*Affiliated Faculty:* Michelle Anderson (Law), Arnetha Ball (Education), Eric Bettinger (Education), Scott Bukatman (Art and Art History), Albert Camarillo (History), Prudence Carter (Education), Samuel Chiu (Management Science and Engineering), Rebecca Diamond (Business), Paula Ebron (Anthropology), Paula Findlen (History), James Fishkin (Communication), Shelley Fisher Fishkin (English), Charlotte Fonrobert (Religious Studies), Richard Ford (Law), Zephyr Frank (History), Leah Gordon (Education), David Grusky (Sociology), Thomas Hansen (Anthropology), Allyson Hobbs (History), Ian Hodder (Anthropology), Miyako Inoue (Anthropology), Sarah Jain (Anthropology), Tomás Jiménez (Sociology), David Labaree (Education), Kincho Law (Civil and Environmental Engineering), Raymond Levitt (Civil and Environmental Engineering), Carolyn Lougee Chappell (History), Tanya Luhmann (Anthropology), Pamela Matson (Earth, Energy, and Environmental Sciences), Doug McAdam (Sociology), Raymond McDermott (Education), Daniel McFarland (Education), William McLennan (Office of Religious

Life), Ian Morris (Classics), Clayton Nall (Political Science), Josiah Ober (Classics, Political Science), Leonard Ortolano (Civil and Environmental Engineering), Sean Reardon (Education), Rob Reich (Political Science), Jonathan Rodden (Political Science), Michael Rosenfeld (Sociology), Walter Scheidel (Classics), Gary Segura (Political Science), Michael Shanks (Classics), Jennifer Trimble (Classics), Nancy Brandon Tuma (Sociology, Hoover Institution), Fred Turner (Communication), Guadalupe Valdes (Education), Barbara Voss (Anthropology), Steve Zipperstein (History)

*Lecturers:* Deland Chan, Melanie Edwards, Dennis Gale, Dehan Glanz, Radford Hall, Kevin Hsu, Clayton Hurd, Michael Kahan, Patricia Karlin-Neumann, Michael Kieschnick, Joseph Kott, Lawrence Litvak, Judith Ned, Marisa Raya, Laura Scher, Frederic Stout, Mark Wolfe

## Overseas Studies Courses in Urban Studies

The Bing Overseas Studies Program (<http://bosp.stanford.edu>) manages Stanford study abroad programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The Bing Overseas Studies course search site (<https://undergrad.stanford.edu/programs/bosp/explore/search-courses>) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) or Bing Overseas Studies (<http://bosp.stanford.edu>).

		Units
OSPBER 30	Berlin vor Ort: A Field Trip Module	1
OSPBER 60	Cityscape as History: Architecture and Urban Design in Berlin	5
OSPCPTWN 16	Sites of Memory	3
OSPCPTWN 24A	Targeted Research Project in Community Health and Development	3
OSPCPTWN 24B	Targeted Research Project in Community Health and Development	5
OSPCPTWN 43	Public and Community Health in Sub-Saharan Africa	4
OSPFLOR 58	Space as History: Social Vision and Urban Change	4
OSPFLOR 75	Florence in the Renaissance: Family, Youth and Marriage in the Fourteenth and Fifteenth Centuries	5
OSPFLOR 115Y	Building the Cathedral and the Town Hall: Constructing and Deconstructing Symbols of a Civilization	4
OSPMARD 60	Integration into Spanish Society: Service Learning and Professional Opportunities	4
OSPOXFRD 70	The History of London	5
OSPPARIS 92	Building Paris: Its History, Architecture, and Urban Design	4
OSPSANTG 71	Santiago: Urban Planning, Public Policy, and the Built Environment	4-5

## Stanford in Washington

*Director:* Adrienne Jamieson

*On Campus Coordinator:* Jill Vizias

The Bing Stanford in Washington program provides highly-qualified undergraduates with an opportunity to work and study in the nation's capital. In addition to providing students with an understanding of public

policy making, the program offers an opportunity to take advantage of the city's unique cultural resources.

Central in the student's educational experience is a full-time internship. Students serve as interns at such institutions and agencies as the Senate, the House of Representatives, the Office of Management and Budget, the White House, the National Institutes of Health, the Smithsonian Institution, CNN, World Bank, the departments of State, Justice, Treasury, Education, and Health and Human Services.

In addition to the internship, students also complete an academic course of study consisting of small courses taught by policy experts, and weekly seminars taught by Stanford faculty members. Seminars are generally 3-5 units. Past topics have included congressional oversight and the press; economic growth and development patterns, policies, and prospects; critical health issues in the U.S. and abroad; policy making in the Washington community; and criminal justice policy. Speakers from the Washington policy community frequently join students and faculty for discussions. Students often write a major paper related to their internship for 3-5 units of credit. Course and seminar topics vary according to student and faculty interest.

The Bing Stanford in Washington program offers stretch quarters in the Autumn and Spring (early September to mid-December, and late March to the end of June) and a regular quarter in Winter, which focuses on environmental policy, health policy and the arts. The program is designed for students in their junior year or during the first or second quarter of their senior year. Applications must be completed two quarters in advance, and three quarters in advance if a student is overseas or otherwise not on campus during the qualifying quarter.

Students interested in the program should contact the campus office of the Bing Stanford in Washington program; see contact information above.

# SCHOOL OF LAW

Courses offered by the School of Law are listed on the Stanford Bulletin's ExploreCourses (<http://explorecourses.stanford.edu>) web site under the subject codes LAW and LAWGEN.

The School of Law, established in 1893, provides a legal education for students who are fitted by their maturity and academic training to pursue professional study under University methods of instruction. The curriculum leading to the first professional degree in law, the Doctor of Jurisprudence (J.D.), constitutes an adequate preparation for the practice of law in any English-speaking jurisdiction. Graduate work leading to the degrees of Master of Laws (L.L.M.), Master of the Science of Law (J.S.M.), and Doctor of the Science of Law (J.S.D.), and a non-professional degree, Master of Legal Studies (M.L.S.), is also offered. For the full curriculum, see the Course Schedule & Description on the Law School (<http://www.law.stanford.edu/courses>) web site. Stanford Law School offers joint or dual degree options in combination with other Stanford graduate departments and universities across the country; see the "Joint and Dual Degrees in Law (<http://www.stanford.edu/dept/registrar/bulletin/5344.htm>)" section of this bulletin.

The school is on a three-term academic calendar. For a complete list of academic dates see the Academic Calendar on the Law School (<http://www.law.stanford.edu/calendar>) web site.

For further information about admission, programs, curriculum, and faculty, see the Law School (<http://www.law.stanford.edu>) web site.

## Joint and Dual Degrees in Law

Formal admission to both the Law School and to the other cooperating school or department in accordance with the established admission standards of each school or department is required. In addition to the established joint degree programs offered, the school considers requests for a dual program on an individually designed basis. For additional information on Law School joint or dual degree programs, see the Law School (<http://www.law.stanford.edu/program/degrees>) web site. See relevant web sites or department sections of this bulletin for degree requirements.

