puzzles for illustration. Close connection between propositional truth and proof is established by the resolution method forming a basis of most automated theorem provers. The language of predicate logic covers much more and illustrates the notion of completeness. Register machines provide connection with computations and lead to a fundamental classification of problems of truth with respect to decidability. The language of arithmetic exhibits a new phenomenon of incompleteness that changed significant part of philosophy in 20-th century.

**PHIL 8N. Free Will and Responsibility. 4 Units.**

In what sense are we, or might we be free agents? Is our freedom compatible with our being fully a part of the same natural, causal order that includes other physical and biological systems? What assumptions about freedom do we make when we hold people accountable morally and/or legally? When we hold people accountable, and so responsible, can we also see them as part of the natural, causal order? Or is there a deep incompatibility between these two ways of understanding ourselves? What assumptions about our freedom do we make when we deliberate about what to do? Are these assumptions in conflict with seeing ourselves as part of the natural, causal order? We will explore these and related questions primarily by way of careful study of recent and contemporary philosophical research on these matters.

**PHIL 9N. Philosophical Classics of the 20th Century. 4 Units.**

Last century's best and most influential philosophical writings. Topics include ethics (what is the nature of right and wrong?), language (how do meaning, reference, and truth arise in the natural world?), science (can science claim objectively accurate descriptions of reality?), existence (are there things that don't exist?), and the mind (could robots ever be conscious?). Authors include Bertrand Russell, Ludwig Wittgenstein, Rudolf Carnap, Willard Quine, Thomas Kuhn, John Rawls, and Saul Kripke. The lay of the land in contemporary philosophy.

**PHIL 10N. Bounded Rationality. 3 Units.**

This course takes a philosophical approach to a cutting edge debate in psychology. Readings include texts in contemporary cognitive science as well as in philosophy of mind.

**PHIL 11N. Skepticism. 3 Units.**

Preference to freshmen. Historical and contemporary philosophical perspectives on the limits of human knowledge of a mind-independent world and causal laws of nature. The nature and possibility of a priori knowledge. Skepticism regarding religious beliefs.

**PHIL 12N. Paradoxes. 3 Units.**

In this course, we will use paradoxes like these as foci for discussions of some of the deepest issues in philosophy and mathematics. No prior knowledge of logic, philosophy or mathematics will be assumed and there will be minimal use of symbolism. Students will be expected to complete problem sheets, and to write a very short final paper. The seminars will be discussion-based.

**PHIL 13N. "Can good people like bad music?" and other questions. 3 Units.**

Think of a musical artist you just can't stand to listen to. Chances are, this artist has thousands, if not millions, of adoring fans. That is, what's "bad music" to you is "good music" to others. This fact is not shocking: we all know that people have different tastes in music, and in art more generally. But what does this fact tell us about art, other people, and ourselves? Are some of us right and others of us wrong about what's good and bad music? Is there reason to think that some music is "objectively" better than other music? Can we say that those who like "bad music" are missing something, or mistaken in their tastes? If so, why not think it's us that are mistaken? How much are our own tastes bound up with "who we are"? And what might this mean for our capacity to appreciate tastes which are not our own? This seminar is an investigation into these and other questions. Through the specific lens of music, we will explore the nature of artistic taste more generally. Our main course text will be Carl Wilson's *Let's Talk About Love: A Journey to the End of Taste*, a popular introduction to our topic. We will also look at and discuss actual album reviews, pieces of music journalism, and news stories. Class meetings will be heavily discussion-based, and students should come to class ready to share, debate, and scrutinize their own musical tastes. Outside of class, students will develop their understanding through a variety of informal and creative writing assignments, such as exploratory journal entries and mock fan letters. Your taste in music may very well change as a result of this seminar, but this is not its aim. The goal is to understand what it means to disagree about art, through which you will learn how to respond more intelligently and empathetically to such disagreements as they come up in your everyday life.

**PHIL 14N. Belief and the Will. 3 Units.**

Preference to freshmen. Is there anything wrong with believing something without evidence? Is it possible? The nature and ethics of belief, and belief's relation to evidence and truth. How much control do believers have over their belief?

**PHIL 15N. Freedom, Community, and Morality. 3 Units.**

Preference to freshmen. Does the freedom of the individual conflict with the demands of human community and morality? Or, as some philosophers have maintained, does the freedom of the individual find its highest expression in a moral community of other human beings? Readings include Camus, Mill, Rousseau, and Kant.

**PHIL 20S. Introduction to Moral Philosophy. 3 Units.**

Moral philosophy is the area of philosophy concerned with how we ought to live our lives. This includes questions such as: what makes an action right or wrong? what makes for a virtuous versus a vicious character? and what sort of obligations, if any, do we have to other people or animals? Our aim is to understand how influential philosophers (including Plato, Aristotle, Mill, Hume, and Kant) have answered these questions and how they have justified their positions. We will also focus on developing student skills in argument and rigorous academic writing.

**PHIL 23A. The Cognitive Science of Mathematics. 2 Units.**

Mathematics has two features which, taken together, are quite puzzling: (i) its objects (numbers, functions, derivatives, manifolds, and the like) are very unlike everyday concrete material objects, yet (ii) it seems to be the source of our most certain knowledge. In this course, we will examine the role in which findings from empirical theories of mathematical cognition can help address and possibly dissolve this puzzle. The course will be broken up into three units: Philosophical Foundations, Numerical Cognition, and Metaphor and Higher Mathematical Thought.

**PHIL 23B. Truth and Paradox. 2 Units.**

Philosophical investigation of the concept of truth is often divided along two dimensions: investigation of the nature of truth and investigation of the semantics of truth claims. This tutorial will focus on the second kind of concern. One key impetus for a philosophical interest in the semantics and definability of truth is the challenge posed by semantic paradoxes such as the Liar paradox and Curry's paradox. Despite each having the initial appearance of a parlor trick, philosophers and logicians have come to appreciate the deep implications of these paradoxes. The main goal of this tutorial is to gain an appreciation of the philosophical issues -- both with respect to formal and natural languages -- which arise from consideration of the paradoxes. To this end, we will study some of the classic contributions to this area including Tarski's famous result that, in an important sense, the semantic paradoxes render truth undefinable, and Kripke's much later attempt to provide a definition of truth in the face of Tarski's limitative result. Further topics include the debate between paracomplete and paraconsistent solutions to the semantic paradoxes (notably defended by, respectively, Field and Priest); the relationship between deflationism about truth and the paradoxes; and the notion of revenge problems (roughly, the claim that any solution to the paradoxes can be used to construct a further paradox). The tutorial will avoid excessive technical discussions, but will aim to engender appreciation for some philosophical interesting technical points and will assume a logic background of PHIL150 level.

**PHIL 23C. Counterfactuals. 2 Units.**

Reasoning about counterfactual conditionals plays an important role in contemporary philosophy. Not only have counterfactual analyses been proposed for central philosophical notions, including causation, laws of nature, free will, and knowledge, but also counterfactuals have become objects of interest in their own right, both in the philosophy of language and in logic. This tutorial will introduce the standard approaches to the semantics of counterfactuals, focusing on the work of David Lewis and Robert Stalnaker. Prerequisite: one logic course (e.g., 50, 150, or 151) or consent of instructor.

**PHIL 23D. Principia as Paradigm: Mechanics After Newton. 2 Units.**

Newton's *Principia* is widely and rightly acknowledged as a landmark achievement in physics that has had a profound impact on the subsequent development of science. This tutorial will focus on what sorts of influence the *Principia* had on the development of mechanics in roughly the first century following its publication. The work of Euler, Lagrange, and Laplace will serve as the primary examples of this development. Kuhn's description of paradigms in *The Structure of Scientific Revolutions* provides a starting point for understanding some of these forms of influence. In particular, this tutorial will try to explore two central areas of influence. The first is Newton's conceptual framework and how it was modified in the further development of mechanics during this period. The second is how projects suggested by residual problems within the *Principia* shaped ongoing study.

**PHIL 23E. Embodied Cognition. 2 Units.**

Where does the mind stop and the world begin? A standard assumption is that thinking is somehow local to the central nervous system; that is, cognition just amounts to brain activity. A wave of recent work in philosophy and cognitive science has questioned this assumption, insisting that the mind cannot be understood outside the context of a living body interacting dynamically with an environment. To put it more dramatically, the mind extends out into the world. We shall read some of the main proponents of this move toward embodied and embedded cognition, and try to assess the extent to which it seriously calls into question more traditional views about how mind, brain, body, and world fit together.

**PHIL 23F. Forgive and Punish. 2 Units.**

Are we ever justified in forgiving those who wrong us? Do we have more reason to seek revenge and/or punishment than we do to forgive? Does it matter if wrongdoers apologize and repent for their offenses? Are there some acts and/or persons that shouldn't be forgiven? This tutorial will take up these questions by examining (mostly recent) philosophical writings about: forgiveness, retribution, the reactive attitudes (such as resentment and hatred), and, more generally, how humans should (and shouldn't) respond to wrongdoing.

**PHIL 23G. Pessimism, Philosophy, and Human Nature. 2 Units.**

In different ways, Thucydides, Hobbes, Rousseau, Kant, and Schopenhauer all emphasize a just so, descriptive account of humankind that, on the surface at least, reveals a profound pessimism with respect to their views about human nature. But for these thinkers pessimism represents a sort of intellectual honesty about human nature, and these insights invariably underscore a profound optimism, in spite of their pessimism, with respect to what they view as the more pressing question concerning what humankind can make itself to be. Our guiding question will be to explore whether and how each of these thinkers reconciles their philosophical optimism with their psychological pessimism about human nature.

**PHIL 23H. Perfectionism: The Idea of the Perfect in Nature, Ethics, and Politics. 2 Units.**

Perfection is the full realization of what is best or most excellent. In this tutorial course we will explore philosophical thought on perfection in three different contexts: natural teleology, individual ethical life, and utopian and anti-utopian social thought. Throughout the course, we will ask the following questions: What is a perfect being? Why is perfection per se good or desirable? Do evaluative comparisons presuppose some absolute standard of perfection? Does it make sense to aim at perfection in ethical and political life? What are the virtues of imperfection? What are the hazards of pursuing perfection in the political realm? Is perfectionism compatible with pluralism about values? Is perfectionism compatible with government based on popular will? The primary emphasis is on close reading and discussion of classic texts in ethical theory, including selections from Plato, Aristotle, Aquinas, Rousseau, Kant, and Tocqueville, accompanied by contemporary selections.

**PHIL 23I. Tutorial: The Hart-Dworkin Debate in the Philosophy of Law. 2 Units.**

The Hart-Dworkin debate is a central debate in jurisprudence and the philosophy of law, and its two main antagonists are among the most important figures in the history of the subject. Hart's articulation of his Legal Positivism in *The Concept of Law* (1961) had a great deal of influence on later jurisprudence - indeed Dworkin, in the introduction to his *Hard Cases* in *Harvard Law Review* (1975), compared Hart's contribution in the field to a paradigm shift in the philosophy of science. In turn, Dworkin's arguments for his Legal Interpretivism, which he first put forward in *The Model of Rules* (1967) and *Hard Cases* (1975), and eventually in *Law's Empire* (1986), raised some of the most potent objections to positivism, and inspired new replies from the positivists in defense of their positions, including Hart in his *Postscript to the second edition of The Concept of Law* (1994). This tutorial aims to give its students a good sense of what the debate is about, i.e. the key views and arguments defining each side of the debate. It will attempt to do so by carefully working through both *The Concept of Law* and *Law's Empire*, accompanied by other pieces of writing by Hart, Dworkin, and others. Almost the entirety of both books will be assigned as readings throughout the course of the term, but it is likely that quite a bit of this will be designated optional.

**PHIL 23J. On the Notion of Respect: Politics, Deliberation and Disagreements. 2 Units.**

The notion of respect plays a crucial role in a variety of human contexts. We respect many different things and we respect them in many different ways: from parents and elders, to public institutions and the law, and other people's dignity, feelings and rights. Many, in fact, claim that all people deserve respect some way or another. Public conversations lately have been plagued with calls to respect the environment, life in all of its forms, citizens' sexual orientation, etc. Additionally, it is also urged that public debates should take place under conditions of mutual respect: that above and beyond our differences and our interests, we should respect each other as persons. In particular, philosophers working in moral and political theory focus on what respect for persons might mean including oneself and possibly other entities. Such a notion is frequently issued inter alia in discussions about justice and legitimacy, equality and exploitation, multiculturalism and pluralism, toleration and recognition. The main concern here centers on the ways in which citizens should respect one another in plural democracies. Explore whether or not the assumption that in order to properly respect each other as free and equal citizens we are obligated to satisfy certain requirements of justification (viz., public reason) by seeking appropriate political justifications and sometimes exercising restraint in appealing to individual points of views (viz., comprehensive doctrines) in political discourse.

**PHIL 23K. Feminism Past and Present. 2 Units.**

"Feminism" is a wide category, encompassing a variety of philosophical positions, but it is also an historical social movement whose meanings and aims have been subject to both change and conflict. This course will explore feminism from a combination of historical, cultural and philosophical perspectives with the overall aim of assessing what "feminism" has meant to various people in the past and what it means today. Roughly the first half of the course will focus on major texts (popular and academic) from the 1st-3rd waves of western feminism as well as texts and historical discussion of some non-western feminist movements. The second half will focus on more recent assertions of feminist positions on a few topical issues. Topics will be somewhat flexible based on the interests of the participants and may include reproductive politics; intergenerational, racial, religious and class-based conflicts within feminism; feminism and work; the sex/gender distinction in science and medicine; feminism's relation to other social movements; etc. This course is open to students of all majors, academic levels and viewpoints.

**PHIL 23L. Love and Friendship. 2 Units.**

People as different as Jesus Christ and Justin Timberlake think that love is crucial to living the good life. But what is love? What part should it play in our lives? Is it just one value among many? This course will consider questions about the nature of love, the role it plays in moral philosophy, and its effect on individual autonomy. Readings will be from both contemporary and historical sources.

**PHIL 23M. Justice and Climate Change. 2 Units.**

Does the current generation have a duty of justice to bear the brunt of the burden of combating climate change for the sake of future generations? If so, who should pay the costs of adapting to climate change and reducing greenhouse gas emissions? Should the costs of combating climate change be distributed according to historical emissions, to wealth, or to an equal per capita emissions principle? We'll explore these questions through readings at the intersection of political philosophy and climate change. The course includes readings on the following topics: global distributive justice, human rights, historical responsibility, economic efficiency, environmental justice, sustainability, and catastrophe. Throughout the course we'll reflect upon what role considerations of justice should play in seeking solutions to climate change.

**PHIL 23N. Neuroscience and the Self. 2 Units.**

The Self: Fiction or reality? Bundle of perceptions? Pragmatic role-concept? Fleeting moment of consciousness? Social invention? Narrative construct? Various philosophical conceptions of the self will be explored with a particular focus on the notion of the 'narrative self.' Literature from neuroscience, psychology and philosophy will be considered.

**PHIL 23O. Tutorial: Origins of the Infinite. 2 Units.**

Aristotle claims in the *Physics* that, "the student of Nature must contemplate of the infinite, with a view to determining whether it exists at all, and, if so, what is its nature." This course follows Aristotle's injunction historically – beginning with the origins of the infinite in classical antiquity and ending with the fundamentals of the contemporary mathematical development at the turn of the 19th century. A central difficulty in this study is that of thinking consistently about infinite number and magnitude. And, more philosophically, whether we can know a priori of an ontological distinction between the finite and the infinite. In addition to Aristotle, we discuss the writings of Philoponus, Galileo, Descartes, Leibniz, Cantor, Dedekind, and Hilbert.

**PHIL 23P. Personal Responsibility: Moral and Civic. 2 Units.**

What do we as individuals owe to other people? Should we be spending our free time toiling in local politics and volunteering in soup kitchens? Should we be sending every extra penny (goodbye new shoes) to people who barely eek out a living on less than a dollar a day? Maybe we ought to spend tons of our time fighting to protect future generations from the predicted devastating effects of climate change. In this course we will explore how local, distant, and future circumstances affect our responsibilities as individuals. We'll discuss questions about what and how much we owe to others, and whether our responsibilities are part and parcel of being a morally good person, or whether they are things we owe others as good citizens of the community (and for that matter, which community do we owe them to—local, national, or global?).

**PHIL 23Q. Tutorial: Selves. 2 Units.**

The course focuses on the nature of the self. Is the self an object among other objects in the world, or something real but not spatial or temporal – an extensionless point? Themes from literature on personal identity, self-consciousness, self-reference, and self-knowledge. Readings may include selections from Kant, Schopenhauer, Wittgenstein, Strawson, Williams, Evans, Nagel, Perry, McDowell.

**PHIL 23R. What's in an essay?. 2 Units.**

This course is about two questions: The first question: what is an essay? In other words, what is it that we mean when we talk about an essay instead of a précis, a paper, a report, a chronicle, a scientific paper, an opinion piece, fiction or simply other kinds of academic writing. Call this first question, the demarcation question about the essay. Essays are particularly hard to pin down, to demarcate its boundaries is almost impossible. The essay represents a distinct challenge for both theory and criticism. Unlike other literary and academic genres, at least since their modern inception in Montaigne's hands, essays challenge notions and assumptions that in other genres are transparent or can be more easily set aside. The second question is: what does essaying "the embarking upon the kind of things essayists claim to be doing" have to do with the cultivation of one's self, the examination of one's actions and deeds in ordinary contexts and the project of shaping it in self-reflective ways. Call this second question, the Socratic aspiration of the essay. To answer this question, we won't start from any pre-establish theory or framework, but rather work our way out directly from the readings of a sample of essays drawn from various sources. By the end of the course, the student will be in a better position to confront questions such as: why are the humanities part and parcel of our educational efforts, more generally, and how could they become part of my education, more particularly? What are the difficulties and advantages, the very point of, writing one's opinions in an attempt to address others? How is self-understanding connected to philosophical endeavors? What role, if any, could finding one's voice have for the purposes of reflective and critical thinking about one's self in relation to others?.

**PHIL 23T. Intellectual trust in oneself and others. 2 Units.**

Most people have many false beliefs. Yet, one routinely relies on one's own beliefs and on the views of others. Does that mean that one takes oneself to be exceptionally good at forming true beliefs, and exceptionally good at detecting false beliefs in others? When is it justified to place intellectual trust in oneself and in others?.

**PHIL 23U. Death and What Comes After. 2 Units.**

Is it irrational to fear death? Is death bad for you? Does it make sense to want to be immortal? How does what happens after our deaths matter to us? Ancient and contemporary philosophers give surprising answers to these questions about death, answers that shed light on basic questions about what matters in life. Among those we'll read are Plato, Aristotle, Epicurus, Bernard Williams, Thomas Nagel and Samuel Scheffler.

**PHIL 23V. Plato's Republic. 2 Units.**

Who should rule? What is the best regime? What is the role of law? What makes a regime just? What is the relation between theory and practice in politics? This course will focus on the political philosophy of the *Republic*, Plato's most well known dialogue and a foundational text in the history of political thought. We will also consider how Plato's psychology underlies his political philosophy and how the political philosophy of the *Republic* is related to political thinking in Plato's later works. Emphasis will be on primary texts, although the instructor will recommend relevant secondary sources as needed. Students will work closely with the instructor to tailor a final assignment that engages with the text and furthers the student's educational goals and interests.

**PHIL 23W. Cognition and Perception. 2 Units.**

In this tutorial, we will examine a cluster of questions concerning the relationship between cognitive states, such as beliefs and desires, and perception. We will examine the question of whether, and to what extent, concepts, beliefs, and desires can influence the content of perception. If these cognitive states can influence the content of perceptual states, how worried should we be about the ability of perception to justify belief, both in everyday life and in scientific inquiry?.

**PHIL 23Y. Knowledge in Action: Anscombe's Intention. 2 Units.**

Anscombe's Intention is one of the foundational texts of 20th century analytic philosophy. It brings together central issues from the philosophy of mind, epistemology, philosophy of language – and lays the ground for contemporary philosophy of action. Anscombe raises (and answers) questions regarding the nature of intentional action, intention, reasons for action, agential self-knowledge, and practical reasoning, connecting them all in one unified account. In the tutorial we will discuss these issues through a close reading of Intention. A short, terse, and marvelously rich self-contained piece of philosophical investigation, it is particularly well-suited for this purpose. Our work with the text should yield a solid basis notably in the philosophy of action, which will be useful for various other courses and areas (in philosophy of action, epistemology, philosophy of mind, and philosophy of language, and ethics). Methodologically the tutorial will foster philosophical skills regarding the analysis, interpretation, and criticism of a dense and rich philosophical text such as Anscombe's.

**PHIL 23Z. Tutorial: Motivation, Obligation, and the Self. 2 Units.**

This tutorial will explore the relationship between one's desires, one's reasons for action, and one's self. Readings to include selections from Bernard Williams, Harry Frankfurt, Christine Korsgaard, John Broome, and Julia Markovits.

**PHIL 25SI. The Animal-Human Relationship: Interdisciplinary Perspectives. 1 Unit.**

The ethical, scientific, and spiritual problems that arise from the interaction between humans and other animals. Can animals have empathy? What does it mean for an animal to feel pain? How did humans come to dominate other animals? What moral obligations do humans have towards animals? Where do animals fit in religious thought? Is animal research ethical, and is it effective? What role does meat consumption play in modern society? How can the environmental impacts of livestock production be mitigated? Guest lecturers from philosophy, literature, biology, neurology, religious studies, psychology, anthropology, and environmental science.

**PHIL 27S. Human Nature and its Discontents. 3 Units.**

In different ways, Thucydides, Hobbes, Rousseau, Kant, and Schopenhauer all emphasize a just so, descriptive account of human beings that, on the surface at least, reveals a profound pessimism with respect to their views about human nature. One of the themes running throughout Thucydides' History of the Peloponnesian War, for example, is the suggestion that human nature is motivated solely by passions of fear, envy, greed, and ambition. Thucydides highlights the ways in which he sees Athens as appealing to these passions while attempting to justify its unspeakable crimes against humanity in the name of "democracy." The aim of this course will be to work through some of the more salient examples of what I will call psychological or anthropological pessimism as outlined in the works of these thinkers, asking about the role their pessimism about human nature plays in their positive philosophical project. Our guiding question will be to explore whether and how each of these thinkers reconciles their philosophical optimism with their psychological pessimism about human nature.

**PHIL 28. The Literature and Philosophy of Place. 4 Units.**

Literature and philosophy, primarily, but not exclusively from Latin America, that raises questions about place and displacement through migration and exile, about how location shapes our understanding of ourselves and of our responsibilities to society and environment, about the multiple meanings of home. Among the questions we will consider are the difference between the experiences of people who are at "home" and those who are "away," how one person's claim on home can be another's experience of being invaded, the interdependence of self and place, the multiple meanings of "environment." Readings by Gabriela Mistral, Pablo Neruda, Carmen Lyra, Jorge Gracia, Otavio Paz, Maria Lugones, among others.

Same as: OSPSANTG 28

**PHIL 30S. Justifying justice at home and abroad. 3 Units.**

It is difficult to read the news today without getting enmeshed in discussions about justice both at home and abroad. Whether it be sequestration, Wall Street regulations, health care reform, the use of drones in war, or humanitarian aid abroad that grabs your attention, there is no doubt that we are living in tumultuous times. What do you think when you read about the new restrictions on abortion in Arkansas? Or about the deregulation of marijuana in Colorado? Or about the abolition of capital punishment in Connecticut? To figure out how to frame answers to these kinds of questions, we shall look at some of the main topics in social and political philosophy: rights, property, justice, criminal punishment, humanitarian intervention and just war theory.

**PHIL 32S. Socrates: The Making of a Philosopher. 3 Units.**

Socrates is a key figure in the history of western philosophy. He is credited for inventing moral philosophy and for revolutionizing the way we think about and do philosophy. Moreover, his historical influence is often compared to that of Jesus and Buddha, partly because his life's mission was to benefit others, but also because his life and cause remain mysterious. Interest in Socrates tends to divide along these exact lines: some (like Xenophon) are more interested in the man, his life and his impact on his friends and fellow citizens; others (like Aristotle) are more interested in his contribution to philosophy, his views, arguments and methods. In this course, we will try to learn more about both parts of Socrates' career by examining the relation between them. We will start by focusing on what is characteristic of his life: What did he do? And why did he do the things he did? In particular, how did he become a philosopher and how did he develop his distinctive approach to philosophy, his own philosophical voice?.

**PHIL 34S. Good, Bad, and Rotten: The Philosophical Study of Moral Character. 3 Units.**

We ordinarily think there's a sense in which someone can be a good person, over and above doing well at her particular occupation (e.g., being a good firefighter), familial role (e.g., being a good sister), or political function (e.g., being a good citizen). But what does it take to be a good person, in this very general sense? And what about the opposite – what does it take to be a bad person? We also tend to feel strongly about whether others, or ourselves, are good or bad people. In particular, we blame people for being bad and praise them for being good. But only sometimes – if someone is bad only because, say, he had a traumatic childhood, then we tend to hold back from blaming him. So, what must be true if someone really is deserving of blame for being bad (or, of praise for being good)? And, finally, there seems to be an important difference between being bad and being completely deprived, or evil. But what underlies this difference? What distinguishes everyday badness from extraordinary evil? This course is dedicated to learning how to look for and evaluate answers to these questions. Readings will be pulled from historical and contemporary sources, including Aristotle, Augustine, Immanuel Kant, Hannah Arendt, Philippa Foot, Bernard Williams, Susan Wolf, Gary Watson, and Nomy Arpaly.

**PHIL 41Q. Truth. 3 Units.**

Preference to sophomores. Central issues animating current work in the philosophy of truth. What is truth? What is it about a statement or judgment that makes it true rather than false? Are there any propositions that are neither true nor false? Could truth be relative to individuals or communities? Do people have different notions of truth for different enterprises such as mathematics and ethics? Might truth be a matter of degree? Sources include the instructor's book manuscript and other contemporary writers.

**PHIL 42. Philosophy through Theater: Choice and Chance. 4 Units.**

Dramatic literature as a window into philosophical work on freedom of the will and indeterminism. Students participate in the production of original one-act plays.

**PHIL 43S. Happiness: Positive Psychology and Philosophy. 3 Units.**

The connection between research in positive psychology to determine what happiness is and the conditions under which human beings are happy with issues in moral philosophy regarding whether we should aim at happiness or think of it as a good. The assumptions about happiness made by positive psychologists. The philosophical insight into the question of how people should live that is gained by looking at the empirical results provide by psychologists.

**PHIL 45S. Is it always good to 'be yourself'? Issues in Ethics and Moral Psychology. 3 Units.**

It may seem obvious that it is good to 'be yourself,' to be 'who you really are,' or to do what you 'really' want to do 'but is it? Some believe that we are our true, or real, selves when we act on our values, what we love, or what we care most about. But if that is true, then is it still good to be yourself when what you value and care most about involves a commitment to acts of terrorism, torturing others, or a life of pain and boredom? We will look at contemporary philosophical attempts to make sense of the idea of 'being yourself,' and what the nature of the value of this authenticity is." Authors include Bratman, Frankfurt, Korsgaard, Millgram and Williams.

**PHIL 49. Survey of Formal Methods. 4 Units.**

Survey of important formal methods used in philosophy. The course covers the basics of propositional and elementary predicate logic, probability and decision theory, game theory, and statistics, highlighting philosophical issues and applications. Specific topics include the languages of propositional and predicate logic and their interpretations, rationality arguments for the probability axioms, Nash equilibrium and dominance reasoning, and the meaning of statistical significance tests. Assessment is through a combination of problem sets and short-answer questions designed to solidify competence with the mathematical tools and to test conceptual understanding. This course replaces PHIL 50.

**PHIL 50. Introductory Logic. 4 Units.**

Propositional and predicate logic; emphasis is on translating English sentences into logical symbols and constructing derivations of valid arguments.

**PHIL 50S. Truth, Proof and Probability: An Introduction To Philosophical and Logical Reasoning. 3 Units.**

Under what conditions does a set of true claims guarantee or make probable a particular conclusion? In this course we study rigorous tools and techniques supporting good reasoning, covering topics of particular significance to modern philosophy and logic. Contemporary philosophy continues a traditional focus on foundational problems related to value, inquiry, mind and reality, but with modern subject matter (often engaging natural, social and mathematical science) and rigorous methods, including set theory, probability theory and formal logic. This course introduces such methods, with a focus on core conceptual distinctions, motivations and debates, and basic practical skills. The presentation will be rigorous, but overly technical topics are avoided. Topics: propositional logic; valid argument forms; truth tables; Russell's paradox; infinite sets; kinds of truth; possibility and necessity; basic probability theory; subjective versus objective probability; Bayes' rule; correlation and causation. No previous philosophical or mathematical training pre-supposed. Appreciation of precise thinking an advantage. Useful preparation for relevant topics in mathematics, computer science, linguistics, economics and statistics.

**PHIL 59S. Philosophy of Mathematics. 3 Units.**

The purpose of this course is to explore some of the themes and questions in philosophy of mathematical practice. These will include: what is the role of mathematics in natural sciences? Can we find an explanation for the applicability of mathematics or is it a completely unreasonable phenomenon? Do mathematicians invent or discover concepts? Either way, how do mathematicians develop new concepts? Is there such thing as mathematical explanation? Are there revolutions in mathematics? These questions are studied in connection to a close historical study of developments in mathematics, and the actual practice of mathematicians.

**PHIL 60. Introduction to Philosophy of Science. 5 Units.**

The nature of scientific knowledge: evidence and confirmation; scientific explanation; models and theories; objectivity; science, society, and values.

Same as: HPS 60

**PHIL 61. Philosophy and the Scientific Revolution. 5 Units.**

Galileo's defense of the Copernican world-system that initiated the scientific revolution of the 17th century, led to conflict between science and religion, and influenced the development of modern philosophy. Readings focus on Galileo and Descartes.

Same as: HPS 61

**PHIL 61S. A Meaningful Life in a Physical World. 3 Units.**

Questions about the meaning of life have occupied a central place in philosophical thought throughout its history. However, the scientific view of human beings as essentially complex, evolutionarily-designed biological systems in a purely material world (one governed by fundamental physical laws) seemingly puts pressure on the idea that humans can live a life of genuine meaningfulness. The guiding questions of this course will be: Is there the prospect of our living truly meaningful lives even if we are just complex biological systems? If so, what kind(s) of meaning can we hope to achieve? If not, how should we live our lives? In exploring these questions, we will read works by philosophers (and psychologists) approaching these questions from many different traditions and perspectives. Possible authors will include Plato, Hobbes, Rousseau, Nietzsche, Sartre, Camus, Sigmund Freud, Viktor Frankl, Bertrand Russell, John Searle, Owen Flanagan, Daniel Dennett, and Ruth Millikan.

**PHIL 63S. Introduction to Bioethics. 3 Units.**

In this course we will explore ethical questions that arise in health care and the biological sciences. We will consider the following issues (perhaps together with others): allocation of health-care resources, the responsibilities of doctors to patients, the distinction between killing someone and letting them die, medically-assisted suicide, abortion, and the use of technologies for genetic screening and manipulation. Throughout, our focus will be on moral questions about how decisions in these areas should be made.

**PHIL 64S. Introduction to Environmental Philosophy. 3 Units.**

Environmental problems define and dominate the times. Climate Change threatens to displace and impoverish millions of people, species extinctions promise to reach unprecedented numbers, and sustainability has become a buzzword in discussions of responsible business practices. In this course we will explore some of the most pivotal environmental issues facing us today using the tools of philosophy. Together we'll ask questions such as: Are individuals or governments responsible for solving environmental problems? What objects should we care about in the natural world (animals, living things, ecosystems?), and what do we do when environmental problems force us to make tough choices in the face of competing values? Do we have responsibilities to future generations? This course will provide a foundation for thinking about these questions and for facing our environmental problems head on.

**PHIL 65S. Technology and the Good Life. 3 Units.**

Can we engineer our way to happiness? Should we try to? An introduction to select issues in engineering ethics, the course examines various threats to human welfare, environmental catastrophe, social injustice, the limitations of "human nature" that could be amenable to engineering solutions. We consider whether it is ethically permissible to address these threats via engineering (referring to various conceptions of the good life for human beings: hedonism, liberalism, virtue ethics) and what the costs of such solutions are.

**PHIL 71H. Philosophy and the Real World. 2 Units.**

Introduction to the humanities as an applied discipline; how literary and philosophical ideas illuminate and change how people live their lives as individuals and members of society. Focus is on short texts that illustrate how literary and philosophical ideas arise from social problems and attempt to confront those problems. Methods and approaches: how to read such texts; how to make arguments about them; how such texts shed light on contemporary situations.

**PHIL 71Q. Emerging Issues in Neuroethics. 3 Units.**

What is the mind? Today, most philosophers and neuroscientists believe it is, in one way or another, just the brain. Brain research is progressing at a staggering pace. Neuroimaging technology seems to be closing in on thought identification, i.e. determining an individual's thought content merely by scanning the brain. Do we have a right to keep our thoughts private or is it permissible to use imaging technologies, perhaps in judicial settings, to identify someone's thoughts? What happens to our concepts of moral responsibility when a brain scan reveals abnormalities in the brain? Do these findings have bearing on our understanding of free will? Commonplace drugs can prevent the forming of memories of painful events. Should we take these drugs to shield ourselves from traumatic memories or is it good for us to remember unpleasant events in order to learn and grow from them? Neurotechnology and pharmacology that enhances cognition is advancing rapidly. Is manipulating our brains into smarter, more efficient ones ethical? These are some of the questions we will consider in this course on the ethics of neuroscience that will allow you to critically assess complicated, cutting edge issues.

**PHIL 72. Contemporary Moral Problems. 4-5 Units.**

This course addresses moral issues that play a major role in contemporary public discourse. The course aims to encourage students to consider moral problems in a reflective, systematic manner, and to equip students with skills that will enable them to do so. Questions to be addressed include: Do rich countries have an obligation to accept refugees from other parts of the world? Do such obligations conflict with the right of individuals to protect their culture? Is there anything principally wrong in the use of drones for purposes of warfare? Do we have obligations to the environment, and if so why? What is racism and what makes it wrong? And what are feminist ideals? Same as: ETHICSOC 185M, POLISCI 134P

**PHIL 73. Collective Action Problems: Ethics, Politics, & Culture. 3-4 Units.**

When acting on one's own, it is often easy to know what the morally right action is. But many moral problems arise from the fact that many individuals act together leading to dilemmas, in which what is individually rational is collectively irrational. For example, the collective result of our consumption decisions is to warm the planet. But individual decisions seem to have no effect on climate change. Such collective action situations give rise to moral questions: Are individuals required to take their contributions to wider systemic effects into account? Does it make a difference whether or not others are doing their share, for example with regard to fighting global poverty? In many cases, the best solution for collective action problems are institutions. But when these are deficient or non-existing, what should individuals do? Do they have a duty to assist in building institutions, and what would this duty imply in practical terms? Interdisciplinary perspective, reading authors from philosophy, politics, economics and sociology such as Elinor Ostrom, Peter Singer or Liam Murphy, relating to current questions such as global poverty and climate change. No background assumed; no mathematical work required. Same as: ETHICSOC 180M, POLISCI 131A, PUBLPOL 304A

**PHIL 74. Business Ethics. 4 Units.**

What do people mean when they say, "it's just business"? Do they mean that there are no moral norms in business or do they mean that there are special moral norms in business that differ from those of personal relationships and other spheres of social activity? In this class we will examine ethical questions that arise in the domain of business. We will ask, for example: What does the market reward and what should it reward? What are the moral responsibilities of a business owner in a competitive environment? Is it acceptable to employ "sweatshop labor"? How do the moral responsibilities of a business owner differ from that of a policy maker? What information does a seller (or buyer) have a moral duty to disclose? In real estate, is a strategic default morally wrong? How much government regulation of Wall Street is morally justified? We will use the writings of Plato, Aristotle, Cicero, J. S. Mill, Marx, Jevons and Menger, Hayek, Walzer, and Sandel, among others, to help us answer these questions. We will see, for example, what Aristotle thought about day trading.

Same as: ETHICSOC 182M

**PHIL 74A. Ethics in a Human Life. 4 Units.**

Ethical questions pervade a human life from before a person is conceived until after she dies, and at every point in between. This course raises a series of ethical questions, following along the path of a person's life - questions that arise before, during, and after she lives it. We will explore distinctive questions that a life presents at each of several familiar stages: prior to birth, childhood, adulthood, death, and even beyond. We will consider how some philosophers have tried to answer these questions, and we will think about how answering them might help us form a better understanding of the ethical shape of a human life as a whole.

Same as: HUMBIO 74

**PHIL 75S. Liberty and Equality. 3 Units.**

This course concerns recent attempts by social contract theorists to reconcile liberty and equality. We would begin by looking at Rawls's attempt to give due respect to both liberty and equality in his two principles. We would then look at criticisms of his attempt from Nozick, G.A. Cohen, possibly Mills and Okin or Pateman. I again would structure each session around a question, such as: Is there a conflict between equality and liberty? What is liberty? Equality. Equality of opportunity? Or equality of condition? What tools do these social contract theorists offer for criticizing racial or gender inequality?

**PHIL 76. Introduction to Global Justice. 4 Units.**

This course provides an overview of core ethical problems in international politics, with special emphasis on the question of what demands justice imposes on institutions and agents acting in a global context. The course is divided into three sections. The first investigates the content of global justice, and comprises of readings from contemporary political theorists and philosophers who write within the liberal contractualist, utilitarian, cosmopolitan, and nationalist traditions. The second part of the course looks at the obligations which global justice generates in relation to five issues of international concern - global poverty, climate change, immigration, warfare, and well-being of women. The final section of the course asks whether a democratic international order is necessary for global justice to be realized.

Same as: ETHICSOC 136R, INTNLREL 136R, POLISCI 136R, POLISCI 336

**PHIL 77S. Philosophy of Religion. 3 Units.**

(Formerly RELIGST 62S) Explores fundamental questions about the existence of God, free will and determinism, faith and reason, through traditional philosophical texts. Course is divided into four sections: first asks what is religion; second surveys the western philosophical tradition from Boethius through Descartes, Hume, Kant, and Kierkegaard regarding the foundation for theist beliefs; third investigates questions mystical experience raises through both western and Buddhist materials; and fourth takes up the ethics of belief, what we have a right to believe, through the Clifford and James debate and the opposing stances of Camus and Pascal.

Same as: RELIGST 36

**PHIL 80. Mind, Matter, and Meaning. 5 Units.**

Intensive study of central topics in metaphysics, epistemology, philosophy of language and mind in preparation for advanced courses in philosophy. Emphasis on development of analytical writing skills. Prerequisite: PHIL 1.

**PHIL 81. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman, Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: CLASSICS 42, COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, ITALIAN 181, SLAVIC 181

**PHIL 90A. The Philosophy of John Perry. 4 Units.**

John Perry is among the most influential philosophers of the last several decades, making important contributions to the philosophy of language, metaphysics, and the philosophy of mind. Focus on Perry's work on indexicality, belief reports, reference, pragmatics, identity, personal identity, modality, and consciousness. Perry's work in these areas will be studied in conjunction with that of some key figures in the surrounding literatures, including Kaplan, Lewis, Stalnaker, Kripke, and Chalmers.

**PHIL 90B. The Ethics of War. 4 Units.**

Issues both in contemporary just war theory and political philosophy. Relevant questions include: Can conscription ever be justified? If not, is there anything wrong with targeting poor people as part of efforts to recruit a 'volunteer' military? If, during war itself, combatants act in ways prohibited by the moral requirements governing war's conduct, then does it make any moral difference whether they were acting as ordered? And how do we identify these moral requirements in the first place? For example, what distinguishes a legitimate target from an illegitimate one? What determines whether military action is disproportionate? What, if anything, is morally distinctive about terrorism? Explores the complexities behind these questions and others, with a view to evaluating the potential answers to them.

**PHIL 90C. Predicting the Future: Puzzles of Induction. 4 Units.**

Can we know that the future is likely to resemble the past? Do we have reason to believe that the Sun is even remotely likely to rise again tomorrow? Are we rationally justified in accepting the confident predictions of science and commonsense, based on well-observed regularities? Consider several paradoxes of induction (that is, extrapolation from observed to unobserved), including those raised by Hume, Hempel, and Goodman, the Doomsday and Sleeping Beauty paradoxes, as well as some attempts to solve or cope with them.

**PHIL 90D. What do Philosophers do?. 4 Units.**

.

**PHIL 90E. Ethics in Real Life: How Philosophy Can Make Us Better People. 4 Units.**

Socrates thought that philosophy was supposed to be practical, but most of the philosophy we do today is anything but. This course will convince you that philosophy actually is useful outside of the classroom—and can have a real impact on your everyday decisions and how to live your life. We'll grapple with tough practical questions such as: 'Is it selfish if I choose to have biological children instead of adopting kids who need homes?' 'Am I behaving badly if I don't wear a helmet when I ride my bike?' 'Should I major in a subject that will help me make a lot of money so I can then donate most of it to overseas aid instead of choosing a major that will make me happy?' Throughout the course, we will discuss philosophical questions about blame, impartiality, the force of different 'shoulds,' and whether there are such things as universal moral rules that apply to everyone.

Same as: ETHICSOC 203R

**PHIL 90G. Native American Philosophy. 4 Units.**

Examine traditional philosophical questions like "How do we know?" "What exists?" "What is a person?" and "What is the good life?" from the perspectives of classical and contemporary Native American thinkers. We will look at Native American beliefs about respect for persons and places; reactions to colonial doctrines of conversion, treaties, and removal; and the importance of the themes of circularity and performance in classical and contemporary Native philosophical thought. Also of importance will be to contrast some Native American approaches to philosophical questions against Western attempts to answer these same questions. How are the approaches the same? How are they different? What assumptions about the natures of reality or humanity account for the similarities or differences?.

**PHIL 90J. Is it Always Good to "Be Yourself?" - Issues at the Intersection of Ethics and Moral Psychology. 4 Units.**

It may seem obvious that it is always good to 'be yourself,' to be who you 'really' are, or to do what you 'really' want to do - but is it? Some philosophers believe that we are our 'true,' or 'real,' selves when we act on our values, or what we care most about. But if that is true, then is it still good to be yourself when what you value and care most about involves a commitment to acts of terrorism, torturing others, or a life of pain and boredom? We will look at contemporary philosophical attempts to make sense of the idea of 'being yourself,' and potential reasons in favor of its supposed value. Authors include Bratman, Frankfurt, Korsgaard, Millgram and Williams.

**PHIL 90K. REALISM. 4 Units.**

The purpose of this course is to explore questions concerning Scientific and Mathematical Realism. We ask, do entities to which scientific theories refer REALLY exist? For instance, do electrons or genes exist? How about mathematical entities? Do numbers or vectors exist? And if so, do they exist independent of our minds?.

**PHIL 90L. Probability and the Law. 4 Units.**

What does it mean to prove guilt beyond a reasonable doubt? Can we interpret legal standards of proof probabilistically? What is the role of probability and statistics in the courtroom? How are quantitative methods changing legal proceedings? Courtroom movies, criminal and civil cases, and academic scholarship will help us address these and related questions. No statistical or legal background is expected.

**PHIL 90N. The Nature of Morality. 4 Units.**

We make moral claims. We say things like "Kicking dogs for fun is wrong." But what is the function of such claims? To describe the world? To prescribe ways of acting? To express our feelings? Moreover, can such claims ever be true? If they cannot, would this be a problem? If they can, what makes them true? God's will? Evolution? Human conventions? Rationality? What, in the end, is the nature of this practice that we all engage in and that we call morality? We will explore some of the most influential answers to these questions. The course should serve as a good introduction to contemporary metaethics (with a slight focus on expressivist theories).

**PHIL 90P. Is logic a source of metaphysical knowledge?. 4 Units.**

The most characteristic feature of analytic metaphysics is the prominent role that it assigns to logic, and analytic philosophy owes its existence to the revolutionary logical developments that occurred in the late 19th century. But what, exactly, is the relationship between logic and metaphysics? How did developments in the study of inference bring about radical changes in philosophers' approach and answers to questions about the nature of existence? Can one infer metaphysical truths directly from truths of logic, or does logic merely provide philosophers with a helpful tool for analyzing metaphysical issues? This course will begin with a brief study of Kant's conception of the relationship between logic and metaphysics, and then explore this relationship in the work of early analytic philosophers, particularly Gottlob Frege. In the final two weeks of the course, we will read several contemporary metaphysical papers on a subject selected by the students. Our discussion of those papers will focus on the role that logic plays and how that role may have changed since the early analytic period.

**PHIL 90S. Philosophical Dimensions of Cognitive Science. 4 Units.**

What is consciousness? What is the relation between the mind and the body? How does the mind represent the world around it? Are our minds just sophisticated computers? If they are, what functions as the 1s and 0s in our brains? Or are our minds something else altogether? This course will look at the philosophical foundations of cognitive science with a particular focus on cognitive architecture. In addition we will consider the nature of mental representation and the challenges presented by subjective experience.

**PHIL 90V. Children, and what to do with them. 4 Units.**

In this course, we investigate a number of ethical questions that arise in relation to children. Is it morally appropriate to create children, knowing that, over the course of their lives, those children will inevitably be subjected to a range of serious harms? Is it permissible for parents to favor their own children, even if their children are already advantaged in comparison to many other children? Who should decide how children are educated, the government, the parents, or someone else?

**PHIL 99. Minds and Machines. 4 Units.**

An overview of the interdisciplinary study of cognition, information, communication, and language, with an emphasis on foundational issues: What are minds? What is computation? What are rationality and intelligence? Can we predict human behavior? Can computers be truly intelligent? How do people and technology interact, and how might they do so in the future? Lectures focus on how the methods of philosophy, mathematics, empirical research, and computational modeling are used to study minds and machines. Undergraduates considering a major in symbolic systems should take this course as early as possible in their program of study.

Same as: LINGUIST 144, PSYCH 35, SYMSYS 100

**PHIL 100. Greek Philosophy. 4 Units.**

We shall cover the major developments in Greek philosophical thought, focusing on Plato, Aristotle, and the Hellenistic schools (the Epicureans, the Stoics, and the Skeptics). Topics include epistemology, metaphysics, psychology, ethics and political theory.

**PHIL 101. Introduction to Medieval Philosophy. 4 Units.**

This course is an introduction to medieval moral philosophy, broadly construed. In addition to doctrines that we would nowadays readily think of as falling within the domain of ethics, we will be looking at closely related topics that might today be thought to belong more properly to metaphysics, the philosophy of religion, or the philosophy of human nature.

Same as: PHIL 201

**PHIL 102. Modern Philosophy, Descartes to Kant. 4 Units.**

Major figures in early modern philosophy in epistemology, metaphysics, and philosophy of mind. Writings by Descartes, Leibniz, Hume, and Kant.

**PHIL 102M. Fichte. 1-2 Unit.**

This three-day intensive mini-course will introduce the moral and political thought of Johann Gottlieb Fichte, the founder of the German idealist movement. The topics to be discussed are: Fichte's theory of subjectivity and transcendental idealism; Fichte's defense of radical freedom of the will; Fichte's transcendental deduction of other selves; the relation of right between rational beings and the foundations of political philosophy; Fichte's deduction of the moral law from the absolute freedom of the rational being; the application of the moral law through conscience. No previous acquaintance with Fichte's philosophy will be presupposed. Same as: PHIL 202M

**PHIL 103. 19th-Century Philosophy. 4 Units.**

Focus is on ethics and the philosophy of history. Works include Mill's *Utilitarianism*, Hegel's *The Philosophy of World History*, Marx's *Economic and Philosophic Manuscripts*, Kierkegaard's *The Sickness Unto Death*, and Nietzsche's *On the Genealogy of Morals*.

**PHIL 104. Philosophy of Religion. 4 Units.**

Key issues in the philosophy of religion. Topics include the relationship between faith and reason, the concept of God, proofs of God's existence, the meaning of religious language, arguments for and against divine command theory in ethics and the role of religious belief in a liberal society.

**PHIL 106. Ancient Skepticism. 4 Units.**

The ancient Pyrrhonian skeptics who think that for any claim there is no more reason to assert it than deny it and that a life without any beliefs is the best route to happiness. Some ancient opponents of the Pyrrhonian skeptics and some relations between ancient and modern skepticism.

Same as: PHIL 206

**PHIL 107. Early Plato. 4 Units.**

We shall focus on Plato's early or Socratic dialogues (e.g. the *Crito*, the *Gorgias*, and the *Protagoras*). In these dialogues, Plato focuses on ethics and ethical psychology without explicitly drawing on epistemological and metaphysical claims. We'll try to determine whether the Socrates of these dialogues is a purely destructive critic or whether he has a positive ethical view that he advances.

Same as: PHIL 207

**PHIL 107A. The Greeks on Irrationality. 2-4 Units.**

In this course, we shall examine the views of some central Greek philosophers (Plato, Aristotle, the Epicureans, and the Stoics) on the irrational and non-rational aspects of human life. What makes something irrational and what roles (negative and perhaps positive as well) does the irrational play in our lives? We shall examine their views on anger, fear, madness, love, pleasure and pain, sexual desire and so on. We shall also consider more briefly some depictions of these psychic items in ancient Greek literature.

Same as: PHIL 207A

**PHIL 107B. Plato's Metaphysics and Epistemology. 4 Units.**

We will read the *Theaetetus* and the *Parmenides*, and consider various definitions of knowledge, and metaphysical problems about the objects of knowledge, and a proposed method for examining and resolving such problems. Prerequisite: Philosophy 80 or consent of instructor.

Same as: PHIL 207B

**PHIL 107C. Plato's Timaeus. 4 Units.**

.

Same as: PHIL 207C

**PHIL 108. Aristotle's Metaphysics Book Alpha. 4 Units.**

An introduction both to Aristotle's own metaphysics and to his treatment of his predecessors on causality, included the early Ionian cosmologists, atomism, Pythagoreans, Heraclitus, Parmenides, Empedocles, Anaxagoras and Plato. Prerequisite: one course in ancient Greek philosophy.

Same as: PHIL 208

**PHIL 108A. Aristotelian Logic. 2-4 Units.**

A careful examination of Aristotle's syllogistic, with special emphasis on the interpretation of his modal syllogistic. This course will serve both as an introduction to ancient term logic and to the difference between sentential modal operators and modal modifiers to the copula. Topics will include the analysis of syllogisms into figures and moods, the reduction of 2nd and 3rd figure syllogisms to the first, the consistency of the modal syllogistic, models for the syllogistic, and de re versus de dicto modalities. For students with at least some introductory background in logic.

Same as: PHIL 208A

**PHIL 108B. Aristotle's Physics Book One. 4 Units.**

A chapter by chapter analysis of Aristotle's introductory discussions of physical theory. Topics to be considered include Aristotle's treatment of Eleatic monism, the role of opposites in pre-Socratic physics, the role of matter in physics, and an analysis of the elements of changing objects into form, privation and a subject.

Same as: PHIL 208B

**PHIL 109. Topics in Ancient Philosophy: Plato and Aristotle on Art and Rhetoric. 4 Units.**

Plato's and Aristotle's views on the nature of art and rhetoric and their connections with the emotions, reason and the good life. Readings include Plato's *Gorgias*, *Ion* and parts of the *Republic* and the *Laws* and Aristotle's *Poetics* and *Rhetoric*.

Same as: PHIL 209

**PHIL 109A. Special Topics in Ancient Philosophy: Aristotle's Metaphysics Zeta. 4 Units.**

Same as: PHIL 209A

**PHIL 109B. Greek philosophers read their ancestors: Intro to the ancient reception of Presocratic philosophy. 4 Units.**

The first Greek philosophers are known to us only through fragments of their original works, generally few in number and transmitted by later authors, as well as through a set of testimonies covering a thousand years and more. Thus it is crucial, in order to understand archaic thought, to get a sense of how they were read by those to whom we owe their transmission. What was their aim, their method, their presuppositions or prejudices? The course will employ this perspective to examine authors such as Plato, Aristotle, Theophrastus, Diogenes Laertius, Simplicius, and among others. We shall also reflect, on the basis of the paradigmatic case of the Presocratics, on some of the more general problems raised by literary and philosophical approaches to the notion of reception.

Same as: PHIL 209B

**PHIL 109C. Aristotle's cosmology and theology. 4 Units.**

PHIL 109C/209C now meets in Raubitschek Room, Green Library Room 351. Undergrads please sign up for 109C; grads sign up for 209C.

Same as: PHIL 209C

**PHIL 110. Plato's Republic. 4 Units.**

The *Republic* is one most famous and influential texts in the history of Western philosophy. We shall read in its entirety closely (along with some other related Platonic texts) focusing on its epistemology, ethics, metaphysics, philosophy of art, and political philosophy.

Same as: PHIL 210

**PHIL 110C. The Stoics on Freedom and Determinism. 4 Units.**

We will investigate ancient Stoic conceptions of causality and freedom, their arguments for causal determinism, and ancient attacks on and defenses of compatibilism.

Same as: PHIL 210C

**PHIL 111. Aristotle's Logic. 4 Units.**

Same as: PHIL 211

**PHIL 112. Causality in Ancient Greek Philosophy. 4 Units.**

Same as: PHIL 212

**PHIL 113. Hellenistic Philosophy. 4 Units.**

Epicureans, skeptics, and stoics on epistemology, ethics, metaphysics, and psychology.

Same as: PHIL 213

**PHIL 115. Problems in Medieval Philosophy: Islamic Aristotelianism and Western Scholasticism. 3-5 Units.**

The western world adopted Aristotle's metaphysics and natural philosophy as the foundation of its educational system and scholarly life between 1210 and 1255. Christian Europe was thereby following the example set by Islam in Spain and the Near East. Today some people believe that this development was independent, and others think that the scholastics copied even their methods from Arabic philosophers.

Historical evaluation of those claims.

Same as: PHIL 215

**PHIL 116. Aquinas. 4 Units.**

This course is an introduction to the metaphysical thought of St. Thomas Aquinas (1225 - 1274), one of the most important and influential philosopher-theologians of the High Middle Ages. Readings will be drawn primarily from the "*Summa theologiae*."

Same as: PHIL 216

**PHIL 117. Descartes. 4 Units.**

(Formerly 121/221.) Descartes's philosophical writings on rules for the direction of the mind, method, innate ideas and ideas of the senses, mind, God, eternal truths, and the material world.

Same as: PHIL 217

**PHIL 118. British Empiricism, 1660s-1730s. 4 Units.**

Focus is on the big three British Empiricists and their developments of thought based on the foundational role that they give to sensory perception or experience as the source of knowledge. Topics may include the theory of ideas, idealism, personal identity, human agency, moral motivation, causation, and induction. Readings predominantly from Locke, Berkeley, and Hume.

**PHIL 118A. Origins of Empiricism: Gassendi, Locke, and Berkeley. 4 Units.**

Particular light is shed on both the strengths and weaknesses of empiricism by studying it as it first arose during the 17th century revolution in philosophy and the sciences initiated by Descartes. Three philosophers of that period helped to advance empiricism: Pierre Gassendi (1592-1655), John Locke (1632-1704), and George Berkeley (1685-1753). A brief introduction to Descartes is followed by Gassendi's reaction to Descartes and his influence on Locke; Locke's theory of ideas, mind, language, reality, and natural philosophy expounded in his *An Essay concerning Human Understanding* (Fourth Edition, 1689); and Berkeley's later reaction to Locke.

Same as: PHIL 218A

**PHIL 119. Rationalists. 4 Units.**

Developments in 17th-century continental philosophy. Descartes's views on mind, necessity, and knowledge. Spinoza and Leibniz emphasizing their own doctrines and their criticism of their predecessors. Prerequisite: 102.

Same as: PHIL 219

**PHIL 120A. The Leibniz-Clarke Correspondence. 4 Units.**

Correspondence on metaphysics, theology, and science.

Same as: PHIL 220A

**PHIL 120W. Richard Rufus on Aristotle's Metaphysics: Ontology, Unity, Universals, & Individuation. 1-2 Unit.**

Mini-Course taught by Rega Wood in association with Santiago Melo Arias & Professors Alan Code & Calvin Normore. Code, Wood, & Melo Arias have spent the last 6 months intensively studying Richard Rufus of Cornwall's commentary on Aristotle's Metaphysics Zeta, Eta, & Theta. This June we will present Rufus' views on ontology, unity, & universals. There will be 6 two hour sessions on June, 4, 5, & 6 (Thurs - Saturday), 10-12 noon, 2-4 pm. Readings will be taken chiefly from Melo Arias' new translations of Rufus' circa 1238 commentary; other readings, from Aristotle and Averroes. We will consider the difference between the treatment of definition, essence and being in logic and in metaphysics, the sense in which accidents have definitions, the unity of genus and differentia in the definitions of substances, the unity of form and proximate matter in hylomorphic compounds, and the unity of the parts of the rational soul. In this context we will discuss the formal distinction pioneered by Rufus as a description of differences in formal predication consistent with real sameness. Richard Rufus was the first Western professor to lecture on Aristotle's metaphysics in Medieval Europe. Same as: PHIL 220W

**PHIL 122. Hume. 4 Units.**

(Formerly 120/220; graduate students enroll in 222.) Hume's theoretical philosophy, in particular, skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self. Same as: PHIL 222

**PHIL 124. Topics in Early Modern Philosophy. 4 Units.**

Philosophical views of the highly influential rationalist philosophers Benedict (or Baruch) Spinoza (1632-1677) and G. W. Leibniz (1646-1716). Topics to be treated include: the nature of God and the question of his providential care for human beings, the concept of substance and its extension, the ontological relation of finite beings to God, the mental and its relation to the corporeal, and the nature of human freedom.

**PHIL 125. Kant's First Critique. 4 Units.**

(Graduate students register for 225.) The founding work of Kant's critical philosophy emphasizing his contributions to metaphysics and epistemology. His attempts to limit metaphysics to the objects of experience. Prerequisite: course dealing with systematic issues in metaphysics or epistemology, or with the history of modern philosophy. Same as: PHIL 225

**PHIL 126B. Kant's Ethical Theory. 2-4 Units.**

(Graduate students register for 226B.) Kant's moral philosophy based primarily on the *Groundwork of Metaphysics of Morals*, *Critique of Practical Reason*, and *The Metaphysics of Morals*. Same as: PHIL 226B

**PHIL 127. Kant's Ethics. 4 Units.**

A study of Kant's ethical thought, focusing on *The Groundwork of the Metaphysics of Morals*, *The Critique of Practical Reason*, and *The Metaphysics of Morals*. Prerequisite: Phil. 2, Phil. 170, or equivalent (consult the instructor). Designed for undergraduate department majors and graduate students. Same as: PHIL 227

**PHIL 127A. Kant's Value Theory. 4 Units.**

(Graduate students register for 227A.) The role of autonomy, principled rational self-governance, in Kant's account of the norms to which human beings are answerable as moral agents, citizens, empirical inquirers, and religious believers. Relations between moral values (goodness, rightness) and aesthetic values (beauty, sublimity). Same as: PHIL 227A

**PHIL 127B. Kant's Anthropology and Philosophy of History. 4 Units.**

Kant's conception of anthropology or human nature, based on his philosophy of history, which influenced and anticipated 18th- and 19th-century philosophers of history such as Herder, Fichte, Hegel, and Marx. Texts include *Idea for a Universal History*, *Conjectural Beginning of Human History*, and *Anthropology from a Pragmatic Point of View*. Topics include: Kant's pragmatic approach to the study of human nature; the difficulty of human self knowledge; the role of regulative and teleological principles in studying human history; and Kant's theory of race. Same as: PHIL 227B

**PHIL 127M. Richard Rufus of Cornwall. 1-2 Unit.**

Metaphysics and Epistemology, readings from Rufus' newly translated *Contra Averroem & Speculum animae*. In these works, Rufus solves a problem for Aristotelian epistemology that was to bedevil later scolastics such as Thomas Aquinas. He also states for the first time a theory of individuation by form that was subsequently adopted by Duns Scotus. Though Scotus like Rufus preferred to speak of individual forms, the theory itself is often identified by a term very seldom used by Scotus, 'haecitas' or thisness. Taught jointly by Rega Wood and Calvin Normore. Same as: PHIL 227M

**PHIL 128. Fichte's Ethics. 4 Units.**

(Graduate students register for 228.) The founder of the German Idealist movement who adopted but revised Kant's project of transcendental philosophy basing it on the principle of awareness of free self-activity. The awareness of other selves and of ethical relations to them as a necessary condition for self-awareness. His writings from 1793-98 emphasizing the place of intersubjectivity in his theory of experience. Same as: PHIL 228

**PHIL 130. Hegel. 4 Units.**

(Formerly 122/222; graduate students register for 230.) Introduction to Hegel's philosophy, emphasizing his moral and political philosophy, through study of his last major work (1821). May be repeated for credit. Prerequisite: course in the history of modern philosophy. Same as: PHIL 230

**PHIL 131W. Kant's Theory of Law and Justice. 1-2 Unit.**

This course will look at Kant's theory of right or law (Recht) and its implications for morality and politics. The topics we will discuss are: the difference between right and ethics in Kant's metaphysics of morals; the relation of law to property and morality; the moral obligations of politicians as holders of rightful authority; and the standards of right as they apply to international relations and war. Same as: PHIL 231W

**PHIL 132W. Mini Course: Topics in Kant's Ethics. 1-2 Unit.**

This mini-course will deal with several selected topics relating to Kant's ethics: (1) Kant's formulas of the moral law, their meaning and their relation to one another; (2) Kant's concept of imperfect (wide, meritorious) duties and its role in his ethical theory; (3) the place of feeling, emotion, desire and inclination, their relation to our empirical nature and to human reason, in Kant's moral psychology; and (4) the place of duties regarding animals and other non-human beings in Kant's ethical theory. There will be six sessions, each two hours in length. Either the instructor or one of the guest lecturers will be in charge of each session, which will consist in part of a presentation by the person in charge and partly of discussion. Instructor: Allen Wood (Indiana University/Stanford University); guest lecturers: Barbara Herman (UCLA), Janelle DeWitt (Indiana University). Course meets Monday, Tuesday, Wednesday, June 6, 7, 8, 2016. May be repeat for credit. Same as: PHIL 232W

**PHIL 133S. Heidegger and Daoism: Differences and Dialogue. 5 Units.**

The new paradigm for understanding Heidegger makes possible a fresh look at his long-standing interest in Daoism. Part One: a radical recasting of Heidegger's thought, including his readings of the Presocratics (6th century BCE). In light of that, Part Two: a reading of Laozi's *Dao De Jing* / *Tao Te Ching* (6th century BCE). Permission of instructor required. Same as: RELIGST 181

**PHIL 133T. Atheism: Hegel to Heidegger. 5 Units.**

The radical changes in ideas of God between Hegel and Heidegger, arguing that their questions about theism and atheism are still pertinent today. Texts from Hegel, Feuerbach, Marx, Nietzsche, and Heidegger: on God, history, and the social dimensions of human nature. N.B.: Class size limited. Apply early at [tsheehan@stanford.edu](mailto:tsheehan@stanford.edu). Same as: RELIGST 183

**PHIL 134. Phenomenology and Intersubjectivity. 4 Units.**

(Graduate students register for 234.) Readings from Husserl, Stein, Heidegger, Sartre, and Merleau-Ponty on subjects related to awareness of others. Topics include solipsism, collective experience, empathy, and objectification of the other. Same as: PHIL 234

**PHIL 135. Existentialism. 4 Units.**

Focus is on the existentialist preoccupation with human freedom. What constitutes authentic individuality? What is one's relation to the divine? How can one live a meaningful life? What is the significance of death? A rethinking of the traditional problem of freedom and determinism in readings from Rousseau, Kierkegaard, and Nietzsche, and the extension of these ideas by Sartre, Beauvoir, and Camus, including their social and political consequences in light of 20th-century fascism and feminism. Same as: PHIL 235

**PHIL 136. History of Analytic Philosophy. 4 Units.**

(Formerly 147/247; graduate students register for 236.) Theories of knowledge in Frege, Carnap, and Quine. Emphasis is on conceptions of analyticity and treatment of logic and mathematics. Prerequisite: 50 and one course numbered 150-165 or 181-90. Same as: PHIL 236

**PHIL 137. Wittgenstein. 4 Units.**

(Graduate students register for 237.) An exploration of Wittgenstein's changing views about meaning, mind, knowledge, and the nature of philosophical perplexity and philosophical insight, focusing on the *Tractatus Logico-Philosophicus* and *Philosophical Investigations*. Same as: PHIL 237

**PHIL 138. Recent European Philosophy: Between Nature and History. 4 Units.**

A critical introduction to the novel understandings of time, language, and cultural power developed by 20th-century continental thinkers, with close attention to work by Heidegger, Saussure, Benjamin, and Foucault. Same as: PHIL 238

**PHIL 143. Quine. 4 Units.**

(Formerly 183/283; graduate students register for 243.) The philosophy of Quine: meaning and communication; analyticity, modality, reference, and ontology; theory and evidence; naturalism; mind and the mental. Same as: PHIL 243

**PHIL 150. Mathematical Logic. 4 Units.**

An introduction to the concepts and techniques used in mathematical logic, focusing on propositional, modal, and predicate logic. Highlights connections with philosophy, mathematics, computer science, linguistics, and neighboring fields. Same as: PHIL 250

**PHIL 150E. Logic in Action: A New Introduction to Logic. 4 Units.**

A new introduction to logic, covering propositional, modal, and first-order logic, with special attention to major applications in describing information and information-driven action. Highlights connections with philosophy, mathematics, computer science, linguistics, and neighboring fields. Based on the open source course 'Logic in Action,' available online at <http://www.logicinaction.org/>. nFulfills the undergraduate philosophy logic requirement.

**PHIL 150X. Mathematical Logic. 2 Units.**

Equivalent to the second half of 150. Students attend the first meeting of 150 and rejoin the class on October 30. Prerequisite: CS 103A or X, or PHIL 50.

**PHIL 151. Metalogic. 4 Units.**

(Formerly 160A.) The syntax and semantics of sentential and first-order logic. Concepts of model theory. Gödel's completeness theorem and its consequences: the Löwenheim-Skolem theorem and the compactness theorem. Prerequisite: 150 or consent of instructor. Same as: PHIL 251

**PHIL 151A. Recursion Theory. 4 Units.**

Computable functions, Turing degrees, generalized computability and definability. "What does it mean for a function from the natural numbers to themselves to be computable?" and "How can noncomputable functions be classified into a hierarchy based on their level of noncomputability?". Theory of relative computability, reducibility notions and degree structures. Prerequisite is PHIL 150, or PHIL 151 or CS 103. Same as: PHIL 251A

**PHIL 152. Computability and Logic. 4 Units.**

Approaches to effective computation: recursive functions, register machines, and Turing machines. Proof of their equivalence, discussion of Church's thesis. Elementary recursion theory. These techniques used to prove Gödel's incompleteness theorem for arithmetic, whose technical and philosophical repercussions are surveyed. Prerequisite: 151. Same as: PHIL 252

**PHIL 153. Feminist Theories and Methods Across the Disciplines. 2-5 Units.**

(Graduate Students register for PHIL 253 or FEMGEN 203) Concepts and questions distinctive of feminist and LGBT scholarship and how they shape research: gender, intersectionality, disciplinary and interdisciplinarity, standpoint, "queering," postmodern critiques, postcolonial critiques. nPrerequisites: Feminist Studies 101 or equivalent with consent of instructor. Same as: FEMGEN 103, FEMGEN 203, PHIL 253

**PHIL 154. Modal Logic. 4 Units.**

(Graduate students register for 254.) Syntax and semantics of modal logic and its basic theory: including expressive power, axiomatic completeness, correspondence, and complexity. Applications to topics in philosophy, computer science, mathematics, linguistics, and game theory. Prerequisite: 150 or preferably 151. Same as: PHIL 254

**PHIL 155. General Interest Topics in Mathematical Logic. 4 Units.**

Introduction to formalization using language of logic and to problems of philosophical logic and computer science that can be handled this way. Propositional calculus, Sudoku puzzles, resolution rule, problem P=NP. Possible worlds, modal logic with emphasis on individuation problems. May be repeated for credit. Same as: PHIL 255

**PHIL 157. Topics in Philosophy of Logic. 3 Units.**

(Graduate students register for 257.) Disputed foundational issues in logic; the question of what the subject matter and boundaries of logic are, such as whether what is called second-order logic should be counted as logic. What is the proper notion of logical consequence? May be repeated for credit. Pre- or corequisite: 151, or consent of instructor. Same as: PHIL 257

**PHIL 158. Topics in Logic: Ten Problems in Deontic Logic. 2 Units.**

As witnessed by the handbook of deontic logic and normative systems, the area of deontic logic is in flux. Traditional questions and logical methods of deontic logic are being supplemented by new questions and new techniques. This tutorial gives an introduction to the current discussion in deontic logic. In what sense are obligations different from norms? Jorgensen's dilemma, from preference based modal logic to the modern approach. How to reason about dilemmas, contrary-to-duty and defeasible norms? Distinguishing various kinds of defeasibility. How to relate various kinds of permissive and constitutive norms? Permissions as exceptions and prioritized norms. How do norms relate to other modalities like beliefs, desires, and intentions How do norms change? What is the role of time, action and games in deontic reasoning? For each problem, we discuss traditional as well as new research questions. We see the new questions as good questions for current research, in the sense that they point to modern theories and applications. We are especially interested in new questions that make older traditional questions obsolete in the sense that they are now addressed from a modern perspective, or in a more general setting. This mini-course will from the week of 15 April through the week of 13 May.  
Same as: PHIL 258

**PHIL 159. Non-Classical Logic. 4 Units.**

This course surveys a range of non-classical logics. Each week, we discuss the formal rules and philosophical underpinnings of a different system. Key topics include modal logic (the logic of possibility and necessity), many-valued logics (in which propositions can be both true and false, or neither), relevant logics (which aim to bring the concept of valid inference into line with everyday ideas about relevance), and logical pluralism (the view that there is more than one correct logic).  
Same as: PHIL 259

**PHIL 160A. Newtonian Revolution. 4 Units.**

(Graduate students register for 260A.) 17th-century efforts in science including by Kepler, Galileo, Descartes, and Huygens, that formed the background for and posed the problems addressed in Newton's *Principia*.  
Same as: PHIL 260A

**PHIL 160B. Newtonian Revolution. 4 Units.**

(Graduate students register for 260B.) Newton's *Principia* in its historical context, emphasizing how it produced a revolution in the conduct of empirical research and in standards of evidence in science.  
Same as: PHIL 260B

**PHIL 162. Philosophy of Mathematics. 4 Units.**

(Graduate students register for PHIL 262.) General survey of the philosophy of mathematics, focusing on epistemological issues. Includes survey of some basic concepts (proof, axiom, definition, number, set); mind-bending theorems about the limits of our current mathematical knowledge, such as Gödel's Incompleteness Theorems, and the independence of the continuum hypothesis from the current axioms of set theory; major philosophical accounts of mathematics: Logicism, Intuitionism, Hilbert's program, Quine's empiricism, Field's program, Structuralism; concluding with a discussion of Eugene Wigner's 'The Unreasonable Effectiveness of Mathematics in the Natural Sciences'. Students won't be expected to prove theorems or complete mathematical exercises. However, includes some material of a technical nature. Prerequisite: PHIL 150 or consent of instructor.  
Same as: MATH 162, PHIL 262

**PHIL 163. Significant Figures in Philosophy of Science. 4 Units.**

(Graduate students register for 263.) Directed study of two or more thinkers, past or present, who have made a lasting impact on contemporary philosophy of science. Subjects last year were Henri Poincaré, Pierre Duhem, and Gaston Bachelard.  
Same as: PHIL 263

**PHIL 164. Central Topics in the Philosophy of Science: Theory and Evidence. 4 Units.**

(Graduate students register for 264.) Is reductionism opposed to emergence? Are they compatible? If so, how or in what sense? We consider methodological, epistemological, logical and metaphysical dimensions of contemporary discussions of reductionism and emergence in physics, in the  $\zeta$ sciences of complexity $\zeta$ , and in philosophy of mind.  
Same as: PHIL 264

**PHIL 164A. Central Topics in Philosophy of Science: Causation. 4 Units.**

(Graduate Students register for 264A.) Establishing causes in science, engineering, and medicine versus establishing them in Anglo-American law, considered in the context of Hume and Mill on causation. May be repeated for credit.  
Same as: PHIL 264A

**PHIL 165. Philosophy of Physics. 4 Units.**

Graduate students register for 265.) Central topic alternates annually between space-time theories and philosophical issues in quantum mechanics; the latter in Winter 2013-14. Conceptual problems regarding the uncertainty principle, wave-particle duality, quantum measurement, spin, and their treatment within the 'Copenhagen interpretation' of quantum mechanics, and the related doctrine of complementarity. The issue of quantum entanglement as raised by Einstein and Schrödinger in the 1930s and the famous EPR (Einstein-Podolsky-Rosen) paper of 1935. Examination of EPR-type experimental set-ups and a result due to Bell in the 1960s, according to which no "hidden variables" theory satisfying a certain locality condition (apparently assumed by EPR) can reproduce all the predictions of quantum mechanics. Survey of several live interpretive options for standard quantum mechanics: Bohmian mechanics (a.k.a. 'pilot wave theory'), 'spontaneous collapse' theories, and Everett's relative-state interpretation. Critical scrutiny of the  $\zeta$ decoherence $\zeta$  program that seeks to explain the classical-to-quantum transition, i.e., the emergence of the world of classical physics and macroscopic objects from quantum physics. May be repeated for credit if content is different.  
Same as: PHIL 265

**PHIL 166. Probability: Ten Great Ideas About Chance. 4 Units.**

Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.  
Same as: PHIL 266, STATS 167, STATS 267

**PHIL 166A. Foundations of Quantum Mechanics. 4 Units.**

This seminar will concentrate on a variety of probability questions that arise in quantum mechanics, including some from recent experiments. Negative probabilities and nonmonotonic upper probabilities will be emphasized.  
Same as: PHIL 266A

**PHIL 167A. Philosophy of Biology. 2-4 Units.**

(Graduate students register for 267A.) Evolutionary theory and in particular, on characterizing natural selection and how it operates. We examine debates about fitness, whether selection is a cause or force, the levels at which selection operates, and whether cultural evolution is a Darwinian process.  
Same as: PHIL 267A

**PHIL 167B. Philosophy, Biology, and Behavior. 4 Units.**

(Graduate Students register for 267B) Philosophical study of key theoretical ideas in biology as deployed in the study of behavior. Topics to include genetic, neurobiological, ecological approaches to behavior; the classification and measurement of behaviors: reductionism, determinism, interactionism. Prerequisites: one PHIL course and either one BIO course or Human Biology core; or equivalent with consent of instructor.

Same as: PHIL 267B

**PHIL 167C. Associative Theories of Mind and Brain. 4 Units.**

After a historical survey of associative theories from Hume to William James, current versions will be analyzed including the important early ideas of Karl Lashley. Emphasis will be on the computational power of associative networks and their realization in the brain.

Same as: PHIL 267C

**PHIL 167D. Philosophy of Neuroscience. 4 Units.**

Can problems of mind be solved by understanding the brain, or models of the brain? The views of philosophers and neuroscientists who believe so, and others who are skeptical of neurophilosophical approaches to the mind. Historical and recent literature in philosophy and neuroscience. Topics may include perception, memory, neural accounts of consciousness, neurophenomenology, neuroscience and physics, computational models, and eliminativism. (Not open to freshmen.)

Same as: PHIL 267D, SYMSYS 206

**PHIL 169. Evolution of the Social Contract. 4 Units.**

Explore naturalizing the social contract. Classroom presentations and term papers. nTexts: Binmore - Natural Justice, Skyrms - Evolution of the Social Contract.

Same as: PHIL 269

**PHIL 170. Ethical Theory. 4 Units.**

A more challenging version of PHIL 2 designed primarily for juniors and seniors (may also be appropriate for some freshmen and sophomores - contact professor). Fulfills the Ethical Reasoning requirement. Graduate section (270) will include supplemental readings and discussion, geared for graduate students new to moral philosophy, as well as those with some background who would like more.

Same as: ETHICSOC 170, PHIL 270

**PHIL 170B. Metaphor. 4 Units.**

In metaphor we think and talk about two things at once: two different subject matters are mingled to rich and unpredictable effect. A close critical study of the main modern accounts of metaphor's nature and interest, drawing on the work of writers, linguists, philosophers, and literary critics. Attention to how understanding, appreciation, and pleasure connect with one another in the experience of metaphor. Consideration of the possibility that metaphor or something very like it occurs in nonverbal media: gesture, dance, painting, music.

Same as: PHIL 270B

**PHIL 170D. Trust and Trustworthiness. 4 Units.**

An exploration of the place of interpersonal trust in ethical thought. What is it to trust another person? How is trusting related to, though different from, other attitudes we sometimes bear towards others (e.g. justified beliefs we form about others and their conduct; ethically significant expectations we have of others, etc.)? What is involved in acquiring/possessing the virtue of trustworthiness? How should trust (and trustworthiness) figure in our thinking about important ethical activities, for example promising, friendship, or the practice of politics?.

Same as: PHIL 270D

**PHIL 171. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, IPS 208, PHIL 271, POLISCI 103, POLISCI 136S, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307

**PHIL 172. History of Modern Moral Philosophy. 4 Units.**

This course traces the development of moral philosophy in Britain just prior to the nearly simultaneous emergence of Kant's moral philosophy and Bentham's utilitarianism in the 1780's. Emphasis is on the dialogue between empiricists and rationalists on the subject of the relationship between the natural and the normative. Authors include Hobbes, Clarke, Hutcheson, Hume, Smith, Price, and Bentham. Prerequisite: some familiarity with Kant's moral theory and utilitarianism, and demonstrated interest in philosophy.

Same as: PHIL 272

**PHIL 172B. Recent Ethical Theory: Moral Obligation. 4 Units.**

Some moral obligations are "relational," "directional," or "bipolar" in structure: in promising you to act in a certain way, for example, I incur an obligation to you to so act and you acquire a corresponding claim or right against me that I so act. This entails that if I violate my obligation to you, I will not merely be doing something that is morally wrong, but will be wronging you in particular. What does explain this? Do all moral obligations have this structure? We will discuss how different moral theories (consequentialist, deontological, contractualist) try to account for such obligations. Readings include Adams, Anscombe, Darwall, Feinberg, Hart, Parfit, Raz, Scanlon, Skorupski, Thompson, Thomson, Wallace, and Wolf.

Same as: PHIL 272B

**PHIL 172D. Bernard Williams. 4 Units.**

An exploration of some central themes from the work of Bernard Williams. Particular attention will be paid to his discussion of the character and identity of the self, his sustained critique of morality and moral philosophy. We will also read several of Williams's interlocutors, including Nagel, Parfit, Korsgaard, and Herman.

Same as: PHIL 272D

**PHIL 172N. Prudence and Morality. 4 Units.**

We sometimes think we should do something just because it will benefit us in the future, even though we don't particularly feel like doing it now (e.g. we exercise, go to the dentist for a check-up, or set aside money for retirement). And we sometimes think we should do something for the sake of another person, even when it is inconvenient, costly, or unpleasant (e.g. we stop to help a stranded motorist, donate to charity, or tell someone an embarrassing truth rather than a face-saving lie). When we do the former, we act prudently. When we do the latter, we act morally. This course explores the debate among philosophers about the source of our reasons for acting prudently and morally. Some argue that our reasons to be prudent and moral stem directly from the fact that we are rational & that it is contrary to reason to ignore our own future interests, or the interests of other people. Others disagree, arguing that the source of these reasons must lie elsewhere. Course readings will include work by Thomas Nagel, Bernard Williams, Christine Korsgaard, Derek Parfit, Philippa Foot, and others.

Same as: PHIL 272N

**PHIL 173A. Aesthetics: Metaphor across the Arts. 4 Units.**

What if a metaphor is an instructively compact work of art, or if finding a metaphor apt is an instructively simple case of finding something aesthetically valuable? What does this reveal about the nature of art and language? Introduction to the philosophical study of art and aesthetic value, organized around metaphor. Contemporary accounts of metaphor as a verbal device. Arguments for the existence of nonverbal metaphor in nonliterary arts. The power and appeal of metaphors drawn from art, art criticism, theoretical inquiry, and everyday life.

**PHIL 173B. Metaethics. 4 Units.**

This is an undergraduate only class. Can moral and ethical values be justified or is it just a matter of opinion? Is there a difference between facts and values? Are there any moral truths? Does it matter if there are not? Is anything in life really valuable or meaningful? Focus is not on which things or actions are valuable or morally right, but what is value or rightness itself. Contemporary metaethics. Prerequisites: 1 and 80.

**PHIL 173W. Aesthetics. 4 Units.**

This course will investigate a cluster of varied but related philosophical issues concerning the arts (painting, music, literature, poetry, photography, theater, film, etc.) issues most of which are, at the same time, problems in philosophy of mind or language, value theory, or epistemology. We will address questions like the following: What, if anything, is distinctive about art and aesthetic experience?, What is aesthetic value, and how do aesthetic values relate to and interact with values of other kinds?, What is fiction and why are people interested in it?, In what ways are works of art expressive of feelings or emotions? What similarities and differences are there in the expressive qualities of music, literature, painting, poetry? How might we learn from works of art of one or another kind, and how might they work to change people's perspectives or attitudes?, In what ways do works of art serve as vehicles of communication? Is there a fundamental difference between the value of works of art, and that of beautiful natural objects? (These various issues are related, as we shall see; we'll be exploring several of them simultaneously.) Along the way, we will bump into more specific questions such as: Why and in what ways is photography more (or less) 'realistic' than painting and drawing, or more or less revealing of reality? Does (instrumental) music have cognitive content? Is music representational in anything like the ways literature and figurative painting are?, Do all literary works have narrators? Is there ever (or always?) anything like narrators in paintings, films, music?.

Same as: PHIL 273W

**PHIL 174. Freedom and the Practical Standpoint. 4 Units.**

(Graduate students register for 274.) Confronted with the question of how to act, people think of themselves as freely determining their own conduct. Natural science poses a challenge to this by explaining all events, including human actions, in terms of causal processes. Are people justified in thinking of themselves as free? Major philosophical approaches to this question: incompatibilism, compatibilism, and the two-standpoint view.

Same as: PHIL 274

**PHIL 174A. Moral Limits of the Market. 4 Units.**

Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases.

Same as: ETHICSOC 174A, PHIL 274A, POLISCI 135P

**PHIL 174D. Moral Luck. 4 Units.**

We draw a fundamental distinction between what a person voluntarily does, and what is beyond her control. Such a distinction seems central to how we think about what it is to justify our actions (whether to ourselves or to one another), as well as to our practice of holding one another morally responsible for what we do. Yet under pressure, this distinction can appear to collapse & we find that we cannot successfully disentangle what a person controls from what she does not when she acts. This course examines this problem in depth, and considers how we might respond in the face of it: Is it really a problem? If so, does it threaten our moral practices? How should it influence the way in which we make choices, or the way we understand those choices once we've made them?.

Same as: PHIL 274D

**PHIL 174L. Betrayal and Loyalty, Treason and Trust. 2 Units.**

The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.

Same as: ETHICSOC 174L, ETHICSOC 274L, PHIL 274L

**PHIL 175. Philosophy of Law. 4 Units.**

This course will explore foundational issues about the nature of law and its relation to morality, and about legal responsibility and criminal punishment, with a focus on criminal culpability for attempts. Prerequisite: PHIL 80 and one additional PHIL course.

**PHIL 175A. Ethics and Politics of Public Service. 5 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. [This class is capped but there are some spaces available with permission of instructor. If the class is full and you would like to be considered for these extra spaces, please email sburbank@stanford.edu with your name, grade level, and a paragraph explaining why you want to take the class.].

Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 275A, POLISCI 133, PUBLPOL 103D, URBANST 122

**PHIL 175M. Two Ethical Theories and Being a Person. 4 Units.**

The distinction between the ethics of being a person and the ethics of rules as opposed to the distinction between Kantian ethics and utilitarianism or consequentialism. Comparison of these two types of ethics with respect to their relationship to agency and being a good person. Relations between Western ethics and those of other continents.

Same as: PHIL 275M

**PHIL 175P. Philosophy of Law and Conceptions of Agency. 4 Units.**

In this course we will explore the connections between recent work in philosophy of law and philosophy of action. Current philosophy of law draws on philosophy of action. One example is the work of Scott Shapiro, who interprets legal activity as a form of social planning that enables citizens to coordinate their activities as agents. We will consider what normative requirements are necessary to make citizens self-legislating autonomous agents. Are formal requirements like consistency and coherence sufficient, or does law have to meet substantial normative and moral requirements? We will also discuss whether the deficiency of &evil legal systems& can be explained in terms of agency. Can distorted legal system provide agents a coherent form of self-understanding? We will explore these questions through readings by Scott Shapiro, Ronald Dworkin, Lon F. Fuller, David Dyzenhaus, Kristen Rundle, Michael Bratman, David Velleman, and Christine Korsgaard.

Same as: PHIL 275P

**PHIL 176. Political Philosophy: The Social Contract Tradition. 4 Units.**  
(Graduate students register for 276.) Why and under what conditions do human beings need political institutions? What makes them legitimate or illegitimate? What is the nature, source, and extent of the obligation to obey the legitimate ones, and how should people alter or overthrow the others? Study of the answers given to such questions by major political theorists of the early modern period: Hobbes, Locke, Rousseau, and Kant. Same as: PHIL 276, POLISCI 137A, POLISCI 337A

**PHIL 176B. The Economic Individual in the Behavioral Sciences. 4 Units.**  
(Graduate students register for 276B.).  
Same as: PHIL 276B

**PHIL 176C. Religion and Politics: a Latin American Perspective. 4 Units.**  
Religion has traditionally been banished from politics in some places in Latin America. Religious symbols may not be displayed in public buildings, political discourse is expected to be free from all religious content, and religious ministers are not allowed to run for public office, among other measures. This course examines the political motivation for this kind of policies towards religion taking a comparative perspective with American and French variants of secularism.  
Same as: ETHICSOC 276R, ETHICSOC 376R, PHIL 276C

**PHIL 177B. EMOTIONS: MORALITY AND LAW. 2 Units.**  
If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Paul's contrast between law and love, or Nietzsche's idea that resentment is what feeds morality, will be discussed alongside other intriguing topics.  
Same as: ETHICSOC 202, ETHICSOC 302, PHIL 277B

**PHIL 177C. Ethics of Climate Change. 4 Units.**  
Climate change is an ethical failure. When we cause greenhouse gas to be emitted for our own benefit, the gas spreads around the world and does harm everywhere. Many of those who are harmed emit very little greenhouse gas themselves. When some people harm others for their own benefit, something is morally wrong. Specifically, there is an injustice. One of the ethical problems raised by climate change is how to rectify this injustice. Climate change also raises a different range of ethical questions, which may be classified as questions of value. For example, in making decisions, how should the distant future be valued in comparison with the present and how should we take account of the great loss of human life that climate change will cause? This course investigates the issues of justice and the issues of value. It considers the moral demands that climate change puts both on private individuals and on public institutions. Because the effects of climate change are so widespread and so complex, the methods of economics can be useful in putting ethical principles into effect. The course will therefore assess some of these methods.  
Same as: PHIL 277C

**PHIL 177W. Human Rights. 4 Units.**  
.  
Same as: PHIL 277W

**PHIL 178. Ethics in Society Honors Seminar. 3 Units.**  
For students planning honors in Ethics in Society. Methods of research. Students present issues of public and personal morality; topics chosen with advice of instructor.  
Same as: ETHICSOC 190

**PHIL 178M. Introduction to Environmental Ethics. 4-5 Units.**  
How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism.  
Same as: ETHICSOC 178M, ETHICSOC 278M, PHIL 278M, POLISCI 134L

**PHIL 179S. Moral Psychology, Reasons for Action, and Moral Theory. 4 Units.**  
What sorts of considerations does an ethical agent take to be good reasons for action? Work in moral psychology to illuminate the theory of practical reasons, and the theory of practical reasons to test the prospects for systematic moral theory. Can any systematic moral theory be reconciled with the moral psychology of ordinary, morally respectable agents? Reading include Bernard Williams, Rosalind Hursthouse, Peter Railton, T.M. Scanlon, and Barbara Herman.  
Same as: PHIL 279S

**PHIL 180. Metaphysics. 4 Units.**  
It seems undeniable that things in the world have certain features, or properties: some apples are red, my cat is soft, the Golden Gate Bridge is 2,737 meters long, and so on. This course will focus on metaphysical issues in properties. The topics include ontic issues in properties (universals vs. tropes, realism vs. nominalism), particulars (tropes and bundle theory), and the nature of properties (quantities and causal essentialism). nPrerequisites: Philosophy 80 and Philosophy 50 or equivalent (or consent of instructor).  
Same as: PHIL 280

**PHIL 180A. Realism, Anti-Realism, Irrationalism, Quasi-Realism. 4 Units.**  
Realism and its opponents as options across a variety of different domains: natural science, mathematics, ethics, and aesthetics. Clarify the various conceptions that fall under these terms and outline the reasons for and against adopting realism for the various domains. Highlight the general issues involved. Prerequisites: 80, 181.  
Same as: PHIL 280A

**PHIL 181. Philosophy of Language. 4 Units.**  
The study of conceptual questions about language as a focus of contemporary philosophy for its inherent interest and because philosophers see questions about language as behind perennial questions in other areas of philosophy including epistemology, philosophy of science, metaphysics, and ethics. Key concepts and debates about the notions of meaning, truth, reference, and language use, with relations to psycholinguistics and formal semantics. Readings from philosophers such as Frege, Russell, Wittgenstein, Grice, and Kripke. Prerequisites: 80 and background in logic.  
Same as: PHIL 281

**PHIL 182. Truth. 2-4 Units.**  
Philosophical debates about the place in human lives and the value to human beings of truth and its pursuit. The nature and significance of truth-involving virtues such as accuracy, sincerity, and candor. Prerequisite Phil 80 or permission of the instructor.  
Same as: PHIL 282

**PHIL 184. Epistemology. 4 Units.**

This is an advanced introduction to core topics in epistemology -- the philosophical study of human knowledge. Questions covered will include: What is knowledge? Can we know anything outside our own minds? Must all knowledge rest on secure foundations? Does knowing something require knowing that you know it? What are the connections between knowledge and rationality? Does 'knowledge' mean the same in the philosophy classroom as it does in everyday life? Prerequisite: Phil 80 or consent of the instructor.

Same as: PHIL 284

**PHIL 184C. Epistemology of Testimony. 4 Units.**

Many of our beliefs come from others, and not from direct experience. Is testimony a source of fundamental reasons? reasons that do not have to be supported or validated by other sources like perception or inference? What sort of responsibility does one have to one's hearers, when one gives testimony?

Same as: PHIL 284C

**PHIL 184F. Feminist Theories of Knowledge. 4 Units.**

Feminist critique of traditional approaches in epistemology and alternative feminist approaches to such topics as reason and rationality, objectivity, experience, truth, the knowing subject, knowledge and values, knowledge and power.

Same as: FEMST 166, PHIL 284F

**PHIL 184P. Probability and Epistemology. 4 Units.**

Confirmation theory and various ways of trying to understand the concept of evidence. Discuss a series of issues in epistemology including probabilism (the view that you should assign degrees of belief to various propositions), conditionalization, confirmational holism, reliabilism and justification, and disagreement.

**PHIL 184V. The Epistemology of Disagreement. 4 Units.**

What should you do when you learn that equally informed and equally competent reasoners disagree with you? Should you give up your beliefs, or should you stick to your views? In this course, we'll look at the recent debate in epistemology about disagreement. We will investigate the effects of disagreement on the justification of our beliefs, and explore the implications for the justification of our religious, moral, and philosophical views.

**PHIL 185. Memory. 4 Units.**

Structure, content, functional role, and epistemic authority of human memories. Sources include philosophical and psychological literature from different schools and historical periods.

**PHIL 185B. Philosophy of Perception. 4 Units.**

The nature of perceptual experience and the role it plays in securing empirical knowledge. Focus will be on what is sometimes called "the problem of perception": the question of how perception could provide us with direct awareness of the surrounding environment given the possibility of illusions or hallucinations. Topics, include the relationship between perception and belief, the nature of perceptual phenomenology, whether or not perceptual experiences are representational states, and the philosophical relevance of empirical research on perception.

Same as: PHIL 285B

**PHIL 186. Philosophy of Mind. 4 Units.**

(Graduate students register for 286.) This is an advanced introduction to core topics in the philosophy of mind. Prerequisite: PHIL 80.

Same as: PHIL 286

**PHIL 186B. Inner Sense. 4 Units.**

Often the label "inner" is used to describe aspects of ourselves we believe are not immediately observable to another. Thoughts, feelings, sensations; these all happen on the "inside," whereas speech, mannerisms, and actions are "outward" expressions. But how useful is this way of thinking? And what does it assume about what is "inner" versus what is "outer"? How reliable are the various internal mechanisms that allow us to know ourselves? Do we have a special kind of direct access to our own inner lives? And what can we know about the inner lives of others? Readings from philosophy of mind and cognitive science.

**PHIL 187. Philosophy of Action. 4 Units.**

(Graduate students register for 287.) Contemporary research in the philosophy of action. Topics include: What is it to be an agent? Is there a philosophically defensible contrast between being an agent and being a locus of causal forces to which one is subject? What is it to act purposively? What is intention? What is the relation between intention and belief? What is it to act intentionally? What is it to act for a reason? What is the relation between explaining why someone acted by citing the reasons for which she acted and causal explanation of her action? What is the relation between theoretical and practical rationality? What is the nature of our knowledge of our own intentional activity? What is it to act autonomously? What is shared cooperative activity? Prerequisite: 80.

Same as: PHIL 287

**PHIL 188. Personal Identity. 4 Units.**

Do you persist through time the way that a skyscraper persists through space, by having different parts at different locations? Or are you wholly present at every moment of your life, in something more like the way that an elevator is present in each place as it travels up to the top floor? What criteria determine whether you now are the very same person as some unique person located at some time in the past? Is the continuity of your memories or other mental states sufficient for your survival? Can you survive the loss or destruction of your body? Do you really exist for more than just the present moment? How do different answers to these questions bear on your moral, personal, and professional obligations? What kinds of considerations could possibly help us to answer these questions? This course explores these and related issues. Readings include a mix of introductory survey, historical, and contemporary material.

Same as: PHIL 288

**PHIL 189. Examples of Free Will. 4 Units.**

Examples drawn from three domains: choice, computation, and conflict of norms. Conceptually, a distinction is made between examples that are predictable and those that are not, but skepticism about making a sharp distinction between determinism and indeterminism is defended.

Same as: PHIL 289

**PHIL 193C. Film & Philosophy. 4 Units.**

Issues of freedom, morality, faith, knowledge, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include *Twelve Monkeys* (Gilliam), *Ordet* (Dreyer), *The Dark Knight* (Nolan), *Vicky Cristina Barcelona* (Allen), and *Eternal Sunshine of the Spotless Mind* (Kaufman). Taught in English.

Same as: COMPLIT 154A, FRENCH 154, ITALIAN 154, PHIL 293C

**PHIL 193D. Dante and Aristotle. 5 Units.**

Students will read all of Dante's *Commedia* alongside works by Aristotle and various ancient and medieval philosophers. Our aim will be to understand the way an Aristotelian worldview informs the *Commedia*. For instance, what is the role of pleasure in the ethical life? What is the highest good of the human being? All readings will be in translation.

Same as: ENGLISH 106E

**PHIL 193H. The Art of the Movies: Story, Drama, and Image. 4 Units.**

A philosophical study of how movies coordinate and transform elements they borrow from older arts of literary narrative, live theater, and graphic illustration. Examples from the career of Alfred Hitchcock.

**PHIL 193W. Nietzsche, Dostoevsky, and Sartre. 4 Units.**

Literary works in which philosophical ideas and issues are put forward, such as prose poems, novels, and plays. Ideas and issues and the dramatic or narrative structures through which they are presented. Texts include: Nietzsche, *Thus Spoke Zarathustra*; Dostoevsky, *The Brothers Karamazov*; and Sartre, *Nausea* and *No Exit*.

**PHIL 194A. Rationality Over Time. 4 Units.**

Our beliefs and intentions seem to be subject to norms of rationality that enjoin consistency and coherence at a given time. Are there also norms of rationality that concern the relations among and changes in our beliefs and intentions over time? What might such norms of rationality over time be, how might we defend them (or argue that they are not defensible), how are they related to norms of rationality at a time, and how does our approach to these rationality norms affect our overall understanding of the kind of thinkers and actors we are? Our focus will be primarily on potential norms of practical rationality concerning intention, but we will also consider potential norms of theoretical rationality concerning belief. We will proceed by studying contemporary work on these issues, including Richard Holton's *Willing, Wanting, Waiting*.

**PHIL 194B. Reason and Passion. 4 Units.**

An influential strand of the Western philosophical tradition maintains that human beings are composites of two motivational sources: reason and passion (sometimes called 'feeling,' or 'emotion'). What are the philosophical reasons for positing this division? If there is such a division, how are we to conceive of passion? In what ways is it like and/or unlike reason? In what ways does it interact and/or fail to interact with reason? And how are both sources related to the self as a whole? We will explore these questions by drawing on both classical and contemporary readings.

**PHIL 194C. Time and Free Will. 4 Units.**

Classic and contemporary reading on free will, with special attention to the consequence argument for incompatibilism, and issues involving causation and time.

**PHIL 194D. Capstone Seminar: Analyticity. 4 Units.**

Survey of philosophical work on analyticity. We will start with some of the classic works on the topic, including papers by Frege, Russell and Quine. Next, we'll look at the cutting edge of research on analyticity, including work by Amie Thomasson, Agustín Rayo, and Paul Boghossian.

**PHIL 194E. Ethical Antitheory. 4 Units.**

.

**PHIL 194F. Capstone seminar: Beauty. 4 Units.**

Capstone seminar for undergrad majors.

**PHIL 194G. Philosophical Issues in Language. 4 Units.**

.

**PHIL 194H. Explanation and Justification. 4 Units.**

We will discuss the nature of epistemic justification; in particular, whether it's "internal" or "external" and how, if at all, justification can explain belief. Assignments include a term paper + an oral presentation.

**PHIL 194J. Capstone Seminar: The Possibility of Philosophy. 4 Units.**

We will read two recent books: Raymond Guess, *World without Why*; and Timothy Williamson, *The Philosophy of Philosophy*. This will be a seminar that will allow for extensive discussion and focussed work on a single long seminar paper. Prerequisites PHIL 80, one course from PHIL 170-176, one course from PHIL 180-189, and PHIL 102.

**PHIL 194L. Montaigne. 4 Units.**

Preference to Philosophy seniors. Philosophical and literary aspects of Montaigne's *Essays* including the nature of the self and self-fashioning, skepticism, fideism, and the nature of Montaigne's philosophical project. Montaigne's development of the essay as a literary genre.

**PHIL 194N. Philosophical Issues in Cognitive Science. 4 Units.**

Philosophers generally do not perform systematic empirical observations or construct computational models. But philosophy remains important to cognitive science because it deals with fundamental issues that underlie the experimental and computational approach to mind. Abstract questions such as the nature of representation and computation. Relation of mind and body and methodological questions such as the nature of explanations found in cognitive science. Normative questions about how people should think as well as with descriptive ones about how they do. In addition to the theoretical goal of understanding human thinking, cognitive science can have the practical goal of improving it, which requires normative reflection on what we want thinking to be. Philosophy of mind does not have a distinct method, but should share with the best theoretical work in other fields a concern with empirical results.

**PHIL 194P. Naming and Necessity. 4 Units.**

Saul Kripke's lectures on reference, modal metaphysics, and the mind/body problem.

**PHIL 194R. Epistemic Paradoxes. 4 Units.**

Paradoxes that arise from concepts of knowledge and rational belief, such as the skeptical paradox, the preface paradox, and Moore's paradox. Can one lose knowledge without forgetting anything? Can one change one's mind in a reasonable way without gaining new evidence?.

**PHIL 194S. Skepticism. 4 Units.**

Modern arguments for skepticism are hard to combat, but also curiously inert in ordinary life. We will look at a variety of contemporary attempts to come to terms with skepticism about the external world, each of which seeks to exploit the curious inertness of skeptical hypotheses.

**PHIL 194T. Practical Reason. 4 Units.**

Contemporary research on practical reason, practical rationality, and reasons for action. Enrollment limited to 12. Priority given to undergraduate Philosophy majors.

**PHIL 195A. Unity of Science. 4-5 Units.**

Primarily for seniors.

**PHIL 195B. Donor Seminar: Practical Reasoning. 4 Units.**

Primarily for seniors. Relationships among action, deliberation, reasons, and rationality. On what basis do people decide what to do? What norms or rules structure reasoning? What constitutes rationality?.

**PHIL 196. Tutorial, Senior Year. 5 Units.**

(Staff).

**PHIL 197. Individual Work, Undergraduate. 1-15 Unit.**

May be repeated for credit.

**PHIL 197I. Homeless Services in Silicon Valley. 2 Units.**

This service learning Student Initiated Course places participants at local organizations to do a quarter-long mentored project, supplemented with training and group reflection sessions. Through these meaningful, hands-on experiences, we hope to engage the Stanford student body in the issue of homelessness, specifically as faced by service providers.

**PHIL 198. The Dualist. 1 Unit.**

Weekly meeting of the editorial board of *The Dualist*, a national journal of undergraduate work in philosophy. Open to all undergraduates. May be taken 1-3 quarters. (AU) (Potochnik, Yap).

**PHIL 199. Seminar for Prospective Honors Students. 2 Units.**

Open to juniors intending to do honors in philosophy. Methods of research in philosophy. Topics and strategies for completing honors project. May be repeated for credit.

**PHIL 201. Introduction to Medieval Philosophy. 4 Units.**

This course is an introduction to medieval moral philosophy, broadly construed. In addition to doctrines that we would nowadays readily think of as falling within the domain of ethics, we will be looking at closely related topics that might today be thought to belong more properly to metaphysics, the philosophy of religion, or the philosophy of human nature.

Same as: PHIL 101

**PHIL 201B. John Duns Scotus: Politics, Metaphysics & Philosophy of Mind. 1-2 Unit.**

Life and an introduction to the difficulties of medieval biography. Franciscanism and Scotus' view on property and ownership. Proofs for the existence of God. Philosophy of mind. Metaphysics in general. Universals, Common natures, Formal Distinction, and Individuation. Formal distinction, individual forms and the precedents for Scotus' view in Richard Rufus.

**PHIL 202M. Fichte. 1-2 Unit.**

This three-day intensive mini-course will introduce the moral and political thought of Johann Gottlieb Fichte, the founder of the German idealist movement. The topics to be discussed are: Fichte's theory of subjectivity and transcendental idealism; Fichte's defense of radical freedom of the will; Fichte's transcendental deduction of other selves; the relation of right between rational beings and the foundations of political philosophy; Fichte's deduction of the moral law from the absolute freedom of the rational being; the application of the moral law through conscience. No previous acquaintance with Fichte's philosophy will be presupposed.

Same as: PHIL 102M

**PHIL 205R. JUST AND UNJUST WARS. 2 Units.**

War is violent, but also a means by which political communities pursue collective interests. When, in light of these features, is the recourse to armed force justified? Pacifists argue that because war is so violent it is never justified, and that there is no such thing as a just war. Realists, in contrast, argue that war is simply a fact of life and not a proper subject for moral judgment, any more than we would judge an attack by a pack of wolves in moral terms. In between is just war theory, which claims that some wars, but not all, are morally justified. We will explore these theories, and will consider how just war theory comports with international law rules governing recourse to force. We will also explore justice in war, that is, the moral and legal rules governing the conduct of war, such as the requirement to avoid targeting non-combatants. Finally, we will consider how war should be terminated; what should be the nature of justified peace? We will critically evaluate the application of just war theory in the context of contemporary security problems, including: (1) transnational conflicts between states and nonstate groups and the so-called "war on terrorism"; (2) civil wars; (3) demands for military intervention to halt humanitarian atrocities taking place in another state.

Same as LAW 751.

Same as: ETHICSOC 205R, ETHICSOC 305R, PHIL 305R

**PHIL 206. Ancient Skepticism. 4 Units.**

The ancient Pyrrhonian skeptics who think that for any claim there is no more reason to assert it than deny it and that a life without any beliefs is the best route to happiness. Some ancient opponents of the Pyrrhonian skeptics and some relations between ancient and modern skepticism.

Same as: PHIL 106

**PHIL 207. Early Plato. 4 Units.**

We shall focus on Plato's early or Socratic dialogues (e.g. the *Crito*, the *Gorgias*, and the *Protagoras*). In these dialogues, Plato focuses on ethics and ethical psychology without explicitly drawing on epistemological and metaphysical claims. We'll try to determine whether the Socrates of these dialogues is a purely destructive critic or whether he has a positive ethical view that he advances.

Same as: PHIL 107

**PHIL 207A. The Greeks on Irrationality. 2-4 Units.**

In this course, we shall examine the views of some central Greek philosophers (Plato, Aristotle, the Epicureans, and the Stoics) on the irrational and non-rational aspects of human life. What makes something irrational and what roles (negative and perhaps positive as well) does the irrational play in our lives? We shall examine their views on anger, fear, madness, love, pleasure and pain, sexual desire and so on. We shall also consider more briefly some depictions of these psychic items in ancient Greek literature.

Same as: PHIL 107A

**PHIL 207B. Plato's Metaphysics and Epistemology. 4 Units.**

We will read the *Theaetetus* and the *Parmenides*, and consider various definitions of knowledge, and metaphysical problems about the objects of knowledge, and a proposed method for examining and resolving such problems. Prerequisite: Philosophy 80 or consent of instructor.

Same as: PHIL 107B

**PHIL 207C. Plato's *Timaeus*. 4 Units.**

.

Same as: PHIL 107C

**PHIL 208. Aristotle's *Metaphysics Book Alpha*. 4 Units.**

An introduction both to Aristotle's own metaphysics and to his treatment of his predecessors on causality, included the early Ionian cosmologists, atomism, Pythagoreans, Heraclitus, Parmenides, Empedocles, Anaxagoras and Plato. Prerequisite: one course in ancient Greek philosophy.

Same as: PHIL 108

**PHIL 208A. Aristotelian Logic. 2-4 Units.**

A careful examination of Aristotle's syllogistic, with special emphasis on the interpretation of his modal syllogistic. This course will serve both as an introduction to ancient term logic and to the difference between sentential modal operators and modal modifiers to the copula. Topics will include the analysis of syllogisms into figures and moods, the reduction of 2nd and 3rd figure syllogisms to the first, the consistency of the modal syllogistic, models for the syllogistic, and *de re* versus *de dicto* modalities. For students with at least some introductory background in logic.

Same as: PHIL 108A

**PHIL 208B. Aristotle's *Physics Book One*. 4 Units.**

A chapter by chapter analysis of Aristotle's introductory discussions of physical theory. Topics to be considered include Aristotle's treatment of Eleatic monism, the role of opposites in pre-Socratic physics, the role of matter in physics, and an analysis of the elements of changing objects into form, privation and a subject.

Same as: PHIL 108B

**PHIL 209. Topics in Ancient Philosophy: Plato and Aristotle on Art and Rhetoric. 4 Units.**

Plato's and Aristotle's views on the nature of art and rhetoric and their connections with the emotions, reason and the good life. Readings include Plato's *Gorgias*, *Ion* and parts of the *Republic* and the *Laws* and Aristotle's *Poetics* and *Rhetoric*.

Same as: PHIL 109

**PHIL 209A. Special Topics in Ancient Philosophy: Aristotle's *Metaphysics Zeta*. 4 Units.**

.

Same as: PHIL 109A

**PHIL 209B. Greek philosophers read their ancestors: Intro to the ancient reception of Presocratic philosophy. 4 Units.**

The first Greek philosophers are known to us only through fragments of their original works, generally few in number and transmitted by later authors, as well as through a set of testimonies covering a thousand years and more. Thus it is crucial, in order to understand archaic thought, to get a sense of how they were read by those to whom we owe their transmission. What was their aim, their method, their presuppositions or prejudices? The course will employ this perspective to examine authors such as Plato, Aristotle, Theophrastus, Diogenes Laertius, Simplicius  $\zeta$  among others. We shall also reflect, on the basis of the paradigmatic case of the Presocratics, on some of the more general problems raised by literary and philosophical approaches to the notion of reception.

Same as: PHIL 109B

**PHIL 209C. Aristotle's cosmology and theology. 4 Units.**

PHIL 109C/209C now meets in Raubitschek Room, Green Library Room 351. Undergrads please sign up for 109C; grads sign up for 209C.

Same as: PHIL 109C

**PHIL 210. Plato's Republic. 4 Units.**

The Republic is one most famous and influential texts in the history of Western philosophy. We shall read in its entirety closely (along with some other related Platonic texts) focusing on its epistemology, ethics, metaphysics, philosophy of art, and political philosophy.

Same as: PHIL 110

**PHIL 210C. The Stoics on Freedom and Determinism. 4 Units.**

We will investigate ancient Stoic conceptions of causality and freedom, their arguments for causal determinism, and ancient attaches on and defenses of compatibilism.

Same as: PHIL 110C

**PHIL 211. Aristotle's Logic. 4 Units.**

Same as: PHIL 111

**PHIL 212. Causality in Ancient Greek Philosophy. 4 Units.**

Same as: PHIL 112

**PHIL 213. Hellenistic Philosophy. 4 Units.**

Epicureans, skeptics, and stoics on epistemology, ethics, metaphysics, and psychology.

Same as: PHIL 113

**PHIL 215. Problems in Medieval Philosophy: Islamic Aristotelianism and Western Scholasticism. 3-5 Units.**

The western world adopted Aristotle's metaphysics and natural philosophy as the foundation of its educational system and scholarly life between 1210 and 1255. Christian Europe was thereby following the example set by Islam in Spain and the Near East. Today some people believe that this development was independent, and others think that the scholastics copied even their methods from Arabic philosophers. Historical evaluation of those claims.

Same as: PHIL 115

**PHIL 216. Aquinas. 4 Units.**

This course is an introduction to the metaphysical thought of St. Thomas Aquinas (1225  $\zeta$  1274), one of the most important and influential philosopher-theologians of the High Middle Ages. Readings will be drawn primarily from the "Summa theologiae."

Same as: PHIL 116

**PHIL 217. Descartes. 4 Units.**

(Formerly 121/221.) Descartes's philosophical writings on rules for the direction of the mind, method, innate ideas and ideas of the senses, mind, God, eternal truths, and the material world.

Same as: PHIL 117

**PHIL 218A. Origins of Empiricism: Gassendi, Locke, and Berkeley. 4 Units.**

Particular light is shed on both the strengths and weaknesses of empiricism by studying it as it first arose during the 17th century revolution in philosophy and the sciences initiated by Descartes. Three philosophers of that period helped to advance empiricism: Pierre Gassendi (1592-1655), John Locke (1632-1704), and George Berkeley (1685-1753). A brief introduction to Descartes is followed by Gassendi's reaction to Descartes and his influence on Locke; Locke's theory of ideas, mind, language, reality, and natural philosophy expounded in his *An Essay concerning Human Understanding* (Fourth Edition, 1689); and Berkeley's later reaction to Locke.

Same as: PHIL 118A

**PHIL 219. Rationalists. 4 Units.**

Developments in 17th-century continental philosophy. Descartes's views on mind, necessity, and knowledge. Spinoza and Leibniz emphasizing their own doctrines and their criticism of their predecessors.

Prerequisite: 102. Same as: PHIL 119

**PHIL 220A. The Leibniz-Clarke Correspondence. 4 Units.**

Correspondence on metaphysics, theology, and science.

Same as: PHIL 120A

**PHIL 220W. Richard Rufus on Aristotle's Metaphysics: Ontology, Unity, Universals, & Individuation. 1-2 Unit.**

Mini-Course taught by Rega Wood in association with Santiago Melo Arias & Professors Alan Code & Calvin Normore. Code, Wood, & Melo Arias have spent the last 6 months intensively studying Richard Rufus of Cornwall's commentary on Aristotle's *Metaphysics* Zeta, Eta, & Theta. This June we will present Rufus' views on ontology, unity, & universals. There will be 6 two hour sessions on June, 4, 5, & 6 (Thurs - Saturday), 10-12 noon, 2-4 pm. Readings will be taken chiefly from Melo Arias' new translations of Rufus' circa 1238 commentary; other readings, from Aristotle and Averroes. We will consider the difference between the treatment of definition, essence and being in logic and in metaphysics, the sense in which accidents have definitions, the unity of genus and differentia in the definitions of substances, the unity of form and proximate matter in hylomorphic compounds, and the unity of the parts of the rational soul. In this context we will discuss the formal distinction pioneered by Rufus as a description of differences in formal predication consistent with real sameness. Richard Rufus was the first Western professor to lecture on Aristotle's metaphysics in Medieval Europe.

Same as: PHIL 120W

**PHIL 222. Hume. 4 Units.**

(Formerly 120/220; graduate students enroll in 222.) Hume's theoretical philosophy, in particular, skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self.

Same as: PHIL 122

**PHIL 224. Kant's Philosophy of Physical Science. 2-4 Units.**

Kant's *Metaphysical Foundations of Natural Science* (1786), published between the first (1781) and second (1787) editions of the *Critique of Pure Reason*, in the scientific and philosophical context provided by Newtonian natural philosophy and the Leibnizean tradition. The place of this work in the development of Kant's thought. Prerequisite: acquaintance with either Kant's theoretical philosophy or the contemporaneous scientific context, principally Newton, Leibniz, and Euler.

**PHIL 224A. Mathematics in Kant's Philosophy. 4 Units.**

Recent work in Kant's philosophy of mathematics, examined with a view to the role of mathematics, both pure and applied, within Kant's theory of experience. Particular attention to the Transcendental Deduction and the Categories of Quantity. Prerequisite: prior acquaintance with Kant's theoretical philosophy and the *Critique of Pure Reason*.

**PHIL 225. Kant's First Critique. 4 Units.**

(Graduate students register for 225.) The founding work of Kant's critical philosophy emphasizing his contributions to metaphysics and epistemology. His attempts to limit metaphysics to the objects of experience. Prerequisite: course dealing with systematic issues in metaphysics or epistemology, or with the history of modern philosophy. Same as: PHIL 125

**PHIL 226B. Kant's Ethical Theory. 2-4 Units.**

(Graduate students register for 226B.) Kant's moral philosophy based primarily on the *Groundwork of Metaphysics of Morals*, *Critique of Practical Reason*, and *The Metaphysics of Morals*. Same as: PHIL 126B

**PHIL 227. Kant's Ethics. 4 Units.**

A study of Kant's ethical thought, focusing on *The Groundwork of the Metaphysics of Morals*, *The Critique of Practical Reason*, and *The Metaphysics of Morals*. Prerequisite: Phil. 2, Phil. 170, or equivalent (consult the instructor). Designed for undergraduate department majors and graduate students. Same as: PHIL 127

**PHIL 227A. Kant's Value Theory. 4 Units.**

(Graduate students register for 227A.) The role of autonomy, principled rational self-governance, in Kant's account of the norms to which human beings are answerable as moral agents, citizens, empirical inquirers, and religious believers. Relations between moral values (goodness, rightness) and aesthetic values (beauty, sublimity). Same as: PHIL 127A

**PHIL 227B. Kant's Anthropology and Philosophy of History. 4 Units.**

Kant's conception of anthropology or human nature, based on his philosophy of history, which influenced and anticipated 18th- and 19th-century philosophers of history such as Herder, Fichte, Hegel, and Marx. Texts include *Idea for a Universal History*, *Conjectural Beginning of Human History*, and *Anthropology from a Pragmatic Point of View*. Topics include: Kant's pragmatic approach to the study of human nature; the difficulty of human self knowledge; the role of regulative and teleological principles in studying human history; and Kant's theory of race. Same as: PHIL 127B

**PHIL 227C. Rousseau and Kant. 1-2 Unit.**

Kant considered Rousseau the Newton of the moral world. A portrait of Rousseau was reportedly the only decoration in Kant's study, and it was Kant's reading of *Émile*, or *On Education* and *On the Social Contract* in the early 1760s which, more than anything else, first awakened Kant's interest in moral philosophy. In a three-day intensive mini-course, we will explore the relation between Rousseau's philosophy and Kant's on such topics as the standards of right and virtue, human equality, the relation of reason and feeling in human nature, and the philosophy of history.

**PHIL 227M. Richard Rufus of Cornwall. 1-2 Unit.**

Metaphysics and Epistemology, readings from Rufus' newly translated *Contra Averroem & Speculum animae*. In these works, Rufus solves a problem for Aristotelian epistemology that was to bedevil later scolastics such as Thomas Aquinas. He also states for the first time a theory of individuation by form that was subsequently adopted by Duns Scotus. Though Scotus like Rufus preferred to speak of individual forms, the theory itself is often identified by a term very seldom used by Scotus, 'haecitas' or thisness. Taught jointly by Rega Wood and Calvin Normore.

Same as: PHIL 127M

**PHIL 228. Fichte's Ethics. 4 Units.**

(Graduate students register for 228.) The founder of the German Idealist movement who adopted but revised Kant's project of transcendental philosophy basing it on the principle of awareness of free self-activity. The awareness of other selves and of ethical relations to them as a necessary condition for self-awareness. His writings from 1793-98 emphasizing the place of intersubjectivity in his theory of experience. Same as: PHIL 128

**PHIL 230. Hegel. 4 Units.**

(Formerly 122/222; graduate students register for 230.) Introduction to Hegel's philosophy, emphasizing his moral and political philosophy, through study of his last major work (1821). May be repeated for credit. Prerequisite: course in the history of modern philosophy. Same as: PHIL 130

**PHIL 231. Introduction to Philosophy of Education. 3 Units.**

How to think philosophically about educational problems. Recent influential scholarship in philosophy of education. No previous study in philosophy required. Same as: EDUC 204

**PHIL 231W. Kant's Theory of Law and Justice. 1-2 Unit.**

This course will look at Kant's theory of right or law (Recht) and its implications for morality and politics. The topics we will discuss are: the difference between right and ethics in Kant's metaphysics of morals; the relation of law to property and morality; the moral obligations of politicians as holders of rightful authority; and the standards of right as they apply to international relations and war. Same as: PHIL 131W

**PHIL 232W. Mini Course: Topics in Kant's Ethics. 1-2 Unit.**

This mini-course will deal with several selected topics relating to Kant's ethics: (1) Kant's formulas of the moral law, their meaning and their relation to one another; (2) Kant's concept of imperfect (wide, meritorious) duties and its role in his ethical theory; (3) the place of feeling, emotion, desire and inclination, their relation to our empirical nature and to human reason, in Kant's moral psychology; and (4) the place of duties regarding animals and other non-human beings in Kant's ethical theory. There will be six sessions, each two hours in length. Either the instructor or one of the guest lecturers will be in charge of each session, which will consist in part of a presentation by the person in charge and partly of discussion. Instructor: Allen Wood (Indiana University/Stanford University); guest lecturers: Barbara Herman (UCLA), Janelle DeWitt (Indiana University). Course meets Monday, Tuesday, Wednesday, June 6, 7, 8, 2016. May be repeated for credit. Same as: PHIL 132W

**PHIL 233. Husserl. 4 Units.**

Husserl's phenomenology. Main themes in his philosophy and their interconnections, including consciousness, perception, intersubjectivity, lifeworld, ethics, mathematics and the sciences, and time and space. Works in English translation.

**PHIL 234. Phenomenology and Intersubjectivity. 4 Units.**

(Graduate students register for 234.) Readings from Husserl, Stein, Heidegger, Sartre, and Merleau-Ponty on subjects related to awareness of others. Topics include solipsism, collective experience, empathy, and objectification of the other. Same as: PHIL 134

**PHIL 234B. The Later Heidegger: Art, Poetry, Language. 3 Units.**

Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from "On the Origin of the Work of Art" and *Elucidations of Holderlin's Poetry*. Same as: RELIGST 277, RELIGST 377

**PHIL 235. Existentialism. 4 Units.**

Focus is on the existentialist preoccupation with human freedom. What constitutes authentic individuality? What is one's relation to the divine? How can one live a meaningful life? What is the significance of death? A rethinking of the traditional problem of freedom and determinism in readings from Rousseau, Kierkegaard, and Nietzsche, and the extension of these ideas by Sartre, Beauvoir, and Camus, including their social and political consequences in light of 20th-century fascism and feminism. Same as: PHIL 135

**PHIL 236. History of Analytic Philosophy. 4 Units.**

(Formerly 147/247; graduate students register for 236.) Theories of knowledge in Frege, Carnap, and Quine. Emphasis is on conceptions of analyticity and treatment of logic and mathematics. Prerequisite: 50 and one course numbered 150-165 or 181-90.

Same as: PHIL 136

**PHIL 237. Wittgenstein. 4 Units.**

(Graduate students register for 237.) An exploration of Wittgenstein's changing views about meaning, mind, knowledge, and the nature of philosophical perplexity and philosophical insight, focusing on the *Tractatus Logico-Philosophicus* and *Philosophical Investigations*.

Same as: PHIL 137

**PHIL 238. Recent European Philosophy: Between Nature and History. 4 Units.**

A critical introduction to the novel understandings of time, language, and cultural power developed by 20th-century continental thinkers, with close attention to work by Heidegger, Saussure, Benjamin, and Foucault.

Same as: PHIL 138

**PHIL 239. Teaching Methods in Philosophy. 1-4 Unit.**

For Ph.D. students in their first or second year who are or are about to be teaching assistants for the department. May be repeated for credit.

**PHIL 240. Individual Work for Graduate Students. 1-15 Unit.**

May be repeated for credit.

**PHIL 241. Dissertation Development Seminar. 1-4 Unit.**

Required of second-year Philosophy Ph.D. students; restricted to Stanford Philosophy Ph.D. students. Prerequisite: consent of instructor.

**PHIL 243. Quine. 4 Units.**

(Formerly 183/283; graduate students register for 243.) The philosophy of Quine: meaning and communication; analyticity, modality, reference, and ontology; theory and evidence; naturalism; mind and the mental.

Same as: PHIL 143

**PHIL 248. Medieval Latin Paleography. 3-5 Units.**

The history of medieval scripts and medieval abbreviation. Dating and placing Latin European medieval manuscripts. Editing medieval texts in philosophy, psychology, physics, and theology. Class project: an early 13th century encyclopedia (with entries citing both Plato and Aristotle). Intellectually exciting, easy to read (textualis script).

**PHIL 249. Evidence and Evolution. 3-5 Units.**

The logic behind the science. The concept of evidence and how it is used in science with regards to testing claims in evolutionary biology and using tools from probability theory, Bayesian, likelihoodist, and frequentist ideas. Questions about evidence that arise in connection with evolutionary theory. Creationism and intelligent design. Questions that arise in connection with testing hypotheses about adaptation and natural selection and hypotheses about phylogenetic relationships.

Same as: PHIL 349

**PHIL 250. Mathematical Logic. 4 Units.**

An introduction to the concepts and techniques used in mathematical logic, focusing on propositional, modal, and predicate logic. Highlights connections with philosophy, mathematics, computer science, linguistics, and neighboring fields.

Same as: PHIL 150

**PHIL 251. Metalogic. 4 Units.**

(Formerly 160A.) The syntax and semantics of sentential and first-order logic. Concepts of model theory. Gödel's completeness theorem and its consequences: the Löwenheim-Skolem theorem and the compactness theorem. Prerequisite: 150 or consent of instructor.

Same as: PHIL 151

**PHIL 251A. Recursion Theory. 4 Units.**

Computable functions, Turing degrees, generalized computability and definability. "What does it mean for a function from the natural numbers to themselves to be computable?" and "How can noncomputable functions be classified into a hierarchy based on their level of noncomputability?". Theory of relative computability, reducibility notions and degree structures. Prerequisite is PHIL 150, or PHIL 151 or CS 103.

Same as: PHIL 151A

**PHIL 252. Computability and Logic. 4 Units.**

Approaches to effective computation: recursive functions, register machines, and Turing machines. Proof of their equivalence, discussion of Church's thesis. Elementary recursion theory. These techniques used to prove Gödel's incompleteness theorem for arithmetic, whose technical and philosophical repercussions are surveyed. Prerequisite: 151.

Same as: PHIL 152

**PHIL 253. Feminist Theories and Methods Across the Disciplines. 2-5 Units.**

(Graduate Students register for PHIL 253 or FEMGEN 203) Concepts and questions distinctive of feminist and LGBT scholarship and how they shape research: gender, intersectionality, disciplinarity and interdisciplinarity, standpoint, "queering," postmodern critiques, postcolonial critiques. Prerequisites: Feminist Studies 101 or equivalent with consent of instructor.

Same as: FEMGEN 103, FEMGEN 203, PHIL 153

**PHIL 254. Modal Logic. 4 Units.**

(Graduate students register for 254.) Syntax and semantics of modal logic and its basic theory: including expressive power, axiomatic completeness, correspondence, and complexity. Applications to topics in philosophy, computer science, mathematics, linguistics, and game theory. Prerequisite: 150 or preferably 151.

Same as: PHIL 154

**PHIL 255. General Interest Topics in Mathematical Logic. 4 Units.**

Introduction to formalization using language of logic and to problems of philosophical logic and computer science that can be handled this way. Propositional calculus, Sudoku puzzles, resolution rule, problem P=NP. Possible worlds, modal logic with emphasis on individuation problems. May be repeated for credit.

Same as: PHIL 155

**PHIL 257. Topics in Philosophy of Logic. 3 Units.**

(Graduate students register for 257.) Disputed foundational issues in logic; the question of what the subject matter and boundaries of logic are, such as whether what is called second-order logic should be counted as logic. What is the proper notion of logical consequence? May be repeated for credit. Pre- or corequisite: 151, or consent of instructor.

Same as: PHIL 157

**PHIL 258. Topics in Logic: Ten Problems in Deontic Logic. 2 Units.**

As witnessed by the handbook of deontic logic and normative systems, the area of deontic logic is in flux. Traditional questions and logical methods of deontic logic are being supplemented by new questions and new techniques. This tutorial gives an introduction to the current discussion in deontic logic. In what sense are obligations different from norms? Jorgensen's dilemma, from preference based modal logic to the modern approach. How to reason about dilemmas, contrary-to-duty and defeasible norms? Distinguishing various kinds of defeasibility. How to relate various kinds of permissive and constitutive norms? Permissions as exceptions and prioritized norms. How do norms relate to other modalities like beliefs, desires, and intentions? How do norms change? What is the role of time, action and games in deontic reasoning? For each problem, we discuss traditional as well as new research questions. We see the new questions as good questions for current research, in the sense that they point to modern theories and applications. We are especially interested in new questions that make older traditional questions obsolete in the sense that they are now addressed from a modern perspective, or in a more general setting. This mini-course will run from the week of 15 April through the week of 13 May.  
Same as: PHIL 158

**PHIL 259. Non-Classical Logic. 4 Units.**

This course surveys a range of non-classical logics. Each week, we discuss the formal rules and philosophical underpinnings of a different system. Key topics include modal logic (the logic of possibility and necessity), many-valued logics (in which propositions can be both true and false, or neither), relevant logics (which aim to bring the concept of valid inference into line with everyday ideas about relevance), and logical pluralism (the view that there is more than one correct logic).  
Same as: PHIL 159

**PHIL 260A. Newtonian Revolution. 4 Units.**

(Graduate students register for 260A.) 17th-century efforts in science including by Kepler, Galileo, Descartes, and Huygens, that formed the background for and posed the problems addressed in Newton's *Principia*.  
Same as: PHIL 160A

**PHIL 260B. Newtonian Revolution. 4 Units.**

(Graduate students register for 260B.) Newton's *Principia* in its historical context, emphasizing how it produced a revolution in the conduct of empirical research and in standards of evidence in science.  
Same as: PHIL 160B

**PHIL 262. Philosophy of Mathematics. 4 Units.**

(Graduate students register for PHIL 262.) General survey of the philosophy of mathematics, focusing on epistemological issues. Includes survey of some basic concepts (proof, axiom, definition, number, set); mind-bending theorems about the limits of our current mathematical knowledge, such as Gödel's Incompleteness Theorems, and the independence of the continuum hypothesis from the current axioms of set theory; major philosophical accounts of mathematics: Logicism, Intuitionism, Hilbert's program, Quine's empiricism, Field's program, Structuralism; concluding with a discussion of Eugene Wigner's 'The Unreasonable Effectiveness of Mathematics in the Natural Sciences'. Students won't be expected to prove theorems or complete mathematical exercises. However, includes some material of a technical nature. Prerequisite: PHIL 150 or consent of instructor.  
Same as: MATH 162, PHIL 162

**PHIL 263. Significant Figures in Philosophy of Science. 4 Units.**

(Graduate students register for 263.) Directed study of two or more thinkers, past or present, who have made a lasting impact on contemporary philosophy of science. Subjects last year were Henri Poincaré, Pierre Duhem, and Gaston Bachelard.  
Same as: PHIL 163

**PHIL 264. Central Topics in the Philosophy of Science: Theory and Evidence. 4 Units.**

(Graduate students register for 264.) Is reductionism opposed to emergence? Are they compatible? If so, how or in what sense? We consider methodological, epistemological, logical and metaphysical dimensions of contemporary discussions of reductionism and emergence in physics, in the  $\zeta$ sciences of complexity $\zeta$ , and in philosophy of mind.  
Same as: PHIL 164

**PHIL 264A. Central Topics in Philosophy of Science: Causation. 4 Units.**

(Graduate Students register for 264A.) Establishing causes in science, engineering, and medicine versus establishing them in Anglo-American law, considered in the context of Hume and Mill on causation. May be repeated for credit.  
Same as: PHIL 164A

**PHIL 265. Philosophy of Physics. 4 Units.**

Graduate students register for 265.) Central topic alternates annually between space-time theories and philosophical issues in quantum mechanics; the latter in Winter 2013-14. Conceptual problems regarding the uncertainty principle, wave-particle duality, quantum measurement, spin, and their treatment within the 'Copenhagen interpretation' of quantum mechanics, and the related doctrine of complementarity. The issue of quantum entanglement as raised by Einstein and Schrödinger in the 1930s and the famous EPR (Einstein-Podolsky-Rosen) paper of 1935. Examination of EPR-type experimental set-ups and a result due to Bell in the 1960s, according to which no "hidden variables" theory satisfying a certain locality condition (apparently assumed by EPR) can reproduce all the predictions of quantum mechanics. Survey of several live interpretive options for standard quantum mechanics: Bohmian mechanics (a.k.a. 'pilot wave theory'), 'spontaneous collapse' theories, and Everett's relative-state interpretation. Critical scrutiny of the  $\zeta$ decoherence $\zeta$  program that seeks to explain the classical-to-quantum transition, i.e., the emergence of the world of classical physics and macroscopic objects from quantum physics. May be repeated for credit if content is different.  
Same as: PHIL 165

**PHIL 265C. Philosophy of Physics: Probability and Relativity. 4 Units.**

Conceptual puzzles in formulating probability concepts to be invariant in the sense of the Lorentz transformation of special relativity. Problems arise in both classical and quantum physics.

**PHIL 266. Probability: Ten Great Ideas About Chance. 4 Units.**

Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.  
Same as: PHIL 166, STATS 167, STATS 267

**PHIL 266A. Foundations of Quantum Mechanics. 4 Units.**

This seminar will concentrate on a variety of probability questions that arise in quantum mechanics, including some from recent experiments. Negative probabilities and nonmonotonic upper probabilities will be emphasized.  
Same as: PHIL 166A

**PHIL 267A. Philosophy of Biology. 2-4 Units.**

(Graduate students register for 267A.) Evolutionary theory and in particular, on characterizing natural selection and how it operates. We examine debates about fitness, whether selection is a cause or force, the levels at which selection operates, and whether cultural evolution is a Darwinian process.  
Same as: PHIL 167A

**PHIL 267B. Philosophy, Biology, and Behavior. 4 Units.**

(Graduate Students register for 267B) Philosophical study of key theoretical ideas in biology as deployed in the study of behavior. Topics to include genetic, neurobiological, ecological approaches to behavior; the classification and measurement of behaviors: reductionism, determinism, interactionism. Prerequisites: one PHIL course and either one BIO course or Human Biology core; or equivalent with consent of instructor.

Same as: PHIL 167B

**PHIL 267C. Associative Theories of Mind and Brain. 4 Units.**

After a historical survey of associative theories from Hume to William James, current versions will be analyzed including the important early ideas of Karl Lashley. Emphasis will be on the computational power of associative networks and their realization in the brain.

Same as: PHIL 167C

**PHIL 267D. Philosophy of Neuroscience. 4 Units.**

Can problems of mind be solved by understanding the brain, or models of the brain? The views of philosophers and neuroscientists who believe so, and others who are skeptical of neurophilosophical approaches to the mind. Historical and recent literature in philosophy and neuroscience. Topics may include perception, memory, neural accounts of consciousness, neurophenomenology, neuroscience and physics, computational models, and eliminativism. (Not open to freshmen.)

Same as: PHIL 167D, SYMSYS 206

**PHIL 269. Evolution of the Social Contract. 4 Units.**

Explore naturalizing the social contract. Classroom presentations and term papers. nTexts: Binmore - Natural Justicen Skyrms - Evolution of the Social Contract.

Same as: PHIL 169

**PHIL 270. Ethical Theory. 4 Units.**

A more challenging version of Phil 2 designed primarily for juniors and seniors (may also be appropriate for some freshmen and sophomores - contact professor). Fulfills the Ethical Reasoning requirement. Graduate section (270) will include supplemental readings and discussion, geared for graduate students new to moral philosophy, as well as those with some background who would like more.

Same as: ETHICSOC 170, PHIL 170

**PHIL 270B. Metaphor. 4 Units.**

In metaphor we think and talk about two things at once: two different subject matters are mingled to rich and unpredictable effect. A close critical study of the main modern accounts of metaphor's nature and interest, drawing on the work of writers, linguists, philosophers, and literary critics. Attention to how understanding, appreciation, and pleasure connect with one another in the experience of metaphor. Consideration of the possibility that metaphor or something very like it occurs in nonverbal medial: gesture, dance, painting, music.

Same as: PHIL 170B

**PHIL 270D. Trust and Trustworthiness. 4 Units.**

An exploration of the place of interpersonal trust in ethical thought. What is it to trust another person? How is trusting related to, though different from, other attitudes we sometimes bear towards others (e.g. justified beliefs we form about others and their conduct; ethically significant expectations we have of others, etc.)? What is involved in acquiring/possessing the virtue of trustworthiness? How should trust (and trustworthiness) figure in our thinking about important ethical activities, for example promising, friendship, or the practice of politics?.

Same as: PHIL 170D

**PHIL 270E. Sexual Ethics. 4 Units.**

What is sex? What are the implications of different conceptions of sex for sexual ethics? Are there any distinctively sexual ethical principles or virtues or are principles and virtues that govern the sexual domain specific instances of principles and virtues that govern human activity more generally? Readings will range from historical to contemporary sources.

**PHIL 271. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, IPS 208, PHIL 171, POLISCI 103, POLISCI 136S, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307

**PHIL 272. History of Modern Moral Philosophy. 4 Units.**

This course traces the development of moral philosophy in Britain just prior to the nearly simultaneous emergence of Kant's moral philosophy and Bentham's utilitarianism in the 1780's. Emphasis is on the dialogue between empiricists and rationalists on the subject of the relationship between the natural and the normative. Authors include Hobbes, Clarke, Hutcheson, Hume, Smith, Price, and Bentham. Prerequisite: some familiarity with Kant's moral theory and utilitarianism, and demonstrated interest in philosophy.

Same as: PHIL 172

**PHIL 272B. Recent Ethical Theory: Moral Obligation. 4 Units.**

Some moral obligations are "relational," "directional," or "bipolar" in structure: in promising you to act in a certain way, for example, I incur an obligation to you to so act and you acquire a corresponding claim or right against me that I so act. This entails that if I violate my obligation to you, I will not merely be doing something that is morally wrong, but will be wronging you in particular. What does explain this? Do all moral obligations have this structure? We will discuss how different moral theories (consequentialist, deontological, contractualist) try to account for such obligations. Readings include Adams, Anscombe, Darwall, Feinberg, Hart, Parfit, Raz, Scanlon, Skorupski, Thompson, Thomson, Wallace, and Wolf.

Same as: PHIL 172B

**PHIL 272D. Bernard Williams. 4 Units.**

An exploration of some central themes from the work of Bernard Williams. Particular attention will be paid to his discussion of the character and identity of the self, his sustained critique of morality and moral philosophy. We will also read several of Williams's interlocutors, including Nagel, Parfit, Korsgaard, and Herman.

Same as: PHIL 172D

**PHIL 272N. Prudence and Morality. 4 Units.**

We sometimes think we should do something just because it will benefit us in the future, even though we don't particularly feel like doing it now (e.g. we exercise, go to the dentist for a check-up, or set aside money for retirement). And we sometimes think we should do something for the sake of another person, even when it is inconvenient, costly, or unpleasant (e.g. we stop to help a stranded motorist, donate to charity, or tell someone an embarrassing truth rather than a face-saving lie). When we do the former, we act prudently. When we do the latter, we act morally. This course explores the debate among philosophers about the source of our reasons for acting prudently and morally. Some argue that our reasons to be prudent and moral stem directly from the fact that we are rational & that it is contrary to reason to ignore our own future interests, or the interests of other people. Others disagree, arguing that the source of these reasons must lie elsewhere. Course readings will include work by Thomas Nagel, Bernard Williams, Christine Korsgaard, Derek Parfit, Philippa Foot, and others.

Same as: PHIL 172N

**PHIL 273B. Graduate Introduction to Metaethics. 2-4 Units.**

This a graduate student only introduction to contemporary metaethics. Can moral and ethical values be justified or is it just a matter of opinion? Is there a difference between facts and values? Are there any moral truths? Does it matter if there are not? Focus is not on which things or actions are valuable or morally right, but what is value or rightness itself. Prerequisites: 280, 281, and an ethics course.

**PHIL 273W. Aesthetics. 4 Units.**

This course will investigate a cluster of varied but related philosophical issues concerning the arts (painting, music, literature, poetry, photography, theater, film, etc.) issues most of which are, at the same time, problems in philosophy of mind or language, value theory, or epistemology. We will address questions like the following: What, if anything, is distinctive about art and aesthetic experience?, What is aesthetic value, and how do aesthetic values relate to and interact with values of other kinds?, What is fiction and why are people interested in it?, In what ways are works of art expressive of feelings or emotions? What similarities and differences are there in the expressive qualities of music, literature, painting, poetry? How might we learn from works of art of one or another kind, and how might they work to change people's perspectives or attitudes?, In what ways do works of art serve as vehicles of communication? Is there a fundamental difference between the value of works of art, and that of beautiful natural objects? (These various issues are related, as we shall see; we'll be exploring several of them simultaneously.) Along the way, we will bump into more specific questions such as: Why and in what ways is photography more (or less) 'realistic' than painting and drawing, or more or less revealing of reality? Does (instrumental) music have cognitive content? Is music representational in anything like the ways literature and figurative painting are?, Do all literary works have narrators? Is there ever (or always?) anything like narrators in paintings, films, music? Same as: PHIL 173W

**PHIL 274. Freedom and the Practical Standpoint. 4 Units.**

(Graduate students register for 274.) Confronted with the question of how to act, people think of themselves as freely determining their own conduct. Natural science poses a challenge to this by explaining all events, including human actions, in terms of causal processes. Are people justified in thinking of themselves as free? Major philosophical approaches to this question: incompatibilism, compatibilism, and the two-standpoint view. Same as: PHIL 174

**PHIL 274A. Moral Limits of the Market. 4 Units.**

Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases. Same as: ETHICSOC 174A, PHIL 174A, POLISCI 135P

**PHIL 274D. Moral Luck. 4 Units.**

We draw a fundamental distinction between what a person voluntarily does, and what is beyond her control. Such a distinction seems central to how we think about what it is to justify our actions (whether to ourselves or to one another), as well as to our practice of holding one another morally responsible for what we do. Yet under pressure, this distinction can appear to collapse & we find that we cannot successfully disentangle what a person controls from what she does not when she acts. This course examines this problem in depth, and considers how we might respond in the face of it: Is it really a problem? If so, does it threaten our moral practices? How should it influence the way in which we make choices, or the way we understand those choices once we've made them?. Same as: PHIL 174D

**PHIL 274L. Betrayal and Loyalty, Treason and Trust. 2 Units.**

The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.

Same as: ETHICSOC 174L, ETHICSOC 274L, PHIL 174L

**PHIL 275A. Ethics and Politics of Public Service. 5 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. [This class is capped but there are some spaces available with permission of instructor. If the class is full and you would like to be considered for these extra spaces, please email sburbank@stanford.edu with your name, grade level, and a paragraph explaining why you want to take the class.]. Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 175A, POLISCI 133, PUBLPOL 103D, URBANST 122

**PHIL 275M. Two Ethical Theories and Being a Person. 4 Units.**

The distinction between the ethics of being a person and the ethics of rules as opposed to the distinction between Kantian ethics and utilitarianism or consequentialism consequentialism. Comparison of these two types of ethics with respect to their relationship to agency and being a good person. Relations between Western ethics and those of other continents. Same as: PHIL 175M

**PHIL 275P. Philosophy of Law and Conceptions of Agency. 4 Units.**

In this course we will explore the connections between recent work in philosophy of law and philosophy of action. Current philosophy of law draws on philosophy of action. One example is the work of Scott Shapiro, who interprets legal activity as a form of social planning that enables citizens to coordinate their activities as agents. We will consider what normative requirements are necessary to make citizens self-legislating autonomous agents. Are formal requirements like consistency and coherence sufficient, or does law have to meet substantial normative and moral requirements? We will also discuss whether the deficiency of &evil legal systems& can be explained in terms of agency. Can distorted legal system provide agents a coherent form of self-understanding? We will explore these questions through readings by Scott Shapiro, Ronald Dworkin, Lon F. Fuller, David Dyzenhaus, Kristen Rundle, Michael Bratman, David Velleman, and Christine Korsgaard. Same as: PHIL 175P

**PHIL 275R. Roads Not Taken, 1880-1960. 4 Units.**

This course is intended to illuminate ideas about justice, freedom, equality, democracy, peace, and social conflict, and to raise persisting questions about such topics as the role of violence in politics through looking at the ideas of America writers such as Edward Bellamy, W.E.B. DuBois, Eugene Debs, Jane Addams, Emma Goldman, John Dewey and Reinhold Niebuhr.

Same as: AMSTUD 275R, ETHICSOC 275R, POLISCI 335L

**PHIL 276. Political Philosophy: The Social Contract Tradition. 4 Units.** (Graduate students register for 276.) Why and under what conditions do human beings need political institutions? What makes them legitimate or illegitimate? What is the nature, source, and extent of the obligation to obey the legitimate ones, and how should people alter or overthrow the others? Study of the answers given to such questions by major political theorists of the early modern period: Hobbes, Locke, Rousseau, and Kant. Same as: PHIL 176, POLISCI 137A, POLISCI 337A

**PHIL 276B. The Economic Individual in the Behavioral Sciences. 4 Units.** (Graduate students register for 276B.). Same as: PHIL 176B

**PHIL 276C. Religion and Politics: a Latin American Perspective. 4 Units.** Religion has traditionally been banished from politics in some places in Latin America. Religious symbols may not be displayed in public buildings, political discourse is expected to be free from all religious content, and religious ministers are not allowed to run for public office, among other measures. This course examines the political motivation for this kind of policies towards religion taking a comparative perspective with American and French variants of secularism. Same as: ETHICSOC 276R, ETHICSOC 376R, PHIL 176C

**PHIL 277B. EMOTIONS: MORALITY AND LAW. 2 Units.** If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Paul's contrast between law and love, or Nietzsche's idea that resentment is what feeds morality, will be discussed alongside other intriguing topics. Same as: ETHICSOC 202, ETHICSOC 302, PHIL 177B

**PHIL 277C. Ethics of Climate Change. 4 Units.** Climate change is an ethical failure. When we cause greenhouse gas to be emitted for our own benefit, the gas spreads around the world and does harm everywhere. Many of those who are harmed emit very little greenhouse gas themselves. When some people harm others for their own benefit, something is morally wrong. Specifically, there is an injustice. One of the ethical problems raised by climate change is how to rectify this injustice. Climate change also raises a different range of ethical questions, which may be classified as questions of value. For example, in making decisions, how should the distant future be valued in comparison with the present and how should we take account of the great loss of human life that climate change will cause? This course investigates the issues of justice and the issues of value. It considers the moral demands that climate change puts both on private individuals and on public institutions. Because the effects of climate change are so widespread and so complex, the methods of economics can be useful in putting ethical principles into effect. The course will therefore assess some of these methods. Same as: PHIL 177C

**PHIL 277W. Human Rights. 4 Units.** Same as: PHIL 177W

**PHIL 278M. Introduction to Environmental Ethics. 4-5 Units.** How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism. Same as: ETHICSOC 178M, ETHICSOC 278M, PHIL 178M, POLISCI 134L

**PHIL 279S. Moral Psychology, Reasons for Action, and Moral Theory. 4 Units.** What sorts of considerations does an ethical agent take to be good reasons for action? Work in moral psychology to illuminate the theory of practical reasons, and the theory of practical reasons to test the prospects for systematic moral theory. Can any systematic moral theory be reconciled with the moral psychology of ordinary, morally respectable agents? Reading include Bernard Williams, Rosalind Hursthouse, Peter Railton, T.M. Scanlon, and Barbara Herman. Same as: PHIL 179S

**PHIL 280. Metaphysics. 4 Units.** It seems undeniable that things in the world have certain features, or properties: some apples are red, my cat is soft, the Golden Gate Bridge is 2,737 meters long, and so on. This course will focus on metaphysical issues in properties. The topics include ontic issues in properties (universals vs. tropes, realism vs. nominalism), particulars (tropes and bundle theory), and the nature of properties (quantities and causal essentialism). Prerequisites: Philosophy 80 and Philosophy 50 or equivalent (or consent of instructor). Same as: PHIL 180

**PHIL 280A. Realism, Anti-Realism, Irrationalism, Quasi-Realism. 4 Units.** Realism and its opponents as options across a variety of different domains: natural science, mathematics, ethics, and aesthetics. Clarify the various conceptions that fall under these terms and outline the reasons for and against adopting realism for the various domains. Highlight the general issues involved. Prerequisites: 80, 181. Same as: PHIL 180A

**PHIL 281. Philosophy of Language. 4 Units.** The study of conceptual questions about language as a focus of contemporary philosophy for its inherent interest and because philosophers see questions about language as behind perennial questions in other areas of philosophy including epistemology, philosophy of science, metaphysics, and ethics. Key concepts and debates about the notions of meaning, truth, reference, and language use, with relations to psycholinguistics and formal semantics. Readings from philosophers such as Frege, Russell, Wittgenstein, Grice, and Kripke. Prerequisites: 80 and background in logic. Same as: PHIL 181

**PHIL 281B. Philosophy of Language: Contemporary Debates. 4 Units.** This course builds on the material of 181/281, focusing on debates and developments in the pragmatics of conversation, the semantics/pragmatics distinction, the contextuality of meaning, the nature of truth and its connection to meaning, and the workings of particular linguistic constructions of special philosophical relevance. Students who have not taken 181/281 should seek the instructor's advice as to whether they have sufficient background.

**PHIL 282. Truth. 2-4 Units.**

Philosophical debates about the place in human lives and the value to human beings of truth and its pursuit. The nature and significance of truth-involving virtues such as accuracy, sincerity, and candor. Prerequisite Phil 80 or permission of the instructor. Same as: PHIL 182

**PHIL 284. Epistemology. 4 Units.**

This is an advanced introduction to core topics in epistemology – the philosophical study of human knowledge. Questions covered will include: What is knowledge? Can we know anything outside our own minds? Must all knowledge rest on secure foundations? Does knowing something require knowing that you know it? What are the connections between knowledge and rationality? Does 'knowledge' mean the same in the philosophy classroom as it does in everyday life? Prerequisite Phil 80 or consent of the instructor. Same as: PHIL 184

**PHIL 284C. Epistemology of Testimony. 4 Units.**

Many of our beliefs come from others, and not from direct experience. Is testimony a source of fundamental reasons? reasons that do not have to be supported or validated by other sources like perception or inference? What sort of responsibility does one have to one's hearers, when one gives testimony? Same as: PHIL 184C

**PHIL 284F. Feminist Theories of Knowledge. 4 Units.**

Feminist critique of traditional approaches in epistemology and alternative feminist approaches to such topics as reason and rationality, objectivity, experience, truth, the knowing subject, knowledge and values, knowledge and power. Same as: FEMST 166, PHIL 184F

**PHIL 285B. Philosophy of Perception. 4 Units.**

The nature of perceptual experience and the role it plays in securing empirical knowledge. Focus will be on what is sometimes called "the problem of perception": the question of how perception could provide us with direct awareness of the surrounding environment given the possibility of illusions or hallucinations. Topics, include the relationship between perception and belief, the nature of perceptual phenomenology, whether or not perceptual experiences are representational states, and the philosophical relevance of empirical research on perception. Same as: PHIL 185B

**PHIL 286. Philosophy of Mind. 4 Units.**

(Graduate students register for 286.) This is an advanced introduction to core topics in the philosophy of mind. Prerequisite: PHIL 80. Same as: PHIL 186

**PHIL 287. Philosophy of Action. 4 Units.**

(Graduate students register for 287.) Contemporary research in the philosophy of action. Topics include: What is it to be an agent? Is there a philosophically defensible contrast between being an agent and being a locus of causal forces to which one is subject? What is it to act purposively? What is intention? What is the relation between intention and belief? What is it to act intentionally? What is it to act for a reason? What is the relation between explaining why someone acted by citing the reasons for which she acted and causal explanation of her action? What is the relation between theoretical and practical rationality? What is the nature of our knowledge of our own intentional activity? What is it to act autonomously? What is shared cooperative activity? Prerequisite: 80. Same as: PHIL 187

**PHIL 288. Personal Identity. 4 Units.**

Do you persist through time the way that a skyscraper persists through space, by having different parts at different locations? Or are you wholly present at every moment of your life, in something more like the way that an elevator is present in each place as it travels up to the top floor? What criteria determine whether you now are the very same person as some unique person located at some time in the past? Is the continuity of your memories or other mental states sufficient for your survival? Can you survive the loss or destruction of your body? Do you really exist for more than just the present moment? How do different answers to these questions bear on your moral, personal, and professional obligations? What kinds of considerations could possibly help us to answer these questions? This course explores these and related issues. Readings include a mix of introductory survey, historical, and contemporary material. Same as: PHIL 188

**PHIL 289. Examples of Free Will. 4 Units.**

Examples drawn from three domains: choice, computation, and conflict of norms. Conceptually, a distinction is made between examples that are predictable and those that are not, but skepticism about making a sharp distinction between determinism and indeterminism is defended. Same as: PHIL 189

**PHIL 293C. Film & Philosophy. 4 Units.**

Issues of freedom, morality, faith, knowledge, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include *Twelve Monkeys* (Gilliam), *Ordet* (Dreyer), *The Dark Knight* (Nolan), *Vicky Cristina Barcelona* (Allen), and *Eternal Sunshine of the Spotless Mind* (Kaufman). Taught in English. Same as: COMPLIT 154A, FRENCH 154, ITALIAN 154, PHIL 193C

**PHIL 300. Proseminar. 4 Units.**

Topically focused seminar. Required of all first year Philosophy PhD students.

**PHIL 301. Dissertation Development Proseminar. 2-4 Units.**

A required seminar for third year philosophy PhD students, designed to extend and consolidate work done in the dissertation development seminar the previous summer.

**PHIL 305R. JUST AND UNJUST WARS. 2 Units.**

War is violent, but also a means by which political communities pursue collective interests. When, in light of these features, is the recourse to armed force justified? Pacifists argue that because war is so violent it is never justified, and that there is no such thing as a just war. Realists, in contrast, argue that war is simply a fact of life and not a proper subject for moral judgment, any more than we would judge an attack by a pack of wolves in moral terms. In between is just war theory, which claims that some wars, but not all, are morally justified. We will explore these theories, and will consider how just war theory comports with international law rules governing recourse to force. We will also explore justice in war, that is, the moral and legal rules governing the conduct of war, such as the requirement to avoid targeting non-combatants. Finally, we will consider how war should be terminated; what should be the nature of justified peace? We will critically evaluate the application of just war theory in the context of contemporary security problems, including: (1) transnational conflicts between states and nonstate groups and the so-called "war on terrorism"; (2) civil wars; (3) demands for military intervention to halt humanitarian atrocities taking place in another state. Same as LAW 751. Same as: ETHICSOC 205R, ETHICSOC 305R, PHIL 205R

**PHIL 306C. Plato on Eros and Beauty. 3-5 Units.**

We read Plato's *Symposium* and *Phaedrus*; topics: love, beauty, language (oral and written). Graduate seminar, but open to seniors. Same as: CLASSICS 336

**PHIL 308. Aristotle's Politics. 4 Units.**

The seminar will be a critical examination of Aristotle's political philosophy and we shall focus on his *Politics* as our primary text. We'll supplement this with some other texts by Aristotle that are relevant and explore the most important connections between Aristotle's political philosophy and his ethics.

**PHIL 308B. Aristotle on his Predecessors. 2-4 Units.**

An introduction both to Aristotle's own metaphysics and to his treatment of his predecessors on causality, included the early Ionian cosmologists, atomism, Pythagoreans, Heraclitus, Parmenides, Empedocles, Anaxagoras and Plato. Prerequisite: one course in ancient Greek philosophy.

**PHIL 309. Hume's Psychology and Political Theory. 3-5 Units.**

This seminar will concentrate on Hume's political ideas, which to a large extent have been neglected, both by philosophers and political scientists. We will read passages from three important works of Hume, as listed above, together with the lively support of a strong view concerning the importance of Hume's ideas about politics. The requirement for the course will be a paper on a subject relevant to the main topic, and mutually agreed to. The first six sessions of the seminar will be held jointly by live video with Professor Russell Hardin of NYU and his students. By the end of the sixth session, NYU's Spring Term will have ended. We will decide at that point how many more joint sessions to have, and how much time should be devoted to individual consultation about the paper to be written.

**PHIL 309C. Aristotle's Metaphysics Zeta and its Medieval Reception: Definition. 4 Units.**

Grad seminar on the medieval reception of Book Zeta of Aristotle's *Metaphysics*.

**PHIL 310. Plato's Phaedo. 4 Units.**

A close reading of Plato's *Phaedo*, with a special emphasis on its metaphysical aspects, such as its discussions of Forms, causation, and coming-to-be. Also to be investigated: the nature and immortality of the soul, the correct attitude to have toward one's death, the theory of recollection, the method of hypothesis, and the respective roles of argument and myth.

**PHIL 311. Plato's Philebus and Timaeus. 4 Units.**

We shall carefully examine two Platonic dialogues, the *Philebus* and the *Timaeus*. We shall focus on the dialogues' ethics, metaphysics, and psychology.

**PHIL 312. Aristotle's Psychology. 4 Units.**

*De Anima* and parts of *Parva Naturalia*.

**PHIL 314. Practical Reasoning in Plato and Aristotle. 2-4 Units.**

It is often said that the greatest difference between Plato's ethics and those of Aristotle is that the latter thinks that practical and theoretical reason are distinct, but the former does not. We shall read some of both Plato and Aristotle and ask whether the above claim is true and then consider what the implications the differences between their views of practical reason have for the rest of their ethics.

**PHIL 317. Topics in Plato: Middle and Late Ethics & Politics. 2-4 Units.**

Examine the fundamentals of Plato's political philosophy by reading the *Politics* as well relevant parts of some of his other ethical and political works.

**PHIL 318. Aristotle and the Object of Mathematical Reasoning. 4 Units.**

The concept of definition plays a central role in Aristotle's treatment of both philosophical and scientific inquiry, as well as explanation. A definition is an account of what something is, and some definitions are used to guide causal inquiry whereas others function as explanatory starting points. In this course we will examine texts from his logic, natural science and metaphysics in order to see what the different kinds of definition are, how they obtained, and how they capture the nature or essence of a definable object. Particular attention will be given to the role of matter in the definition of the form of a natural substance, state, process or activity. For instance, what role does a specification of physiological processes play in the definitions of emotions such as anger? No knowledge of Greek is required. May be repeat for credit. Same as: CLASSICS 315

**PHIL 319. Topics in Greek Philosophy: Plato and Aristotle on Knowledge and Action. 2-4 Units.**

Aristotle's views about substance and the nature and possibility of metaphysics. Focus is on *Categories* and *Metaphysics* Book Zeta.

**PHIL 321. Leibniz's Metaphysics. 2-4 Units.**

Leibniz's metaphysical views during his so-called "mature period" (early 1680s to 1716). Topics will include Leibniz's conception of substance, his alleged idealism, his doctrine of possible worlds and his doctrine of pre-established harmony. Reading of the *Discourse on Metaphysics* (1686) and the correspondence with Arnauld (1686-1690).

**PHIL 322. Hume. 2-4 Units.**

Hume's theoretical philosophy emphasizing skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self.

**PHIL 323. Kant's Criticism of Metaphysics. 4 Units.**

Motivations and strategies of Kant's criticisms of traditional metaphysics in the *Critique of Pure Reason*. Leibnizian and Wolffian versions of the concept containment theory of truth and the Wolffian ideal of a conceptual system of metaphysical knowledge. Kant's analytic/synthetic distinction, focusing on its place in the rejection of metaphysics and in arguments about the ideas of reason in the transcendental dialectic. Prerequisite: course on the first *Critique*, or consent of instructor.

**PHIL 324. Kant's System of Nature and Freedom. 4 Units.**

The aim is to acquire a sense of how the two main parts of Kant's philosophy, theoretical and practical, fit together. These two parts, according to the *Critique of the Power of Judgment*, concern the realm of nature and the realm of freedom respectively. We shall study parts of all three *Critiques*, along with appropriate supplementary materials. Prior acquaintance with both Kant's theoretical and his practical philosophy is presupposed.

**PHIL 326. Kant's Transcendental Deduction. 4 Units.****PHIL 330. Social and Political Philosophy of Hegel and Marx. 4 Units.**

Same as: ETHICSOC 330R, POLISCI 330

**PHIL 332. Nietzsche. 2-4 Units.**

Preference to doctoral students. Nietzsche's later works emphasizing *The Gay Science*, *Beyond Good and Evil*, and *On the Genealogy of Morals*. The shape of Nietzsche's philosophical and literary projects, and his core doctrines such as eternal recurrence, will to power, and perspectivism. Problems such as the proper regulation of belief, and the roles of science, morality, art, and illusion in life.

**PHIL 333. Philosophy, Literature, and the Arts Core Seminar. 2-4 Units.**

Same as: DLCL 333

**PHIL 334. Habermas. 3-5 Units.**

Does Habermas have a distinctive account of normativity and normative judgements?

**PHIL 335. Topics in Aesthetics. 4 Units.**

May be repeated for credit.

**PHIL 339. Marx. 2-4 Units.**

This course examines the works of a thinker who radically transformed the ways that we think about modern society. Marx saw fundamental problems with capitalist societies, including: un-freedom, alienation, inequality, and bureaucratization. He developed a theory to account for these problems. Our task will be to read his works critically and to evaluate their contributions to our understanding the relationship between politics, social structure, knowledge and human agency. We will also be especially interested in comparing his view with alternative diagnoses of the problems of modern capitalist societies, especially those of Max Weber and John Rawls.

Same as: POLISCI 333S

**PHIL 340. Time and Free Will. 3-5 Units.**

Free will and the consequence argument of Peter van Inwagen and others. Focus is on the principle that one cannot change the past and the problem of backtracking conditionals, and less on the problem raised by determinism. Hypotheses less drastic than determinism support backtrackers; given the backtracker, would someone's not having done something require that he change the past? Issues related to time, change, the phenomenology of agency, and McTaggart's argument about the reality of time.

**PHIL 344. Narrative Knowing. 1-2 Unit.**

Philosophers and historians have been debating the status of narrative explanation for well over 50 years. Until quite recently, a supposed dichotomy between natural science and history has shaped the discussion. Beginning from the origins, history, and limitations of the dichotomy, this seminar will explore how claims for narrative understanding and explanation have come to occupy an increasingly important role in the natural sciences as well as the social sciences. Some classic contributors are Hempel, Danto, Mink, Kuhn, White, Ricoeur, Geertz, and Ginzburg. Current authors include Roth, Rheinberger, Kitcher, Beatty, Morgan, and (yes) Wise.

Same as: HISTORY 344

**PHIL 348. Evolution of Signalling. 2-4 Units.**

Explores evolutionary (and learning) dynamics applied to simple models of signaling, emergence of information and inference. Classroom presentations and term papers. Text: Skyrms - SIGNALS: EVOLUTION, LEARNING and INFORMATION and selected articles.

**PHIL 349. Evidence and Evolution. 3-5 Units.**

The logic behind the science. The concept of evidence and how it is used in science with regards to testing claims in evolutionary biology and using tools from probability theory, Bayesian, likelihoodist, and frequentist ideas. Questions about evidence that arise in connection with evolutionary theory. Creationism and intelligent design. Questions that arise in connection with testing hypotheses about adaptation and natural selection and hypotheses about phylogenetic relationships.

Same as: PHIL 249

**PHIL 350A. Model Theory. 3 Units.**

Back-and-forth arguments with applications to completeness, quantifier-elimination and omega-categoricity. Elementary extensions and the monster model. Preservation theorems. Interpolation and definability theorems. Imaginaries. Prerequisite: Phil 151A or consent of the instructor.

**PHIL 351. Representation Theorems. 4 Units.**

Representation theorems show that beliefs which obey certain qualitative constraints have the structure of probabilities, while preferences which obey certain qualitative constraints have the structure of expected-utility maximization. In this course, we prove several representation theorems in detail, and discuss the philosophic controversies surrounding them: how to justify the qualitative constraints, the difference between normative and descriptive interpretations, and what the formal relation of representability amounts to in real terms.

**PHIL 351A. Recursion Theory. 3 Units.**

Theory of recursive functions and recursively enumerable sets. Register machines, Turing machines, and alternative approaches. Gödel's incompleteness theorems. Recursively unsolvable problems in mathematics and logic. Introduction to higher recursion theory. The theory of combinators and the lambda calculus. Prerequisites: 151, 152, and 161, or equivalents.

**PHIL 351B. Proof Mining. 1-3 Unit.**

Uses of proof theory in analysis and number theory. Proof mining: extraction of bounds from non-effective proofs. May be repeated for credit. Prerequisite: 151, 152 or equivalents, and a calculus course.

**PHIL 353B. Proof Theory B. 2-3 Units.**

Consistency ordinal as a measure of the strength of a mathematical theory. The open problem of describing the ordinal of mathematical analysis (second order arithmetic). Present state of the problem and approaches to a solution. Prerequisites: Phil 151, 152 or equivalents.

**PHIL 353C. Functional Interpretations. 4 Units.**

Finite-type arithmetic. Gödel's functional interpretation and Kreisel's modified realizability. Systems based on classical logic. Spector's extension by bar-recursive functionals. Kohlenbach's monotone interpretation and the bounded functional interpretation. The elimination of weak König's lemma. Uniform boundedness. A look at Tao's hard/soft analysis distinction.

**PHIL 354. Topics in Logic. 1-3 Unit.**

Complexity of propositional calculi. P=NP problem. Exponential lower bounds for resolution and for intuitionistic derivations. Problem of saving proofs. Complexity of derivations in arithmetic. Inventor's paradox. Synthesis of inductive invariants. Prerequisites: Phil 151, 152 or equivalents.

**PHIL 355. Logic and Social Choice. 4 Units.**

Topics in the intersection of social choice theory and formal logic. Voting paradoxes, impossibility theorems and strategic manipulation, logical modeling of voting procedures, preference versus judgment aggregation, role of language in social choice, and metatheory of social choice. May be repeated for credit. Prerequisite: 151 or consent of instructor.

**PHIL 356. Applications of Modal Logic. 3 Units.**

Applications of modal logic to knowledge and belief, and actions and norms. Models of belief revision to develop a dynamic doxastic logic. A workable modeling of events and actions to build a dynamic deontic logic on that foundation. (Staff).

**PHIL 357. Information, Computation, and Intelligence. 4 Units.**

graduate seminar.

**PHIL 359. Topics in Logic, Information and Agency. 2-4 Units.**

Logical analysis of information, interaction and games, with topics connecting philosophy, computer science, game theory, and other fields. The focus is on current research at these interfaces. Prerequisite: 151, 154/254, or equivalent background.

**PHIL 360. Core Seminar in Philosophy of Science. 4 Units.**

Limited to first- and second-year Philosophy Ph.D. students.