## Graduate School of Business

- See the GSB's M.B.A. web site (<http://www.gsb.stanford.edu/programs/mba>)
- J.D./M.B.A. Master of Business Administration

## School of Earth Sciences

- J.D./M.S. Interdisciplinary Program in Environment and Resources (E-IPER)
- J.D./Ph.D. Interdisciplinary Program in Environment and Resources (E-IPER)

## School of Education

J.D./M.A. Education

## School of Engineering

- J.D./M.S. Bioengineering
- J.D./Ph.D. Bioengineering
- J.D./M.S. Computer Science
- J.D./M.S. Electrical Engineering
- J.D./M.S. Management Science and Engineering (MS&E)
- J.D./Ph.D. Management Science and Engineering (MS&E)

## School of Humanities and Sciences

- J.D./M.A. Economics

- J.D./Ph.D. Economics
- J.D./M.A. History
- J.D./Ph.D. History
- J.D./M.A. in degree granting programs in Stanford Global Studies (SGS):
  - African Studies
  - East Asian Studies
  - Latin American Studies
  - Russian, East European and Eurasian Studies
- J.D./M.A. in International Policy Studies
- J.D./Ph.D. Philosophy
- J.D./Ph.D. Political Science
- J.D./Ph.D. Psychology
- J.D./M.P.P. Public Policy
- J.D./Ph.D. Sociology

## School of Medicine

- J.D./M.S. Health Research and Policy (HRP)

## Cooperative Programs with Other Universities

Stanford J.D. students have also pursued degrees at other universities such as the Harvard Kennedy School, Johns Hopkins School of Advanced International Studies, and Princeton Woodrow Wilson School. The approval process for such a cooperative program begins after the student has been admitted, independently, to both programs. Students may enroll in either a joint degree among schools at Stanford or in a degree from an external university, but a student may not enroll in both a Stanford JDP and a cooperative program with another university.

## Courses in Law

Some Law courses have special enrollment instructions and restrictions, but many Law courses are open to qualified graduate students in other departments of Stanford University with instructor consent. Non-Law students may not enroll in courses that are part of the required first-year J.D. curriculum. Stanford non-Law students intending to enroll in any course with a LAW subject code must consult the Office of the Law School Registrar in the Stanford Law School Administration Building, room 100, or see the Stanford Law School, Office of the Registrar (<http://www.law.stanford.edu/organizations/offices/office-of-the-registrar>) web site.

*Emeriti (Professors):* Janet Cooper Alexander, Barbara Allen Babcock, Wayne G. Barnett, Paul Brest, Gerhard Casper, Joshua Cohen, Lance E. Dickson, Marc A. Franklin, Jack H. Friedenthal, Ronald J. Gilson, Robert A. Girard, William B. Gould IV, Thomas C. Grey, Thomas C. Heller, Miguel A. Méndez, John Henry Merryman, Margaret Jane Radin, Kenneth E. Scott, Byron D. Sher, William H. Simon, Michael S. Wald

*Dean:* M. Elizabeth Magill

*Vice Dean:* Mark G. Kelman

*Associate Dean for Public Interest and Clinical Education:* Juliet M. Brodie

*Associate Dean for Curriculum:* Jenny Martinez

*Associate Dean for Executive Education and Special Programs:* F. Daniel Siciliano

*Associate Dean for Graduate Studies:* Deborah R. Hensler

*Associate Dean for Strategic Planning:* George Triantis

*Senior Associate Dean and Chief Financial Officer:* Frank Brucato

*Associate Deans:* Diane Chin, Faye Deal, Julia Erwin-Weiner, Catherine Glaze, Sabrina Johnson, Susan Robinson

*Professors:* Michelle Wilde Anderson, Joseph Bankman, R. Richard Banks, G. Marcus Cole, Richard Craswell (on leave), Robert M. Daines, Michele Landis Dauber, John J. Donohue III, David Freeman Engstrom, Nora Freeman Engstrom, George Fisher, Richard T. Ford, Barbara H. Fried, Lawrence M. Friedman, Paul Goldstein, Robert W. Gordon, Henry T. Greely (on leave spring), Joseph A. Grundfest, Deborah R. Hensler, Daniel E. Ho, Pamela S. Karlan, Mark G. Kelman, Amalia D. Kessler, Daniel P. Kessler, Michael Klausner (on leave winter/spring), Mark A. Lemley, Robert MacCoun, M. Elizabeth Magill, Lawrence C. Marshall, Jenny S. Martinez, Michael W. McConnell, Michelle Mello, Bernadette Meyler, Alison D. Morantz (on leave), Nathaniel Persily, Joan Petersilia, A. Mitchell Polinsky, Robert L. Rabin (on leave), Deborah L. Rhode, Jane Schacter, David A. Sklansky, Norman W. Spaulding, James F. Strnad II, David Studdert, Alan O. Sykes, Barton H. Thompson, Jr., George Triantis, Barbara van Schewick (on leave autumn), Robert Weisberg

*Associate Professor:* Michael Wara

*Assistant Professors:* Gregory Ablavsky, Lisa Larrimore Ouellette, Shirin Sinnar

*Professors (Teaching):* Juliet M. Brodie, James Cavallaro (on leave winter), Jeffrey L. Fisher, William S. Koski, Phillip R. Malone, Jay A. Mitchell, Deborah A. Sivas, Jayashri Srikantiah

*Associate Professors (Teaching):* James Sonne, Ronald C. Tyler

*Senior Lecturers:* Janet Martinez, Allen S. Weiner

*Professors of the Practice of Law:* Lucas Guttentag (on leave), Erik G. Jensen, A. Douglas Melamed, David W. Mills, Dan Reicher, F. Daniel Siciliano, Brian Wolfman

*Professors (by courtesy):* Jennifer Eberhardt, Michael Genesereth, David Larcker, Jose Maldonado, Paul C. Pfleiderer, Madhav Rajan, Jack Rakove, Frank Wolack

*Visiting Professors:* Michael Asimow, Binyamin Blum, Jennifer Chacon, Mariano-Florentino (Tino) Cuéllar, Siegfried Fina, Jonathan Glater, Laurie Hodrick, Edward Kleinbard, Avishai Margalit, Jonathan Mitchell, Rogelio Perez-Perdomo

*Distinguished Visitors from Practice:* Russ Feingold, David Hayes

*Thomas C. Grey Legal Research and Writing Instructors:* Abbye Atkinson, Sarah Duranske, Thea Johnson, Mugambi Jouet, Jeanne Merino, Justin Weinstein-Tull