**PHIL 361. Social Dimensions of Scientific Knowledge. 4 Units.**

Study of philosophical issues raised by the social character of scientific research and the relation of scientific inquiry to its broader social, economic, and cultural context: values in/of science, science and policy, distribution of cognitive labor, trust in science, models of knowledge.

**PHIL 362. Grad Seminar on Philosophy of Science. 4 Units.**

.

**PHIL 365. Seminar in Philosophy of Physics. 4 Units.**

.

**PHIL 366. Evolution and Communication. 4 Units.**

Topics include information bottlenecks, signaling networks, information processing, invention of new signals, teamwork, evolution of complex signals, teamwork. Sources include signaling games invented by David Lewis and generalizations thereof, using evolutionary and learning dynamics.

**PHIL 369. Philosophy of Linguistics. 4 Units.**

Philosophical issues raised by contemporary work in linguistics. Topics include: the subject matter of linguistics (especially internalism vs. externalism), methodology and data (especially the role of quantitative methods and the reliance on intuitions), the relationship between language and thought (varieties of Whorfianism and anti-Whorfianism), nativist arguments about language acquisition, and language evolution. Same as: LINGUIST 204, SYMSYS 204

**PHIL 370. Core Seminar in Ethics. 4 Units.**

Limited to first- and second-year students in the Philosophy Ph.D. program.

**PHIL 370A. Grad Seminar in Ethics. 4 Units.**

Conceptions of the self in practical philosophy. Graduate seminar exploring topics at the intersection of personal identity, agency, and morality. Specific topics and authors to be determined.

**PHIL 371D. INEQUALITY: Economic and Philosophical Perspectives. 5 Units.**

The nature of and problem of inequality is central to both economics and philosophy. Economists study the causes of inequality, design tools to measure it and track it over time, and examine its consequences. Philosophers are centrally concerned with the justification of inequality and the reasons why various types of inequality are or are not objectionable. In this class we bring both of these approaches together. Our class explores the different meanings of and measurements for understanding inequality, our best understandings of how much inequality there is, its causes, its consequences, and whether we ought to reduce it, and if so, how. This is an interdisciplinary graduate seminar. We propose some familiarity with basic ideas in economics and basic ideas in contemporary political philosophy; we will explain and learn about more complex ideas as we proceed. The class will be capped at 20 students.

Same as: ECON 380, ETHICSOC 371R, POLISCI 431L

**PHIL 372. Topics in Kantian Ethics. 4 Units.**

Selected topics in ethics, considering both Kant's texts and recent writings by Kant interpreters and moral philosophers in the Kantian tradition. Among the topics covered will be: Practical reason, personal relationships, duties to oneself, evil, right and politics, lying, constructivism in ethics.

**PHIL 372D. Topics in Political Philosophy. 5 Units.**

Leading ideas in *A Theory of Justice*, *Political Liberalism*, and *The Law of Peoples*.

Same as: POLISCI 332

**PHIL 372E. Graduate Seminar on Moral Psychology. 3-5 Units.**

Recent philosophical works on desire, intention, the motivation of action, valuing, and reasons for action. Readings: Williams, Korsgaard, Smith, Blackburn, Velleman, Stampe, Frankfurt.

**PHIL 372M. Ending Wars: A Just Peace or Just a Peace. 2 Units.**

Much of just war theory focuses on the justifications for resorting to armed force and the conduct of hostilities. But what are the ethical and legal principles that govern ending wars and making peace? This course will explore the theory of "just peace," including such problems as when a party to war may demand the unconditional surrender of its adversary and what kinds of compromises are ethically permissible in order to end  $\zeta$  or to avoid  $\zeta$  armed conflict. We will also consider the terms and practices the winning party in war may impose on the loser, such as reparations and occupation (particularly transformative occupation). In addition, we will examine the topic of transitional justice, including issues related to amnesty, forgiveness, criminal and other forms of accountability, and reconciliation. Elements used in grading: Class Participation, Written Assignments, Final Exam.

Same as: ETHICSOC 372R

**PHIL 372P. Korsgaard and her Critics. 2-4 Units.**

Christine Korsgaard has developed an unusually complex and comprehensive theory of morality, according to which moral authority has its source in our authority over ourselves simply as human agents. Her view purports to be humanist without falling into relativism, subjectivism, or voluntarism. Our aim is to understand and evaluate Korsgaard's theory, which Derek Parfit has characterized as combining "Kantian, Humean, and existentialist ideas in unexpected, platitude-denying ways." Readings include Korsgaard's own works as well as selected critiques. Graduate level seminar aimed primarily at philosophy students.

**PHIL 372R. Political Realism. 3-5 Units.**

This seminar will explore various articulations of political realism in their historical contexts. Realism is generally taken to be a pragmatic approach to a political world marked by the competition for material interests and the struggle for power. Yet beyond a shared critique of idealism and an insistence on the priority and autonomy of the political, realists tend to have very different normative visions and political projects. We will consider the works of several political realists from the history of political and international relations thought, including: Thucydides, Machiavelli, Hobbes, Carr, Niebuhr, and Morgenthau.

Same as: POLISCI 435R

**PHIL 373. GRAD SEMINAR. 4 Units.**

Grad seminar on ethical topic. May be repeat for credit.

**PHIL 374. Caring and Practical Reasoning. 4 Units.**

What is it to care about something; how is caring related to desiring, emotions, and having policies; what is the relationship between caring and the will; why do people care about things; can attention to caring help explain the phenomenon of silencing reasons? Readings from contemporary literature, including Frankfurt, Watson, Bratman, Scanlon, Williams, Helm, and Kolodny. May be repeated for credit.

**PHIL 374C. Democracy and the Constitution. 5 Units.**

(Same as LAW 268) Connections between democratic theory and constitutional theory. Sources include literature from political philosophy, constitutional law, and jurisprudence, and arguments about freedom of expression, campaign finance, legislative apportionment, federalism, and separation of powers. Readings from Scalia, Breyer, Ely, Ackerman, Dahl, Rawls, Habermas, Dworkin, Riker, and Schumpeter, as well as constitutional cases.

Same as: POLISCI 438

**PHIL 374F. Science, Religion, and Democracy. 4 Units.**

Same as: ETHICSOC 374R

**PHIL 375. Ethics, Economics and the Market. 4 Units.**

Economic analysis inevitably raises moral questions. Getting clear on those moral questions, and the competing answers to them, can help improve both economic analysis and our understanding of the values involved in alternative social policies. This course focuses on a central economic institution: the market. How have the benefits and costs of using markets been understood? For example, it is often claimed that markets are good for welfare, but how is welfare to be understood? What is the connection between markets and different values such as equality and autonomy? What, if anything is wrong with markets in everything? Are there moral considerations that allow us to, distinguish different markets? This course examines competing answers to these questions, drawing on historical and contemporary literature. Readings include Adam Smith, JS Mill, Karl Marx, Michael Walzer, Dan Hausman and Michael McPherson and Debra Satz among others. For graduate students only.

Same as: ETHICSOC 303R, POLISCI 434A

**PHIL 376. Agency and Personal Identity. 4 Units.**

How philosophical theories of agency interact with philosophical accounts of personal identity. Readings include David Velleman and Harry Frankfurt.

**PHIL 376C. Tragic Form and Political Theory. 5 Units.**

Tragic form and political theory have in common a profound interest in the conflictual foundation of human society. This course explores how the two intellectual approaches define the actors of conflict, its causes, and its possible (or impossible) resolution.

Same as: COMPLIT 376C

**PHIL 377. Rational and Social Agency. 2-5 Units.**

Contemporary discussions of practical reason, individual rational agency, planning agency, diachronic agency, intention, belief, intentional action, shared agency, identification and self-governance. Tentative list of authors whose work will be studied includes: Michael Bratman, Margaret Gilbert, Richard Holton, Christine Korsgaard, Alfred Mele, Kieran Setiya, Scott Shapiro, Michael Smith, David Velleman, Jay Wallace, and Gary Watson.

Same as: POLISCI 333

**PHIL 377B. Normativity, Rationality, and Reasoning. 4 Units.**

This course will explore the nature and interconnections of normativity, rationality and reasoning. It particularly concentrates on practical rationality and practical reasoning. Broome's book "Rationality Through Reasoning" will be a guide to the course.

**PHIL 378. Amartya Sen's capability theory. 2-4 Units.**

Amartya Sen's pioneering work attempts to open up economics to missing informational and evaluative dimensions. This seminar will explore Sen's "capability approach" and its implications for the study of economics, gender, and justice. It will look at different ways that the capability approach has been developed, in particular, by Martha Nussbaum, but also by other political philosophers.

Same as: POLISCI 436R

**PHIL 378A. Special Topics in Political Philosophy. 4 Units.**

.

**PHIL 378W. Owning the Earth. 4 Units.**

.

**PHIL 379. Graduate Seminar in Metaethics. 2-4 Units.**

Theories about the meaning of ethical terms and the content of ethical judgements. Do these theories fit with best accounts of human agency and practical deliberation? Readings from recent literature. Prerequisites: 173B/273B, 181, 187/287 or equivalent.

**PHIL 380. Core Seminar in Metaphysics and Epistemology. 4 Units.**

Limited to first- and second-year students in the Philosophy Ph.D. program.

**PHIL 381. Graduate Seminar in Metaphysics: Recent Work on Ground. 4 Units.**

Metaphysicians have done an enormous amount of work on grounding over the past ten years or so. In this seminar, we will survey this new literature, focusing on the 'pure logic of ground' and the 'impure logic of ground'. Kit Fine's "A Guide to Ground" (which is easy to find through Google) is a useful introduction to the topic.

**PHIL 382. Seminar on Reference. 4 Units.**

Philosophical issues concerning the relationship between linguistic expressions and the objects to which they refer. Is it possible to get one unified theory of reference for different kinds of referring expressions such as proper names, pronouns, demonstratives, and other kinds of indexicals? Unsolved problems and desiderata for a theory of reference?.

**PHIL 382A. Pragmatics and Reference. 4 Units.**

Grice's theory of conversational implicatures, Relevance Theory and other contemporary pragmatic theories, focusing on issues involving singular reference, "pragmatic intrusion," and the semantics - pragmatics "interface." Throughout the seminar will be developing the approach Kępa Korta and Perry call "critical pragmatics."

**PHIL 383. Advanced Topics in Epistemology. 2-4 Units.**

May be repeated for credit.

**PHIL 383B. What's an Inference?. 2-4 Units.**

Fundamental issues in epistemology, philosophy of mind and language: issues relating to the notion (or rather, notions) of an inference. What's inferential justification? What's an inferential reasoning process? What are inference rules, and what distinguishes a good rule of inference from a bad rule? Subtopics to be discussed include: the problem of mental causation, the distinction between personal and sub-personal levels of explanation, preservation of content and warrant, the epistemic support relation, and time permitting the nature of perceptual justification.

**PHIL 384. Seminar in Metaphysics and Epistemology. 4 Units.**

2015-16 topic: Logical Consequence. May be repeated for credit.

**PHIL 385. Pragmatics and Reference. 2-4 Units.**

Problems about reference have played a large role in the philosophy of language since the days of Frege and Russell. An approach to reference from the point of view of pragmatics, that Kępa Korta and John Perry have developed in their book CRITICAL PRAGMATICS. Rely on ideas from John Perry's book REFERENCE AND REFLEXIVITY. Also look at other approaches to reference, and to pragmatics.

**PHIL 385B. Topics in Metaphysics and Epistemology: Vagueness. 4 Units.**

Contemporary proposals for how and whether to explain and accommodate vagueness in reality and in representation. Theories of mental and linguistic representation that struggle to explain imprecise representation, and metaphysical theories of the ultimate structure of reality that are threatened with incoherence if worldly boundaries are vague. May be repeated for credit.

**PHIL 385C. Topics in Philosophy of Language: The Frege-Russell Problems. 2-4 Units.**

Explore various approaches to the difficulties for semantic theories raised by the behavior of propositional attitude sentences. How, if Superman and Clark are the same person, can Lois have different beliefs about them? "Classic" treatments of the issues including Frege, Russell, Quine, Davidson, and Kripke. Contemporary debates about the most promising approaches, including "naive Russellianism" and "unarticulated constituent" accounts.

**PHIL 385D. Topics in Philosophy of Language. 2-4 Units.**

Course may be repeat for credit.

**PHIL 385M. The Metaphysics of Meaning. 2-4 Units.**

One central project in the philosophy of language is to explain the relationships between paradigmatically semantic phenomena like meaning, truth, and reference (as well as entailment, satisfaction, application, and others). Often the pursuit of this project generates orders of explanation in which some notions are privileged as more "fundamental" than others, in what is arguably a metaphysical sense of the expression. The dominant order of explanation in both philosophical and linguistic semantics seems to be Referentialism, according to which word/world relationships like reference and application are taken to be more fundamental than sentential truth or meaning. (Think: correspondence theory + model-theoretic semantics.) Alternatives to the orthodoxy include certain versions of conceptual-role semantics, Brandom's inferentialism, and Horwich's use theory of meaning. The aims of this seminar will be to acquaint ourselves with these and other going concerns in the theory of meaning, to organize logical space so that gaps might more easily be spotted, and to help the instructor develop his own, as yet nascent form of opposition to Referentialism. Of special interest will be the alleged normativity of meaning and the Field/Wright dispute over reference to abstracta. Besides the authors already mentioned, readings will be drawn from Katz, King, Kripke, and perhaps (time permitting) Millikan, Peacocke, and/or Taylor as well. But we should probably begin by rehashing Davidson v. Dummett.

**PHIL 385R. Metaphysics of Reference. 2-4 Units.**

This seminar is an investigation of the nature of reference in both private thought and public talk. Just what is it for some bits of either our shared public language or our inner thoughts to refer to or stand for bits of the world? In virtue of what does the relation of reference obtain between some bit of the world and some bit of either outer language or inner thought? What about apparent reference to putatively non-existent objects, like Santa Claus or Sherlock Holmes? We appear to think and talk about objects that do not exist. But there are no such objects. So just how do we manage to think and talk about them? Or consider abstract objects, like numbers, that are thought by some to exist outside the spatial-temporal order. We appear to think and talk about such objects as well. But it is a mystery how, if at all, the reach of our thought could possibly extend beyond even the bounds of space and time. Though we will canvass a number of different answers to this questions, proposed by a variety of philosophers, my main goal will be to develop and defend a view that I call two-factor referentialism. Readings will be drawn from a number of sources, including several chapters of my book in progress *Referring to the World*.

**PHIL 386. Topics in Philosophy of Mind: Rule Following. 4 Units.**

This is a graduate seminar in phil of mind, epistemology, language – and whatever else we need to get to the heart of the rule-following considerations.

**PHIL 386B. Husserl and Adam Smith. 4 Units.**

Readings from Husserl and others in the phenomenological tradition, and recent work on intentionality and consciousness by philosophers and cognitive scientists.

**PHIL 386C. Subjectivity. 4 Units.**

Continuation of 386B.

**PHIL 386D. Personal Identity. 4 Units.**

Focus on personal identity as a case study in metaphysical indeterminacy. The classic puzzles of PI can be construed as arguments that it can be indeterminate whether person A is identical to person B, and indeed, whether person A exists. Can such cases of indeterminacy be plausibly interpreted as semantic (or epistemic), or do they support the possibility of worldly or "ontic" indeterminacy? Is ontic indeterminacy even coherent? How might it be modeled? Parallel questions arise in the metaphysics of ordinary material objects, of course; but it's not obvious that their answers should also run parallel. And even if they do, focusing on PI lends the questions some real urgency. How should I feel about the interests of a past or future person who's only indeterminately me? Should I fear a future in which I merely indeterminately exist? Maybe outright death is preferable to being literally liminal. Seminar. Graduate work in core philosophy a prerequisite.

**PHIL 386E. About Being. 4 Units.**

A pop-up course on Burgess' eponymous book project, which deals with the metaphysics of linguistic representation in the service of developing a methodology for adjudicating ontological disputes. Keywords: linguistic turn, Plato's beard, problem of intentionality, grounding, deflationism, metaontology, etc. Readings will be a mix of chapter drafts and recent, relevant work by other people, including Rayo, Sider, Manley & Hawthorne; with a couple classics by Quine and Stalnaker thrown in for good measure.

**PHIL 387. Intention and Normative Judgment. 2-4 Units.**

Prominent views in both metaethics and the philosophy of action hold that there are distinctively practical states of the mind that nonetheless play many of the roles traditionally associated with belief. Some action theorists hold that intention is a kind of practical attitude subject to rational requirements such as requirements of consistency and coherence. Metaethical noncognitivists hold that normative judgments are distinctively practical; perhaps even a species of intention; and face the well-known Frege-Geach problem because of that commitment. We will consider what metaethicists can learn from debates about intention in the philosophy of action, and what philosophers of action can learn from debates about metaethical non-cognitivism.

**PHIL 387B. Plan Rationality. 4 Units.**

This seminar will explore foundational issues about practical rationality as they arise in the context of agency in which planning plays a basic role. We will consider issues both about rationality at a time and about rationality over time. Open to graduate students in Philosophy and to others by permission.

**PHIL 387C. Consistency and Coherence. 2-4 Units.**

Some philosophers think that attitudes like belief and intention are subject to consistency and coherence requirements. Are there such general purpose cogency requirements on attitudes? If so, what is their nature and strength? What grounds these requirements; for instance, does the point or purpose of a belief or an intention ground consistency and coherence requirements on that attitude? How are such requirements on belief related to requirements on intention? How does the answer to such questions bear on understanding of the interrelations between theoretical and practical rationality?.

**PHIL 387D. Rationality over Time. 2-4 Units.****PHIL 387S. Practical Reasons and Practical Reasoning. 4 Units.**

Attempts to develop alternatives to Humean, instrumentalist conceptions of practical reasoning, and alternatives to Humean, non-cognitivist views of practical reasons. Readings include Aurel Kolnai, Bernard Williams, David Wiggins, Joseph Raz, Michael Bratman, Elijah Millgram, and T.M. Scanlon.

**PHIL 388. Normative Consciousness. 2-4 Units.**

Topics in Normativity. May be repeated for credit.

**PHIL 389. Advanced Topics in Epistemology. 2-5 Units.**

Advanced topics in epistemology. Pre-requisite Phil 284. May be repeated for credit.

**PHIL 391. Research Seminar in Logic and the Foundations of Mathematics. 1-3 Unit.**

Contemporary work. May be repeated a total of three times for credit. Math 391 students attend the logic colloquium in 380-381T. Same as: MATH 391

**PHIL 392. Workshop in Philosophical logic. 1-3 Unit.**

may be repeated for credit.

**PHIL 450. Thesis. 1-15 Unit.**

(Staff).

**PHIL 470. Proseminar in Moral Psychology. 4 Units.**

Restricted to Philosophy doctoral students. May be repeated for credit.

**PHIL 500. Advanced Dissertation Seminar. 1 Unit.**

Presentation of dissertation work in progress by seminar participants. May be repeated for credit.

**PHIL 801. TGR Project. 0 Units.**

.

**PHIL 802. TGR Dissertation. 0 Units.**

(Staff).

## Physical Education Courses

**PE 1. Student Designed Fitness Programming. 1 Unit.**

Students will learn how to design safe, effective, exercise programs based on their individual needs and interest. Through class discussions, assignments and participation, students will learn all the health-related and skill-related components of fitness such as cardiovascular endurance, muscular strength and endurance, flexibility, balance, agility, speed, power, and coordination. Prerequisite: All levels and abilities welcome.

**PE 3. Jogging For Fitness. 1 Unit.**

This course will focus on understanding the basic components of cardiovascular fitness, and flexibility. This will be achieved by teaching students how to prepare, train and pace themselves throughout a variety of workouts such as jogging and interval training. Students will gain knowledge to make intelligent choices that contribute to a healthy active lifestyle.

**PE 4. Walking for Fitness. 1 Unit.**

This course will focus on understanding the basic components of cardiovascular fitness, and flexibility. This will be achieved by teaching students how to monitor heart rate, record steps, prepare, train and pace themselves throughout a variety of walking workouts. Students will gain knowledge to make intelligent choices that contribute to a healthy active lifestyle.

**PE 5. Fundamentals of TRX. 1 Unit.**

Students will learn a variety of exercises that focuses on total body resistance exercise. This class allows you to move, stretch and strengthen the entire body. Exercising on the TRX utilizes gravity and movement to generate neuromuscular responses to changes in body position and mechanical advantage. Movements using the TRX integrate strength and balance into a single dynamic format that taxes the nervous system at a high level and maximizes the benefits of bodyweight exercise for faster results. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness such as: cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 8. Badminton: Beginning. 1 Unit.**

This course is designed to teach the basic skills necessary to play the game of badminton. Fitness and training principles will be discussed as well as singles and doubles strategy. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 9. Badminton: Intermediate. 1 Unit.**

This course will introduce the student to more advanced skills and strategies of the game of badminton. Emphasis will be placed on conditioning, shot selection, court positioning, and singles and doubles play. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 14. Basketball Skills. 1 Unit.**

Although this course is designed for players of intermediate to advance skill level, it is open to anyone hoping to improve as a player. Focus will be placed on individual skills such as passing, dribbling, shooting, rebounding, defending, and post play. Team offensive and defensive principles will be taught through intra-class competition.

**PE 16. Bellydance Fusion. 1 Unit.**

This course will introduce students to the fundamentals of belly dance with a focus on fusion and tribal fusion styles. No dance experience is required for this class; however, it is also suitable for students with previous belly dance training. Over the course of the quarter students will build their technique and learn a full choreography.

**PE 17. Cardio Dance. 1 Unit.**

Cardio Dance combines traditional aerobic routines with dance-based choreography. This course will focus on understanding the basic components of cardiovascular fitness, and flexibility. This course will teach students how to properly warm-up, cool-down, stretch and monitor heart rate as you engage in various styles of dance week to week: swing, salsa, hip-hop, modern, African and Jazz. No experience necessary; just a love of both movement and upbeat music.

**PE 20. Barre Fusion. 1 Unit.**

This course is a mix of Barre exercises, Pilates exercises, Yoga poses and stretching specifically designed to increase strength and muscle tone in the entire body and overall flexibility. We focus on proper alignment and improving posture. The exercises are intense and effective yet extremely accessible. This course will also utilize class instruction, assignments and student participation to enable students to: (1) Acquire knowledge of the basic components of health and wellness. (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 23. Core Training. 1 Unit.**

This course is designed to help students improve their ability to stabilize the torso. A strong core is an essential component for performance in any sport, hobby and for life. Your posture will improve enabling you to breathe more deeply. You will move with the ease and grace that comes from finding balance the fulcrum of your body. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness such as muscle strength and endurance (2) Develop physical fitness skills and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 27. Cross Training Fitness. 1 Unit.**

Cross training fitness class will focus on combining different types of exercises to work the body as a whole to develop cardiovascular fitness, strength and power. All fitness levels are welcome. Class sessions will include exercises such as: indoor cycling, plyometrics, rowing, jump rope, circuit training, and various other exercises.

**PE 30. Indoor Cycling. 1 Unit.**

This course is designed to teach students basic concepts associated with indoor cycling as well as build cardio-respiratory endurance, muscular strength, and flexibility through structured individually paced indoor cycling workouts. Instructors motivate participants through intervals, hill climbs and coasts for the ultimate workout. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 32. Boot Camp. 1 Unit.**

This course will focus on understanding the basic components of health-related physical fitness (cardiovascular fitness, muscular strength and endurance, and flexibility). Students will have the opportunity to engage in a variety of physical activities, which will enhance all aspects of health-related fitness. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness (2) Develop physical fitness skills and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. May be repeated for credit.

**PE 33. Diving. 1 Unit.**

Basic techniques and mechanics of springboard and platform diving. Five basic categories of dives will be introduced: front, back, inward, reverse and twist. Competitive aspects of diving. Fee.

**PE 39. Fencing: Beginning. 1 Unit.**

The sport of swordmanship develops quick hands, strong legs, and a strategic mind. Footwork, handwork, and bouting. Emphasis is on foil technique. All equipment provided. Fee. (AU).

**PE 40. Fencing, Intermediate. 1 Unit.**

Continuation of 39; learn advanced footwork and handwork. Strategy and bouting. Introduction to epee and saber. All equipment provided. Prerequisite: 39. Fee. (AU).

**PE 43. Futsal. 1 Unit.**

Futsal is a variant of soccer that is played on a smaller playing surface and mainly played indoors. Soccer greats such as Kaka, Ronaldo, Ronaldinho, Marta and Messi grew up playing Futsal and credit it for developing their incredible skills. Learn quick reflexes, fast thinking and pin-point passing. With five-a-side play and a special low bounce ball, Futsal will improve your game through its intense pace and rapid execution.

**PE 45. Field Hockey, Indoor. 1 Unit.**

Learn the game and rules of indoor field hockey, prior outdoor field hockey experience required.

**PE 46. Field Hockey, Intermediate. 1 Unit.**

For those with prior experience. Techniques, skills, and strategy. Scrimmages and game-like scenarios. Fee. (AU).

**PE 51. Golf: Beginning. 1 Unit.**

This course is designed to teach the fundamentals of the golf swing; putting, chipping, and sand play. We will also cover golf etiquette and rules. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness, (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 52. Golf: Advanced Beginning. 1 Unit.**

This course allows students to further development their golf swing and short game. This course will also review golf concepts, rules and etiquette. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness, (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisite: PE 51 or golf experience.

**PE 53. Golf: Intermediate. 1 Unit.**

This course allows students to further development their golf game by engaging in various golf drills and the opportunity to practice on all facets of golf. Students will learn how to lower scores and manage the game on the course. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness, (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisite: 52 or equivalent. Fee. (AU).

**PE 54. Golf: Advanced. 1 Unit.**

This course is designed to refine the golf swing and increase power, distance, and accuracy. This course will also cover topics such as: course management, mental preparation and visualization techniques. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of skill-related and health-related physical fitness, (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisite: PE 53 or experience playing and practicing, and the ability to hit shots with relative accuracy and distance. Fee. (AU).

**PE 58. Gymnastics: Beginning. 1 Unit.**

This course is designed to teach students the fundamental movements of gymnastics including flexibility and strength exercises taught on the Olympic apparatus including floor, balance beam, bars, and rings. The utilization of class discussions, assignments and student participation will enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscle endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Fee. (AU).

**PE 59. Gymnastics: Intermediate. 1 Unit.**

This course is for students who have completed 58 or have a background in gymnastics. This class will focus on tumbling and somersaulting. The utilization of class discussions, assignments and student participation will enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscle endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Fee. (AU).

**PE 63. Hip Hop. 1 Unit.**

Funky, jazzy, hip hop dance for fun and cardiovascular fitness. Fee. (AU).

**PE 65. Horsemanship: Beginning Riding. 1 Unit.**

This course explores beginning riding. Topics include, but are not limited to, basic horse care, equitation at the walk/trot and negotiation of simple obstacles. This course will utilize class discussions, class assignments and student participation. No experience needed. Fee \$350.

**PE 66. Horsemanship: Advanced Beginning Riding. 1 Unit.**

This course will review the basics of horsemanship and provides the necessary foundation for riding. Topics that will be covered include: horsemanship and horse care; the canter and basic jumping. This course will utilize class discussions, class assignments and student participation. Prerequisite: 65 or equivalent. Fee. (AU).

**PE 67. Horsemanship: Intermediate Riding. 1 Unit.**

Basic veterinary skills and barn management. Riding at all gaits and completing horsemanship patterns (Western) or jumping basic courses (English). Fee. Prerequisite: 66 or equivalent. (AU).

**PE 68. Horsemanship: Student Assistant. 1 Unit.**

(Bartsch).

**PE 69. Leadership: Assertiveness and Creativity. 1 Unit.**

This class will teach leadership techniques for maximizing creativity in a group setting through facilitated interaction with horses. Students will practice increasing personal and situational mind/body awareness, develop an authentic, assertive leadership style, and access creativity in challenging circumstances. No experience needed. Fee.

**PE 70. Horsemanship. 1 Unit.**

This course explores the basics of horsemanship and provides the necessary foundation for beginning riding. Topics include, but are not limited to, general horse care, handling techniques, horse health and disease, and stable management. This is an un-mounted course. This course will utilize class discussions, class assignments and student participation. No experience needed. Fee.

**PE 76. Kickboxing. 1 Unit.**

This high energy class focuses on upper and lower body kickboxing combinations for the ultimate cardio and muscular endurance workout. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness such as: cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 80. Lifeguard Training. 1 Unit.**

This course allows students to learn lifeguard characteristics and responsibilities, recognize hazards and emergencies, patron and facility surveillance, interaction with the public, and rescue skills. Students will also learn first aid and CPR/AED for the Professional Rescuer. This course will utilize class discussions, class assignments and student participation, both in and out of water, to prepare students to become lifeguards. Prereq: 300 yard continuous swim with rhythmic breathing (100 yards of freestyle, 100 yards of breaststroke, and 100 yards of combination of the two); Swim 20 yards, surface dive 7ft, retrieve a 10lb diving brick, and return in one minute and forty seconds.

**PE 81. Beginning Stand Up Paddleboarding. 1 Unit.**

This course teaches students the basic skills, strokes, maneuvers and water safety skills of Stand Up Paddleboarding in a calm, flat-water setting. Prerequisites: None.

**PE 87. Learn to Row for Men. 1 Unit.**

This class is an introduction to the sport of rowing for men. The fundamentals of proper form, technique and workouts to develop cardiovascular fitness will be taught. The class will progress from rowing ergometer machines into rowing shells on the water. The utilization of class discussions, assignments and student participation will enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscle endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 88. Learn To Row For Women. 1 Unit.**

This class is an introduction to the sport of rowing for women. The fundamentals of proper form, technique and workouts to develop cardiovascular fitness will be taught. The class will progress from rowing ergometer machines into rowing shells on the water. No prior rowing experience necessary. This class is recommended if you are interested in trying out for the women's rowing team. Read notes section for additional information. Fee (AU).

**PE 89. Rowing Ergometer. 1 Unit.**

Introduction to aerobic based training utilizing rowing machines. The utilization of class discussions, assignments and student participation will enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscle endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Fee.

**PE 90. Essentials of Pilates. 1 Unit.**

Students will focus on developing core strength, flexibility, and awareness by engaging in a variety of exercises that integrate the principles of Pilates. This course will utilize class instruction, assignments, and student participation to enable students to: (1) Acquire knowledge of the basic health-related components of physical fitness and the different dimensions of wellness. (2) Develop the skill-related components of fitness, and (3) Understand and practice the behaviors that contribute to a healthy lifestyle. May be repeat for credit.

**PE 91. Pilates Mat: Intermediate / Advanced. 1 Unit.**

Students will focus on developing core strength, flexibility, and awareness by engaging in a variety of exercises that integrate the principles of Pilates. This course will utilize class instruction, assignments, and student participation to enable students to: (1) Acquire knowledge of the basic health-related components of physical fitness and the different dimensions of wellness. (2) Develop the skill-related components of fitness, and (3) Understand and practice the behaviors that contribute to a healthy lifestyle.

**PE 92. Rock Climbing I: Beginning. 1 Unit.**

This course is an introductory course. Students will learn skills necessary to get started exploring the world of indoor climbing. These skills include technical safety skills for bouldering and top-roped climbing, essential physical and mental skills, and strategies for training. Students will be taught with industry standard best practices in regards to safety, and provided with a multi-disciplinary approach to overall health and wellness. No experience necessary.

**PE 93. Rock Climbing II: Intermediate. 1 Unit.**

In this course students will have the opportunity to build upon basic principles associated with rock climbing. Student will further explore variations in climbing efficiency techniques, crack climbing techniques, and training methodologies to enhance their climbing experience and help prevent injuries. Students will be taught with industry standard best practices in regards to safety, and provided with a multi-disciplinary approach to overall health and wellness. Prerequisites: Rock Climbing 1 or at least 3 months previous climbing experience, current top-rope belay certification at the Stanford Climbing Wall.

**PE 95. Rock Climbing: Strength and Conditioning. 1-2 Unit.**

The course will provide students with a framework to develop a balanced strength and conditioning program specific to training for bouldering and sport climbing. Topics addressed will include mobility training, sport specific strength and conditioning, and injury prevention. Prerequisites: Rock Climbing 1 or at least 3 months previous climbing experience, current top-rope belay certification at the Stanford Climbing Wall.

**PE 96. Bouldering for Fitness. 1 Unit.**

This is a mixed level course open to new and experienced climbers. This course will provide an introduction to bouldering (climbing at a low height without ropes) as a fitness activity. Students will learn a variety of sport specific exercises to increase mobility and performance while reducing the likelihood of injury. Students will be taught with industry standard best practices in regards to safety, and provided with a multi-disciplinary approach to overall health and wellness. No experience necessary.

**PE 98. Sailing, Beginning. 1 Unit.**

Students will learn skills, theories, and techniques to enable beginners to sail with confidence in small centerboard boats. This class utilization of class discussions, assignments and student participation will enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscle endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 99. Sailing, Advanced Beginning. 1 Unit.**

Students will have the opportunity to further development their sailing skills and techniques. This class utilization of class discussions, assignments and student participation will enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscle endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 100. Sailing, Intermediate. 1 Unit.**

Students will have the opportunity to refine their sailing skills Students will also be introduced to racing. This class utilization of class discussions, assignments and student participation will enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscle endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 102. Coaching Corps. 1 Unit.**

This course is designed to build practical and educational foundations to prepare students to be instructional leaders (coaches) in sports activities. Students will have the opportunity to make a valuable contribution to youth while developing practical coaching skills. The course will explore topics including practice planning and designing curriculum, how to effectively engage youth in sports, youth development through sports, social issues facing urban youth in sports, the plight of sports programs in urban centers, and how to create a college-going culture among youth in low-income communities. Students will coach off campus at local schools/community-based organizations that offer after school sports programs.

**PE 103. Route Setting: Designing the Indoor Climbing Experience. 1 Unit.**

The Route Setting course is intended for those with extensive climbing experience who are interested in learning to design climbing routes for indoor climbing walls. The course will introduce students to route setting philosophies centered around the user experience, route setting operations, route evaluation, and setting guidelines and techniques for designing specific grades, specific movements and achieving equitability for various climber heights.

**PE 104. PCIA: Climbing Wall Instructor. 1 Unit.**

The Professional Climbing Instructors Association (PCIA) Climbing Wall Instructor Course provides instructors and potential instructors with an in depth and standardized understanding of the skills essential to teaching climbing in an indoor setting. The course reinforces the importance of teaching technically accurate information and debunks many common climbing myths. The course emphasizes the presentation of sound fundamental skills to climbing gym participants, the formation of risk assessment and risk management skills and basic problem solving skills such as belay transitions and on wall coaching and assist techniques. Participants will be assessed on both their core knowledge and their ability to effectively teach and coach related skills. Students will have the option to certify with the Professional Climbing Instructors Association. Prerequisites: Rock Climbing 2 (Intermediate) or equivalent, The candidate must show an adequate experience level to the course provider illustrating that he/she is ready for the course. Examples include periodic climbing for 2 ½ 3 years, a high intensity of climbing in the past few months, etc.; Able to easily put on harness and tie in appropriately; Able to belay with an aperture belay device and an assisted locking device in competent, comfortable and confident manner; Possess the personal equipment necessary for the course; Capable of comfortably top roping 5.8 on an artificial climbing wall.

**PE 108. Social Dance: Introduction to Swing dancing: Lindy Hop. 1 Unit.**

Students will learn the collection of dances known as Swing, generally considered to include Lindy Hop, East Coast Swing, and Charleston. All of these sometimes fall under the single heading of Lindy Hop and can be danced together in one dance. In addition, students will: (1) Understand basic components of health-related physical fitness, cardiovascular fitness and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

Same as: includes East Coast Swing and Charleston

**PE 109. Social Dance, Beginning. 1 Unit.**

Introduction to modern social partner dancing, comprised of three sections: Latin, Ballroom, and Club. You may take one or more sections in any order; no section requires any prior experience nor partner. Steps, styling, and technique are covered. n¿ Autumn: Introduction to Latin dancing: Salsa, Cha-Cha, Rumba, Samba n¿ Winter: Introduction to Ballroom dancing: Waltz, Foxtrot, Tango, Quickstep n¿ Spring: Introduction to Club dancing: Swing (Lindy Hop), Night-Club Two Step, Hustle.

**PE 110. Introduction to Ballroom Dancing: Waltz, Foxtrot and Tango. 1 Unit.**

Students will learn the three primary Ballroom Dances: Waltz, Foxtrot and Tango. In addition, students will: (1) Understand basic components of health-related physical fitness, cardiovascular fitness and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 113. Soccer: Indoor Beginning/Intermediate. 1 Unit.**

This course is designed to teach the basic skills and concepts of soccer. Students will work on skills of moving, passing, dribbling, trapping, heading, throw-in and offensive and defensive positioning, as well as learning basic rules and terminology of the game. This course will utilize class discussions, assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 114. Soccer, Indoor: Intermediate/Advanced. 1 Unit.**

This course is designed to teach more advanced skills and concepts of soccer, as well as more advanced offensive and defensive tactics. Students will have the opportunity to refine their skills of moving, passing, dribbling, trapping, heading, throw-in and offensive and defensive positioning, as well as game playing strategies. This course will utilize class discussions, assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 115. Soccer: Advanced for Men. 1 Unit.**

Students will learn advanced game playing skills, strategies, and techniques. This course will utilize class discussions, assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 116. Soccer: Advanced for Women. 1 Unit.**

Students will learn advanced game playing skills, strategies, and techniques. This course will utilize class discussions, assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 123. Squash, Beginning/Intermediate. 1 Unit.**

Techniques, rules and practice matches. Racquets, balls, and eye guards provided. Limited enrollment. Fee.

**PE 128. Swimming: Beginning I. 1 Unit.**

This class is for first time swimmers and for individuals who have fear, anxiety or discomfort in water. This class is also designed for individuals who have previously taken beginning swim courses and have had little/no success or who struggle to move through water. A foundation of basic balance and movement skills will be developed through a series of fundamental water exercises. When safety or balance in the water is in question, so is the ability to move, and to some extent, the ability to breathe comfortably. As comfort and balance improves, the easier it is to accept breathing and movement skills. The goal is for a swimmer to become comfortable and in control in both shallow and deep water. The fundamental skills learned in this course will provide a foundation for learning stroke technique, such as freestyle, in an effortless manner. nPrerequisites: None.

**PE 129. Swimming: Beginning II. 1 Unit.**

In this class you will learn how to relax in the water, breath effectively, float and tread, swim 3 different strokes (freestyle, backstroke, breaststroke), jump in the water from the deck, use swimming equipment (kickboards, pull buoys, fins) and swim across a 25 year pool. nIf you have fear or anxiety in the water, consider taking the ATH 128 Confidence in Water class. If you can swim across a 25 yard pool, you should take the ATH 131 Intermediate Swim class. nPrereq: non-swimmer, unable to swim across a 25 yard pool. nGoals: Learn to be safe and relaxed in shallow and deep water. Develop ease and efficiency with breathing & swimming strokes. Be safe and comfortable swimming 25 yards continuously. FEE. (AU).

**PE 131. Swimming: Intermediate. 1 Unit.**

This class is for those who can swim across a 50-yard pool. In this class you will learn how to: breathe effectively, tread water, dive in from the edge and use swimming equipment (kick boards, pull buoys, hand paddles, fins). You will be introduced to and gain further development of the 4 competitive swimming strokes (Freestyle, Backstroke, Breaststroke & Butterfly). An introduction to flipturns and intervals (50 yard repeats) will be taught. Underwater videotaping and stroke review and analysis will occur. nPrereq: Ability to swim across a 50-yard pool continuously. You MUST be comfortable in deep water, if you are uncomfortable in deep water please take ATH 129 Swimming Beginning.

**PE 132. Swimming: Advanced. 1 Unit.**

This class is for those who can swim 100 yards freestyle continuously and have had an introduction to backstroke and breaststroke. In this class you will learn: refinement of the 4 competitive swimming strokes: freestyle, breaststroke, backstroke, butterfly (review/intro) and efficient breathing techniques. You will gain additional development of flipturns using intervals (100 yard repeats), competitive starts and turns, use of swimming equipment (kick boards, pull buoys, hand paddles, fins) for fitness, and videotaping with review. nPrereq: Swim 100 yards continuous of freestyle. If you have not had an introduction to Breaststroke or backstroke, we recommend you take ATH 131 Swimming Intermediate.

**PE 133. Swim Conditioning. 1 Unit.**

Improve cardio-respiratory endurance through directed swimming workouts. Technique corrections as needed. Prerequisite: advanced swimmer. Fee. (AU).

**PE 134. Synchronized Swimming, Beginning. 1 Unit.**

Students will learn basic skills and techniques associated with synchronized swimming. Students will learn how synchronized swimming is judged alongside some of the basic moves. Sculling with the arms and an 'egg beater' motion with the legs keeps the swimmer stable and allows the more advanced techniques to be performed. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscle endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisite: intermediate to advanced swimming skills. Fee. (AU).

**PE 135. Aqua Boot Camp. 1 Unit.**

A unique combination of swim conditioning, swim power training and dry land training offered by the staff of the Women's Swimming program. Increase your strength and cardiovascular endurance, in and out of the water. Prerequisites: Ability to tread deep water for 5 minutes and swim at least 50 meters continuously of backstroke, front crawl, & breaststroke. This is not a learn-to-swim class. Fee.

**PE 136. Swimming: Stroke Refinement. 1 Unit.**

Review and fine tune the 4 competitive strokes (freestyle, backstroke, butterfly, and breaststroke), with a primary emphasis on improving freestyle stroke efficiency. Flipturn refinement. Drill and technique work will be heavily emphasized. On average, 1000 meters will be swum per class. nPrereq: Ability to tread deep water for 5 minutes, swim 100 meter intervals of freestyle, backstroke, and breaststroke with rhythmic breathing, and swim 200 meters continuously under 5 minutes.

**PE 138. Table Tennis: Intermediate. 1 Unit.**

This class is intended for players who have experience playing table-tennis including those who have taken the beginning table-tennis class. Students should have prior experience in countering, looping, chopping, and serving.

**PE 139. TABLE TENNIS: BEGINNING. 1 Unit.**

Basic counters, topspins, and chops with both the forehand and backhand. Serve and return, emphasizing game situations and match play. All equipment provided. Fee.

**PE 140. Taiji Quan. 1 Unit.**

Taiji Quan (Tai Chi) is a Chinese martial arts system of slow meditative physical exercise designed for relaxation, balance and health. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. All levels are welcome. Same as: Tai Chi

**PE 141. Tai Chi: Intermediate. 1 Unit.**

At the Intermediate level, students will develop a deeper and more internal understanding of Tai Chi. This course will introduce new concepts and movements that are more challenging. This course will also utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisite: ATHLETIC 140 or prior practice and courses in Tai Chi.

**PE 144. Tennis: Beginning. 1 Unit.**

Students will learn and develop the essential stroke techniques with emphasis on control. This course will also incorporate rules, etiquette, and basic play. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 145. Tennis: Advanced Beginning. 1 Unit.**

Students will review and strengthen stroke techniques with emphasis on control, depth, and direction. This course will also incorporate rules, etiquette, and basic strategy and tactics. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisites: 144, or knowledge of rules and scoring and average ability in fundamental strokes but limited playing experience. Fee. (AU).

**PE 146. Tennis: Intermediate. 1 Unit.**

Students will review and strengthen stroke techniques with more emphasis on depth, direction, and spin. This course will also incorporate basic to advance strategies and tactics with performance enhancing cooperative and competitive drills. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisites: 145 or average ability in fundamental strokes, and regular playing experience; NTRP rating of 3.0 -3.5. (AU).

**PE 147. Tennis: Advanced. 1 Unit.**

Students will refine stroke techniques with more emphasis on spin, power, and variety. This course will also incorporate advance strategies and tactics with performance enhancing competitive drills. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisite: NTRP rating above 4.0 or equivalent. (AU).

**PE 151. Total Body Training. 1 Unit.**

Students will learn a variety of exercises that focuses on the body as a whole. This class allows you to move, stretch and strengthen the entire body. A variety of equipment will be used to target all major muscle groups. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness such as: cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 161. Volleyball: Beginning Sand. 1 Unit.**

This course is designed to help students gain proficient skills and knowledge of the game of sand volleyball. This is an introductory course for those with limited or no playing experience. Instruction will include techniques for passing, setting, serving, serve receive, hitting, blocking, digging, and transition. The course is arranged to familiarize students with the rules, terminology, offensive and defensive strategies, team organization, communication, game play, and conditioning for volleyball. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 162. Volleyball. 1 Unit.**

This course is designed to help students gain proficient skills and knowledge of the game of volleyball. This is an introductory course for those with limited or no playing experience. Instruction will include techniques for passing, setting, serving, serve receive, hitting, blocking, digging, and transition. The course is arranged to familiarize students with the rules, terminology, offensive and defensive strategies, team organization, communication, game play, and conditioning for volleyball. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 163. Volleyball: Intermediate/Advanced. 1 Unit.**

This course is designed for players of intermediate to advanced skill level. This course will review the basic fundamentals of volleyball, proper conditioning for volleyball, and various tournament situations. Students will learn advanced concepts in team strategy through offense and defense with varying defensive and offensive systems. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 164. Volleyball: Intermediate Sand. 1 Unit.**

Further development of skills and rules. Strategy in two- and four-person sand volleyball. Fee. (AU).

**PE 165. Volleyball: Advanced Sand. 1 Unit.**

This course is designed to refine and improve skills and game playing strategy in two- and four-person sand volleyball. Students must have strong skills and general knowledge of team concepts. This course will utilize class discussions, assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. Prerequisite: PE 164 or consent of the instructor. Fee. (AU).

**PE 169. Water Polo: Beginning. 1 Unit.**

Course Description: This course is designed to teach the basic skills and concepts of Water Polo. Students will also learn game strategies associated with water polo. Classes will include scrimmage play. This course will also utilize class discussions, assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. nPE: 169 Water Polo Beginning or equivalent skills and swimming experience.

**PE 170. Water Polo: Intermediate/Advanced. 1 Unit.**

This course is designed to further develop game playing skills, strategies and techniques that are associated with water polo. Classes will include scrimmage play of water polo skills. Students will also be exposed to game strategy. Classes will include scrimmage play. This course will also utilize class discussions, assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle. nPrereq: PE169 Water Polo Beginning or equivalent skills and swimming experience. Fee. (AU).

**PE 173. Weight Training: Intermediate. 1 Unit.**

This course will allow students to expand upon skills learned in Beginning Weight Training. Students will learn to design and develop a balanced weight training program to meet their goals. This course also provides an opportunity to develop skills in specific areas of strength training, endurance, and power. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness such as: muscular strength and endurance, power, and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 174. Weight Training: Beginning. 1 Unit.**

This course is designed to teach the fundamentals of weight training, including equipment use, exercise technique and safety procedures. By the end of the course, students should be able to safely demonstrate a variety of exercise techniques, as well as have a general appreciation for the benefits of strength training. Fee. (AU).

**PE 175. Muscle Works. 1 Unit.**

Functional Training teaches you how to move your body optimally, improve balance, build strength, and prevent injury. Class sessions incorporate a variety of exercises that work on flexibility, core, balance, strength and power, focusing on multiple movement planes. Whether your goal is to train your body to perform the activities of daily life effortlessly and without injury, improve your athletic edge, or regain lost function, this class gives you the tools to achieve these goals. All fitness levels are welcome.

**PE 176. Weight Training for Women. 1 Unit.**

This course is designed to teach the fundamentals of weight training, including equipment use, exercise technique, proper stretching, safety procedures and injury prevention. The basics of the physiology of strength training and planning individual programs. Fee. (AU).

**PE 177. Circuit Training. 1 Unit.**

This class will focus on full-body conditioning workouts, combining resistance training and high-intensity aerobics. This challenging class provides a great workout as you move through a series of stations designed to elevate your heart rate and challenge your muscles. Stations may include body weight exercises, weights, resistant bands, stability balls, treadmills, etc. Class may be modified for all levels of fitness. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness (2) Develop physical fitness skills and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 179. Wrestling and Introduction to Mixed Martial Arts. 1 Unit.**

While primarily focusing on the basic techniques of collegiate wrestling, some non-striking forms of MMA, such as Brazilian jiu-jitsu and submission grappling, will be covered throughout the quarter. Same as: MMA

**PE 180. Yoga for Stress Management. 1 Unit.**

Students will have the opportunity to learn ancient yoga/health practices for managing daily stressors. Students will learn to identify signs and symptoms of stress, how anxiety manifests in the body and mind, and yoga techniques for relief. The focus will be on breathing techniques to calm the nervous system and practicing mindfulness. Hatha, or physical yoga, will also be introduced as preliminary practices to balance the body, relax the breath, stretch and tone muscles, and massage internal organ systems. All practices are meant to provide students new options for gaining inner strength and self-control. This course will utilize class instruction, assignments, and student participation to enable students to: (1) Acquire knowledge of the basic health-related components of physical fitness and the different dimensions of wellness. (2) Develop the skill-related components of fitness, and (3) Understand and practice the behaviors that contribute to a healthy lifestyle.

**PE 181. YOGA: Beginning. 1 Unit.**

Students will be introduced to the values and skills of Hatha Yoga (Yoga of exercise). Students will learn how to reduce tension, increase energy levels, move efficiently, reconnect to self-awareness, and learn about the body. The poses and flows are adaptable and can be personalized for any level of fitness. The emphasis of the class will be on asanas (poses) and vinyasa (flow) for increased flexibility, improved health, relaxation, and reduced stress in daily living. Students will also be exposed to the language, philosophy, history, and concepts of Yoga. A typical class will include breathing techniques, meditation and asana practice, including standing, balancing, stretching and some inverted poses. At the end of the quarter students will have: (1) Acquired knowledge of the basic components of health and wellness. (2) Developed physical fitness and motor skills, and (3) A positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 182. Yoga: Asana Practice. 1 Unit.**

Yoga offers continual opportunities for growth and balance both physical and emotional. Challenging yourself with different approaches will help you stay focused and keep your practice creative. In Asana Yoga Practice students will learn solid yoga practices that they can enjoy on their own as well as yoga foundations that they can apply in all types of yoga classes around the world.

**PE 183. Yoga: Advanced. 1 Unit.**

Advanced Yoga is for students who already possess a solid and ongoing yoga practice. This course will move deeper into all aspects of yoga by exploring more advanced postures, pranayama and meditation techniques. This course is designed for students who wish to challenge themselves both physically and mentally.

**PE 184. Yoga/Pilates Fusion. 1 Unit.**

This class will focus on practicing yoga poses and Pilates exercises to enhance one's sense of proprioception, mind-body awareness, and muscular strength and endurance. This course will utilize class instruction, assignments, and student participation to enable students to: (1) Acquire knowledge of the basic health-related components of physical fitness and the different dimensions of wellness. (2) Develop the skill-related components of fitness, and (3) Understand and practice the behaviors that contribute to a healthy lifestyle.

**PE 185. Yoga: Intermediate Asana. 1 Unit.**

This course is designed for students who already possess an ongoing yoga practice. This course will move deeper into all aspects of yoga by exploring more postures, pranayama and meditation techniques. This course is designed for students who wish to improve themselves both physically and mentally. Intermediate yoga will provide students with information and experience which will enable students to: (1) Acquire knowledge of the basic components of health and wellness. (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**PE 186. Zumba. 1 Unit.**

Zumba combines Latin rhythms with cardiovascular exercise to create an aerobic routine. Interval and resistance training to maximize caloric output, and total body toning. (AU).

**PE 187. Power Yoga. 1 Unit.**

Power yoga combines dynamic breathing and flowing sequences of asanas that focus on strengthening the entire body. Core muscle activation and stabilization is emphasized to ensure safe body mechanics. Power yoga will provide students with information and practical experience that will enable students to: (1) Acquire knowledge of the basic components of health and wellness. (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity, which will facilitate a healthy lifestyle.

**PE 189. Business Practices in Sport. 2 Units.**

Planning and management of intercollegiate sports and recreation. Elements of business contracts, finance, facility development, legal issues, risk management, human resources, security, and operations and event management. How an athletic and recreation department is organized. Career opportunities in sports and recreation administration.

**PE 193. Fitness for Life. 1 Unit.**

This course teaches students how to stay active by engaging in a variety of workouts (indoor cycling, interval training, weight training, walking/jogging, etc.). This course utilizes a variety of workout equipment to target all major muscle groups. This course will utilize class discussions, class assignments and student participation to enable students to: (1) Understand basic components of health-related physical fitness, cardiovascular fitness, muscular strength and endurance and flexibility (2) Develop physical fitness and motor skills, and (3) Develop a positive attitude toward wellness and physical activity which will facilitate a healthy lifestyle.

**Physics Courses****PHYSICS 15. Stars and Planets in a Habitable Universe. 3 Units.**

Is the Earth unique in our galaxy? Students learn how stars and our galaxy have evolved and how this produces planets and the conditions suitable for life. Discussion of the motion of the night sky and how telescopes collect and analyze light. The life-cycle of stars from birth to death, and the end products of that life cycle – from dense stellar corpses to supernova explosions. Course covers recent discoveries of extrasolar planets – those orbiting stars beyond our sun – and the ultimate quest for other Earths. Intended to be accessible to non-science majors, material is explored quantitatively with problem sets using basic algebra and numerical estimates. Sky observing exercise and observatory field trips supplement the classroom work.

**PHYSICS 16. The Origin and Development of the Cosmos. 3 Units.**

How did the present Universe come to be? The last few decades have seen remarkable progress in understanding this age-old question. Course will cover the history of the Universe from its earliest moments to the present day, and the physical laws that govern its evolution. The early Universe including inflation and the creation of matter and the elements. Recent discoveries in our understanding of the makeup of the cosmos, including dark matter and dark energy. Evolution of galaxies, clusters, and quasars, and the Universe as a whole. Implications of dark matter and dark energy for the future evolution of the cosmos. Intended to be accessible to non-science majors, material is explored quantitatively with problem sets using basic algebra and numerical estimates.

**PHYSICS 17. Black Holes and Extreme Astrophysics. 3 Units.**

Black holes represent an extreme frontier of astrophysics. Course will explore the most fundamental and universal force – gravity – and how it controls the fate of astrophysical objects, leading in some cases to black holes. How we discover and determine the properties of black holes and their environment. How black holes and their event horizons are used to guide thinking about mysterious phenomena such as Hawking radiation, wormholes, and quantum entanglement. How black holes generate gravitational waves and powerful jets of particles and radiation. Other extreme objects such as pulsars. Relevant physics, including relativity, is introduced and treated at the algebraic level. No prior physics or calculus is required, although some deep thinking about space, time, and matter is important in working through assigned problems.

**PHYSICS 18N. Frontiers in Theoretical Physics and Cosmology. 3 Units.**

Preference to freshmen. The course will begin with a description of the current standard models of gravitation, cosmology, and elementary particle physics. We will then focus on frontiers of current understanding including investigations of very early universe cosmology, string theory, and the physics of black holes.

**PHYSICS 21. Mechanics, Fluids, and Heat. 4 Units.**

How are the motions of objects and the behavior of fluids and gases determined by the laws of physics? Students learn to describe the motion of objects (kinematics) and understand why objects move as they do (dynamics). Emphasis on how Newton's three laws of motion are applied to solids, liquids, and gases to describe phenomena as diverse as spinning gymnasts, blood flow, and sound waves. Understanding many-particle systems requires connecting macroscopic properties (e.g., temperature and pressure) to microscopic dynamics (collisions of particles). Laws of thermodynamics provide understanding of real-world phenomena such as energy conversion and performance limits of heat engines. Everyday examples are analyzed using tools of algebra and trigonometry. Problem-solving skills are developed, including verifying that derived results satisfy criteria for correctness, such as dimensional consistency and expected behavior in limiting cases. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Prerequisite: high school algebra and trigonometry; calculus not required.

**PHYSICS 21S. Mechanics, Fluids, and Heat with Laboratory. 5 Units.**

How are the motions of objects and the behavior of fluids and gases determined by the laws of physics? Students learn to describe the motion of objects (kinematics) and understand why objects move as they do (dynamics). Emphasis on how Newton's three laws of motion are applied to solids, liquids, and gases to describe phenomena as diverse as spinning gymnasts, blood flow, and sound waves. Understanding many-particle systems requires connecting macroscopic properties (e.g., temperature and pressure) to microscopic dynamics (collisions of particles). Laws of thermodynamics provide understanding of real-world phenomena such as energy conversion and performance limits of heat engines. Everyday examples are analyzed using tools of algebra and trigonometry. Problem-solving skills are developed, including verifying that derived results satisfy criteria for correctness, such as dimensional consistency and expected behavior in limiting cases. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Labs are an integrated part of the summer course. Prerequisite: high school algebra and trigonometry; calculus not required.

**PHYSICS 22. Mechanics, Fluids, and Heat Laboratory. 1 Unit.**

Guided hands-on exploration of concepts in classical mechanics, fluids, and thermodynamics with an emphasis on student predictions, observations and explanations. Pre- or corequisite: PHYSICS 21.

**PHYSICS 23. Electricity, Magnetism, and Optics. 4 Units.**

How are electric and magnetic fields generated by static and moving charges, and what are their applications? How is light related to electromagnetic waves? Students learn to represent and analyze electric and magnetic fields to understand electric circuits, motors, and generators. The wave nature of light is used to explain interference, diffraction, and polarization phenomena. Geometric optics is employed to understand how lenses and mirrors form images. These descriptions are combined to understand the workings and limitations of optical systems such as the eye, corrective vision, cameras, telescopes, and microscopes. Discussions based on the language of algebra and trigonometry. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Prerequisite: PHYSICS 21 or PHYSICS 21S.

**PHYSICS 23S. Electricity, Magnetism, and Optics with Laboratory. 5 Units.**

How are electric and magnetic fields generated by static and moving charges, and what are their applications? How is light related to electromagnetic waves? Students learn to represent and analyze electric and magnetic fields to understand electric circuits, motors, and generators. The wave nature of light is used to explain interference, diffraction, and polarization phenomena. Geometric optics is employed to understand how lenses and mirrors form images. These descriptions are combined to understand the workings and limitations of optical systems such as the eye, corrective vision, cameras, telescopes, and microscopes. Discussions based on the language of algebra and trigonometry. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Labs are an integrated part of the summer courses. Prerequisite: PHYSICS 21 or PHYSICS 21S.

**PHYSICS 24. Electricity, Magnetism, and Optics Laboratory. 1 Unit.**

Guided hands-on exploration of concepts in electricity and magnetism, circuits and optics with an emphasis on student predictions, observations and explanations. Introduction to multimeters and oscilloscopes. Pre- or corequisite: PHYS 23.

**PHYSICS 25. Modern Physics. 4 Units.**

How do the discoveries since the dawn of the 20th century impact our understanding of 21st-century physics? This course introduces the foundations of modern physics: Einstein's theory of special relativity and quantum mechanics. Combining the language of physics with tools from algebra and trigonometry, students gain insights into how the universe works on both the smallest and largest scales. Topics may include atomic, molecular, and laser physics; semiconductors; elementary particles and the fundamental forces; nuclear physics (fission, fusion, and radioactivity); astrophysics and cosmology (the contents and evolution of the universe). Emphasis on applications of modern physics in everyday life, progress made in our understanding of the universe, and open questions that are the subject of active research. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Prerequisite: PHYSICS 23 or PHYSICS 23S.

**PHYSICS 26. Modern Physics Laboratory. 1 Unit.**

Guided hands-on and simulation-based exploration of concepts in modern physics, including special relativity, quantum mechanics and nuclear physics with an emphasis on student predictions, observations and explanations. Pre- or corequisite: PHYSICS 25.

**PHYSICS 41. Mechanics. 4 Units.**

How are motions of objects in the physical world determined by laws of physics? Students learn to describe the motion of objects (kinematics) and then understand why motions have the form they do (dynamics). Emphasis on how the important physical principles in mechanics, such as conservation of momentum and energy for translational and rotational motion, follow from just three laws of nature: Newton's laws of motion. Distinction made between fundamental laws of nature and empirical rules that are useful approximations for more complex physics. Problems drawn from examples of mechanics in everyday life. Skills developed in verifying that derived results satisfy criteria for correctness, such as dimensional consistency and expected behavior in limiting cases. Discussions based on language of mathematics, particularly vector representations and operations, and calculus. Physical understanding fostered by peer interaction and demonstrations in lecture, and discussion sections based on interactive group problem solving. Prerequisite: High school physics or concurrent enrollment in PHYSICS 41A. MATH 41 or MATH 51 or CME 100 or equivalent. Minimum corequisite: MATH 42 or equivalent.

**PHYSICS 41A. Mechanics Concepts, Calculations, and Context. 1 Unit.**

Additional assistance and applications for PHYSICS 41. In-class problems in physics and engineering. Exercises in the concepts and calculations of vectors, translational and rotational velocity and acceleration, equations of motion for particles and rigid bodies, and principles of energy and linear/angular momentum. In-class participation required. Highly recommended for students with limited or no high school physics or calculus. Co-requisite: PHYSICS 41.

**PHYSICS 42. Classical Mechanics Laboratory. 1 Unit.**

Hands-on exploration of concepts in classical mechanics: Newton's laws, conservation laws, rotational motion. Introduction to laboratory techniques, experimental equipment and data analysis. Pre- or corequisite: PHYSICS 41.

**PHYSICS 43. Electricity and Magnetism. 4 Units.**

What is electricity? What is magnetism? How are they related? How do these phenomena manifest themselves in the physical world? The theory of electricity and magnetism, as codified by Maxwell's equations, underlies much of the observable universe. Students develop both conceptual and quantitative knowledge of this theory. Topics include: electrostatics; magnetostatics; simple AC and DC circuits involving capacitors, inductors, and resistors; integral form of Maxwell's equations; electromagnetic waves. Principles illustrated in the context of modern technologies. Broader scientific questions addressed include: How do physical theories evolve? What is the interplay between basic physical theories and associated technologies? Discussions based on the language of mathematics, particularly differential and integral calculus, and vectors. Physical understanding fostered by peer interaction and demonstrations in lecture, and discussion sections based on interactive group problem solving. Prerequisite: PHYSICS 41 or equivalent. MATH 42 or MATH 51 or CME 100 or equivalent. Recommended corequisite: MATH 52 or CME 102.

**PHYSICS 43A. Electricity and Magnetism: Concepts, Calculations and Context. 1 Unit.**

Additional assistance and applications for Physics 43. In-class problems in physics and engineering. Exercises in calculations of electric and magnetic forces and field to reinforce concepts and techniques; Calculations involving inductors, transformers, AC circuits, motors and generators. Highly recommended for students with limited or no high school physics or calculus. Co-requisite: PHYSICS 43.

**PHYSICS 43N. Understanding Electromagnetic Phenomena. 1 Unit.**

Preference to freshmen. Expands on the material presented in PHYSICS 43; applications of concepts in electricity and magnetism to everyday phenomena and to topics in current physics research. Corequisite: PHYSICS 43 or advanced placement.

**PHYSICS 44. Electricity and Magnetism Lab. 1 Unit.**

Hands-on exploration of concepts in electricity, magnetism, and circuits. Introduction to multimeters, function generators, oscilloscopes, and graphing techniques. Pre- or corequisite: PHYSICS 43.

**PHYSICS 45. Light and Heat. 4 Units.**

What is temperature? How do the elementary processes of mechanics, which are intrinsically reversible, result in phenomena that are clearly irreversible when applied to a very large number of particles, the ultimate example being life? In thermodynamics, students discover that the approach of classical mechanics is not sufficient to deal with the extremely large number of particles present in a macroscopic amount of gas. The paradigm of thermodynamics leads to a deeper understanding of real-world phenomena such as energy conversion and the performance limits of thermal engines. In optics, students see how a geometrical approach allows the design of optical systems based on reflection and refraction, while the wave nature of light leads to interference phenomena. The two approaches come together in understanding the diffraction limit of microscopes and telescopes. Discussions based on the language of mathematics, particularly calculus. Physical understanding fostered by peer interaction and demonstrations in lecture, and discussion sections based on interactive group problem solving. Prerequisite: PHYSICS 41 or equivalent. MATH 42 or MATH 51 or CME 100 or equivalent.

**PHYSICS 45N. Advanced Topics in Light and Heat. 1 Unit.**

Preference to freshmen. Expands on the subject matter presented in PHYSICS 45 to include optics and thermodynamics in everyday life, and applications from modern physics and astrophysics. Corequisite: PHYSICS 45 or advanced placement.

**PHYSICS 46. Light and Heat Laboratory. 1 Unit.**

Hands-on exploration of concepts in geometrical optics, wave optics and thermodynamics. Pre- or corequisite: PHYSICS 45.

**PHYSICS 50. Observational Astronomy Laboratory. 3 Units.**

Introduction to observational astronomy emphasizing the use of optical telescopes. Observations of stars, nebulae, and galaxies in laboratory sessions with telescopes at the Stanford Student Observatory. Meets at the observatory one evening per week from dusk until well after dark, in addition to day-time lectures each week. No previous physics required. Limited enrollment.

**PHYSICS 59. Frontiers of Physics Research. 1 Unit.**

Recommended for prospective Physics or Engineering Physics majors or anyone with an interest in learning about the big questions and unknowns that physicists tackle in their research at Stanford. Weekly faculty presentations, in some cases followed by tours of experimental laboratories where the research is conducted.

**PHYSICS 61. Mechanics and Special Relativity. 4 Units.**

(First in a three-part advanced freshman physics series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) This course covers Einstein's special theory of relativity and Newtonian mechanics at a level appropriate for students with a strong high school mathematics and physics background, who are contemplating a major in Physics or Engineering Physics, or are interested in a rigorous treatment of physics. Postulates of special relativity, simultaneity, time dilation, length contraction, the Lorentz transformation, causality, and relativistic mechanics. Central forces, contact forces, linear restoring forces. Momentum transport, work, energy, collisions. Angular momentum, torque, moment of inertia in three dimensions. Damped and forced harmonic oscillators. Uses the language of vectors and multivariable calculus. Recommended prerequisites: Mastery of mechanics at the level of AP Physics C and AP Calculus BC or equivalent. Corequisite: MATH 51.

**PHYSICS 62. Mechanics Laboratory. 1 Unit.**

Introduction to laboratory techniques, experiment design, data collection and analysis simulations, and correlating observations with theory. Labs emphasize discovery with open-ended questions and hands-on exploration of concepts developed in PHYSICS 61 including Newton's laws, conservation laws, rotational motion. Pre- or corequisite PHYSICS 61.

**PHYSICS 63. Electricity, Magnetism, and Waves. 4 Units.**

(Second in a three-part advanced freshman physics series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) This course covers the foundations of electricity and magnetism for students with a strong high school mathematics and physics background, who are contemplating a major in Physics or Engineering Physics, or are interested in a rigorous treatment of physics. Electricity, magnetism, and waves with some description of optics. Electrostatics and Gauss' law. Electric potential, electric field, conductors, image charges. Electric currents, DC circuits. Moving charges, magnetic field, Ampere's law. Solenoids, transformers, induction, AC circuits, resonance. Relativistic point of view for moving charges. Displacement current, Maxwell's equations. Electromagnetic waves, dielectrics. Diffraction, interference, refraction, reflection, polarization. Prerequisite: PHYSICS 61 and MATH 51. Pre- or corequisite: MATH 52.

**PHYSICS 64. Electricity, Magnetism and Waves Laboratory. 1 Unit.**

Introduction to multimeters, breadboards, function generators and oscilloscopes. Emphasis on student-developed design of experimental procedure and data analysis for topics covered in PHYSICS 63: electricity, magnetism, circuits, and optics. Pre- or corequisite: PHYSICS 63.

**PHYSICS 65. Quantum and Thermal Physics. 4 Units.**

(Third in a three-part advanced freshman physics series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) This course introduces the foundations of quantum and statistical mechanics for students with a strong high school mathematics and physics background, who are contemplating a major in Physics or Engineering Physics, or are interested in a rigorous treatment of physics. Quantum mechanics: atoms, electrons, nuclei. Quantization of light, Planck's constant. Photoelectric effect, Compton and Bragg scattering. Bohr model, atomic spectra. Matter waves, wave packets, interference. Fourier analysis and transforms, Heisenberg uncertainty relationships. Schrödinger equation, eigenfunctions and eigenvalues. Particle-in-a-box, simple harmonic oscillator, barrier penetration, tunneling, WKB and approximate solutions. Time-dependent and multi-dimensional solution concepts. Coulomb potential and hydrogen atom structure. Thermodynamics and statistical mechanics: ideal gas, equipartition, heat capacity. Probability, counting states, entropy, equilibrium, chemical potential. Laws of thermodynamics. Cycles, heat engines, free energy. Partition function, Boltzmann statistics, Maxwell speed distribution, ideal gas in a box, Einstein model. Quantum statistical mechanics: classical vs. quantum distribution functions, fermions vs. bosons. Prerequisites: PHYSICS 61 & PHYSICS 63. Pre- or corequisite: MATH 53.

**PHYSICS 67. Introduction to Laboratory Physics. 2 Units.**

Methods of experimental design, data collection and analysis, statistics, and curve fitting in a laboratory setting. Experiments drawn from electronics, optics, heat, and modern physics. Lecture plus laboratory format. Required for PHYSICS 60 series Physics and Engineering Physics majors; recommended, in place of PHYSICS 44, for PHYSICS 40 series students who intend to major in Physics or Engineering Physics. Pre- or corequisite: PHYSICS 65 or PHYSICS 43.

**PHYSICS 70. Foundations of Modern Physics. 4 Units.**

Required for Physics or Engineering Physics majors who completed the PHYSICS 40 series. Introduction to special relativity: reference frames, Michelson-Morley experiment. Postulates of relativity, simultaneity, time dilation. Length contraction, the Lorentz transformation, causality. Doppler effect. Relativistic mechanics and mass, energy, momentum relations. Introduction to quantum physics: atoms, electrons, nuclei. Quantization of light, Planck constant. Photoelectric effect, Compton and Bragg scattering. Bohr model, atomic spectra. Matter waves, wave packets, interference. Fourier analysis and transforms, Heisenberg uncertainty relationships. Schrödinger equation, eigenfunctions and eigenvalues. Particle-in-a-box, simple harmonic oscillator, barrier penetration, tunneling, WKB and approximate solutions. Time-dependent and multi-dimensional solution concepts. Coulomb potential and hydrogen atom structure. Prerequisites: PHYSICS 41, PHYSICS 43. Pre or corequisite: PHYSICS 45. Recommended: prior or concurrent registration in MATH 53.

**PHYSICS 81N. Science on the Back of the Envelope. 3 Units.**

Understanding the complex world around us quantitatively, using order of magnitude estimates and dimensional analysis. Starting from a handful of fundamental constants of Nature, one can estimate complex quantities such as cosmological length and time scales, size of the atom, height of Mount Everest, speed of tsunamis, energy density of fuels and climate effects. Through these examples students learn the art of deductive thinking, fundamental principles of science and the beautiful unity of nature.

**PHYSICS 83N. Physics in the 21st Century. 3 Units.**

Preference to freshmen. Current topics at the frontier of modern physics. This course provides an in-depth examination of two of the biggest physics discoveries of the 21st century: that of the Higgs boson and Dark Energy. Through studying these discoveries we will explore the big questions driving modern particle physics, the study of nature's most fundamental pieces, and cosmology, the study of the evolution and nature of the universe. Questions such as: What is the universe made of? What are the most fundamental particles and how do they interact with each other? What can we learn about the history of the universe and what does it tell us about its future? We will learn about the tools scientists use to study these questions such as the Large Hadron Collider and the Hubble Space Telescope. We will also learn to convey these complex topics in engaging and diverse terms to the general public through writing and reading assignments, oral presentations, and multimedia projects. The syllabus includes a tour of SLAC, the site of many major 20th century particle discoveries, and a virtual visit of the control room of the ATLAS experiment at CERN amongst other activities. No prior knowledge of physics is necessary; all voices are welcome to contribute to the discussion about these big ideas. Learning Goals: By the end of the quarter you will be able to explain the major questions that drive particle physics and cosmology to your friends and peers. You will understand how scientists study the impossibly small and impossibly large and be able to convey this knowledge in clear and concise terms.

**PHYSICS 91SI. Practical Computing for Scientists. 2 Units.**

Essential computing skills for researchers in the natural sciences. Helping students transition their computing skills from a classroom to a research environment. Topics include the Unix operating system, the Python programming language, and essential tools for data analysis, simulation, and optimization. More advanced topics as time allows. Prerequisite: CS106A or equivalent.

**PHYSICS 100. Introduction to Observational Astrophysics. 4 Units.**

Designed for undergraduate physics majors but open to all students with a calculus-based physics background and some laboratory and coding experience. Students make and analyze observations using the telescopes at the Stanford Student Observatory. Topics covered include navigating the night sky, the physics of stars and galaxies, telescope instrumentation and operation, imaging and spectroscopic techniques, quantitative error analysis, and effective scientific communication. The course concludes with an independent project. Limited enrollment. Prerequisites: prior completion of Physics 40 or 60 series.

**PHYSICS 105. Intermediate Physics Laboratory I: Analog Electronics. 4 Units.**

Analog electronics including Ohm's law, passive circuits and transistor and op amp circuits, emphasizing practical circuit design skills to prepare undergraduates for laboratory research. Short design project. Minimal use of math and physics, no electronics experience assumed beyond introductory physics. Prerequisite: PHYSICS 43 or PHYSICS 63.

**PHYSICS 107. Intermediate Physics Laboratory II: Experimental Techniques and Data Analysis. 4 Units.**

Experiments on lasers, Gaussian optics, and atom-light interaction, with emphasis on data and error analysis techniques. Students describe a subset of experiments in scientific paper format. Prerequisites: completion of PHYSICS 40 or PHYSICS 60 series, and PHYSICS 70 and PHYSICS 105. Recommended pre- or corequisites: PHYSICS 120 and 130. WIM.

**PHYSICS 108. Advanced Physics Laboratory: Project. 4 Units.**

Small student groups plan, design, build, and carry out a single experimental project in low-temperature physics. Prerequisites PHYSICS 105, PHYSICS 107.

**PHYSICS 110. Advanced Mechanics. 3-4 Units.**

Lagrangian and Hamiltonian mechanics. Principle of least action, Euler-Lagrange equations. Small oscillations and beyond. Symmetries, canonical transformations, Hamilton-Jacobi theory, action-angle variables. Introduction to classical field theory. Selected other topics, including nonlinear dynamical systems, attractors, chaotic motion. Undergraduates register for Physics 110 (4 units). Graduates register for Physics 210 (3 units). Prerequisites: MATH 131P, and PHYSICS 112 or MATH elective 104 or higher. Recommended prerequisite: PHYSICS 130. Same as: PHYSICS 210

**PHYSICS 112. Mathematical Methods of Physics. 4 Units.**

Theory of complex variables, complex functions, and complex analysis. Fourier series and Fourier transforms. Special functions such as Laguerre, Legendre, and Hermite polynomials, and Bessel functions. The uses of Green's functions. Covers material of MATH 106 and MATH 132 most pertinent to Physics majors. Prerequisites: MATH 50 or 50H series, and MATH 131P or MATH 173.

**PHYSICS 113. Computational Physics. 4 Units.**

Numerical methods for solving problems in mechanics, electromagnetism, quantum mechanics, and statistical mechanics. Methods include numerical integration; solutions of ordinary and partial differential equations; solutions of the diffusion equation, Laplace's equation and Poisson's equation with relaxation methods; statistical methods including Monte Carlo techniques; matrix methods and eigenvalue problems. Short introduction to MatLab, used for class examples; class projects may be programmed in any language such as C. Prerequisites: MATH 53 and PHYS 120. Previous programming experience not required.

**PHYSICS 120. Intermediate Electricity and Magnetism I. 4 Units.**

Vector analysis. Electrostatic fields, including boundary-value problems and multipole expansion. Dielectrics, static and variable magnetic fields, magnetic materials. Maxwell's equations. Prerequisites: PHYSICS 43 or PHYS 63; MATH 52 and MATH 53. Pre- or corequisite: MATH 131P or MATH 173. Recommended corequisite: PHYS 112.

**PHYSICS 121. Intermediate Electricity and Magnetism II. 4 Units.**

Conservation laws and electromagnetic waves, Poynting's theorem, tensor formulation, potentials and fields. Plane wave problems (free space, conductors and dielectric materials, boundaries). Dipole and quadrupole radiation. Special relativity and transformation between electric and magnetic fields. Prerequisites: PHYS 120 and MATH 131P or MATH 173; Recommended: PHYS 112.

**PHYSICS 130. Quantum Mechanics I. 4 Units.**

The origins of quantum mechanics and wave mechanics. Schrödinger equation and solutions for one-dimensional systems. Commutation relations. Generalized uncertainty principle. Time-energy uncertainty principle. Separation of variables and solutions for three-dimensional systems; application to hydrogen atom. Spherically symmetric potentials and angular momentum eigenstates. Spin angular momentum. Addition of angular momentum. Prerequisites: PHYSICS 65 or PHYSICS 70 and MATH 131P or MATH 173. MATH 173 can be taken concurrently. Pre- or corequisites: PHYSICS 120.

**PHYSICS 131. Quantum Mechanics II. 4 Units.**

Identical particles; Fermi and Bose statistics. Time-independent perturbation theory. Fine structure, the Zeeman effect and hyperfine splitting in the hydrogen atom. Time-dependent perturbation theory. Variational principle and WKB approximation. Prerequisite: PHYSICS 120, PHYSICS 130, MATH 131P, or MATH 173. Pre- or corequisite: PHYSICS 121.

**PHYSICS 134. Advanced Topics in Quantum Mechanics. 3-4 Units.**

Scattering theory, partial wave expansion, Born approximation. Additional topics may include nature of quantum measurement, EPR paradox, Bell's inequality, and topics in quantum information science; path integrals and applications; Berry's phase; structure of multi-electron atoms (Hartree-Fock); relativistic quantum mechanics (Dirac equation). Undergraduates register for PHYSICS 134 (4 units). Graduate students register for PHYSICS 234 (3 units). Prerequisite: PHYSICS 131. Same as: PHYSICS 234

**PHYSICS 152. Introduction to Particle Physics I. 3 Units.**

Elementary particles and the fundamental forces. Quarks and leptons. The mediators of the electromagnetic, weak and strong interactions. Interaction of particles with matter; particle acceleration, and detection techniques. Symmetries and conservation laws. Bound states. Decay rates. Cross sections. Feynman diagrams. Introduction to Feynman integrals. The Dirac equation. Feynman rules for quantum electrodynamics and for chromodynamics. Undergraduates register for PHYSICS 152. Graduate students register for PHYSICS 252. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 130. Pre- or corequisite: PHYSICS 131. Same as: PHYSICS 252

**PHYSICS 160. Introduction to Stellar and Galactic Astrophysics. 3 Units.**

Observed characteristics of stars and the Milky Way galaxy. Physical processes in stars and matter under extreme conditions. Structure and evolution of stars from birth to death. White dwarfs, planetary nebulae, supernovae, neutron stars, pulsars, binary stars, x-ray stars, and black holes. Galactic structure, interstellar medium, molecular clouds, HI and HII regions, star formation, and element abundances. Undergraduates register for PHYSICS 160. Graduate students register for PHYSICS 260. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 121. Same as: PHYSICS 260

**PHYSICS 161. Introduction to Cosmology and Extragalactic Astrophysics. 3 Units.**

What do we know about the physical origins, content, and evolution of the Universe – and how do we know it? Students learn how cosmological distances and times, and the geometry and expansion of space, are described and measured. Composition of the Universe. Origin of matter and the elements. Observational evidence for dark matter and dark energy. Thermal history of the Universe, from inflation to the present. Emergence of large-scale structure from quantum perturbations in the early Universe. Astrophysical tools used to learn about the Universe. Big open questions in cosmology. Undergraduates register for Physics 161. Graduates register for Physics 261. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 121 or equivalent. Same as: PHYSICS 261

**PHYSICS 170. Thermodynamics, Kinetic Theory, and Statistical Mechanics I. 4 Units.**

Basic probability and statistics for random processes such as random walks. The derivation of laws of thermodynamics from basic postulates; the determination of the relationship between atomic substructure and macroscopic behavior of matter. Temperature; equations of state, heat, internal energy, equipartition; entropy, Gibbs paradox; equilibrium and reversibility; heat engines; applications to various properties of matter; absolute zero and low-temperature phenomena. Distribution functions, fluctuations, the partition function for classical and quantum systems, irreversible processes. Pre- or corequisite: PHYSICS 130.

**PHYSICS 171. Thermodynamics, Kinetic Theory, and Statistical Mechanics II. 4 Units.**

Mean-field theory of phase transitions; critical exponents. Ferromagnetism, the Ising model. The renormalization group. Dynamics near equilibrium: Brownian motion, diffusion, Boltzmann equations. Other topics at discretion of instructor. Prerequisite: PHYSICS 170. Recommended pre- or corequisite: PHYSICS 130.

**PHYSICS 172. Solid State Physics. 3 Units.**

Introduction to the properties of solids. Crystal structures and bonding in materials. Momentum-space analysis and diffraction probes. Lattice dynamics, phonon theory and measurements, thermal properties. Electronic structure theory, classical and quantum; free, nearly-free, and tight-binding limits. Electron dynamics and basic transport properties; quantum oscillations. Properties and applications of semiconductors. Reduced-dimensional systems. Undergraduates should register for PHYSICS 172 and graduate students for APPPHYS 272. Prerequisites: PHYSICS 170 and PHYSICS 171, or equivalents. Same as: APPPHYS 272

**PHYSICS 190. Independent Research and Study. 1-9 Unit.**

Undergraduate research in experimental or theoretical physics under the supervision of a faculty member. Prerequisites: superior work as an undergraduate Physics major and consent of instructor.

**PHYSICS 205. Senior Thesis Research. 1-12 Unit.**

Long-term experimental or theoretical project and thesis in Physics under supervision of a faculty member. Planning of the thesis project is recommended to begin as early as middle of the junior year. Successful completion of a senior thesis requires a minimum of 3 units for a letter grade completed during the senior year, along with the other formal thesis and physics major requirements. Students doing research for credit prior to senior year should sign up for Physics 190. Prerequisites: superior work as an undergraduate Physics major and approval of the thesis application.

**PHYSICS 210. Advanced Mechanics. 3-4 Units.**

Lagrangian and Hamiltonian mechanics. Principle of least action, Euler-Lagrange equations. Small oscillations and beyond. Symmetries, canonical transformations, Hamilton-Jacobi theory, action-angle variables. Introduction to classical field theory. Selected other topics, including nonlinear dynamical systems, attractors, chaotic motion. Undergraduates register for Physics 110 (4 units). Graduates register for Physics 210 (3 units). Prerequisites: MATH 131P, and PHYSICS 112 or MATH elective 104 or higher. Recommended prerequisite: PHYSICS 130. Same as: PHYSICS 110

**PHYSICS 211. Continuum Mechanics. 3 Units.**

Elasticity, fluids, turbulence, waves, gas dynamics, shocks, and MHD plasmas. Examples from everyday phenomena, geophysics, and astrophysics.

**PHYSICS 212. Statistical Mechanics. 3 Units.**

Principles, ensembles, statistical equilibrium. Thermodynamic functions, ideal and near-ideal gases. Fluctuations. Mean-field description of phase transitions and associated critical exponents. One-dimensional Ising model and other exact solutions. Renormalization and scaling relations. Prerequisites: PHYSICS 131, 171, or equivalents.

**PHYSICS 216. Back of the Envelope Physics. 3 Units.**

Techniques such as scaling and dimensional analysis, useful to make order-of-magnitude estimates of physical effects in different settings. Goals are to promote a synthesis of physics through solving problems, including problems that are not usually thought of as physics. Applications include properties of materials, fluid mechanics, geophysics, astrophysics, and cosmology. Prerequisites: undergraduate mechanics, statistical mechanics, electricity and magnetism, and quantum mechanics.

**PHYSICS 220. Classical Electrodynamics. 3 Units.**

Special relativity: The principles of relativity, Lorentz transformations, four vectors and tensors, relativistic mechanics and the principle of least action. Lagrangian formulation, charges in electromagnetic fields, gauge invariance, the electromagnetic field tensor, covariant equations of electrodynamics and mechanics, four-current and continuity equation. Noether's theorem and conservation laws, Poynting's theorem, stress-energy tensor. Constant electromagnetic fields: conductors and dielectrics, magnetic media, electric and magnetic forces, and energy. Electromagnetic waves: Plane and monochromatic waves, spectral resolution, polarization, electromagnetic properties of matter, dispersion relations, wave guides and cavities. Prerequisites: PHYSICS 121 and PHYSICS 210, or equivalent; MATH 106 or MATH 116, and MATH 132 or equivalent.

**PHYSICS 230. Graduate Quantum Mechanics I. 3 Units.**

Fundamental concepts. Introduction to Hilbert spaces and Dirac's notation. Postulates applied to simple systems, including those with periodic structure. Symmetry operations and gauge transformation. The path integral formulation of quantum statistical mechanics. Problems related to measurement theory. The quantum theory of angular momenta and central potential problems. Prerequisite: PHYSICS 131 or equivalent.

**PHYSICS 231. Graduate Quantum Mechanics II. 3 Units.**

Basis for higher level courses on atomic solid state and particle physics. Problems related to measurement theory and introduction to quantum computing. Approximation methods for time-independent and time-dependent perturbations. Semiclassical and quantum theory of radiation, second quantization of radiation and matter fields. Systems of identical particles and many electron atoms and molecules. Prerequisite: PHYSICS 230.

**PHYSICS 234. Advanced Topics in Quantum Mechanics. 3-4 Units.**

Scattering theory, partial wave expansion, Born approximation. Additional topics may include nature of quantum measurement, EPR paradox, Bell's inequality, and topics in quantum information science; path integrals and applications; Berry's phase; structure of multi-electron atoms (Hartree-Fock); relativistic quantum mechanics (Dirac equation). Undergraduates register for PHYSICS 134 (4 units). Graduate students register for PHYSICS 234 (3 units). Prerequisite: PHYSICS 131. Same as: PHYSICS 134

**PHYSICS 240. Introduction to the Physics of Energy. 3 Units.**

Energy as a consumable. Forms and interconvertability. World Joule budget. Equivalents in rivers, oil pipelines and nuclear weapons. Quantum mechanics of fire, batteries and fuel cells. Hydrocarbon and hydrogen synthesis. Fundamental limits to mechanical, electrical and magnetic strengths of materials. Flywheels, capacitors and high pressure tanks. Principles of AC and DC power transmission. Impossibility of pure electricity storage. Surge and peaking. Solar constant. Photovoltaic and thermal solar conversion. Physical limits on agriculture.

**PHYSICS 241. Introduction to Nuclear Energy. 3 Units.**

Radioactivity. Elementary nuclear processes. Energetics of fission and fusion. Cross-sections and resonances. Fissionable and fertile isotopes. Neutron budgets. Light water, heavy water and graphite reactors. World nuclear energy production. World reserves of uranium and thorium. Plutonium, reprocessing and proliferation. Half lives of fission decay products and actinides made by neutron capture. Nuclear waste. Three Mile Island and Chernobyl. Molten sodium breeders. Generation-IV reactors. Inertial confinement and magnetic fusion. Laser compression. Fast neutron production and fission-fusion hybrids. Prerequisites: Strong undergraduate background in elementary chemistry and physics. PHYSICS 240 and PHYSICS 252 recommended but not required. Interested undergraduates encouraged to enroll, with permission of instructor.

**PHYSICS 252. Introduction to Particle Physics I. 3 Units.**

Elementary particles and the fundamental forces. Quarks and leptons. The mediators of the electromagnetic, weak and strong interactions. Interaction of particles with matter; particle acceleration, and detection techniques. Symmetries and conservation laws. Bound states. Decay rates. Cross sections. Feynman diagrams. Introduction to Feynman integrals. The Dirac equation. Feynman rules for quantum electrodynamics and for chromodynamics. Undergraduates register for PHYSICS 152. Graduate students register for PHYSICS 252. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 130. Pre- or corequisite: PHYSICS 131. Same as: PHYSICS 152

**PHYSICS 260. Introduction to Stellar and Galactic Astrophysics. 3 Units.**

Observed characteristics of stars and the Milky Way galaxy. Physical processes in stars and matter under extreme conditions. Structure and evolution of stars from birth to death. White dwarfs, planetary nebulae, supernovae, neutron stars, pulsars, binary stars, x-ray stars, and black holes. Galactic structure, interstellar medium, molecular clouds, HI and HII regions, star formation, and element abundances. Undergraduates register for PHYSICS 160. Graduate students register for PHYSICS 260. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 121. Same as: PHYSICS 160

**PHYSICS 261. Introduction to Cosmology and Extragalactic Astrophysics. 3 Units.**

What do we know about the physical origins, content, and evolution of the Universe -- and how do we know it? Students learn how cosmological distances and times, and the geometry and expansion of space, are described and measured. Composition of the Universe. Origin of matter and the elements. Observational evidence for dark matter and dark energy. Thermal history of the Universe, from inflation to the present. Emergence of large-scale structure from quantum perturbations in the early Universe. Astrophysical tools used to learn about the Universe. Big open questions in cosmology. Undergraduates register for Physics 161. Graduates register for Physics 261. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 121 or equivalent. Same as: PHYSICS 161

**PHYSICS 262. General Relativity. 3 Units.**

Einstein's General Theory of Relativity is a basis for modern ideas of fundamental physics, including string theory, as well as for studies of cosmology and astrophysics. The course begins with an overview of special relativity, and the description of gravity as arising from curved space. From Riemannian geometry and the geodesic equations, to curvature, the energy-momentum tensor, and the Einstein field equations. Applications of General Relativity: topics may include experimental tests of General Relativity and the weak-field limit, black holes (Schwarzschild, charged Reissner-Nordstrom, and rotating Kerr black holes), gravitational waves (including detection methods), and an introduction to cosmology (including cosmic microwave background radiation, dark energy, and experimental probes). Prerequisite: PHYSICS 121 or equivalent including special relativity.

**PHYSICS 290. Research Activities at Stanford. 1 Unit.**

Required of first-year Physics graduate students; suggested for junior or senior Physics majors for 1 unit. Review of research activities in the department and elsewhere at Stanford at a level suitable for entering graduate students.

**PHYSICS 291. Practical Training. 1-3 Unit.**

Opportunity for practical training in industrial labs. Arranged by student with the research adviser's approval. A brief summary of activities is required, approved by the research adviser.

**PHYSICS 293. Literature of Physics. 1-15 Unit.**

Study of the literature of any special topic. Preparation, presentation of reports. If taken under the supervision of a faculty member outside the department, approval of the Physics chair required. Prerequisites: 25 units of college physics, consent of instructor.

**PHYSICS 294. Teaching of Physics Seminar. 1 Unit.**

Required of all Teaching Assistants prior to the first teaching assignment. Weekly seminar/discussions on interactive techniques for teaching physics. Practicum which includes class observations, grading and student teaching in current courses.

**PHYSICS 295. Learning & Teaching of Science. 3 Units.**

This course will provide students with a basic knowledge of the relevant research in cognitive psychology and science education and the ability to apply that knowledge to enhance their ability to learn and teach science, particularly at the undergraduate level. Course will involve readings, discussion, and application of the ideas through creation of learning activities. It is suitable for advanced undergraduates and graduate students with some science background.

Same as: EDUC 280

**PHYSICS 301. Astrophysics Laboratory. 3 Units.**

Open to all graduate students with a calculus-based physics background and some laboratory experience. Students make and analyze observations using telescopes at the Stanford Student Observatory. Topics include navigating the night sky, the physics of stars and galaxies, telescope instrumentation and operation, quantitative error analysis, and effective scientific communication. The course also introduces a number of hot topics in astrophysics and cosmology. Limited enrollment.

**PHYSICS 312. Basic Plasma Physics. 3 Units.**

For the nonspecialist who needs a working knowledge of plasma physics for space science, astrophysics, fusion, or laser applications. Topics: orbit theory, the Boltzmann equation, fluid equations, magneto hydrodynamics (MHD) waves and instabilities, electromagnetic (EM) waves, the Vlasov theory of electrostatic (ES) waves and instabilities including Landau damping and quasilinear theory, the Fokker-Planck equation, and relaxation processes. Advanced topics in resistive instabilities and particle acceleration. Prerequisite: PHYSICS 220, or consent of instructor.

**PHYSICS 321. Laser Spectroscopy. 3 Units.**

Theoretical concepts and experimental techniques. Absorption, dispersion, Kramers-Kronig relations, line-shapes. Classical and laser linear spectroscopy. Semiclassical theory of laser atom interaction: time-dependent perturbation theory, density matrix, optical Bloch equations, coherent pulse propagation, multiphoton transitions. High-resolution nonlinear laser spectroscopy: saturation spectroscopy, polarization spectroscopy, two-photon and multiphoton spectroscopy, optical Ramsey spectroscopy. Phase conjugation. Four-wave mixing, harmonic generation. Coherent Raman spectroscopy, quantum beats, ultra-sensitive detection. Prerequisite: PHYSICS 230. Recommended: PHYSICS 231.

**PHYSICS 330. Quantum Field Theory I. 3 Units.**

Lorentz Invariance. S-Matrix. Quantization of scalar and Dirac fields. Feynman diagrams. Quantum electrodynamics. Elementary electrodynamic processes: Compton scattering; e-e- annihilation. Loop diagrams. Prerequisites: PHYSICS 130, PHYSICS 131, or equivalents AND a basic knowledge of Group Theory.

**PHYSICS 331. Quantum Field Theory II. 3 Units.**

Functional integral methods. Local gauge invariance and Yang-Mills fields. Asymptotic freedom. Spontaneous symmetry breaking and the Higgs mechanism. Unified models of weak and electromagnetic interactions. Prerequisite: PHYSICS 330.

**PHYSICS 332. Quantum Field Theory III. 3 Units.**

Theory of renormalization. The renormalization group and applications to the theory of phase transitions. Renormalization of Yang-Mills theories. Applications of the renormalization group of quantum chromodynamics. Perturbation theory anomalies. Applications to particle phenomenology. Prerequisite: PHYSICS 331.

**PHYSICS 351. Standard Model of Particle Physics. 3 Units.**

Symmetries, group theory, gauge invariance, Lagrangian of the Standard Model, flavor group, flavor-changing neutral currents, CKM quark mixing matrix, GIM mechanism, rare processes, neutrino masses, seesaw mechanism, QCD confinement and chiral symmetry breaking, instantons, strong CP problem, QCD axion. Prerequisite: PHYSICS 330.

**PHYSICS 361. Cosmology. 3 Units.**

A comprehensive exposition of the standard model of cosmology, connecting a fundamental physics description to contemporary and proposed observations. Geometry, kinematics, dynamics, and current contents of the Universe at large. History of the universe as it expanded in size by a factor of a trillion, including nucleosynthesis, recombination, and reionization. Evolution of perturbations that eventually grow to form large scale structure, and the influence of this structure on observations of the microwave background and galaxies. Introduction to modern cosmological probes including techniques to measure the expansion history and the growth of structure. The course will conclude with a focused discussion of cosmic inflation, the nature and origin of matter, and the cosmological constant. Recommended prerequisites: PHYSICS 261 or equivalent. Recommended coreq: PHYSICS 368. Offered in Winter 2016 and alternate years thereafter.

**PHYSICS 362. Advanced Extragalactic Astrophysics and Cosmology. 3 Units.**

Observational data on the content and activities of galaxies, the content of the Universe, cosmic microwave background radiation, gravitational lensing, and dark matter. Models of the origin, structure, and evolution of the Universe based on the theory of general relativity. Test of the models and the nature of dark matter and dark energy. Physics of the early Universe, inflation, baryosynthesis, nucleosynthesis, and galaxy formation. Prerequisites: PHYSICS 210, PHYSICS 211, and PHYSICS 260 or PHYSICS 360.

**PHYSICS 364. Advanced Gravitation. 3 Units.**

Classical and quantum gravity in Anti-de Sitter spacetime (AdS). History and uses of AdS. Basic classical physics of AdS: metric, conformal structure, common coordinate systems. Black holes in AdS: thermodynamics, Hawking-Page transition. Classical fields in AdS: action of conformal group, singletons. Stability of AdS and positive energy theorems. Towards the holographic correspondence: geodesics and the UV-IR relation. AdS from supergravity. Recommended: PHYSICS 330, some familiarity with general relativity.

**PHYSICS 366. Special Topics in Astrophysics: Statistical Methods. 2 Units.**

Existing and emerging statistical techniques and their application to astronomical surveys and cosmological data analysis. Topics covered will include statistical frameworks (Bayesian inference and frequentist statistics), numerical methods including Markov Chain Monte Carlo, and machine learning applied to classification and regression. Hands on activities based on open-source software in python. Recommended prerequisites: PHYSICS 260 and 261, or equivalent. Familiarity with Python coding and basic statistics at level of STATS 116. This course runs for the first five weeks of the quarter.

**PHYSICS 367. Special Topics in Astrophysics: High-Energy Astrophysics. 2 Units.**

Basic theory of radiative processes, particle acceleration and propagation, compact objects, accretion, and shock fronts, with application to pulsars, X-ray binaries, supernova remnants, cosmic rays, active galactic nuclei, and clusters of galaxies. Prerequisite: PHYSICS 260 or equivalent. This course runs for the first five weeks of the quarter.

**PHYSICS 368. Computational Cosmology and Astrophysics. 2 Units.**

Create virtual Universes and understand our own using your computer. Techniques for studying the dynamics of dark matter and gas as it assembles over cosmic time to form the structure in the Universe. The use of modern computer codes on supercomputers to combine modeling of gravitation, gas dynamics, radiation processes, magnetohydrodynamics, and other relevant physical processes to make detailed predictions about the evolution of the Universe. Practical exercises to explore how cosmic microwave background observations are sensitive to cosmological parameters, how key numerical algorithms work, how different cosmological observations can be combined to constrain what the Universe is made of and how it changed over time. Additional current topics in computational cosmology depending on student interest. Hands-on activities based on open-source software in C++ and Python. Pre- or corequisites: PHYSICS 361. Recommended prerequisite: PHYSICS 366.

**PHYSICS 372. Condensed Matter Theory I. 3 Units.**

Fermi liquid theory, many-body perturbation theory, response function, functional integrals, interaction of electrons with impurities. Prerequisite: APPPHYS 273 or equivalent.

**PHYSICS 373. Condensed Matter Theory II. 3 Units.**

Superfluidity and superconductivity. Quantum magnetism. Prerequisite: PHYSICS 372.

**PHYSICS 450. Quantum Chaos and Quantum Gravity. 3 Units.**

Course reviews aspects of classical and quantum chaos; discussions of recent connections of these topics to the physics of black holes and scattering experiments in AdS/CFT; and estimates of a bound on the rate at which chaos can appear in diagnostic correlation functions.

**PHYSICS 451. Topics in Modern Condensed Matter Theory. 3 Units.**

This course will cover various aspects of modern condensed matter physics with emphasis on statistical field theories. Possible topics include: renormalization group and critical phenomena, quantum phase transitions, disordered systems, quantum Hall systems.

**PHYSICS 490. Research. 1-18 Unit.**

Open only to Physics graduate students, with consent of instructor. Work is in experimental or theoretical problems in research, as distinguished from independent study of a non-research character in 190 and 293.

**PHYSICS 801. TGR Project. 0 Units.**

.

**PHYSICS 802. TGR Dissertation. 0 Units.**

.

**Political Economics Courses****POLECON 230. Strategy Beyond Markets. 2 Units.**

This course develops techniques and tools to use in firms' strategic interactions beyond the market environment. We'll examine firms' interactions with stakeholders, constituents, and institutions, including interest groups, legislatures, regulatory agencies, courts, international organizations, and the public. Topics covered in the class include: intellectual property, health care reform, carried interest in private equity, peer-to-peer lending, and beyond market strategy for start-ups. The goal is to develop integrated strategies for optimal firm performance that combine strategies within and beyond markets.

**POLECON 231. Strategy Beyond Markets: Challenges and Opportunities in Developing Economies. 3 Units.**

This course shares significant material with POLECON 230 and the goal of developing integrated strategies for optimal firm performance that combine elements within and beyond markets. POLECON 231 diverges from the base course to delve deeper into issues that are particularly salient for entrepreneurs in emerging and frontier markets. Using a combination of cases from developed and developing countries, we will expand the list of topics considered to include managing political risk and protecting the firm in the face of uncertain and discretionary regulatory environments. The objective is to provide a solid grounding in the techniques explored in 230, while refining skill sets and whetting appetites for investment in higher risk environments.

**POLECON 232. Law and Economics for Corporate Strategy. 3 Units.**

This course introduces students to the core issues of law and economics and their applications to managerial strategy. Markets and the legal environment are increasingly interrelated: issues such as antitrust, intellectual property, privacy rights, product regulation, and torts affect firms' profitability both directly through legal action and indirectly by determining the "rules of the game." Nor are companies simply reactive to legal and political forces; actions taken by managers in firms often propel issues before the public eye. For instance, electronic collection and collation of personal data has stimulated new concerns about privacy, while court decisions, new legislation, and public opinion have all played roles in determining what is acceptable. Such legal and political forces invariably necessitate changes in corporate strategy, and the effectiveness of corporate strategy often rests on managers' ability to anticipate, rather than simply react to, developments in the nonmarket environment. Cases and readings consider specific legal principles and how executives can anticipate, and take effective action with regards to, the threats and opportunities they present. The course will focus on legal doctrine within the United States, but will also consider the legal ramifications of corporate actions with regards to other nations and international law. The course also considers other important nonmarket issues, such as responding to pressure from independent interest groups and understanding how firms may influence the legislative process, though in less depth than Nonmarket Strategy. Students are expected to come to class with a thorough understanding of the both the legal issues involved and the economic considerations of the case under discussion. By the end of the course, students will have acquired a thorough understanding of the legal principles covered, as well as a strategic acuity regarding the appropriate market and nonmarket responses. Grades will be based on student's demonstration of this understanding through class participation and a final exam.

**POLECON 239. MSx: Strategy Beyond Markets. 2 Units.**

This course addresses managerial issues in the social, political, legal, and ethical environments of business. Cases and readings emphasize strategies to improve the performance of companies in light of their multiple constituencies, in both international and US environments. Most core courses focus on firms' interactions with customers, suppliers, and alliance partners in the form of mutually beneficial voluntary exchange transacted in markets. In contrast, this course considers the strategic interactions of firms with comparably important constituents, organizations, and institutions beyond markets. Issues considered include those involving activist and interest groups, the media, legislatures, regulatory and antitrust agencies, and international organizations such as the WTO. In many of the class sessions, we will draw on theoretical and empirical research in political economy, a field that is particularly relevant for understanding relationships between firms and governments, because (unlike most of economics) political economy focuses on interactions that are neither voluntary nor transacted via money.

**POLECON 330. Law and Economics for Corporate Strategy. 3 Units.**

This is an advanced version of the GSB's class on Strategy Beyond Markets. It is intended for students who have substantive experience working with/for governments, activist groups, the media, or heavily-regulated industries, and particularly those students with previous legal experience. The class may also be appropriate for students who have academic backgrounds in political science or public policy. Cases and readings consider specific legal principles (e.g., antitrust, fiduciary duty, intellectual property) and how executives can anticipate and take effective action with regards to the threats and opportunities they present. The course will focus on legal doctrine within the United States, but will also consider the legal ramifications of corporate actions with regards to other nations' legal doctrine and international law. By the end of the course, students are expected to acquire not only a thorough understanding of the legal principles covered, but also insight into the appropriate market-based and non-market-based responses.

**POLECON 332. Managers and the Legal Environment. 4 Units.**

To excel, managers and entrepreneurs must know how to operate successfully in the legal environment in which they must conduct business. This course addresses the legal aspects of business agreements and relationships. The course begins with an overview of the different forms of business organizations available, mergers and acquisitions, public and private offerings of securities, and the fiduciary duties of officers, directors and controlling shareholders. The course covers the US court system and the laws of contracts, torts, antitrust and intellectual property. The legal aspects of the employment relationship as they relate to the liability of corporations and managers for the acts of their employees, wrongful termination, discrimination, and sexual harassment will also be covered. Students who have a JD degree, or will receive a JD degree, from a U.S. university should not take this class. If you cannot attend a class, you must notify instructors before class.

**POLECON 342. Finding Spiritual Meaning at Work: Business Exemplars. 3 Units.**

This course explores the experience of respected business leaders who have been able to integrate their spiritual and business lives successfully. It also provides an explicit opportunity for students to discuss their own intentions to find deep meaning in and through their business careers. Difficulties, struggles and barriers will be examined as well. Readings will include both biographies of specific business people and background materials on the major religious and philosophical traditions represented. A number of the exemplars whose biographical information will be examined, like Jeff Weiner of LinkedIn, will be invited to class – initially to listen to the class discussion, and then to provide feedback to students, expand on their own biographies and the background resources read in preparation for each class, and respond to questions and answers. This course will help students elucidate how their business careers fit into what ultimately matters most to them and how to build moral courage and long-term commitment to their ideals.

**POLECON 349. The Business World: Moral and Spiritual Inquiry through Literature. 3 Units.**

This course uses novels and plays as a basis for examining the moral and spiritual aspects of business leadership and of the environment in which business is done. On the one hand literature is used as the basis for examining the character of business people, while on the other hand literature provides illumination of the cultural contexts of values and beliefs within which commercial activities take place in a global economy. The course is organized around the interplay of religious traditions and national identities. Classes are taught in a Socratic, discussion-based style, creating as much of a seminar atmosphere as possible. A two-text method is used, encouraging students to examine their own personal stories with as much care as the stories presented in the literature. This course will be graded on the basis of class participation, weekly reflection papers (1 page), and a final paper. There will be no exam.

**POLECON 351. Global Business: Unspoken Rules of the Game. 3 Units.**

This course will provide both theoretical and practical assistance to students who will be engaged in global business -- in terms of understanding and negotiating issues of custom, cultural ethos, and underlying religious traditions which are often unspoken but critical to business success. Frameworks and modes of analysis will be presented that can be used universally, but then will be applied concretely, through case studies, to business contexts in China, Japan, India, the Middle East, Israel, Europe, Africa, Latin America, and the United States. Background information will be included on major religious traditions involved, like Buddhism, Confucianism, Hinduism, Islam, Judaism and Christianity. The class will be discussion-based, drawing on students' own life experience as well as that of invited guests who are personally familiar with business practices in various parts of the world.

**POLECON 528. Measuring Opinion and Sentiment. 2 Units.**

Measuring the opinions and sentiments of consumers and employees are important responsibilities of several areas of managerial responsibility including marketing, strategy, business development, and sales.

We focus on three main approaches learning the preferences of key stakeholders in the design of products and services: (1) surveys; (2) experiments; and (3) "big data." Topics include sampling, questionnaire design, and experimental design and methodology. The main assignment will be a group project. Students should have either taken Data & Decisions or have some familiarity with statistics.

**POLECON 530. Law and Economics for Corporate Strategy. 3 Units.**

This is an advanced version of the GSB's class on Strategy Beyond Markets. It is intended for students who have substantive experience working with/for governments, activist groups, the media, or heavily-regulated industries, and particularly those students with previous legal experience. The class may also be appropriate for students who have academic backgrounds in political science or public policy. Cases and readings consider specific legal principles (e.g., antitrust, fiduciary duty, intellectual property) and how executives can anticipate and take effective action with regards to the threats and opportunities they present. The course will focus on legal doctrine within the United States, but will also consider the legal ramifications of corporate actions with regards to other nations' legal doctrine and international law. By the end of the course, students are expected to acquire not only a thorough understanding of the legal principles covered, but also insight into the appropriate market-based and non-market-based responses.

**POLECON 538. Disruptive Innovation. 2 Units.**

Disruptive innovation is challenging to bring to market because of the power of entrenched incumbents and their political advocates. This course will discuss market and non-market strategies for effectively deploying and scaling up disruptive technologies. We will focus on developed products and initial business/company building. Pedagogical techniques include case studies, historical analysis, strategic frameworks, and interactive group presentations. The course will feature guest speakers as well as the co-instructor's experience as the first business leader (and now CFO) of Dropbox as it grew from an early stage company to a multi-billion dollar enterprise.

**POLECON 547. Intellectual Property and Its Effect on Business. 2 Units.**

This course explores the impact intellectual property rights have on business decisions. We begin with a general background of intellectual property law including copyright, trademark, patent and trade secret. We will also cover quasi property rights such as database and privacy. Each of these distinct rights will be examined through a case methodology affording students an opportunity to gauge the relative strengths and weaknesses of a particular form of protection. As the value of intellectual property rises, the avenues of economic return increase. We will analyze various methods of maximizing such economic returns. Focus for this course is on the impact both technological innovation and intellectual property law have on business strategies. This is not a class designed to teach students the law of intellectual property. Rather, this course educates business decision makers on the impact intellectual property can have on the bottom line. This course employs a mixed lecture/case discussion format. We will have several sessions with lectures by visiting industry experts.

**POLECON 555. New Opportunities in the Changing World of American Health Care. 1 Unit.**

In this class, we will visit and analyze two health care organizations that are experimenting with innovative approaches to delivering care. The visits will highlight:
 

- the new technologies that clinics and hospitals are using to improve health outcomes, reduce cost, and enhance customer service;
- how clinics and hospitals are reorganizing the division of labor between physicians, nurses, and support workers to make optimal use of new technology;
- the challenges of obtaining payment from an insurance system that has historically focused on the volume of services rather than quality or efficiency.

 In the first session, we will review how health care is financed in the U.S. and how the Affordable Care Act, the country's new health reform law, will change the finance and delivery of care starting in 2014. In the last session, we will discuss the two organizations that we visited, which aspects of their approaches are most (and least) likely to succeed, and which areas of the sector offer the greatest opportunities for the future. Students will be expected to participate in both visits and the discussions before and after them.

**POLECON 571. The Future of Growth: Developed and Developing World. 2 Units.**

The course deals with the recent (post war) sustained high growth in the developing world and its likely evolution and impact in the future. How are these kinds of growth rates possible? What accounts for the absence of growth in a part of the developing world? What are the key political ingredients? Attention will be given to the evolving global landscape surrounding this growth. What is the impact of this widening pattern of growth and are there natural brakes that may slow the process down or make it difficult for the non-G20 developing countries and their 1/3 of the world's population to start or sustain the high growth process. The class will attempt to identify and assess the impact of important global trends and challenges. Included in the latter will be governance issues. We will spend a little time on the impact of the 2008-2009 crisis, the transmission channels and lessons learned from the vantage point of developing countries.

**POLECON 584. Managing Global Political Risk. 1 Unit.**

In a globalized world, managers and investors are increasingly realizing that politics matter as much as economic fundamentals. Micro-level decisions made by local politicians in Brazil or India, national-level strategies of countries like China and Russia, and multi-national regimes, policies, and norms are all affecting global businesses in significant and often surprising ways. This course examines the full array of political risks confronting businesses today, from creeping expropriations to sudden shocks like national debt defaults and coups to emerging threats like cyber exploitation. Students will learn about impediments to assessing political risk and how to tackle them; develop strategies for managing political risk in a systematic way; and craft tools for mitigating the downside effects of political risk to business. Each session will include customized case studies and mini-simulations for students to walk in the shoes of senior managers confronting these challenges.

**POLECON 670. Advanced Topics in Political Economy. 4 Units.**

This is a topics class aimed at advanced students in political economy and related disciplines. It will consist of a combination of lectures and student presentations. Grading will be based on class participation and a research proposal/paper.

**POLECON 676. Behavioral Political Economy. 4 Units.**

This course examines organizational decision making in ways that depart from the "thin theory" of rationality in one of two respects. (1) The thin theory presumes that decision makers are fully rational, i.e., they are cognitively unconstrained. We will examine a variety of cognitive constraints and their effects on institutional behavior and policy outcomes. (2) The thin theory presumes individualistic preferences: people care only about their own payoffs. There is now substantial evidence that this assumption is sometimes inaccurate. We will study some of this literature. Much of the important work in this area has come not from political economy but from cognitive psychology and behavioral economics. Hence, we will spend between a third and a half of the quarter on micro-foundations. Throughout the course, contrasts will be drawn between models based on the thin theory of rationality and less orthodox ones. Consequently, some familiarity with theories of rational choice is desirable. Any course on game theory or normative decision theory suffices. Although the motivation for relaxing the thin theory has been largely empirical, the orientation of this course is heavily theoretical. Many of the theories that we will study are expressed as mathematical or computational models. Students are expected either to have a taste for formal reasoning or at least to tolerate it.

**POLECON 677. Political Economy and Political Behavior. 4 Units.**

This seminar will expose students to cutting-edge research in political behavior and political economy published in the leading political science (and other social science) journals. The aim is for students to learn the contemporary literature so that they can be producers of research. To that end, the required assignments in the class will be aimed at professional development: writing an original research note, writing a review, and delivering a scholarly presentation.

**POLECON 680. Foundations of Political Economy. 3 Units.**

This course provides an introduction to political economy with an emphasis on formal models of collective choice, public institutions, and political competition. Topics considered include voting theory, social choice, institutional equilibria, agenda setting, interest group politics, bureaucratic behavior, and electoral competition. Also listed as Political Science 351A.

**POLECON 681. Economic Analysis of Political Institutions. 4 Units.**

This course extends the foundations developed in P680 by applying techniques of microeconomic analysis and game theory to the study of political behavior and institutions. The techniques include information economics, games of incomplete information, sequential bargaining theory, repeated games, and rational expectations. The applications considered include agenda formation in legislatures, government formation in parliamentary systems, the implications of legislative structure, elections and information aggregation, lobbying, electoral competition and interest groups, the control of bureaucracies, interest group competition, and collective choice rules. Also listed as Political Science 351B.

**POLECON 682. Institutions and Bridge-Building in Political Economy. 4 Units.**

This course critically surveys empirical applications of formal models of collective-choice institutions. It is explicitly grounded in philosophy of science (e.g., Popperian positivism and Kuhn's notions of paradigms and normal science). Initial sessions address the meanings and roles of the concept of institutions in social-science research. Historically important works of political science and/or economics are then considered within a framework called Components of Institutional Analysis (or CIA), which provides a fully general way of evaluating research that is jointly empirical and formal theoretical. The course concludes with contemporary instances of such bridge-building. The over-arching objectives are to elevate the explicitness and salience of desirable properties of research and to illustrate the inescapable tradeoffs among the stipulated criteria. Although this is a core course in the GSB Political Economy PhD curriculum, its substantive foci may differ across years depending on the instructor. For Professor Krehbiel's sessions, the emphasis is on legislative behavior, organization, and lawmaking, and on inter-institutional strategic interaction (e.g. between executive, legislative, and judicial branches in various combinations). Students should have taken POLECON 680 and POLECON 681. Also listed as Political Science 351C.

**POLECON 683. Political Development Economics. 3 Units.**

This course surveys emerging research in political economics as it applies to developing societies, emphasizing both theoretical and empirical approaches. Topics will include: corruption and "forensic" political economics, institutional reform and democratization, ethnicity, conflict and public goods provision, and the role of trade and financial innovations in political development. The aim of the course is to bring students to the frontier of the field and develop their own research. Graduate level proficiency in microeconomics and empirical methods will be required.

**POLECON 691. PhD Directed Reading. 1-15 Unit.**

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, STRAMGT 691

**POLECON 692. PhD Dissertation Research. 1-15 Unit.**

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, STRAMGT 692

**POLECON 698. Doctoral Practicum in Teaching. 1 Unit.**

Doctoral Practicum in Teaching.

**POLECON 699. Doctoral Practicum in Research. 1 Unit.**

Doctoral Practicum in Research.

**POLECON 802. TGR Dissertation. 0 Units.**

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, STRAMGT 802

**Political Science Courses****POLISCI 1. The Science of Politics. 5 Units.**

Why do countries go to war? How can we explain problems such as poverty, inequality, and pollution? What can be done to improve political representation in the United States and other countries? We will use scientific methods to answer these and other fundamental questions about politics.

**POLISCI 1Z. Introduction to International Relations. 5 Units.**

Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth.

**POLISCI 2. Introduction to American National Government and Politics. 5 Units.**

American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. (This course has merged with Political Science 123/ PubPol 101).

Same as: AMSTUD 2

**POLISCI 11N. The Rwandan Genocide. 3 Units.**

Preference to freshmen. In 1994, more than 800,000 Tutsi and moderate Hutu Rwandans were killed in the most rapid genocide in history. What could bring humans to carry out such violence? Could it have been prevented? Why did no major power intervene to stop the killing? Should the U.N. be held accountable? What were the consequences for Central Africa? How have international actors respond to the challenges of reconstructing Rwanda? What happened to the perpetrators? Sources include scholarly and journalistic accounts.

**POLISCI 12N. Climate Change and Conflict: Will Warming Lead to Warring?. 3 Units.**

Policymakers and scholars are increasingly interested in whether climate change and its associated effects could contribute to the risk of violent conflict within and between countries. Will drought and rising temperatures lead to struggles over a dwindling supply of agricultural land? Will shortages of fresh water cause growing tension over access to rivers and lakes? Will rising sea levels cause mass migration from coastal areas, bringing people into conflict? Will social unrest arising from such stresses lead to violent efforts to topple governments or spill over across borders? In this seminar, we explore such questions as: How could the expected effects of climate change make civil or international conflicts more likely? What evidence is there that environmental factors contribute to violent conflicts, historically and today? What regions or countries are most at risk from these challenges, and why? Answering these questions requires that we not only think about the human and social impacts of climate change but also ask basic questions about what causes political violence within and between countries and how we can assess the contribution of different risk factors. Assignments will encourage students to learn more about the conflict risks in countries that interest them and to gain familiarity with some of the methods that political scientists use to explore these issues systematically. The connection between climate and conflict is relatively new area of inquiry, without many settled answers, so this seminar presents an opportunity to explore what we know, what we do not yet know, and what we can do to further our understanding of this issue going forward.

**POLISCI 18N. Civil War and International Politics: Syria in Context. 3 Units.**

How and why do civil wars start, drag on, and end? What does focus of post-Cold War U.S. foreign policy on countries torn apart by civil war tell us about contemporary international relations? We consider these and related questions, with the conflict in Syria as our main case study.

**POLISCI 18SC. The Federal Government and the West. 2 Units.**

Historical development and current status of the relationship between the U.S. federal government and the American West. Land ownership, natural resource management, agriculture, water, energy, and environmental quality.

**POLISCI 19N. Politics of Energy Efficiency. 5 Units.**

We will examine the political context of energy efficiency and climate change. Why are some countries, such as Japan and France, able to achieve high levels of energy efficiency, while others, such as the United States and Australia, struggle to do so? What political factors facilitate or impede energy efficiency policies? Why is international cooperation on climate change so difficult?

**POLISCI 22SC. The Face of Battle. 2 Units.**

Our understanding of warfare often derives from the lofty perspective of political leaders and generals: what were their objectives and what strategies were developed to meet them? This top-down perspective slights the experience of the actual combatants and non-combatants caught in the crossfire. This course focuses on the complexity of the process by which strategy is translated into tactical decisions by the officers and foot soldiers on the field of battle. We will focus on three battles in American history: Gettysburg (July 1863), the Battle of Little Bighorn (June 1876), and the Korengal Valley campaign in Afghanistan (2006-2010). In addition to reading major works on these battles and the conflicts in which they occurred, we will travel to Gettysburg, Pennsylvania, and the Little Bighorn battlefield in Montana. While at Stanford, students will conduct extensive research on individual participants at Gettysburg and Little Bighorn. When we walk through the battlefield sites, students will brief the group on their subjects' experience of battle and on why they made the decisions they did during the conflict. Why did Lt. General Longstreet oppose the Confederate attack on the Union Army at Gettysburg? What was the experience of a military surgeon on a Civil War battlefield? Why did Custer divide his 7th Cavalry troops as they approached the Little Bighorn River? What was the role of Lakota Sioux women after a battle? Travel will be provided and paid by Sophomore College (except incidentals) and is made possible by the support of the Center for International Security and Cooperation (CISAC). The final part of the class covers contemporary military conflicts discussing what the US public, political leaders, and military commanders have learned (and not learned) from the past. The course is open to students from a range of disciplines; an interest in the topic is the only prerequisite. Sophomore College course, applications required by 12noon April 5, 2016. Apply at <http://soco.stanford.edunn> Read the article written about the 2012 Face of Battle Course ([http://cisac.fsi.stanford.edu/news/custer\\_makes\\_last\\_stand\\_in\\_stanford\\_tshirts\\_and\\_raybans\\_20121221/](http://cisac.fsi.stanford.edu/news/custer_makes_last_stand_in_stanford_tshirts_and_raybans_20121221/)).

**POLISCI 24Q. Law and Order. 3 Units.**

Preference to sophomores. The role of law in promoting social order. What is the rule of law? How does it differ from the rule of men? What institutions best support the rule of law? Is a state needed to ensure that laws are enforced? Should victims be allowed to avenge wrongs? What is the relationship between justice and mercy?

**POLISCI 24SC. Conservatism and Liberalism in American Politics and Policy. 2 Units.**

What influence do political ideologies have in American politics and government? In this course, students will study liberal and conservative ideology in American politics and public policy from the mid-20th century onward. The course begins with an examination of ideology in the American public and then considers ideology among political activists and elected officials, focusing on members of Congress and the president. The course will also cover the ideological polarization of political elites and its impact on the policy-making process. In the final part of the course, through a series of policy case studies, students will also evaluate how well certain public policies have met the ideological goals of their liberal and conservative sponsors. The course will included several lunches and dinners with guest speakers.

**POLISCI 25N. The US Congress in Historical and Comparative Perspective. 3 Units.**

This course traces the development of legislatures from their medieval European origins to the present, with primary emphasis on the case of the U.S. Congress. Students will learn about the early role played by assemblies in placing limits on royal power, especially via the power of the purse. About half the course will then turn to a more detailed consideration of the U.S. Congress's contemporary performance, analyzing how that performance is affected by procedural legacies from the past that affect most democratic legislatures worldwide.

**POLISCI 27N. Thinking Like a Social Scientist. 3 Units.**

Preference to freshman. This seminar will consider how politics and government can be studied systematically: the compound term Political SCIENCE is not an oxymoron. The seminar will introduce core concepts and explore a variety of methodological approaches. Problems of inference from evidence will be a major concern. Classic and contemporary research studies will be the basis of discussion throughout.

**POLISCI 28N. The Changing Nature of Racial Identity in American Politics. 3 Units.**

Almost one-third of Americans now identify with a racial/ethnic minority group. This seminar examines the relationship between racial identity, group consciousness, and public opinion. Topics include the role of government institutions in shaping identification, challenges in defining and measuring race, attitudes towards race-based policies, and the development of political solidarity within racial groups. Particular attention will be paid to the construction of political identities among the growing mixed-race population.

**POLISCI 29N. Mixed-Race Politics and Culture. 3 Units.**

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? In this course, we approach issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st century U.S. We will examine issues surrounding the role of multiculturalism, immigration, acculturation, racial representation and racial prejudice in American society. Topics we will explore include the political and social formation of race; racial representation in the media, arts, and popular culture; the rise and decline of the one-drop rule and its effect on political and cultural attachments; the politicization of Census categories and the rise of the Multiracial Movement.

Same as: AFRICAAM 52N, ENGLISH 52N

**POLISCI 31N. Political Freedom: Rights, Justice, and Democracy in the Western Tradition. 3 Units.**

Freedom is one of our core values. Most people can agree that freedom is a good thing. Yet there is far less agreement about how to understand the concept itself and what kinds of political arrangements are best suited to protect and enhance freedom. Is freedom about being left alone? Undertaking action with others? Participating in governance? Does freedom require a limited state? An active and interventionist government? A robustly participatory political system? How is freedom connected to other political values, like justice and equality? This seminar will consider and evaluate some of the most controversial and challenging answers that have been given to these questions by both historical and contemporary political thinkers from Europe and North America. Thinkers covered will include: Plato, Thomas Hobbes, John Locke, Alexis de Tocqueville, John Stuart Mill, Karl Marx, Robert Putnam, and Jeremy Waldron.

**POLISCI 33S. Religion, Democracy, and Human Rights. 3 Units.**

What is the relationship between religion, democracy, and human rights? What is the status of religion within modern human rights regimes? Do religions have "special" rights in democracies? Why did the French outlaw the hijab (Islamic headscarf) and the Swiss the building of mosques and is that good for human and democratic rights? What is (and what should be) the relationship between religious human rights and democratic self-determination? How do we balance between concerns over blasphemy and free speech, in the case of the Danish cartoon depiction of Mohammad, for example? Is the idea of "religion" even useful in human rights or democratic language anymore, as some now claim? These are just some of the questions students will take up as they are introduced to several important areas within the larger field of religion and international relations. Readings are interdisciplinary in nature, and include case studies. No prerequisite. Open to all majors/minors, and will be particularly beneficial to students in International Relations, International Policy Studies, Political Science, and Religious Studies, as well as students with specific regional political interests where the themes of the course are especially relevant (e.g., Middle East, Latin America, Russia and Eastern Europe, Africa, and so on) and Pre-Law students.

Same as: RELIGST 35S

**POLISCI 34S. Religion and Politics. 3 Units.**

What is the relationship between religion, international conflict and peace? This course takes up this question by examining contemporary thinking in international relations, conflict management, political science, and religious ethics. Topics to be taken up include: whether religion is fundamentally a positive or negative force in conflict management; how do major world religions think about war and peace; the relationship of religion to terrorism; whether thinking about religion in international conflict requires its own categories, distinct from models concerning ethnic or nationalistic communities in conflict; varieties of religious militancy; religion's potential role in conflict resolution; among others. Through these investigations, students will better grasp the contemporary scholarship on the place of religion in international conflict and peace building. Readings are interdisciplinary in nature, and include case studies. No prerequisite. Open to all majors/minors, and will be particularly beneficial to students in International Relations, Religious Studies, International Policy Studies, and Political Science, as well as students with specific regional political interests where the themes of the course are especially relevant (e.g., Middle East, Latin America, Russia and Eastern Europe, Africa, and so on).

**POLISCI 42Q. The Rwandan Genocide. 5 Units.**

Between April and July of 1994 more than 800,000 Rwandans, mostly Tutsi but also moderate Hutus, were killed in the most rapid genocide the world has ever known. The percentage of Rwandans killed in a single day of the genocide was ten times greater than the percentage of Americans killed in the entire Vietnam war. What could bring humans to plan and carry out such an orgy of violence? Could it have been prevented? Why did the United States or any other major power not intervene to stop the killing? To what extent should the United Nations be held accountable for the failure to end the genocide? What were the consequences of the genocide for the region of Central Africa? How did international actors respond to the challenges of reconstructing Rwanda after the killings? What has happened to the perpetrators of the genocide? This course surveys scholarly and journalistic accounts of the genocide to seek answers to these questions. This seminar will be residence based in Crothers, but will be open to Crothers residents and non-residents.

**POLISCI 45N. Civil War Narratives. 3 Units.**

Preference to freshmen. Focus is on a new statistics-based theory to account for the susceptibility of countries to civil war. How to write a theory-based historical narrative. Students write and present an original historical narrative focusing on how well the theory explains a particular history and on the importance of factors that are absent from the theory in explaining civil war onsets.

**POLISCI 49N. Dictators. 3 Units.**

This course explores how dictators perpetuate their rule through the use of ideology, coercion and political institutions. We will examine existing typologies of authoritarian rule and investigate examples of dictatorship from across the world, both contemporary and historical. Using works of fiction in addition to historical and political science texts, we will consider why some people resist authoritarian rule while others do not and the conditions under which dictators are overthrown.

**POLISCI 57E. State of the Union 2014. 1 Unit.**

This course will examine major themes that contribute to the health, or disease, of the US body politic. Challenges and opportunities abound: we live in an age of rising inequality, dazzling technological innovation, economic volatility, geopolitical uncertainty, and the accumulating impact of climate change. These conditions confront our political leaders and us as citizens of a democracy plagued by dysfunction. What are the implications for the body politic? Led by Rob Reich (Political Science, Stanford), David Kennedy (History, Stanford), and James Steyer (CEO, Common Sense Media), the course will bring together distinguished analysts of American politics. Together, we will examine the following topics: inequality; energy and the environment; media and technology; the economy; and the 2014 midterm elections. The course is designed for the entire Stanford community: jointly offered for undergraduate and graduate students at Stanford (through listings in Political Science and History) and for community members through the Continuing Studies Program. For students, the course is available for 1 credit. This course may not be taken for a Letter Grade.

Same as: HISTORY 57E

**POLISCI 71. Current Issues in European Security. 1 Unit.**

Russia's annexation of Crimea in Spring 2014 posed not only a threat to post-World War II Europe formed around the norm of national sovereignty, but possibly also the very real threat that Russia had awakened from its 20 years of peacefulness to once again impose its will on Eastern Europe. Is Europe again under threat from the East? In Current Issues in European Security, students will attend public events organized by Stanford's Europe Center and Freeman Spogli Institute for International Studies. These events – talks by political leaders and scholars from the U.S. and Europe – will engage and encourage students to understand the deepening crises in Ukraine, conflict in the Baltics, and European security as a whole. Students will leave the course with a better understanding of the multi-faceted dilemmas policy makers face, historical background, and possible paths forward for global decision makers. In addition to attending the events, students will write a final memo recommending a course of action for US policy makers. Events will typically be scheduled from 12 noon to 1:30 p.m. but may be held at other times. There will be approximately six events in spring quarter, and students may also be required to attend one or two separate discussion sessions.

**POLISCI 72. Policy, Politics, and the Presidency: Understanding the 2016 Campaign from Start to Finish. 2 Units.**

In 2016, Americans will once again go to the polls to select a new president. But what will actually happen behind-the-scenes between now and then is largely a mystery to most. This course will introduce students to the nuts-and-bolts of a presidential campaign. Each week, we will explore a different topic related to running for the presidency – policy formation, communications, grassroots strategy, digital outreach, campaign finance – and feature high-profile guest speakers who have served in senior roles on both Democratic and Republican campaigns. Students, guests, and faculty will also participate in discussions on how these topics will relate to the 2016 presidential contest, which will begin in earnest over the course of the quarter.

Same as: PUBLPOL 146, PUBLPOL 246

**POLISCI 73. Energy Policy in California. 1 Unit.**

This seminar will provide an in-depth analysis of the role of California state agencies in driving energy policy development, technology innovation, and market structures. The course will cover three areas: 1) roles and responsibilities of key state agencies; 2) current and evolving energy and climate policies; and 3) development of California's 21st century energy systems. Presentations will include experts from the California Energy Commission, the California Public Utilities Commission, the California Air Resources Board, the California Independent System Operator, the California Legislature, and the Governor's office.

**POLISCI 96X. Mobilizing Democracy: Campaigns, Elections, and Voting. 1 Unit.**

Alternative Spring Break: America is often thought of as the archetypal democracy. While most democracies have surprisingly short lifespans, America has persisted for 238 years. However, in the 21st century, we have grounds to question the quality of our democracy. Turnout of the Voting Age Population hovers around 50 percent and today, we are seeing increasing legal challenges to voting rights. In the backdrop of these statistics, there is an entire industry devoted to campaigns. In the 2012 presidential race alone, almost \$2.5 billion was poured into the campaign-industrial complex. Given that this cycle is a presidential election year, those amounts are expected to be surpassed. As a consequence, many questions arise: How do politicians engage voters in elections at the various levels of government? Where do they spend their money and why? In the age of big data, how accurately can elections be predicted? How do we maximize participation in elections?.

**POLISCI 97X. Bridging the Civil-Military Divide: Military Service as Public Service in the 21st Century. 1 Unit.**

Alternative Spring Break: Today, fewer than 0.5 percent of Americans serve in the military, as compared to roughly 12 percent during the second World War. This has led to a widening gap in knowledge about the military, its members and the functions they perform, as well as its basic structure and tradition of service. This course is intended to introduce students to the notion of military service as public service and explore how misperceptions on both sides affect the civil-military divide. We will explore military service from the life of an enlisted soldier deployed to Afghanistan, to an officer working at the Pentagon on broad national security strategy. How does society conceive of a soldier, a sailor, an airman, a marine? How do Americans perceive military service and what role do service members play in our society?.

**POLISCI 99Z. Introduction to the Science of Politics. 4 Units.**

Why do countries go to war? Why are some countries democratic and others autocratic? How can we improve political representation in the United States and other countries? We will use scientific methods to answer these and other fundamental questions about politics.

**POLISCI 101. Introduction to International Relations. 5 Units.**

(Formerly POLISCI 1) Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth.

**POLISCI 102. Politics and Public Policy. 4-5 Units.**

(Formerly PS 2) American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. Undergraduate Public Policy students are required to enroll in this class for five units.

Same as: AMSTUD 123X, POLISCI 123, PUBLPOL 101, PUBLPOL 201

**POLISCI 103. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 136S, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307

**POLISCI 104. Introduction to Comparative Politics. 5 Units.**

(Formerly POLISCI 4) Why are some countries prone to civil war and violence, while others remain peaceful? Why do some countries maintain democratic systems, while others do not? Why are some countries more prosperous than others? This course will provide an overview of the most basic questions in the comparative study of political systems, and will introduce the analytical tools that can help us answer them.

**POLISCI 110C. America and the World Economy. 5 Units.**

Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade politics and policies; the effects of the globalization of business on future US prosperity. Enroll in PoliSci 110C for WIM credit.

Same as: INTNLREL 110C, POLISCI 110X

**POLISCI 110D. War and Peace in American Foreign Policy. 5 Units.**

(Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period.

Same as: INTNLREL 110D, POLISCI 110Y

**POLISCI 110G. Governing the Global Economy. 5 Units.**

Who governs the world economy? Why do countries succeed or fail to cooperate in setting their economic policies? When and how do international institutions help countries cooperate? When and why do countries adopt good and bad economic policies? This course examines how domestic and international politics determine how the global economy is governed. We will study the politics of monetary, trade, international investment, energy, environmental, and foreign aid policies to answer these questions. The course will approach each topic by examining alternative theoretical approaches and evaluate these theories using historical and contemporary evidence. There will be an emphasis on applying concepts through the analysis of case studies.

**POLISCI 110X. America and the World Economy. 5 Units.**

Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade politics and policies; the effects of the globalization of business on future US prosperity. Enroll in PoliSci 110C for WIM credit.

Same as: INTNLREL 110C, POLISCI 110C

**POLISCI 110Y. War and Peace in American Foreign Policy. 5 Units.**

(Students not taking this course for WIM, register for 110Y.) The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period.

Same as: INTNLREL 110D, POLISCI 110D

**POLISCI 114D. Democracy, Development, and the Rule of Law. 5 Units.**

Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts.

Same as: INTNLREL 114D, IPS 230, POLISCI 314D

**POLISCI 114S. International Security in a Changing World. 5 Units.**

This class surveys the most pressing global security problems facing the world today and includes an award-winning two-day international crisis simulation. Past guest lecturers have included former Secretary of Defense William Perry, former U.S. Ambassador to Afghanistan Gen. Karl Eikenberry, and former Secretary of State Condoleezza Rice. Major topics covered: changing types of warfare, ethics and conduct of war, nuclear proliferation, insurgency and terrorism, Russia, and ISIS. No prior background in international relations is necessary.

Same as: HISTORY 104D, IPS 241

**POLISCI 115. Living at the Nuclear Brink: Yesterday and Today. 3 Units.**

The development, testing, and proliferation of nuclear weapons will be covered, from World War II through the Cold War to the present. Emphasis will be placed on understanding the evolving role of these weapons, both militarily and politically. It will also examine controversies and opposition movements to nuclear weapons and their use. The course will feature numerous guest speakers from Stanford and beyond. Students will be required to write in-depth analyses of specific nuclear weapons policy questions. Following this course, students are expected to have a deeper understanding of the profound dangers these weapons continue to present to the world today.

Same as: IPS 249, POLISCI 315

**POLISCI 115A. The Rise of Asia. 3-5 Units.**

We will examine the sources and implications of the rise of Asia in the international system. Topics will include military competition, international cooperation, regional integration, domestic politics, business and investment, legalization, environmental issues, demographics, social issues, and the role of technology.

Same as: POLISCI 315A

**POLISCI 116. The International History of Nuclear Weapons. 5 Units.**

An introduction to the history of nuclear weapons from World War II to the present. The focus is on politics, but the role of technology transfer & whether legal or illicit & in the development of nuclear weapons will be examined; so too will the theories about the military and political utility of nuclear weapons. We will look at the efforts to control and abolish nuclear weapons and at the international institutions created to reduce the danger of nuclear war.

Same as: HISTORY 103E

**POLISCI 118P. U.S. Relations in Iran. 5 Units.**

The evolution of relations between the U.S. and Iran. The years after WW II when the U.S. became more involved in Iran. Relations after the victory of the Islamic republic. The current state of affairs and the prospects for the future. Emphasis is on original documents of U.S. diplomacy (White House, State Department, and the U.S. Embassy in Iran). Research paper.

**POLISCI 120B. Campaigns, Voting, Media, and Elections. 4-5 Units.**

This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players – candidates, parties, journalists, and voters – in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process.

Same as: COMM 162, COMM 262

**POLISCI 120C. What's Wrong with American Government? An Institutional Approach. 5 Units.**

How politicians, once elected, work together to govern America. The roles of the President, Congress, and Courts in making and enforcing laws. Focus is on the impact of constitutional rules on the incentives of each branch, and on how they influence law. Fulfills the Writing in the Major Requirement for Political Science majors.

Same as: PUBLPOL 124

**POLISCI 120Z. What's Wrong with American Government? An Institutional Approach. 4 Units.**

How politicians, once elected, work together to govern America. The roles of the President, Congress, and Courts in making and enforcing laws. Focus is on the impact of constitutional rules on the incentives of each branch, and on how they influence law. Fulfills the Writing in the Major Requirement for Political Science majors.

**POLISCI 121. Political Power in American Cities. 5 Units.**

The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances.

Same as: AMSTUD 121Z, PUBLPOL 133, URBANST 111

**POLISCI 121L. Racial-Ethnic Politics in US. 5 Units.**

This course examines various issues surrounding the role of race and ethnicity in the American political system. Specifically, this course will evaluate the development of racial group solidarity and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. We will also examine the politics surrounding the Multiracial Movement and the development of racial identity and political attitudes in the 21st century. Stats 60 or Econ 1 is strongly recommended.

Same as: AMSTUD 121L, CSRE 121L, PUBLPOL 121L

**POLISCI 122. Introduction to American Law. 3-5 Units.**

For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general.

Same as: AMSTUD 179, PUBLPOL 302A

**POLISCI 123. Politics and Public Policy. 4-5 Units.**

(Formerly PS 2) American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. Undergraduate Public Policy students are required to enroll in this class for five units.

Same as: AMSTUD 123X, POLISCI 102, PUBLPOL 101, PUBLPOL 201

**POLISCI 124A. The American West. 5 Units.**

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.

Same as: AMSTUD 124A, ARTHIST 152, ENGLISH 124, HISTORY 151

**POLISCI 124L. The Psychology of Communication About Politics in America. 4-5 Units.**

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.

Same as: COMM 164, COMM 264, PSYCH 170

**POLISCI 124R. The Federal System: Judicial Politics and Constitutional Law. 5 Units.**

Does the constitution matter? And if so, how exactly does it shape our daily lives? In this course, we will examine the impact of structural features, such as the separation of powers and federalism. While these features often seem boring and unimportant, they are not. As we will see, arguments over structure were at the heart of the debates over slavery, the incarceration of the Japanese during WWII, the drug war and gay marriage. Prerequisites: 2 or equivalent, and sophomore standing. Fulfills Writing in the Major requirement for PoliSci majors.

**POLISCI 124S. Civil Liberties: Judicial Politics and Constitutional Law. 5 Units.**

The role and participation of courts, primarily the U.S. Supreme Court, in public policy making and the political system. Judicial activity in civil liberty areas (religious liberty, free expression, race and sex discrimination, political participation, and rights of persons accused of crime). Prerequisites: 2 or equivalent, and sophomore standing.

**POLISCI 125M. LATINO SOCIAL MOVEMENTS. 5 Units.**

Historically significant and contemporary political and social movements in Latino communities in the U.S., with a focus on events of the modern era such as the Spring 2006 marches and student walkouts, the 2009 Basta Dobbs campaign, the 2010 resistance to Arizona's SB1070, and ongoing efforts in 2014 and 2015 related to detention and deportation policies.

Same as: CHILATST 181

**POLISCI 125P. The First Amendment: Freedom of Speech and Press. 4-5 Units.**

Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. In addition to a final and midterm exam, students participate in a moot court on a hypothetical case. (Grad students register for COMM 251). Same as: COMM 151, COMM 251

**POLISCI 125S. Chicano/Latino Politics. 5 Units.**

The political position of Latinos and Latinas in the U.S.. Focus is on Mexican Americans, with attention to Cuban Americans, Puerto Ricans, and other groups. The history of each group in the American polity; their political circumstances with respect to the electoral process, the policy process, and government; the extent to which the demographic category Latino is meaningful; and group identity and solidarity among Americans of Latin American ancestry. Topics include immigration, education, affirmative action, language policy, and environmental justice. Same as: CHILATST 125S

**POLISCI 125V. The Voting Rights Act. 5 Units.**

Focus is on whether and how racial and ethnic minorities including African Americans, Asian Americans, and Latinos are able to organize and press their demands on the political system. Topics include the political behavior of minority citizens, the strength and effect of these groups at the polls, the theory and practice of group formation among minorities, the responsiveness of elected officials, and the constitutional obstacles and issues that shape these phenomena. Same as: AFRICAAM 125V, CSRE 125V

**POLISCI 126P. Constitutional Law. 3 Units.**

This course covers Supreme Court case law concerning governmental powers, equal protection, and certain fundamental rights. The course investigates the constitutional foundation for democratic participation in the United States, covering topics such as the Fourteenth Amendment's protections against discrimination on grounds of race, gender, and other classifications, as well as the individual rights to voting and intimate association, and an introduction to First Amendment rights of free speech and press. Students will be evaluated on class participation, a midterm moot court with both a written and oral component, and a take-home final exam. Lectures will be twice per week and a discussion section once per week. Same as: COMM 152, COMM 252

**POLISCI 127P. Economic Inequality and Political Dysfunction. 5 Units.**

This course will examine how two of the defining features of contemporary U.S. politics, economic inequality and political polarization, relate to each other and to Congressional gridlock. The reading list will focus on several books recently authored by preeminent political scientists on this important topic. The course will cover a range of topics, including the disparity in political representation of the preferences of the affluent over those of the poor, the origins of Congressional polarization, the influence of money in politics, budgetary politics, immigration policy, and electoral and institutional barriers to reform.

**POLISCI 128S. The Constitution: A Brief History. 5 Units.**

A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime. Same as: AMSTUD 157, HISTORY 157

**POLISCI 131A. Collective Action Problems: Ethics, Politics, & Culture. 3-4 Units.**

When acting on one's own, it is often easy to know what the morally right action is. But many moral problems arise from the fact that many individuals act together leading to dilemmas, in which what is individually rational is collectively irrational. For example, the collective result of our consumption decisions is to warm the planet. But individual decisions seem to have no effect on climate change. Such collective action situations give rise to moral questions: Are individuals required to take their contributions to wider systemic effects into account? Does it make a difference whether or not others are doing their share, for example with regard to fighting global poverty? In many cases, the best solution for collective action problems are institutions. But when these are deficient or non-existing, what should individuals do? Do they have a duty to assist in building institutions, and what would this duty imply in practical terms? Interdisciplinary perspective, reading authors from philosophy, politics, economics and sociology such as Elinor Ostrom, Peter Singer or Liam Murphy, relating to current questions such as global poverty and climate change. No background assumed; no mathematical work required. Same as: ETHICSOC 180M, PHIL 73, PUBLPOL 304A

**POLISCI 131L. Modern Political Thought: Machiavelli to Marx and Mill. 5 Units.**

This course offers an introduction to the history of Western political thought from the late fifteenth through the nineteenth centuries. We will consider the development of ideas like individual rights, government by consent, and the protection of private property. We will also explore the ways in which these ideas continue to animate contemporary political debates. Thinkers covered will include: Niccolò Machiavelli, Thomas Hobbes, John Locke, Jean-Jacques Rousseau, Edmund Burke, John Stuart Mill, and Karl Marx. Same as: ETHICSOC 131S

**POLISCI 132C. Family, Friends, and Groups: The Ethics of Association. 4 Units.**

The practice of associating with others is a fundamental part of human existence. We cultivate friendships, we grow up in families, we work for nonprofit associations or businesses, we join social movements and sport clubs, and we participate in political associations with our fellow citizens. This seminar explores the ethical dimensions of association. What grounds a right to freedom of association? Do we have, beyond a right, also a duty to participate in associational life? Do we have special obligations towards our friends, family members, or fellow-citizens that we do not have toward strangers? To what extent should the internal life of private associations, such as families or churches, be regulated by the state? Should the state support, through tax-exemptions and subsidies, the nonprofit associations of civil society? Can a state exclude non-citizens, such as immigrants, in the same way in which a private club excludes non-members? These questions have wide-ranging implications for contemporary political and legal debates. Same as: ETHICSOC 183M

**POLISCI 133. Ethics and Politics of Public Service. 5 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. [This class is capped but there are some spaces available with permission of instructor. If the class is full and you would like to be considered for these extra spaces, please email sburbank@stanford.edu with your name, grade level, and a paragraph explaining why you want to take the class.]. Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, PUBLPOL 103D, URBANST 122

**POLISCI 133D. The Paradigm Shift. 1 Unit.**

Examination of the idea of 'paradigm shift' by considering paradigm shifts in different academic fields of inquiry. Serial accumulation of guest lectures by distinguished faculty representing the University's many and varied departments, each asking and answering the question 'What is the most important paradigm shift in the history of my field? Are paradigm shifts revolution or evolution? Do they move us closer to truth? How frequently do they occur? Can humans plan for, cause, or resist them? Same as: MUSIC 150D

**POLISCI 134L. Introduction to Environmental Ethics. 4-5 Units.**

How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism.

Same as: ETHICSOC 178M, ETHICSOC 278M, PHIL 178M, PHIL 278M

**POLISCI 134P. Contemporary Moral Problems. 4-5 Units.**

This course addresses moral issues that play a major role in contemporary public discourse. The course aims to encourage students to consider moral problems in a reflective, systematic manner, and to equip students with skills that will enable them to do so. Questions to be addressed include: Do rich countries have an obligation to accept refugees from other parts of the world? Do such obligations conflict with the right of individuals to protect their culture? Is there anything principally wrong in the use of drones for purposes of warfare? Do we have obligations to the environment, and if so why? What is racism and what makes it wrong? And what are feminist ideals? Same as: ETHICSOC 185M, PHIL 72

**POLISCI 135D. The Ethics of Democratic Citizenship. 5 Units.**

We usually think about democratic citizenship in terms of rights and opportunities, but are these benefits of democracy accompanied by special obligations? Do citizens of a democracy have an obligation to take an interest in politics and to actively influence political decision making? How should citizens respond when a democracy's laws become especially burdensome? Do citizens of a democracy have a special obligation to obey the law? In this course, we will read classical and contemporary political philosophy including Plato's *Crito* and King's "Letter from a Birmingham Jail" to explore how political thinkers have understood and argued for the ethics of citizenship. Students in this course will draw on these materials to construct their own arguments, and to identify and assess implicit appeals to the ethics of citizenship in popular culture and contemporary public discourse, from The Simpsons to President Obama's speeches.

Same as: ETHICSOC 135R

**POLISCI 135P. Moral Limits of the Market. 4 Units.**

Morally controversial uses of markets and market reasoning in areas such as organ sales, procreation, education, and child labor. Would a market for organ donation make saving lives more efficient; if it did, would it thereby be justified? Should a nation be permitted to buy the right to pollute? Readings include Walzer, Arrow, Rawls, Sen, Frey, Titmuss, and empirical cases.

Same as: ETHICSOC 174A, PHIL 174A, PHIL 274A

**POLISCI 136R. Introduction to Global Justice. 4 Units.**

This course provides an overview of core ethical problems in international politics, with special emphasis on the question of what demands justice imposes on institutions and agents acting in a global context. The course is divided into three sections. The first investigates the content of global justice, and comprises of readings from contemporary political theorists and philosophers who write within the liberal contractualist, utilitarian, cosmopolitan, and nationalist traditions. The second part of the course looks at the obligations which global justice generates in relation to five issues of international concern: global poverty, climate change, immigration, warfare, and well-being of women. The final section of the course asks whether a democratic international order is necessary for global justice to be realized.

Same as: ETHICSOC 136R, INTNLREL 136R, PHIL 76, POLISCI 336

**POLISCI 136S. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors. Same as: ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 103, POLISCI 336S, PUBLPOL 103C, PUBLPOL 307

**POLISCI 137A. Political Philosophy: The Social Contract Tradition. 4 Units.**

(Graduate students register for 276.) Why and under what conditions do human beings need political institutions? What makes them legitimate or illegitimate? What is the nature, source, and extent of the obligation to obey the legitimate ones, and how should people alter or overthrow the others? Study of the answers given to such questions by major political theorists of the early modern period: Hobbes, Locke, Rousseau, and Kant. Same as: PHIL 176, PHIL 276, POLISCI 337A

**POLISCI 140L. China in World Politics. 5 Units.**

The implications of the rise of China in contemporary world politics and for American foreign policy, including issues such as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions.

Same as: POLISCI 340L

**POLISCI 141S. Politics of India. 5 Units.**

This course provides an overview of the political institutions, processes, and issues in post-independence India. The purpose is not merely to familiarize students to the politics of India, but also to facilitate a good understanding of, and stimulate keen interest in, the subject. The course hopes to build a strong foundation for acquiring a deeper understanding of Indian politics. The subject-matter will be approached from a comparative perspective, and students are encouraged to think about the topics covered with a view on cases beyond India.

**POLISCI 142B. British Politics. 5 Units.**

The impact on the world's oldest democracy of major changes in policies, politics, and the institution of government made over the last two decades by Margaret Thatcher and Tony Blair.

**POLISCI 143S. Comparative Corruption. 4-5 Units.**

Causes, effects, and solutions to various forms of corruption in business and politics in both developing regions (e.g. Asia, E. Europe) and developed ones (the US and the EU).

Same as: SOC 113

**POLISCI 144A. Revolution and Reconciliation Through Film. 5 Units.**

The course uses the Spanish political experience in the 20th Century, both in the Spanish civil war and in its transition to democracy in the late 1970s, as a starting point, to focus on the human and social effects of the numerous political upheavals in the transitions from democracy to authoritarianism and back again. Using films about revolutionary change in several different societies, we will treat these as the "texts" to motivate our thinking, and examine both the process of social breakdown during periods of civil strife and the role of reconciliation in the reconstruction of societies. We will focus on multiple elements of social consequences in political transitions, including gender, children, non-violent resistance, racism, social class, and the role of the United States. Course requirements will include weekly film screening, discussion, and two critical response papers written across the quarter.

**POLISCI 146A. African Politics. 4-5 Units.**

Africa has lagged the rest of the developing world in terms of economic development, the establishment of social order, and the consolidation of democracy. This course seeks to identify the historical and political sources accounting for this lag, and to provide extensive case study and statistical material to understand what sustains it, and how it might be overcome.

Same as: AFRICAAM 146A

**POLISCI 147. Comparative Democratic Development. 5 Units.**

Social, cultural, political, economic, and international factors affecting the development and consolidation of democracy in historical and comparative perspective. Individual country experiences with democracy, democratization, and regime performance. Emphasis is on the third wave of democratization over the past three decades and contemporary possibilities for democratic change. (Diamond).

Same as: SOC 112

**POLISCI 147P. The Politics of Inequality. 5 Units.**

This course is about the distribution of power in contemporary democratic societies, and especially in the US: who governs? Is there a "power elite?" Or, does public policy making accommodate a wide range of interests? What is the relationship between income and power? What are the political consequences of increasing income inequality? What are the implications of racial and ethnic inequities for the quality of democratic representation? Which policies increase political inequities? What are effective remedies for unequal influence? Finally, which institutions move democratic practice furthest towards full democratic equality? This course will address these questions, focusing first on the local distribution of power, and then in state and national levels of government, in a broadly comparative context. Students will have the opportunity to work with income and labor force surveys in a mid-term assignment, and in a final paper, to examine different dimensions of American inequality and their implications for the quality of American democracy.

**POLISCI 148. Chinese Politics: The Transformation and the Era of Reform. 3-5 Units.**

Overview of the reforms in China since 1978 that have made its economy one of the fastest growing in the world yet it still has the Chinese Communist Party at the helm wielding one party rule. Key questions addressed include the following: What has been the process and challenges of reform that have reshaped China's economic landscape? What are the political consequences of these dramatic economic changes? Why has the CCP remained strong while other communist regimes have failed? Markets have spread but what is the role of the state? What are the opportunities for political participation and prospects for political change? Materials will include readings, lectures, and selected films. This course has no prerequisites. (Graduate students register for 348.) This fulfills the Writing in the Major requirement for PoliSci majors.

Same as: POLISCI 348

**POLISCI 149S. Islam, Iran, and the West. 5 Units.**

Changes in relative power and vitality of each side. The relationship in the Middle Ages revolved around power and domination, and since the Renaissance around modernity. Focus is on Muslims of the Middle East.

**POLISCI 149T. Middle Eastern Politics. 5 Units.**

Topics in contemporary Middle Eastern politics including institutional sources of underdevelopment, political Islam, electoral authoritarianism, and the political economy of oil.

**POLISCI 150A. Data Science for Politics. 5 Units.**

Data science is quickly changing the way we understand and engage in the political process. In this course we will develop fundamental techniques of data science and apply them to large political datasets on elections, campaign finance, lobbying, and more. The objective is to give students the skills to carry out cutting edge quantitative political studies in both academia and the private sector. Students with technical backgrounds looking to study politics quantitatively are encouraged to enroll.

Same as: POLISCI 355A

**POLISCI 150B. Machine Learning for Social Scientists. 5 Units.**

Machine learning—the use of algorithms to classify, predict, sort, learn and discover from data—has exploded in use across academic fields, industry, government, and non-profit. This course provides an introduction to machine learning for social scientists. We will introduce state of the art machine learning tools, show how to use those tools in the programming language R, and demonstrate why a social science focus is essential to effectively apply machine learning techniques. Applications of the methods will include forecasting social phenomena, the analysis of social media data, and the automatic analysis of text data. Political Science 150A or an equivalent is required. (Prerequisite 150A/355A).

Same as: POLISCI 355B

**POLISCI 150C. Causal Inference for Social Science. 5 Units.**

Causal inference methods have revolutionized the way we use data, statistics, and research design to move from correlation to causation and rigorously learn about the impact of some potential cause (e.g., a new policy or intervention) on some outcome (e.g., election results, levels of violence, poverty). This course provides an introduction that teaches students the toolkit of modern causal inference methods as they are now widely used across academic fields, government, industry, and non-profits. Topics include experiments, matching, regression, sensitivity analysis, difference-in-differences, panel methods, instrumental variable estimation, and regression discontinuity designs. We will illustrate and apply the methods with examples drawn from various fields including policy evaluation, political science, public health, economics, business, and sociology. Political Science 150A and 150B or an equivalent is required.

Same as: POLISCI 355C

**POLISCI 152. Introduction to Game Theoretic Methods in Political Science. 3-5 Units.**

Concepts and tools of non-cooperative game theory developed using political science questions and applications. Formal treatment of Hobbes' theory of the state and major criticisms of it; examples from international politics. Primarily for graduate students; undergraduates admitted with consent of instructor.

Same as: POLISCI 352

**POLISCI 153. Strategy: An Introduction to Game Theory. 5 Units.**

This course provides an introduction to basic concepts in game theory and strategic reasoning. We discuss ideas such as commitment, credibility, adverse selection, signaling and reputation. Concepts are developed through games played in class, and applied to politics, economics, business and everyday life.

Same as: POLISCI 354

**POLISCI 155. Political Data Science. 5 Units.**

Introduction to methods of research design and data analysis used in quantitative political research. Topics covered include hypothesis testing, linear regression, experimental and observational approaches to causal inference, effective data visualization, and working with big data. These topics will be introduced using data sets from American politics, international relations, and comparative politics. The course begins with an intensive introduction to the R programming language used throughout the course. Satisfies quantitative methods requirement for the Political Science Research Honors Track. Prerequisites: Stat 60 or instructor consent.

Same as: PUBLPOL 157

**POLISCI 203. U.S. Human Rights NGOs and International Human Rights. 1 Unit.**

(Same as LAW 782) Many US human rights non-government organizations, including the US philanthropic sector, work on international human rights. The US government also engages with the private sector in "partnerships" that twins US foreign aid human rights action with corporate expertise. This weekly series will feature speakers who lead these human rights NGOs, philanthropic enterprises, and corporate partnerships, and also policy experts and scholars, to explore the pro's and con's of this scenario.

Same as: ETHICSOC 15R, IPS 271A, MED 225

**POLISCI 209. Curricular Practical Training. 1 Unit.**

Qualified Political Science students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. The student is responsible for arranging their own internship/employment and gaining faculty sponsorship. Prior to enrolling students must complete a petition due no later than May 15th. An offer letter will need to be submitted along with the petition. At the completion of the summer quarter, a final report must be submitted to the faculty sponsor documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. May be repeated for credit but the course will not count toward the Political Science major requirements.

**POLISCI 210G. Global Supply Chains and the Future of Global Governance. 5 Units.**

What explains a government's decision to block a trade deal, prevent foreign investors from gaining control of a local factory, or ban the export of rare earth minerals? This course develops theory and evidence that these decisions are political. Applications include the trade in environmental goods, global supply chains, and intellectual property protections. We will discuss these topics in the context of the legal disputes at the World Trade Organization and recent debates about the rise of China and the development of Mega-regional agreements across the Pacific and the Atlantic.

**POLISCI 211. Political Economy of East Asia. 3-5 Units.**

(Formerly 117.) Comparative and international political economy of E. and S.E. Asia. Industrial development and the Asian miracle, economic integration, regional cooperation, the Asian financial crisis, and contemporary challenges.

Same as: INTNLREL 159

**POLISCI 211P. International Security in South Asia: Pakistan, India and the United States.. 5 Units.**

This course critically examines the dynamics of continuity and change in American interactions with nuclear armed adversaries, India and Pakistan. It also aims to sensitize the students to Indian and Pakistani perspectives on regional security and the mainsprings of their interactions with United States. There will be an in-depth exploration of the impact of the Indo-US strategic partnership for evolving balance of power in South Asia.

**POLISCI 212C. Civil War and International Politics: Syria in Context. 5 Units.**

The Syrian civil war is both a humanitarian disaster and a focal point for a set of interlocking regional and international political struggles. This course uses the Syrian case as an entry for exploring broader questions, such as why do civil wars begin, how do they end, and what are the international politics of civil war. Please enroll in 212C for WIM credit.

Same as: POLISCI 212X

**POLISCI 212X. Civil War and International Politics: Syria in Context. 5 Units.**

The Syrian civil war is both a humanitarian disaster and a focal point for a set of interlocking regional and international political struggles. This course uses the Syrian case as an entry for exploring broader questions, such as why do civil wars begin, how do they end, and what are the international politics of civil war. Please enroll in 212C for WIM credit.

Same as: POLISCI 212C

**POLISCI 213E. Introduction to European Studies. 5 Units.**

This course offers an introduction to major topics in the study of historical and contemporary Europe. We focus on European politics, economics and culture. First, we study what makes Europe special, and how its distinct identity has been influenced by its history. Next, we analyze Europe's politics. We study parliamentary government and proportional representation electoral systems, and how they affect policy. Subsequently, we examine the challenges the European economy faces. We further study the European Union and transatlantic relations.

Same as: INTNLREL 122

**POLISCI 213S. A Post American Century? American Foreign Policy in a Uni-Multi-unipolar World. 5 Units.**

This seminar examines recent policy from Bush to Obama in the context of two classic traditions: Wilsonianism vs. Realism. What is the role of the international system, what is the weight of domestic forces like ideology, history and identity? Prerequisite: junior or senior standing.

**POLISCI 214R. Challenges and Dilemmas in American Foreign Policy. 5 Units.**

This seminar will examine the complexities and trade offs involved in foreign policy decision-making at the end of the twentieth century and the dawn of the post-9/11 era. Students will analyze dilemmas confronting policymakers through case studies including post-conflict reconstruction and state-building, nuclear proliferation, democratization and peace negotiation. The seminar will conclude with a 48-hour crisis simulation. For advanced undergraduates and graduate students. Application for enrollment required. Applications will be available for pick up in Political Science Department (Encina West 100) starting late-October.

Same as: POLISCI 314R

**POLISCI 215. Explaining Ethnic Violence. 5 Units.**

What is ethnic violence and why does it occur? Should elite machinations, the psychology of crowds, or historical hatreds be blamed? Case studies and theoretical work on the sources and nature of ethnic violence. Counts as Writing in the Major for PoliSci majors.

**POLISCI 215D. Special Topics: Dilemmas of Democracy and Security in Israel and the Middle East. 5 Units.**

The Middle East is known to be a volatile region, characterized by political violence, armed conflicts, and social instabilities. This volatility is of relevance for many countries including the US with its invested interests in the region and Israel that exists at the heart of the region, and along with its conflict with the Palestinians is considered to be one of the root causes of this volatility. Moreover, the volatility brings into encounter two kinds of collective goods: democracy and security. Their encounter in a conflictual and unstable environment raises a host of questions and dilemmas, both moral and practical: should we balance democracy and security and if so how? Can the two be accommodated at all? Does democracy is better or worse in addressing security problems? Does democracy and security constitute each other conceptually? Do democratic states tend to cooperate with each other when confronting security issues? And what about democratization: how good a ca use is it as a foreign policy? How good a cause is it in justifying war and/or not ending one? From its establishment the State of Israel found itself torn by these and others related questions and the recent decades saw the US drawn by these dilemmas as well (think of the Bybee Memo and the Patriot acts). In the course we will introduce these dilemmas, analyze them and examine different normative and policy answers that were discussed in academia and in the policy world.

Same as: JEWISHST 275D

**POLISCI 215F. Nuclear Weapons and International Politics. 5 Units.**

Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, refrain from doing so? What are the strategic consequences of new states deploying nuclear weapons? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? We will study the political science and history literature on these topics. Research paper required.

Same as: POLISCI 315F

**POLISCI 216. State Building. 5 Units.**

How and when can external actors (others states, aid agencies, NGOs?) promote institutional change in weak and badly governed states?.

**POLISCI 216E. International History and International Relations Theory. 4-5 Units.**

The aims of the course are: to gain some understanding of the history and development of the international states system; to explore the different ways in which historians and theorists have studied the system; to analyze aspects of the system that may now be changing; to identify the ways in which international history and international relations theory can learn from each other. The course will focus on major wars and the efforts to rebuild order after such wars.

Same as: HISTORY 202, HISTORY 306E, POLISCI 316

**POLISCI 216G. International Organizations and Institutions. 5 Units.**

What is the appropriate balance between government regulation and market freedom? Introduction to important theoretical and policy debates in international political economy. Topics include: political economy of trade; exchange rate policy; the liberalization of trade and finance; the global move to openness; development, debt and aid; and the role of international organizations. Discussion of application of academic insights to key policy debates, including whether governments should offset the welfare costs of globalization, whether the IMF and World Bank should be reformed to meet the needs of the 21st century, and how the international community should respond to financial crises. Students will research, write and orally present policy briefs on specific policy questions.

**POLISCI 217A. American Foreign Policy: Interests, Values, and Process. 5 Units.**

This seminar will examine the tension in American foreign policy between pursuing U.S. security and economic interests and promoting American values abroad. The course will retrace the theoretical and ideological debates about values versus interests, with a particular focus on realism versus liberalism. The course will examine the evolution of these debates over time, starting with the French revolution, but with special attention given to the Cold War, American foreign policy after September 11th, and the Obama administration. The course also will examine how these contending theories and ideologies are mediated through the U.S. bureaucracy that shapes the making of foreign policy. \*\* NOTE: Initial registration for this course does not guarantee enrollment. All interested students should attend the first class. Final enrollment criteria will be detailed on the first day of class. There will be 10 seats for graduate students and 10 seats for undergraduate students.

Same as: GLOBAL 220, IPS 242

**POLISCI 217M. Special Topics: International Democratization. 5 Units.**

Analyzing the international aspects of democratization involves understanding at least the following: (1) what is democracy (2) what domestic-level processes increase or decrease the level of democracy (3) what kind of influences from the outside world work, and do not work, in furthering democracy, and in what ways. This course spans all subfields of political science, and spills over into law, economics, and sociology. A complicating factor is the geographical expanse of democratic institutions and efforts to promote them. Eastern Europe, Russia, the Middle East, Sub-Saharan Africa, post-civil war El Salvador and Cambodia, are only some of the regions and countries that have been impacted. Their vastly different backgrounds challenge anyone attempting the puzzle. A further complication is the variety of ways in which the outside world may affect the scope and quality of democracy. These ways include but are not limited to: pressures exercised by regional economic institutions and alliances, the power of ideas and socialization, transfers of wealth, demands for trade liberalization, the training of civic activists, reports issued by foreign election observers.

Same as: POLISCI 317M

**POLISCI 218. Special Topics: Democratic Peace-A Political Biography. 3-5 Units.**

The theories of democratic peace are among the most salient theories in the discipline of International Relations. The academic discussions surrounding their validity have been quite fierce as they concern also the inter-paradigmatic debates so prevalent in IR. No less interestingly, though, is the theories' migration outside of the halls of academia into the political arena in countries such as the United States and Israel. Noteworthy is the impact those theories had on public discussions and on the shaping of foreign policies of the US following the Cold War. This phenomenon raises important meta-theoretical questions about the nature of theory, its powers, and the responsibilities of academia to society. The course will follow the political biography of the theories of democratic peace: their academic origins, migration into the public and political spheres, the politicization process they underwent, the political and rhetorical uses and misuses of the theories (including the Iraq War), and the outcomes of this charged meeting of academia and politics. No less importantly, the course will discuss the responsibility theorists bear for the real-world ramifications of their theories, and the way they should act to discharge their responsibilities.

Same as: POLISCI 318

**POLISCI 218J. Japanese Politics and International Relations. 5 Units.**

The domestic politics, political economy, and international relations of contemporary Japan. The role of political parties, the bureaucracy, and private actors. Economic development and challenges. Relations with the United States and East Asia.

Same as: POLISCI 318J

**POLISCI 218S. Political Economy of International Trade and Investment. 5 Units.**

How domestic and international politics influence the economic relations between countries. Why do governments promote or oppose globalization? Why do countries cooperate economically in some situations but not others? Why do countries adopt bad economic policies? Focus on the politics of international trade and investment. Course approaches each topic by examining alternative theoretical approaches and evaluate these theories using historical and contemporary evidence from many geographical regions around the world. Prerequisites: ECON 1A, ECON 1B, and a statistics course. Same as: INTNLREL 118S

**POLISCI 218T. Terrorism. 5 Units.**

The course is primarily concerned with variation in terrorist group behavior and therefore concentrates on issues on the organizational level of analysis. We address questions such as: Why and how do terrorist groups emerge? Who joins terrorist groups? Which organizational challenges do terrorists face and how do they solve them? Why are some groups more lethal than others? Why has suicide terrorism increased in the 2000s? How and why do groups decline? Topics such as counterterrorism, macrostructural determinants of terrorism, or the effects of terrorism will be treated only peripherally.

**POLISCI 219. Directed Reading and Research in International Relations. 1-10 Unit.**

May be repeated for credit. Requires a petition that can be found on our Political Science website.

**POLISCI 220R. The Presidency. 5 Units.**

This course provides students with a comprehensive perspective on the American presidency and covers a range of topics: elections, policy making, control of the bureaucracy, unilateral action, war-making, and much more. But throughout, the goal is to understand why presidents behave as they do, and why the presidency as an institution has developed as it has, with special attention to the dynamics of the American political system and how they condition incentives, opportunities, and power.

Same as: POLISCI 320R

**POLISCI 223. The Politics of Gender in the United States. 5 Units.**

Gender is one of the most recognizable and important identities in daily life. Yet it has been paid scant attention by political scientists in terms of its role on access to political power, opinion formation, group identity politics, election outcomes, and political representation. This class provides a survey of the literature on gender in American politics. We begin with the interdisciplinary research on the social construction of gender to understand what gender is and is not. Throughout the course we will use these theories to analyze and critique the approaches of quantitative research on gender politics.

Same as: FEMGEN 223X

**POLISCI 223B. Money, Power, and Politics in the New Gilded Age. 5 Units.**

During the past two generations, democracy has coincided with massive increases in economic inequality in the U.S. and many other advanced democracies. The course will explore normative and practical issues concerning democracy and equality and examine why democratic institutions have failed to counteract rising inequality. Topics will include the influence of money in politics, disparity in political representation of the preferences of the affluent over those of the poor, the implications of political gridlock, and electoral and institutional barriers to reform.

**POLISCI 223F. Ethics and Politics. 5 Units.**

A discussion of critical ethical issues faced by American and other national leaders. Case studies of 20th- and 21st-century decisions, including those involved with violence (e.g., the use of drone missiles or torture to extract information from enemies), whistle-blowing in government (e.g., decisions to expose what was known about 9/11 in advance), disobedience of those in authority (e.g., Daniel Ellsberg's release of the Pentagon Papers), policies on distributing scarce goods in society (e.g. rationing health care), policies involving justice and equal treatment (e.g. affirmative action or gay marriage), policies regarding life and death (e.g., abortion and euthanasia laws), and others. Students will debate some of the key issues, relying on ethical principles that will be discussed each week, and develop their own case studies.

Same as: ETHICSOC 202R

**POLISCI 223R. Pivotal Moments in American Institutions and Public Law, 1781-Present. 5 Units.**

American lawyers and policymakers work today in a system of institutions that are strikingly unique in comparative and historical terms. With some exceptions, that system is characterized by relatively stable political and legal institutions, low levels of explicit corruption, high bureaucratic capacity in public organizations, and relatively open, impersonal access to political, policymaking, and legal institutions. Although these characteristics are now too often taken for granted, the process through which they emerged remains remarkably opaque. In the 1780s under the Articles of Confederation, the United States was a poor developing country on the fringe of the Atlantic community with limited capacity and a striking inability to provide basic public goods, such as security. One hundred years later, it well along the way to becoming the richest nation in the world. How did this transformation occur? Drawing on judicial opinions, legal scholarship, political science, economics, and history, this course explores how institutions evolved to create such a system. It traces the problem of institutional development through several critical periods in the history of American public law, including the emergence of the Constitution, the events leading up to and following the Civil War, the Progressive era, World War II, 1964-75, and the emergence of the modern administrative state. Although the primary focus is on the American experience, we place these developments in comparative context as well.

**POLISCI 224C. Heretics to Headscarves. 5 Units.**

Broad survey of religious discrimination and persecution in the Euro-American tradition, and the rise of tolerationist ideas and practices, from Augustine's rationale for punishing dissenters to the current European debates over the regulation of Islam. Topics include the Inquisition; struggles over toleration in Reformation Europe; the impact of Locke, Bayle, and Spinoza; Spanish practice in the Americas; and the American constitutional experiment in free exercise.

Same as: HISTORY 102C

**POLISCI 225C. Fixing US Politics: Political Reform in Principle and Practice. 5 Units.**

Americans have been trying to perfect their system of government since its founding. Despite some notable achievements, there is a pervasive sense of frustration with political reform. This course will examine the goals and political consequences of American political regulation. Topics will vary by year to some degree but examples include campaign finance, lobbying, term limits, conflict of interest regulation, direct democracy, citizen commissions and assemblies, vote administration problems, transparency, and open meeting laws.

**POLISCI 226. Race and Racism in American Politics. 5 Units.**

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

Same as: AMSTUD 226, CSRE 226, POLISCI 326

**POLISCI 226T. The Politics of Education. 5 Units.**

America's public schools are government agencies, and virtually everything about them is subject to political authority—and thus to decision through the political process. This seminar is an effort to understand the politics of education and its impacts on the nation's schools. Our focus is on the modern era of reform, with special attention to the most prominent efforts to bring about fundamental change through accountability (including No Child Left Behind), school choice (charter schools, vouchers), pay for performance, and more and more to the politics of blocking that has made genuine reform so difficult to achieve.

Same as: POLISCI 326T

**POLISCI 226U. Approaches to American Legal History. 5 Units.**

Legal history, once primarily devoted to exploring legal doctrines and key judicial opinions and thus of interest mainly to legal scholars and lawyers, now resembles historical writing more generally; the study of legal ideas and practices is increasingly integrated with social, intellectual, cultural, and political history. Recent writings in American legal history; how the field reflects developments in historical writing; and how the use of legal materials affects understanding of American history. Same as: HISTORY 253D

**POLISCI 227. U.S. Immigration Politics. 5 Units.**

This course presents an overview of immigration in the United States. We will focus on current policies, U.S. immigration history, individual immigrant groups, economic causes and consequences of immigration, attitudes toward immigrants, U.S. national identity, immigrant political behavior, undocumented immigration, immigrants and public education, language barriers and policies, and immigration reform. Although the course is crafted with a focus on the U.S. as a whole, we will also spend a little time at the end of the quarter narrowing in on the California context, before taking a broader look at immigration in Western Europe to gain a comparative perspective on immigration. Finally, while we will discuss immigrant groups beyond Latinos, the course will disproportionately focus on Latino immigrants, as this is by far the largest immigrant group in the United States.

**POLISCI 228. The Democratic Faith: An Empirical Analysis of Citizenship. 5 Units.**

Political scientists have now accumulated evidence over more than fifty years documenting the limits of ordinary citizens' and their minimal levels of information about public affairs; their minimal capacity for thinking coherently about political choices; their limited understanding of and commitment to core democratic values; their susceptibility to racism and intolerance of many forms. These findings, taken all in all, seem to add up to a conclusion that citizens are incapable of discharging the duties of democratic citizenship. It seems, these results suggest, that the best contribution that they can make to a democratic politics is to stay out of the way. The aim of this course to examine a paradox: how can it simultaneously be true that findings of citizen incompetence and intolerance are valid and that citizens nonetheless can be capable of discharging the duties of democratic citizenship. In particular, this course will concentrate on three main topics: racism in contemporary politics; commitment to civil liberties and civil rights, and multiculturalism. The course will require intensive reading and analysis of quantitative research on public opinion surveys and experiments.

**POLISCI 229. Directed Reading and Research in American Politics. 1-10 Unit.**

May be repeated for credit. Requires a petition that can be found on our Political Science website.

**POLISCI 231. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests. 3-5 Units.**

Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era.

Same as: CLASSICS 382, POLISCI 331

**POLISCI 231D. Science, Power and Democracy. 5 Units.**

This course investigates the relationship between science and democracy, and between knowledge and power, in the modern world. Topics covered include the epistemic properties of democratic institutions; the question of expertise in democratic politics; the role of values in science and public policy; the relationship between democracy and technology; and the relationship between democracy and the social sciences. We also analyze a number of concrete issues at the intersection of politics and science, including climate change and biomedical research. The course is interdisciplinary in method and content, with readings ranging across political theory, philosophy, history, and the social sciences.

Same as: ETHICSOC 206R

**POLISCI 231T. Democratic Accountability and Transparency. 5 Units.**

This course critically examines two related democratic values, accountability and transparency. We begin with historical perspectives on accountability, tracing its centrality to democratic politics to ancient Athens and early modern debates about the nature and function of political representation. But the bulk of the course deals with contemporary issues and problems: how should we conceive of accountability, both conceptually and normatively, and what is its relationship to other values such as transparency and publicity? What forms of accountability are appropriate for modern democratic politics? Is accountability only for elites, or should ordinary citizens be accountable to one another? In what contexts are transparency and publicity valuable, and when might we instead find their operation counter-productive and troubling? Readings draw from canonical texts as well as contemporary political theory, philosophy, and political science. Same as: ETHICSOC 207R

**POLISCI 231Z. Topics in Democratic Theory. 5 Units.**

Democratic rule is rule of the people. But what does that mean? This course explores democracy's roots in ancient Athens to its modern incarnation. The course aims to familiarize students with the various strands of democratic theory as well as the way democratic theory responds to hot political issues such as immigration and freedom of speech. The goal of the course is to equip students to think critically about democracy in the modern world and the different interpretation democratic rule can have. The questions we will investigate include: What does democracy require? What is the relationship between democracy and human rights or social justice? Can democracy justify border control? What restrictions, if any, does democracy place on hate speech? What is the role of courts in a democracy? The course provides tools to answer these questions by surveying different approaches to democracy in contemporary literature, as well surveying the history of democratic theory from ancient Athenian democracy to the modern age, with a look to the future of democracy in a globalized era.

**POLISCI 232T. The Dialogue of Democracy. 4-5 Units.**

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized.

Same as: AMSTUD 137, COMM 137W, COMM 237, POLISCI 332T

**POLISCI 233F. Science, technology and society and the humanities in the face of the looming disaster. 2-5 Units.**

How STS and the Humanities can together help think out the looming catastrophes that put the future of humankind in jeopardy.

Same as: FRENCH 228, ITALIAN 228

**POLISCI 234P. Deliberative Democracy and its Critics. 3-5 Units.**

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.

Same as: AMSTUD 135, COMM 135, COMM 235, COMM 335, POLISCI 334P

**POLISCI 235J. Creative Political Thinking: From Machiavelli to Madison. 4-5 Units.**

How can we account for creativity and innovation in political thinking? Are these qualities simply a product of political expediency and rhetorical urgency, or do they also depend on qualities of mind and historical contingencies that have to be studied individually? This class will explore these questions with three noteworthy cases: Niccolò Machiavelli, John Locke, and James Madison. Extensive reading in both primary writings and secondary sources.

Same as: HISTORY 205G, HISTORY 305G, POLISCI 335J

**POLISCI 236. Theories of Civil Society, Philanthropy, and the Nonprofit Sector. 5 Units.**

What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? The historical development and modern structure of civil society emphasizing philanthropy and nonprofit sector. Readings in political philosophy, political sociology, and public policy. WIM for PoliSci students who enroll in PoliSci 236S.

Same as: ETHICSOC 232T, POLISCI 236S

**POLISCI 236S. Theories of Civil Society, Philanthropy, and the Nonprofit Sector. 5 Units.**

What is the basis of private action for the public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in a modern democracy? How do nongovernmental organizations operate domestically and globally? The historical development and modern structure of civil society emphasizing philanthropy and nonprofit sector. Readings in political philosophy, political sociology, and public policy. WIM for PoliSci students who enroll in PoliSci 236S.

Same as: ETHICSOC 232T, POLISCI 236

**POLISCI 237M. Politics and Evil. 5 Units.**

In the aftermath of the Second World War, the political theorist Hannah Arendt wrote that the problem of evil will be the fundamental question of postwar intellectual life in Europe. This question remains fundamental today. The acts to which the word "evil" might apply—genocide, terrorism, torture, human trafficking, etc.—persist. The rhetoric of evil also remains central to American political discourse, both as a means of condemning such acts and of justifying preventive and punitive measures intended to combat them. In this advanced undergraduate seminar, we will examine the intersection of politics and evil by considering works by philosophers and political theorists, with occasional forays into film and media. The thinkers covered will include: Hannah Arendt, Immanuel Kant, Niccolò Machiavelli, Friedrich Nietzsche, and Michael Walzer.

Same as: ETHICSOC 237M

**POLISCI 237S. Civil Society and Democracy in Comparative Perspective. 5 Units.**

A cross-national approach to the study of civil societies and their role in democracy. The concept of civil society—historical, normative, and empirical. Is civil society a universal or culturally relative concept? Does civil society provide a supportive platform for democracy or defend a protected realm of private action against the state? How are the norms of individual rights, the common good, and tolerance balanced in diverse civil societies? Results of theoretical exploration applied to student-conducted empirical research projects on civil societies in eight countries. Summary comparative discussions. Prerequisite: a course on civil society or political theory. Students will conduct original research in teams of two on the selected nations. Enrollment limited to 18. Enrollment preference given to students who have taken PoliSci 236S/EthicSoc 232T.

Same as: ETHICSOC 237

**POLISCI 238. Political Disagreement. 5 Units.**

Disagreement is a permanent and ubiquitous feature of political life. Furthermore, political disagreement can stem from a wide range of sources. Perhaps most importantly, democratic citizens disagree at the level of values: they disagree about the proper form of the good life as well as the human interests that political laws and institutions ought to serve. This course will focus primary attention on the implications of such value-based disagreement for how we should think about political justice.

**POLISCI 238C. Governing the 21st Century World. 5 Units.**

How is our world governed, and by whom? How are decisions made on the most important issues of our time, including climate change, global inequality, and protection of human rights? A traditional answer to these questions is that only official governments have the power to govern—to set and enforce rules on these and other issues. In contrast, this class explores the emerging roles of non-state actors, including NGOs, for-profit corporations, informal social movements, and international institutions, in governing our world and making decisions on these and other key issues. We will also study the ways that the governance by non-state actors challenges our ideas of democracy, legitimacy, and justice. The class thus seeks to bring together perspectives and tools from both empirical social science and political theory in order to better understand this important phenomenon.

**POLISCI 238T. History of International Relations Thought. 5 Units.**

In this course, we will examine the intellectual origins of contemporary theories and approaches to international politics. In particular, we will trace the classical and early modern roots of contemporary realism, idealism, and cosmopolitanism. We will also address some of the enduring normative and empirical questions about international politics: (1) What is the basis of political power and authority? (2) What rights and obligations do individuals have? (3) What rights and obligations do states have? (4) What are the causes of conflict? (5) What are the prospects for enduring peace? Thinkers covered may include: Thucydides, Cicero, Augustine, Aquinas, Grotius, Hobbes, Kant, Morgenthau, and Waltz.

Same as: INTNLREL 136

**POLISCI 239. Directed Reading and Research in Political Theory. 1-10 Unit.**

May be repeated for credit.

**POLISCI 240C. The Comparative Political Economy of Post-Communist Transitions. 3-4 Units.**

Dominant theoretical perspectives of comparative democratization and marketization; focus is on the political economy of transition in Eastern Europe and Eurasia while comparing similar processes in Latin America and Asia. Topics include: meanings of democracy, synergy between democracies and markets, causes of the collapse of communism, paths to political liberalization and democracy, civil society, constitutions, parliaments, presidents, the rule of law, electoral systems, market requirements, strategies of reform, the Russian experience of market building, exporting democracy and the market, and foreign aid and assistance.

**POLISCI 240T. Democracy, Promotion, and American Foreign Policy. 5 Units.**

Theoretical and intellectual debates about democracy promotion with focus on realism versus liberalism. The evolution of these debates with attention to the Cold War, the 90s, and American foreign policy after 9/11. Tools for and bureaucratic struggles over how to promote democracy. Contemporary case studies.

**POLISCI 241A. An Introduction to Political Economy of Development. 5 Units.**

This course is an upper-level undergraduate seminar providing an introduction to the political economy of development. This course explores sources of economic growth, inequality, poverty, and other aspects of development with a particular focus on political institutions. We first explore the patterns of development in the world and then overview basic theories of development. Second, we review the key areas of debate within the study of development, including the role of the state, the consequences of corruption, the effects of natural resources, and gender. The course consists of lectures on theoretical and empirical approaches and the discussion on the literature and cases.

**POLISCI 241C. Campaigns and Elections in Israel. 5 Units.**

Employing a theoretical and comparative framework, this seminar focuses on campaigns and elections in Israel. The seminar is divided into two interrelated sections. In the first section, we will cover voting behavior. Here we will look at Israel's election laws, its political culture, socialization and cleavages, turnout, political sophistication, ideology, partisanship and issue voting. In the second half of the semester we will examine elections from the perspective of candidates and campaign strategists. The topics we will focus on include election laws, public and private campaign finance, campaign strategy, media, polling, and advertising. In examining these topics, we will cover a variety of elections campaigns since Israel's birth, with an emphasis on the most recent ones.

Same as: JEWISHST 271C

**POLISCI 241S. Spatial Approaches to Social Science. 5 Units.**

This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.

Same as: ANTHRO 130D, ANTHRO 230D, URBANST 124

**POLISCI 241T. Political Economy of Gender. 5 Units.**

This course provides an introduction to the political economy of gender. The course first explores the key areas of debate on women's representation. Why are women underrepresented in formal political institutions? How do the political institutions affect women's representation? What's the effects of women's representation? Also, the course examines the quality of female politicians, women's voting behavior and political preferences, public opinion on gender issues, and women's representation in Law. No prior knowledge is required.

**POLISCI 242A. Why is Africa Poor?. 5 Units.**

Living standards around the world have increased, in many cases exponentially, throughout the previous century. Yet sub-Saharan Africa remains, by a considerable margin, the poorest region on Earth. This course asks three questions: Why is Africa poor? When did it become so? And will it remain so for the foreseeable future? The course draws on a range of social science disciplines, including anthropology, economics, history, political science, and sociology, to offer tentative answers.

**POLISCI 242C. Corruption, Conflict and Financial Crisis: Contemporary Global Politics and Journalism. 5 Units.**

This course offers students interested in contemporary global politics a unique introduction to the critical analysis of current events through the lens of award-winning non-fiction writing. Each week, we will explore a new political issue crucial to understanding today's world by reading some of the most gripping (and best written!) first- and second-hand narratives of these events, as recounted by journalists, academics and documentarians working in the field. Topics will include: global poverty, the overthrow of authoritarian regimes, terrorism, genocide and crimes against humanity, the Israel-Palestinian conflict, financial crises, and political corruption. In class, students will discuss the readings and learn to apply major social scientific theories to systematically analyze these complex political issues. Through this course, students will not only gain exposure to some exemplary writing on topics of current importance, but also acquire the skills and tools necessary to understand some of the most intractable and interesting problems in the world today.

**POLISCI 243C. The Political Economy of Development. 5 Units.**

Why are some countries rich and others poor? What explains the economic policies that governments adopt, and how do those policies affect economic performance? Why some policies persist over time while others don't? We will use tools from political science and economics to explore these important questions. The readings for this course will include conceptual and historical material from many geographic regions. As we explore the fascinating relationship between politics and economics, we will evaluate hypotheses according to robust and sound empirical evidence.

**POLISCI 243E. Political Economy of Development in Rural India. 5 Units.**

When and why do farmers accept, manipulate, or overthrow the pre-existing distribution of political, economic and social power? This course will help students utilize political economy theories and methods of analysis to understand the institutional dynamics of change in rural India. First, it will provide students with a deeper understanding of the nature of change in a particularly dynamic, varied and influential state with a mainly-rural population: India. Second, it will focus on three major topics in political economy: control over land; taxation and investment; and anti-state resistance. The course will draw from political science examinations of how and why states succeed, fail, and conduct major reforms by examining these questions in the context of rural India's small farmers. Indian political institutions are simultaneously lauded as extremely stable, highly-prone to decentralized rebellion, and models of innovation and innovation from which the rest of the world has much to learn. Overall, this course will expect students to engage with the political economy literature both historical and contemporary in order to develop two short research papers and present well-argued positions in class-wide debates on the nature of political, economic and social change driven by and for small farmers in rural India.

**POLISCI 243L. Politics of Economic Reform. 5 Units.**

Description to come.

**POLISCI 244. An Introduction to Political Development. 5 Units.**

Political development concerns the evolution of three categories of institutions: (1) the state itself; (2) the rule of law; and (3) accountable government. Focus on many of the major theories of political development, beginning with some classic social theorists and continuing up through the present.

**POLISCI 244A. Authoritarian Politics. 3-5 Units.**

Examination of how authoritarian regimes govern. Topics include: historical determinants of authoritarian government, typologies of authoritarian rule and impact of authoritarian governance on economic growth.

Same as: POLISCI 344A

**POLISCI 244C. Political Change in Latin America: The contemporary challenge to democracy. 5 Units.**

The purpose is to present the contemporary tendencies that characterize the mutation of democracy in Latin America. Along with a general conceptualization, focus will be given to specific cases that illustrate concepts. Three axes constitute the frame of the course: the background, the new trends of democracy on the eve of the 21st century, and the emergence of "refoundational" government and movements.

**POLISCI 244P. Religion and Politics in Latin America. 5 Units.**

The purpose of this seminar is to introduce students to the complexities of Politics and Religion in Latin America from a historical and sociological perspective. The seminar will examine the evolution of Church-State-Society-Community-Individual relations in Latin America, from Independence to present day. Topics will include new definitions of religious freedom, debates concerning the so called "lay State" (Estado laico), secularization, and the role of the lay or secular state and religious groups in the development of democratic or authoritarian regimes, as well as civil and religious freedoms, particularly sexual and reproductive rights and bioethical issues (contraception, abortion euthanasia, stem cell research, homosexual rights and homophobia). The course will combine a series of reading tests designed to introduce central questions of the texts with a critical discussion of the assigned source material, in order to develop a knowledgeable approach and research interest in the student.

**POLISCI 244T. Organized Crime and Democracy in Latin America. 5 Units.**

Scholars and policy analysts have long emphasized the strength of the rule of law as a key determinant of economic development and social opportunity. They also agree that the rule of law requires an effective and accountable legal system. The growth of transnational organized crime is a major impediment, however, to the creation of effective and accountable legal systems. This seminar examines how and why transnational criminal organizations have developed in Latin America, explores why they constitute a major challenge to the consolidation of democratic societies, economic development and individual rights. It also examines the efforts of governments to combat them, with a focus on the experiences of Mexico, Colombia, and Brazil. The course examines these cases in order to draw lessons by pointing to both successes and failures of use to policy analysts, legal scholars, and practitioners.

Same as: INTNLREL 152, IPS 247

**POLISCI 244U. Political Culture. 5 Units.**

Implications of cultural coordination and cultural difference for political processes and institutions. Prerequisite: 4 or equivalent.

Same as: POLISCI 344U

**POLISCI 245. Evidence and the Making of Foreign Policy. 5 Units.**

This seminar will examine how various forms of historical data and social-scientific evidence are and can be used to shape and inform foreign policy decision-making. Drawing on in-depth explorations of a variety of contemporary foreign policy challenges – the collapse of Syria, Russia's invasion of Ukraine, Iran's pursuit of a nuclear weapon, increasing repression in Egypt, post-conflict reconstruction in Iraq, and the spread of radical extremism – this course will challenge students to think through how a better understanding of theory and the impact of prior policies might change the decisions of U.S. policymakers. The seminar will blend perspectives from social science and behind-the-scenes insights from high-level policymaking. For advanced undergraduates.

**POLISCI 245A. Politics and Public Finance. 5 Units.**

The main related but different questions addressed by course are: how states have, through history, financed their expenditures, e.g. by taxing people or issuing public debt; how different political and fiscal institutions have been shaped by the varying need of the state to collect revenues (such as war, revolution threats, increasing demand of redistribution by the median voter). We will focus mainly, but not only, on the historical experience of the Western World (e.g. Europe and the US), and pay special attention to the nature of political institutions in place (e.g. absolutist regimes, constitutional monarchies, different forms of democracy), over a relatively long period of time (i.e. beginning with the). The exposition will not necessarily follow a chronological order, but rather a logical one (in some sense).

**POLISCI 245E. Middle East Politics. 5 Units.**

This course offers a thematic approach to the study of Middle Eastern politics. We will overview the major areas of political science research on the contemporary Middle East while simultaneously building empirical knowledge about the politics of individual countries in the region. Topics to be covered include: state capacity and democracy; economic development and mineral resources; the politics of religion and gender; international relations and civil conflict; terrorism and revolution.

**POLISCI 245R. Politics in Modern Iran. 5 Units.**

Modern Iran has been a smelting pot for political movements, ideologies, and types of states. Movements include nationalism, constitutionalism, Marxism, Islamic fundamentalism, social democracy, Islamic liberalism, and fascism. Forms of government include Oriental despotism, authoritarianism, Islamic theocracy, and liberal democracy. These varieties have appeared in Iran in an iteration shaped by history, geography, proximity to oil and the Soviet Union, and the hegemony of Islamic culture.

**POLISCI 246P. The Dynamics of Change in Africa. 4-5 Units.**

Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

Same as: AFRICAST 301A, HISTORY 246, HISTORY 346, POLISCI 346P

**POLISCI 247A. Games Developing Nations Play. 5 Units.**

If, as economists argue, development can make everyone in a society better off, why do leaders fail to pursue policies that promote development? The course uses game theoretic approaches from both economics and political science to address this question. Incentive problems are at the heart of explanations for development failure. Specifically, the course focuses on a series of questions central to the development problem: Why do developing countries have weak and often counterproductive political institutions? Why is violence (civil wars, ethnic conflict, military coups) so prevalent in the developing world, and how does it interact with development? Why do developing economies fail to generate high levels of income and wealth? We study how various kinds of development traps arise, preventing development for most countries. We also explain how some countries have overcome such traps. This approach emphasizes the importance of simultaneous economic and political development as two different facets of the same developmental process. No background in game theory is required. Same as: ECON 162, POLISCI 347A

**POLISCI 247G. Governance and Poverty. 5 Units.**

Poverty relief requires active government involvement in the provision of public services such as drinking water, healthcare, sanitation, education, roads, electricity and public safety. Failure to deliver public services is a major impediment to the alleviation of poverty in the developing world. This course will use an interdisciplinary approach to examining these issues, bringing together readings from across the disciplines of political science, economics, law, medicine and education to increase understanding of the complex causal linkages between political institutions, the quality of governance, and the capacity of developing societies to meet basic human needs. Conceived in a broadly comparative international perspective, the course will examine cross-national and field-based research projects, with a particular focus on Latin America and Mexico.

**POLISCI 248L. Political-Economy of Crime and Violence in Latin America. 5 Units.**

Latin America has experienced a significant wave of crime and violence in the past two decades. Criminal organizations have penetrated State organizations and are increasingly embedded in society. These organizations have created wide and solid networks all over the region, including the United States. The activities of criminal organizations in Latin America have eroded the social fabric, weakened State institutions, have caused a significant number of deaths, and have created strong disincentives for productive investment. The course aims at acquainting students with the political-economy of crime and violence. It focuses on understanding the incentives that individuals face for engaging in criminal activities; the incentives that criminal organizations have to use violence against each other, against citizens, and against State forces; the incentives that citizens face to side, or not, with criminal organizations; and the responses that States have structured against crime and violence. The course focuses on Latin America, but also learns from the case of the United States for which there is a relatively more extensive literature. The course makes extensive use of available data on the topic and emphasizes the learning of adequate methods for measuring these phenomena.

Same as: POLISCI 348L

**POLISCI 248S. Latin American Politics. 3-5 Units.**

Fundamental transformations in Latin America in the last two decades: why most governments are now democratic or semidemocratic; and economic transformation as countries abandoned import substitution industrialization policies led by state intervention for neoliberal economic policies. The nature of this dual transformation.

Same as: POLISCI 348S

**POLISCI 249. Directed Reading and Research in Comparative Politics. 1-10 Unit.**

May be repeated for credit. Requires a petition that can be found on our Political Science website.

**POLISCI 249P. Introduction to Israeli Politics. 5 Units.**

This course aims to introduce students to Israel's political system and its major actors. We will survey Israel's political landscape, both chronologically and thematically, covering the major issues and conflicts which have dominated Israeli politics since its inception. Same as: INTNLREL 163, JEWISHST 279P

**POLISCI 259. Directed Reading and Research in Political Methodology. 1-10 Unit.**

May be repeated for credit.

**POLISCI 291. Political Institutions. 5 Units.**

This course focuses on the role of political institutions in shaping policy outcomes around the world, with special attention to the United States. Students will become familiar with a wide range of theoretical approaches to the study of institutions, and they will learn the basics of applied quantitative empirical analysis. Enrollment is restricted to Political Science Research Honors Track students.

**POLISCI 292. Political Behavior. 5 Units.**

This research seminar will survey important topics in the study of mass political behavior including public opinion, political participation, partisanship and voting. Open only to students in the Political Science Research Honors Track.

**POLISCI 293. Research Design. 5 Units.**

This course is designed to teach students how to design a research project. The course emphasizes the specification of testable hypotheses, the building of data sets, and the inferences from that may be drawn from that evidence. It is only open to students in the PS Research Honors Track.

**POLISCI 299A. Honors Thesis. 1-5 Unit.**

Students conduct independent research work towards a senior honors thesis. Restricted to students in the Research Track Honors Program in Political Science.

**POLISCI 299B. Honors Thesis. 1-5 Unit.**

Students conduct independent research work towards a senior honors thesis.

**POLISCI 299C. Honors Thesis. 1-5 Unit.**

Students conduct independent research work towards a senior honors thesis.

**POLISCI 299Q. Honors Thesis Seminar. 3-5 Units.**

Restricted to Research Honors Track students who have completed PoliSci 291, 292, and 293.

**POLISCI 311E. Political Economy I. 2-5 Units.**

Theoretical models of political economy. Potential topics include: basic social choice theory, democracy, electoral competition, political accountability, legislative bargaining, lobbying, corruption, autocratic politics, democratization, conflict and arms races, and institutional change. Attention to economics implications, including taxation, redistribution, and public goods. Prerequisite: 203 or permission of instructors.

Same as: ECON 220

**POLISCI 314D. Democracy, Development, and the Rule of Law. 5 Units.**

Links among the establishment of democracy, economic growth, and the rule of law. How democratic, economically developed states arise. How the rule of law can be established where it has been historically absent. Variations in how such systems function and the consequences of institutional forms and choices. How democratic systems have arisen in different parts of the world. Available policy instruments used in international democracy, rule of law, and development promotion efforts. Same as: INTNLREL 114D, IPS 230, POLISCI 114D

**POLISCI 314R. Challenges and Dilemmas in American Foreign Policy. 5 Units.**

This seminar will examine the complexities and trade offs involved in foreign policy decision-making at the end of the twentieth century and the dawn of the post-9/11 era. Students will analyze dilemmas confronting policymakers through case studies including post-conflict reconstruction and state-building, nuclear proliferation, democratization and peace negotiation. The seminar will conclude with a 48-hour crisis simulation. For advanced undergraduates and graduate students. Application for enrollment required. Applications will be available for pick up in Political Science Department (Encina West 100) starting late-October. Same as: POLISCI 214R

**POLISCI 315. Living at the Nuclear Brink: Yesterday and Today. 3 Units.**

The development, testing, and proliferation of nuclear weapons will be covered, from World War II through the Cold War to the present. Emphasis will be placed on understanding the evolving role of these weapons, both militarily and politically. It will also examine controversies and opposition movements to nuclear weapons and their use. The course will feature numerous guest speakers from Stanford and beyond. Students will be required to write in-depth analyses of specific nuclear weapons policy questions. Following this course, students are expected to have a deeper understanding of the profound dangers these weapons continue to present to the world today.

Same as: IPS 249, POLISCI 115

**POLISCI 315A. The Rise of Asia. 3-5 Units.**

We will examine the sources and implications of the rise of Asia in the international system. Topics will include military competition, international cooperation, regional integration, domestic politics, business and investment, legalization, environmental issues, demographics, social issues, and the role of technology.

Same as: POLISCI 115A

**POLISCI 315F. Nuclear Weapons and International Politics. 5 Units.**

Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, refrain from doing so? What are the strategic consequences of new states deploying nuclear weapons? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? We will study the political science and history literature on these topics. Research paper required.

Same as: POLISCI 215F

**POLISCI 316. International History and International Relations Theory. 4-5 Units.**

The aims of the course are: to gain some understanding of the history and development of the international states system; to explore the different ways in which historians and theorists have studied the system; to analyze aspects of the system that may now be changing; to identify the ways in which international history and international relations theory can learn from each other. The course will focus on major wars and the efforts to rebuild order after such wars.

Same as: HISTORY 202, HISTORY 306E, POLISCI 216E

**POLISCI 316S. Decision Making in U.S. Foreign Policy. 5 Units.**

Formal and informal processes involved in U.S. foreign policy decision making. The formation, conduct, and implementation of policy, emphasizing the role of the President and executive branch agencies. Theoretical and analytical perspectives; case studies. Interested students should attend the first day of class. Admission will be by permission of the instructor. Priority to IPS students.

Same as: IPS 316S

**POLISCI 317M. Special Topics: International Democratization. 5 Units.**

Analyzing the international aspects of democratization involves understanding at least the following: (1) what is democracy (2) what domestic-level processes increase or decrease the level of democracy (3) what kind of influences from the outside world work, and do not work, in furthering democracy, and in what ways. This course spans all subfields of political science, and spills over into law, economics, and sociology. A complicating factor is the geographical expanse of democratic institutions and efforts to promote them. Eastern Europe, Russia, the Middle East, Sub-Saharan Africa, post-civil war El Salvador and Cambodia, are only some of the regions and countries that have been impacted. Their vastly different backgrounds challenge anyone attempting the puzzle. A further complication is the variety of ways in which the outside world may affect the scope and quality of democracy. These ways include but are not limited to: pressures exercised by regional economic institutions and alliances, the power of ideas and socialization, transfers of wealth, demands for trade liberalization, the training of civic activists, reports issued by foreign election observers. Same as: POLISCI 217M

**POLISCI 318. Special Topics: Democratic Peace-A Political Biography. 3-5 Units.**

The theories of democratic peace are among the most salient theories in the discipline of International Relations. The academic discussions surrounding their validity have been quite fierce as they concern also the inter-paradigmatic debates so prevalent in IR. No less interestingly, though, is the theories' migration outside of the halls of academia into the political arena in countries such as the United States and Israel. Noteworthy is the impact those theories had on public discussions and on the shaping of foreign policies of the US following the Cold War. This phenomenon raises important meta-theoretical questions about the nature of theory, its powers, and the responsibilities of academia to society. The course will follow the political biography of the theories of democratic peace: their academic origins, migration into the public and political spheres, the politicization process they underwent, the political and rhetorical uses and misuses of the theories (including the Iraq War), and the outcomes of this charged meeting of academia and politics. No less importantly, the course will discuss the responsibility theorists bear for the real-world ramifications of their theories, and the way they should act to discharge their responsibilities.

Same as: POLISCI 218

**POLISCI 318J. Japanese Politics and International Relations. 5 Units.**

The domestic politics, political economy, and international relations of contemporary Japan. The role of political parties, the bureaucracy, and private actors. Economic development and challenges. Relations with the United States and East Asia.

Same as: POLISCI 218J

**POLISCI 319. Directed Reading in International Relations. 1-10 Unit.**

May be repeated for credit.

**POLISCI 320R. The Presidency. 5 Units.**

This course provides students with a comprehensive perspective on the American presidency and covers a range of topics: elections, policy making, control of the bureaucracy, unilateral action, war-making, and much more. But throughout, the goal is to understand why presidents behave as they do, and why the presidency as an institution has developed as it has, with special attention to the dynamics of the American political system and how they condition incentives, opportunities, and power.

Same as: POLISCI 220R

**POLISCI 321. Law and Politics Workshop. 2-3 Units.**

This workshop will feature guest speakers who are political scientists or law professors specializing in the legal regulation of politics. Students will be responsible for response papers to each scholarly paper presented. On weeks without guest speakers, topics to be covered will include election law, administrative law, legislation, judicial behavior and public opinion, as well as the political science relevant to those areas of law. The final grade will be determined by class participation (10%), response papers (30%) and final research paper (60%). Students can take the course for R credit for either 2 or 3 units, depending on paper length. Elements used in grading: Class participation (10%), Response papers (30%) and final paper of no less than 18 pages for 2 units of credit and 26 pages for 3 units of credit (60%). (Cross-listed as POLISCI 321).

**POLISCI 322A. Advances in Political Psychology. 3-5 Units.**

Among the topics: the comparative contributions of rational choice and political psychology; political information process; coordinating vs. inducing preferences; identities and values; and prejudice and politics.

**POLISCI 322S. Topics in Constitutional History. 5 Units.**

Originalism has become the dominant topic in contemporary constitutional interpretation. Is it possible to interpret the Constitution according to its original, meaning, intentions, and understandings? Should we think of the Constitution as a fixed set of rules laid down linguistically, or a set of understandings shaped by the nation's history? How should modern interpreters assess the legacy of major epochs of constitutional change, from the founding era through Reconstruction and on to the great disputes over the New Deal and civil rights? These are the questions this course will entertain.

**POLISCI 323. Pivotal Moments in American Institutions and Public Law, 1781-Present. 5 Units.**

(Same as Law 680) American lawyers and policymakers work today in a system of institutions that are strikingly unique in comparative and historical terms. With some exceptions, that system is characterized by relatively stable political and legal institutions, low levels of explicit corruption, high bureaucratic capacity in public organizations, and relatively open, impersonal access to political, policymaking, and legal institutions. Although these characteristics are now too often taken for granted, the process through which they emerged remains remarkably opaque. In the 1780s under the Articles of Confederation, the United States was a poor developing country on the fringe of the Atlantic community with limited capacity and a striking inability to provide basic public goods, such as security. One hundred years later, it well along the way to becoming the richest nation in the world. How did this transformation occur? Drawing on judicial opinions, legal scholarship, political science, economics, and history, this course explores how institutions evolved to create such a system. It traces the problem of institutional development through several critical periods in the history of American public law, including the emergence of the Constitution, the events leading up to and following the Civil War, the Progressive era, World War II, 1964-75, and the emergence of the modern administrative state. Although the primary focus is on the American experience, we place these developments in comparative context as well.

**POLISCI 323R. The Press and the Political Process. 4-5 Units.**

(Graduate students register for COMM 260.) The role of mass media and other channels of communication in political and electoral processes. Same as: COMM 160, COMM 260

**POLISCI 324. Graduate Seminar in Political Psychology. 1-3 Unit.**

For students interested in research in political science, psychology, or communication. Methodological techniques for studying political attitudes and behaviors. May be repeated for credit. Same as: COMM 308

**POLISCI 326. Race and Racism in American Politics. 5 Units.**

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

Same as: AMSTUD 226, CSRE 226, POLISCI 226

**POLISCI 326T. The Politics of Education. 5 Units.**

America's public schools are government agencies, and virtually everything about them is subject to political authority—and thus to decision through the political process. This seminar is an effort to understand the politics of education and its impacts on the nation's schools. Our focus is on the modern era of reform, with special attention to the most prominent efforts to bring about fundamental change through accountability (including No Child Left Behind), school choice (charter schools, vouchers), pay for performance, and more and more to the politics of blocking that has made genuine reform so difficult to achieve.

Same as: POLISCI 226T

**POLISCI 327. Minority Behavior and Representation. 5 Units.**

Politics of minorities in the U.S. Topics include: historic and contemporary struggles of Latinos, African Americans, and gays and lesbians for political power and social acceptance; group-level public opinion and electoral behavior; scholarship on group influence in the policy making process and policy issues of importance; and the jurisprudence shaping minority political access and civil rights.

**POLISCI 327C. Regulation of the Political Process. 3-5 Units.**

Combined with LAW 577. This course is intended to give students a basic understanding of the themes in the legal regulation of elections and politics. We will cover all the major Supreme Court cases on topics of voting rights, reapportionment/redistricting, ballot access, regulation of political parties, campaign finance, and the 2000 presidential election controversy. The course pays particular attention to competing political philosophies and empirical assumptions that underlie the Court's reasoning while still focusing on the cases as litigation tools used to serve political ends. Elements used in grading: Class participation and one day take home final exam. (POLISCI 327C; LAW 577).

Same as: COMM 361

**POLISCI 329. Directed Reading and Research in American Politics. 1-10 Unit.**

May be repeated for credit.

**POLISCI 330. Social and Political Philosophy of Hegel and Marx. 4 Units.**

Same as: ETHICSOC 330R, PHIL 330

**POLISCI 331. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests. 3-5 Units.**

Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era.

Same as: CLASSICS 382, POLISCI 231

**POLISCI 332. Topics in Political Philosophy. 5 Units.**

Leading ideas in *A Theory of Justice*, *Political Liberalism*, and *The Law of Peoples*.

Same as: PHIL 372D

**POLISCI 332T. The Dialogue of Democracy. 4-5 Units.**

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized.

Same as: AMSTUD 137, COMM 137W, COMM 237, POLISCI 232T

**POLISCI 333. Rational and Social Agency. 2-5 Units.**

Contemporary discussions of practical reason, individual rational agency, planning agency, diachronic agency, intention, belief, intentional action, shared agency, identification and self-governance. Tentative list of authors whose work will be studied includes: Michael Bratman, Margaret Gilbert, Richard Holton, Christine Korsgaard, Alfred Mele, Kieran Setiya, Scott Shapiro, Michael Smith, David Velleman, Jay Wallace, and Gary Watson.

Same as: PHIL 377

**POLISCI 333M. Research and Methods in Political Theory. 3-5 Units.**

This seminar has two aims. First, we discuss recent scholarship that examines the relationship between normative and empirical (or positive) work. In particular, we focus on normative work in political theory/philosophy and empirical work in political science and other social sciences. Second, we discuss in an informal workshop setting the ongoing work of graduate students, considering how, if at all, the readings on methodology could inform this work.

**POLISCI 333S. Marx. 2-4 Units.**

This course examines the works of a thinker who radically transformed the ways that we think about modern society. Marx saw fundamental problems with capitalist societies, including: un-freedom, alienation, inequality, and bureaucratization. He developed a theory to account for these problems. Our task will be to read his works critically and to evaluate their contributions to our understanding the relationship between politics, social structure, knowledge and human agency. We will also be especially interested in comparing his view with alternative diagnoses of the problems of modern capitalist societies, especially those of Max Weber and John Rawls.

Same as: PHIL 339

**POLISCI 334. Philanthropy and Civil Society. 1-3 Unit.**

Cross-listed with Law (LAW 781), Political Science (POLISCI 334) and Sociology (SOC 374). Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.

Same as: EDUC 374, SOC 374

**POLISCI 334P. Deliberative Democracy and its Critics. 3-5 Units.**

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.

Same as: AMSTUD 135, COMM 135, COMM 235, COMM 335, POLISCI 234P

**POLISCI 335A. Adam Smith: From Moral Philosophy to Political Economy. 3-5 Units.**

This course is designed for graduate students and advanced undergraduates interested in moral philosophy or modern political economy. The course blends two approaches to Adam Smith. We use political thought and intellectual history to introduce students to the intellectual roots of classical Liberalism; asking: What are the moral psychological foundations of justice?, Does the free market make everyone, including the least advantaged, better off? How do we sustain a good society? We use social science to study Smith's integrated approach to human cooperation in three realms, society, politics, and markets; asking: Why isn't the entire world developed? How did Europe develop out of feudalism? How does a community sustain moral behavior? The two perspectives allow us to discover that Smith has ideas on these subjects that expand today's frontiers of both positive and normative social science.

**POLISCI 335J. Creative Political Thinking: From Machiavelli to Madison. 4-5 Units.**

How can we account for creativity and innovation in political thinking? Are these qualities simply a product of political expediency and rhetorical urgency, or do they also depend on qualities of mind and historical contingencies that have to be studied individually? This class will explore these questions with three noteworthy cases: Niccolo Machiavelli, John Locke, and James Madison. Extensive reading in both primary writings and secondary sources.

Same as: HISTORY 205G, HISTORY 305G, POLISCI 235J

**POLISCI 335L. Roads Not Taken, 1880-1960. 4 Units.**

This course is intended to illuminate ideas about justice, freedom, equality, democracy, peace, and social conflict, and to raise persisting questions about such topics as the role of violence in politics through looking at the ideas of America writers such as Edward Bellamy, W.E.B. DuBois, Eugene Debs, Jane Addams, Emma Goldman, John Dewey and Reinhold Niebuhr.

Same as: AMSTUD 275R, ETHICSOC 275R, PHIL 275R

**POLISCI 336. Introduction to Global Justice. 4 Units.**

This course provides an overview of core ethical problems in international politics, with special emphasis on the question of what demands justice imposes on institutions and agents acting in a global context. The course is divided into three sections. The first investigates the content of global justice, and comprises of readings from contemporary political theorists and philosophers who write within the liberal contractualist, utilitarian, cosmopolitan, and nationalist traditions. The second part of the course looks at the obligations which global justice generates in relation to five issues of international concern - global poverty, climate change, immigration, warfare, and well-being of women. The final section of the course asks whether a democratic international order is necessary for global justice to be realized.

Same as: ETHICSOC 136R, INTNLREL 136R, PHIL 76, POLISCI 136R

**POLISCI 336C. French Political Thought From Rousseau to the Present. 3-5 Units.**

An overview of the current awakening of French political thought as it is grounded in a new reading of the great classics of French social thought, from Rousseau to Tocqueville and Benjamin Constant. Readings of Lefort, Castoriadis, Louis Dumont, Ricoeur, Furet, Manent, Ferry, Renaut, Gauchet, Raynaud, etc. Readings in French. (Translations in English will be made available whenever possible.) Discussions in French and in English.

Same as: FRENCH 245

**POLISCI 336S. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 103, POLISCI 136S, PUBLPOL 103C, PUBLPOL 307

**POLISCI 337A. Political Philosophy: The Social Contract Tradition. 4 Units.**

(Graduate students register for 276.) Why and under what conditions do human beings need political institutions? What makes them legitimate or illegitimate? What is the nature, source, and extent of the obligation to obey the legitimate ones, and how should people alter or overthrow the others? Study of the answers given to such questions by major political theorists of the early modern period: Hobbes, Locke, Rousseau, and Kant.

Same as: PHIL 176, PHIL 276, POLISCI 137A

**POLISCI 337L. Ancient Greek Law and Justice. 3-5 Units.**

The development and practice of law and legal procedure in the ancient Greek world, emphasizing the well documented case of classical Athens. Constitutional, criminal, and civil law, approached through analysis of actual laws and speeches by litigants in Athenian courtrooms. Review of a growing scholarship juxtaposing Greek law to other prominent legal traditions and exploring the role of law in Greek social relations, economics, and literature, and its relationship to Greek conceptions of justice.

Same as: CLASSICS 378

**POLISCI 338E. The Problem of Evil in Literature, Film, and Philosophy. 3-5 Units.**

Conceptions of evil and its nature and source, distinctions between natural and moral evil, and what belongs to God versus to the human race have undergone transformations reflected in literature and film. Sources include Rousseau's response to the 1755 Lisbon earthquake; Hannah Arendt's interpretation of Auschwitz; Günther Anders' reading of Hiroshima; and current reflections on looming climatic and nuclear disasters. Readings from Rousseau, Kant, Dostoevsky, Arendt, Anders, Jonas, Camus, Ricoeur, Houellebeck, Girard. Films by Lang, Bergman, Losey, Hitchcock.

Same as: FRENCH 265

**POLISCI 339. Directed Reading and Research in Political Theory. 1-5 Unit.**

May be repeated for credit.

**POLISCI 340L. China in World Politics. 5 Units.**

The implications of the rise of China in contemporary world politics and for American foreign policy, including issues such as arms and nuclear proliferation, regional security arrangements, international trade and investment, human rights, environmental problems, and the Taiwan and Tibet questions.

Same as: POLISCI 140L

**POLISCI 343A. Field Methods. 3-5 Units.**

Familiarizes students with a variety of field methods potentially applicable to ongoing research projects and dissertations. Topics include case selection, process tracing, participant observation, interviewing, archival research, survey design, lab experiments, field experiments, and ethical concerns in the field. Students develop a field research strategy as a final project. Prerequisites: 440A,B,C.

**POLISCI 344. Politics and Geography. 3-5 Units.**

The role of geography in topics in political economy, including development, political representation, voting, redistribution, regional autonomy movements, fiscal competition, and federalism.

**POLISCI 344A. Authoritarian Politics. 3-5 Units.**

Examination of how authoritarian regimes govern. Topics include: historical determinants of authoritarian government, typologies of authoritarian rule and impact of authoritarian governance on economic growth.

Same as: POLISCI 244A

**POLISCI 344U. Political Culture. 5 Units.**

Implications of cultural coordination and cultural difference for political processes and institutions. Prerequisite: 4 or equivalent.

Same as: POLISCI 244U

**POLISCI 346P. The Dynamics of Change in Africa. 4-5 Units.**

Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

Same as: AFRICAST 301A, HISTORY 346, POLISCI 246P

**POLISCI 347A. Games Developing Nations Play. 5 Units.**

If, as economists argue, development can make everyone in a society better off, why do leaders fail to pursue policies that promote development? The course uses game theoretic approaches from both economics and political science to address this question. Incentive problems are at the heart of explanations for development failure. Specifically, the course focuses on a series of questions central to the development problem: Why do developing countries have weak and often counterproductive political institutions? Why is violence (civil wars, ethnic conflict, military coups) so prevalent in the developing world, and how does it interact with development? Why do developing economies fail to generate high levels of income and wealth? We study how various kinds of development traps arise, preventing development for most countries. We also explain how some countries have overcome such traps. This approach emphasizes the importance of simultaneous economic and political development as two different facets of the same developmental process. No background in game theory is required.

Same as: ECON 162, POLISCI 247A

**POLISCI 347D. Rebooting Government with Design Thinking. 3-4 Units.**

Students apply tools of human-centered design to issues of government performance. Small project teams work with NGO and government partners (in the U.S. and abroad) on concrete design challenges focused on issues such as how to deliver services more effectively and ensure that citizens' voices are heard. Students identify needs, generate concepts, create prototypes, and test their appropriateness. Taught through the Hasso Plattner Institute of Design at Stanford (<http://dschool.stanford.edu>). Enrollment limited. Application required. Prerequisites: consent of instructor(s).

Same as: PUBLPOL 347D

**POLISCI 348. Chinese Politics: The Transformation and the Era of Reform. 3-5 Units.**

Overview of the reforms in China since 1978 that have made its economy one of the fastest growing in the world yet it still has the Chinese Communist Party at the helm wielding one party rule. Key questions addressed include the following: What has been the process and challenges of reform that have reshaped China's economic landscape? What are the political consequences of these dramatic economic changes? Why has the CCP remained strong while other communist regimes have failed? Markets have spread but what is the role of the state? What are the opportunities for political participation and prospects for political change? Materials will include readings, lectures, and selected films. This course has no prerequisites. (Graduate students register for 348.) This fulfills the Writing in the Major requirement for PoliSci majors.

Same as: POLISCI 148

**POLISCI 348L. Political-Economy of Crime and Violence in Latin America. 5 Units.**

Latin America has experienced a significant wave of crime and violence in the past two decades. Criminal organizations have penetrated State organizations and are increasingly embedded in society. These organizations have created wide and solid networks all over the region, including the United States. The activities of criminal organizations in Latin America have eroded the social fabric, weakened State institutions, have caused a significant number of deaths, and have created strong disincentives for productive investment. The course aims at acquainting students with the political-economy of crime and violence. It focuses on understanding the incentives that individuals face for engaging in criminal activities; the incentives that criminal organizations have to use violence against each other, against citizens, and against State forces; the incentives that citizens face to side, or not, with criminal organizations; and the responses that States have structured against crime and violence. The course focuses on Latin America, but also learns from the case of the United States for which there is a relatively more extensive literature. The course makes extensive use of available data on the topic and emphasizes the learning of adequate methods for measuring these phenomena.

Same as: POLISCI 248L

**POLISCI 348S. Latin American Politics. 3-5 Units.**

Fundamental transformations in Latin America in the last two decades: why most governments are now democratic or semidemocratic; and economic transformation as countries abandoned import substitution industrialization policies led by state intervention for neoliberal economic policies. The nature of this dual transformation.

Same as: POLISCI 248S

**POLISCI 349. Directed Reading and Research in Comparative Politics. 1-10 Unit.**

May be repeated for credit.

**POLISCI 350A. Political Methodology I: Regression. 5 Units.**

Introduction to statistical research in political science, with a focus on linear regression. Teaches students how to apply multiple regression models as used in much of political science research. Also covers elements of probability and sampling theory.

**POLISCI 350B. Political Methodology II: Causal Inference. 5 Units.**

Survey of statistical methods for causal inference in political science research. Covers a variety of causal inference designs, including experiments, matching, regression, panel methods, difference-in-differences, synthetic control methods, instrumental variables, regression discontinuity designs, quantile regression, and bounds. 350A is a prerequisite for this class.

**POLISCI 350C. Political Methodology III: Model-Based Inference. 3-5 Units.**

Provides a survey of statistical tools for model-based inference in political science. Topics include generalized linear models for various data types and their extensions, such as discrete choice models, survival outcome models, mixed effects and multilevel models.

**POLISCI 350D. Political Methodology IV: Advanced Topics. 5 Units.**

Covers advanced statistical tools that are useful for empirical research in political science. Possible topics include missing data, survey sampling and experimental designs for field research, machine learning, text mining, clustering, Bayesian methods, spatial statistics, and web scraping.

**POLISCI 351A. Foundations of Political Economy. 3 Units.**

Introduction to political economy with an emphasis on formal models of collective choice, public institutions, and political competition. Topics include voting theory, social choice, institutional equilibria, agenda setting, interest group politics, bureaucratic behavior, and electoral competition.

**POLISCI 351B. Economic Analysis of Political Institutions. 4 Units.**

Applying techniques such as information economics, games of incomplete information, sequential bargaining theory, repeated games, and rational expectations of microeconomic analysis and game theory to political behavior and institutions. Applications include agenda formation in legislatures, government formation in parliamentary systems, the implications of legislative structure, elections and information aggregation, lobbying, electoral competition and interest groups, the control of bureaucracies, interest group competition, and collective choice rules.

**POLISCI 351C. Institutions and Bridge-Building in Political Economy. 4 Units.**

This course critically surveys empirical applications of formal models of collective-choice institutions. It is explicitly grounded in philosophy of science (e.g., Popperian positivism and Kuhn's notions of paradigms and normal science). Initial sessions address the meanings and roles of the concept of institutions in social-science research. Historically important works of political science and/or economics are then considered within a framework called Components of Institutional Analysis (or CIA), which provides a fully general way of evaluating research that is jointly empirical and formal theoretical. The course concludes with contemporary instances of such bridge-building. The over-arching objectives are to elevate the explicitness and salience of desirable properties of research and to illustrate the inescapable tradeoffs among the stipulated criteria. Although this is a core course in the GSB Political Economy PhD curriculum, its substantive foci may differ across years depending on the instructor. For Professor Krehbiel's sessions, the emphasis is on legislative behavior, organization, and lawmaking, and on inter-institutional strategic interaction (e.g. between executive, legislative, and judicial branches in various combinations). Students should have taken POLECON 680 and POLECON 681. Also listed as Political Science 351C.

**POLISCI 352. Introduction to Game Theoretic Methods in Political Science. 3-5 Units.**

Concepts and tools of non-cooperative game theory developed using political science questions and applications. Formal treatment of Hobbes' theory of the state and major criticisms of it; examples from international politics. Primarily for graduate students; undergraduates admitted with consent of instructor.

Same as: POLISCI 152

**POLISCI 353A. Workshop in Statistical Modeling. 1 Unit.**

Theoretical aspects and empirical applications of statistical modeling in the social sciences. Guest speakers. Students present a research paper. Prerequisite: 350B or equivalent. May be repeat for credit.

**POLISCI 353C. Workshop in Statistical Modeling. 1-2 Unit.**

Continuation of 353A. May be repeated for credit. Prerequisite: 353A and B. May be repeat for credit.

**POLISCI 354. Strategy: An Introduction to Game Theory. 5 Units.**

This course provides an introduction to basic concepts in game theory and strategic reasoning. We discuss ideas such as commitment, credibility, adverse selection, signaling and reputation. Concepts are developed through games played in class, and applied to politics, economics, business and everyday life.

Same as: POLISCI 153

**POLISCI 355A. Data Science for Politics. 5 Units.**

Data science is quickly changing the way we understand and engage in the political process. In this course we will develop fundamental techniques of data science and apply them to large political datasets on elections, campaign finance, lobbying, and more. The objective is to give students the skills to carry out cutting edge quantitative political studies in both academia and the private sector. Students with technical backgrounds looking to study politics quantitatively are encouraged to enroll.

Same as: POLISCI 150A

**POLISCI 355B. Machine Learning for Social Scientists. 5 Units.**

Machine learning—the use of algorithms to classify, predict, sort, learn and discover from data—has exploded in use across academic fields, industry, government, and non-profit. This course provides an introduction to machine learning for social scientists. We will introduce state of the art machine learning tools, show how to use those tools in the programming language R, and demonstrate why a social science focus is essential to effectively apply machine learning techniques. Applications of the methods will include forecasting social phenomena, the analysis of social media data, and the automatic analysis of text data. Political Science 150A or an equivalent is required. (Prerequisite 150A/355A).

Same as: POLISCI 150B

**POLISCI 355C. Causal Inference for Social Science. 5 Units.**

Causal inference methods have revolutionized the way we use data, statistics, and research design to move from correlation to causation and rigorously learn about the impact of some potential cause (e.g., a new policy or intervention) on some outcome (e.g., election results, levels of violence, poverty). This course provides an introduction that teaches students the toolkit of modern causal inference methods as they are now widely used across academic fields, government, industry, and non-profits. Topics include experiments, matching, regression, sensitivity analysis, difference-in-differences, panel methods, instrumental variable estimation, and regression discontinuity designs. We will illustrate and apply the methods with examples drawn from various fields including policy evaluation, political science, public health, economics, business, and sociology. Political Science 150A and 150B or an equivalent is required.

Same as: POLISCI 150C

**POLISCI 356A. Formal Theory I: An Introduction to Game Theory. 3-5 Units.**

An introduction to noncooperative game theory through applications in political science. Topics will include the Hotelling-Downs model, the probabilistic voting model, political bargaining models and political agency models, among others.

**POLISCI 356B. Formal Theory II: Models of Politics. 3-5 Units.**

A continuation of Formal Theory I covering advanced topics, including classical political economy, comparative institutions, theories of conflict and cooperation, dynamic political economy, and the new behavioral political economy.

**POLISCI 357. Sampling and Surveys. 5 Units.**

The importance of sample surveys as a source of social science data including public opinion, voting, welfare programs, health, employment, and consumer behavior. Survey design, sampling theory, and estimation. Nonresponse, self-selection, measurement error, and web survey methods. Prerequisite: 350B or equivalent.

**POLISCI 358. Data-driven Politics. 3-5 Units.**

Covers advanced computational and statistical methods for collecting and modeling large-scale data on politics. Topics will include automated and computer-assisted methods for collecting, disambiguating, and merging unstructured data (web-scraping, identity resolution, and record-linkage), database management (SQL, data architecture), data-reduction techniques for measuring the political preferences for large numbers of individuals, topic models applied to political text/speech, and social network analysis for mapping relationships and identifying influential actors.

**POLISCI 359. Advanced Individual Study in Political Methodology. 1-10 Unit.**

May be repeated for credit.

**POLISCI 362. New Economics of Organization. 5 Units.**

Survey of economic approaches to organization, emphasizing theory and application, with attention to politics.

**POLISCI 400. Dissertation. 1-10 Unit.****POLISCI 400C. Research Design. 5 Units.**

Required of Political Science PhD candidates with International Relations, American Politics, or Comparative Politics as their first or second field. Other by consent of instructor. Students develop their own research design. Prerequisites: 410A&B or 420A&B or 440A&B.

**POLISCI 404. Dispute Resolution in International Economic Law. 1 Unit.**

(Same as LAW 356.) Topics include: theoretical work on international trade and investment disputes; empirical work on WTO dispute resolution and the efficacy of developing country participation; and legal analysis of current, prominent disputes in the WTO and under international investment treaties. Substantial paper required. May be repeated for credit.

**POLISCI 410A. International Relations Theory, Part I. 3-5 Units.**

First of a three-part graduate sequence. History of international relations, current debates, and applications to problems of international security and political economy.

**POLISCI 410B. International Relations Theory, Part II. 3-5 Units.**

Second of a three-part graduate sequence. History of international relations theory, current debates, and applications to problems of international security and political economy. Prerequisite: 410A.

**POLISCI 410C. Research in International Relations. 5 Units.**

Third of a three-part graduate sequence. Focus is on developing research papers begun in 410A or B, and exploring active areas of research in the field. Prerequisite: 410B.

**POLISCI 411A. Workshop in International Relations. 1 Unit.**

For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.

**POLISCI 411B. Workshop in International Relations. 1-2 Unit.**

For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.

**POLISCI 411C. Workshop in International Relations. 1 Unit.**

For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.

**POLISCI 412. The Politics and Economics of Modern Europe. 3-5 Units.**

What are the implications of European integration for social and economic policy and outcomes? In this course, we will examine how EU membership has altered the democratic politics of Europe, with a special focus on policymaking during Europe's most recent financial crisis.

**POLISCI 420A. American Political Institutions. 3-5 Units.**

Theories of American politics, focusing on Congress, the presidency, the bureaucracy, and the courts.

**POLISCI 420B. Topics in American Political Behavior. 3-5 Units.**

For graduate students with background in American politics embarking on their own research. Current research in American politics, emphasizing political behavior and public opinion. Possible topics: uncertainty and ambivalence in political attitudes, heterogeneity in public opinion, the structure of American political ideology, political learning, the media as a determinant of public opinion, and links between public opinion and public policy.

**POLISCI 420C. Discovery in American Politics. 5 Units.**

What are the "novel facts" being generated in the study of American politics, and how are these discoveries being made? Emphasis on strengths and limitations of emerging methodologies and review of the substantive contributions they yield. Student-led replication of extant research and development of original research ideas a key component of the course. Prerequisites: 420A,B.

**POLISCI 421K. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.**

The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.

Same as: COMM 339, PSYCH 231

**POLISCI 421R. American Political Development, 1865-present. 3-5 Units.**

In this reading-intensive course, we will conduct a wide-ranging survey of major transformations in the American political system in the post-Civil War period. Our inquiries about these transformations will focus on the origins of the modern administrative state, the interactive role of the state and social movements, and changes in the party system. We'll examine these developments not only to understand institutional change, but to learn how changing institutions have shaped the behavior of the American electorate.

**POLISCI 422. Workshop in American Politics. 1 Unit.**

Research seminar. Frontiers in mass political behavior. Sources include data sets from the 2004 election cycle. Prerequisite: 420B or equivalent. Course may be repeated for credit.

**POLISCI 423A. The Laboratory of the Study of American Values I. 1-5 Unit.**

Designed for graduate students who are writing dissertations about American public opinion. Students participate in all phases of the research process and include questions on nationally representative surveys. Enrollment is limited to members of the Laboratory for the Study of American Values.

**POLISCI 423B. The Laboratory of the Study of American Values II. 1-5 Unit.**

Designed for graduate students who are writing dissertations about American public opinion. Students participate in all phases of the research process and include questions on nationally representative surveys. Enrollment is limited to members of the Laboratory for the Study of American Values.

**POLISCI 423C. The Laboratory of the Study of American Values III. 1-5 Unit.**

Designed for graduate students who are writing dissertations about American public opinion. Students participate in all phases of the research process and include questions on nationally representative surveys. Enrollment is limited to members of the Laboratory for the Study of American Values.

**POLISCI 425. Political Communication. 1-5 Unit.**

An overview of research in political communication with particular reference to work on the impact of the mass media on public opinion and voting behavior. Limited to Ph.D. students. Prerequisite: 260 or consent of instructor.

Same as: COMM 360G

**POLISCI 425S. Topics in Political Communication: Media Bias, Selective Exposure, and Political Polarization. 1-5 Unit.**

This course surveys theories of media bias, biased processing of information, and the empirical challenges facing researchers attempting to link changes in the composition of audiences to attitudinal and behavioral outcomes. (Limited to PhD students).

Same as: COMM 362

**POLISCI 426S. Theories of Racism in American Politics: A Critique. 0 Units.****POLISCI 427R. Race and Racism in American Politics. 5 Units.**

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

**POLISCI 428. Political Economy and Political Behavior. 4 Units.**

[Same as POLECON 677] This seminar will expose students to cutting-edge research in political behavior and political economy published in the leading political science (and other social science) journals. The aim is for students to learn the contemporary literature so that they can be producers of research. To that end, the required assignments in the class will be aimed at professional development: writing an original research note, writing a review, and delivering a scholarly presentation.

**POLISCI 430A. Ancient Greek Economic Development. 4-5 Units.**

(Formerly CLASSHIS 330A.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

Same as: CLASSICS 384A

**POLISCI 430B. Ancient Greek Economic Development. 1-5 Unit.**

(Formerly CLASSHIS 330B.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

Same as: CLASSICS 384B

**POLISCI 431L. INEQUALITY: Economic and Philosophical Perspectives. 5 Units.**

The nature of and problem of inequality is central to both economics and philosophy. Economists study the causes of inequality, design tools to measure it and track it over time, and examine its consequences. Philosophers are centrally concerned with the justification of inequality and the reasons why various types of inequality are or are not objectionable. In this class we bring both of these approaches together. Our class explores the different meanings of and measurements for understanding inequality, our best understandings of how much inequality there is, its causes, its consequences, and whether we ought to reduce it, and if so, how. This is an interdisciplinary graduate seminar. We propose some familiarity with basic ideas in economics and basic ideas in contemporary political philosophy; we will explain and learn about more complex ideas as we proceed. The class will be capped at 20 students.

Same as: ECON 380, ETHICSOC 371R, PHIL 371D

**POLISCI 432R. Selections in Modern Political Thought. 5 Units.**

This graduate-level seminar explores selections from the canon of Western political thought from the late fifteenth through nineteenth centuries. Throughout the course, we will engage in close textual readings of individual thinkers and consider some of the larger questions raised by political modernity. The Fall 2015 offering of the course will focus on the three modern social contract thinkers: Thomas Hobbes, John Locke, and Jean-Jacques Rousseau.

**POLISCI 433. Workshop in Political Theory. 1-2 Unit.**

For graduate students. May be repeated for credit.

**POLISCI 434. Egalitarianism. 5 Units.**

This seminar will explore different theories of equality in contemporary political philosophy. Topics include: the currency of equality (equality of what?); equality versus sufficiency or prioritarianism; the relationship between equality and responsibility; the value of equality; and different interpretations of equality of opportunity. Readings will be drawn from the work of Elizabeth Anderson, G.A. Cohen, Ronald Dworkin, Thomas Nagel, Derek Parfit, John Rawls, Thomas Scanlon, Amartya Sen, and others.

**POLISCI 434A. Ethics, Economics and the Market. 4 Units.**

Economic analysis inevitably raises moral questions. Getting clear on those moral questions, and the competing answers to them, can help improve both economic analysis and our understanding of the values involved in alternative social policies. This course focuses on a central economic institution: the market. How have the benefits and costs of using markets been understood? For example, it is often claimed that markets are good for welfare, but how is welfare to be understood? What is the connection between markets and different values such as equality and autonomy? What, if anything is wrong with markets in everything? Are there moral considerations that allow us to, distinguish different markets? This course examines competing answers to these questions, drawing on historical and contemporary literature. Readings include Adam Smith, JS Mill, Karl Marx, Michael Walzer, Dan Hausman and Michael McPherson and Debra Satz among others. For graduate students only.

Same as: ETHICSOC 303R, PHIL 375

**POLISCI 435R. Political Realism. 3-5 Units.**

This seminar will explore various articulations of political realism in their historical contexts. Realism is generally taken to be a pragmatic approach to a political world marked by the competition for material interests and the struggle for power. Yet beyond a shared critique of idealism and an insistence on the priority and autonomy of the political, realists tend to have very different normative visions and political projects. We will consider the works of several political realists from the history of political and international relations thought, including: Thucydides, Machiavelli, Hobbes, Carr, Niebuhr, and Morgenthau.

Same as: PHIL 372R

**POLISCI 436R. Amartya Sen's capability theory. 2-4 Units.**

Amartya Sen's pioneering work attempts to open up economics to missing informational and evaluative dimensions. This seminar will explore Sen's "capability approach" and its implications for the study of economics, gender, and justice. It will look at different ways that the capability approach has been developed, in particular, by Martha Nussbaum, but also by other political philosophers.

Same as: PHIL 378

**POLISCI 437. Autonomy. 5 Units.****POLISCI 438. Democracy and the Constitution. 5 Units.**

(Same as LAW 268) Connections between democratic theory and constitutional theory. Sources include literature from political philosophy, constitutional law, and jurisprudence, and arguments about freedom of expression, campaign finance, legislative apportionment, federalism, and separation of powers. Readings from Scalia, Breyer, Ely, Ackerman, Dahl, Rawls, Habermas, Dworkin, Riker, and Schumpeter, as well as constitutional cases.

Same as: PHIL 374C

**POLISCI 440A. Theories in Comparative Politics. 3-5 Units.**

Required of Political Science Ph.D. students with comparative politics as first or second concentration; others by consent of instructor. Theories addressing major concerns in the comparative field including democracy, regime change, the state, revolutions, national heterogeneity, and economic performance.

**POLISCI 440B. Comparative Political Economy. 5 Units.**

Required of Political Science Ph.D. students with comparative politics as a first or second concentration; others by consent of the instructor. The origins of political and economic institutions and their impact on long run outcomes for growth and democracy. Emphasis is on the analysis of causal models, hypothesis testing, and the quality of evidence.

**POLISCI 440C. Methods in Comparative Politics. 5 Units.**

Required of Political Science Ph.D. candidates with comparative politics as a first or second concentration; others by consent of instructor. Current methodological standards in comparative politics. Students develop their own research design that meets these standards.

**POLISCI 440D. Workshop in Comparative Politics. 1-2 Unit.**

Faculty, guest speakers, and graduate students conducting research in comparative politics present work-in-progress. Graduate students may enroll for up to 5 total units apportioned by quarter. Auditors welcome. Course may be repeated for credit.

**POLISCI 441L. Grad Seminar on Middle Eastern Politics. 5 Units.**

Survey of major topics in the study of Middle Eastern politics including state formation, authoritarian resilience and political Islam.

**POLISCI 443S. Political Economy of Reform in China. 5 Units.**

Content, process, and problems of China's post-Mao reforms. Changes in property rights, markets, credit, and the role of the state in economic development. Comparative insights about reform in the Chinese communist system that distinguishes it from the experience of regimes in E. Europe and the former Soviet Union.

**POLISCI 443T. Approaches to Chinese Politics. 3-5 Units.**

Major secondary literature on Chinese politics, involving the evolution of theoretical concepts and social scientific approaches characterizing the field. Subjects include changes made to defining fundamental issues of Chinese political theory, and the implications of shifts in research methods and analytical tools. Prerequisite: basic knowledge of politics of post-1949 China.

**POLISCI 444. Comparative Political Economy: Advanced Industrial Societies. 3-5 Units.**

Political economy approaches to key policy outcomes including redistribution, the size of government, fiscal behavior, and pork-barrel politics. Theories related to institutions, interest groups, and geography, focusing on middle- and upper-income countries.

**POLISCI 446. Models and Empirical Methods in Political Economy. 5 Units.**

This course surveys the use and empirical evaluation of formal models in political economy to explain policy outcomes, the determinants of political regimes, the sources of institutional persistence, and the causes and consequences of electoral rules. The course has two main goals. The first is to become better consumers and producers of formal work through the study of leading applications in political economy. The second is to introduce innovative approaches to research design and measurement for evaluating formal theories in political economy.

**POLISCI 448R. Workshop: China Social Science. 1 Unit.**

For Ph.D. students in the social sciences and history. Research on contemporary society and politics in the People's Republic of China. May be repeated for credit. Prerequisite: consent of instructor. Same as: SOC 368W

**POLISCI 451. Design and Analysis of Experiments. 3-5 Units.**

Political scientists increasingly rely on experimental methods. This course covers the principles and logic of experimental design as applied to laboratory, field and survey experiments. We discuss the strengths and limitations of experiments in relation to observational methods. Design considerations include randomization, the construction of treatments, the use of deception, the ethical implications of deception, and new developments in subject recruitment. Turning to the analysis of experimental data, we describe the methods for estimating treatment effects, interactions, and more complex indirect effects stemming from either mediator or moderator variables. We also cover appropriate data analytic strategies for quasi-experimental designs including interrupted time series, matching and propensity scores.

**POLISCI 452. Text as Data. 3-5 Units.**

Topics covered will include preprocessing texts (unigrams, bigrams, and a brief introduction to natural language processing), unsupervised learning (clustering, topic models, and computer-assisted methods), supervised learning (including SVM, lasso, naive Bayes, and a matrix smoothing method), and methods for evaluation (cross-validation, model based, expert based). The class is ideal for students in the dissertation phase of research who have texts they would like to analyze, but aren't quite sure what to do with them. Prerequisites are at least 350a and 350b and an willingness to learn programming skills (including Python and R).

**POLISCI 474. Design and Analysis of Surveys. 1-5 Unit.****POLISCI 801. TGR Project. 0 Units.****POLISCI 802. TGR Dissertation. 0 Units.****Portuguese Language Courses****PORTLANG 1A. Accelerated First-Year Portuguese, Part 1. 5 Units.**

For students with two years of college level study or equivalent of a Romance language, preferably Spanish. Goal is to use socially and culturally appropriate forms in conversations, providing and obtaining information, and expressing feelings, emotions, and opinions. Students learn the language as they contrast Brazilian culture with their own. Lab. Completion of PORTLANG 2A fulfills the University's foreign language requirement.

**PORTLANG 2A. Accelerated First-Year Portuguese, Part 2. 5 Units.**

Continuation of PORTLANG 1A. For students with two years of college level study or equivalent of a Romance language, preferably Spanish. Goal is to use socially and culturally appropriate forms in conversations, providing and obtaining information, describing and narrating, and expressing feelings, emotions, and opinions. Students learn the language as they contrast Brazilian culture with their own. Lab. Completion of PORTLANG 2A fulfills the University's foreign language requirement. Prerequisite: Placement Test, or PORTLANG 1A.

**PORTLANG 11A. Accelerated Second-Year Portuguese, Part 1. 5 Units.**

Continuation of PORTLANG 2A. Goal is to use linguistically and culturally appropriate forms in oral narrations, descriptions, and expression of ideas and opinions. Emphasis is on expository speech. Prerequisite: Placement Test, PORTLANG 2A or PORTLANG 3.

**PORTLANG 12A. Accelerated Second-Year Portuguese, Part 2. 5 Units.**

Continuation of PORTLANG 11A. Goal is to use linguistically and culturally appropriate forms in narrations, descriptions, and expression of ideas and opinions. Emphasis on expository writing. Prerequisite: Placement Test or PORTLANG 11A.

**PORTLANG 99. Language Specials. 1-5 Unit.**

Prerequisite: consent of instructor.n (Staff).

**PORTLANG 101. Reading Brazil. 3-5 Units.**

Short expository readings, guest lectures, discussions, compositions on Brazilian issues. Review of grammatical structures. Vocabulary building with emphasis on common idiomatic expressions and troublesome lexical distinctions. Prerequisite: PORTLANG 12A or equivalent.

**PORTLANG 102. Brazil in Text: Advanced Grammar and Composition. 3-5 Units.**

3rd year course. Further development of academic writing. Short fictional and expository readings, guest lectures, discussions, compositions on Brazilian issues. Emphasis is on building paragraphs, organizing arguments, and justifying positions. May be used as workshop to write papers in Portuguese for another course. May be repeated once for credit. Prerequisite: PORTLANG 12A or equivalent.

**PORTLANG 103. Advanced Conversation: Brazil Today. 3-5 Units.**

3rd year course. Reading and discussions on issues from current newspapers and magazines, reading comprehension strategies with online news updates, and vocabulary building with emphasis on formal expository writing. Writing practice if desired. Students prepare short presentations and lead subsequent discussions. May be repeated once for credit. Prerequisite: PORTLANG 12A.

**PORTLANG 161. Advanced Reading in Portuguese, Fourth-year Portuguese. 4-5 Units.**

The course emphasizes high-level reading comprehension and leads to advanced development of communication skills for extended formal and informal discourse in Portuguese. Prerequisite: Placement Test or PORTLANG 101.

**PORTLANG 162. Advanced Writing in Portuguese, Fourth-year Portuguese. 4-5 Units.**

The course has two tracks, depending on the interest of the student: a) advanced expository writing (correspondence, technical reports, editorials, etc.) and b) creative writing ('crônicas' short stories, poems, etc.). Prerequisite: Placement Test or PORTLANG 102.

**PORTLANG 163. Contemporary Issues in the Lusophone World. Fourth-Year Portuguese. 4-5 Units.**

The class emphasizes formal presentations/discussions in Portuguese, based on contemporary issues in the lusophone world. Students use as linguistic models newspaper and magazine articles, TV news broadcasts, online news services, films, art exhibits, news on scientific advances, etc. Focus is on mastering high-level vocabulary/structures, as well as reading and rhetorical strategies, for appropriate use in professional settings. Prerequisite: Placement Test or PORTLANG 103.

**PORTLANG 164. Translating the Lusophone world, Fourth-Year Portuguese. 3-5 Units.**

For advanced students. Literary and technical translation. Readings on theoretical topics on translation; discussion, analysis and comparison of existing translations (literary and technical); individual translation projects according to students field of study, and discussion and analysis of those projects in class. Final translation project to be undertaken individually. Prerequisite: PORTLANG 250 or completion of 3rd year sequence.

**PORTLANG 193Q. Spaces and Voices of Brazil through Film. 3-4 Units.**

The manners in which a country is perceived and defines itself is a result of many complex forces, and involves the reproduction of social relations and complex social constructions both on the part of those who live there and those who see it from a distance. The perceptions of what Brazil is and what defines the country has changed throughout times, but has conserved some clear pervasive defining traits. This course is an introduction to the history, culture, politics and artistic production of Brazil as seen through feature films, documentaries and some complementary readings. Movies include, among others, *Banana is my Business*, *Black Orpheus*, *Olga*, *They Don't Use Black-Tie*, *City of God*, *Central Station*, *Gaijin*, and *Four Days in September*-among others. In English.

Same as: ILAC 193Q

**PORTLANG 297. Directed Reading. 1-4 Unit.**

Prerequisite: consent of instructor.nn (Staff).

**PORTLANG 394. Graduate Studies in Portuguese Conversation. 1-3 Unit.**

Prerequisite: consent of instructor.nn (Staff).

**PORTLANG 395. Graduate Studies in Portuguese. 1-5 Unit.**

Prerequisite: consent of instructor.n (Staff).

## Psychiatry Courses

**PSYC 29SI. ASB: Illuminating Multidisciplinary Perspectives on Mental Health in the Bay Area and Beyond. 1 Unit.**

Sheds light on campus mental health resource availability, different types of mental health disorders, root causes of mental health disorders, current care and treatment methods. Topics include the impacts of mental health issues on larger communities and how students can serve as allies to those seeking to make mental health a priority in personal lives, government policy, education and medical research. Includes service trip during spring recess.

**PSYC 35SI. Clinical and Societal Issues of Neurological Disorders. 2 Units.**

Provides introductory exposure to some of the most common neurological disorders currently diagnosed in the U.S. Looks at clinical and societal aspects of such neurological disorders.

**PSYC 50Q. Brain Training: Hype or Help?. 3 Units.**

Focuses on primary literature to evaluate evidence supporting claims that concerted practice can lead to improvements in capacities such as working memory, speed of processing and IQ. Looks across lifespan from childhood and remediation of learning disabilities to elderly individuals and the potential for brain training to delay onset of dementia. Examines new research into brain training as treatment for psychiatric disorders, as well as neuroscience behind learning and memory. Considers ethical implications of these programs. Students participate in brain training and track and analyze progress.

**PSYC 51Q. Culture, Psychology, and Mental Health Treatment. 2 Units.**

Focuses on a critical analysis of Western approach to psychology and psychiatric terms of understanding mental illness, psychiatric phenomena, and treatment of mental health disorders. Includes an orientation to and critique of western clinical psychology/psychiatry and an inquiry as to its relevance outside Western settings. Includes guest speakers representing cross-cultural providers of mental health services as well as medical anthropologists and critics of the Western generalizations in psychiatry. Special attention place on cross-cultural psychiatry and international mental health efforts.

**PSYC 52Q. Public Mental Health and Community Psychiatry. 2 Units.**

Focuses on mental health systems of care in the United States with special attention to community Psychiatry and mental health for the underserved. Emphasizes understanding issues involved with providing mental health treatment in a public health setting as well as to special populations. Guest speakers include policy makers and local providers. Students introduced to possibilities for Stanford-supported local public service opportunities.

**PSYC 53Q. Secret Mind: Getting to Know and Living with your Unconscious. 3 Units.**

Focuses on the motivational unconscious. Topics include the science of the unconscious mind and the techniques used to gain conscious access to these psychological process, as well as methods of exploring students' own unconscious for creative purposes and to understand personal habits, reactions, motives, emotions and thoughts. Case-based, problem-oriented format utilized to develop foundational understanding of the science of the unconscious mind. Emphasis on student study of self and own unconscious as case for the class. Student privacy will be protected.

**PSYC 54N. Genes, Memes and Behavior. 3 Units.**

Examines how natural selection operates to shape successful genes in the gene pool, how cultural selection operates to shape successful "memes" in the pool of cultural ideas, and how selection by consequences operates to shape successful behaviors in our repertoires. Topics include cases in which selection produces undesirable consequences (e.g. genetic mutations, cultural problems, and aberrant behaviors in children). Emphasis on understanding the role of modern natural science in complex behaviors and why study of human life from an interdisciplinary perspective is important.

**PSYC 60N. The Psychology of Stoked. 3 Units.**

Examines the biological, psychological and social aspects of what it means to live a positive, life-affirming existence. Drawing from a wide range of sources, from psychiatry and psychology, to spirituality and philosophy, seminar informs on the latest thinking about the psychology of happiness, and questions assumptions about personal happiness. Explores the new field of positive psychology and pulls from a multidisciplinary literature, examining life satisfaction and happiness from many perspectives, and the psychiatry of stimulation including substance, human sexuality, and healthy methods of attaining happiness. Includes guest speakers from many different backgrounds and perspectives. Examines what it means to be truly mindful.

**PSYC 70N. Mind-Body Medicine: A Global Perspective. 3 Units.**

Explores ways in which the powerful connection between the brain and the body can be harnessed to maintain health or fight disease. Intended for students who have a general interest in matters of mind and health, and students who are specifically interested in the psychological/biological/medical sciences. Course begins with a historical perspective on how diverse cultures and medical systems from around the world grapple with the concept of the mind-body connection, then goes through a clear and accessible overview of the nervous, endocrine, and immune systems, and then explores mind-body techniques used in modern societies. Investigates the mind-body connection in the context of: western medicine, traditional medical systems of different cultures, health effects of "good" versus "bad" stress, meditation and other stress reduction techniques, positive and negative emotions, medical applications of hypnosis, the placebo and nocebo effects, and disorders such as anxiety and depression.

**PSYC 71N. Eight Ages of Man. 3 Units.**

Ways in which a psychologically-minded attitude can add to the appreciation of literature; how literature can be used to understand issues and themes of the developing personality. Using the well-known essay by psychoanalyst Erik Erikson, "The Eight Ages of Man," as a foundation, works reflecting elements of an age or ages are read. "Wisdom of the Ego" by Dr. George Valliant serves as a resource to better understand this model, as well as offering a more contemporary theory of personality development.

**PSYC 76Q. Temperament and Creativity in Mood Disorders. 2 Units.**

Preference to sophomores. Western cultural notions of mad geniuses and artistic temperaments. How many individuals who suffer from depression, bipolar disorder, and related problems are nonetheless productively creative. Current psychological and neurobiological research, and assessment of mood, temperament, and creativity. Emphasis is on written and oral communications and multimedia presentations.

**PSYC 77N. Deviants in Literature. 3 Units.**

Many literary works are enhanced by, in fact demand, a psychological perspective to achieve a fully informed reading. In *The Devils* Dostoevsky uses the issues and process of anarchy as a platform on which to develop some of the most unforgettable characters in literary history. *Death in Venice* contains among its many themes the darker dynamic of paraphilia. Guilt searches for a validating crime in Kafka's *The Penal Colony*. Capote uses a journalistic style to manage horrible fact during *In Cold Blood*. Conrad shows that telling a story of the journey outward is more nearly an analysis of the journey inward in *Heart of Darkness*. Albee's *Zoo Story* asks whether the man on the street is prepared to confront his own worst nightmare. Close reading of works such as these presents opportunities to learn about character pathology and to expand traditional approaches to literary criticism by applying a psychological perspective.

**PSYC 78N. Mental Health in Collegiate Athletes. 3 Units.**

Developmental, psychological, social, and performance issues in collegiate sports. Topics include transition to Stanford, time management, optimizing mental fitness, coping with injuries.

**PSYC 79Q. Family Dynamics in Literature. 3 Units.**

Preference to sophomores. Using a psychological approach, explores relationships between and among the characters of well-known literary works. Primary readings include: Freud's *Dora: An Analysis of a Case of Hysteria*; Shakespeare's *Henry IV, Part 1*, which anticipates what Freud later calls "the unconscious,"; Kafka's *Metamorphosis*, the "identified patient" in family of seemingly unconventional make-up; and Flaubert's *Madame Bovary*.

**PSYC 81Q. Fate of Orphans and Vulnerable Children in Sub Saharan Africa. 2 Units.**

The complicated forces, shaped by geopolitical history and current events, that frame all social programs, the care of orphans in the context of the AIDS pandemic in particular; history of the care of orphans; developmental effects of deprivation of care and nurturing. Guest speakers.

**PSYC 82Q. Psychosis and Literature. 3 Units.**

One of the great gifts of literature is its ability to give us insight into the internal worlds of others. Perhaps nowhere is this gift as rare and crucial as in our attempt to understand the experience of mental illness. This is particularly true of that state clinicians call "psychosis." But psychosis is a slippery term, with definitions ranging from being "out of touch with reality" to states of hallucination and delusion, to "disorganization of thought and speech." It is devastating and terrifying both for patients and families, and yet shares many characteristics with other, less pathological states, such as mysticism and creativity. How then can we begin to make sense of it? In this course, we will examine the first-hand experience of psychosis in letters, memoirs and fiction. Our goal will be to learn how to read such texts from multiple perspectives, examining not only clinical, social, and historical aspects of psychosis, but also what they offer as unique literary works or art. We will look at texts as diverse as Shakespeare and the science fiction writer Philip K. Dick, supplementing them with film and art. This class is not only for students thinking of career in medicine, psychology or anthropology, but also readers and writers interested exploring extraordinary texts. Along the way, we will be paying attending to lessons that we take for our own writing, both fiction and non-fiction. There are no prerequisites necessary; all that is needed is a love of language and a curiosity about the secrets of other minds.

**PSYC 111Q. Madness and the Womb: Medical and Artistic Approaches to Mental Illness in Women Through the Ages. 3 Units.**

Historical and current concepts of mental illness in women. Premenstrual dysphoric disorder (PMS), postpartum depression, menopausal mood disorders, and eating disorders. Historical biopsychosocial approach. Readings include women's diaries and advice books, physicians' casebooks, and 19th- and 20th-century medical texts. Guest speakers from art and literature departments. Literary and artistic images, and the social and cultural contexts of these disorders during the last 300 years.

**PSYC 135. Sleep and Dreams. 3 Units.**

The course is designed to impart essential knowledge of the neuroscience of sleep and covers how sleep affects our daily lives-- both physical and mental functions of our well-being. The course covers the science of sleep, dreams, and the pathophysiology of highly prevalent sleep disorders such as sleep deprivation, biological rhythms, and focuses on the physiology of non-REM and REM sleep. Course content empowers students to make educated decisions concerning sleep and alertness for the rest of their lives and shapes students' attitudes about the importance of sleep. Learning about the science of sleep provides tangible reason to respect sleep as a member of what we term the triumvirate of health: good nutrition, physical fitness, and healthy sleep. Same as: PSYC 235

**PSYC 136A. Valuescience: Shedding Illusion to Live Better. 3-4 Units.**

Apply scientific methods and principles to discern and realize value. Read history, philosophy, ecology, economics, sociology, linguistics and psychology pertinent to emergence of valuescience as foundation for an increasing range of human action. Explore perceptual, cognitive, and cultural impediments to valuescience; strategies for overcoming these; and personal and social benefits of doing so. 4 units includes weekly practice (e.g., meditation, aerobic exercise). Students may enroll in PSYC 136A or PSYC 136B or both. Either may be taken first. Same as: PSYC 236A

**PSYC 136B. Valuescience: Shedding Illusion to Live Better. 3-4 Units.**

Apply scientific methods and principles to discern and realize value. Read history, philosophy, ecology, economics, sociology, linguistics and psychology pertinent to emergence of valuescience as foundation for an increasing range of human action. Explore perceptual, cognitive, and cultural impediments to valuescience, strategies for overcoming these, and personal and social benefits of doing so. 4 units includes weekly practice (e.g., meditation, aerobic exercise). Students may enroll in PSYC 136A or PSYC 136B or both. Either may be taken first. Same as: PSYC 236B

**PSYC 139. Understanding Relationships: A Couples and Family Therapy Perspective. 4 Units.**

Considers the premises of the family-systems approach to intimate and family relationships, drawing on concepts from psychology, psychiatry, neurobiology, anthropology, and organizational behavior. Examines relationship formation and commitment, intimacy and sexuality, family development and structure, interpersonal conflict and communication, historical patterns and legacies, gender and power, and the cultural and larger systemic contexts of close relationships. Frameworks for assessing relationships and tools for changing romantic, family, and social relationships are examined in detail, and case examples illustrate the relationship change strategies of major contributors to the field. Highlights practical applications of the family-systems approach in educational, medical, business, and community settings. Students do not need to have a background in Psychology or Human Biology, and all student levels are welcome (including GSB, Law, Medicine, GSE for PSYC 239).

Same as: PSYC 239

**PSYC 195. Special Laboratory Projects. 1-3 Unit.**

Assist Behavioral Neuroendocrinology Program with data entry, library organization, and study-related projects.

**PSYC 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**PSYC 208. Hypnosis. 2 Units.**

Hypnosis is a psychophysiological state of attentive, receptive concentration, with a relative suspension of peripheral awareness. It is the first Western form of psychotherapy. The course, in seminar format, combines presentation of lecture material on hypnosis and its applications with experience for students to practice assessing hypnotizability and teaching patients to use self-hypnosis in treatment. Topics covered include the nature of hypnosis, the neurophysiology underlying it, the measurement of hypnotizability, and applications of hypnosis in the treatment of pain, stress, anxiety, smoking, obesity, and psychosomatic disorders.

**PSYC 211. Child and Adolescent Psychopathology. 1 Unit.**

Common syndromes in child psychiatry. Topics include diagnosis, epidemiology, etiology, course, outcome and therapeutic interventions. Prerequisite: familiarity with the basics of psychiatric and psychological discourse; psychiatry clerkship or course in psychology.

**PSYC 212. Pediatric Psychosomatic Medicine: Psychological Issues in the Physically Ill Child. 1 Unit.**

Open to MD and graduate students; qualified undergraduates by consent of instructor. Diagnosis and management of emotional disorders and difficulties in physically ill children and adolescents. Topics include psychotherapeutic and psychopharmacologic approaches to psychiatric disorders encountered in the pediatric medical health care setting. Oral and multimedia presentations. Prerequisite: familiarity with basic principles of psychopathology.

**PSYC 225. Stanford Klingenstein Fellowship Program. 1 Unit.**

A mentoring program designed to expose first and second year medical students to the rewarding field of child and adolescent psychiatry, and to increase awareness and education about child and adolescent mental health issues. Offers a year-long program wherein medical students are paired with child and adolescent psychiatrists, meeting bimonthly for clinical experiences and mentoring. Also provides opportunities for the students to get involved in cutting-edge scientific research, networking opportunities, and opportunities to attend professional conferences.

**PSYC 233. Mindfulness: An Awareness-Based Stress Reduction Program in Medicine. 3 Units.**

An experiential program in which the participants learn the techniques of mindfulness meditation and its application in the management of stress and in healthcare. Modeled after the MBSR, Mindfulness Based Stress Reduction, started by Jon Kabat-Zinn at UMASS Medical Center. Designed to work with the mind/body relationship to stress and chronic illness teaching open sensitive awareness without judgement of mental or physical reactivity. Requirement for the course is the daily practice of mindfulness meditation, attendance at weekly class meetings and the all day retreat, home reading, and a final paper covering the student's observations.

**PSYC 235. Sleep and Dreams. 3 Units.**

The course is designed to impart essential knowledge of the neuroscience of sleep and covers how sleep affects our daily lives-- both physical and mental functions of our well-being. The course covers the science of sleep, dreams, and the pathophysiology of highly prevalent sleep disorders such as sleep deprivation, biological rhythms, and focuses on the physiology of non-REM and REM sleep. Course content empowers students to make educated decisions concerning sleep and alertness for the rest of their lives and shapes students' attitudes about the importance of sleep. Learning about the science of sleep provides tangible reason to respect sleep as a member of what we term the triumvirate of health: good nutrition, physical fitness, and healthy sleep. Same as: PSYC 135

**PSYC 236A. Valuescience: Shedding Illusion to Live Better. 3-4 Units.**

Apply scientific methods and principles to discern and realize value. Read history, philosophy, ecology, economics, sociology, linguistics and psychology pertinent to emergence of valuescience as foundation for an increasing range of human action. Explore perceptual, cognitive, and cultural impediments to valuescience; strategies for overcoming these; and personal and social benefits of doing so. 4 units includes weekly practice (e.g., meditation, aerobic exercise). Students may enroll in PSYC 136A or PSYC 136B or both. Either may be taken first. Same as: PSYC 136A

**PSYC 236B. Valuescience: Shedding Illusion to Live Better. 3-4 Units.**

Apply scientific methods and principles to discern and realize value. Read history, philosophy, ecology, economics, sociology, linguistics and psychology pertinent to emergence of valuescience as foundation for an increasing range of human action. Explore perceptual, cognitive, and cultural impediments to valuescience, strategies for overcoming these, and personal and social benefits of doing so. 4 units includes weekly practice (e.g., meditation, aerobic exercise). Students may enroll in PSYC 136A or PSYC 136B or both. Either may be taken first. Same as: PSYC 136B

**PSYC 239. Understanding Relationships: A Couples and Family Therapy Perspective. 4 Units.**

Considers the premises of the family-systems approach to intimate and family relationships, drawing on concepts from psychology, psychiatry, neurobiology, anthropology, and organizational behavior. Examines relationship formation and commitment, intimacy and sexuality, family development and structure, interpersonal conflict and communication, historical patterns and legacies, gender and power, and the cultural and larger systemic contexts of close relationships. Frameworks for assessing relationships and tools for changing romantic, family, and social relationships are examined in detail, and case examples illustrate the relationship change strategies of major contributors to the field. Highlights practical applications of the family-systems approach in educational, medical, business, and community settings. Students do not need to have a background in Psychology or Human Biology, and all student levels are welcome (including GSB, Law, Medicine, GSE for PSYC 239).

Same as: PSYC 139

**PSYC 247. Principles and Practices in Care of the Dying. 1 Unit.**

Detailed, systematic survey of a generalized terminal illness and elaboration of the basic principles underlying approaches to the care of the dying. Particular attention is paid to problem areas involving medical ethics and multi-culture. Practical strategies for managing the special medical and emotional problems that arise in the care of the dying patient. There may be guest speakers and patient interviews. No final examination. (Minimum: 4 students).

**PSYC 250. Methodology of Research in Behavioral Sciences. 1-3 Unit.**

Statistical and methodological issues in two major psychiatric research themes: clinical psychiatric research (Aut), neuroimaging research (Win), and statistical genetics and general statistical modeling (Spr). Autumn series includes: basics of inferential statistics, group comparison, analysis of variance, regression analysis, multivariate analysis, and longitudinal analysis in the context of psychiatric and behavioral research. Also included are conceptual topics such as risk factors, mediation, moderation, and causal inference. Winter series includes: functional and structural neuroimaging research methods (e.g. functional magnetic resonance imaging (fMRI), structural MRI (sMRI), diffusion tensor imaging (DTI), transcranial magnetic stimulation (TMS), near-infrared spectroscopy (NIRS), electroencephalogram (EEG)). Basic principles, statistical analysis methods, advantages and limitations, and applications are discussed. Spring series includes: tests and effect estimation for multiple SNPs, genes or pathways in genetic association studies, gene-gene interactions, twins and heritability estimates, Hardy-Weinberg and linkage equilibrium, interpretation and presentation of results for a range of statistical models for different types of data. Practical examples from recent research within the Department of Psychiatry will be used throughout the course. Prerequisite: Some exposure to statistical methods, either from course work or from participation in research having some behavioral aspects, or consent of instructor. 1 unit for class participation only, 2 units includes weekly assignments, 3 units includes a final project.

**PSYC 290. Teaching in Psychiatry. 1-10 Unit.**

Practical experience in teaching by serving as a teaching assistant in a psychiatry course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student.

**PSYC 299. Directed Reading in Psychiatry. 1-18 Unit.**

Prerequisite: consent of instructor.

**PSYC 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**PSYC 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**Psychology Courses****PSYCH 1. Introduction to Psychology. 5 Units.**

Human behavior and mental processes including the nervous system, consciousness, learning, memory, development, emotion, psychopathology, interpersonal process, society, and culture. Current research.

**PSYCH 4N. Predicting aggregate choice. 3 Units.**

Preference to freshmen. Is prediction of group choice possible and how can it be done? This course is ideal for students that would like to extend predictions about individual choice to group choice, and who plan to apply this knowledge to future research.

**PSYCH 7Q. Language Understanding by Children and Adults. 3 Units.**

How do we first learn to find meaning in strings of speech sounds? Understanding spoken language requires the rapid integration of acoustic information with linguistic knowledge and with conceptual knowledge based on experience with how things happen in the world. Topics include research on early development of language understanding and laboratory methods of how young children make sense of speech. Observations of preschool children and visits to Stanford laboratories. Might be repeatable for credit.

**PSYCH 8N. The New Longevity. 3 Units.**

Adult development from the perspective of life-span theory – a conceptual framework that views development as a series of adaptations to physical, societal and individual resources and constraints. Students will learn about demographic and medical changes, ways that individuals typically change socially, emotionally and cognitively as they move through adulthood. An understanding of the conceptual foundations of the life-span approach and place aging of young people today in historical context.

**PSYCH 9N. Reading the Brain: the Scientific, Ethical, and Legal Implications of Brain Imaging. 3 Units.**

It's hard to pick up a newspaper without seeing a story that involves brain imaging, from research on psychological disorders to its use for lie detection or "neuromarketing". The methods are indeed very powerful, but many of the claims seen in the press are results of overly strong interpretations. In this course, you will learn to evaluate claims based on brain imaging research. We will also explore the deeper ethical and philosophical issues that arise from our ability to peer into our own brains in action. The course will start by discussing how to understand and interpret the findings of brain imaging research. We will discuss how new statistical methods provide the ability to accurately predict thoughts and behaviors from brain images. We will explore how this research has the potential to change our concepts of the self, personal responsibility and free will. We will also discuss the ethics of brain imaging, such as how the ability to detect thoughts relates to personal privacy and mental illness. Finally, we will discuss the legal implications of these techniques, such as their use in lie detection or as evidence against legal culpability.

**PSYCH 10. Introduction to Statistical Methods: Precalculus. 5 Units.**

Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages.

Same as: STATS 60, STATS 160

**PSYCH 10N. Kids, Culture, and Poverty: From Biology to Social Action. 3 Units.**

Years before they set foot in school, children growing up in poor families begin to diverge from children in richer families in their trajectories of cognitive and language growth. These differences have powerful and enduring consequences for the health, well-being, educational success, and longevity of individuals, as well as for the future prosperity of the societies in which children become adults. Early childhood is a time of both enormous promise and considerable risk, and parents in different cultures have widely differing practices and beliefs about their role in enabling children to avoid risk and achieve their potential. In this seminar we will evaluate evidence from the biological and social sciences showing how positive and negative experiences in infancy have profound and enduring effects on early brain architecture, with cascading consequences for later development in childhood and adulthood. We will also consider the challenges of designing more effective programs and social policies to provide support for families in diverse cultural contexts, with the goal of helping more children to reach their full potential.

**PSYCH 11N. Origin of Mental Life. 3 Units.**

Preference to freshmen. Mental life in infancy; how thinking originates. How do babies construe the objects, events, people, and language that surround them? Recent advances in psychological theory, hypotheses, and evidence about how the infant human mind develops.

**PSYCH 12N. Self Theories. 3 Units.**

Preference to freshmen. The impact of people's belief in a growing versus fixed self on their motivation and performance in school, business, sports, and relationships. How such theories develop and can be changed.

**PSYCH 13N. Emotion Regulation. 2 Units.**

This seminar provides a selective overview of the scientific study of emotion regulation. Topics include: theoretical foundations, cognitive consequences, developmental approaches, personality processes and individual differences, and clinical and treatment implications. Our focus is on interesting, experimentally tractable ideas. Meetings will be discussion based.

**PSYCH 13S. Dynamical models of mental processes: Development, analysis, and simulation. 2 Units.**

Mathematical modeling has been a critical component in modern psychological and cognitive neuroscience research on the dynamics of mental processes. This course is designed to equip the new generation of such scientists with tailored mathematical knowledge to develop models of their own. I will use classical models and my own experience in modeling decision making as examples to demonstrate the process from vague ideas to the development, refinement, analysis and simulation of dynamical models. Along the way, systematic knowledge in differential equations, numerical methods, principle component analysis etc will be provided to facilitate the general ground for future models of students' choosing. Open to graduate students and advanced undergraduates.

**PSYCH 15N. Interpersonal Influence. 3 Units.**

This course will examine how individuals influence each other, both intentionally as well as nonconsciously. The focus will be on individuals in dyads rather than in groups. We will examine a) subtle interpersonal influence processes such as nonverbal communication, b) structural sources of interpersonal influence such as gender, race, social class, and culture, and c) interpersonal influence within different relationships such as organizational and romantic relationships. Familiarity with technology and video editing is useful. Students will have the opportunity to make brief podcasts and iMovie videos, as weekly responses to readings, as well as for the final class project.

**PSYCH 16N. Amines and Affect. 3 Units.**

Preference to freshmen. How serotonin, dopamine, and norepinephrine influence people's emotional lives. This course is ideal for students that would like to get deeper exposure to cutting edge concepts and methods at the intersection of psychology and biology, and who plan to apply their knowledge to future research.

**PSYCH 17N. Language and Society: How Languages Shape Lives. 3 Units.**

Do people who speak different languages think differently? What role does language play in politics, law, and religion? The role of language in individual cognition and in society. Breaking news about language and society; the scientific basis for thinking about these broad issues.

**PSYCH 20N. How Beliefs Create Reality. 3 Units.**

This seminar will take an interdisciplinary approach to exploring how subjective aspects of the mind (e.g., thoughts, beliefs, and expectations) can fundamentally change objective reality. Over the course of the semester, students will be challenged to think critically about research from psychology, sociology, and medicine, which suggests that what we think, believe and expect plays a significant role in determining our physical health, performance and well-being. Students will explore research on how mindsets about nutrition, exercise, and stress can alter the body's response to those phenomena. Students will also uncover how social interactions with friends, family, colleagues and the media influence the perceived quality and impact of cultural products such as art, music, and fashion. And students will learn about the neurological and physiological underpinnings of the placebo effect, a powerful demonstration of expectation that produces real, healing changes in the body. Finally, students will have the opportunity to consider real world applications in disciplines including policy, business, medicine, academics, athletics and public health and consider the ethical implications of those applications. Throughout the class active participation and an open mind will be critical to success. The final weeks of class will be dedicated to student designed studies or interventions aimed to further explore the power of self-fulfilling prophecies, placebo effects, and the social-psychological creation of reality.

**PSYCH 25N. Psychology, Inequality, and the American Dream. 3 Units.**

Despite legal prohibitions against discrimination and the fact that many people endorse egalitarian values, inequality persists in America. What role do psychological factors play in perpetuating inequality? How can psychologically "wise" reforms promote equal opportunity? Topics include prejudice and discrimination, school achievement, social class, and race/ethnicity.

**PSYCH 26N. Language Acquisition: Exploring the Minds of Children. 3 Units.**

Language is an extraordinary competence distinguishing humans from other species, yet there is debate about the role of biology in guiding language acquisition. Does language development follow an innate "bioprogram" or does it build on more general cognitive abilities, influenced by early experience? Topics include biological and experiential influences on the emergence of linguistic ability as children learn a first language. Discussions of theory and research, visits to Stanford laboratories and observations of very young language learners.

**PSYCH 27N. The Psychology of Prejudice. 3 Units.**

Preference to freshmen. Social psychological theories and research on stereotypes, prejudice, discrimination, and racism. Psychological perspectives include those emphasizing personologic, cognitive, motivational, and sociocultural contributions to prejudice. Emphasis is on applying each approach to understanding real-world contexts such as educational and occupational contexts, and to the implications of this research for efforts to reduce prejudice and discrimination.

**PSYCH 29N. Growing Up in America. 3 Units.**

Preference to freshmen. To what extent is it possible to describe an "American" experience? How are different people included in or excluded from the imagined community that is America? How do a person's race, class, gender and sexuality affect his or her experience of belonging to this country? These are just some of the questions we will consider as we familiarize ourselves with the great diversity of childhood and young adult experiences of people who have grown up in America. We will read and discuss narratives written by men and women, by urban, suburban, and rural Americans, and by Asian Americans, African Americans, Native Americans, Latina/os, and European Americans.

**PSYCH 30. Introduction to Perception. 3 Units.**

Behavioral and neural aspects of perception focusing on visual and auditory perception. Topics include: scientific methods for studying perception, anatomy and physiology of the visual and auditory systems, color vision, depth perception, motion perception, stereopsis, visual recognition, pitch and loudness perception, speech perception, and reorganization of the visual system in the blind.

**PSYCH 35. Minds and Machines. 4 Units.**

An overview of the interdisciplinary study of cognition, information, communication, and language, with an emphasis on foundational issues: What are minds? What is computation? What are rationality and intelligence? Can we predict human behavior? Can computers be truly intelligent? How do people and technology interact, and how might they do so in the future? Lectures focus on how the methods of philosophy, mathematics, empirical research, and computational modeling are used to study minds and machines. Undergraduates considering a major in symbolic systems should take this course as early as possible in their program of study.

Same as: LINGUIST 144, PHIL 99, SYMSYS 100

**PSYCH 45. Introduction to Learning and Memory. 3 Units.**

The literature on learning and memory including cognitive and neural organization of memory, mechanisms of remembering and forgetting, and why people sometimes falsely remember events that never happened. Cognitive theory and behavioral evidence integrated with data from patient studies and functional brain imaging. Recommended: 1.

**PSYCH 50. Introduction to Cognitive Neuroscience. 4 Units.**

Survey of topics relating brain activity to cognitive processes and behavior. The course begins with an overview of neurophysiology and techniques to measure brain activity. We then discuss perceptual and motor processes before investigating neural responses related to attention, memory, and cognitive control. The course concludes with a discussion of brain processes related to reward, decision making, and social cognition.

**PSYCH 60. Introduction to Developmental Psychology. 4 Units.**

Psychological development from birth to adulthood, emphasizing infancy and the early and middle childhood years. The nature of change during childhood and theories of development. Recommended: PSYCH 1.

**PSYCH 60A. Introduction to Developmental Psychology Section. 2 Units.**

Guided observation of children age 2-5 at Bing Nursery School. Corequisite: 60.

**PSYCH 60B. Introduction to Developmental Psychology. 3 Units.**

Psychological development from birth to adulthood, emphasizing infancy and the early and middle childhood years. The nature of change during childhood and theories of development. This course is not a Writing in the Major course. For WIM credit, please register for Psych 60. nRecommended: PSYCH 1.

**PSYCH 70. Introduction to Social Psychology. 4 Units.**

Topics related to the influence of other people on individuals' thoughts, emotions, and behaviors. Factors that affect the way that we perceive ourselves and others; how people influence others; how persuasion happens; what causes us to like, love, help, or hurt others; and how social psychology helps to understand questions about law, business, and health. Fulfills WIM requirement.

**PSYCH 75. Introduction to Cultural Psychology. 5 Units.**

The cultural sources of diversity in thinking, emotion, motivation, self, personality, morality, development, and psychopathology.

**PSYCH 80. Introduction to Personality and Affective Science. 3 Units.**

How do we measure personality and emotion? What parts of your personality and emotions are set at birth? What parts of your personality and emotions are shaped by your sociocultural context? Can your personality and emotions make you sick? Can you change yours personality and emotions? There are questions we begin to address in this introductory course on personality and emotion. Prerequisite: Psych 1.

**PSYCH 90. Introduction to Clinical Psychology. 3 Units.**

History of clinical psychology, models and assessment of personality, behavior, cognition, psychopathology, and approaches to the treatment of abnormal behavior. Emphasis is on current theory, research, issues in, and the role of clinical psychology in contemporary society. Recommended: 1.

**PSYCH 95. Introduction to Abnormal Psychology. 3 Units.**

Theories of and approaches to understanding the phenomenology, etiology, and treatment of psychological disorders among adults and children. Research findings and diagnostic issues. Recommended: PSYCH 1.

**PSYCH 101. Community Health Psychology. 4 Units.**

Social ecological perspective on health emphasizing how individual health behavior is shaped by social forces. Topics include: biobehavioral factors in health; health behavior change; community health promotion; and psychological aspects of illness, patient care, and chronic disease management. Prerequisites: HUMBIO 3B or PSYCH 1, or equivalent. Same as: HUMBIO 128

**PSYCH 101S. Introduction to Neuroscience. 4 Units.**

Introduction to structure and function of the nervous system. The course first surveys neuroscience research methods, physiology, and gross anatomy. We then study the brain systems which produce basic functions such as perception and motion, as well as complex processes like sleep, memory, and emotion. Finally, we examine these principles in cases of neurological and psychiatric disorders.

**PSYCH 102. Longevity. 4 Units.**

Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists. Same as: HUMBIO 149L, NENS 202

**PSYCH 102S. Introduction to Neuroscience. 4 Units.**

Introduction to structure and function of the nervous system. The course first surveys neuroscience research methods, physiology, and gross anatomy. We then study the brain systems which produce basic functions such as perception and motion, as well as complex processes like sleep, memory, and emotion. Finally, we examine these principles in cases of neurological and psychiatric disorders.

**PSYCH 103. Intergroup Communication. 3 Units.**

In an increasingly globalized world, our ability to connect and engage with new audiences is directly correlated with our competence and success in any field How do our intergroup perceptions and reactions influence our skills as communicators? This course uses experiential activities and discussion sections to explore the role of social identity in effective communication. The objective of the course is to examine and challenge our explicit and implicit assumptions about various groups to enhance our ability to successfully communicate across the complex web of identity. Same as: CSRE 103

**PSYCH 103F. Intergroup Communication Facilitation. 1 Unit.**

This is a TA training course for Psych 103 - Intergroup Communication. Same as: CSRE 103F

**PSYCH 104. Uniquely Human. 3 Units.**

Are humans the only species that displays altruism, experiences uncertainty, and is capable of language and deception? Sources include empirical and theoretical papers in comparative psychology. Prerequisite: 1.

**PSYCH 104S. Affective Science. 3 Units.**

This course will provide an introduction to a growing field known as affective science, which focuses on the study of emotion and other related phenomena (i.e., motivation, pain, etc.). We will explore core questions in affective science, including: 1) What is emotion and why is it useful? 2) How do emotions influence the way we perceive, attend to, and understand the world? 3) How do emotions become dysfunctional, and how can individuals control them? We will attempt to approach these questions from multiple perspectives, including i) neurobiological ii) behavioral, and iii) sociocultural perspectives.

**PSYCH 105. Social Neuroscience. 4 Units.**

Over the last 20 years, neuroscientists have become increasingly interested in studying topics that were previously the purview of social psychologists. In this seminar, we will survey neuroimaging research on topics such as self perception, person perception, empathy, and social influence. More broadly, we will consider the contributions that neuroscience can (and cannot) make to social psychological theory. Students will be responsible for leading discussions and producing one in-depth review or research paper at the end of the quarter.

**PSYCH 105S. General Psychology. 3 Units.**

In what ways does the scientific study of psychology increase our understanding of the thoughts, feelings, and behaviors we observe and experience in everyday life? What are the main areas of psychology and the different questions they seek to answer? This course will give you an introduction to the field of psychology and its many different areas. You will learn about the central methods, findings, and unanswered questions of these areas, as well as how to interpret and critically evaluate research findings.

**PSYCH 106. Seminar on Visual Development. 3 Units.**

Describe basic development of visual system, introduce research methods/experimental designs, and present pathologies of visual development.

**PSYCH 107. Visual Processing of Faces. 2-3 Units.**

How do we perceive a face, recognize its identity or judge its subtle communicative cues (e.g. emotion or intention)? How does our ability to visually process faces develop with age and change throughout our life span? What is the role of nature vs. nurture in this development? How do social attitudes, culture and face perception interact? In addressing these questions, we will learn about behavioral, electrophysiological and neuroimaging approaches to understanding face processing and critically examine the theories and original research that have defined the field. The course is designed to give you an in depth understanding of face processing while exposing you to methods and ideas that are useful in evaluating a wide range of cognitive neuroscience research.

**PSYCH 107S. Introduction to Social Psychology. 3 Units.**

A comprehensive overview of social psychology with in-depth lectures exploring the history of the field, reviewing major findings and highlighting areas of current research. Focus is on classic studies that have profoundly changed our understanding of human nature and social interaction, and, in turn, have triggered significant paradigm shifts within the field. Topics include: individuals and groups, conformity and obedience, attraction, intergroup relations, and judgment and decision-making.

**PSYCH 108. Longevity through Film. 3 Units.**

The media informs the understanding of life stages and shapes expectations about our futures. This course will explore the realities and fictions about life-span development through film. This course will revolve around selected films compared with the literature on life stages. Guest filmmakers, psychologists, sociologists and thought leaders will join the class to discuss human development.

**PSYCH 108S. Introduction to Social Psychology. 3 Units.**

This course aims to blend a comprehensive overview of social psychology with in-depth lectures exploring the history of the field, reviewing major findings and highlighting areas of current research. The course will focus on classic studies that have profoundly changed our understanding of human nature and social interaction, and, in turn, have triggered significant paradigm shifts within the field. Some of the topics covered in this class will include: individuals and groups, conformity and obedience, attraction, intergroup relations, and judgment and decision-making. The course, overall, will attempt to foster interest in social psychology as well as scientific curiosity in a fun, supportive and intellectually stimulating environment.

**PSYCH 109S. Introduction to Cognitive Neuroscience. 3 Units.**

3) Introduction of the neurobiology of behavior including the biology of nervous system, the neural basis for perception, learning, memory, decision making and neurological disorders. Introduction to different research techniques that are prevalent in current neuroscience studies including fMRI, EEG, TMS and single unit recording.

**PSYCH 110. Research Methods and Experimental Design. 5 Units.**

Structured research exercises and design of an individual research project. Prerequisite: consent of instructor.

**PSYCH 111S. Abnormal Psychology. 3 Units.**

This course will provide an introduction to abnormal psychology. It will be targeted towards students who have had little or no exposure to coursework on mental disorders. The course will have three core aims: 1) Explore the nature of mental disorders, including the phenomenology, signs/symptoms, and causal factors underlying various forms of mental illness, 2) Explore conventional and novel treatments for various mental disorders, 3) Develop critical thinking skills in the theory and empirical research into mental disorders. The course will explore a wide range of mental disorders, including depression, anxiety, schizophrenia, addiction, eating disorders, and personality disorders.

**PSYCH 113S. Developmental Psychology. 3 Units.**

This class will introduce students to the basic principles of developmental psychology. As well as providing a more classic general overview, we will also look towards current methods and findings. Students will gain an appreciation of how developmental psychology as a science can be applied to their general understanding of children and the complicated process of growing into adults.

**PSYCH 115S. Personality Psychology. 3 Units.**

This course will focus on current empirical and theoretical approaches to personality. Lectures will be organized around the following questions central to personality research: How and why do people differ? How do we measure individual differences? Does personality change over time? How does personality interact with sociocultural factors to influence behavior? What makes people happy? What are the physical, mental, and social consequences of personalities?

**PSYCH 118F. Literature and the Brain. 5 Units.**

Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer?. Same as: ENGLISH 118, ENGLISH 218, FRENCH 118, FRENCH 318

**PSYCH 119. Psychology and Public Policy. 5 Units.**

Applications of psychology to public and social policy. Factors that affect the influence of psychological research and individual psychology on the creation of policy, and the influence of policy on attitudes and behavior at the personal and societal levels. Topics include education, health care, and criminal justice.

**PSYCH 119S. The Psychology of Stigma. 3 Units.**

What obese people, African Americans, people with physical disabilities, lesbians, and Muslims have in common: social stigma. The social and psychological experiences of individuals living with social stigmas. Classic and current theory and research. Topics include: function, nature, and types of stigma; how stigmatized individuals view their identities and cope; mental and cognitive consequences; and interactions between stigmatized and non-stigmatized. Literature employing research methods including neuroimaging and social interaction studies.

**PSYCH 120. Cellular Neuroscience: Cell Signaling and Behavior. 4 Units.** Neural interactions underlying behavior. Prerequisites: PSYCH 1 or basic biology.  
Same as: BIO 153

**PSYCH 121. Ion Transport and Intracellular Messengers. 1-3 Unit.** (Graduate students register for 228.) Ion channels, carriers, ion pumps, and their regulation by intracellular messengers in a variety of cell types. Recommended: 120, introductory course in biology or human biology.  
Same as: PSYCH 228

**PSYCH 124S. Applying Psychology to Modern Life. 3 Units.** A scientific examination of everyday modern life. Topics include: how research on attention and memory can be applied to improve study strategies; how advertisers persuade and how their techniques can be resisted; how interpersonal conflicts can be avoided through knowledge of common errors in judging other people; and how studies on attraction and love can improve close relationships.

**PSYCH 125S. Language and Thought. 3 Units.** How are we able to produce and comprehend language in all its complexity? How does language processing interact with other parts of cognition? In this course, we will focus on several main themes: language production and comprehension, discourse, language acquisition, bilingualism, and linguistic relativity. We will explore these themes through lecture, demonstrations, analysis of empirical work, and student-led discussion. Special attention will also be given to the various experimental methods we use to conduct psycholinguistic and developmental research (e.g., self-paced reading, eye-tracking, cross-modal priming, and neural imaging).

**PSYCH 129. Happiness, Well-Being, Gender. 1-3 Unit.** Exploring the meaning and attainment of psychological well-being and happiness, this course will address gender differences in well-being and approaches that can be used by all individuals to improve their state of happiness and well-being. Course literature will be drawn primarily from social, clinical, and positive psychology, but will be drawn from other disciplines as well. Students will actively engage with course material by critiquing studies, discussing research, and applying methods for improving well-being to their daily lives.  
Same as: FEMGEN 156

**PSYCH 130. Experimental Pragmatics. 3 Units.** How do we understand language as it is used in context? Pragmatic reasoning allows us to go beyond the literal semantics of what someone says to infer what they actually meant. This course will be an in-depth investigation of recent experimental work on pragmatics. Students will read the primary research literature as they learn the skills necessary to develop and run an original experiment investigating our pragmatic inference abilities. Required: Psych 131, Linguist 130A, Linguist 188, or permission of instructor.

**PSYCH 130A. NARRATIVE PSYCHOLOGY. 3 Units.** This is an exploration of how human experience is remembered, organized, and transformed through stories people tell about their lives. Through a multicultural perspective we examine how narrative approaches in human development and health care offer promising ways to psychological and social wellness. We integrate transdisciplinary scholarship, traditional cultural wisdom, and self-reflective, experiential learning to connect our academic work with our personal lives.

**PSYCH 130S. Positive Psychology: Happiness & Well-Being. 3 Units.** Exploring the meaning and attainment of psychological well-being and happiness, this course investigates approaches that can be used by all individuals to improve their state of happiness and well-being. Course literature is drawn primarily from social, clinical, and positive psychology, but is also drawn from other disciplines as appropriate. In this course, students will actively engage with course material by critiquing studies, discussing research, and applying methods for improving well-being to their daily lives.

**PSYCH 131. Language and Thought. 4 Units.** The psychology of language including: production and understanding in utterances; from speech sounds to speaker's meaning; children's acquisition of the first language; and the psychological basis for language systems. Language functions in natural contexts and their relation to the processes by which language is produced, understood, and acquired. Prerequisite: 1 or LINGUIST 1.  
Same as: LINGUIST 131, PSYCH 262

**PSYCH 132S. The Neglected Senses: Hearing, Touch, Smell and Taste. 3 Units.** Whereas psychology and neuroscience have made great strides in understanding how we perceive the world through all five of our senses, most undergraduate courses focus primarily on vision. The most popular undergraduate perception textbooks devote less than half of their pages to all four other senses. This course will be devoted to these neglected senses: hearing, taste, olfaction and touch. The course will provide answers for the following questions: What stimuli activate the senses of hearing, taste, olfaction and touch? How do we detect that these stimuli are there? How does the brain process information from the senses? How do the senses affect each other? And what can we learn from studying people's behavior alone (using psychological methods)?

**PSYCH 134. Seminar on Language and Deception. 3 Units.** Deceptive, exploitative, and other noncooperative uses of language. How is language used to deceive or exploit? Where are these techniques practiced and why? What are the personal, ethical, and social consequences of these practices? Prerequisite: 131, LINGUIST 1, or PHIL 181.  
Same as: LINGUIST 134

**PSYCH 134S. The Art and Science of Emotional Intelligence. 3 Units.** Emotional intelligence has been promoted as essential in finding meaning and fulfillment in our work and relationships. This course is designed to provide an introduction to research and theory on emotional intelligence as a relatively new concept in psychology that has profound influence in education, health, and business. We will critically review it as a scientific concept, looking at the research and the biological bases for emotional intelligence. We will then explore its four basic areas of self understanding, self management, social understanding, and social management. For each area we will engage in self reflection and learn and practice ways of enhancing our emotional intelligence.

**PSYCH 136S. Learning and Memory: Theory and Applications. 3 Units.** Introduction to learning and memory, including the ways that our past influences our present through multiple memory systems, the ways in which memory not only can succeed but also can fail, and how memory integrity changes across the lifespan and across clinical populations. Special emphasis on applications of theoretical content to the real world technologies, policies, and diseases that touch our everyday lives.

**PSYCH 138. Wise Interventions. 4 Units.** Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy.  
Same as: PSYCH 238, PUBLPOL 238

**PSYCH 138S. Motivation to Learn. 3 Units.**

Why do some students delight at the thought of challenging tasks while others only care about getting the grade? Why do some seek out opportunities to learn in and out of school while others feel anxious just showing up to class? Why do our failures sometimes debilitate and other times invigorate? How do we turn our desires to achieve into concrete action? Where do these motivational processes come from and how might we use our understanding of motivation to improve educational systems? This course will address these and other fascinating questions as we consider theory and research on motivation, primarily as it applies to educational contexts. The course will be based largely around interactive discussions of primary source articles, with some lecture in order to provide you with important background information and a framework for discussing the readings.

**PSYCH 139S. Psychology of Women. 3 Units.**

Women comprise half of the human population, yet throughout much of history, the study of human thought and behavior has been largely male focused. In fact, some of the earliest psychological studies of women were conducted primarily to argue for the evolutionary supremacy of men. During the past fifty years, the field of psychology has made significant strides towards considering women and men equally worthy subjects of inquiry. In this course, we will discuss this growing body of research related to gender and the female experience. We will focus on six main themes: social and biological approaches to studying gender, evidence for gender similarities and differences, gender stereotypes and sexism, gender and language use, women in the workplace, and female sexuality. We will explore these themes through lectures, in class demonstrations, analysis of empirical work, and student led discussion.

**PSYCH 140S. Sport Psychology. 3 Units.**

Focus is on research methods and findings and how to apply these findings to students' own performance. Topics include methods of performance enhancement, psychological characteristics of top performers, group dynamics and processes, effective leadership practices, the effects of stereotyping on sport participation and performance, and debates in the field. Emphasis will be on sports, although most topics can be applied to performance in general.

**PSYCH 141. Cognitive Development. 3 Units.**

How children's thinking and mental abilities change from infancy on. The major theories and explanations of intellectual growth. Sources include classic findings and state-of-the-art research on cognitive development. Prerequisite: 1.

**PSYCH 141S. Health Psychology. 3 Units.**

Why is it so difficult for people to stick to an exercise plan? Why don't people take their doctor's advice? Why aren't public health announcements more effective? This course addresses these questions by providing an overview of health psychology: the scientific study of behaviors and cognitive processes related to health states. In this course, we will discuss the mind/body connection, the influence of social/cultural and physical environments on our health, cognitive processing of health information, health belief models, and the link between emotion and health. Understanding the interactions between these biological, psychological, and social influences on individuals' health states is crucial for developing effective health communication and intervention programs. We will approach all course topics from both theory-driven and applied perspectives.

**PSYCH 142S. The Psychology of Social Media. 3 Units.**

People interact with the world around them largely through mediated means – internet, television, radio, etc. This course will survey current social media – e.g. Facebook, Twitter, YouTube, etc – and popular culture in order to highlight the psychological processes at play. Topics will include: social belonging, interpersonal attraction, identity, bias, and cyberbullying. Students will be expected to learn how to study social media and popular culture using psychological methods.

**PSYCH 143. Developmental Anomalies. 3 Units.**

For advanced students. Developmental disorders and impairments. What the sparing of mental abilities in otherwise devastating disorders (or vice versa) tells about the mind and its development in the normal case. Examples of disorders and impairments: autism, congenital blindness, deafness, mental retardation, attachment disorder, and Williams syndrome. Limited enrollment. Prerequisite: consent of instructor.

**PSYCH 143S. The Psychology of Mean Girls. 3 Units.**

This course examines the phenomenon of relational aggression and its implications on girls' lives and relationships. Using the theoretical lenses of moral and social psychology, we will consider how girls experience relational aggression and how it affects their friendships and other social negotiations. While adolescents will be the main focus group, examples from college-age and older girls will also be considered. Classwork will include case studies, reflection papers, and a final research paper on a related topic of the students' choice.

**PSYCH 145. Seminar on Infant Development. 1-2 Unit.**

For students preparing honors research. Conceptual and methodological issues related to research on developmental psycholinguistics; training in experimental design; and collection, analysis, and interpretation of data.

**PSYCH 146. Observation of Children. 3-5 Units.**

Learning about children through guided observations at Bing Nursery School, Psychology's lab for research and training in child development. Physical, emotional, social, cognitive, and language development. Recommended: 60.

**PSYCH 147. Development in Early Childhood. 3-5 Units.**

Supervised experience with young children at Bing Nursery School. 3 units require 4 hours per week in Bing classrooms throughout the quarter; 4 units require 7 hours per week; 5 units require 10.5 hours per week. Seminar on developmental issues in the Bing teaching/learning environment. Recommended: 60 or 146, or consent of instructor.

**PSYCH 149. The Infant Mind: Cognitive Development over the First Year. 3 Units.**

How do babies learn so much in so little time? Emphasis is on cognitive and perceptual development, and the relationship between brain and behavior in infancy. Prerequisite: 1. Recommended: 60 or 141.

**PSYCH 150. Race and Crime. 3 Units.**

The goal of this course is to examine social psychological perspectives on race, crime, and punishment in the United States. Readings will be drawn not only from psychology, but also from sociology, criminology, economics, and legal studies. We will consider the manner in which social psychological variables may operate at various points in the criminal justice system- from policing, to sentencing, to imprisonment, to re-entry. Conducted as a seminar.

**PSYCH 150B. RACE AND CRIME PRACTICUM. 2-4 Units.**

This practicum is designed to build on the lessons learned in Psych 150. Students will be assigned to internships relevant to race and crime. Prerequisite: Psych 150.

**PSYCH 151. Emotion Regulation and Psychopathology. 3 Units.**

A broad overview of specific emotion regulation impairments in various psychopathologies and discussion of how current treatment protocols are likely to aid recovery by forming more adaptive emotion regulation ability. Topics include: Foundations and Emotion regulation models, Emotion regulation impairments in Mood disorders (Unipolar Depression and Bipolar Disorder), Anxiety disorders (Social Phobia, Post Traumatic Stress Disorder, General Anxiety Disorder), Eating disorders (Anorexia and Bulimia Nervosa), and Personality Disorders (Narcissistic Personality Disorder, Borderline Personality Disorder).

**PSYCH 152. Mediation for Dispute Resolution. 3 Units.**

Mediation as more effective and less expensive than other forms of settling disputes such as violence, lawsuits, or arbitration. How mediation can be structured to maximize the chances for success. Simulated mediation sessions.

Same as: EDUC 131

**PSYCH 152F. Doing Race and Ethnicity: How and Why it Matters. 3 Units.**

Going to school and work, renting an apartment, going to the doctor, watching television, voting, reading, and attending religious services are all activities that involve doing, consciously or unconsciously, race and ethnicity. In this course, we draw from history, psychology, genetics, and literary studies to understand contemporary racial formations and cultural representations. Course will include two 50-minute lectures with a required online discussion section. Enrollment capped at 20 students.

**PSYCH 154. Judgment and Decision-Making. 3 Units.**

Survey of research on how we make assessments and decisions particularly in situations involving uncertainty. Emphasis will be on instances where behavior deviates from optimality. Overview of recent works examining the neural basis of judgment and decision-making.

**PSYCH 155. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.**

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section.

Same as: COMPLIT 195, CSRE 196C, ENGLISH 172D, SOC 146, TAPS 165

**PSYCH 157. Social Foundations of Expertise and Intelligence. 3 Units.**

Psychological conceptions of expertise, ability, and intelligence and the research methods used to study these attributes. Topics include: research on how expertise in a diverse set of disciplines is developed; the role of practice in nurturing expertise; whether intelligence predicts life outcomes; the genetic and environmental determinants of intelligence; whether genes or environment explain racial differences such as the Black-White performance gap and the East Asian achievement advantage; and the Flynn effect.

**PSYCH 158. Emotions: History, Theories, and Research. 1-3 Unit.**

Graduate students register for 259. Theoretical and empirical issues in the domain of emotions. The history of emotion theories, current approaches, and the interaction between emotion and cognition.

Same as: PSYCH 259

**PSYCH 159. Psychology of Attitude Change and Social Influence. 3 Units.**

Review of classic and current research on attitudes, attitude change and persuasion. Increase appreciation for the ways that our thoughts, actions, and feelings are shaped and manipulated by social influences.

**PSYCH 161. Emotion. 3 Units.**

(Graduate students register for 261.) The scientific study of emotion. Topics: models of emotion, emotion antecedents, emotional responses (facial, subjective, and physiological), functions of emotion, emotion regulation, individual differences, and health implications. Focus is on experimentally tractable ideas.

Same as: PSYCH 261

**PSYCH 164. Brain decoding. 3 Units.**

Can we know what someone is thinking by examining their brain activity? Using knowledge of the human visual system and techniques from machine learning, recent work has shown impressive ability to decode what people are looking at from their brain activity as measured with functional imaging. The course will use a combination of lectures, primary literature readings, discussion and hands-on tutorials to understand this emerging technology from basic knowledge of the perceptual (primarily visual) and other cognitive systems (such as working memory) to tools and techniques used to decode brain activity. Prerequisites: Either Psych 30 or Psych 50 or Consent of Instructor.

**PSYCH 167. Seminar on Aggression. 3 Units.**

The causes and modification of individual and collective aggression. Major issues in aggression: social labeling of injurious conduct, social determinants of aggression, effects of the mass media, institutionally sanctioned violence, terrorism, psychological mechanisms of moral disengagement, modification of aggressive styles of behavior, and legal sanctions and deterrence doctrines.

**PSYCH 169. Advanced Seminar on Memory. 3 Units.**

Memory and human cognition. Memory is not a unitary faculty but consists of multiple systems that support learning and remembering, each with its own processing characteristics and neurobiological substrates. This advanced undergraduate seminar will consider recent discoveries about the cognitive and neural architectures of working, declarative, and nondeclarative memory. Required: 45.

**PSYCH 170. The Psychology of Communication About Politics in America. 4-5 Units.**

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.

Same as: COMM 164, COMM 264, POLISCI 124L

**PSYCH 171. Research Seminar on Aging. 4 Units.**

Two quarter practicum exposes students to multiple phases of research by participating in a laboratory focusing on social behavior in adulthood and old age. Review of current research; participation in ongoing data collection, analysis, and interpretation. Prerequisites: 1, research experience, and consent of instructor. May be repeated for credit.

**PSYCH 175. Early Learning and Social Cognition. 3 Units.**

Social cognition, the ability to perceive others, understand their behaviors, and reason about their thoughts, is a critical component of what makes us human. In what ways does this ability help young children learn about the world, and what can science tell us about the representations and the inferential processes that underlie early learning? This course will explore various topics on social cognition with an emphasis on (but not limited to) developmental perspectives, including face perception, action understanding, and Theory of Mind, and encourage students to think about how these abilities might be linked to the developmental changes in children's understanding of the world. Another goal of the course is to offer an insight into the fundamental questions that have motivated psychological research on social cognition, and the value of developmental methods in addressing these questions. Students should expect to read, present, and discuss theoretical and empirical research articles and to develop original research proposals as a final project. Students will have an opportunity to develop their proposals into a research project in PSYCH 187, a lab course offered in Spring as a sequel to this course. This course fulfills the WIM requirement. Prerequisites: Psych60 or Psych141.

**PSYCH 178. New Methods for Old Questions: Linking Social Cognition and Social Cognitive Neuroscience. 3 Units.**

Novel technology can fuel new discoveries and generate new questions for future research. For instance, looking-time methods for studying infants or response time (RT) measures in cognitive psychology have been enabled by the use of computers and video cameras. More recently, neuroimaging techniques (such as fMRI) have transformed the field by offering a more direct look into the working human brain. These methods are, in a way, *old* and *new* ways of studying what psychologists want to study *mental representations*. What are the promises and challenges of using these methods to study human cognition and its development? What have we learned, where have we fallen short, and why? Most importantly, how can we make the most out of these new methods to bear on our understanding of social cognition and its development? After the first two weeks of lectures on basic methods, each week we will consider a topic that has been extensively studied in cognitive development literature. Topics will include: perception of agency, theory of mind, and morality; on each topic, we will compare two different ways of studying mental representations *the old way* (behavior) and the *new way* (neural response) to assess their relative benefits and shortcomings, and to discuss the promises and pitfalls for combining the two. This course will be a combination of lectures, presentations, and discussions aimed primarily for upper-class undergraduate students or graduate students who do not have much background in neuroimaging methods, but interested in learning more about neuroimaging methods and think about how these methods can (and cannot) help address questions about social cognition and development. Prerequisite: Psych60 or Psych141, or see instructor.

**PSYCH 179. The Psychology of Everyday Morality. 4 Units.**

(Graduate students register for 270.) For graduate students, coterm, and senior Psychology majors. Traditional approaches focusing on how morality colors mundane human activities such as eating and on morality as defined by actors themselves rather than social scientists. Moral hypocrisy, food and disgust, taboo trade-offs, moral reproach, and prejudice with compunction. Limited enrollment. Prerequisite: 70 and consent of instructor. Same as: PSYCH 270

**PSYCH 180. Social Psychological Perspectives on Stereotyping and Prejudice. 4 Units.**

The seminar will review classic and current literature from social psychology on stereotyping and prejudice. We will cover the perceiver's perspective including the formation and maintenance of stereotypes, the functions and costs of stereotyping, and stereotype change. We will also explore how targets are affected by stereotypes and prejudice, as well as intergroup relations. Recent research concerning the role of cognitive, affective, motivational and behavioral processes will be emphasized.

**PSYCH 182. Seminar in Applied Cognitive Development. 3 Units.**

Much is known about how children learn. But how can this knowledge be used to create effective, age-appropriate health and educational interventions for children? This course surveys research in basic and applied cognitive development. Students will then have the opportunity to design an intervention for young children based on what they've learned. Recommended: Psych 60 or Psych 141.

**PSYCH 183. SPARQshop: Social Psychological Answers to Real-world Questions. 2 Units.**

Research, develop, and disseminate solutions to social problems in real-world settings such as police departments, schools, and hospitals. Get trained in research methods, community partnerships, mass media communication, data visualization, project management, and other useful skills. Must participate for credit for the full school year. Permission of instructor required.

**PSYCH 186. The Psychology of Everyday Morality. 3 Units.**

Recent literature on morality from a social psychological perspective. Topics include moral judgment, moral intuitions, moral hypocrisy, moral identity, moralization, moral reproach, shame and guilt, temptations, and self-regulation. Contemporary psychological research emphasizing descriptive approaches (what people actually do) rather than normative ones (what one should do). Same as: PSYCH 286

**PSYCH 187. Research Design, Implementation, and Communication in Cognitive Development. 3-4 Units.**

This course is offered primarily for students who have taken PSYCH175 (Winter) and wish to further develop their final papers into a research project. Students will learn how experiments are designed and conducted using young children as participants, whose task comprehension/compliance/attention span are all very different from adults. The goal of this course is to provide hands-on experiences in designing, creating, and adjusting stimuli/protocols, and through this process, help students understand how studying such populations, despite its difficulties, can help us answer some of the most interesting questions about the human mind. Students will experience all stages of designing and running an experiment with children within a structured time frame, and present their studies by presenting their work and writing a final paper at the end of the course. Students should expect to commit hours outside of class, for creating stimuli and collecting data. Prerequisites: PSYCH175, or see instructor.

**PSYCH 189. Stanford Center on Longevity Practicum. 3 Units.**

Student involvement in an interdisciplinary center aimed at changing the culture of human aging using science and technology. May be repeated for credit.

**PSYCH 190. Special Research Projects. 1-6 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**PSYCH 191. Special Research Projects in the Mind & Body Lab. 1-6 Unit.**

May be repeated for credit or for grade. Prerequisites: consent of instructor.

**PSYCH 192. Career and Personal Counseling. 3 Units.**

Theories and methods for helping people create more satisfying lives for themselves. Simulated counseling experiences. Same as: EDUC 134, EDUC 234

**PSYCH 193. Special Laboratory Research. 1-6 Unit.**

May be repeated for credit. Prerequisites: 1, 10, and consent of instructor.

**PSYCH 194. Reading and Special Work. 1-3 Unit.**

Independent study. May be repeated for credit. Prerequisite: consent of instructor.

**PSYCH 195. Special Laboratory Projects. 1-6 Unit.**

Independent study. May be repeated for credit. Prerequisites: 1, 10, and consent of instructor.

**PSYCH 196. Contemporary Psychology: Overview of Theory, Research, Applications. 3 Units.**

Capstone experience for juniors and seniors that bridges course work with research opportunities. Lectures representing the department's areas: social, personality, developmental, neuroscience, and cognitive psychology. Faculty present current research. Discussions led by advanced graduate students in the field represented by that week's guest. Students write research proposals. Small grants available to students to conduct a pilot study of their proposed research. Limited enrollment. Prerequisite: consent of instructor.

**PSYCH 196A. Advanced Psychology Research Methods. 3 Units.**

This course is designed for advanced psychology students familiar with basic research methods (Honors and Coterms) who wish to build on and develop more sophisticated, independent research skills. Topics will include research design and evaluation, introductory statistics and basic programming in R, logistics of running a study at Stanford (including online studies with Qualtrics and Amazon's Mechanical Turk), interpreting and writing up the results of statistical analyses, giving an academic presentation, and more. Students will gain hands on, pragmatic skills in each of these areas through individual and group projects and presentations, problem sets, and instructor and peer feedback. By the end of the course, students will have the knowledge and skills they need to develop and execute their own independent research project (e.g., their honors or coterms thesis project).

**PSYCH 197. Advanced Research. 1-4 Unit.**

Limited to students in senior honors program. Weekly research seminar, independent research project under the supervision of an appropriate faculty member. A detailed proposal is submitted at the end of Autumn Quarter. Research continues during Winter and Spring quarters as 198. A report demonstrating sufficient progress is required at the end of Winter Quarter.

**PSYCH 198. Senior Honors Research. 1-4 Unit.**

Limited to students in the senior honors program. Finishing the research and data analysis, written thesis, and presentation at the Senior Honors Convention. May be repeated for credit.

**PSYCH 199. Temptations and Self Control. 2 Units.**

(Graduate students register for 299.) Why do people do things that they come to regret? How can people minimize behavior such as exercise avoidance, angry words, overeating, unsafe sex, and dangerous driving? Sources include classical and current research from experimental psychology, neuroscience, behavioral economics, and neuroeconomics. Real-world applications. Same as: PSYCH 299

**PSYCH 201. Social Psychology Lecture Series. 3 Units.**

Required of social psychology graduate students. Guest lecturers from Stanford and other institutions. May be repeated for credit. (Miller).

**PSYCH 201S. Bayesian Data Analysis for Psychologists. 3 Units.**

Why do some students delight at the thought of challenging tasks while others only care about getting the grade? Why do some seek out opportunities to learn in and out of school while others feel anxious just showing up to class? Why do our failures sometimes debilitate and other times invigorate? How do we turn our desires to achieve into concrete action? Where do these motivational processes come from and how might we use our understanding of motivation to improve educational systems? This course will address these and other fascinating questions as we consider theory and research on motivation, primarily as it applies to educational contexts. The course will be based largely around interactive discussions of primary source articles, with some lecture in order to provide you with important background information and a framework for discussing the readings.

**PSYCH 202. Cognitive Neuroscience. 3 Units.**

Graduate core course. The anatomy and physiology of the brain. Methods: electrical stimulation of the brain, neuroimaging, neuropsychology, psychophysics, single-cell neurophysiology, theory and computation. Neuronal pathways and mechanisms of attention, consciousness, emotion, language, memory, motor control, and vision. Prerequisite: 207 or consent of instructor.

**PSYCH 203. MODELS OF LANGUAGE ACQUISITION. 3 Units.**

How do children learn to understand and produce their native language? Language acquisition is a core topic in cognitive science and has been a key test case for formal approaches. Topics include: learnability theory, grammatical approaches, connectionist models, and probabilistic models.

**PSYCH 204. Computation and cognition: the probabilistic approach. 3-4 Units.**

This course will introduce the probabilistic approach to cognitive science, in which learning and reasoning are understood as inference in complex probabilistic models. Examples will be drawn from areas including concept learning, causal reasoning, social cognition, and language understanding. Formal modeling ideas and techniques will be discussed in concert with relevant empirical phenomena.

**PSYCH 204A. Human Neuroimaging Methods. 3 Units.**

This course introduces the student to human neuroimaging using magnetic resonance scanners. The course is a mixture of lectures and hands-on software tutorials. The course begins by introducing basic MR principles. Then various MR measurement modalities are described, including several types of structural and functional imaging methods. Finally algorithms for analyzing and visualizing the various types of neuroimaging data are explained, including anatomical images, functional data, diffusion imaging (e.g., DTI) and magnetization transfer. Emphasis is on explaining software methods used for interpreting these types of data.

**PSYCH 204B. Computational Neuroimaging: Analysis Methods. 1-3 Unit.**

Neuroimaging methods with focus on data analysis techniques. Basic MR physics and BOLD signals. Methods for neuroimaging data using real and simulated data sets. Topics include: linearity of the fmri signal; time versus space resolution tradeoffs; noise in neuroimaging; correlation analysis; visualization methods; cortical reconstruction, inflation, and flattening; reverse engineering; can cognitive states be predicted from brain activation? Prerequisite: consent of instructor.

**PSYCH 205. Foundations of Cognition. 1-3 Unit.**

Topics: attention, memory, language, similarity and analogy, categories and concepts, learning, reasoning, and decision making. Emphasis is on processes that underlie the capacity to think and how these are implemented in the brain and modeled computationally. The nature of mental representations, language and thought, modular versus general purpose design, learning versus nativism. Prerequisite: 207 or consent of instructor. nOpen to Psychology PhD students only.

**PSYCH 206. Cortical Plasticity: Perception and Memory. 1-3 Unit.**

Seminar. Topics related to cortical plasticity in perceptual and memory systems including neural bases of implicit memory, recognition memory, visual priming, and perceptual learning. Emphasis is on recent research with an interdisciplinary scope, including theory, behavioral findings, neural mechanisms, and computational models. May be repeated for credit. Recommended: 30, 45.

**PSYCH 207. Professional Seminar for First-Year Ph.D. Graduate Students. 2-3 Units.**

Required of and limited to first-year Ph.D. students in Psychology. Major issues in contemporary psychology with historical backgrounds.

**PSYCH 207B. Professional Development Seminar in Psychology. 0-1 Units.**

For graduate students who wish to gain professional development skills to pursue an academic career. May be repeated for credit. Course is intended for second year Ph.D. student in Psychology but open to all years.

**PSYCH 208. Advanced Topics in Self-Defense. 1-3 Unit.**

Seminar. Threat to the self and how people deal with them. Readings from social psychological areas including social comparison, self-affirmation, self-completion, self-discrepancy, shame and guilt, terror management, dimensions of self-worth, self-regulation, self-presentation, psychophysiology, and moral identity. Enrollment limited to 15.

**PSYCH 209. Neural network and deep learning models for cognition and cognitive neuroscience. 4 Units.**

Models of cognitive and developmental processes and the brain basis of such processes, including perception, attention, memory, decision making, language processing, acting and thinking. Models considered will include neural network models including contemporary deep learning models, as well as other process models spanning a spectrum from abstract to neurally realistic. Relationships between such models and more abstract models of cognitive processes including probabilistic models will be explored. Students learn about classic models and carry out exercises in the first six weeks and will undertake projects and learn about recent developments during the last four weeks of the quarter. For advanced undergraduates and graduate students. Recommended: some familiarity with computer programming, differential equations, linear algebra, and/or probability theory, and courses in cognitive psychology and/or cognitive neuroscience.

**PSYCH 211. Developmental Psychology. 1-3 Unit.**

Prerequisite: 207 or consent of instructor.

**PSYCH 212. Social Psychology. 1-3 Unit.**

Classic studies in experimental social psychology. Group and group dynamics; compliance and social pressure; conformity, cooperation, conflict, and social dilemmas; attraction and preference; attitudes and attitude change; social comparison, emotion, and affiliation; dissonance, consistency, and self-justification; attribution and self-perception; judgment and decision making, motivation, automaticity, and culture.

**PSYCH 213. Affective Science. 3 Units.**

This seminar is the core graduate course on affective science. We consider definitional issues, such as differences between emotion and mood, as well as issues related to the function of affect, such as the role affect plays in daily life. We review autonomic, neural, genetic, and expressive aspects of affective responding. Later in the course we discuss the role of affect in cognitive processing, specifically how affective states direct attention and influence memory, as well as the role of affect in decision making. We will also discuss emotion regulation and the strategic control of emotion; the cultural shaping of emotional experience and regulation; disorders of emotion; and developmental trajectories of experience and control from early to very late life. Meetings are discussion based. Attendance and active participation are required. Prerequisite: 207 or consent of instructor.

**PSYCH 215. Mind, Culture, and Society. 3 Units.**

Social psychology from the context of society and culture. The interdependence of psychological and sociocultural processes: how sociocultural factors shape psychological processes, and how psychological systems shape sociocultural systems. Theoretical developments to understand social issues, problems, and polity. Works of Baldwin, Mead, Asch, Lewin, Burner, and contemporary theory and empirical work on the interdependence of psychology and social context as constituted by gender, ethnicity, race, religion, and region of the country and the world. Prerequisite: 207 or consent of instructor.

**PSYCH 216. Public Policy and Social Psychology: Implications and Applications. 4 Units.**

Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior will be discussed with reference to a range of public policy issues including education, public health, income and wealth inequalities, and climate change. Specific topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; stereotyping and stereotype threat, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; also the general problem of producing individual and collective changes in norms and behavior.

Same as: IPS 207B, PUBLPOL 305B

**PSYCH 216A. Statistics and data analysis in MATLAB. 1-3 Unit.**

This course will cover basic statistical principles that are widely useful for the analysis of neuroscience and behavioral data, such as error bars and confidence intervals, multivariate probability distributions, regression and classification, linear and nonlinear models, cross-validation, bootstrapping, and model selection. In each class, we will cover the theory behind a statistical principle and learn how to implement the principle efficiently in MATLAB. Example material can be found at <http://randomanalyses.blogspot.com>. Prerequisites: Familiarity with basic statistics and programming in MATLAB.

**PSYCH 217. Topics and Methods Related to Culture and Emotion. 1-3 Unit.**

Preference to graduate students. How cultural factors shape emotion and other feeling states. Empirical and ethnographic literature, theories, and research on culture and emotion. Applications to clinical, educational, and occupational settings. Research in psychology, anthropology, and sociology. May be repeated for credit.

**PSYCH 218. Early Social Cognitive Development. 1-3 Unit.**

Current literature on social and cognitive development in infancy emphasizing the interface between the two domains. May be repeated for credit. Prerequisite: consent of instructor.

**PSYCH 220. Special Topics in Cognitive Development. 1-3 Unit.**

In the last few years, research at the intersection of cognitive and social development has burgeoned, yielding unprecedented knowledge about the roots of the human (social) mind in infants and children. In this course, using an outstanding new volume edited by Susan Gelman and Mahzarin Banaji, we will discuss work that highlights the social nature of cognitive development (e.g., the degree to which social learning may account for uniquely human cognitive abilities) and that explores the early emergence of social knowledge and understanding (e.g., mental models of relationships, knowledge of good and bad, beliefs about ingroups and outgroups, and knowledge of other people's minds). Prerequisites: Psychology 207 or permission of instructor.

**PSYCH 220S. Temptations and Self Control. 3 Units.**

Why do people do things they come to regret, such as lack of exercise, angry words, overeating, unsafe sex, or dangerous driving? How can they minimize such behaviors? Sources include classical and current research from experimental psychology, neuroscience, behavioral economics, and neuroeconomics. Emphasis is on real-world applications.

**PSYCH 221. Applied Vision and Image Systems. 1-3 Unit.**

This course is an introduction to imaging technologies including hardware and the image processing pipeline. There is an emphasis on how these technologies accommodate the requirements of the human visual system. The course is intended for students interested in various aspects of imaging technologies, including: Digital cameras and displays; Image processing and compression; Image quality analysis; Human color, pattern and motion vision. The course consists of lectures, tutorials and a project. Lectures cover the tools used in digital imaging and image quality measurement. Tutorials and projects include extensive software simulations of the digital imaging pipeline. Some background in mathematics (linear algebra) and programming (Matlab) is valuable.

**PSYCH 222. From Classic Experiments to Cutting Edge Neuroimaging: The Functional Neuroanatomy of Visual Cortex. 1-3 Unit.**

We will discuss the fundamental organizational principles of the visual system starting by discussing classic papers in non-human primates and proceeding to discuss recent neuroimaging studies in humans. We will then examine how understanding these organizational principles has influenced mapping the functional organization of visual system. Finally, we will analyze neuroimaging datasets and examine how well one can evaluate and define visual areas in the human brains by understanding these principles.

**PSYCH 223. Social Norms. 3 Units.**

This course covers research and theory on the origins and function of social norms. Topics include the estimation of public opinion, the function of norms as ideals and standards of judgment, and the impact of norms on collective and individual behavior. In addition to acquainting students with the various forms and functions of social norms the course will provide students with experience in identifying and formulating tractable research questions.

**PSYCH 224. Research Topics in Emotion Regulation. 1 Unit.**

Current research findings and methods, ongoing student research, and presentations by visiting students and faculty. May be repeated for credit. Prerequisite: consent of instructor.

**PSYCH 225. Special Neuroscience Seminar with Dr. Shinobu Kitayama. 1-2 Unit.**

How will culture influence the human mind? Is culture a superficial overlay on the basic, universal computational machine called the mind? Alternatively, is culture a crucial constitutive element of the mind? If so, what are specific mechanisms underlying this constitution process? And what theoretical framework do we need to make a visible progress on these questions? More generally, how can we start discussing meaningfully and productively about various problematic dichotomies such as mind versus body, culture versus biology, and nurture versus nature? An emerging field of cultural neuroscience has the potential of addressing these and other important questions and thus bridging natural, behavioral, and social sciences of the human mind. This seminar reviews the field of cultural neuroscience. It starts with a discussion of some theoretical foundations of the field, including cultural psychology, cognitive and social neuroscience, evolutionary psychology, and population genetics (PART 1). We will then discuss several specific content domains with a focus on cross-cultural variations in brain responses (PART 2). The seminar will conclude with a discussion on gene x environment interaction in varying cultural contexts (PART 3). Students can take the seminar for credit. One unit for attending all five sessions, two units for all five sessions and a short paper.

**PSYCH 226. Models and Mechanisms of Memory. 1-3 Unit.**

Current topics in memory as explored through computational models addressing experimental findings and physiological and behavioral investigations. Topics include: explicit and implicit learning; role of MTL structures in learning and memory; and single versus dual processes approaches to recognition. May be repeated for credit.

**PSYCH 228. Ion Transport and Intracellular Messengers. 1-3 Unit.**

(Graduate students register for 228.) Ion channels, carriers, ion pumps, and their regulation by intracellular messengers in a variety of cell types. Recommended: 120, introductory course in biology or human biology. Same as: PSYCH 121

**PSYCH 231. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.**

The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.

Same as: COMM 339, POLISCI 421K

**PSYCH 232. Brain and Decision Making. 3 Units.**

Neuroeconomics combines experimental techniques from neuroscience, psychology, and experimental economics, such as electrophysiology, fMRI, eye tracking, and behavioral studies, and models from computational neuroscience and economics. May be repeated for credit. Prerequisite: consent of instructor.

**PSYCH 233. MATLAB and Psychtoolbox for the Behavioral Sciences. 1-3 Unit.**

Topics such as experiment design, stimulus presentation, counterbalancing, response collection, data analysis, and plotting. Programming experiments. Final project programming a complete behavioral experiment relevant to student's research.

**PSYCH 234. Topics in Depression. 1-3 Unit.**

Current research topics including epidemiology and phenomenology of affective disorders, psychological theories of depression, gender differences in affective disorders, cognitive and social functioning of depressed persons, psychobiology of affective disorders, depression in children, postpartum depression, suicide issues in the treatment of depression, and cultural aspects of affective disorders. Prerequisite: graduate standing in Psychology or consent of instructor. May be repeated for credit.

**PSYCH 235. Motivation and Emotion. 3 Units.**

This graduate seminar will take a social-cognitive perspective on motivation and emotion. Meetings will be discussion oriented, and each meeting will focus on a different question of theoretical and applied significance. Prerequisite: 207 or consent of instructor.

**PSYCH 236C. Seminar in Semantics: Modality and Conditionals. 4 Units.**

Discussion of theories of the semantics and pragmatics of modals and conditionals.

Same as: LINGUIST 236

**PSYCH 237. Mathematical Cognition. 2-4 Units.**

The course will examine the basis of numerical and mathematical abilities, and the acquisition and learning of mathematical skills, drawing on experimental and modeling studies. Topics will include numerosity, counting, basic arithmetic, and fractions, as well as algebraic and geometric reasoning as well as insight into mathematical and scientific problems. Roles of rules, procedures and symbolic, spatial, and sensory-motor representations; relationship between skill and understanding; nature of discovery and insight in mathematical reasoning; the relationship between insight and proof. Open to PhD and Masters students and to Juniors and Seniors who have completed an introductory level course in cognitive or developmental psychology.

**PSYCH 238. Wise Interventions. 4 Units.**

Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy.

Same as: PSYCH 138, PUBLPOL 238

**PSYCH 239. Formal and Computational Approaches in Psychology and Cognitive Science. 3 Units.**

Do psychology and cognitive science need formal theories and/or explicit computational models? What insights should such things provide? What is the proper relationship between different theoretical and modeling approaches? Between different levels or kinds of analysis? Where do informally stated theories fit in and what are the roles of formal and computational modeling approaches in relation to other less explicitly specified forms of theorizing? This seminar will explore these issues and compare different formal and computational model variants, especially connectionist and probabilistic models, within 3-4 different target domains. Possible target domains include categorization, property induction, causal learning, perceptual decision making, language acquisition, semantics and pragmatics, and mid-level vision.

**PSYCH 240. What Changes?. 3 Units.**

When children get older, they start to behave differently. What's changing? In other words, what specific mechanisms underlie different developmental correlations between age and behavioral competence. Of course, the answer (or more likely, answers plural) to this question will differ vastly from domain to domain, but are there generalizations that we can make about the ways that different factors affect behavior across domains - differences in developmental drivers for so-called "lower-level" tasks versus "higher-level" tasks, or age-related differences in the determinants of change during specific time periods? In this course, we'll try to get a handle on some of the extant proposals on these questions, and maybe offer some of our own.

**PSYCH 241. Probabilistic Models of Social Behavior and Affect. 4 Units.**

How do we reason about other people and ourselves? Is human behavior in social situations a set of ad-hoc and irrational responses—or can we understand humans as making rational inferences under uncertainty about the people they are interacting with? This project-based seminar will re-examine classic findings from social psychology and affective science through the lens of rational analysis and probabilistic models. In collaboration with instructors, students will develop projects focused on making testable theoretical models of classic tasks and literatures with the goal of creating a publishable end product. Phenomena under consideration include but are not limited to: cognitive dissonance, attribution theory, mindset theory, stereotyping, and emotion perception.

**PSYCH 243. General Development Seminar. 1-2 Unit.**

May be repeated for credit. Prerequisite: consent of instructors. Restricted to Developmental graduate students.

**PSYCH 244. Psychology of Aging. 1-3 Unit.**

Theory and research in gerontology. Normal and abnormal changes that occur in biological, cognitive, and psychological aging. Emphasis is on the environmental factors that influence the aging process. Prerequisite: graduate standing in Psychology or consent of instructor.

**PSYCH 245. Social Psychological Perspectives on Stereotyping and Prejudice. 3 Units.**

Classic and contemporary social psychological approaches to prejudice and stereotyping. Emphasis is on how stereotypes are employed and maintained, and the influence of stereotyping and prejudice on behavior in domains including education, employment, politics, and law. Limited enrollment.

**PSYCH 246. Cognitive and Neuroscience Friday Seminar. 1 Unit.**

Participant presentations. May be repeated for credit. Prerequisite: graduate standing in psychology or neuroscience program.

**PSYCH 247. Fundamentals of Neuroscience for Non-Life-Scientists. 2 Units.**

Human behavior and the human brain and how it enables perception, learning, decision making, planning, and action with a focus on how neuroscience may be presented or used in law, business, or education contexts. Neurotechnology and experimental methods used to conduct research.

**PSYCH 248. Reproducibility in Scientific Research. 3 Units.**

This seminar will discuss the ongoing reproducibility crisis in science and explore computational approaches to help enhance reproducibility. Topics will include null-hypothesis testing versus Bayesian approaches, statistical power, replication, cross-validation, and reproducible coding practices. In-class exercises will focus on computing practices such as version control, unit testing and validation, literate programming, and code reviews.

**PSYCH 249. Human Motivation. 1-3 Unit.**

Current research and theory including questions concerning the nature of human motives, intrinsic motivation, self-regulation, the roles of affect and cognition, and lifespan and cultural influences on motivation. Prerequisite: 207 or consent of instructors.

**PSYCH 249L. Workshop on Language and Social Reasoning. 1 Unit.**

To what extent can language use be treated as a special case of social cognition? The class will be based around visiting lectures by major researchers in this area, along with meetings to prepare for their visits by discussing key readings. May be repeated for credit. Same as: LINGUIST 249L

**PSYCH 250. High-Level Vision: Object Representation. 3 Units.**

(Formerly CS423 High-Level Vision: Behaviors, Neurons, and Computational Models) Interdisciplinary seminar focusing on understanding how computations in the brain enable rapid and efficient object perception. Covers topics from multiple perspectives drawing on recent research in Psychology, Neuroscience, Computer Science and Applied Statistics. Emphasis on discussing recent empirical findings, methods and theoretical debates in the field. Topics include: theories of object perception, neural computations underlying invariant object perception, how visual exemplars and categories are represented in the brain, what information is present in distributed activations across neural populations and how it relates to object perception, what modern statistical and analytical tools there are for multi-variate analysis of brain activations. Same as: CS 431

**PSYCH 251. Affective Neuroscience. 3 Units.**

Theory and research. Comparative and human research approaches map affective function to neuroanatomical and neurochemical substrates. Prerequisite: consent of instructor.

**PSYCH 252. Statistical Methods for Behavioral and Social Sciences. 1-6 Unit.**

For students who seek experience and advanced training in empirical research. Analysis of data from experimental through factorial designs, randomized blocks, repeated measures; regression methods through multiple regression, model building, analysis of covariance; categorical data analysis through two-way tables. Integrated with the use of statistical computing packages. Prerequisite: 10 or equivalent.

**PSYCH 253. Statistical Theory, Models, and Methodology. 3 Units.**

Practical and theoretical advanced data analytic techniques such as loglinear models, signal detection, meta-analysis, logistic regression, reliability theory, and factor analysis. Prerequisite: 252 or EDUC 257.

**PSYCH 254. Lab in Experimental Methods. 3 Units.**

Laboratory class in experimental methods for psychology, with a focus on technical/computer-based methods. Programming experience helpful although not required. Topics include data collection on the web, data management and data analysis.

**PSYCH 257. Individually Supervised Practicum. 3-5 Units.**

Satisfies INS requirements for curricular practical training. Relevant experience for graduate students as part of their program of study. May be repeated for credit. Prerequisites: graduate standing in Psychology, consent of adviser.nn (Staff).

**PSYCH 258. Graduate Seminar in Social Psychology Research. 1-3 Unit.**

For students who are already or are planning to become involved in research on social construal and the role that it plays in a variety of phenomena, notably the origin and escalation of conflict.