*Lecturers:* Fred Alvarez, Marilyn Bautista, Jeanine Becker, Brian Blalock, Gary Born, Lauren Brady, Jeff Brown, Viola Canales, Vanessa Casada, Mark Chandler, Diane Chin, Laurent Cohen-Tanugi, Margaret Crosby, Allison Marston Danner, Tanya de la Fuente, Amalia Greenberg Delgado, Donald Dell, Allison Elgart, Lisa Douglass, Bonnie Eskanazi, Randee G. Fenner, Bertram Fields, Jay Finkelstein, Simon Frankel, Laurence Franklin, Steven Franklin, Michelle Galloway, Mei Gechlik, Andrew Gilden, Jonathan Greenberg, Thomas Griffith, Margaret Hagen, Timothy H. Hallahan, Kathryn Haun, Todd Hinnen, Stacey Jessiman, David Johnson, Danielle Jones, Sean Kaneshiro, Megan Karsh, Daphne Keller, Julie Matlof Kennedy, Sallie Kim, David Kleiman, Jeffery W. Kobrick, Larry Kramer, Kenneth Kuwayti, Robin John Lee, Mina Titi Liu, Suzanne Luban, Thomas Lue, Grande Lum, Diego Gil McCawley, Beth McLellan, Jeanne Merino, Shawn Miller, Nader Mousavi, Carly Munson, Linda Netsch, William Neukom, Jessica Notini, Jef Pearlman, B. Howard Pearson, Lisa M. Pearson, Brenna Powell, John G. Quigley, Stephan Ray, Brian Richmand, Susan Robinson, John Rodkin, Dave Rogers, Michael Romano, Jacob Hale Russell, Richard Salgado, Rachel Samberg, Matthew Sanders, Ticien

Sassoubre, Rachel Silverberg, Jason Solomon, Michelle Sonu, Shanin Specter, Jory Steele, Sergio Stone, Kimberly Summe, Alicia Thesing, John True, Adine Varah, Claret Vargas, Lisa Weissman Ward, Robert Wexler, Beth Williams, Bryan Wilson, Katherine C. Wright, Joseph Yang, Mallun Yen, James Yoon

*Affiliated Faculty:* Alexandria (Ali) Boehm (Civil and Environmental Engineering), Svetlana Bryzgalova (GSB), Kate Bundorf (Health Research and Policy), Stefan Reichelstein (GSB), Abraham Sofaer (Hoover), Francis "Vic" Stanton (GSB), Leon Szeptycki (Woods Institute)

# SCHOOL OF MEDICINE

The School of Medicine offers courses of study leading to the M.S., Ph.D., and M.D. degrees.

## Undergraduate Programs in the School of Medicine

Many courses in the School of Medicine are open to any registered Stanford student who has fulfilled the prerequisites, subject to the usual limits of course enrollment and faculty approval. The school also offers courses specifically for undergraduates, as well as graduate-level courses where advanced undergraduates with backgrounds in the life sciences are welcome. Among the undergraduate offerings are numerous Stanford Introductory Seminars for freshmen and sophomores, the Emergency Medical Technician program, Stanford Immersion in Medicine Physician Shadowing, Pre-Vet Advisory, and courses in Community Health, including participation in the Stanford Free Clinics. The school also offers several undergraduate courses through the Department of Biology and the Interdisciplinary Program in Human Biology in the School of Humanities and Sciences.

## M.S. and Ph.D. Programs in the School of Medicine

The School of Medicine is home to graduate programs covering a broad range of disciplines within biomedicine leading to Ph.D. or M.S. degrees. These programs focus on interdisciplinary training with in-depth investigation of an original problem of fundamental importance to the biosciences. Each degree program sets its own curriculum, but many courses are taught by groups of faculty from multiple programs and departments. Flexibility is a priority to ensure that all students obtain the best possible training for pursuing careers in their areas of interest. The school is dedicated to training students from diverse backgrounds, and to the promotion of diversity in graduate education. Admission is through one of about 15 home programs. These home programs enable students to carry out dissertation research and training with School of Medicine faculty, as well as investigators in the departments of Biology and Biophysics in the School of Humanities and Sciences. Detailed information on School of Medicine M.S. and Ph.D. programs, curricula, and research can be found at Stanford's School of Medicine Master's Degree Programs (<http://med.stanford.edu/ms>) and Ph.D. Programs (<http://med.stanford.edu/phd>) web site. Application information can be found at Stanford's Office of Graduate Admissions (<http://gradadmissions.stanford.edu>) web site.

## M.D. Program in the School of Medicine

The School of Medicine seeks to attract students who are passionate about scholarship and wish to improve the health of the world's people through research, innovation, and leadership. The Stanford M.D. curriculum provides education in biomedical and clinical sciences along with study and independent research through scholarly concentrations. Emphasis is placed on interdisciplinary learning, with streamlined content and melding of basic science and clinical instruction across the curriculum. Blocks of unscheduled time allow for individual or group study, participation in elective courses, research, and reflection. Alternative pathways through the curriculum include an option of a fifth or sixth year of study as well as opportunities for pursuing a second degree, such as an M.P.H., M.B.A., Master's of Science in Epidemiology or Health Services Research, or a Ph.D.

Broad clinical science education occurs throughout the curriculum with exposure to patient care and the practice of medicine beginning on the first day of medical school. Students begin clinical clerkships in June of the second year. A population health course combines classroom and

experiential learning to provide understanding of the socioeconomic determinants of the health of patients and communities.

Scholarly concentrations offer opportunities for developing skills that enhance basic science and clinical training in areas such as bioengineering, biomedical ethics and medical humanities, biomedical informatics, clinical research, community health, health services and policy research, and the molecular basis of medicine. Through the scholarly concentration program, these skills may be applied in clinical areas housed within centers at Stanford such as the Comprehensive Cancer Center, the Cardiovascular Institute, the Neuroscience Institute, the Institute of Immunity, Transplantation, and Infection, and Women's Health at Stanford. Study in a scholarly concentration typically includes course work and research activities. Research for scholarly concentrations is supported through the Medical Scholars program, which funds student research projects at Stanford and overseas.

Students with interests in medical research as a career are encouraged to investigate opportunities available through the Medical Scientist Training Program (MSTP). Stanford also collaborates with the University of California, Berkeley, to offer students opportunities for M.D./M.P.H. training. Details about these programs may be found at Stanford's Dual Degree and Multi-Degree Programs ([http://med.stanford.edu/combined\\_degree](http://med.stanford.edu/combined_degree)) web site.

Stanford is committed to representing the diversity of the U.S. and California populations by seeking a diverse body of students who are interested in the intellectual substance of medicine and committed to advancing the field of health care, broadly defined. Provided an applicant to the school has completed basic courses in physics, chemistry, and biology, the choice of an undergraduate major may reflect other interests, including the arts and humanities. Course work in advanced biology such as biochemistry, molecular biology, or genetics and the behavioral sciences is recommended because of their importance in understanding health care. Breadth of interests and depth of experiences play an important role in the selection of students from among those applicants having superior academic records.

The M.D. degree requires 13 quarters of registration at full Med-MD tuition; the joint M.D./Ph.D. degree requires 16 quarters. Completion of the M.D. degree must be achieved within six years, unless a petition is granted to extend this time frame. For further details on the M.D. degree, including admission requirements, see the Medical Education at Stanford (<http://med.stanford.edu/md>) web site.

## Multiple-Degree Programs in the School of Medicine

### M.D./Ph.D.

Many M.D. students undertake a Ph.D. while they are at Stanford. Popular choices are School of Medicine programs in Bioengineering, Biomedical Informatics, or one of the 13 Biosciences home departments. At the School of Engineering, the Biomechanical Engineering M.D./Ph.D. program also makes a special effort to work with M.D. students.

### Medical Scientist Training Program

The Medical Scientist Training Program (MSTP) provides medical students with an opportunity to pursue an individualized program of research and course work leading to both the M.D. and Ph.D. degrees. It is designed to equip students for careers in academic investigative medicine, and emphasizes flexibility of curricular and research programs for each trainee. Training for a combined M.D.-Ph.D. includes the same content encountered by students who pursue each degree separately, but the total training time is less than the sum of the time normally required for each degree. The flexible curriculum at Stanford's School of Medicine allows each student, in consultation with a preceptor and other advisers, to pursue a plan of study that satisfies the requirements for the M.D. and allows performance of doctoral-level research leading to the Ph.D.

Students interested in joining the MSTP are considered for admission at the time of their application to the School of Medicine M.D. program and are asked to provide supplemental information relevant to their research background. Current Stanford M.D. students may also apply for admission to the MSTP.

### M.D./M.B.A.

M.D.. students interested in combining their medical training with training in business can take advantage of a dual degree M.D./M.B.A. program that allows students to obtain both degrees after completion of a 5-year curriculum. Students must apply to and be admitted by the Stanford Graduate School of Business, at the time of their admission to the medical school or after beginning their M.D.. studies.

### M.D./M.P.H.

A unique collaboration with UC Berkeley allows M.D.. students to pursue and obtain a Master of Public Health degree while still at the Stanford School of Medicine. This dual degree M.D./M.P.H. program is open to M.D. students who participate in the Scholarly Concentration in Community Health. Students must apply to and be admitted by the UC Berkeley program; course work is undertaken at the UC Berkeley campus.

### Ph.D./M.S.M.

The Master of Science in Medicine (<http://msm.stanford.edu>) program admits current Stanford Ph.D. students who have a commitment to translational research, but are not interested in becoming clinicians. The goal of the program is to train researchers in human biology and disease to be better equipped to translate new scientific discoveries into useful medical advances. Students offered admission into any Ph.D. program at Stanford may apply for admission to the master's program. During their first five quarters, students take basic biomedical science courses with Stanford M.D. students. The School of Medicine M.D. curriculum is presented in a succinct format that allows time for students to concurrently complete their Ph.D. course requirements and lab rotations. By early in their second year, students choose a lab for their Ph.D. thesis research and complete their medical course work. They also elect a clinical co-mentor to discuss translational research needs and help to arrange a short clinical experience. Upon completion of the Program., participating students receive an M.S. in Medicine.

### M.D./M.S. Degrees

**Health Services Research:** The Master's Degree program in Health Services Research is a research-oriented program with a concentration on economics and statistics, outcomes research, cost-effectiveness, and technology assessment. The program is designed to complement training in the medical and social sciences and prepare students for research careers in health services or health policy analysis. The program provides specialized training in selected areas of health care policy, research methodology, and the application of these skills to a specific research problem. Course work requirements allow students to design a program of study suited to their individual backgrounds and interests.

**Epidemiology:** The Graduate Interdisciplinary Program in Epidemiology is a research oriented program that offers instruction and research opportunities leading to the M.S. degree in Epidemiology - the study of the distribution and determinants of diseases in populations.

**Medical Information Sciences:** An option for anyone who wishes to either perform research in Biomedical Informatics as clinical faculty at a school of medicine or for those who wish to continue into the health care industry or government. There is high need for trained individuals who understand the practice of medicine and who are able to develop and implement applications in biomedical informatics.

**Biomechanical Engineering:** Bioengineering is a fusion of engineering and the life sciences that promotes scientific discovery and the invention of new technologies and therapies through research and education. It

encompasses both the use of biology as a new engineering paradigm and the application of engineering principles to medical problems and biological systems. The discipline embraces biology as a new science base for engineering.

### M.D./M.P.P. Degree

Matriculated M.D. students from Stanford's School of Medicine may apply for admission to the joint M.P.P./M.D. degree program ([http://publicpolicy.stanford.edu/jt\\_mdmp](http://publicpolicy.stanford.edu/jt_mdmp)). Applications are accepted anytime after a student has completed one year in the M.D. program. Students must obtain the permission of the School of Medicine to participate in the joint degree program. Students are required to devote two continuous years of full-time study to the completion of the first two years of the core M.D. curriculum. Students then devote one continuous academic year of study to the completion of the M.P.P. core curriculum. At other times, the student may be enrolled in either unit and may take courses from either unit to satisfy the joint degree requirements.

### Departmental Dual Degrees

**Education:** The Individually designed M.A. in Education is designed for Stanford doctoral students enrolled outside of the School of Education. Individuals enrolled at the doctoral level at Stanford can be considered for this program.

**E-IPER:** Stanford's Emmett Interdisciplinary Program in Environment and Resources (E-IPER) gives students a focused science, engineering, and technology background, allowing them to integrate science with law and business to address critical environmental and sustainability issues. [http://e-iper.stanford.edu/admissions.jointms\\_application.php](http://e-iper.stanford.edu/admissions.jointms_application.php)

**Public Policy:** Stanford University offers two master's programs in Public Policy. A Master's of Public Policy (M.P.P.) is a two-year professional degree and the Masters of Arts in Public Policy (M.A.) is a one-year non-professional degree. Students currently enrolled in other Stanford graduate programs, and applicants to those programs, may apply for either of the Public Policy master's programs. M.D. students are eligible to apply for a dual M.A. degree program See above for the joint M.D./M.P.P. program.

*Dean:* Lloyd Minor

*Senior Associate Dean for Graduate Education and Postdoctoral Affairs:* William Talbot

*Senior Associate Dean for Medical Education:* Charles Prober

## Biochemistry

Courses offered by the Department of Biochemistry are listed under the subject code BIOC on the Stanford Bulletin's ExploreCourses web site.

Biochemistry is a department within the School of Medicine, with offices and labs located in the Beckman Center for Molecular and Genetic Medicine at the Stanford Medical Center. Courses offered by the department may be taken by undergraduates as well as graduate and medical school students.

Advanced courses offered in more specialized areas emphasize recent developments in biochemistry, cell biology, and molecular biology. These courses include the physical and chemical principles of biochemistry, enzyme reaction mechanisms, membrane trafficking and biochemistry, molecular motors and the cytoskeleton, mechanisms and regulation of nucleic acid replication and recombination, the biochemistry of bacterial and animal viruses, the molecular basis of morphogenesis, the molecular and cell biology of yeast, and the structure and function of both eukaryotic and prokaryotic chromosomes.

Opportunities exist for directed reading and research in biochemistry and molecular biology, using the most advanced research facilities,

including those for light and electron microscopy, chromatography and electrophoresis, protein and nucleic acid purification, rapid kinetic analysis, synthesis and analysis, single molecule analyses using laser light traps, microarray generation and analysis, and computer graphic workstation facilities for protein and nucleic acid structural analysis. Ongoing research uses a variety of organisms from bacteria to animal cells.

## Doctor of Philosophy in Biochemistry

Requirements for the M.S. and Ph.D. degrees are described in the "Graduate Degrees (p. 45)" section of this bulletin. The department does not offer undergraduate degrees.