**PSYCH 259. Emotions: History, Theories, and Research. 1-3 Unit.**

Graduate students register for 259. Theoretical and empirical issues in the domain of emotions. The history of emotion theories, current approaches, and the interaction between emotion and cognition. Same as: PSYCH 158

**PSYCH 261. Emotion. 3 Units.**

(Graduate students register for 261.) The scientific study of emotion. Topics: models of emotion, emotion antecedents, emotional responses (facial, subjective, and physiological), functions of emotion, emotion regulation, individual differences, and health implications. Focus is on experimentally tractable ideas. Same as: PSYCH 161

**PSYCH 261A. Learning and Cognition in Activity. 3 Units.**

Methods and results of research on learning, understanding, reasoning, problem solving, and remembering, as aspects of participation in social organized activity. Principles of coordination that support cognitive achievements and learning in activity settings in work and school environments.

Same as: EDUC 295

**PSYCH 262. Language and Thought. 4 Units.**

The psychology of language including: production and understanding in utterances; from speech sounds to speaker's meaning; children's acquisition of the first language; and the psychological basis for language systems. Language functions in natural contexts and their relation to the processes by which language is produced, understood, and acquired. Prerequisite: 1 or LINGUIST 1.

Same as: LINGUIST 131, PSYCH 131

**PSYCH 263. Cognitive Neuroscience: Vision. 3 Units.**

Decision, categorization. Bayesian inference, working memory, attention, cognitive control, conscious perception and awareness. The neural basis for all of these cognitive functions have been extensively studied in the domain of vision. Why vision? Because a great deal of scientific inquiry has delineated both the behavioral and physiological aspects of basic sensory processing in vision. Because of this, cognitive neuroscience questions can be precisely formulated in the context of vision. As a result we have some of the best answers to the question of what neural mechanisms underlie cognitive functions in the domain of vision. The course will combine lectures and in-depth discussions of primary literature to develop key concepts in the neuroscience of vision and how these concepts have been built on to understand the neural basis of higher cognition.

**PSYCH 264. Moral Minds: What Can Moral Psychology Tell Us About Ethics. 2 Units.**

SAME AS LAW744. Recent psychological advances in our understanding of the cognitive and social origins of morality cast a new light on age-old questions about ethics, such as: How did our moral sense evolve in our species? How does it develop over our lifetime? How much does our culture, religion, or politics determine our moral values? What is the role of intuition and emotion in moral judgment? How "logical" is moral judgment? How do other people's moral choices affect us? Does character matter or is behavior entirely dictated by the situations we find ourselves in? If it is purely situational, are we morally responsible for anything? How far will we go to convince ourselves that we are good and moral? Barbara Fried and Benoit Monin will review empirical answers to these questions suggested by behavioral research, and lead discussions on their implications for ethics. Students enrolled in the course will be selected through an application process. The application can be found at <http://web.stanford.edu/~arnewman/MoralMinds.fb>, and is due at 11:59 p.m. on November 14, 2014.

Same as: ETHICSOC 304

**PSYCH 265. Social Psychology and Social Change. 2-3 Units.**

The course is intended an exploration of the major ideas, theories, and findings of social psychology and their applied status. Special attention will be given to historical issues, classic experiments, and seminal theories, and their implications for topics relevant to education. Contemporary research will also be discussed. Advanced undergraduates and graduate students from other disciplines are welcome. Interested students should contact Shannon Brady ([stbrady@stanford.edu](mailto:stbrady@stanford.edu)).

Same as: EDUC 371

**PSYCH 266. Current Debates in Learning and Memory. 1-3 Unit.**

Memory is not a unitary faculty, but consists of multiple forms of learning and remembering. The cognitive and neural architectures of memory, focusing on the application of functional brain imaging (primarily fMRI and ERP). Recommended: 45.

**PSYCH 267. Human Memory: Facts, Fallacies, and Fragile Powers. 1-3 Unit.**

Seminar. Applications of memory concepts in everyday life and in social and clinical settings. Topics include personal identity, childhood amnesia, autobiographic memory, emotions and memory, memory distortions, illusions, self-serving biases, recovery of repressed memories, false memories, implicit memories, and unconscious influences on social behavior, with applications to psychopathology.

**PSYCH 269. Graduate Seminar in Affective Science. 1 Unit.**

May be repeated for credit. Prerequisite: graduate standing in Psychology. (Gotlib).

**PSYCH 270. The Psychology of Everyday Morality. 4 Units.**

(Graduate students register for 270.) For graduate students, coterm, and senior Psychology majors. Traditional approaches focusing on how morality colors mundane human activities such as eating and on morality as defined by actors themselves rather than social scientists. Moral hypocrisy, food and disgust, taboo trade-offs, moral reproach, and prejudice with compunction. Limited enrollment. Prerequisite: 70 and consent of instructor.

Same as: PSYCH 179

**PSYCH 271. Writing About Psychology. 3 Units.**

Writing clear and compelling prose is a vital skill for any psychologist, but one that is often not formally taught. This graduate seminar will provide a chance for students to think systematically about writing for audiences within and outside of psychology, and to concretely improve pieces of writing that matter to them. The course will take the form of a "writer's workshop", in which each student will bring two pieces of writing—one empirical, and one intended for a popular audience, to be discussed by the class. All class members will discuss each piece of writing twice, providing constructive feedback for the target student to revise her or his work. The workshop will be supplemented by general discussions of writing principles and examples of good writing in psychology.

**PSYCH 272. Special Topics in Psycholinguistics. 1-3 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**PSYCH 273. Graduate Seminar on Language, Cognition, and Perception. 3 Units.**

Current topics and debates. Readings from psychology, linguistics, neuroscience, ethology, anthropology, and philosophy. May be repeated for credit.

**PSYCH 274. Graduate Research Workshop on Psychological Interventions. 3 Units.**

Psychological research has the potential to create novel interventions that promote the public good. This workshop will expose students to psychologically 'wise' intervention research and to support their efforts to conduct such interventions, especially in the context of education, broadly conceived, as well as other areas. The first part of the class will address classic interventions and important topics in intervention research, including effective delivery mechanisms, sensitive behavioral outcomes, the role of theory and psychological process, and considerations of the role of time and of mechanisms that can sustain treatment effects over time. In the second part of the class, students will present and receive feedback on their own ongoing and/or future intervention research. Prerequisite: Graduate standing in Psychology or Education, or consent of instructor.

Same as: EDUC 287

**PSYCH 275. Graduate Research. 1-15 Unit.**

Intermediate-level research undertaken with members of departmental faculty. Prerequisite: consent of instructor.nn (Staff).

**PSYCH 277. Psychology of Pedagogy. 1-3 Unit.**

How can methods and insights from psychology inform education practice, particularly in a higher education context? This course aims to develop your skills as critical consumers and producers of empirical findings on teaching and learning. Course involves a quarter-long project to develop a pedagogical research proposal, supplemented and informed by readings, guided discussions, and group workshops.  
Same as: EDUC 248

**PSYCH 278. Social Cognitive Development: New Methods for Answering Old Questions. 1-2 Unit.**

Novel technology can fuel new discoveries and generate new questions for future research, for instance, the use of video cameras has transformed the field of developmental psychology. More recently, the use of neuroimaging techniques (such as fMRI) to study the developing brain has been gaining lots of interest among developmental psychologists. What are the promises and challenges of using these neuroimaging methods to study cognitive development? This course will be a discussion-based seminar class (with some lectures from the instructor and from students) aimed for graduate students who are interested in learning more about how these methods can help address questions about cognitive development, with a particular focus on children's developing understanding of their social world.

**PSYCH 279. Topics in Cognitive Control. 1-3 Unit.**

The processes that enable flexible behavior by biasing contextually relevant perceptual, mnemonic, and response representations or processing pathways. Cognitive control is central to volitional action, allowing work with memory, task/goal states, and overriding inappropriate responses. Current models of cognitive control, functional neuroimaging, and neuropsychological evidence. Recommended: 45. May be repeated for credit.

**PSYCH 280. Foundations and Contemporary Topics in Social-Educational Psychology. 2-4 Units.**

At its core, social psychology is concerned with educational problems because it addresses the problem of how to change hearts and minds in lasting ways. This course explores the major ideas, theories, and findings of social psychology, their educational implications, and the insights they shed into how and when people change. There will be a focus on educational issues. Intersections with other disciplines, in particular social development and biology, will be addressed. Historical tensions and traditions, as well as classic studies and theories, will be covered. Graduate students from other disciplines, and advanced undergraduates, are welcome (class size permitting).  
Same as: EDUC 307

**PSYCH 281. Practicum in Teaching. 1-5 Unit.**

Enrollment limited to teaching assistants in selected Psychology courses. May be repeated for credit.

**PSYCH 282. Practicum in Teaching PSYCH 1. 1-2 Unit.**

Logistical TA training including: preparing for sections; creating, correcting exams; grading an iterative writing assignment; office hours; review sessions; developing audiovisual expertise; communicating via coursework. Review of student evaluations with instructor to set goals and strategies. Second quarter focuses on pedagogical improvement. Limited to current PSYCH 1 TAs. May be repeated for credit.

**PSYCH 283. International Conflict Resolution Colloquium. 1 Unit.**

(Same as LAW 611.) Sponsored by the Stanford Center on International Conflict and Negotiation (SCICN). Conflict, negotiation, and dispute resolution with emphasis on conflicts and disputes with an international dimension, including conflicts involving states, peoples, and political factions such as the Middle East and Northern Ireland. Guest speakers. Issues including international law, psychology, and political science, economics, anthropology, and criminology.  
Same as: IPS 250A

**PSYCH 283A. SPARQshop: Social Psychological Answers to Real-world Questions. 2 Units.**

Research, develop, and disseminate solutions to social problems in real-world settings such as police departments, schools, and hospitals. Get trained in research methods, community partnerships, mass media communication, data visualization, project management, and other useful skills. Must participate for credit for the full school year. Permission of instructor required.

**PSYCH 284. Computational Modeling of a Range of Neural Circuits. 1-3 Unit.**

Lectures, student presentations, and extensive software exercises. Focus on quantifiable models of neural signaling, starting with physical specification of input signals, sensory transductions, spiking, and mean electrical field potentials, and the inter-relation to BOLD signals (fMRI). Applications will be drawn from many examples, but a there will be a particular focus on the visual pathways and how measurements and models relate to visual perception.

**PSYCH 286. The Psychology of Everyday Morality. 3 Units.**

Recent literature on morality from a social psychological perspective. Topics include moral judgment, moral intuitions, moral hypocrisy, moral identity, moralization, moral reproach, shame and guilt, temptations, and self-regulation. Contemporary psychological research emphasizing descriptive approaches (what people actually do) rather than normative ones (what one should do).  
Same as: PSYCH 186

**PSYCH 287. Brain Machine Interfaces - Theory and Technology Course Information. 1-3 Unit.**

(Same as MCP 287) There is a growing number of methods to interact with the living nervous system. This seminar will review methods, principal results, and ideas for designing devices that either act on or read out data from the nervous system. A principal objective of designing these devices is to use them for sensory prosthetics (retinal implants and motor control units), and also for reducing the symptoms of different diseases (Parkinsons, Depression, Epilepsy). We will consider a wide variety of applications, but our emphasis will be on electronic devices that either stimulate or read-out from the human brain.  
Same as: NSUR 287

**PSYCH 288. Hierarchical Linear Modeling for Psychological Sciences. 1-3 Unit.**

HLM is a statistical theory and a computer program used to analyze multi-level data, such as trials within participants or students within classrooms. HLM allows researchers to analyze data at each level of analysis separately, to partition the total variance across different levels, to explain variance at each level separately using level-appropriate predictors, and to model cross-level interactions. How to use the HLM program and to model various types of multi-level data using it. May be repeated for credit.

**PSYCH 289. Sensory Representations in Language and Memory. 1-3 Unit.**

Is recollecting an experience similar to re-experiencing it? How closely tied is our knowledge to the perceptual representations and processes that may have given rise to it? What role do perceptuo-motor representations play in understanding language? We will review the recent literature on perceptual re-activation in episodic memory, perceptual grounding in semantic representations, and neural reuse of perceptual mechanisms for abstract thought. Emphasis will be placed on recent research with an interdisciplinary scope, including discussion of theory, behavioral findings, neural mechanisms, and computational models. Prerequisite: Psych 207 or consent of instructor.

**PSYCH 290. Graduate Research Methods. 2 Units.**

Primary tool use for psychologists: basics of experiment design; computer-based experiments; web-based experiments; data analysis packages and data presentation; exploratory statistics; eye-tracking methods; psychophysiology methods; survey construction; corpus and discourse analysis; and perhaps hypnosis. Prerequisite: Ph.D. student in Psychology.

**PSYCH 291. Psychology Teaching Methods. 1-2 Unit.**

Open to graduate students and advanced undergraduates. Principles of good teaching. Students practice teaching skills.

**PSYCH 292. Special Topics in Emotion Regulation. 1 Unit.**

This seminar will consider special topics in emotion regulation. Admission is by invitation only.

**PSYCH 293. Communication, Intentionality, and the Origins of Language. 3 Units.**

How did language evolve to become a ubiquitous, definitional part of human life? What relationship does children's early language have to their understanding of intentionality and other methods of non-verbal communication? This seminar will survey theoretical and experimental work on the foundations of human language, communication, and intentionality, with the goal of understanding what we know and what questions are still open. Areas of focus include developmental work on communication; whether early language use is referential/intentional and whether early words are general or particular; and research on language evolution and animal communication.

**PSYCH 294. Human Prosociality. 3 Units.**

Human beings engage in a vast amount of prosocial behaviors (including altruism and cooperation) that critically support our success as a social species. That said, the psychological underpinnings of prosociality remain surprisingly enigmatic. This seminar will survey classic and modern theories of prosocial behavior from evolutionary biology, economics, psychology, and neuroscience, with an emphasis on common ideas about the cognitive and affective mechanisms supporting such behaviors. Students will be responsible for leading discussions and producing one in-depth review or research paper at the end of the quarter.

**PSYCH 295. Cognitive Modeling using Bayesian Statistics. 2-3 Units.**

This course introduces the student to cognitive modeling from a Bayesian statistical approach. The goal of the course is to facilitate and promote Bayesian fitting for a large variety of latent cognitive models to data through the use of accessible computer software. Within particular cognitive models, students will learn how to first construct a basic model, and then add various effects such as individual or group differences, substantive prior information, covariates, and contaminant processes. Along the way, students will gain a better understanding of the many advantages of Bayesian statistics over frequentist-type analyses. A strong statistical or computer science background is not required.

**PSYCH 297. Seminar for Coterminial Master of Arts. 1-2 Unit.**

Contemporary issues and student research. Student and faculty presentations.

**PSYCH 298. Advanced Studies in Health Psychology. 3 Units.**

This course provides an overview of the major concepts and questions in the field of health psychology. Through reading, lecture and interactive discussion, students have the opportunity to explore and think critically about a number of psychological and social influences in determining health including: emotions, beliefs, relationships, stress, motivation, behavior change, spirituality, culture, and social influence. Students will also discuss the role of important and current topics in the field of health psychology and medicine such as the changing role of the patient and provider relationship, health-care policy and the environment, placebo effects, wearable health devices, and the use of technology in medicine. Course is offered to graduate students and advanced undergraduates with permission from the instructor.

**PSYCH 299. Temptations and Self Control. 2 Units.**

(Graduate students register for 299.) Why do people do things that that they come to regret? How can people minimize behavior such as exercise avoidance, angry words, overeating, unsafe sex, and dangerous driving? Sources include classical and current research from experimental psychology, neuroscience, behavioral economics, and neuroeconomics. Real-world applications. Same as: PSYCH 199

**PSYCH 303. Human and Machine Hearing. 3 Units.**

Topics: Linear and nonlinear system theory applied to sound and hearing; understanding how to model human hearing in the form of algorithms that can process general sounds efficiently; how to construct, display, and interpret "auditory images"; how to extract features compatible with machine-learning systems; how to build systems that extract information from sound to do a job; and example applications of machine hearing to speech, music, security and surveillance, personal sound diaries, smart house, etc. Prerequisites: basic calculus and algorithms.

**PSYCH 373. Research Seminar: Mind, Brain, and Computation. 1 Unit.**

Faculty and student research presentations focusing on work linking cellular, systems, cognitive, behavioral, and computational neuroscience. Limited to affiliates of the Center for Mind, Brain and Computation. May be repeated for credit.

**PSYCH 383. International Conflict Resolution. 3 Units.**

(Same as LAW 656) This seminar examines the challenges of managing and resolving violent inter-group and international conflicts. Employing an interdisciplinary approach drawing on social psychology, political science, game theory, and international law, the course identifies various tactical, psychological, and structural barriers that can impede the achievement of efficient solutions to conflicts. We will explore a conceptual framework for conflict management and resolution that draws not only on theoretical insights, but also builds on historical examples and practical experience in the realm of conflict resolution. This approach focuses on the following questions: (1) how can the parties to conflict develop a vision of a mutually bearable shared future; (2) how can parties develop trust in the enemy; (3) how can each side be persuaded, as part of a negotiated settlement, to accept losses that it will find very painful; and (4) how do we overcome the perceptions of injustice that each side are likely to have towards any compromise solution? Among the conceptual issues we will examine include the problem of spoilers who seek to sabotage agreements, the role of mediators, the role international legal rules can play in facilitating or impeding conflict resolution, and the advantages and disadvantages of unilateral versus reciprocal measures in advancing conflict resolution efforts. Particular conflicts we will explore include the Northern Ireland conflict, the Israeli-Palestinian conflict, and the U.S.-Soviet Cold War rivalry. Prerequisite for undergraduates: consent of instructor. Same as: IPS 250

**PSYCH 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.**

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics. Same as: BIO 459, BIOC 459, BIOE 459, CHEM 459, CHEMENG 459

**PSYCH 801. Master's TGR Project. 0 Units.****PSYCH 802. PhD TGR Dissertation. 0 Units.**

## Public Policy Courses

### **PUBLPOL 55N. Public Policy and Personal Finance. 3 Units.**

The seminar will provide an introduction and discussion of the impact of public policy on personal finance. Voters regularly rate the economy as one of the most important factors shaping their political views and most of those opinions are focused on their individual bottom lines. In this course we will discuss the rationale for different public policies and how they affect personal financial situations. We will explore personal finance issues such as taxes, loans, charity, insurance, and pensions. Using the context of (hypothetical) personal finance positions, we will discuss the public policy implications of various proposals and how they affect different groups of people, for example: the implications of differential tax rates for different types of income, the promotion of home ownership in the U.S., and policies to care for our aging population. While economic policy will be the focus of much of the course, we will also examine some of the implications of social policies on personal finance as well. There will be weekly readings and several short policy-related writing assignments.

Same as: ECON 25N

### **PUBLPOL 74. Public Service Internship Preparation. 1 Unit.**

Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is primarily designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do the assignments for 1 unit of credit.

Same as: ARTSINST 40, EARTHYSYS 9, EDUC 9, HUMBIO 9, URBANST 101

### **PUBLPOL 101. Politics and Public Policy. 4-5 Units.**

(Formerly PS 2) American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. Undergraduate Public Policy students are required to enroll in this class for five units.

Same as: AMSTUD 123X, POLISCI 102, POLISCI 123, PUBLPOL 201

### **PUBLPOL 102. Organizations and Public Policy. 4-5 Units.**

Analysis of organizational processes emphasizing organizations that operate in a non-market environment. Prerequisite: ECON 1.

Same as: PUBLPOL 202

### **PUBLPOL 103C. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors.

Same as: ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 103, POLISCI 136S, POLISCI 336S, PUBLPOL 307

### **PUBLPOL 103D. Ethics and Politics of Public Service. 5 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. [This class is capped but there are some spaces available with permission of instructor. If the class is full and you would like to be considered for these extra spaces, please email sburbank@stanford.edu with your name, grade level, and a paragraph explaining why you want to take the class.]

Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, URBANST 122

### **PUBLPOL 103E. Ethics on the Edge Public Policy Core Seminar. 2 Units.**

[Note: This two-credit seminar accompanies Ethics on the Edge (Public Policy 134) but can also be taken as a stand-alone course upon permission from the instructor. Enrollment preference will be given to Public Policy majors seeking to fulfill the core requirement (and are required to do so) or upon permission of instructor. (The required course, Public Policy 103C, can be fulfilled by taking Ethics on the Edge (Public Policy 134, 3 units) and this Ethics on the Edge Public Policy Core Seminar (Public Policy 103E, 2 units) for a total of 5 units.) This course is not required for students taking Public Policy 134 to gain Ways of Thinking credit or to gain credit towards Ethics in Society, Science, Technology and Society, or general course credit.] The seminar-style course will explore additional foundational readings on organizational ethics (business, non-profit, and governmental organizations) and policy ethics. Themes will include the Baltimore police brutality incidents, FIFA corruption scandals, and negotiations around the Iran nuclear agreement. Organizing themes include, among others: ethics of leadership; ethics of persuasion and compromise; the influence of bias in organizational and policy ethics; discrepancies between discourse and action; and interpreting and explaining ethics. In addition, the course will offer training in a wide variety of skills for effective communication of ethics for policy purposes (presentations, website discourse, commenting in meetings and conferences, interviews, statement of personal views, interacting with the media, prioritizing arguments, and mapping complex ethical analysis). Most of the assignments allow students flexibility to explore topics of their choice. The objective is to engage actively and improve skills in a supportive environment. A short, analytically rigorous final paper in lieu of final exam. Attendance required. Grading will be based on short assignments, class participation, and the short final paper. \*Public Policy majors taking the course to complete the core requirements must obtain a letter grade. Other students may take the course for a letter grade or C/NC.

### **PUBLPOL 104. Economic Policy Analysis. 4-5 Units.**

The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50 and ECON 102B. Undergraduate Public Policy students are required to take this class for a letter grade and enroll in this class for five units.

Same as: ECON 150, PUBLPOL 204

**PUBLPOL 105. Empirical Methods in Public Policy. 5 Units.**

Methods of empirical analysis and applications in public policy. Emphasis on causal inference and program evaluation. Public policy applications include health, education, and labor. Assignments include hands-on data analysis, evaluation of existing literature, and a final research project. Objective is to obtain tools to 1) critically evaluate evidence used to make policy decisions and 2) perform empirical analysis to answer questions in public policy. Prerequisite: ECON 102B. Public Policy students taking this course to satisfy a degree requirement must take the course for a letter grade.  
Same as: PUBLPOL 205

**PUBLPOL 106. Law and Economics. 4-5 Units.**

This course explores the role of law in promoting economic welfare. Law has many meanings and many aspects, but some version of it is essential to cooperative human interaction and thus to civilization itself. Cooperation often is a positive-sum or welfare-enhancing activity, while competition among individuals, in contrast, is often zero- or negative-sum. Law, among its other functions, can serve as a mechanism to harmonize private incentives to achieve cooperative gains, to maintain an equitable division of those gains, and to deter "cheating." Economic analysis of law focuses on the welfare-enhancing incentive effects of law and law enforcement and on law's role in reducing the risks of cooperation by setting expectations of "what courts or the state will do" in various contingencies. Prerequisite: Econ 50. Undergraduate Public Policy students are required to take this class for a letter grade and enroll in this class for five units.  
Same as: ECON 154, PUBLPOL 206

**PUBLPOL 107. Public Finance and Fiscal Policy. 5 Units.**

What role should and does government play in the economy? What are the effects of government spending, borrowing, and taxation on efficiency, equity and economic stability and growth? The course covers economic, historical and statical analyses and current policy debates in the U.S. and around the world. Policy topics: Fiscal crises, budget surpluses/deficits; tax reform; social security and healthcare programs and reforms; transfers to the poor; public goods and externalities; fiscal federalism; public investment and cost-benefit analysis; and the political economy of government decision-making. Prerequisites: ECON 51, ECON 52 (can be taken concurrently).  
Same as: ECON 141

**PUBLPOL 115. Practical Training. 1-5 Unit.**

Qualified Public Policy students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. Prior to enrolling students must get internship approved by the Public Policy Program. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. May be repeated for credit.

**PUBLPOL 120. Social Science Field Research Methods and Applications. 5 Units.**

This course teaches the basics of the design, implementation and interpretation of social science field research. Building on a basic knowledge of statistical methods and economics, the course first introduces observational field research and compares it with experimental field research. Significant attention will be devoted to explaining what can and cannot be learned each type of field research. The details of designing both types of field research projects will then be discussed. The basics theory of the design of statistical experiments will be introduced and applied. Topics covered include sample size selection, power and size of statistical hypothesis tests, sample selection bias and methods for accounting for it. Examples of best practice field research studies will be presented as well as examples of commonly committed errors. Practical aspects of field work will also be covered, including efficient and cost-effective data collection, data analysis, teamwork, and common ethical considerations. Students can apply to participate in a course project designing a field research project and implementing it in a developing country context during four weeks of the summer. Prerequisites: either ECON 1 or 1A or 1V and either STATS 60 or Econ 102A or equivalent.  
Same as: ECON 121, PUBLPOL 220

**PUBLPOL 121. Policy and Climate Change. 4-5 Units.**

Science and economics, including recent findings. History and evolution of local, state, regional, national, and international policy. California's recent landmark climate change bill. Future policy prospects, emphasizing national and international levels.

**PUBLPOL 121L. Racial-Ethnic Politics in US. 5 Units.**

This course examines various issues surrounding the role of race and ethnicity in the American political system. Specifically, this course will evaluate the development of racial group solidarity and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. We will also examine the politics surrounding the Multiracial Movement and the development of racial identity and political attitudes in the 21st century. Stats 60 or Econ 1 is strongly recommended.  
Same as: AMSTUD 121L, CSRE 121L, POLISCI 121L

**PUBLPOL 122. Biosecurity and Bioterrorism Response. 4-5 Units.**

Overview of the most pressing biosecurity issues facing the world today. Guest lecturers have included former Secretary of State Condoleezza Rice, former Special Assistant on BioSecurity to Presidents Clinton and Bush Jr. Dr. Ken Bernard, Chief Medical Officer of the Homeland Security Department Dr. Alex Garza, eminent scientists, innovators and physicians in the field, and leaders of relevant technology companies. How well the US and global healthcare systems are prepared to withstand a pandemic or a bioterrorism attack, how the medical/healthcare field, government, and the technology sectors are involved in biosecurity and pandemic or bioterrorism response and how they interface, the rise of synthetic biology with its promises and threats, global bio-surveillance, making the medical diagnosis, isolation, containment, hospital surge capacity, stockpiling and distribution of countermeasures, food and agriculture biosecurity, new promising technologies for detection of bio-threats and countermeasures. Open to medical, graduate, and undergraduate students. No prior background in biology necessary. This course satisfies the TiS requirement for Engineering students; please check with your major advisor to verify this. 4 units for twice weekly attendance (Mon. and Wed.); additional 1 unit for writing a research paper for 5 units total maximum. PLEASE NOTE: This class will meet for the first time on Wednesday, April 1.  
Same as: BIOE 122, EMED 122

**PUBLPOL 124. What's Wrong with American Government? An Institutional Approach. 5 Units.**

How politicians, once elected, work together to govern America. The roles of the President, Congress, and Courts in making and enforcing laws. Focus is on the impact of constitutional rules on the incentives of each branch, and on how they influence law. Fulfills the Writing in the Major Requirement for Political Science majors.

Same as: POLISCI 120C

**PUBLPOL 125. Law and Public Policy. 5 Units.**

This course investigates the relationship between law, politics and public policy in the United States. What is the proper role of judicial decision-making in a democratic system? How do lawyers, judges and other legal actors impact society and shape policy? In turn, how is law impacted and shaped by social forces and movements? We will explore these questions in the context of longstanding debates on policy issues such as economic inequality, racial justice, voting rights, environmental regulation, gun control, sexual identity, immigration and refugees. The course will be taught as a seminar. Discussion will involve the close reading and interpretation of judicial opinions, legislation and other legal texts, interdisciplinary scholarship, and film.

**PUBLPOL 126B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.**

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings.

Same as: AFRICAAM 126B, CSRE 126B, EDUC 136B, EDUC 236B

**PUBLPOL 128. International Problem-Solving Through NGOs: Policy, Players, Strategies, and Ethics. 2 Units.**

This course will focus on advanced international problem-solving through the lens of international NGOs, while integrating other relevant players that address global issues within a lens of ethics and accountability. Particular aspects of NGOs that will be assessed are: policy, business, strategy, and engagement with other players. Students will consider the major issues that international NGOs face in their effort to effect positive change in an increasingly complex global environment. The course draws heavily on a series of sophisticated case studies involving a variety of NGOs, areas of specialization, and geographic regions. Topics may include: poverty and famine; the natural resources curse; terrorism; HIV/Aids and other epidemics and neglected diseases; natural disasters and emergencies; climate change; and contagion of unethical behavior. A final project tailored to each student's interest will be in lieu of a final exam. Students will have the opportunity to work with several internationally prominent guests.

Same as: INTNLREL 128B, PUBLPOL 228

**PUBLPOL 132. The Politics of Policy Making. 3 Units.**

Public policymaking in the United States is part of a political process that can take years or even decades to play out. A familiarity with the politics of policymaking is key to understanding why some reform attempts are successful while others are not. This course will give students a behind-the-scenes look at how policy actually gets made. Students will gain exposure to the theory and literature behind policy formulation, and engage in debates over historical and contemporary efforts at reform.

Same as: PUBLPOL 232

**PUBLPOL 133. Political Power in American Cities. 5 Units.**

The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances.

Same as: AMSTUD 121Z, POLISCI 121, URBANST 111

**PUBLPOL 134. Ethics On the Edge: Business, Non-Profit Organizations, Government, and Individuals. 3 Units.**

The objective of the course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government and non-profit. A framework for ethical decision-making underpins the course. The relationship between ethics and culture, global risks (poverty, cyber-terrorism, climate change, etc.) leadership, and the law and policy will inform discussion. Prominent guest speakers will attend certain sessions interactively. A broad range of international case studies might include: Ebola; Facebook's mood manipulation research and teen suicides from social media bullying; Google's European "right to be forgotten" and driverless cars; Space X (Elon Musk's voyages to Mars); ISIS' interaction with international NGOs; sexual assault on U.S. university campuses and in the U.S. military; the ethics of corporate social responsibility (through companies such as L'Oreal, Whole Foods and Walmart); corporate and financial sector scandals; and non-profit sector ethics challenges. Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities beyond speaking in class). Final project in lieu of exam. Strong emphasis on critical thinking and testing ideas in real-world contexts. There will be a limited numbers of openings above the set enrollment limit of 40 students. If the enrollment limit is reached, students wishing to take the course should contact Dr. Susan Liautaud at [susan11@stanford.edu](mailto:susan11@stanford.edu). The course offers credit toward Ethics in Society, Public Policy core requirements (if taken in combination with Public Policy 103E), and Science, Technology and Society and satisfies the Ways of Thinking requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. \*Public Policy majors taking the course to complete the core requirements must obtain a letter grade. Other students may take the course for a letter grade or C/NC. Same as: ETHICSOC 234R, PUBLPOL 234

**PUBLPOL 135. Regional Politics and Decision Making in Silicon Valley and the Greater Bay Area. 3 Units.**

Dynamics of regional leadership and decision making in Silicon Valley, a complex region composed of 40 cities and four counties without any overarching framework for governance. Formal and informal institutions shaping outcomes in the region. Case studies include transportation, workforce development, housing and land use, and climate change.

**PUBLPOL 137. Innovations in Microcredit and Development Finance. 3 Units.**

The role of innovative financial institutions in supporting economic development, the alleviation of rural and urban poverty, and gender equity. Analysis of the strengths and limits of commercial banks, public development banks, credit unions, and microcredit organizations both in the U.S. and internationally. Readings include academic journal articles, formal case studies, evaluations, and annual reports. Priority to students who have taken any portion of the social innovation series: URBANST 131, 132, or 133. Recommended: ECON 1A or 1B. Same as: URBANST 137

**PUBLPOL 143. Finance and Society for non-MBAs. 4 Units.**

This interdisciplinary course will discuss the role of the financial system in the economy and its interactions with different parts of society. The course will introduce basic finance concepts, cover the basic economic principles essential for understanding the role of finance in the economy, provide an overview of the different institutions in the system, and discuss of policy issues around financial regulation. Topics to be discussed include: the basics of financial decisions and markets; from micro finance to global mega-banks: how and why finance can benefit society as well as endanger and harm; financial regulation: why and how; other people's money: the challenge of effective control, governance, and trust; the politics of banking and finance. Prerequisite: Econ 1. Same as: ECON 143

**PUBLPOL 144. Giving 2.0: Philanthropy by Design. 4 Units.**

Seminar and practicum. Students drive an actual \$10,000 philanthropic process and design their own social change strategy. Topics: strategic planning, nonprofit assessment and site visits, innovative social change models, and leadership development. Speakers include philanthropic leaders and social entrepreneurs. Class activities: group grant assessments and selection, creative problem solving, and decision-making simulations. Individual project: Social Impact Strategic Plan. Must attend first class; limited enrollment. Recommended: PUBPOL 183.

**PUBLPOL 146. Policy, Politics, and the Presidency: Understanding the 2016 Campaign from Start to Finish. 2 Units.**

In 2016, Americans will once again go to the polls to select a new president. But what will actually happen behind-the-scenes between now and then is largely a mystery to most. This course will introduce students to the nuts-and-bolts of a presidential campaign. Each week, we will explore a different topic related to running for the presidency – policy formation, communications, grassroots strategy, digital outreach, campaign finance – and feature high-profile guest speakers who have served in senior roles on both Democratic and Republican campaigns. Students, guests, and faculty will also participate in discussions on how these topics will relate to the 2016 presidential contest, which will begin in earnest over the course of the quarter. Same as: POLISCI 72, PUBLPOL 246

**PUBLPOL 151. Science Policy, National Security, and Cybersecurity. 4 Units.**

Provides a basic overview of science policy and its connection to national security, with a strong emphasis on cybersecurity as an aspect of national security. Addresses biosecurity as a secondary focus. The course includes sessions on effective memo writing and presentation of policy proposals. Same as: PUBLPOL 251

**PUBLPOL 154. Politics and Policy in California. 5 Units.**

State politics and policy making, including the roles of the legislature, legislative leadership, governor, special interests, campaign finance, advocacy groups, ballot initiatives, state and federal laws, media, and research organizations. Case studies involving budgets, education, pensions, health care, political reform, environmental reforms, water, transportation and more. Evaluation of political actions, both inside and outside of government, that can affect California policy and social outcomes. Meetings with elected officials, policymakers, and advocates in class and during a day-long field trip to Sacramento.

**PUBLPOL 155. Disruption for Good- Technology, Innovation and Philanthropy. 2 Units.**

A new breed of technologies and nonprofits are driving unprecedented innovation in how we create, deliver and measure social change. Innovative models and technology's extraordinary potential to transform billions of individual lives. Topics: social network campaigns, mobile platforms and international development, apps for good, crowdsourcing, crowdfunding, creative swarms, nonprofit evaluators, and new generation corporate philanthropy. Readings: articles, blogs, studies, book chapters and websites. Guest speakers include technology, nonprofit and philanthropic leaders. Individual Project: "Unusual Suspects" Technology Innovators interviews and paper. Must attend first class; limited enrollment.

**PUBLPOL 156. Health Care Policy and Reform. 5 Units.**

Focuses on healthcare policy at the national, state, and local levels. Includes sessions on international models, health insurance, the evolution of healthcare policy in the U.S., key U.S. healthcare topics (Patient Protection and Affordable Care Act, Medicare, Medicaid, public employee retiree health care), the role of technology, reform proposals (single payer, national health care, consumer-based systems, regulated markets, state and local reform efforts), efficiency/cost drivers and prospects for future policy. The course includes sessions on effective memo writing and presentation of policy proposals.

**PUBLPOL 157. Political Data Science. 5 Units.**

Introduction to methods of research design and data analysis used in quantitative political research. Topics covered include hypothesis testing, linear regression, experimental and observational approaches to causal inference, effective data visualization, and working with big data. These topics will be introduced using data sets from American politics, international relations, and comparative politics. The course begins with an intensive introduction to the R programming language used throughout the course. Satisfies quantitative methods requirement for the Political Science Research Honors Track. Prerequisites: Stat 60 or instructor consent.

Same as: POLISCI 155

**PUBLPOL 168. Global Organizations: Managing Diversity. 4 Units.**

Analytical tools derived from the social sciences to analyze global organizations, strategies, and the tradeoffs between different designs of organizations. Focus is on tribal mentality and how to design effective organizations for policy implementation within and across institutional settings. Recommended: PUBLPOL 102, MS&E 180, SOC 160, ECON 149, or MGTECON 330.

Same as: PUBLPOL 268, SOC 168, SOC 268

**PUBLPOL 170. Political Corruption. 2 Units.**

Sources and effects of political corruption in the United States, with focus on potential solutions. Perspectives include political contribution and lobbying laws, rational and passionate collective action incentives, welfare effects of congressional control of the administrative state, voter behavior, agency theory, and the role of competition among politicians and interest groups. Grading based on participation and term paper. Enrollment is limited to 15 students and permission of the instructor required. Email [bruceowen@stanford.edu](mailto:bruceowen@stanford.edu).

Same as: PUBLPOL 270

**PUBLPOL 174. The Urban Economy. 4 Units.**

Applies the principles of economic analysis to historical and contemporary urban and regional development issues and policies. Explores themes of urban economic geography, location decision-making by firms and individuals, urban land and housing markets, and local government finance. Critically evaluates historical and contemporary government policies regulating urban land use, housing, employment development, and transportation. Prerequisite: Econ 1A or permission of instructor.

Same as: URBANST 173

**PUBLPOL 183. Philanthropy and Social Innovation. 4 Units.**

Philanthropic innovation, action and social transformation in the 21st century. Topics: individual giving; philanthropic landscape and models; foundation mission and infrastructure; philanthropic strategy and grantmaking; accountability and knowledge management; global, venture and corporate philanthropy; public policy and advocacy. Readings: business school cases and industry articles. Guest speakers include individual donors and foundation presidents. Class activities: case discussions, role-plays, breakouts, and debates. Individual project: \$10 million Foundation Business Plan. Must attend first class; limited enrollment.

**PUBLPOL 184. Poverty and Policies in Developing Economies. 5 Units.**

Economic models of growth and poverty, differences in growth rates among countries, and the persistence of poverty. Models of physical and human capital accumulation, and recent theories of the importance of institutions, social capital, and political factors. The effectiveness of social policies in developing countries, emphasizing India, in the light of theories of growth and poverty, and in terms of immediate goals and long-term consequences. Policies include schooling and health, anti-poverty, banking, and political decentralization. Limited Enrollment. Prerequisites: ECON 1 and ECON 50.

**PUBLPOL 194. Technology Policy. 3-4 Units.**

How the U.S. federal government promotes, uses, and regulates new technologies; tensions between representative governance and the need for elite expertise in policymaking; contemporary debates over international security, energy, health, information technology, and economic competitiveness. Recommended: POLISCI 2.

Same as: PUBLPOL 294

**PUBLPOL 197. Junior Honors Seminar. 5 Units.**

Primarily for students who expect to write an honors thesis. Weekly sessions go through the process of selecting a research question, finding relevant bibliography, writing a literature review, introduction, and study design, culminating in the write-up of an honors thesis proposal (prospectus) and the oral presentation of each student's research project. Students also select an adviser and outline a program of study for their senior year. Enrollment limited to 15.

Same as: ECON 198

**PUBLPOL 198. Directed Readings in Public Policy. 1-5 Unit.****PUBLPOL 199. Senior Research. 1-15 Unit.**

May be repeated for credit.

**PUBLPOL 200A. Senior Practicum. 5 Units.**

Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

**PUBLPOL 200B. Senior Practicum. 5 Units.**

Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

**PUBLPOL 200C. Senior Practicum. 5 Units.**

Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

**PUBLPOL 200H. Senior Honors Seminar. 3 Units.**

Honors students conduct original research for oral presentations and a paper on their policy-related Honors thesis topic. The course is designed to help students make progress on their theses and improve their analytical, research, and communication skills.

**PUBLPOL 201. Politics and Public Policy. 4-5 Units.**

(Formerly PS 2) American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. Undergraduate Public Policy students are required to enroll in this class for five units.

Same as: AMSTUD 123X, POLISCI 102, POLISCI 123, PUBLPOL 101

**PUBLPOL 202. Organizations and Public Policy. 4-5 Units.**

Analysis of organizational processes emphasizing organizations that operate in a non-market environment. Prerequisite: ECON 1.

Same as: PUBLPOL 102

**PUBLPOL 204. Economic Policy Analysis. 4-5 Units.**

The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50 and ECON 102B. Undergraduate Public Policy students are required to take this class for a letter grade and enroll in this class for five units.

Same as: ECON 150, PUBLPOL 104

**PUBLPOL 205. Empirical Methods in Public Policy. 5 Units.**

Methods of empirical analysis and applications in public policy. Emphasis on causal inference and program evaluation. Public policy applications include health, education, and labor. Assignments include hands-on data analysis, evaluation of existing literature, and a final research project. Objective is to obtain tools to 1) critically evaluate evidence used to make policy decisions and 2) perform empirical analysis to answer questions in public policy. Prerequisite: ECON 102B. Public Policy students taking this course to satisfy a degree requirement must take the course for a letter grade.

Same as: PUBLPOL 105

**PUBLPOL 206. Law and Economics. 4-5 Units.**

This course explores the role of law in promoting economic welfare. Law has many meanings and many aspects, but some version of it is essential to cooperative human interaction and thus to civilization itself. Cooperation often is a positive-sum or welfare-enhancing activity, while competition among individuals, in contrast, is often zero- or negative-sum. Law, among its other functions, can serve as a mechanism to harmonize private incentives to achieve cooperative gains, to maintain an equitable division of those gains, and to deter "cheating." Economic analysis of law focuses on the welfare-enhancing incentive effects of law and law enforcement and on law's role in reducing the risks of cooperation by setting expectations of "what courts or the state will do" in various contingencies. Prerequisite: ECON 50. Undergraduate Public Policy students are required to take this class for a letter grade and enroll in this class for five units.

Same as: ECON 154, PUBLPOL 106

**PUBLPOL 220. Social Science Field Research Methods and Applications. 5 Units.**

This course teaches the basics of the design, implementation and interpretation of social science field research. Building on a basic knowledge of statistical methods and economics, the course first introduces observational field research and compares it with experimental field research. Significant attention will be devoted to explaining what can and cannot be learned each type of field research. The details of designing both types of field research projects will then be discussed. The basics theory of the design of statistical experiments will be introduced and applied. Topics covered include sample size selection, power and size of statistical hypothesis tests, sample selection bias and methods for accounting for it. Examples of best practice field research studies will be presented as well as examples of commonly committed errors. Practical aspects of field work will also be covered, including efficient and cost-effective data collection, data analysis, teamwork, and common ethical considerations. Students can apply to participate in a course project designing a field research project and implementing it in a developing country context during four weeks of the summer. Prerequisites: either ECON 1 or 1A or 1V and either STATS 60 or Econ 102A or equivalent.

Same as: ECON 121, PUBLPOL 120

**PUBLPOL 221. Sentencing, Corrections, and Criminal Justice Policy. 3 Units.**

This introductory course will familiarize students with the history, structure, and performance of America's sentencing and corrections system. Sentencing is the process by which criminal sanctions are imposed in individual cases following criminal convictions. Corrections deals with the implementation and evaluation of criminal sentences after they are handed down. In fact, the two subject areas are inseparable. The course will examine sentencing and corrections from global and historical views, from theoretical and policy perspectives, and with close attention to many problem-specific areas. We will explore sentencing theories and their application, the nature, scope and function of corrections, the impact of mass incarceration on crime and communities, the effectiveness of rehabilitation, the relationship between sanctions and crime, and the consequences of prisoner reentry. These topics will be considered as they play out in current political and policy debates. Guest lectures may include presentations by legal professionals, victims, offenders, and correctional leaders. We also plan to visit a correctional facility. This course is open to 1Ls, 2Ls, and 3Ls in the Law School. Special Instructions: Grades will be based on class participation, and either: (1) three reflection papers of 5 to 7 pages each, or (2) a longer research paper. After the term begins, students accepted into the course can transfer from section (01) into section (02) which meets the research (R) requirement, with consent of the instructor. Elements used in grading: Class participation, reflection papers or research paper. Cross-listed with Comparative Studies in Race & Ethnicity (CSRE 221), Law (LAW 621), Public Policy (PUBLPOL 221).

Same as: CSRE 221

**PUBLPOL 222. Biosecurity and Bioterrorism Response. 2-5 Units.**

Overview of the most pressing biosecurity issues facing the world today. Guest lecturers have included former Secretary of State Condoleezza Rice, former Special Assistant on BioSecurity to Presidents Clinton and Bush Jr. Dr. Ken Bernard, Chief Medical Officer of the Homeland Security Department Dr. Alex Garza, eminent scientists, innovators and physicians in the field, and leaders of relevant technology companies. How well the US and global healthcare systems are prepared to withstand a pandemic or a bioterrorism attack, how the medical/healthcare field, government, and the technology sectors are involved in biosecurity and pandemic or bioterrorism response and how they interface, the rise of synthetic biology with its promises and threats, global bio-surveillance, making the medical diagnosis, isolation, containment, hospital surge capacity, stockpiling and distribution of countermeasures, food and agriculture biosecurity, new promising technologies for detection of bio-threats and countermeasures. Open to medical, graduate, and undergraduate students. No prior background in biology necessary. 2 unit option for once weekly attendance (Wed only); 4 unit option for twice weekly attendance (Mon and Wed); 1 additional units (for a maximum of 5 units total) for a research paper.

Same as: EMED 222

**PUBLPOL 228. International Problem-Solving Through NGOs: Policy, Players, Strategies, and Ethics. 2 Units.**

This course will focus on advanced international problem-solving through the lens of international NGOs, while integrating other relevant players that address global issues within a lens of ethics and accountability. Particular aspects of NGOs that will be assessed are: policy, business, strategy, and engagement with other players. Students will consider the major issues that international NGOs face in their effort to effect positive change in an increasingly complex global environment. The course draws heavily on a series of sophisticated case studies involving a variety of NGOs, areas of specialization, and geographic regions. Topics may include: poverty and famine; the natural resources curse; terrorism; HIV/Aids and other epidemics and neglected diseases; natural disasters and emergencies; climate change; and contagion of unethical behavior. A final project tailored to each student's interest will be in lieu of a final exam. Students will have the opportunity to work with several internationally prominent guests.

Same as: INTNLREL 128B, PUBLPOL 128

**PUBLPOL 231. Health Law: Finance and Insurance. 3 Units.**

(SAME AS LAW 348, MGTECON 331) Provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. Potential topics include: health reform, health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), medical malpractice and quality regulation, pharmaceuticals, the corporate practice of medicine, regulation of fraud and abuse, and international comparisons.

Same as: HRP 391

**PUBLPOL 232. The Politics of Policy Making. 3 Units.**

Public policymaking in the United States is part of a political process that can take years or even decades to play out. A familiarity with the politics of policymaking is key to understanding why some reform attempts are successful while others are not. This course will give students a behind-the-scenes look at how policy actually gets made. Students will gain exposure to the theory and literature behind policy formulation, and engage in debates over historical and contemporary efforts at reform.

Same as: PUBLPOL 132

**PUBLPOL 234. Ethics On the Edge: Business, Non-Profit Organizations, Government, and Individuals. 3 Units.**

The objective of the course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government and non-profit. A framework for ethical decision-making underpins the course. The relationship between ethics and culture, global risks (poverty, cyber-terrorism, climate change, etc.) leadership, and the law and policy will inform discussion. Prominent guest speakers will attend certain sessions interactively. A broad range of international case studies might include: Ebola; Facebook's mood manipulation research and teen suicides from social media bullying; Google's European "right to be forgotten" and driverless cars; Space X (Elon Musk's voyages to Mars); ISIS' interaction with international NGOs; sexual assault on U.S. university campuses and in the U.S. military; the ethics of corporate social responsibility (through companies such as L'Oreal, Whole Foods and Walmart); corporate and financial sector scandals; and non-profit sector ethics challenges. Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities beyond speaking in class). Final project in lieu of exam. Strong emphasis on critical thinking and testing ideas in real-world contexts. There will be a limited number of openings above the set enrollment limit of 40 students. If the enrollment limit is reached, students wishing to take the course should contact Dr. Susan Liautaud at susan11@stanford.edu. The course offers credit toward Ethics in Society, Public Policy core requirements (if taken in combination with Public Policy 103E), and Science, Technology and Society and satisfies the Ways of Thinking requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. \*Public Policy majors taking the course to complete the core requirements must obtain a letter grade. Other students may take the course for a letter grade or C/NC.

Same as: ETHICSOC 234R, PUBLPOL 134

**PUBLPOL 236. Law and Public Policy: Issues in Implementation. 3 Units.**

(Same as LAW 636). This seminar will focus on issues related to achieving successful implementation of the goals of legislation. It is widely recognized that the goals of legislation often are not realized and that the failure frequently rests in breakdowns in the implementation process by the agencies and organizations charged with implementing the legislation. In response to problems in implementation, the institutional context of public policy implementation is changing. One category of innovations, known by names such as "management-based regulation" and "evidence-based" social service delivery, gives broad discretion to street-level service providers but subjects them to intensive monitoring and disciplined performance comparison. Another category applies market concepts to regulation or social services, for example, by creating tradeable rights (e.g., pollution allowances) or vouchers (for schools, housing, or healthcare). These, and other, new approaches are affecting both the contours of public law doctrine and the nature of lawyering in the public sector. Lawyers in the public sector are increasingly drawing on skills of institutional design and monitoring of the kind associated with private sector transactional practice. The seminar will examine some of the emerging general themes of innovative policy implementation and look at a range of case studies. Topics will include the conditions under which financial and other rewards and sanctions are useful in bringing about desired behaviors, the pluses and minuses of the creation of markets as alternatives to government run programs, and efforts at improving implementation by improving management activities. Examples will be taken from both regulation and social services, and are likely to include environmental protection, education, child protective services, healthcare, food and workplace safety, nuclear power safety, and regulation of financial institutions.

**PUBLPOL 238. Wise Interventions. 4 Units.**

Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy.

Same as: PSYCH 138, PSYCH 238

**PUBLPOL 242. Design Thinking for Public Policy Innovators. 3-4 Units.**

This class will explore how the methods and mindsets of design thinking - in particular its emphasis on a human-centered approach - can offer new insights that help lead to policy innovations. You will investigate the origins and impact of local policies, diagnose where opportunity for innovation and improvement lies, and redesign one facet of a recent and real policy currently being implemented. Your goal will be to design and test interactions that aim to fundamentally improve the way key public services or policies are being administered. Throughout the class you will tackle two design challenges, requiring collaboration with other students from across the university. You must be able to commit to team collaboration that happens outside of class while the design projects are in full swing, including trips off-campus. Be prepared to get beyond Stanford and engage people in surrounding communities to understand recent policy changes through their perspective. The topics for the projects in this class will be driven by student interest; you will be pushed to pursue and frame challenges that are meaningful to you and your team. Given what's going on in the world today, we imagine that topics might range from immigration to marriage equality to zoning and property policies that affect gentrification and development... and beyond. This class is for you if you like to have a high degree of ownership and accountability for the projects you work on. Limited enrollment. Admission by application. See <http://dschool.stanford.edu/classes>.

**PUBLPOL 246. Policy, Politics, and the Presidency: Understanding the 2016 Campaign from Start to Finish. 2 Units.**

In 2016, Americans will once again go to the polls to select a new president. But what will actually happen behind-the-scenes between now and then is largely a mystery to most. This course will introduce students to the nuts-and-bolts of a presidential campaign. Each week, we will explore a different topic related to running for the presidency -- policy formation, communications, grassroots strategy, digital outreach, campaign finance -- and feature high-profile guest speakers who have served in senior roles on both Democratic and Republican campaigns. Students, guests, and faculty will also participate in discussions on how these topics will relate to the 2016 presidential contest, which will begin in earnest over the course of the quarter.

Same as: POLISCI 72, PUBLPOL 146

**PUBLPOL 251. Science Policy, National Security, and Cybersecurity. 4 Units.**

Provides a basic overview of science policy and its connection to national security, with a strong emphasis on cybersecurity as an aspect of national security. Addresses biosecurity as a secondary focus. The course includes sessions on effective memo writing and presentation of policy proposals.

Same as: PUBLPOL 151

**PUBLPOL 268. Global Organizations: Managing Diversity. 4 Units.**

Analytical tools derived from the social sciences to analyze global organizations, strategies, and the tradeoffs between different designs of organizations. Focus is on tribal mentality and how to design effective organizations for policy implementation within and across institutional settings. Recommended: PUBLPOL 102, MS&E 180, SOC 160, ECON 149, or MGTECON 330.

Same as: PUBLPOL 168, SOC 168, SOC 268

**PUBLPOL 270. Political Corruption. 2 Units.**

Sources and effects of political corruption in the United States, with focus on potential solutions. Perspectives include political contribution and lobbying laws, rational and passionate collective action incentives, welfare effects of congressional control of the administrative state, voter behavior, agency theory, and the role of competition among politicians and interest groups. Grading based on participation and term paper.

Enrollment is limited to 15 students and permission of the instructor required. Email [bruceowen@stanford.edu](mailto:bruceowen@stanford.edu).

Same as: PUBLPOL 170

**PUBLPOL 294. Technology Policy. 3-4 Units.**

How the U.S. federal government promotes, uses, and regulates new technologies; tensions between representative governance and the need for elite expertise in policymaking; contemporary debates over international security, energy, health, information technology, and economic competitiveness. Recommended: POLISCI 2.

Same as: PUBLPOL 194

**PUBLPOL 298. Directed Readings in Public Policy. 1-5 Unit.****PUBLPOL 301A. Microeconomics. 4 Units.**

Microeconomic concepts relevant to decision making. Topics include: competitive market clearing, price discrimination; general equilibrium; risk aversion and sharing, capital market theory, Nash equilibrium; welfare analysis; public choice; externalities and public goods; hidden information and market signaling; moral hazard and incentives; auction theory; game theory; oligopoly; reputation and credibility. Prerequisites: ECON 50 and MATH 51 or equiv.

Same as: IPS 204A

**PUBLPOL 301B. Economic Policy Analysis for Policymakers. 4-5 Units.**

This class provides economic and institutional background necessary to conduct policy analysis. We will examine the economic justification for government intervention and illustrate these concepts with applications drawn from different policy contexts. The goal of the course is to provide you with the conceptual foundations and the practical skills and experience you will need to be thoughtful consumers or producers of policy analysis. Prerequisites: ECON 102B or PUBLPOL 303D.

Same as: IPS 204B

**PUBLPOL 302A. Introduction to American Law. 3-5 Units.**

For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general.

Same as: AMSTUD 179, POLISCI 122

**PUBLPOL 302B. Economic Analysis of Law. 3 Units.**

(Same as LAW 528 .) This course will provide a broad overview of the scholarly field known as "law and economics." The focus will be on how legal rules and institutions can correct market failures. We will discuss the economic function of contracts and, when contracts fail or are not feasible, the role of legal remedies to resolve disputes. We will also discuss at some length the choice between encouraging private parties to initiate legal actions to correct externalities and governmental actors, such as regulatory authorities. Extensive attention will be given to the economics of litigation, and to how private incentives to bring lawsuits differs from the social value of litigation. The economic motive to commit crimes, and the optimal governmental response to crime, will be studied in depth. Specific topics within the preceding broad themes include: the Coase Theorem; the tradeoff between the certainty and severity of punishment; the choice between ex ante and ex post sanctions; negligence versus strict liability; property rules; remedies for breach of contract; and the American rule versus the English rule for allocating litigation costs. Because this course is taught jointly with Law 528 in the Law School, it will not be mathematically oriented; there are no prerequisites to take the course.

**PUBLPOL 303C. Bayesian Statistics and Econometrics. 5 Units.**

(Same as LAW 243.) Linear and nonlinear regression, covariance structures, panel data, qualitative variable models, nonparametric and semiparametric methods, time series, Bayesian model averaging and variable selection. It explores Bayesian methodology including Markov Chain Monte Carlo methods, hierarchical models, model checking, mixture models, empirical Bayes approaches, approximations, and computational issues and gives some attention to foundations. Prerequisite: graduate-level econometrics or equivalent.

**PUBLPOL 303D. Applied Econometrics for Public Policy. 4-5 Units.**

This course aims to present the theory and practice of empirical research in economics with particular emphasis on topics relating to public policy questions. We will start with basic regression analysis and introduce the statistical software STATA. The course will put a substantial amount of effort on work with STATA in analyzing actual data sets, reproducing and criticizing results in scientific research and learning the actual practice of econometrics. We will focus on the identification of causal effects and the various econometric techniques available to learn about causality. While this is primarily a methodology module, most examples and applications will be drawn from the area of public policy. The final will be a 3-5 hour take-home exam. Prerequisite: Econ 102A.

**PUBLPOL 304A. Collective Action Problems: Ethics, Politics, & Culture. 3-4 Units.**

When acting on one's own, it is often easy to know what the morally right action is. But many moral problems arise from the fact that many individuals act together leading to dilemmas, in which what is individually rational is collectively irrational. For example, the collective result of our consumption decisions is to warm the planet. But individual decisions seem to have no effect on climate change. Such collective action situations give rise to moral questions: Are individuals required to take their contributions to wider systemic effects into account? Does it make a difference whether or not others are doing their share, for example with regard to fighting global poverty? In many cases, the best solution for collective action problems are institutions. But when these are deficient or non-existing, what should individuals do? Do they have a duty to assist in building institutions, and what would this duty imply in practical terms? Interdisciplinary perspective, reading authors from philosophy, politics, economics and sociology such as Elinor Ostrom, Peter Singer or Liam Murphy, relating to current questions such as global poverty and climate change. No background assumed; no mathematical work required. Same as: ETHICSOC 180M, PHIL 73, POLISCI 131A

**PUBLPOL 305A. Problem Solving and Decision Making for Public Policy and Social Change. 4-5 Units.**

This course introduces skills and bodies of knowledge useful for careers in law, public policy, and achieving social change at scale. These include framing problems; designing, implementing, and evaluating strategies; system design; cost-benefit analysis; decision making under uncertainty; heuristics and biases that affect empirical judgments and decision making; methods for influencing people's behavior ranging from incentives and penalties to "nudges;" and human-centered design. The course will be taught through problems, cases, and a field project to solve real-world problems on or near the Stanford campus, with the goal of integrating strategic thinking and behavioral insights with human-centered design and systems design. The course may be of interest to students in Law and Policy Lab practicums who wish to broaden their policy analysis skills. Enrollment: Limited to 32 students, with priority given to students in Law School, the MPP program, and the IPS program in that order. Students other than law students must seek the consent of the instructor. Elements used in grading: Class participation, midterm assignment, and final assignment. Cross-listed with International Policy Studies (IPS 207A) & the Law School (LAW 333). Same as: IPS 207A

**PUBLPOL 305B. Public Policy and Social Psychology: Implications and Applications. 4 Units.**

Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior will be discussed with reference to a range of public policy issues including education, public health, income and wealth inequalities, and climate change. Specific topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; stereotyping and stereotype threat, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; also the general problem of producing individual and collective changes in norms and behavior.

Same as: IPS 207B, PSYCH 216

**PUBLPOL 306. Writing and Rhetoric for Policy Audiences. 4 Units.**

This course offers hands-on learning of effective writing and presentation techniques for audiences that include policy makers, decision stakeholders, interest groups, the media, and the public. Class time will be spent learning lessons in rhetoric, analyzing multiple written genres (memo, op-ed, report, media communications), participating in peer review, and practicing presentation strategies (elevator pitch, press conference, media interview, board meeting, formal presentation). Course texts include sample memos, op-eds, and white papers, as well as rhetoric handouts and videos. Students will draft, revise, and submit writing for policy audiences in the compilation of a final portfolio. Students will also produce oral and multimedia arguments, individually and in teams. Students will be responsible for timely peer review and short presentations on course materials. Enrollment limited. Prerequisite: consent of instructor.

**PUBLPOL 307. Justice. 4-5 Units.**

Focus is on the ideal of a just society, and the place of liberty and equality in it, in light of contemporary theories of justice and political controversies. Topics include financing schools and elections, regulating markets, discriminating against people with disabilities, and enforcing sexual morality. Counts as Writing in the Major for PoliSci majors. Same as: ETHICSOC 171, IPS 208, PHIL 171, PHIL 271, POLISCI 103, POLISCI 136S, POLISCI 336S, PUBLPOL 103C

**PUBLPOL 308. Political Analysis for Public Policymakers. 4 Units.**

Policymakers in the United States, whether elected or unelected, operate in a governmental system where politics pervades nearly every element of their daily activity. This course provides students with both the theory and real-world examples they need to understand and evaluate the impact of politics, political institutions, and the political process on policymaking. Readings will include selections from the public policy, political science, legal, and economics literatures.

**PUBLPOL 309. Practicum. 1-10 Unit.**

Applied policy exercises in various fields. Multidisciplinary student teams apply skills to a contemporary problem in a major policy exercise with a public sector client such as a government agency. Problem analysis, interaction with the client and experts, and presentations. Emphasis is on effective written and oral communication to lay audiences of recommendations based on policy analysis.

**PUBLPOL 309X. Public Policy Research Project. 1-10 Unit.**

Supervised research internship. Individual students perform policy research for outside client, applying analytical skills from core curriculum. Requires permission of program director.

**PUBLPOL 310. Master of Arts Thesis. 1-5 Unit.**

Restricted to students writing a master's thesis in Public Policy. May be repeated for credit.

**PUBLPOL 311. Public Policy Colloquium. 1 Unit.**

Weekly colloquia speaker series required for M.P.P. and M.A. in Public Policy students. Themes vary each quarter.

**PUBLPOL 313. Issues in Science Policy. 1 Unit.**

Lecture series on significant issues in science and technology policy. Guest speakers will discuss issues including but not limited to: who should make science policy, educational dimension of science policy, manufacturing and science policy, California's stem cell policy, immigration and science policy, and the role of industry in science policy.

**PUBLPOL 315. Practical Training. 1-5 Unit.**

Qualified Public Policy students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. Prior to enrolling students must get internship approved by the Public Policy Program. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. May be repeated for credit.

**PUBLPOL 317. Comparing Institutional Forms: Public, Private, and Nonprofit. 4 Units.**

For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials.

Same as: EDUC 377, GSBGEN 346, SOC 377

**PUBLPOL 319. Legislation. 3 Units.**

(Same as LAW 319) Lawyers work in a legal system largely defined by statutes, and constantly shaped by the application of legislative power. This course is about statutes and the legislative institutions that create them. It discusses some of the key laws governing access to legislative power and the procedures that culminate in the production of statutes in the legislature. The course is divided into two parts. The first part will focus on the acquisition of legislative power. Key topics include bribery laws, lobbying and indirect influence on legislative activity, and campaign finance regulations. The second part will focus on the exercise of legislative power. Through a number of public policy case studies, students will better understand the organization of the U.S. Congress, the ways in which power is exercised in that institution, and the intersection between politics, the law, and policymaking. Elements used in grading: Class participation and final exam.

**PUBLPOL 347D. Rebooting Government with Design Thinking. 3-4 Units.**

Students apply tools of human-centered design to issues of government performance. Small project teams work with NGO and government partners (in the U.S. and abroad) on concrete design challenges focused on issues such as how to deliver services more effectively and ensure that citizens' voices are heard. Students identify needs, generate concepts, create prototypes, and test their appropriateness. Taught through the Hasso Plattner Institute of Design at Stanford (<http://dschool.stanford.edu>). Enrollment limited. Application required. Prerequisites: consent of instructor(s).

Same as: POLISCI 347D

**PUBLPOL 353. Science and Technology Policy. 3-4 Units.**

How U.S. and international political institutions and processes govern science and technology; the roles of scientists, engineers, and physicians in creating and implementing policies; introduction to analytical techniques that are common to research and policy analysis in technology and public policy; and examples from specific mission areas (e.g., economic growth, health, climate, energy and the environment, information technology, international security). Assignments: analyzing the politics of particular legislative outcomes, assessing options for trying to reach a policy objective, and preparing a mock policy memo and congressional testimony.

Same as: BIOE 253

**PUBLPOL 354. Economics of Innovation. 5 Units.**

The role of innovation and technological change in long run economic growth and the sources of innovation in science, technology, and commercialization. Founding of new industries and new markets. Commercialization of new technologies. Incentives and organization of science. Entrepreneurship. Openness and proprietary/controlled innovation. Selected public policies toward invention and innovation. The industrial revolution, the shifting international location of innovation, and the information revolution. Focus of the second half of the course is on the newest research on the newest industries. Prerequisites: 51,102B. Same as: ECON 113

**PUBLPOL 364. The Future of Finance. 2 Units.**

If you are interested in a career in finance or that touches finance (computational science, economics, public policy, legal, regulatory, corporate, other), this course will give you a useful perspective. We will take on hot topics in the current landscape of the global markets as the world continues to evolve from the financial crisis. We will discuss the sweeping change underway at the policy level by regulators and legislators around the world and how this is changing business models for existing players and attracting new players to finance. The course will include guest-lecturer perspectives on where the greatest opportunities exist for students entering or touching the world of finance today including new and disruptive players in fin tech, crowd financing, block chain, robo advising, algorithmic trading, big data and other areas. New challenges such as cyber and financial warfare threats also will be addressed. While derivatives and other quantitative concepts will be handled in a non-technical way, some knowledge of finance and the capital markets is presumed. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and email to the instructors the Consent Application Form, which will be made available on the Public Policy Program's website prior to the beginning of Winter Quarter. See Consent Application Form for submission deadline. (Cross-listed as ECON252/152, PUBLPOL364, STATS238, LAW 564.). Same as: ECON 152, ECON 252, STATS 238

**PUBLPOL 413R. The National Environmental Policy Act: Pushing the Reset Button. 2 Units.**

(Same as LAW 413R). This policy lab will focus on recommendations for the reform and modernization of the National Environmental Policy Act (NEPA) – the granddaddy of our environmental laws. NEPA is a disclosure statute which requires that before federal officials can issue a permit, commit federal funds, or otherwise take an action that may have a significant impact on the environment, decision-makers must have the opportunity to review an Environmental Impact Statement (EIS) that analyzes the potential environmental consequences of the proposed action and its alternatives. Many critics from both the right and left are dissatisfied with the way that NEPA and its state analogues are being implemented, prompting some legislators to advocate statutory overrides and agency officials to expand the use of categorical exemptions. Meanwhile, NEPA proponents are interested in making the environmental review process more user-friendly and efficient, while preserving its core disclosure requirements. In this policy lab, students will review, analyze, and develop positions on potential NEPA reform options. Students will interact with NEPA experts at the White House's Council on Environmental Quality (CEQ) and produce work product that CEQ can use as it responds to Congressional and outside pressure to reform the NEPA process. Students may normally receive no more than four units for a Policy Lab practicum and no more than a total of eight units of Policy Lab practicums and Directed Research projects combined may be counted toward graduation unless additional units for graduation are approved in advanced by the Petitions Committee. A student cannot receive a letter grade for more than eight units of independent research (Policy Lab practicum, Directed Research, Senior Thesis, and/or Research Track). Any units taken in excess of eight will be graded on a mandatory pass basis. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and e-mail the Consent Application Form available on the SLS Registrar's Office website (see Registration and Selection of Classes for Stanford Law Students) to the instructors. See Consent Application Form for submission deadline.

**PUBLPOL 801. TGR Project. 0 Units.**

Instructor and program consent required prior to enrollment.

**ROTC Air Force Courses****ROTCAF 1. Air Force ROTC Lab. 1 Unit.**

Practical leadership exercises including physical fitness training. May be repeated for credit.

**ROTCAF 11. The Foundation of the United States Air Force. 1 Unit.**

Introduces students to the Air Force and AFROTC with an overview of basic characteristics, missions, and organization of the Air Force; additional topics include officership and professionalism, career opportunities, military customs and courtesies, and an introduction to communications skills. May be repeat for credit.

**ROTCAF 21. The Evolution of USAF Air and Space Power. 2 Units.**

Examines general aspects of air and space power through historical study and analysis and provides the student with a knowledge level understanding of the capabilities, function and doctrinal employment of aerospace forces; emphasizes development of oral and written communication skills. May be repeat for credit.

**ROTCAF 131. Air Force Leadership Studies. 2 Units.**

Study of leadership, management fundamentals, professional knowledge, Air Force personnel system, ethics, and communication skills; develops application level knowledge of skills required of junior Air Force officer through case studies, practical exercises, and seminar discussion. May be repeat for credit.

**ROTCAF 141. National Security Affairs. 2 Units.**

Examines the national security process, international and regional relations, advanced leadership ethics, and Air Force doctrine with focus on the military as a profession, officership, military justice, civilian control of the military and current issues affecting military professionalism.

**ROTCAF 142. PREPARATION FOR ACTIVE DUTY. 2 Units.**

An examination of the role of the Air Force officer in contemporary society with emphasis on knowledge, comprehension, and application of skills needed to facilitate a smooth transition from civilian to military life. May be repeated for credit.

**ROTC Army Courses****ROTCARMY 1. ARMY ROTC LAB. 1 Unit.**

Leadership laboratories, held weekly for three hours, are required of all students. Performance during lab periods is reflected in the student's course grade. Labs include activities such as rappelling, terrain navigation, marksmanship, drill and ceremonies, and tactical field training exercises.

**ROTCARMY 11. Leadership and Personal Development. 1 Unit.**

Introduces students to the personal challenges and competencies that are critical for effective leadership. Students learn how the personal development of life skills such as goal setting, time management, physical fitness, and stress management relate to leadership and officership. Students develop their own personal fitness program under the guidance of an Army master fitness trainer.

**ROTCARMY 12. Foundations in Leadership I. 1 Unit.**

An overview of leadership fundamentals such as setting direction, problem solving, listening, presenting briefs, providing feedback and using effective writing skills. Students begin to explore leadership dimensions and values.

**ROTCARMY 13. Foundations in Leadership II. 1 Unit.**

An overview of the leadership framework with practical applications in fundamentals such as problem solving, listening, presenting briefs, and using effective writing skills. Students explore dimensions of leadership, values, attributes, skills, and actions in the context of practical, hands-on, and interactive exercises.

**ROTCARMY 21. Innovative Leadership. 2 Units.**

Explores the dimensions of creative leadership strategies and styles by studying historical cases and engaging in interactive exercises. Students practice aspects of personal motivation and team building within the context of planning, executing and assessing team exercises. Focus will be on the continued development of the knowledge of leadership values and attributes through an understanding of organizational customs and courtesies. Leadership case studies provide tangible context for learning Individual Creeds and Organizational Ethos.

**ROTCARMY 22. Leadership in Changing Environments I. 2 Units.**

Examines the challenges of leadership in complex contemporary operational environments. Dimensions of the cross-cultural challenges of leadership in a constantly changing world and their application to leadership tasks and situations. Case studies stressing importance of teamwork and tactics in real-world settings.

**ROTCARMY 23. Leadership in Changing Environments II. 2 Units.**

Examines the decision-making process and plans/orders that enable small units to complete assigned tasks. Planning techniques used to develop orders and briefing plans and decisions.

**ROTCARMY 131. Adaptive Team Leadership. 2 Units.**

Challenges students to study, practice, and evaluate adaptive leadership skills as they are presented with the demands of the ROTC Leader Development Assessment Course. Challenging scenarios related to small unit tactical operations are used to develop self-awareness and critical thinking skills. Students receive systematic and specific feedback on their leadership abilities.

**ROTCARMY 132. Situational Leadership I. 2 Units.**

Study of intense situational leadership challenges to build student awareness and skills in leading small units. Skills in decision-making, persuading, and motivating team members when "under fire" are explored, evaluated, and developed.

**ROTCARMY 133. Situational Leadership II. 2 Units.**

Practical applications of intense situational leadership challenges that will provide awareness and specific feedback on leadership abilities. Student skills are evaluated using practical applications in decision making, persuading, and motivating team members when under fire. Aspects of military operations are reviewed as a means of preparing for the ROTC Leader Development Assessment Course (LDAC).

**ROTCARMY 141. Developing Adaptive Leaders. 2 Units.**

Students develop proficiency in planning, executing, and assessing complex operations; in functioning as a member of a staff; and in providing leadership performance feedback to subordinates. Students are given situational opportunities to assess risk, make ethical decisions, and provide coaching to fellow ROTC students. Students are challenged to instruct younger students. Students identify responsibilities of key staff roles and use situational opportunities to develop subordinates.

**ROTCARMY 142. Leadership in a Complex World I. 2 Units.**

Explores the dynamics of leadership in the complexity of current military operations. Students examine customs and courtesies, military law, principles of war and rules of engagement in the face of international terrorism. Aspects of interacting with nongovernmental organizations, civilians on the battlefield, and host nation support are examined and evaluated.

**ROTCARMY 143. Leadership in a Complex World II. 2 Units.**

Significant emphasis is placed on preparing students for their first unit of assignment and transition to lieutenant. Case studies, scenarios, and exercises are used to prepare students to face the complex ethical and practical demands of leading as commissioned officers in the U.S. Army.

**ROTCARMY 176. Military History. 2 Units.**

A survey of the military and diplomatic aspects of American involvement in conflicts from the Anglo-Indian Wars to the present.

**ROTC Navy Courses****ROTCNAVY 1. Naval ROTC Lab. 1 Unit.**

Activities consist of drill, athletics, and professional information events. Students gain experience in actual leadership situations and learn the fundamentals of seamanship, military formations, movements, commands, discipline, courtesies, and honors. During information briefings, special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer's duties.

**ROTCNAVY 11. Introduction to Naval Science. 1 Unit.**

An introduction to the naval profession and to the concepts of seapower. The mission, organization, and warfare components of the Navy and Marine Corps, including an overview of officer and enlisted ranks, rates, and career patterns; naval courtesy and customs, military justice, leadership, and nomenclature are discussed.

**ROTCNAVY 12. Sea Power. 2 Units.**

Provides an understanding of the role that the United States Navy has played in its nation's history, both in times of peace and in times of war, from 1775 to present day. Covers the early development of sea power and its effect on world events. Examines the continued importance of sea power and the many roles of the United States Navy from war fighting entity to international maritime peacekeeper to foreign policy instrument.

**ROTCNAVY 20. Evolution of Warfare. 2 Units.**

The purpose of the Evolution of Warfare course is to provide the student with a general introduction to the art and concepts of warfare from the beginning of recorded history to the modern day.

**ROTCNAVY 21. Leadership and Management. 2 Units.**

Introduces basic management, decision making, and moral leadership. The student will learn to establish meaningful goals, prioritize among competing demands, and plan and forecast in a task-centered organization. The course includes exposure to measures of organizational effectiveness, methods to overcome resistance to change, effective communications, and techniques to aid in counseling, team building, and resolution of disciplinary and personnel matters.

**ROTCNAVY 22. Naval Ship Systems - Engineering. 2 Units.**

Introduces the principles of the design, construction, and propulsion of ships. Includes the analysis of ship stability and thermodynamic cycles, and provides an introduction to ship main propulsion and auxiliary systems.

**ROTCNAVY 131. Navigation. 2 Units.**

Introduces the fundamentals of marine navigation emphasizing piloting and electronic navigation procedures. Covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, and study of tides and currents.

**ROTCNAVY 132. Naval Operations & Seamanship. 2 Units.**

Application of the nautical rules and maneuvering board in order to avoid collisions at sea. Other aspects of naval surface ship operations that are introduced include visual and electronic communications methods, tactical disposition of forces, ship handling theory, and deck seamanship topics.

**ROTCNAVY 141. Naval Ship Systems - Weapons. 2 Units.**

Examines the principles and theories used in the development of naval weapons systems. Extensive study is made of detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, stabilizing, tracking, and weapons control and delivery.

**ROTCNAVY 142. Leadership and Ethics. 2 Units.**

Integrates an intellectual exploration of Western moral traditions and ethical philosophy with a variety of topics, such as military leadership, core values, and professional ethics; the Uniform Code of Military Justice and Navy regulations; and discussions relating to the roles of enlisted members, junior and senior officers, command relationships and the conduct of warfare. The course provides midshipmen with a foundation of moral traditions, combined with a discussion of actual and historical events in the United States Navy and Marine Corps to prepare them for the roles and responsibilities of Naval leadership.

**ROTCNAVY 154. Littoral Warfare. 2 Units.**

This course analyzes a series of historical case studies in an effort to discern certain patterns and principles that will provide the basis for a professional understanding of amphibious warfare. This is a history-based course.

**Radiation Oncology Courses****RADO 101. Readings in Radiation Biology. 1-18 Unit.**

.

**RADO 121. Imaging Anatomy in Animal Models. 3 Units.**

Introduces engineering and physical science majors to the basic laboratory animal anatomy visualized and targeted with biomedical imaging. Topics include: various imaging modalities (PET, CT, Radiology, MRI, and other optical imaging) and associated depiction of normal organs and skeletal structures in pigs, dogs, rabbits and rodents. Course includes didactic lectures, discussion, imaging labs and gross cadaver examination.

**RADO 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**RADO 202. The Basic Science of Radiation and Cancer Biology. 1 Unit.**

For residents or fellows in the training program in the Division of Radiation Therapy, and for interested medical students. Basic processes of radiation biology that underly the treatment of malignant diseases by radiation. Carcinogenesis and mutagenesis by radiation are also covered. Prerequisite: familiarity with cell biology and physiology; consent of instructor.

**RADO 244. Program in Radiation Biology Seminar Series. 1 Unit.**

Open to graduate and undergraduate students. Current research in radiation and cancer biology summarized by two laboratories.

**RADO 280. Early Clinical Experience in Radiation Oncology. 1-2 Unit.**

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

**RADO 299. Directed Reading in Radiation Oncology. 1-18 Unit.**

Prerequisite: consent of instructor.

**RADO 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**RADO 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**Radiology Courses****RAD 101. Readings in Radiology Research. 1-18 Unit.**

Prerequisite: consent of instructor.

**RAD 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**RAD 220. Introduction to Imaging and Image-based Human Anatomy. 3 Units.**

Focus on learning the fundamentals of each imaging modality including X-ray Imaging, Ultrasound, CT, and MRI, to learn normal human anatomy and how it appears on medical images, to learn the relative strengths of the modalities, and to answer, "What am I looking at?" Course website: <http://rad220.stanford.edu>.

Same as: BIOE 220

**RAD 221. Physics and Engineering of Radionuclide Imaging. 3 Units.**

Physics, instrumentation, and algorithms for positron emission tomography (PET) and single photon emission computed tomography (SPECT). Topics include basic physics of photon emission and detection, electronics, system design, strategies for tomographic image reconstruction, data correction algorithms, methods of image quantification, and image quality assessment, and current developments in the field. Prerequisites: A year of university mathematics and physics. Same as: BIOE 221

**RAD 222. Instrumentation and Applications for Multi-modality Molecular Imaging of Living Subjects. 3-4 Units.**

Focuses on instruments, algorithms and other technologies for imaging of cellular and molecular processes in living subjects. Introduces preclinical and clinical molecular imaging modalities, including strategies for molecular imaging using PET, SPECT, MRI, Ultrasound, Optics, and Photoacoustics. Covers basics of instrumentation physics, the origin and properties of the signal generation, and image data quantification. Same as: BIOE 222

**RAD 223. Physics and Engineering of X-Ray Computed Tomography. 3 Units.**

CT scanning geometries, production of x-rays, interactions of x-rays with matter, 2D and 3D CT reconstruction, image presentation, image quality performance parameters, system components, image artifacts, radiation dose. Prerequisites: differential and integral calculus. Knowledge of Fourier transforms (EE261) recommended.

Same as: BIOE 223

**RAD 224. Probes and Applications for Multi-modality Molecular Imaging of Living Subjects. 4 Units.**

Focuses on molecular contrast agents (a.k.a. "probes") that interrogate and target specific cellular and molecular disease mechanisms. Covers the ideal characteristics of molecular probes and how to optimize their design for use as effective imaging reagents that enables readout of specific steps in biological pathways and reveal the nature of disease through noninvasive imaging assays. Prerequisites: none.

Same as: BIOE 224

**RAD 225. Ultrasound Imaging and Therapeutic Applications. 3 Units.**

Covers the basic concepts of ultrasound imaging including acoustic properties of biological tissues, transducer hardware, beam formation, and clinical imaging. Also includes the therapeutic applications of ultrasound including thermal and mechanical effects, visualization of the temperature and radiation force with MRI, tissue assessment with MRI and ultrasound, and ultrasound-enhanced drug delivery. Course website: <http://bioe325.stanford.edu>.

Same as: BIOE 225

**RAD 226. In Vivo Magnetic Resonance Spectroscopy and Imaging. 3 Units.**

Collections of identical independent nuclear spins are described by the classical vector model of magnetic resonance imaging (MRI); however, interactions among spins, as occur in many in vivo processes, require a more complete description. Physics and engineering principles of these in vivo magnetic resonance phenomena with emphasis on current research questions and clinical applications. Topics: product operator formalism, relaxation theory, and contrast mechanisms. Prerequisites: EE 369B or familiarity with magnetic resonance, working knowledge of linear algebra.

**RAD 226A. In Vivo MR: SpinPhysics and Spectroscopy. 3 Units.**

Collections of independent identical nuclear spins are well described by the classical vector model of magnetic resonance imaging, however, interaction among spins, as occur in many in vivo processes, require a more complete description. This course develops the basic physics and engineering principles of these interactions with emphasis on current research questions and clinical spectroscopy applications. Prerequisite: EE396b; familiarity with MRI, linear algebra recommended.

Same as: BIOE 326A

**RAD 226B. In Vivo MR: Relaxation Theory and Contrast Mechanisms. 3 Units.**

Principles of nuclear magnetic resonance relaxation theory as applicable to in vivo processes with an emphasis on medical imaging. Topics: physics and mathematics of relaxation, relaxation times in normal and diseased tissues, magnetization transfer contrast, chemical exchange saturation transfer, MRI contrast agents, and hyperpolarized <sup>13</sup>C.

Prerequisites: RAD 226.

Same as: BIOE 326B

**RAD 227. Functional MRI Methods. 3 Units.**

Basics of functional magnetic resonance neuroimaging, including data acquisition, analysis, and experimental design. Journal club sections. Cognitive neuroscience and clinical applications. Prerequisites: basic physics, mathematics; neuroscience recommended.

Same as: BIOPHYS 227

**RAD 228. Magnetic Resonance Imaging Programming Topics. 3 Units.**

Primarily for students working on research projects involving MRI pulse sequence programming. Introductory and student-initiated topics in seminars and hands-on labs. Image contrast mechanisms achieved by pulse sequences that control radiofrequency and gradient magnetic fields in real time, while acquiring data in an organized manner for image reconstruction. Prerequisites: EE 369B and consent of instructor.

**RAD 229. MRI Sequences and Signals. 3 Units.**

Magnetic Resonance Imaging (MRI) uses sequences of radiofrequency excitation and magnetic field gradients to generate a signal and form images. Numerous common and advanced sequences will be studied, including analysis techniques to predict signal and contrast levels, and to measure and reduce unwanted image artifacts. Prerequisite: EE 369B.

**RAD 260. Computational Methods for Biomedical Image Analysis and Interpretation. 3-4 Units.**

The latest biological and medical imaging modalities and their applications in research and medicine. Focus is on computational analytic and interpretive approaches to optimize extraction and use of biological and clinical imaging data for diagnostic and therapeutic translational medical applications. Topics include major image databases, fundamental methods in image processing and quantitative extraction of image features, structured recording of image information including semantic features and ontologies, indexing, search and content-based image retrieval. Case studies include linking image data to genomic, phenotypic and clinical data, developing representations of image phenotypes for use in medical decision support and research applications and the role that biomedical imaging informatics plays in new questions in biomedical science. Includes a project. Enrollment for 3 units requires instructor consent. Prerequisites: programming ability at the level of CS 106A, familiarity with statistics, basic biology. Knowledge of Matlab highly recommended. Same as: BIOMEDIN 260

**RAD 280. Early Clinical Experience in Radiology. 1-2 Unit.**

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

**RAD 299. Directed Reading in Radiology. 1-18 Unit.**

Prerequisite: consent of instructor.

**RAD 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**RAD 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**Religious Studies Courses****RELIGST 1. Religion Around the Globe. 4 Units.**

A survey of significant religious traditions of the world with emphasis on contemporary manifestations. We will address aspects of Buddhism, Christianity, Hinduism, Islam, Judaism, and Sikhism. In addition, we will discuss interaction between individuals and communities in diverse and complex religious settings such as East Asia, the Middle East, and North America.

**RELIGST 2. Is Stanford a Religion?. 4 Units.**

This course seeks to introduce students to the study of religion by posing a two-part question: What is a religion, and does Stanford qualify as one? Scientific, pragmatic, seemingly secular, Stanford may not seem at all similar to religions like Christianity, Judaism or Buddhism, but a deeper look reveals that it has many of the qualities of religion—origin stories, rituals and ceremonies, sacred spaces and times, visions of the future, even some spirits. By learning some of the theories and methods of the field of religious studies, students will gain a better understanding not just of Stanford culture but of what motivates people to be religious, the roles religion plays in people's lives, and the similarities and differences between religious and secular culture.

**RELIGST 11N. The Meaning of Life: Philosophical, Aesthetic, and Religious Perspectives. 5 Units.**

Raise ultimate questions about life. Yes, the unexamined life is not worth living, but also the un-lived life is not worth examining. Students and professor examine their own lives in the light of questions that the readings and lectures bring up: 1. The big picture: Is there such a thing as "the" meaning of life? 2. What is entailed in making personal-existential sense of one's own life? 3. What constitutes the good life, lived in society? 4. How can a university education bear upon the search for a meaningful life? 5. What "methods" for or approaches to life can one learn from studies in the humanities? After introductory lectures, the seminar studies a series of artworks, poems, diverse texts, and a film, all of which bear on the questions mentioned above -- works such: 1. Plato's Allegory of the Cave, from "The Republic" 2. Manet's "A bar at the Folies Bergere" 3. A comparison/contrast of Monet's early (1862) "Still Life" and van Gogh's late (1889) "Irises" 4. Lyric poetry T.S. Eliot: "The Love Song of J. Alfred Prufrock," "The Waste Land," and "East Coker"; Edwin Muir: "The Heart Could Never Speak"; Philip Larkin: "Days" 5. Martin Heidegger's "What Is Metaphysics?" 6. Jean-Paul Sartre's novel "Nausea" 7. Marx's Paris Manuscripts of 1844 8. Bergman's "The Seventh Seal".

**RELIGST 12N. Perspectives on the Good Life. 3-4 Units.**

The question is how to approach and evaluate different perspectives on the good life, especially when those perspectives are beautifully, and elusively, presented to us as texts. We will consider both classic and modern writers, from the West and from China; some are explicitly religious, some explicitly secular; some literary, some philosophical. Most of the class will revolve around our talk with each other, interpreting and questioning relatively short texts. The works we will read - by Dante, Dickenson, Zhuangzi, Shklar, and others - are not intended to be representative of traditions, of eras, or of disciplines. They do, however, present a range of viewpoint and of style that will help frame and re-frame our views on the good life. They will illustrate and question the role that great texts can play in a modern 'art of living.' Perhaps most important, they will develop and reward the skills of careful reading, attentive listening, and thoughtful discussion. (Note: preparation and participation in discussion are the primary course requirement. Enrollment at 3 units requires a short final paper; a more substantial paper is required for the 4-unit option.

**RELIGST 13Q. Mystical Journeys: Beyond Knowing and Reason. 3 Units.**

What makes a mystic a mystic? This question has many sides. Why do we call someone a mystic? Is there such a thing as mystical experience? Do experiences make a mystic? Do beliefs? Practices? Many religious traditions have records of visionaries whose lives and writings open windows on the more hidden and aspirational aspects of belief and practice. These writings also take many forms: poems, letters, teachings, and accounts of visions, which we will encounter in the course of the quarter. Readings for the course will cover a cross-section of texts taken from Christian, Jewish, Muslim, Buddhist, and Native American sources.

**RELIGST 14N. Demons, Death, and the Damned: The 'Other' and the Otherworldly in America. 3 Units.**

This course will examine how beliefs about the "other world" actually shape and are shaped by Americans' this-worldly actions and interactions (i.e. in the demonization of the "other," whether defined religiously, racially, ethnically, or in gendered terms). Students will ask how ideas about demons and death, heaven and hell have reflected the concerns, values, and identities of Americans over time. Students will learn how to read primary sources against secondary literature.

**RELIGST 17N. Love, Power, and Justice: Ethics in Christian Perspective. 3 Units.**

From its inception, the Christian faith has, like all religions, implied an ethos as well as a worldview, a morality and way of life as well as a system of beliefs, an ethics as well as a metaphysics. Throughout history, Christian thinkers have offered reasoned accounts of the moral values, principles, and virtues that ought to animate the adherents of what eventually became the world's largest religion. We will explore a variety of controversial issues, theological orientations, and types of ethical reasoning in the Christian tradition, treating the latter as one 'comprehensive doctrine' (John Rawls) among many; a normative framework (actually a variety of contested religious premises, moral teachings, and philosophical arguments) formally on par with the religious ethics of other major faiths as well as with the various secular moral theories typically discussed in the modern university. We will learn to interpret, reconstruct, criticize, and think intelligently about the coherence and persuasiveness of moral arguments offered by a diverse handful of this religious tradition's best thinkers and critics, past and present.

**RELIGST 18N. Religion and Politics: Comparing Europe to the U.S.. 3-4 Units.**

Interdisciplinary and comparative. Historical, political, sociological, and religious studies approaches. The relationship between religion and politics as understood in the U.S. and Europe. How this relationship has become tense both because of the rise of Islam as a public religion in Europe and the rising influence of religious groups in public culture. Different understandings and definitions of the separation of church and state in Western democratic cultures, and differing notions of the public sphere. Case studies to investigate the nature of public conflicts, what issues lead to conflict, and why. Why has the head covering of Muslim women become politicized in Europe? What are the arguments surrounding the Cordoba House, known as the Ground Zero Mosque, and how does this conflict compare to controversies about recent constructions of mosques in Europe? Resources include media, documentaries, and scholarly literature.

Same as: JEWISHST 18N

**RELIGST 19N. "Land of Milk and Honey": Food, Justice, and Ethnic Identity in Jewish Culture. 3 Units.**

Food is an essential aspect of the human experience. The decisions and choices we make about food define who we have been, who we are now, and who we want to become. This seminar examines Jewish culture and the food practices and traditions that have shaped and continue to shape it. Why has Jewish culture been centered around food practices? How have religious laws and rituals about food and food production shaped Jewish culture and vice versa? Dietary laws prescribe which animals are and are not "kosher" and what can be eaten with them, holidays are celebrated with traditional foods, and regional foods contribute to the formation of distinct Jewish ethnic identities. More recently, American Jews have begun to organize around issues of food justice, and joined the sustainability movement, adapting Jewish traditions about food production into their cause. What is the significance of animal welfare, environmental issues, and labor practices in Jewish culture? This multi-disciplinary seminar explores the connection between food practices and ethnic and religious identity(ies), the history of the dietary laws and their multiple interpretations, the cultural significance of the phenomenal success of kosher certification in the U.S. food market, and the rise of the Jewish food justice movement. These issues raise a multitude of comparative questions, and you are encouraged to engage in research into other religious and ethnic food cultures. Course materials include: biblical and later religious, legal, and philosophical texts; cook-books (as cultural and historical sources); literature (both fiction and academic); films; news media, and food experts. We will visit an urban farming community (Urban Adamah) to learn from those involved in the Jewish sustainability movement. Same as: CSRE 19N, JEWISHST 19N

**RELIGST 20A. The Sun Also Shines on the Wicked: The Problem of Evil in Religious Thought. 3 Units.**

The problem of Evil has plagued religious thinkers and philosophers for centuries. If God is omnipotent, omniscient, and omnibenevolent, then why is there Evil in the world? We will read and discuss the key thinkers and foundational texts from Plato and the Book of Job to Fyodor Dostoevsky, Friedrich Nietzsche and Sigmund Freud in order to appreciate the diverse responses to this most vexed of questions. We will survey some of the major approaches to the problem of Evil such as skepticism and theodicy in the works of the Classical authors and in those of the Christian, Jewish, and Islamic thinkers like Augustine, Maimonides, and al-Ghazali. We will also engage with dualist traditions such as Zoroastrianism and Manicheism, and with the ethics of the major figures of the Enlightenment such as Leibniz, Hume, and Kant. We will end the quarter by reading the most strident atheistic responses from contemporary scientists and philosophers such as Richard Dawkins and Sam Harris.

**RELIGST 21. Religion in Science Fiction and Fantasy. 5 Units.**

Science fiction and fantasy create alternate worlds that incorporate religious institutions and beliefs that illuminate how we think about religion now and for the future. Texts work off diverse religious traditions: Islam, Buddhism, Catholic and Protestant forms of Christianity, Mayan religion, and Voudou are some that appear. Themes of free will and determinism, immortality, apocalypse and redemption. Myth, ritual, prophecy, the messianic hero, monasticism and mysticism. Texts like *Dune*, *Count Zero*, *Sandman*, *Grass* and the like explore religion in the contemporary imagination. Main assignment: write a short story.

**RELIGST 22. Method in the Sciences of Nature and Society. 4 Units.**

This course considers whether there are any fundamental differences between natural science and social science. Students are introduced to the philosophy of science, social theory, evolutionary epistemology, and debates about the influence of ideologies on the contents of science and scholarship.

**RELIGST 24. Sexuality, Gender, and Religion. 2 Units.**

From ancient times to the present, religious texts, authority figures, adherents, and critics have had a great deal to say about sexuality and gender, with powerful impacts in personal, social and political spheres. Today these debates are more wide ranging and public than ever. In this lecture and discussion series, distinguished scholars from within and beyond Stanford will consider how sexuality and gender become "religious" in Judaism, Islam, Christianity, Hinduism, and Buddhism. Same as: FEMGEN 24

**RELIGST 25SI. Contemporary German Jewish Encounters: the Holocaust in Historical Memory. 1 Unit.**

This one-unit course, open to all students, will focus on the history and contemporary experience of Jewish life and memory in Berlin in the decades following the Holocaust. Topics range from artistic expression and storytelling, to theodicy and forgiveness, to public historical memory and memorials. Each week students will meet with professors from various departments with different fields of expertise. This is a readings and discussion based course that encourages group discussion and empowers students to learn from each other as well as from the speaking professors.

**RELIGST 26. The Bible and its Interpreters. 4 Units.**

Introduction to major stories, figures, and themes of the Christian Bible and their retellings in theological writing, art, literature, film, and music throughout the ages.

**RELIGST 28. Religion and Science in Dialogue: Possibilities and Future Directions. 1-2 Unit.**

Religion and science are widely seen to be in conflict with each other, particularly in the West where science was under the aegis of the Church for centuries, until the advent of an independent scientific community and the tragedy of the Galileo affair. This course explores the historical and philosophical grounds for the conflictual view, areas where the two domains remain distinct, and contemporary and future strategies for dialogue on the basis of overlapping understandings of how we go about knowing anything at all. Features guest speakers from Stanford and elsewhere in the scientific, philosophical, historical and theological fields.

**RELIGST 29. Religion, Violence & Nonviolence. 2 Units.**

College courses and public events often address "religion and violence"—an important topic, but one-sided. We will study ways in which religious leaders, movements, and discourses have (1) promoted violent conflict, aggression, and oppression; and (2) contributed to nonviolence, peacebuilding, and liberation of the oppressed. An overarching theme will be a view of religions as fields of interpretation. No religion is essentially violent or peaceful; intricately connected to the world around them, religions become what they become through interpretation and action. Each week will have two meetings: one featuring an outstanding guest lecturer and one to discuss the lecture topic, with assigned readings and films. Topics under consideration include: Buddhism and Violence; Dorothy Day and Catholic Nonviolent Resistance to Nuclear Weapons; Just War and Jihad; The Contribution of Negro Spirituals to Liberation; The Quakers: Pacifist Convictions and Activism; Violence/Nonviolence in Jainism; The Role of Christian Faith in M.L. King's Political Work; Spirituality and Religious Peacebuilding. Lectures series with required attendance and written reflections for 2 units; full course for 4 units please sign up for RELIGST 119. Same as: Lecture Series

**RELIGST 31. The Religious Life of Things. 3-5 Units.**

Temples, prayer beads, icons, robes, books, relics, candles and incense, scarves and hats, sacred food and holy water; objects of all sorts play a prominent role in all religions, evoking a wide range of emotional responses, from reverence, solace and even ecstasy, to fear, hostility and violence. What is it about these things that makes them so powerful? Is it beliefs and doctrines that inspire particular attitudes towards certain objects, or is it the other way around? Many see a tension or even contradiction between religion and material pursuits and argue that the true religious life is a life without things. But is such a life even possible? This course adopts a comparative approach, drawing on a variety of traditions to examine the place of images, food, clothing, ritual objects, architecture and relics in religious thought and practice. Materials for the course include scholarship, scripture, images and at least one museum visit.

**RELIGST 35S. Religion, Democracy, and Human Rights. 3 Units.**

What is the relationship between religion, democracy, and human rights? What is the status of religion within modern human rights regimes? Do religions have "special" rights in democracies? Why did the French outlaw the hijab (Islamic headscarf) and the Swiss the building of mosques and is that good for human and democratic rights? What is (and what should be) the relationship between religious human rights and democratic self-determination? How do we balance between concerns over blasphemy and free speech, in the case of the Danish cartoon depiction of Mohammad, for example? Is the idea of "religion" even useful in human rights or democratic language anymore, as some now claim? These are just some of the questions students will take up as they are introduced to several important areas within the larger field of religion and international relations. Readings are interdisciplinary in nature, and include case studies. No prerequisite. Open to all majors/minors, and will be particularly beneficial to students in International Relations, International Policy Studies, Political Science, and Religious Studies, as well as students with specific regional political interests where the themes of the course are especially relevant (e.g., Middle East, Latin America, Russia and Eastern Europe, Africa, and so on) and Pre-Law students.

Same as: POLISCI 33S

**RELIGST 36. Philosophy of Religion. 3 Units.**

(Formerly RELIGST 62S) Explores fundamental questions about the existence of God, free will and determinism, faith and reason, through traditional philosophical texts. Course is divided into four sections: first asks what is religion; second surveys the western philosophical tradition from Boethius through Descartes, Hume, Kant, and Kierkegaard regarding the foundation for theist beliefs; third investigates questions mystical experience raises through both western and Buddhist materials; and fourth takes up the ethics of belief, what we have a right to believe, through the Clifford and James debate and the opposing stances of Camus and Pascal.

Same as: PHIL 77S

**RELIGST 36S. Saints, Hermits and Epic Journeys in East Asia. 3 Units.**

We will be reading Buddhist literary classics from China and Japan. This course introduces traditions of East Asian Buddhism and other religious traditions of China. Two major themes emerge in Buddhist literature: tales of great persons and grueling journeys of spiritual consequence. This course explores the themes of saints and their journeys, in the Buddhist traditions and the literature of East Asia. Students will develop critical skills for reading religious literature and will practice articulating religious themes. The course begins with introductions to the three great traditions of Confucianism, Daoism and Buddhism. Through reading saintly stories and Chan lore, students will learn to identify genres, themes, and religious ideals in ancient religious texts. Then the course will turn to modern versions of the lives of saints, analyzing the best-selling manga Buddha. Next, our class will read the medieval Chinese poetry of the hermit known as Cold Mountain and learn to discern his Buddhist, Daoist, and Confucian impulses. We will examine poetic techniques as preparation for turning to the literary devices and Buddhist themes in a record left by a Japanese recluse. Our readings will conclude with China's epic Journey to the West and a harrowing poetic record of a famous journey through the Japanese Alps. We will attend to these texts' use of plot and narrative technique as we consider 'the journey' as metaphor for the spiritual path.

**RELIGST 37S. Religion in the Information Age: The Modern Religious Experience in New Media and Cyberspace. 3 Units.**

In today's high-tech world, information is everywhere. We live in an age where all the knowledge ever produced, anything you could ever want to know, see, or hear, is available within a matter of seconds. Yet for all this instantly accessible information, it seems there remain questions that can't be solved by a simple search on Wikipedia or Google. What is life? Why are we here? Is there a higher being? What is the best way to live? These are questions that have traditionally been associated with religion, with philosophy rather than science, with faith rather than fact. In a time when everything is immediately knowable, how does religion retain any sense of mystery? Do the ways of talking and thinking about God handed down to us from the ancient world still have any of their power, or have they grown stale, ossified and ineffective as we transform the universe into easily searchable data, into friendly sound bites and viral memes? What has become of religion in the age of information? This course focuses on the concept of information as a way to examine the broader question of the role of religion in the modern world. How is religion affected by the exponential advancement of technology? How are traditional concepts like God, belief, or prayer impacted by the discoveries of science? What is the modern religious experience in this new digital age? In particular this course asks whether or not religious discourse; the language of poetry, scripture, and everyday speech; faces new challenges in the modern age.

**RELIGST 38. Religion in the Information Age: The Modern Religious Experience in New Media and Cyberspace. 4 Units.**

In today's high-tech world, information is everywhere. We live in an age where all the knowledge ever produced, anything you could ever want to know, see, or hear, is available within a matter of seconds. Yet for all this instantly accessible information, it seems there remain questions that can't be solved by a simple search on Wikipedia or Google. What is life? Why are we here? Is there a higher being? What is the best way to live? These are questions that have traditionally been associated with religion, with philosophy rather than science, with faith rather than fact. In a time when everything is immediately knowable, how does religion retain any sense of mystery? Do the ways of talking and thinking about God handed down to us from the ancient world still have any of their power, or have they grown stale, ossified and ineffective as we transform the universe into easily searchable data, into friendly sound bites and viral memes? What has become of religion in the age of information? This course focuses on the concept of information as a way to examine the broader question of the role of religion in the modern world. How is religion affected by the exponential advancement of technology? How are traditional concepts like God, belief, or prayer impacted by the discoveries of science? What is the modern religious experience in this new digital age? In particular this course asks whether or not religious discourse; the language of poetry, scripture, and everyday speech; faces new challenges in the modern age.

**RELIGST 38S. Who Am I? The Question of the Self in Art, Literature, Religion, and Philosophy. 3 Units.**

This course engages the question of the self through the exploration of art, literature, religion, philosophy, and pop culture. Through close, guided readings and analysis of classic, contemporary, as well as popular materials, we will attempt to both understand and complicate the notion of the self and inquire into the personal, social, and political relationships that define its contours and boundaries. Course content will be drawn from a diverse but complementary range of thinkers including: Plato, Plotinus, Ibn al-Arabi, Jean-Paul Sartre, Martin Heidegger, William Blake, Guy Debord, Cormac McCarthy, and Friedrich Nietzsche. We will also interrogate what films such as Christopher Nolan's Memento, images such as Manet's 'Bar at the Folies Bergère, and countercultural musical movements such as punk rock and black metal have to add to our inquiry. Short lectures will contextualize the topics treated, but the main focus will be on fostering robust and substantive discussion and developing the philosophical skills needed to think through and debate the notion of the self and its attendant issues in a reflective and nuanced manner. By drawing from different eras and cultural contexts, we will gain a new appreciation for the historical background of the existential questions that concern us today, while confronting the radical diversity of possible responses. The seminar's ultimate aim is to engage with multimedia materials that help you develop, articulate, and ultimately, live out your own personal response to a very pressing question: 'Who am I?'

**RELIGST 50. Exploring Buddhism. 5 Units.**

From its beginnings to the 21st century. Principal teachings and practices, institutional and social forms, and artistic and iconographical expressions. (Formerly RELIGST 14.).

**RELIGST 55. Exploring Zen. 4 Units.**

Reading and discussion of Zen texts in English translation.

**RELIGST 56. Exploring Chinese Religions. 4 Units.**

An overview of major themes and historical developments in 5000 years of Chinese religion. In this course, we will try as much as possible to appreciate Chinese religion from the Chinese perspective, paying particular attention to original texts in translation in an attempt to discern the logic of Chinese religion and the role it has played in the course of Chinese history. To a greater extent perhaps than any other civilization, Chinese have left behind a continuous body of written documents and other artifacts relating to religion stretching over thousands of years, providing a wealth of material for studying the place of religion in history and society.

**RELIGST 61. Exploring Islam. 4 Units.**

This course introduces some of the most important features of the Islamic religious tradition. It explores the different ways in which Muslims have interpreted and practiced their religion. The main subjects of discussion — including the life of the Prophet Muhammad, the Qurʾān, law, ritual, mysticism, theology, politics, and art — will be considered with reference to their proper historical contexts. Some of the topics covered include abortion, gender, rebellion and violence, and the visual vocabulary of paintings. Students will be exposed to important theories and methods in the academic study of religion. No prior knowledge is required.

**RELIGST 61S. Islamic Encounters. 4 Units.**

No religious tradition forms or exists in a vacuum and throughout history Muslims have lived and interacted with non-Muslims, whether Christian, Jews, or Hindus. This course will explore those encounters by looking at the social and political effects of five encounters between Muslims and non-Muslims across the world. The class will begin with two examples from the contemporary period: political debates over Islamic clothing in Europe and shared devotion between Muslims and Hindus in modern India as the class examines how politics and cultural affect and are affected by religious identity. We will then turn to the example of Muslims living under non-Muslim rule in eighteenth- and nineteenth-century West Africa. As we examine how these communities decided to shift from religious accommodation to religious warfare and Muslim statehood we will question the role of religious conflict in driving large historical changes. In the fourth section of this class will examine the relationship between racial and religious identity by looking at Muslims in the Americas, and specifically at the participation of Muslims in the 1835 slave uprising in Brazil. Finally, the last section of the class will focus on the development of the first Muslim community in the Arabian peninsula as we look at the relationship between the formation of religious identity and the formation of a religion itself. While historically and geographically distinct, all these moments bring to light the fundamental issue of contact and encounter and examine how those encounters shape religious traditions and identity.

**RELIGST 62. Philosophy of Religion. 4 Units.**

Classic and modern questions in the philosophy of religion traced through Western and Eastern traditions: the coherence of theism, relativism, verification and ethics of belief, and mystical experience. Readings from traditional and modern texts.

**RELIGST 65. Exploring Global Christianity. 4 Units.**

Explore the world's largest religion as a multicultural, global faith, with attention to Christianity's origins, spread and impact around the world up to the present. Special attention to recent shifting demographics leading to declining numbers in mainline Christian denominations in North America and Europe and the rapid expansion of Christianity in Africa, Asia, and South America; the explosion of international Pentecostalism and other new Christianities; Christianity, global politics, and the global economy; Christian-Muslim relations and conflicts.

**RELIGST 71. Jews and Christians: Conflict and Coexistence. 3 Units.**

The relationship between Judaism and Christianity has had a long a controversial history. Christianity originated as a dissident Jewish sect but eventually evolved into an independent religion, with only tenuous ties to its Jewish past and present. At the same time, Judaism has at times considered Christianity a form of idolatry. It seems that only since the catastrophe of the Holocaust, Jews and Christians (Catholics and Protestants) have begun the serious work of forging more meaningful relationships with each other. This course explores the most significant moments, both difficult and conciliatory ones, that have shaped the relationship between Judaism and Christianity, and introduces students to some of the most important literature, art, and music that are part of it. Selected literature: Gospel according Matthew, the letters of St. Paul, St. Augustine, the Talmud (selections), Maimonides, Martin Luther's sermons on the Jews, *Nostra Aetate* (Vatican II) Art and Music: Medieval art and sculpture, Haendel's *Messiah*.

Same as: JEWISHST 71

**RELIGST 81. Exploring Indian Religions. 4 Units.**

This course provides an overview of Indian religious traditions, including Hinduism, Buddhism, Jainism, Islam, and Sikhism. We will spend approximately half the course on Hindu thought and traditions from the Vedic period until the present day, emphasizing the diverse forms of this religion in different times and places. The second half of the course will be devoted to religions that emerged in South Asia (e.g., Jainism) and those that came to find a home and particular forms of expression on the subcontinent (e.g., Islam). Throughout students will read selections from a range of theological texts, epics, and literature that have permeated many aspects of daily religious life in India. We will also emphasize ritual activities, visual experiences in temples, and networks of pilgrimage places that dot the subcontinent. We will often pair primary sources (in translation) with later interpretations and impacts of those texts in modern South Asia. We will also survey the modern incarnations of particular Indian religious traditions throughout South Asia and the diaspora. By the conclusion of this course, students will be conversant with the texts, beliefs, and practices of the major Indian religions in their cultural and historical contexts and also have a working knowledge of basic categories important for the study of religion more broadly.

**RELIGST 82. Approaches to the Study of Religion: Exploring Christianity. 4 Units.**

Historical and contemporary Christianity from four viewpoints: ritual and prayer; sacred texts and creeds; ethics and life; and community governance.

**RELIGST 86. Exploring the New Testament. 4 Units.**

The New Testament is many things to many people. Around the globe, it is and has been for two millennia a source of culture, law, and faith. It has been used both to undergird battles for civil rights and to fight against them. It has been used both to justify wars and to argue that all war is unjust. Yet, many people haven't read the New Testament and still more haven't looked at it from historical, sociological, comparative and literary frameworks. This course will provide you the opportunity to read the New Testament and to study it closely. We will ask questions of the New Testament about the early Jesus movement, how it fits into its historical context and how it developed. We will look at the range of opinions and views about Jesus present in this literature. We will explore the different genres used by early Christians. We will examine how this set of Early Christian texts came to be considered the canon.

Same as: CLASSICS 43

**RELIGST 91. Exploring American Religious History. 4 Units.**

This course will trace how contemporary beliefs and practices connect to historical trends in the American religious landscape.

Same as: AMSTUD 91

**RELIGST 93. Exploring Zoroastrianism. 4 Units.**

Zoroastrianism was once considered one of the great religions of antiquity. It was the state religion of the Persian Empire and its theological influence has been traced in Graeco-Roman mystery cults, Judaism, Christianity, Islam, Hinduism and Buddhism. Yet, today it is one of the least understood of living religions. This introductory class will introduce and analyze Zoroastrianism through some of its defining themes, including an examination of the figure of the prophet Zoroaster, modes of transmitting sacred knowledge, the nature of good and evil, and the importance of ritual practice and practitioners. We will also discuss how Zoroastrianism views the individual with respect to the body, the life cycle, and issues of gender and sexuality. Finally, this course will also examine the intersection of religion and ethnicity that has defined Zoroastrianism from its origins in the 2nd millennium BCE up to the present.

**RELIGST 95. How to Read the Bible. 4 Units.**

What does the Bible mean? Seeks to help students answer this question for themselves by introducing some of the many ways in which the Bible has been read over the ages. The focus will be the book of Genesis, but the real subject is the history of biblical interpretation; how Genesis has been understood by theologians, writers, artists, scholars and others; and the ultimate goal is not merely to engage the Bible itself but to gain a better appreciation of the act of reading, why people read differently and the consequences of that difference for religious history.

**RELIGST 104. Religion, Counterculture, and the Radical Imagination. 4 Units.**

Counterculture: A radical culture, esp. amongst the young, that rejects established social values and practices; a mode of life opposed to the conventional or dominant. Cf. alternative adj. ~ O.E.D. We will critically examine contemporary and past countercultural religious movements in light of larger debates on such perennially important issues as race, politics, environmentalism, and gender. In particular, we will focus on how mysticism, myth, and the radical religious imagination are mobilized to affect real change in the sociocultural realm. We will engage primary materials such as text, film, and music: a multimedia approach that will foreground the complex strategies used to transform ideas into actions, propositions into performances. To this end, assignments will offer creative yet critical opportunities to think through the complexities of the construction of our own group and individual identities. Subject matter treated will include sex, drugs and rock & roll; as well as polite conversations about other things normally avoided in polite conversation. No prior experience with religious studies or philosophy is necessary. All materials will be in English. Everyone is welcome.

**RELIGST 105. Religion and War in America. 4 Units.**

Scholars have devoted much attention to wars in American history, but have not agreed as to whether religion was a major cause or simply a cover for political, economic, and other motives. We will compare interpretations that leave religion out, with those that take it into account. We will also look at the impact of war on the religious lives of ordinary Americans. We will examine both secondary as well as primary sources, beginning with King Philip's War in the 17th century, and ending with the "War on Terror" in the present day.  
Same as: HISTORY 154D

**RELIGST 106. Religion and the Environment: The Moral Meanings of Nature. 3 Units.**

What does it mean to live in "harmony" with nature? What do humans seek and find in nature and our relationship to it? How have understandings of nature oriented human actions and values and given "place" to humanity in the cosmos? From religious texts to Deep Ecology, American conservationism to Buddhist and Romantic nature poetry, naturalist critics of religion to religious naturalists, and finally debates over the role of religion in dealing with environmental crisis, this course is designed as a general introductory survey of the topic of religion and the environment. It will be guided by the question of how conceptions of nature have been a source of reflection on the goals of life and the ways in which humans are to understand their existential "lot". Readings will include primary texts from major religious traditions, poetry, and scholarly and philosophical texts from figures including, among others, Descartes, Goethe, Nietzsche, J.S. Mill, Thoreau, Aldo Leopold, John Muir, Gary Snyder, and Peter Singer.

**RELIGST 107. Hindus and Muslims in South Asia. 4 Units.**

Hindus and Muslims have lived together in the subcontinent for over 1000 years, joined by Sikhs in the last 500. Contrasting narratives may emphasize composite cultures and interdependent societies, or separation and conflict. In the first half we will introduce these traditions and communities and highlight composite cultures in religion, literature, and music. In the second half we will examine key moments of conflict: the 11th-century invasions of Mahmud of Ghazni and narratives about them in Hindu and Muslim sources; the 1947 Partition of India and Pakistan; the Khalistan movement and the 1984 massacre of Sikhs after Indira Gandhi's assassination; the 2002 Gujarat riots. Learning goals: critically examine the categories 'Hindu,' 'Muslim,' 'Sikh,' 'religion'; analyze differing narratives of the same events; clarify the complex factors involved in violent 'religious' conflict.

**RELIGST 108. Indian Epics: Past and Present. 4 Units.**

The Mahabharata and the Ramayana, the two great epics of India, have been crucial texts in South Asian literatures and cultures for millennia. In this course, we will explore the diverse traditions of both epics from their Sanskrit versions, first composed more than 2,000 years ago, through retellings in newer media forms well into the twenty-first century. Among our primary interests will be comparing versions of each epic that have circulated in South Asia, Southeast Asia, and the West at different times. We begin with abridged translations of both the Sanskrit Mahabharata (including the Bhagavadgita) and the Ramayana. We will discuss the major literary, religious, and social themes of each text as well as subsequent translations and transcreations of the stories in Indian and Southeast Asian contexts during the last thousand years. We will also investigate the modern lives of the epics, including their transformations into Indian television serials, film versions of both narratives (from India and America), and invocations of the epic stories in contemporary art, culture, and political disputes. Students will gain exposure to some of the foundational texts for the study of South Asia, both past and present. More broadly, students will cultivate the ability to fruitfully approach texts from different cultures and learn to critically analyze the impacts and roles of stories in various religious, literary, and historical contexts.  
Same as: COMPLIT 148B

**RELIGST 109. Emperor, Explorer, and God: Alexander the Great in the Global Imagination. 3 Units.**

(Formerly CLASSGEN 109.) This course will survey the changing image of Alexander the Great from the Hellenistic world to the contemporary. We shall study the appropriation of his life and legend in a variety of cultures both East and West and discuss his reception as both a divine and a secular figure by examining a variety of media including texts (primary and secondary) and images (statues, coins, mosaics, illuminated manuscripts, film, and TV) in the Hellenistic, Roman, Byzantine, Jewish, Islamic, Medieval, Renaissance, and Early Modern contexts. In concluding the quarter, students will evaluate contemporary representations in film and popular culture, such as *Alexander* directed by Oliver Stone and *Pop Art* in order to better appreciate his enduring legacy.  
Same as: CLASSICS 142

**RELIGST 110. Islam, Art, Modernity. 3-5 Units.**

Taught in conjunction with a major exhibition of modern Islamic art at the Cantor Museum. We will consider theoretical discussions regarding art and modern Muslim identities and examine the use of Islamic motifs in art and architecture in detail.  
Same as: RELIGST 310

**RELIGST 111. Islam in India: Conflict and Accommodation. 4 Units.**

This course will investigate the history of Islam in South Asia, particularly interactions between Muslims and Hindus, through the lenses of conflict and accommodation. This topic has become increasingly important in modern times as India and neighboring nations experience sectarian violence and simultaneously strive to engender the peaceful coexistence of multiple religious communities. In many ways the debate over South Asia's present and future is being played out in regards to interpretations of its past. In this course, students will gain a solid overview of the chronological development of Islam in India and its negotiations with other religious traditions on the subcontinent. We will think critically about the relevance of South Asia's past to its present and the crucial role of forms of Indian Islam in the broader context of Islamic cultures across the globe.

Same as: HISTORY 195X

**RELIGST 113B. Japanese Religion Through Film. 4 Units.**

Themes in premodern and modern Japanese religion through animations, movies and documentaries.

**RELIGST 113C. Asceticism: The Discipline of Desire. 3 Units.**

Asceticism is an intense negotiation of the self with its desires, usually taking the form of the attempt to repress or curtail desire. Asceticism is often understood as a radical response to the problem of obsessive desire. Excessive attachments to food, money, and sex are among the most common of these concerns; today we refer to these as addictions; both in the contemporary world and to those living in a pre-modern context. In this course, we will discuss the experiences of ascetic figures throughout history not as relics of history but as intelligible responses to the problem of obsessive desire common to all ages. We will comparatively examine case studies from the ancient Christian world and the modern Indian world. The first part of the course will be devoted to understanding some of the most notable theoretical approaches to ascetic behavior in the field of religious studies while the second part of the course will be devoted to close readings of the cases in light of these theoretical approaches. Cross-cultural comparison and contrast will also be stressed. In the final part of the course, we will turn to modern philosophical reflections on ascetic behavior, attempting to answer the question, does the ascetic response to obsessive desire make sense in the world we live in today?.

**RELIGST 114. Yoga Ancient and Modern. 4 Units.**

Originating in ancient India, yoga went through many developments over more than 4000 years in India and other parts of Asia. Having migrated to Euro-America in the late nineteenth century, today yoga is everywhere—studios, schools, gyms, malls, resorts, ashrams, retreat centers. It comes in many flavors; austere, with meditative instructors and Sanskrit chants; stylish, in 105-degree heat, with portable-miked instructors loudly motivating students to go through poses with speed and intensity; niche-crafted to meet the needs of busy professionals, pregnant women, senior citizens, or people with back problems. It may appear as a spiritual path or as a heavily marketed commodity. It generates lawsuits as teachers dispute ownership of certain styles, or as some Americans oppose its teaching yoga in public schools. In the first half of the course we will study the history of yoga in India, reading primary texts composed between about 500 BCE and 1600 CE. In the second half we will learn about yoga's globalization in the last century. Participating in a yoga class is recommended. 2 units of independent study (S-NC) are offered for those who participate in a weekly yoga class and write short reflections on the experience.

**RELIGST 115. Women and Pilgrimage in Japan. 4 Units.**

Pilgrimage, travel to a religious center or along a religious circuit, has been an integral part of Japanese religion since at least the Heian era. However, pilgrimage in Japan has changed dramatically since its early inception as an elite pursuit of the aristocracy, becoming practiced by an increasingly broad spectrum of society. We will examine the historical exclusion of women from some pilgrimage sites, and explore the ways in which contemporary pilgrimage may be a gendered experience. This course will also investigate specific Japanese pilgrimage sites in order to understand the broader phenomenon of Japanese pilgrimage and Japanese religious history.

**RELIGST 115B. Buddhism and Death. 4 Units.**

Death both transcends cultures and is intimately enmeshed in them. Dying, death, and the afterlife, from a certain perspective, are what the disparate varieties of Buddhist religion would all seem to be about. How does death influence the living? Is there an afterlife? How should one die? What should be done with the body? As we explore these and other issues, we will move between theories and practices, and between history and current events. Using primary sources, including images, videos, and stories, we will practice interpretation of . By studying Buddhism and death both within distinct cultural contexts and as cross-cultural phenomena, students are invited to attend to their own assumptions about death, dying, and the afterlife.

**RELIGST 115X. The Civilization and Culture of the Middle Ages. 3-5 Units.**

This course provides an introduction to Medieval Europe from the fall of Rome to the Renaissance. While the framework of the course is chronological, we'll concentrate particularly on the structure of medieval society. Rural and urban life, kingship and papal government, wars and plagues provide the context for our examination of the lives of medieval people, what they believed, and how they interacted with other, both within Christendom and beyond it.

Same as: HISTORY 15D, HISTORY 115D

**RELIGST 116. Who Speaks for Religion? Scholars Versus Believers. 4 Units.**

This course introduces students to the Insider / Outsider problem in the study of Religion focusing on questions of location, position, relation and boundaries. Who possesses the authority to decide on which people are inside/outside a religion, religious group or tradition? How do we conceive of the participant observer relationship and the speaking and writing about religion? How should we think about the scientific pretensions of religious studies as a reductionist approach? How do we meaningfully engage with questions of faith, theology, and the beliefs of others as part of a historical narrative of religious studies that both privileges lived experience of believers and extols the need for critical distance on the part of scholars?.

**RELIGST 117. Christianity in 21st-century America. 4 Units.**

As the largest religion practiced in the United States, Christianity not only shapes the lives of a large number of its citizens but also impinges on public discourse, policies, and debates. This course investigates the ways in which Christianity in America is changing and what these changes bode for its role in the public and private spheres. Issues include shifting demographics lead to declining numbers in 'mainline' denominations; the polarization of Christian conservatives and religious 'nones'; interfaith toleration and cooperation alongside interreligious conflict; the rise of 'spiritual, not religious' young adults; the effects of immigration; religion and science.

**RELIGST 117X. Losing My Religion: Secularism and Spirituality in American Lives. 3 Units.**

In this seminar you will explore theory and practice, sociological data, spiritual writing, and case studies in an effort to gain a more nuanced understanding about how religion, spirituality, and secularism attempt to make legible the constellation of concerns, commitments, and behaviors that bridge the moral and the personal, the communal and the national, the sacred, the profane, and the rational. Together we will cultivate critical perspectives on practices and politics, beliefs and belonging that we typically take for granted.

Same as: AMSTUD 117N, EDUC 117N

**RELIGST 118. Gandhi, Nonviolence, Religion. 4 Units.**

We will study Gandhi and his era, focusing on sources that relate Gandhi's theory and practice of nonviolence to religion and ethics. Topics include Gandhi's biography and personal influences; his construction of Hinduism and inclination to asceticism; his encounters with Jainism and Christianity; his attempts to negotiate the increasingly intractable and violent issues between Hindus and Muslims leading up to independence/partition; and the religious arguments involved in his bitter break with the leader of the anti-caste and 'untouchable' liberation movement, B.R. Ambedkar. We will locate discussions of religion within larger political and social circumstances. Readings include *The Story of My Experiments with Truth*, *Hind Swaraj*, and other writings by Gandhi; the *Bhagavad Gita*; Erik Erikson's psychoanalytic study, *Gandhi's Truth*; and recent critical works on Gandhi and religion.

**RELIGST 119. Religion, Violence, and Nonviolence. 4 Units.**

College courses and public events often address "religion and violence"—an important topic, but one-sided. We will study ways in which religious leaders, movements, and discourses have (1) promoted violent conflict, aggression, and oppression; and (2) contributed to nonviolence, peacebuilding, and liberation of the oppressed. An overarching theme will be a view of religions as fields of interpretation. No religion is essentially violent or peaceful; intricately connected to the world around them, religions become what they become through interpretation and action. Each week will have two meetings: one featuring an outstanding guest lecturer and one to discuss the lecture topic, with assigned readings and films. Topics under consideration include: Buddhism and Violence; Dorothy Day and Catholic Nonviolent Resistance to Nuclear Weapons; Just War and Jihad; The Contribution of Negro Spirituals to Liberation; The Quakers: Pacifist Convictions and Activism; Violence/Nonviolence in Jainism; The Role of Christian Faith in M.L. King's Political Work; Spirituality and Religious Peacebuilding. For lecture series with required attendance and written reflections for 2 units, take RELIGST 29.

**RELIGST 119X. Spirits, Selves, and the Social: Histories of Thinking about Religion. 5 Units.**

Why do humans worship gods, spirits, and ancestors? What roles do religion, witchcraft, and magic play in everyday life? How does religious action become meaningful in a particular context? In what sense can we know about the religious experiences of others? Focus is on approaches to religion throughout anthropology's history. Each student will carry out a mini-ethnography on a religious community of their choice. Students will not be required to have any previous knowledge in anthropology or the study of religion.

Same as: ANTHRO 119A

**RELIGST 121. Muslim Bodies: sound, art, food and medicine in Islam. 4 Units.****RELIGST 124. Sufi Islam. 4 Units.**

The complex of Islamic intellectual and social perspectives subsumed under the term Sufism. Sufi mystical philosophies and historical and social evolution. Major examples include: Qushayrî, Râbî'a, Junayd, Hallâj, Sulamî, Ibn al-'Arabî, Rûmî, Nizâm al-Dîn Awliyâ'. Social and political roles of Sufi saints and communities. Readings include original prose and poetry in translation, secondary discussions, and ethnography.

**RELIGST 126. Protestant Reformation. 4 Units.**

The emergence of Protestant Christianity in 16th-century Europe. Analysis of writings by evangelical reformers (Luther, Calvin, Zwingli, Sattler, Hubmeier, Müntzer) and study of reform movements (Lutheran, Reformed, Anabaptist, Spiritualist) in their medieval context and as expressions of new and influential visions of Christian belief, life, social order.

Same as: HISTORY 126B

**RELIGST 128. The Five Books of Moses. 4 Units.**

A survey of the first five books of the Hebrew Bible/Old Testament—Genesis, Exodus, Leviticus, Numbers and Deuteronomy—that will explore their authorship, form and meaning.

**RELIGST 129. Modern Jewish Thought. 4 Units.**

From 1870 to the late twentieth century, Jewish thought and philosophy attempted to understand Judaism in response to the developments and crises of Jewish life in the modern world. In this course we shall explore the responses of figures such as Martin Buber, Franz Rosenzweig, Hermann Cohen, Abraham Joshua Heschel, Joseph Soloveitchik, Emil Fackenheim, and Emmanuel Levinas. Central topics will concern ethics and politics, faith and revelation, redemption and messianism, and the religious responses to catastrophe and atrocity. We shall discuss Judaism in European culture before and after World War I and in North America in the postwar period and after the Six Day War. A central theme will be the ways in which attempts to understand Jewish experience are related to history.

Same as: JEWISHST 129

**RELIGST 130. Sex and Gender in Judaism and Christianity. 3 Units.**

What role do Jewish and Christian traditions play in shaping understandings of gender differences? Is gender always imagined as dual, male and female? This course explores the variety of ways in which Jewish and Christian traditions - often in conversation with and against each other - have shaped gender identities and sexual politics. We will explore the central role that issues around marriage and reproduction played in this conversation. Perhaps surprisingly, early Jews and Christian also espoused deep interest in writing about 'eunuchs' and 'androgynes,' as they thought about Jewish and Christian ways of being a man or a woman. We will examine the variety of these early conversations, and the contemporary Jewish and Christian discussions of feminist, queer, trans- and intersex based on them.

Same as: FEMGEN 130, JEWISHST 120

**RELIGST 132. Jesus the Christ. 4 Units.**

How did Jesus of Nazareth, who never claimed to be Christ or divine, become the son of God after his death? Sources include the history of first-century Judaism and Christianity.

**RELIGST 132C. How Jesus the Jew became God. 4 Units.**

Contemporary historical-critical methods in investigating how one might study Jewish and Christian texts of the 1st century CE. Social contexts including economic realities and elite ideological views. What can be known historically about 1st-century Judaism and Jesus' part in it. How Jewish apocalyptic messianism shaped the birth of Christianity and its trajectory through the 1st century.

**RELIGST 132D. Early Christian Gospels. 4 Units.**

An exploration of Christian gospels of the first and second century. Emphasis on the variety of images and interpretations of Jesus and the good news, the broader Hellenistic and Jewish contexts of the gospels, the processes of developing and transmitting gospels, and the creation of the canon. Readings include the Gospel of John, the Gospel of Mark, the Gospel of Thomas, the Gospel of Mary and other canonical and non-canonical gospels.

Same as: CLASSICS 145

**RELIGST 133. Inventing Christianity in Late Antiquity. 4 Units.**

The transformation of an apocalyptic sect into an imperial religion from 200 to 600 C.E. Shifts in structures of authority, worship, and belief mapped against shifts in politics, economics and religion in the larger Roman empire. Cultural visions of this history including Edward Gibbon's *Decline and Fall of the Roman Empire*, Dan Brown's conspiracy theory in *The Da Vinci Code*, and Elaine Pagels' *The Secret Gospel of Thomas*.

**RELIGST 134. Sacred Space. 4 Units.**

Religions throughout history have marked certain spaces as out-of-the-ordinary, as places where the gods reveal themselves, where special events have taken place, where one can see and experience things not possible in ordinary space. Individuals and groups who enter and create these sacred spaces create the opportunity to transcend the everyday world. Some of these spaces are natural—mountains, rivers, deserts. Others are constructed—temples, churches, tombs. This course will explore such sacred spaces: how they come to be, what distinguishes them from ordinary space, what happens in them. Part of the course will be theoretical, looking at different approaches to sacred spaces developed by recent scholars of religion; part of it will be focused on specific sacred spaces, especially in Israel and America, and the course will conclude with a chance for students to explore the variety of sacred spaces found in our own community.

**RELIGST 135. Islam in America. 4 Units.**

This course explores the history of Islam in North America with special emphasis on the experience of Muslims in the United States. Contrary to popularly held belief, Muslims have been critical participants in the construction of American identity from the 16th century onwards when Muslim slaves were forcibly brought to Colonial America. Our course will explore the diverse ways Muslims in America have imagined, practiced, and negotiated their religious identity. We will move chronologically, and we will focus upon three crucial themes: the convergence of constructions of racial, religious, and national identities in America; the ever-shifting terrain of notions of authority and authenticity amongst Muslims in America; and global resonances of the practices and ideas of American Muslims.

**RELIGST 136. Buddhist Yoga. 4 Units.**

Buddhist models of spiritual practice emphasizing issues in the interpretation of the contemplative path.

**RELIGST 140. RELIGION AND ETHICS: The Limits of Dialogue. 3 Units.**

How do religious traditions address ethical problems? Although the good seems like a universal goal, religious traditions force us to consider non-universal ways of defining it. From marriage to genetic engineering, from abortion to organ donation, issues of community, faith, and practice continue to complicate our ethical thinking. Exploration of case-studies and concepts, with readings from Kant, Foucault, Butler and others, as well as Jewish and Christian interpretations of the Bible.

**RELIGST 143. Empathy. 3 Units.**

Empathy is fashionable these days - whether in Silicon Valley or the latest neuroscience. There is a deep sense that we need to learn how to walk in the shoes of another. This course will trace the meaning and practice of empathy through Buddhist compassion; Christianity's commandments to love our neighbor; Enlightenment moral philosophy; nineteenth-century aesthetics; and twenty-first century neuroscience. We will also explore how the arts - drama, novels, poetry, and the visual arts - especially enable us to understand and empathize with the other.

**RELIGST 144. John Calvin and Christian Faith. 5 Units.**

Close reading and analysis of Calvin's *Institutes of the Christian Religion* as a classic expression of Christian belief.

**RELIGST 146. Religious Mystery and Rational Reflection. 4 Units.**

Explores the boundaries of rational knowledge about Christian faith through a careful reading of the transcendental project of Jesuit theologian Karl Rahner. Rahner's thought, informed by various sources (e.g., the mystics, Aquinas, Kant, Hegel and Ignatius Loyola), results in an interpretation of Christian faith that strives for intellectual honesty in the face of challenges from science, atheism and post-modern culture. Yet it leaves room for a fundamental human openness to the source and goal of self-transcendence, what Rahner calls Holy Mystery. Weekly short position papers will be required to stir both reflection and discussion.

**RELIGST 148. From Jesus to Paul. 4 Units.**

Jesus considered himself God's definitive prophet, but he did not think he was God, and had no intention of founding a new religion. How did this Jewish prophet become the gentile God and the founder of Christianity? The role of Paul.

**RELIGST 148A. St. Paul and the Politics of Religion. 4 Units.**

The major letters written by Paul, the Apostle, and his biography, Acts of the Apostles. Historical context in first century Jewish cultural politics. Origins of Christianity, and the split into Judaism and Christianity. The relationship between Jews and non-Jews. The juxtaposition of law and faith. Origins of cultural universalism. Paul as Jewish radical versus Paul, the first Christian thinker and theologian. Recent philosophical readings of Paul (Taubes, Badiou, and Agamben).

**RELIGST 150. The Lotus Sutra: Story of a Buddhist Book. 4 Units.**

The Lotus school of Mahayana, and its Indian sources, Chinese formulation, and Japanese developments.

**RELIGST 156. Music and Religious Experience in the Contemporary World. 3-5 Units.**

Explores the central role of music in the performance and experience of religion, positioning music not as an adjunct to silent rituals and liturgy, but as the catalyst and carrier of religious experience, indeed as religious experience itself. Topics include: trance, spirit possession, heightened religious experience, sacred sound and chant, shamanism, politics, and identity. Musical traditions include: Zimbabwean mbira music, African-American church music, Southeast Asian Buddhist ritual music, South Asian Hindu and Islamic devotional music, shamanistic music of Southeast Asia.

Same as: MUSIC 186A, MUSIC 286A, RELIGST 256

**RELIGST 160. Religion in Modern African Literature. 4 Units.****RELIGST 161. Modern Religious Thought: From Galileo to Freud. 4-5 Units.**

The three centuries following the Protestant Reformation led to a gradual clarification of the notions of the religious and secular and gave rise to a new genre of religious thought, ideally freed from theology, church or synagogue—a secular philosophy of religion, or in some cases a religiously-imbued philosophy. We will examine some of the foundations of religious thought in modernity, including Galileo, Spinoza, Diderot, Kant, Hegel, Schleiermacher, Kierkegaard, Feuerbach, Marx, Nietzsche and Freud.

**RELIGST 162X. Spirituality and Nonviolent Urban and Social Transformation. 3 Units.**

A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, César Chávez in the labor movement, and William Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center).

Same as: CSRE 162A, URBANST 126

**RELIGST 168. Philosophy of Religion. 3 Units.**

Course traces efforts within the Western tradition from Boethius through Anselm, Aquinas, Descartes, Hume, Kant, and Kierkegaard to Camus to establish a rational foundation for theist belief and its consistency or coherence with everyday experience. We will deal extensively with the criticisms that that effort has cast up and then turn to investigate issues that extraordinary or mystical experience raises. We will incorporate a look at Buddhist traditions as well as those in the west to gain insight into these questions. And finally, we will look at the ethics of belief, at our responsibility toward our commitments, and some of the varying positions available to us.

**RELIGST 170A. Biblical Hebrew, First Quarter. 2 Units.**

Establish a basic familiarity with the grammar and vocabulary of Biblical Hebrew and will begin developing a facility with the language. Students that are enrolled in this course must also enroll in Beginning Hebrew. This course requires no prior knowledge of Hebrew and will begin with learning the alphabet. By the end of the year, students will be able to translate basic biblical texts, will be familiar with common lexica and reference grammars, and will have sufficient foundational knowledge to enable them to continue expanding their knowledge either in a subsequent course or on their own.

Same as: AMELANG 170A, JEWISHST 107A

**RELIGST 170C. Reading in Biblical Hebrew. 4 Units.**

Third of a three quarter sequence. Readings and translation of biblical narratives emphasizing grammar and literary techniques. Prerequisite: AMELANG 170B.

**RELIGST 170D. Readings in Talmudic Literature. 1 Unit.**

Readings of the talmudic texts. Some knowledge of Hebrew is preferred. The ongoing seminar is designed to study the making of the talmudic sugya (unit of discourse), along with classic commentaries. Students will consider some of the recent developments in the academic study of Talmudic literature, introduced by the instructor. The goal of the ongoing seminar is to provide Stanford students and faculty with the opportunity to engage in regular Talmud study, and to be introduced to a variety of approaches to studying Talmudic texts. Class meets on Fridays, from 12:00-1:15 pm in Hillel (Koret Pavilion Taube Hillel House; Ziff Center for Jewish Life). May be repeat for credit.

Same as: JEWISHST 127D, JEWISHST 227D

**RELIGST 171A. Biblical Greek. 3-5 Units.**

(Formerly CLASSGRK 5.) This is a one term intensive class in Biblical Greek. After quickly learning the basics of the language, we will then dive right into readings from the New Testament and the Septuagint, which is the ancient Greek translation of the Hebrew Bible. No previous knowledge of Greek required. If demand is high for a second term, an additional quarter will be offered in the Spring.

Same as: CLASSICS 6G, JEWISHST 5

**RELIGST 171X. Intensive Biblical Greek. 8 Units.**

Equivalent to two quarters of Biblical Greek (CLASSICS 6G, 7G). Students will learn the core of New Testament Greek with the goal of learning to accurately translate and read the New Testament. Students will read one-third of the Gospel of John during the course and will be well-prepared to read the Greek New Testament independently after the course. Focus on knowledge of key vocabulary and grammar needed to read the Greek Bible with ease. No previous knowledge of Greek required. Course does not fulfill the Stanford language requirement.

Same as: JEWISHST 5G

**RELIGST 173. What is Enlightenment? Religion in the Age of Reason. 4 Units.**

Many contemporary attitudes towards religion were forged in 17th- and 18th-century Europe in the midst of heated debates over the meaning and value of Christianity in a world 'come of age': Liberal calls for justice, toleration, and pluralism in matters religious; secular suspicions about religious superstition, fanaticism, and ideology; skepticism regarding the solubility of ultimate questions of meaning and metaphysics. Seminal readings on religion from Descartes, Pascal, Leibniz, Voltaire, Hume, Mendelssohn and Kant.

**RELIGST 174. Religious Existentialism-Kierkegaard. 4 Units.**

Existentialism is often understood to be a secular or anti-religious philosophy of life, a substitute for Christian ethics in a post-theistic world come of age. Yet this twentieth-century philosophical movement owes many of its concerns and much of its vocabulary to the hyper-Protestant Danish thinker Soren Kierkegaard, and much of the best Christian and Jewish thought in the 20th-century (Bultmann, Buber, Tillich) adopted existentialism as the 'best philosophy' for making sense of these traditions in a secular age. This course will examine the origins of existentialist thought in the writings of Kierkegaard and its appropriation by a handful of influential 20th-century religious thinkers.

**RELIGST 176. Religious Diversity: Theoretical and Practical Issues. 4 Units.**

What does it mean for a religion to be true? If one religion is true, what about the truth of other religious possibilities? How, and why, should religious traditions be compared? Readings address tolerance and pluralism, relativism, comparative theory, and new religious virtues.

**RELIGST 179. Doing the Sacred: Religion and Performance. 4 Units.**

This course investigates religion as practice and performance, rather than as belief and doctrine. A performance-centered emphasis helps us understand how domination and authority, as well as creativity and individual resistance, underlie culture. From initiatory rites to cyber sermons, human action offers raw, physical data that unveils the mechanisms of social control, ideology, and individual resistance. Reorienting religion from the perspective of religious acts / actors – those who are doing something they consider sacred – evokes many interpretive possibilities: How do these performances create and maintain communities? How do they resolve conflicts that arise within everyday affairs? In what ways do they generate meaning and shape identity? What can these enactments reveal about the constructions of power, gender, and race? This course explores such issues, probing the complicated relationship between human intention and social reality. Ultimately, a study of religion and performance seeks to understand how performance and transcendence interact to make participants into who they are. The readings cover an array of religious traditions – medieval and evangelical Christian, Hindu, Native American, Jewish, Buddhist, African and Haitian Vodou – all of which present a rich repertoire of sacred drama, dance, and music. We will discuss performances that make modern readers uncomfortable, such as sacrifice and flagellation, and examine why they are meaningful within their specific cultural context. Finally, we will consider how secular practices and the internet mimic religious behavior. However divergent, all of these examples demonstrate how religious performance is no mere artifice, but a vehicle for the practitioner's own pious posturing – one that is spiritually innovative and self-affirming – yet shaped by hierarchical regimes.

**RELIGST 181. Heidegger and Daoism: Differences and Dialogue. 5 Units.**

The new paradigm for understanding Heidegger makes possible a fresh look at his long-standing interest in Daoism. Part One: a radical recasting of Heidegger's thought, including his readings of the Presocratics (6th century BCE). In light of that, Part Two: a reading of Laozi's *Dao De Jing* / *Tao Te Ching* (6th century BCE). Permission of instructor required. Same as: PHIL 133S

**RELIGST 183. Atheism: Hegel to Heidegger. 5 Units.**

The radical changes in ideas of God between Hegel and Heidegger, arguing that their questions about theism and atheism are still pertinent today. Texts from Hegel, Feuerbach, Marx, Nietzsche, and Heidegger: on God, history, and the social dimensions of human nature. N.B.: Class size limited. Apply early at [tsheehan@stanford.edu](mailto:tsheehan@stanford.edu). Same as: PHIL 133T

**RELIGST 185. Prophetic Voices of Social Critique. 4 Units.**

Judges, Samuel, Amos, and Isaiah depict and question power, strong leaders who inevitably fail, the societal inequities and corruption inevitable in prosperity, and the interplay between prophet as representative of God and the human king. How these texts succeed in their scrutiny of human power and societal arrangements through attention to narrative artistry and poetic force, and condemnation of injustice. Includes service-learning component in conjunction with the Haas Center.

**RELIGST 188A. Issues in Liberation: Central America. 5 Units.**

Within the context of US intervention in Latin America the course investigates the history of liberation movements in El Salvador and Nicaragua (including liberation theology), as well as ethical questions relating economic, social, and political issues in those countries. This class will likely include immersion travel to El Salvador or Nicaragua over spring break and consequently the size of this course is limited. Students will be given an application by email. All applications will be reviewed to determine final class enrollment.

**RELIGST 199. Individual Work. 1-15 Unit.**

Prerequisite: consent of instructor and department. May be repeated for credit.

**RELIGST 201. Islamic Law. 3-5 Units.**

(This course is combined with LAW 586) Topics include marriage, divorce, inheritance, ritual, war, rebellion, abortion, and relations with non-Muslims. The course begins with the premodern period, in which jurists were organized in legal traditions called *ḥ*schools of law.*ḥ* After examining the nature and functions of these institutions, we turn to the present era to study the relationship between customary law, state law, and the Islamic legal heritage in Egypt and Indonesia. The course explores Muslim laws and legal institutions and the factors that have shaped them, including social values and customs, politics, legal precedents, and textual interpretation.

Same as: RELIGST 301

**RELIGST 201A. Gender in Classical Islamic Law. 3-5 Units.**

The course examines classical Islamic society and law. It covers historical development, the unity and diversity of Muslim legal traditions, and the relationship between laws and values. Constructions of gender in law are examined through rituals, marriage, divorce, birth control, child custody, and sexuality.

Same as: RELIGST 301A

**RELIGST 203. Myth, Place, and Ritual in the Study of Religion. 3-5 Units.**

Sources include: ethnographic texts and theoretical writings; the approaches of Charles Long, Jonathan Z. Smith, Victor Turner, Michael D. Jackson, and Wendy Doniger; and lived experiences as recounted in Judith Sherman's *Say the Name: A Survivor's Tale in Prose and Poetry*, Jackson's *At Home in the World*, Marie Cardinal's *The Words to Say It*, and John Phillip Santos's *Places Left Unfinished at the Time of Creation*.

Same as: RELIGST 303

**RELIGST 204. Paleography of Medieval and Early Modern Manuscripts. 3-5 Units.**

Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.

Same as: CLASSICS 215, DLCL 209, HISTORY 309G

**RELIGST 205. Religious Poetry. 4 Units.**

Religious poetry drawn from the Islamic, Christian, Confucian and Daoist traditions. Limited enrollment or consent of the instructor required.

**RELIGST 208A. Ex Oriente Lux: Orientalism and the Study of Religion. 3-5 Units.**

This seminar is designed to expose students to issues relating to discourse and subjectivity within the textual constructions of Oriental religions in the colonial era. We will begin with Edward W. Said's provocative work on notions of representation and power embedded in the discourse on the Orient that established, produced, and, ultimately, perpetuated western knowledge about the Other. We will then discuss the impact of the Oriental Renaissance and the vital role that Eastern wisdom played in constructing the field of Comparative Religious Studies. In addition, students will also read ethnographies, fables, and travelogues that both support and undermine Said's thesis of an active West constructing a largely passive East.

Same as: RELIGST 308A

**RELIGST 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 308C

**RELIGST 209. Priests, Prophets, and Kings: Religion and Society in Late Antique Iran. 4-5 Units.**

This course is designed as a broad introduction to the religious and social history of the Sasanian Empire, encompassing the period from 224-651 CE as well as the early years of Islamic rule in Iran. Among the topics we will discuss are: the lives and deeds of the powerful Iranian emperors such as Shapur I and II in relation to the Roman emperors Diocletian and Constantine; the transformation of Zoroastrianism into a powerful official religion of the state and its subsequent orthodoxy; the emergence of the prophet Mani and the confrontation of Manicheism with the Zoroastrian priesthood; the conversion of Constantine to Christianity and its political and social ramifications in Iran; the establishment of an independent Iranian Christian church; the importance of Armenia in the Sasanian-Roman conflict; and a brief discussion of the history of the Jewish community under the Sasanians. We will end the quarter by examining the Arab-Islamic conquests of Iran and the profound social changes experienced by the Zoroastrian communities in the early centuries of Islam in Iran.

Same as: CLASSICS 147, CLASSICS 247, RELIGST 309

**RELIGST 209A. Sugar in the Milk: Modern Zoroastrianism as Race, Religion, and Ethnicity. 4-5 Units.**

Modern Zoroastrian experience as race, religion, and ethnic identity. Some 60,000 Zoroastrians now live in India and have resided there for a millennium. In the 19th century, these peoples from Persia became colonial elites yet were acutely aware that they were not quite Indian, British, or Persian. Diverse ways this experience of dislocation has served as a defining characteristic in Parsi communal identity and contrast these South Asian experiences with the minority socio-politics of those who remained in Iran. Survey the colonial and post-colonial communities in England, East Africa, Hong Kong, Australia, and North America and examine the expression of these global diasporic experiences in literature and the arts.

Same as: RELIGST 309A

**RELIGST 209D. 'Crow Eaters' & 'Fire Worshippers': Exploring Contemporary Zoroastrianism Thru Reading Parsi Lit. 3-5 Units.**

In the past three decades Parsi fiction has rapidly emerged as a unique and creative voice in modern Anglophone literature from South Asia. From Bapsi Sidhwa to Thrity Umrigar to Rohinton Mistry, Parsi novelists address the most poignant concerns of Zoroastrians living in an era of rapid social, political, and religious transformation. The erosion of tradition; the breakdown of the Parsi family; the demise of religion among the young; and the cultural losses and gains of living in diaspora are common themes in their works. The unique vantage point of the Parsis; neither Hindu nor Muslim, neither quite Indian nor quite British; will serve as a lens for examining the inherent tensions in multicultural societies both East and West.

Same as: RELIGST 309D

**RELIGST 209E. Imperishable Heroes and Unblemished Goddesses: Myth, Ritual, and Epic in Ancient Iran. 3-5 Units.**

Designed as a broad introduction to the world of ancient Iran, students will be introduced to the Indo-European inheritance in ancient Iranian culture; the shared world of ritual, religion, and mythology between Zoroastrianism in Iran and Vedic Hinduism in India; and to the contours of early Zoroastrian religious thought. We will also survey mythoepic literature in translation from the archaic Avesta through the late antique Zoroastrian Middle Persian corpus to the early medieval national epic of Iran, the Book of Kings of Ferdowsi.

Same as: CLASSICS 148, CLASSICS 248, RELIGST 309E

**RELIGST 212. Chuang Tzu. 5 Units.**

The *Chuang Tzu* (Zhuangzi) in its original setting and as understood by its spiritual progeny. Limited enrollment.

**RELIGST 212X. Knights, Monks, and Nobles: Masculinity in the Middle Ages. 4-5 Units.**

This course considers masculinity as historically and culturally contingent, focusing on the experiences and representations of medieval men as heroes, eunuchs, fathers, priests, husbands, boys, and fighting men. Recognizing that the lives of men, like those of women, were governed by gendered rules and expectations, we will explore a wide range of medieval masculinities, paying close attention to the processes by which manhood could be achieved (e.g. martial, spiritual, sexual), and to competing versions of manliness, from the warrior hero of the early middle ages to the suffering Christ of late medieval religion.

Same as: FEMGEN 212X, FEMGEN 312, HISTORY 212, HISTORY 312, RELIGST 312X

**RELIGST 215X. Saints and Sinners: Women and Religion in the Medieval World. 5 Units.**

Although the Apostle Paul taught that "There is neither Jew nor Greek, slave nor free, male nor female, for you are all one in Christ Jesus" (Gal. 3:28), men and women experienced medieval Christianity in ways that were often vastly different. In this course we examine the religious experiences of women from the origins of Christianity through to the end of the medieval period, with particular attention paid to female prophets and religious authority, saints and martyrs, sexuality and virginity, literacy and education within the cloister, mysticism, relations between religious women and men, and the relevance of gender in the religious life – especially as gender intersected with fears of heresy, sin, and embodiment.

Same as: FEMGEN 215, HISTORY 215

**RELIGST 216. Japanese Buddhism. 4 Units.**

Focus on the religious lives of lay people in medieval Japan, as evidenced in collections of Buddhist stories (setsuwashu), narrative picture scrolls (emaki), and related historical materials. All readings are in English, but the instructor will also work with students interested in reading the original Japanese.

**RELIGST 217. Japanese Studies of Religion in China. 3 Units.**

(Graduate students register for 317.) Readings in Japanese secondary sources on Chinese religions.

Same as: RELIGST 317

**RELIGST 217X. Minorities In Medieval Europe. 5 Units.**

This course examines attitudes towards outsider groups within medieval society and the treatment of these groups by medieval Christians. Heretics, Jews, Muslims, homosexuals, prostitutes and usurers occupied ambivalent and at times dangerous positions within a society that increasingly defined itself as Christian. Differences in the treatment of these various 'outcast' groups, their depiction in art, their legal segregation, and their presumed association with demonic activity are addressed through discussion, and readings from primary and secondary source material.

Same as: HISTORY 217S

**RELIGST 221. The Talmud. 4 Units.**

Strategies of interpretation, debate, and law making. Historical contexts.

Prerequisite: Hebrew.

Same as: RELIGST 321

**RELIGST 221B. What is Talmud?. 5 Units.**

In what sense can Talmud be studied as literature? Which voices can be identified? Concepts of author, editor, or redactor. The basic textual units of Talmud: sugya, chapter, and tractate. The sugya as literary genre. The aesthetic of talmudic dialectics. Prerequisite: reading Hebrew with some understanding of biblical Hebrew.

Same as: RELIGST 321B

**RELIGST 221D. Readings in Syriac Literature. 2-5 Units.**

In recent years, there has been growing interest in the works of Syriac speaking Christians in antiquity and beyond. This course offers an introduction to the Syriac language, including its script, vocabulary and grammar, and a chance to read from a selection of foundational Syriac Christian texts.

Same as: JEWISHST 221D, JEWISHST 321D, RELIGST 321D

**RELIGST 222B. Sufism Seminar. 3-5 Units.**

Sufism through original texts and specialized scholarship. Prerequisite: ability to read at least one major language of Islamic religious literature (Arabic, Persian, Turkish, Urdu).

Same as: RELIGST 322B

**RELIGST 223. Studying Islam: History, Methods, Debates. 4 Units.**

Islam as a subject of academic inquiry since the 19th century. Origins and critiques of major methodological perspectives in Islamic studies such as philology, religious studies, history, art history, and anthropology. Landmarks in the development of the field and the work of major scholars. Academic debates regarding unity versus diversity, orientalism, fundamentalism and Islamism, Sufism, and gender. Current trends in scholarship on medieval and modern Muslim societies. Prerequisite: course work in Islamic studies or methodology in religious studies.

**RELIGST 224. Classical Islamic Texts. 3 Units.**

The course is based on readings in primary Arabic sources in the key fields of pre-modern Islamic scholarship. The list of readings and topics will depend on the interests of the students. In addition to focusing on the language, contents, and context of the texts covered, the course introduces genre-specific historical research methods. The reading selections may be derived from Qur'anic interpretation (tafsir), the hadith literature, adab, biographical dictionaries, fiqh, ta'rikh, kalam, or Sufism. Reading knowledge of Arabic is required.

Same as: RELIGST 324

**RELIGST 224B. Unveiling the Sacred: Explorations in Islamic Religious Imagination. 3-5 Units.**

Poetry and prose in translation as well as historical studies. Islamic movements invested in the idea that the sensory world has a hidden or esoteric counterpart that can be understood or experienced through following particular religious programs. Various forms of Shi'ism and Sufism, millenarian and apocalyptic movements, the Nation of Islam and its offshoots. Philosophical propositions, historical contexts, and the role of ritual in the construction of religious systems.

Same as: RELIGST 324B

**RELIGST 226A. Judaism and Hellenism. 3-5 Units.**

interactions and conflicts between Jews and Greeks in the centuries following the conquests of Alexander the Great and the cultural/religious repercussions of their encounter. In what ways were Jews influenced by Greek culture? In what ways, and for what reasons, did they resist it? And how the interaction of these cultures shape the subsequent development of Judaism and Christianity? Jewish texts in the Greco-Roman period, including Jewish-Greek writers like Philo of Alexandria, the Apocrypha, the Dead Sea Scrolls, selected writings from the New Testament, and the Passover Haggadah.

Same as: RELIGST 326A

**RELIGST 226D. Jewish-Christian Relations in Antiquity. 1-2 Unit.**

Constructions of identity, community, ethnicity: these nonconsiderations frame the investigation of ancient Christian rhetoric and theology contra Iudaeos. This historical project will be set within the larger intellectual and cultural context of a) learned Graeco-Roman traditions of ethnic stereotyping; b) forensic rhetoric; and c) philosophical paideia; and these traditions will be considered within their larger social context of the Mediterranean city (I-III). Specifically, various Christian, and especially Latin traditions contra Iudaeos (IV-VI) will be studied.

Same as: CLASSGEN 126B

**RELIGST 227. The Qur'an. 5 Units.**

Early history, themes, structure, chronology, and premodern interpretation. Relative chronology of passages.

Same as: RELIGST 327

**RELIGST 229. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.**

Stretching from India to Ethiopia, the Persian Empire, the largest empire before Rome, has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West and Greek democracy. This course will provide a general introduction to the Persian Empire, beginning in the 6th century BCE to the fall of Persia to Alexander the Great in 331 BCE. We shall not only examine the originality of the first world empire of antiquity, but the course will also attempt to present a broad picture of the diverse cultural institutions and religious practices found within the empire. Readings in translation from the royal edicts and the inscriptions of Cyrus, Darius, and Xerxes will allow us to better appreciate the subtle ways in which these Persian kings used religion to justify and propagate the most ambitious imperial agenda the world had ever seen. In concluding the quarter, students will evaluate contemporary representations of Persia and the Persians in politics and popular culture in a wide array of media, such as the recent film 300 and the graphic novel on which it is based, in an attempt to better appreciate the enduring legacy of the Greco-Persian wars.

Same as: CLASSICS 146, CLASSICS 246, RELIGST 329

**RELIGST 230B. Zen Studies. 4 Units.**

Readings in recent English-language scholarship on Chan and Zen Buddhism.

Same as: RELIGST 330B

**RELIGST 231X. Knowing God: Learning Religion in Popular Culture. 4 Units.**

This course will examine how people learn religion outside of school, and in conversation with popular cultural texts and practices. Taking a broad social-constructivist approach to the variety of ways people learn, this course will explore how people assemble ideas about faith, identity, community, and practice, and how those ideas inform individual, communal and global notions of religion. Much of this work takes place in formal educational environments including missionary and parochial schools, Muslim madrasas or Jewish yeshivot. However, even more takes place outside of school, as people develop skills and strategies in conversation with broader social trends. This course takes an interdisciplinary approach to questions that lie at the intersection of religion, popular culture, and education.

Same as: AMSTUD 231X, EDUC 231, JEWISHST 291X

**RELIGST 234. Emmanuel Levinas: Ethics, Philosophy and Religion. 4 Units.**

Emmanuel Levinas (1906-1995) is a major French philosopher of the second half of the twentieth century and is among the half-dozen most important Jewish thinkers of the century. Born in Lithuania, Levinas lived most of his life in France; he was primarily a philosopher but also a deeply committed Jewish educator who often lectured and wrote about Judaism and Jewish matters. Levinas was influenced by Bergson, Husserl, Heidegger, and others, like Buber and Rosenzweig. We will look at the philosophical world in which he was educated and explore his unique development as a philosopher in the years after World War Two. Levinas reacted against the main tendencies of Western philosophy and religious thought and as a result shaped novel, powerful, and challenging ways of understanding philosophy, religion, ethics, and politics. In this course, we will examine works from every stage of Levinas's career, from his early study of Husserl and Heidegger to the emergence of his new understanding of the human condition and the primacy of ethics, the face-to-face encounter with the human other, the role of language and the relationship between ethics and religion, and finally his understanding of Judaism and its relationship to Western philosophy. We will be interested in his philosophical method, the relevance of his thinking for ethics and religion, the role of language in his philosophy and the problem of the limits of expressibility, and the implications of his work for politics. We shall also consider his conception of Judaism, its primary goals and character, and its relation to Western culture and philosophy.

Same as: JEWISHST 224, JEWISHST 324, RELIGST 334

**RELIGST 235. Religion in Modern Society: Secularization and the Sacred. 4 Units.**

What is the status of religion in modern life? Is the modern world "secular" in some fundamental, irreversible way and what does this mean? This course will explore these questions through variety of readings from leading sociologists, philosophers, and anthropologists. Our goal will be to understand in what ways industrialization, political liberalization, the rise of technology, and the success of modern science have been used to support the "secularization" thesis that the modern West rendered religion a thing of the past. A central question to be asked will be: do assessments of the place of religion in modernity necessitate a philosophy of history i.e., a theory not only of historical change, but of the meaning of this change as well? The course will begin by looking at the origins of the theory of secularization from its beginnings in Enlightenment attempts to understand the meaning of history. We will then turn to contemporary debates over the term "secular" against its counterpart, "religious", and the problems with their application to non-Western societies. We will read works by Talal Asad, Saba Mahmood, Max Weber, Charles Taylor, Jürgen Habermas, and Pope Benedict XVI. Same as: RELIGST 335

**RELIGST 238. Christian Neo-Platonism, East and West. 3-5 Units.**

Christianity's shift to neo-Platonic Greek philosophical categories and its significance for contemporary spirituality. Readings from Plotinus, Proclus, Greek fathers such as Pseudo-Dionysus, and from Ambrose and Augustine. Same as: RELIGST 338

**RELIGST 239. Luther and the Reform of Western Christianity. 3-5 Units.**

Luther's theology, ethics, biblical interpretation, and social reforms and their significance for the remaking of Western Christianity. Readings include Luther's own writings and secondary sources about Luther and his world. Same as: RELIGST 339

**RELIGST 244. Explaining Religion. 3-5 Units.**

There are broadly two different, and sometimes mutually exclusive, ways of explaining social religious phenomena: idealism and materialism. One gives ideas ultimate causal primacy while the other emphasizes economic, technological, geographical, and demographic factors. This course examines arguments for and against each approach. Topics include rational choice theory, functionalism, Marxism, cultural materialism, and the unconscious. Case studies include Jewish and Indian dietary restrictions, competition between Christian denominations, survival strategies of minority religions, apocalyptic movements, etc. For the final paper, each student will write on a religious tradition of his/her choice. Same as: RELIGST 344

**RELIGST 245. Religion, Reason, and Romanticism. 5 Units.**

The late 18th-century European cultural shift from rationalist to romantic modes of thought and sensibility. Debates about religion as catalysts for the new *Zeitgeist*. Readings include: the Jewish metaphysician, Mendelssohn; the dramatist, Lessing; the philosopher of language and history, Herder; the critical idealist, Kant; and the transcendental idealist, Fichte.

**RELIGST 246. Constructing Race and Religion in America. 4-5 Units.**

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time. Same as: CSRE 246, HISTORY 256G, HISTORY 356G, RELIGST 346

**RELIGST 247B. Readings in Chinese Religious Texts: The Lingbao Scriptures. 4 Units.**

A survey of the original Lingbao scriptures. Composed in the late-4th / early 5th century, these texts radically revised Daoist practice, incorporated elements of Buddhist thought and practice, and created liturgies that are still used in Daoist communities today. (Reading knowledge of Literary Chinese 22 required). Same as: RELIGST 347B

**RELIGST 248. Chinese Buddhism in World Historical Perspective. 3-5 Units.**

Shared cosmologies, trade routes, and political systems. Prerequisite: Shared knowledge in Chinese or Japanese. Same as: RELIGST 348

**RELIGST 248A. Chinese Buddhism Beyond the Great Wall. 3-5 Units.**

The thought, practice, and cultural resonance of the sorts of originally Chinese Buddhism that flourished to the north and northwest of China proper during the two to three centuries following the fall of the Tang - i.e., under the Khitan Liao (907-1125) and the Tangut Xixia (1032-1227) dynasties - with special emphasis on the later fortunes of the Huayan, Chan, and Mijiao (Esoteric) traditions. Prerequisite: reading knowledge of Chinese. Same as: RELIGST 348A

**RELIGST 250. Classics of Indian Buddhism. 4 Units.**

Texts in English translation including discourses (sutras), philosophical treatises, commentaries, didactic epistles, hymns, biographies, and narratives.

**RELIGST 251. Readings in Indian Buddhist Texts. 3-5 Units.**

(Graduate students register for 351.) Introduction to Buddhist literature through reading original texts in Sanskrit. Prerequisite: Sanskrit. Same as: RELIGST 351

**RELIGST 252. Hearts and Diamonds: The Lives of Buddhist Sacred Texts. 4 Units.**

An exploration of two key Mahayana Buddhist scriptures (the Heart & Diamond Sutras) and their histories, looking at what they say and how they have been used, from the first millennium to the present day.

**RELIGST 252A. The Story of a Buddhist Megascripture: Readings in the Avatamsaka. 3-5 Units.**

In this course we will explore the massive Mahayana Buddhist scriptural compilation known as the Avatamsaka Sutra (more correctly: Buddhavatamsaka Sutra). We will investigate the development of the text in India, study its contents, and consider its later reception in East Asia. Since much of the course will be devoted to reading sections of the Buddhavatamsaka, a reading knowledge of Chinese is required. Same as: RELIGST 352A

**RELIGST 253. Mountains, Buddhist Practice, and Religious Studies. 3-5 Units.**

The notion of the sacred mountain. Readings from ethnographic and theoretical works, and primary sources. Same as: RELIGST 353

**RELIGST 254. Recent Contributions to Buddhist Studies. 3-5 Units.**

This reading intensive course will examine nine areas in recent work in Buddhist studies, including ethnography, archaeology, monasticism, the study of "experience," and gender. May be repeated for credit. Same as: RELIGST 354

**RELIGST 255. Religion and Power in the Making of Modern South Asia. 3-5 Units.**

This course examines the diverse ways that religious traditions have been involved in the brokering of power in South Asia from the late seventeenth century to the present day. We will examine the intersection of religion and power in different arenas, including historical memory, religious festivals, language politics, and violent actions. At the core of our inquiry is how religion is invoked in political contexts (and vice-versa), public displays of religiosity, and the complex dynamics of religion and the state. Among other issues, we will particularly engage with questions of religious identity, knowledge, and violence. HISTORY297F must be taken for 4-5 units.

Same as: HISTORY 297F, RELIGST 355

**RELIGST 256. The Brahma Net Sutra (Fanwang Jing). 4 Units.**

A study of an important Chinese Buddhist apocryphal work, with special attention to interpretation of content, impact on monastic codes in medieval China, transmissional history and commentarial tradition.

Same as: RELIGST 356

**RELIGST 257. Readings in Daoist Texts. 4 Units.**

Readings from primary sources. Prerequisite: classical Chinese.

Same as: RELIGST 357

**RELIGST 257X. Female Divinities in China. 4-5 Units.**

This course examines the fundamental role of powerful goddesses in Chinese religion. It covers the entire range of imperial history and down to the present. It will look at, among other questions, what roles goddesses played in the spirit world, how this is related to the roles of human women, and why a civilization that excluded women from the public sphere granted them a dominant place, in the religious sphere. It is based entirely on readings in English.

Same as: HISTORY 293E, HISTORY 393E, RELIGST 357X

**RELIGST 258. Japanese Buddhist Texts. 3-5 Units.**

Readings in medieval Japanese Buddhist materials. May be repeated for credit. Prerequisite: background in Japanese or Chinese.