The Department of Biochemistry offers a Ph.D. program which begins in the Autumn Quarter of each year. The program of study is designed to prepare students for productive careers in biochemistry; its emphasis is training in research, and each student works closely with members of the faculty. In addition to the requirement for a Ph.D. dissertation based on original research, students are required to complete six advanced courses in biochemistry and related areas among the 135 total units required for the Ph.D. Selection of these courses is tailored to fit the background and interests of each student. A second requirement involves the submission of two research proposals which are presented by the student to a small committee of departmental faculty members who are also responsible for monitoring the progress of student curricular and research programs, and a journal club presentation. All Ph.D. students are expected to participate actively in the department's seminar program, and students are encouraged to attend and to present papers at regional and national meetings in cellular biochemistry and molecular biology. Teaching experience is an integral part of the Ph.D. curriculum and is required for the degree.

The Department of Biochemistry offers an M.S. degree only to students already enrolled in the Ph.D. program. Students should contact the Graduate Studies adviser for more details.

Those applying for graduate study should have at least a baccalaureate degree and should have completed work in cell and developmental biology, basic biochemistry and molecular biology, and genetics. Also required are: at least one year of university physics; differential and integral calculus; and organic, inorganic, and physical chemistry. The department is especially interested in those applicants who have research experience in biology or chemistry. Students must submit an application, including transcripts and letters of recommendation, by December for admission in the following Autumn Quarter.

Applications should be submitted at the Office of Graduate Admissions (<http://gradadmissions.stanford.edu>) web site. Applicants are notified by March 31 of decisions on their applications. Stanford University requires scores from the Graduate Record Examination (GRE) (verbal, quantitative, and analytical), and applicants are encouraged to submit scores from the GRE Subject Test in biochemistry, biology, or chemistry. Applicants should take the October GRE exam.

All applicants are urged to compete for non-Stanford fellowships or scholarships, and U.S. citizens should complete an application for a National Science Foundation Predoctoral Traineeship. Students are provided with financial support to cover normal living expenses; Stanford tuition costs are paid. Applicants for admission to the department are considered without regard to race, color, creed, religion, sex, age, national origin, or marital status.

Postdoctoral research training is available to graduates who hold a Ph.D. or an M.D. degree. Qualified individuals may write to individual faculty members for further information.

At present, the primary research interests of the department are the structure and function of proteins and nucleic acids, the biochemistry and control of development processes, molecular motors and the

cytoskeleton, the trafficking of proteins between membrane-bound organelles, the control and regulation of gene expression, bioinformatics/protein structure design, and the application of microarrays to problems in human health and disease.

## Biomedical Ethics

The Stanford University Center for Biomedical Ethics (SCBE) is dedicated to interdisciplinary research and education, and provides clinical and research ethics consultation. SCBE serves as a scholarly resource on emerging ethical issues raised by medicine and biomedical research.

SCBE offers a scholarly concentration in Biomedical Ethics and Medical Humanities (BEMH) to medical students. This program allows medical students to study in depth the moral, social, and humanistic dimensions of medicine and biomedical science. Using cross-disciplinary methods such as those from philosophy, social science, film, literature, art, and law, students examine the meaning and implications of medicine and medical research.

### Degree Requirements

Students who pursue Biomedical Ethics and Medical Humanities in conjunction with an application area, such as Immunology, are required to complete 6 units including:

		Units
INDE 212	Medical Humanities and the Arts	2
PEDS 251A	Medical Ethics I	2

Students may select the other two core BEMH units from a wide variety of University, Medical School, and Law School courses. Students interested in completing all 12 units in the BEMH scholarly area may do the same. Students are encouraged to go through the various offerings and devise a course plan to present to the director, David Magnus, and Audrey Shafer. Additional information on requirements for the scholarly concentration, is available at the BEMH (<http://bioethics.stanford.edu/education/bemh>) web site.

*Director: David C. Magnus*

*Director Emeritus: Thomas A. Raffin*

*Associate Director: Mildred K. Cho*

*Participating Faculty and Staff: Danton S. Char, Julie A. Collier, Steven Goodman, Maren Grainger-Monsen, Henry Greely, Alvan A. Ikoku, Katrina A. Karkazis, Sandra S. Lee, Jose R. Maldonado, Michelle M. Mello, Kelly E. Ormond, Laura W. Roberts, Christopher T. Scott, Audrey Shafer, Abraham C. Verghese*

## Biomedical Informatics

Courses offered by the Program in Biomedical Informatics are listed under the subject code BIOMEDIN on the Stanford Bulletin's ExploreCourses web site.

The program in Biomedical Informatics emphasizes research to develop novel computational methods that can advance biomedicine. Students receive training in the investigation of new approaches to conceptual modeling and to development of new algorithms that address challenging problems in the biological sciences and clinical medicine. Students with a primary interest in developing new informatics methods and knowledge are best suited for this program. Students with a primary interest in the biological or medical application of existing informatics techniques may be better suited for training in the application areas themselves.

### Graduate Programs in Biomedical Informatics

The Biomedical Informatics Program is interdepartmental and offers instruction and research opportunities leading to M.S. and Ph.D. degrees in Biomedical Informatics. All students are required to complete the core curriculum requirements, and also to elect additional courses to complement both their technical interests and their goals.

The core curriculum is common to all degrees offered by the program but is adapted or augmented depending on the interests and experience of the student. Deviations from the core curriculum must be justified in writing and approved by the student's Biomedical Informatics academic adviser and the chair of the Biomedical Informatics Executive Committee. The program is intended to provide flexibility and to complement other opportunities in applied medical research that exist at Stanford. Although most students are expected to comply with the basic program of study outlined here, special arrangements can be made for those with unusual needs or those simultaneously enrolled in other degree programs within the University. Similarly, students with prior relevant training may have the curriculum adjusted to eliminate requirements met as part of prior training.

The University requirements for the M.S. degree are described in the "Graduate Degrees (p. 45)" section of this bulletin.

### Master of Science in Biomedical Informatics (Academic)

This degree is designed for individuals who wish to undertake in-depth study of biomedical informatics with research on a full-time basis. Normally, a student spends two years in the program and implements and documents a substantial project during the second year. The first year involves acquiring the fundamental concepts and tools through course work and research project involvement. All first- and second-year students are expected to devote 50 percent or more of their time participating in research projects. Research rotations are not required, but can be done with approval of the academic adviser or training program director. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics. This degree requires a written research paper to be approved by two faculty members.

### Master of Science in Biomedical Informatics (Professional/Honors Cooperative Program)

This degree is designed primarily for the working professional who already has advanced training in one discipline and wishes to acquire interdisciplinary skills. All classes necessary for the degree are available online. The professional M.S. is offered in conjunction with Stanford Center for Professional Development (SCPD), which establishes the rates

of tuition and fees. The program uses the honors cooperative program (HCP) model, which assumes that the student is working in a corporate setting and is enrolled in the M.S. on a part-time basis. The student has up to five years to complete the program. Research projects are optional and the student must make arrangements with program faculty. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics.

### Master of Science in Biomedical Informatics (Coterminal)

The coterminal degree program allows Stanford University undergraduates to study for a master's degree while completing their bachelor's degree(s) in the same or a different department. Please refer to the "Coterminal Degrees" section in this bulletin for additional information.

The coterminal Master of Science program follows the same program requirements as the Master of Science (Professional), except for the requirement to be employed in a corporate setting. The coterminal degree is available only to current Stanford undergraduates. Coterminal students are enrolled full-time and courses are taken on campus. Research projects are optional and the student must make arrangements with program faculty. Graduates of this program are prepared to contribute creatively to basic or applied projects in biomedical informatics.

For University coterminal degree program rules and University application forms, see the Registrar's coterminal forms (<https://registrar.stanford.edu/resources-and-help/forms/coterminal-forms>) web site.

#### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

### Core Curriculum and Program Requirements in Biomedical Informatics

#### Core Curriculum in Biomedical Informatics

Students are expected to participate regularly in BIOMEDIN 101 Biomedical Informatics Student Seminar and a research colloquium. In addition, all students are expected to fulfill requirements in the following five categories:

**1. Core Biomedical Informatics (17 units)**

Students are expected to complete the core offerings in biomedical informatics:

- BIOMEDIN 212 Introduction to Biomedical Informatics Research Methodology
- and 4 of the following:

BIOMEDIN 210	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
BIOMEDIN 215	Data Driven Medicine	3
BIOMEDIN 217	Translational Bioinformatics	4
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation	3-4

- Any remaining units must be graduate level courses listed under BIOMEDIN.
- Note that BIOMEDIN 211 is no longer offered, however that course may be used by students who completed it to fulfill a core BMI requirement.

**2. Computer Science, Statistics, Mathematics & Engineering (18 units)**

Students are expected to create a program of study with a mixture of graduate-level courses in computer science, statistics or other technical informatics-related disciplines that allows them to achieve in-depth mastery of these areas. The programs of study may focus on aspects of these disciplines including (but not limited to): machine learning, artificial intelligence, data mining, image analysis, human-computer interaction, systems engineering, scientific and numerical computing or graphics. In general, this course of study should include no more than 9 units in courses 100-199, and the rest should be 200 or above (unless specifically approved by adviser). CS courses 106A and 106B cannot be counted for this requirement, and all courses should be formal classroom-based courses, unless approved by the executive committee. Up to 6 units of this portion of the core curriculum may be taken on a pass/fail basis, but at least half of the units in this portion of the curriculum must be taken for a grade. Students may petition for quantitative courses in the Medical School or Humanities and Sciences to be counted in this section of the curriculum.

**3. Social and Ethical Issues (4 units)**

Students are expected to be familiar with issues regarding ethical, legal, social, organizational and behavioral aspects of the impact of biomedical informatics technologies on society in general. They should select courses broadly from University offerings to explore one or more of these aspects more deeply. Choose courses that fulfill this requirement by entering bmi::ethics in the Explore Courses search box. Students are required to take MED 255 The Responsible Conduct of Research, or the equivalent.

BIOE 131	Ethics in Bioengineering	3
BIOE 450	Advances in Biotechnology	3
BIOMEDIN 256	Economics of Health and Medical Care	5
BIOMEDIN 432	Analysis of Costs, Risks, and Benefits of Health Care	4
BIOS 224	Big Topics in Stem Cell Ethics	2
CS 181	Computers, Ethics, and Public Policy	4
CS 181W	Computers, Ethics, and Public Policy	4
GENE 210	Genomics and Personalized Medicine	3
HRP 209	Health Law: The FDA	2-3
HRP 210	Health Law and Policy	3
HRP 211	Law and the Biosciences: Neuroscience	3
HRP 221	Law and the Biosciences: Genetics	3

HRP 256	Economics of Health and Medical Care	5
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4
HUMBIO 174	Foundations of Bioethics	3
INDE 212	Medical Humanities and the Arts	2
LAW 654	Law and Biosciences Workshop	1
ME 208	Patent Law and Strategy for Innovators and Entrepreneurs	2-3
MED 242	Physicians and Human Rights	1
MED 255	The Responsible Conduct of Research	1
MED 255C	The Responsible Conduct of Research for Clinical and Community Researchers	1
MS&E 256	Technology Assessment and Regulation of Medical Devices	3
MS&E 278	Patent Law and Strategy for Innovators and Entrepreneurs	2-3
NBIO 101	Social and Ethical Issues in the Neurosciences	2-4
PEDS 251A	Medical Ethics I	2
PEDS 251B	Medical Ethics II	2
PUBLPOL 222	Biosecurity and Bioterrorism Response	2-5

Units

**4. Unrestricted Electives (6 units)**

Students may fulfill this requirement with any Stanford course, including courses taken to satisfy core curriculum prerequisites.

**5. For PhD Students only**

Domain Biology/Medicine, Pedagogy, Electives (9 units): In order to reach a total of 54 units of core curriculum, PhD students should take an additional 9 units; this should include 6 units of biology or medicine classes relevant to their research interests, 2 units of BIOMEDIN 290 Biomedical Informatics Teaching Methods and one additional unit of unrestricted elective.

The core curriculum generally entails a minimum of 45 units of course work for master's students and 54 units of course work for Ph.D. students, but can require substantially more or less depending upon the courses chosen and the previous training of the student.

The following courses may be taken for satisfactory/no credit (S/NC):

		Units
BIOMEDIN 200	Biomedical Informatics Colloquium	1
BIOMEDIN 201	Biomedical Informatics Student Seminar	1
BIOMEDIN 205	Precision Practice with Big Data	1
BIOMEDIN 206	Informatics in Industry	1
BIOMEDIN 207	Smart Health through Digital Medicine	1
BIOMEDIN 290	Biomedical Informatics Teaching Methods	1-6
BIOMEDIN 299	Directed Reading and Research	1-18
BIOMEDIN 801	TGR Master's Project	0
BIOMEDIN 802	TGR PhD Dissertation	0
MED 255	The Responsible Conduct of Research	1

Ur

The varying backgrounds of students are well recognized and no one is required to take courses in an area in which he or she has already been adequately trained; under such circumstances, students are permitted to skip courses or substitute more advanced work using a formal annual process administered by the BMI executive committee, in which students demonstrate satisfaction of core curriculum prerequisites, and request permission to receive core curriculum credit for classes taken previously in areas of the core curriculum. Students design appropriate programs for their interests with the assistance and approval of their Biomedical Informatics academic adviser. At least 27 units of formal graded course work are expected for the core curriculum.

## Program Requirements for the Academic M.S., HCP Professional M.S., and Coterminal M.S. Degrees

Students enrolled in any of the M.S. degrees must complete the program requirements in order to graduate. Programs of at least 45 Stanford units that meet the following guidelines are normally approved:

1. Completion of the core curriculum with overall GPA of 3.0.
2. Students are expected to participate regularly in BIOMEDIN 201 Biomedical Informatics Student Seminar and a research colloquium. HCP professional masters candidates who are able to attend classes on campus should also participate regularly.
3. Electives: additional courses to bring the total to 45 or more units taken at Stanford to fulfill the University's residency requirement.
4. Masters candidates should sign up for BIOMEDIN 801 TGR Master's Project for their project units after completing their 45-unit residency requirement.