Same as: RELIGST 358

**RELIGST 259. Religion and Music in South Asia. 4-5 Units.**

How music and other arts in South Asia are intertwined with religion. Classical, devotional, folk, and popular examples introduce Gods as musicians, sound as God, music as yoga, singing as devotion, music as ecstasy-inducing, music as site for doctrinal argument, music and religion as vehicles for nationalism. Co-taught by professors of Music and Religious Studies, focusing Hinduism and Islam in India, Pakistan, and the diaspora. Music practice along with academic study; guest artists and films; no background required.

Same as: MUSIC 186, MUSIC 286

**RELIGST 260. Buddhism & Modernity. 3-5 Units.**

Is Buddhism a philosophy? A mind science? An ancient mystical path? A modern construct? This seminar will evaluate a variety of answers to these questions by exploring how Buddhism has been understood in the modern era. Our primary source materials will range from Orientalist poetry to Zen essays to Insight Meditation manuals to 21st-century films. We will examine how these works shape Buddhism, consider their pre-modern influences, and turn to recent scholarship to discuss how romantic, imperialist, anti-modern, nationalist, therapeutic, and scientific frames depict one of today's most popular religions. This course is cross-listed as RELIGST 260/360. Undergraduates must enroll in RELIGST 260 for 5 units. Graduate students must enroll RELIGST 360 for 3-5 units.

Same as: RELIGST 360

**RELIGST 261A. Belief. 5 Units.**

The post-Christain (or post-modern) age has given rise to new forms of faith, ranging from secular humanism and cultural atheism to rediscovery of the transcendent in the cosmos and quantum mechanics. However, unlike the era of "Christendom," belief is no longer necessarily hinged to faith. This course explores the origins of this phenomenon in Thomas Aquinas, and then newer philosophical approaches to understanding belief, ranging from Charles Taylor and Talal Asad and their theories of the secular, to Catherine Bell and the role of practice in believing. Finally, we turn to the work of three contemporary theorists of religious belief: Gianni Vattimo, Jean-Luc Marion, and Richard Kearney, who endeavor to cast believing outside established theological categories, yet still speak of "god."

Same as: in a post-Christian Age

**RELIGST 263. Judaism and the Body. 4 Units.**

Representations and discourses of the body in Jewish culture; theories of body and ritual. Case studies of circumcision, menstrual impurity, and intersexuality. Readings include classical texts in Jewish tradition and current discussions of these textual traditions.

**RELIGST 271A. Dante's Spiritual Vision. 4-5 Units.**

Poetry, ethics, and theology in Dante's Divine Comedy. Supplementary readings from classical authors such as St. Thomas Aquinas, and from modern writers, such as Jorge Borges. Fulfills capstone seminar requirement for the Philosophy and Literature tracks. Students may take 271A without taking 271B. Consent of the instructor required.

**RELIGST 271B. Dante's Spiritual Vision. 4-5 Units.**

Poetry, ethics, and theology in Dante's Divine Comedy. Supplementary readings from classical authors such as St. Thomas, and from modern writers, such as Jorge Borges. Fulfills capstone seminar requirement for the Philosophy and Literature tracks. Prerequisite: 271A.

**RELIGST 272. Kant on Religion. 3-5 Units.**

Critical examination of Kant's principle writings on religion against the background of his general theoretical and practical philosophy and guided by the hypothesis that his philosophy of religion continues to offer significant insights and resources to contemporary theories of religion. Recent reassessments of Kant on religion in the secondary literature will also be read and discussed.

Same as: RELIGST 372

**RELIGST 273. Historicism and Its Problems: Ernst Troeltsch, the Study of Religion, and the Crisis of Historicism. 3-5 Units.**

Examination of the early twentieth-century historian of religion, philosopher of culture, sociologist of religion, Christian theologian, and philosopher of history, Ernst Troeltsch, within the context of the late nineteenth-century "crisis of historicism," i.e., the historicization and relativization of religious, ethical, social, and political norms. Attention to seminal theorists of history (Herder, Kant, Ranke, Hegel, Nietzsche) in the post-Enlightenment German intellectual tradition and the attempts of Christian and Jewish thinkers in the Weimar era (Barth, Gogarten, Rosenzweig, L. Strauss) to "overcome" the crisis wrought by a radically historical approach to human culture.

Same as: RELIGST 373

**RELIGST 274. From Kant to Kierkegaard. 3-5 Units.**

(Graduate students register for 374. Undergrads register for 274 for 5 units.) The philosophy of religion emerged from the European Enlightenment as a new genre of reflection on religion distinct from both dogmatic theology and rationalist dreams of a "natural" religion of reason. Neither beholden to pre-critical tradition, nor dismissive of what Thomas Nagel has termed "the religious attitude," this new, ostensibly secular, genre of religious thought sought to rethink the meaning of Christianity at a time of immense philosophical ferment. The main currents of religious thought in Germany from Kant's critical philosophy to Kierkegaard's revolt against Hegelianism. Emphasis on the theories of religion, the epistemological status of religious discourse, the role of history (especially the figure of Jesus), and the problem of alienation/reconciliation in seminal modern thinkers: Kant, Schleiermacher, Hegel, and Kierkegaard.

Same as: RELIGST 374

**RELIGST 275. Kierkegaard. 3-5 Units.**

(Graduate students register for 375.) Close reading of Kierkegaard's magnum opus, *Concluding Unscientific Postscript to Philosophical Fragments*, in its early 19th-century context.

Same as: RELIGST 375

**RELIGST 277. The Later Heidegger: Art, Poetry, Language. 3 Units.**

Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from "On the Origin of the Work of Art" and Elucidations of Holderlin's Poetry.

Same as: PHIL 234B, RELIGST 377

**RELIGST 278. Heidegger: Confronting the Ultimate. 3-5 Units.**

Heidegger's work on meaning, the self, and the sacred. Texts include *Being and Time*, courses and opuscula up to 1933, the *Letter on Humanism*, and *Contributions of Philosophy*.

Same as: RELIGST 378

**RELIGST 279. After God: Why religion at all?. 4 Units.**

God is dead, but where does religion come from? The end of the quest for God in twentieth century philosophy. Robert Bellah's *Religion in Human Evolution* plus seminal works of Heidegger, including *Being and Time*, 'What Is Metaphysics?' 'Nietzsche's Saying 'God is Dead.' 'N.B.: Class size limited. Apply early at tsheehan@stanford.edu.

Same as: RELIGST 379

**RELIGST 279A. Heidegger on human being and God. 4 Units.**

This lecture-seminar first raises the question of essential characteristics of human being, such as temporality, mortality, hermeneutics and the relation to meaning, and then, via readings from Karl Rahner, asks whether human being is open to a possible relation to a supernatural divinity.

Same as: RELIGST 379A

**RELIGST 279X. American Jewish History: Learning to be Jewish in America. 2-4 Units.**

This course will be a seminar in American Jewish History through the lens of education. It will address both the relationship between Jews and American educational systems, as well as the history of Jewish education in America. Plotting the course along these two axes will provide a productive matrix for a focused examination of the American Jewish experience. History students must take course for at least 3 units.

Same as: AMSTUD 279X, EDUC 279, HISTORY 288D, JEWISHST 297X

**RELIGST 280. Schleiermacher: Reconstructing Religion. 3-5 Units.**

Idealist philosopher, Moravian pietist, early German Romantic, co-founder of the University of Berlin, head preacher at Trinity Church, translator of Plato's works, Hegel's opponent, pioneer in modern hermeneutics, father of modern theology. Schleiermacher's controversial reconception of religion and theology in its philosophical context.

Same as: RELIGST 380

**RELIGST 281. Asian Religions in America; Asian American Religions. 4 Units.**

This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.

Same as: AMSTUD 281, ASNAMST 281, RELIGST 381

**RELIGST 282. King Solomon and the Search for Wisdom. 4 Units.**

What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish, Christian and Islamic tradition.

Same as: RELIGST 382

**RELIGST 283A. Heidegger, Hölderlin, and the Gods. 3-5 Units.**

The radical transformations in Western notions of God between the death of Hegel and the birth of historical materialism, arguing that questions about theism and atheism, humanism, and history formulated in the period 1831-50 are still pertinent. Texts from Hegel, the young Hegelians, Feuerbach, and Marx on issues of God, history, and the social dimensions of human nature.

Same as: RELIGST 383A

**RELIGST 290. Majors Seminar. 5 Units.**

Required of all majors and combined majors. The study of religion reflects upon itself. Representative modern and contemporary attempts to "theorize," and thereby understand, the phenomena of religion in anthropology, psychology, sociology, cultural studies, and philosophy. WIM.

**RELIGST 293X. Church, State, & Schools: Issues in Education & Religion. 4 Units.**

This course will examine interactions between religion and education, focusing on both formal and experiential sites in which people and communities explore, articulate, encounter, and perform religious ideologies and identities. The class will focus on different religious traditions and their encounters the institutions and structures of education in American culture, both in the United States and as it manifests in American culture transnationally.

Same as: AMSTUD 293, EDUC 293

**RELIGST 297. Senior Essay/Honors Essay Research. 3-5 Units.**

Guided by faculty adviser. May be repeated for credit. Prerequisite: consent of instructor and department.

**RELIGST 298. Senior Colloquium. 5 Units.**

For Religious Studies majors writing the senior essay or honors thesis. Students present work in progress, and read and respond to others. Approaches to research and writing in the humanities.

**RELIGST 300. Theory in the Study of Religion. 4 Units.**

This course explores how religious belief, ritual, and tradition, interact with, embed, or respond to aspects of social reality or human nature, such as economics, institutions, law, art, values, and psychology. The course examines a number of approaches to the study of religion, including sociological and anthropological ones. The course is intended for Religious Studies MA students and graduate students from other departments.

**RELIGST 301. Islamic Law. 3-5 Units.**

(This course is combined with LAW 586) Topics include marriage, divorce, inheritance, ritual, war, rebellion, abortion, and relations with non-Muslims. The course begins with the premodern period, in which jurists were organized in legal traditions called *ḥ*schools of law.*ḥ* After examining the nature and functions of these institutions, we turn to the present era to study the relationship between customary law, state law, and the Islamic legal heritage in Egypt and Indonesia. The course explores Muslim laws and legal institutions and the factors that have shaped them, including social values and customs, politics, legal precedents, and textual interpretation.

Same as: RELIGST 201

**RELIGST 301A. Gender in Classical Islamic Law. 3-5 Units.**

The course examines classical Islamic society and law. It covers historical development, the unity and diversity of Muslim legal traditions, and the relationship between laws and values. Constructions of gender in law are examined through rituals, marriage, divorce, birth control, child custody, and sexuality.

Same as: RELIGST 201A

**RELIGST 302. Islamic Studies Proseminar. 1-5 Unit.**

Research methods and materials for the study of Islam. May be repeated for credit.

**RELIGST 303. Myth, Place, and Ritual in the Study of Religion. 3-5 Units.**

Sources include: ethnographic texts and theoretical writings; the approaches of Charles Long, Jonathan Z. Smith, Victor Turner, Michael D. Jackson, and Wendy Doniger; and lived experiences as recounted in Judith Sherman's *Say the Name: A Survivor's Tale in Prose and Poetry*, Jackson's *At Home in the World*, Marie Cardinal's *The Words to Say It*, and John Phillip Santos's *Places Left Unfinished at the Time of Creation*.

Same as: RELIGST 203

**RELIGST 304A. Theories and Methods. 4 Units.**

Required of graduate students in Religious Studies. Approaches to the study of religion. Prerequisite: consent of instructor.

**RELIGST 304B. Theories and Methods. 4 Units.**

Required of graduate students in Religious Studies. Approaches to the study of religion. Prerequisite: consent of instructor.

**RELIGST 306. Life, Love, and Death in Islamic Narratives. 3-5 Units.**

A wide-ranging engagement with Islamic perspectives on fundamental human preoccupations. We will utilize religious and literary sources spanning Islamic history to discuss topics such as: the ends of human life in the material world: pleasures and pains of love for God and human beings; death and dying; eschatology and resurrection; and skepticism regarding religious claims. Emphasis on original sources in translation considered in relation to theoretical perspectives in the humanities.

**RELIGST 308. Medieval Japanese Buddhism. 3-5 Units.**

Japanese religion and culture, including Buddhism, Shinto, popular religion, and new religions, through the medium of film.

**RELIGST 308A. Ex Oriente Lux: Orientalism and the Study of Religion. 3-5 Units.**

This seminar is designed to expose students to issues relating to discourse and subjectivity within the textual constructions of Oriental religions in the colonial era. We will begin with Edward W. Said's provocative work on notions of representation and power embedded in the discourse on the Orient that established, produced, and, ultimately, perpetuated western knowledge about the Other. We will then discuss the impact of the Oriental Renaissance and the vital role that Eastern wisdom played in constructing the field of Comparative Religious Studies. In addition, students will also read ethnographies, fables, and travelogues that both support and undermine Said's thesis of an active West constructing a largely passive East.

Same as: RELIGST 208A

**RELIGST 308C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C

**RELIGST 309. Priests, Prophets, and Kings: Religion and Society in Late Antique Iran. 4-5 Units.**

This course is designed as a broad introduction to the religious and social history of the Sasanian Empire, encompassing the period from 224-651 CE as well as the early years of Islamic rule in Iran. Among the topics we will discuss are: the lives and deeds of the powerful Iranian emperors such as Shapur I and II in relation to the Roman emperors Diocletian and Constantine; the transformation of Zoroastrianism into a powerful official religion of the state and its subsequent orthodoxy; the emergence of the prophet Mani and the confrontation of Manicheism with the Zoroastrian priesthood; the conversion of Constantine to Christianity and its political and social ramifications in Iran; the establishment of an independent Iranian Christian church; the importance of Armenia in the Sasanian-Roman conflict; and a brief discussion of the history of the Jewish community under the Sasanians. We will end the quarter by examining the Arab-Islamic conquests of Iran and the profound social changes experienced by the Zoroastrian communities in the early centuries of Islam in Iran.

Same as: CLASSICS 147, CLASSICS 247, RELIGST 209

**RELIGST 309A. Sugar in the Milk: Modern Zoroastrianism as Race, Religion, and Ethnicity. 4-5 Units.**

Modern Zoroastrian experience as race, religion, and ethnic identity. Some 60,000 Zoroastrians now live in India and have resided there for a millennium. In the 19th century, these peoples from Persia/Parsis became colonial elites yet were acutely aware that they were not quite Indian, British, or Persian. Diverse ways this experience of dislocation has served as a defining characteristic in Parsi communal identity and contrast these South Asian experiences with the minority socio-politics of those who remained in Iran. Survey the colonial and post-colonial communities in England, East Africa, Hong Kong, Australia, and North America and examine the expression of these global diasporic experiences in literature and the arts.

Same as: RELIGST 209A

**RELIGST 309D. 'Crow Eaters' & 'Fire Worshippers': Exploring Contemporary Zoroastrianism Thru Reading Parsi Lit. 3-5 Units.**

In the past three decades Parsi fiction has rapidly emerged as a unique and creative voice in modern Anglophone literature from South Asia. From Bapsi Sidhwa to Thrity Umrigar to Rohinton Mistry, Parsi novelists address the most poignant concerns of Zoroastrians living in an era of rapid social, political, and religious transformation. The erosion of tradition; the breakdown of the Parsi family; the demise of religion among the young; and the cultural losses and gains of living in diaspora are common themes in their works. The unique vantage point of the Parsis; neither Hindu nor Muslim, neither quite Indian nor quite British; will serve as a lens for examining the inherent tensions in multicultural societies both East and West.

Same as: RELIGST 209D

**RELIGST 309E. Imperishable Heroes and Unblemished Goddesses: Myth, Ritual, and Epic in Ancient Iran. 3-5 Units.**

Designed as a broad introduction to the world of ancient Iran, students will be introduced to the Indo-European inheritance in ancient Iranian culture; the shared world of ritual, religion, and mythology between Zoroastrianism in Iran and Vedic Hinduism in India; and to the contours of early Zoroastrian religious thought. We will also survey mythoepic literature in translation from the archaic Avesta through the late antique Zoroastrian Middle Persian corpus to the early medieval national epic of Iran, the Book of Kings of Ferdowsi.

Same as: CLASSICS 148, CLASSICS 248, RELIGST 209E

**RELIGST 310. Islam, Art, Modernity. 3-5 Units.**

Taught in conjunction with a major exhibition of modern Islamic art at the Cantor Museum. We will consider theoretical discussions regarding art and modern Muslim identities and examine the use of Islamic motifs in art and architecture in detail.

Same as: RELIGST 110

**RELIGST 312. Buddhist Studies Proseminar. 1-5 Unit.**

Research methods and materials for the study of Buddhism. May be repeated for credit. Prerequisite: reading knowledge of Chinese or Japanese.

**RELIGST 312X. Knights, Monks, and Nobles: Masculinity in the Middle Ages. 4-5 Units.**

This course considers masculinity as historically and culturally contingent, focusing on the experiences and representations of medieval men as heroes, eunuchs, fathers, priests, husbands, boys, and fighting men. Recognizing that the lives of men, like those of women, were governed by gendered rules and expectations, we will explore a wide range of medieval masculinities, paying close attention to the processes by which manhood could be achieved (e.g. martial, spiritual, sexual), and to competing versions of manliness, from the warrior hero of the early middle ages to the suffering Christ of late medieval religion.

Same as: FEMGEN 212X, FEMGEN 312, HISTORY 212, HISTORY 312, RELIGST 212X

**RELIGST 313. Graduate Seminar in Chinese Buddhist Texts. 3-5 Units.**

Graduate Seminar in Chinese Buddhist Texts: An in-depth reading of Zongmi's Chanyuan zhuquanji duxu ("Preface to the Collected Writings on the Source of Chan") (T#2015). Written in 833, the "Preface" is Zongmi's most ambitious and well-known work. It seeks to delineate the historical and doctrinal origins of the Chan tradition. In doing so, it is the first work to formulate the paradigm of a multi-branched genealogical tree that becomes the template in terms of which the subsequent Chan tradition described itself. It also tries to harmonize Chan (the practice of meditation) with the canonical teachings (doctrinal study) by adapting a Huayan philosophical framework to correlate different Chan traditions with different Chinese Buddhist doctrinal schools. In addition, it is particularly noteworthy for its analysis of the so-called sudden/gradual controversy, in which Zongmi develops an overarching scheme in which the different contending positions can all be seen to fit. The text is an excellent vehicle for giving students a grounding in both Tang-dynasty Chan history and teachings as well as the teachings of the main philosophical schools of Chinese Buddhism. The seminar will focus on a close reading of selected sections from Zongmi's text, especially those bearing on his strategies for harmonizing Chan and doctrinal teachings as well as his analysis of the sudden/gradual controversy. In doing so it will pay special attention to problems of translation. Meetings will be held in Buddhist Studies Library, located in Bldg 70 (Main Campus Quad).

**RELIGST 313X. The Education of American Jews. 4 Units.**

This course will take an interdisciplinary approach to the question of how American Jews negotiate the desire to retain a unique ethnic sensibility without excluding themselves from American culture more broadly. Students will examine the various ways in which people debate, deliberate, and determine what it means to be an "American Jew". This includes an investigation of how American Jewish relationships to formal and informal educational encounters through school, popular culture, religious ritual, and politics.

Same as: EDUC 313, JEWISHST 393X

**RELIGST 314. Seminar in Buddhist Historiography. 3-5 Units.**

The focus of this course is on approaches to the past from within Buddhist traditions rather than modern academic writing on Buddhist history. We will briefly examine research on religious conceptions of the past in other religions before turning to the full range of Buddhist historiography, including writings from India, Ceylon, China, Tibet and Japan. The first half of the class will be dedicated to reading and discussing scholarship as well as some primary sources in translation. In the second half of the course, students will develop projects based on their interests, culminating in presentations and a research paper.

**RELIGST 315. Third Bhavanakrama & the Writings of Héshang Moheyan: Scripture in Buddhist Scholastic Polemics. 3-5 Units.**

Readings in the original languages (Sanskrit, Tibetan and Chinese) of materials from the debates of late 8th Century Tibet (so-called debate at Bsam-yas). The course focuses on the use of scriptural quotations in those passages where the arguments of Kamalasila, the leading Indian representative at the debates, best map on to the arguments of his Chinese rival, Héshang Moheyan.

**RELIGST 315A. Chinese Buddhism. 3-5 Units.**

This course provides an overview of the major themes and historical developments in 2000 years of Buddhist history in China, from its early transmission from India to contemporary developments in the PRC, Taiwan and Hong Kong. Themes include monasticism, doctrine, popular devotion, state policy and the encounter with modernity.

**RELIGST 317. Japanese Studies of Religion in China. 3 Units.**

(Graduate students register for 317.) Readings in Japanese secondary sources on Chinese religions.

Same as: RELIGST 217

**RELIGST 320. Religion and Literature. 4 Units.**

grad seminar in religion and literature-description to follow.

**RELIGST 321. The Talmud. 4 Units.**

Strategies of interpretation, debate, and law making. Historical contexts. Prerequisite: Hebrew.

Same as: RELIGST 221

**RELIGST 321B. What is Talmud?. 5 Units.**

In what sense can Talmud be studied as literature? Which voices can be identified? Concepts of author, editor, or redactor. The basic textual units of Talmud: sugya, chapter, and tractate. The sugya as literary genre. The aesthetic of talmudic dialectics. Prerequisite: reading Hebrew with some understanding of biblical Hebrew.

Same as: RELIGST 221B

**RELIGST 321D. Readings in Syriac Literature. 2-5 Units.**

In recent years, there has been growing interest in the works of Syriac speaking Christians in antiquity and beyond. This course offers an introduction to the Syriac language, including its script, vocabulary and grammar, and a chance to read from a selection of foundational Syriac Christian texts.

Same as: JEWISHST 221D, JEWISHST 321D, RELIGST 221D

**RELIGST 322B. Sufism Seminar. 3-5 Units.**

Sufism through original texts and specialized scholarship. Prerequisite: ability to read at least one major language of Islamic religious literature (Arabic, Persian, Turkish, Urdu).

Same as: RELIGST 222B

**RELIGST 324. Classical Islamic Texts. 3 Units.**

The course is based on readings in primary Arabic sources in the key fields of pre-modern Islamic scholarship. The list of readings and topics will depend on the interests of the students. In addition to focusing on the language, contents, and context of the texts covered, the course introduces genre-specific historical research methods. The reading selections may be derived from Qurʾānic interpretation (tafsir), the hadith literature, adab, biographical dictionaries, fiqh, taʾrikh, kalam, or Sufism. Reading knowledge of Arabic is required.

Same as: RELIGST 224

**RELIGST 324B. Unveiling the Sacred: Explorations in Islamic Religious Imagination. 3-5 Units.**

Poetry and prose in translation as well as historical studies. Islamic movements invested in the idea that the sensory world has a hidden or esoteric counterpart that can be understood or experienced through following particular religious programs. Various forms of Shiʿism and Sufism, millenarian and apocalyptic movements, the Nation of Islam and its offshoots. Philosophical propositions, historical contexts, and the role of ritual in the construction of religious systems.

Same as: RELIGST 224B

**RELIGST 326A. Judaism and Hellenism. 3-5 Units.**

interactions and conflicts between Jews and Greeks in the centuries following the conquests of Alexander the Great and the cultural/religious repercussions of their encounter. In what ways were Jews influenced by Greek culture? In what ways, and for what reasons, did they resist it? And how the interaction of these cultures shape the subsequent development of Judaism and Christianity? Jewish texts in the Greco-Roman period, including Jewish-Greek writers like Philo of Alexandria, the Apocrypha, the Dead Sea Scrolls, selected writings from the New Testament, and the Passover Haggadah.

Same as: RELIGST 226A

**RELIGST 327. The Qurʾān. 5 Units.**

Early history, themes, structure, chronology, and premodern interpretation. Relative chronology of passages.

Same as: RELIGST 227

**RELIGST 328S. The Study of the Midrash. 1-2 Unit.**

Two-week block seminar; four sessions. Talmudic philology; development and transmission of the Talmudic text and manuscripts. Relationship between Midrash and Mishnah and between Mishnah and Tosefta; development of talmudic sugiot; relationship between the Babylonian and Palestinian Talmud.

**RELIGST 329. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.**

Stretching from India to Ethiopia, the Persian Empire; the largest empire before Rome; has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West and Greek democracy. This course will provide a general introduction to the Persian Empire, beginning in the 6th century BCE to the fall of Persia to Alexander the Great in 331 BCE. We shall not only examine the originality of the first world empire of antiquity, but the course will also attempt to present a broad picture of the diverse cultural institutions and religious practices found within the empire. Readings in translation from the royal edicts and the inscriptions of Cyrus, Darius, and Xerxes will allow us to better appreciate the subtle ways in which these Persian kings used religion to justify and propagate the most ambitious imperial agenda the world had ever seen. In concluding the quarter, students will evaluate contemporary representations of Persia and the Persians in politics and popular culture in a wide array of media, such as the recent film 300 and the graphic novel on which it is based, in an attempt to better appreciate the enduring legacy of the Greco-Persian wars.

Same as: CLASSICS 146, CLASSICS 246, RELIGST 229

**RELIGST 329X. Advanced Paleography. 5 Units.**

This course will train students in the transcription and editing of original Medieval and Early Modern textual materials from c. 1000 to 1600, written principally in Latin and English (but other European languages are possible, too). Students will hone their archival skills, learning how to describe, read and present a range of manuscripts and single-leaf documents, before turning their hand to critical interpretation and editing. Students, who must already have experience of working with early archival materials, will focus on the full publication of one individual fragment or document as formal assessment.

Same as: CLASSICS 216, HISTORY 315

**RELIGST 330B. Zen Studies. 4 Units.**

Readings in recent English-language scholarship on Chan and Zen Buddhism.

Same as: RELIGST 230B

**RELIGST 332X. Religion and Modernity. 5 Units.**

What role has the category of religion played in the development of the modern state, both colonial and national? How have central concepts of liberal political thought, such as freedom, progress, and history, depended on certain normative ideas of religion? Through various genealogical, historical, and ethnographic inquiries, this course examines how the category of religion has both subtended and disturbed formations of colonial and post-colonial modernity.

Same as: ANTHRO 347

**RELIGST 334. Emmanuel Levinas: Ethics, Philosophy and Religion. 4 Units.**

Emmanuel Levinas (1906-1995) is a major French philosopher of the second half of the twentieth century and is among the half-dozen most important Jewish thinkers of the century. Born in Lithuania, Levinas lived most of his life in France; he was primarily a philosopher but also a deeply committed Jewish educator who often lectured and wrote about Judaism and Jewish matters. Levinas was influenced by Bergson, Husserl, Heidegger, and others, like Buber and Rosenzweig. We will look at the philosophical world in which he was educated and explore his unique development as a philosopher in the years after World War Two. Levinas reacted against the main tendencies of Western philosophy and religious thought and as a result shaped novel, powerful, and challenging ways of understanding philosophy, religion, ethics, and politics. In this course, we will examine works from every stage of Levinas's career, from his early study of Husserl and Heidegger to the emergence of his new understanding of the human condition and the primacy of ethics, the face-to-face encounter with the human other, the role of language and the relationship between ethics and religion, and finally his understanding of Judaism and its relationship to Western philosophy. We will be interested in his philosophical method, the relevance of his thinking for ethics and religion, the role of language in his philosophy and the problem of the limits of expressibility, and the implications of his work for politics. We shall also consider his conception of Judaism, its primary goals and character, and its relation to Western culture and philosophy.

Same as: JEWISHST 224, JEWISHST 324, RELIGST 234

**RELIGST 335. Religion in Modern Society: Secularization and the Sacred. 4 Units.**

What is the status of religion in modern life? Is the modern world "secular" in some fundamental, irreversible way and what does this mean? This course will explore these questions through variety of readings from leading sociologists, philosophers, and anthropologists. Our goal will be to understand in what ways industrialization, political liberalization, the rise of technology, and the success of modern science have been used to support the "secularization" thesis that the modern West rendered religion a thing of the past. A central question to be asked will be: do assessments of the place of religion in modernity necessitate a philosophy of history i.e., a theory not only of historical change, but of the meaning of this change as well? The course will begin by looking at the origins of the theory of secularization from its beginnings in Enlightenment attempts to understand the meaning of history. We will then turn to contemporary debates over the term "secular" against its counterpart, "religious", and the problems with their application to non-Western societies. We will read works by Talal Asad, Saba Mahmood, Max Weber, Charles Taylor, Jürgen Habermas, and Pope Benedict XVI. Same as: RELIGST 235

**RELIGST 338. Christian Neo-Platonism, East and West. 3-5 Units.**

Christianity's shift to neo-Platonic Greek philosophical categories and its significance for contemporary spirituality. Readings from Plotinus, Proclus, Greek fathers such as Pseudo-Dionysus, and from Ambrose and Augustine. Same as: RELIGST 238

**RELIGST 339. Luther and the Reform of Western Christianity. 3-5 Units.**

Luther's theology, ethics, biblical interpretation, and social reforms and their significance for the remaking of Western Christianity. Readings include Luther's own writings and secondary sources about Luther and his world. Same as: RELIGST 239

**RELIGST 340. Contemporary Religious Reflection. 3-5 Units.**

Focus is on normative and prescriptive proposals by recent and contemporary philosophers and theologians, as opposed to the domination of Religious Studies by textual, historical, cultural, and other largely descriptive and interpretive approaches. Do such normative and prescriptive proposals belong in the academy? Has Religious Studies exorcised its theological nimbus only to find contemporary religious reflection reappearing elsewhere in the university?.

**RELIGST 341. Comparative Perspectives on Classical Chinese Texts. 4-5 Units.**

Classical Chinese texts, in prose and poetry, interpreted through comparative perspectives drawn from both inside and outside China. Consent of the instructor required.

**RELIGST 344. Explaining Religion. 3-5 Units.**

There are broadly two different, and sometimes mutually exclusive, ways of explaining social religious phenomena: idealism and materialism. One gives ideas ultimate causal primacy while the other emphasizes economic, technological, geographical, and demographic factors. This course examines arguments for and against each approach. Topics include rational choice theory, functionalism, Marxism, cultural materialism, and the unconscious. Case studies include Jewish and Indian dietary restrictions, competition between Christian denominations, survival strategies of minority religions, apocalyptic movements, etc. For the final paper, each student will write on a religious tradition of his/her choice. Same as: RELIGST 244

**RELIGST 346. Constructing Race and Religion in America. 4-5 Units.**

This seminar focuses on the interrelationships between social constructions of race, and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources, and at the historical development of ideas and practices over time. Same as: CSRE 246, HISTORY 256G, HISTORY 356G, RELIGST 246

**RELIGST 347. Chinese Buddhist Texts. 3-5 Units.**

Chinese Buddhist texts from the Han Dynasty onwards, including sutra translations, prefaces, colophons, story collections and biographies. Prerequisite: reading competence in Chinese.

**RELIGST 347B. Readings in Chinese Religious Texts: The Lingbao Scriptures. 4 Units.**

A survey of the original Lingbao scriptures. Composed in the late-4th / early 5th century, these texts radically revised Daoist practice, incorporated elements of Buddhist thought and practice, and created liturgies that are still used in Daoist communities today. (Reading knowledge of Literary Chinese 22 required). Same as: RELIGST 247B

**RELIGST 348. Chinese Buddhism in World Historical Perspective. 3-5 Units.**

Shared cosmologies, trade routes, and political systems. Prerequisite: background in Chinese or Japanese. Same as: RELIGST 248

**RELIGST 348A. Chinese Buddhism Beyond the Great Wall. 3-5 Units.**

The thought, practice, and cultural resonance of the sorts of originally Chinese Buddhism that flourished to the north and northwest of China proper during the two to three centuries following the fall of the Tang - i.e., under the Khitan Liao (907-1125) and the Tangut Xixia (1032-1227) dynasties - with special emphasis on the later fortunes of the Huayan, Chan, and Mijiao (Esoteric) traditions. Prerequisite: reading knowledge of Chinese. Same as: RELIGST 248A

**RELIGST 349. Meditation and Mythology in Chinese Buddhism. 3-5 Units.**

Readings in Chinese texts and English scholarly literature on issues such as specific techniques and hagiographical imagery in Chinese Buddhist traditions of self-cultivation. Prerequisite: background in Chinese or Japanese.

**RELIGST 350. Modern Western Religious Thought Proseminar. 1-5 Unit.**

Selected topics in recent and contemporary religious thought. May be repeated for credit.

**RELIGST 351. Readings in Indian Buddhist Texts. 3-5 Units.**

(Graduate students register for 351.) Introduction to Buddhist literature through reading original texts in Sanskrit. Prerequisite: Sanskrit. Same as: RELIGST 251

**RELIGST 352A. The Story of a Buddhist Megascripture: Readings in the Avatamsaka. 3-5 Units.**

In this course we will explore the massive Mahayana Buddhist scriptural compilation known as the Avatamsaka Sutra (more correctly: Buddhavatamsaka Sutra). We will investigate the development of the text in India, study its contents, and consider its later reception in East Asia. Since much of the course will be devoted to reading sections of the Buddhavatamsaka, a reading knowledge of Chinese is required. Same as: RELIGST 252A

**RELIGST 353. Mountains, Buddhist Practice, and Religious Studies. 3-5 Units.**

The notion of the sacred mountain. Readings from ethnographic and theoretical works, and primary sources. Same as: RELIGST 253

**RELIGST 354. Recent Contributions to Buddhist Studies. 3-5 Units.**

This reading intensive course will examine nine areas in recent work in Buddhist studies, including ethnography, archaeology, monasticism, the study of "experience," and gender. May be repeated for credit.

Same as: RELIGST 254

**RELIGST 355. Religion and Power in the Making of Modern South Asia. 3-5 Units.**

This course examines the diverse ways that religious traditions have been involved in the brokering of power in South Asia from the late seventeenth century to the present day. We will examine the intersection of religion and power in different arenas, including historical memory, religious festivals, language politics, and violent actions. At the core of our inquiry is how religion is invoked in political contexts (and vice-versa), public displays of religiosity, and the complex dynamics of religion and the state. Among other issues, we will particularly engage with questions of religious identity, knowledge, and violence. HISTORY297F must be taken for 4-5 units.

Same as: HISTORY 297F, RELIGST 255

**RELIGST 356. The Brahma Net Sutra (Fanwang Jing). 4 Units.**

A study of an important Chinese Buddhist apocryphal work, with special attention to interpretation of content, impact on monastic codes in medieval China, transmissional history and commentarial tradition.

Same as: RELIGST 256

**RELIGST 357. Readings in Daoist Texts. 4 Units.**

Readings from primary sources. Prerequisite: classical Chinese.

Same as: RELIGST 257

**RELIGST 357X. Female Divinities in China. 4-5 Units.**

This course examines the fundamental role of powerful goddesses in Chinese religion. It covers the entire range of imperial history and down to the present. It will look at, among other questions, what roles goddesses played in the spirit world, how this is related to the roles of human women, and why a civilization that excluded women from the public sphere granted them a dominant place, in the religious sphere. It is based entirely on readings in English.

Same as: HISTORY 293E, HISTORY 393E, RELIGST 257X

**RELIGST 358. Japanese Buddhist Texts. 3-5 Units.**

Readings in medieval Japanese Buddhist materials. May be repeated for credit. Prerequisite: background in Japanese or Chinese.

Same as: RELIGST 258

**RELIGST 359. Readings in Buddhist Studies. 3-5 Units.****RELIGST 360. Buddhism & Modernity. 3-5 Units.**

Is Buddhism a philosophy? A mind science? An ancient mystical path? A modern construct? This seminar will evaluate a variety of answers to these questions by exploring how Buddhism has been understood in the modern era. Our primary source materials will range from Orientalist poetry to Zen essays to Insight Meditation manuals to 21st-century films. We will examine how these works shape Buddhism, consider their pre-modern influences, and turn to recent scholarship to discuss how romantic, imperialist, anti-modern, nationalist, therapeutic, and scientific frames depict one of today's most popular religions. This course is cross-listed as RELIGST 260/360. Undergraduates must enroll in RELIGST 260 for 5 units. Graduate students must enroll RELIGST 360 for 3-5 units.

Same as: RELIGST 260

**RELIGST 361. Buddhist Precepts and Ordinations: Prescriptions, Descriptions and Predictions. 4 Units.****RELIGST 370. Comparative Religious Ethics. 4 Units.**

The difference that the word religious makes in religious ethics and how it affects issues of genre. Theoretical analyses with examples from W. and E. Asia. Prerequisite: consent of instructor.

**RELIGST 372. Kant on Religion. 3-5 Units.**

Critical examination of Kant's principle writings on religion against the background of his general theoretical and practical philosophy and guided by the hypothesis that his philosophy of religion continues to offer significant insights and resources to contemporary theories of religion.

Recent reassessments of Kant on religion in the secondary literature will also be read and discussed.

Same as: RELIGST 272

**RELIGST 373. Historicism and Its Problems: Ernst Troeltsch, the Study of Religion, and the Crisis of Historicism. 3-5 Units.**

Examination of the early twentieth-century historian of religion, philosopher of culture, sociologist of religion, Christian theologian, and philosopher of history, Ernst Troeltsch, within the context of the late nineteenth-century "crisis of historicism," i.e., the historicization and relativization of religious, ethical, social, and political norms. Attention to seminal theorists of history (Herder, Kant, Ranke, Hegel, Nietzsche) in the post-Enlightenment German intellectual tradition and the attempts of Christian and Jewish thinkers in the Weimar era (Barth, Gogarten, Rosenzweig, L. Strauss) to "overcome" the crisis wrought by a radically historical approach to human culture.

Same as: RELIGST 273

**RELIGST 374. From Kant to Kierkegaard. 3-5 Units.**

(Graduate students register for 374. Undergrads register for 274 for 5 units.) The philosophy of religion emerged from the European Enlightenment as a new genre of reflection on religion distinct from both dogmatic theology and rationalist dreams of a "natural" religion of reason. Neither beholden to pre-critical tradition, nor dismissive of what Thomas Nagel has termed "the religious attitude," this new, ostensibly secular, genre of religious thought sought to rethink the meaning of Christianity at a time of immense philosophical ferment. The main currents of religious thought in Germany from Kant's critical philosophy to Kierkegaard's revolt against Hegelianism. Emphasis on the theories of religion, the epistemological status of religious discourse, the role of history (especially the figure of Jesus), and the problem of alienation/reconciliation in seminal modern thinkers: Kant, Schleiermacher, Hegel, and Kierkegaard.

Same as: RELIGST 274

**RELIGST 375. Kierkegaard. 3-5 Units.**

(Graduate students register for 375.) Close reading of Kierkegaard's magnum opus, *Concluding Unscientific Postscript to Philosophical Fragments*, in its early 19th-century context.

Same as: RELIGST 275

**RELIGST 377. The Later Heidegger: Art, Poetry, Language. 3 Units.**

Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from "On the Origin of the Work of Art" and *Elucidations of Holderlin's Poetry*.

Same as: PHIL 234B, RELIGST 277

**RELIGST 378. Heidegger: Confronting the Ultimate. 3-5 Units.**

Heidegger's work on meaning, the self, and the sacred. Texts include *Being and Time*, courses and opuscula up to 1933, the *Letter on Humanism*, and *Contributions of Philosophy*.

Same as: RELIGST 278

**RELIGST 379. After God: Why religion at all?. 4 Units.**

God is dead, but where does religion come from? The end of the quest for God in twentieth century philosophy. Robert Bellah's *Religion in Human Evolution* plus seminal works of Heidegger, including *Being and Time*, 'What Is Metaphysics?' 'Nietzsche's Saying 'God is Dead.' 'N.B.: Class size limited. Apply early at tsheehan@stanford.edu.

Same as: RELIGST 279

**RELIGST 379A. Heidegger on human being and God. 4 Units.**

This lecture-seminar first raises the question of essential characteristics of human being, such as temporality, mortality, hermeneutics and the relation to meaning, and then, via readings from Karl Rahner, asks whether human being is open to a possible relation to a supernatural divinity.

Same as: RELIGST 279A

**RELIGST 380. Schleiermacher: Reconstructing Religion. 3-5 Units.**

Idealist philosopher, Moravian pietist, early German Romantic, co-founder of the University of Berlin, head preacher at Trinity Church, translator of Plato's works, Hegel's opponent, pioneer in modern hermeneutics, father of modern theology. Schleiermacher's controversial reconception of religion and theology in its philosophical context.

Same as: RELIGST 280

**RELIGST 381. Asian Religions in America; Asian American Religions. 4 Units.**

This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.

Same as: AMSTUD 281, ASNAMST 281, RELIGST 281

**RELIGST 382. King Solomon and the Search for Wisdom. 4 Units.**

What is wisdom according to the Bible? The course addresses this question by surveying various biblical and post-biblical texts associated with King Solomon. Other topics include the on-going debate over the historical existence of a Solomonic kingdom, the origins and history of the Jerusalem Temple, and Solomon's role in Jewish, Christian and Islamic tradition.

Same as: RELIGST 282

**RELIGST 383A. Heidegger, Hölderlin, and the Gods. 3-5 Units.**

The radical transformations in Western notions of God between the death of Hegel and the birth of historical materialism, arguing that questions about theism and atheism, humanism, and history formulated in the period 1831-50 are still pertinent. Texts from Hegel, the young Hegelians, Feuerbach, and Marx on issues of God, history, and the social dimensions of human nature.

Same as: RELIGST 283A

**RELIGST 385. Research in Buddhist Studies. 1-15 Unit.**

Independent study in Buddhism. May be repeated for credit. Prerequisite: consent of instructor.

**RELIGST 386. Research in Islamic Studies. 1-15 Unit.**

Independent study in Islamic Studies. May be repeated for credit. Prerequisite: consent of instructor.

**RELIGST 387. Research in Jewish Studies. 1-15 Unit.**

Independent study in Jewish Studies. May be repeated for credit. Prerequisite: consent of instructor.

**RELIGST 388. Research in Modern Religious Thought, Ethics, and Philosophy. 1-15 Unit.**

Independent study in Modern Religious Thought, Ethics, and Philosophy. May be repeated for credit. Prerequisite: consent of instructor.

**RELIGST 389. Individual Work for Graduate Students. 1-15 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**RELIGST 390. Teaching Internship. 3-5 Units.**

Required supervised internship for PhDs.

**RELIGST 391. Teaching Religious Studies. 3 Units.**

Workshop/seminar for doctoral students in Religious Studies and adjacent fields designed to cultivate methods for teaching Religious Studies in an academic setting.

**RELIGST 392. Paper in the Field. 1-15 Unit.**

Prerequisite: consent of graduate director. May be repeated for credit.

**RELIGST 395. Master of Arts Thesis. 2-9 Units.****RELIGST 399. Recent Works in Religious Studies. 1-2 Unit.**

Readings in secondary literature for Religious Studies doctoral students. May be repeated for credit.

**RELIGST 801. TGR Project. 0 Units.**

(Staff).

**RELIGST 802. TGR Dissertation. 0 Units.****Russian, East European, & Eurasian Studies Courses****REES 18. Understanding the Jews of Russia and Poland. 1 Unit.**

A preparatory course, for field trip to Moscow and Warsaw, that would cover Russian and Polish History, former Soviet Jewry, international relations, and current social realities.

**REES 23. Issues in Global Health: Russia and Eastern Europe. 1-2 Unit.**

Activity course features Stanford faculty and researchers who lecture weekly on their experiences working international health issues. Focus this year will be on the global region including Russia, and East Europe.

**REES 35. Films of Central Asia. 1-2 Unit.**

Films with English subtitles from Tajikistan, Uzbekistan, Kazakhstan, Kyrgyzstan, and Turkmenistan. May be repeated once for credit. (AU).

**REES 54A. Central Asia Through Films: A Weekly 3-Hour Seminar. 3-5 Units.**

Through films this course explores major issues of contemporary peoples of Central Asia while learning fundamental concepts in cultural anthropology. In this seminar we will consider a wide range of examples, including first of all the new feature films, which will be used as a window into the modern reality and therefore could be served in a certain sense as anthropological fieldwork data. Films are prearranged by the instructor according to certain thematic subjects for in-class discussions.

Same as: ANTHRO 54A

**REES 84. Zionism and the State of Israel. 3 Units.**

(Same as HISTORY 184. History majors and others taking 5 units, register for 184.) Hotly contested still, this course will open up the movement's ideas, practices, achievements and crises in such a way as to allow students to hear the fullest range of voices - Jewish, Arab, religious, secular, etc. It will track the movement from its appearance in the late nineteenth century until the establishment of State of Israel in 1948, and beyond.

Same as: CSRE 84, HISTORY 84, JEWISHST 84

**REES 85B. Jews in the Contemporary World: Faith and Ethnicity, Visibility and Vulnerability. 3 Units.**

(Same as HISTORY 185B. History majors and others taking 5 units, register for 185B.) This course explores the full expanse of Jewish life today and in the recent past. The inner workings of religious faith, the content of Jewish identity shorn of belief, the interplay between Jewish powerlessness and influence, the myth and reality of Jewish genius, the continued pertinence of antisemitism, the rhythms of Jewish economic life - all these will be examined in weekly lectures, classroom discussion, and with the use of a widely diverse range of readings, films, and other material. Explored in depth will be the ideas and practices of Zionism, the content of contemporary secularism and religious Orthodoxy, the impact Holocaust, the continued crisis facing Israel and the Palestinians. Who is to be considered Jewish, in any event, especially since so many of the best known (Spinoza, Freud, Marx) have had little if anything to do with Jewish life with their relationships to it indifferent, even hostile?.

Same as: CSRE 85B, HISTORY 85B, JEWISHST 85B

**REES 100. Current Issues in Russian, East European, and Eurasian Studies. 1-2 Unit.**

Enrollment limited to REES students. Scholars present analyses of methodologies, challenges, and current issues in the study of Russia, E. Europe, and Eurasia.

**REES 105. Central and East European Politics. 5 Units.**

Focus is on how the states of Central and East Europe, including the Baltic states, have moved from communism and the Soviet Bloc to democracy, NATO and the EU. Topics include the communist legacy, transitions and their legacies, ethnic issues, and the evolution of economic and social policies, and the comparison of democratization processes in these countries to democracies in other regions, such as Latin America and southern Europe.

Same as: REES 205

**REES 130. With God in Russia: Orthodox Christianity in the 19th and 20th Centuries. 4-5 Units.**

The experience of religion, particularly Orthodoxy, under tsars and commissars. Religion as a lived experience; practice and belief in the provinces and villages, intertwining of religion and folk customs (the so-called double faith); condition of the Church before and after the Revolutions of 1917; religion under Soviet control; and liberation of the Church since the collapse of the Soviet Union.

Same as: REES 330

**REES 145D. Jewish American Literature. 5 Units.**

A study of Jewish-American literature from its Russian roots into the present. What distinguishes it from American mainstream and minority literatures? We will consider the difficulties of displacement for the emigrant generation who struggled to sustain their cultural integrity in the multicultural American environment, and the often comic revolt of their American-born children and grandchildren against their grand)parents; nostalgia, trauma, and failure to assimilate.

Authors: Gogol, Dostoevsky, Babel, Olsen, Paley, Yezierska, Ozick, Singer, Malamud, Spiegelman, Roth, Bellow, Segal, Baldwin.

Same as: ENGLISH 145D, JEWISHST 155D

**REES 184. Zionism and the State of Israel. 5 Units.**

(Same as History 84.) Hotly contested still, this course will open up the movement's ideas, practices, achievements and crises in such a way as to allow students to hear the fullest range of voices - Jewish, Arab, religious, secular, etc. It will track the movement from its appearance in the late nineteenth century until the establishment of State of Israel in 1948, and beyond.

Same as: CSRE 184C, HISTORY 184, JEWISHST 184

**REES 185B. Jews in the Contemporary World: Faith and Ethnicity, Vulnerability and Visibility. 5 Units.**

**REES 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 208C, MUSIC 408C, REES 408C, RELIGST 208C, RELIGST 308C

**REES 209. Democratic Transition in Ukraine: Values, Political Culture, Conflicts. 3-5 Units.**

This course introduces students to issues of social and political transition in Ukraine from the early 1990s through the Orange Revolution to the Euromaidan and the present-day Russian-Ukrainian crisis in a comparative perspective. Topics to include: democratization, shifts in values, identity, dynamics of political protest and revolutions, economics, corruption, and the international security context (NATO, EU). Class discussions to be based on analysis of relevant survey data and live, online interviews with experts on selected topics.

**REES 219. The Russian Economy. 4-5 Units.**

Brief introduction to the economic history of Russia, general overview of the modern Russian economy with analysis of its macroeconomic features and dynamics, industrial structure, and the major institutional features that are important for understanding Russian economic development. The period of transition from Soviet-type planned economy to a market economy and market reforms (1991-1998), the period of economic growth (1999-2007), and the economic development of Russia during the current global crisis of 2008-2010. Analysis of Russia's social structure and social policy, labor markets, the regional structure of the economy, the role of the state, and major Russian industries (oil, metals, machinery). Emphasis on the specific institutional aspects that have shaped Russia's economic development.

Same as: ECON 119

**REES 220A. Literature and Cultural Politics in the Former Yugoslavia. 3-5 Units.**

Socialist Yugoslavia disintegrated after 46 years. The story is a telling one, let's read it! Literature in Yugoslavia went through transformations from socialist-realism at the beginning toward nationalist-realism at the end. To understand this process, it is crucial to relate it to its political and ideological background: social myths and taboos, questions of language, cultural and class identity, individual and collective rights. These issues will be explored through fictional texts by prominent Yugoslav writers, including Ivo Andric, Miroslav Krleza, Milos Crnjanski, Mesa Selimovic, Danilo Kis.

Same as: REES 320A

**REES 220G. Demons, Witches, Old Believers, Holy Fools, and Folk Belief: Popular Religion in Russia. 4-5 Units.**

19th and early 20th centuries. Peasants, parish priests, witches, possessed persons, cults and sects, old believers, saints, and women's religious communities. Nominally Christian, and members of the Orthodox Church, Russians embraced beliefs and customs that combined teaching from Church and folk traditions.

Same as: HISTORY 220G, HISTORY 320G, REES 320G

**REES 224A. The Soviet Civilization. 4-5 Units.**

Socialist visions and practices of the organization of society and messianic politics; the Soviet understanding of mass violence, political and ethnic; and living space. Primary and secondary sources. Research paper or historiographical essay.

Same as: HISTORY 224A, HISTORY 424A

**REES 227. All Quiet on the Eastern Front? East Europe and Russia in the First World War. 3-5 Units.**

Until recently history has been comparatively quiet about the experience of World War I in the east. Far from being a peripheral theater of war, however, the experiences of war on the Eastern Front were central to shaping the 20th century. Not only was the first shot of the war fired in the east, it was also the site of the most dramatic political revolution.

Using scholarly texts, literature and film, this course combines political, military, cultural and social approaches to introduce the causes, conduct and consequences of World War I with a focus on the experiences of soldiers and civilians on the Eastern Front. Topics include: the war of movement, occupation, extreme violence against civilians, the Armenian genocide, population exchanges, the Russian Revolution and civil war, and the disintegration of empires and rise of nation-states.

Same as: HISTORY 227D, HISTORY 327D, REES 327

**REES 231. Russia, the West and the Rest. 4 Units.**

Focus on understanding the diversity of political, social, and economic outcomes in Russia since the collapse of the Soviet Union. Exploration of questions, including: Is Russia still a global power? Where does it have influence internationally, how much, and why? Developmentally, what is the relevant comparison set of countries? Is Russia's economic growth over the last decade truly similar to Brazil, China, and India or is it more comparable to Kazakhstan, Nigeria, and Kenya? How has Russia's domestic political trajectory from liberalizing country to increasingly autocratic affected its foreign policy toward Ukraine, Georgia, and other formerly Soviet states? Finally, is Russia's reemergence as an important global actor more apparent than real?

Same as: IPS 231

**REES 240. Post-Socialist Heritages: memorialisation, past mastering and nostalgia in Eurasia. 3-5 Units.**

The post-Soviet story is far from resolved! While national identities and geopolitical alliances are being (re)negotiated across Eurasia, unresolved atrocities continue to reopen old wounds. Within this process the past is skillfully embraced to support and sustain conflicting political discourses. Drawing on a variety of highly topical case studies this course will explore the main dynamics and historically entrenched structures that define how the past plays out in the present since the disintegration of the Soviet Empire.

Same as: ARCHLGY 140, ARCHLGY 240

**REES 244A. Practice of Everyday Life in Kazakhstan: From Nomadism to Modernity. 3-5 Units.**

An interdisciplinary introduction to the historically nomadic land of Kazakhstan, its peoples and their lifestyles & the practice of everyday life. Ranked as the ninth largest country in the world, Kazakhstan is also the world's largest landlocked country; its territory is greater than Western Europe: it stretches from the fringes of Europe to the borders of Mongolia and China. The seminar surveys language and society, traditional economics and customary law, rituals and folk customs, local dwelling, craft and art, the cultural panorama, the historical relationship between sedentary and nomadic peoples as well as new approaches to the study of nomads in modernity. Speaking of the present time, we will follow the changing nomads in a changing world. The instructor is going to base, to the extent possible, on the extremely rich fieldwork data recently discovered in Kazakhstan -- the data is yet little known in the West. The seminar will make extensive use of audio-visual materials and films.

Same as: ANTHRO 144A

**REES 247A. Folklore, Mythology, and Islam in Central Asia. 3-5 Units.**

Central Asian cults, myths, and beliefs from ancient time to modernity. Life crisis rites, magic ceremonies, songs, tales, narratives, taboos associated with childbirth, marriage, folk medicine, and calendrical transitions. The nature and the place of the shaman in the region.

Sources include music from the fieldwork of the instructor and the Kyrgyz epoch *Manas*. The cultural universe of Central Asian peoples as a symbol of their modern outlook.

Same as: ANTHRO 147A

**REES 250A. Minaret and Mahallah: Women and Islam in Central Asia. 3-5 Units.**

Introduction to women's culture and art in Muslim countries of Central Asia. Women, bearers of family rites and folklore, are the key figures in transmission of traditional culture and guardians of folk Islam. Women helped to keep the continuity of Islamic education in Central Asia during the harsh times of Communist dominance. The whole wealth of women's oral tradition will be demonstrated and examined to the extent possible. The course will make broad use of audio-visual materials.

Same as: ANTHRO 150A, FEMGEN 150A

**REES 299. Directed Reading. 1-12 Unit.****REES 300. MA Capstone Seminar. 1-3 Unit.**

Required for and limited to REES MA candidates. Colloquia with CREEES Director and Associate Director to assist with refinement of research topic, advisor support, literature review, research, and thesis writing.

**REES 301. An Introduction to Russian, East European and Eurasian Studies. 5 Units.**

This seminar investigates the origins and evolution of the field and exposes students to major debates about the history, geography, politics, societies, economies, cultures, and languages of the region.

**REES 301B. History and Politics in Russian and Eastern European Cinema. 5 Units.**

From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica. Permission of instructor required prior to the first day of classes.

Same as: FILMSTUD 245B, FILMSTUD 445B

**REES 304G. War and Society. 4-5 Units.**

How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of genocidal ideology and racial prejudice; the theory of just war and its practical implementation; and how wars are commemorated.

Same as: HISTORY 204G, HISTORY 304G

**REES 312. Socio-Economic Issues in Contemporary Russia and Eastern. 3-5 Units.**

Course focus on the political dynamics of market liberalization and response to economic crisis in these emerging markets, including the sources of support and opposition to reform, the interplay between international organizations and domestic politics, and the challenges of protecting the losers of economic liberalization.

**REES 313. Transformation of Socialist Societies. 3-5 Units.**

A quarter-century from the fall of the Berlin Wall, we have gained broad perspective on the challenges of wholesale transformations away from socialism. This course explores the process and social consequences of opening the economies of Eastern Europe, Eurasia, and China to market forces. We will answer questions about how individuals and social systems respond to the particular challenges of rapid economic and political openings, including demographic challenges, corruption, nationalism, and growing inequality. We will compare the Eastern European and Post-Soviet experiences of these issues with the Chinese experience, and highlight the similarities and distinctions between transformations in these societies.

Same as: SOC 313A

**REES 320. State and Nation Building in Central Asia. 3-5 Units.**

Issues of identity, development, and security following the dissolution of the Soviet Union and the emergence of independent states in Central Asia and the Southern Caucasus. Topics include the impact of 9/11, the spread of radical Islamist movements in the region, its growing role as a transit route for drugs, weapons, and possibly nuclear materials, the impact of the Soviet legacy, the nature of political and economic transformations, relations with neighboring countries, security challenges, and options facing U.S. policy makers.

**REES 320A. Literature and Cultural Politics in the Former Yugoslavia. 3-5 Units.**

Socialist Yugoslavia disintegrated after 46 years. The story is a telling one, let's read it! Literature in Yugoslavia went through transformations from socialist-realism at the beginning toward nationalist-realism at the end. To understand this process, it is crucial to relate it to its political and ideological background: social myths and taboos, questions of language, cultural and class identity, individual and collective rights. These issues will be explored through fictional texts by prominent Yugoslav writers, including Ivo Andric, Miroslav Krleza, Milos Crnjanski, Mesa Selimovic, Danilo Kis.

Same as: REES 220A

**REES 320G. Demons, Witches, Old Believers, Holy Fools, and Folk Belief: Popular Religion in Russia. 4-5 Units.**

19th and early 20th centuries. Peasants, parish priests, witches, possessed persons, cults and sects, old believers, saints, and women's religious communities. Nominally Christian, and members of the Orthodox Church, Russians embraced beliefs and customs that combined teaching from Church and folk traditions.

Same as: HISTORY 220G, HISTORY 320G, REES 220G

**REES 327. All Quiet on the Eastern Front? East Europe and Russia in the First World War. 3-5 Units.**

Until recently history has been comparatively quiet about the experience of World War I in the east. Far from being a peripheral theater of war, however, the experiences of war on the Eastern Front were central to shaping the 20th century. Not only was the first shot of the war fired in the east, it was also the site of the most dramatic political revolution. Using scholarly texts, literature and film, this course combines political, military, cultural and social approaches to introduce the causes, conduct and consequences of World War I with a focus on the experiences of soldiers and civilians on the Eastern Front. Topics include: the war of movement, occupation, extreme violence against civilians, the Armenian genocide, population exchanges, the Russian Revolution and civil war, and the disintegration of empires and rise of nation-states.

Same as: HISTORY 227D, HISTORY 327D, REES 227

**REES 330. With God in Russia: Orthodox Christianity in the 19th and 20th Centuries. 4-5 Units.**

The experience of religion, particularly Orthodoxy, under tsars and commissars. Religion as a lived experience; practice and belief in the provinces and villages, intertwining of religion and folk customs (the so-called double faith); condition of the Church before and after the Revolutions of 1917; religion under Soviet control; and liberation of the Church since the collapse of the Soviet Union.

Same as: REES 130

**REES 335A. Animism and Alter-Native Modernities. 5 Units.**

For many years indigenous knowledges were treated as a field of research for anthropologists and as "mistaken epistemologies," i. e., unscientific and irrational folklore and childish worldviews. This old view of animism was a product of the evolutionist and anthropocentric worldview of the Enlightenment. However within the framework of ecological humanities, current interest in posthumanism, postsecularism and discussions on building altermodernity (Michael Hardt and Antonio Negri), indigenous thought is used to critique modern epistemology and develop an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge is presented as a decolonizing and liberating practice. The term alter-native modernities as response to the challenges of Euromodernity and suggests modernities that might emerge out of indigenous ways of being in the world. Comparison between literature on indigenous cultures from Latin America and from Russia (animism in Amazonia and Siberia). Following recent works by anthropologists and archaeologists such as Nurit Bird-Rose, Philippe Descola, Graham Harvey, Tim Ingold and Viveiros de Castro, new animism is treated as an alternative (relational) ontology that allows rethinking the problem of matter and agency, goes beyond human exceptionalism and embraces non-humans. Topics include: alternative and alter-native modernities; Jean Piaget's theory of childhood animism; problem of anthropomorphism and personification; indigenous knowledge and the problem of epistemic violence; vitalist materialism (Jane Bennett, Rosi Braidotti); connectedness as the principle of life (relational epistemologies and ontologies); non-human agency (Bruno Latour).

Same as: ANTHRO 335A, FRENCH 335A

**REES 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, CLASSICS 175, MUSIC 208C, MUSIC 408C, REES 208C, RELIGST 208C, RELIGST 308C

**REES 409. Iconoclasm. 5 Units.**

Iconoclasm, iconophobia, and aniconism as markers of cultural transformation of the Mediterranean in the 7th-9th centuries. The identity crisis in the region as the Arabs established the Umayyad caliphate, conquering the Holy Land, Egypt, and Spain. The West consolidated around the Carolingians versus the East split between the Byzantines and the Arabs. How each of these three empires emerged from the ashes of late antique culture and carved an identity out of a common cultural foundation. The course will take place in the seminar room of the Art and Architectural Library located in the Cummings Art Building.

Same as: ARTHIST 209C, ARTHIST 409, CLASSICS 158, CLASSICS 258

**Science in the Making Courses****Science, Technology, & Society Courses****STS 1. The Public Life of Science and Technology. 4 Units.**

The course focuses on key social, cultural, and values issues raised by contemporary scientific and technological developments through the STS interdisciplinary lens by developing and applying skills in three areas: (a) The historical analysis of contemporary global matters (e.g., spread of technologies; climate change response); (b) The bioethical reasoning around health issues (e.g., disease management; privacy rights); and (c) The sociological study of knowledge (e.g., intellectual property, science publishing). A discussion section is required and will be assigned the first week of class.

**STS 103Q. Reading and Writing Poetry about Science. 4 Units.**

Preference to sophomores. Students will study recent poetry inspired by the phenomena and history of the sciences in order to write such poems themselves. These poems bring sensuous human experience to bear on biology, ecology, astronomy, physics, earth science, and medicine, as well as on technological advances and calamities. Poets such as Linda Bierds, Mark Doty, Albert Goldbarth, Sarah Lindsay, W.S. Merwin, Adrienne Rich, Pattiann Rogers, Tracy K. Smith, Arthur Sze, and C. K. Williams. Grounding in poetics, research in individually chosen areas of science, weekly analytical and creative writing. Fulfills the Creative Expression requirement. Enrollment limited to 12.

**STS 131. Science Technology & Environmental Justice. 4 Units.**

The Bay Area is renowned for its technological innovations and progressive politics, including environmental justice activism. This course explores the multifaceted intersections of science, technology, and environmental issues, in the Bay Area and beyond. It also facilitates students' engagement with Wikipedia, as contributors and analysts. Throughout, students investigate the politics of place, with an eye to inequalities of race, class, gender, age, disability, and citizenship. Topics include: Internet and "new economy" geographies; public health and urban planning; food systems; climate change; innovation policy; "undone science."

**STS 140. Science, Technology and Politics. 5 Units.**

This course will critically interrogate the relationship between science and technology and politics. Politics plays a significant role in the production of scientific knowledge and technological artifacts. Science and technology in turn constitute crucial elements of politics and governance in modern democracy. This course will explore these interactions through (1) key theoretical texts in STS and (2) case studies of such issues as climate change, race and science, urban planning, elections and technology, and information technology in social movements. Preference to juniors and seniors. First class attendance mandatory. Enrollment limited to 16.

**STS 160Q. Technology in Contemporary Society. 4 Units.**

Preference to sophomores. Introduction to the STS field. The natures of science and technology and their relationship, what is most distinctive about these forces today, and how they have transformed and been affected by contemporary society. Social, cultural, and ethical issues raised by recent scientific and technological developments. Case studies from areas such as information technology and biotechnology, with emphasis on the contemporary U.S. Unexpected influences of science and technology on contemporary society and how social forces shape scientific and technological enterprises and their products. Enrollment limited to 12.

**STS 165N. Cars: Past, Present, and Future. 3 Units.**

(Formerly COMM 165N.) Preference to freshmen. Focus is on the past, present and future of the automobile, bridging the humanities, social sciences, design, and engineering. Focus on the human experiences of designing, making, driving, being driven, living with, and dreaming of the automobile. A different theme featured each week in discussion around a talk and supported by key readings and media. Course is informed by history, archaeology, ethnography, human-technology interaction, mechanical engineering, and cognitive science.

**STS 190. Issues in Technology and the Environment. 4 Units.**

Humans have long shaped and reshaped the natural world with technologies. Once a menacing presence to conquer or an infinite reserve for resources, nature is now understood to require constant protection from damage and loss. This course will examine humanity's varied relationship with the environment, with a focus on the role of technology. Topics include: industrialization, modernism, nuclear technology, and biotechnology. Students will explore theoretical and methodological approaches in STS and conduct original research that addresses this human-nature-technology nexus.

**STS 191. Introduction to Research in STS. 4 Units.**

This seminar introduces key analytical approaches and methodologies in STS, as well as basic tools for conducting original research in STS. Students survey a series of influential empirical studies; identify productive questions of their own interest; and explore how to pursue them through strong research design. Research proposal as final assignment. Preference to STS juniors; others require consent of instructor. The final proposal can serve as an honors prospectus for students who seek to participate in the STS honors program.

**STS 199. Independent Study. 1-5 Unit.**

Every unit of credit is understood to represent three hours of work per week per term and is to be agreed upon between the student and the faculty member. Instructor consent required. Please contact the department for a permission number.

**STS 199A. Curricular Practical Training. 1 Unit.**

Students obtain internship in a relevant research or industrial activity to enhance their professional experience consistent with their degree program and area of concentration. Prior to enrolling students must get internship approved by the STS Program Director. At the end of the quarter, a one-page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own internship. Limited to declared STS majors only. Course may be repeated twice. Instructor consent required. Please contact the department for a permission number.

**STS 199J. Editing a Science Technology and Society Journal. 1-2 Unit.**

The Science Technology and Society (STS) Program has a student journal, *Intersect*, that has been publishing STS student papers for a number of years. This course involves learning about how to serve as an editor of a peer-reviewed journal, while serving as one of the listed editors of *Intersect*. Entirely operated online, the journal uses a work-flow management to help with the submission process, peer-review, editing, and publication. Student editors learn by being involved in the publishing process, from soliciting manuscripts to publishing the journal's annual issue, while working in consultation with the instructor. Students will also learn about current practices and institutional frameworks around open access and digital publishing.

**STS 200A. Food and Society: Politics, Culture and Technology. 5 Units.**

This course will examine how politics, culture, and technology intersect in our food practices. Through a survey of academic, journalistic, and artistic works on food and eating, the course will explore a set of key analytical frameworks and conceptual tools in STS, such as the politics of technology, classification and identity, and nature/culture boundaries. The topics covered include: the industrialization of agriculture; technology and the modes of eating (e.g., the rise of restaurants); food taboos; globalization and local foodways; food and environmentalism; and new technologies in production (e.g., genetically modified food). Through food as a window, the course intends to achieve two broad intellectual goals. First, students will explore various theoretical and methodological approaches in STS. In particular, they will pay particular attention to the ways in which politics, culture, and technology intersect in food practices. Second, student will develop a set of basic skills and tools for their own critical thinking and empirical research, and design and conduct independent research on a topic related to food. First class attendance mandatory. STS majors must have Senior status to enroll in this Senior Capstone course.

**STS 200D. Text Technologies: A History. 5 Units.**

Beginning with cave painting, carving, cuneiform, hieroglyph, and other early textual innovations, survey of the history of writing, image, sound, and byte, all text technologies employed to create, communicate and commemorate. Focus on the recording of language, remembrance and ideas explicating significant themes seen throughout history; these include censorship, propaganda, authenticity, apocalypticism, technophobia, reader response, democratization and authority. The production, transmission and reception of tablet technology, the scroll, the manuscript codex and handmade book, the machine-made book, newspapers and ephemera; and investigate the emergence of the phonograph and photograph, film, radio, television and digital multimedia. The impact of these various text technologies on their users, and try to draw out similarities and differences in our cultural and intellectual responses to evolving technologies. STS majors must have senior status to enroll in this senior capstone course.

Same as: ENGLISH 184H

**STS 200E. Technology, Nature, and Environmentalism. 5 Units.**

Humans have long shaped and reshaped the natural world with technologies. Once a menacing presence to conquer or an infinite reserve for resources, nature is now understood to require constant protection from damage and loss. Humanity's relationships with the environment have changed over time and differed across societies. In this course, students (1) explore diverse ways in which people in different historical and cultural settings have conceptualized nature and their relationships with it, with a focus on the role of technology; and (2) learn the basics of STS research and conduct an original study that addresses this human-nature-technology nexus. First class attendance mandatory. STS majors must have senior status to enroll in this senior capstone course.

**STS 200H. Ethics, Science, & Technology. 4 Units.**

Critical analysis of ethical issues raised by recent or emerging advances in science and engineering. Issues: privacy, intellectual property, design equity, the public interest, ethical responsibilities of technical practitioners, research ethics, and freedom of inquiry. Advances from fields such as IT, biotechnology, nanotechnology, neurotechnology, construction technology, and transport technology. Seminar limited to 25 senior STS majors. Prerequisite: a course in ethics or permission of the instructor.

**STS 200J. Advanced Topics in Agnotology. 4-5 Units.**

Advanced research into the history of ignorance. Our goal will be to explore how ignorance is created, maintained and destroyed, using case studies from topics such as tobacco denialism, global climate denialism, and other forms of resistance to knowledge making. Course culminates in a research paper on the theory and practice of agnotology, the science of ignorance.

Same as: HISTORY 204D, HISTORY 304D

**STS 200K. Sciences of Learning. 4 Units.**

Understanding the process of learning has enticed and eluded scientists for generations. Abetted by the rise of massive open online courses (MOOCs), learning has attracted new cadres of researchers and stars from scientists in adjacent fields, as well as new forms of financial support and visibility. This seminar investigates the recent dynamics of learning science as a case study in the politics of knowledge. Student projects will enable focused empirical inquiry.

**STS 200L. Critique of Technology. 3-5 Units.**

Informed citizens living in today's world, and especially in Silicon Valley, should be able to formulate their own, articulate positions about the role of technology in culture. The course gives students the tools to do so. Against the trend towards the thoughtless celebration of all things technological, we will engage in critique in the two senses of the term: as careful study of the cultural implications of technology and as balanced, argumentative criticism. Can technology make life more meaningful, society more fair, people smarter, and the world smaller? Selections by fiction writers, philosophers and thinkers (such as Heidegger and Beller), as well as recent popular works of social commentary, such as *You are not a Gadget*, *The Shallows*, *24/7*, and *Present Shock*.

Same as: ILAC 235

**STS 299. Advanced Individual Work. 1-5 Unit.**

For students in the STS Honors program. Every unit of credit is understood to represent three hours of work per week per term and is to be agreed upon between the student and the faculty member. May be repeated for credit.

**Scientific Computing & Comput'l Math Courses****SCCM 398. Curricular Practical Training. 1 Unit.**

Provides students with on-the-job training under the guidance of experienced, on-site supervisors. Students must register the quarter after their training. Students receive credit and a grade after submitting a concise report detailing work activities, problems worked on, and key results. Prerequisite: written consent of adviser. (Staff).

**SCCM 499. Advanced Reading and Research. 1-15 Unit.**

Prerequisites: majoring in SC/CM; consent of adviser. (Staff).

**Slavic General Courses****Slavic Language Courses****SLAVLANG 1. First-Year Russian, First Quarter. 5 Units.**

Functionally-based communicative approach, including essential Russian grammar. Discussions of Russian culture and the Russian view of reality.

**SLAVLANG 1A. Accelerated First-Year Russian, Part 1. 5 Units.**

First quarter of the two-quarter accelerated sequence. For students with little or no prior experience studying Russian. Students acquire beginning proficiency in Russian at an accelerated pace through intensive studying of basic Russian grammar and functional vocabulary. The course emphasis is put on practice in speaking, reading, and writing Russian with special insight into Russian culture. Completion of 2A fulfills the University Language Requirement.

**SLAVLANG 2. First-Year Russian, Second Quarter. 5 Units.**

Continuation of SLAVLANG 1. Functionally-based communicative approach, including essential Russian grammar. Discussions of Russian culture and the Russian view of reality. Prerequisite: Placement Test or SLAVLANG 1.

**SLAVLANG 2A. Accelerated First-Year Russian, part 2. 5 Units.**

Continuation of Slavlang 1A. Completes the first-year sequence in two rather than three quarters. Students develop first-year proficiency in Russian at an accelerated pace through intensive studying of basic Russian grammar and functional vocabulary and active language use. The course emphasis is put on practice in speaking, reading, and writing Russian through diverse materials and appropriate cultural contexts. The course fulfills the University foreign language requirement. nPrerequisite: Slavlang 1A or consent of instructor.

**SLAVLANG 3. First-Year Russian, Third Quarter. 5 Units.**

Continuation of SLAVLANG 2. Functionally-based communicative approach, including essential Russian grammar. Discussions of Russian culture and the Russian view of reality. Prerequisite: Placement Test or SLAVLANG 2.

**SLAVLANG 6. Russian for Native Speakers, Second Quarter. 2 Units.**

Self-paced. Reading and writing skills and communicating in formal and informal settings. Does not fulfill the University foreign language requirement. Prerequisite: SLAVLANG 5.

**SLAVLANG 7. Russian for Native Speakers, Third Quarter. 2 Units.**

Continuation of SLAVLANG 6. Self-paced. Reading and writing skills and communicating in formal and informal settings. Does not fulfill the University foreign language requirement. Prerequisite: SLAVLANG 6.

**SLAVLANG 51. Second-Year Russian, First Quarter. 5 Units.**

Proficiency development at the intermediate level, including more difficult grammar such as numbers, verb conjugation, and aspect. Vocabulary, speaking skills. Prerequisite: Placement Test, SLAVLANG 3.

**SLAVLANG 52. Second-Year Russian, Second Quarter. 5 Units.**

Continuation of 51. Proficiency development at the intermediate level, including more difficult grammar such as numbers, verb conjugation, and aspect. Vocabulary, speaking skills. Prerequisite: placement test or 51.

**SLAVLANG 53. Second-Year Russian, Third Quarter. 5 Units.**

Continuation of 52. Proficiency development at the intermediate level, including more difficult grammar such as numbers, verb conjugation, and aspect. Vocabulary, speaking skills. Prerequisite: placement test or 52.

**SLAVLANG 55. Intermediate Russian Conversation. 2 Units.**

May be repeated for credit. Prerequisite: SLAVLANG 3 or equivalent placement.

**SLAVLANG 60A. Beginning Russian Conversation. 1 Unit.**

.

**SLAVLANG 60B. Intermediate Russian Conversation. 1 Unit.**

.

**SLAVLANG 60C. Advanced Russian Conversation. 1 Unit.**

.

**SLAVLANG 60E. The Sensuality of Slavic Sustenance. 1 Unit.**

.

**SLAVLANG 60F. Perspectives on Slavic Culture and History through Film. 1 Unit.**

.

**SLAVLANG 60H. Culture and Politics of Russian Athleticism through the lens of Sochi 2014. 1 Unit.**

.

**SLAVLANG 60M. Songs and Poems of Comrades, Cossacks, Gypsies, and Peasants. 1 Unit.**

.

**SLAVLANG 60P. Slav Dom Theme Projects. 1 Unit.**

.

**SLAVLANG 60T. Teaching Slavic Conversation. 1 Unit.**

.

**SLAVLANG 70. Reading in Russian. 2 Units.**

The course is designed to develop reading competence in Russian. This is not a traditional language course that takes an integrated four-skill approach. The goal of the course is to reach proficiency of advanced level in reading Russian authentic materials pertinent to history and culture. The emphasis is on vocabulary building, reading comprehension, and translation. Intermediate level of Russian is required.

**SLAVLANG 99. Language Specials. 1-5 Unit.**

Prerequisite: consent of instructor.

**SLAVLANG 111. Third-Year Russian, First Quarter. 4 Units.**

Continuation of SLAVLANG 53. A snapshot of Russian life. Reading comprehension, conversational competence, grammatical accuracy, and cultural sophistication. Prerequisite: Placement Test or SLAVLANG 53.

**SLAVLANG 112. Third-Year Russian, Second Quarter. 4 Units.**

Continuation of SLAVLANG 111. A snapshot of Russian life. Reading comprehension, conversational competence, grammatical accuracy, and cultural sophistication. Prerequisite: Placement Test or SLAVLANG 111.

**SLAVLANG 113. Third-Year Russian, Third Quarter. 4 Units.**

Continuation of SLAVLANG 112. A snapshot of Russian life. Reading comprehension, conversational competence, grammatical accuracy, and cultural sophistication. Prerequisite: Placement Test or SLAVLANG 112.

**SLAVLANG 177. Fourth-Year Russian, First Quarter. 3 Units.**

Continuation of SLAVLANG 113. Culture, history, and current events. Films, classical and contemporary writers, newspaper articles, documentaries, radio and TV programs, and music. Review and fine-tuning of grammar and idiomatic usage. Prerequisite: Placement Test, SLAVLANG 113.

**SLAVLANG 178. Fourth-Year Russian, Second Quarter. 3 Units.**

Continuation of SLAVLANG 177. Culture, history, and current events. Films, classical and contemporary writers, newspaper articles, documentaries, radio and TV programs, and music. Review and fine-tuning of grammar and idiomatic usage. Prerequisite: Placement Test, SLAVLANG 177.

**SLAVLANG 179. Fourth-Year Russian, Third Quarter. 3 Units.**

Continuation of SLAVLANG 178. Culture, history, and current events. Films, classical and contemporary writers, newspaper articles, documentaries, radio and TV programs, and music. Review and fine-tuning of grammar and idiomatic usage. Prerequisite: Placement Test, SLAVLANG 178.

**SLAVLANG 181. Fifth-Year Russian, First Quarter. 3 Units.**

Continuation of SLAVLANG 179. Language proficiency maintenance; appropriate for majors and non-majors with significant language experience overseas. Discussions, oral presentations, and writing essays on contemporary Russia. Prerequisite: Placement Test, or SLAVLANG 179.

**SLAVLANG 182. Fifth-Year Russian, Second Quarter. 3 Units.**

Continuation of SLAVLANG 181. Language proficiency maintenance; appropriate for majors and non-majors with significant language experience overseas. Discussions, oral presentations, and writing essays on contemporary Russia. Prerequisite: Placement Test or SLAVLANG 181.

**SLAVLANG 183. Fifth-Year Russian, Third Quarter. 3 Units.**

Continuation of SLAVLANG 182. Language proficiency maintenance; appropriate for majors and non-majors with significant language experience overseas. Discussions, oral presentations, and writing essays on contemporary Russia. Prerequisite: Placement Test or SLAVLANG 182.

**SLAVLANG 184A. Russian Reading Conversation and Composition. 2-3 Units.**

Proficiency in reading, spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.

**SLAVLANG 184B. Russian Advanced Conversation and Composition. 2-3 Units.**

Proficiency in spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.

**SLAVLANG 184C. Russian Advanced Conversation and Composition. 2-3 Units.**

Proficiency in spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.

**SLAVLANG 199. Individual Work. 1-5 Unit.**

Prerequisite: consent of instructor.

**SLAVLANG 220. Russian for Slavic PhD Students. 1-3 Unit.**

For DLCL graduate students who will teach Russian language and literature. nCourse objective is to improve spoken Russian on literary and pedagogical topics. Prerequisite: consent of instructor.

**SLAVLANG 299. Independent Study. 1-5 Unit.****SLAVLANG 394. Graduate Studies in Russian Conversation. 1-3 Unit.****SLAVLANG 395. Graduate Studies in Russian. 1-5 Unit.**

Prerequisite: consent of instructor.n (Staff).

## Slavic Languages and Literatures Courses

**SLAVIC 77Q. Russia's Weird Classic: Nikolai Gogol. 3-4 Units.**

This seminar investigates the work and life of Nikolai Gogol, the most eccentric of Russian authors, the founder of what was dubbed Fantastic (or Magic) Realism. Our investigation will be based on close reading of the works written in various genres and created in various stages of Gogol's literary career. This study provides a perspective on the relationship between Romanticism and Realism in Russian literature (the so-called "Natural School" of the 1830-1840s), and between the popular Ukrainian culture and "high" Russian and West European traditions in Gogol's oeuvre. The seminar traces Gogol's influences on subsequent Russian literature (Dostoevsky in particular) and investigates the impact of his work on XX century modernist literature, theatre, music, and painting (Vladimir Nabokov, literature of the absurd, Dmitry Shostakovich, Marc Chagall). The seminar is intended for students interested in literature and literary studies.

**SLAVIC 78N. Poetry to Prose: The Birth of the Great Russian Novel in Alexander Pushkin's Eugene Onegin. 3-4 Units.**

Devoted to a close reading and detailed discussion of Alexander Pushkin's masterpiece in the context of XIX century Russian and continental literary history. Pushkin (1799-1837) is the founder of modern Russian literature; his place in it is comparable to that of Shakespeare in Britain. Taught in English.

**SLAVIC 88N. UKRAINE AT A CROSSROADS. 3-4 Units.**

Literally meaning *borderland*, Ukraine has embodied in-betweenness in all possible ways. In the course, we will consider the historical permeability of its territorial, linguistic, and ethnic borders as an opportunity to explore the multiple dimensions of Ukraine's relations its neighbors. The reading materials for the course include the earliest records of Herodotus about the prehistoric Ukrainian civilizations, the cultural legacy of Kyivan Rus and baroque, as well as artistic works created during romanticism, realism, modernism, and postmodernism. In addition to learning how to interpret literary texts, we will examine the works of visual and performative arts which shape modern Ukraine and create several cartographic projects with the use of GIS tools. All required texts are in English. No knowledge of Ukrainian is required.

**SLAVIC 103Q. Subversive Acts: Invention and Convention in the 20th Century. 2-4 Units.**

Course investigates a range of artistic, social, and political meanings of the term *avant garde* in the 20th century. Several major international *avant-garde* artifacts, texts, and films will be explored through the prism of artistic and political subversion. This course traces a wide range of aesthetic case studies, which offer unique visions of how art influences and subverts established social practices and challenges political ideologies.

**SLAVIC 115. Between Europe and Asia: Introduction to Russian Culture. 3 Units.**

The course investigates the main stages of Russian history and civilization. Taught in Russian.

**SLAVIC 129. Russian Versification: History and Theory. 3-4 Units.**

A survey of metric forms, rhyming principles and stanzaic patterns in the Russian poetry of the 18th - 21st centuries. Taught in Russian. Prerequisite: Two years of Russian. Same as: SLAVIC 329

**SLAVIC 145. Survey of Russian Literature: The Age of Experiment. 3-5 Units.**

This course discusses the transition from predominantly poetic to predominantly prosaic creativity in the Russian literature of the first half of the 19th century Russian literature and the birth of the great Russian novel. It covers three major Russian writers -- Alexander Pushkin, Mikhail Lermontov and Nikolai Gogol -- and examines the changes in the Russian literary scene affected by their work. An emphasis is placed on close reading of literary texts and analysis of literary techniques employed in them. Taught in English.

Same as: SLAVIC 345

**SLAVIC 146. The Great Russian Novel: Tolstoy and Dostoevsky. 3-5 Units.**

The development of 19th-century Russian novel through close reading and broad cultural examination of three masterpieces: Ivan Goncharov's *Oblomov* (1859), Fyodor Dostoevsky's *Crime and Punishment* (1866), and Leo Tolstoy's *Anna Karenina* (1877) - the novels which have been part of the European literary canon long before Oprah Winfrey put them in her reading list. Through the analysis of the novels and their adaptations, students will study the aesthetic contours of Russian Realism and its intermedial capacities. Special attention will be paid to the questions of genre, discourse, medium and intermediality, relationship between artist, audience, and critic.

Same as: SLAVIC 346

**SLAVIC 147. Modern Russian Literature and Culture: The Age of War and Revolution. 3-5 Units.**

The Age of Revolution: Readings in Russian Modernist Prose of the 1920-30s: What makes Russian modernist prose special? Or is there anything special about Russian modernist prose? This course aims to answer these questions through close readings of works by Babel, Mandelstam, Zoshchenko, Platonov, Olesha and Bulgakov. Aesthetic issues such as hero, plot, and narrative devices will be addressed with the aid of contemporaneous literary theory (Shklovsky, Tynianov, Eikhenbaum, Bakhtin). Novels and theory will be read in English.

Same as: SLAVIC 347

**SLAVIC 148. Dissent and Disenchantment: Russian Literature and Culture since the Death of Stalin. 3-5 Units.**

Russian culture and society since 1953 through literature (in English translation). Topics: opposition and dissent; generational conflict; modernization; everyday life, gender, ethnicity, class, citizenship, exit from communism. Literature of the "Thaw," state-published and *samizdat*, "village" and "cosmopolitan," the new emigration, Sots-Art, and the Russian "post-modern." Solzhenitsyn, Shalamov, Trifonov, Siniavsky-Tertz, Erofeev, Dovlatov, Brodsky, Petrushevskaya, Pelevin, Ulitskaya, Sorokin. Requirements: three reaction papers and final exam (UG); research paper for graduate credit.

Same as: SLAVIC 348

**SLAVIC 156. Nabokov in the Transnational Context. 3-5 Units.**

Nabokov's techniques of migration and camouflage as he inhabits the literary and historical contexts of St. Petersburg, Berlin, Paris, America, and Switzerland. His early and late stories, last Russian novel "The Gift," "Lolita" (the novel and screenplay), and "Pale Fire." Readings in English. Russian speakers will be encouraged to read Russian texts in original. Same as: COMPLIT 115, COMPLIT 315, SLAVIC 356

**SLAVIC 179. Literature from Old Rus' and Medieval Russia. 2-4 Units.**

From earliest times through the 17th century. The development of literary and historical genres, and links among literature and art, architecture, and religious culture. Readings in English; graduate students read in original. Same as: SLAVIC 379

**SLAVIC 181. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman; Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: CLASSICS 42, COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81

**SLAVIC 185. Cinematograph. 3-5 Units.**

The term cinematography, which literally means "inscribing motion," tends to lose the "graphic" part in modern use. However, several influential film-makers not only practiced the art of "inscribing motion" but also wrote texts discussing the aesthetic premises of cinematographic art. This course explores theories of cinema as propagated by the following film-makers: Vertov, Eisenstein, Godard, Bresson, Antonioni, Pasolini, Tarkovsky, Greenaway, and Lynch. Selected key texts will be supplemented by screenings of classic films, indicative of each director's work.

Same as: FILMSTUD 131, FILMSTUD 331, SLAVIC 285

**SLAVIC 187. History of 18th and 19th century Russian Poetry. 3-4 Units.**

Close analysis of lyrical poems of Russian classical poets from Mikhail Lomonosov to Vladimir Soloviev. Taught in Russian. Prerequisite: Two years of Russian.

Same as: SLAVIC 387

**SLAVIC 188. 20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky. 3-5 Units.**

Developments in and 20th-century Russian poetry including symbolism, acmeism, futurism, and literature of the absurd. Emphasis is on close readings of individual poems. Taught in Russian.

Same as: SLAVIC 388

**SLAVIC 190. Tolstoy's Anna Karenina in Dialogue with Contemporary Philosophical, Social, and Ethical Thought. 3-5 Units.**

Anna Karenina, the novel as a case study in the contest between "modernity" and "tradition," their ethical order, ideology, cultural codes, and philosophies. Images of society, women and men in Tolstoy v. those of his contemporaries: Marx, Mill, Nietzsche, Weber, Durkheim, Freud. Open to juniors, seniors and graduate students. Requirements: three interpretive essays (500-1000 words each). Analysis of a passage from the novel; AK refracted through a "philosophical" prism and vice versa (30% each); class discussion and Forum (10%).

Same as: COMPLIT 190, COMPLIT 390, SLAVIC 390

**SLAVIC 194. Russia: Literature, Film, Identity, Alterity. 3-5 Units.**

How do Russian literature and film imagine Russian identity and, in contrast, the ethnic or national Other? Does political and literary theory analyzing national identity and the literary imagination elsewhere hold true in the Russian context? Texts include works by Pushkin, Dostoevsky, Tolstoy, Blok, Mayakovsky, Platonov; Soviet and post-Soviet films; theory and history. Recommended for returnees from Moscow, Slavic majors, and CREEES MA students. Accepted for IR credit. Readings in English and films subtitled; additional section for Russian readers. Taught in English.

Same as: SLAVIC 394

**SLAVIC 195. Russian and East European Theater. 3-5 Units.**

Evolution of modernist Russian/EEur. dramaturgy, theatrical practices, landmark productions from Chekhov-Meyerhold-Grotowski to present; re-performance of classics; techniques of embodiment. Taught in English. Same as: SLAVIC 395

**SLAVIC 198. Writing Between Languages: The Case of Eastern European Jewish Literature. 3-5 Units.**

Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well.

Same as: JEWISHST 148, JEWISHST 348, SLAVIC 398

**SLAVIC 199. Individual Work for Undergraduates. 1-5 Unit.**

Open to Russian majors or students working on special projects. May be repeated for credit. Prerequisite: consent of instructor.

**SLAVIC 200. Proseminar in Literary Theory and Study of Russian Literature. 3-5 Units.**

Introduction to advance study of Russian literature and culture: profession, discipline, theoretical perspectives. Variety of approaches, from semiological to psychoanalytic, phenomenological, historical, and sociological; practical exercises in the analysis of verse, narrative, and visual representation in literature and art. Three short essays (800 words) and a review of a recent monograph on Russian literature and culture. Required for graduate students and honors seniors in Russian; first-year graduate students must enroll during their first quarter. Prerequisites: Knowledge of Russian language and literature.

**SLAVIC 218. Modernist Journeys. 2-5 Units.**

Radical displacements took place in the Soviet Union of the 1920-30s: immigration, war, forced relocation, labor camps, and, in very rare cases, travel for leisure. In spite of these sweeping movements of dislocation, this was the time when the Soviet subjectivity was formed. Modernist Journeys explores theoretical, biographic and artistic texts by key writers and artists of the period who contributed to the formation (or disintegration) of the *Soviet man*: Sergei Tretiakov, Evgenii Zamiatin, Osip Mandelstam, Andrei Platonov, Aleksandr Rodchenko, Dziga Vertov, among others.

**SLAVIC 224. The Russian Postmodern Text. 2-4 Units.**

What is the place of postmodernism in Russia? The course aims to answer the question by engaging with theories of postmodernity (Baudrillard, Barthes, Derrida) and through close reading of several gems of Russian postmodern literature and art: Venedikt Erofeeva's *Moscow-Petushki*, Sasha Sokolov's *School for Fools*, Vladimir Sorokin's *Norma*, Dmitrii Prigov's selected poems, and Ilya Kabakov texts. Texts read in Russian. Taught in Russian.

**SLAVIC 226. BAKHTIN AND HIS LEGACY. 3-5 Units.**

"Quests for my own word are in fact quests for a word that is not my own, a word that is more than myself," writes Mikhail Bakhtin towards the end of his life. It was this ceaseless pursuit of another word that allowed Bakhtin, one of the most distinguished literary critics of the twentieth century, to author several influential literary theory concepts, many of which deal with the ideas of multiplicity, diversity and unfinalizability. The seminar explores these core concepts through close reading of key texts in English and investigates their reverberations in the writings of other thinkers such as Kristeva, de Man and Derrida.

**SLAVIC 230. 18th Century Russian Literature. 5 Units.**

For graduate students and upper-level undergraduates. Russian literature of the long 18th century, from the late 1600s to 1800. Readings in the Baroque, Neoclassicism and Sentimentalism. Major works are examined in their literary and historical context and also in relation to the principal subcultures of the period, including the court, academy, church and Old Believer diaspora.

**SLAVIC 235. Late and Post-Soviet Literature. 3-5 Units.**

This course will cover major trends and in Russian literature of the late and post-Soviet periods. We will give some consideration of related developments in art and cinema. Readings will be in Russian, and course discussions will be in English.

**SLAVIC 236. The Russian Long Take. 3-5 Units.**

"Time flows in a film not by virtue but in defiance of montage-cuts," wrote the great Russian filmmaker Andrei Tarkovsky. An exploration of the phenomenon of long take (a single continuous shot which presents `a vision of time') and its aesthetic and philosophical significance to the art of cinema. Key films by cult Russian/Soviet auteurs such as Andrei Tarkovsky, Sergei Paradzhanov and Aleksandr Sokurov will be used as case studies and read through the prism of film theory (Gilles Deleuze, Andre Bazin and Jean Epstein). Taught in English.

**SLAVIC 242. Artists and Power: Eastern European Literature and Film from 1945 to 1991. 2-5 Units.**

During the Cold War, the highly diverse region of Eastern Europe was largely united by a common political allegiance to the USSR. The oppressive politics of the Eastern Bloc regimes meant that artists were frequently compelled to respond to political pressure in their works. This situation has been interpreted according to the logic of the Cold War: artists were either courageous dissidents who opposed the regime or brainwashed conformists. In this course we will consider examples that conform to this frame—literature and film of political reform as well as models of Socialist Realism. In addition, however, we will also consider works of self-reflection, escapism, and every-day life under Socialism, in order to arrive at a more complete understanding of the cultural history of the era. The course will include literature and film produced by artists from Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, the Soviet Union, and Yugoslavia. All readings will be in English.

**SLAVIC 245. Slavic Literary Theory: Formalism Structuralism Semiotics, Formalism and Structuralism. 2-4 Units.**

Introduction to seminal Slavic contributions to 20th c. literary theory (formalism, structuralism, semiotics) considered in broader intellectual historical context. First half of course to focus on central concepts of Russian formalism (material and device, defamiliarization, poetic language, narrative structure, literary evolution) through writings of Shklovsky, Eikhnenbaum, Tynianov, Jakobson and others. Second half to look at subsequent developments in Czech and French structuralism (Mukarovsky, Levi-Strauss, Barthes) and Soviet semiotics (Lotman).

**SLAVIC 251. Dostoevsky: Narrative Performance and Literary Theory. 3-5 Units.**

In-depth engagement with a range of Dostoevsky's genres: early works (epistolary novella *Poor Folk* and experimental *Double*), major novels (*Crime and Punishment*, *The Idiot*), less-read shorter works ("A Faint Heart," "Bobok," and "The Meek One"), and genre-bending *House of the Dead* and *Diary of a Writer*. Course applies recent theory of autobiography, performance, repetition and narrative gaps, to Dostoevsky's transformations of genre, philosophical and dramatic discourse, and narrative performance. Slavic students read primary texts in Russian, other participants in translation. Course conducted in English. For graduate students; undergraduates with advanced linguistic and critical competence may enroll with consent of instructor. Same as: COMPLIT 219

**SLAVIC 285. Cinemato-graph. 3-5 Units.**

The term cinematography, which literally means "inscribing motion," tends to lose the "graphic" part in modern use. However, several influential film-makers not only practiced the art of "inscribing motion" but also wrote texts discussing the aesthetic premises of cinematographic art. This course explores theories of cinema as propagated by the following film-makers: Vertov, Eisenstein, Godard, Bresson, Antonioni, Pasolini, Tarkovsky, Greenaway, and Lynch. Selected key texts will be supplemented by screenings of classic films, indicative of each director's work. Same as: FILMSTUD 131, FILMSTUD 331, SLAVIC 185

**SLAVIC 300B. Research Tools and Professionalization Workshop. 1 Unit.**

This course introduces graduate students in Slavic Studies to library, archival, and web resources for research, grant opportunities, publication strategies, and professional timelines. Open to PhD students in the Slavic Department and other departments and to MA students in CREEES.

**SLAVIC 311. Introduction to Old Church Slavic. 2-4 Units.**

The first written language of the Slavic people. Grammar. Primarily a skills course, with attention to the historical context of Old Church Slavic.

**SLAVIC 315. Isaac Babel and His Worlds. 3-4 Units.**

Isaac Babel, his oeuvre, literary, theatrical, and cinematic; his milieu; cultural and historical setting; literary and cultural legacy. Taught in English, knowledge of Russian language and literature strongly recommended.

**SLAVIC 325. Readings in Russian Realism. 3-5 Units.**

For graduate students or upper-level undergraduates. What did Realism mean for late imperial Russian writers? What has it meant for twentieth-century literary theory? As we seek to answer these questions, we read Tolstoy, Dostoevsky, Turgenev, and Chekhov, alongside their brilliant but less often taught contemporaries such as Goncharov, Saltykov-Shchedrin, Leskov, Garshin, Korolenko, Gorky, Andreev, and Bunin. Taught in English; readings in Russian. Prerequisite: Three years of Russian.

**SLAVIC 327. Boris Pasternak and 20th century Russian Modernist Poetry. 3-5 Units.**

An emphasis is made on close reading of the poetry of Boris Pasternak, Marina Tsvetaeva and Vladimir Mayakovsky. Taught in Russian.

**SLAVIC 329. Russian Versification: History and Theory. 3-4 Units.**

A survey of metric forms, rhyming principles and stanzaic patterns in the Russian poetry of the 18th - 21st centuries. Taught in Russian. Prerequisite: Two years of Russian.

Same as: SLAVIC 129

**SLAVIC 340. Russia's Castaway Classic: Andrei Platonov. 3-5 Units.**

"The power of devastation [Platonov's texts] inflict upon their subject matter exceeds by far any demands of social criticism and should be measured in units that have very little to do with literature as such," wrote Joseph Brodsky. Explores key texts of Andrei Platonov, who is frequently considered the greatest Russian prose writer of the twentieth century, and covers major critical approaches to his "devastating" oeuvre. The texts will be read in Russian, discussion in English.

**SLAVIC 345. Survey of Russian Literature: The Age of Experiment. 3-5 Units.**

This course discusses the transition from predominantly poetic to predominantly prosaic creativity in the Russian literature of the first half of the 19th century Russian literature and the birth of the great Russian novel. It covers three major Russian writers -- Alexander Pushkin, Mikhail Lermontov and Nikolai Gogol -- and examines the changes in the Russian literary scene affected by their work. An emphasis is placed on close reading of literary texts and analysis of literary techniques employed in them. Taught in English.

Same as: SLAVIC 145

**SLAVIC 346. The Great Russian Novel: Tolstoy and Dostoevsky. 3-5 Units.**

The development of 19th-century Russian novel through close reading and broad cultural examination of three masterpieces: Ivan Goncharov's *Oblomov* (1859), Fyodor Dostoevsky's *Crime and Punishment* (1866), and Leo Tolstoy's *Anna Karenina* (1877) - the novels which have been part of the European literary canon long before Oprah Winfrey put them in her reading list. Through the analysis of the novels and their adaptations, students will study the aesthetic contours of Russian Realism and its intermedial capacities. Special attention will be paid to the questions of genre, discourse, medium and intermediality, relationship between artist, audience, and critic.

Same as: SLAVIC 146

**SLAVIC 347. Modern Russian Literature and Culture: The Age of War and Revolution. 3-5 Units.**

The Age of Revolution: Readings in Russian Modernist Prose of the 1920-30s: What makes Russian modernist prose special? Or is there anything special about Russian modernist prose? This course aims to answer these questions through close readings of works by Babel, Mandelstam, Zoshchenko, Platonov, Olesha and Bulgakov. Aesthetic issues such as hero, plot, and narrative devices will be addressed with the aid of contemporaneous literary theory (Shklovsky, Tynianov, Eikhenbaum, Bakhtin). Novels and theory will be read in English. Same as: SLAVIC 147

**SLAVIC 348. Dissent and Disenchantment: Russian Literature and Culture since the Death of Stalin. 3-5 Units.**

Russian culture and society since 1953 through literature (in English translation). Topics: opposition and dissent; generational conflict; modernization; everyday life, gender, ethnicity, class, citizenship, exit from communism. Literature of the "Thaw," state-published and samizdat, "village" and "cosmopolitan," the new emigration, Sots-Art, and the Russian "post-modern." Solzhenitsyn, Shalamov, Trifonov, Siniavsky-Tertz, Erofeev, Dovlatov, Brodsky, Petrushevskaya, Pelevin, Ulitskaya, Sorokin. Requirements: three reaction papers and final exam (UG); research paper for graduate credit. Same as: SLAVIC 148

**SLAVIC 356. Nabokov in the Transnational Context. 3-5 Units.**

Nabokov's techniques of migration and camouflage as he inhabits the literary and historical contexts of St. Petersburg, Berlin, Paris, America, and Switzerland. His early and late stories, last Russian novel "The Gift," "Lolita" (the novel and screenplay), and "Pale Fire." Readings in English. Russian speakers will be encouraged to read Russian texts in original. Same as: COMPLIT 115, COMPLIT 315, SLAVIC 156

**SLAVIC 369. Folklore Theory and Slavic Folklore. 1-3 Unit.**

Why do educated elites care about popular or folk culture, and how do they use it? An intellectual history of two centuries of folklore theory, with examples drawn from Eastern European (Slavic and Jewish) lore; students collect other folklore themselves and analyze it. Separate section for Russian readers.

**SLAVIC 370. Pushkin. 2 Units.**

Pushkin's poems, prose, and drafts in dialogue with contemporaries and cultural milieu. Emphasis on innovation and controversy in genre, lyrical form and personal idiom, shaping a public discourse. Taught in English.

**SLAVIC 372. Osip Mandelstam In Context and the Russian Experience: 1891-1991. 1-4 Unit.**

Osip Mandelstam from Symbolism to Acmeism, to Post-Modernism: poetry, thought, culture, politics, reception. Russian Symbolism (Baudelaire, Mallarme, Ivanov, Bely, Blok, Annensky, Kuzmin); Acmeism/Futurism; reception; Mandelstam in Soviet civilization; poet's social function; memory, biography and cultural theory; Acmeist paradigm in the late Soviet/post-Soviet poetry: Sots-Art, Kibirov, Gandlevsky, Rubinshtein, et al. Prerequisite: Advanced Russian strongly recommended.

**SLAVIC 379. Literature from Old Rus' and Medieval Russia. 2-4 Units.**

From earliest times through the 17th century. The development of literary and historical genres, and links among literature and art, architecture, and religious culture. Readings in English; graduate students read in original. Same as: SLAVIC 179

**SLAVIC 387. History of 18th and 19th century Russian Poetry. 3-4 Units.**

Close analysis of lyrical poems of Russian classical poets from Mikhail Lomonosov to Vladimir Soloviev. Taught in Russian. Prerequisite: Two years of Russian. Same as: SLAVIC 187

**SLAVIC 388. 20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky. 3-5 Units.**

Developments in and 20th-century Russian poetry including symbolism, acmeism, futurism, and literature of the absurd. Emphasis is on close readings of individual poems. Taught in Russian. Same as: SLAVIC 188

**SLAVIC 390. Tolstoy's Anna Karenina in Dialogue with Contemporary Philosophical, Social, and Ethical Thought. 3-5 Units.**

Anna Karenina, the novel as a case study in the contest between "modernity" and "tradition," their ethical order, ideology, cultural codes, and philosophies. Images of society, women and men in Tolstoy v. those of his contemporaries: Marx, Mill, Nietzsche, Weber, Durkheim, Freud. Open to juniors, seniors and graduate students. Requirements: three interpretive essays (500-1000 words each). Analysis of a passage from the novel; AK refracted through a "philosophical" prism and vice versa (30% each); class discussion and Forum (10%). Same as: COMPLIT 190, COMPLIT 390, SLAVIC 190

**SLAVIC 394. Russia: Literature, Film, Identity, Alterity. 3-5 Units.**

How do Russian literature and film imagine Russian identity and, in contrast, the ethnic or national Other? Does political and literary theory analyzing national identity and the literary imagination elsewhere hold true in the Russian context? Texts include works by Pushkin, Dostoevsky, Tolstoy, Blok, Mayakovsky, Platonov; Soviet and post-Soviet films; theory and history. Recommended for returnees from Moscow, Slavic majors, and CREES MA students. Accepted for IR credit. Readings in English and films subtitled; additional section for Russian readers. Taught in English. Same as: SLAVIC 194

**SLAVIC 395. Russian and East European Theater. 3-5 Units.**

Evolution of modernist Russian/EEur. dramaturgy, theatrical practices, landmark productions from Chekhov-Meyerhold-Grotowski to present; re-performance of classics; techniques of embodiment. Taught in English. Same as: SLAVIC 195

**SLAVIC 398. Writing Between Languages: The Case of Eastern European Jewish Literature. 3-5 Units.**

Eastern European Jews spoke and read Hebrew, Yiddish, and their territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well. Same as: JEWISHST 148, JEWISHST 348, SLAVIC 198

**SLAVIC 399. INDIVIDUAL WORK. 1-15 Unit.**

Open to Russian majors or students working on special projects. May be repeated for credit. Prerequisite: consent of instructor.

**SLAVIC 801. TGR PROJECT. 0 Units.****SLAVIC 802. TGR Dissertation. 0 Units.**

## Slavic Literature Courses

### Sociology Courses

**SOC 1. Introduction to Sociology at Stanford. 5 Units.**

This course to get students to think like a sociologist; to use core concepts and theories from the field of sociology to make sense of the most pressing issues of our time: race and ethnicity; gender and sexuality; family; education; social class and economic inequality; social connectedness; social movements; and immigration. The course will draw heavily on the research and writing of Stanford's own sociologist.

**SOC 2. Social Psychology: Self and Society. 3 Units.**

Why do people behave the way they do? This fundamental question drives social psychology, a field that bridges psychology and sociology. This course surveys social psychological research on a wide variety of topics including conformity, morality, respect, generosity, identity, and prejudice, giving students a deeper understanding of the causal architecture of the social world.

**SOC 14N. Inequality in American Society. 4 Units.**

An overview of the major forms of inequality in American society, their causes and consequences. Special attention will be devoted to public policy associated with inequality.

**SOC 15N. The Transformation of Socialist Societies. 3 Units.**

Preference to freshmen. The impact of societal organization on the lives of ordinary people in socialist societies and in the new societies arising through the processes of political, economic, and social transformation. Do the concepts of democratization and marketization suffice to characterize ongoing changes? Enrollment limited to 16.

**SOC 16N. African Americans and Social Movements. 3 Units.**

Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women's right, LGBT rights, environmental movement, and contemporary political conservatism. Same as: AFRICAAM 16N, CSRE 16N

**SOC 20N. What counts as "race," and why?. 3 Units.**

Preference to freshmen. Seminar discussion of how race is conceptualized and how categorizations are determined across a range of disciplines and institutions in U.S. society. Course materials survey approaches from history, demography, law, sociology, psychology, genetics, and medicine. Students will read original social science research, learn to conduct and analyze in-depth interviews, and use library resources to support legal/archival case studies.

**SOC 22N. The Roots of Social Protest. 3 Units.**

Preference to freshmen. The conditions under which social protest occurs and the emergence, success, and viability of contemporary social movements. Examples include women's civil rights, ecology, and antiwar and anti-globalization movements in the U.S. and elsewhere. Sociological theories to explain the timing, location, and causes of mobilization; how researchers evaluate these theories. Comparison of tactics, trajectories, and outcomes.

**SOC 24N. Themes in Political and Historical Sociology: The Political Party. 4 Units.**

This class focuses on the political party and on the different scholarly perspectives from which it has been studied. We will study these perspectives analytically to find the main elements that characterize them and historically to understand how the party has operated in different contexts and how scholarly interpretations have changed in time. The emphasis on the party requires a contextualization of two processes that have shaped the functioning of the institutions of the state in the last decades: one operating below the state and the other operating above. From below the state, the fragmentation of interests has been challenging the traditional identities that used to be embedded in the party. From above, international economic processes have been undermining the role of the state, and thus of the party, as the main vehicle for bringing grievances into the political arena. Thus, part of the agenda of the party is dominated by the activities of organized social movements that only partially follow traditional cleavages (class, status, race, ethnicity, urban/rural), while another part is dominated by multinational firms and banks that only partially represent national interests. Yet, to the extent that the institutions of the state remain relevant, the political party remains a powerful and significant actor of Modern democracies. The fundamental question of this class is to understand the way in which the party continues to shape the functioning of the state. We will approach this question analytically and historically. Analytically, we will read through various definitions of what a party is. The aim is not to arrive at a "correct" definition of the party (there is not such a thing!) but to sharpen the differences between the several approaches. Historically, we will study the party in action with the goal of understanding the perspective from which the party was portrayed. Together, in this double exercise you will learn the tools of the trade, so to speak, of political sociology.

**SOC 45Q. Understanding Race and Ethnicity in American Society. 4 Units.**

Preference to sophomores. Historical overview of race in America, race and violence, race and socioeconomic well-being, and the future of race relations in America. Enrollment limited to 16. Same as: CSRE 45Q

**SOC 46N. Race, Ethnic, and National Identities: Imagined Communities. 3 Units.**

Preference to freshmen. How new identities are created and legitimated. What does it mean to try on a different identity? National groups and ethnic groups are so large that one individual can know only an infinitesimal fraction of other group members. What explains the seeming coherence of groups? If identities are a product of the imagination, why are people willing to fight and die for them? Enrollment limited to 16.

**SOC 100ASB. Pre-field Course for Alternative Spring Break. 1 Unit.**

Limited to students participating in the Alternative Spring Break program. See <http://asb.stanford.edu> for more information.

**SOC 100D. Organizational Theory. 3 Units.**

Schools, prisons, hospitals, universities, restaurants, nations, sports teams - organizations are all around. They employ us, feed us, and provide us with sources of identity. This course is an introduction to the basic concepts and classic theories about organizations. What defines an organization? How should organizations structure themselves to accomplish their goals? When is it most desirable for an organization to merge with another? Lectures and readings will explore such questions, and contemporary examples in the media will bring them to life.

**SOC 100SI. Student Initiated Course. 1 Unit.**

**SOC 101D. Interpersonal Relations. 3 Units.**

This course examines what happens when people interact together and how that interaction affects the nature of their thoughts, relationships, and behaviors. We will take a look at research from sociology and psychology to explore a diverse set of issues including conformity, stereotypes, and cognitive biases. At times we will look at deeply individual topics like cognition and happiness and at other times we will look at more macro-level issues like how we are affected by our social networks. However, throughout the whole class we will be looking at the dynamic and complex relationship between the individual and the social world.

**SOC 102. Between Nation-Building and Liberalization: The Welfare State in Israel. 3 Units.**

According to one commentator, the political economy of Israel is characterized by embedded illiberalism. In the context of a national and territorial conflict, the Israeli state fostered comprehensive nation-building projects (such as immigration absorption), via employment and social protection schemes. This course surveys the distinctive development of the Israeli welfare state in comparative perspective, and analyzes its particular politics and outcomes in the form of inclusion but also exclusion of different populations from full citizenship. The course will follow a chronological path from the pre-state crystallization of national welfare institutions to the current neo-liberalization trend that seems to undermine collectivist projects and advance the re-commodification of citizenship. Throughout the course we will discuss issues such as: the role of labor and nationalism in the design of social policy, the production of national, ethnic and gender inequality, and the dynamics of change and continuity following heightened liberalization and internationalization since the 1980s. The course exposes students to key issues of the sociology of the welfare state with particular emphasis on the development and role of the state in a deeply conflicted society, using the Israeli experience. At the conclusion of the course students are expected to understand how welfare state institutions reflect but also reproduce societal schisms and conflicts, and be familiar with central aspects of Israeli politics past and present.

Same as: JEWISHST 132

**SOC 102D. Social Movements in the 21st Century: Innovations in Structures and Strategies. 4 Units.**

The study of social movements is well developed in sociology, but has largely focused on movements that occurred prior to widespread use of cell phones, the Internet and social media. These technologies have allowed not just new mobilization strategies, but also new tactics and organizational structures. Recognizing the power of new technologies to change the way we interact and organize is integral to understanding the future of social movements as well as more routine organizational structures and interpersonal interactions.

**SOC 103. Sociology of Citizenship. 3 Units.**

Not only a legal status, citizenship forms a major concern for political sociologists interested in questions of membership, exclusion, redistribution, and struggles over the boundaries of collective identity. Citizenship is in essence membership in a political community that entails rights and duties, and structures a tripartite relationship between the individual, community and state. The institutions of citizenship include formal and bureaucratic rules of eligibility  $\zeta$  but also informal institutions such as identity and belonging. Throughout the course, students are exposed to key issues of the sociology of citizenship such as the historically different paths of men, women, minority groups and immigrants into citizenship, the contested development of rights and duties, the regulation of population, as well as insurgency and collective attempts to rearticulate the terms of the  $\zeta$ contract $\zeta$  with the state. Israel, the USA, France and Germany are used as empirical illustrations. At the conclusion of the course students will know how to utilize the analytic framework of citizenship in order to analyze a wide range of political phenomena in contemporary societies.

Same as: JEWISHST 133

**SOC 103D. Can Women (and Men) Have it All? Gender and Work in the 21st Century. 3 Units.**

This course will cover the current understanding of gender inequality in modern workplaces; its sources, operationalizations, and consequences. Drawing from gender theories about topics like the motherhood penalty, unconscious bias in interactions, occupational segregation, work-life conflict, sexual harassment, and the backlash against women leaders, this course will explore the fundamental question: why do women continue to suffer in the workplace relative to men? The course will also examine the parallel question: what obstructs men from becoming more involved in the home? As families become less and less  $\zeta$ traditional,  $\zeta$  reflecting increasing diversity in.

**SOC 104D. U.S. Attitudes to Crime and Policing. 3 Units.**

This course examines how social groups, laws, and popular media impact Americans' attitudes towards criminal behaviors. It draws on sociological and psychological research, enabling students to appreciate but also critique academic research. Among the topics covered are social influence, laws, and media bias. Students will conduct a research project on a topic of their choosing and present their findings to the class at the end of the quarter.

**SOC 107. China After Mao. 5 Units.**

China's post-1976 recovery from the late Mao era; its reorientation toward an open market-oriented economy; the consequences of this new model and runaway economic growth for standards of living, social life, inequality, and local governance; the political conflicts that have accompanied these changes.

Same as: SOC 207

**SOC 108. Political & Historical Sociology. 5 Units.**

The differences between historical and sociological analysis of past events. The difference between constructing sociological explanations and describing past events. Topics include: the rise of Christianity, the mafia in a Sicilian village, the trade network of the East India Company.

Same as: SOC 208

**SOC 111. State and Society in Korea. 4 Units.**

20th-century Korea from a comparative historical perspective. Colonialism, nationalism, development, state-society relations, democratization, and globalization with reference to the Korean experience.

Same as: INTNLREL 143, SOC 211

**SOC 111D. Social-Psychology and Economics: The trouble with how economists think you think. 5 Units.**

This course will compare and contrast explanations for human behavior; specifically, those derived from economic theory with those from social-psychological research. Rationality, decision-making, happiness, motivation, the persistence of inequality, and evaluation of outputs will be examined. It will also investigate the shortcomings of estimating individual preferences without taking into account macro-level phenomenon, such as hierarchy and justice. For students who lack familiarity with economics, the course will also cover basic economic theory as necessary. The use of economic versus social-psychological theory in determining appropriate public policy will also be explored.

**SOC 112. Comparative Democratic Development. 5 Units.**

Social, cultural, political, economic, and international factors affecting the development and consolidation of democracy in historical and comparative perspective. Individual country experiences with democracy, democratization, and regime performance. Emphasis is on the third wave of democratization over the past three decades and contemporary possibilities for democratic change. (Diamond).

Same as: POLISCI 147

**SOC 113. Comparative Corruption. 4-5 Units.**

Causes, effects, and solutions to various forms of corruption in business and politics in both developing regions (e.g. Asia, E. Europe) and developed ones (the US and the EU).

Same as: POLISCI 143S

**SOC 113D. Sociology of Sport. 5 Units.**

This course is designed to examine sports from a sociological perspective and to develop a greater understanding of the impact of sports on societies and individuals. We will analyze sports and sporting cultures using several theoretical frameworks such as functionalism, conflict theory, critical theory, feminist theory, and an internationalist perspective. This course will address questions such as: What role do sports have in society? How can we understand the importance societies place on sports? How are social inequalities replicated or challenged through sports? How do sports influence individuals and the construction of a social reality?.

**SOC 114. Economic Sociology. 4 Units.**

(Graduate students register for 214.) The sociological approach to production, distribution, consumption, and markets, emphasizing the impact of norms, power, social structure, and institutions on the economy. Comparison of classic and contemporary approaches to the economy among the social science disciplines. Topics: consumption, labor markets, organization of professions such as law and medicine, the economic role of informal networks, industrial organization, including the structure and history of the computer and popular music industries, business alliances, capitalism in non-Western societies, and the transition from state socialism in E. Europe and China.

Same as: SOC 214

**SOC 114D. Sociology of the Great Recession. 5 Units.**

The Great Recession (2007-2009), one of the most socially significant events of our time. This course will cover the economic, social, cultural, and political consequences of the recession. We will address its impact on: inequality; job prospects for college graduates; trust in the government; the 2012 presidential election; marriage; child birth; and immigration. We examine the rise of protest movements during the recession period, such as Occupy Wall Street and the Tea Party, and explore the idea of "class warfare". Class will feature several guest speakers and will focus on developing a general understanding of trends emerging in these events.

**SOC 115. Topics in Economic Sociology. 5 Units.**

How does a corporation's practice of religion affect your employment? How do your personal data become a corporation's private property? How does corporate behavior reinforce the marginalization of certain populations? The answers to these questions have varied as society's conceptualization of corporations evolved from simple, legal fiction to rights and responsibilities similar to those of humans. In this seminar, we critically examine relationships between corporations and citizens, and analyze the idea of corporation as citizen. Through careful reading, discussion, reflection, and writing, you will understand how corporations are socially constructed and in turn regulate social behavior. We will empower each other to thoughtfully question and possibly change our relationships with these major actors in economic sociology.

**SOC 115D. Can Law Fix Race? Race, Law, and Contemporary American Society. 5 Units.**

In this Age of Obama, why are we still talking about legal remedies to racial inequality? This course will explore this question from an interdisciplinary perspective, focusing on perspectives from law and social science. Students will read both actual Supreme Court opinions as well as foundational works in the sociology of race and law. Through readings and discussion, students will leave this course with 1) a background in the historical role of the law in relation to race; 2) an understanding in how law's role in the maintenance of racial inequality has evolved; and 3) an ability to articulate their own views on why we are and whether we should be still talking about race, using both theory and empirical evidence to support their views. Specifically, students will be able to answer this question: Is it appropriate for law to attempt to remedy racial inequality?.

**SOC 116. Chinese Organizations and Management. 5 Units.**

Seminar for advanced undergraduates and all graduate students.

Same as: SOC 216

**SOC 116D. The Sociological Complexities of Human Trafficking. 5 Units.**

Human trafficking is more than a crime and a human rights violation; it reveals the complex interactions of social norms, policies, and actions. In this course, we will consider norms of sexuality and morality in relation to sex trafficking and consenting sex workers, politics and labor policy in relation to labor trafficking and day workers, and political consumerism as a form of collective action in relation to fair trade. Specific topics include the impact of legalized prostitution on human trafficking, the effects of the annual US-released Trafficking In Persons report on international migrant labor laws, and the question of whether or not fair trade is fair. This seminar will provide students opportunities to think critically about society and to collaborate as researchers and activists on the issue of human trafficking.

**SOC 117A. China Under Mao. 5 Units.**

(Graduate students register for 217A.) The transformation of Chinese society from the 1949 revolution to the eve of China's reforms in 1978: creation of a socialist economy, reorganization of rural society and urban workplaces, emergence of new inequalities of power and opportunity, and new forms of social conflict during Mao's Cultural Revolution of 1966-69 and its aftermath.

Same as: SOC 217A

**SOC 117D. Recognizing Inequality. 3 Units.**

Over the last few years social and economic inequality has become a major topic in the media and public policy. Gaps and inequalities between groups exist across a range of arenas including education, wages and promotions, housing and cultural consumption. In this course we'll bring these big ideas down to the individual level—investigating and analyzing manifestations of inequality in our everyday lives, considering why these inequalities exist and developing strategies to alleviate them. This seminar will call upon students' imagination and analytical savvy to tackle pressing societal problems by considering the dynamics of their own lives. In the process, students will develop skills that can be applied in fields as diverse as public policy, health care, non-profit work and entrepreneurship.

**SOC 118. Social Movements and Collective Action. 4 Units.**

Why social movements arise, who participates in them, the obstacles they face, the tactics they choose, and how to gauge movement success or failure. Theory and empirical research. Application of concepts and methods to social movements such as civil rights, environmental justice, antiglobalization, and anti-war.

Same as: SOC 218

**SOC 119. Understanding Large-Scale Societal Change: The Case of the 1960s. 5 Units.**

The demographic, economic, political, and cultural roots of social change in the 60s; its legacy in the present U.S.

Same as: SOC 219

**SOC 120. Interpersonal Relations. 4 Units.**

(Graduate students register for 220.) Forming ties, developing norms, status, conformity, deviance, social exchange, power, and coalition formation; important traditions of research have developed from the basic theories of these processes. Emphasis is on understanding basic theories and drawing out their implications for change in a broad range of situations, families, work groups, and friendship groups.

Same as: SOC 220

**SOC 121. The Individual in Social Structure: Foundations in Sociological Social Psychology. 5 Units.**

Dynamics of the relationship between the individual and social structure, the relationship between the individual and immediate social context, and relationships between individuals. Focus is on the dominant theoretical perspectives in sociological social psychology: social structure and personality, structural social psychology, and symbolic interactionism.

**SOC 123. Sex and Love in Modern U.S. Society. 3 Units.**

Social influences on private intimate relations involving romantic love and sexuality. Topics include the sexual revolution, contraception, dating, hook-ups, cohabitation, sexual orientation, and changing cultural meanings of marriage, gender, and romantic love.

Same as: FEMGEN 123, SOC 223

**SOC 125. Sociology of Religion. 5 Units.**

The social patterns of religious belief and practice, and the classical and contemporary theoretical approaches to understanding these patterns.

Topics: churches, sects and cults, sources of religious pluralism, relationships between religion and aspects of social structures including the economy, class structure, ethnicity, social networks, and the state.

**SOC 125D. Sociology of Learning. 3 Units.**

Learn how to learn. We spend considerable time learning in school, yet we devote comparatively little time to investigating the learning process.

This course uses a variety of learning situations to interrogate how we learn, understand how our social environment shapes the process, and refine our own unique learning styles. We employ project-based, experiential methods to enhance the exploration of core sociological concepts that affect learning, such as status, authority, and norms.

Emphasis is placed on the social construction of specific contexts for learning such as school, work, and even the artist's studio. Students develop learning skills that are transferable to other classes and non-school contexts.

**SOC 126. Introduction to Social Networks. 5 Units.**

(Graduate students register for 226.) Theory, methods, and research.

Concepts such as density, homogeneity, and centrality; applications to substantive areas. The impact of social network structure on individuals and groups in areas such as communities, neighborhoods, families, work life, and innovations.

Same as: SOC 226

**SOC 127. Bargaining, Power, and Influence in Social Interaction. 5 Units.**

(Graduate students register for 227.) Research and theoretical work on bargaining, social influence, and issues of power and justice in social settings such as teams, work groups, and organizations. Theoretical approaches to the exercise of power and influence in social groups and related issues in social interaction such as the promotion of cooperation, effects of competition and conflict, negotiation, and intergroup relations. Enrollment limited to 40.

Same as: SOC 227

**SOC 128. Introduction to Social Network Analysis. 5 Units.**

(Graduate students register for SOC 228.) Theory and methods of network analysis in sociology (with an emphasis on social movements), anthropology, history, social psychology, economics, political science, and public health. Prerequisite: basic mathematics.

Same as: SOC 228

**SOC 129X. Urban Education. 3-4 Units.**

(Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

Same as: AFRICAAM 112, CSRE 112X, EDUC 112, EDUC 212, SOC 229X

**SOC 130. Education and Society. 4-5 Units.**

The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.

Same as: EDUC 120C, EDUC 220C, SOC 230

**SOC 132. Sociology of Education: The Social Organization of Schools. 4 Units.**

Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

Same as: EDUC 110, EDUC 310, SOC 332

**SOC 132J. Sociology of Jewishness. 3-5 Units.**

Examines the place of the Jewish people in society throughout various locales and historical periods to understand how interactions among Jews and with other groups have shaped Jewish identities. Topics include modernism, the Holocaust, Israel/nationhood, race/ethnicity, intermarriage, and assimilation. Uses theoretical, empirical, and historical material from multiple social scientific fields of study and explores the study of Judaism from several major sociological lenses.

Same as: CSRE 132J, JEWISHST 132D

**SOC 133. Law and Wikinomics: The Economic and Social Organization of the Legal Profession. 1-5 Unit.**

(Graduate and Law students enroll in 333.) Seminar. Emphasis is on the labor market for large-firm lawyers, including the market for entry-level lawyers, attorney retention and promotion practices, lateral hiring of partners, and increased use of forms of employment such as the non-equity form of partnership. Race and gender discrimination and occupational segregation; market-based pressure tactics for organizational reform. Students groups collect and analyze data about the profession and its markets. Multimedia tools for analysis and for producing workplace reforms. May be repeated for credit. Prerequisite: consent of instructor.

Same as: SOC 333

**SOC 134. Education, Gender, and Development. 4 Units.**

Theories and perspectives from the social sciences relevant to the role of education in changing, modifying, or reproducing structures of gender differentiation and hierarchy. Cross-national research on the status of girls and women and the role of development organizations and processes.

Same as: EDUC 197, FEMGEN 297

**SOC 135. Poverty, Inequality, and Social Policy in the United States. 3 Units.**

This course will investigate three main questions: What is poverty? What are its causes? and What do we do in the United States to alleviate it? We will examine these questions by learning about government and private nonprofit social policies. We will also explore arguments for and against those policies. Specifically, we will look at topics like hunger, housing costs, minimum wage, healthcare reform, education, welfare and other income supports. The class will be discussion based with the expectation that you come to class having completed the reading, with reflections and preliminary answers to guiding questions, your own questions in mind, and full participation in activities.

Same as: SOC 235

**SOC 136. Sociology of Law. 4 Units.**

(Graduate students register for 236) Major issues and debates. Topics include: historical perspectives on the origins of law; rationality and legal sanctions; normative decision making and morality; cognitive decision making; crime and deviance; the law in action versus the law on the books; organizational responses to law in the context of labor and employment; the roles of lawyers, judges, and juries; and law and social change emphasizing the American civil rights movement.

Same as: SOC 236

**SOC 136A. Law and Society. 5 Units.**

Law and social inequality. Major sociological perspectives on where the law comes from, what law and justice systems do, and how they work.

Same as: SOC 236A

**SOC 136B. Advanced Topics in Sociology of Law. 5 Units.**

(Same as LAW 538.) Historical perspectives on the origins of law, rationality and legal sanctions, law on the books versus the law in action, crime and deviance, school desegregation, privatization of prisons, American civil rights, file sharing, jury decision making, the role of lawyers and judges, and cynicism about the American legal system.  
Same as: SOC 236B

**SOC 137. Global Capitalism and Development. 4 Units.**

Global interactions are the norm in today's emerging markets. We explore how globalization affects capitalism in the developing world, including the process of market creation, responses to economic crisis, the actors and mechanisms behind policy diffusion, the effects of globalization on socio-economic development, and the prospects for change.

**SOC 138. American Indians in Comparative Historical Perspective. 4 Units.**

(Graduate students register for 238.) Demographic, political, and economic processes and events that shaped relations between Euro-Americans and American Indians, 1600-1890. How the intersection of these processes affected the outcome of conflicts between these two groups, and how this conflict was decisive in determining the social position of American Indians in the late 19th century and the evolution of the doctrine of tribal sovereignty.  
Same as: NATIVEAM 138, SOC 238

**SOC 139. American Indians in Contemporary Society. 4 Units.**

(Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history.  
Same as: NATIVEAM 139, SOC 239

**SOC 140. Introduction to Social Stratification. 3 Units.**

(Graduate students register for 240.) The main classical and modern explanations of the causes of social, economic, and political inequality. Issues include: power; processes that create and maintain inequality; the central axes of inequality in contemporary societies (race, ethnicity, class, and gender); the consequences of inequality for individuals and groups; and how social policy can mitigate and exacerbate inequality. Cases include technologically simple groups, the Indian caste system, and the modern U.S.  
Same as: SOC 240

**SOC 141. Controversies about Inequality. 5 Units.**

(Graduate students register for 241.) Debate format involving Stanford and guest faculty. Forms of inequality including racial, ethnic, and gender stratification; possible policy interventions. Topics such as welfare reform, immigration policy, affirmative action, discrimination in labor markets, sources of income inequality, the duty of rich nations to help poor nations, and causes of gender inequality.  
Same as: SOC 241

**SOC 142. Sociology of Gender. 5 Units.**

(Graduate students register for 242.) Gender inequality in contemporary American society and how it is maintained. The social and relative nature of knowledge and the problems this poses for understanding sex differences and gendered behavior in society. Analytical levels of explanation for gender inequalities: socialization, interaction processes, and socioeconomic processes; arguments and evidence for each approach. The social consequences of gender inequality such as the feminization of poverty, and problems of interpersonal relations.  
Same as: FEMGEN 142, FEMGEN 242, SOC 242

**SOC 143. Sociology of the Middle Class. 4 Units.**

This class focuses on understanding of how social research is conducted, and gaining the ability to evaluate the quality of empirical research. The course will focus on the process of designing a research project, including: formulating research questions, developing hypotheses, developing valid and reliable measures, deciding on the types of data needed, making decisions on sampling, choosing research design and data collection methods, the challenges of making causal inferences, and criteria for evaluating the quality of social research.

**SOC 144. Inequality and the Workplace. 5 Units.**

How characteristics of workplaces, such as hiring practices, workforce diversity, organizational policies and legal mandates, produce variation in inequality. Examines the sources, extent, and consequences of workplace inequality across gender, racial and ethnic lines. Topics include earnings, social status, geographical location, and opportunities for people in the workforce.  
Same as: SOC 244

**SOC 145. Race and Ethnic Relations in the USA. 4 Units.**

(Graduate students register for 245.) Race and ethnic relations in the U.S. and elsewhere. The processes that render ethnic and racial boundary markers, such as skin color, language, and culture, salient in interaction situations. Why only some groups become targets of ethnic attacks. The social dynamics of ethnic hostility and ethnic/racial protest movements.  
Same as: CSRE 145, SOC 245

**SOC 146. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.**

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section.  
Same as: COMPLIT 195, CSRE 196C, ENGLISH 172D, PSYCH 155, TAPS 165

**SOC 148. Comparative Ethnic Conflict. 4 Units.**

Causes and consequences of racial and ethnic conflict, including nationalist movements, ethnic genocide, civil war, ethnic separatism, politics, indigenous peoples' movements, and minority rights movements around the world.  
Same as: CSRE 148, SOC 248

**SOC 149. The Urban Underclass. 4 Units.**

(Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor.  
Same as: SOC 249, URBANST 112

**SOC 150. Race and Political Sociology. 3 Units.**

How race informs the theories and research within political sociology. The state's role in creation and maintenance of racial categories, the ways in which racial identity motivates political actors, how race is used to legitimate policy decisions, comparisons across racial groups. Emphasis on understanding the ways race operates in the political arena.  
Same as: CSRE 150, SOC 250

**SOC 151. From the Cradle to the Grave: How Demographic Processes Shape the Social World. 5 Units.**

(Graduate students register for 251.) Comparative analysis of historical, contemporary, and anticipated demographic change. Draws on case studies from around the world to explore the relationship between social structure and population dynamics. Introduces demographic measures, concepts and theory. Course combines lecture and seminar-style discussion.  
Same as: SOC 251

**SOC 152. The Social Determinants of Health. 4 Units.**

How social differences, such as where we live, whether and how we work, or how much money we make, and our gender, race or ethnicity, also play a role in who gets sick and who does not.

Same as: SOC 252

**SOC 155. The Changing American Family. 4 Units.**

Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change.

Same as: FEMGEN 155, FEMGEN 255, SOC 255

**SOC 156. Ritual, Politics, Power. 5 Units.**

Our everyday lives are made up of multiple routines, some consciously staged and imagined and others unconscious and insidious. Anthropologists call these rituals. Rituals shape every aspect of our lives, creating our symbolic universes and governing the most minute of our practices. For early anthropologists and for those interested in religious and symbolic life, rituals and rites were seen as both one of the most universal features of human existence, and, as that which enables us to reflect upon our human existence. A prominent example are that of the *rites de passage* found in every culture, from puberty initiation rites, weddings or funerals, which socially signal the change from one status to another. While initially for anthropologists, rituals marked the difference between the sacred and the profane, soon scholars began to see the ubiquity of ritual and the symbolic in shaping even the most mundane activity such as the structure of a meal and why one is not meant to eat dessert before the main course. The first half of the class examines these different debates surrounding the meaning and effects of rituals and rites. The second half of the class takes these debates to think about the question of power and politics. We return to the question of how our symbolic universes are staged and imagined by us through ritual forms such as the annual Presidential *pardoning the turkey* at Thanksgiving. The question of power however pushes us even further to ask why it is that we obey particular kinds of authority, consent to particular actions, and find ourselves doing things we haven't consciously decided to do. Many have argued that these kinds of political questions about how we respond and are shaped by power have something to do with our symbolic worlds and ritual, from the most obvious (the monarchy) to the most subtle (listening in a classroom). Throughout the course, these abstract questions will be grounded in cross-cultural examples and analysis.

Same as: ANTHRO 152

**SOC 159. Social and Cultural Dimensions of Global Indigeneity. 4 Units.**

This course will expose students to the rise of a world-wide indigenous identity, common themes embraced by indigenous people, and common challenges these groups confront when dealing with the larger social environment that surrounds them. Topics to be covered include tribal sovereignty, rights, and recognition; language preservation; the maintenance of cultural integrity and ethnic authenticity; cultural production and the commodification of indigenous culture; literary traditions; indigenous social movements; natural resources and land disputes; and the disadvantaged social position that these groups typically occupy.

Same as: SOC 259

**SOC 160. Formal Organizations. 4 Units.**

(Graduate students register for 260.) The roles of formal organizations in production processes, market transactions, and social movements; and as sources of income and ladders of mobility. Relationships of modern organizations to environments and internal structures and processes. Concepts, models, and tools for analyzing organizational phenomena in contemporary societies. Sources include the literature and case studies.

Same as: SOC 260

**SOC 161. The Social Science of Entrepreneurship. 4 Units.**

(Graduate students register for 261.) Who is likely to become an entrepreneur and where is entrepreneurship likely to occur? Classic and contemporary theory and research. Interaction with expert practitioners in creating entrepreneurial opportunities including venture and corporate capitalists. The role of culture, markets, hierarchies, and networks. Market creation and change, and factors that affect success of new organizations. Field projects on entrepreneurial environments such as technology licensing offices, entrepreneurial development organizations, venture capital firms, and corporate venturing groups.

Same as: SOC 261

**SOC 162. Markets and Governance. 4 Units.**

Social and political forces that shape market outcomes. The emergence and creation of markets, how markets go wrong, and the roles of government and society in structuring market exchange. Applied topics include development, inequality, globalization, and economic meltdown. Preference to Sociology majors and Sociology coterm students.

Same as: SOC 262

**SOC 163. Foundations of Organizational Theory. 5 Units.**

Foundational material in organizational theory literature.

Same as: SOC 263

**SOC 164. Immigration and the Changing United States. 4 Units.**

The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration.

Same as: CHILATST 164, CSRE 164, SOC 264

**SOC 165. Seminar on the Everyday Lives of Immigrants. 5 Units.**

Everyday experience of immigrants and the immigrant second generation through the ethnographic lens. Ethnographies that focus on the immigrant experience. Limited enrollment.

Same as: SOC 265

**SOC 166. Mexicans, Mexican Americans, and Chicanos in American Society. 5 Units.**

Contemporary sociological issues affecting Mexican-origin people in the U.S. Topics include: the immigrant experience, immigration policy, identity, socioeconomic integration, internal diversity, and theories of incorporation.

Same as: SOC 266

**SOC 167A. Asia-Pacific Transformation. 4 Units.**

Post-WW II transformation in the Asia-Pacific region, with focus on the ascent of Japan, the development of newly industrialized capitalist countries (S. Korea and Taiwan), the emergence of socialist states (China and N. Korea), and the changing relationship between the U.S. and these countries.

Same as: SOC 267A

**SOC 168. Global Organizations: Managing Diversity. 4 Units.**

Analytical tools derived from the social sciences to analyze global organizations, strategies, and the tradeoffs between different designs of organizations. Focus is on tribal mentality and how to design effective organizations for policy implementation within and across institutional settings. Recommended: PUBLPOL 102, MS&E 180, SOC 160, ECON 149, or MGTECON 330.

Same as: PUBLPOL 168, PUBLPOL 268, SOC 268

**SOC 170. Classics of Modern Social Theory. 4 Units.**

(Graduate students register for 270). Preference to Sociology majors. Contributions of Marx, Weber, and Durkheim to contemporary sociology. Topics: the problem of social order and the nature of social conflict; capitalism and bureaucracy; the relationship between social structure and politics; the social sources of religion and political ideology; and the evolution of modern societies. Examples from contemporary research illustrate the impact of these traditions. Limited enrollment.

Same as: SOC 270

**SOC 173. Gender and Higher Education: National and International Perspectives. 4 Units.**

This course examines the ways in which higher education structures and policies affect females, males, and students in relation to each other and how changes in those structures and policies improve experiences for females and males similarly or differently. Students are expected to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and the development of feminist scholarship and pedagogy. Attention is paid to how these issues are experienced by women and men in the United States, including people of color, and by academics throughout the world, and how these have changed over time.

Same as: EDUC 173, EDUC 273, FEMST 173, SOC 273

**SOC 177D. Economic Elites in the 21st Century. 3-5 Units.**

Elites have gained disproportionately from the growth of the global economy over the past two decades, leading to serious concerns about inequality and to protests against the 1% in several countries. This course addresses the role of economic elites in the world economy and their relationship to global inequality. Topics include the evolution and consequences of global inequality, the composition of economic elites in various countries, and economic elites' impact on politics, education, culture, and the economy in the US and abroad. We also discuss potential solutions to global inequality.

Same as: SOC 277D

**SOC 180A. Foundations of Social Research. 4 Units.**

Formulating a research question, developing hypotheses, probability and non-probability sampling, developing valid and reliable measures, qualitative and quantitative data, choosing research design and data collection methods, challenges of making causal inference, and criteria for evaluating the quality of social research. Emphasis is on how social research is done, rather than application of different methods. Limited enrollment; preference to Sociology and Urban Studies majors, and Sociology coterms.

Same as: SOC 280A

**SOC 180B. Introduction to Data Analysis. 4 Units.**

Methods for analyzing and evaluating quantitative data in sociological research. Students will be taught how to run and interpret multivariate regressions, how to test hypotheses, and how to read and critique published data analyses. Limited enrollment; preference to Sociology majors.

Same as: SOC 280B

**SOC 181B. Sociological Methods: Statistics. 5 Units.**

(Graduate students register for 281B.) Statistical methods of relevance to sociology: contingency tables, correlation, and regression.

Same as: SOC 281B

**SOC 190. Undergraduate Individual Study. 1-5 Unit.**

Prior arrangement required.

**SOC 191. Undergraduate Directed Research. 1-5 Unit.**

Work on a project of student's choice under supervision of a faculty member. Prior arrangement required.

**SOC 192. Undergraduate Research Apprenticeship. 1-5 Unit.**

Work in an apprentice-like relationship with faculty on an on-going research project. Prior arrangement required.

**SOC 193. Undergraduate Teaching Apprenticeship. 1-5 Unit.**

Prior arrangement required.

**SOC 194. Computational Undergraduate Research Assistantship. 1-5 Unit.**

Computational sociology research assistant working with faculty on an on-going technical research project. Applications for position reviewed on a rolling basis.

**SOC 196. Senior Thesis. 1-15 Unit.**

Work on an honors thesis project under faculty supervision (see description of honors program). Must be arranged early in the year of graduation or before.

**SOC 200. Junior/Senior Seminar for Majors. 4 Units.**

For Sociology majors. Capstone course in which sociological problems are framed, linked to theories, and answers pursued through research designs. Independent research. How to formulate a research question; how to integrate theory and methods. Prerequisites: SOC 170, 180B.

**SOC 201. Preparation for Senior Project. 5 Units.**

First part of capstone experience for Urban Studies majors pursuing an internship-based research project or honors thesis. Assignments culminate in a research proposal, which may be submitted for funding. Students also identify and prepare for a related internship, normally to begin in Spring Quarter in URBANST 201B or in Summer. Research proposed in the final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research. Service Learning Course (certified by Haas Center).

Same as: URBANST 201

**SOC 202. Preparation for Senior Research. 5 Units.**

Required of all juniors in Urban Studies and those juniors in Sociology planning on writing an honors thesis. Students write a research prospectus and grant proposal, which may be submitted for funding. Research proposal in final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research.

Same as: URBANST 202

**SOC 207. China After Mao. 5 Units.**

China's post-1976 recovery from the late Mao era; its reorientation toward an open market-oriented economy; the consequences of this new model and runaway economic growth for standards of living, social life, inequality, and local governance; the political conflicts that have accompanied these changes.

Same as: SOC 107

**SOC 208. Political & Historical Sociology. 5 Units.**

The differences between historical and sociological analysis of past events. The difference between constructing sociological explanations and describing past events. Topics include: the rise of Christianity, the mafia in a Sicilian village, the trade network of the East India Company.

Same as: SOC 108

**SOC 211. State and Society in Korea. 4 Units.**

20th-century Korea from a comparative historical perspective. Colonialism, nationalism, development, state-society relations, democratization, and globalization with reference to the Korean experience.

Same as: INTNLREL 143, SOC 111

**SOC 214. Economic Sociology. 4 Units.**

(Graduate students register for 214.) The sociological approach to production, distribution, consumption, and markets, emphasizing the impact of norms, power, social structure, and institutions on the economy. Comparison of classic and contemporary approaches to the economy among the social science disciplines. Topics: consumption, labor markets, organization of professions such as law and medicine, the economic role of informal networks, industrial organization, including the structure and history of the computer and popular music industries, business alliances, capitalism in non-Western societies, and the transition from state socialism in E. Europe and China.

Same as: SOC 114

**SOC 216. Chinese Organizations and Management. 5 Units.**

Seminar for advanced undergraduates and all graduate students.

Same as: SOC 116

**SOC 217A. China Under Mao. 5 Units.**

(Graduate students register for 217A.) The transformation of Chinese society from the 1949 revolution to the eve of China's reforms in 1978: creation of a socialist economy, reorganization of rural society and urban workplaces, emergence of new inequalities of power and opportunity, and new forms of social conflict during Mao's Cultural Revolution of 1966-69 and its aftermath.

Same as: SOC 117A

**SOC 218. Social Movements and Collective Action. 4 Units.**

Why social movements arise, who participates in them, the obstacles they face, the tactics they choose, and how to gauge movement success or failure. Theory and empirical research. Application of concepts and methods to social movements such as civil rights, environmental justice, antiglobalization, and anti-war.

Same as: SOC 118

**SOC 219. Understanding Large-Scale Societal Change: The Case of the 1960s. 5 Units.**

The demographic, economic, political, and cultural roots of social change in the 60s; its legacy in the present U.S.

Same as: SOC 119

**SOC 220. Interpersonal Relations. 4 Units.**

(Graduate students register for 220.) Forming ties, developing norms, status, conformity, deviance, social exchange, power, and coalition formation; important traditions of research have developed from the basic theories of these processes. Emphasis is on understanding basic theories and drawing out their implications for change in a broad range of situations, families, work groups, and friendship groups.

Same as: SOC 120

**SOC 223. Sex and Love in Modern U.S. Society. 3 Units.**

Social influences on private intimate relations involving romantic love and sexuality. Topics include the sexual revolution, contraception, dating, hook-ups, cohabitation, sexual orientation, and changing cultural meanings of marriage, gender, and romantic love.

Same as: FEMGEN 123, SOC 123

**SOC 224B. Relational Sociology. 4 Units.**

Conversations, social relationships and social networks are the core features of social life. In this course we explore how conversations, relationships, and social networks not only have their own unique and independent characteristics, but how they shape one another and come to characterize many of the settings we enter and live in. As such, students will be introduced to theories and research methodologies concerning social interaction, social relationships, and social networks, as well as descriptions of how these research strands interrelate to form a larger relational sociology that can be employed to characterize a variety of social phenomenon. This course is suitable to advanced undergraduates and doctoral students.

Same as: EDUC 312

**SOC 226. Introduction to Social Networks. 5 Units.**

(Graduate students register for 226.) Theory, methods, and research. Concepts such as density, homogeneity, and centrality; applications to substantive areas. The impact of social network structure on individuals and groups in areas such as communities, neighborhoods, families, work life, and innovations.

Same as: SOC 126

**SOC 227. Bargaining, Power, and Influence in Social Interaction. 5 Units.**

(Graduate students register for 227.) Research and theoretical work on bargaining, social influence, and issues of power and justice in social settings such as teams, work groups, and organizations. Theoretical approaches to the exercise of power and influence in social groups and related issues in social interaction such as the promotion of cooperation, effects of competition and conflict, negotiation, and intergroup relations. Enrollment limited to 40.

Same as: SOC 127

**SOC 228. Introduction to Social Network Analysis. 5 Units.**

(Graduate students register for SOC 228.) Theory and methods of network analysis in sociology (with an emphasis on social movements), anthropology, history, social psychology, economics, political science, and public health. Prerequisite: basic mathematics.

Same as: SOC 128

**SOC 229X. Urban Education. 3-4 Units.**

(Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

Same as: AFRICAAM 112, CSRE 112X, EDUC 112, EDUC 212, SOC 129X

**SOC 230. Education and Society. 4-5 Units.**

The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.

Same as: EDUC 120C, EDUC 220C, SOC 130

**SOC 231. World, Societal, and Educational Change: Comparative Perspectives. 4-5 Units.**

Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.

Same as: EDUC 136, EDUC 306D

**SOC 234. Research Seminar on Access to Justice. 1-5 Unit.**

The functions and dysfunctions of modern legal systems. Topics include: official statements of the U.S. and the EU about the rights of parties to civil disputes; the roles of lawyers as gatekeepers and facilitators; the filtering process by which injuries and experiences become the basis for legal claims; access to and use of courts; the balance of power and advantage between individual persons and organizations in disputes. Prerequisite: advanced undergraduate or graduate standing, or consent of instructor.

Same as: SOC 334

**SOC 235. Poverty, Inequality, and Social Policy in the United States. 3 Units.**

This course will investigate three main questions: What is poverty? What are its causes? and What do we do in the United States to alleviate it? We will examine these questions by learning about government and private nonprofit social policies. We will also explore arguments for and against those policies. Specifically, we will look at topics like hunger, housing costs, minimum wage, healthcare reform, education, welfare and other income supports. The class will be discussion based with the expectation that you come to class having completed the reading, with reflections and preliminary answers to guiding questions, your own questions in mind, and full participation in activities.

Same as: SOC 135

**SOC 236. Sociology of Law. 4 Units.**

(Graduate students register for 236) Major issues and debates. Topics include: historical perspectives on the origins of law; rationality and legal sanctions; normative decision making and morality; cognitive decision making; crime and deviance; the law in action versus the law on the books; organizational responses to law in the context of labor and employment; the roles of lawyers, judges, and juries; and law and social change emphasizing the American civil rights movement.

Same as: SOC 136

**SOC 236A. Law and Society. 5 Units.**

Law and social inequality. Major sociological perspectives on where the law comes from, what law and justice systems do, and how they work.

Same as: SOC 136A

**SOC 236B. Advanced Topics in Sociology of Law. 5 Units.**

(Same as LAW 538.) Historical perspectives on the origins of law, rationality and legal sanctions, law on the books versus the law in action, crime and deviance, school desegregation, privatization of prisons, American civil rights, file sharing, jury decision making, the role of lawyers and judges, and cynicism about the American legal system.  
Same as: SOC 136B

**SOC 238. American Indians in Comparative Historical Perspective. 4 Units.**

(Graduate students register for 238.) Demographic, political, and economic processes and events that shaped relations between Euro-Americans and American Indians, 1600-1890. How the intersection of these processes affected the outcome of conflicts between these two groups, and how this conflict was decisive in determining the social position of American Indians in the late 19th century and the evolution of the doctrine of tribal sovereignty.  
Same as: NATIVEAM 138, SOC 138

**SOC 239. American Indians in Contemporary Society. 4 Units.**

(Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history.  
Same as: NATIVEAM 139, SOC 139

**SOC 240. Introduction to Social Stratification. 3 Units.**

(Graduate students register for 240.) The main classical and modern explanations of the causes of social, economic, and political inequality. Issues include: power; processes that create and maintain inequality; the central axes of inequality in contemporary societies (race, ethnicity, class, and gender); the consequences of inequality for individuals and groups; and how social policy can mitigate and exacerbate inequality. Cases include technologically simple groups, the Indian caste system, and the modern U.S.  
Same as: SOC 140

**SOC 240W. CPI Seminar. 1-2 Unit.**

A workshop devoted to presenting ongoing research on poverty and inequality in the United States. Open to all students interested in (a) building a better infrastructure for monitoring poverty and inequality, (b) building cutting-edge models of the causes and consequences of poverty and inequality, and (b) building better policy to reduce poverty and inequality. Required for all National Poverty Fellows funded by the Stanford Center on Poverty and Inequality.  
Same as: SOC 340W

**SOC 241. Controversies about Inequality. 5 Units.**

(Graduate students register for 241.) Debate format involving Stanford and guest faculty. Forms of inequality including racial, ethnic, and gender stratification; possible policy interventions. Topics such as welfare reform, immigration policy, affirmative action, discrimination in labor markets, sources of income inequality, the duty of rich nations to help poor nations, and causes of gender inequality.  
Same as: SOC 141

**SOC 242. Sociology of Gender. 5 Units.**

(Graduate students register for 242.) Gender inequality in contemporary American society and how it is maintained. The social and relative nature of knowledge and the problems this poses for understanding sex differences and gendered behavior in society. Analytical levels of explanation for gender inequalities: socialization, interaction processes, and socioeconomic processes; arguments and evidence for each approach. The social consequences of gender inequality such as the feminization of poverty, and problems of interpersonal relations.  
Same as: FEMGEN 142, FEMGEN 242, SOC 142

**SOC 244. Inequality and the Workplace. 5 Units.**

How characteristics of workplaces, such as hiring practices, workforce diversity, organizational policies and legal mandates, produce variation in inequality. Examines the sources, extent, and consequences of workplace inequality across gender, racial and ethnic lines. Topics include earnings, social status, geographical location, and opportunities for people in the workforce.  
Same as: SOC 144

**SOC 245. Race and Ethnic Relations in the USA. 4 Units.**

(Graduate students register for 245.) Race and ethnic relations in the U.S. and elsewhere. The processes that render ethnic and racial boundary markers, such as skin color, language, and culture, salient in interaction situations. Why only some groups become targets of ethnic attacks. The social dynamics of ethnic hostility and ethnic/racial protest movements.  
Same as: CSRE 145, SOC 145

**SOC 248. Comparative Ethnic Conflict. 4 Units.**

Causes and consequences of racial and ethnic conflict, including nationalist movements, ethnic genocide, civil war, ethnic separatism, politics, indigenous peoples' movements, and minority rights movements around the world.  
Same as: CSRE 148, SOC 148

**SOC 249. The Urban Underclass. 4 Units.**

(Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor.  
Same as: SOC 149, URBANST 112

**SOC 250. Race and Political Sociology. 3 Units.**

How race informs the theories and research within political sociology. The state's role in creation and maintenance of racial categories, the ways in which racial identity motivates political actors, how race is used to legitimate policy decisions, comparisons across racial groups. Emphasis on understanding the ways race operates in the political arena.  
Same as: CSRE 150, SOC 150

**SOC 251. From the Cradle to the Grave: How Demographic Processes Shape the Social World. 5 Units.**

(Graduate students register for 251.) Comparative analysis of historical, contemporary, and anticipated demographic change. Draws on case studies from around the world to explore the relationship between social structure and population dynamics. Introduces demographic measures, concepts and theory. Course combines lecture and seminar-style discussion.  
Same as: SOC 151

**SOC 252. The Social Determinants of Health. 4 Units.**

How social differences, such as where we live, whether and how we work, or how much money we make, and our gender, race or ethnicity, also play a role in who gets sick and who does not.  
Same as: SOC 152

**SOC 254. Welfare State. 4-5 Units.**

This seminar introduces students to the key literature, questions, and debates about the modern welfare state. Emergence, growth, and purported demise of the welfare state. American welfare state in comparative perspective. Social and political factors affecting state development including political parties, labor markets, gender, demographic change, and immigration.  
Same as: SOC 354

**SOC 255. The Changing American Family. 4 Units.**

Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change.

Same as: FEMGEN 155, FEMGEN 255, SOC 155

**SOC 257. Causal Inference in Quantitative Educational and Social Science Research. 3-5 Units.**

Quantitative methods to make causal inferences in the absence of randomized experiment including the use of natural and quasi-experiments, instrumental variables, regression discontinuity, matching estimators, longitudinal methods, fixed effects estimators, and selection modeling. Assumptions implicit in these approaches, and appropriateness in research situations. Students develop research proposals relying on these methods. Prerequisites: exposure to quantitative research methods; multivariate regression.

Same as: EDUC 255B

**SOC 258. Applied Quasi-Experimental Research in Education. 3-5 Units.**

Course will provide hands-on practice in analysis of data from experimental and quasi-experimental research designs, including a) instrumental variables estimators; b) regression discontinuity estimators; c) difference-in-difference estimators; d) matching estimators; e) fixed effects estimators; and f) panel data methods (including individual fixed effects models, lagged covariate adjustment models, growth models, etc.). Prerequisites: satisfactory completion of EDUC 255B, EDUC 257C or SOC 257.

Same as: EDUC 255C

**SOC 259. Social and Cultural Dimensions of GlobalIndigeneity. 4 Units.**

This course will expose students to the rise of a world-wide indigenous identity, common themes embraced by indigenous people, and common challenges these groups confront when dealing with the larger social environment that surrounds them. Topics to be covered include tribal sovereignty, rights, and recognition; language preservation; the maintenance of cultural integrity and ethnic authenticity; cultural production and the commodification of indigenous culture; literary traditions; indigenous social movements; natural resources and land disputes; and the disadvantaged social position that these groups typically occupy.

Same as: SOC 159

**SOC 260. Formal Organizations. 4 Units.**

(Graduate students register for 260.) The roles of formal organizations in production processes, market transactions, and social movements; and as sources of income and ladders of mobility. Relationships of modern organizations to environments and internal structures and processes. Concepts, models, and tools for analyzing organizational phenomena in contemporary societies. Sources include the literature and case studies.

Same as: SOC 160

**SOC 261. The Social Science of Entrepreneurship. 4 Units.**

(Graduate students register for 261.) Who is likely to become an entrepreneur and where is entrepreneurship likely to occur? Classic and contemporary theory and research. Interaction with expert practitioners in creating entrepreneurial opportunities including venture and corporate capitalists. The role of culture, markets, hierarchies, and networks. Market creation and change, and factors that affect success of new organizations. Field projects on entrepreneurial environments such as technology licensing offices, entrepreneurial development organizations, venture capital firms, and corporate venturing groups.

Same as: SOC 161

**SOC 262. Markets and Governance. 4 Units.**

Social and political forces that shape market outcomes. The emergence and creation of markets, how markets go wrong, and the roles of government and society in structuring market exchange. Applied topics include development, inequality, globalization, and economic meltdown. Preference to Sociology majors and Sociology coterm students.

Same as: SOC 162

**SOC 263. Foundations of Organizational Theory. 5 Units.**

Foundational material in organizational theory literature.

Same as: SOC 163

**SOC 264. Immigration and the Changing United States. 4 Units.**

The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration.

Same as: CHILATST 164, CSRE 164, SOC 164

**SOC 265. Seminar on the Everyday Lives of Immigrants. 5 Units.**

Everyday experience of immigrants and the immigrant second generation through the ethnographic lens. Ethnographies that focus on the immigrant experience. Limited enrollment.

Same as: SOC 165

**SOC 266. Mexicans, Mexican Americans, and Chicanos in American Society. 5 Units.**

Contemporary sociological issues affecting Mexican-origin people in the U.S. Topics include: the immigrant experience, immigration policy, identity, socioeconomic integration, internal diversity, and theories of incorporation.

Same as: SOC 166

**SOC 267A. Asia-Pacific Transformation. 4 Units.**

Post-WW II transformation in the Asia-Pacific region, with focus on the ascent of Japan, the development of newly industrialized capitalist countries (S. Korea and Taiwan), the emergence of socialist states (China and N. Korea), and the changing relationship between the U.S. and these countries.

Same as: SOC 167A

**SOC 268. Global Organizations: Managing Diversity. 4 Units.**

Analytical tools derived from the social sciences to analyze global organizations, strategies, and the tradeoffs between different designs of organizations. Focus is on tribal mentality and how to design effective organizations for policy implementation within and across institutional settings. Recommended: PUBLPOL 102, MS&E 180, SOC 160, ECON 149, or MGTECON 330.

Same as: PUBLPOL 168, PUBLPOL 268, SOC 168

**SOC 270. Classics of Modern Social Theory. 4 Units.**

(Graduate students register for 270). Preference to Sociology majors. Contributions of Marx, Weber, and Durkheim to contemporary sociology. Topics: the problem of social order and the nature of social conflict; capitalism and bureaucracy; the relationship between social structure and politics; the social sources of religion and political ideology; and the evolution of modern societies. Examples from contemporary research illustrate the impact of these traditions. Limited enrollment.

Same as: SOC 170

**SOC 271. Organizational Analysis. 4 Units.**

Principles of organizational behavior and analysis; theories of group and individual behavior; organizational culture; and applications to school organization and design. Case studies.

Same as: EDUC 288

**SOC 273. Gender and Higher Education: National and International Perspectives. 4 Units.**

This course examines the ways in which higher education structures and policies affect females, males, and students in relation to each other and how changes in those structures and policies improve experiences for females and males similarly or differently. Students are expected to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and the development of feminist scholarship and pedagogy. Attention is paid to how these issues are experienced by women and men in the United States, including people of color, and by academics throughout the world, and how these have changed over time.

Same as: EDUC 173, EDUC 273, FEMST 173, SOC 173

**SOC 277D. Economic Elites in the 21st Century. 3-5 Units.**

Elites have gained disproportionately from the growth of the global economy over the past two decades, leading to serious concerns about inequality and to protests against the 1% in several countries. This course addresses the role of economic elites in the world economy and their relationship to global inequality. Topics include the evolution and consequences of global inequality, the composition of economic elites in various countries, and economic elites' impact on politics, education, culture, and the economy in the US and abroad. We also discuss potential solutions to global inequality.

Same as: SOC 177D

**SOC 278. Introduction to Computational Social Science. 3 Units.**

With a vast amount of data now collected on our online and offline actions – from what we buy, to where we travel, to who we interact with – we have an unprecedented opportunity to study complex social systems. This opportunity, however, comes with scientific, engineering, and ethical challenges. In this hands-on course, we develop ideas from computer science and statistics to address problems in sociology, economics, political science, and beyond. We cover techniques for collecting and parsing data, methods for large-scale machine learning, and principles for effectively communicating results. To see how these techniques are applied in practice, we discuss recent research findings in a variety of areas. Prerequisites: introductory course in applied statistics, and experience coding in R, Python, or another high-level language.

Same as: MS&E 231

**SOC 279. Law, Order & Algorithms. 3 Units.**

Data and algorithms are rapidly transforming law enforcement and criminal justice, including how police officers are deployed, how discrimination is detected, and how sentencing, probation, and parole terms are set. Modern computational and statistical methods offer the promise of greater efficiency, equity, and transparency, but their use also raises complex legal, social, and ethical questions. In this course, we analyze recent court decisions, discuss methods from machine learning and game theory, and examine the often subtle relationship between law, public policy and statistics. Students work in interdisciplinary teams to explore these issues in an empirical or investigative project of their choice. Prerequisite: An introductory course in applied statistics (e.g. MS&E 125). Recommended: experience programming in R or Python.

Same as: MS&E 330

**SOC 280A. Foundations of Social Research. 4 Units.**

Formulating a research question, developing hypotheses, probability and non-probability sampling, developing valid and reliable measures, qualitative and quantitative data, choosing research design and data collection methods, challenges of making causal inference, and criteria for evaluating the quality of social research. Emphasis is on how social research is done, rather than application of different methods. Limited enrollment; preference to Sociology and Urban Studies majors, and Sociology coterms.

Same as: SOC 180A

**SOC 280B. Introduction to Data Analysis. 4 Units.**

Methods for analyzing and evaluating quantitative data in sociological research. Students will be taught how to run and interpret multivariate regressions, how to test hypotheses, and how to read and critique published data analyses. Limited enrollment; preference to Sociology majors.

Same as: SOC 180B

**SOC 281B. Sociological Methods: Statistics. 5 Units.**

(Graduate students register for 281B.) Statistical methods of relevance to sociology: contingency tables, correlation, and regression.

Same as: SOC 181B

**SOC 300. Workshop: Teaching Development. 2 Units.**

For first-year Sociology doctoral students only. The principles for becoming an effective instructor, adviser, and mentor to undergraduates. Topics: ethics, course organization and syllabus development, test construction and grading, conflict resolution, common classroom problems, and University policies related to matters such as sexual harassment. Technologies and other topics related to making effective presentations, and campus resources to improve classroom performance. Roundtable discussions with faculty and advanced graduate students known for teaching excellence. Students may be asked to give a demonstration lecture.

**SOC 305. Graduate Proseminar. 1 Unit.**

For first-year Sociology doctoral students only. Introduction and orientation to the field of Sociology.

**SOC 308. Social Demography. 4-5 Units.**

For graduate students and advanced undergraduates. Topics: models of fertility behavior, migration models, stable population theory, life table analysis, data sources, and measurement problems. How population behavior affects social processes, and how social processes influence population dynamics. Recommended: sociological research methods; basic regression analysis and log linear models.

**SOC 309. Nations and Nationalism. 4-5 Units.**

The nation as a form of collective identity in the modern era. Major works in the study of nations and nationalism from comparative perspectives with focus on Europe and E. Asia.

**SOC 310. Political Sociology. 4-5 Units.**

Theory and research on the relationship between social structure and politics. Social foundations of political order, the generation and transformation of ideologies and political identities, social origins of revolutionary movements, and social consequences of political revolution. Prerequisite: doctoral student.

**SOC 311A. Workshop: Comparative Studies of Educational and Political Systems. 1-5 Unit.**

Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor.

Same as: EDUC 387

**SOC 312W. Workshop: Political Sociology, Social Movements, and Collective Action. 1-2 Unit.**

Faculty and student presentations of ongoing research on topics including: social movement and organizations, and the relationship between them; democracy movements; legislative and policy outcomes; and collective action tactics, strategies, and trajectories. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.

**SOC 313A. Transformation of Socialist Societies. 3-5 Units.**

A quarter-century from the fall of the Berlin Wall, we have gained broad perspective on the challenges of wholesale transformations away from socialism. This course explores the process and social consequences of opening the economies of Eastern Europe, Eurasia, and China to market forces. We will answer questions about how individuals and social systems respond to the particular challenges of rapid economic and political openings, including demographic challenges, corruption, nationalism, and growing inequality. We will compare the Eastern European and Post-Soviet experiences of these issues with the Chinese experience, and highlight the similarities and distinctions between transformations in these societies.

Same as: REES 313

**SOC 314. Economic Sociology. 4-5 Units.**

Classical and contemporary literature covering the sociological approach to markets and the economy, and comparing it to other disciplines. Topics: consumption, labor, professions, industrial organization, and the varieties of capitalism; historical and comparative perspectives on market and non-market provision of goods and services, and on transitions among economic systems. The relative impact of culture, institutions, norms, social networks, technology, and material conditions. Prerequisite: doctoral student status or consent of instructor.

**SOC 315W. Workshop: Economic Sociology and Organizations. 1-2 Unit.**

Theory, methods, and research in the sociology of the economy and of formal organizations, through presentations of ongoing work by students, faculty, and guest speakers, and discussion of recent literature and controversies. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.

**SOC 316. Historical and Comparative Sociology. 4-5 Units.**

Theory and research on macro-historical changes of sociological significance such as the rise of capitalism, the causes and consequences of revolutions, and the formation of the modern nation state and global world system. Methodological issues in historical and comparative sociology.

**SOC 317W. Workshop: Networks, Histories, and Theories of Action. 1-2 Unit.**

Yearlong workshop where doctoral students are encouraged to collaborate with peers and faculty who share an interest in researching the network dynamics, histories and theories of action that help explain particular social phenomena. Students present their own research and provide helpful feedback on others' work. Presentations may concern dissertation proposals, grants, article submissions, book proposals, datasets, methodologies and other texts. Repeatable for credit. Same as: EDUC 317

**SOC 318. Social Movements and Collective Action. 4-5 Units.**

Topics: causes, dynamics, and outcomes of social movements; organizational dimensions of collective action; and causes and consequences of individual activism.

**SOC 320. Foundations of Social Psychology. 4-5 Units.**

Major theoretical perspectives, and their assumptions and problems, in interpersonal processes and social psychology. Techniques of investigation and methodological issues. Perspectives: symbolic interaction, social structure and personality, and cognitive and group processes.

**SOC 321W. Workshop: Social Psychology and Social Structure. 1-2 Unit.**

Advanced graduate student workshop in social psychology. Current theories and research agendas, recent publications, and presentations of ongoing research by faculty and students. May be repeated for credit. Prerequisite: consent of instructor.

**SOC 323. Sociology of the Family. 4-5 Units.**

Sociological research on changing family forms. Topics include courtship, marriage, divorce, conflict, relationship skills and satisfaction, gender patterns, power relations within the family, and class and race differences in patterns. Enrollment limited to graduate students.

**SOC 324. Social Networks. 3-5 Units.**

How the study of social networks contributes to sociological research. Application of core concepts to patterns of relations among actors, including connectivity and clusters, duality of categories and networks, centrality and power, balance and transitivity, structural equivalence, and blockmodels. Friendship and kinship networks, diffusion of ideas and infectious diseases, brokerage in markets and organizations, and patronage and political influence in historical contexts.

**SOC 325W. Family Workshop: Sociology Phd students present and critique work on family and demography.. 1-2 Unit.**

Sociology PhD students will present their own work weekly, and read and critique the research-in-progress of their peers on issues of family, household structure, interpersonal relationships, marriage, demography, survey data, demographic methods, statistical methods, and related fields.

**SOC 327. Frontiers of Social Psychology. 1-5 Unit.**

Advanced topics, current developments, theory, and empirical research. Possible topics include social identity processes, status beliefs and processes, social exchange, affect and social cohesion, legitimacy, social difference and inequality, norms, and social dilemmas.

**SOC 330. Sociology of Science. 3-4 Units.**

The sociology of science concerns the social structures and practices by which human beings interpret, use and create intellectual innovations. In particular we will explore the claim that scientific facts are socially constructed and ask whether such a characterization has limits. Course readings will concern the formation and decline of various thought communities, intellectual social movements, scientific disciplines, and broader research paradigms. A special focus will be placed on interdisciplinarity as we explore whether the collision of fields can result in new scientific advances. This course is suitable to advanced undergraduates and doctoral students.

Same as: EDUC 120, EDUC 320

**SOC 331. The Conduct of Qualitative Inquiry. 3-4 Units.**

Two quarter sequence for doctoral students to engage in research that anticipates, is a pilot study for, or feeds into their dissertations. Prior approval for dissertation study not required. Students engage in common research processes including: developing interview questions; interviewing; coding, analyzing, and interpreting data; theorizing; and writing up results. Participant observation as needed. Preference to students who intend to enroll in 327C.

Same as: EDUC 327A

**SOC 332. Sociology of Education: The Social Organization of Schools. 4 Units.**

Seminar. Key sociological theories and empirical studies of the links between education and its role in modern society, focusing on frameworks that deal with sources of educational change, the organizational context of schooling, the impact of schooling on social stratification, and the relationships between the educational system and other social institutions such as families, neighborhoods, and the economy.

Same as: EDUC 110, EDUC 310, SOC 132

**SOC 333. Law and Wikinomics: The Economic and Social Organization of the Legal Profession. 1-5 Unit.**

(Graduate and Law students enroll in 333.) Seminar. Emphasis is on the labor market for large-firm lawyers, including the market for entry-level lawyers, attorney retention and promotion practices, lateral hiring of partners, and increased use of forms of employment such as the non-equity form of partnership. Race and gender discrimination and occupational segregation; market-based pressure tactics for organizational reform. Students groups collect and analyze data about the profession and its markets. Multimedia tools for analysis and for producing workplace reforms. May be repeated for credit. Prerequisite: consent of instructor.

Same as: SOC 133

**SOC 334. Research Seminar on Access to Justice. 1-5 Unit.**

The functions and dysfunctions of modern legal systems. Topics include: official statements of the U.S. and the EU about the rights of parties to civil disputes; the roles of lawyers as gatekeepers and facilitators; the filtering process by which injuries and experiences become the basis for legal claims; access to and use of courts; the balance of power and advantage between individual persons and organizations in disputes. Prerequisite: advanced undergraduate or graduate standing, or consent of instructor.

Same as: SOC 234

**SOC 336. Sociology of Law. 3-5 Units.**

Sociological examination of law as a mechanism of social regulation and as a field of knowledge. Explores classical and contemporary theoretical and empirical contributions to the sociology of law. Law and social control, law and social change, social reality of the law, the profession and practice of law, legal mobilization, and the influence of race, gender, and social status in legal decisions and processes.

**SOC 338W. Workshop: Sociology of Law. 1-5 Unit.**

(Same as LAW 581.) Required for joint degree J.D./Ph.D. students in Sociology in the first three years of program; open to Ph.D. students in Sociology and related disciplines. Empirical, sociological study of law and legal institutions. Topics such as the relation of law to inequality and stratification, social movements, organizations and institutions, political sociology and state development, and the social construction of disputes and dispute resolution processes. Research presentations. Career development issues. May be repeated for credit.

**SOC 339. Gender Meanings and Processes. 5 Units.**

Current theories and research on the social processes, such as socialization, status processes, stereotyping, and cognition, that produce gender difference and inequality. Intersections of gender with race, class, and bodies. Applications to workplaces, schools, families, and intimate relationships. Prerequisite: Sociology doctoral student or consent of instructor.

**SOC 340. Social Stratification. 4-5 Units.**

Classical and contemporary approaches to the unequal distribution of goods, status, and power. Modern analytic models of the effects of social contact, cultural capital, family background, and luck in producing inequality. The role of education in stratification. The causes and consequences of inequality by race and gender. The structure of social classes, status groupings, and prestige hierarchies in various societies. Labor markets and their role in inequality. The implications of inequality for individual lifestyles. The rise of the new class, the underclass, and other emerging forms of stratification. Prerequisite: Ph.D. student or consent of instructor.

**SOC 340W. CPI Seminar. 1-2 Unit.**

A workshop devoted to presenting ongoing research on poverty and inequality in the United States. Open to all students interested in (a) building a better infrastructure for monitoring poverty and inequality, (b) building cutting-edge models of the causes and consequences of poverty and inequality, and (b) building better policy to reduce poverty and inequality. Required for all National Poverty Fellows funded by the Stanford Center on Poverty and Inequality.

Same as: SOC 240W

**SOC 341W. Workshop: Inequality. 1-2 Unit.**

Causes, consequences, and structure of inequality; how inequality results from and shapes social classes, occupations, professions, and other aspects of the economy. Research presentations by students, faculty, and guest speakers. Discussion of controversies, theories, and recent writings. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.

**SOC 342B. Gender and Social Structure. 4-5 Units.**

The role of gender in structuring contemporary life. Social forces affecting gender at the psychological, interactional, and structural levels. Gender inequality in labor markets, education, the household, and other institutions. Theories and research literature.

**SOC 346. Workshop: Ethnography. 1-2 Unit.**

Restricted to doctoral students. Student research employing ethnographic methods. May be repeated for credit. Prerequisite: consent of instructor.

**SOC 348. Advanced Topics in the Sociology of Gender. 3-5 Units.**

Seminar for graduate students who have research projects in progress that focus on questions about gender and society. Research projects can be at any stage from the initial development to the final writing up of results. Focus is on questions posed by the research projects of the seminar participants. Readings include relevant background to each other's questions and present their own work in progress. A final paper reports the progress on the seminar member's research project.

**SOC 350. Sociology of Race. 4-5 Units.**

Emphasis on cultural approaches that focus on meaning and meaning-making in the realm of race and race relations. Issues and complications in conceptualizing and theorizing race. Differentiation, organization, and stratification by race across a range of domains. Identity, political and economic participation, group solidarity. Prerequisite: Sociology doctoral student or consent of instructor.

**SOC 350W. Workshop: Migration, Race, Ethnicity and Nation. 1-3 Unit.**

Current theories and research, recent publications, and presentations of ongoing research by faculty and students. May be repeated for credit. Prerequisite: consent of instructor.

**SOC 353X. Inequality, Society, and Education. 3-5 Units.**

The course will focus on developing students' understanding of theory and research on several key issues in the relationship between education and inequality: 1) what are the recent patterns and trends in both economic and educational inequality? 2) what kinds of inequality (from a normative/philosophical perspective) should we worry about? 3) how do we measure educational inequality? 4) how are economic and educational inequality linked? 5) what policies/practices might reduce educational inequality? The course will be a graduate student seminar, with enrollment capped at 20-25.

Same as: EDUC 253

**SOC 354. Welfare State. 4-5 Units.**

This seminar introduces students to the key literature, questions, and debates about the modern welfare state. Emergence, growth, and purported demise of the welfare state. American welfare state in comparative perspective. Social and political factors affecting state development including political parties, labor markets, gender, demographic change, and immigration.

Same as: SOC 254

**SOC 356. Strategy and Organizations. 3 Units.**

Why are some organizations more competitive than others? This is one of the defining questions of the interdisciplinary research field known as strategic management. In this seminar, we will survey the field of strategic management as seen through the lens of organization theory, touching on the four main theoretical approaches that have developed there. Most work in strategic management pays little attention to particular theoretical perspectives, and is organized more by the topic - the phenomenon being studied - such as market exit, growth, performance, mergers and acquisitions, innovation, and the like. I have catalogued the research in strategic management both according to theoretical perspective and topic, and that structure is developed in this course. Our goal is to help you to identify theoretical perspectives as you try to understand the strategy field.

**SOC 357. Immigration and Assimilation. 3-5 Units.**

Major theoretical debates and empirical applications in the study of immigrant assimilation. Topics include racial and ethnic identity, socioeconomic integration, political participation, and national identity. Companion to SOC 358.

**SOC 358. Sociology of Immigration. 1-5 Unit.**

Topics include: the process of migration; historical perspectives; immigrant integration; transnationalism; immigration policy; labor; nations and nationalism.

**SOC 359. Organizations and Uncertainty. 3-5 Units.**

Organizations and environments characterized by institutional uncertainty. Beliefs at the roots of shared routines and institutional myths are absent. Institutionalists and neo-institutionalists, organizations facing uncertain institutional environments.

**SOC 361. Social Psychology of Organizations. 3 Units.**

This seminar focuses on social psychological theories and research relevant to organizational behavior. It reviews the current research topics in micro-organizational behavior, linking these to foundations in cognitive and social psychology and sociology. Topics include models of attribution, decision making, emotion, coordination, influence and persuasion, and the psychology of power and culture. Prerequisites: Enrollment in a PhD program. graduate-level social psychology course.

**SOC 361W. Workshop: Networks and Organizations. 1-3 Unit.**

For students doing advanced research. Group comments and criticism on dissertation projects at any phase of completion, including data problems, empirical and theoretical challenges, presentation refinement, and job market presentations. Collaboration, debate, and shaping research ideas. Prerequisite: courses in organizational theory or social network analysis.

Same as: EDUC 361

**SOC 362. Organization and Environment. 3 Units.**

This seminar considers the leading sociological approaches to analyzing relations of organizations and environments, with a special emphasis on dynamics. Attention is given to theoretical formulations, research designs, and results of empirical studies. Prerequisite: Enrollment in a PhD program.

**SOC 363A. Seminar on Organizational Theory. 5 Units.**

The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field.

Same as: EDUC 375A, MS&E 389

**SOC 363B. Seminar on Organizations: Institutional Analysis. 3-5 Units.**

Seminar. Key lines of inquiry on organizational change, emphasizing network, institutional, and evolutionary arguments.

Same as: EDUC 375B

**SOC 366A. Organizational Ecology. 3 Units.**

This seminar examines theoretical and methodological issues in the study of the ecology of organizations. Particular attention is given to the dynamics that characterize the interface between organizational populations and their audiences.

Same as: OB 601

**SOC 367. Institutional Analysis of Organizations. 3-5 Units.**

Reading and research on the nature, origins, and effects of the modern institutional system. Emphasis is on the effects of institutional systems on organizational structure.

**SOC 368W. Workshop: China Social Science. 1 Unit.**

For Ph.D. students in the social sciences and history. Research on contemporary society and politics in the People's Republic of China. May be repeated for credit. Prerequisite: consent of instructor.

Same as: POLISCI 448R

**SOC 369. Social Network Methods. 4-5 Units.**

Introduction to social network theory, methods, and research applications in sociology. Network concepts of interactionist (balance, cohesion, centrality) and structuralist (structural equivalence, roles, duality) traditions are defined and applied to topics in small groups, social movements, organizations, communities. Students apply these techniques to data on schools and classrooms.

Same as: EDUC 316

**SOC 370A. Sociological Theory: Social Structure, Inequality, and Conflict. 5 Units.**

Restricted to Sociology doctoral students. The traditions of structural analysis derived from the work of Marx, Weber, and related thinkers. Antecedent ideas in foundational works are traced through contemporary theory and research on political conflict, social stratification, formal organization, and the economy. Priority is given to first year Sociology students.

**SOC 370B. Social Interaction and Group Process. 3-5 Units.**

Theoretical strategies for the study of interaction, group, and network processes, including rational choice and exchange theory, the theory of action, symbolic interactionism, formal sociology, and social phenomenology. Antecedent ideas in foundational works and contemporary programs of theoretical research.

**SOC 371W. Workshop: Analytical Sociology. 1-2 Unit.**

Advanced graduate student workshop with a focus on rigorous data analysis, theory and model generation, and careful attention to mechanisms and causal inference. Special methods of interest include experimental and pseudo-experimental research, mathematical and computational sociology, social network analysis, and quantitative analysis of large datasets, often from online sources. The workshop is not substantively restricted, including sociological analysis of economic, political, cultural, psychological, and other phenomena. May be repeated for credit.

**SOC 372. Theoretical Analysis and Research Design. 3-5 Units.**

Intended for Doctoral students and required for Ph.D. in Sociology.

This seminar is designed to deepen students' understanding of the epistemological foundations of social science, the construction and analysis of theories, and the design of empirical research.

**SOC 374. Philanthropy and Civil Society. 1-3 Unit.**

Cross-listed with Law (LAW 781), Political Science (POLISCI 334) and Sociology (SOC 374). Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 9 units.

Same as: EDUC 374, POLISCI 334

**SOC 375. Cooperation, Cohesion, and Morality. 3-5 Units.**

This class reviews research on mechanisms promoting social cohesion from various social sciences, with a special emphasis on cooperation, morality, and hierarchy. Assignments: Students will complete several short proposed study designs and a final empirical project proposal. Prerequisite: Doctoral student in Sociology, Psychology, or the Graduate School of Business, or consent of instructor.

**SOC 376. Perspectives on Organization and Environment: Social Movement Organizations and Environments. 3 Units.**

This course examines the interaction between organizations and their environments. It is given every year by a different faculty member. What follows is the description of the course for the academic year 2012-13: This research seminar explores recent theory and research on social movement organizations and their environments. We'll consider the way in which organizational theories help us to explain social movement phenomena, and the way in which social movement theories help us to explain organizational phenomena.

**SOC 377. Comparing Institutional Forms: Public, Private, and Nonprofit. 4 Units.**

For students interested in the nonprofit sector, those in the joint Business and Education program, and for Public Policy MA students. The focus is on the missions, functions, and capabilities of nonprofit, public, and private organizations, and the managerial challenges inherent in the different sectors. Focus is on sectors with significant competition among institutional forms, including health care, social services, the arts, and education. Sources include scholarly articles, cases, and historical materials.

Same as: EDUC 377, GSBGEN 346, PUBLPOL 317

**SOC 378. Seminar on Institutional Theory and World Society. 1-5 Unit.**

Sociological analyses of the rise and impact of the expanded modern world order, with its internationalized organizations and globalized discourse. Consequences for national and local society: education, political organization, economic structure, the environment, and science. The centrality of the individual and the rationalized organization as legitimated actors.

**SOC 380. Qualitative Methods. 3-5 Units.**

Priority to Sociology doctoral students. Emphasis is on observational and interview-based research. Limited enrollment.

**SOC 381. Sociological Methodology I: Introduction. 5 Units.**

Enrollment limited to first-year Sociology doctoral students. Basic math and statistics. Types of variables, how to recode and transform variables, and how to manage different types of data sets. How to use and think about weights. Introduction to statistical packages and programming. Introduction to multiple regression, and introduction to the interpretation of regression results.

**SOC 382. Sociological Methodology II: Principles of Regression Analysis. 4-5 Units.**

Preference to Sociology doctoral students. Required for Ph.D. in Sociology. Enrollment limited to first-year Sociology doctoral students. Rigorous treatment of linear regression models, model assumptions, and various remedies for when these assumptions are violated. Introduction to panel data analysis. Enrollment limited to 15. Prerequisites: 381.

**SOC 383. Sociological Methodology III: Models for Discrete Outcomes. 5 Units.**

Required for Ph.D. in Sociology; enrollment limited to first-year Sociology doctoral students. The rationale for and interpretation of static and dynamic models for the analysis of discrete variables. Prerequisites: 381 and 382, or equivalents.

**SOC 384. New Models and Methods in the Social Sciences. 3 Units.**

Two-week intensive introduction to new statistical approaches. Emphasis is on applications. Topics may include network models, multilevel models, latent class models, mixed methods, new qualitative methods, growth models, geostatistical tools, survey-based experiments, new methods for estimating causal effects, web-based surveys, advanced discrete choice models, and diffusion models.

**SOC 385A. Research Practicum 1. 1-2 Unit.**

Workshop on research methods for third year Sociology doctoral students. Ongoing student research, methodological problems, and possible solutions. Required for third year paper.

**SOC 385B. Research Practicum II. 1 Unit.**

Continuation of 385A. Workshop on research methods for second year Sociology doctoral students. Ongoing student research, methodological problems, and possible solutions. Required for second year paper.

**SOC 388. Log-Linear Models. 3-5 Units.**

Analysis of categorical data with log-linear and negative binomial models. Measures of fit and hypothesis testing.

**SOC 389. Mixed Method Research Design and Analysis. 3-5 Units.**

Research designs that incorporate qualitative and quantitative analyses in a single project. The tension between thinking case-wise and variable-wise; how the focus on relationships between variables that is the hallmark of the quantitative approach can be brought into qualitative work.

**SOC 390. Graduate Individual Study. 1-5 Unit.**

May be repeated for credit.

**SOC 391. Graduate Directed Research. 1-5 Unit.**

May be repeated for credit.

**SOC 392. Research Apprenticeship. 1-5 Unit.**

May be repeated for credit.

**SOC 393. Teaching Apprenticeship. 1-15 Unit.****SOC 396. Sociology Colloquium. 1 Unit.**

The Sociology Colloquium is a semimonthly seminar held throughout the academic year, in which distinguished scholars lecture about their cutting-edge research findings. Sociology Students must enroll or credit and it is required for all first and second year Sociology students.

**SOC 635. Social Movements and Organizations. 4 Units.**

This research seminar is intended for students seeking to learn more about how collective action underpins institutional change in organizations and industries, and how the success of collective action, in turn, hinges on organizational structures and processes to recruit and mobilize individuals. The purpose of this course is to provide you a roadmap for you to roam the terrain of movements and organizations, and be prepared to generate original research ideas that extend inquiry in your chosen area of research.

**SOC 670. Designing Social Research. 4 Units.**

This is a course in the design of social research, with a particular emphasis on research field (i.e., non-laboratory) settings. As such, the course is a forum for discussing and developing an understanding of the different strategies social theorists employ to explain social processes, develop theories, and make these theories as believable as possible. In general, these issues will be discussed in the context of sociological research on organizations, but this will not be the exclusive focus of the course. A range of topics will be covered, for example: formulating and motivating research questions; varieties of explanation; experimental and quasi-experimental methods, including natural experiments; counterfactual models; conceptualization and measurement; sampling and case selection; qualitative and quantitative approaches. This course is particularly oriented toward developing an appreciation of the tradeoffs of different approaches. It is well suited to Ph.D. students working on qualifying papers and dissertation proposals.

**SOC 802. TGR Dissertation. 0 Units.****Spanish Language Courses****SPANLANG 1. First-Year Spanish, First Quarter. 5 Units.**

Emphasis is on developing socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Influences shaping the production of oral and written texts in the Spanish- and English-speaking world.

**SPANLANG 1A. Accelerated First-Year Spanish, Part 1. 5 Units.**

Completes first-year sequence in two rather than three quarters. For students with previous knowledge of Spanish, or those with a strong background in another Romance language. SPANLANG 2A fulfills the University Foreign Language Requirement. Prerequisite: Placement Test.

**SPANLANG 1G. Accelerated First-Year Business Spanish, Part 1. 4 Units.**

For GSB students only. Limited enrollment.

**SPANLANG 2. First-Year Spanish, Second Quarter. 5 Units.**

Continuation of SPANLANG 1. Emphasis is on developing socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Prerequisite: Placement Test or SPANLANG 1.

**SPANLANG 2A. Accelerated First-Year Spanish, Part 2. 5 Units.**

Continuation of SPANLANG 1A. Completes first-year sequence in two rather than three quarters. For students with previous knowledge of Spanish, or those with a strong background in another Romance language. Prerequisite: Placement Test or SPANLANG 1A. Fulfills the University language requirement.

**SPANLANG 2G. Accelerated First-Year Business Spanish, Part 2. 4 Units.**

Continuation of 1G. For GSB students only. Limited enrollment.

**SPANLANG 3. First-Year Spanish, Third Quarter. 5 Units.**

Continuation of SPANLANG 2. Emphasis is on developing socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Prerequisite: Placement Test or SPANLANG 2. Fulfills the University Foreign Language Requirement.

**SPANLANG 3G. Spanish for Business Professionals. 4 Units.**

For GSB students only. Limited enrollment.

**SPANLANG 5A. Intensive First-Year Spanish, Part A. 5 Units.**

Same as SPANLANG 1. Goal is to engage in interactions with Spanish speakers in socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Only Stanford graduate students restricted to 9 units may register for 205A,B,C.

**SPANLANG 5B. Intensive First-Year Spanish, Part B. 5 Units.**

Same as SPANLANG 2. Continuation of 5A. Goal is to engage in interactions with Spanish speakers in socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 1 or 5A.

**SPANLANG 5C. Intensive First-Year Spanish, Part C. 5 Units.**

Same as SPANLANG 3. Continuation of 5B. Continuation of 5A. Goal is to engage in interactions with Spanish speakers in socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Only Stanford graduate students restricted to 9 units may register for 205A,B,C. Prerequisite 2 or 5B. Fulfills the University Foreign Language Requirement.

**SPANLANG 10. Beginning Oral Communication. 2 Units.**

Additional pronunciation, vocabulary, and speaking skills. May be repeated once for credit. Prerequisite: one quarter of Spanish, demonstrated oral proficiency above the novice level; may be taken concurrently with SPANLANG 2, SPANLANG 2A 2A, or SPANLANG 3.

**SPANLANG 11C. Second-Year Spanish: Cultural Emphasis, First Quarter. 4 Units.**

Continuation of SPANLANG 3 or SPANLANG 2A. Sequence integrating culture and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic, and professional contexts. `C` content focuses on societal and cultural components of the Spanish-speaking world. Prerequisite: Placement Test, SPANLANG 3 or SPANLANG 2A.

**SPANLANG 11R. Second-Year Spanish: Emphasis on International Relations, First Quarter. 4 Units.**

Continuation of SPANLANG 3 or SPANLANG 2A. Sequence integrating geopolitics and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic, and professional contexts. `R` content focuses on international relations and socioeconomics of the Spanish-speaking world. Prerequisite: Placement Test, SPANLANG 2A or SPANLANG 3.

**SPANLANG 12C. Second-Year Spanish: Cultural Emphasis, Second Quarter. 4 Units.**

Continuation of SPANLANG 11C. Sequence integrating culture and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic, and professional contexts. `C` content focuses on societal and cultural components of the Spanish-speaking world. Prerequisite: Placement Test, SPANLANG 11C or 11R.

**SPANLANG 12R. Second-Year Spanish: Emphasis on International Relations, Second Quarter. 4 Units.**

Continuation of SPANLANG 11R. Sequence integrating geopolitics and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic, and professional contexts. `R` content focuses on international relations and socioeconomics of the Spanish-speaking world. Prerequisite: Placement Test, SPANLANG 11R or 11C.

**SPANLANG 13C. Second-Year Spanish: Cultural Emphasis, Third Quarter. 4 Units.**

Continuation of SPANLANG 12C. Sequence integrating culture and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, academic, and professional contexts. `C` content focuses on societal and cultural components of the Spanish-speaking world. Prerequisite: Placement Test, SPANLANG 12C or 12R. Fulfills the IR major Language Requirement.

**SPANLANG 13R. Second-Year Spanish: Emphasis on International Relations, Third Quarter. 4 Units.**

Continuation of SPANLANG 12R. Sequence integrating geopolitics and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language, international relations, and socioeconomics of the Spanish-speaking world. Prerequisite: SPANLANG 12R. Fulfills the IR major Language Requirement.

**SPANLANG 13SL. Second-Year Spanish: Emphasis on Service Learning, Third Quarter. 4-5 Units.**

Continuation of SPANLANG 12. Integration of community engagement and language, with emphasis on developing advanced proficiency in oral and written discourse. Targeted functional abilities include presentational and socioculturally appropriate language in formal and informal, community and professional contexts. SL content focuses on immersion in civics-based reciprocity and service learning in the Spanish-speaking local community. Service Learning Course (certified by Haas Center). Prerequisite: Placement Test, SPANLANG 12C, 12R, 12M or 12S. Fulfills the IR major Language Requirement.

**SPANLANG 15. Intermediate Oral Communication. 3 Units.**

Emphasis is on interaction in Spanish locally and globally. Regional vocabularies and cultures at home and abroad. Interaction with local native Spanish speakers and communities globally via the Internet. May be repeated once for credit. Prerequisite: SPANLANG 2A, SPANLANG 3 and demonstrated oral proficiency above the low intermediate level.

**SPANLANG 15S. Intermediate Oral Communication. 3 Units.**

Emphasis is on interaction in Spanish locally and globally. Regional vocabularies and cultures at home and abroad. Interaction with local native Spanish speakers and communities globally via the Internet. May be repeated once for credit. Prerequisite: first-year Spanish and demonstrated oral proficiency above the low intermediate level.

**SPANLANG 21B. Second-Year Spanish for Heritage Language Students, First Quarter. 4 Units.**

Emphasis is on ability to communicate orally and in writing. Spelling and the written accent. Goal is to understand, interpret, and analyze texts, movies, radio, and television. Written language skills include rules for editing written language. Third quarter focus is on the development of written and oral styles and registers used in more formal settings. Prerequisite: Placement Test.

**SPANLANG 22B. Second-Year Spanish for Heritage Language Students, Second Quarter. 3-5 Units.**

Continuation of SPANLANG 21B. Emphasis is on ability to communicate orally and in writing. Spelling and the written accent. Goal is to understand, interpret, and analyze texts, movies, radio, and television. Written language skills include rules for editing written language. Prerequisite: Placement Test, SPANLANG or 21B.

**SPANLANG 23B. Second-Year Spanish for Heritage Language Students, Third Quarter. 3-5 Units.**

Continuation of SPANLANG 22B. Emphasis is on ability to communicate orally and in writing. Spelling and the written accent. Goal is to understand, interpret, and analyze texts, movies, radio, and television. Written language skills include rules for editing written language. Third quarter Focus is on the development of written and oral styles and registers used in more formal settings. Prerequisite: Placement Test or SPANLANG 22B.

**SPANLANG 25A. Intensive Second-Year Spanish, Part A. 4 Units.**

Same as SPANLANG 11. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: one year of college Spanish or equivalent.

**SPANLANG 25B. Intensive Second-Year Spanish, Part B. 4 Units.**

Same as SPANLANG 12. Continuation of 25A. Prerequisite: 25A or equivalent.

**SPANLANG 25C. Intensive Second-Year Spanish, Part C. 4 Units.**

Same as SPANLANG 13. Continuation of 25B. Prerequisite: 25B or equivalent.

**SPANLANG 99. Language Specials. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**SPANLANG 100. Advanced Oral Communication. 3 Units.**

For students who have completed second-year Spanish or who have oral skills above the intermediate level. Interactive activities require students to persuade, analyze, support opinions, and gather and interpret others' points of view. Focus is on vocabulary enrichment and idiomatic expressions. Cultural, literary, political, and journalistic readings. May be repeated once for credit. Prerequisite: SPANLANG 13 or equivalent.

**SPANLANG 101. The Structure of Spanish. 4 Units.**

Criteria and skills to analyze Spanish grammatical structure. Identification of word functions in sentences and texts, types of sentences, and terminology. Structure of nouns, adjectives, and verbs, and their relationship with meaning. The differences between Spanish grammar as a formal system and in everyday life. Prerequisite: SPANLANG 13C, SPANLANG 13R or SPANLANG 23B.

**SPANLANG 102. Composition and Writing Workshop. 4 Units.**

Individual development of the ability to write in Spanish. Emphasis is on style and diction, and on preparing and writing essays on literary topics. Non-Spanish majors or minors may choose topics more closely related to their studies for projects. Prerequisite: two years of college Spanish or equivalent.

**SPANLANG 102B. Composition and Writing Workshop for Heritage Language Students. 3-5 Units.**

For students with a good understanding of written accents, spelling, and syntax. Focus is on the craft of writing with emphasis on brainstorming, planning, outlining, drafting, revising, style, diction, and editing. Writing essays on literary topics. Non-Spanish majors or minors may choose topics related to their studies. Prerequisite: 23B or equivalent.

**SPANLANG 121M. Spanish for Medical Students. 2-3 Units.**

First quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on taking the medical history. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Offered to undergraduates for 3 units(2 units for medical students).

Same as: HRP 280

**SPANLANG 122M. Spanish for Medical Students. 2 Units.**

Second quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on performing a physical examination. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Offered to undergraduates for 3 units(2 units for medical students).

Same as: HRP 281

**SPANLANG 123M. Spanish for Medical Students. 2-3 Units.**

Third quarter of three-quarter series. Goal is a practical and culturally appropriate command of spoken Spanish. Emphasis is on different specialties and medical conditions. Topics include the human body, hospital procedures, diagnostics, food, and essential doctor-patient phrases when dealing with Spanish-speaking patients. Series can be taken independently, depending on the level of prior knowledge. Offered to undergraduates for 3 units(2 units for medical students).

Same as: HRP 282

**SPANLANG 131M. Spanish for Heritage and Foreign Language Pre-Med and Public Health Students. 3-4 Units.**

For pre-med or public health students who grew up in homes where Spanish is spoken or for students who possess a considerable command of Spanish. Focus is on developing the ability to provide information on health-related topics to Spanish speakers in the U.S. Students participate in the organization and delivery of information on preventive health care in a workshop setting to a Spanish-speaking community.

**SPANLANG 199. Individual Reading. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**SPANLANG 205A. Intensive First-Year Spanish for Stanford Grads, Part A. 3-5 Units.**

Equivalent to SPANLANG 1. For Stanford graduate students only. Goal is to engage in interactions with Spanish speakers using socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units.

**SPANLANG 205B. Intensive First-Year Spanish for Stanford Grads, Part B. 3-5 Units.**

Equivalent to SPANLANG 2. Continuation of 205A. For Stanford graduate students only. Goal is to engage in interactions with Spanish speakers using socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units. Prerequisite 205A or equivalent.

**SPANLANG 205C. Intensive First-Year Spanish for Stanford Grads, Part C. 3-5 Units.**

Equivalent to SPANLANG 3. Continuation of 205B. For Stanford graduate students only. Goal is to engage in interactions with Spanish speakers using socially and culturally appropriate forms. Social and cultural influences shaping the production of oral and written texts in the Spanish- and English-speaking world. Stanford graduate students restricted to 9 units may take 205A,B,C for a total of 9 units or 2 of the courses for a total of 9 units. Prerequisite 205B or equivalent.

**SPANLANG 225A. Intensive Second-Year Spanish for Stanford Grads, Part A. 3-4 Units.**

Same as SPANLANG 11. For Stanford Graduate students restricted to 9 units. Sequence integrating culture and language. Emphasis is on advanced proficiency in oral and written discourse including presentational language and socioculturally appropriate discourse in formal and informal, academic, and professional contexts. Prerequisite: one year of college Spanish or equivalent.

**SPANLANG 225B. Intensive Second-Year Spanish for Stanford Grads, Part B. 3-4 Units.**

Same as SPANLANG 12. Continuation of 225A. For Stanford Graduate students restricted to 9 units. Prerequisite 225A or equivalent.

**SPANLANG 225C. Intensive Second-Year Spanish for Stanford Grads, Part C. 3-4 Units.**

Same as SPANLANG 13. Continuation of 225B. For Stanford Graduate students restricted to 9 units. Prerequisite 225B or equivalent.

**SPANLANG 250. Reading Spanish. 3 Units.**

Reading Spanish - For students who have already taken Spanish for at least one year or have superior reading proficiency in another Romance language. Emphasis is on academic texts. Fulfills University reading requirements for advanced degrees if students earn a grade of 'B'.

**SPANLANG 394. Graduate Studies in Spanish Conversation. 1-3 Unit.**  
Prerequisite: consent of instructor.**SPANLANG 395. Graduate Studies in Spanish. 1-5 Unit.**  
Prerequisite: consent of instructor.**Special Language Program Courses****SPECLANG 75. Greek Culture, Ideals, and Themes. 3 Units.**

Introduction to Greek culture and its global influence in a social historical context, through images from its past and institutions in contemporary Greek society. Limited enrollment.

**SPECLANG 90A. First - Year Estonian First Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through emphasizing all skills, speaking, reading, writing, and listening. Estonian culture.

**SPECLANG 90B. First- Year Estonian- Second quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through emphasizing all skills, speaking, reading, writing, and listening. Estonian culture.

**SPECLANG 90C. First Year Estonian- Third Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through emphasizing all skills, speaking, reading, writing, and listening. Estonian culture.

**SPECLANG 99. Language Specials. 2-5 Units.**

Prerequisite: Consent of instructor.

**SPECLANG 100A. First-Year Cherokee, First Quarter. 4 Units.**

First quarter of a three-quarter beginning sequence. Distance learning combined with periodic on-site instruction, conducted primarily in Cherokee. Course emphasizes developing effective communication at a basic level, covering grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening in everyday situations. Cherokee culture.

**SPECLANG 100B. First-Year Cherokee, Second Quarter. 4 Units.**

Distance learning combined with periodic on-site instruction, conducted primarily in Cherokee. Course emphasizes developing effective communication at a basic level, covering grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening in everyday situations. Cherokee culture. Prerequisite: SPECLANG 100A or consent of instructor.

**SPECLANG 100C. First-Year Cherokee, Third Quarter. 4 Units.**

Continuation of SPECLANG 100B. Distance learning combined with periodic on-site instruction, conducted primarily in Cherokee. Course emphasizes developing effective communication at a basic level, covering grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening in everyday situations. Cherokee culture. Prerequisite: SPECLANG or consent of instructor. Completion of #C fulfills the University Foreign Language Requirement.

**SPECLANG 101A. First-Year Nahuatl, First Quarter. 4 Units.**

First quarter of a three-quarter beginning sequence. Distance learning combined with periodic on-site instruction, conducted primarily in Nahuatl. Course emphasizes developing effective communication at a basic level, covering grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening in everyday situations. Nahuatl culture. Some knowledge of Spanish is useful.

**SPECLANG 101B. First-Year Nahuatl, Second Quarter. 4 Units.**

Continuation of SPECLANG 101A. Distance learning combined with periodic on-site instruction, conducted primarily in Nahuatl. Course emphasizes developing effective communication at a basic level, covering grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening in everyday situations. Nahuatl culture. Some knowledge of Spanish is useful. Prerequisite: SPECLANG 101A or consent of instructor.

**SPECLANG 101C. First-Year Nahuatl, Third Quarter. 4 Units.**

Continuation of SPECLANG 101B. Distance learning combined with periodic on-site instruction, conducted primarily in Nahuatl. Course emphasizes developing effective communication at a basic level, covering grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening in everyday situations. Nahuatl culture. Some knowledge of Spanish is useful. Prerequisite: SPECLANG 101B or consent of instructor. Completion of 101C fulfills the University Foreign Language Requirement.

**SPECLANG 106A. Third-Year Albanian, First Quarter. 3 Units.**

Continuation of SPECLANG 105C. Prerequisite: SPECLANG 105C.

**SPECLANG 106B. Third-Year Albanian, Second Quarter. 4 Units.**

Continuation of SPECLANG 106A. Prerequisite: SPECLANG 106A.

**SPECLANG 107. Reading Sanskrit. 2-4 Units.**

Focus is on readings of Sanskrit passages and Sanskrit epics Ramayana or Mahabharata. Discussions will include English translations of Sanskrit poems. Knowledge of Sanskrit grammar required. May be repeated for credit.

**SPECLANG 109A. First-Year Bengali, First Quarter. 5 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Bengali culture.

**SPECLANG 109B. First-Year Bengali, Second Quarter. 5 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Bengali culture. Prerequisite: SPECLANG 109A.

**SPECLANG 109C. First-Year Bengali, Third Quarter. 5 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Bengali culture. Prerequisite: SPECLANG 109B.

**SPECLANG 110A. Second-Year Bengali. 4 Units.**

Second Year Bengali is the first course in a three-quarter sequence. The course focuses on developing all four skills as students gain practice in the use of the language in a range of situations, including conversations discussions and presentations. The course is organized thematically, with each lesson integrating elements of Bengali culture, review of relevant grammar concepts, and opportunities to use the language in real-world communication contexts. We use Bengali texts, multimedia products and other materials designed to suit the students' interests and proficiency.

**SPECLANG 110B. Second-Year Bengali - Second Quarter. 4 Units.****SPECLANG 110C. Second-Year Bengali - Third Quarter. 4 Units.**

Second Year Bengali is the third course in a three-quarter sequence. The course focuses on developing all four skills as students gain practice in the use of the language in a range of situations, including conversations discussions and presentations. The course is organized thematically, with each lesson integrating elements of Bengali culture, review of relevant grammar concepts, and opportunities to use the language in real-world communication contexts. We use Bengali texts, multimedia products and other materials designed to suit the students' interests and proficiency.

**SPECLANG 129A. First-Year Ukrainian, First Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Ukrainian culture.

**SPECLANG 129B. First-Year Ukrainian, Second Quarter. 4 Units.**

Continuation of SPECLANG 129A. Prerequisite: SPECLANG 129A.

**SPECLANG 129C. First-Year Ukrainian, Third Quarter. 4 Units.**

Continuation of SPECLANG 129B. Prerequisite: SPECLANG 129B.

**SPECLANG 130A. Second-Year Ukrainian, First Quarter. 4 Units.**

Continuation of SPECLANG 129C. Prerequisite: SPECLANG 129C. Fulfills the University Foreign Language Requirement.

**SPECLANG 130B. Second-Year Intermediate Ukrainian, Second Quarter. 4 Units.**

Continuation of SPECLANG 130A. Prerequisite: SPECLANG 130A.

**SPECLANG 130C. Second-Year Ukrainian, Third Quarter. 4 Units.**

Continuation of SPECLANG 130B. Prerequisite: SPECLANG 130B.

**SPECLANG 131A. Third-Year Ukrainian, First Quarter. 4 Units.**

Continuation of SPECLANG 130C. Prerequisite: SPECLANG 130C.

**SPECLANG 133. Introduction to Georgian. 4 Units.**

Introduction to spoken and written Georgian. Emphasis on listening comprehension, oral practice, grammar, vocabulary building, and elementary readings; introduction to Georgian culture.

**SPECLANG 138A. First-Year Navajo, First Quarter. 4 Units.**

First quarter of a three-quarter beginning sequence. Distance learning combined with periodic on-site instruction, conducted primarily in Navajo. Course emphasizes developing effective communication at a basic level, covering grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening in everyday situations. Navajo culture.

**SPECLANG 138B. First-Year Navajo, Second Quarter. 4 Units.**

Continuation of SPECLANG 138A. Distance learning combined with periodic on-site instruction, conducted primarily in Navajo. Course emphasizes developing effective communication at a basic level, covering grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening in everyday situations. Navajo culture. Prerequisite: SPECLANG138A or consent of instructor.

**SPECLANG 138C. First-Year Navajo, Third Quarter. 4 Units.**

Continuation of SPECLANG 138B Distance learning combined with periodic on-site instruction, conducted primarily in Cherokee. Course emphasizes developing effective communication at a basic level, covering grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening in everyday situations. Navajo culture. Prerequisite: SPECLANG138B or consent of instructor. Completion of #C fulfills the University Foreign Language Requirement.

**SPECLANG 144A. First-Year Tagalog, First Quarter. 5 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Tagalog culture.

**SPECLANG 144B. First-Year Tagalog, Second Quarter. 5 Units.**

Continuation of SPECLANG 144A. Prerequisite: SPECLANG 144A.

**SPECLANG 144C. First-Year Tagalog, Third Quarter. 5 Units.**

Continuation of SPECLANG 144B. Prerequisite: SPECLANG 144B. Fulfills the University Foreign Language Requirement.

**SPECLANG 145A. Second-Year Tagalog, First Quarter. 4 Units.**

Continuation of SPECLANG 144C. Prerequisite: SPECLANG 144C.

**SPECLANG 145B. Second-Year Tagalog, Second Quarter. 4 Units.**

Continuation of SPECLANG 145A. Prerequisite: SPECLANG 145A.

**SPECLANG 145C. Second-Year Tagalog, Third Quarter. 4 Units.**

Continuation of SPECLANG 145B. Prerequisite: SPECLANG 145B.

**SPECLANG 146A. Third-Year Tagalog, First Quarter. 4 Units.**

Continuation of SPECLANG 145C. Prerequisite SPECLANG 145C or consent of instructor.

**SPECLANG 146B. Third-Year Tagalog, Second Quarter. 4 Units.**

Continuation of SPECLANG 145A. Prerequisite: SPECLANG 145A.

**SPECLANG 146C. Third-Year Tagalog, Third Quarter. 4 Units.**

Continuation of SPECLANG 146B. Prerequisite SPECLANG 146B.

**SPECLANG 150A. First-Year Vietnamese, First Quarter. 5 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Vietnamese culture.

**SPECLANG 150B. First-Year Vietnamese, Second Quarter. 5 Units.**

Continuation of SPECLANG 150A. Prerequisite: SPECLANG 150A.

**SPECLANG 150C. First-Year Vietnamese, Third Quarter. 5 Units.**

Continuation of SPECLANG 150B. Prerequisite: SPECLANG 150B. Fulfills the University Foreign Language Requirement.

**SPECLANG 151A. Second-Year Vietnamese, First Quarter. 4 Units.**

Continuation of SPECLANG150C. Prerequisite: SPECLANG 150C.

**SPECLANG 151B. Second-Year Vietnamese, Second quarter. 4 Units.**

Continuation of SPECLANG 151A. Prerequisite SPECLANG 151A.

**SPECLANG 151C. Second-Year Vietnamese, Third Quarter. 4 Units.**

Continuation of SPECLANG 151B. Prerequisite SPECLANG 151B.

**SPECLANG 152A. First-Year Hindi, First Quarter. 5 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Hindi culture.

**SPECLANG 152B. First-Year Hindi, Second Quarter. 5 Units.**

Continuation of SPECLANG 152A. Prerequisite: SPECLANG 152A.

**SPECLANG 152C. First-Year Hindi, Third Quarter. 5 Units.**

Continuation of SPECLANG 152B. Prerequisite: SPECLANG 152B. Fulfills the University language requirement.

**SPECLANG 152H. Heritage Hindi. 5 Units.**

This course is meant for students who have had some familiarity with the Hindi language, and who can, understand and speak Hindi with limited comprehension and proficiency. They may, or may not be familiar with the Devanagari (Hindi) Script. It will cover basic grammar of modern standard Hindi. As part of this course, students will learn popular Hindi songs, watch films and video clips, and become familiar with Indian culture. With material especially designed for this course, one has plenty of opportunity to play with and explore the language and its parent culture. This course is geared towards increasing oral, aural, written and reading proficiency in the target language. Emphasis is placed on spontaneous self-expression in the language. By the end of year, students will be able to interpret and create the language in speech as well as writing in a variety of communication contexts.

**SPECLANG 153A. Second-Year Hindi, First Quarter. 4 Units.**

Continuation of SPECLANG 152C. Second-year sequence integrating culture and language with emphasis on developing oral and written discourse. Course aims to pose and probe questions of national identity, gender, masculinity, women's roles, caste and class, and politics as manifested in Hindi films. Coursework includes essay writing, attendance at required weekly film screenings as well as a final project. Students will examine Indian culture as represented in South Asian cinema and learn to articulate new ways of approaching Bollywood movies while enhancing their Hindi language proficiency. Continuation of SPECLANG 152C. Prerequisite: SPECLANG 152C.

**SPECLANG 153B. Second-Year Hindi, Second Quarter. 4 Units.**

Continuation of SPECLANG 153A. Prerequisite: SPECLANG 153A.

**SPECLANG 153C. Second-Year Hindi, Third Quarter. 4 Units.**

Continuation of SPECLANG 153B. Prerequisite: SPECLANG 153B.

**SPECLANG 154A. Third-Year Hindi, First Quarter. 4 Units.**

Continuation of SPECLANG 153C. Prerequisite: SPECLANG 153C.

**SPECLANG 154B. Third-Year Hindi, Second Quarter. 4 Units.**

Continuation of SPECLANG 154A. Prerequisite: SPECLANG 154A.

**SPECLANG 154C. Third-Year Hindi, Third Quarter. 4 Units.**

Continuation of SPECLANG 154B. Prerequisite: SPECLANG 154B.

**SPECLANG 156A. First-Year Indonesian, First Quarter. 5 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Indonesian culture.

**SPECLANG 156B. First-Year Indonesian, Second Quarter. 5 Units.**

Continuation of SPECLANG 156A. Prerequisite: SPECLANG 156A.

**SPECLANG 156C. First-Year Indonesian, Third Quarter. 5 Units.**

Continuation of SPECLANG 156B. Prerequisite: SPECLANG 156B.

**SPECLANG 157A. Second-Year Indonesian, First Quarter. 4 Units.**

Continuation of SPECLANG 156C. Prerequisite: SPECLANG 156C. Fulfills the University language requirement.

**SPECLANG 157B. Second-Year Indonesian, Second Quarter. 4 Units.**

Continuation of SPECLANG 157A. Prerequisite: SPECLANG 157A.

**SPECLANG 157C. Second-Year Indonesian, Third Quarter. 4 Units.**

Continuation of SPECLANG 157B. Prerequisite: SPECLANG 157B.

**SPECLANG 158A. Third-Year Indonesian, First Quarter. 4 Units.**

Continuation of SPECLANG 157C. Prerequisite: SPECLANG 157C.

**SPECLANG 162A. Beginning Tamil, First Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Tamil culture.

**SPECLANG 162B. Beginning Tamil, Second Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Tamil culture.

**SPECLANG 162C. Beginning Tamil, Third Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Tamil culture.

**SPECLANG 164A. First-Year Czech, First Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Czech culture.

**SPECLANG 164B. First-Year Czech, Second Quarter. 4 Units.**

Continuation of SPECLANG 164A. Prerequisite: SPECLANG 164A.

**SPECLANG 164C. First-Year Czech, Third Quarter. 4 Units.**

Continuation of SPECLANG 164B. Prerequisite: SPECLANG 164B.

**SPECLANG 165A. Second-Year Czech, First Quarter. 3 Units.**

Continuation of SPECLANG 164C. Prerequisite: SPECLANG 164C. Fulfills the University language requirement.

**SPECLANG 165C. Second-Year Czech, Third Quarter. 3 Units.**

Continuation of SPECLANG 165B. Prerequisite: SPECLANG 165B.

**SPECLANG 167A. First-Year Polish, First Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Polish culture.

**SPECLANG 167B. First-Year Polish, Second Quarter. 4 Units.**

Continuation of SPECLANG 167A. Prerequisite: SPECLANG 167A.

**SPECLANG 167C. First-Year Polish, Third Quarter. 4 Units.**

Continuation of SPECLANG 167B. Prerequisite: SPECLANG 167B.

**SPECLANG 168A. Second-Year Polish, First Quarter. 3 Units.**

Continuation of SPECLANG 167C. Prerequisite: SPECLANG 167C. Fulfills the University language requirement.

**SPECLANG 168B. Second-Year Polish, Second Quarter. 3 Units.**

Continuation of SPECLANG 168A. Prerequisite: SPECLANG 168A.

**SPECLANG 168C. Second-Year Polish, Third Quarter. 3 Units.**

Continuation of SPECLANG 168B. Prerequisite: SPECLANG 168B.

**SPECLANG 169A. Third-Year Polish, First Quarter. 4 Units.**

Continuation of SPECLANG 168C. Prerequisite: SPECLANG 168C.

**SPECLANG 169B. Third-Year Polish, Second Quarter. 4 Units.**

Continuation of SPECLANG 169A. Prerequisite: SPECLANG 169A.

**SPECLANG 170A. First-Year Modern Greek, First Quarter. 5 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Greek culture.

**SPECLANG 170B. First-Year Modern Greek, Second Quarter. 5 Units.**

Continuation of SPECLANG 170A. Prerequisite: SPECLANG 170A.

**SPECLANG 170C. First-Year Modern Greek, Third Quarter. 5 Units.**

Continuation of SPECLANG 170B. Emphasis on speaking, reading, writing and listening. Student-centered, interactive approach focuses on mastering the basic grammar structures and basic vocabulary through a multimodal approach. Introduction to the Greek culture. Prerequisite: SPECLANG 170B. Fulfills the University language requirement.

**SPECLANG 171A. Second-Year Modern Greek, First Quarter. 4 Units.**

Continuation of SPECLANG 170C. Grammar structures and vocabulary through authentic materials. Cultural proficiency. Prerequisite: SPECLANG 170C.

**SPECLANG 171B. Second-Year Modern Greek, Second Quarter. 4 Units.**

Continuation of SPECLANG 171A. Prerequisite: SPECLANG 171A.

**SPECLANG 171C. Second-Year Modern Greek, Third Quarter. 4 Units.**

Continuation of SPECLANG 171B. Prerequisite: SPECLANG 171B.

**SPECLANG 172A. Modern Greek Language and Culture through Literature and Film, First Quarter. 4 Units.**

Accelerated. Vocabulary enrichment through multimedia, online materials.

**SPECLANG 172B. Modern Greek Language and Culture through Literature and Film, Second Quarter. 4 Units.**

Continuation of 172A.

**SPECLANG 172C. Modern Greek Language and Culture through Literature and Film, Third Quarter. 4 Units.**

Accelerated. Vocabulary enrichment through multimedia, online materials.

**SPECLANG 173A. First-Year Hungarian, First Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Hungarian culture.

**SPECLANG 173B. First-Year Hungarian, Second Quarter. 4 Units.**

Continuation of SPECLANG 173A. Prerequisite: SPECLANG 173A.

**SPECLANG 173C. First-Year Hungarian, Third Quarter. 4 Units.**

Continuation of SPECLANG 173B. Prerequisite: SPECLANG 173B.

**SPECLANG 174A. First-Year Quechua, First Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Quechua culture.

**SPECLANG 174B. First-Year Quechua, Second Quarter. 4 Units.**

Continuation of SPECLANG 174A. Prerequisite: SPECLANG 174A.

**SPECLANG 174C. First-Year Quechua, Third Quarter. 4 Units.**

Continuation of SPECLANG 174B. Prerequisite: SPECLANG 174B.

**SPECLANG 175A. Second-Year Quechua, First Quarter. 3 Units.**

Continuation of SPECLANG 174C. Prerequisite: SPECLANG 174C. Fulfills the University Foreign Language Requirement.

**SPECLANG 175B. Second-Year Quechua, Second Quarter. 4 Units.**

Continuation of SPECLANG 175A. Prerequisite: SPECLANG 175A.

**SPECLANG 175C. Second-Year Quechua, Third Quarter. 4 Units.**

Continuation of SPECLANG 175B. Prerequisite: SPECLANG 175B.

**SPECLANG 176A. First-Year Thai, First Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Thai culture.

**SPECLANG 176B. First-Year Thai, Second Quarter. 4 Units.**

Continuation of SPECLANG 176A. Prerequisite: SPECLANG 176A.

Continuation of SPECLANG 176B. Prerequisite: SPECLANG 176B.

**SPECLANG 177A. Second-Year Thai, First Quarter. 3 Units.**

Continuation of SPECLANG 176C. Prerequisite: SPECLANG 176 C. Fulfills the University Foreign Language Requirement.

**SPECLANG 177B. Second-Year Thai, Second Quarter. 4 Units.**

Continuation of SPECLANG 177A. Prerequisite: SPECLANG 177A.

**SPECLANG 177C. Second-Year Thai, Third Quarter. 4 Units.**

Continuation of SPECLANG 177B. Prerequisite: SPECLANG 177B.

**SPECLANG 178A. First-Year Sign Language, First Quarter. 5 Units.**

Comprehension and production skills; cultural awareness necessary for communication. Limited enrollment.

**SPECLANG 178B. First-Year Sign Language, Second Quarter. 5 Units.**

Continuation of SPECLANG 178A. Prerequisite: SPECLANG 178A.

**SPECLANG 178C. First-Year Sign Language, Third Quarter. 5 Units.**

Continuation of SPECLANG 178B. Prerequisite: SPECLANG 178B. Fulfills the University language requirement.

**SPECLANG 179A. Second-Year Sign Language, First Quarter. 4 Units.**

Continuation of SPECLANG 178C. Additional functional structures, lexical items, and history. Prerequisite: SPECLANG 178B. Limited enrollment.

**SPECLANG 179B. Second-Year Sign Language, Second Quarter. 4 Units.**

Continuation of SPECLANG 179A. Prerequisite: SPECLANG 179A. Limited enrollment.

**SPECLANG 179C. Second-Year Sign Language, Third Quarter. 4 Units.**

Continuation of SPECLANG 179B. Prerequisite: SPECLANG 179B. Limited enrollment.

**SPECLANG 182A. Second-Year Hungarian, First Quarter. 3 Units.**

Continuation of SPECLANG 173C. Prerequisite: SPECLANG 173C. Fulfills the University Foreign Language Requirement.

**SPECLANG 182B. Second-Year Hungarian, Second Quarter. 3 Units.**

Continuation of SPECLANG 182A. Prerequisite: SPECLANG 182A.

**SPECLANG 182C. Second-Year Hungarian, Third Quarter. 3 Units.**

Continuation of SPECLANG 182B. Prerequisite: SPECLANG 182B.

**SPECLANG 183. BEGINNING SANSKRIT. 4 Units.**

Full class in the script, grammar, and vocabulary of the Sanskrit language of ancient India. Also included will be some readings from the Bhagavad Gita. No previous knowledge of Sanskrit required.

**SPECLANG 183A. First-Year Sanskrit, First Quarter. 4 Units.**

Full class in the script, grammar, and vocabulary of the Sanskrit language of ancient India. Also included will be some readings from the Bhagavad Gita. No previous knowledge of Sanskrit required.

**SPECLANG 183B. First-Year Sanskrit, Second Quarter. 4 Units.**

Continuation of SPECLANG 183A. Prerequisite: SPECLANG 183A.

**SPECLANG 184A. Second-Year Sanskrit, First Quarter. 4 Units.**

Continuation of SPECLANG 183C. Readings from the Sanskrit epics Ramayana or Mahabharata. Knowledge of Sanskrit grammar required. Prerequisite: SPECLANG 183C.

**SPECLANG 184B. Second-Year Sanskrit, Second Quarter. 4 Units.**

Continuation of SPECLANG 184A. Prerequisite: SPECLANG 184A.

**SPECLANG 184C. Second-Year Sanskrit, Third Quarter. 4 Units.**

Continuation of SPECLANG 184B. Prerequisite: SPECLANG 184B.

**SPECLANG 186. Introduction to Serbo-Croatian. 1-2 Unit.**

Description: This introductory course focuses on the acquisition of fundamental communication skills. Students learn to understand and carry on simple conversations on daily life topics such as work, personal interests, family, and friends, and also to conduct simple transactions related to traveling, studying or working in the region.

**SPECLANG 186A. First-Year Serbo-Croatian, First Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Serb and Croat culture.

**SPECLANG 186B. First-Year Serbo-Croatian, Second Quarter. 4 Units.**

Continuation of SPECLANG 186A. Prerequisite: SPECLANG 186A.

**SPECLANG 189A. First-Year Hawaiian, First Quarter. 4 Units.**

.

**SPECLANG 189B. First-Year Beginning Hawaiian, Second Quarter. 4 Units.**

Continuation of SPECLANG 189A. Prerequisite: SPAECLANG 189A.

**SPECLANG 189C. First-Year Hawaiian, Third Quarter. 4 Units.**

Continuation of SPECLANG 189B. Prerequisite: SPECLANG 189B. Fulfills the University Foreign Language Requirement.

**SPECLANG 192A. First-Year Kazakh, First Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Kazakh culture.

**SPECLANG 192B. First-Year Kazakh, Second Quarter. 4 Units.**

Continuation of SPECLANG 192A. Prerequisite: SPECLANG 192A.

**SPECLANG 192C. First-Year Kazakh, Third Quarter. 4 Units.**

Continuation of SPECLANG 192B. Prerequisite: SPECLANG 192B.

**SPECLANG 193A. Second-Year Kazakh, First Quarter. 3 Units.**

Continuation of SPECLANG 192C. Prerequisite: SPECLANG 192C. Fulfills the University language requirement.

**SPECLANG 193B. Second-Year Kazakh, Second Quarter. 3 Units.**

Continuation of SPECLANG 193A. Prerequisite: SPECLANG 193A.

**SPECLANG 193C. Second-Year Kazakh, Third Quarter. 3 Units.**

Continuation of SPECLANG 193B. Prerequisite: SPECLANG 193B.

**SPECLANG 198Q. Modern Greece in Film and Literature. 3-5 Units.**

Preference to sophomores. Cultural and literary highlights. Filmmakers include Kakoyannis, Dassen, Boulmetis, Angelopoulos, and Scorsese; readings from Eugenides, Gage, Kavafis, Kazantzakis, Samarakis, Seferis, and Elytis.

**SPECLANG 202. Introduction to Gandhari. 1-3 Unit.**

Grammar and readings of Gandhari, a middle-Indic language from Afghanistan. Mostly we will read these newly published early Buddhist texts in Roman script, but will also read from photographs of the original birch-bark fragments in their Kharosthi script. Knowledge of Sanskrit and Pali expected, but not required.

**SPECLANG 215A. Modern Greek for Heritage Language Learners, First Quarter. 2-4 Units.**

For students of Greek background. Sources include authentic texts, multimedia materials, and Greek media.

**SPECLANG 215B. Modern Greek for Heritage Language Learners, Second Quarter. 2-4 Units.**

Continuation of SPECLANG 215A. Prerequisite: SPECLANG 215A.

**SPECLANG 215C. Modern Greek for Heritage Language Learners, Third Quarter. 2-4 Units.**

Continuation of SPECLANG 215B. Prerequisite: SPECLANG 215A.

**SPECLANG 218A. Beginning Urdu, First Quarter. 5 Units.**

First Year Urdu will introduce students to the Urdu alphabet (Nastaliq script); to pronunciation and intonation; to basic conversation patterns; and to the elements of spelling, reading, and writing in Urdu. It will cover basic grammar of modern standard Urdu. As part of this course, students will learn popular Urdu songs, watch films and video clips, and become familiar with culture of Urdu speaking people. They will also have exciting opportunities to make their own audio and video recordings to improve their pronunciation, work with Web-based and multi-media materials, and to go on one or more field trips. By the end of year, students will have acquired a basic vocabulary of 800-1000 words, and will be able to generate and interpret several types of simple sentences in simple conversation as well as write in a variety of communication contexts.

**SPECLANG 218B. Beginning Urdu, Second Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Urdu culture.

**SPECLANG 219A. Intermediate Urdu, First Quarter. 4 Units.****SPECLANG 219B. Intermediate Urdu, Second Quarter. 4 Units. (Staff).****SPECLANG 224A. Third-Year Vietnamese, First Quarter. 4 Units.**

Continuation of SPECLANG 151C. Grammar structures and vocabulary through authentic materials. Cultural proficiency. Prerequisite: SPECLANG 151C or consent of instructor.

**SPECLANG 224B. Third-Year Vietnamese, Second Quarter. 4 Units.**

Continuation of SPECLANG 224A. Prerequisite: SPECLANG 224A or consent of instructor.

**SPECLANG 224C. Third-Year Vietnamese, Third Quarter. 4 Units.**

Continuation of SPECLANG 224B. Prerequisite: SPECLANG 224B or consent of instructor.

**SPECLANG 229A. Beginning Pashto, First Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Pashto culture.

**SPECLANG 229B. Beginning Pashto, Second Quarter. 4 Units.**

Grammatical structures, vocabulary, and sentence patterns through speaking, reading, writing, and listening. Pashto culture.

**SPECLANG 239A. Second-Year Uzbek, First Quarter. 3 Units.**

Continuation of SPECLANG 238C. Prerequisite: SPECLANG 228C or consent of instructor. Fulfills the University Foreign Language Requirement.

**SPECLANG 239B. Second-Year Uzbek, Second Quarter. 3 Units.**

Continuation of SPECLANG 239A. Prerequisite: SPECLANG 239A or consent of instructor.

**SPECLANG 239C. Second-Year Uzbek, Third Quarter. 3 Units.**

Continuation of SPECLANG 239B. Prerequisite: SPECLANG 239B or consent of instructor.

**SPECLANG 240A. Third-Year Uzbek, First quarter. 3 Units.**

Continuation of SPECLANG 239C. Prerequisite; SPECLANG 239C or consent of instructor.

**SPECLANG 247A. First-Year Lakota, First Quarter. 4 Units.****SPECLANG 247B. First-Year Lakota, Second Quarter. 4 Units.**

Continuation of SPECLANG 247A. Prerequisite: SPECLANG 247A or consent of instructor.

**SPECLANG 247C. First-Year Lakota, Third Quarter. 4 Units.**

Continuation of SPECLANG 247B. Prerequisite: SPECLANG 247B or consent of instructor. Fulfills the University Foreign Language Requirement.

**SPECLANG 248. Introduction to Siouan Language & Culture II. 5 Units.**

Continuation of the Introduction to Siouan Language & Culture I. This course will take a more focused approach on one cultural aspect of Dakota/Nakota/Lakota culture through the analysis of Dakota/Nakota/Lakota words in the lyrics of songs sung in the Sundance as a focus of study in the continuing use of language in the Dakota/Nakota/Lakota culture."

**SPECLANG 248A. Second-Year Lakota, First Quarter. 4 Units.****SPECLANG 248B. Second-Year Lakota. 4 Units.**

prerequisite- speclang 248A.

**SPECLANG 248C. Second-Year Lakota, third Quarter. 4 Units.**

Prerequisite- must have completed 248B.

**SPECLANG 250A. First-Year Romanian, First Quarter. 4 Units.****SPECLANG 250B. First-Year Romanian, Second Quarter. 4 Units.**

Continuation of SPECLANG 250A. Prerequisite: SPECLANG 250A or consent of instructor.

**SPECLANG 250C. First-Year Romanian, Third Quarter. 4 Units.**

Continuation of SPECLANG 250B. Prerequisite: SPECLANG 250B or consent of instructor.

**SPECLANG 251A. Second-Year Romanian, First Quarter. 3 Units.**

Continuation of SPECLANG 250C. Prerequisite: SPECLANG 250C or consent of instructor. Fulfills the University Foreign Language Requirement.

**SPECLANG 251B. Second-Year Romanian, Second Quarter. 3 Units.**

Continuation of SPECLANG 251A. Prerequisite: SPECLANG 251A or consent of instructor.

**SPECLANG 251C. Second-Year Romanian, Third Quarter. 3 Units.**

Continuation of SPECLANTG 251B. Prerequisite: SPECLANG 251B or consent of instructor.

**SPECLANG 254C. Third-Year Hungarian, Third Quarter. 3 Units.**

Continuation of SPECLANG 254B. Prerequisite: SPECLANG 254B or consent of instructor.

**SPECLANG 255A. Fourth-Year Albanian, 1st quarter. 4 Units.**

Continuation of SPECLANG 106C.

**SPECLANG 255B. Fourth-Year Albanian, 2nd quarter. 4 Units.**

Continuation of SPECLANG 255A.

**SPECLANG 255C. Fourth-Year Albanian, 3rd Quarter. 4 Units.**

Continuation of 255B.

**SPECLANG 260A. Third-Year Modern Greek, First Quarter. 4 Units.**

Continuation of SPECLANG 171C. Prerequisite: SPECLANG 171C or consent of instructor.

**SPECLANG 260B. Third-Year Modern Greek, Second Quarter. 4 Units.**

Continuation of SPECLANG 260A. Prerequisite: SPECLANG 260A or consent of instructor.

**SPECLANG 260C. Third-Year Modern Greek, Third Quarter. 4 Units.**

Continuation of SPECLANG 260B. Prerequisite: SPECLANG 260B or consent of instructor.

**SPECLANG 264A. Advanced Czech Conversation, First Quarter. 1-4 Unit.**

Repeatable once for credit.

**SPECLANG 265A. Third-Year Hungarian, First Quarter. 3 Units.**

Continuation of SPECLANG 182C. Prerequisite completion of SPECLANG 182C or consent of instructor.

**SPECLANG 265B. Third-Year Hungarian, Second Quarter. 3 Units.**

Continuation of SPECLANG 265A. Prerequisite completion of SPECLANG 265A or consent of instructor.

**SPECLANG 265C. Third-Year Hungarian, Third Quarter. 3 Units.**

Continuation of SPECLANG 265B. Prerequisite completion of SPECLANG 265B or consent of instructor.

**SPECLANG 297. Directed Reading. 1-5 Unit.**

Prerequisite: consent of instructor.- For Grad students only.

**SPECLANG 395. Graduate Studies in Special Language. 1-5 Unit.**

Prerequisite: consent of instructor.

## Stanford Global Studies Courses

**GLOBAL 101. Global Studies Gateway Course. 3 Units.**

Gateway course for students wishing to pursue a Global Studies minor in one of six specializations: African, European, Islamic, Iranian, Latin American, and South Asian Studies.

**GLOBAL 210. Urdu Literature and Bombay Cinema. 3 Units.**

What are some of the major themes that drive modern Urdu literature as well as the *ʿMuslim Social* genre of Bombay Cinema? How can we place these cultural texts within their historical context? Urdu literature and Bombay Cinema provide compelling windows into the crisis of modernity both within South Asia and Muslim societies. In this seminar, we will start with a discussion on the emergence of print culture and its impact on the world of Urdu poetry and an exploration of the work of reformers who viewed Urdu as *ʿthe language of secular Islam.* Next we will engage with the anticolonial Progressive Writers Movement as well as the trauma of Partition and its reflection in literature and film. The course will conclude with a discussion of the contemporary Indian nostalgia for a cosmopolitan Indo-Muslim past. Through projects and presentations, students will hone their written and oral communication skills. They will also practice approaching works of art and literature with a critical lens. Ultimately this course will provide students with a better understanding of the society, literary and film of Muslim South Asia. Literary cultures of Muslim South Asia are not a fixed and unchanging, but rather a set of representations that are constantly shifting and adapting to reflect the context of society.

Same as: FEMGEN 210

**GLOBAL 220. American Foreign Policy: Interests, Values, and Process. 5 Units.**

This seminar will examine the tension in American foreign policy between pursuing U.S. security and economic interests and promoting American values abroad. The course will retrace the theoretical and ideological debates about values versus interests, with a particular focus on realism versus liberalism. The course will examine the evolution of these debates over time, starting with the French revolution, but with special attention given to the Cold War, American foreign policy after September 11th, and the Obama administration. The course also will examine how these contending theories and ideologies are mediated through the U.S. bureaucracy that shapes the making of foreign policy. \*\* NOTE: Initial registration for this course does not guarantee enrollment. All interested students should attend the first class. Final enrollment criteria will be detailed on the first day of class. There will be 10 seats for graduate students and 10 seats for undergraduate students.

Same as: IPS 242, POLISCI 217A

**GLOBAL 249A. The Iranian Cinema: Image and Meaning. 1-3 Unit.**

This course will focus on the analysis of ten Iranian films with the view of conducting a discourse on the semiotics of Iranian art and culture. Each session will be designated to the viewing of a film by a prominent Iranian film-maker. Students are expected to prepare for class by having previously examined other available films by the film-maker under consideration.

Same as: COMPLIT 249A

**GLOBAL 249B. Iranian Cinema in Diaspora. 1-3 Unit.**

Despite enormous obstacles, immigrant Iranian Filmmakers, within a few decades (after the Iranian revolution), have created a slow but steady stream of films outside Iran. They were originally started by individual spontaneous attempts from different corners of the world and by now we can identify common lines of interest amongst them. There are also major differences between them. These films have never been allowed to be screened inside Iran, and without any support from the global system of production and distribution, as independent and individual attempts, they have enjoyed little attention. Despite all this, Iranian cinema in exile is in no sense any less important than Iranian cinema inside Iran. In this course we will view one such film, made outside Iran, in each class meeting and expect to reach a common consensus in identifying the general patterns within these works and this movement. Questions such as the ones listed below will be addressed in our meetings each week: What changes in aesthetics and point of view of the filmmaker are caused by the change in his or her work environment? Though unwisely these films are made outside Iran, how related are they to the known (recognized) cinema within Iran? And in fact, to what extent do these films express things that are left unsaid by the cinema within Iran? Same as: COMPLIT 249B

**GLOBAL 249C. Contemporary Iranian Theater. 1-3 Unit.**

Today Iranian plays - both in traditional and contemporary styles - are staged in theater festivals throughout the world play their role in forming a universal language of theater which combine the heritages from countries in all five continents. Despite many obstacles, some Iranian plays have been translated into English and some prominent Iranian figures are successful stage directors outside Iran. Forty-six years ago when "Theater in Iran" (a monograph on the history of Iranian plays) by Bahram Beyzaie was first published, it put the then contemporary Iranian theater movement - which was altogether westernizing itself blindly - face to face with a new kind of self-awareness. Hence in today's generation of playwrights and stage directors in Iran, all know something of their theatrical heritage. In this course we will spend some class sessions on the history of theater in Iran and some class meetings will be concentrating on contemporary movements and present day playwrights. Given the dearth of visual documents, an attempt will be made to present a picture of Iranian theater to the student. Students are expected to read the recommended available translated plays of the contemporary Iranian playwrights and participate in classroom discussions.

Same as: COMPLIT 249C

**GLOBAL 250. Bollywood and Beyond: An Introduction to Indian Film. 4 Units.**

A broad engagement with Indian cinema: its relationship with Indian politics, history, and economics; its key thematic concerns and forms; and its adaptation of and response to global cinematic themes, genres, and audiences. Locating the films within key critical and theoretical debates and scholarship on Indian and world cinemas. Goal is to open up what is often seen as a dauntingly complex region, especially for those who are interested in but unfamiliar with its histories and cultural forms. Same as: COMPLIT 247, FILMSTUD 250B

## Stanford in Washington Courses

**SIW 103. Economic Growth and Development Patterns, Policies, and Prospects. 5 Units.****SIW 104. Congressional Oversight and the Press. 5 Units.**

SIW 105. Education Policy. 5 Units.

SIW 106. Criminal Justice Policy. 5 Units.

SIW 107. Civil Rights Law. 5 Units.

SIW 108. Urban Policy. 5 Units.

SIW 109. Trans-Atlantic Relations. 5 Units.

SIW 110. U.S. Foreign Policy. 3 Units.

SIW 111. Composing a Life in Public Service. 3 Units.

SIW 112. Health Policy Making in the US. 5 Units.

SIW 113. Critical Health Issues in the U.S. and Abroad. 5 Units.

SIW 115. Health and Environmental Regulatory Policy. 5 Units.  
(Staff).

SIW 116. International Environmental Policy. 5 Units.

SIW 118. Topics in American Politics and Public Policy. 3 Units.

SIW 119. U. S. and Europe: Cooperation or Competition?. 5 Units.

SIW 120. Law and Public Policy in the Federal Government. 5 Units.

SIW 121. Economic Analysis of Federal Environmental and Health Regulations. 5 Units.

SIW 122. Energy, Environment and Security in South Asia. 5 Units.

SIW 124. The American Presidency: From TR to Nixon. 5 Units.

SIW 128. Transitions in Energy Policy Speakers Series. 2 Units.

SIW 129. Women's, Maternal, and Children's Health. 5 Units.

SIW 130. Security through Partnerships, Partnerships through Security. 5 Units.

SIW 131. United States and Europe in Comparative Perspective. 5 Units.

SIW 132. Bridging the gap between environmental science and policy. 5 Units.

SIW 135. Federal Education Policy. 5 Units.

SIW 137. Energy and Environment: Technology, Economics and Policy. 5 Units.

SIW 138. Game Theory and Mathematical Models of Politics. 5 Units.

SIW 140. Health and Environmental Policy Speaker Series. 2 Units.

SIW 142. Images of National Politics from Classics in Political Science. 5 Units.

SIW 144. Energy, Environment, Climate and Conservation Policy: A Washington, D.C. Perspective. 5 Units.

SIW 146. Diplomacy in Practice: Security Issues in the South Caucasus. 5 Units.

SIW 148. Art and the First Amendment: Testing the Limits of Expression. 5 Units.

This course will take place in Washington D.C.

Same as: ARTHIST 148

SIW 151. Banking Regulation 5 Years After the Crisis. 5 Units.

SIW 153. Energy and Climate Cooperation in the Western Hemisphere. 5 Units.

SIW 155. Images of National Politics from Classics in Political Science. 5 Units.

SIW 156. Washington Policymaking: Advocacy and Strategy. 5 Units.

SIW 164. Debating the Nation. 5 Units.

SIW 182. Arguing about the Constitution. 5 Units.

SIW 183. U.S. Immigration Politics and Policy. 5 Units.

SIW 198Y. Health Policy. 5 Units.

SIW 198Z. International Economic Policy. 5 Units.

SIW 201A. CSRE Public Policy Seminar. 3-5 Units.

SIW 201B. CSRE Public Policy Seminar. 3-5 Units.

**SIW 214. From the Pantheon to the Capitol: Architecture, Cosmology, Mathematics and Illusion. 5 Units.**

This course traces the history of the dome over two millenia, from temples to the gods to Temples of the State, and from cosmic archetype to architectural fetish. The narrative interweaves the themes of the dome as image of the Cosmos, religious icon, national landmark, and political monument. It examines the dome not only as a venue for structural innovation, but also metaphysical geometry and transcendent illusionism. Individual case studies will familiarise you with major architects from Hadrian to Richard Rogers and historical milestones from the Dome of the Rock to the Capitol in Washington DC.

Same as: ARTHIST 214

## Statistics Courses

**STATS 42Q. Undergraduate Admissions to Selective Universities - a Statistical Perspective. 2 Units.**

The goal is the building of a statistical model, based on applicant data, for predicting admission to selective universities. The model will consider factors such as gender, ethnicity, legacy status, public-private schooling, test scores, effects of early action, and athletics. Common misconceptions and statistical pitfalls are investigated. The applicant data are not those associated with any specific university.

**STATS 48N. Riding the Data Wave. 3 Units.**

Imagine collecting a bit of your saliva and sending it in to one of the personalized genomics company: for very little money you will get back information about hundreds of thousands of variable sites in your genome. Records of exposure to a variety of chemicals in the areas you have lived are only a few clicks away on the web; as are thousands of studies and informal reports on the effects of different diets, to which you can compare your own. What does this all mean for you? Never before in history humans have recorded so much information about themselves and the world that surrounds them. Nor has this data been so readily available to the lay person. Expression as "data deluge" are used to describe such wealth as well as the loss of proper bearings that it often generates. How to summarize all this information in a useful way? How to boil down millions of numbers to just a meaningful few? How to convey the gist of the story in a picture without misleading oversimplifications? To answer these questions we need to consider the use of the data, appreciate the diversity that they represent, and understand how people instinctively interpret numbers and pictures. During each week, we will consider a different data set to be summarized with a different goal. We will review analysis of similar problems carried out in the past and explore if and how the same tools can be useful today. We will pay attention to contemporary media (newspapers, blogs, etc.) to identify settings similar to the ones we are examining and critique the displays and summaries there documented. Taking an experimental approach, we will evaluate the effectiveness of different data summaries in conveying the desired information by testing them on subsets of the enrolled students.

**STATS 50. Mathematics of Sports. 3 Units.**

The use of mathematics, statistics, and probability in the analysis of sports performance, sports records, and strategy. Topics include mathematical analysis of the physics of sports and the determinations of optimal strategies. New diagnostic statistics and strategies for each sport. Corequisite: STATS 60, 110 or 116.  
Same as: MCS 100

**STATS 60. Introduction to Statistical Methods: Precalculus. 5 Units.**

Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages.  
Same as: PSYCH 10, STATS 160

**STATS 90. Mathematics in the Real World. 3 Units.**

Introduction to non-calculus applications of mathematical ideas and principles in real-world problems. Topics include probability and counting, basic statistical concepts, geometric series. Applications include insurance, gambler's ruin, false positives in disease testing, present value of money, and mortgages. No knowledge of calculus required. Enrollment limited to students who do not have Stanford credit for a high school or college course in calculus or statistics.  
Same as: MATH 16

**STATS 110. Statistical Methods in Engineering and the Physical Sciences. 4-5 Units.**

Introduction to statistics for engineers and physical scientists. Topics: descriptive statistics, probability, interval estimation, tests of hypotheses, nonparametric methods, linear regression, analysis of variance, elementary experimental design. Prerequisite: one year of calculus.

**STATS 116. Theory of Probability. 3-5 Units.**

Probability spaces as models for phenomena with statistical regularity. Discrete spaces (binomial, hypergeometric, Poisson). Continuous spaces (normal, exponential) and densities. Random variables, expectation, independence, conditional probability. Introduction to the laws of large numbers and central limit theorem. Prerequisites: MATH 52 and familiarity with infinite series, or equivalent.

**STATS 141. Biostatistics. 3-5 Units.**

Introductory statistical methods for biological data: describing data (numerical and graphical summaries); introduction to probability; and statistical inference (hypothesis tests and confidence intervals). Intermediate statistical methods: comparing groups (analysis of variance); analyzing associations (linear and logistic regression); and methods for categorical data (contingency tables and odds ratio). Course content integrated with statistical computing in R.  
Same as: BIO 141

**STATS 155. Statistical Methods in Computational Genetics. 3 Units.**

The computational methods necessary for the construction and evaluation of sequence alignments and phylogenies built from molecular data and genetic data such as micro-arrays and data base searches. How to formulate biological problems in an algorithmic decomposed form, and building blocks common to many problems such as Markovian models, multivariate analyses. Some software covered in labs (Python, Biopython, XGobi, MrBayes, HMMER, Probe). Prerequisites: knowledge of probability equivalent to STATS 116, STATS 202 and one class in computing at the CS 106 level. Writing intensive course for undergraduates only. Instructor consent required. (WIM).

**STATS 160. Introduction to Statistical Methods: Precalculus. 5 Units.**

Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages.  
Same as: PSYCH 10, STATS 60

**STATS 167. Probability: Ten Great Ideas About Chance. 4 Units.**

Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.  
Same as: PHIL 166, PHIL 266, STATS 267

**STATS 191. Introduction to Applied Statistics. 3-4 Units.**

Statistical tools for modern data analysis. Topics include regression and prediction, elements of the analysis of variance, bootstrap, and cross-validation. Emphasis is on conceptual rather than theoretical understanding. Applications to social/biological sciences. Student assignments/projects require use of the software package R. Recommended: 60, 110, or 141.

**STATS 195. Introduction to R. 1 Unit.**

This short course runs for the first four weeks of the quarter and is offered in fall and spring. It is recommended for students who want to use R in statistics, science, or engineering courses and for students who want to learn the basics of R programming. The goal of the short course is to familiarize students with R's tools for scientific computing. Lectures will be interactive with a focus on learning by example, and assignments will be application-driven. No prior programming experience is needed. Topics covered include basic data structures, File I/O, graphs, control structures, etc, and some useful packages in R.  
Same as: CME 195

**STATS 196A. Multilevel Modeling Using R. 1 Unit.**

Multilevel data analysis examples using R. Topics include: two-level nested data, growth curve modeling, generalized linear models for counts and categorical data, nonlinear models, three-level analyses. For more information, see course website: <http://rogosateaching.com/stat196/>.  
Same as: EDUC 401D

**STATS 198. Practical Training. 1 Unit.**

For students majoring in Mathematical and Computational Science only. Students obtain employment in a relevant industrial or research activity to enhance their professional experience. Students may enroll in summer quarters only for a total of three times. For corresponding Statistics master's course see Stats 298.

**STATS 199. Independent Study. 1-15 Unit.**

For undergraduates.

**STATS 200. Introduction to Statistical Inference. 3 Units.**

Modern statistical concepts and procedures derived from a mathematical framework. Statistical inference, decision theory; point and interval estimation, tests of hypotheses; Neyman-Pearson theory. Bayesian analysis; maximum likelihood, large sample theory. Prerequisite: 116.

**STATS 201. Design and Analysis of Experiments. 3-5 Units.**

Theory and applications. Factors that affect response. Optimum levels of parameters. How to balance theory and practical design techniques. Prerequisites: basic statistics and probability theory.

**STATS 202. Data Mining and Analysis. 3 Units.**

Data mining is used to discover patterns and relationships in data. Emphasis is on large complex data sets such as those in very large databases or through web mining. Topics: decision trees, association rules, clustering, case based methods, and data visualization. Prereqs: Introductory courses in statistics or probability (e.g., Stats 60), linear algebra (e.g., Math 51), and computer programming (e.g., CS 105).

**STATS 203. Introduction to Regression Models and Analysis of Variance. 3 Units.**

Modeling and interpretation of observational and experimental data using linear and nonlinear regression methods. Model building and selection methods. Multivariable analysis. Fixed and random effects models. Experimental design. Pre- or corequisite: 200.

**STATS 204. Sampling. 3 Units.**

How best to take data and where to sample it. Examples include surveys and sampling from data warehouses. Emphasis is on methods for finite populations. Topics: simple random sampling, stratified sampling, cluster sampling, ratio and regression estimators, two stage sampling.

**STATS 205. Introduction to Nonparametric Statistics. 3 Units.**

Nonparametric analogs of the one- and two-sample  $t$ -tests and analysis of variance; the sign test, median test, Wilcoxon's tests, and the Kruskal-Wallis and Friedman tests, tests of independence. Nonparametric regression and nonparametric density estimation, modern nonparametric techniques, nonparametric confidence interval estimates.

**STATS 206. Applied Multivariate Analysis. 3 Units.**

Introduction to the statistical analysis of several quantitative measurements on each observational unit. Emphasis is on concepts, computer-intensive methods. Examples from economics, education, geology, psychology. Topics: multiple regression, multivariate analysis of variance, principal components, factor analysis, canonical correlations, multidimensional scaling, clustering. Pre- or corequisite: 200.

**STATS 207. Introduction to Time Series Analysis. 3 Units.**

Time series models used in economics and engineering. Trend fitting, autoregressive and moving average models and spectral analysis, Kalman filtering, and state-space models. Seasonality, transformations, and introduction to financial time series. Prerequisite: basic course in Statistics at the level of 200.

**STATS 208. Introduction to the Bootstrap. 3 Units.**

The bootstrap is a computer-based method for assigning measures of accuracy to statistical estimates. By substituting computation in place of mathematical formulas, it permits the statistical analysis of complicated estimators. Topics: nonparametric assessment of standard errors, biases, and confidence intervals; related resampling methods including the jackknife, cross-validation, and permutation tests. Theory and applications. Prerequisite: course in statistics or probability.

**STATS 209. Statistical Methods for Group Comparisons and Causal Inference. 3 Units.**

Critical examination of statistical methods in social science and life sciences applications, especially for cause and effect determinations. Topics: mediating and moderating variables, potential outcomes framework, encouragement designs, multilevel models, matching and propensity score methods, analysis of covariance, instrumental variables, compliance, path analysis and graphical models, group comparisons with longitudinal data. See <http://rogosateaching.com/stat209/>. Prerequisite: intermediate-level statistical methods.

Same as: EDUC 260A, HRP 239

**STATS 211. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.**

Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics.

Same as: CHPR 206, HRP 206, MED 206

**STATS 212. Applied Statistics with SAS. 3 Units.**

Data analysis and implementation of statistical tools in SAS. Topics: reading in and describing data, categorical data, dates and longitudinal data, correlation and regression, nonparametric comparisons, ANOVA, multiple regression, multivariate data analysis, using arrays and macros in SAS. Prerequisite: statistical techniques at the level of STATS 191 or 203; knowledge of SAS not required.

**STATS 213. Introduction to Graphical Models. 3 Units.**

Multivariate Normal Distribution and Inference, Wishart distributions, graph theory, probabilistic Markov models, pairwise and global Markov property, decomposable graph, Markov equivalence, MLE for DAG models and undirected graphical models, Bayesian inference for DAG models and undirected graphical models. Prerequisites: STATS 217, STATS 200 (preferably STATS 300A), MATH 104 or equivalent class in linear algebra. Same as: STATS 313

**STATS 215. Statistical Models in Biology. 3 Units.**

Poisson and renewal processes, Markov chains in discrete and continuous time, branching processes, diffusion. Applications to models of nucleotide evolution, recombination, the Wright-Fisher process, coalescence, genetic mapping, sequence analysis. Theoretical material approximately the same as in STATS 217, but emphasis is on examples drawn from applications in biology, especially genetics. Prerequisite: 116 or equivalent.

**STATS 216. Introduction to Statistical Learning. 3 Units.**

Overview of supervised learning, with a focus on regression and classification methods. Syllabus includes: linear and polynomial regression, logistic regression and linear discriminant analysis; cross-validation and the bootstrap, model selection and regularization methods (ridge and lasso); nonlinear models, splines and generalized additive models; tree-based methods, random forests and boosting; support-vector machines; Some unsupervised learning: principal components and clustering (k-means and hierarchical). Computing is done in R, through tutorial sessions and homework assignments. This math-light course is offered via video segments (MOOC style), and in-class problem solving sessions. Prereqs: Introductory courses in statistics or probability (e.g., Stats 60), linear algebra (e.g., Math 51), and computer programming (e.g., CS 105).

**STATS 216V. Introduction to Statistical Learning. 3 Units.**

Overview of supervised learning, with a focus on regression and classification methods. Syllabus includes: linear and polynomial regression, logistic regression and linear discriminant analysis; cross-validation and the bootstrap, model selection and regularization methods (ridge and lasso); nonlinear models, splines and generalized additive models; tree-based methods, random forests and boosting; support-vector machines; Some unsupervised learning: principal components and clustering (k-means and hierarchical). Computing is done in R, through tutorial sessions and homework assignments. This math-light course is offered remotely only via video segments (MOOC style). TAs will host remote weekly office hours using an online platform such as Google Hangout or BlueJeans. There are four homework assignments, a midterm, and final exam. Prereqs: Introductory courses in statistics or probability (e.g., Stats 60), linear algebra (e.g., Math 51), and computer programming (e.g., CS 105).

**STATS 217. Introduction to Stochastic Processes. 2-3 Units.**

Discrete and continuous time Markov chains, poisson processes, random walks, branching processes, first passage times, recurrence and transience, stationary distributions. Non-Statistics masters students may want to consider taking STATS 215 instead. Prerequisite: STATS 116 or consent of instructor.

**STATS 218. Introduction to Stochastic Processes. 3 Units.**

Renewal theory, Brownian motion, Gaussian processes, second order processes, martingales.

**STATS 219. Stochastic Processes. 3 Units.**

Introduction to measure theory, Lp spaces and Hilbert spaces. Random variables, expectation, conditional expectation, conditional distribution. Uniform integrability, almost sure and Lp convergence. Stochastic processes: definition, stationarity, sample path continuity. Examples: random walk, Markov chains, Gaussian processes, Poisson processes, Martingales. Construction and basic properties of Brownian motion. Prerequisite: STATS 116 or MATH 151 or equivalent. Recommended: MATH 115 or equivalent. Same as: MATH 136

**STATS 221. Introduction to Mathematical Finance. 3-4 Units.**

Interest rate and discounted value. Financial derivatives, hedging, and risk management. Stochastic models of financial markets, introduction to Ito calculus and stochastic differential equations. Black-Scholes pricing of European options. Optimal stopping and American options. Prerequisites: MATH 53, STATS 116, or equivalents.

**STATS 222. Statistical Methods for Longitudinal Research. 2-3 Units.**

Research designs and statistical procedures for time-ordered (repeated-measures) data. The analysis of longitudinal panel data is central to empirical research on learning, development, aging, and the effects of interventions. Topics include: measurement of change, growth curve models, analysis of durations including survival analysis, experimental and non-experimental group comparisons, reciprocal effects, stability. See <http://rogosateaching.com/stat222/>. Prerequisite: intermediate statistical methods. Same as: EDUC 351A

**STATS 229. Machine Learning. 3-4 Units.**

Topics: statistical pattern recognition, linear and non-linear regression, non-parametric methods, exponential family, GLMs, support vector machines, kernel methods, model/feature selection, learning theory, VC dimension, clustering, density estimation, EM, dimensionality reduction, ICA, PCA, reinforcement learning and adaptive control, Markov decision processes, approximate dynamic programming, and policy search. Prerequisites: linear algebra, and basic probability and statistics. Same as: CS 229

**STATS 231. Statistical Learning Theory. 3 Units.**

(Same as STATS 231) How do we formalize what it means for an algorithm to learn from data? This course focuses on developing mathematical tools for answering this question. We will present various common learning algorithms and prove theoretical guarantees about them. Topics include online learning, kernel methods, generalization bounds (uniform convergence), and spectral methods. Prerequisites: A solid background in linear algebra and probability theory, statistics and machine learning (STATS 315A or CS 229). Convex optimization (EE 364a) is helpful but not required. Same as: CS 229T

**STATS 237. Theory of Investment Portfolios and Derivative Securities. 3 Units.**

Asset returns and their volatilities. Markowitz's portfolio theory, capital asset pricing model, multifactor pricing models. Measures of market risk. Financial derivatives and hedging. Black-Scholes pricing of European options. Valuation of American options. Implied volatility and the Greeks. Prerequisite: STATS 116 or equivalent.

**STATS 238. The Future of Finance. 2 Units.**

If you are interested in a career in finance or that touches finance (computational science, economics, public policy, legal, regulatory, corporate, other), this course will give you a useful perspective. We will take on hot topics in the current landscape of the global markets as the world continues to evolve from the financial crisis. We will discuss the sweeping change underway at the policy level by regulators and legislators around the world and how this is changing business models for existing players and attracting new players to finance. The course will include guest-lecturer perspectives on where the greatest opportunities exist for students entering or touching the world of finance today including new and disruptive players in fin tech, crowd financing, block chain, robo advising, algorithmic trading, big data and other areas. New challenges such as cyber and financial warfare threats also will be addressed. While derivatives and other quantitative concepts will be handled in a non-technical way, some knowledge of finance and the capital markets is presumed. Elements used in grading: Class Participation, Attendance, Final Paper. Consent Application: To apply for this course, students must complete and email to the instructors the Consent Application Form, which will be made available on the Public Policy Program's website prior to the beginning of Winter Quarter. See Consent Application Form for submission deadline. (Cross-listed as ECON252/152, PUBLPOL364, STATS238, LAW 564.) Same as: ECON 152, ECON 252, PUBLPOL 364

**STATS 239. Mathematical and Computational Finance Seminar. 1 Unit.**

.

Same as: CME 242

**STATS 239A. Workshop in Quantitative Finance. 1 Unit.**

Topics of current interest.

**STATS 239B. Workshop in Quantitative Finance. 1 Unit.**

Topics of current interest. May be repeated for credit. Same as: CME 239B

**STATS 240. Statistical Methods in Finance. 3-4 Units.**

(SCPD students register for 240P.) Regression analysis and applications to investment models. Principal components and multivariate analysis. Likelihood inference and Bayesian methods. Financial time series. Estimation and modeling of volatilities. Statistical methods for portfolio management. Prerequisite: STATS 200 or equivalent.

**STATS 240P. Statistical Methods in Finance. 3 Units.**

For SCPD students; see 240.

**STATS 241. Data-driven Financial and Risk Econometrics. 3-4 Units.** (SCPD students register for 241P) Substantive and empirical modeling approaches in options, interest rate, and credit markets. Nonlinear least squares, logistic regression and generalized linear models. Nonparametric regression and model selection. Multivariate time series modeling and forecasting. Vector autoregressive models and cointegration. Risk measures, models and analytics. Prerequisite or corequisite: STATS 240 or equivalent.

**STATS 241P. Data-driven Financial and Risk Econometrics. 3 Units.** For SCPD students; see STATS241.

**STATS 242. Algorithmic Trading and Quantitative Strategies. 3 Units.** An introduction to financial trading strategies based on methods of statistical arbitrage that can be automated. Methodologies related to high frequency data and stylized facts on asset returns; models of order book dynamics and order placement, dynamic trade planning with feedback; momentum strategies, pairs trading. Emphasis on developing and implementing models that reflect the market and behavioral patterns. Prerequisite: STATS 240 or equivalent.

**STATS 243. Financial Models and Statistical Methods in Active Risk Management. 3 Units.**

Market risk and credit risk, credit markets. Back testing, stress testing and Monte Carlo methods. Logistic regression, generalized linear models and generalized mixed models. Loan prepayment and default as competing risks. Survival and hazard functions, correlated default intensities, frailty and contagion. Risk surveillance, early warning and adaptive control methodologies. Banking and bank regulation, asset and liability management. Prerequisite: STATS 240 or equivalent. Same as: CME 243

**STATS 244. Quantitative Trading: Algorithms, Data, and Optimization. 2-4 Units.**

Statistical trading rules and performances evaluation. Active portfolio management and dynamic investment strategies. Data analytics and models of transactions data. Limit order book dynamics in electronic exchanges. Algorithmic trading, informatics, and optimal execution. Market making and inventory control. Risk management and regulatory issues. Prerequisites: STATS 240 or equivalent.

**STATS 245. Data, Models, and Decision Analytics. 3 Units.**

Statistical models and decision theory. Online A/B testing, comparative effective studies of medical treatments. Introduction to recommender systems in online services, personalized medicine and marketing. Prerequisite or corequisite: STATS 202, or CS 229, or CME 250, or equivalent.

**STATS 250. Mathematical Finance. 3 Units.**

Stochastic models of financial markets. Forward and futures contracts. European options and equivalent martingale measures. Hedging strategies and management of risk. Term structure models and interest rate derivatives. Optimal stopping and American options. Corequisites: MATH 236 and 227 or equivalent. Same as: MATH 238

**STATS 253. Analysis of Spatial and Temporal Data. 3 Units.**

A unified treatment of methods for spatial data, time series, and other correlated data from the perspective of regression with correlated errors. Two main paradigms for dealing with autocorrelation: covariance modeling (kriging) and autoregressive processes. Bayesian methods. Prerequisites: applied linear algebra (MATH 103 or equivalent), statistical estimation (STATS 200 or CS 229), and linear regression (STATS 203 or equivalent).

**STATS 260A. Workshop in Biostatistics. 1-2 Unit.**

Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student. Same as: HRP 260A

**STATS 260B. Workshop in Biostatistics. 1-2 Unit.**

Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student. Same as: HRP 260B

**STATS 260C. Workshop in Biostatistics. 1-2 Unit.**

Applications of statistical techniques to current problems in medical science. To receive credit for one or two units, a student must attend every workshop. To receive two units, in addition to attending every workshop, the student is required to write an acceptable one page summary of two of the workshops, with choices made by the student. Same as: HRP 260C

**STATS 261. Intermediate Biostatistics: Analysis of Discrete Data. 3 Units.**

Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference. Same as: BIOMEDIN 233, HRP 261

**STATS 262. Intermediate Biostatistics: Regression, Prediction, Survival Analysis. 3 Units.**

Methods for analyzing longitudinal data. Topics include Kaplan-Meier methods, Cox regression, hazard ratios, time-dependent variables, longitudinal data structures, profile plots, missing data, modeling change, MANOVA, repeated-measures ANOVA, GEE, and mixed models. Emphasis is on practical applications. Prerequisites: basic ANOVA and linear regression. Same as: HRP 262

**STATS 263. Design of Experiments. 3 Units.**

Experiments vs observation. Confounding. Randomization. ANOVA. Blocking. Latin squares. Factorials and fractional factorials. Split plot. Response surfaces. Mixture designs. Optimal design. Central composite. Box-Behnken. Taguchi methods. Computer experiments and space filling designs. Prerequisites: probability at STATS 116 level or higher, and at least one course in linear models. Same as: STATS 363

**STATS 266. Advanced Statistical Methods for Observational Studies. 2-3 Units.**

Design principles and statistical methods for observational studies. Topics include: matching methods, sensitivity analysis, instrumental variables, graphical models, marginal structural models. 3 unit registration requires a small project and presentation. Computing is in R. Pre-requisites: HRP 261 and 262 or STAT 209 (HRP 239), or equivalent. See <http://rogosateaching.com/somgen290/>. Same as: CHPR 290, EDUC 260B

**STATS 267. Probability: Ten Great Ideas About Chance. 4 Units.**

Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116. Same as: PHIL 166, PHIL 266, STATS 167

**STATS 270. Bayesian Statistics I. 3 Units.**

This is the first of a two course sequence on modern Bayesian statistics. Topics covered include: real world examples of large scale Bayesian analysis; basic tools (models, conjugate priors and their mixtures); Bayesian estimates, tests and credible intervals; foundations (axioms, exchangeability, likelihood principle); Bayesian computations (Gibbs sampler, data augmentation, etc.); prior specification. Prerequisites: statistics and probability at the level of Stats300A, Stats305, and Stats310.  
Same as: STATS 370

**STATS 271. Bayesian Statistics II. 3 Units.**

This is the second of a two course sequence on modern Bayesian statistics. Topics covered include: Asymptotic properties of Bayesian procedures and consistency (Doobs theorem, frequentists consistency, counter examples); connections between Bayesian methods and classical methods (the complete class theorem); generalization of exchangeability; general versions of the Bayes theorem in the undominated case; non parametric Bayesian methods (Dirichelet and Polya tree priors). Throughout general theory will be illustrated with classical examples. Prerequisites: Stats 270/370.  
Same as: STATS 371

**STATS 290. Paradigms for Computing with Data. 3 Units.**

Advanced programming and computing techniques to support projects in data analysis and related research. For Statistics graduate students and others whose research involves data analysis and development of associated computational software. Prerequisites: Programming experience including familiarity with R; computing at least at the level of CS 106; statistics at the level of STATS 110 or 141.

**STATS 298. Industrial Research for Statisticians. 1 Unit.**

Masters-level research as in 299, but with the approval and supervision of a faculty adviser, it must be conducted for an off-campus employer. Students must submit a written final report upon completion of the internship in order to receive credit. Repeatable for credit. Prerequisite: enrollment in Statistics M.S. program.

**STATS 299. Independent Study. 1-10 Unit.**

For Statistics M.S. students only. Reading or research program under the supervision of a Statistics faculty member. May be repeated for credit.

**STATS 300. Advanced Topics in Statistics: Stochastic Block Models and Latent Variable Models. 2-3 Units.**

Main topic: statistical inference of latent variable models (including SBM), using EM-like algorithms. The critical step is the determination of the conditional distribution of the latent variables given the observed data, which is doable for mixture models and hidden Markov models. For more complex models such as the stochastic block model (SBM: popular in sociology, physics, biology, etc.) variational approximations can be used to derive a generalized version of EM algorithm. This approach can be extended to Bayesian inference (variational Bayes EM algorithm). If time permits, change-point detection models will be introduced. Topics will be illustrated with examples from genomics.

**STATS 300A. Theory of Statistics. 2-3 Units.**

Finite sample optimality of statistical procedures; Decision theory: loss, risk, admissibility; Principles of data reduction: sufficiency, ancillarity, completeness; Statistical models: exponential families, group families, nonparametric families; Point estimation: optimal unbiased and equivariant estimation, Bayes estimation, minimax estimation; Hypothesis testing and confidence intervals: uniformly most powerful tests, uniformly most accurate confidence intervals, optimal unbiased and invariant tests. Prerequisites: Real analysis, introductory probability (at the level of STATS 116), and introductory statistics.

**STATS 300B. Theory of Statistics. 2-4 Units.**

Elementary decision theory; loss and risk functions, Bayes estimation; UMVU estimator, minimax estimators, shrinkage estimators. Hypothesis testing and confidence intervals: Neyman-Pearson theory; UMP tests and uniformly most accurate confidence intervals; use of unbiasedness and invariance to eliminate nuisance parameters. Large sample theory: basic convergence concepts; robustness; efficiency; contiguity, locally asymptotically normal experiments; convolution theorem; asymptotically UMP and maximin tests. Asymptotic theory of likelihood ratio and score tests. Rank permutation and randomization tests; jackknife, bootstrap, subsampling and other resampling methods. Further topics: sequential analysis, optimal experimental design, empirical processes with applications to statistics, Edgeworth expansions, density estimation, time series.

**STATS 300C. Theory of Statistics. 2-4 Units.**

Decision theory formulation of statistical problems. Minimax, admissible procedures. Complete class theorems ("all" minimax or admissible procedures are "Bayes"), Bayes procedures, conjugate priors, hierarchical models. Bayesian non parametrics: diaichlet, tail free, polya trees, bayesian sieves. Inconsistency of bayes rules.

**STATS 302. Qualifying Exams Workshop. 3 Units.**

Prepares Statistics Ph.D. students for the qualifying exams by reviewing relevant course topics and problem solving strategies.

**STATS 303. PhD First Year Student Workshop. 1 Unit.**

For Statistics First Year PhD students only. Discussion of relevant topics in first year student courses, consultation with PhD advisor.

**STATS 305. Introduction to Statistical Modeling. 3 Units.**

Review of univariate regression. Multiple regression. Geometry, subspaces, orthogonality, projections, normal equations, rank deficiency, estimable functions and Gauss-Markov theorem. Computation via QR decomposition, Gramm-Schmidt orthogonalization and the SVD. Interpreting coefficients, collinearity, graphical displays. Fits and the Hat matrix, leverage & influence, diagnostics, weighted least squares and resistance. Model selection, Cp/Aic and crossvalidation, stepwise, lasso. Basis expansions, splines. Multivariate normal distribution theory. ANOVA: Sources of measurements, fixed and random effects, randomization. Emphasis on problem sets involving substantive computations with data sets. Prerequisites: consent of instructor, 116, 200, applied statistics course, CS 106A, MATH 114.

**STATS 306A. Methods for Applied Statistics. 3 Units.**

Regression modeling extended to categorical data. Logistic regression. Loglinear models. Generalized linear models. Discriminant analysis. Categorical data models from information retrieval and Internet modeling. Prerequisite: 305 or equivalent.

**STATS 306B. Methods for Applied Statistics: Empirical Bayes Methods. 2-3 Units.**

Empirical Bayes procedures for estimation, testing, and prediction, especially as applied to large-scale problems.

**STATS 310A. Theory of Probability. 2-4 Units.**

Mathematical tools: sigma algebras, measure theory, connections between coin tossing and Lebesgue measure, basic convergence theorems. Probability: independence, Borel-Cantelli lemmas, almost sure and  $L_p$  convergence, weak and strong laws of large numbers. Large deviations. Weak convergence; central limit theorems; Poisson convergence; Stein's method. Prerequisites: 116, MATH 171.  
Same as: MATH 230A

**STATS 310B. Theory of Probability. 2-3 Units.**

Conditional expectations, discrete time martingales, stopping times, uniform integrability, applications to 0-1 laws, Radon-Nikodym Theorem, ruin problems, etc. Other topics as time allows selected from (i) local limit theorems, (ii) renewal theory, (iii) discrete time Markov chains, (iv) random walk theory, (v) ergodic theory. Prerequisite: 310A or MATH 230A.  
Same as: MATH 230B

**STATS 310C. Theory of Probability. 2-4 Units.**

Continuous time stochastic processes: martingales, Brownian motion, stationary independent increments, Markov jump processes and Gaussian processes. Invariance principle, random walks, LIL and functional CLT. Markov and strong Markov property. Infinitely divisible laws. Some ergodic theory. Prerequisite: 310B or MATH 230B. Same as: MATH 230C

**STATS 311. Information Theory and Statistics. 3 Units.**

Information theoretic techniques in probability and statistics. Fano, Assouad, and Le Cam methods for optimality guarantees in estimation. Large deviations and concentration inequalities (Sanov's theorem, hypothesis testing, entropy method, concentration of measure). Approximation of (Bayes) optimal procedures, surrogate risks, f-divergences. Penalized estimators and minimum description length. Online game playing, gambling, no-regret learning. Prerequisites: EE 376A (or equivalent) or STATS 300A. Same as: EE 377

**STATS 312. Statistical Methods in Neuroscience. 3 Units.**

The goal is to discuss statistical methods for neuroscience in their natural habitat: the research questions, measurement technologies and experiment designs used in modern neuroscience. We will emphasize both the choice and quality of the methods, as well as the reporting, interpretation and visualization of results. Likely topics include preprocessing and signal extraction for single-neuron and neuroimaging technologies, statistical models for single response, encoding and decoding models, multiple-responses and parametric maps, and testing. Participation includes analyzing methods and real data, discussing papers in class, and a final project. Requirements: we will assume familiarity with linear models, likelihoods etc. Students who have not taken graduate level statistics courses are required to contact the instructor. Background in neuroscience is not assumed.

**STATS 313. Introduction to Graphical Models. 3 Units.**

Multivariate Normal Distribution and Inference, Wishart distributions, graph theory, probabilistic Markov models, pairwise and global Markov property, decomposable graph, Markov equivalence, MLE for DAG models and undirected graphical models, Bayesian inference for DAG models and undirected graphical models. Prerequisites: STATS 217, STATS 200 (preferably STATS 300A), MATH 104 or equivalent class in linear algebra. Same as: STATS 213

**STATS 314A. Advanced Statistical Theory. 3 Units.**

Covers a range of topics, including: empirical processes, asymptotic efficiency, uniform convergence of measures, contiguity, resampling methods, Edgeworth expansions.

**STATS 314B. Topics in Minimax Inference of Nonparametric Functionals. 3 Units.**

Topics in the estimation of various functionals of underlying distribution for nonparametric problems. Development of ideas of higher order influence functions that extend the theory of classical first order semiparametric theory. Topics on adaptive estimation and adaptive confidence sets construction. Understanding results from wavelet theory and higher order U-statistics.

**STATS 315A. Modern Applied Statistics: Learning. 2-3 Units.**

Overview of supervised learning. Linear regression and related methods. Model selection, least angle regression and the lasso, stepwise methods. Classification. Linear discriminant analysis, logistic regression, and support vector machines (SVMs). Basis expansions, splines and regularization. Kernel methods. Generalized additive models. Kernel smoothing. Gaussian mixtures and the EM algorithm. Model assessment and selection: crossvalidation and the bootstrap. Pathwise coordinate descent. Sparse graphical models. Prerequisites: STATS 305, 306A,B or consent of instructor.

**STATS 315B. Modern Applied Statistics: Data Mining. 2-3 Units.**

Two-part sequence. New techniques for predictive and descriptive learning using ideas that bridge gaps among statistics, computer science, and artificial intelligence. Emphasis is on statistical aspects of their application and integration with more standard statistical methodology. Predictive learning refers to estimating models from data with the goal of predicting future outcomes, in particular, regression and classification models. Descriptive learning is used to discover general patterns and relationships in data without a predictive goal, viewed from a statistical perspective as computer automated exploratory analysis of large complex data sets.

**STATS 316. Stochastic Processes on Graphs. 1-3 Unit.**

Local weak convergence, Gibbs measures on trees, cavity method, and replica symmetry breaking. Examples include random k-satisfiability, the assignment problem, spin glasses, and neural networks. Prerequisite: 310A or equivalent.

**STATS 317. Stochastic Processes. 3 Units.**

Semimartingales, stochastic integration, Ito's formula, Girsanov's theorem. Gaussian and related processes. Stationary/isotropic processes. Integral geometry and geometric probability. Maxima of random fields and applications to spatial statistics and imaging.

**STATS 318. Modern Markov Chains. 3 Units.**

Tools for understanding Markov chains as they arise in applications. Random walk on graphs, reversible Markov chains, Metropolis algorithm, Gibbs sampler, hybrid Monte Carlo, auxiliary variables, hit and run, Swedson-Wong algorithms, geometric theory, Poincare-Nash-Cheeger-Log-Sobolev inequalities. Comparison techniques, coupling, stationary times, Harris recurrence, central limit theorems, and large deviations.

**STATS 319. Literature of Statistics. 1-3 Unit.**

Literature study of topics in statistics and probability culminating in oral and written reports. May be repeated for credit.

**STATS 320. Heterogeneous Data with Kernels. 3 Units.**

Mathematical and computational methods necessary to understanding analysis of heterogeneous data using generalized inner products and Kernels. For areas that need to integrate data from various sources, biology, environmental and chemical engineering, molecular biology, bioinformatics. Topics: Distances, inner products and duality. Multivariate projections. Complex heterogeneous data structures (networks, trees, categorical as well as multivariate continuous data). Canonical correlation analysis, canonical correspondence analysis. Kernel methods in Statistics. Representer theorem. Kernels on graphs. Kernel versions of standard statistical procedures. Data cubes and tensor methods.

**STATS 321. Modern Applied Statistics: Transposable Data. 2-3 Units.**

Topics: clustering, biclustering, and spectral clustering. Data analysis using the singular value decomposition, nonnegative decomposition, and generalizations. Plaid model, aspect model, and additive clustering. Correspondence analysis, Rasch model, and independent component analysis. Page rank, hubs, and authorities. Probabilistic latent semantic indexing. Recommender systems. Applications to genomics and information retrieval. Prerequisites: 315A,B, 305/306A,B, or consent of instructor.

**STATS 322. Function Estimation in White Noise. 2-3 Units.**

Gaussian white noise model sequence space form. Hyperrectangles, quadratic convexity, and Pinsker's theorem. Minimax estimation on  $L_p$  balls and Besov spaces. Role of wavelets and unconditional bases. Linear and threshold estimators. Oracle inequalities. Optimal recovery and universal thresholding. Stein's unbiased risk estimator and threshold choice. Complexity penalized model selection. Connecting fast wavelet algorithms and theory. Beyond orthogonal bases.

**STATS 324. Multivariate Analysis. 2-3 Units.**

Classic multivariate statistics: properties of the multivariate normal distribution, determinants, volumes, projections, matrix square roots, the singular value decomposition; Wishart distributions, Hotelling's T-square; principal components, canonical correlations, Fisher's discriminant, the Cauchy projection formula.

**STATS 325. Multivariate Analysis and Random Matrices in Statistics. 2-3 Units.**

Topics on Multivariate Analysis and Random Matrices in Statistics (full description TBA).

**STATS 329. Large-Scale Simultaneous Inference. 1-3 Unit.**

Estimation, testing, and prediction for microarray-like data. Modern scientific technologies, typified by microarrays and imaging devices, produce inference problems with thousands of parallel cases to consider simultaneously. Topics: empirical Bayes techniques, James-Stein estimation, large-scale simultaneous testing, false discovery rates, local fdr, proper choice of null hypothesis (theoretical, permutation, empirical nulls), power, effects of correlation on tests and estimation accuracy, prediction methods, related sets of cases ("enrichment"), effect size estimation. Theory and methods illustrated on a variety of large-scale data sets.

**STATS 330. An Introduction to Compressed Sensing. 3 Units.**

Compressed sensing is a new data acquisition theory asserting that one can design nonadaptive sampling techniques that condense the information in a compressible signal into a small amount of data. This revelation may change the way engineers think about signal acquisition. Course covers fundamental theoretical ideas, numerical methods in large-scale convex optimization, hardware implementations, connections with statistical estimation in high dimensions, and extensions such as recovery of data matrices from few entries (famous Netflix Prize). Same as: CME 362

**STATS 331. Survival Analysis. 2 Units.**

The course introduces basic concepts, theoretical basis and statistical methods associated with survival data. Topics include censoring, Kaplan-Meier estimation, logrank test, proportional hazards regression, accelerated failure time model, multivariate failure time analysis and competing risks. The traditional counting process/martingale methods as well as modern empirical process methods will be covered. Prerequisite: Understanding of basic probability theory and statistical inference methods.

**STATS 333. Modern Spectral Analysis. 3 Units.**

Traditional spectral analysis encompassed Fourier methods and their elaborations, under the assumption of a simple superposition of sinusoids, independent of time. This enables development of efficient and effective computational schemes, such as the FFT. Since many systems change in time, it becomes of interest to generalize classical spectral analysis to the time-varying setting. In addition, classical methods suffer from resolution limits which we hope to surpass. In this topics course, we follow two threads. On the one hand, we consider the estimation of instantaneous frequencies and decomposition of source signals, which may be time-varying. The thread begins with the empirical mode decomposition (EMD) for non-stationary signal decomposition into intrinsic mode functions (IMFs), introduced by N. Huang et al [1], together with its machinery of the sifting process and computation of the Hilbert spectrum, resulting in the so-called adaptive harmonic model (AHM). Next, this thread considers the wavelet synchrosqueezing transform (WSST) proposed by Daubechies et al [2], which attempts to estimate instantaneous frequencies (IFs), via the frequency re-assignment (FRA) rule, that facilitates non-stationary signal decomposition. In reference [3], a real-time method is proposed for computing the FRA rule; and in reference [4], the exact number of AHM components is determined with more precise estimation of the IFs, for more accurate extraction of the signal components and polynomial-like trend. In another thread, recent developments in optimization have been applied to obtain time-varying spectra or very high-resolution spectra; in particular, references [5]-[8] give examples of recent results where convex estimation is applied to obtain new and more highly resolved spectral estimates, some with time-varying structure.

**STATS 338. Topics in Biostatistics. 3 Units.**

Data monitoring and interim analysis of clinical trials. Design of Phase I, II, III trials. Survival analysis. Longitudinal data analysis.

**STATS 341. Applied Multivariate Statistics. 3 Units.**

Theory, computational aspects, and practice of a variety of important multivariate statistical tools for data analysis. Topics include classical multivariate Gaussian and undirected graphical models, graphical displays. PCA, SVD and generalizations including canonical correlation analysis, linear discriminant analysis, correspondence analysis, with focus on recent variants. Factor analysis and independent component analysis. Multidimensional scaling and its variants (e.g. Isomap, spectral clustering). Students are expected to program in R. Prerequisite: STATS 305 or equivalent.

**STATS 344. Introduction to Statistical Genetics. 3 Units.**

Statistical methods for analyzing human genetics studies of Mendelian disorders and common complex traits. Probable topics include: principles of population genetics; epidemiologic designs; familial aggregation; segregation analysis; linkage analysis; linkage-disequilibrium-based association mapping approaches; and genome-wide analysis based on high-throughput genotyping platforms. Prerequisite: STATS 116 or equivalent or consent of instructor.

Same as: GENE 244

**STATS 345. Statistical and Machine Learning Methods for Genomics. 3 Units.**

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets.

Same as: BIO 268, BIOMEDIN 245, CS 373, GENE 245

**STATS 350. Topics in Probability Theory: Probabilistic Concepts in Statistical Physics and Information Theory. 1-3 Unit.**

Concentration of measure techniques. Mean field models for disordered systems: infinite size limit, computing the free energy, ultrametricity, dynamics. Interpolation techniques and infinite size limit in information theory and coding. May be repeated once for credit. Prerequisite: 310A or equivalent.

**STATS 351. Random Walks, Networks and Environment. 3 Units.**

Selected material about probability on trees and networks, random walk in random and non-random environments, percolation and related interacting particle systems. Prerequisite: Exposure to measure theoretic probability and to stochastic processes.

**STATS 351A. An Introduction to Random Matrix Theory. 3 Units.**

Patterns in the eigenvalue distribution of typical large matrices, which also show up in physics (energy distribution in scattering experiments), combinatorics (length of longest increasing subsequence), first passage percolation and number theory (zeros of the zeta function). Classical compact ensembles (random orthogonal matrices). The tools of determinantal point processes.

Same as: MATH 231A

**STATS 355. Observational Studies. 2-3 Units.**

This course will cover statistical methods for the design and analysis of observational studies. Topics for the course will include the potential outcomes framework for causal inference; randomized experiments; methods for controlling for observed confounders in observational studies; sensitivity analysis for hidden bias; instrumental variables; tests of hidden bias; coherence; and design of observational studies.

Same as: HRP 255

**STATS 360. Advanced Statistical Methods for Earth System Analysis. 3 Units.**

Introduction for graduate students to important issues in data analysis relevant to earth system studies. Emphasis on methodology, concepts and implementation (in R), rather than formal proofs. Likely topics include the bootstrap, non-parametric methods, regression in the presence of spatial and temporal correlation, extreme value analysis, time-series analysis, high-dimensional regressions and change-point models. Topics subject to change each year. Prerequisites: STATS 110 or equivalent.

Same as: ESS 260

**STATS 362. Topic: Monte Carlo. 3 Units.**

Random numbers and vectors: inversion, acceptance-rejection, copulas. Variance reduction: antithetics, stratification, control variates, importance sampling. MCMC: Markov chains, detailed balance, Metropolis-Hastings, random walk Metropolis, independence sampler, Gibbs sampling, slice sampler, hybrids of Gibbs and Metropolis, tempering. Sequential Monte Carlo. Quasi-Monte Carlo. Randomized quasi-Monte Carlo. Examples, problems and motivation from Bayesian statistics, machine learning, computational finance and graphics. May be repeated for credit.

**STATS 363. Design of Experiments. 3 Units.**

Experiments vs observation. Confounding. Randomization. ANOVA. Blocking. Latin squares. Factorials and fractional factorials. Split plot. Response surfaces. Mixture designs. Optimal design. Central composite. Box-Behnken. Taguchi methods. Computer experiments and space filling designs. Prerequisites: probability at STATS 116 level or higher, and at least one course in linear models.

Same as: STATS 263

**STATS 366. Modern Statistics for Modern Biology. 3 Units.**

Application based course in nonparametric statistics. Modern toolbox of visualization and statistical methods for the analysis of data, examples drawn from immunology, microbiology, cancer research and ecology. Methods covered include multivariate methods (PCA and extensions), sparse representations (trees, networks, contingency tables) as well as nonparametric testing (Bootstrap, permutation and Monte Carlo methods). Hands on, use R and cover many Bioconductor packages. Prerequisite: Minimal familiarity with computers. Instructor consent. Location: Li Ka Shing Center, room 120.

Same as: BIOS 221

**STATS 367. Statistical Models in Genetics. 3 Units.**

Statistical problems in association and linkage analysis of qualitative and quantitative traits in human and experimental populations; sequence alignment and analysis; population genetics/evolution (Wright-Fisher model, Kingman coalescent, models of nucleotide substitution); related computational algorithms. Prerequisites: knowledge of probability through elementary stochastic processes and statistics through likelihood theory.

**STATS 370. Bayesian Statistics I. 3 Units.**

This is the first of a two course sequence on modern Bayesian statistics.

Topics covered include: real world examples of large scale Bayesian analysis; basic tools (models, conjugate priors and their mixtures); Bayesian estimates, tests and credible intervals; foundations (axioms, exchangeability, likelihood principle); Bayesian computations (Gibbs sampler, data augmentation, etc.); prior specification. Prerequisites: statistics and probability at the level of Stats300A, Stats305, and Stats310.

Same as: STATS 270

**STATS 371. Bayesian Statistics II. 3 Units.**

This is the second of a two course sequence on modern Bayesian statistics. Topics covered include: Asymptotic properties of Bayesian procedures and consistency (Doob's theorem, frequentists consistency, counter examples); connections between Bayesian methods and classical methods (the complete class theorem); generalization of exchangeability; general versions of the Bayes theorem in the undominated case; non parametric Bayesian methods (Dirichlet and Polya tree priors). Throughout general theory will be illustrated with classical examples. Prerequisites: Stats 270/370.

Same as: STATS 271

**STATS 374. Large Deviations Theory. 3 Units.**

Combinatorial estimates and the method of types. Large deviation probabilities for partial sums and for empirical distributions, Cramer's and Sanov's theorems and their Markov extensions. Applications in statistics, information theory, and statistical mechanics. Prerequisite: MATH 230A or STATS 310. Offered every 2-3 years.

Same as: MATH 234

**STATS 375. Inference in Graphical Models. 3 Units.**

Graphical models as a unifying framework for describing the statistical relationships between large sets of variables; computing the marginal distribution of one or a few such variables. Focus is on sparse graphical structures, low-complexity algorithms, and their analysis. Topics include: variational inference; message passing algorithms; belief propagation; generalized belief propagation; survey propagation. Analysis techniques: correlation decay; distributional recursions. Applications from engineering, computer science, and statistics. Prerequisite: EE 278, STATS 116, or CS 228. Recommended: EE 376A or STATS 217.

**STATS 376A. Information Theory. 3 Units.**

The fundamental ideas of information theory. Entropy and intrinsic randomness. Data compression to the entropy limit. Huffman coding. Arithmetic coding. Channel capacity, the communication limit. Gaussian channels. Kolmogorov complexity. Asymptotic equipartition property. Information theory and Kelly gambling. Applications to communication and data compression. Prerequisite: EE178 or STATS 116, or equivalent. Same as: EE 376A

**STATS 376B. Network Information Theory. 3 Units.**

Network information theory deals with the fundamental limits on information flow in networks and the optimal coding schemes that achieve these limits. It aims to extend Shannon's point-to-point information theory and the Ford-Fulkerson max-flow min-cut theorem to networks with multiple sources and destinations. The course presents the basic results and tools in the field in a simple and unified manner. Topics covered include: multiple access channels, broadcast channels, interference channels, channels with state, distributed source coding, multiple description coding, network coding, relay channels, interactive communication, and noisy network coding. Prerequisites: EE376A. Same as: EE 376B

**STATS 390. Consulting Workshop. 1-3 Unit.**

Skills required of practicing statistical consultants, including exposure to statistical applications. Students participate as consultants in the department's drop-in consulting service, analyze client data, and prepare formal written reports. Seminar provides supervised experience in short term consulting. May be repeated for credit. Prerequisites: course work in applied statistics or data analysis, and consent of instructor.

**STATS 396. Research Workshop in Computational Biology. 1-2 Unit.**

Applications of Computational Statistics and Data Mining to Biological Data. Attendance mandatory. Instructor approval required.

**STATS 397. PhD Oral Exam Workshop. 1 Unit.**

For Statistics PhD students defending their dissertation.

**STATS 398. Industrial Research for Statisticians. 1 Unit.**

Doctoral research as in 298, but must be conducted for an off-campus employer. Final report required. May be repeated for credit. Prerequisite: Statistics Ph.D. candidate.

**STATS 399. Research. 1-10 Unit.**

Research work as distinguished from independent study of nonresearch character listed in 199. May be repeated for credit.

**STATS 801. TGR Project. 0 Units.**

.

**STATS 802. TGR Dissertation. 0 Units.**

.

**Stem Cell Biology and Regenerative Medicine Courses****STEMREM 83Q. The Stem Cell: Biological, Social, and Practical Aspects of Stem Cell Research. 3 Units.**

Preference to sophomores. Ethical, legal, social, and economic dimensions of stem cell research such as the discovery of human embryonic stem cells and the international landscape of public policy. How stem cells work, their role in the upkeep of the human body, and current and future uses in medicine. Issues at the intersection of science and society such as human-animal hybrids, notions of justice in intellectual property law, distribution of health care, and the major ethical frameworks defining the debate. Prerequisite: AP Biology.

**STEMREM 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**STEMREM 200. Stem Cell Intensive. 1 Unit.**

Open to first year Stem Cell Biology and Regenerative Medicine graduate students or consent of Instructor. Hands-on, five-day immersion to learn basic methods of tissue culture, mouse embryo fibroblast (MEF) preparation, embryonic stem and induced pluripotent stem (ES/iPS) cell culture, differentiation, DNA isolation, polymerase chain reaction (PCR), sequencing, and basic microscopy.

**STEMREM 201A. Stem Cells and Human Development: From Embryo to Cell Lineage Determination. 1-2 Unit.**

For graduate, undergraduate and medical students. Offers didactic lectures focused on human developmental biology, derivation of pluripotent stem cells, cell sorting, genomics, bioinformatics, imaging and other related topics. Provides the educational foundation and social group building within each first-year class of STEMREM graduate students. Students enrolling for 1 unit attend all lectures; students enrolling for 2 units attend all lectures and discussion sections.

**STEMREM 201B. Stem Cells and Human Development Laboratory. 3 Units.**

Limited enrollment restricted to first year majors. Lab fee may apply. Focus is on human development from embryo to cell lineage determination. Emphasis is on human developmental biology, derivation of pluripotent stem cells, cell sorting, genomics, bioinformatics, imaging and other related topics. Comprehensive laboratory-based instruction focused on human developmental biology, derivation of pluripotent stem cells, cell sorting, genomics, bioinformatics, imaging and other related topics. Provides hands-on skills development within each first-year class of STEMREM graduate students. Must be taken concurrently with STEMREM 201A.

**STEMREM 202. Stem Cells and Translational Medicine. 3-5 Units.**

For graduate, undergraduate and medical students. Focus is on fundamentals of stem cell biology and regenerative Medicine. Topics include exploration of the well-studied system of hematopoiesis, molecular pathways of pluripotency and tissue-specific stem cells and ends with coverage of aging as related to stem cell dynamics. Features include lectures on the basic science of each topic, followed by clinical applications in order to show the mechanisms and methods to translate findings to therapeutic applications, culminated with construction of a research proposal or business plan in an area of interest, to be further explored in STEMREM 203. Students enrolling for 3 units submit four of seven problem-sets; students enrolling for 4 units submit five of seven problem-sets; students enrolling for 5 units turn in seven of seven problem-sets.

**STEMREM 203. Stem Cells Immersion: Applications in Medicine, Business and Law. 3 Units.**

For graduate and medical students. Provides the clinical, pharmaceutical, biotechnology or business immersion necessary to allow insight into the world of medicine from multiple vantage points, setting the stage for students to translate research successfully beyond the academic sphere and gain the necessary knowledge to move their research proposal/business plan forward (from STEMREM 202). Prerequisites: STEMREM 201A and STEMREM 202.

**STEMREM 250. Regenerative Medicine Seminar Series. 1 Unit.**

For graduate, medical and undergraduate students. A forum for Stanford researchers to meet, hear about what is going on in Stem Cell Biology and Regenerative Medicine at Stanford, and spark collaborations. Topics include all areas of regenerative medicine, broadly defined, ranging from fundamental biological principles and basic science advances to novel applications in biotechnology, stem cell biology, and human disease.

**STEMREM 280. Stem Cell Biology and Regenerative Medicine Journal Club. 2 Units.**

For graduate, medical and undergraduate students. Review of current literature in both basic and translational medicine as it relates to stem cell biology and/or regenerative medicine in a seminar format consisting of both faculty and student presentations. Includes discussions led by faculty experts in the area covered for that particular session. Topics may range widely, depending on the available literature and students' interests. Students are expected to review the chosen article before class presentations and participate in discussion. Discussion includes methodology and statistical analysis of each study and its relevance to stem cell biology and/or regenerative medicine.

**STEMREM 281. Landmark Papers in Immunology and Stem Cell Biology: How to Pose Experimental Questions. 2 Units.**

Focus on deciphering article titles to accurately assess the biological question being asked, and what experiment design might best approach the question, encouraging students to become experimentalists, not memorizers, of information presented by authors. Topics include implications of paper questions for the field, deciphering paper titles, hypothesizing research questions.

**STEMREM 299. Directed Reading in Stem Cell Biology and Regenerative Medicine. 1-18 Unit.**

Prerequisite: consent of instructor.

**STEMREM 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**STEMREM 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**STEMREM 801. TGR Project. 0 Units.**

.

**STEMREM 802. TGR Dissertation. 0 Units.**

.

**Strategic Management Courses****STRAMGT 110Q. Making Sense of Strategy. 3 Units.**

Get the strategy right, and the chance for success is great. Nowhere is this more evident than in today's world of major challenges. Strategy is at the heart of problem solving and achieving objectives, yet few people can define strategy, much less understand how to conceptualize, design, and execute effective strategies that yield the best outcomes. This course will meet once a week to focus on interesting and engaging case studies, each of which illustrates a key ingredient of strategy. Some are well-known historical events, while others are less obvious, but all have a strategic lesson to share. They are quite diverse, from the planning of a high-risk rescue in the Colorado Rockies, to a product crisis in a Fortune 50 company, to a little-known failed military mission of WWII, to a commercial airline disaster. The ability to think through challenging and varied scenarios is both instructive and mind-stretching. There will be some pre-reading on each case study and there may be a field trip for students to put their lessons into practice. The course is designed to be highly interactive; all to enable students to unravel the mystery and power of strategic thinking. Students will also have the opportunity to select and analyze a case reflecting interests of their own. This course can help students not only prepare for a career in a range of fields, but also as they meet the challenges of their current coursework. Problem-solving skills are central in every walk of life; this seminar can help students build a stronger foundation for sound decision-making.

**STRAMGT 207. Strategic Leadership. 3 Units.**

This course examines fundamental issues of general management and leadership within an organization. You will learn about setting an organization's strategic direction, aligning structure to implement strategy, and leading individuals within the firm. You will master concepts, frameworks, and tools to assess an industry and a firm's competitive environment, and to craft alternatives. You will study the interplay among formal structure, informal networks, and culture in shaping organizational performance. By integrating leadership theory, the lessons of practical application, and your own experience, you will develop skills and capabilities essential to leading others. And you'll gain a better understanding of your own leadership preferences, strengths, and weaknesses.

**STRAMGT 209. Leadership Laboratory. 1 Unit.**

Having the opportunity to choose one's colleagues is rare in corporate life - we usually inherit them when we join an organization. More often than not, when we assume a management position in an organization, we inherit our subordinates as well. How do we maximize the performance of the teams we become part of? What interpersonal skills give us influence? Which interpersonal strengths can propel us to our next promotion? What development areas might prevent our ascension to the executive suite? In the Leadership Labs, we focus on these questions. However, rather than tackle cases where you can distance yourself in comfortable analytical discussions, we throw you into experiential exercises, testing your ability to build effective relationships, motivate others, and influence outcomes. The Leadership Labs are designed for deep self-reflection about what behaviors you choose to use, the consequences of those behaviors, and given choices, how you might be even more productive. In total, there are ten Leadership Lab Sessions—six, three-hour Interpersonal Skills Labs, and four, 90-minute Managerial Skills Labs. The Interpersonal Skills Labs sessions are comprised of short lectures and increasingly challenging simulations and role-plays facilitated by the Arbuckle Leadership Fellows. The Leadership Fellows are second-year GSB students who have participated in a rigorous training program that prepares them to facilitate the exercises and cases used in the Interpersonal Skills Labs. In the 90-minute Managerial Skills Labs we examine several common managerial challenges faced by executives. Together with Faculty, students explore these topics using four case examples, each asking students to evaluate a series of situations, develop alternatives for their resolution, and ultimately recommend and implement a course of action from the point of view of the company's owner/manager. We have selected small to midsized businesses as the context for these discussions in order to highlight the impact that key decisions and their implementation can have on the broader organization. Class preparation should include not only analysis and conclusions, but also specific recommendations on implementation. Students should come to class prepared to role play important conversations between management and other key individuals.

**STRAMGT 210. Managerial Skills. 1 Unit.**

In the Managerial Skills Labs we examine several common managerial challenges faced by executives. Together with Faculty, students explore these topics using four case examples, each asking students to evaluate a series of situations, develop alternatives for their resolution, and ultimately recommend and implement a course of action from the point of view of the company's owner/manager. We have selected small to midsized businesses as the context for these discussions in order to highlight the impact that key decisions and their implementation can have on the broader organization. Class preparation should include not only analysis and conclusions, but also specific recommendations on implementation. Students should come to class prepared to role play important conversations between management and other key individuals.

**STRAMGT 257. Sloan: Strategic Leadership. 2 Units.**

This 9-session course focuses on situations where senior executives must execute strategic action fast because of rapidly changing environmental conditions. The focus of the course is on the approaches successful leaders use to recognize the need for strategic change early, determine which particular approach is likely to be successful, and then implement the change to its conclusion. Leaders in these situations often confront the problem that many people in the organization do not yet recognize the need for change and resist making the personal adjustments required. The course provides these leaders with tools to initiate and execute the changes required to address key strategic challenges: how to capitalize better on the position an organization occupies in its environment, how to reposition the organization relative to its competitors and how to develop and implement a plan to accomplish the required changes successfully. nnnGSB professor Robert A. Burgelman, an active field researcher of strategic change in complex organizations, and Dr. Robert Pearl, CEO of The Permanente Medical Group, Kaiser Permanente, who has taken one of the largest healthcare delivery organizations in the world through a major strategic change journey, jointly teach this course.

**STRAMGT 258. MSx: Strategic Management. 3 Units.**

This course deals with the overall general management of the business enterprise. Extensive case studies of a variety of companies of differing size, industry, and current conditions provide the basis for the comprehensive analysis and establishment of a strategic management approach for the organization. Frameworks are presented for strategy identification and evaluation; assessing industry attractiveness; evaluating the firm's capabilities, resources, and position; determining the optimal horizontal and vertical scope of the firm; entering into strategic alliances and joint ventures; and formulating and implementing strategy in multi-business organizations.

**STRAMGT 259. MSx: Generative Leadership. 2 Units.**

Generative Leadership: How to Create Innovative Ideas and Convey Them with ImpactnnThere are three major sections to this course - Design Thinking, The Improvisational Mindset, and High Performance Communication.nnDesign ThinkingnnOutcome:nParticipants learn to employ User Centered Design as promoted by the Stanford d.school. They become adept at Empathizing with the end user, practicing focused Need Finding, Defining the Problem, Ideating, Rapidly Prototyping and Adapting to Feedback.nnExperiences:nParticipants learn the Design Thinking process through a hands-on, collaborative design challenge, like redesigning the Briefcase for a specific user.nnThe Improvisational MindsetnnOutcome:nThe participants increase their ability to respond flexibly to novel situations and to generate innovative solutions on a collaborative, creative team. The mindset is cultivated by practicing 5 key principles. Say "Yes, and". Treat Mistakes as Gifts. Inspire your Partner. Dare to be Obvious. Notice the World.nnExperiences:nThe key principles are taught through a series of immersive theater exercises derived from Johnstone, Spolin, and Ryan. Valuable readings include IMPROV WISDOM, by Patricia Ryan and journal articles on improv and brainstorming.nnHigh Performance CommunicationnnOutcome:nThe final segment of the class is a chance to apply the principles of User Centered Design and the Improvisational Mindset to design and deliver messages that go beyond just transmitting information - they get results. Participants successfully use a version of the Design Thinking process to rapidly develop content that is tuned to the audience's needs, and that they can deliver in a way that is agile and responsive to real time feedbacknnExperiencesnGenerative Leadership culminates in a group presentation designed to influence key stakeholders. To be successful, participants will have to draw on all sections of the course. AS WE SPEAK is our text.

**STRAMGT 279. MSx: Global Strategic Management. 4 Units.**

This course introduces the basic concepts of strategic management, focusing on their application in a semi-globalized world, where international borders are less significant than in the past but still very important. There are texts that will be required reading, but each class will also feature a case discussion.

**STRAMGT 306. Food Innovation and Entrepreneurship. 3 Units.**

Americans spend nearly 7% of their income on food items and another 5% on food services annually (US Census). Food spend is at the intersection of two of the most important industries in the US: health care and agriculture. Food production today supports the food consumption causing our extraordinary burden of disease; 75 cents of every dollar of the \$4.8 billion spent annually on health care is for diet-related disease. The health care system accounts for over 17% of U.S. gross domestic product (GDP). Agriculture and agriculture-related industries contributed 4.8% to the U.S. gross domestic product (GDP) in 2012.nThis course focuses on the opportunities across these industries for food, health, and nutrition entrepreneurship. The course is designed for students with a broad interest in the food or health systems and/or who are interested in careers in food-related fields.nnWe will examine the food system from three points of view: the consumer, nutritional science, and policy. The class will focus on problem-solving from the perspective of an entrepreneur. The class will involve lecture, discussion, and prominent guest speakers who are entrepreneurs themselves or industry leaders.

**STRAMGT 307. Innovation in Healthcare Venture Capital Investing. 3 Units.**

The purpose of this course is to provide students with insights into the newest innovations in healthcare service delivery, information technology, biotech and medical devices and how venture and private equity investors evaluate and determine where to invest their money among these areas to maximize return, minimize risk, and capitalize on a highly fluid marketplace that represents nearly 20% of the U.S. GDP. Through presentations by leading entrepreneurs in the field, students will be challenged to reach conclusions regarding which healthcare sectors are the most promising for venture investing and which individual companies presented reflect the best opportunities, particularly in light of the seismic shifts currently underway within the healthcare industry driven by both public and private considerations. This is not primarily a finance class, but more substantively about the nuances of emerging healthcare businesses and venture finance as applied to this very unique sector.

**STRAMGT 308. Entrepreneurship from the Perspective of Women. 3 Units.**

This seminar will showcase successful women entrepreneurs and their professional and personal journeys. We will study how they navigated finding an idea, forming and building a team, being an effective leader, raising money, overcoming setbacks, and assembling a board. We will explore some of the unique challenges women face when approaching entrepreneurship. Speakers will also include female venture capitalists and social entrepreneurs, and male entrepreneurs. The class will use cases, panel discussions, readings and videos and social time with the panelists. nnnThis class is appropriate for women and men considering starting a high-impact venture as well as those who are just curious about entrepreneurship. This class will help you understand your own capabilities and interest in being an entrepreneur.

**STRAMGT 313. The New Business Ideas Workshop. 3 Units.**

This workshop provides students with a structured forum in which they can find, develop and receive feedback on a new venture idea. The target audiences are students who have yet to find an idea worth working on, or are trying to decide which of several ideas to pursue. You should NOT take this workshop if you are already actively working on an idea. There are other GSB classes for you. Students can develop an idea alone, but partnering with one or more class members is encouraged. The structured part of the workshop covers: the process of finding new business ideas; how to research and vet a new idea; how to build a business model around an idea; and how to ultimately pitch the idea to others. As part of the workshop, students will spend time helping classmates think through and improve their ideas. Students have the option to present their ideas at the end of the quarter to outside guests or submit a progress report.

**STRAMGT 315. From Launch to Liquidity. 3 Units.**

This course considers the challenges faced by start-ups in achieving liquidity. We take the perspectives of organizational behavior, marketing, and finance, and examine forks in the road faced by firms that have already launched products. Marketing topics include how to market firms for sale and calculating the addressable market. Organizational topics include hiring and firing, and the role of founders after sales. Finance topics include how the choice between sale and IPO affects value realized, and private equity exits.

**STRAMGT 316. Fundamentals of Effective Selling. 3 Units.**

The primary objective of this course is to introduce students to the fundamentals of how to sell and to what selling is truly about. The course is appropriate for anyone who wants to understand and show proficiency with the skills required by different selling situations (e.g., direct sales of products and services, selling oneself in an interview, raising money for a new venture, running a company as CEO, etc.). The course looks at the entire selling process of lead generation, prospecting, qualification, discovery, understanding value, customizing presentations, objection handling, negotiation and closing. This is not a typical GSB case-study-based course. Students who have taken the class describe it as a hands-on, practical, skills-based class. Students will work by themselves and together in groups to complete individual and team-based exercises designed to introduce them to and give them practice with selling fundamentals in each stage of the selling process. Students will be practicing and utilizing newly learned skills in real life each week; the focus will be on doing stuff (e.g., using curiosity in a situation outside the classroom) rather than thinking about and talking about stuff. Students will then come together in class with the instructors to share and process the learning from these exercises.

**STRAMGT 321. Create a New Venture: From Idea to Launch I. 3 Units.**

This is an integrated lab course in Entrepreneurship designed to teach students the process of creating a new viable venture - from idea to launch. It is a dynamic and interactive course organized around projects undertaken by teams of 3 to 4 registered students from the MSx and MBA programs, together with other graduate students within Stanford who bring expertise of particular relevance to the idea being pursued. This course is designed not only for students with immediate entrepreneurial aspirations, but also for any student considering starting an entrepreneurial venture at some point in his or her career. The course is a two quarter class, with admission to the class by team and idea. In the winter quarter, teams will research, craft, and morph their idea into a viable business concept. In the spring quarter they will further refine their concept and develop a strategy and plan to attract financial, human and other resources. At the end of the spring quarter, teams will present their plan to a panel of experts and potential investors to simulate the funding process. The new course builds on a predecessor course S356 "Evaluating Entrepreneurial Opportunities" and encapsulates new and important research and findings as they relate to the process of new venture creation. The teaching method is primarily learning by doing (LBD) through a structured process and supported by relevant lectures. Learning is further enhanced through meetings with the instructor, coaching by experienced mentors and review by peers. Field research as well as prototype product development are integral to the course. Since admittance to S321/S322 is by team and the quality of their idea, team formation takes place during the autumn quarter. Informal student mixers and seminars will be held to facilitate team formation and idea generation. Each team of 3-4 students should preferably consist of 1 or more MSx students and graduate students from the MBA program or other Schools - Engineering, Medicine, Law, Science, Education - to bring diversity and depth to the team. The application-selection process is described on the S321/S322 website.

**STRAMGT 322. Create a New Venture: From Idea to Launch II. 3 Units.**

This is an integrated lab course in Entrepreneurship designed to teach students the process of creating a new viable venture - from idea to launch. It is a dynamic and interactive course organized around projects undertaken by teams of 3 to 4 registered students from the MSx and MBA programs, together with other graduate students within Stanford who bring expertise of particular relevance to the idea being pursued. This course is designed not only for students with immediate entrepreneurial aspirations, but also for any student considering starting an entrepreneurial venture at some point in his or her career. The course is a two quarter class, with admission to the class by team and idea. In the winter quarter, teams will research, craft, and morph their idea into a viable business concept. In the spring quarter they will further refine their concept and develop a strategy and plan to attract financial, human and other resources. At the end of the spring quarter, teams will present their plan to a panel of experts and potential investors to simulate the funding process. The new course builds on a predecessor course S356 "Evaluating Entrepreneurial Opportunities" and encapsulates new and important research and findings as they relate to the process of new venture creation. The teaching method is primarily learning by doing (LBD) through a structured process and supported by relevant lectures. Learning is further enhanced through meetings with the instructor, coaching by experienced mentors and review by peers. Field research as well as prototype product development are integral to the course. Since admittance to S321/S322 is by team and the quality of their idea, team formation takes place during the autumn quarter. Informal student mixers and seminars will be held to facilitate team formation and idea generation. Each team of 3-4 students should preferably consist of 1 or more MSx students and graduate students from the MBA program or other Schools - Engineering, Medicine, Law, Science, Education - to bring diversity and depth to the team. The application-selection process is described on the S321/S322 website.

**STRAMGT 323. DESIGN THINKING GLOBAL ORGS. 3 Units.**

We'd like to introduce you to Samantha Palmer, a recent Stanford graduate who took several classes at the d.school. Each class further confirmed the importance of the design thinking process, methodology, and community. By the end of her Stanford career she truly believed that design thinking had the potential to change her life. n nAs graduation approached, Samantha found a position at a large tech company in Silicon Valley and was excited to bring the design thinking methodologies with her. A few weeks into her new job, she asked her team if they wanted to talk to some users before launching into their next big project. She was met with a room of blank stares and apprehensive questions. n nHow might we give Samantha the skills she needs to change the mindset of her colleagues, spark design thinking at her company, and get her first design-driven project off the ground? n nWhen you take a class at the d.school, you walk away confident in your creative skills and fluent in the design process. However, when recent graduates (re)enter the workforce, they quickly become discouraged by the stagnancy of company cultures. They see the need to trigger and sustain change, but don't have the understanding of organizational psychology to do so. Organizational Psychology of Design Thinking asks you to take on Samantha's challenges. n nOver the course of the semester, students will engage in 2 large-scale projects: n- Project 1 (Empathy - Synthesis) - Working with partner companies, students will apply organizational psychology and design frameworks to better understand company culture. n- Project 2 (Ideation - Testing) - Using their work from Project 1, students will prototype and test organizational changes in real company settings. n n\*\*Please note\*\* Our class will take an experimental approach Organizational Psychology of Design Thinking. The majority of classes will be conducted in the field allowing students to take a hands-on approach to design thinking. Please be aware and build travel time into your class schedule.

**STRAMGT 325. Starting and Growing a Social Venture. 4 Units.**

This course is for students who may want to undertake an entrepreneurial career by starting and/or joining the senior management team of a social venture. It covers all phases of a venture - ideation and venture creation, resource acquisition, managing growth and harvest/exit. The instructors believe, for the most part, social ventures (which include both for-profit and non-profit structures) should be treated and managed like profit maximizing ventures, and many topics and themes encountered in this course will be similar to those covered in other entrepreneurial courses, such as Formation of New Ventures. Of course there are important differences related specifically to social ventures, some of which are critical to understand properly to effectively start and manage a social enterprise. We will highlight these differences throughout our sessions, so while that the lessons learned in this class can be generalized to all ventures, we do not advise you to take this class unless you really want to learn about social ventures. All the cases used in class and class discussions will be about early stage companies and organizations in the social venture space. Guests, both social entrepreneurs active in the field, and social impact investors, are heavily featured in class discussions and are an important part of the classroom experience.

**STRAMGT 328. Social Ventures Practicum. 3 Units.**

The Social Ventures Practicum is an experiential learning course for student teams actively working to launch a social venture (nonprofit or for-profit or tbd). n nDesigned as a follow-on to ideation courses such as STRAMGT 356: Startup Garage or the Design for Extreme Affordability sequence, this course will focus on the business planning needed to launch your venture. n nIn weekly sessions through Winter Quarter, teams will work through topics unique to social ventures (e.g. mission, theory of change, impact measurement) as well as topics common to any venture, e.g. product/service market fit, business/economic model, financial planning, early stage financing, logistics, sales/distribution, and board/talent development. Each team will receive significant one-on-one coaching from the instructors, as well as opportunities to share their work with peers and learn from/present to guest speakers. n nTeams will emerge with a solid business and impact model, ready to raise their first round of seed funding. This course will prepare students for the Stanford Social Innovation Fellowship, Echoing Green, and other similar post-graduate funding opportunities. n nThe course will assume a level of familiarity with key social impact frameworks, so students are encouraged to take another social innovation course or to have prior experience working with mission and theory of change.

**STRAMGT 330. Entrepreneurship and Venture Capital: Partnership for Growth. 3 Units.**

This 3 unit course is a case study course specifically for those students interested in entrepreneurship and/or investing. The partnership (and interaction) between the entrepreneur and the investor is a very important dimension in the growth of many start-ups. This course examines the entrepreneur & investor relationship from both the entrepreneur's and the investor's perspectives. n nFrom the point of view of the entrepreneur & we look at how to select an investor and match the investor to the growth trajectory of your company, how and when to approach those investors as well as the positioning of your company within their portfolio. The course gives entrepreneurs the opportunity to connect with members of the VC community on a novel business idea or, if you do not have a business idea, we will help you find one to `adopt; for this course through the CES site (<https://mygsb.stanford.edu/mba/programs-centers/center-entrepreneurial-studies-ces/looking-startup-idea>). You can then use that idea / company as a basis for the paper and team project. n nFrom the point of view of the investor & given the rapid evolution in the investor sector, it is important for entrepreneurs (and future investors) to understand investors; motivation and process. We will explain why entrepreneurs have many more investor alternatives today compared to several years ago, how investors look for their next opportunity, the investors; selection process and how investors plan to work with the entrepreneur after the investment. n nThe course is geared for multiple audiences: the student who is considering an entrepreneurship or investor career path and the student who is exploring a start-up idea (and perhaps formed a team). Both audiences will benefit from a greater understanding as to what happens `behind the scenes; (e.g. in the investors partners; meeting and at the negotiating table) between the entrepreneur and investor. Each class is case study based with engaging class discussions led by experienced venture capitalists. The course includes frequent guest speakers (both entrepreneurs and investors) who will give alternate and candid `off the record; details about their experiences. n nClass participation is integral to a successful exchange of ideas; therefore, we make class participation 50% of your total grade. The other 50% of the grade is based on both an individual paper and your contribution to a team project. The individual project is a short 3-5 page paper focused on a subject facing entrepreneurship (i.e. investor selection or managing the equity split within the team). The team project is a short presentation to the class on the business idea and then a more complete presentation to a panel of VC investors.

**STRAMGT 335. Entrepreneurial Approaches to Education Reform. 3 Units.**

In this course, students will investigate opportunities and challenges of entrepreneurial ventures trying to make a positive impact in public education. The course requires a basic level of understanding of the U.S. K-12 public school system. The first session will analyze the structure of the public education as an industry, with a special emphasis on understanding the achievement gap. Subsequent sessions will explore challenges in increasing efficacy, ensuring financial sustainability, and scaling for entrepreneurs who have sought to change student outcomes, solve pain points, and innovate. The course will feature a variety of ventures (including schools, education technology, training, and supplemental services) and organizational models (for-profit, not-for-profit, and benefit corporation). This course is suitable for students aspiring to be entrepreneurs, leaders in entrepreneurial organizations, leaders in educational organizations, Board members, donors or investors. (Note: this is not a "how-to" course on starting an entrepreneurial venture.).

**STRAMGT 341. Achieving Social Impact. 4 Units.**

Social Enterprise explores a range of leading issues focused on the challenges and opportunity for impact through social entrepreneurship. Students explore a range of organizations from nonprofits, to for-profits, to hybrid forms of organization, and examine issues from a variety of different perspectives, including those of entrepreneur, CEO, funder, and board member. nnnDesigned to appeal to students who seek to take on leadership roles in social value creation throughout their careers, whether as leaders in the private, nonprofit, or government sectors, or some combination thereof. nnnSocial Enterprise focuses on innovative approaches for creating social value through a variety of social enterprises. Cases explore the unique challenges of creating and leading social enterprises, particularly those that depart from traditional approaches to social value creation. The course modules encompass the following topics: Undertaking the Social Entrepreneurship Process; Mobilizing Economic and Human Resources; Achieving Social Objectives with Commercial Vehicles; Crafting Alliances; Managing Growth; Measuring and Managing Performance; Governing for Excellence. The course utilizes case studies and readings. There will also be frequent direct interaction with dynamic social entrepreneurs who will discuss challenges that they currently face in their organizations and who will share with students their experiential wisdom. For the course paper, students will carry out field-based research in teams, analyzing a significant strategic or operational issue of a social enterprise of their choosing. This field-based applied learning component in lieu of an exam has proven to be a particular enriching for students with high impact on the organizations.

**STRAMGT 348. Creating and Managing Very Early Stage Ventures. 4 Units.**

The early stages of a new venture pose special challenges and issues for founders. For some entrepreneurs, the questions are basic: Should I seek to start a new business? And, How can I find an idea worth pursuing? Later, the question is: How do I evaluate whether my (our) idea is worth pursuing? To answer these questions, it is useful for founders to have an integrated framework for evaluating new business opportunities. In this class we develop such a framework and show how it can usefully compare and contrast new product or service businesses. We also consider the very first steps startups must take. These include how startups can begin to accumulate resources, as well as early legal, organizational, personnel and financial issues that must be handled. The course is largely case-based. It is supplemented with lectures and guests. The target audience is students who are thinking about forming a new venture early in their career. This class is appropriate for first or second year MBAs who have not yet taken S356, as well as other Stanford graduate students.

**STRAMGT 350. Global Value Chain Strategies. 4 Units.**

This course addresses how the increasingly large number of firms that use or provide outsourcing and "offshoring" can create a sustainable competitive advantage. Students who complete the course will have a framework and a set of concepts that can be used to position a firm for strategic advantage in these supply networks. Positioning in and strategic analysis of product markets is covered in a variety of courses and books. A distinguishing feature of this course is that it addresses positioning and strategic analysis for firms operating as part of a network of providers, sellers and buyers... the factor markets. The course takes a general management perspective and provides examples through cases and discussions with visitors. The major theme of the course is that these firms must carefully consider how they position themselves in both the product and factor markets.

**STRAMGT 351. Building and Managing Professional Sales Organizations. 4 Units.**

The focus of this class is on the challenges and key issues associated with the creation and management of a professional sales organization. Our emphasis is developing and managing the selling effort of business-to-business and business-to-consumer capital goods and services. There will be relatively little emphasis on sales technique (i.e., students should not expect a course on "How to be a Better Salesperson"). The course is organized to follow the development of the sales function from strategic inception through to execution and implementation: choosing a go-to-market model (e.g., direct sales, VARs, OEMs, hybrid models); building and structuring the sales organization (e.g., sales learning curve, organizational structure, allocating territories and quotas); and managing the sales force (e.g., hiring/firing, compensation, forecasting, culture). We will address these topics in the context of both early stage ventures and later stage enterprises.

**STRAMGT 353. Entrepreneurship: Formation of New Ventures. 4 Units.**

This course is offered for students who at some time may want to undertake an entrepreneurial career by pursuing opportunities leading to partial or full ownership and control of a business. The course deals with case situations from the point of view of the entrepreneur/manager rather than the passive investor. Many cases involve visitors, since the premise is that opportunity and action have large idiosyncratic components. Students must assess opportunity and action in light of the perceived capabilities of the individuals and the nature of the environments they face. The course is integrative and will allow students to apply many facets of their business school education. Each section will have a specific focus, please select the instructor(s) with your interests: Leslie, Rachleff - High tech ventures; Ellis, Chambers, Childs - Diverse types of ventures; Foster - Diverse types of ventures; Siegel, Brady - High tech emphasis, but diverse types of ventures; Reiss, Chess - Very early stage ventures.

**STRAMGT 354. Entrepreneurship and Venture Capital. 4 Units.**

Many of America's most successful entrepreneurial companies have been substantially influenced by professionally managed venture capital. This relationship is examined from both the entrepreneur's and the venture capitalist's perspective. From the point of view of the entrepreneur, the course considers how significant business opportunities are identified, planned, and built into real companies; how resources are matched with opportunity; and how, within this framework, entrepreneurs seek capital and other assistance from venture capitalists or other sources. From the point of view of the venture capitalist, the course considers how potential entrepreneurial investments are evaluated, valued, structured, and enhanced; how different venture capital strategies are deployed; and how venture capitalists raise and manage their own funds. The course includes a term-long project where students work in teams (4-5 students per team) to write a business plan (or a business model canvas) for a venture of the team's choosing.

**STRAMGT 355. Managing Growing Enterprises. 4 Units.**

This course is offered for students who, in the near term, aspire to the management and full or partial ownership of a new or newly-acquired business. The seminar, which is limited to 45 students, has a strong implementation focus, and deals in some depth with certain selected, generic entrepreneurial issues, viewed from the perspective of the owner/manager. Broad utilization is made of case materials, background readings, visiting experts, and role playing. Throughout the course, emphasis is placed on the application of analytical tools to administrative practice.

**STRAMGT 356. The Startup Garage: Design. 4 Units.**

Startup Garage is an intensive hands-on, project-based course, in which students will apply the concepts of design thinking, engineering, finance, business and organizational skills to design and test new business concepts that address real world needs. Our aspiration is to help teams identify an unmet customer need, design new products or services that meet that need, and develop business models to support the creation and launch of startup products or services. Even those teams that do not successfully launch a venture, or individuals who decide not to move forward, will learn critical, cutting-edge techniques about starting and launching a venture. Collaborative, multi-disciplinary teams will identify and work with users, domain experts, and industry participants to identify and deeply understand customer needs, then proceed to design products or services and a business model to address those needs. Each team will conceive, design, build, and field-test critical aspects of both the product or service and the business model. This course is offered by the Graduate School of Business. It integrates methods from human-centered design, lean startup, and business model planning. The course focuses on developing entrepreneurial skills (using short lectures and in-class exercises) and then applying these skills to specific problems faced by those users identified by the teams. Teams will get out of the building and interact directly with users and advisers to develop a deep understanding of the challenges they face and to field test their proposed services, products, and business models.

**STRAMGT 359. Aligning Start-ups with their Market. 4 Units.**

Most everyone associated with technology start-ups would agree that the most important initial characteristic of a successful endeavor is a compelling vision. The journey from vision to escape velocity is highly dependent on management's ability to translate that vision into a product or service that closely and economically addresses a customer's significant point of pain. Without a tight product market fit, the start-up's offering will not be able to break through the market's gravitational forces which strongly favor existing solutions, resulting in likely failure. With tight product/market fit, it is far more likely the company will achieve repeatable and growing sales success. Conventional wisdom dictates that a start-up launching a new product should focus its energy understanding what the market wants (problem) and then translating that knowledge into an optimal set of product features (solution). This is the ideal strategy if one is attacking a market that already exists. However if the start-up pursues an entirely new market or re-segments an existing market, customers are unlikely to be able to articulate the benefits and features they will need. The approaches required to pursue new or re-segmented markets are radically different from those applied to existing markets. As a result it is not relentless execution and exploitation of a well understood market that will lead to success, but discovery of a new market or segment that is in need of the product as envisioned. If done well, this process of finding the optimal product/market fit has a disproportionate impact on success. Our course explores the many issues associated with optimizing product/market fit. A take-home midterm, a group paper, and an in-class exercise comprise 50% of a student's grade with class participation representing the remainder. STRAMGT 353 is recommended prior to taking this course.

**STRAMGT 360. Strategic Educational Research and Organizational Reform Clinic A. 2 Units.**

This is a two-quarter clinical course offered in the Winter and Spring Quarters that brings together upper-level graduate students in business, law, and education from Stanford to collaborate with their peers at other universities (Columbia University, Harvard University, University of Pennsylvania, University of Michigan) and provide strategic research and consulting to public education organizations. Participants engage in a rigorous and rewarding learning experience, including:nnn(i) An intensive seminar in the design, leadership and management, and transformation of public school systems, charter management organizations, start-ups, and other K-12 public- and social-sector institutions;nn(ii) Comprehensive skills training in team-based problem solving, strategic policy research, managing multidimensional (operational, policy, legal) projects to specified outcomes in complex environments, client counseling, and effective communication; andnn(iii) A high-priority consulting project for a public education sector client (e.g., school district, state education agency, charter management organization, non-profit) designing and implementing solutions to a complex problem at the core of the organization's mission to improve the educational outcomes and life chances of children. The participant's team work will allow public agencies throughout the nation to receive relevant, timely, and high-quality research and advice on institutional reforms that otherwise may not receive the attention they deserve.

**STRAMGT 361. Strategic Educational Research and Organizational Reform Clinic B. 2 Units.**

This is a two-quarter clinical course offered in the Winter and Spring Quarters that brings together upper-level graduate students in business, law, and education from Stanford to collaborate with their peers at other universities (Columbia University, Harvard University, University of Pennsylvania, University of Michigan) and provide strategic research and consulting to public education organizations. Participants engage in a rigorous and rewarding learning experience, including:nnn(i) An intensive seminar in the design, leadership and management, and transformation of public school systems, charter management organizations, start-ups, and other K-12 public- and social-sector institutions;nn(ii) Comprehensive skills training in team-based problem solving, strategic policy research, managing multidimensional (operational, policy, legal) projects to specified outcomes in complex environments, client counseling, and effective communication; andnn(iii) A high-priority consulting project for a public education sector client (e.g., school district, state education agency, charter management organization, non-profit) designing and implementing solutions to a complex problem at the core of the organization's mission to improve the educational outcomes and life chances of children. The participant's team work will allow public agencies throughout the nation to receive relevant, timely, and high-quality research and advice on institutional reforms that otherwise may not receive the attention they deserve.

**STRAMGT 365. Strategic Decision Making. 4 Units.**

This compressed course concerns the analysis of strategic decision-making, with an emphasis on the process of "big stakes" analysis in complex corporate settings. The first week is devoted primarily to the tools of this process and to coping with (strategic) unawareness (especially in competitive situations). The second week is devoted primarily to "learning by doing," as we apply the tools developed in the first week to real-life problems. The overall objective of the course is to develop the student's working knowledge of these techniques, so the student can fruitfully apply these techniques on his/her own. The course may be taken as a two-unit compressed course by signing up for STRAMGT 565 and participating in the first week only. Alternately, students may sign up for both weeks, by registering for STRAMGT 365. Students who sign up initially for STRAMGT 565 will be able to decide late in week 1 whether to continue into week 2 (in effect, these students will have the registration changed from 565 to 365). Note that, in the registration process, students who rank STRAMGT 365 will have a greater chance of getting a spot than students ranking STRAMGT 565. (It will not be possible to change in midstream from 365 to 565, i.e., to drop the second week.) Students will be expected to do approximately 90 minutes of work outside of class each day both weeks. A group project will be the main work product in the second week. The course will be taught jointly by Carl Spetzler, Chairman, Strategic Decisions Group and Professor Yossi Feinberg.

**STRAMGT 366. The Startup Garage: Testing and Launch. 4 Units.**

Teams that concluded at the end of the fall quarter that their preliminary product or service and business model suggest a path to viability, continue with the winter quarter course. In this course, the teams develop more elaborate versions of their product/service and business model, perform a series of experiments to test the key hypotheses about their product and business model, and prepare and present an investor pitch for a seed round of financing to a panel of seasoned investors and entrepreneurs. The key premise for the course is that a robust venture creation process involves development and validation of a series of hypotheses about a new product or service, its value proposition, and how the business will acquire customers, make money, scale up to achieve profitability, and raise funds to achieve the key milestones to profitability. In Startup Garage: Testing and Launch, teams will learn how to precisely formulate these hypotheses and early stage milestones, and how to test them using one or more of the following low-cost approaches: a) online experiments with minimally viable products; b) interviews with partners, advisors, investors, and business experts; c) analogies from existing businesses that were successful in proving hypotheses that are analogous to what the new startup wants to prove. The course focuses on further developing entrepreneurial skills using the same pedagogical approach used in S356: short lectures, extensive in-class exercises focused on each team's specific projects, and 'get out of the building' assignments. Teams will have the opportunity to: Get out of the building and interact with users, advisors, investors and partners to develop a deep understanding of the challenges they face, to field test their proposed services, products, and business models, and to gather data. Interpret the data and make important startup decisions in the context of their own project: pivot, persevere, or perish. Develop creative go-to-market strategies and test their effectiveness. Develop and deliver in front of real investors an investor pitch, elevator pitch and executive summary. Negotiate term sheets with venture investors. Develop a hiring plan for their first year of operation and consider equity and other compensation plan.

**STRAMGT 367. Social Entrepreneurship and Social Innovation. 3 Units.**

This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ "entrepreneurial skills," such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all else. We will study some of the most promising and the best-proven innovations for improving people's lives. We will also examine mature projects that are now tackling the issue of "scale", moving from local innovations to solutions that create deep systemic changes for larger numbers of economically disadvantaged individuals and communities throughout the world. This year we will focus on what are the constraints and opportunities for creating a social enterprise at scale. The process of "scale" poses tremendous challenges. Even when organizations manage to overcome the many obstacles to growth, and achieve appreciable scale, this approach is seldom sufficient to achieve significant social impact on its own. This year our course will pay particular attention to network approaches which require the mobilization of a vast array of actors and resources, but have the potential to generate rapid and sustained social impact.

**STRAMGT 368. Strategic Management of Nonprofit Organizations and Social Ventures. 4 Units.**

This course seeks to provide a survey of the strategic, governance, and management issues facing a wide range of nonprofit organizations and their executive and board leaders, in the era of venture philanthropy and social entrepreneurship. The students will also be introduced to core managerial issues uniquely defined by this sector such as development/fundraising, investment management, performance management and nonprofit finance. The course also provides an overview of the sector, including its history and economics. Cases involve a range of nonprofits, from smaller, social entrepreneurial to larger, more traditional organizations, including education, social service, environment, health care, religion, NGO's and performing arts. In exploring these issues, this course reinforces the frameworks and concepts of strategic management introduced in the core first year courses. In addition to case discussions, the course employs role plays, study group exercises and many outsider speakers.

**STRAMGT 369. Social Entrepreneurship. 4 Units.**

This course is about the efforts of private citizens to create effective responses to social needs and innovative solutions to social problems. History is full of examples of this kind of activity, though its character continues to evolve. Social entrepreneurs are increasingly blurring the lines between the sectors, using for-profit and hybrid forms of organization to achieve social objectives. This creates new opportunities for applying business skills in the social sector. Despite its prominence and complexity, this combination of private initiative and public purpose is not well understood. The objectives of this course are: (1) to introduce students to the concepts, practices, and challenges of social entrepreneurship in the United States and around the world; (2) to equip students with frameworks and tools that will help them be more effective in their socially entrepreneurial pursuits, and (3) to engage students in a joint learning process as a better understanding of this emerging field is developed by all in this class.