## Doctor of Philosophy in Biomedical Informatics

The University's basic requirements for the doctorate (residence, dissertation, examination, and so on) are discussed in the "Graduate Degrees (p. 45)" section of this bulletin. The Core Curriculum in Biomedical Informatics is outlined in the Master's section (p. 681).

Individuals wishing to prepare themselves for careers as independent researchers in biomedical informatics, with applications experience in bioinformatics, clinical informatics, or imaging informatics, should apply for admission to the doctoral program. The following are additional requirements imposed by the Biomedical Informatics Executive Committee:

1. A student plans and completes a coherent program of study including the core curriculum and additional requirements as for the master's program. In the first year, two or three research rotations are encouraged. The master's requirements should be completed by the end of the second year in the program.
2. Doctoral students are generally advanced to Ph.D. candidacy after passing the qualifying exam, which takes place during the end of the second year of training. A student's academic adviser has primary responsibility for the adequacy of the program, which is regularly reviewed by the Biomedical Informatics Executive Committee.
3. To remain in the Ph.D. program, each student must attain a grade point average (GPA) of 3.0 for the core curriculum. The student must fulfill these requirements and apply for admission to candidacy for the Ph.D. by the beginning of the third year. In addition, reasonable progress in the student's research activities is expected of all doctoral candidates.
4. During the third year of training, each doctoral student is required to give a preproposal seminar that describes evolving research plans.
5. By the beginning of the fourth year, each student must orally present a written thesis proposal for the written dissertation and must orally defend the thesis proposal before a University oral examination committee that generally includes at least one member of the Biomedical Informatics Executive Committee. The committee determines whether the student's general knowledge of the field and the details of the planned thesis are sufficient to justify proceeding with the dissertation.
6. After application for Terminal Graduate Registration (TGR) status and completion of 135 units, the Ph.D. candidate should register each quarter for BIOMEDIN 802 TGR PhD Dissertation so their research effort may be counted toward the degree.
7. As part of the training for the Ph.D., each student is required to be a teaching assistant for two courses approved by the Biomedical Informatics Executive Committee; one should be completed in the first two years of study.

8. The most important requirement for the Ph.D. degree is the dissertation. Prior to the oral dissertation proposal and defense, each student must secure the agreement of a member of the program faculty to act as dissertation adviser. The principal adviser should be approved by the Biomedical Informatics Executive Committee, and all dissertation reading committees should include at least one BMI participating faculty member.
9. At the completion of training, while still matriculated and shortly prior to deposit of the dissertation, the student gives a final talk describing his or her results. No official additional oral examination is required upon completion of the written dissertation. The oral defense of the dissertation proposal satisfies the University oral examination requirement.
10. The student is expected to demonstrate an ability to present scholarly material and research in a lecture at a formal seminar.
11. The student is expected to demonstrate an ability to present scholarly material in concise written form. Each student is required to write a paper suitable for publication, usually discussing his or her doctoral research project. This paper must be approved by the student's academic adviser as suitable for submission to a refereed journal before the doctoral degree is conferred.
12. The dissertation must be accepted by a reading committee composed of the principal dissertation adviser, a member of the program faculty, and a third faculty member chosen from anywhere within the University. A fourth reader may be added at the discretion of the student and their adviser.

## Ph.D. Minor in Biomedical Informatics

For a Ph.D. minor in Biomedical Informatics (BMI), a candidate must complete a minimum of 20 unduplicated units of biomedical informatics course work, including 12 units in BMI core courses from:

		Units
BIOMEDIN 210	Modeling Biomedical Systems: Ontology, Terminology, Problem Solving	3
BIOMEDIN 212	Introduction to Biomedical Informatics Research Methodology	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
BIOMEDIN 215	Data Driven Medicine	3
BIOMEDIN 217	Translational Bioinformatics	4
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation	3-4

The candidate must complete the one-unit MED 255 The Responsible Conduct of Research or an approved substitute.

The remaining units must be courses that would count towards the BMI master's degree, taken from these areas:

- Computer Science, Probability, Statistics, Machine Learning, Mathematics, Engineering
- Biomedicine
- Other BMI courses from the list above

Students are expected to participate regularly in BIOMEDIN 201 (<https://exploreddegrees-nextyear.stanford.edu/schoolofmedicine/biomedicalinformatics>) Biomedical Informatics Student Seminar.

Courses used for the BMI Ph.D. minor may not be double-counted to meet the requirements of a master's or Ph.D. degree.

All courses used for the BMI Ph.D. minor, except MED 255, must be taken for a letter grade and passed with an overall GPA of 3.0 or better.

Stanford students apply using the Application for Ph.D. Minor and must provide an unofficial Stanford transcript as well as a statement of purpose for adding the Ph.D. minor degree.

This degree offering became effective in Autumn Quarter 2010-11. Courses taken at Stanford prior to that date may be counted towards the BMI Ph.D. minor degree. A minor program adviser is assigned from the Biomedical Informatics Executive Committee or advising faculty.

*Committee:* Russ B. Altman (Chair and Program Director), Mark A. Musen (Co-Director), Steven C. Bagley (Executive Director), Manisha Desai, Michel Dumontier, Teri Klein, Daniel L. Rubin, Nigam Shah, Dennis P. Wall

*Participating Faculty and Staff by Department\**

*Biochemistry:* Douglas L. Brutlag (Professor Emeritus), Rhiju Das (Assistant Professor), Ronald Davis (Professor), James Ferrell (Professor), Julia Salzman (Assistant Professor), Julie Theriot (Professor)

*Bioengineering:* Russ B. Altman (Professor), Kwabena Boahen (Associate Professor), Markus Covert (Assistant Professor), Ingmar Riedel-Kruse (Assistant Professor)

*Biology:* Hunter Fraser (Assistant Professor), Dmitri Petrov (Professor), Jonathan Pritchard (Professor)

*Chemical and Systems Biology:* Joshua Elias (Assistant Professor), James Ferrell (Professor)

*Chemistry:* Vijay Pande (Professor)

*Computer Science:* Serafim Batzoglou (Professor), Gill Bejerano (Assistant Professor), David Dill (Professor), Leonidas Guibas (Professor), Anshul Kundaje (Assistant Professor), Daphne Koller (Professor), Terry Winograd (Professor Emeritus)

*Developmental Biology:* Gill Bejerano (Assistant Professor)

*Genetics:* Russ B. Altman (Professor), Steven C. Bagley (Senior Research Engineer), Michael Bassik (Assistant Professor), Carlos Bustamante (Professor), Atul Butte (Associate Professor), J. Michael Cherry (Professor, Research), Stanley N. Cohen (Professor), Ronald Davis (Professor), William Greenleaf (Assistant Professor), Teri E. Klein (Senior Research Scientist), Anshul Kundaje (Assistant Professor), Jin Billy Li (Assistant Professor), Stephen B. Montgomery (Assistant Professor), Jonathan Pritchard (Professor), Gavin Sherlock (Professor), Arend Sidow (Professor), Michael P. Snyder (Professor), Hua Tang (Associate Professor)