**STRAMGT 371. Strategic Management of Technology and Innovation. 4 Units.**

This course focuses on the strategic management of technology-based innovation in the firm. The purpose is to provide students with concepts, frameworks, and experiences that are useful for taking part in the management of innovation processes in both startups and large technology-focused organizations. The course examines how leaders can manage fast-changing technological innovations effectively. Specific topics include: assessing the innovative capabilities of the firm, managing the technical function in a company, navigating the interfaces between functional groups in the development function in the firm, understanding and managing technical entrepreneurs, building technology-based distinctive competencies and competitive advantages, technological leadership versus followership in competitive strategy, institutionalizing innovation, attracting and keeping entrepreneurs.

**STRAMGT 373. Strategic Thinking in Action --- in Business and Beyond. 4 Units.**

The seminar's aim is to develop participants' ability to create strategically informed action plans that are imaginative, inspiring and workable in highly dynamic environments. The seminar's pedagogy involves informed debate to evaluate and hone well-researched views by the participants and instructors, as well as the writing and presentation of position papers by small groups of seminar participants on the seminar's focal theme. Andy Grove will continue to participate as co-instructor of the seminar, but at a reduced level. In the course of the seminar discussions, we aim to deepen our understanding of strategic dynamics and transformational change at the societal, industry and organizational levels of analysis. In fall 2010, the focal theme of the seminar will be "The Future Role of Silicon Valley: Prospective Strategic Analyses." Within the overarching theme, we will research four sub-themes. Domain experts for three of the sub-themes have committed to co-leading the related sessions with the instructors (see below). The four sub-themes are: 1. The role of Silicon Valley in the future of the semiconductor industry. George Cogan, Partner at Bain & Company and expert of the semiconductor industry, will co-lead this sub-theme. 2. The role of Silicon Valley in the future of the computer industry. Tien Tzuo, CEO of Zuora Inc. and expert of SaaS and cloud computing, will co-lead this sub-theme. 3. The role of Silicon Valley in the future of the automotive industry. Sven Beiker, Executive Director of the Center for Automotive Research at Stanford - CARS, will co-lead this sub-theme. 4. The role of Silicon Valley in the future of U.S. Employment. Andy Grove will lead this sub-theme. Two seminar sessions will be devoted to each sub-theme. The first session will be led by the instructors. It will involve discussion of reading material and data and focus on refining the key research questions for the sub-theme. The second session (4 weeks later) will be led by the student team carrying out research on that sub-theme. Seminar participants will organize into four teams, each one focused on a sub-theme. Each team will research the forces that are shaping the evolving role of Silicon Valley in relation to their sub-theme, try to assess the implications of that evolution for the future of the U.S. economy, and propose executable recommendations for strengthening Silicon Valley's future role. Each team will be expected to produce a monograph (10-15 pages) presenting and discussing its findings and recommendations, to be handed in at the end of the quarter.

**STRAMGT 376. Developing Entrepreneur Emotional Resilience. 4 Units.**

A fundamental challenge of an entrepreneur is the chronic emotional adversity new leaders face, at a task, relationship, and identity development (diversity) level. This class applies to both social entrepreneurs and business entrepreneurs. This developmental flow of this course draws heavily on Goleman's emotional intelligence skills developed in OB 374: self-awareness, self-regulation, motivation, empathy, and social skills. Student's completing this class have called it 'touchy feely for entrepreneurs'. The goal of this class is to learn to identify, build on, and leverage one's personal emotional resilience schema. Emotional resilience is the capacity to 'successfully adapt to emotional adversity'. When emotionally flooded decision-making is significantly impaired. Creative problem solving and teamwork are severely compromised. The capacity to down-regulate physiological arousal when emotionally 'flooded' by adversity and regain one's equilibrium of perception is a learnable skill. It is an intentional extension of one's personal emotional resilience schema. For an entrepreneur it is also a strategic advantage. Just as individuals can become emotionally flooded and incapacitated by adversity so can teams. In this 'flooded' state individuals and teams fall back on coping patterns of action. When what is most needed is timely and intentional 'down-regulating' behaviors: 1) self-soothing, and 2) co-soothing, that achieve emotional equilibrium. Students will engage in one-on-one interviews to identify different soothing strategies and resilience schema's learned by themselves, classmates, and experienced entrepreneurs. To achieve this goal four educational behaviors will be engaged: 1. Learning one-on-one 'critical incident' interview skills that facilitate empathic-inquiry, emotional disclosure, pattern discovery and adaptive-reflection. 2. Identify one's present 'emotional resilience schema'. 3. Use critical incident interview skills to identify other entrepreneur's 'emotional resilience schema'. 4. Identify student's incidents of adaptive-reflection documented in submitted reflection journals (1-4) and summarize student's personal 'emotional resilience schema' growth trend. This class is structured around Five Critical Incident (one-on-one) Interviews that the student will participate in. Each interview will be digitally taped and a copy saved by the student for review and analysis and submitted with each respective reflection journal (5). Students are expected to complete a 1000 word Emotional Resilience Reflection Journal entry summarizing their leanings from each of the Five Critical Incident Interviews.

**STRAMGT 378. Strategic Leadership of Nonprofits. 4 Units.**

Formulating, evaluating, and implementing mission and strategy. Case studies from nonprofits in social services, health care, education, and arts and culture. The interaction of strategy and mission, industry structure and evolution, strategic change, growth and replication, corporate strategy, governance, commercialization, alliances, capacity building, and leadership.

Same as: EDUC 377D

**STRAMGT 381. Leading Strategic Change in the Health Care Industry. 3 Units.**

This seminar provides the opportunity for students to study the structure and dynamics of the U.S. health care industry, and some of the ways it intersects with the global health care industry. The U.S. health care industry represents over 15 percent of the nation's GDP and is rapidly changing as a result of government regulatory reform enacted in 2010. The seminar's aim is to develop participants' ability to create strategically informed action plans that are imaginative, inspiring and workable in this highly dynamic environment. The seminar's pedagogy involves informed debate to evaluate and hone well-researched views by the participants and instructors, as well as the writing and presentation of position papers by small groups of seminar participants on the key dynamics of the industry. In the course of the seminar discussions, we aim to deepen our understanding of strategic dynamics and transformational change at the societal, industry and organizational levels of analysis. After developing a complete picture of the structure of the health care industry and the strategic relationships among the key players - the strategic landscape -, the seminar will focus on how health care reform and other external forces will affect the strategic opportunities and challenges of four types of players in the strategic landscape: (1) Incumbents (e.g., pharmaceutical companies, hospital companies, insurance companies); (2) entrepreneurial startups (e.g., home monitoring, genetic testing companies, information services); (3) cross-boundary disruptors (e.g., health clinics, Wal-Mart, Cisco, Google); and (4) international health care providers (e.g. in Mexico, India, Thailand) Four student teams will be formed to focus on one of the four types of players. Each team will prepare a research paper focused on determining how their type of player can take advantage of the regulatory, technological, social, cultural and demographic changes, and who will be the likely winners and why. During the first round of discussions (sessions 2-5) all participants will take part in examining the different parts of the competitive landscape. During the second round (sessions 6-9), the different teams will present their research findings and perspectives about the strategic opportunities and threats which exist. As part of the second set of sessions, the instructors will bring in domain experts to further augment the discussion.

**STRAMGT 504. Innovation and Non-founder CEOs. 1 Unit.**

This course will examine innovation (creating a different offering that customers want to buy), its role in the continued success of organizations, and the role of the non-founder CEO in leading an innovation organization. There will be special emphasis placed on how successful non-founder CEOs manage risk and potential failure in leading their organizations.

**STRAMGT 508. Entrepreneurship from the Perspective of Women. 2 Units.**

There are now over a dozen courses taught on entrepreneurship at the GSB. These courses cover a wide range of topics of interest to the budding entrepreneur and venture capitalists. But what unique challenges do women face when approaching entrepreneurship? This seminar will showcase successful women entrepreneurs and the challenges they encountered in funding, communication styles, lifestyle balance, and paths to success. We will do so with mini-cases, panel discussions, readings, and some social time with experienced entrepreneurs. Men are also welcome to enroll.

**STRAMGT 510. Conversations in Management. 2 Units.**

This case-based course is offered for students who want to refine their ability to manage challenging professional conversations. The class, which is limited to 32 students, will focus on the preparation for and execution of role-played dialogue as well as on postmortem analysis. Most of the respondent roles will be external to one's company, and some will be front line or mid-level people with limited educational credentials. Broad utilization will be made of background readings plus visiting case protagonists and experts. There will be nine class sessions, each of one hour and forty-five minutes.

**STRAMGT 511. Protecting Ideas. 2 Units.**

At the beginning and usually at the heart of every new business is an idea. Around that core idea talent is assembled, technology is developed, investors are attracted, capital is deployed, business models are evolved, and products and services are created and sold. But what happens if a business'## core idea turns out not to be protectable, and can be freely used by competitors, many of whom may have significantly greater resources, pricing power and other competitive advantages? Or conversely, how do you recognize opportunities to enter markets in which incumbent barriers to entry are, from an IP standpoint, weak or illusory? Using hypotheticals premised on reported cases, this course explores the business impact and implications of the rapidly-changing and often confusing law around how to protect what are often the most valuable core assets of a business. In particular, and with the assistance of business executives from impacted companies and institutions, the Supreme Court'##s recent decisions in *Alice Corp. v. CLS Bank International*, *Association for Molecular Pathology v. Myriad Genetics*, and *Mayo v. Prometheus* will be discussed, and their implications for business models and both offensive and defensive strategy in fields such as software development, e-commerce, personalized medicine and medical diagnostics will be explored. The objective of this course is to help students to recognize and think critically about how the ability or inability to protect, or the scope of the protection available for, new ideas impacts everything from the funding and viability of a new business to the business model and IP strategy selected to advance it.

**STRAMGT 512. The Yin and Yang of Family Business Transitions. 2 Units.**

This seminar provides students with practical solutions to some of the challenges faced in family business transitions. Family businesses are by far the dominant form of commerce world-wide, albeit the majority are small "mom and pop shops." Some research shows that large businesses, whatever the form of ownership, have an average lifespan of around forty years, while small businesses (at least in Japan and Europe) average around twelve years. So, if businesses in general do not survive, then it is a wonder that any family business can survive from one generation to another, let alone two, three, four or more. There are three essential requirements to succeed in a family business transition. First, it may seem obvious that the business must succeed, but it is less obvious what advantages a family business has over its non-family-owned counterparts. Second, the ownership structure must effectively maintain family cohesion and support the business. Finally, family members need to organize in thoughtful ways to work effectively with one another. The beauty of a family business is that it can be more profitable than companies with non-family ownership. Two fundamentals, at least, provide this advantage - a strong value system and a long-term economic perspective. The operative word above, however, is "can"; it is by no means a foregone conclusion that a family business will be more successful. Families must thoughtfully develop their advantages, while at the same time avoiding the pitfalls that are inherent in any family business. Accordingly, this course is offered for students whose families own a family business or who are interested in the special challenges faced by family businesses. International students are encouraged to register as different cultural perspectives to family business will enrich the experience for everyone. Particular focus will be given to the transitions from one generation to another and the lessons learned that can be applied during the entire life of the business.

**STRAMGT 513. New Venture Pitch Workshop. 2 Units.**

This workshop provides students with a forum through which they can develop and receive feedback on a new venture idea. Class time will be devoted to understanding how to improve the viability of a new venture idea and how to present that idea clearly to others. At the course conclusion, students will present their idea to others in the class and outside guests. The workshop can handle up to 15 ideas or teams; you may develop your own idea and pitch, or partner with other students. You must have your team formed before registering for the course. Note: students should be pitching ideas that are at an EARLY stage, ones that have not been pitched previously or are existing businesses.

**STRAMGT 514. The Improvisational Entrepreneur. 1 Unit.**

Improvisational acting (i.e., improv) requires fast, flexible, and creative thinking; intense listening and effective self-presentation; and the ability to act without fear of failure. These skills are also vital for being a successful entrepreneur. In this class, you will learn techniques of improvisational acting that can transform your thinking about business and your approach to life.

**STRAMGT 516. Fundamentals of Effective Selling. 2 Units.**

The primary objective of this course is to introduce students to the fundamentals of how to sell and to what selling is truly about. The course is appropriate for anyone who wants to understand and show proficiency with the skills required by different selling situations (e.g., direct sales of products and services, selling oneself in an interview, raising money for a new venture, running a company as CEO, etc.). The course looks at the entire selling process of lead generation, prospecting, qualifying, discovery, understanding and selling value, customizing presentations, objection handling, negotiation and closing, and demonstrates how curiosity plays a critical role in every stage of the process. This is not a typical GSB case-study-based course. Students who have taken the class describe it as a hands-on, skill-based class. As students in this class, you will work together in groups outside of class to complete team-based exercises designed to introduce you to selling fundamentals in each stage of the selling process. You will be practicing and utilizing newly learned skills in real life each week; there will be lots of repetition. You will then come together in class with the instructors to share and process the learning from these exercises.

**STRAMGT 517. Topics in Digital Business. 2 Units.**

This class will guide students through in-depth research projects focusing on specific case studies of digital businesses, where students select topics individually or in teams. The research projects must be framed using principles from economics and strategy. The course will review conceptual frameworks from the economics of platform markets, such as economies of scale, network effects, entry strategies for new businesses as well as defensive strategies by incumbents. Possible topics include financial technology, virtual currency, internet marketplaces, the sharing economy, online advertising and advertising technology, big data, and analytics.

**STRAMGT 518. Advertising and Monetization. 2 Units.**

The Global advertising market is forecast to top \$600 Billion in 2016, with advances in advertising technology, such as online publishing, digital and mobile advertising platforms, as well as new ways of consuming video content, driving a rapid evolution of the market. We analyze this evolution from the perspective of three main constituents: 1) Marketers who rely on advertising to launch and sustain product sales, 2) Publishers and media owners for whom advertising often represents the largest source of monetization, and 3) Advertising agencies who design, plan and buy media for advertising campaigns. From the marketer's perspective, we will look at the metrics and methods that are used in optimizing the use of advertising in an increasingly fragmented, complex marketplace. From the media side, we will look at different selling and delivery strategies that can help publishers, particularly digital ones, monetize their audience more effectively.

**STRAMGT 520. The Industrialist's Dilemma. 2 Units.**

This course explores how digital disruptions are having tectonic shifts on large, successful and established companies, whether they have a digital foundation or not. Both new and existing high technology firms such as Google, Amazon, Uber, Airbnb, Instacart and others are reshaping industries as disparate as life sciences and transportation. The management principles, competitive strategies, partnerships, and core competencies of the 20th century are being challenged in a world of bits and the global network in which all companies are forced to compete. In this course we will explore some of the fundamental technological changes impacting these industries, such as scaling assets without owning them, partnerships with digital leaders and new distribution strategies for goods and services. We will hear from CEOs of both leading Fortune 500 companies and new disruptors about what it takes to survive and thrive in this new digital economy.

**STRAMGT 524. Strategy Implementation. 2 Units.**

The seminar is built around five company visits to some of the most innovative firms in Silicon Valley. We visit their location, meet with mid-level managers who are encouraged to engage us in candid conversation about the challenges facing the company, and the challenges they personally face on a daily basis to implement their firm's strategy. Key questions include: What is the role, if any, of middle-managers in helping to formulate strategy? How is the strategy communicated to employees? In what circumstances do middle-managers explicitly invoke the strategy, if at all? What role do middle-managers play in strategic change? Do you distinguish financial and strategic health in your business? If so, do you quantify strategic health? How important is culture to the company's success and how do you reinforce this? What challenges have you faced in managing growth and organizational change at your company? What are the challenges to managing innovation in your company? The seminar will be particularly useful to students interested in strategy consulting or line management positions where you will participate in the strategy process, or any kind of implementation role. Each day we will spend time in class before each company visit to discuss a reading, the company background, and share reactions to the day's visit (this is an especially important aspect of the experience). In the past we have visited: Apple, Cisco, Facebook, Google, Ideo, Tesla and Yahoo!, among others. We plan to organize the same or similar visits this year.

**STRAMGT 526. Managing to Outcomes in Government, Education, and Nonprofit Organizations. 2 Units.**

This course focuses on actionable measurement in government agencies, non-profit organizations, and schools. Actionable means that the measurement is used by managers and other stakeholders to make decisions, influence behavior, and hold agents accountable. The course explores the intersection of several ideas that seem to be in some tension with each other. (1) You can't manage what you can't measure, (2) Measurement is expensive and its results are often ignored, (3) Not everything that counts can be counted and not everything that can be counted counts (apocryphally attributed to Einstein), (4) The more any quantitative social indicator is used for decision making, the more subject it will be to corruption pressures and the more apt it will be to distort and corrupt the social processes it is intended to monitor. (Campbell's Law). Among other things, we will consider logic models, theories of change, strategic design, monitoring and evaluation, social impact measures, performance contracting, and techniques for improving the behavior and accountability of individuals and organizations. The classes will be taught mainly through case studies that place the students in the position of managers and stakeholders called upon to make decisions. We will examine the challenges of managing to outcomes in various contexts, including government agencies (e.g., police departments), nonprofit organizations, and schools. We will also look at innovative funding vehicles that depend on measuring outcomes, such as conditional and unconditional cash transfers, pay for performance schemes, and social impact bonds.

**STRAMGT 527. Product Entrepreneurship. 2 Units.**

What distinguishes conventional products from hits? The class builds a framework for taking instincts through to idea phase and finally to creation of breakthrough products in creative and online markets. It will begin by dissecting the mechanics of successful video game design, which will then be extended to broader application in the launch of consumer products in a variety of markets and contexts. The objective is to systematically analyze the DNA of a hit product, from product design and testing through to post launch challenges and rapid scaling. We will focus on product attributes as they relate to consumers, organizational challenges, intermediators and, more broadly, the strategic competitive environment.

**STRAMGT 531. Venture Capital and Innovation. 1 Unit.**

In this course, we will investigate to what extent venture capital (in the U.S. elsewhere) fosters innovation as well as how other types of financing can drive or hinder innovation. Our discussion will be based on most recent academic and industry empirical evidence, as well as illustrative case studies. We will start with discussing venture capital as an industry, explain the organizational structure of venture capital firms as well as incentives of different players in the industry. We then explore in more detail how we can measure innovation and the relationship between VC industry and innovation activity.

**STRAMGT 532. Intellectual Property: Financial and Strategic Management. 2 Units.**

In today's competitive marketplace, companies -- from Fortune 500 firms to early stage start-ups -- rely on intellectual property (IP) to keep them one step ahead of the game. The role of IP as a strategic business asset has been punctuated by the recent multi-billion dollar deals and acquisitions involving patent portfolios, as well as the fierce Mobile market patent wars raging in courts around the world. This class will explore the value of corporate IP assets by thinking strategically about how to effectively leverage the knowledge, trade secrets, patents, technologies, trademarks, structures and processes that are critical across industries. We will focus on the elements of a successful IP strategy, and how that strategy is shaped by economic, strategic, legal, regulatory, and market factors. nnThrough a combination of case studies, class discussion and guest speakers, we will cover a variety of issues shaping a successful IP strategy in today's global business environment. Some of the topics we will cover include: nn\* Building and managing an IP portfolio that is aligned with business objectives;n\* The innovation cycle and technology transfer mechanisms;n\* IP portfolio monetization strategies (e.g., licensing, sale, enforcement);n\* IP considerations in Mergers & Acquisitions;n\* Tax planning related to IP (e.g., cross border transfer pricing, IP holding companies);n\* Managing corporate IP litigation risk;n\* Patent reform and the role of the U.S. Patent & Trademark Office (USPTO);n\* IP rights challenges while doing business in developing countries;n\* IP strategies for start-ups & entrepreneurs.nnMs. Efrat Kasznik is an IP valuation and strategy expert with more than twenty years of experience advising companies of all sizes, from startups to Fortune 100s, on extracting value from their IP. She is the founder and President of Foresight Valuation Group, an IP consulting and startup advisory firm providing valuation and strategy services for a range of purposes, including M&A, financial reporting, technology commercialization decisions, tax compliance, transfer pricing, and litigation damages. Ms. Kasznik has been a co-founder, CFO and advisor to several startups and incubators in the US and Europe, including the Stanford Venture Studio at the GSB. She is listed on the IAM 300 list of World Leading IP Strategists, and is a member of the leadership committee of the High Tech Sector, Licensing Executives Society.

**STRAMGT 533. Strategizing in Creative Industries. 1 Unit.**

Creative success is highly unpredictable; but creativity is increasingly becoming a source of competitive advantage in a variety of markets, from music and film, to new media, video games and software. Creative competitiveness brings with it a set of unique strategic challenges. How do you anticipate market reaction when there are no agreed-upon criteria for evaluating quality? How are barriers to entry retained, or overcome, in industries pervaded by reputation and status? How can creative talent be managed effectively under such circumstances? And what are the strategic implications of emerging digital technologies on the dynamics of creative markets?nnThis course is intended for students interested in understanding these issues, especially from the point of view of new entrants. It focuses primarily, though not exclusively, on the intersection between traditional creative markets such as music and film, and digital technology. We will explore recent cases of innovative startups on the forefront of digital media; of companies intermediating between producers and consumers such as social movie services and online radio; and on the strategic analysis of creative markets. In particular, we will explore insights from recent research on consumer taste and how identity impacts success in creative domains.

**STRAMGT 535. Entrepreneurial Approaches to Education Reform. 2 Units.**

This course will investigate the ways in which entrepreneurs have and could transform K-12 public schooling in the United States, a \$650 billion dollar industry that has a direct and long-term effect on nation's economy, democracy and culture. We will explore how human capital solutions, new schools, and technology products can all dramatically improve student learning and solve pain points. We will study a variety of ways to evaluate the efficacy, scalability, and financial sustainability of entrepreneurial enterprises serving students, families, educators and administrators in public education. The course will feature for-profit, not-for-profit, as well as double-bottom-line organizations. This course is suitable for students aspiring to be entrepreneurs, leaders in entrepreneurial organizations, leaders in educational organizations, donors or investors. Gloria Lee is a serial education entrepreneur who co-founded Aspire Public Schools, Teaching Channel, and Yu Ming Charter School. She is currently Chief Operating Officer at NewSchools Venture Fund.

**STRAMGT 536. The Startup Garage: The China Version. 1 Unit.**

A condensed version of Startup Garage focused on exploring entrepreneurial opportunities in China. Stanford teams will work jointly with students at the Graduate School of Management at our partner, Peking University (PKU). The teams' goals will be to identify a business startup model that has been successful in the US and explore how to modify and transplant that model for the Chinese market. We will be meeting in our immersive classroom at the GSB, and we will connect with our partners at their classroom in the Stanford Center at Peking University. The course will begin with a workshop that introduces the key concepts taught at Startup Garage: empathy, ideating, prototyping and testing of the complete business model. Teams will apply in a rapid fashion all steps of the Startup Garage process to their business idea. Because a central element of the Startup Garage is to get out of the building, the partnership with PKU will enable the teams at Stanford to have access to on the ground, out-of-the-building, real time information. The process will culminate into a short presentation summarizing each team's assessment about the viability of the business idea and immediate next steps. At the end of the course, teams who wish to continue exploring their business idea can join the fall quarter version of Startup Garage and maintain their collaboration with their PKU team. Teams will be formed within the course, and they will be advised by our network of Startup Garage advisors, which includes investors with experience in the Chinese market, as well as advisors and faculty from PKU. Instructor: Stefanos Zenios Stefanos Zenios is a professor at the GSB and the director of the Center for Entrepreneurial Studies. He is the lead architect of Startup Garage, an experiential second year elective in which teams of students explore new business ideas by using a combination of design thinking and lean startup tools. He is continuously exploring ways to apply the Startup Garage process to different entrepreneurial challenges, including the challenge of exploring entrepreneurial opportunities in emerging economies.

**STRAMGT 537. Leading Change in Public Education. 2 Units.**

Public education in America is at a crossroads. Does our education system have what it takes to produce graduates who are prepared for college, career, and citizenship in our increasingly digital and pluralistic world? Will income and ethnic achievement gaps continue to be pervasive and persistent in our nation's largest urban cities? Will family zip code determine educational destiny for the next generation of students? How will technological advances that have disrupted so many other sectors affect American public education? Which strategies and reforms are truly demonstrating results and which are merely passing fads? As in all large-scale enterprises undergoing rapid, transformative change, leadership matters greatly. Fortunately, over the last decade, the reform of American public education has been led by a number of innovative and results-oriented leaders at the state, district and charter levels. These leaders are bringing additional urgency, strategies, and ideas designed to prepare America's schools and her students for the century ahead. Some ideas are proving to be critical levers for change, others are facing significant political challenges, and others have not delivered on expected results. Many of them hold lessons for how future educational leaders can contribute to transforming public education for the next generation of K-12 students. This course will focus on school system leadership for education reform. The course will provide an overview of the critical issues facing K-12 public education in America today, and what is going on across the U.S. during this transformative period of change. Once this context is set, students will study education leaders and systems change strategies from the last 10-15 years at the state, district and charter levels. We will focus on leaders across five domains: Leadership in crisis situations, strategic leadership, "china-breaking" leadership, sustaining leadership, and next generation leadership. We will also look at leadership examples from outside K-12 education to broaden our thinking about what leadership styles and strategies could be effective here. Students will debate the strategies and efficacy of how different leaders approached systems-level change and will form their own working hypotheses of what is needed to help transform the American education system. Case studies in school system leadership will form the primary basis for classroom assignments and discussion. We will examine what went right and what went wrong in each case, focusing particularly on the decisions that school system leaders faced and the implications of their decisions. Most cases will be supplemented with research publications, technical notes, news clips, and/or videos to deepen the students' understanding of the context or issues discussed in the cases. Dan Katzir worked for Bain & Company, Teach for America and Sylvan Learning Systems before joining The Broad Foundation as its founding managing director. He is an experienced case study teacher and the editor of "The Redesign of Urban School Systems" (Harvard University Press, 2013). Please note that for two of the nine weeks, this course will meet on Wednesday instead of Monday: Wednesday, May 20 (instead of Monday, May 18) Wednesday, May 27 (instead of Monday, May 25, which is Memorial Day).

**STRAMGT 538. Financial Technologies. 2 Units.**

This class will provide an overview of the rapidly evolving world of financial technologies. New market entrants are promising to change the way we borrow, save, invest, and transact. Incumbents enjoy substantial market power but are struggling to keep up technologically as they wrestle with antiquated core infrastructure. We will analyze the emerging competitive landscape and the strategic dynamics in play. The class will begin with a short review of digital platform economics in which we will cover basic concepts such as network effects and economies of scale. We will then dive into a series of case studies and industry analyses. Particular attention will be paid to the areas of payments, alternative credit, and virtual currencies.

**STRAMGT 542. Entrepreneurial Investing in Health Care. 1 Unit.**

Investing in the healthcare sector is fraught with idiosyncratic challenges. First, the sector is very diverse and it spans biopharmaceuticals, medical devices, diagnostics, health care information technology, and health care services. Second, business models are evolving: business-to-business, business-to-physician, Business-to-patient, Business-to-business-to-patient, Business-to-business-to-physician, etc. Third, the sector is exposed to strong nonmarket forces: regulatory and reimbursement which are important elements to one's investment thesis. These challenges are amplified when investments focus on either early stage private ventures, or small capitalization public companies. Yet the possible returns for early stage and small cap investors are significant: fledgling healthcare companies can grow to multibillion business and can have a long and lasting impact on people's life and wellbeing. Topics to examine in the seminar include- Investment criteria that investors use to screen investment opportunities in this sector. Specific issues in biotech, medical devices, and services will be addressed.

n- How early stage ventures evolve as they mature and how the investment criteria change with the stage of the company.

n- How the investors change with the stage of the company: venture capitalists, private equity, public markets.

nWe will examine these topics through a combination of guest presentations, lectures, and practical applications to real investment opportunities.

nnTentative List of Speakers: Mike Kaplan (MMC Health Services); Noah Knauf (Warburg PincusHealth Care Group); Oleg Nodelman (EcoR1 -Capital value-oriented biotech investment fund);nTom McKinley (Cardinal Partners); Peter Ehrich (Crassey & Co); David Kim (Ghost TreenCapital); Marc Galetting (Longitude Capital); Anne DeGheest (Health Teach Capital)

nnInstructor: Stefanos ZeniosStefanos Zenios is a professor at the GSB and an expert on health care systems and the on innovation processes. He has completed a study in which he has developed a datadriven methodology that can be used by investors to identify predictors of success in early stage ventures. He will share his research findings with the class.

**STRAMGT 543. Entrepreneurial Acquisition. 2 Units.**

For aspiring entrepreneurs who don't have a burning idea or desire to start a company from scratch, acquiring a small business can provide a direct route to running and growing a business. This class will explore entrepreneurial acquisition (EA). As the course covers topics such as what makes a good industry, raising capital, how to source deals, dealing with investors, due diligence, and negotiation, the course is also applicable to those interested in private equity, venture capital, start-ups, and general management. The class relies heavily on the case method, and each class includes guests (often the case protagonists) who bring practical and current experience to the classroom. The two group projects are intended to be highly practical, simulating real-world situations. Professors Dodson and Kelly each have over 20 years of experience in the subject matter.

**STRAMGT 544. Scaling Excellence. 2 Units.**

The premise of the course is that managers are concerned with how to scale excellence in organizations and that scaling skills are essential for any leadership role. It will be taught with Shantanu Narayen, the CEO of Adobe. The course is designed to appeal to a wide range of audiences: students seeking to build new organizations, or turn around poorly performing organizations, or grow existing organizations to greater heights. We will focus on how to transform the footprint of a firm, and yet, not lose the mindset. Executives also need to think about to spread 'good behaviors' and make them widespread very quickly, and conversely, on how to shrink bad behaviors and make them small very quickly. This course aims to train students into becoming effective leaders of organizational change. We will use a mix of cases written specially for the course, and 'live cases' with guest speakers from the C-Suite.

**STRAMGT 545. Taking Social Innovation to Scale. 2 Units.**

How do you get the best new social innovations to reach the hundreds of millions of people who need it the most? And how do ensure that they are developed, deployed and scaled in a way that is relevant, appropriate and sustainable?

nnInnovators tackling the world's most difficult problems often ignore, misunderstand, and under-invest in the critical business challenges involved in crossing "the middle of the value chain." This is innovation's valley of death: product and system adaption and evaluation; evidence generation and design validation; formal or informal regulatory approval and registration. How do you design, introduce, and optimize the intervention's uptake before it can be taken to scale by markets, governments or other systems?

nThe class is taught by Steve Davis, President & CEO of PATH ([www.path.org](http://www.path.org)), the leader in global health innovation, and former global Director of Social Innovation at McKinsey & Company.

nnWe take an inter-disciplinary approach to look at the factors that pull innovation forward, push it from behind, and (often to the world's detriment) block its successful implementation and scaling. First grounding the discussion in research on innovation and social change, we then apply business principles, real world experiences and several important case studies in global health to examine the way good ideas get stuck, and how good ideas can turn into innovation that matters. We focus on root causes for failure, success factors, and business practices and tools to enable millions of lives to be impacted by social innovation. The seminar combines lectures, case studies, visiting practitioners and team projects focused on the business case for scaling specific social innovations. The goal is to help the next generation of social innovation leaders think more about some of the mistakes of the past, lessons for the future, and new ways of approaching old problems, all from a practitioner's point of view.

**STRAMGT 546. Strategies for Growth. 2 Units.**

This course will develop Business Strategy frameworks, some of which will be familiar from the core Strategy class and others of which will be new, and apply them to growing businesses. We will look at companies attempting to grow, as well as family businesses and some enterprises that will always be small. Each session, we will spend some time developing frameworks based on required reading. Then we will analyze individual companies using a combination of written case studies, video and audio excerpts of interviews with business owners, and guest speakers (or, if feasible, company visits). Issues we will consider include:

n- What makes a business scalable?

n- When are barriers to entry feasible and sustainable?

n- How can a firm differentiate itself?

n- How might that limit growth?

n- What can small firms do effectively that large organizations cannot?

n- How do organizational issues such as incentives, hiring, and delegation limit growth and/or create advantages for small and growing enterprises?

nnGrades will be based on class participation, a group written assignment applying concepts from the class, and a take-home exam.

**STRAMGT 547. Entrepreneurial Opportunities in Developing Economies. 2 Units.**

As technology-driven ventures are having more and more impact, entrepreneurial ecosystems have been emerging in recent years in developing economies. Following the lead of Silicon Valley, these newly formed industry networks that include universities, incubators and accelerator programs, angel investor networks and venture capital firms can now support local entrepreneurs and innovation better than ever before. As these economies grow and get more connected, exciting opportunities arise across markets and industries such as replicating a successful business model, leapfrogging the last technology, targeting the base of the pyramid or starting a venture capital firm. Despite the fertile ground for new endeavors, entrepreneurs face particular challenges and risks that they would not encounter in Silicon Valley.

nnThis case driven course will include the participation of investors and entrepreneurs that have seized these opportunities across the world. By taking this course, you will be better equipped to observe and explain emerging ecosystems and the opportunities they present. It is targeted towards students who are thinking about creating or investing in new ventures in emerging markets.

**STRAMGT 550. Global Value Chain Strategies. 2 Units.**

This course addresses how firms should structure and exploit their value chains as a competitive strategy. Structuring the value chain could involve decisions such as vertical integration which requires the firm to acquire key supply or customer operations, spinning off an internal operation or outsourcing a key operation, or merging with another firm that has similar products, services or markets. Exploiting the value chain could involve leveraging the value chain to enable faster product innovation, product development and launch, creation of new channels, or expanding to new markets. The course takes the perspective of senior management, possibly C-level executives, on how to develop strategies around such value chain issues.

**STRAMGT 552. Angel And Venture Capital: Financing and Decision-Making. 1 Unit.**

This course covers some of the stages of investment in early stage high-growth companies, especially the seed funding of a novel idea to initial venture capital rounds. We will concentrate on how investors and entrepreneurs make and should make important decisions at different stages and on typical mistakes. Some questions that we will discuss are: How do angels and VCs generate and process their deal flow and select companies? What are typical mistakes of entrepreneurs in raising capital and negotiating with financiers? How do VC funds operate and make decisions? How are VCs involved in business decisions such as recruiting talent and replacing CEOs? What are the important provisions of financial contracts between VCs and founders? How to value early-stage companies? The course is mostly case-based. The course is for those who want to become entrepreneurs and thus likely consumers of angel and VC financing and those who want to pursue a career in the financial services industry. No prior knowledge of the VC industry is needed.

**STRAMGT 554. Entrepreneurship and Venture Capital. 2 Units.**

This new course, STRAMGT 554, is a two unit version of the popular course, STRAMGT 354: Entrepreneurship and Venture Capital. Many of America's most successful entrepreneurial companies have been substantially influenced and supported by professionally managed venture capital funds. This relationship is examined from both the entrepreneur's and the venture capitalist's perspective. From the point of view of the entrepreneur, the course considers how significant and global business opportunities are identified, planned, and built into real companies; how resources are matched with opportunity; and how, within this framework, entrepreneurs seek capital and other assistance from venture capitalists, angel investors or other sources. From the point of view of the venture capitalist, the course considers how potential entrepreneurial investments are evaluated, valued, structured, and enhanced; how different venture capital strategies are deployed; and how venture capitalists raise and manage their own funds and add value to their companies. This course represents a shorter, more intense version of STRAMGT 354 - Entrepreneurship and Venture Capital. Students should not take both courses, as there is considerable overlap in course content.

**STRAMGT 555. Managing Growing Enterprises. 2 Units.**

This seminar is offered for students who, in the near term, aspire to the management and full or partial ownership of a new or newly acquired business. The seminar will deal in some depth with certain selected, generic entrepreneurial issues, viewed from the perspective of the owner/manager. Broad utilization will be made of case materials, background readings, visiting experts, and role playing. Throughout the course, emphasis will be placed on the application of analytical tools to administrative practice. This course is a condensed version of the four unit sections (S355) of the same course title. The course prioritizes the material from S355, covering much of the same material, but not to the depth covered in the four unit sections.

**STRAMGT 556. Venture Studio for Credit. 2 Units.**

Venture Studio for Credit is a self-guided project-based course in which students apply the concepts of design thinking, engineering, finance, business and organizational skills to design and test new business concepts. Students will work one-on-one with instructors and coaches to move through a workbook(s) and attend Thursday afternoon workshops where they will have team-to-team interaction. This course integrates methods from human-centered design, lean startup, and business model planning. Outside of meetings and workshops, teams will get out of the building and interact directly with users to develop a deep understanding of the challenges they face and to field test their proposed services, products, and business models. Prequalifications: 1. Projects must be exploring the commercialization of a technology innovation pioneered at a Stanford lab. 2. Teams must be a minimum of three people with at least one student enrolled for credit and representing a minimum of two schools. 3. All team members must be available to attend mandatory workshops on Thursdays from 3-4:20pm. Failure to meet all three prequalifications will result in an automatic drop.

**STRAMGT 562. Intellectual Property: Financial and Strategic Management. 1 Unit.**

In today's competitive marketplace, smart companies from Fortune 500 firms to early stage start-ups rely on innovation to keep them one step ahead of the game. The role of intellectual property (IP) as a strategic business asset has been punctuated by the recent multi-billion dollar deals involving patent portfolios, as well as the fierce patent wars raging in courts around the world. This class will help you understand the value of IP, by thinking strategically about how to effectively leverage the trade secrets, patents, technologies, trademarks, structures and processes that are critical to many businesses. The class will focus on the state-of-the-art, best practices related to IP strategy, and how they are shaped by economic, strategic, legal, regulatory, and market factors. Through a combination of case studies, class discussion and guest speakers, the class will cover a variety of issues shaping a successful IP strategy in today's global marketplace. Some of the topics we will cover include: Building and managing an IP portfolio that is aligned with business objectives; Extracting value from the IP portfolio through transactions (e.g., licensing, sale, enforcement); IP valuation in financial reporting; Tax planning related to IP (e.g., cross border transfer pricing, IP holding companies); Review of corporate IP litigation and the principals of IP damages; Patent reform and the role of the U.S. Patent & Trademark Office (USPTO); IP strategies for start-ups & entrepreneurs. Ron Kasznik is Professor of Accounting (Stanford GSB). Ms. Efrat Kasznik is an IP valuation and strategy expert, with 20 years of consulting experience, focusing on helping companies bring their innovation to market. She is the founder and President of Foresight Valuation Group, an IP consulting firm providing valuation and strategy. Ms. Kasznik is a member of the leadership committee of the Licensing Executives Society (LES) High Tech Sector, and has been listed on the IAM Strategy 300 list of top IP strategists in 2013.

**STRAMGT 565. Strategic Decision Making. 2 Units.**

This compressed course concerns the analysis of strategic decision-making, with an emphasis on the process of "big stakes" analysis in complex corporate settings. The first week is devoted primarily to the tools of this process and to coping with (strategic) unawareness (especially in competitive situations). The second week is devoted primarily to "learning by doing," as we apply the tools developed in the first week to real-life problems. The overall objective of the course is to develop the student's working knowledge of these techniques, so the student can fruitfully apply these techniques on his/her own. The course may be taken as a two-unit compressed course by signing up for STRAMGT 565 and participating in the first week only. Alternately, students may sign up for both weeks, by registering for STRAMGT 365. Students who sign up initially for STRAMGT 565 will be able to decide late in week 1 whether to continue into week 2 (in effect, these students will have the registration changed from 565 to 365). Note that, in the registration process, students who rank STRAMGT 365 will have a greater chance of getting a spot than students ranking STRAMGT 565. (It will not be possible to change in midstream from 365 to 565, i.e., to drop the second week.) Students will be expected to do approximately 90 minutes of work outside of class each day both weeks. A group project will be the main work product in the second week. The course will be taught jointly by Carl Spetzler, Chairman, Strategic Decisions Group and Professor Yossi Feinberg.

**STRAMGT 567. Social Entrepreneurship and Social Innovation. 2 Units.**

This course examines individuals and organizations that use entrepreneurial skills and approaches to develop innovative responses to social problems. Entrepreneurship has traditionally been seen as a way of creating wealth for the entrepreneur and for those who back her/his work. Social entrepreneurs employ "entrepreneurial skills," such as finding opportunities, inventing new approaches, securing and focusing resources and managing risk, in the service of creating a social value. As the intensity and complexity of social and environmental problems has grown in recent years social entrepreneurship, defined as innovative, social value creating activity that can occur within or across the nonprofit, government or business sectors, has become increasingly prominent. While virtually all enterprises, commercial and social, generate social value, fundamental to this definition is that the primary focus of social entrepreneurship is to achieve social impact above all else. We will study some of the most promising and the best-proven innovations for improving people's lives. We will also examine mature projects that are now tackling the issue of "scale", moving from local innovations to solutions that create deep systemic changes for larger numbers of economically disadvantaged individuals and communities throughout the world. This year we will focus on what are the constraints and opportunities for creating a social enterprise at scale. The process of "scale" poses tremendous challenges. Even when organizations manage to overcome the many obstacles to growth, and achieve appreciable scale, this approach is seldom sufficient to achieve significant social impact on its own. This year our course will pay particular attention to network approaches which require the mobilization of a vast array of actors and resources, but have the potential to generate rapid and sustained social impact.

**STRAMGT 573. Moore's Law and the Convergence of Computing and Communications; Strategic Thinking in Action. 2 Units.**

This six-session 2-point Bass seminar will involve students (maximum 20) in using strategic thinking to analyze the evolution of the semiconductor industry through the eyes of several key companies. The purpose of the seminar is to help students sharpen their skills in strategic recognition and in leading strategic change in large complex systems where technology trends play a major role in business outcomes. While the instructors will provide relevant pre-readings related to these topics, students will be expected to complement these materials with their own research of theoretical and empirical sources. After an initial lecture reviewing tools and industry dynamics, class discussions will focus on the situations of specific industry leaders. For the first 90 minutes of each of the next four sessions, we will be joined by a C-level executive from a leading semiconductor player to discuss his or her perspectives. Students will be expected to help structure the discussion and move it forward toward conclusions. Students will organize into 3-4 teams each focused on one of the sub-sectors or companies and prepare a five-to-ten page group report and present their most important findings and conclusions during the last class.

Same as: I

**STRAMGT 574. Strategic Thinking in Action - In Business and Beyond. 2 Units.**

This six-session 2-point Bass seminar will involve students (maximum 18) in analyzing the emerging global electric automotive industry by focusing on: (1) The electric automotive industry in the U.S. and Europe, (2) the electric automotive industry in Japan and Korea, and (3) the electric automotive industry in China. We will each time examine the strategies of the key automotive companies as well as that of the government and other key players such as infrastructure providers. The purpose of the seminar is to help students sharpen their skills in identifying facilitating and impeding forces of strategic change, and in assessing and estimating the direction and rate of strategic change. While the instructors will provide relevant pre-readings related to these topics, students will be expected to complement these materials with their own research of theoretical and empirical sources. They will also be expected to help structure the discussion and move it forward toward conclusions. Students will organize into three teams each focused on one of the regions and prepare a five-to-ten page group report of their most important findings and conclusions that extend current knowledge.

Same as: II

**STRAMGT 577. Strategic Interactions. 1 Unit.**

This course will cover advanced game theoretical tools by studying applications to competitive and cooperative interactions. Game theory provides an analytical method for modeling decision makers, their actions, preferences, information, dynamics and decision making process. Complex strategic environments usually do not yield themselves to a simple game structure, hence this course will be based on cases suggested by the students. Students will suggest a case (in the form of an industry, a specific interaction, a topic, etc.) the class will then jointly analyze the selected cases.

**STRAMGT 583. The Challenges in/with China. 2 Units.**

The general objective of the course is to develop a solid grasp of the changing socio-economic and political situation in China (with its challenges both for China and for the rest of the world). It should make then possible to define sustainable strategies for managing effectively in China and for handling the growing interdependence between China and the US and China with the rest of the world. From assessing critically the performance of China today, students will get an insight in the current complex dynamics of China renaissance/transformation and discuss alternative scenarios, with their business and socio-political consequences on the medium term. From this analysis and with a prospective perspective in mind, we will explore alternative strategic business approaches and propose responsible management practices required to build, overtime, a mutually rewarding growing interdependence. More specifically, the course will initially identify the multi-causality behind China's achievements and discuss some of the dysfunctions associated, today, with such performance. The conditions of management effectiveness required to enter and succeed overtime in the Chinese market will be identified while the challenges faced by the global expansion of Chinese firms overseas will be illustrated. The course will rely upon different pedagogical methods; it will create conditions to share and leverage participants' experience and it will make use of a number of recent cases and research results. Auditors will be admitted, but they will have to be present (and prepared) in all the sessions.

**STRAMGT 584. New Business Models in Emerging Markets. 2 Units.**

In recent years, we've seen an explosion of innovative business models blazing new trails in emerging markets. Many of these models are achieving commercial success while transforming the lives of low-income populations. Using nine cases of both early-stage, entrepreneur-led ventures and later-stage, public or large-cap firms, this course will examine best practices for scaling new enterprises in emerging markets. It will do so primarily through the lens of a potential investor. It will also explore what is required to spark, nurture and scale entire sectors that serve rapidly growing, often low-income markets. What does it mean to work in markets with limited infrastructure? What common mistakes are made -## whether in business model design, in supply chains, or in dealing with government -## and how can we avoid them? Which are the best business models to serve markets that corporations have traditionally ignored, and in which government has failed to deliver? Who might be threatened by the success of these new businesses? The seminar is a good match for Stanford students interested in working or investing in emerging markets. It will be taught by Matt Bannick, who leads Omidyar Network (a \$744m impact investing fund) and is the former President of eBay International and of PayPal.

**STRAMGT 585. International Business. 2 Units.**

This course addresses key issues in the creation and implementation of company strategies in the international environment: Why and how do firms internationalize? How should a firm assess the opportunities and risks in a foreign environment? What are the competences a firm needs successfully to enter foreign markets, where it faces unfamiliar environments and entrenched local competitors? How does a firm balance risk and return in deciding the best mode of foreign market entry? What are the strategic options available to a firm in competing internationally? How do international firms organize to deal with complexity? The course is in two parts, which are closely linked. The first is concerned with the strategy and operations of international firm, focusing on how corporations overcome the challenges of foreign environments to expand globally. This section covers foreign market assessment (analyzing the business opportunities and investment climate in a foreign country) and foreign entry strategy, including the alternatives of exporting, licensing, greenfield foreign direct investment or cross-border M&A. We look at trade-offs firms face between global or regional operating economies, on the one hand, and responsiveness to local customers, on the other, leading them to adopt global versus multi-local strategies. In the second part, we consider the development and adaptation of competences in the face of international competition. This section concerns the operational processes and organization structures firms use to support their international strategies. These include the generation and diffusion of knowledge across the corporate network, and the role of innovation and leadership in the transformation of international companies. The course uses a combination of case studies, problems, lectures and discussion, over a variety of companies and countries. Country settings include Japan, Spain, Italy, Singapore, India, Brazil, Romania, China, and the US. Companies may include P&G, Singapore Airlines, Timken, Indesit, HP, Inditex (Zara), Arcor and others.

**STRAMGT 586. New World Global Business. 2 Units.**

This elective is concerned with two themes: nnn1. The strategies and competitive basis of new business challengers— enterprises based in the countries of the "New World" of rapidly developing economies, including China, India, Brazil and Russia, Mexico, Indonesia and Turkey; nnn2. How companies based in the developed world can compete with the challengers.nnnThe rapidly developing economies are the home bases for highly competitive new firms which have employed novel and successful business models to gain significant stakes in domestic markets. Their home economies have been, to varying degrees, less affected than the mature economies by the global financial crisis and their firms have been able to continue remarkable domestic growth trajectories. Further, many of these firms are outwardly focused and rapidly gaining positions in the developed world, where they are challenging the interests of developed world multinationals. For global incumbents, it is critical to understand the strategies of the new challengers and how to compete with them. nnnThe focus of the course will be on these New World firms, with the aim of understanding the strategies and competences they are deploying in their successful expansion. Integral to their developing global competences is the role of disruptive innovation, addressing under-served markets, and exploiting institutional distance in establishing competitive positions in the home base. Yet it is not clear to what extent these competences can be successfully translated into more developed markets. The course will address strategies multinationals based in the developed world can adopt to counter the new challengers and succeed in their home markets, as well as in the home markets of these challengers.nnnThe course will be taught with newly developed case studies written for this and related courses. The cases provide insight into the strategies of New World companies, how companies from the developed world can address the opportunities and risks in New World countries and use them as platforms for expansion.nnnThe following are examples of companies which will be included:nnnNatura - Exporting Brazilian Beauty, BrazilnnLenovo: Managing a Global Merger, ChinannHaier: Taking a Chinese Company Global, ChinannInfosys Technologies Ltd.: Looking to the Future, IndiannTNK-BP: Russian Oil and Foreign Interests, RussiannSamsung Electronics: Global Flash Memory Business, KoreannArcor: The Challenge of Becoming a Global Competitor, ArgentinannMetro Cash & Carry, Russia, India, ChinannMonsanto: Realizing Biotech Value in Brazil, Brazil, USnnArcelik's International Expansion, TurkeynnStudio Moderna in Eastern Europe, Slovenia.

**STRAMGT 587. Strategy and Management in Developing Economies. 1 Unit.**

An important channel for economic development, and the progress of poverty alleviation, is to drive productivity improvements and growth among firms in developing countries. Yet scaling firms in environments characterized by extreme poverty, weak institutions and high levels of inequality poses severe challenges. This seminar will explore the issues facing firms in such environments, including the strategic challenges the firms face as well as the challenges involved in improving managerial practices. Many of the issues and potential solutions to these problems are poorly understood, and the goal of the seminar will be to deepen everyone's understanding of the challenges, as well as brainstorm about potential solutions. This will be an interactive seminar, based on readings and/or guest speakers, with students expected to engage in active discussion of the materials.

**STRAMGT 588. Leading Organizations. 2 Units.**

This course studies principles for leading organizations and creating business value from the perspective of a high-level executive. Topics include product development, business models and pricing, people management, time allocation, measurement and accountability, creative destruction, the development of new capabilities, and marketing.

**STRAMGT 691. PhD Directed Reading. 1-15 Unit.**

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: ACCT 691, FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, POLECON 691

**STRAMGT 692. PhD Dissertation Research. 1-15 Unit.**

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: ACCT 692, FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, POLECON 692

**STRAMGT 802. TGR Dissertation. 0 Units.**

Same as: ACCT 802, FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, POLECON 802

**Structural Biology Courses****SBIO 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**SBIO 225. Biochips and Medical Imaging. 3 Units.**

The course covers state-of-the-art and emerging bio-sensors, bio-chips, imaging modalities, and nano-therapies which will be studied in the context of human physiology including the nervous system, circulatory system and immune system. Medical diagnostics will be divided into bio-chips (in-vitro diagnostics) and medical and molecular imaging (in-vivo imaging). In-depth discussion on cancer and cardiovascular diseases and the role of diagnostics and nano-therapies.

Same as: EE 225, MATSCI 382

**SBIO 228. Computational Structural Biology. 3 Units.**

Interatomic forces and interactions such as electrostatics and hydrophobicity, and protein structure in terms of amino acid properties, local chain conformation, secondary structure, domains, and families of folds. How protein motion can be simulated. Bioinformatics introduced in terms of methods that compare proteins via their amino acid sequences and their three-dimensional structures. Structure prediction via simple comparative modeling. How to detect and model remote homologues. Predicting the structure of a protein from knowledge of its amino acid sequence. Via Internet.

Same as: BIOPHYS 228

**SBIO 241. Biological Macromolecules. 3-5 Units.**

The physical and chemical basis of macromolecular function. Topics include: forces that stabilize macromolecular structure and their complexes; thermodynamics and statistical mechanics of macromolecular folding, binding, and allostery; diffusional processes; kinetics of enzymatic processes; the relationship of these principles to practical application in experimental design and interpretation. The class emphasizes interactive learning, and is divided equally among lectures, in-class group problem solving, and discussion of current and classical literature. Enrollment limited to 50. Prerequisites: Background in biochemistry and physical chemistry recommended but material available for those with deficiency in these areas; undergraduates with consent of instructor only.

Same as: BIOC 241, BIOPHYS 241, GENE 241

**SBIO 242. Methods in Molecular Biophysics. 3 Units.**

Experimental methods in molecular biophysics from theoretical and practical standpoints. Emphasis is on X-ray diffraction, nuclear magnetic resonance, and fluorescence spectroscopy. Prerequisite: physical chemistry or consent of instructor.

Same as: BIOPHYS 242

**SBIO 274. Topics in Nucleic Acid Structure and Function. 2 Units.**

Principles of nucleic acid structure and function. Methods for investigating nucleic acid structure. Limited to graduate students and postdoctoral fellows in structural biology. Prerequisite: consent of instructor.

**SBIO 299. Directed Reading in Structural Biology. 1-18 Unit.**

Prerequisite: consent of instructor.

**SBIO 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**SBIO 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**SBIO 801. TGR Project. 0 Units.****SBIO 802. TGR Dissertation. 0 Units.****Structured Liberal Education Courses****SLE 91. Structured Liberal Education. 8 Units.**

Three quarter sequence; restricted to and required of SLE students. Comprehensive study of the intellectual foundations of the western tradition in dialogue with eastern, indigenous, and postcolonial perspectives. The cultural foundations of western civilization in ancient Greece, Rome, and the Middle East, with attention to Buddhist and Hindu counterparts and the questions these traditions address in common. Texts and authors include Homer, Plato, Aristotle, Greek tragedy, Sappho, the Hebrew Bible, the New Testament, Saint Augustine, and texts from Hindu and Buddhist traditions.

**SLE 92. Structured Liberal Education. 8 Units.**

Three quarter sequence; restricted to and required of SLE students. Comprehensive study of the intellectual foundations of the western tradition in dialogue with eastern, indigenous, and postcolonial perspectives. The foundations of the modern world, from late antiquity through the Middle Ages, the Renaissance, the Enlightenment, and the Scientific Revolution. Authors include Dante, Descartes, Shakespeare, and texts from Chinese and Islamic traditions.

**SLE 93. Structured Liberal Education. 8 Units.**

Three quarter sequence; restricted to and required of SLE students. Comprehensive study of the intellectual foundations of the western tradition in dialogue with eastern, indigenous, and postcolonial perspectives. Modernity as a period in intellectual history and a problem in the human sciences. Authors include Marx, Nietzsche, Freud, Kafka, Woolf, Eliot, and Sartre.

**SLE 199. Teaching SLE. 1 Unit.****SLE 299. Structured Liberal Education Capstone Seminar. 1 Unit.**

Senior capstone project for students who were enrolled in SLE their freshman year.

**Surgery Courses****SURG 60Q. Virtual to Real: Fundamentals of Human Anatomy. 3 Units.**

Advances in imaging technologies allow us to interact with anatomical information in ways that have not been previously possible. This course is designed to teach human anatomy through the interpretation of radiographs and CT scans, and the correlation of these images to real anatomy. Utilizes resources such as virtual interactive scans via the virtual anatomy table and interactive digital applications to aid students in developing their image interpretive skills. First six weeks focus on image interpretation and the remaining four weeks on the utilization of this knowledge in the understanding and identification of human anatomy on human prosecutions (cadaver material).

**SURG 68Q. Current Concepts in Transplantation. 3 Units.**

Preference to sophomores. Biological aspects of cell and organ transplantation, including issues that arise in the popular media. Diseases for which transplantation is a treatment, the state of the art in human transplantation, transplantation of animal tissue into humans (xenotransplantation), development of new tissue and organs in the laboratory (tissue engineering and cloning), and development of drugs and biological strategies to promote long-term survival of the tissue or organ (tolerance). How to write a scientific abstract, critique scientific literature, and research and present topics in contemporary transplantation.

**SURG 70Q. Surgical Anatomy of the Hand: From Rodin to Reconstruction. 2 Units.**

The surgical anatomy of the hand is extremely complex in terms of structure and function. Exploration of the anatomy of the hand in different contexts: its representation in art forms, the historical development of the study of hand anatomy, current operative techniques for reconstruction, advances in tissue engineering, and the future of hand transplantation.

**SURG 71Q. Procedural Anatomy. 3 Units.**

Study of human anatomy through the understanding of eight to ten common conditions, such as diseases, injuries, and genetic defects, that affect the head and neck region and the associated surgical procedures to treat these conditions. Students are exposed to the modalities involved in confirming the diagnosis of these common conditions, the benefits and risks of the procedures to treat these conditions, and the anatomy affected by the conditions and procedures. The laboratory component exposes students to surgical procedures on cadaver material and the learning of anatomy via 3D digital images, the 3D dissection table and models. The focus is on learning clinically relevant anatomy of the head and neck region.

**SURG 72Q. Anatomy in Society. 3 Units.**

Preference to sophomores. The influence of human anatomy on the design of commercial products and performance (such as headphone and ear bud design, automobile interior design, table music performance and handicap devices design). How societal advancements have evolved to increasingly accommodate human form and function. Guest speakers are experts in the fields of audiology, design and music. Exposure to human anatomy via cadaver material, 3D digital images, the 3D dissection table and models.

**SURG 100. From Virtual to Real: The Fundamentals of Clinical Anatomy. 3 Units.**

Introduction to human anatomy through a non-dissecting experience. Focus is on interpretation of normal anatomy through medical imaging such as radiographs and CT scans, the correlation of these images to real anatomy using prosecutions (cadaver material). Incorporates innovative resources such as virtual interactive scans, the 3D anatomy table, and interactive digital applications. Students expected to use proper anatomical terminology when describing structures and relationships within the body. Emphasis placed on typical anatomy as seen in healthy individuals, with introduction to anatomical variations and clinical cases throughout the course.

**SURG 101. Regional Study of Human Structure. 5 Units.**

Enrollment limited to seniors and graduate students. Comprises two parts, lecture and lab, both of which are required. Lectures in regional anatomy and dissection of the human cadaver; the anatomy of the trunk and limbs through the dissection process, excluding the head and neck.

**SURG 101A. Head and Neck Anatomy. 3 Units.**

Introduces students to human anatomy of the head and neck through a dissection based course. Students use proper anatomical terminology to describe structures and their relationships. Emphasis on typical anatomy as seen in healthy individuals, with some examples of anatomical variation introduced through dissection and clinical cases. Ideal for senior undergraduate students who have completed SURG 101 or equivalent, are familiar with basic anatomy, and have some dissection experience. Prerequisites: Surgery 101 or equivalent.

**SURG 150. Principles and Practice of International Humanitarian Surgery. 4 Units.**

Open to undergraduate students. Focus is on understanding the theory behind medical humanitarianism, the growing role of surgery in international health, and the clinical skills necessary for students to partake in global medical service. Guest speakers include world-renowned physicians and public health workers. Students work in groups to complete a substantial final project on surgical program development. Same as: SURG 250

**SURG 199. Undergraduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**SURG 203A. Clinical Anatomy. 11 Units.**

Introduction to human structure and function presented from a clinical perspective. Includes clinical scenarios, frequently used medical imaging techniques, and interventional procedures to illustrate the underlying anatomy. Students are required to attend lectures and engage in dissection of the human body in the anatomy laboratory. Surgery 203A presents structures of the thorax, abdomen, pelvis, back, upper and lower limbs.

**SURG 203B. Clinical Anatomy. 4 Units.**

Continues the introduction to human structure and function from a clinical perspective. Includes clinical scenarios, frequently used medical imaging techniques, and interventional procedures to illustrate the underlying anatomy. Students are required to attend lectures and engage in dissection of the human body in the anatomy laboratory. Surgery 203B presents structures of the head and neck.

**SURG 204. Introduction to Surgery. 1 Unit.**

Designed to give pre-clinical MD students a broad overview of all the surgical specialties. Lectures by leading surgeons from General Surgery, Plastic Surgery, Neurosurgery, Orthopedic Surgery, Head and Neck Surgery, Transplantation Surgery and Cardiac Surgery highlight the array of diseases and operations performed in their disciplines. In addition, each lecture gives students a "roadmap" as to how to enter that discipline.

**SURG 205. Advanced Suturing Techniques. 1 Unit.**

Designed for preclinical medical students interested in exploring technical skills and surgical techniques. Topics include knot tying, suturing, hand-sewn and stapled bowel anastomosis, and laparoscopic techniques. Students will complete a laparoscopic cholecystectomy on an animal model, and work with surgical attendings to complete general surgical operations (including pancreatectomy, colon resection, and others) on a cadaver. Preference is given to second year students.

**SURG 208. Plastic Surgery Tutorial. 2 Units.**

Diagnosis, theory, and practice of plastic and reconstructive surgery. Limited to two students per faculty member.

**SURG 209. Plastic Surgery. 1-18 Unit.**

Students participate in plastic and reconstructive surgery as functioning members of the clinical team. Students are exposed to operative surgery, emergency and trauma care, evaluation of operative candidates in the outpatient setting, and also attend teaching conferences. Limited to four students. Prerequisite: completion of first year or clinical experience.

**SURG 214. Medical Etymology. 1 Unit.**

A survey of medical etymology and terminology that parallels preclinical medical education. Topics focus on Greek and Latin roots and their appearances in the medical lexicon.

**SURG 230. Obesity in America. 1 Unit.**

Prevalence and effects of the obesity epidemic in America and the growing prevalence of associated comorbidities such as diabetes, hypertension, hyperlipidemia, sleep apnea, and joint problems. Risk factors, multi-disciplinary treatment options, the role of food in society, patients' perspectives, and current research in the field.

**SURG 231. Healthcare in Haiti and other Resource Poor Countries. 1 Unit.**

Originally developed to highlight healthcare in extreme poverty in Haiti, related lectures have been added covering healthcare in resource poor environments with the objective to introduce students to the complexity and unique problems of working in the Third World's healthcare morass.

**SURG 232. Social Emergency Medicine and Service Learning. 2-3 Units.**

Focus on understanding the social determinants of health and exploring the relationship between emergency medicine and public health affecting the Emergency Department patient population by: 1) Discussion and critique of relevant literature; 2) Learning about community resources for patient's social needs; 3) Shadowing ED physicians. Topics include how public health initiatives can improve access to hospital and community resources, and how patients receive care in a busy, fast-paced environment. 2 Units. Service learning component (Additional 1 Unit of Credit): Requires prerequisite of Med 157 Community Health Course, a 3-quarter commitment, personal statement and faculty approval. Students conduct screening and intervention for ED patients; Service Learning option requires prerequisite of Med 157 Community Health course, and enrolling for 3 units.

**SURG 241. Portraiture and Facial Anatomy for Artists. 4 Units.**

Focus is on the art of portraiture and underlying structures of the face, fundamental anatomical elements such as the skull and muscles of facial expressions, and the intersections between human anatomy and art. Studio sessions incorporate plastic models, dry bones, cadaveric specimens, and live models. Encourages use of proper anatomical terminology for describing structures and their relationships. Same as: ARTSTUDI 139

**SURG 242. Art and Anatomy Studio. 1 Unit.**

Discusses the intersection of art and anatomy and provides the opportunity to explore one art medium in depth. Students select a medium from drawing, painting, sculpture, digital art and art appreciation, and work in small groups with a mentor artist. Class time includes art instruction, creation and feedback. May be repeated for credit. May be taken for 1-3 units; units awarded commensurate with project time. Prerequisites: SURG 203A, SURG 203B, or SURG 101.

**SURG 243. Anatomy for Artists. 3 Units.**

Blends human anatomy and artwork, and is aimed at artists who aspire to study human structure, shape, and form. Weekly lectures will highlight intersections and influences of human anatomy on art, and explore the role it has played in various forms of artwork. Students encouraged to use proper anatomical terminology to describe structures and their relationships. Weekly studio sessions provide an opportunity for students to immerse in anatomically inspired drawings. Plastic models, dry bones, cadaveric specimens, and live models will be used for the studio sessions.

**SURG 250. Principles and Practice of International Humanitarian Surgery. 4 Units.**

Open to undergraduate students. Focus is on understanding the theory behind medical humanitarianism, the growing role of surgery in international health, and the clinical skills necessary for students to partake in global medical service. Guest speakers include world-renowned physicians and public health workers. Students work in groups to complete a substantial final project on surgical program development. Same as: SURG 150

**SURG 251A. Imaging Anatomy. 1 Unit.**

Accompanies existing clinical anatomy course for first year medical students (SURG 203A). Sessions focus on the anatomical region being taught and dissected during the same week in SURG 203A. Students revisit anatomy using a variety of basic and advanced imaging modalities. Emphasis on correlating imaging to dissection, studying anatomical variations, discussing clinical vignettes. Enrollment limited to MD students.

**SURG 251B. Imaging Anatomy (Head & Neck) II. 1 Unit.**

Accompanies existing clinical anatomy course for first year medical students (SURG 203B) concentrating on the head and neck region. Sessions focus on the anatomical region being taught and dissected during the same week in SURG 203B. Students revisit anatomy using a variety of basic and advanced imaging modalities. Emphasis on correlating imaging to dissection, studying anatomical variations, discussing clinical vignettes. Enrollment limited to MD students.

**SURG 252. Bedside Anatomy. 1 Unit.**

Provides an opportunity to revisit anatomy in a clinical context. Using case discussions, clinical vignettes, radiological imaging, and hands-on exercises, students are challenged to apply their knowledge of anatomy to explain common diagnostic maneuvers and interventional procedures performed at the bedside or in the outpatient setting. Emphasis will be on anatomical considerations in successfully performing these procedures and avoiding errors that may arise due to anatomical changes, oddities, or variations.

**SURG 253. Topics in Simulation of Human Physiology & Anatomical Systems. 1 Unit.**

Biweekly interdisciplinary lecture series on the development of computational tools for modeling and simulation of human physiological and anatomical systems. Lectures by instructors and guest speakers on topics such as surgical simulation, anatomical & surgical Modeling, neurological Systems, and biomedical models of human movement. Group discussions, team based assignments, and project work. Prerequisite: Medical students, residents or fellows from school of medicine, and computationally oriented students with a strong interest to explore computational and mathematical methods related to the health sciences.

Same as: CME 520

**SURG 254. Operative Anatomy and Techniques. 1 Unit.**

For preclinical students; provides a background in and integrates knowledge of surgical anatomy and therapy. Surgical or operative anatomy differs from gross anatomy in that the area exposed during surgery may be limited, the dissection may require exposing other seemingly unrelated anatomic structures with unique landmarks, and the procedure may require unusual technical facility. Provides an opportunity for students to understand the goals of representative surgical procedures (translating pathophysiology to surgical decision making to actual incision). Students learn surgical skills and perform the dissection of a number of commonly performed operations in the bio-skills laboratory. Emphasizes hands-on participation in surgical procedures in the laboratory and is taught by attending physicians in general, cardiothoracic, vascular, plastic, head and neck, urologic, and orthopedic surgery.

**SURG 256. Clinical Anatomy and Surgical Education Series. 2 Units.**

Intended for first-year MD students. Builds on prior experience in the first-year medical curriculum consisting of the required Clinical Anatomy and the elective Operative Anatomy courses. Focuses on case-based didactic sessions for teaching the approach to a variety of surgical cases and their management. Students perform simulated cadaveric surgical procedures using standard operative instruments and techniques based on clinical case presentations and analysis. Covers hand surgery, vascular surgery, minimally invasive surgery, ear surgery and eye surgery specialties.

Same as: CASES

**SURG 271. Anatomy of Medical Mysteries. 1 Unit.**

This elective course for medical students explores areas of health and disease that are poorly understood presently. A variety of topics are covered such as placebo effect, techniques of meditation, presence of extra-sensory perception, and near death experiences. Scientific evidence for and against these topics presented and discussed. Current literature is evaluated and reading assignments are included. Pre-requisites: SURG 203A and SURG 203B.

**SURG 281A. Musculoskeletal Disorders. 1 Unit.**

Focuses on in-depth understanding of human musculoskeletal anatomy, biomechanics, and disease processes. Emphasis will be on the dynamic nature of musculoskeletal tissue with its complex biochemistry and cellular activity. Topics include fundamentals of musculoskeletal development, growth, repair and vascularization. In addition, students receive an introduction to musculoskeletal imaging, forensics, pathology, and the clinical principals of fixation and treatment protocols.

**SURG 281B. Musculoskeletal Disorders II. 1 Unit.**

Continuation of in-depth understanding of human musculoskeletal anatomy, biomechanics, and disease processes. Emphasis will be on the dynamic nature of musculoskeletal tissue with its complex biochemistry and cellular activity. Topics include fundamentals of musculoskeletal development, growth, repair and vascularization. In addition, students receive an introduction to musculoskeletal imaging, forensics, pathology, and the clinical principals of fixation and treatment protocols.

**SURG 290. 3D Biomedical Visualization: Techniques, Methods, and Applications. 1 Unit.**

Explores the power of digital anatomy. How 3D anatomical data sets like CT and MRI scans are created from human specimens; how they are processed, analyzed, and rendered. Focus on how digital content is best used for learning anatomy, patient education, and clinical practice.

**SURG 296. Individual Work: Human Anatomy. 1-18 Unit.**

Carried out under the supervision of one or more members of the staff. Prerequisite: consent of instructor.

**SURG 298. Procedure-Based Specialty Capstone Course. 1 Unit.**

Designed for graduating medical students entering a procedure-based internship or residency (e.g. general surgery, surgical sub-specialties, obstetrics-gynecology, anesthesia, and emergency medicine). Prepares students with practical, high-yield clinical and procedural skills. Clinical skills include fielding common calls regarding surgical patients, obtaining informed consent, completing operative dictations, discharging patients, writing prescriptions, running trauma surveys, and interpreting surgically relevant radiology studies. The hands-on portion of the course covers basic open and laparoscopic surgical skills utilizing bench models, laparoscopic box trainers, and full cadaveric simulations. Prerequisite: graduating medical student.

**SURG 299. Directed Reading in Surgery. 1-18 Unit.**

Consists of studies in progress, including cardiovascular and circulatory problems; gastric physiology; hemostatic disorders; homotransplantation; liver disorders; orthopedic pathology; bone growth; radiation injury; immunology, bacteriology, pathology, and physiology of the eye; physiological optics; comparative ophthalmology; neurophysiology of hearing; spatial orientation and disorientation; nasal function; and psychophysics of sensation. Prerequisite: consent of instructor.

**SURG 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**SURG 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members.

**Symbolic Systems Courses****SYMSYS 100. Minds and Machines. 4 Units.**

An overview of the interdisciplinary study of cognition, information, communication, and language, with an emphasis on foundational issues: What are minds? What is computation? What are rationality and intelligence? Can we predict human behavior? Can computers be truly intelligent? How do people and technology interact, and how might they do so in the future? Lectures focus on how the methods of philosophy, mathematics, empirical research, and computational modeling are used to study minds and machines. Undergraduates considering a major in symbolic systems should take this course as early as possible in their program of study.

Same as: LINGUIST 144, PHIL 99, PSYCH 35

**SYMSYS 122. Artificial Intelligence: Philosophy, Ethics, & Impact. 3-4 Units.**

Recent advances in computing may place us at the threshold of a unique turning point in human history. Soon we are likely to entrust management of our environment, economy, security, infrastructure, food production, healthcare, and to a large degree even our personal activities, to artificially intelligent computer systems. The prospect of "turning over the keys" to increasingly autonomous systems raises many complex and troubling questions. How will society respond as versatile robots and machine-learning systems displace an ever-expanding spectrum of blue- and white-collar workers? Will the benefits of this technological revolution be broadly distributed or accrue to a lucky few? How can we ensure that these systems respect our ethical principles when they make decisions at speeds and for rationales that exceed our ability to comprehend? What, if any, legal rights and responsibilities should we grant them? And should we regard them merely as sophisticated tools or as a newly emerging form of life? The goal of this course is to equip students with the intellectual tools, ethical foundation, and psychological framework to successfully navigate the coming age of intelligent machines.

**SYMSYS 130. Research Methods in the Cognitive and Information Sciences. 3 Units.**

Understanding the different methodological approaches used in disciplines that study cognition and information. Emphasis is on philosophical/analytical, formal/mathematical, empirical, and computational thinking styles, with some attention to other methods as well. What assumptions underlie these methods? How can they be combined? How do practitioners of each discipline think differently about problems, and what are the challenges involved in studying or working across them?.

**SYMSYS 150. CRYPTOCURRENCIES SEMINAR. 2 Units.**

A weekly seminar allowing students the opportunity to discuss and explore cryptocurrencies from a variety of domains and view points: n1) Explore the history of fiat currencies, both economically and philosophically. How does Bitcoin mesh in here? What are advantages and disadvantages compared to traditional fiat currencies? (~2 weeks) n2) Contextualize and juxtapose decentralized currencies with respect to TCP/IP, Napster, and other relevant decentralized and cloud protocols. (~2 weeks) n3) Work through and understand Satoshi's initial protocol and proof-of-work mining system. What problem did she solve? How? Why was it important? How can we prove it mathematically? What are significant game theoretic and cryptographic weaknesses? What do alternative cryptocurrencies look like? Is there a 'best' alternative? (~3 weeks) n4) What does 'Bitcoin as a protocol' mean? What can be built on top of it? What's being built around it? What does regulation look like? What are hypotheses for the future of digital currencies? How do we explain investor confidence, given regulatory hesitation? (~3 weeks).

**SYMSYS 161. Applied Symbolic Systems in Venture Capital + Entrepreneurship. 2 Units.**

A weekly seminar allowing students the opportunity to discuss and explore applied Symbolic Systems in technology, entrepreneurship, and venture capital. We will explore popular conventions and trends through the lens of numerous deductive and applied Symbolic Systems.

Same as: SYMSYS 261

**SYMSYS 170. Decision Behavior: Theory and Evidence. 3-4 Units.**

Introduction to the study of judgment and decision making, relating theory and evidence from disciplines such as psychology, economics, statistics, neuroscience, and philosophy. The development and critique of Homo economicus as a model of human behavior, and more recent theories based on empirical findings. Recommended: background in formal reasoning.

Same as: SYMSYS 270

**SYMSYS 184. Syntactic Theory and Implementation. 4 Units.**

Analysis and implementation of grammatical phenomena of English. Introduction to a theory of formal grammar, and its computational realization. Practical experience in forming linguistic hypotheses and testing them via implementation using state-of-the-art language technology.

Same as: LINGUIST 184

**SYMSYS 190. Senior Honors Tutorial. 1-5 Unit.**

Under the supervision of their faculty honors adviser, students work on their senior honors project. May be repeated for credit.

**SYMSYS 191. Senior Honors Seminar. 1 Unit.**

Recommended for seniors doing an honors project. Under the leadership of the Symbolic Systems program coordinator, students discuss, and present their honors project.

**SYMSYS 196. Independent Study. 1-15 Unit.**

Independent work under the supervision of a faculty member. Can be repeated for credit.

**SYMSYS 200. Symbolic Systems in Practice. 2-3 Units.**

Applying a Symbolic Systems education at Stanford and outside. The basics of research and practice. Students develop and present a project, and investigate different career paths, including academic, industrial, professional, and public service, through interviews with alumni.

**SYMSYS 201. ICT, Society, and Democracy. 3 Units.**

The impact of information and communication technologies on social and political life. Interdisciplinary. Classic and contemporary readings focusing on topics such as social networks, virtual versus face-to-face communication, the public sphere, voting technology, and collaborative production. Prerequisite: Completion of a course in psychology, communication, human-computer interaction, or a related discipline, or consent of the instructor.

**SYMSYS 203. Cognitive Science Perspectives on Conflict, Violence, Peace, and Justice. 3 Units.**

In recent years, cognitive scientists have turned more attention to questions that have traditionally been investigated by historians, political scientists, sociologists, and anthropologists, e.g. What are the sources of conflict and disagreement between people?, What drives or reduces violence and injustice?, and What brings about or is conducive to peace and justice? In this advanced small seminar, we will read and discuss works by psychologists, neuroscientists, philosophers, and others, which characterize this growing research area among those who study minds, brains, and behavior. Required: Completion of a course in psychology beyond the level of Psych 1, or consent of the instructor.

**SYMSYS 204. Philosophy of Linguistics. 4 Units.**

Philosophical issues raised by contemporary work in linguistics. Topics include: the subject matter of linguistics (especially internalism vs. externalism), methodology and data (especially the role of quantitative methods and the reliance on intuitions), the relationship between language and thought (varieties of Whorfianism and anti-Whorfianism), nativist arguments about language acquisition, and language evolution. Same as: LINGUIST 204, PHIL 369

**SYMSYS 206. Philosophy of Neuroscience. 4 Units.**

Can problems of mind be solved by understanding the brain, or models of the brain? The views of philosophers and neuroscientists who believe so, and others who are skeptical of neurophilosophical approaches to the mind. Historical and recent literature in philosophy and neuroscience. Topics may include perception, memory, neural accounts of consciousness, neurophenomenology, neuroscience and physics, computational models, and eliminativism. (Not open to freshmen.) Same as: PHIL 167D, PHIL 267D

**SYMSYS 209. Battles Over Bits. 3 Units.**

The changing nature of information in the Internet age and its relationship to human behavior. Philosophical assumptions underlying practices such as open source software development, file sharing, common carriage, and community wireless networks, contrasted with arguments for protecting private and commercial interests such as software patents, copy protection, copyright infringement lawsuits, and regulatory barriers. Theory and evidence from disciplines including psychology, economics, computer science, law, and political science. Prerequisite: PSYCH 40, 55, 70, or SYMSYS 202.

**SYMSYS 210. Learning Facial Emotions: Art and Psychology. 3 Units.**

Artistic and psychological learning approaches for emotion recognition from facial expressions. The advantages of learning by image-based microexpressions, subtle expressions, macro expressions, art drawing and actor mimicry when there are cognitive deficits due to conditions such as autism. Comparative analysis uses brain studies, learning theory, and human-computer interaction. Studio component conveys the artistic and psychological approaches. Prerequisites: PSYCH 1, SYMSYS 100 or consent of instructor. Go to [www.stanford.edu/~dwilkins/Symsys210Enroll.doc](http://www.stanford.edu/~dwilkins/Symsys210Enroll.doc) to sign up for a Permission Number.

**SYMSYS 211. Learning Facial Emotions: Art, Psychology, Human-Computer Interaction. 3 Units.**

Learning to recognize facial emotions by drawing a live model versus the psychology method of using classified images of subtle and micro expressions. Dimensions of analysis include cognitive modeling and neuroscience. The design of human-computer interaction systems for people with cognitive deficits such as autism and Aspergers, which integrate the art and psychology approaches using methods such as robot heads, avatars, and facial recognition software. Prerequisites: PSYCH 1 or consent of instructor.

**SYMSYS 245. Cognition in Interaction Design. 3 Units.**

Note: Same course as 145 which is no longer active. Interactive systems from the standpoint of human cognition. Topics include skill acquisition, complex learning, reasoning, language, perception, methods in usability testing, special computational techniques such as intelligent and adaptive interfaces, and design for people with cognitive disabilities. Students conduct analyses of real world problems of their own choosing and redesign/analyze a project of an interactive system. Limited enrollment seminar taught in two sections of approximately ten students each. Admission to the course is by application to the instructor, with preference given to Symbolic Systems students of advanced standing. Recommended: a course in cognitive psychology or cognitive anthropology.

**SYMSYS 255. Building Digital History: Social Movements and Protest at Stanford. 3-5 Units.**

A project-based course focused on developing a collaborative history website based on oral and archival history research. Thematic focus is the history of student activism at Stanford. How have political activities such as demonstrations, assemblies, educational events, and nonviolent civil disobedience been organized on campus, and how have they affected Stanford? What lessons can be drawn from the past for students interested in social change? Students will choose historical periods and/or specific social movements for research. Course will feature guest appearances by representatives from a range of social movements at Stanford the past fifty years, and the building of an online repository and community for the collaborative representation and discussion of history.

**SYMSYS 255A. Building Digital History: Social Movements and Protest at Stanford. 1 Unit.**

Lectures-only version of Symsys 255.

**SYMSYS 261. Applied Symbolic Systems in Venture Capital + Entrepreneurship. 2 Units.**

A weekly seminar allowing students the opportunity to discuss and explore applied Symbolic Systems in technology, entrepreneurship, and venture capital. We will explore popular conventions and trends through the lens of numerous deductive and applied Symbolic Systems. Same as: SYMSYS 161

**SYMSYS 270. Decision Behavior: Theory and Evidence. 3-4 Units.**

Introduction to the study of judgment and decision making, relating theory and evidence from disciplines such as psychology, economics, statistics, neuroscience, and philosophy. The development and critique of Homo economicus as a model of human behavior, and more recent theories based on empirical findings. Recommended: background in formal reasoning. Same as: SYMSYS 170

**SYMSYS 280. Symbolic Systems Research Seminar. 1 Unit.**

A mixture of public lectures of interest to Symbolic Systems students (the Symbolic Systems Forum) and student-led meetings to discuss research in Symbolic Systems. Can be repeated for credit. Open to both undergraduates and Master's students. First meeting is the second Monday of the quarter.

**SYMSYS 290. Master's Degree Project. 1-15 Unit.****SYMSYS 291. Master's Program Seminar. 1 Unit.**

Enrollment limited to students in the Symbolic Systems M.S. degree program. May be repeated for credit.

**SYMSYS 296. Independent Study. 1-15 Unit.**

Independent work under the supervision of a faculty member. Can be repeated for credit.

**SYMSYS 297. Teaching in Symbolic Systems. 1-5 Unit.**

Leading sections, grading, and/or other duties of teaching or helping to teach a course in Symbolic Systems. Sign up with the instructor supervising the course in which you are teaching or assisting.

**SYMSYS 298. Peer Advising in Symbolic Systems: Practicum. 1-2 Unit.** Optional for students selected as Undergraduate Advising Fellows in the Symbolic Systems Program. AFs work with program administrators to assist undergraduates in the Symbolic Systems major or minor, in course selection, degree planning, and relating the curriculum to a career or life plan, through advising and events. Meeting with all AFs for an hour once per week under the direction of the Associate Director. Requires a short reflective paper at the end of the quarter on what the AF has learned about advising students in the program. Repeatable for credit. May not be taken by students who receive monetary compensation for their work as an AF.

**SYMSYS 299. Curricular Practical Training. 1 Unit.** Students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of advisor.

## Teaching and Learning Courses

**VPTL 120. Peer Tutor Training. 1 Unit.** Goal is to help students become effective peer tutors for course material already mastered by articulating aims; developing practical tutoring skills including strategies for drop-in sessions; observing experienced tutors; discussing reading assignments; role playing; and reflecting on experiences as a peer tutor intern. Prerequisite: consent of instructor.

**VPTL 165. Race, Athletics and College Achievement. 3 Units.** How do social identities affect how people experience academic interactions? How can learning environments be better structured to support the success of all students? In this class, we will explore how a variety of identities such as race, gender, social class, and athletic participation can affect academic achievement, with the goal of identifying concrete strategies to make learning environments at Stanford and similar universities more inclusive. Readings will draw from psychology, sociology, education, and popular press. This class is a seminar format.  
Same as: AFRICAAM 165, CSRE 165

**VPTL 199. Independent Study. 1-3 Unit.** Special study under lecturer direction, usually leading to a written report or an oral presentation. Prerequisite: consent of instructor.

**VPTL 221. Practicum for fellows in the Stanford-SJSU Preparing Future Professors Program. 1 Unit.** Nine weekly one-hour sessions consisting of discussions of: (1) the previous week's SJSU shadowing experiences and (2) readings related to session themes.

**VPTL 231. Preparing for Faculty Careers. 1 Unit.** For graduate students and postdoctoral fellows from all disciplines who are considering a faculty career of any type and at any of a broad range of institutions. Numbers are limited and so whether formally registered (grad students) or attending as auditors (grad students or postdocs), all participants must commit to attending the entire course. Begins with a methodology to help determine if a faculty career is a good fit for the values, interests and abilities of each participant. Progresses to an exploration of different types of faculty roles and different institutional contexts (e.g., tenure-track vs. non-tenure-track; research-intensive vs. teaching-intensive; large vs. small; etc.). Discusses how to identify and land a faculty position. Ends with concrete tips on how to thrive in such a role. May be repeated for credit.

**VPTL 297. Teaching and Learning in Higher Education. 1-4 Unit.** (Same as LAW 303) This course is co-taught by Tom Ehrlich, GSE, and Mariatte Denman, Office of the Vice Provost for Teaching & Learning. It provides doctoral and masters students with an opportunity to focus on teaching and learning along with graduate students from many disciplines throughout the university. Students watch and interview master teachers at Stanford, prepare a syllabus module for a workshop or class they might teach, and learn a range of effective pedagogical methods. The course is open not only to masters students and doctoral students from all schools who expect to work in higher education, but also to students interested in K-12 education, and they may develop a teaching module for use in those schools.  
Same as: EDUC 297

**VPTL 299. Independent Study. 1-3 Unit.** Special study under lecturer direction, usually leading to a written report or an oral presentation. Prerequisite: consent of instructor.

**VPTL 312. Science and Engineering Course Design. 2-3 Units.** For students interested in an academic career and who anticipate designing science or engineering courses at the undergraduate or graduate level. Goal is to apply research on science and engineering learning to the design of effective course materials. Topics include syllabus design, course content and format decisions, assessment planning and grading, and strategies for teaching improvement.  
Same as: ENGR 312

## Theater and Performance Studies Courses

**TAPS 1. Introduction to Theater and Performance Studies. 4 Units.** What brings together a contemporary company such as Google and an experimental theater such as The Wooster Group? What sets them apart? Approaching theater as presentational form of organization, this class shifts study of theater from the context of literature to that of performance. It offers an overview of performance across disciplines: from theater and other performing arts, to law, management, sports, and new technologies. In this interdisciplinary exploration, performance emerges as a model that cuts across diverse branches of contemporary culture, from sports events, to social dances, to political protests, to the organization of a workplace. It is designed to serve students who may go on to major or minor in Theater and Performance Studies including the Dance division and also students for whom this knowledge is a general contribution to their liberal arts education or to their own field of study. It integrates scholarly research and practical use of performance. No previous performing arts training or skills are required.

**TAPS 10AX. Acting Intensive: Theatre and Beyond, Into the World of Film. 2 Units.** Introduction to the craft of acting for film and reinforcement of basic concepts for the experienced student. Skill-building in the areas of acting, movement, voice, and speech, utilizing material from the film and theater. In-depth work on technique, utilization of action, specificity of language, personalization, emotional truth, character, and given circumstance. Blocking of scenes live performance and video recording of performances. Final performance of the two scenes in a showcase afternoon.

**TAPS 10N. Arts and Ideas: 20th Century Art in Conflict. 4 Units.** The second quarter of Art & Ideas builds on the examples of Modernism students in Arts and Ideas studied in the first quarter. The Frosh Seminar ¿20th-Century Art in Conflict¿ will focus on drama and film that experiments with new possibilities of form, shaping the direction of later artistic practice. We will trace how the political and aesthetic concerns of the 20th century reflect and exploit new technologies, both in theater and film, altering the position and function of author, actor, director, and audience.

**TAPS 11AX. Set Design. 2 Units.**

How ideas in fine art, architecture, and installation inform the practice of theatre set design. Traditional techniques of stage scenery design, basic drafting and model making guide the process of designing a set for an opera or play in this hands-on workshop.

**TAPS 11N. Dramatic Tensions: Theater and the Marketplace. 4 Units.**

Preference to freshmen. The current state of the American theater and its artists. Conventional wisdom says that theater is a dying art, and a lost cause, especially in an age of multi-media entertainment. But there are more young playwrights, actors, and directors entering the field today than at any other time in American history. Focus is on the work of today's theater artists, with an emphasis on an emerging generation of playwrights. Students read a cross-section of plays from writers currently working in the US and UK, covering a spectrum of subjects and styles from serious to comic, from the musical to the straight play. Hits and misses from recent seasons of the New York and London stages and some of the differences of artistic taste across the Atlantic. Hands-on exploration of the arts and skills necessary to make a play succeed. Students develop their own areas of interest, in guided projects in design, direction or performance. Conversations with playwrights, designers, and directors. Labs and master classes to solve problems posed in areas of creative production. Class meets literary managers and producers who are on the frontlines of underwriting new talent. Class trips include two plays at major Bay Area Stages.

**TAPS 11Q. Art in the Metropolis. 3 Units.**

This seminar is offered in conjunction with the annual "Arts Immersion" trip to New York that takes place over the spring break and is organized by the Stanford Arts Institute (SAI). Participation in the trip is a requirement for taking part in the seminar (and vice versa). The trip is designed to provide a group of students with the opportunity to immerse themselves in the cultural life of New York City guided by faculty and the SAI programming director. Students will experience a broad range and variety of art forms (visual arts, theater, opera, dance, etc.) and will meet with prominent arts administrators and practitioners, some of whom are Stanford alumni. For further details and updates about the trip, see <http://arts.stanford.edu>.

Same as: ARTSINST 11Q

**TAPS 11SC. Learning Theater: From Audience to Critic at the Oregon Shakespeare Festival. 2 Units.**

Who doesn't love going to a play: sitting in the darkened theater, an anonymous member of the audience waiting to be entertained, charmed, and challenged? But how many of us know enough about the details of the plays, their interpretation, their production, and acting itself, to allow us to appreciate fully the theatrical experience? In this seminar, we will spend 13 days in Ashland, Oregon, at the Oregon Shakespeare Festival (OSF), where we will attend these plays: Shakespeare's *Hamlet*, *Richard II*, *The Winter's Tale*, *Timon of Athens*, and *Twelfth Night*; the world premiere of Lisa Loomer's *Roe*; Qui Nguyen's *Vietgone*; William F. Brown and Charlie Smalls's *The Wiz* (adapted from L. Frank Baum's *The Wonderful Wizard of Oz*); the world premiere of Penny Metropulos and Linda Alpers's adaptation of Charles Dickens's *Great Expectations*, and a world premiere adaptation of Gilbert and Sullivan's *The Yeomen of the Guard*. (To read more about these productions, go to [www.osfashland.org](http://www.osfashland.org)). We will also spend time backstage, meeting with actors, designers, and artistic and administrative directors of OSF. Students will read the plays before the seminar begins. In Ashland, they will produce staged readings and design a final paper based on one of the productions. These reviews will be delivered to the group and turned in on Thursday, September 22. Note: This seminar will convene in Ashland on Monday, September 5, and will adjourn to Stanford on Sunday, September 18. Students must arrive in Ashland by 4:00 p.m. on September 5. Room and board in Ashland and transportation to Stanford will be provided and paid for by the program. Sophomore College Course: Application required, due noon, April 5, 2016. Apply at <http://soco.stanford.edu>.

**TAPS 12AX. Sketch Comedy and Improvisation. 2 Units.**

Explore improvisation and sketch comedy in an intensive ensemble and create an original show. Pure improvisational theater techniques. Concepts covered include spontaneity, shared control, creative collaboration, narrative, and status. Students apply those skills to writing and staging scripted monologues, two-handers, and ensemble sketches. Students create an original show with the entire class.

**TAPS 12N. To Die For: Antigone and Political Dissent. 4 Units.**

(Formerly CLASSGEN 6N.) Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of *Antigone* by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta. Same as: CLASSICS 17N

**TAPS 12SC. Playwriting Lab: The Art of Dramatic Writing. 2 Units.**

Workshop. Each student develops an original script which is presented in theater by the other students. How to develop, expand, and condition the creative mind. Topics including dramatic action, text and subtext, characterization, language, and style. Students function as a theatrical collective where each has the opportunity to participate in reading and serving the vision of each student-author.

**TAPS 13AX. Musical Theater. 2 Units.**

Have you ever seen a great musical and wondered, "How do the actors do it?" In this workshop we will explore the mechanics of acting in musicals as we practice solos and scene work from contemporary and classic musicals. Material will range from the "golden age" of musicals of the 1930s to new releases. Possible choices are: *Gypsy*, *Company*, *My Fair Lady*, *Sweeney Todd*, *Oklahoma!*, *Guys and Dolls*, *Cabaret*, *West Side Story*, *A Chorus Line*, *Ragtime*, *Urinetown*, *Dreamgirls*, *Hair*, *Avenue Q*, *South Pacific*, *Damn Yankees*, *Anything Goes*, *Hedwig and the Angry Inch*, *Caroline, or Change*, *Ain't Misbehavin'*, *Next to Normal*, *Hairspray*, and others. Students are encouraged to suggest their own material in their application for the program. The class will be accessible to both beginners and experienced actors/singers and will include in-depth work on vocal technique, utilization of action, specificity of language, personalization, emotional truth, character, and given circumstance. Students will develop an awareness of the demands of the performance experience in a safe and supportive environment. They will be encouraged to work to expand their range and will study and perform a solo and a scene from a musical. These assignments will require a minimum of 2 two-hour sessions with a scene partner during a scene rehearsal week. Commitment and responsibility to scene partners is a crucial component to successful work in the theater. In addition to required readings, students will be expected to conduct some research on the world of the playwright, librettist, and composer. We will end our workshop with a final performance of the work in a showcase for an invited audience. All levels welcome!

**TAPS 13N. Law and Drama. 4 Units.**

Preference to Freshmen. Beyond the obvious traits that make a good (court room) drama, theater and jurisprudence have much more in common. Just as drama is engaged not only in entertainment but also in examination of social conventions and mechanisms, so law is not only concerned with dispensing justice but with shaping and maintaining a viable human community. In this class we will read and discuss a series of plays in which court proceedings are at the center of dramatic action and concluding with an investigation of the new genre of documentary drama.

**TAPS 13SC. Journeying In and Out: Creative Writing and Performance in Prison. 2 Units.**

The United States imprisons more people than any other nation. Including those on probation or parole, over seven million adults are currently under correctional supervision in the U.S. - that's 1 in every 50 Americans. The United States also incarcerates more youth than all other countries. Each year approximately 500,000 young people are brought to detention centers, and an estimated 250,000 young people are tried, sentenced, or incarcerated as adults, the majority for non-violent offenses. On any given night in America, 87,000 children are housed in juvenile residential placements, and 10,000 children are held in adult jails and prisons. Despite the magnitude of these numbers, prisons and juvenile detention centers are uniquely closed and sequestered institutions. This class works collaboratively with a local juvenile hall to use literature, writing, and performance to explore the lives of incarcerated youth. In the process, students gain an understanding of incarceration on an immediate and personal scale. Stanford students will work directly with students serving sentences at Hillcrest Juvenile Hall, using collaborative writing and performance projects to share their individual experiences and voices. Stanford students will also engage in writing exercises and discussion groups on campus in order to explore their own relationship to freedom and punishment, choices, changes, and mercy. Class readings, screenings, and discussions will foreground the legal, social, and historical contexts surrounding incarceration as well as the social and behavioral changes made possible through arts programming in prisons. In addition to sustained collaborations with incarcerated youth, the class includes workshops with formerly incarcerated artists, authors, and advocates as well as visits to historic and active prison facilities. Taught jointly by a fiction writer and a dance studies historian, and using the template of the hero's journey as our guide, we will consider how writing and performance might mediate understandings of crime, punishment, and rehabilitation.

**TAPS 14N. Imagining India: Art, Culture, Politics in Modern India. 3 Units.**

This course explores history via cultural responses in modern India. We will examine a range of fiction, film and drama to consider the ways in which India emerges through its cultural productions. The course will consider key historical events such as the partition of the subcontinent, independence from British rule, Green Revolution, Emergency, liberalization of the Indian economy, among others. We will reflect on epochal historical moments by means of artistic responses to these events. For example, Ritwik Ghatak's experimental cinema intervenes into debates around the Bengal partition; Rohinton Mistry's novel, *A Fine Balance* grapples with the suspension of civil liberties during the emergency between 1975-77; Rahul Varma's play *Bhopal* reflects on the Bhopal gas tragedy, considered the world's worst industrial disaster. Students will read, view and reflect on the aesthetic and historical texts through their thoughtful engagement in class discussions and written essays. They will also have opportunities to imaginatively respond to these texts via short creative projects, which could range from poems, monologues, solo pieces, web installations, etc. Readings will also include Mahashweta Devi, Amitav Ghosh, Girish Karnad, Jhumpa Lahiri, Manjula Padmanabhan, Salman Rushdie, Aparna Sen, among others.

Same as: COMPLIT 14N, CSRE 15N, FEMGEN 14N

**TAPS 15N. Food and Performance: Meals, Markets, Maize and Macaroni. 3 Units.**

Come hungry to learn! This course serves as an introduction to food and performance culture. We will engage ethical and aesthetic questions about factory farms, feminist performance art and futuristic cooking. Emphasis is on original research, interdisciplinary analysis and doing performance. We will attend events, have guest speakers, create our own mini-performances around the broad themes of the course, write critical reviews and conduct archival research. We begin by studying the work of anthropologists of food and then move on to contemplate the way food and performance converge in modern thought and art. We will vary our approaches to the texts and debate a broad range of topics. For example, we will discuss: food's connection to sexuality, memory, race, embodiment, colonialism, violence, protest, public policy and science. The parameters of the course have been limited to food movements in the U.S. in the 20th and 21st centuries; however the opportunity to work on topics beyond this geopolitical and historical scope is possible and encouraged. Texts may include works by Yayoi Kusama, Dwight Conquergood, Mary Douglas, Karen Finley, Psyche Williams, Alice Waters, Jonathan Foer, Michael Pollan, Julia Child, Lauren Berlant, Laura Esquivel, Douglas Sirk, Coco Fusco, Nao Bustamante, Doris Witt and more.

**TAPS 15SC. Courtroom Theater. 2 Units.**

In the new millennium, the popularity of TV courtroom drama has been staggering: according to a weekly Nielsen ratings conducted a few years ago, 30 million people watched *CSI: Crime Scene Investigation* in one night, 70 million watched at least one of the *CSI* shows, and 40 million watched two other forensic dramas (*Without a Trace* and *Cold Case*). These widely popular shows offer a somewhat distorted image of American criminal courtroom. In this class we will go "behind the scenes" to engage in a hands-on investigation of performances in the criminal trials. We will begin by visiting Bay Area courthouses to investigate the courtroom as a "set" for powerful legal dramas that are happening there on a daily basis. In these field trips we will also observe the courtroom proceedings and talk to judges and other legal professionals. After this introduction to the real-life courtroom, we will investigate landmark theatrical court dramas. Using mock trial techniques, we will approach playtexts as legal "cases." We will try to identify weaknesses and strengths of these cases, and then use them as mock trial scenarios. Ultimately, this class engages the questions of what does it take to build a solid courtroom case and how does it differ from a powerful piece of theater. While getting acquainted with both courtroom and theater techniques, we will keep a critical eye on (mis)representations of criminal courtroom in the popular media. No previous experience in acting or mock trials is necessary. The class satisfies the WAYS Creative Expression requirement. Sophomore College Course: Application required, due noon, April 5, 2016. Apply at <http://soco.stanford.edu>.

**TAPS 16N. Masterpieces of Modern Drama. 4 Units.**

What is modern theatre and how is it created? In this course, we will explore some of the most important works of the last century and a half. These plays, by writers such as Ibsen, Beckett, and Brecht, will be a springboard for our own leap into the art of the theatre. This course stresses that the theatre truly lives when performed. In addition to reading plays, we will watch productions (recorded and live), and stage some scenes informally ourselves. No theatrical experience is required; only an openness to creative and intellectual challenge.

**TAPS 20A. Acting for Non-Majors. 2 Units.**

A class designed for all interested students. Creative play, ensemble work in a supportive environment. Designed for the student to experience a range of new creative skills, from group improvisation to partner work. Introductory work on freeing the natural voice and physical relaxation. Emphasis on rediscovering imaginative and creative impulses. Movement improvisation, listening exercises, and theater games release the energy, playfulness and willingness to take risks that is the essence of free and powerful performance. Course culminates with work on dramatic text.

**TAPS 21. StoryCraft. 2 Units.**

StoryCraft is a hands-on, experiential workshop offering participants the opportunity, structure and guidance to craft compelling personal stories to be shared in front of a live audience. The class will focus on several areas of storytelling: Mining  $\zeta$  how do you find your stories and extract the richest details? Crafting  $\zeta$  how do you structure the content and shape the language? Performing  $\zeta$  how do you share your stories with presence, authenticity and connection? Will meet Wednesday evenings from 7-9pm.

**TAPS 22. Scene Work. 1-2 Unit.**

For actors who complete substantial scene work with graduate directors in the graduate workshop.

**TAPS 23. Game Design: Making Play. 3 Units.**

Do you want to make games? This is a project-oriented workshop course that will teach you how to apply design thinking to create new kinds of play. We'll teach you about mechanics, playtesting, drama, narrative, and more. You'll work in teams to produce a new play form in whatever medium and style you like. We want zippy mobile games. We want intensely serious board games. We want socially conscious interactive theater games. We want kinds of fun we've never even imagined.

Same as: TAPS 223

**TAPS 25. Acting Short Narrative: From Shakespeare to YouTube. 2 Units.**

This course will help beginning students understand basic dramatic structure for acting short scenes. Using classic models (Euripides, Shakespeare, Noel Coward, Stephen Sondheim), we will explore how compelling dramatic scenes are constructed. Students will work with the instructor and with professional actors from Stanford Repertory Theater to come to grips with what makes these scenes successful and how best to bring them to life. As a final project, students will work together to develop and write their own short dramatic scenes, suitable for posting on YouTube.

**TAPS 28. Makeup for the Stage. 2 Units.**

Techniques of make-up application and design for the actor and artist including corrective, age, character, and fantasy. Emphasis placed on utilizing make-up for development of character by the actor. Limited enrollment.

**TAPS 29. Theater Performance: Acting. 1-3 Unit.**

Students cast in department productions receive credit for their participation as actors; 1-2 units for graduate directing workshop projects and 1-3 units for major productions (units determined by instructor). May be repeated for credit. Prerequisite: consent of instructor.

**TAPS 30. How Theater is Designed. 4 Units.**

Team-taught. An introduction to theatrical set, costume and lighting design. Emphasis on balancing practical skill with conceptual ideas for live stage performance. Hands-on projects.

**TAPS 31. Introduction to Lighting and Production. 4 Units.**

How light contributes to the creation of mood and atmosphere and different kinds of visibility in theatrical storytelling. The use of controllable qualities of light including color, brightness, angle, and movement in the theatrical process of creative scenography. Hands-on laboratory time.

**TAPS 32. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.**

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations.

Same as: AFRICAAM 32, AMSTUD 32, CSRE 32A, EDUC 32, EDUC 432

**TAPS 32F. History of Costume and Fashion. 4 Units.**

The evolution of fashion and costume with an emphasis on the relationship between social, cultural, and political events and clothing style. Attention to major designers and creators and their shaping of resultant fashion and artistry in clothing.

**TAPS 34. Stage Management Techniques. 2-3 Units.**

The production process, duties, and responsibilities of a stage manager. Skills needed to stage manage a production.

Same as: TAPS 334

**TAPS 39. Theatre Crew. 1-3 Unit.**

For students working backstage, on run crew, or in the theater shops on TAPS department productions. Night and weekend time required. Pre-approval from Laxmi Kumaran (laxmik@stanford.edu) required for enrollment.

**TAPS 39D. Small Project Stage Management. 2-4 Units.**

For students Stage Mananging a TAPS Senior Project or Assistant Stage Managing a TAPS department production. Pre-approval by Laxmi Kumaran (laxmik@stanford.edu) required for enrollment.

**TAPS 41N. Inventing Modern Theatre: Georg Büchner and Frank Wedekind. 3 Units.**

The German writers Georg Büchner (1813-1837) and Frank Wedekind (1864-1918). Many of the most important theater and film directors of the last century, including Max Reinhardt, G. W. Pabst, Orson Welles, Robert Wilson, and Werner Herzog, have wrestled with their works, as have composers and writers from Alban Berg and Bertolt Brecht through Christa Wolf and Thalia Field. Rock artists as diverse as Tom Waits, Lou Reed, Duncan Sheik, and Metallica have recently rediscovered their urgency. Reading these works in translation and examining artistic creations they inspired. Classroom discussions and written responses; students also rehearse and present in-class performances of excerpts from the plays. The aim of these performances is not to produce polished stagings but to creatively engage with the texts and their interpretive traditions. No previous theatrical experience required.

Same as: GERMAN 41N

**TAPS 70. Introduction to Directing. 3 Units.**

Fundamentals of Directing.

**TAPS 101. Theater History. 4 Units.**

A survey of the history of theatre and dance from the ancient Greeks to the modern world. While primarily intended to help TAPS graduate students prepare for their Comprehensive Exam, this course may also be taken by undergraduates or non-TAPS graduate students in order to gain a broad understanding of some of the seminal plays, dances, theories, and performance practices of the past 2500 years.

Same as: TAPS 201

**TAPS 101P. Intro to Directing and Devising Theatre. 4 Units.**

An introductory workshop class that explores a range of theatre exercises and techniques in order to create, perform, and compose theatre.

Students will work with original texts such as Beckett, Pinter, Churchill as well as creating their own performance texts and scores to make original, devised performance. Students will be encouraged to think critically about various compositional themes and ideas including the relationship between form and content, aesthetics, proximity, audience, space. Students will work collaboratively learning how to problem solve and deal with creative challenges as they create original performance works. Students will work towards creating a short original performance piece.

**TAPS 103. Beginning Improvising. 3 Units.**

The improvisational theater techniques that teach spontaneity, cooperation, team building, and rapid problem solving, emphasizing common sense, attention to reality, and helping your partner. Based on TheatreSports by Keith Johnstone. Readings, papers, and attendance at performances of improvisational theater. Limited enrollment. Improv, Improvisation, creativity and creative expression.

**TAPS 104. Intermediate Improvisation. 3 Units.**

This class is the continued study of improvisational theater with a focus on stage skills, short and long form performance formats, and offstage applications of collaborative creativity. It is open to any students who have taken TAPS 103 or have previous onstage improv experience AND consent of the instructor. May be repeat for credit.

**TAPS 105V. Improv & Design. 1 Unit.**

Improv & Design is a wildly practical class exploring the intersection of Improvisational Theater & Design Thinking. Spring quarter 2015, Improv & Design is about creating joyful disruption in the world around us. Students will be bringing the gift of improv out from the stage or the classroom into the world in real time, using design thinking principles to try things, iterate and gather feedback. Each week, we will cover a fundamental principle of improvisation. Topics might include playfulness, connection, resilience, collaboration, inspiration, optimism, generosity, presence, listening, accepting offers, and storytelling. Teams of students will then design small experiments to run in the real world that week to increase ordinary people's experience of that particular mindset or improvisational principle. The class is open to undergraduate and graduate students at Stanford with a genuine desire to make the world a better place (today!) and a willingness to jump in and explore new ways of showing up in the world. No previous design or improv experience needed. Open to undergraduate and graduate students. Students must apply for this class in order to be enrolled. Accepting 12-16 students. See [d.school.stanford.edu/classes](http://d.school.stanford.edu/classes) for more information.

**TAPS 108. Introduction to Feminist, Gender, and Sexuality Studies. 4-5 Units.**

Introduction to interdisciplinary approaches to gender, sexuality, queer, trans and feminist studies. Topics include the emergence of sexuality studies in the academy, social justice and new subjects, science and technology, art and activism, history, film and memory, the documentation and performance of difference, and relevant socio-economic and political formations such as work and the family. Students learn to think critically about race, gender, and sexuality from local and global perspectives.

Same as: AMSTUD 107, CSRE 108, FEMGEN 101

**TAPS 111. The American Dramatic Musical. 4 Units.**

The class offers an overview of the musical as an American genre, but will focus primarily on the evolution of the dramatic musical over the past 50 years, especially the work of Stephen Sondheim, Jeanine Tesori, Lin-Manuel Miranda, and similar artists. The class will culminate in participation in the creation of TheatreWorks' production of the musical Jane Austen's Emma, including discussions at rehearsals and previews with its author-composer Paul Gordon (Tony Award nominee for Jane Eyre) and its professional actors and designers. Final project rather than final exam. Some classes will be held off-campus during class hours. Taught by visiting lecturer Robert Kelley, Artistic Director, TheatreWorks Silicon Valley.

**TAPS 112. Creative Expression: Musical Theater. 4 Units.**

Students begin to create pieces that are fresh and innovative forms of musical theater that do not necessarily appeal to specifically popular audiences but perhaps to audiences more associated with high art, opera, or even contemporary independent music. Musical theater is an untapped resource of potential artistic innovation and has unfortunately become stuck in an ideal of universal accessibility. In present popular culture and the culture of contemporary art forms, musical theater almost exclusively refers to popular productions such as Phantom of the Opera, Rent, Wicked, Jesus Christ Superstar. Although excellent pieces of art in their own way, both dramaturgically and in their ability to evoke emotion through catchy melodies, for the most part each of them have their basis in popular and traditional musical idioms and theatrical forms, seldom exploring more advanced or avant-garde and experimental compositional and theatrical techniques.

Same as: MUSIC 112

**TAPS 113. Creative Expression: Directing the Musical. 3 Units.**

This course would teach conductors, composers, sound engineers and directors what to consider when directing the music for a musical theater production. Students would learn to efficiently schedule and conduct rehearsals, create legible scores and parts, make a checklist for all the required nuances ie: Music stands, stand lights, stools etc. Additionally, it is evident that musicians, theater artists, dancers, lighting designers, costume designers and scenic designers all have very different cultures in the way they operate: punctuality, preparation, warm ups, expectations etc. In order to have a smooth and successful working relationship with all of these important members of a theatrical production, a musical director must understand these cultures and how to communicate with them using a language they all understand.

**TAPS 114. Designing Wonder: Creating "everyday audiences". 4 Units.**

Flash Mobs, Concerts, Amusement Parks, Bakeries. Art and Theater does not need to be confined to a stage, and audiences do not need to be confined to comfy red velvet seats. In this course, students will explore and create unexpected and engaging experiences in everyday spaces. Sidewalks, Parks, Stanford Dining Halls. All of the work will seek to make the world a more WONDERous place in which moments of amazement and delight are possible around every corner. Class time will frequently be substituted for off-campus excursions including Great America, The Exploratorium, House of Air, Alcatraz Island, and Outdoor Movie Screenings. This is a hands-on, creative course.

**TAPS 115. Musical Theater. 1-3 Unit.**

In this workshop we will traverse the landscape of world of Musical Theater. It will serve as an introduction for the beginning actor and singer, and expand the more experienced performer's range in this genre. The world of Musical Theater is filled with stories of love, passion, joy, violence, heartbreak and rage. The class will include an introduction to vocal and movement skills for musical theater, beginning with exercises to build an ensemble and encourage a sense of play and relaxation in supportive environment. Our class must be a place where everyone feels safe. As ensemble members, we will be responsible for each other in this environment. Students will choose one solo song, and perform in a group number from this exciting discipline. The instructor will work with the actors on technique, utilization of action, specificity of language, personalization, and emotional truth. A professional coach from the theater community will conduct vocal coaching. Physical warm-ups and choreography will be suited for both the dancer and non-dancer. The class will culminate in the last week with live performance for friends and family. STUDENTS ARE ENCOURAGED TO BRING THEIR OWN SUGGESTIONS. (Isn't there a role you've always wanted to sing?) Required text: Broadway Musicals Show by Show: Sixth Edition - Stanley Green; Paperback.

**TAPS 120A. Acting I: Scene Study. 1-3 Unit.**

A substantive introduction to the basics of the craft of acting, this course gives all incoming students the foundation of a common vocabulary. Students will learn fundamental elements of dramatic analysis, and how to apply it in action. Topics include scene analysis, environment work, psychological and physical scoring, and development of a sound and serviceable rehearsal technique. Scene work will be chosen from accessible, contemporary, and realistic plays. Outside rehearsal time required.

**TAPS 120B. Acting II: Period and Style. 1-3 Unit.**

Learn how to expand character work, beyond what is immediately familiar. Continuing basic practices from the first part of the sequence, in this quarter they will look beyond the strictly contemporary, and may begin to approach roles drawn from more challenging dramatic texts. This might include plays chosen from mid-century American classics, World Theater, or other works with specific historic or cultural requirements. Actors begin to learn how a performing artist researches and how that research can be used to enrich and deepen performance. Prerequisite: 120A or consent of instructor.

**TAPS 120D. Studio Performance. 1-5 Unit.**

Rehearsal and development of a studio performance project for an end of quarter presentation. Emphasis is on development of acting skills with minimal technical support. Material chosen from classic plays, American realism, world theater, or created group ensemble pieces.

**TAPS 120V. Vocal Production and Audition. 1-3 Unit.**

An introductory study of the vocal mechanism and the development of voice and articulation for the stage. Students will be introduced to the actor's tools of phonetics, verbal action and text analysis. Vocal technique will then be applied to the actor's process in preparation for audition. Actors will fully participate in the audition process, from beginning to end. Emphasis will be on relaxation, selection of appropriate material, and versatility to show contrast and range. Same as: TAPS 210V

**TAPS 121. Proseminar. 3-5 Units.**

Workshop. Open to graduate and undergraduate students. Prepares PhD students for the academic profession by honing skills in conference presentations, job market, and scholarly publications. Also offered to undergraduates to help prepare them for careers in theater. Same as: TAPS 321

**TAPS 121C. Physical Characterization. 3 Units.**

A practical course in movement, acting and character development for stage or screen. This course is appropriate for all artists; no prior movement training is required. We will explore expressive possibilities in the body in order to build characters with nuanced physicality and rich emotional life. Students will learn strategies for awakening the body, find a greater range of expression, and widen the variety of characters they can inhabit. We will conduct live observations and take inspiration from photographs, memories, dramatic texts and other sources to build vivid portraits of character in performance. Actors will work independently and as an ensemble, learning techniques derived from Michael Chekhov. We will also practice physical conditioning for the actor through a daily warm-up sequence that improves strength, flexibility and alignment.

**TAPS 121P. Period and Style: Acting. 3 Units.**

This course is designed for the actor and theater-lover who has completed 120a or an equivalent basic acting class. Students will develop their acting skills towards the ability to perform in some of the major classics of the theater, from Shakespeare's plays through the fast-paced physical comedies of twentieth-century farce. Acting in "big" plays without damaging the voice, working physically with safety, how to research like an artist, and rehearse like a professional are all topics that will be covered. Class culminates in an open Scene Showing of Period Plays.

**TAPS 121S. Shakespeare Performance Intensive. 4 Units.**

This course explores the unique demands of playing Shakespeare on the stage. Through deep exploration of language and performance techniques in sonnets, speeches and scenes in (an edited) full-length play, the student will learn how to bring Shakespeare's passions to life through research, analysis, and a dynamic use of voice, body and imagination. This course is designed to increase the actor's physical, vocal, emotional, and intellectual responsiveness to the demands, challenges and joys of playing Shakespeare.

**TAPS 122P. Undergrad Performance Project: Oh What a Lovely War!. 4-9 Units.**

The Undergraduate Performance Project provides students the opportunity to study and perform in major dramatic works. The Winter 2016 Undergraduate Performance Project presents Oh What a Lovely War! Students learn to form an artistic ensemble, develop dramaturgical materials, learn professional arts protocols and practice, devise within the ensemble, and develop live performance ability. Audition required. Preference to majors/minors. Maybe repeated for credit.

**TAPS 123. Speaking with Distinction. 3 Units.**

Find your voice, focus your presence, stand your ground, and deliver your message with authority, clarity, and grace. SPEAKING WITH DISTINCTION is a course designed for anyone who has a need to speak to one person or a hundred people and make the message clear. Essential for presentations of all kinds whether in the classroom, workplace, or marketplace; present key concepts and ideas with power and enthusiasm; Speak to large audiences; One-on-one presentations; Speak to motivate, collaborate, inspire; Learn to think on your feet so that you are not dependent on notes, slides or luck. Increase your presence and build your public speaking skills in a fun and supportive environment.

**TAPS 124D. Acting for Non-Majors. 1-3 Unit.**

Formerly TAPS 20. Creative play, ensemble work in a supportive environment. Designed for the student to experience a range of new creative skills, from group improvisation to partner work. Introductory work on freeing the natural voice and physical relaxation. Emphasis on rediscovering imaginative and creative impulses. Movement improvisation, listening exercises, and theater games release the energy, playfulness and willingness to take risks that is the essence of free and powerful performance. Course culminates with work on dramatic text.

**TAPS 125. Acting Shakespeare. 3 Units.**

This course explores the unique demands of playing Shakespeare on the stage. Through deep exploration of language and performance techniques in sonnets, speeches and scenes, the student will learn how to bring Shakespeare's passions to life through research, analysis, and a dynamic use of voice, body and imagination. This course is designed to increase the actor's physical, vocal, emotional, and intellectual responsiveness to the demands, challenges and joys of playing Shakespeare.

**TAPS 126. Your American Life. 4 Units.**

This is a small seminar designed for students interested in creating scored stories for radio, podcast or live performance—spoken, sonic stories. Students will examine the main features and craft of these kinds of stories, popularized by radio programs like *This American Life*, and *Radiolab* and live shows like *The Moth*, and then write and produce your own piece, be it memoir, documentary, inquiry, or some combination of these genres. You will have the opportunity to meet at work with some of the best storytellers in America, including *Jad Abumrad*, host of *Radiolab*.

**TAPS 127. Introduction to Movement for Actors. 3-4 Units.**

The physical actor is ever working to develop a wider range of emotional expression, an unconscious attentiveness to fellow actors, and a compelling presence that conveys a sense of truth in action and in word. In this course, students will explore movement as a means of physical training and performance-building. This course is for those interested in dynamic storytelling; no prior acting or physical training is required. Our work consists of four main components: physical conditioning, practical technique, movement improvisation and the creation of several short performance pieces. Through mime technique (from *Tomaschevski* and *Decroux*) students will increase precision and control, create images with the body, and examine basic compositional elements. Students will also learn the fundamentals of contact improvisation for theater, which offers actors another way to explore text and make discoveries about character. Exercises in movement composition will sharpen tools necessary for creating original work and crafting strong performances on stage.

**TAPS 127S. Acting Through Song. 2-4 Units.**

How does a singer develop the strategies to shape nuanced, emotional performances? What clues does the singer mine from lyrics and a score in order to communicate through song? This is a studio course in acting and movement techniques for vocal performers who want to expand their expressive range, refine multi-faceted performances, and cultivate compelling stage presence. This course is suitable for any vocalist; classical singers, a cappella performers, musical theater actors and others are all welcome. The three foundational underpinnings of our work will be actor personalization technique, basic movement training and text analysis strategies. We will develop flexibility, relaxation and the freedom to follow expressive impulses while also deepening our knowledge of character, narrative and theme. Students should be prepared to engage in intensive work with performance pieces, selected according to each student's preferred style and tradition. We will focus on close textual analysis and find connections between the ways performers use various written scores (for spoken dialogue, song lyrics and musical composition) as the blueprints for dynamic performances that tell a powerful story. The course will culminate in a public performance of material from a musical performance genre.

**TAPS 127X. Advanced Movement for Actors: Conditioning, Improvisation and Composition. 3-4 Units.**

The physical actor is ever working to develop a wider range of emotional expression, an unconscious attentiveness to fellow actors, and a compelling presence that conveys a sense of truth in action and in word. Students explore movement as a means of physical training and performance-building. For those interested in dynamic storytelling; no prior acting or physical training is required. Four main components: physical conditioning, practical technique, movement improvisation, and the creation of several short performance pieces. The fundamentals of contact improvisation for theater, which offers actors another way to explore text and make discoveries about character. Exercises in movement composition sharpen tools necessary for creating original work and crafting strong performances on stage.

**TAPS 128. Acting for Film and Video. 3 Units.**

Acting techniques for working on film and with video.

**TAPS 129. Advanced Acting. 4 Units.**

Advanced study and practice of acting.

**TAPS 130. ReDesigning Theater: Live & Digital Performance. 3 Units.**

This quarter's version of *ReDesigning Theater* looks at Live and Digital Performance. We will examine the use of digital technology in collaboration with live performance. Students will learn and employ the design thinking process as well as improv and theatrical techniques. We aim to create user-centric, interactive experiences where technology enables the audience to become part of and/or influence the outcome of the story or its presentation. Student projects will begin with the concepts enabled by personal technology such as smart phones and expand to animation, video projection, and other media. Students will work in small groups to investigate and experiment with formats that blur the lines between live and digital, performer and audience, and physical and virtual platforms. This project-based course is accessible to students of all backgrounds interested in exploring and transforming the frontiers of technology, art, and live performance. Same as: ME 288

**TAPS 131. Lighting Design. 4 Units.**

Hands-on laboratory projects in lighting and designing stage productions and other live performances. The content and format of lighting plots. Prerequisite DRAMA 31.

**TAPS 132. Costume Design. 4 Units.**

Process of designing costumes for the stage, covering script analysis, rendering techniques, character development and conceptual ideas. Project related work with smaller, pertinent exercises. Prerequisite: 30 or consent of instructor.

**TAPS 133. Stage Scenery Design. 3-4 Units.**

Craft and Theory of stage scenery design including visual research, spatial organization, basic drafting, sketching and model-building. Prerequisite: 30, or consent of instructor.

**TAPS 134. Stage Management Project. 3-5 Units.**

For students stage managing a Department of Drama production.

**TAPS 136. Virtual Drafting for Designers. 3-5 Units.**

A new course looking at virtual drafting methods and opportunities.

**TAPS 137. Hand Drafting for Designers. 3 Units.**

Fundamentals of hand-drafting. Standard drawing conventions; the use of line weight, color, composition, and graphic style. Creation of construction documents for real-world applications. May be repeated for credit.

**TAPS 138. Sound Design. 4 Units.**

This is a hands-on, workshop-oriented course in sound design with an emphasis on sound for live performance. Its focus is on rapidly developing technical skills and intuitions for crafting beautiful, meaningful sounds. These skills are potentially useful to persons with interest in the fields of technical theater and dance, electronic music, game design, interior design, and experience design. Topics include wave editing; sound and music curation; audio spatialization; the qualitative study of filters; show control; sound reinforcement; interactive audio; and the use of tone, dynamics, and timbre to create moods and impressions.

**TAPS 140. Introduction to Projects in Theatrical Production. 1-4 Unit.**

A seminar course for students performing significant production work on Drama Department or other Stanford University student theatre projects. Students serving as producers, directors, designers or stage managers, who wish mentorship and credit for their production work sign up for this course and contact the instructor, Linda Apperson. Prerequisite: consent of instructor.

**TAPS 144. Puppetry with a Twist. 3-4 Units.**

Creative course is an introduction to puppetry with a survey of important styles and techniques from around the world including Twist's own.

Hands on and individualized experience with the aim of each student creating or contributing to a puppet or object/figure performance. Course is as broad as the individual's creative expression.

Same as: TAPS 344

**TAPS 150. British Theatre Then and Now: 1890s-present. 4-5 Units.**

This introductory course covers some of the 'golden ages' of British Theatre from 1890 to the present: the stylish and witty 'New Drama' of the Edwardian era with writers such as George Bernard Shaw and Oscar Wilde exploring sex and politics in the wake of Ibsen's *A Doll's House*; the artistic innovations of the 1950s and 60s from seminal writers such as Samuel Beckett, Harold Pinter and Tom Stoppard; and more recent works by modern legends Caryl Churchill, David Hare, Alan Ayckbourn, and immersive or interactive theatre by companies such as Punch Drunk. We will also look at the ever changing relationship with Shakespeare across generations of British theatre artists, including directors such as Peter Brook and Deborah Warner. In this class students will explore the relationship between theatre, politics and culture across fascinating eras in British history as well as thinking about the role of theatre in our own lives and social contexts. We will ask the questions: What is theatre for? What meaning does it have for a contemporary audience? How can it reflect our times? Has the communal audience experience of going to the theatre changed in an age that is dominated by social media and broadcast technology? Has this changed the way that people make theatre? What do we as audiences want from the theatre? What do we as theatre makers want from audiences? Students will read plays weekly and also see screenings of several excellent film versions of the plays as well as participating in staged readings of scenes and class discussions. The class will also attend at least one live theatre event. This is a perfect class for students who enjoy active learning, approaching the texts as scholars and historians, but also working with the plays creatively, engaging the imagination as potential actors, directors, designers and/or dramaturgs.

**TAPS 150T. Transnational Sexualities. 4 Units.**

Transnational Sexualities is an interdisciplinary course that considers the aesthetic, social, and political formation of sexual subjectivities in a global world. How does the transnational traffic of people, media, images, finance, and commodities shape the force-fields of desire? What is the relationship between political economies and libidinal economies? The course will explore the erotics of race and religion, neoliberalism and globalization within a wide range geo-political contexts including Indonesia, China, Egypt, India, South Africa, US, among others.

Same as: FEMGEN 150T, FEMGEN 250T, TAPS 250T

**TAPS 151A. Theater of the Asia-Pacific Region. 4 Units.**

This course offers a historical and cultural exploration of theatre forms and performance cultures from various countries that border the Pacific Ocean, as well as from island communities within Oceania. Taking the term 'Asia-Pacific' as a provocation and point of interrogation, we will assess how theatrical production from this broad area can help us think through questions of nationalism, regionalism, interculturalism, and diaspora, while deepening our appreciation of world theatre history. The first part of the course focuses on theatre in specific sites, covering classical forms from China, Japan, and Indonesia, as well as indigenous theatre and performance from several Pacific Islands, including the Cook Islands, S'moa, Aotearoa/New Zealand, and Hawai'i. The second part of the course centers on the ocean as a dynamic space of mobility, examining a range of recent plays and performances that trace identities on the move and across borders, and which reveal how various Asian and Pacific Islander communities have engaged with each other in locations from Australia to the west coast of the United States. In so doing, our course will chart connections and divergences that enable fresh insights into the geographical and cultural dimensions of global theatre.

Same as: TAPS 251A

**TAPS 151C. Hamlet and the Critics. 5 Units.**

Focus is on Shakespeare's *Hamlet* as a site of rich critical controversy from the eighteenth century to the present. Aim is to read, discuss, and evaluate different approaches to the play, from biographical, theatrical, and psychological to formalist, materialist, feminist, new historicist, and, most recently, quantitative. The ambition is to see whether there can be great literature without (a) great (deal of) criticism. The challenge is to understand the theory of literature through the study of its criticism.

Same as: ENGLISH 115C

**TAPS 151D. The Critic as Artist. 3 Units.**

Criticism is art. It therefore must aspire to reach the heights, depths and strange in-betweens it grapples with in the art of others. Yet criticism owes a singular responsibility to these others, and to the wider culture it seeks to interrogate. Our interrogation will be generated by dance and performance criticism, with possible forays into live visual art, theater, hybrid forms and whatever else we think might suit our purposes. Various methodologies will be debated and employed throughout the semester, as students are encouraged to begin (or continue) developing personal philosophies and voices through their writing. Our meetings will be hands-on affairs, guided by student experiments. Experiments is a key word; this class will function like a laboratory, an introduction to an unruly literary art form that is open to all individuals with an interest in better understanding themselves and their world through words and art.

Same as: DANCE 33

**TAPS 151H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.**

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice.

Same as: AMSTUD 151H, CSRE 151H, DANCE 151H, DANCE 251H, TAPS 351H

**TAPS 151T. Great Books: Dramatic Traditions. 4 Units.**

The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons.

Same as: COMPLIT 151B, COMPLIT 351B, TAPS 351

**TAPS 152. Introduction to Improvisation in Dance: From Salsa to Vodun to Tap Dance. 3-4 Units.**

This seminar introduces students to Dance Studies by exploring the topic of improvisation, a central concept in multiple genres of dance and music. We will survey a range of improvised dance forms from salsa to vodun to tap dance through readings, video viewings, discussion, and movement exercises (no previous dance experience required).

When studying each genre, we will examine how race, gender, sexuality, citizenship, and other power structures affect the practices and theorizations of improvisation. Topics include community and identity formation; questions of technique versus natural ability; improvisation as a spiritual practice; and the role of history in improvisers' quest for spontaneity. Course material will focus on improvised dance, but we will also read pertinent literature in jazz music, theatre, and the law.

Same as: AFRICAAM 52, CSRE 152, DANCE 152

**TAPS 152D. Introduction to Dance in the African Diaspora. 4 Units.**

This course introduces students to dance as an important cultural force in the African Diaspora. From capoeira in Brazil to dance hall in Jamaica to hip hop in the United States and Ghana, we will analyze dance as a form of resistance to slavery, colonialism, and oppression; as an integral component of community formation; and as a practice that shapes racial, gendered, and national identity. We will explore these topics through readings, film viewings, and movement workshops (no previous dance experience required). Students will have the option to do a creative performance as part of their final project.

Same as: AFRICAAM 24, CSRE 24D, DANCE 24

**TAPS 152H. Food and Performance: Meals, Markets, Maize and Macaroni. 4 Units.**

Come hungry to learn! This course serves as an introduction to food and performance culture. We will engage ethical and aesthetic questions about factory farms, feminist performance art and futuristic cooking. Emphasis is on original research, interdisciplinary analysis and doing performance. We will attend events, have guest speakers, create our own mini-performances around the broad themes of the course, write critical reviews and conduct archival research. We begin by studying the work of anthropologists of food and then move on to contemplate the way food and performance converge in modern thought and art. We will vary our approaches to the texts and debate a broad range of topics. For example, we will discuss: food's connection to sexuality, memory, race, embodiment, colonialism, violence, protest, public policy and science. The parameters of the course have been limited to food movements in the U.S. in the 20th and 21st centuries; however the opportunity to work on topics beyond this geopolitical and historical scope is possible and encouraged. Texts may include works by Yayoi Kusama, Dwight Conquergood, Mary Douglas, Karen Finley, Psyche Williams, Alice Waters, Jonathan Foer, Michael Pollan, Julia Child, Lauren Berlant, Laura Esquivel, Douglas Sirk, Coco Fusco, Nao Bustamante, Doris Witt and more.

**TAPS 153. Revenge: From Aeschylus to ABC. 4 Units.**

How has the topic of revenge inspired some of theatre history's most dramatic masterpieces? Covering works from ancient Greek and Roman tragedy to Chinese Opera, from Japanese samurai intrigues to Renaissance drama, and from nineteenth-century comedy to postcolonial plays, this course examines how the powerful impetus to take revenge has spurred or stymied some of theatre's most compelling characters. Blending theory and practice, we will experiment with an array of theatrical forms and styles; we will also discuss the philosophical dimensions and moral implications of revenge, including various cultural understandings of retribution and redress.

**TAPS 153D. Performing Digital Technologies. 4 Units.**

This class is about collaboration: between live performers and digital images, between artists and engineers, and between scholars and artists. It emphasizes conceptual work and creativity in the integration of new and old media. We will take a rigorous but fundamentally hands-on approach to the uses of a wide range of screen technologies - from smart phones to digital projections - in live performance. The class will start with a survey of successful uses of screens in recent theater and performance work, then move to finding novel solutions for particular dramatic scenes.

Same as: TAPS 253D

**TAPS 153S. Japanese Theater: Noh to Contemporary Performance. 4 Units.**

This course will provide a historical overview of Japanese theater from traditional (Noh, Kabuki, Bunraku) to contemporary (Angura, Butoh, and performance art). We will focus on the relationship between Japanese theaters and its audiences, exploring the contexts in which theater forms developed and how these forms themselves reflect Japanese culture and society.

**TAPS 154. A History of Theater in 10 1/2 Films. 4 Units.**

Engages the issue of visual literacy in the study of theater history. Pays special attention to the ways in which new media transform traditional fields of study. Films screenings will be combined with written sources, which will help students to recognize the historical elements in films we are viewing, and understand the ways in which the fact supports the story both in feature film and in historical narrative.

**TAPS 154C. Shall We Dance? Social Dancing as Political Practice. 3-4 Units.**

This seminar investigates social dancing as a political practice, and the dance floor as a place where race, ethnicity, class status, and sexuality are formed and contested. While many students may be familiar with salsa, and can imagine how it produces particular kinds of Latin/a femininities, this course asks students to expand the notion of social dancing beyond partner-dancing spheres. Course materials will focus on dance practices from the late-nineteenth century to present-day, ranging from rural Louisiana dancehalls to NYC nightclubs to Iranian backyards. We will examine how dances become racially coded (e.g., what makes a dance black or Latin@?), and understand how categories such as gender, class, and regionality intersect with such racializations. Students will engage in a range of activities, including reading, viewing films, and participating in occasional movement workshops (no previous dance experience required). Each student's final project will require independent, sustained, ethnographic research in a social dance setting of choice (e.g., student dance club, yoga studio, aerobics class, or YouTube).

Same as: DANCE 154

**TAPS 154D. The Chorus & The Digital Crowd: Representing Groups from Ancient Greece to the Arab Spring. 4 Units.**

The Chorus & The Digital Crowd is an interdisciplinary workshop in Theater, Visual and Digital Arts, where students will learn from, and collaborate with, professional artists in a dramatic and conceptual exploration of what it means to be a "chorus" from its early representations in Greek Tragedy to its emerging online character (tweeting, posting, liking, and sharing). Reckoning with the reemergence of the crowd in the public sphere, enabled and reinforced by its online counterpart, The Chorus & The Crowd will examine how we imagine and represent collective action. Whether in the same room, at the same website, or on the same planet, what happens when "I" becomes "we"?.

Same as: TAPS 354D

**TAPS 154S. Theater and Legal Regulation. 4 Units.**

This course examines how legal statutes, lawsuits, and contracts police theatrical practice, particularly in Britain and the United States in the nineteenth and twentieth centuries. Three particular forms of legal intervention will concern us: ownership of theaters and plays, government censorship and authorial control, and health and safety laws. We will explore how, despite their apparently different aims, these manifestations of the law pursue closely related ends.

**TAPS 155M. Dance and at the African Diaspora. 4 Units.**

Same as: DANCE 26

**TAPS 155T. Theatre of War. 4 Units.**

Military personnel and politicians alike use the phrase "the theatre of war" to refer to the geographical area of a military conflict and the more intangible concerns of battle. The primary concern of this class is the intersection between performance and war. Our inquiry will focus on drama, film, the media, and role-playing scenarios as a military training tool, and we will approach these objects through critical theories of justice, performance theory, and trauma.

**TAPS 156. Performing History: Race, Politics, and Staging the Plays of August Wilson. 4 Units.**

This course purposefully and explicitly mixes theory and practice. Students will read and discuss the plays of August Wilson, the most celebrated and most produced contemporary American playwright, that comprise his 20th Century History Cycle. Class stages scenes from each of these plays, culminating in a final showcase of longer scenes from his work as a final project.

Same as: AFRICAAM 156, TAPS 356

**TAPS 156T. Movement and Digital Culture. 4 Units.**

What is physical intelligence? How could we cultivate it? What technologies can extend sensory awareness, and which can suppress it? How can better understanding of human movement impact a creative/design process? The term "hybrid action" introduces the notion of movement, expressed in both the physical and virtual worlds. Through interactive technologies, such as the Kinect and camera tracking, and literature from multiple fields, this class takes human movement as a practice-based, creative, theoretical, historical, and philosophical realm of study. The course introduces basic principles and practices of body awareness as a way to extend one's "physical intelligence" and asks how studying movement can inform creative practices from computer programming to engineering to choreography, as well as applications in health and rehabilitation, cognitive and neuroscience, philosophy and literature. The class emphasizes hands-on, individual and collaborative projects through research and prototyping.

Same as: DANCE 156T

**TAPS 157. World Drama and Performance. 4 Units.**

This course takes up a geographically expansive conversation by looking at modern and contemporary drama from nations including Ghana, Egypt, India, Argentina, among others. Considering influential texts from the Global South will also enable us to explore a range of themes and methodologies that are radically re-shaping the field of Performance Studies. We will examine the relationship between colonialism and globalization, empire and capital, cosmopolitanism and neoliberalism. Re-situating our perspective from the Global South and the non-western world, we will "provincialize Europe" and probe the limits of its universalizing discourses.

Same as: TAPS 357

**TAPS 158H. Proximity and Temporality in Performance. 4-5 Units.**

This course considers the relationship between proximity and temporality in live performance, looking quite literally at the distance in space and time between performers and audiences. Alongside case studies of performance works, class readings will be drawn from current Performance Studies scholarship as well as discourses in postmodern geographies and anthropological studies of "proxemics," as well as key philosophic works such as Lefebvre's *The Production of Space* and Heidegger's *The Concept of Time*.

Same as: TAPS 358H

**TAPS 158L. The Ethics of Storytelling: The Autobiographical Monologue in Theory, in Practice, and in the World. 4 Units.**

Recently a theatrical monologist gained notoriety when it was revealed that key aspects of one of his "autobiographical" stories had been fabricated. In this class another autobiographical monologist – who has himself lied many times in his theater pieces, without ever getting caught – will examine the ethics of telling our life stories onstage. Does theatrical "truth" trump factual truth? We will interrogate several autobiographical works, and then – through autobiographical pieces created in class – we will interrogate ourselves.

Same as: ETHICSOC 201R, TAPS 358L

**TAPS 159. Introduction to Game Studies. 4 Units.**

Games are not new; they are older than civilization. But in the past 50 years or so, we have seen an explosion of creativity in the development of new games, many of which, especially video games, complicate older understandings of what games are. This explosion of creativity has been matched by the increasing visibility and ubiquity of new games and ways of seeing games: as video games, televised professional sports, and even distributed urban events. Games are not a simple object of study. There are many ways to understand them: as social practices, as formal systems, as representative artwork, as modes of learning, and many more. We will start by considering games as a mode of performance, considering games in relation to theater and other forms of aesthetic performance. However, we will take a deeply interdisciplinary approach to the study of games, and will draw on perspectives from design, philosophy, education, and the emerging discipline of video game studies. We will also, of course, draw on a variety of games, both online and offline. As we bring in these perspectives, we will begin to consider games in at least two other fundamental ways: as designed experiences and as composed systems or artworks. This course is less an attempt to provide a survey of the entire field of games. It is more an attempt to provide a basic toolbox for critically examining and analyzing games. These tools are potentially useful for anyone who interacts with games: whether as a consumer of entertainment, a critical analyst of play, a user of serious games, or a game designer.

**TAPS 159G. The Theater of War: Art, Violence, and the Technologies of Death. 4 Units.**

We will read plays and study films dealing with war and the technologies of destruction, including Aeschylus' *Persians*, Sophocles' *Philoctetes*, Euripides' *Trojan Women*, Shakespeare's *Macbeth*, O'Casey's *The Plough and the Stars* and *The Silver Tassie*, Brecht's *Galileo and Mother Courage*, Kubrick's *Paths of Glory* and *Dr. Strangelove*, Bergman's *Shame*, Nichol's *Catch-22*, Wertmuller's *Seven Beauties*, Brenton's *The Genius*, Frayn's *Copenhagen*, Nottage's *Ruined*, among others.

**TAPS 159M. Movement and Meaning: Dance Studies in Global Comparative Context. 4 Units.**

This course introduces students to various approaches to studying dance in a humanities context. We will explore how people create meaning through dance and how dance, in turn, shapes social norms, political institutions, and cultural practices across time and space. The course's structure challenges the Western/non-Western binary that still pervades many academic disciplines by comparing dance forms across the globe on the basis of functional similarities. At the same time, we will keep in mind the unequal power hierarchies shaping our modern world, and therefore we will examine how and why certain forms have become delineated as 'Western' and others as 'world' or 'ethnic,' despite similarities in movement, meaning, or purpose.

Same as: CSRE 159M, DANCE 23, TAPS 259M

**TAPS 160. Performance and History: Rethinking the Ballerina. 4 Units.**

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries.

Same as: DANCE 160, FEMGEN 160, TAPS 260

**TAPS 160N. Chican@/Latin@ Performance in the U.S.. 4 Units.**

This course will introduce works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course's conclusion, each student will create and perform in a staged reading of an original performance piece.

Same as: CHILATST 160N

**TAPS 161. Dance & Conflict. 4 Units.**

This seminar investigates how moving bodies are compelling agents of social, cultural, and political change. Through readings, videos, discussions and viewings of live performances this class questions the impact of social conflict and war on selected 20th and 21st century dances and dance practices. This class asks to what extent dance, in its history as well as contemporary development, is linked to concepts of the political and conflict.

**TAPS 161H. Dance, History and Conflict. 4 Units.**

This seminar investigates how moving bodies are compelling agents of social, cultural, and political change. Through readings, videos, discussions and viewings of live performances this class questions the impact of social conflict and war on selected 20th and 21st century dances and dance practices. This class asks to what extent dance, in its history as well as contemporary development, is linked to concepts of the political and conflict.

Same as: DANCE 161H

**TAPS 162. Performance and the Text. 5 Units.**

Formal elements in Greek, Elizabethan, Noh, Restoration, romantic, realistic, and contemporary world drama; how they intersect with the history of performance styles, character, and notions of action. Emphasis is on how performance and media intervene to reproduce, historicize, or criticize the history of drama.

Same as: TAPS 262

**TAPS 162H. Baroque Modernities: Dance, Theater, Film, Political Theory. 4 Units.**

What do seventeenth-century choreography and dramaturgy contribute to (mean to) choreographic and theatrical modernity? How can we explain the recurrent baroque phenomenon across the twentieth century -- becoming particularly prominent in the 1980s -- beyond the historicist accounts of theatrical reconstruction? How does the baroque locate itself within cultural modernity? This seminar asks this question of choreography at several junctures: The analysis of seventeenth century baroque spectacle that fashioned dance and theatre into political tools of monarchical sovereignty; Twentieth-century literature on the Baroque that destabilizes received notions of subjectivity and political sovereignty; Twentieth-century choreography and film that deploys baroque figures and techniques. Thus, our material shall range from seventeenth-century dance and theater to contemporary dance, film and literature.

Same as: DANCE 162H

**TAPS 162I. The Idea of a Theater. 5 Units.**

Examines the idea of a theater from the religious street theater of Medieval York, though Shakespeare's Globe, and onto the mental theater of the Romantic reader and the alienation effects of Brecht's radical playhouse in the 20th cent.

**TAPS 163. Introduction to Dance and History: From Postwar to the Present. 4 Units.**

This course explores the cultural and historical unfolding of the genre of contemporary performance known as postmodern dance over the past six decades. It begins with the formative influence of the émigré Bauhaus artists of the 1930s, then the postwar experiments of the Beat artists in the 1950s, to Merce Cunningham, the Judson Dance Theatre, postmodern formalism, neo-expressionism, dance theatre and through to the global, spectacle-rich, cross-genre dance work of the early 21st century as the most recent extended legacy of this history. This course uses dance history to trace with special emphasis the effects of these visual art and movement experimentalists on gender representation and nationalist identity construction in the negotiation of boundaries between dance and life.

Same as: DANCE 163, FEMGEN 163D, TAPS 263

**TAPS 164L. Introduction to American Theater: Queer Lives from Cushman to Kushner. 4 Units.**

This course introduces students to classics in American Theater from the nineteenth-century to the present. We will learn how to read and critique plays, to conduct research about actors, directors, and how to think about problems in theater history. The course includes some scene work. More specifically, we will address questions such as: how does the American theater intersect with "queer lives" on and off the stage? How can we understand theories of acting and performance in relation to concepts about the performance of gender/race/class/ and sexuality as they have been and are rehearsed in great American plays such as *A STREETCAR NAMED DESIRE*, *SUDDENLY LAST SUMMER*, *INTIMATE APPAREL*, *ANGELS IN AMERICA*, *A CHORUS LINE*. *WICKED* and more.

Same as: FEMGEN 164L

**TAPS 164T. Queer Art and Performance. 4-5 Units.**

Examines the late 19th, 20th and 21st century forms of performance--including examples from drama, theater, cabaret, and performance art -- through the perspectives of contemporary critical gender and queer theories. Texts and movements range from early avant-garde (Dada, Futurism) to gay and lesbian drama (Lillian Hellmann, Joe Orton, Tony Kushner) to post-liberation Queer performance and video (Split Britches, Carmelita Tropicana, Kalup Linzy). Theorists include Judith Butler, Michel Foucault, and Eve Kosofsky Sedgwick.

Same as: FEMGEN 140P, TAPS 364T

**TAPS 165. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.**

How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section.

Same as: COMPLIT 195, CSRE 196C, ENGLISH 172D, PSYCH 155, SOC 146

**TAPS 165C. Ancient Dance and its Modern Legacy. 3-5 Units.**

Descriptions of dance in the Greek and Greco-Roman world; theories about dance in antiquity; dance and the senses; modern and modernist dancers and choreographers discussing ancient dance.

Same as: CLASSICS 137, CLASSICS 237, TAPS 265C

**TAPS 166H. Historiography of Theater. 3-5 Units.**

Goal is to design an undergraduate theater history class. Standard theater history textbooks, alternative models of theater history scholarship, and critical literature engaging historiography in general.

Same as: TAPS 304

**TAPS 167. Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice. 4 Units.**

(Formerly CLASSGEN 110.) Gods and heroes, fate and free choice, gender conflict, the justice or injustice of the universe: these are just some of the fundamental human issues that we will explore in about ten of the tragedies of Aeschylus, Sophocles, and Euripides.

Same as: CLASSICS 112

**TAPS 167H. Revolutions in Theater. 4 Units.**

This course surveys the period from the turn of the 20th century until WWII, during which the European avant-garde movements transformed modern art. This period in history is marked by dynamic political events that had a deep impact on experimental art and on culture in general. This interaction between poetics and politics makes the first decades of the 20th century the formative period of western and global theater.

Same as: TAPS 267

**TAPS 168. Writing for the Stage and Screen. 4 Units.**

This is a script analysis and film criticism course from the vantage point of the scriptwriter – both playwrights and screenplay writers. We will do comparative analysis of films that were adapted from plays and use published plays and/or student-authored plays to write original script adaptations. Students will also develop short video films based on a segment of such adaptations. May be repeated for credit.

Same as: FEMGEN 168

**TAPS 169. Hysteria and Modern Culture. 3-5 Units.**

The term "hysteria" has been used for centuries to categorize the mysterious ailments of others. This course will focus on the history of hysteria's representation and production from the late nineteenth century through WWI. Readings will include medical writings (Charcot, Bernheim, Freud), plays (Ibsen, Strindberg, Toller), and feminist theory (Cixous, Clément, Diamond). We will also devote some attention to the ongoing influence of the discourse of hysteria on contemporary medical and popular cultures.

Same as: GERMAN 137, HUMBIO 162H

**TAPS 170. Directing and Dramaturgy: Composition and Adaptation for Theatre. 4-5 Units.**

This course explores dramaturgy and directing in the research and production of theatre primarily through practical creative projects with secondary readings on dramaturgy as a discipline. In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material.

Same as: TAPS 370

**TAPS 170B. Directing Workshop: The Actor-Director Dialogue. 4 Units.**

This course focuses on the actor-director dialogue. We will work with actors and directors developing approaches to collaboration that make the actor-director dialogue in theater.

Same as: TAPS 372

**TAPS 171. Performance Making. 4 Units.**

A studio course focused on creative processes and generating original material. Students will be encouraged to think critically about the relationship between form and content exploring the possibilities of site specific, gallery and theatre settings. Students will reflect throughout on the types of contact and communication uniquely possible in the live moment, such as interaction or the engagement of the senses. The emphasis is on weekly experimentation in the creation of short works rather than on a final production.

Same as: TAPS 371

**TAPS 172. Out of Place: (W)riting Home. 4 Units.**

A creative writing workshop; all genres. This course will introduce students to the fundamentals of a productive creative writing practice, including the beginner's mind (as founded in Eastern spiritual practices); and, an indigenous approach to authenticity; in one's work and one's words. Through writing, one returns to the body of home-knowledges, languages, and geographies to uncover what is profoundly original in us as artists, writers and thinkers.

Same as: CSRE 172, FEMGEN 172, TAPS 272

**TAPS 173. Solo Performance. 4-5 Units.**

Students learn how to draw from the specificity of their own unique experiences, connecting with ideas, issues and questions that resonate with race, class, gender, environmental, and global issues. The course gives students the creative and critical tools to enable them to connect the personal with the political and see the solo voice as a powerful, potent form of artistic expression. Students have the opportunity to hone their own creative talents in writing, devising, composing, producing and creating work.

Same as: TAPS 373W

**TAPS 173D. Theater Production Lab: Dramaturgy and Development. 4 Units.**

This course explores dramaturgy and directing in the research and production of theatre primarily through practical creative projects with secondary readings on dramaturgy as a discipline. In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material.

Same as: TAPS 373

**TAPS 174A. Performance Making: Production. 5 Units.**

A structured, creative environment for students working toward the realization of Senior Projects and 2nd year graduate productions. Instructors will work with students to develop the relationships between the content and the form of their productions using critical and creative tools to develop and reflect on the work. There will be a staged class showing at the end of the quarter followed by critiques designed to help students as they begin preparing for their final public performances (beyond the class).

Same as: TAPS 374A

**TAPS 176. Living with Mindfulness, Meaning, and Compassion. 5 Units.**

Living with mindfulness, meaning, and compassion is a journey of contemplation, self reflection, and guided action. We examine "the good life" through the insightful eyes and inspirational words of others as well as through the light of our own experience. We explore success, happiness, and well being through the wisdom of spiritual traditions and scientific discoveries. Our focus is on acceptance, vulnerability, humility, kindness, and courage. Our integrative learning approach creates a transformative, synergistic community through appreciative inquiry and connected knowing.

**TAPS 176A. Narrative Design. 4 Units.**

This class examines narrative design in performed storytelling, especially live drama, oral storytelling, and radio, and compares it to narrative design in other forms, such as print, photography, and the graphic novel. After considering what media theory, psychology and neurobiology understand about how different forms of narratives operate on us, students will create a "base narrative" in print and then versions of that narrative in two different other forms. The goal is for students to understand narrative design principles both across and specific to media forms and be able to apply them to move audiences. Students will have the opportunity to meet and work with master storytellers from the Moth and with graphic novelists Chris Ware and Marjane Satrapi.

**TAPS 176B. Documentary Fictions. 4 Units.**

More and more of our best fiction, plays, and comics are being created out of documentary practices such as in-depth interviewing, oral histories, and reporting. Novels like Dave Egger's *What is the What* and plays like Anna Deavere Smith's *Let Me Down Easy* act as both witnesses and translators of people's direct experience and push art into social activism in new ways. This course takes a close look at a diverse range of these contemporary works and explores how to adopt their research and aesthetic strategies for work of your own. We start with a brief look back at the recent origins of this trend and look at excerpts from forerunners such as Richard Wright, Truman Capote, and Bertolt Brecht. We then turn to the rise of documentary fictions in the last few decades and read works by Eggers, Adam Johnson, G.B. Tran, Maria Hummel, and Daniel Alarcon and watch performances by the Tectonic Theater Project and Elevator Repair Service. Students write one analytic essay and then conduct or study interviews to design a work of their own. The course will feature class visits by a number of our authors and a special half-day workshop with Smith.

Same as: AFRICAAM 176B

**TAPS 176S. Finding Meaning in Life's Struggles: Narrative Ways of Healing. 5 Units.**

We can find meaning in life's struggles through narrative ways of healing. The self-reflective, dynamic process of finding, telling, and living our stories connects us with our whole selves as well as with others. We find our stories through vulnerability and courage; tell them with humility and honesty; and live them authentically and responsibly. Our shared stories will focus on gratitude, acceptance, reconciliation, forgiveness and compassion, empowering us to overcome personal, community, and historical traumas and wounds. In a respectful, caring community we will discover our hidden wholeness by improvising with various experiential and embodied means of finding our stories; telling our stories in diverse ways, including writing, storytelling, music, and art; and living our stories by putting values into action.

Same as: CSRE 176S

**TAPS 177. Writing for Performance: The Fundamentals. 4 Units.**

Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

Same as: CSRE 177, FEMGEN 177, TAPS 277

**TAPS 178. Page to Stage: Playwriting and Solo Performance. 3-5 Units.**

Dramatic writing: scripted and solo, and as performed by actors or by the playwright. Physical and psychological theatrical action. Development of skills in dialogue, story structure, style, and personal voice. Script readings and directed staging sessions.

Same as: TAPS 278

**TAPS 178B. Intensive Playwriting. 4 Units.**

Intermediate level study of fundamentals of playwriting through an intensive play development process. Course emphasizes visual scripting for the stage and play revision. Script analysis of works by contemporary playwrights may include: Suzan-Lori Parks, Tony Kushner, Adrienne Kennedy, Edward Albee, Maria Irene Fornes and others. Table readings of full length work required by quarter's end.

Same as: CSRE 178B, TAPS 278

**TAPS 179. Chicano & Chicana Theater: Politics In Performance. 4 Units.**

This is a practicum course, where the basic tenets and evolving politics and philosophies of Chicano and Latin American liberationist theater are examined through direct engagement with its theatrical forms, including, social protest & agit-prop, myth & ritual, scripting through improvisation, in-depth character and solo work, collective conceptualization and more. The course will culminate in an end-of-the quarter play performance in the Nitery Theater (Old Union) and at a Mission District theater in San Francisco.

Same as: CHILATST 179, TAPS 379

**TAPS 179C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.**

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what the facts can offer.

Same as: CSRE 179C, CSRE 279C, FEMGEN 179C, TAPS 279C

**TAPS 179F. Flor y Canto: Poetry Workshop. 3-5 Units.**

Poetry reading and writing. The poet as philosopher and the poet as revolutionary. Texts: the philosophical meditations of pre-Columbian Aztec poetry known as *flor y canto*, and reflections on the poetry of resistance born out of the nationalist and feminist struggles of Latin America and Aztlán. Required 20-page poetry manuscript.

Same as: CHILATST 179F, CSRE 179F, TAPS 279F

**TAPS 180P. Color. 3-4 Units.**

Hands-on study of color to develop color sensitivity and the ability to manipulate color to exploit its expressive potential. Guided experimentation and observation. Topics include color relativity, color and light, color mixing, color harmony, and color and content. (lower level).

Same as: ARTSTUDI 180

**TAPS 180Q. Noam Chomsky: The Drama of Resistance. 4 Units.**

Preference to sophomores. Chomsky's ideas and work which challenge the political and economic paradigms governing the U.S. Topics include his model for linguistics; cold war U.S. involvements in S.E. Asia, the Middle East, Central and S. America, the Caribbean, and Indonesia and E. Timor; the media, terrorism, ideology, and culture; student and popular movements; and the role of resistance.

**TAPS 181Q. Alternative Viewpoints: Black Independent Film. 4 Units.**

Preference to sophomores. Do you want to learn more about independent film as it was practiced in major urban centers by young filmmakers? This class focuses on major movements by groups such as the Sankofa Film Collective and the L.A. Rebellion. Learn how to analyze film and to discuss the politics of production as you watch films by Spike Lee, Julie Dash, Melvin Van Peebles, Ngozi Onwurah and more. We will discuss representation, lighting, press material, and of course the films themselves. This course includes a workshop on production, trips to local film festivals and time to critique films frame-by-frame. It matters who makes film and how they do so. When you have completed this class you will be able to think critically about "alternative viewpoints" to Hollywood cinema. You will understand how independent films are made and you will be inspired to seek out and perhaps produce or promote new visions.

Same as: AFRICAAM 181Q, FILMSTUD 181Q

**TAPS 184Q. The Personal is Political: Art, Activism and Performance. 4-5 Units.**

SOPHOMORE SEMINAR: This course looks at the performance of personal truths in political contexts, challenging inequalities of race, gender, sexual orientation and class through performance, visual art and activism. Students will engage in seminar discussions and writing on case studies such as the Occupy Movement and the works of key artists as well as working individually and in groups to think creatively about strategies for putting their own personal truths into political/public contexts to draw attention to issues they are passionate about.

**TAPS 190. Special Research. 1-5 Unit.**

Individual project on the work of a playwright, period, or genre.

Prerequisite: consent of instructor.

**TAPS 191. Independent Study. 1-18 Unit.**

Individual supervision of off-campus internship. Prerequisite: consent of instructor.

**TAPS 193. Life in the Body, Performing the Self. 2 Units.**

No Class on January 8th. Class meets 7:00-8:50 every Tuesday beginning January 15th through March 12th, with a 10th and final required class during finals week on March 19th from 7:00-8:50. Also, students will be joined in the classroom by Continuing Studies students. Life is a performance of gestures. Dance is any conscious movement. Based on a "choreography of the everyday," this course invites participants to experience the subtle surprise of performing oneself. Working with our own gestures, words, thoughts, and perceptions, and drawing upon the basic elements of composition in performance, music, and choreography, we will develop a performance work in the mode of a "chamber piece." Building individual movement-based portraits, and then weaving them together as a whole, this gestural performance "chamber piece" will reflect the community of class participants and the Stanford community as a whole. Considerations of time, space, and quality of motion will be at the forefront of our work together. We will investigate the cultural identity and history of our gestures, as well as trace the evolution of this type of performance work in art, dance, and performance history. Participants can expect to find inspiration, delight, refreshment, and renewal through this performance process. No experience is necessary, just a willingness to move and reflect upon having a life in a body at this moment in history. The work of this course is the springboard of a larger performance work, "The Symphonic Body," which is scheduled to be performed at the new Bing Concert Hall in May 2013. Course participants have the option to perform in the larger work.

**TAPS 197. Dance in Prison: The Arts, Juvenile Justice, and Rehabilitation in America. 4 Units.**

This class works collaboratively with a local juvenile hall to use civic engagement and performance to explore the aesthetic, cultural and legal issues in the lives of incarcerated youth. In the process students gain an understanding of incarceration on an immediate and personal scale. Taught jointly by a Dance Studies scholar and a lawyer specializing in Juvenile Justice, we will consider what unique understandings are possible if we position the arts as central to an exploration of punishment, rehabilitation and recidivism in America. The course will examine case studies, historical and contemporary narratives about the social, imaginative and behavioral change possible through arts programs in prison. Half of the class meetings will be in Hillcrest Juvenile Hall in San Mateo, where our class will join with a group of 13-18 year old youths currently detained there. Dance will be used to help shape their individual expressive voices, and ours, through collaborative hip hop dance classes. Books to be read are *Just Mercy: A Story of Justice and Redemption* by Bryan Stevenson, and *Last Chance in Texas* by John Hubner.

Same as: DANCE 197

**TAPS 200. Senior Project. 2-9 Units.**

All TAPS Majors must complete a Senior Project that represents significant work in any area of theater and/or performance. The project must be an original contribution and can consist of any of the following: devising a performance, choreographing a dance, stage managing a production, designing a large theater work, performing a major role, writing a play, directing a show, or researching and writing a senior essay. Work for this project normally begins in Spring Quarter of the junior year and must be completed by the end of the senior year. Students receive credit for senior projects through TAPS 200. A minimum of 4 units is required, but additional units are available for larger projects. Students pursuing senior projects must submit a two-page proposal to a faculty advisor of their choice, which must be approved by the Undergraduate Advisor and the department faculty no later than the end of Spring Quarter of the junior year.

**TAPS 201. Theater History. 4 Units.**

A survey of the history of theatre and dance from the ancient Greeks to the modern world. While primarily intended to help TAPS graduate students prepare for their Comprehensive Exam, this course may also be taken by undergraduates or non-TAPS graduate students in order to gain a broad understanding of some of the seminal plays, dances, theories, and performance practices of the past 2500 years.

Same as: TAPS 101

**TAPS 201A. Honors Colloquium. 1 Unit.**

See "Undergraduate Programs" for description.

**TAPS 201B. Honors Colloquium. 1 Unit.**

See "Undergraduate Programs" for description.

**TAPS 201C. Honors Colloquium. 1 Unit.**

See "Undergraduate Programs" for description.

**TAPS 201D. Honors Colloquium. 1 Unit.**

See "Undergraduate Programs" for description.

**TAPS 202. Honors Thesis. 2-9 Units.**

See "Undergraduate Programs" for description. May be repeated for credit. (Staff).

**TAPS 203. Advanced Improvisation. 3 Units.**

Further development of improvisational skills.

**TAPS 210V. Vocal Production and Audition. 1-3 Unit.**

An introductory study of the vocal mechanism and the development of voice and articulation for the stage. Students will be introduced to the actor's tools of phonetics, verbal action and text analysis. Vocal technique will then be applied to the actor's process in preparation for audition. Actors will fully participate in the audition process, from beginning to end. Emphasis will be on relaxation, selection of appropriate material, and versatility to show contrast and range.

Same as: TAPS 120V

**TAPS 212. The Book of Musicals: Contemporary Musical Theater in America. 4 Units.**

In this course we will examine Contemporary American Musical Theater, ranging from such musicals as *Hair* up to *Rent* and on to *The Book of Mormon*. We will explore the theatrical innovations in these works as well as how these plays operated within their social and historical contexts. We will assess how these works were impacted by and in turn impacted American society around them. This course will also ask students to analyze the music and other aspects of production, staging and performance. In addition, students will engage in practical work and hand on projects as well as critical analysis through writing.

**TAPS 213. Stanford Improv Ensemble. 1-2 Unit.**

By audition only, for members of the improvisation troupe. Special project work. Prerequisite: 103.

**TAPS 215. Ibsen and Strindberg. 3-5 Units.**

Close reading of about 18 plays (total) by Ibsen and Strindberg, together with videos of productions and (if possible) attendance at live shows. Emphasis on primary documents, but with some secondary literature included.

**TAPS 223. Game Design: Making Play. 3 Units.**

Do you want to make games? This is a project-oriented workshop course that will teach you how to apply design thinking to create new kinds of play. We'll teach you about mechanics, playtesting, drama, narrative, and more. You'll work in teams to produce a new play form in whatever medium and style you like. We want zippy mobile games. We want intensely serious board games. We want socially conscious interactive theater games. We want kinds of fun we've never even imagined. Same as: TAPS 23

**TAPS 231. Advanced Stage Lighting Design. 1-5 Unit.**

Individually structured class in lighting mechanics and design through experimentation, discussions, and written reports. Prerequisite: 131 or consent of instructor.

**TAPS 232. Advanced Costume Design. 1-5 Unit.**

Individually structured tutorial for costume designers. May be repeated for credit. Prerequisite: 132 or consent of instructor.

**TAPS 233. Advanced Scene Design. 1-5 Unit.**

Individually structured workshop. May be repeated for credit. Prerequisite: 133 or consent of instructor.

**TAPS 234. Advanced Stage Management Project. 2-9 Units.**

For students stage managing a Department of Drama production. Prerequisite: 134.

**TAPS 236. Directing Scenes: The Director's Toolkit. 4 Units.**

This first half of this course, a practicum, introduces you to basic concepts in directing live theatre, such as creating strong spatial relationships on stage or in a performance space, interpreting and building a concept for a scene, and beginning to work with actors. You will then spend the second half of the course directing 2-3 modern and contemporary scenes, with actors.

**TAPS 248. Family Drama: American Plays about Families. 5 Units.**

Plays written by 20th century writers that concentrate on the family as the primary source of dramatic conflict and comedy. Writers include Williams, O'Neill, Wilder, Albee, Vogel, Parks, Lindsay-Abaire, and Hwang.

**TAPS 250T. Transnational Sexualities. 4 Units.**

Transnational Sexualities is an inter-disciplinary course that considers the aesthetic, social, and political formation of sexual subjectivities in a global world. How does the transnational traffic of people, media, images, finance, and commodities shape the force-fields of desire? What is the relationship between political economies and libidinal economies? The course will explore the erotics of race and religion, neoliberalism and globalization within a wide range geo-political contexts including Indonesia, China, Egypt, India, South Africa, US, among others. Same as: FEMGEN 150T, FEMGEN 250T, TAPS 150T

**TAPS 251A. Theater of the Asia-Pacific Region. 4 Units.**

This course offers a historical and cultural exploration of theatre forms and performance cultures from various countries that border the Pacific Ocean, as well as from island communities within Oceania. Taking the term 'Asia-Pacific' as a provocation and point of interrogation, we will assess how theatrical production from this broad area can help us think through questions of nationalism, regionalism, interculturalism, and diaspora, while deepening our appreciation of world theatre history. The first part of the course focuses on theatre in specific sites, covering classical forms from China, Japan, and Indonesia, as well as indigenous theatre and performance from several Pacific Islands, including the Cook Islands, S'moa, Aotearoa/New Zealand, and Hawai'i. The second part of the course centers on the ocean as a dynamic space of mobility, examining a range of recent plays and performances that trace identities on the move and across borders, and which reveal how various Asian and Pacific Islander communities have engaged with each other in locations from Australia to the west coast of the United States. In so doing, our course will chart connections and divergences that enable fresh insights into the geographical and cultural dimensions of global theatre. Same as: TAPS 151A

**TAPS 253D. Performing Digital Technologies. 4 Units.**

This class is about collaboration: between live performers and digital images, between artists and engineers, and between scholars and artists. It emphasizes conceptual work and creativity in the integration of new and old media. We will take a rigorous but fundamentally hands-on approach to the uses of a wide range of screen technologies - from smart phones to digital projections - in live performance. The class will start with a survey of successful uses of screens in recent theater and performance work, then move to finding novel solutions for particular dramatic scenes. Same as: TAPS 153D

**TAPS 254. Stage and Spectacle : an Aesthetics of Conflict and Complementarity. 4 Units.**

The aim of this class is to explore different ways in which cinema has been using theatre as an art to explore its own aesthetical, political or philosophical dimensions. For this exploration, we will use different films in which theatre plays a major role, each of them offering a different perspective on life and art. Amongst the films considered, one can expect : 'To be or not to be' by Ernst Lubitsch (1942) ; 'Children of Paradise' by Marcel Carné (1944) ; 'The Golden Coach' by Jean Renoir (1953) ; 'Torn Curtain' by Alfred Hitchcock (1966) ; 'The Most important thing : Love' by Andrzej Zulawski (1975) ; 'The Travelling Players' by Theodoros Angelopoulos (1975) ; 'The Last métro' by François Truffaut (1980) ; 'Fanny and Alexander' by Ingmar Bergman (1982) ; 'Shakespeare in love' by John Madden (1998) ; 'Birdman' by Alejandro Iñárritu (2014).

**TAPS 259. Game Studies. 1 Unit.**

A 1-unit class for graduate students. Games are not new; they are older than civilization. But in the past 50 years or so, we have seen an explosion of creativity in the development of new games, many of which, especially video games, complicate older understandings of what games are. This explosion of creativity has been matched by the increasing visibility and ubiquity of new games and ways of seeing games: as video games, televised professional sports, and even distributed urban events. Games are not a simple object of study. There are many ways to understand them: as social practices, as formal systems, as representative artwork, as modes of learning, and many more. We will start by considering games as a mode of performance, considering games in relation to theater and other forms of aesthetic performance. However, we will take a deeply interdisciplinary approach to the study of games, and will draw on perspectives from design, philosophy, education, and the emerging discipline of video game studies. We will also, of course, draw on a variety of games, both online and offline. As we bring in these perspectives, we will begin to consider games in at least two other fundamental ways: as designed experiences and as composed systems or artworks. This course is less an attempt to provide a survey of the entire field of games. It is more an attempt to provide a basic toolbox for critically examining and analyzing games. These tools are potentially useful for anyone who interacts with games: whether as a consumer of entertainment, a critical analyst of play, a user of serious games, or a game designer.

**TAPS 259M. Movement and Meaning: Dance Studies in Global Comparative Context. 4 Units.**

This course introduces students to various approaches to studying dance in a humanities context. We will explore how people create meaning through dance and how dance, in turn, shapes social norms, political institutions, and cultural practices across time and space. The course's structure challenges the Western/non-Western binary that still pervades many academic disciplines by comparing dance forms across the globe on the basis of functional similarities. At the same time, we will keep in mind the unequal power hierarchies shaping our modern world, and therefore we will examine how and why certain forms have become delineated as 'Western' and others as 'world' or 'ethnic,' despite similarities in movement, meaning, or purpose.

Same as: CSRE 159M, DANCE 23, TAPS 159M

**TAPS 260. Performance and History: Rethinking the Ballerina. 4 Units.**

The ballerina occupies a unique place in popular imagination as an object of over-determined femininity as well as an emblem of extreme physical accomplishment for the female dancer. This seminar is designed as an investigation into histories of the ballerina as an iconographic symbol and cultural reference point for challenges to political and gender ideals. Through readings, videos, discussions and viewings of live performances this class investigates pivotal works, artists and eras in the global histories of ballet from its origins as a symbol of patronage and power in the 15th century through to its radical experiments as a site of cultural obedience and disobedience in the 20th and 21st centuries.

Same as: DANCE 160, FEMGEN 160, TAPS 160

**TAPS 262. Performance and the Text. 5 Units.**

Formal elements in Greek, Elizabethan, Noh, Restoration, romantic, realistic, and contemporary world drama; how they intersect with the history of performance styles, character, and notions of action. Emphasis is on how performance and media intervene to reproduce, historicize, or criticize the history of drama.

Same as: TAPS 162

**TAPS 262S. The Total Work of Art. 5 Units.**

Frequently associated with the work of Richard Wagner, The Total Work of Art (or Gesamtkunstwerk) is a genre that aims to synthesize a range of artistic forms into an organic unity, a unity that both models and helps to forge an ideal state. This seminar will examine the history of the Gesamtkunstwerk from its roots in German Romanticism to the present day, focusing on the genre's relations with technology and mass culture across a wide range of media. Creations we will consider include Wagner's Festival Theatre at Bayreuth, Walter Gropius' plans for a Totaltheater, Bertolt Brecht and Kurt Weill's radio-oratorio *The Lindbergh Flight*, Leni Riefenstahl's *Triumph of the Will*, Walt Disney's theme parks, Andy Warhol's *Exploding Plastic Inevitable*, and Bill Gates' "home of the future." Taught in English.

Same as: GERMAN 262

**TAPS 263. Introduction to Dance and History: From Postwar to the Present. 4 Units.**

This course explores the cultural and historical unfolding of the genre of contemporary performance known as postmodern dance over the past six decades. It begins with the formative influence of the émigré Bauhaus artists of the 1930s, then the postwar experiments of the Beat artists in the 1950s, to Merce Cunningham, the Judson Dance Theatre, postmodern formalism, neo-expressionism, dance theatre and through to the global, spectacle-rich, cross-genre dance work of the early 21st century as the most recent extended legacy of this history. This course uses dance history to trace with special emphasis the effects of these visual art and movement experimentalists on gender representation and nationalist identity construction in the negotiation of boundaries between dance and life.

Same as: DANCE 163, FEMGEN 163D, TAPS 163

**TAPS 265C. Ancient Dance and its Modern Legacy. 3-5 Units.**

Descriptions of dance in the Greek and Greco-Roman world; theories about dance in antiquity; dance and the senses; modern and modernist dancers and choreographers discussing ancient dance.

Same as: CLASSICS 137, CLASSICS 237, TAPS 165C

**TAPS 267. Revolutions in Theater. 4 Units.**

This course surveys the period from the turn of the 20th century until WWII, during which the European avant-garde movements transformed modern art. This period in history is marked by dynamic political events that had a deep impact on experimental art and on culture in general. This interaction between poetics and politics makes the first decades of the 20th century the formative period of western and global theater.

Same as: TAPS 167H

**TAPS 272. Out of Place: (W)riting Home. 4 Units.**

A creative writing workshop; all genres. This course will introduce students to the fundamentals of a productive creative writing practice, including the beginner's mind (as founded in Eastern spiritual practices); and, an indigenous approach to authenticity in one's work and one's words. Through writing, one returns to the body of home-knowledges, languages, and geographies to uncover what is profoundly original in us as artists, writers and thinkers.

Same as: CSRE 172, FEMGEN 172, TAPS 172

**TAPS 277. Writing for Performance: The Fundamentals. 4 Units.**

Course introduces students to the basic elements of playwriting and creative experimentation for the stage. Topics include: character development, conflict and plot construction, staging and setting, and play structure. Script analysis of works by contemporary playwrights may include: Marsha Norman, Patrick Shanley, August Wilson, Suzan-Lori Parks, Paula Vogel, Octavio Solis and others. Table readings of one-act length work required by quarter's end.

Same as: CSRE 177, FEMGEN 177, TAPS 177

**TAPS 278. Page to Stage: Playwriting and Solo Performance. 3-5 Units.**

Dramatic writing: scripted and solo, and as performed by actors or by the playwright. Physical and psychological theatrical action. Development of skills in dialogue, story structure, style, and personal voice. Script readings and directed staging sessions.

Same as: TAPS 178

**TAPS 279C. Chroniclers of Desire: Creative Non-Fiction Writing Workshop. 3-5 Units.**

This course emphasizes the study and practice of personal memoir writing and literary journalism. The class will explore those writings that contain a public and private story, navigating an intimate and institutional world. Student writers will serve as public chroniclers whose subjective point of view and experience attempt to provide a truth greater than what the facts can offer.

Same as: CSRE 179C, CSRE 279C, FEMGEN 179C, TAPS 179C

**TAPS 279F. Flor y Canto: Poetry Workshop. 3-5 Units.**

Poetry reading and writing. The poet as philosopher and the poet as revolutionary. Texts: the philosophical meditations of pre-Columbian Aztec poetry known as *flor y canto*, and reflections on the poetry of resistance born out of the nationalist and feminist struggles of Latin America and Aztlán. Required 20-page poetry manuscript.

Same as: CHILATST 179F, CSRE 179F, TAPS 179F

**TAPS 279G. Indigenous Identity in Diaspora: People of Color Art Practice in North America. 3-5 Units.**

This "gateway" core course to the IDA emphasis in CSRE offers a 21st century examination of people of color aesthetics and related politics, drawing from contemporary works (literature, music, visual and performing arts) in conversation with their native (especially American Indigenous and African) origins. Issues of gender and sexuality in relation to cultural identity are also integral to this study. Students will be required to produce a final work, integrating critical writing with a creative project.

Same as: CSRE 179G, CSRE 279G, FEMGEN 179G

**TAPS 284. Empathy Lab. 5 Units.**

This lab-based class examines the ways in which various disciplines and art forms conceive of, and tell stories about, the experiences and stories of others. With permission of instructor.

Same as: ANTHRO 379, TAPS 384

**TAPS 289. Buechner and Wedekind. 3-5 Units.**

Modern theatre owes an incalculable debt to two German playwrights: Georg Büchner (1813-1837) and Frank Wedekind (1864-1918). We will read their still-shocking portraits of sex, madness, and social brutality in plays such as *Woyzeck* and *Spring's Awakening*, and explore the international journeys these works have made from stage to film and from opera to musical theatre.

Same as: GERMAN 289

**TAPS 289A. Interactive Art / Performance Design. 2 Units.**

This class is for those who want the experience of designing and creating interactive art and performance pieces for public audiences, using design thinking as the method, and supported by guest speakers, artist studio visits and needfinding trips to music festivals, museums and performances. Drawing on the fields of design, art, performance, and engineering, each student will ideate, design, plan and lead a team to build an interactive art and/or performance piece to be showcased to audience of 5000 at the Frost Music and Art Festival held on the Stanford campus on May 17th 2014. Projects can range from interactive art to unconventional set design, and from site-specific sculpture to immersive performance. This is a two-quarter long commitment during which students will first learn the design, planning, story boarding, budgeting, engineering, proposal creation and concept pitching of projects for applying for grants and presenting to funders. The second quarter will concentrate on prototyping, maquette making, testing, team forming, project management, creative leadership, construction, site installation and documentation. Part one of a two course series: ME 289A&B.

Same as: ME 289A

**TAPS 289B. Interactive Art / Performance Creation. 3-4 Units.**

This class is the continuation of ME289A where students experience the designing and creating of interactive art and performance pieces for public audiences, using design thinking as the method, and supported by guest speakers, artist studio visits and needfinding trips to music festivals, museums and performances. Drawing on the fields of design, art, performance, and engineering, each student will ideate, design, plan and lead a team to build an interactive art and/or performance piece to be showcased to audience of 5000 at the Frost Music and Art Festival held on the Stanford campus on May 17th 2014. Projects can range from interactive art to unconventional set design, and from site-specific sculpture to immersive performance. During this second quarter students will concentrate on prototyping, maquette making, testing, team forming, project management, creative leadership, construction, site installation and documentation. Part two of a two course series: ME 289A&B.

Same as: ME 289B

**TAPS 290. Special Research. 1-5 Unit.**

Individual project on the work of a playwright, period, or genre.

**TAPS 300A. Critical Styles I. 5 Units.**

Literary criticism and theory, emphasizing style as evidence of historical, cultural, and ideological concerns. Assumptions about written texts by authors such as Coleridge, Bradley, and Burke. How style reveals context. Students write in the style of authors discussed.

**TAPS 300B. Critical Styles II. 5 Units.**

This seminar follows on from Critical Styles I in which students were grounded in the rigors of critical writing. In this sequel seminar, the emphasis will be on the overtones and undertones of critical thought in performance making and performance analysis. Students will generate weekly critical and creative responses to readings from contemporary writers and artists such as Jacques Rancière, Amelia Jones, Guillermo Gómez-Peña and Marina Abramovic. Workshop activities and performances will take place alongside seminar discussions of readings.

**TAPS 304. Historiography of Theater. 3-5 Units.**

Goal is to design an undergraduate theater history class. Standard theater history textbooks, alternative models of theater history scholarship, and critical literature engaging historiography in general.

Same as: TAPS 166H

**TAPS 311. Performance, Historiography, and Ethnography. 4 Units.**

This graduate seminar introduces you to advanced methodologies in two key areas of theatre and performance studies research: historiography and ethnography. The course is divided into two sections. The first concentrates on questions of historiography and the archive as they relate to studies of theater, dance, and performance. We will think about how events have been historicized, how absence has been represented, and how bodies are re-figured and remembered, and we will investigate important principles and best practices of performance documentation and historiography. The second part of the course explores the relationship between performance and ethnography. We will discuss different critical perspectives on ethnographic methods and data gathering, including participant-observation fieldwork and interview techniques. This course purposefully blends theory and practice, connecting philosophical discussions to concrete case studies, field trips, and your own research practices. In this spirit, you will also be encouraged to conduct research and present findings in different modes and media.

**TAPS 312. The Archive in the Repertoire. 4 Units.**

This course looks at recent scholarship in theater and performance studies that engages the idea of the "archive." We will also debate questions about historiography. Texts may include work by Joseph Roach, Tracy Davis, Hayden White, Jacques Derrida, Amelia Jones, Rebecca Schneider, Fred Moten, Diana Taylor, Shannon Jackson, Peggy Phelan, Akira Lippit and Susan Foster.

**TAPS 313. Performance and Performativity. 1-4 Units.**

Performance theory through topics including: affect/trauma, embodiment, empathy, theatricality/performativity, specularity/visibility, liveness/disappearance, belonging/abjection, and utopias and dystopias. Readings from Schechner, Phelan, Austin, Butler, Conquergood, Roach, Schneider, Silverman, Caruth, Fanon, Moten, Anzaldúa, Agamben, Freud, and Lacan. May be repeated for credit.

Same as: ENGLISH 313, FEMGEN 313

**TAPS 314. Performing Identities. 4 Units.**

This course examines claims and counter-claims of identity, a heated political and cultural concept over the past few decades. We will consider the ways in which theories of performance have offered generative discursive frameworks for the study of identities, variously shaped by vectors of race, gender, sexuality, religion, class, nation, ethnicity, among others. How is identity as a social category different from identity as a unique and personal attribute of selfhood? Throughout the course we will focus on the inter-locking ways in which certain dimensions of identity become salient at particular historical conjunctures. In addition, we will consider the complex discourses of identity within transnational and historical frameworks. Readings include Robin Bernstein, Ann Pellegrini, Tavia Nyong'o, Jose Munoz, Michael Taussig, Wendy Brown, Talal Asad, Jasbir Puar, among others.

Same as: CSRE 314, FEMGEN 314

**TAPS 315. Dramaturgy. 4 Units.**

In this seminar, we will take the conventional idea of dramaturgy for narrative performance as developed in Western European theater since the enlightenment, and investigate its relation to non-narrative forms of performance in 20th and 21st (performance art, conceptual dance). Further, we will use dramaturgical procedures to explore the ideological content of performance and position of art institutions in our society. Finally, the students will get acquainted with production dramaturgy and get necessary tools to take the role of dramaturgs in actual performance productions.

**TAPS 321. Proseminar. 3-5 Units.**

Workshop. Open to graduate and undergraduate students. Prepares PhD students for the academic profession by honing skills in conference presentations, job market, and scholarly publications. Also offered to undergraduates to help prepare them for careers in theater.

Same as: TAPS 121

**TAPS 330. Transnational Sexualities. 4 Units.**

Transnational Sexualities is an inter-disciplinary course that considers the aesthetic, social, and political formation of sexual subjectivities in a global world. How does the transnational traffic of people, media, images, finance, and commodities shape the force-fields of desire? What is the relationship between political economies and libidinal economies? The course will explore the erotics of race and religion, neoliberalism and globalization within a wide range geo-political contexts including Indonesia, China, Egypt, India, South Africa, US, among others.

Same as: FEMGEN 330

**TAPS 333. Performance and Migration. 4 Units.**

This seminar examines an array of works from various global sites to explore how artists have used performance to raise vital questions about location, citizenship, identity, community, and human agency in migrant contexts. By considering a range of examples from international commercial collaborations to the crisis-ridden narratives of asylum seekers, the course stages theoretical, practical, and ethical inquiries into art's role in relaying local concerns beyond national boundaries while extending students' appreciation of approaches in comparative theatre and performance studies.

**TAPS 334. Stage Management Techniques. 2-3 Units.**

The production process, duties, and responsibilities of a stage manager. Skills needed to stage manage a production.

Same as: TAPS 34

**TAPS 336. Comprehensive 1st Year Exam. 2 Units.**

Required course for first-year Ph.D. students in Theater & Performance Studies. Credits for work toward the Comprehensive 1st-year Exam taken in late February or Early March.

**TAPS 341E. English Drama Before Shakespeare. 5 Units.**

English dramatic and theatrical culture from the mystery cycles of the late medieval period to the establishment of professional playhouses in late sixteenth-century London. Different dramatic genres (interludes, moralities, farces, tragedies, comedies, histories, pastoral plays), performance venues (streets, households, inns, schools, universities, court, playhouses), and dramatic traditions (classical, native, continental European) will be represented. Authors (of those who have names) range from Medwall, Skelton, Heywood, Preston, and Edwards to Lyly, Kyd, Greene, Peele, and Marlowe.

**TAPS 344. Puppetry with a Twist. 3-4 Units.**

Creative course is an introduction to puppetry with a survey of important styles and techniques from around the world including Twist's own. Hands on and individualized experience with the aim of each student creating or contributing to a puppet or object/figure performance. Course is as broad as the individual's creative expression.

Same as: TAPS 144

**TAPS 345. Choreography and Corporeality. 4 Units.**

In this course, we explore American-derived theoretical praxes for analyzing organized movement. How has dance studies been constituted as a field? What theoretical lines of inquiry have served it, and how have they fared over time? What tools do scholars bring to bear on the study of dance, choreography, and corporeality, and where have these tools been most effective? Weekly pairings of creative works and theoretical approaches to considerations of dance practice and performance. Special emphasis on practices of writing about bodies in motion and dance.

**TAPS 351. Great Books: Dramatic Traditions. 4 Units.**

The most influential and enduring texts in the dramatic canon from Sophocles to Shakespeare, Chekhov to Soyinka. Their historical and geopolitical contexts. Questions about the power dynamics involved in the formation of canons.

Same as: COMPLIT 151B, COMPLIT 351B, TAPS 151T

**TAPS 351H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.**

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice.

Same as: AMSTUD 151H, CSRE 151H, DANCE 151H, DANCE 251H, TAPS 151H

**TAPS 353. Representation and Theatre Culture in 20th Century France. 5 Units.**

This course will examine some major French playwrights such as Alfred Jarry, Eugene Ionesco, Samuel Beckett, Jean Genet, Jean Tardieu, Albert Camus or Jean Anouilh in their global cultural environment. Discussion in English; French majors read in French.

Same as: FRENCH 210

**TAPS 354. The Nervous Age: Neurosis, Neurology, and Nineteenth-century Theatre. 5 Units.**

The nineteenth century witnessed profound developments in neurological and psychological sciences, developments that fundamentally altered conceptions of embodiment, agency, and mind. This course will place these scientific shifts in conversation with theatrical transformations of the period. We will read nineteenth-century neuropsychologists such as Charles Bell, Johannes Müller, George Miller Beard, Jean-Martin Charcot, and Hippolyte Bernheim alongside artists such as Percy Shelley, Georg Büchner, Richard Wagner, Émile Zola, and August Strindberg.  
Same as: GERMAN 284, HUMBIO 162

**TAPS 354D. The Chorus & The Digital Crowd: Representing Groups from Ancient Greece to the Arab Spring. 4 Units.**

The Chorus & The Digital Crowd is an interdisciplinary workshop in Theater, Visual and Digital Arts, where students will learn from, and collaborate with, professional artists in a dramatic and conceptual exploration of what it means to be a "chorus" from its early representations in Greek Tragedy to its emerging online character (tweeting, posting, liking, and sharing). Reckoning with the reemergence of the crowd in the public sphere, enabled and reinforced by its online counterpart, The Chorus & The Crowd will examine how we imagine and represent collective action. Whether in the same room, at the same website, or on the same planet, what happens when "I" becomes "we"?  
Same as: TAPS 154D

**TAPS 356. Performing History: Race, Politics, and Staging the Plays of August Wilson. 4 Units.**

This course purposefully and explicitly mixes theory and practice. Students will read and discuss the plays of August Wilson, the most celebrated and most produced contemporary American playwright, that comprise his 20th Century History Cycle. Class stages scenes from each of these plays, culminating in a final showcase of longer scenes from his work as a final project.  
Same as: AFRICAAM 156, TAPS 156

**TAPS 357. World Drama and Performance. 4 Units.**

This course takes up a geographically expansive conversation by looking at modern and contemporary drama from nations including Ghana, Egypt, India, Argentina, among others. Considering influential texts from the Global South will also enable us to explore a range of themes and methodologies that are radically re-shaping the field of Performance Studies. We will examine the relationship between colonialism and globalization, empire and capital, cosmopolitanism and neoliberalism. Re-situating our perspective from the Global South and the non-western world, we will provincialize Europe and probe the limits of its universalizing discourses.  
Same as: TAPS 157

**TAPS 358H. Proximity and Temporality in Performance. 4-5 Units.**

This course considers the relationship between proximity and temporality in live performance, looking quite literally at the distance in space and time between performers and audiences. Alongside case studies of performance works, class readings will be drawn from current Performance Studies scholarship as well as discourses in postmodern geographies and anthropological studies of "proxemics" as well as key philosophic works such as Lefebvre's *The Production of Space* and Heidegger's *The Concept of Time*.  
Same as: TAPS 158H

**TAPS 358L. The Ethics of Storytelling: The Autobiographical Monologue in Theory, in Practice, and in the World. 4 Units.**

Recently a theatrical monologist gained notoriety when it was revealed that key aspects of one of his "autobiographical" stories had been fabricated. In this class another autobiographical monologist – who has himself lied many times in his theater pieces, without ever getting caught – will examine the ethics of telling our life stories onstage. Does theatrical "truth" trump factual truth? We will interrogate several autobiographical works, and then – through autobiographical pieces created in class – we will interrogate ourselves.  
Same as: ETHICSOC 201R, TAPS 158L

**TAPS 359. The Other Body/The Body Other. 4 Units.**

Writing creatively through critical thinking. Writing critically through creative imagination. Advanced Creative/Critical Writing course, designed for those "other" creative writers and thinkers who want to use language in original, innovative and embodied introspective ways to respond to (and from) non-dominant cultures, themes and identities. All genres. Readings, performances, films assigned to provoke an(other) response. Permission of Instructor.

**TAPS 360. Greek Tragedy. 3-5 Units.**

The seminar explores the intellectual, political, and cultural background of 5th-century Athenian tragedy, with special focus on the theatrical dynamics of the major plays of Aeschylus, Sophocles, and Euripides. Although the seminar emphasizes a close reading of the tragedies themselves, secondary sources include selections from Homer, Thucydides, Aristophanes, Aristotle, Hegel, and Nietzsche, as well as modern and contemporary classical scholars (Jebb, Dodds, Segal, Taplin, Goldhill, Nussbaum, Easterling, Foley, Seidensticker, Griffiths, Rehm, Wiles, Hall, Budelmann, and others). The seminar assigns the plays in English translation, but students with ancient Greek are encouraged to enroll, and accommodations can be made to attend to their interests. Plays include *Persians*, *Prometheus Bound*, the *Oresteia* trilogy (Aeschylus); *Antigone*, *Oedipus*, *Oedipus at Colonus*, *Electra*, and *Philoctetes* (Sophocles); and *Medea*, *Heracles*, *Electra*, *Ion*, *Helen*, and *Bacchae* (Euripides).

**TAPS 364T. Queer Art and Performance. 4-5 Units.**

Examines the late 19th, 20th and 21st century forms of performance – including examples from drama, theater, cabaret, and performance art – through the perspectives of contemporary critical gender and queer theories. Texts and movements range from early avant-garde (Dada, Futurism) to gay and lesbian drama (Lillian Hellmann, Joe Orton, Tony Kushner) to post-liberation Queer performance and video (Split Britches, Carmelita Tropicana, Kalup Linzy). Theorists include Judith Butler, Michel Foucault, and Eve Kosofsky Sedgwick.  
Same as: FEMGEN 140P, TAPS 164T

**TAPS 368S. Understanding and Staging Molière Theatre. 3-5 Units.**

Devoted to an in depth analysis of Molière's major plays, as well as a study of contemporary productions of his work. Taught in French.  
Same as: FRENCH 316

**TAPS 370. Directing and Dramaturgy: Composition and Adaptation for Theatre. 4-5 Units.**

This course explores dramaturgy and directing in the research and production of theatre primarily through practical creative projects with secondary readings on dramaturgy as a discipline. In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material.  
Same as: TAPS 170

**TAPS 371. Performance Making. 4 Units.**

A studio course focused on creative processes and generating original material. Students will be encouraged to think critically about the relationship between form and content exploring the possibilities of site specific, gallery and theatre settings. Students will reflect throughout on the types of contact and communication uniquely possible in the live moment, such as interaction or the engagement of the senses. The emphasis is on weekly experimentation in the creation of short works rather than on a final production.  
Same as: TAPS 171

**TAPS 372. Directing Workshop: The Actor-Director Dialogue. 4 Units.**

This course focuses on the actor-director dialogue. We will work with actors and directors developing approaches to collaboration that make the actor-director dialogue in theater.  
Same as: TAPS 170B

**TAPS 373. Theater Production Lab: Dramaturgy and Development. 4 Units.**

This course explores dramaturgy and directing in the research and production of theatre primarily through practical creative projects with secondary readings on dramaturgy as a discipline. In this course we will consider the role of the dramaturg in its broadest sense, running across theatrical production from research to playwriting, adaptation, choreography, devising and directing. Students will work individually and in small groups researching, adapting, crafting and workshopping material.

Same as: TAPS 173D

**TAPS 373W. Solo Performance. 4-5 Units.**

Students learn how to draw from the specificity of their own unique experiences, connecting with ideas, issues and questions that resonate with race, class, gender, environmental, and global issues. The course gives students the creative and critical tools to enable them to connect the personal with the political and see the solo voice as a powerful, potent form of artistic expression. Students have the opportunity to hone their own creative talents in writing, devising, composing, producing and creating work.

Same as: TAPS 173

**TAPS 374. Practice Based Research. 4 Units.**

A structured, creative environment for students working toward the realization of 2nd year graduate productions. Instructors will work with students to develop the relationships between the content and the form of their productions using critical and creative tools to develop and reflect on the work. There will be a staged class showing at the end of the quarter followed by critiques designed to help students as they begin preparing for their final public performances (beyond the class).

**TAPS 374A. Performance Making: Production. 5 Units.**

A structured, creative environment for students working toward the realization of Senior Projects and 2nd year graduate productions. Instructors will work with students to develop the relationships between the content and the form of their productions using critical and creative tools to develop and reflect on the work. There will be a staged class showing at the end of the quarter followed by critiques designed to help students as they begin preparing for their final public performances (beyond the class).

Same as: TAPS 174A

**TAPS 375. Main Stage Production. 3-5 Units.**

Production of a full-length play as part of the Department of Drama season. Public performance.

**TAPS 376. Projects in Performance. 4 Units.**

Creative projects to be determined in consultation with Drama graduate faculty and production advisor.

**TAPS 377. Graduate Directors' Staged Reading Project. 2 Units.**

Presentation of a new or newly adapted work for the stage, in a mode employed in professional theater for the development of new plays. Two to four rehearsals. Public performance.

**TAPS 379. Chicano & Chicana Theater: Politics In Performance. 4 Units.**

This is a practicum course, where the basic tenets and evolving politic and philosophies of Chicano and Latin American liberationist theater are examined through direct engagement with its theatrical forms, including, social protest & agit-prop, myth & ritual, scripting through improvisation, in-depth character and solo work, collective conceptualization and more. The course will culminate in an end-of-the quarter play performance in the Nitory Theater (Old Union) and at a Mission District theater in San Francisco.

Same as: CHILATST 179, TAPS 179

**TAPS 379A. Empathy Lab II: The Potential of Anthropology for the 21st Century. 1-5 Unit.**

This interdisciplinary arts/anthropology lab class will study and practice methods from performing arts to expand our understandings of cultural contact and develop methods of thinking more expansively about the creative elements and possibilities for ethnographic fieldwork and critical cultural studies. Prerequisite, by instructor consent.

Same as: ANTHRO 379A

**TAPS 381. Instantaneous, Incessant, Infinite: Time and Performance. 4 Units.**

Time is the most fundamental and elusive aspect of performance. In this graduate seminar we will investigate time in performance from various perspectives: while getting acquainted with some of the most prominent recent conceptualizations of temporality (Henri Bergson, Marin Heidegger, Gilles Deleuze) we will also explore questions of politics of temporality, ethnographic and sociological study of time, and its peculiar place within literary studies. Most of all, we will investigate complex temporality of performance: from performances of great magnitude, to micro performances, to performance as a medium of time's commodification. While drawing on questions that emerge from PSi 19: Performance and Temporality, we will explore some aspects of this theme that were insufficiently addressed in the conference.

**TAPS 382. Brecht. 3-5 Units.**

Arguably the most influential theatrical artist of the twentieth century, Bertolt Brecht continues to be a lightning rod for debates over art and politics. This course will consider Brecht as playwright, director, and theorist. Alongside reading and discussing texts such as Threepenny Opera, Mother Courage, and Galileo, students will also be expected to participate in occasional in-class performances in order better to grapple with his plays and theories. No previous theatrical experience is necessary.

Same as: GERMAN 283

**TAPS 383. Performance and Transnationalism. 4 Units.**

Coming soon.

**TAPS 384. Empathy Lab. 5 Units.**

This lab-based class examines the ways in which various disciplines and art forms conceive of, and tell stories about, the experiences and stories of others. With permission of instructor.

Same as: ANTHRO 379, TAPS 284

**TAPS 390. Directed Reading. 1-6 Unit.**

(Staff) Students may take directing reading only with the permission of their dissertation advisor. Might be repeatable for credit twice for 6 units total.

**TAPS 397. Curricular Practical Training for Theater and Performance Studies. 1-3 Unit.**

Course to support curricular practical training for Ph.D. students in Theater and Performance Studies.

**TAPS 399. Dissertation Research. 1-9 Unit.**

(Staff).

**TAPS 801. TGR Project for MA students. 0 Units.**

(Staff).

**TAPS 802. TGR Dissertation. 0 Units.**

(Staff).

## Thinking Matters Courses

### THINK 1. The Science of MythBusters. 4 Units.

How do scientists actually go about answering practical questions? How does science function as a way of understanding our world, and importantly how does it differ from other approaches? As its point of departure, this course will examine and critique selected episodes of the television series, *MythBusters* (Discovery Channel), which tests the validity of many popular beliefs in a variety of imaginative ways, including myths, rumors, traditions, and stories. We will take the opportunity to delve more deeply into the applicability of the scientific method in understanding a vast range of real-world problems, and into the practical acquisition of fact-based knowledge, which together form the cornerstone of all science. The intellectual framework of this course will be based, first and foremost, on skeptical inquiry, combined with the other key ingredients of good science, which include: framing the question well, careful experimental design, meticulous observation and measurement, quantitative analysis and modeling, the evaluation of statistical significance, recovery from failure, disseminating findings, and the continuous cycle of hypothesis and testing. Note: This course is taught at an introductory level, but it pays serious attention to the quantitative treatment of experimental data and associated tests of statistical significance. All students taking the course will be expected to learn, and to work a series of problems in, basic probability and statistics. There is also a hands-on, "dorm lab" component that involves some fabrication and a significant amount of individual testing and measurement. The final course project will involve developing and writing a scientific grant proposal to test a myth. We hope to inculcate in our students "a taste for questioning, a sense of observation, intellectual rigor, practice with reasoning, modesty in the face of facts, the ability to distinguish between true and false, and an attachment to logical and precise language." (Yves Quéré, 2010 *Science* 330:605).

### THINK 2. The Art of Living. 4 Units.

Where do our ideals for living come from, and how should they be structured? How do we justify them in the face of criticism? What role do great works of art play in this creative process? Our lives are not simply given to us, but also something we make: as we examine the circumstances of our existence, recognizing certain facts as immutable and others as subject to our control, each of us faces the challenge of fashioning out of them a way of living that is both meaningful and justifiable. The Art of Living will explore different ways to think about the nature of that challenge; how to accommodate conflicting demands and values, how to make our choices artfully; how we might use works of imaginative literature to inspire us. We will read important works of literature and philosophy, each of which implies a different value by which to live, whether reason, authenticity, community, art, or faith. In each case, you will be presented with different perspectives and asked to work out for yourself what you find most persuasive, thereby fine-tuning skills essential to your own lifelong project of self-construction.

### THINK 3. Breaking Codes, Finding Patterns. 4 Units.

Why are humans drawn to making and breaking codes? To what extent is finding patterns both an art and a science? Cryptography has been used for millennia for secure communications, and its counterpart, cryptanalysis, or code breaking, has been around for just slightly less time. In this course we will explore the history of cryptography and cryptanalysis including the Enigma code, Navajo windtalkers, early computer science and the invention of modern Bayesian inference. We will try our own hand at breaking codes using some basic statistical tools for which no prior experience is necessary. Finally, we will consider the topic of patterns more generally, raising such questions as why we impute meaning to patterns, such as Biblical codes, and why we assume a complexity within a pattern when it's not there, such as the coincidence of birthdays in a group.

### THINK 5. Justice and the Constitution. 4 Units.

How does justice incorporate the ideals of liberty, equality, and security? How are these ideals balanced against each other? How are they made concrete in the US Constitution and law? What is the relationship between justice and the law? In this course we consider three core ideals that animate the idea of liberty: freedom, equality and security. We explore the relationship between these different ideals through an interdisciplinary inquiry that includes political philosophy, history and law. In your reading, writing and thinking, you will move between the realm of abstract ideas and actual legal cases. We begin with the philosophical roots of the ideals of liberty, equality and security and then focus on their articulation in the US Constitution and the overarching US legal framework and public policy. Students will learn to analyze the distinctive challenges posed to the ideals of liberty, equality and security by twenty-first century developments such as the emergence of the internet and the rise of non-state warfare.

### THINK 6. Everyday Life: How History Happens. 4 Units.

To what extent can individuals' daily actions influence world events, and to what extent are individuals influenced by world events? This course investigates the relationship between private lives and public affairs. We will trace how small acts contribute to global change and, in turn, how global change can shape one's sense of self. We will explore the shifting mentalities of individuals during the most dramatic transformations in 20th century Europe: World War I, communist revolution, the rise of Nazism, World War II, the Holocaust, and the Cold War. Through analysis of memoirs, diaries, essays, novels, and state documents, you will examine how social and political developments can reveal the very boundaries between self and society. To make this exploration more personal, you will develop a fictional persona that you will keep throughout the quarter through which you explore the everyday workings behind momentous change.

### THINK 7. Journeys. 4 Units.

Is death final or only the beginning of another journey? How do the mysteries of destination give rise to our most basic questions of purpose, meaning, and faith, and challenge us to consider our proper relation to others? Journeys will examine works written across a span of some 2,300 years, from Chinese philosophy to American short stories. Each of these forms and genres presents some essential aspect of the journey we all share, and of the various passages we make within that one great journey that relentlessly challenge and transform us even as we advance toward what the poet Thomas Gray called our "inevitable hour." By reading, discussing, and interpreting these works, we will ask you to consider how each text compels us, by the penetration of its vision and the power of its art, to make part of our own journey in its company.

### THINK 8. Sustainability and Collapse. 4 Units.

What does it mean to live sustainably? How do our different definitions of nature—scientific, literary, cultural, and historical—shape the way we answer that question? Sustainability and Collapse will explore what people in different places and periods of time have envisioned as successful ways of living with nature and how such ways of life have come under pressure. We will focus particularly on the interface between scientific and humanistic approaches to questions of environmental sustainability through a study of novels, historical texts, and works of biogeography. You will learn to ask how textual and visual images inform our ideas about what it means to live sustainably. We will then consider whether those ideas are in accordance with or in conflict with scientific understandings of human uses of nature. This course takes on some of the fundamental problems that presently confront our global community.

**THINK 9. Technological Visions of Utopia. 4 Units.**

How do science and technology shape the frameworks for imagining utopian or dystopian societies? Sir Thomas More gave a name to the philosophical ideal of a good society - a word that is now a part of common language: utopia. In the almost 500 years since More's Utopia appeared, changes in society - including enormous advances in science and technology - have opened up new possibilities for the utopian society that More and his predecessors could not have envisioned. At the same time science and technology also entail risks that suggest more dystopian scenarios - in their most extreme form, threats to humanity's very survival. We will look at several works that consider how literary visions of society have evolved with the progress of science and technology. The readings begin with More and include examples of more technologically determined visions of the late 20th century, as imagined in works of fiction.

**THINK 10. Voyages and Visionaries. 4 Units.**

How did cross-cultural contact between Europe and Asia in the pre-modern era produce our modern concept of civilization? In this course we examine five moments of intellectual encounter in the pre-modern era among civilizations of the eastern hemisphere, including India and China and what we now call the Middle East. Through the eyes of scholars, pilgrims, and missionaries, you will learn to map the itineraries of early travelers and to analyze their experiences from a comparative perspective. We will focus on reconstructing the worldviews and geographical imaginations that inform each text with reference to historical maps and images.

**THINK 11. Bioethical Challenges of New Technology. 4 Units.**

How might we apply ideas from ethical theory to contemporary issues and debates in biotechnology? This course will provide critical encounters with some of the central topics in the field of bioethics, with an emphasis on new technologies. Controversies over genetic engineering, stem cell research, reproductive technologies, and genetic testing will provide an opportunity for you to critically assess arguments and evidence. We will begin with an overview of the field and the theoretical approaches to bioethics that have been derived from philosophy. You will then have the opportunity to engage in debate and learn how to identify underlying values and how to apply ideas from ethical theory to contemporary problems.

**THINK 12. Century of Violence. 4 Units.**

What is modern about modern mass violence? This course explores the evolution, varieties, and logic of mass violence from the early 20th century to the present day. You will engage with and analyze primary accounts of such violence by victims, observers, perpetrators, and courts. We will then consider the effectiveness of various efforts to confront genocides and crimes against humanity in international courts and institutions, past and present. We start with the emergence of genocide as a modern, international issue; proceed with colonial massacres in early 20th century Africa; move to the Armenian genocide in the Ottoman Empire and WWI; Nazi and Nazi-inspired racial murder; communist-induced mass violence in the Soviet Union and Asia; ethnic cleansing in former Yugoslavia; and end with an examination of the recent genocides in Rwanda, Sudan, and the Middle East.

**THINK 13. Epic Journeys. 4 Units.**

What makes an epic hero? How does the epic poem externalize our quest for identity and self-definition? The human quest for identity and self-knowledge is the oldest story of human culture. It almost always involves a confrontation with death. As the epic hero journeys across the physical world and descends into the underworld to visit the dead and seek counsel from them, he gradually comes to understand himself in a deeper, more meaningful way than before he set out on his journey. In this course, you will learn to engage in depth with some of the great epics of the Western tradition, beginning with *The Epic of Gilgamesh* and ending with Dante's masterpiece, *The Divine Comedy*. In each case, we will consider the unique goals of each hero's journey and the obstacles he must confront in order to reach his destination, with particular attention to the themes of violence in self and society, exile and alienation, the encounter with ancestors, the female voice, and divine guidance. We will focus on how the hero's search for a moral identity in relation to his community connects to current definitions of the ethical life in relation to political violence, war, honoring the dead, and confronting our mortality.

**THINK 15. How Does Your Brain Work?. 4 Units.**

How do the biology and chemistry of the brain create the mind that lets us talk, walk, laugh, love, learn, remember, and forget? What can neuroscience say about what makes us human? How can we ask questions about the brain that are observable, testable, and answerable? The human brain is the most complex organ we know. To understand the biology of brain function, this course will use highly interactive lectures and discussions to examine the validity of common beliefs about the brain, discuss how the brain and the nervous system are organized, how individual elements of the brain function, and how together these units produce action. The brain, like all other biological structures, has evolved over time in response to natural selection by adapting to diverse behavioral and environmental constraints. We use evolutionary comparisons to illuminate important questions about brain function, including what the origins and consequences of brain damage are, how and where drugs act, and how you collect, interpret, and understand information about the world. You will learn both how the science of the brain has emerged through understanding important experiments and observations and how you can formulate and test your own experimental questions about the brain.

**THINK 16. Is the Universe Just? Explorations in the Classics. 4 Units.**

What can the Classics teach us about understanding justice and injustice? Do you ask yourself whether your life is controlled more by your own free choices or by your genetic code? Do you worry whether a superpower can function without hubristic arrogance? Do you ponder what constitutes the Good Life? If these sorts of issues are central to your intellectual and personal growth, this course will demonstrate to you that the ancient Mediterranean world was equally consumed with questions about the nature of human society and human existence. We will explore certain recurring themes within classical text such as the relationship between power and gender; gods and humans; innocence and evil. We will read a wide and deep selection of important and influential literary texts from the Near East, Greece, and Rome, spanning from c.2000 BCE to the first century BCE. The readings will include creation texts, epic, lyric, tragedy, and philosophy.

**THINK 17. The Poet Re-Making the World. 4 Units.**

Can poetry change the world? Poets use form and language to hold up a mirror to the events that change the world and the making of a poem can also be the re-making of a world. We will read and study poetry from different historical, cultural, and poetic traditions, and explore whether something as individual as artistic expression can help us cope with the social and political events that bring suffering and destruction. The course follows the adventures of the individual poet: from a young man caught in the trenches of the First World War, to a Japanese haiku master of the 17th century, to an American Beat, to an English woman trapped in the conventions of her time, to a contemporary U.S. soldier in Iraq. Poets show us the many similarities, as well as rich cultural differences, between us all.

**THINK 18. Rebellious Daughters and Filial Sons of the Chinese Family. 4 Units.**

How has the family been broken, preserved, and reinvented in the fast-changing world of revolution and modernization? *Rebellious Daughters and Filial Sons of the Chinese Family* follows the theme of the Chinese family in fiction and film to investigate the core values that hold it together in the midst of great historical change. You will learn to interpret both fiction and film as visual and textual narratives that illuminate the multiple aspects of family and community. We will explore how modernization, colonialism, revolution, war, and immigration disrupt traditional home and family. Through film and text, we will discover the various poignant attempts to rebuild family relations in the midst of such dislocation. As you embark on your college education and take leave of your own families, you might start to consider how your familial ties shape your concept of self, your emotional attachment to community, social relationships with society, and political consciousness.

**THINK 19. Rules of War. 4 Units.**

When, if ever, is war justified? How are ethical norms translated into rules that govern armed conflict? Are these rules still relevant in light of the changing nature of warfare? We will examine seminal readings on just war theory, investigate the legal rules that govern the resort to and conduct of war, and study whether these rules affect the conduct of states and individuals. We will examine alternative ethical frameworks, competing disciplinary approaches to war, and tensions between the outcomes suggested by ethical norms, on the one hand, and legal rules, on the other. Students will engage actively with these questions by participating in an interactive role-playing simulation, in which they will be assigned roles as government officials, advisors, or other actors. The class will confront various ethical, legal, and strategic problems as they make decisions about military intervention and policies regarding the threat and use of force in an international crisis.

**THINK 21. Folklore and Literature in Russia and Beyond: Vampires, Talking Cats, and Frog Princesses. 4 Units.**

What is 'folklore' and what is its purpose? How do we decide if something is authentically 'folk' and does it matter? Why are Eastern Europe and Russia associated with the idea of folklore? For the past two centuries, writers, composers, and artists have found inspiration in folklore: the stories, songs, and beliefs of their grandparents, their servants (or their slaves), and their neighbors. This class asks what folklore means and what purposes - political and philosophical as well as artistic - it can serve. We begin with examples from around the world: the German Brothers Grimm as well as the Americans John and Alan Lomax. Then we turn to Eastern Europe and the role it has played in the Western European and American imagination as the home of the archaic and the authentic, from the vampires of Transylvania to the oral epics of the Bosnian Serbs to the nostalgic idea of the Jewish shtetl to the fantasy of Soviet communism as a survival of a pre-capitalist order. Students will analyze both folk and elite texts, and will experiment with gathering oral texts and transforming them just like the writers we studied.

**THINK 22. Who Owns the Past? Archaeology, Heritage and Global Conflicts. 4 Units.**

Who owns the past? Is cultural heritage a universal right? This course interrogates the relationship between the past and the present through archaeology. Increasingly, heritage sites are flash points in cultural, economic, and religious conflicts around the globe. Clearly history matters, but how do certain histories come to matter in particular ways, and to whom? Through close study of important archaeological sites, you will learn to analyze landscapes, architecture, and objects, as well as reflect on the scholarly and public debates about history and heritage around the world. Far from being a neutral scholarly exercise, archaeology is embedded in the heated debates about heritage and present-day conflicts.

**THINK 23. The Cancer Problem: Causes, Treatments, and Prevention. 4 Units.**

How has our approach to cancer been affected by clinical observations, scientific discoveries, social norms, politics, and economic interests? Approximately one in three Americans will develop invasive cancer during their lifetime; one in five Americans will die as a result of this disease. This course will expose you to multiple ways of approaching the cancer problem, including laboratory research, clinical trials, population studies, public health interventions, and health care economics. We will start with the 18th century discovery of the relationship between coal tar and cancer, and trace the role of scientific research in revealing the genetic basis of cancer. We will then discuss the development of new treatments for cancer as well as measures to screen for and prevent cancer, including the ongoing debate over tobacco control. Using cancer as a case study, you will learn important aspects of the scientific method including experimental design, data analysis, and the difference between correlation and causation. You will learn how science can be used and misused with regard to the public good. You will also learn about ways in which social, political, and economic forces shape our knowledge about and response to disease.

**THINK 24. Evil. 4 Units.**

What is evil? Are we naturally good or evil? How should we respond to evil? There are many books and courses that focus on the good life or the virtues. Yet despite their obvious apparent presence in our life and world, evil and the vices are rarely taken as explicit topics. We will read philosophical and literary texts that deal with the question of evil at an abstract level and then use other readings that help us focus on more practical implications of the meaning and consequences of evil. By exploring the issue of evil, we will confront larger questions about the nature of humans, the responsibility to address evil as a society, and the moral and ethical ways we might begin to define what is evil.

**THINK 26. How Do You Build a Nation? Inclusion and Exclusion in the Making of Modern Iran. 4 Units.**

Why were minority religious groups excluded from the majority's vision of a Shi'i Iranian nation? How and when were women included as citizens of a new Iran? In this course, specific attention will be paid to key events of the 20th century that shaped modern Iran: the Constitutional Revolution (1905-11), the 1953 coup, the White Revolution (1963), the Islamic Revolution (1978-79), the Iran-Iraq War (1980-1988), and the post-revolutionary period in general. Through a close reading of key poems, short stories, and films created in this period, this course will identify major inclusionary and exclusionary forces in the process of nation-building in 20th-century Iran. Specific attention will be paid to issues of ethnicity, religion, and gender. In addition to reading texts (poetry and prose) and watching films, students will be called on to present critiques of these literary and cinematic products in the form of brief oral presentations and short writing assignments. The final project will involve interviewing Iranian expatriates on issues covered in the lectures. Students will work in small groups to produce short videos of these interpersonal encounters.

**THINK 27. Human Rights and Humanitarianism. 4 Units.**

Why do certain governments and citizens feel obliged to ease the suffering of distant people in need? How did the humanitarian sensibilities and human rights discourses that now define global politics come into being? In this course, you will consider how contemporary ethical motivations for human rights and humanitarianism have developed. We will investigate the emergence and transformation of these ideas through the study of key historical events in the modern world: slavery and its abolition, colonialism, the World Wars, apartheid, decolonization, and the Cold War. We will then consider how this longer history has influenced the ways activists, NGOs, and governments today draw attention to global crises and abuses. Our ultimate objective is to gain an understanding of how the language and ideals of human rights and humanitarianism emerged from the context of liberalism, capitalism, and imperialism.

**THINK 29. Networks: Ecological, Revolutionary, Digital. 4 Units.**

Why is the word network used to describe the behavior of computers, ants, and people? Do all these networks share certain properties? What might we learn by comparing them? We like to think of social networks as a contemporary phenomenon. But before Facebook, individuals organized themselves in social networks; before Twitter, revolutionaries used media to communicate and coordinate their messages. In fact, even animal societies are networked. Through project-based exercises, you will learn to study, analyze, and write about networks from the perspectives of a biologist, a computer scientist, and a historian. We will retrace social networks in the 18th and 21st centuries, observe the organization of animal networks, and investigate the structure of online networks. Our goal is to use the concept of the network to deepen our understanding of the natural world, historical change, and our own social lives.

**THINK 30. Race Matters. 4 Units.**

What are race and ethnicity? How do they shape society and individual experience? What role do they play in identity formation? Going to school and work, renting an apartment, going to the doctor, watching television, voting, reading books and newspaper, or attending religious services are all activities that are influenced consciously and unconsciously by race and ethnicity. In this course, we will draw on scholarship from psychology, genetics, history, and cultural studies to understand contemporary racial formations and cultural representations. We will look at how recent research on the human genome has reinvigorated biological conceptions of race and ethnicity, engage in activities that highlight the psychological consequences of race and ethnicity, and analyze selected race-relevant memes that appear in popular media.

**THINK 31. Race and American Memory. 4 Units.**

How have Americans remembered the Civil War - what it meant, what it accomplished, and what it failed to accomplish? How did Americans reimagine the United States as a nation after the war? Who belonged in the national community and who would be excluded? In 1865, the peace treaty was signed at Appomattox and the Thirteenth Amendment outlawed slavery, but the battle over memory and national identity had just begun. The questions that the Civil War addressed - and failed to address - continue to affect our lives today. We will focus on how Americans negotiated issues of cultural memory and national identity through a close analysis of historical texts, novels, poems, films, paintings, cartoons, photographs, and music. Our interpretations will foreground the particular themes of race and nationhood, freedom and citizenship, and changing notions of individual and collective identity. Our assumption in this course is that history is not available to us as a set of events - fixed, past, and unchanging. Rather, history is known through each generation's interpretations of those events, and these interpretations are shaped by each generation's lived experience. What stories get told? Whose stories? And in what ways? The stories we choose to tell about the past can shape not only our understanding of the present, but also the kind of future we imagine and strive to realize.

**THINK 32. Subversive Acts: Invention and Convention in the 20th Century. 4 Units.**

Can art subvert social practice and politics? In this course, we will learn how to "read" art and analyze the ways aesthetic objects can raise larger conceptual questions about culture, society, and change. We will do this by investigating the broad range of artistic, social, and political meanings of the term "avant-garde" in the 20th century. The course looks at some of the key moments in avant-garde art in Europe, including Dadaism and Futurism, with a particular emphasis on Russia. Through an examination of various aesthetic case studies, we will be able to ask the larger question of whether art can actually challenge social conventions and established political ideologies.

**THINK 33. The Water Course. 4 Units.**

How can we balance all the competing, and growing, demands for freshwater? When you turn on your tap, where does the water come from? Water is essential for life. But, around the world, governments and citizens are challenged to balance the human demands on our freshwater resources, while protecting the integrity of natural ecosystems. At the core of the challenge is our limited understanding, in many parts of the world, of the watershed-scale hydrologic cycle - the course that the water follows from rainfall, to river, to groundwater, to ocean, to atmosphere, and back again. The Water Course takes students along that course, exploring the role that natural systems and human systems play in impacting both the quantity and quality of our freshwater. We will consider questions surrounding decisions about water allocation, and discuss new scientific methods that provide support for science-based decision making in the management of freshwater resources. You will connect global-scale issues to your personal experiences with water through a quarter-long project investigating both water quantity and water quality for a city or watershed in the western U.S. You will produce a numerical model, and make approximations, to describe a complex natural system. Using online resources you will explore the pathway that water takes from rainfall to your tap.

**THINK 39. Energy? Understanding the Challenge, Developing Solutions. 4 Units.**

How much energy do we need to run the world and what energy resources can we use? How do we convert those resources into energy services? What are the economic, environmental, and security costs of energy services? How will energy markets address the challenges of reducing greenhouse gas emission? Energy is the lifeblood of human societies. Energy use is intricately woven through the fabric of the productive (and comfortable) lives we live in the developed world. We use energy to move and sometimes make fresh water, grow food, transport it to markets, heat, cool, and light our dwellings and workplaces, communicate and compute, and travel the world. We worry about energy security and fret about the cost of gasoline. And as world population continues to grow and the developing world seeks to use energy for the services we enjoy, the challenge of supplying the energy the world needs will grow commensurately. Energy is also a primary way human activities interact with global air, water, and biological systems that provide essential services to us and the planet. Balancing our interactions with those systems will require dramatic changes to the world's energy systems in the decades to come. This course examines the energy challenges, opportunities, and choices that lie ahead.

**THINK 40. Meeting the Global Sustainability Challenge. 4 Units.**

What are the most critical sustainability challenges facing us in this century? How can natural and social sciences, humanities, and technology fields interact to contribute to their solution? How do we balance the needs and desires of current generations with the needs of future generations? The term sustainability seems to be everywhere. Businesses, cities, non-governmental organizations, individuals, and universities such as Stanford use the term to characterize decisions that make sense for the well-being of people as well as the environment. Beyond the popular use of the term is an emerging field of study that focuses on the goals of sustainable development - improving human well-being while preserving Earth's life support systems (air, water, climate, ecosystems) over the long run - and explores how science and technology can contribute to the solution of some of the most critical problems of the 21st Century. The goal of this course is to engage you in critical thinking and analysis about complex sustainability challenges and to encourage you to consider the need for integrative solutions that draw on different disciplines. We will examine some of the major problems of sustainable development (including issues related to food, water, and energy resources, climate change, and protection of ecosystem services), grapple with the complexities of problem solving in complex human-environment systems, and participate in the design of effective strategies and policies for meeting sustainability goals. You will learn to develop policy briefs addressing sustainability issues in the university, local communities, state and the nation as well as work on team projects with decision makers that address real-life challenges in your local area.

**THINK 41. The Conscious Mind: The Philosophy and Biology of Consciousness, Memory, and Personal Identity. 4 Units.**

How do our common-sense conceptions of the mind and of ourselves hold up against the growing body of psychological and neurobiological knowledge of the brain? How is your mental life anchored to your physical self? You wake up from a dreamless sleep and suddenly everything's buzzing with color and sound. Somehow your brain sustains this rich landscape of experience, integrating it with a repertoire of memories to constitute yourself. This course probes the neurobiological bases of these familiar yet miraculous facets of the mind. You'll learn to analyze primary philosophical and scientific texts, using basic knowledge of the brain to assess and even innovate experiments that could shed light on the nature of consciousness and personal identity.

**THINK 42. Thinking Through Africa: Perspectives on Health, Wealth, and Well-Being. 4 Units.**

What is human well-being? How do we define it? How do we measure it? What do we mean when we talk about certain parts of the world as "developed" and others as "underdeveloped" or "developing"? How do improvements in human well-being come about? What happens when some people become much better off and others do not? In this course, we will use African experiences, past and present, to think critically and reflectively about concepts whose meaning we all too often take for granted: not only well-being and development, but also wealth and health, equality and inequality. Using the tools and techniques of four different disciplines -- history, anthropology, public health, and engineering -- we will tackle essential questions about the meaning of well-being and the indices by which we measure it, the role of politics in the development process, the importance of historical and cultural contexts, and the sometimes unanticipated challenges that individuals, institutions, and societies face when they seek to promote development and improve human well-being.

**THINK 43. What is love?. 4 Units.**

Is love a spiritual or a bodily phenomenon? Is the concept of love timeless or ever changing? How does thinking about love lead us to ask other important philosophical and social questions? In this course we will examine the classical roots, medieval developments, and contemporary permutations of Western ideas of romantic love. With an eye to thinking about representations of love in our own culture, we consider some of the foundational love books of the Western tradition. From Plato's Symposium to Chester Brown's graphic novel *Paying For It*, we ask the fundamental question of whether and how we might distinguish between spiritual and physical desire. We consider how medieval and contemporary writers dealt with the relation of love to sex, power, money, marriage, and gender. We discuss these works of the past, for example the illicit love in the courtly romance *Tristan*, in tandem with representations of clandestine love from the present day, such as the portrayal of same-sex love in *Brokeback Mountain*.

**THINK 44. Belief. 4 Units.**

Why do people believe in God? What does it mean for people to experience the supernatural? How do we understand belief in God? How do people convey experiences that are by definition extra-ordinary to others? In this course we ask the big (and unanswerable) question why people believe in God. Some scholars argue that belief results from direct experience, such as visions or moments of transcendence, that testify to God's existence. Others suggest that belief in the supernatural is better explained by the way the human mind has evolved or people's experience of the social world. In this class, we will pair medieval literature on Christian mysticism and magic with readings from modern psychology and anthropology. We will look at the dominant answers provided by each discipline. For example, belief might result from our sensory experience of the world, or it might have developed as part of our cognitive apparatus in response to fear. Our aim is to show how different disciplines can work together to cast light on a basic question of human existence.

**THINK 45. Thinking About the Universe: What do we know? How do we know it?. 4 Units.**

What is the origin and ultimate fate of the universe? Can we know what came before the universe? Are there ultimate limits to human knowledge about the universe and are we reaching them? Cosmology (the study of the universe) raises profound questions about us, our place in the universe, and about the limits of our knowledge. It was only in the 20th century that cosmology developed from metaphysical and theological speculation to become an observational science and a recognized part of physics. In this course, students will explore questions about the Universe, its beginnings, its structure, its extent, its fate, from several perspectives - philosophical, experimental, and theoretical. We will discuss current research and the ongoing debates about the laws of nature on subatomic scales and the perplexing questions they raise regarding the universe and the limits of scientific inquiry.

**THINK 46. Why So Few? Gender Diversity and Leadership. 4 Units.**

Why there are so few women leaders and what is the cost to society for women's underrepresentation in positions of power? How can organizations and individuals increase women's leadership and be more inclusive of the diverse people that make up our society? Women make up half the population and have earned more than half of all the undergraduate degrees in the U.S. since the early 1980s; yet women comprise only 17% of US Congress, 4% of Fortune 500 CEOs, 16% of the board of directors of major corporations, 22% of tenured faculty at Stanford, and less than a fifth of law firm partners. For women of color, these numbers are considerably lower. Yet, research shows that gender diversity increases the creativity and innovation of groups. In this course, we will directly address the questions of why there are so few women leaders and what can be done, at an organizational and individual level, to increase their representation. Using the lens of sociology, we will think critically about leadership, influence, power, status, gender stereotypes, mentorship, and negotiation. Once we understand the mechanisms underpinning the lack of women leaders, we will discuss and critique potential interventions. A unique aspect of this course will be to apply some of the scholarly research on gender and leadership to our lives outside the classroom. We will be using modules based on those used in businesses schools and corporate executive training. Students will develop practical, real-world skills to increase their own leadership capacities by working on projects and taking part in interactive sessions on negotiation and team dynamics.

**THINK 47. Inventing Government: Ancient and Modern. 4 Units.**

How might the study of the successes and failures of democratic and republican government in ancient Greece and Rome help us to fix what is broken in our own political systems? Democracy and republic are ancient names for revolutionary approaches to government of, by, and for citizens. Today, almost every state proclaims itself to be a democracy, a republic – or both. Democratic and republican revolutions transformed ancient Greece and Rome – and later transformed the modern world. We explore how political thinkers, from Machiavelli to Madison and Mill, used the lessons of ancient politics to design bold new systems of government. Ancient politics may still hold lessons for us. We analyze what is broken in modern government (corruption, polarization, gridlock), how it broke, and how the tool kit of ancient political history might help us to analyze and repair the damage.

**THINK 48. Reading the Body: How Medicine and Culture Define the Self. 4 Units.**

How have our perceptions of what is considered normal/abnormal; beautiful/ugly; infected/uninfected changed over time? How do these changing medical and cultural representations of the body reflect larger societal shifts? How does illness change our perceptions of our bodies and our identities? Viewed through the lens of medicine, the body is a text that offers clues to health and illness, yet clinical readings are never entirely objective. Culture informs and distorts how we discern, accept, reject, and analyze our bodies. Looking at literary, medical, ethical, and anthropological texts, we ask how representations of the body affects the way we experience illness, embody gender and racial identities, and understand our rights (or lack of rights) to control our own bodies. We will critically examine our perceptions about the body and debate some of the most complex and sensitive issues surrounding the body, from the ethics of medical research trials to end of life decisions.

**THINK 49. Stories Everywhere. 4 Units.**

Do we perceive the world through stories? Are we made of stories? Can we make sense of the world without narrative? The telling of stories is not just a form of entertainment but an essential human activity that moves and persuades us, compelling us to action and reflection. In this course, we will probe how moral, cognitive and historical forces give stories their power. You will be introduced to the basic theory and art of storytelling, enabling you to understand and master the fundamentals of narrative structure, plot, and character. This will allow you to practice producing your own stories through both interpretative and creative writing assignments. The class will also give students the chance to participate in various story-making activities and work with the Stanford Storytelling Project, San Francisco StoryCorps, School of the Arts and the Stanford Innocence Project to create assignments that would be useful to both private and nonprofit organizations.

**THINK 50. Empathy. 4 Units.**

This course will introduce freshmen to a range of ways of thinking about empathy. How do we know and understand the other? How does knowledge of another's experience and circumstances enable us to make moral decisions and take moral actions? It will take students on an intellectual investigation of the topic of empathy from the Buddhist emphasis on compassion in the fifth century BCE to Jesus' teaching of parables in the first century CE to Enlightenment philosophy to Silicon Valley's adoption of empathy in the twenty-first century. The main focus will be on the modern period (from the 18th to 20th century) and students will be asked to approach different genres of text through the lens of empathy. The course will culminate with a one-week creative workshop on the question of empathy.

**THINK 51. The Spirit of Democracy. 4 Units.**

This course provides an overview of the challenges and aspirations facing ideals of democracy. It deals both with competing visions of what democracy might be, and their actual realization not only in the US but around the world. It will begin with the debate over the American founding and move eventually to the "third wave" of democratization around the world in the late 20th century as well as its more recent retrenchment. The problems of democratic reform are continuing and recurrent around the world. Democratic institutions are subject to a living dialogue and we intend to engage the students in these debates at the level of democratic theory and at the level of specific institutional designs.

**THINK 52. World of Words. 4 Units.**

In this course, we define and make sense of the world around us through the words we use. Students will be asked to consider how words are formed, and who chooses what gets accepted into the dictionary. What do words reveal about status, class, race? Why are there so many derogatory words for women, but so few for men? We will enquire about how the words we use have changed over time, both through shifts in meaning, and through the life and death of words. We'll seek to discover how different cultures make sense of the world through specific sets of words, but also why the world loses an average of one language every two weeks. We'll explore how we create new names for things, from a "refrigerator" to "Google". We'll ask how words function in relation to the Internet, and how coding can be thought of as language. Words are the key to understanding the minds and ideas of a people and in tracing the biographies of words we are able to discern how the world was, is, and might be perceived and described. The course will be structured through a sequence of weekly words that are the starting point for a discussion on a major characteristic of the dynamic and fascinating world of words.

**THINK 53. Food Talks: The Language of Food. 4 Units.**

In this course, we examine how the ways we talk about food offers us a window into history, psychology, culture and economics. We ask students to think critically about language and taste as well as explore the hidden meanings and influence of the language that surrounds us. Students will analyze the language of food through menus, recipes, Yelp reviews, TV food shows, as well as the history and etymology of food words. Some of our examples will be drawn from East Asian food and culture in addition to, and as a point of contrast with, foods and cultures that may be more familiar to students.

**THINK 54. 100,000 Years of War. 4 Units.**

If you had been born 10,000 years ago, the chance that someone would kill you was more than 1 in 10, but if you were born in the twentieth century AD it was more like 1 in 100, despite that century's world wars, genocides, and nuclear weapons. In the 2010s, it is just 1 in 150. This course tries to explain this astonishing shift away from violence. We will look at the history of war from the Stone Age to the robot age, including the conflicts of the 2010s; and we will draw on everything from anthropology and archaeology to biology and psychology, as we try to answer one of the biggest questions of all: will there ever be a world without war? Students learn how to approach a big, complex, and often very politicized question in an analytical manner.

**Tibetan Language Courses****TIBETLNG 1. First-Year Tibetan, First Quarter. 4 Units.**

Grammar, reading, and composition. Tibetan culture and the Tibetan view of reality.

**TIBETLNG 2. First Year Tibetan, Second Quarter. 4 Units.**

Continuation of 1.

**TIBETLNG 3. First Year Tibetan, Third Quarter. 4 Units.**

Continuation of 2. Fulfills the University Foreign Language Requirement.

**TIBETLNG 11. Intermediate Tibetan, First-Quarter. 4 Units.**

Continuation of 3.

**TIBETLNG 13. Intermediate Tibetan, Third-Quarter. 4 Units.**

Continuation of 12.

**TIBETLNG 21. Intermediate/Advanced Tibetan, First Quarter. 4 Units.**

.

**TIBETLNG 23. Intermediate/Advance Tibetan, Third Quarter. 4 Units.**

.

**TIBETLNG 199. Individual Work. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**TIBETLNG 395. Graduate Studies in Tibetan. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**Undergraduate Advising and Research Courses****UAR 10. Intellectual Journeys. 1 Unit.**

Stanford speakers share their research as well as their intellectual and life paths, including how they chose their undergraduate major, how they found mentors, and what their field offers undergraduates.

**UAR 11A. OXC: Learning to Live at Stanford. 1 Unit.**

Reflect upon building our community here at Stanford through short texts, poetry, short stories, and social media articles that highlight core points for discussion for students and residents at Stanford: Home and Community; Care and Tolerance; Doubt and Fear; Inspiration and Success; Isolation and Loneliness; Enough and Too Much; Peace and Quiet; Balance and Joy. An OpenXChange program.

**UAR 11B. OXC: Learning to Live at Stanford. 1 Unit.**

Reflect upon building our community here at Stanford through short texts, poetry, short stories, and social media articles that highlight core points for discussion for students and residents at Stanford: Home and Community; Care and Tolerance; Doubt and Fear; Inspiration and Success; Isolation and Loneliness; Enough and Too Much; Peace and Quiet; Balance and Joy. An OpenXChange program.

**UAR 21. OXC: Freshman Women's Leadership Initiative. 1 Unit.**

Understand leadership skills in the context of the values, issues, and goals that characterize women in leadership, with a focus on Stanford undergraduate life. An intimate, immersive environment to discuss issues of leadership and community engagement. Recognize core values, leadership strengths and limitations, and inspiration to act with intentionality around interests and ambitions here at Stanford. An OpenXChange program.

**UAR 31. OXC: The African American Male Experience in Collegiate Sports. 1 Unit.**

Experiences and representations of African American men in college athletics and sports media. Explore the relationships between race, social class and athletic experiences, with a focus on sports film, social science data and the specific experiences of professional and student athletes. Readings will draw from psychology, sociology, education, and popular press. An OpenXChange program.

**UAR 41. OXC: Residential Exploration, Advocacy, Leadership. 1 Unit.**

Explore concepts in leadership. Examine academic and personal issues affecting students and develop skills and approaches necessary to tackle the political, educational, and socioeconomic issues towards future change. An OpenXChange program.

Same as: REAL

**UAR 42A. LSP First Year Seminar. 1 Unit.**

For freshmen who participated in the Leland Scholars Program.

This seminar supports LSP students in the first year in the areas of institutional engagement, academic empowerment, their sense of belonging to Stanford, and builds their cohort identity.

**UAR 42B. LSP First Year Seminar B. 1 Unit.**

For freshmen who participated in the Leland Scholars Program.

This seminar supports LSP students in the first year in the areas of institutional engagement, academic empowerment, their sense of belonging to Stanford, and builds their cohort identity.

**UAR 56. Building a Successful Academic Career. 1 Unit.**

For freshmen in expanded advising programs. Techniques for honing academic skills for college, and applying those skills to better define intellectual identity in academic pursuits. May be repeated for credit.

**UAR 60. Engaging, Exploring, and Reflecting on Alumni Career Worlds. 1 Unit.**

This course helps students access and navigate the professional world with tools such as e-Portfolios, Strengths Quest, and alumni shadow visits. Assignments and discussions will encourage deep reflection on the values, philosophies, and backgrounds that can help shape each student's long term goals.

**Urban Studies Courses****URBANST 25Q. The Origins of the Modern American City, 1865-1920. 3 Units.**

Are we living in a new Gilded Age? To answer this question, we go back to the original Gilded Age, as well as its successor, the Progressive Era. How did urban Americans around the turn of the twentieth century deal with stark inequalities of class, race, ethnicity, gender, and sexuality? And what can we learn from their struggles for our own time? Students use primary and secondary sources in digital and print formats. Possible field trip to San Francisco.

Same as: AMSTUD 25Q, HISTORY 55Q

**URBANST 27Q. Sophomore Seminar: Three Detectives, Three Cities. 3 Units.**

This seminar will analyze the social reality of three historic cities (London in the 1880s and 90s, San Francisco in the 1920s and 30s, and contemporary Shanghai) through the prism of popular crime fiction featuring three great literary detectives (Arthur Conan Doyle's Sherlock Holmes, Dashiell Hammett's Sam Spade, and Qiu Xiaolong's Chief Inspector Chen). As a student in this course, you will explore why crime fiction is so popular, why the fear of crime is so much a part of modern urban culture, and why the police detective and the private investigator have become iconic code heroes of pulp fiction, movies, TV shows, and even video games. If you take this class, you will have the opportunity to write a paper and present your research on one of the classic literary detectives or on one of today's related manifestations of the same impulse in mass-market tales of superheroes, vampires, and the zombie apocalypse.

**URBANST 100A. Pre-field Course for Urban Studies Alternative Spring Break. 1 Unit.**

Limited to students participating in the Alternative Spring Break program. See <http://asb.stanford.edu> for more information.

**URBANST 101. Public Service Internship Preparation. 1 Unit.**

Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is primarily designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do the assignments for 1 unit of credit.

Same as: ARTSINST 40, EARTHSYS 9, EDUC 9, HUMBIO 9, PUBLPOL 74

**URBANST 102. Social and Urban Development in Beijing: Field Observation & Service Learning. 4 Units.**

In this course, we explore China's urban and social development through the lens of Beijing. We investigate issues such as land use and land rights, housing, education, migrants in cities, and the repercussions of unequal development and a frayed social safety net. BOSP students will communicate and share their unique perspective with students at the Stanford home campus who are also studying China's urbanization. While in Beijing, BOSP students will also have the opportunity to participate in documentary fieldwork: observing the city and its patterns of life, participating in field trips, and completing a service project with a Beijing community organization. Students will come away with an up-close view of the social implications of China's rapid economic and urban growth, and the ability to put a human face on the challenges of development. Note: Course is open to Stanford-in-Beijing students.

**URBANST 103. Social Movements, Hip-hop & Heroes in the City: From Greensboro to Ferguson. 1 Unit.**

The focus of this workshop is on the social and cultural histories and present conditions relating to social movements and the role of leaders and heroes in urban settings. The workshop seeks to foster historical consciousness of past struggles for justice through collective action as well as to introduce students to a diverse range of leaders of contemporary social justice movements. Additionally, as an underpinning concept, the course explores the changing meaning and importance of social and cultural heroes through history, literature, and music. Workshop activities will be divided between sessions with guest speakers and classes held to discuss background concepts and material.

**URBANST 104. Civic Dreams, Human Spaces: Urban Design with People. 4 Units.**

Human-centered design of cities and public spaces. Explore the principles underlying vibrant spaces, utilize creative tools and techniques to strengthen the social fabric of communities and enhance benefits to the public, and find new sources of inspiration to inform the urban design process. Take part in real-world design projects in the city of San Francisco and/or other Bay Area communities, while decoding public spaces from multiple perspectives: as sites of recreation, interaction, and political contention; as physical infrastructure that municipalities or grassroots citizen efforts seek to build and maintain for the common good; as places of historical memory, identity, and personal storytelling; and as opportunities for cutting-edge civic innovation. Participants will practice ethical design, utilizing frameworks that are inclusive (for many) and participatory (by many), and that benefit human beings and their diverse communities. Limited enrollment, admission by application. Find out more and apply at [dschool.stanford.edu](http://dschool.stanford.edu).

**URBANST 106. City, Society, Literature- 19th Century Histories. 4 Units.**

This course examines the rise of modern cities through an analysis of urban society and the imaginative literature of the 1800s. Same as: HISTORY 206A, HISTORY 306A

**URBANST 107. Introduction to Urban and Regional Planning. 3 Units.**

An investigation into urban planning as a democratic practice for facilitating or mitigating change in society and the built environment. We will engage in professional planning practices in focused sessions on transportation, design, housing, environmental policy, demographic research, community organizing and real estate development. Strong emphasis on developing an understanding of the forces that shape urban and regional development, including cultural trends, real estate and labor economics, climate change and the environment, and political organizing and power dynamics.

**URBANST 108. Grassroots Community Organizing: Building Power for Collective Liberation. 4-5 Units.**

This course explores the theory, practice and history of grassroots community organizing as a method for developing community power to promoting social justice. We will develop skills for 1-on-1 relational meetings, media messaging, fundraising strategies, power structure analysis, and strategies organizing across racial/ethnic difference. And we will contextualize these through the theories and practices developed in the racial, gender, queer, environmental, immigrant, housing and economic justice movements to better understand how organizing has been used to engage communities in the process of social change. Through this class, students will gain the hard skills and analytical tools needed to successfully organize campaigns and movements that work to address complex systems of power, privilege, and oppression. As a Community-Engaged Learning course, students will work directly with community organizations on campaigns to address community needs, deepen their knowledge of theory and history through hands-on practice, and develop a critical analysis of inequality at the structural and interpersonal levels. Placements with community organizations are limited. Enrollment will be determined on the first day through a simple application process. Students will have the option to continue the course for a second quarter in the Winter, where they will execute a campaign either on campus or in collaboration with their community partner. Same as: AFRICAAM 100, CSRE 100, FEMGEN 100X

**URBANST 110. Utopia and Reality: Introduction to Urban Studies. 4 Units.**

Designed for freshmen and sophomores. Introduction to the study of cities and urban civilization focusing on the utopias that have been produced over time to guide and inspire city-dwellers to improve and perfect their urban environments. History of urbanization and the urban planning theories inspired by Ebenezer Howard, Le Corbusier, Frank Lloyd Wright, the New Urbanists and Smart Growth advocates that address current issues such as urban community dynamics, suburbanization, sustainability, and globalization. Public policy approaches designed to address these issues and utopian visions of what cities could be, or should be, in the future. Topic of the final paper chosen by the student, with consent of instructor, and may be a historical research paper, a policy-advocacy paper, or a proposal for an urban utopia that addresses the challenges and possibilities of urban life today.

**URBANST 111. Political Power in American Cities. 5 Units.**

The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances.

Same as: AMSTUD 121Z, POLISCI 121, PUBLPOL 133

**URBANST 111A. The Politics of the American City. 4 Units.**

This course will focus on American urban politics - the distinctive nature of local government, its relationship to state government and the separation of powers between states and the federal government. Certain theories about political decision-making and power sharing will be explored. We will try to develop a national perspective on the political dynamics of urban governments and we will probe certain policy areas such as economic development to understand how political choice is embedded within the allocation of resources to meet human needs. The growing transformation among American urban areas due to the rise of the global economy will also be examined. The course will be composed of lectures, class discussions and graded exercises.

**URBANST 112. The Urban Underclass. 4 Units.**

(Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor.

Same as: SOC 149, SOC 249

**URBANST 113. Introduction to Urban Design: Contemporary Urban Design in Theory and Practice. 5 Units.**

Comparative studies in neighborhood conservation, inner city regeneration, and growth policies for metropolitan regions. Lect-disc and research focusing on case studies from North America and abroad, team urban design projects. Two Saturday class workshops in San Francisco: 2nd and 4th Saturdays of the quarter. Terms: Win | Units: 5 | UG Req: GER:DBSocSci | Grading: Letter (ABCD/NP).

**URBANST 114. Urban Culture in Global Perspective. 5 Units.**

Core course for Urban Studies majors. We will study urban space both historically and cross-culturally. Urban Studies, by definition, is an interdisciplinary field, where the methodological approaches draw upon a diverse set of analytic tools. Disciplines that occupy a prominent place in this class are geography, cultural anthropology, sociology, history, media studies, and literature. In this context, we will discuss the importance of cities around the world to the economic, cultural, and political well-being of modern societies and examine how forces such as industrialization, decentralization, and globalization affect the structure and function of cities.

Same as: ANTHRO 126

**URBANST 119. Ancient Urbanism. 3-5 Units.**

(Formerly CLASSART 112/212.) Archaeology of Greek, Roman and early Islamic cities and urbanism in the Mediterranean and western Asia. Comparison and contrast of the shaping role of religion and politics; definitions of public and private space, monumental buildings, houses, streets, infrastructure. Special themes are city and country connections; the problems of giant cities; cities in the longue durée. Case studies include Athens, Olynthos, Rome, Pompeii, Constantinople, Damascus and Cairo.

Same as: ARCHLGY 153, CLASSICS 153

**URBANST 121. Public Scholarship & Social Change. 2 Units.**

Introduces students to the diverse ways of doing public/community-engaged scholarship, including public interest and public policy-oriented research, design research, social entrepreneurship, activist/advocacy and community-based research models. Through a multidisciplinary set of case studies of actual research/action projects in the US and abroad, students will compare and assess research models in terms of methodological approach, academic rigor, control and ownership of the research process, means and modes of data dissemination, researcher subjectivity, depth of community partnership, and relative potential for sustainable, long-term community impact. The course material is designed to provide students with a broad framework and context to imagine how to produce their own scholarship/research as a form of public service and social transformation.

**URBANST 122. Ethics and Politics of Public Service. 5 Units.**

Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford. [This class is capped but there are some spaces available with permission of instructor. If the class is full and you would like to be considered for these extra spaces, please email sburbank@stanford.edu with your name, grade level, and a paragraph explaining why you want to take the class.].

Same as: CSRE 178, ETHICSOC 133, HUMBIO 178, PHIL 175A, PHIL 275A, POLISCI 133, PUBLPOL 103D

**URBANST 123. Approaching Research and the Community. 2-3 Units.**

Comparative perspective on research with communities and basic overview of research methodologies, with an emphasis on the principles and practices of doing community-based research as a collaborative enterprise between academic researchers and community members. How academic scholarship can be made useful to communities. How service experiences and interests can be used to develop research questions in collaboration with communities and serve as a starting point for developing senior theses or other independent research projects. Through the coursework, students are encouraged to develop a draft proposal for an actual community-based research project. The course is highly recommended for students planning to apply for community-based summer research fellowships through the Haas Center for Public Service (Community-based Research Fellowship Program) or CRSE (Community Research Summer Internship). Students who complete the course will be given priority for these fellowships.

Same as: CSRE 146A

**URBANST 123B. Approaching Research in the Community: Design and Methods. 3 Units.**

(Taught concurrently with CSRE 146; you may enroll in either course.) This course focuses on issues of research design and how to select specific methodological strategies to assure ethical and effective partnership-based research. In this course, students will plan for their own participation in a CB(P)R project. Topical themes will include best practice strategies for (a) defining and selecting community problems or issues to be addressed, (b) generating relevant and useful research questions, (c) choosing specific means and methods for data collection [e.g., surveys, interviews, focus groups, etc.], (d) storing, organizing and analyzing data, (e) reflecting on and critiquing research findings, and (f) carrying out dissemination in ways that can be expected to enhance community power and advance community development. Students will be provided with opportunities to workshop their respective projects-in-development, (e.g., developing and sharing research questions, data collection instruments, strategies for engaging community constituents as co-researchers, etc.). This is a required course for students participating in the Haas Center for Public Service's Community-based Research Fellows Program, but enrollment is open to all Stanford students.

**URBANST 124. Spatial Approaches to Social Science. 5 Units.**

This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.

Same as: ANTHRO 130D, ANTHRO 230D, POLISCI 241S

**URBANST 126. Spirituality and Nonviolent Urban and Social Transformation. 3 Units.**

A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, César Chávez in the labor movement, and William Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center).

Same as: CSRE 162A, RELIGST 162X

**URBANST 127. Community Planning Workshop. 4-5 Units.**

Students work in teams to conduct research, analyze and evaluate alternatives, and make recommendations for possible solutions to local community development issues. Students work with community partners to blend theory and practice to accomplish a community based project.

**URBANST 128. Community Mapping Practicum. 4 Units.**

Students will use mapping techniques to explore community planning and policy issues in Redwood City. Focusing on building other skills including teamwork, writing, and oral communication. GIS is not a prerequisite.

**URBANST 131. VIP: Very Impactful People - Social Innovation & the Social Entrepreneur. 1 Unit.**

Invited lecture series. Perspectives and endeavors of entrepreneurs and thought leaders who address social needs in the U.S. and internationally through private, for-profit and nonprofit organizations or public institutions.

**URBANST 132. Concepts and Analytic Skills for the Social Sector. 4 Units.**

How to create and grow innovative not-for-profit organizations and for-profit enterprises which have the primary goal of solving social and environmental problems. Topics include organizational mission, strategy, communications/marketing, financing and impact evaluation. Opportunities and limits of methods from the for-profit sector to meet social goals. Perspectives from the field of social entrepreneurship, design thinking and social change. Focus is on integrating theory with practical applications. Enrollment limited to 20. Prerequisite: consent of instructor. Email lalitvak@stanford.edu.

**URBANST 133. Social Entrepreneurship Collaboratory. 4 Units.**

Interdisciplinary student teams create and develop U.S. and international social entrepreneurship initiatives. Proposed initiatives may be new entities, or innovative projects, partnerships, and/or strategies impacting existing organizations and social issues in the U.S. and internationally. Focus is on each team's research and on planning documents to further project development. Project development varies with the quarter and the skill set of each team, but should include: issue and needs identification; market research; design and development of an innovative and feasible solution; and drafting of planning documents. In advanced cases, solicitation of funding and implementation of a pilot project. Enrollment limited to 20. May be repeated for credit. Prerequisites: 131 and 132, or consent of instructor.

Same as: MS&E 174

**URBANST 136. The Sharing Economy. 3 Units.**

The rapid growth of the sharing economy, sometimes also called the peer to peer economy, is made possible by the ubiquity of smart phones, inefficiency of ownership, and measures designed to create and measure trust among participants. The course will explore not only the rapid rise of certain companies but also the shadow side of commercialized relationships. We will examine the economics and development consequences of the sharing economy, primarily with an urban focus, along an emphasis on the design of platforms and markets, ownership, the nature of work, environmental degradation and inequality.

**URBANST 137. Innovations in Microcredit and Development Finance. 3 Units.**

The role of innovative financial institutions in supporting economic development, the alleviation of rural and urban poverty, and gender equity. Analysis of the strengths and limits of commercial banks, public development banks, credit unions, and microcredit organizations both in the U.S. and internationally. Readings include academic journal articles, formal case studies, evaluations, and annual reports. Priority to students who have taken any portion of the social innovation series: URBANST 131, 132, or 133. Recommended: ECON 1A or 1B.

Same as: PUBLPOL 137

**URBANST 138SI. Scaling Impact with VIP. 2 Units.**

Social entrepreneurship is innovating new ways to create social value. This course will focus on the challenges of scaling social enterprises during the many stages of maturity. This class will act an adjunct (auxiliary, complementary) class to VIP: Very Impactful People Speaker Series (URBANST 131). VIP speakers will stay after their lectures to provide insight on their experience in scaling, be it through detailed case studies or structured Q&A discussion. Note: students do not need to separately register for Urban Studies 131. The two credit units for this course is inclusive of the one credit unit a student would otherwise receive for Urban Studies 131.

**URBANST 139. Urban Africa. 5 Units.**

This course explores the production of urban space and the social, cultural, and political significance of cities in sub-Saharan Africa. Topics include: architecture and the built environment; urban planning and colonial public health; migration and rural-urban dynamics; youth, politics, and popular culture; violence, policing, and the privatization of public space; (in)formality in housing, transportation, and employment; class, gender, and mobility in the public sphere; urban citizenship and "right to the city"; movements; gentrification, tourism, and the commodification of poverty; and efforts to (re)theorize postcolonial African cities. Readings are drawn from anthropology, history, urban studies, and geography. Discussion will situate struggles over urban forms and the contours of everyday life within broader trends in the political economy of the region from the late colonial period to the present.

Same as: AFRICAST 138B, ANTHRO 138B

**URBANST 140. Urban Ethnography. 5 Units.**

Ethnographic research and writing focuses on the ways our lives are shaped by interacting forces such as history, political economy, and creative cultural practices. In the last fifty years, more and more cultural anthropology has been carried out in urban contexts, due to both urbanization around the world and changes in anthropology as a field. This seminar focuses on careful reading and analysis of book-length ethnographies about urban cultures, people and dynamics to consider what the theory and methodological tools of anthropology have to offer us as we seek to better understand "the city." Readings include a variety of approaches to ethnographic research in and/or about cities, with a mix from different eras and about different cities around the world.

Same as: ANTHRO 102

**URBANST 141. Gentrification. 5 Units.**

Neighborhoods in the Bay Area and around the world are undergoing a transformation known as gentrification. Middle- and upper-income people are moving into what were once low-income areas, and housing costs are on the rise. Tensions between "newcomers" and "old timers," who are often separated by race, ethnicity, or sexual orientation, can erupt; high rents may force long-time residents to leave. In this class we will move beyond simplistic media depictions to explore the complex history, nature, causes and consequences of this process. Students will learn through readings, films, class discussions, and engagement with a local community organization.

**URBANST 142. Paris: The Making of a Modern Icon. 3-5 Units.**

Few places have been as heavily romanticized and mythologized as Paris. To many observers, Paris and its attractions serve as icons of modernity itself. By engaging with fiction, film, journalism, painting, photography, poetry, song, and other media, we'll trace how different people at different times have used Paris as both backdrop and main protagonist, and we'll consider how the city itself has incorporated and rebelled against such representations. The scope of our inquiry will stretch from the late 18th century to the present, covering a host of topics, figures, and sites: from the French Revolution to the protests of May '68, from Baudelaire to Hemingway, from the Impressionists to the Situationists. Taught in English.

Same as: FRENCH 227, HISTORY 239E

**URBANST 144. Cities and Citizens in the Middle East. 4 Units.**

This course will explore historical formation of cities and citizens in the Eastern Mediterranean since the 19th century. We will explore urban development, economy, social classes and local politics with a focus on Egypt and Turkey and in particular two world-historical cities, Cairo and Istanbul. Drawing on history, cultural anthropology, geography and sociology disciplines, we will examine how urban space in Egypt and Turkey have reconfigured through histories of colonialism, nationalism, developmentalism and globalization. Rural to urban immigration, informality, gendered places, consumption, urban regeneration, local politics and branding the city will be the themes of our discussion. We will study these themes in relation to two main questions: How do spatial changes engender new social practices and redefine cultural difference?; How do power struggles at the intersection of local and global interests shape urban change? It will be of interest for urban studies majors and other students at all levels who would like to study urban struggles and change in Turkey, Egypt, the Middle East and the Global South.

Same as: ANTHRO 149A

**URBANST 145. International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development. 4-5 Units.**

Comparative approach to sustainable cities, with focus on international practices and applicability to China. Tradeoffs regarding land use, infrastructure, energy and water, and the need to balance economic vitality, environmental quality, cultural heritage, and social equity. Student teams collaborate with Chinese faculty and students partners to support urban sustainability projects. Limited enrollment via application; see [internationalurbanization.org](http://internationalurbanization.org) for details. Prerequisites: consent of the instructor(s).

Same as: CEE 126, EARTHSYS 138, IPS 274

**URBANST 150. From Gold Rush to Google Bus: History of San Francisco. 5 Units.**

This class will examine the history of San Francisco from Native American and colonial settlement through the present. Focus is on social, environmental, and political history, with the theme of power in the city. Topics include Indians and Spanish settlers, the Gold Rush, immigration and nativism, earthquake and fire, progressive reform and unionism, gender, race and civil rights, sexuality and politics, redevelopment and gentrification.

Same as: AMSTUD 150X, HISTORY 152E

**URBANST 160. Environmental Policy and the City in U.S. History. 5 Units.**

Looks at the historical backgrounds of current issues in urban environmental policy, including waste, transportation, air pollution, and other major issues. Covers the period 1800 to the present. Explores the relevance of historical scholarship.

**URBANST 161. U.S. Urban History since 1920. 5 Units.**

The end of European immigration and its impact on cities; the Depression and cities; WW II and the martial metropolis; de-industrialization; suburbanization; African American migration; urban renewal; riots, race, and the narrative of urban crisis; the impact of immigration from Asia, Latin America, and Africa; homelessness; the rise of the Sunbelt cities; gentrification; globalization and cities. Final project is history of a San Francisco neighborhood, based on primary sources and site visit.

**URBANST 162. Managing Local Governments. 4 Units.**

In-the-trenches approach. Issues in leading and managing local governments in an era of accelerating and discontinuous change. Focus is on practical strategies related to financing, public services impacted by increasing demand and revenue constraints, the politics of urban planning, private-public partnerships, public sector marketing, entrepreneurial problem solving, promoting a learning and risk-taking organizational culture, and developing careers in local government. Enrollment limited to 25; preference to Urban Studies majors.

**URBANST 163. Land Use Control. 4 Units.**

Methods of land use control related to the pattern and scale of development and the protection of land and water resources. Emphasis is on the relationship between the desired land use goal and geographical landscape, physical externalities, land use law, and regulatory agencies. Topics include the historical roots of modern land use controls; urban reforms of the 19th century; private ownership of land; zoning; local, state, and federal land use regulation; and land trusts preservation. Smart growth, environmental impact consideration, private property rights, and special purpose agencies are related to current issues.

**URBANST 164. Sustainable Cities. 4-5 Units.**

Service-learning course that exposes students to sustainability concepts and urban planning as a tool for determining sustainable outcomes in the Bay Area. Focus will be on the relationship of land use and transportation planning to housing and employment patterns, mobility, public health, and social equity. Topics will include government initiatives to counteract urban sprawl and promote smart growth and livability, political realities of organizing and building coalitions around sustainability goals, and increasing opportunities for low-income and communities of color to achieve sustainability outcomes. Students will participate in team-based projects in collaboration with local community partners and take part in significant off-site fieldwork. Prerequisites: consent of the instructor. Same as: EARTHSYS 160

**URBANST 165. Sustainable Urban and Regional Transportation Planning. 4-5 Units.**

Environmental, economic, and equity aspects of urban transportation in 21st-century U.S. Expanded choices in urban and regional mobility that do not diminish resources for future generations. Implications for the global environment and the livability of communities.

**URBANST 166. East Palo Alto: Reading Urban Change. 5 Units.**

Examines the changes in East Palo Alto's built environment, economy, and civil society since the 1990s. Focus on environmental activism, sustainability, and environmental justice issues. Students use archived film footage to analyze the history.

**URBANST 167. Green Mobilities for the Suburbs of the Future. 3 Units.**

Much of the recent academic discussion of the future of urban mobility has stressed the likelihood of a concentration of all urban functions in dense urban centers. The need for sustainability, so the argument goes, will make cities more like Manhattan with high-rise clustering, residences close to work, pedestrian and bicycle pathways, and a heavy emphasis on mass transit. But a recent US Census report indicates that center-city urban growth in America has begun to level off while suburbs continue to grow vigorously, and the suburban residential option remains highly attractive both to the established middle-class populations in the advanced industrial nations and to the emerging middle-classes in Asia and Latin America. As a result, the real urban sustainability challenge of the future will be the task of greening the suburbs with the use of mobility policies that are necessarily very different from those needed in dense urban centers. In addition, the automobile industry will face two very different design and marketing challenges – one for center cities and quite another for more spatially diffuse suburbs. Working together, students in this undergraduate seminar will explore these issues, hear from suburban planners and developers concerned about sustainability challenges, and engage in the re-design of suburbs and suburban mobility options for the future.

**URBANST 168. Housing & Community Development--Policy and Practice. 3 Units.**

How federal, state and local governments have worked with private and nonprofit sector actors in creating housing, as well as downtown, waterfront and neighborhood development. Legal and financial mechanisms, tax policy, reuse of historic structures, affordable shelter.

**URBANST 169. California's Minority-Majority Cities. 4-5 Units.**

Historical development and the social, cultural, and political issues that characterize large cities and suburbs where communities of color make up majority populations. Case studies include cities in Los Angeles, Santa Clara, and Monterey counties. Comparisons to minority-majority cities elsewhere in the U.S. Service Learning Course (certified by Haas Center). Same as: CSRE 260, HISTORY 260

**URBANST 171. Urban Design Studio. 5 Units.**

The practical application of urban design theory. Projects focus on designing neighborhood and downtown regions to balance livability, revitalization, population growth, and historic preservation.

**URBANST 173. The Urban Economy. 4 Units.**

Applies the principles of economic analysis to historical and contemporary urban and regional development issues and policies. Explores themes of urban economic geography, location decision-making by firms and individuals, urban land and housing markets, and local government finance. Critically evaluates historical and contemporary government policies regulating urban land use, housing, employment development, and transportation. Prerequisite: Econ 1A or permission of instructor.

Same as: PUBLPOL 174

**URBANST 174. Defining Smart Cities: Visions of Urbanism for the 21st Century. 1 Unit.**

In a rapidly urbanizing world, "the city" paves the way toward sustainability and social well-being. But what does it mean for a city to be smart? Does that also make it sustainable or resilient or livable? This seminar delves into current debates about urbanism through weekly talks by experts on topics such as big data, human-centered design, new urbanism, and natural capital. How urban spaces are shaped, for better or worse, by the complex interaction of cutting-edge technology, human societies, and the natural environment. The goal is to provoke vigorous discussion and to foster an understanding of cities that is at once technological, humanistic, and ecologically sound.

Same as: CEE 125, CEE 225

**URBANST 181. Urban Agriculture in the Developing World. 3-4 Units.**

In this advanced undergraduate course, students will learn about some of the key social and environmental challenges faced by cities in the developing world, and the current and potential role that urban agriculture plays in meeting (or exacerbating) those challenges. This is a service-learning course, and student teams will have the opportunity to partner with real partner organizations in a major developing world city to define and execute a project focused on urban development, and the current or potential role of urban agriculture. Service-learning projects will employ primarily the student's analytical skills such as synthesis of existing research findings, interdisciplinary experimental design, quantitative data analysis and visualization, GIS, and qualitative data collection through interviews and textual analysis. Previous coursework in the aforementioned analytical skills is preferred, but not required. Admission is by application.

Same as: EARTHSYS 181, EARTHSYS 281, ESS 181, ESS 281

**URBANST 190. Urban Professions Seminar. 1 Unit.**

Workshop. Contemporary practice of urban design and planning, community development, urban education, public service law, and related fields. Topics depend partly on student interests. Bay Area professionals lecture and respond to questions concerning their day-to-day work, impressions of their field, and the academic background recommended for their work.

**URBANST 194. Internship in Urban Studies. 2-4 Units.**

For Urban Studies majors only. Students organize an internship in an office of a government agency, a community organization, or a private firm directly relevant to the major. Reading supplements internship. Paper summarizes internship experience and related readings.

**URBANST 195. Special Projects in Urban Studies. 1-5 Unit.**

**URBANST 197. Directed Reading. 1-5 Unit.****URBANST 198. Senior Research in Public Service. 1-3 Unit.**

Limited to seniors approved by their departments for honors thesis and admitted to the year-round Public Service Scholars Program sponsored by the Haas Center for Public Service. What standards in addition to those expected by the academy apply to research conducted as a form of public service? How can communities benefit from research? Theory and practice of research as a form of public service readings, thesis workshops, and public presentation of completed research. May be repeated for credit. Corequisite: 199.

**URBANST 199. Senior Honors Thesis. 1-10 Unit.****URBANST 201. Preparation for Senior Project. 5 Units.**

First part of capstone experience for Urban Studies majors pursuing an internship-based research project or honors thesis. Assignments culminate in a research proposal, which may be submitted for funding. Students also identify and prepare for a related internship, normally to begin in Spring Quarter in URBANST 201B or in Summer. Research proposed in the final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research. Service Learning Course (certified by Haas Center). Same as: SOC 201

**URBANST 201A. Capstone Internship in Urban Studies. 3 Units.**

Restricted to Urban Studies majors. Students work at least 80 hours with a supervisor, establish learning goals, and create products demonstrating progress. Reflection on service and integration of internship with senior research plans. Must be completed by start of Winter Quarter senior year. May continue for additional quarter as 194. Service Learning Course (certified by Haas Center). Corequisite: URBANST 201 or consent of instructor.

**URBANST 201B. Capstone Internship Seminar. 3-4 Units.**

Students carry out an internship of at least 80 hours with a community organization or government agency. Class meets weekly to discuss related issues, including ethics of service, combining service and research, navigating organizational dynamics, and setting and accomplishing internship goals. Students submit internship agreement and internship-related deliverables, and give in-class presentations.

**URBANST 202. Preparation for Senior Research. 5 Units.**

Required of all juniors in Urban Studies and those juniors in Sociology planning on writing an honors thesis. Students write a research prospectus and grant proposal, which may be submitted for funding. Research proposal in final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research. Same as: SOC 202

**URBANST 203. Senior Seminar. 5 Units.**

Conclusion of capstone sequence. Students write a substantial paper based on the research project developed in 202. Students in the honors program may incorporate paper into their thesis. Guest scholar chosen by students.

**Urology Courses****UROL 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**UROL 280. Early Clinical Experience in Urology. 1-2 Unit.**

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

**UROL 299. Directed Reading in Urology. 1-18 Unit.**

Prerequisite: consent of instructor.

**UROL 310W. Advanced Surgery/Urology Clerkship. 6 Units.****UROL 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**UROL 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**Wellness Ed Courses****WELLNESS 18. Compassion Meditation: Strengthening the Heart. 1 Unit.**

Investigate evidence-based models of compassion meditation and cultivation based on Stanford's Center for Compassion and Altruism Research and Education (CCARE) program and following the Stanford Compassion Training protocol. Examine strategies to develop self-compassion, experience genuine happiness, reduce stress and negative thoughts, resolve differences with difficult others, and take compassionate action that makes a difference in the world. Courses mixes direct instruction, meditation, and group discussion on current research and its real world application.

**WELLNESS 187. Analysis of Human Movement. 1 Unit.**

This course covers the basic principles governing human movement with an emphasis on sports applications. The course spends roughly equal amounts of time on anatomy and biology (large- and small-scale structure and function). Applied anatomy: Anatomy (body structure) and mechanics (force, torque, etc) together describe macroscopic movement. Applied biology: The molecular and cellular basis of movement, including: muscles contraction, nerves signals, and related topics such as exercise damage, cramping, muscle memory, DOMS and fatigue.

**WELLNESS 188. The Athlete and Personal Identity Development. 1 Unit.**

Overview of identity development theory related to religious/spiritual identity development, gender, and sexuality identity development, racial and cultural identity development, ethical and moral development, and the development of meaning and purpose. The ways in which athletic participation affects and contributes to each of these developmental areas. This course also examines each of these topics in a larger context by discussing relevant current issues and events in sport.

**WELLNESS 190. Introduction to Nutrition. 1 Unit.**

Optimize nutrition for health and performance based on established research. Topics include evidence-based analysis of macronutrients, fad diets, sugar addiction, low-calorie sweeteners, caloric restriction, disease prevention, and general nutrition. Discern between popular trends and scientific understanding in nutrition and nutritional habits.

**WELLNESS 191. The Science of Motivation. 1 Unit.**

Motivation is often misunderstood as a force driven by a system of rewards and punishments. However, the latest research shows it's much more dependent on cultivating meaning, purpose, task mastery, and freedom of choice. In this course students will uncover the keys inside themselves to ignite the power of their motivation at school and their life. Research on motivation from the fields of psychology, behavioral economics, and neuroscience is discussed and then tools are provided that enhance the drive to achieve in a balanced and healthy manner. Students will learn how to cultivate the psycho-physiological factors that increase motivation, while reducing those aspects that depress it.

**WELLNESS 192. Mindful Nourishment: Training for Healthy Nutrition and Wellbeing. 1 Unit.**

Intuitive Eating entails the scientific study and the application of mindfulness applied to nutrition, health, and eating through contemplative and applied practices. Mindfulness is a way of being engaged in our lives with greater emotional and mental balance. This course involves: 1) Participating in dialogue that cultivates shared mindfulness 2) Develop inner and outer wisdom applied to your health and eating. 3) Apply mindfulness skills to your emotional and physical health and greater well-being. These practices aim to develop greater insight, self-awareness, emotional regulation, and skillful responding. 4) Use mindfulness as way to create collaborative learning. Collaborative learning at its best is when we can listen deeply, suspend judgment, and speak authentically. When we do these, we create the conditions for meaningful dialogue and learning.

**WELLNESS 194. Healthy Cooking: Food as Medicine. 1 Unit.**

The class will explore the basics in healthy nutrition and the essentials for a healthy balanced plate. Classes will focus on recipes in East Asia & India, the benefits of foods for certain ailments, super-foods, plant based diets and phyto-nutrients, cleansing foods, the use of foods for skin care and aromatherapy, understanding the link between the foods we eat and the soil they grow in, and lastly healthy comfort foods. This interactive and experiential class will help one to develop a healthy relationship with food and develop some practical cooking skills.

**WELLNESS 195. Wellness: Mind, Body, Spirit. 2 Units.**

An introduction to wellness focusing on emotional health and the cultivation of happiness. Managing stress and enhancing productivity while remaining centered are the primary learning objectives. Class will be lecture and discussion with time for guided practice in skill development.

**WELLNESS 196. Practice of Happiness. 1 Unit.**

How research-based happiness theory and principles are applied to enhance daily and life satisfaction. Positions happiness as the cornerstone of personal wellness, purpose, and fulfillment. Investigates the science of happiness through lecture, guided practice, dialogue, and course material in order to enhance both its understanding and implementation.

**WELLNESS 197. Psychology of Optimal Performance. 2 Units.**

The psychological skills that athletes and other performers apply in training, preparation, and competition have a significant influence on performance. Students will learn an overview of concepts and theories in sports psychology research (e.g., motivation, arousal regulation, self-confidence, team dynamics, mental skills training, etc.) and apply psychological techniques to enhance performance, enjoyment, and self-satisfaction in sports and life.

**WELLNESS 198. Stress Less, Sleep Better. 2 Units.**

This course helps students better manage their stress and sleep more soundly. It does so by presenting the latest findings in the science of stress and sleep. Functional definitions of stress and perceived stress are given, student stress levels are assessed, and tools are given to manage stress more effectively. Students learn about the sleep cycle and its effect on the brain, understand the causes of insomnia, track their sleep behaviors, and practice getting a better night's sleep by using cognitive-behavioral interventions rooted in the latest findings of sleep research. By the end of the course students will be more empowered to work effectively with stress and sleep so they have more clarity, focus, and energy in their day-to-day lives.

**WELLNESS 200. Using Emotional Social Intelligence to Increase Effectiveness. 1 Unit.**

Examine, understand, and develop emotional and social intelligence (ESI). Presents leading models (Bar-On, Mayer, Salovey, Caruso) of and skills (Goleman) for enhancing emotional and social intelligence. Blends course lecture, discussion, peer coaching, and guided practice to develop theoretical and practical knowledge of ESI. Assess, understand, and utilize ESI strengths and mitigate weaknesses in order to enhance stress management and resilience, increase self-other awareness, and increase balanced productivity.

**WELLNESS 201. Intro to Wellness: Nutrition, Stress, Movement, and the Body. 2 Units.**

An introduction to wellness focusing on physical well being and the importance of that in leading a happy and successful life. Topics covered are proper diet and nutrition, exercise, sleep, brain fitness and the concept of flow or engagement. Woven throughout the class will be the need to manage stress and remain productive and centered.

**WELLNESS 202. Wellness: Mind, Body, Spirit. 1 Unit.**

An introduction to wellness focusing on emotional health and the cultivation of happiness. Managing stress and enhancing productivity while remaining centered are the primary learning objectives. Class will be lecture and discussion with time for guided practice in skill development.

**WELLNESS 204. Resilience: How to Bounce Back. 1 Unit.**

Resilience is the ability to bounce back in the face of life's challenges, whether these challenges are getting a poor test grade, breaking-up with a significant other, battling illness, or taking on any number of other tough events. In this course students study insights from the emerging field of resilience to learn about and practice the skills that allow them to bounce back more quickly and effectively from life's setbacks. Models of resilience will be presented and students will learn about the cognitive, emotional, and social aspects that allow them to enhance their capacity to rise above life adversity and thrive, even in the midst of tough times.

**WELLNESS 205. Meditation. 1 Unit.**

Introduces diverse forms of meditation practice in both theory (contemplative neuroscience, phenomenological traditions) and practice. Practices in guided imagery, compassion, loving kindness, positive emotion, mindfulness, and mantra meditation will be offered to enhance well-being. While meditation practices emerge from religious traditions, all practice and instruction will be secular.

**WELLNESS 207. Meaningful Work: Creating a Career You Love. 1 Unit.**

Finding work that is meaningful and a career that actualizes one's potential while maximizing success and well-being deepens insights present in research on motivation, meaning, and purpose creation. Philosophical traditions and psychological science converge on the conclusion that meaningful work leads to professional success, positive relationships, and improved health. Develop the theoretical understanding and skills that lead to both reframing current endeavors for enhanced purpose and choose new endeavors with higher meaning, optimizes both future achievement and lasting happiness.

**WELLNESS 208. Behavior Change: Building A Better You. 1 Unit.**

Change behaviors using evidence-based techniques. Addresses habit cycles, procrastination mitigation, productivity enhancement, motivational factors, and addiction and addictive processes (both substances and non-substance related) in changing behavior from maladaptive to adaptive patterns. Draws from neuroscience (Davidson, Siegel) and psychology (Beck, Miller, Rollnick) and employs motivational interviewing, cognitive reframing, peer coaching, and mindfulness meditation models and intervention strategies.

**WELLNESS 215. Wise Decision Making. 1 Unit.**

Being wise makes us happier and more successful. Our relationships, bodies, health, school, and work can be either stressful or fulfilling. Wisdom skills are practical and effective in these areas, and you can learn how to apply them sooner rather than later. This course will help you develop wisdom through guided practice in skills such as mindfulness, emotional intelligence, cognitive reframing, humility, empathy, gratitude, and courage. Entertaining video clips, quotes, and jokes will supplement our discussions.

**WELLNESS 220. Applying Wellness Practicum. 2 Units.**

Translating theoretical knowledge and acquired skills into actionable wellness projects that enhances an aspect of wellness within the Stanford community. Students work in a collaborative, peer-coaching model, under the mentorship of the course instructors, to design, deliver, and evaluate a wellness initiative at Stanford.

**Woods Institute for the Environment Courses****ENVRINST 109. Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision. 2 Units.**

Examination of program-based local actions that promote resource conservation and an educational environment for sustainability. Examination of building-level actions that contribute to conservation, lower utility costs, and generate understanding of sustainability consistent with Stanford's commitment to sustainability as a core value. Overview of operational sustainability including energy, water, buildings, waste, and food systems. Practical training to enable students to become sustainability coordinators for their dorms or academic units. Same as: CEE 109, EARTHSYS 109

**ENVRINST 177. Interdisciplinary Research Survival Skills. 2 Units.**

Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects. Same as: EARTHSYS 177, EARTHSYS 277, ENVRINST 277

**ENVRINST 198. Prehonors Seminar. 1 Unit.**

Seminar for students admitted to the Goldman Honors Program. Students will begin work on honors projects. Enrollment by consent of instructor.

**ENVRINST 199. Interschool Honors Program in Environmental Science, Technology, and Policy. 1-9 Unit.**

Students from the schools of Humanities and Sciences, Engineering, and Earth Sciences analyze important problems in a year-long small group seminar. Combines research methods, oral presentations, preparation of an honors project by each student, and where relevant, field study. May be repeated for credit.

**ENVRINST 260. Water in the West: Challenges and Opportunities. 2-3 Units.**

This 3-unit course explores challenges and opportunities in the management of water resources to protect the economic, ecological, and social values of the American West. Lectures and readings will cover a wide array of subjects and take an interdisciplinary approach to issues affecting water supply, water quality, and ecosystems with an emphasis on applications to policy and practice. Invited speakers from Stanford, other universities, government agencies, business, and non-governmental organizations will discuss relevant topics such as climate change, agricultural and urban water demand, impacts on business, management of freshwater ecosystems, markets and pricing, and other topics to be determined. Class discussion will focus on potential solutions in the areas of policy, markets, technology, and other interventions. Assignments will require students to applying knowledge from readings, lectures, and discussions to practical, real-world scenarios in the form of public comments, editorials, plans, or proposals. Through this course, students will gain an understanding of the complex water landscape of the American West, how decisions affecting water resources in the West are made and may be influenced, and be able to discuss the trade-offs between different various solutions. Limited enrollment. Prerequisite: consent of instructor.

**ENVRINST 277. Interdisciplinary Research Survival Skills. 2 Units.**

Learning in interdisciplinary situations. Framing research questions. Developing research methods that benefit from interdisciplinary understanding. Writing for multiple audiences and effectively making interdisciplinary presentations. Discussions with interdisciplinary experts from across campus regarding interdisciplinary research projects. Same as: EARTHSYS 177, EARTHSYS 277, ENVRINST 177

**Writing & Rhetoric, Program in Courses****PWR 1AB. Writing & Rhetoric 1: Podcasts to Broadcasts: The Rhetoric of Radio. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1AH. Writing & Rhetoric 1: The Rhetoric of American Multicultural Experience. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of multicultural experience and cultural assimilation, focusing on the theme of social acceptance. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1AO. Writing & Rhetoric 1: Visual Rhetoric Across the Globe: Capturing Culture in Images. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of styles of leadership across the globe and communication strategies used to bring about change. Exploration of how global leaders learn cross-cultural rhetoric skills to adapt to dynamic and unfamiliar situations. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1AOA. Writing & Rhetoric 1: Music and Making Meaning. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1AT. Writing & Rhetoric 1: A Mountain for Itself: The Rhetoric of Wilderness. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1BR. Writing & Rhetoric 1: Healthy or Cutthroat: The Rhetoric of Competition. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1BRA. Writing & Rhetoric 1: Growing Up Millennial: The Rhetoric of Coming of Age. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1BW. Writing & Rhetoric 1: The Loyal Opposition: The Rhetoric of Dissent. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1CA. Writing & Rhetoric 1: The Rhetoric of Gaming. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

Topics include how gameplay in a variety of genres operates as argument about cultural values and how games function as sites of community building, social networking, and learning. Students produce research-based arguments on these issues and merge practice and production in storyboarding rhetorically persuasive games.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1CG. Writing & Rhetoric 1: Mixtapes & Meetups: The Interactive Rhetoric of Media and Relationships. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of styles of leadership across the globe and communication strategies used to bring about change. Exploration of how global leaders learn cross-cultural rhetoric skills to adapt to dynamic and unfamiliar situations. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1CGA. Writing & Rhetoric 1: Popular Science to Girl Talk: Writing as Adaptation and Remix. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1CK. Writing & Rhetoric 1: Investigating the News: Journalism, Technology & the Future. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1CL. Writing & Rhetoric 1: The Politics of Difference, Identity, and Harm: The Rhetoric of Hate Crimes. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

<https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1CS. Writing & Rhetoric 1: Debating the Environment. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1CW. Writing & Rhetoric 1: Sporting Rhetoric: Power, Performance, Profit and Politics. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 1D. Writing Well: An Introduction to College Writing. 3 Units.**

Offered only to participants in the Summer College for High School Students. Develops critical reading, writing, and research skills applicable to any area of study. Emphases include close reading, analysis of varied texts, development of strong theses, revision strategies, and introduction to research-based argument. Classes are small, encouraging extensive interaction between students and instructors. Discussions of readings, peer work, and individual conferences with instructors. Each section has a thematic emphasis developed by the instructor; students choose sections based on their individual interests. Does not meet the Stanford first-year writing requirement.

**PWR 1DC. Writing & Rhetoric 1: Is This What a Feminist Looks Like? Race/Gender in the Obama Age. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the coverage of and activism in a post-racial U.S., including evaluation of the debate over the intersections of racial activism and feminist activism in U.S. politics. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1DH. Writing & Rhetoric 1: The Virtue of Vice and the Vice of Virtue: The Rhetoric of Criminality. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students investigate language and images that construct criminals, analyzing how these representations shape personal and cultural beliefs. Analysis of the costs and benefits of retributive, restorative, and transformative justice systems. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1DW. Writing & Rhetoric 1: Gangsters, Glamour Girls & Gold-diggers: Dialectic of Am. Culture & Hollywood. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of American film and its conversation with American culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1EC. Writing & Rhetoric 1: From the Galleries to the Streets: The Rhetoric of Public Space Art. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

<https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1ECA. Writing & Rhetoric 1: Where I'm From: The Rhetorics of Mapping and Human Geography. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1EE. Writing & Rhetoric 1: Prowling Toward Certainty: Exploration as Argument. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1EL. Writing & Rhetoric 1: Propaganda: The Dark Side of Rhetoric. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1EP. Writing & Rhetoric 1: The Rhetoric of Global Development and Social Change. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1EV. Writing & Rhetoric 1: The Rhetoric of Globalization. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GAA. Writing & Rhetoric 1: Writing Rites: The Rhetoric of Ritual. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GAC. Writing & Rhetoric 1: Protest Art!: The Rhetoric of Art as Social Activism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of art in drawing our attention to social issues such as racism, poverty, sexism, and homophobia and in moving us to social action. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GAD. Writing & Rhetoric 1: Display Cases and Databases: The Rhetoric of Collection. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GAF. Writing & Rhetoric 1: Little Boxes: The Rhetoric of the American Suburb. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of the suburbs as a site of cultural debate through investigation of the ways that authors and artists imagine the physical landscape of the suburb and the inner lives of suburbanites. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GAJ. Writing & Rhetoric 1: The Rhetoric of Eating. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GAK. Writing & Rhetoric 1: No Filter: The Rhetoric of Young Adulthood. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GAL. Writing & Rhetoric 1: The Rhetoric of Disgust. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GAR. Writing & Rhetoric 1: Rhetoric of Frost. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GAT. Writing & Rhetoric 1: Size Matters: The Writing and Rhetoric of Short Stories. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GAU. Writing & Rhetoric 1: Mind vs. Brain: The Rhetoric of Consciousness. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GAW. Writing & Rhetoric 1: Global Exchange: Intercultural Communication. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. The American cultural apparatus, its limitations, and development of other world views. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GAZ. Writing & Rhetoric 1: From Cradle to Grave: The Rhetoric of Age and Aging. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the history of aging in America; developments in reproductive science; the proverbial mid-life crisis; and how people cope with the ultimate horizon of death. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GBJ. Writing & Rhetoric 1: The Rhetoric of Cultural Memories of Violence. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GBR. Writing & Rhetoric 1: Spill: The Rhetoric of Confessions and Self-Revelations. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GBW. Writing & Rhetoric 1: Deathbeds: Art and the Rhetoric of Disease. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GCA. Writing & Rhetoric 1: AH! Real Monsters: The Rhetoric of Monstrosity in Popular Culture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GCD. Writing & Rhetoric 1: Domsdays: The Rhetoric of Apocalypse. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See

<https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GCJ. Writing & Rhetoric 1: El Otro Lado / The Other Side: The rhetoric of real and imagined borders. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. The

physical border between the United States and Mexico is the focus of the examination of the artistic, scholarly, and political rhetoric of real and imagined borders. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GCL. Writing & Rhetoric 1: Rhetoric of Ledbetter. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GCO. Writing & Rhetoric 1: To Boldly Go: The Rhetoric of Travel. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GCX. Writing & Rhetoric 1: "I Do": The Rhetoric of Consent. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

Examination of the idea of consent and the underlying principles of free will and autonomy in the fields of law, intellectual property, marriage contracts, political philosophy, medical ethics, and sex.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GCZ. Writing & Rhetoric 1: "It Never Got Weird Enough For Me": The Rhetoric of Intoxication. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GDA. Writing & Rhetoric 1: Rhetoric of Murray. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

Critical analysis of the ways in which online life intersects with real life around issues including privacy, authorship, and morality.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GDM. Writing & Rhetoric 1: Revolution and Revolt: Political Writing for Political Action. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GDS. Writing & Rhetoric 1: From Trash Talk to Toxic Discourse: Rhetorics of Waste. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument.

Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See

<https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GEM. Writing & Rhetoric 1: The Rhetoric of Foodie Culture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See

<https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GER. Writing & Rhetoric 1: The Rhetoric of Social Media. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor.

Exploration of the multifaceted and hypertextual rhetoric of social media, the intersection between rhetoric and social media, and how new types of online media have heightened participation, openness, and a sense of community. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GEV. Writing & Rhetoric 1: All the World's a Stage: The Rhetoric of Theater. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students

investigate the role theater plays in the rhetorical strategies of various literary and non-literary texts as well as visual materials such as films and cartoons. See [http://ual.stanford.edu/AP/univ\\_req/PWR/Req.html](http://ual.stanford.edu/AP/univ_req/PWR/Req.html).

**PWR 1GFL. Writing & Rhetoric 1: From Con Artists to Catfish: The Rhetoric of Trickery. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See

<https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GGH. Writing & Rhetoric 1: Understanding American Political Speeches of the 20th and 21st Centuries. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Rhetorical analyses of speeches by a range of 20th-century American political figures and the political rhetoric of the present day. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GGK. Writing & Rhetoric 1: Ladies, Tramps, and Other Furry Friends: The Rhetoric of Pets. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GGZ. Writing & Rhetoric 1: The Rhetoric of Race in American Cinema. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GIF. Writing & Rhetoric 1: Dark Humor: A Rhetoric of Social Taboos. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of dark humor as it deals with the most delicate subject matter, topics we designate as sacred and beyond criticism: violence and bodily damage, illness, aging and death, race and ethnicity, and gender and sexuality. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GIY. Writing & Rhetoric 1: Jekylls and Hydies: The Rhetoric of the Scientist. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GJE. Writing & Rhetoric 1: Gay Ghettoes, Queer Hoods: The Rhetoric of Race and Urban Sexual Subcultures. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the rhetoric of urban sexual subcultures, and how the rhetoric in medical science, journalism, and popular entertainment defines queers of color in intellectual thought and pop culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GJH. Writing & Rhetoric 1: Invention and Imagination in the Nineteenth Century. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GJM. Writing & Rhetoric 1: The Rhetoric of California. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://ual.stanford.edu/AP/univ\\_req/PWR/Courses.html](http://ual.stanford.edu/AP/univ_req/PWR/Courses.html).

**PWR 1GJN. Writing & Rhetoric 1: Speaking of Dreams. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GJS. Writing & Rhetoric 1: Our Warded World: The Rhetoric of Conservation. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GJU. Writing & Rhetoric 1: 'Surface of Past Time': The Rhetoric of Nostalgia. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GJW. Writing & Rhetoric 1: I Know It When I Hear It: The Rhetoric of the Unspeakable. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GKL. Writing & Rhetoric 1: The Use and Abuse of Civil Debate: The Rhetoric of Collective Thinking. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GLA. Writing & Rhetoric 1: Code Orange: Post-9/11 America and the Rhetoric of Alarm. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GLB. Writing & Rhetoric 1: In Poor Taste: The Rhetoric of Catastrophe Comedy. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GLD. Writing & Rhetoric 1: The Cyborg Body: The Rhetoric of Disability. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of disability, using the analogy of the cyborg, in an era when the human body has become plastic, digitized and surgically manipulated. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GLL. Writing & Rhetoric 1: Wow, that's so postcard: The Rhetoric of Tourism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of tourism as a way of seeing and representing the rest of the world and oneself, touching on some of the most pressing political, economic, and cultural questions facing an increasingly globalized world. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GLR. Writing & Rhetoric 1: Are you Fuzzy and Techie?: The Rhetoric of Art and Science. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GM. Writing & Rhetoric 1: Writing for the Wild and the Tame. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of the tension between reverence and science, language and feeling, natural and unnatural in the interrelationship of rhetoric and nature. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GMA. Writing & Rhetoric 1: A Thousand Words: When Art is Not Enough. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GMG. Writing & Rhetoric 1: Love to Hate: The Rhetoric of Misanthropy. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GMH. Writing & Rhetoric 1: Transformative Turns: The Rhetoric of Revolution. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GMK. Writing & Rhetoric 1: Pure and Unadulterated: The Rhetoric of Contamination. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GML. Writing & Rhetoric 1: The Rhetoric of Migrant Protest. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GMR. Writing & Rhetoric 1: Fearful Symmetry: The Rhetoric of the Double. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of the fictions of the double and the philosophies of personal identity, and how both anticipate and condition contemporary responses to the twin issues of human cloning and intellectual property. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GMT. Writing & Rhetoric 1: The Shape of Things: The Rhetoric of Design. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GMV. Writing & Rhetoric 1: Don't Take it Personally!: The Rhetoric of The Insult. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of how insults function rhetorically in specific situations and how they have catalyzed prolonged confrontations around race, education, politics, sexual orientation, and national standing. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GMX. Writing & Rhetoric 1: 'Too Much Information?': The Rhetoric of Social Networking & Online Privacy. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Critical analysis of the ways in which online life intersects with real life around issues including privacy, authorship, and morality. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GMZ. Writing & Rhetoric 1: The Rhetoric of Institutional Power. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GNA. Writing & Rhetoric 1: Talking Baseball. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GNL. Writing & Rhetoric 1: Punk Rock and Rhetoric of Protest Music. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GNV. Writing & Rhetoric 1: Rhetoric of Bioethics and Biopolitics. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GPS. Writing & Rhetoric 1: The Rhetoric of English. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GRA. Writing & Rhetoric 1: Millions Like Us: The Rhetoric of Crowds. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include symbolic meaning of rock, sports, and political events; virtual crowds online; and use of crowds to shape ideology. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GRH. Writing & Rhetoric 1: 2012 & the Rhetoric of Apocalypse. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of apocalypse as a cultural phenomenon. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GRK. Writing & Rhetoric 1: Plugged In: The Rhetoric of Networks. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GRL. Writing & Rhetoric 1: Queer Rhetoric: The Language of Sex, Gender, and Identity. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GRN. Writing & Rhetoric 1: Lasting Only One Day: The Rhetoric of Ephemera and Other Discarded Things. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of ephemera and how they argue for their meaning as they collect and preserve the past while reflecting humantransience. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GRY. Writing & Rhetoric 1: Fashionable Fables: The Rhetoric of Modern Mythology. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GRZ. Writing & Rhetoric 1: Decisions, Rhetoric, and the Art of Choosing. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GSD. Writing & Rhetoric 1: Masters of Style - The Rhetoric of Sophistication. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of how style is mastered and deployed in a range of genres. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GSG. Writing & Rhetoric 1: From Cowboys to Computers: Rhetoric of the American West. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GSO. Writing & Rhetoric 1: The Varieties of Conservative Experience. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GTA. Writing & Rhetoric 1: What Lies Beneath: The Rhetoric of the Underworld. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GTJ. Writing & Rhetoric 1: Rhetoric of the Unruly: Iconoclasts and Their Controversies. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GTL. Writing & Rhetoric 1: Love at First Sight and Forever: The Rhetoric of Romance. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GTM. Writing & Rhetoric 1: The Rhetoric of Taste. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of the rhetoric of taste as the luxurious product of a sophisticated society and as tedious, stultifying, snobby, or outright offensive. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GTX. Writing & Rhetoric 1: 'Making My Way Downtown': The Rhetoric of the City. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Through historic, literary, journalistic, and film portrayals of city life, we will analyze the idea of 'the city' as constructed through media and in the imaginations of its residents, and the way life in cities is really lived. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GVC. Writing & Rhetoric 1: The Rhetoric of Circus. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GVG. Writing & Rhetoric 1: The Way of the Dodo: Rhetoric of Extinction. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1GVN. Writing & Rhetoric 1: Noise Machines: The Rhetoric of Sound and Technology. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Critical analysis of the ways in which online life intersects with real life around issues including privacy, authorship, and morality. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GWI. Writing & Rhetoric 1: Rhetoric of Winkler. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GWS. Writing & Rhetoric 1: Body Politics: The Rhetoric of Transhumanism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1GWT. Writing & Rhetoric 1: Money for 'Nothing' : The Rhetoric of Silicon Valley. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1HJ. Writing & Rhetoric 1: Not Just Art: The Rhetoric of Museums. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1HJA. Writing & Rhetoric 1: What None Can Avoid: The Rhetoric of Death. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1HR. Writing & Rhetoric 1: Fake News and the Rhetoric of "Truthiness". 4 Units.**

Development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Critical analysis of the fake news phenomenon, considering its impact on the political process and how we discuss important issues of the day. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1IY. Writing & Rhetoric 1: Rhetorics of Travel and Tourism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1JA. Writing & Rhetoric 1: The Rhetoric of Number One. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1JD. Writing & Rhetoric 1: Frog Princes and Ugly Ducklings: The Rhetoric of Self-Transformation. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1JH. Writing & Rhetoric 1: Lies and the Lying Liars Who Tell Them: Rhetoric and Deception. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of untruth, misrepresentation, and deception in journalistic and scientific rhetoric. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1JJ. Writing & Rhetoric 1: The Rhetoric of Language and Thought. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1JJI. Writing & Rhetoric 1: The Rhetoric of Futility. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1JL. Writing & Rhetoric 1: 'Saving Strangers': Rhetoric and Humanitarian Intervention. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of how media representations of world crises are crafted to persuade us to action, appealing to our senses of justice, pragmatism, outrage, and compassion. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1JM. Writing & Rhetoric 1: Rhetoric of the Startups. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1JP. Writing & Rhetoric 1: The Rhetoric of Consumer Culture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students explore what consumerism says about the larger culture and the segmented groups within it, analyzing popular and scholarly texts as well as current trends in pop culture, to research how the activities of consumerism shape culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1JPA. Writing & Rhetoric 1: The Rhetoric of Liberal Arts Education. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Engagement with debates and issues related to liberal arts education, including the tension between education as training for a career and as a venue for developing the life of the mind. See [http://ual.stanford.edu/AP\\_univ\\_req\\_PWR/Courses.html](http://ual.stanford.edu/AP_univ_req_PWR/Courses.html).

**PWR 1JS. Writing & Rhetoric 1: Beyond DNA: The Omics Revolution. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1JT. PWR 1: RHETORIC HEALTH CARE. 4 Units.****PWR 1KB. Writing & Rhetoric 1: Authentic Experience: The Rhetoric of Tourism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KBA. Writing & Rhetoric 1: On Display: The Rhetoric of Museums and Exhibition Spaces. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KC. Writing & Rhetoric 1: The Rhetoric of Gender and Sexuality in Popular Culture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1KD. Writing & Rhetoric 1: The Feature Article: Writing and Change. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. How various feature article writers argue the issues of soaring energy and food prices, serious market volatility, climate change, an ongoing war in the Middle East, and how terms like *“crisis”* or *“change”* impact the discussion. See [http://ual.stanford.edu/AP/univ\\_req/PWR/Courses.html](http://ual.stanford.edu/AP/univ_req/PWR/Courses.html).

**PWR 1KE. Writing & Rhetoric 1: The Science of Sports. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include sports at the level of cells and psychology, the science of sports equipment and sports spaces, the ethics of performance enhancement, and sports-related research projects on the Stanford campus. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KG. Writing & Rhetoric 1: Rhetoric of McDonough. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1KJ. Writing & Rhetoric 1: The Rhetoric of Film. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1KM. Writing & Rhetoric 1: If These Walls Could Talk: The Rhetoric of Places and Spaces. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Explores the *“language”* of man-made environments such as universities, theme parks, monuments, shopping malls, museums, and public buildings. Students analyze space through physical exploration and critical inquiry and discover the applications of rhetoric not only to traditional texts but to physical structures and spaces as well. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KMA. Writing & Rhetoric 1: Metaphor and Motion: The Rhetoric of Sacred Space. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KMB. Writing & Rhetoric 1: Cradle to Cradle: the Rhetoric of Sustainability. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KS. Writing & Rhetoric 1: Imagining Others: 21st Century Cosmopolitanism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of cosmopolitanism, questions related to globalization, nationalism, citizenship, cultural values, aesthetics, and identity. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KSA. Writing & Rhetoric 1: Constructing Childhood. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KSB. Writing & Rhetoric 1: Health Matters: Health Innovation and Communication. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1KT. Writing & Rhetoric 1: The Emperor's New Clothes: The Rhetoric of Modern Mythology. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1LH. Writing & Rhetoric 1: Ask What You Can Do: The Rhetoric of Public Leadership. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1LM. Writing & Rhetoric 1: Two Truths and a Lie: The Rhetoric of Authenticity. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1LMA. Writing & Rhetoric 1: From Page to Stage: The Rhetoric of American Drama. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1LP. Writing & Rhetoric 1: Crafting Credibility: Rhetoric and Authority. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1MC. Writing & Rhetoric 1: Oppositional Rhetoric: Resistance and Public Protest. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include how gameplay in a variety of genres operates as argument about cultural values and how games function as sites of community building, social networking, and learning. Students produce research-based arguments on these issues and merge practice and production in storyboarding rhetorically persuasive games. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1MD. Writing & Rhetoric 1: Heavenly Bodies: The Rhetoric of Sanctity and Martyrdom. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1MF. Writing & Rhetoric 1: Writing about Cities: Exploration, Observation, Research, Analysis. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1MFA. Writing & Rhetoric 1: Shades of Green: The Rhetoric of Contemporary Environmentalism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1MG. Writing & Rhetoric 1: The Rhetoric of the American West. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1MN. Writing & Rhetoric 1: Liberation or Occupation?: The Rhetoric of War. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1MO. Writing & Rhetoric 1: Imagining Technology: The Rhetoric of Humans and Machines. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include how gameplay in a variety of genres operates as argument about cultural values and how games function as sites of community building, social networking, and learning. Students produce research-based arguments on these issues and merge practice and production in storyboarding rhetorically persuasive games. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1MS. Writing & Rhetoric 1: Seeing Nature: The Power of Environmental Visual Rhetoric. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1NA. Writing & Rhetoric 1: The Rhetoric of Childhood. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1NF. Writing & Rhetoric 1: Language 2.0: Investigating the Rhetoric of Digital Language. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1PB. Writing & Rhetoric 1: Supreme Court Rhetoric. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of Supreme Court opinions, *amicus curiae* briefs, editorials about Court opinions, and pertinent lower court decisions. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1PH. Writing & Rhetoric 1: He Said, She Said: The Rhetoric of Gender Politics. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the ways in which news articles, movie clips, magazine advertisements, television commercials, and other texts present gender roles, and how the roles and bodies of both sexes are presented as objects open to scrutiny, critique, exploitation, abuse, and awe. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1PHA. Writing & Rhetoric 1: Sisterhood, Brotherhood, Solidarity: The Rhetoric of Greek Life. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1RC. Writing & Rhetoric 1: Domestication: How Humans Shape the Natural World. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1RL. Writing & Rhetoric 1: The Rhetoric of Happiness. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1RP. Writing & Rhetoric 1: The Rhetoric of Archaeology. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1RT. Writing & Rhetoric 1: The War Between Wars: the "isms" of modernism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of modernism in art, literature, and thought between the two world wars. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1RTA. Writing & Rhetoric 1: Modernism and the Wreck of Education. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SB. Writing & Rhetoric 1: Machine Dreams: The Rhetoric of Technology. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the arguments we make about technology, the arguments various technologies produce about us, and the ways in which rhetoric itself might be productively viewed as a technology for producing arguments. Students explore the social, economic, political, and psychological consequences of rapidly developing technologies. See [http://ual.stanford.edu/AP/univ\\_req/PWR/Req.html](http://ual.stanford.edu/AP/univ_req/PWR/Req.html).

**PWR 1SC. Writing & Rhetoric 1: The Rhetoric of Public Art. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1SG. Writing & Rhetoric 1: Body and Mind: The Rhetoric of Gesture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SH. Writing & Rhetoric 1: Strange Art, Stranger Politics: Absurdism and the Rhetoric of Social Action. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Topics include the benefits and drawbacks of deploying strange art as artistic and political protest, how breaking the aesthetic rules sometimes serves to argue for social change, and how absurdist protests succeed or fail to gain social traction. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SI. Writing & Rhetoric 1: Super-Storms, Polar Bears, and Droughts: The Rhetoric of Climate Change. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1SK. Writing & Rhetoric 1: Rhetoric of Perkins. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1SL. Writing & Rhetoric 1: New Media Rhetoric and Web 2.0. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students define new media and debate the ideas of web 2.0; the virtue of Web 2.0 in digital game modifications and the potential subversive effects of web 2.0 on advertising restrictions; and look into the possibilities and limitations of democracy 2.0. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SLA. Writing & Rhetoric 1: "Advertising R Us": The Rhetoric of Advertising. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SM. Writing & Rhetoric 1: The Elephant, the Tiger, and the Cellphone: Rhetoric of India and Indian Film. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the rhetoric of the India of the new millennium, including issues of gender, caste, class, religion, sexuality, nationalism, diaspora, outsourcing, and globalization. Service Learning Course (certified by Haas Center). See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SMA. Writing & Rhetoric 1: Humans and Things: The Rhetoric of Commodities and Commodification. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SMB. Writing & Rhetoric 1: The Jewel in the Crown: The Rhetoric of (Post)Colonialism. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SN. Writing & Rhetoric 1: The Rhetoric of Containment: Cold War Ideology Post 9/11. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1SP. Writing & Rhetoric 1: Growing Up Global: The Rhetoric of Children's Culture Today. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SS. Writing & Rhetoric 1: The Page and the Stage: Writing and Performance. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Students explore identity as a social, political, and cultural performance; how different situations call for particular styles of rhetorical performance; and how people evaluate and analyze different types of performances, including artistic and political performances, as well as the performances of everyday life. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SSA. Writing & Rhetoric 1: Real and Imagined Lives: Narrative, Rhetoric, and Identity. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of the rhetoric of identity as constructed in a range of narrative forms including fiction, memoirs, political campaigns, and social media. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1ST. Writing & Rhetoric 1: The Rhetoric of Biomedical Ethics. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SU. Writing & Rhetoric 1: The World According to Bollywood: Indian Cinema and its Representations. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Analysis of representations of India's culture through Indian film and how such representations have coincided with India's economic success over the last two decades of the twentieth century, giving rise to a new trend in global popular culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SUA. Writing & Rhetoric 1: Such a Long Journey: South Asian Diaspora in the World. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1SW. Writing & Rhetoric 1: Scandals, Private Lives, and Public Faces: The Rhetoric of Stanford. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Study of the early history and rhetoric of the public face of Stanford University, from the post-Gold Rush and Big Four railroad era to the building of the University. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1TS. Writing & Rhetoric 1: White Mice and White Coats: The Rhetoric of Biomedical Science. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1TSA. Writing & Rhetoric 1: 10,000 Ways That Didn't Work: The Rhetoric of Innovation. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1VK. Writing & Rhetoric 1: Rhetorics of Trauma. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 1VS. Writing & Rhetoric 1: Eating-Animals: The Rhetoric of Animals, Food, and the Environment. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1WG. Writing & Rhetoric 1: Reading Minds: The Rhetoric of Consciousness. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Examination of states of mind ranging from the radical self-possession cultivated through practice to altered states induced through drugs and trauma, illness, and religion. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 1ZS. Writing & Rhetoric 1: On Cages, Boxes & Boundaries: The Rhetoric of Limits. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-1>.

**PWR 2AH. Writing & Rhetoric 2: Ethnic Narratives and the Rhetoric of American Identity. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how race and ethnicity in America have become subjects of personal negotiations and public perception. Addresses various topics such as biracial and bicultural identity, acculturation, and stereotyping. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2AO. Writing & Rhetoric 2: Rhetoric and Global Leadership. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of styles of leadership across the globe and communication strategies used to bring about change. Exploration of how global leaders learn cross-cultural rhetoric skills to adapt to dynamic and unfamiliar situations. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2AT. Writing & Rhetoric 2: House Red, Hot Bellies, and High Velocity Lead Therapy: The Rhetoric of Trauma. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2BR. Writing & Rhetoric 2: "I Feel Your Pain": The Rhetoric of Sympathy. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CA. Writing & Rhetoric 2: Networked Rhetoric: Social Networks, Participatory Media and the Future of Wr. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of the issues surrounding participatory media and social networking in contemporary digital culture from the perspective of both theory and practice. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CAB. Writing & Rhetoric 2: The Rhetoric of Gender and Technology. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2CG. Writing & Rhetoric 2: Sounds of Stanford: Authoring, Archiving, and Podcasting. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CGA. Writing & Rhetoric 2: Stories, Jokes, and Anecdotes: How to Engage an Audience. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CK. Writing & Rhetoric 2: Speaking Out: Claiming Citizenship, Demanding Rights. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CKA. Writing & Rhetoric 2: Rhetoric of Distraction. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the message, performance, and construction of identity, electronic renditions of the self, and the constant or changing nature of identity. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CL. Writing & Rhetoric 2: Crime, Media, & Law. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2CR. Writing & Rhetoric 2: Communicating Science. 4 Units.**

Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Examination of the motivations and appeals of environmental arguments, considering underlying assumptions and contexts of time, culture, audience, purpose, and mode of delivery. Participation in Community Writing Project, working with local nonprofit environmental organizations to produce real-world writing, multimedia, and/or speaking projects on these organizations' behalf. Work in the community will form the basis of the major research project. Service Learning Course (certified by Haas Center). Prerequisite: PWR 1. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CRA. Writing & Rhetoric 2: The State of California: Rhetoric of a Dream. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Service Learning Course (certified by Haas Center). See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2CW. Writing & Rhetoric 2: Rhetorical Games: Sport (for) Development Policy in the 21st Century. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2DC. Writing & Rhetoric 2: The Popular Science of Sex. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of the intersection between social debate and scientific research about sex and gender; how social debates draw on, represent, respond to, and influence scientific studies; and how the process shapes our knowledge and beliefs about sex and gender. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2DCA. Writing & Rhetoric 2: Race/Gender in the "Obama Age". 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of perceptions of race and gender seen through the political lens of the 2008 presidential campaign. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2DH. Writing & Rhetoric 2: I Post Therefore I Am: 21st Century Identity?. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the message, performance, and construction of identity, electronic renditions of the self, and the constant or changing nature of identity. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2DHA. Writing & Rhetoric 2: Action Research: Making Time for Social Change. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2EC. Writing & Rhetoric 2: 'Like' this Class: The Rhetoric of Public Relations. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2EE. Writing & Rhetoric 2: Once Upon a Cause: Producing Picture Books for Local Children. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2EL. Writing & Rhetoric 2: Rhetoric of Silence. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2ELA. Writing & Rhetoric 2: The Remix, the Original, and the Voice. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2EP. Writing & Rhetoric 2: Global Protest and Civil Unrest: The Rhetoric of Resistance. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2EPA. Writing & Rhetoric 2: Slacktivism to Hacktivism: The Rhetoric of Technology and Social Change. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2EV. Writing & Rhetoric 2: The Global Politics of Protest and Change. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2GAW. Writing & Rhetoric 2: 'Don't Stand so Close to Me': Cross-cultural Communication. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of how rhetoric functions in various cultures, considering body language, symbols, visual media, and the Internet. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2GM. Writing & Rhetoric 2: Unpredictable Dialogue: Art of the Interview, Art of the Essay. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the rhetorical craft of the interview, exploring structure, language, timing, and development in a range of forums, including documentaries, radio, transcription, campus conversations, and television. Research of a Stanford professor's work, including interview. Presentation of findings from research and interview to the class. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2GMA. Writing & Rhetoric 2: Breaking News, Making News 1.0. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2GMC. Writing & Rhetoric 2: A Thousand Words: When Art is Not Enough. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2HL. Writing & Rhetoric 2: Developing and Communicating Your Expertise: The Rhetoric of Excellence. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JA. Writing & Rhetoric 2: Rhetoric of Archer. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. Exploration of how rhetoric functions in various cultures, considering body language, symbols, visual media, and the Internet. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JB. Writing & Rhetoric 2: Rhetoric of Ethics in Research and Technology. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the rhetoric of ethical discourse, including the ethical standards guiding research at Stanford and examples of ethical misconduct. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JD. Writing & Rhetoric 2: Straight A's and Sports Cars: The Rhetoric of Success. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JH. Writing & Rhetoric 2: Cred: Rhetoric and Credibility in Research, Politics, and Everyday Life. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Work on making students more effective researchers and communicators in their areas of interest, with a focus on gaining and projecting credibility. Exploration of how speakers and writers gain and lose credibility, how people evaluate the credibility of others, and how the rules of credibility are different in politics, in scholarship, and in popular culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JL. Writing & Rhetoric 2: Doomsday Rhetoric. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Investigation of how the doomsday epic expresses real concerns emerging from fields like technology, environmental studies, pathobiology, and politics. Consideration of apocalypticism as a mode of argument. Examination of how belief in the imminent destruction of the present world order influences our political decisions and personal behavior. Topics in religious eschatology and apocalypticism illuminate the genre's origins. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JLA. Writing & Rhetoric 2: Speaking About Art: Narrating the Collections of the Cantor Art Center. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration and theory of successful strategies of oral communication, considering how words and images (in this case works of art) work together to create meaning, culminating in creation of an audio guide for the Cantor Arts Center. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JLB. Writing & Rhetoric 2: Rhetoric and Education Reform. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of social, ideological, and pedagogical perspectives on education reform. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2JLC. Writing & Rhetoric 2: Illness Narratives: Attention, Empathy, and Storytelling. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2JM. Writing & Rhetoric 2: Criminal Matters: Evidence, Detection, Expertise. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2JP. Writing & Rhetoric 2: The Rhetoric of Art and Commerce. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Examination of unspoken rules regarding the separation of creativity and commerce and arguments about how consumer culture influences the work of the artist. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2JPA. Writing & Rhetoric 2: How We Got Schooled: The Rhetoric of Literacy and Education. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2JS. Writing & Rhetoric 2: In Science We Trust. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2KC. Writing & Rhetoric 2: Technology and the Rhetoric of Embodiment. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2KD. Writing & Rhetoric 2: Un-Performing Ourselves: The Design and Craft of Presentations. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the application of performance techniques makes academic or professional presentations more compelling. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2KDA. Writing & Rhetoric 2: DJ's, Django and Drones: Mashups and Popular Culture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2KEB. Writing & Rhetoric 2: Sports Appeal: Packaging and Promoting Stanford Athletics. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2KEC. Writing & Rhetoric 2: It's About Time: Seizing Opportunity in Rhetoric, Writing, and Performance. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2KM. Writing & Rhetoric 2: Everyone Has a ¿Climate Thing¿: The Discourse of Sustainable Energy. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Focus on the rhetoric and ethics of sustainable energy, investigating both the alarmism and optimism which fuel this debate. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2KMA. Writing & Rhetoric 2: Natural Enemies: The Rhetoric of Invasion Biology. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of the use of metaphors and argument in the context of invasion biology and species conservation, especially the effects those metaphors and claims have on practice and policy outcomes. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2KS. Writing & Rhetoric 2: Happy Now? The Anatomy of Happiness. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. How the emerging field of happiness studies involves psychologists, economists and policy-makers in defining what happiness is and determining how society might create the conditions in which it can flourish. Exploration of how happiness studies can uncover happiness at the heart of arguments about democracy, religion, and personal lifestyles, exploring what makes people happy across cultural, social, and national contexts. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2KSA. Writing & Rhetoric 2: The Rhetoric of Childhood and Children's Culture. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2KSB. Writing & Rhetoric 2: Design Thinking: Bringing d.thinking to Research, Writing & Presentation. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2KT. Writing & Rhetoric 2: The Great and Powerful Oz: The Rhetoric of Spokespersons. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2KTA. Writing & Rhetoric 2: A Rebel With A Cause: The Rhetoric of Giving a Damn. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2LK. Writing & Rhetoric 2: Rhetoric in Crisis!. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_uai/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_uai/AP_univ_req_PWR_Courses.html).

**PWR 2LM. Writing & Rhetoric 2: The Rhetoric and Aesthetic of War. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2MC. Writing & Rhetoric 2: Cultures of Personality: Iconography, Rhetoric, and Visual Style. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2MF. Writing & Rhetoric 2: Speaking About Art: Narrating the Cantor's Collections. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of strategies for developing museum audio guides, including analysis of existing guides and behind-the-scenes work in the Cantor Arts Center. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2MFA. Writing & Rhetoric 2: Searching for San Jose: Urban Studies Audio Walking Tours. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2MFB. Writing & Rhetoric 2: Sustainability: Making an Impact with Research and Rhetoric. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2MO. Writing & Rhetoric 2: Rhetoric of Scientific Controversies. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2MR. Writing & Rhetoric 2: Technology and the Demonic: Rhetoric Against the Machine. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2MS. Writing & Rhetoric 2: Seriously Funny: The Rhetoric of Humor. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2NF. Writing & Rhetoric 2: Language Gone Viral: Investigating the Rhet. of Social Media and Digital Comm.. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2PB. Writing & Rhetoric 2: The Power of Political Photography. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Topics include the role of photographers and photo-journalists in helping viewers see the world differently and the political implications of fashion photography, environmental photography, music photography, and fashion photography. Traditional readings as well as archival and field research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2PBA. Writing & Rhetoric 2: Calling All Astronauts: Researching, Writing, and Talking about Tomorrow. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2PH. Writing & Rhetoric 2: Equal Treatment: The Rhetoric of Public Health. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of how public health discourses influence policymaking, practitioners, and community members, how the public understands the rhetoric of public health, and how that understanding affects public and government support of health-related research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2PHA. Writing & Rhetoric 2: You Go Girl: The Rhetoric of Gender Equality. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2PHB. Writing & Rhetoric 2: Indecision 2012: The Rhetoric of Politics. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2RC. Writing & Rhetoric 2: Red Pill or Blue Pill? : The Rhetoric of Drugs. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 2RL. Writing & Rhetoric 2: The Rhetoric of the Natural and Beyond. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2RP. Writing & Rhetoric 2: The Power of Sports: Rhetoric and Athletics in Contemporary Society. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2RS. Writing & Rhetoric 2: The Rhetoric in Memoir. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2RT. Writing & Rhetoric 2: Stepping Out of the Shadows: Music, Bass Guitar, and the Rhetoric of Revoluti. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of how the emergence of the electric bass in the fifties helped usher in a revolution that challenged commonplace assumptions concerning nationality, race, gender, and sexuality. Exploration of the history of the electric bass as a case study of musical revolutions, focusing on how music revolutions reflect emerging ideologies in any given culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2RTA. Writing & Rhetoric 2: Postmodernism and the Rhetoric of Uncertainty. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Inquiry into major theories of the postmodern and analysis of postmodernism's effect on culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2RTB. Writing & Rhetoric 2: The Language and Style of Virginia Woolf. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SB. Writing & Rhetoric 2: Writing 'Science': Fact, Fiction, and Everything Between. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of science fiction and popular writing about science and technology as arguments about where we are headed, where we are, who we are, and what we value. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SBA. Writing & Rhetoric 2: Building a Better Human: Arguing Enhancement/Enhancing Arguments. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of science fiction and popular writing about science and technology as arguments about where we are headed, where we are, who we are, and what we value. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SC. Writing & Rhetoric 2: Are We There Yet?: The Rhetoric of Mobility. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SG. Writing & Rhetoric 2: Bodies of Knowledge: The bodily foundations of human thought and reason. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SGA. Writing & Rhetoric 2: Lie Detection and the Social Functions of Deception. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SH. Writing & Rhetoric 2: The Ugly American: Tourism and the Rhetoric of Power. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Analysis of the Ugly American in aesthetics and culture, in films and novels, tourist locations and business conferences, to illuminate America's complex role in the world. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SL. Writing & Rhetoric 2: Got Ads: Visual Design in Print Advertising. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Introduction to the rhetorical interplay of visuals, text, and design layout in print advertising, and narrative, classificatory, and dynamic patterns in print advertisement campaigns. Culminates in design and presentation of an original ad campaign. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SLA. Writing & Rhetoric 2: Information Design: The Visual Language of Graphic Communication. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SM. Writing & Rhetoric 2: Dirty, Pretty Things: The Rhetoric of Objects and Objectification. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Study of objects and objectification, from the relationships shared by cultures, objects, and people to how human beings have been objectified through colonialism, enslavement, sex-trafficking, and organ trade. Material objects discussed in terms of staging, collecting, design, location, inheritance, and cultural meaning. Service Learning Course (certified by Haas Center). See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SMA. Writing & Rhetoric 2: Love and Longing in Bombay: Romance and Rebellion in Indian Film. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SN. Writing & Rhetoric 2: Rhetoric of Activism. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SPA. Writing & Rhetoric 2: Other Selves: The Art & Science of Friendship. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SS. Writing & Rhetoric 2: Mass Audiences and Modern Communication. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the ability to reproduce a work for increasingly large audiences has fundamentally changed the nature of art and its effect on culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SSA. Writing & Rhetoric 2: Rhetoric of Reality Culture. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SSB. Writing & Rhetoric 2: Superfans and Scholars: Writing Fan Culture. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2ST. Writing & Rhetoric 2: Science, Democracy and Social Media. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SU. Writing & Rhetoric 2: Hollywood Bollywood: Rhetoric of India in Global Cinema. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of how the rhetoric of India is constructed for an international audience through films and how such representations have coincided with India's recent economic success to give rise to a new trend in global popular culture. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2SW. Writing & Rhetoric 2: Propaganda of World War II: Strategies of Persuasion. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Through work with the Hoover Archives, exploration of how written, visual, and film sources were used by a variety of countries to influence their citizens during WWII. Topics include the rhetoric of eugenics, political speeches, war posters, and how advertising during WWII pursued clear agendas to support government goals. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2TS. Writing & Rhetoric 2: The Rhetoric of the Experiment. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2WG. Writing & Rhetoric 2: All That Jazz: The Rhetoric of American Musical Theater. 4 Units.**

Prerequisite: PWR 1. Further work in developing skills in argument and research-based writing, with emphasis on both written and oral/multimedia presentation of research. Exploration of the conventions and strategies that define the genre of American musical theater. Analysis of how contemporary musicals mirror, revise, and even subvert traditional rules while addressing a range of current issues. See [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_ual/AP\\_univ\\_req\\_PWR\\_Courses.html](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_ual/AP_univ_req_PWR_Courses.html).

**PWR 2ZS. Writing & Rhetoric 2: Designing Memorials: Building Rhetoric into Commemoration. 4 Units.**

Rhetorical and contextual analysis of readings; research; and argument. Focus is on development of a substantive research-based argument using multiple sources. Individual conferences with instructor. See <https://undergrad.stanford.edu/programs/pwr/courses/pwr-2>.

**PWR 4. Directed Writing. 3-4 Units.**

Further work on developing writing. Analysis and research-based argument, writing for a range of audiences and in varied disciplinary contexts. Workshops and individual conferences. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

**PWR 5. Independent Writing. 1-5 Unit.**

Individual writing project under the guidance of a PWR instructor. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

**PWR 6. Writing Workshop. 1-3 Unit.**

Writing workshop for collaborative, group, and individual projects guided by a specific theme or genre.

**PWR 91. Intermediate Writing. 3 Units.**

For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 91B. Intermediate Writing: Digital Rhetoric, New Media, and Transformations in Writing. 3 Units.**

Writing operates in multiple modes (word, image, sound) in the new media environment. Examples of texts - invention, drafting, revision, and communication - governed by the evolving conditions of a new, digital rhetoric. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 91C. Intermediate Writing: The Stanford Daily Show. 3 Units.**

Class will study fake news programs such as the Daily Show, the Colbert Report and the Onion, and will produce The Stanford Daily Show, our own version of a fake news program. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 91CG. Intermediate Writing: Science and Technology Writing for Popular Audiences. 3 Units.**

Whether you're a fuzzy or a techie, chances are you've had to explain the content of the classes you've taken to outside audiences. You've had to explain to your parents how your/their tuition dollars are at work, or you've advocated for your well-rounded background during a job interview. Your access to Stanford has granted you a certain expert label, even if it doesn't always feel that way. This course leverages your growing expertise by introducing you to writing styles and genres that will allow you to communicate your technical interests to a non-expert, or popular, audience. We'll talk about stylistic points including story ledes and anecdotes, metaphor, and organizing familiar and non-familiar language in our writing. We'll also experiment with different genres that accomplish these translation goals by experimenting with writing abstracts, journalism pieces, provocative podcasts, first-person narratives, visual essays, and creative non-fiction essays. Our ultimate goal will be to not only better understand these styles and genres in order to communicate more effectively with a wide variety of audiences, but to also seek publication in local newspapers, blogs, and sources such as *Salon*, *Slate*, *The Huffington Post*, *The Atlantic*, and even *Wired* or *Radiolab*.

**PWR 91CL. Intermediate Writing: Creative Inquiry: New Genres for Science Writing. 3 Units.**

Despite the widespread assumption that scientists are weak communicators, many of today's most celebrated essayists hail from backgrounds in the hard sciences. Physician, poet and essayist, Lewis Thomas inspires readers to delve into the etymology of scientific discovery, and, in doing so, prompts radical reconsiderations of the cultural significance of innovation. Similarly, neurologist and writer, Oliver Sacks's compassionate ruminations on mental disability advance fresh thinking on the nature of difference. Inversely, many essayists hailing from "fuzzy" backgrounds, deploy techniques usually associated with scientific observation to electrify their prose: To wit, the works of brilliant stylists like Annie Dillard, Chang-rae Lee, and Mark Doty are characterized by the kind of deep observation that underpins scientific inquiry. These writers, like scientists, are first and foremost good at really looking.

In this course, we will delve into a fluid, yet rigorous, research process based on the art of observation. Each student will begin the quarter by posing a question of personal or professional significance about how some aspect of the natural, social, technological or cultural world works. Using these questions as a starting point, students will then design a research process to first complicate, and then perhaps also answer, their initial question. The end product of the inquiry will be a self-fashioned experimental essay that can engage a discerning public audience. This is the perfect class for techies, wonks, and data junkies who want to cultivate the poet's cherished sensibilities.

**PWR 91D. Intermediate Writing: Your American Life. 3 Units.**

In this course, you'll read and listen to some of the most moving and insightful pieces of the last decade, explore the important differences between print and oral storytelling, and then script and record your own full-length audio piece. Along the way, we will explore many craft elements that apply equally to print and audio pieces. You will learn, for example, how to organize your material, choose an effective structure, blend dramatization and reflection, ground insights in concrete scenes, create a strong narrative arc, and manage elements such as characterization, description, and dialogue. We will also, of course, explore craft elements unique to the audio form and you will learn how to use your voice and other sonic elements to craft the kind of piece you might hear on *This American Life*.

Through a special arrangement with the Stanford Storytelling Project, in the spring of 2012 this course will feature special sessions with prominent contributors to *This American Life*.

Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 91E. Intermediate Writing: The Oral Tradition: Myth, Folklore, and Fairy Tale. 3 Units.**

Contemporary storytelling covers a variety of media - from movies to novels, theatre and beyond. What this course offers is an in depth study of the roots of that practice - the oral tradition.

Over the course we will explore many different motifs and structures that arise in the oral tradition, myth, folklore and fairy tale. What universal themes do we detect, and what separates the progression of a pacific north west Trickster story from an Arthurian romance? Why is it that in the early twenty first century many of our most acclaimed art forms carry narrative forms that are thousands of years old? *Star Wars*, *Lord of the Rings* and the recent Broadway show *Jerusalem*, all follow scenic progressions informed by myth.

The first encounter with the story will be an oral narrative - the myth told unscripted in the classroom. The stories, which range from the Arthurian romance *Parzival* to Trickster folk tales, will be told in several sections - with a running exegesis and student response alongside. Many of these stories are now transcripts and have become works of literature. We will explore both the complementary aspects of this development, and areas of tension.

During the course each student will embark on a project that demonstrates a thorough understanding of the topics covered, and utilizes those elements in their wider practice of writing and rhetoric.

The project will be to research a story handed down within the family - an adventure of some distant relative, or a family migration from one country to another. Factoring in elements from the taught class, the student will mythologize the story: by writing an in depth commentary on its implications - factoring in contemporary, psychological and metaphorical associations. The second element will be to tell the story to the class. In these way we experience myth as a living principle, not something just from "a long time ago."

**PWR 91EP. Intermediate Writing: Communicating Climate Change: Navigating the Stories from the Frontlines. 4 Units.**

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

**PWR 91F. Intermediate Writing: Finding Your Story. 3 Units.**

Life challenges us to become aware of the stories that shape us: family stories, cultural mythologies, even popular movies, television shows, and songs; and then create and live our own story. We face this challenge throughout our lives but perhaps most acutely as we move into adulthood; this is the period when we most need to become conscious of stories and their power, to gather wisdom, practices, and resources for finding our own story. This class, designed with seniors in mind, will illuminate and explore these resources and give you the opportunity to reflect deeply, in discussion and writing, on what truly calls to you in this life.

For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 91JS. Intermediate Writing: Stanford Science Podcast. 3 Units.**

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

**PWR 91KS. Intermediate Writing: Design Thinking and Science Communication. 4 Units.**

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

**PWR 91NSC. Intermediate Writing: Introduction to Science Communication. 4 Units.**

With the growing impact of science and technology on our society, the emphasis on communicating that science well has never been greater. But what is effective science communication? Is it ever ok to use jargon? Is it ok to say  $\chi^2$  in my research report? How do I communicate complex topics in simple, but accurate, ways? In this course, we will explore the variety of formats that science communication can take  $\chi$  from technical research papers on particle physics to children's books about genetics. We will explore how different audiences shape the way science is communicated, and we will develop a set of best practices for effective science communication. Students will then apply these strategies in their own science communication projects. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>. Required of students admitted into the Notation for Science Communication after January 2015.

**PWR 91RS. Intermediate Writing: Communicating Bioinformation. 3 Units.**

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

**PWR 91S. Intermediate Writing: Communicating Science. 3 Units.**

Effective communication of expert knowledge in the sciences to non-specialist audiences. Project-based work on a range and variety of communication challenges, contexts, and media. For students who have completed the first two levels of the writing requirement and want further work in developing writing abilities, especially within discipline-specific contexts and nonfiction genres. Individual conferences with instructor and peer workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For more information, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 99A. Portfolio Preparation I. 1 Unit.**

A 1-unit course introducing ePortfolios and folio thinking for students in the Notation in Science Communication (NSC). The course will assist students in designing a rhetorical ePortfolio and in selecting and reflecting on writing samples that represent student learning in science communication. This is the first of a two-part ePortfolio requirement for the NSC. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

**PWR 99B. Portfolio Preparation II. 2 Units.**

A 2-unit culminating course on ePortfolios for students in the Notation in Science Communication (NSC). In this course, students will continue building, revising, and editing a portfolio of documents, slides, and videos that will demonstrate development as a science communicator. This is the second of a two-part ePortfolio requirement for the NSC. For more information, see <https://undergrad.stanford.edu/programs/pwr/explore/notation-science-writing>.

**PWR 191. Advanced Writing. 3 Units.**

Open to undergraduates and graduate students. Crafting nonfiction prose in a range of genres. Focus is on the relationship of genre and form; attention to developing stylistic versatility. Individual conferences with instructor. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

**PWR 192. Projects in Research, Writing, and Rhetoric. 1-5 Unit.**

Advanced work on research projects, early drafts of theses, proposals. Shared work, discussions, and examination of methods, rhetorics, and styles in all disciplines. May be repeated for credit. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

**PWR 193. Writing the Honors Thesis. 1-5 Unit.**

For students from all majors in the process of writing an honors thesis. Review of key elements of thesis process, including literature reviews, structure, argumentation, style, and documentation. Group and individual workshops. Prerequisite: first two levels of the writing requirement or equivalent transfer credit.

**PWR 194. Topics in Writing and Rhetoric. 4 Units.**

Understanding rhetoric as readers and interpreters of texts and to develop skills as writers and speakers. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 194AJ. Topics in Writing & Rhetoric: "We Gon Be Alright": Contemporary Black Rhetorics. 4 Units.**

Does not fulfill NSC requirement. What does the difference between Kendrick Lamar's "We Gon Be Alright" and older movement anthems like "Let Nobody Turn Us Around" tell us about differences in perspective held by contemporary Black activists and those of other eras? What strategies are people engaged in various kinds of work to "assert their collective humanity" and "gain acceptance for ideas relative to Black survival and Black liberation" using in the pursuit of those goals? What debates are taking place inside Black communities about activism? About community itself? What is it about twitter, vines and memes that have made those spaces such rich spaces for Black expressive cultures? What stylistic or aesthetic features mark those communicative efforts? Finally, what do young people themselves have to say about activism in this moment? This course will examine Black rhetoric from overtly persuasive political and activist discourse to Scandal watch parties and everyday conversation. Prerequisite: first level of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>. Same as: AFRICAAM 194

**PWR 194B. Advanced Writing. 4 Units.**

Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For details, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr).

**PWR 194C. Make Them Laugh: Comedy as Persuasion and Argument. 4 Units.**

Exploration of major theories of comedy and application of these theories to historical and contemporary comedic practice, with particular attention to comedy as a form of argument in a range of contexts.

For more information, see [http://www.stanford.edu/dept/undergrad/cgi-bin/drupal\\_pwr/advanced\\_pwr](http://www.stanford.edu/dept/undergrad/cgi-bin/drupal_pwr/advanced_pwr). Prerequisite: first two levels of the undergraduate writing requirement or equivalent transfer credit. Not repeatable for credit.

**PWR 194DH. Topics in Writing and Rhetoric: Empathy: A Rhetorical Tool In The Fight For Social Change?. 4 Units.**

Does not fulfill NSC requirement. In this course, we will interrogate empathy as an ethical model and a rhetorical strategy for effecting social change. Partisanship is at an all time high in the US, being as ingrained and divisive now as race. And a 2015 poll showed that almost six in ten Americans—heavy majorities of both blacks and whites—believe that "race relations are generally bad, and nearly four in 10 think the situation is getting worse." Stanford's campus has been no stranger to these controversies—divestment from Palestine and fossil fuels, Slow Down for Michael Brown, sexual assault punishments, and accusations of anti-Jewish bias in election endorsements. So, do we need an "empathy revolution," or should we be "against empathy" or is it more complicated? To get at these questions, we will read about empathy from the perspective of morality, neuroscience, social movements and rhetoric; and practice compassion meditation. Finally, with the course readings and discussions in mind, you will write about a social change issue you believe might, or might not, benefit from an empathetic framework. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>.

**PWR 194KD. Topics in Writing and Rhetoric: Technology and Human Values. 4 Units.**

Pining for a job in Google X but a little afraid of what disrupting the next social system will do to humans when all is said and done? Unsure where the real conversation is happening at Stanford about how to think more carefully and thoughtfully about the tech we are being trained to make? Curious to know what underlying common ground might link fuzzies with techies, humanists with engineers, scientists with philosophers? These are some of the issues we'll address in this seminar. You will be able to choose your own current topic: drones, tech and medicine, Big Data, Cloud applications, AI and consciousness, cybersecurity, tech and the law, for which you will choose readings and write a seminar paper and then co-lead discussion. The class goals are to know better the ethical value of one's tech work and research and to be able to express to scientists and non-scientists alike the ways in which this work contributes to the greater human good (beyond strict convenience or short-term profit). Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>.

**PWR 194SB. Topics in Writing and Rhetoric: Rhetoric of Science. 4 Units.**

Understanding rhetoric as readers and interpreters of texts and to develop skills as writers and speakers. Prerequisite: first two levels of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>.

**PWR 195. Writing Center Peer Tutor Seminar. 2-3 Units.**

For students selected to serve as peer writing tutors in the Stanford Writing Center and/or at other campus sites. Readings on and reflection about writing processes, the dynamics of writing and tutoring situations, tutoring techniques, learning styles, diversity, and ethics. Observation of tutoring sessions, written responses to readings, and other written work. Same as: PWR 295

**PWR 295. Writing Center Peer Tutor Seminar. 2-3 Units.**

For students selected to serve as peer writing tutors in the Stanford Writing Center and/or at other campus sites. Readings on and reflection about writing processes, the dynamics of writing and tutoring situations, tutoring techniques, learning styles, diversity, and ethics. Observation of tutoring sessions, written responses to readings, and other written work. Same as: PWR 195