*Health Research and Policy:* Trevor Hastie (Professor), Mark Hlatky (Professor), Richard A. Olshen (Professor), Chiara Sabatti (Associate Professor), Robert Tibshirani (Professor)

*Management Science and Engineering:* Margaret Brandeau (Professor), Ross D. Shachter (Associate Professor)

*Medicine:* Russ B. Altman (Professor), Euan Ashley (Assistant Professor), Jayanta Bhattacharya (Associate Professor), Catherine Blish (Assistant Professor), Carol Cain (Consulting Assistant Professor), Stanley Cohen (Professor), Manisha Desai (Associate Professor), Michel Dumontier (Associate Professor), Andrew Gentles (Assistant Professor), Olivier Gevaert (Assistant Professor), Mary Goldstein (Professor), Michael Higgins (Consulting Associate Professor), Mark Hlatky (Professor), Hanlee P. Ji (Assistant Professor), Purvesh Khatri (Assistant Professor), Henry Lowe (Associate Professor), Mark A. Musen (Professor), Douglas K. Owens (Professor), Daniel R. Rubin (Assistant Professor), Robert W. Shafer (Professor, Research), Nigam Shah (Assistant Professor), Samson Tu (Senior Research Scientist), P.J. Utz (Professor)

*Microbiology and Immunology:* Karla Kirkegaard (Professor), Garry Nolan (Professor), Julie Theriot (Professor)

*Operations, Information and Technology:* Mohsen Bayati (Assistant Professor)

*Pathology:* Stephen B. Montgomery (Assistant Professor), Arend Sidow (Professor)

*Pediatrics:* Chris Longhurst (Clinical Associate Professor), Jonathan Palma (Clinical Assistant Professor), Dennis Wall (Associate Professor)

*Psychiatry and Behavioral Sciences:* Vinod Menon (Professor, Research)

*Radiation Oncology:* Lei Xing (Professor)

*Radiology:* Sam (Sanjiv) Gambhir (Professor), Parag Mallick (Assistant Professor, Research), Sandy A. Napel (Professor), David Paik (Consulting Assistant Professor), Sylvia Plevritis (Professor), Daniel L. Rubin (Associate Professor)

*Statistics:* Trevor J. Hastie (Professor), Susan Holmes (Professor), Art Owen (Professor), Chiara Sabatti (Associate Professor), Robert Tibshirani (Professor)

*Structural Biology:* Michael Levitt (Professor)

*Surgery:* Thomas Krumel (Professor)

\* Research opportunities are not limited to faculty and departments listed.

## Cancer Biology

Courses offered by the Cancer Biology Program are listed under the subject code CBIO on the Stanford Bulletin's ExploreCourses web site.

The Cancer Biology Program at Stanford University is an interdisciplinary program leading to the Ph.D. degree. During the past three decades, understanding of cancer has increased with the discovery of oncogenes, tumor suppressor genes, pathways of DNA damage and repair, chromatin remodeling, cell cycle regulation, angiogenesis, and responses to hypoxia, and recent glimpses into the molecular basis of metastasis and cancer stem cell biology. In addition, methods of parallel analysis including gene expression arrays, protein arrays, and tissue arrays have begun to refine and redefine the taxonomy of cancer diagnosis. This explosion of basic and clinical science has resulted in the first successful cancer chemotherapies and immunotherapies based on the knowledge of specific molecular targets. Stanford presents a unique environment to pursue interdisciplinary cancer research because the schools of Medicine, Humanities and Sciences, and Engineering are located on a single campus.

The goal of the Cancer Biology Ph.D. program is to provide students with education and training that enables them to make significant contributions to this field. Course work during the first year is designed to provide a broad understanding of the molecular, genetic, cell biological, and pathobiological aspects of cancer. Students also learn about the current state of the epidemiology, clinical diagnosis, treatment, and prevention of human cancers. Equally important during the first year is a series of three rotations in research laboratories chosen by each student. By the beginning of the second year, each student chooses a research adviser and begins work on the dissertation project. A qualifying examination must be completed by the end of the second year. An annual Cancer Biology conference at Chaminade in Santa Cruz, California, provides students with an opportunity to present their research to one another and to faculty. The expected time to degree is four to five years.

Students are not limited to a single department in choosing their research adviser. The Cancer Biology Ph.D. program currently has approximately

65 graduate students located in basic science and clinical departments throughout the School of Medicine and the School of Humanities and Sciences.

## Doctor of Philosophy in Cancer Biology

University requirements for the Ph.D. are described under the "Graduate Degrees (p. 45)" section of this bulletin.

A small number of applicants are admitted to the program each year. Applicants should have completed an undergraduate major in the biological sciences; applicants with undergraduate majors in physics, chemistry, or mathematics may be admitted if they complete background training in biology during the first two years of study. During the first year, each student is required to complete a minimum of three, one quarter laboratory rotations. Students must choose a dissertation adviser prior to the end of Summer Quarter, first year, but not before the end of Spring Quarter.

The requirements for the Ph.D. degree are as follows:

1. Training in biology equivalent to that of an undergraduate biology major at Stanford.
2. Completion of the following courses:

BIOS 200	Foundations in Experimental Biology (for students entering in 2012 or later. Students who entered in 2011 or earlier took GENE 203, Advanced Genetics.)	6
BIO 214	Advanced Cell Biology	4
CBIO 241	Cellular Basis of Cancer	4
Select one of the following:		
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	
BIOMEDIN 217	Translational Bioinformatics	
CSB 210	Cell Signaling	
GENE 211	Genomics	
GENE 212	Introduction to Biomedical Informatics Research Methodology	
SBIO 241	Biological Macromolecules	
CBIO 280	Cancer Biology Journal Club (required for first- and second-year graduate students in Autumn, Winter, and Spring quarters, totaling 6 units)	1
MED 255	The Responsible Conduct of Research	1

3. At least 6 units of additional cancer biology-related, graduate-level courses. Course work taken is determined in consultation with the student's adviser and/or the Program Director.
4. Presentation of research results at the annual Cancer Biology Conference on at least three occasions, at least one being an oral presentation.
5. Completion of a qualifying examination in Cancer Biology is required for admission to Ph.D. candidacy. The exam consists of an F31 NRSA-style written grant proposal not to exceed seven pages (excluding references) and an oral examination. The examining committee consists of three faculty members from the Cancer Biology Program and does not include the student's dissertation adviser. The composition of this committee is chosen by the student and dissertation adviser and must be submitted to and approved by the program director prior to the end of Autumn Quarter, second year. The qualifying examination must be taken prior to the end of Spring Quarter, second year. If necessary, one retake is permitted prior to the end of Summer Quarter, second year. After the qualifying examination has been completed, the student is required to form a dissertation reading committee that includes the student's adviser and three other members of the Academic Council with appropriate

expertise. Each student is required to arrange annual meetings (more frequently, if necessary) of the dissertation reading committee, at which time progress during the past year and a plan of study for the coming year are presented orally and discussed. Completion of each annual committee meeting must be communicated in writing to the program director by the adviser by the end of Spring Quarter each year.

The major accomplishment of each successful Ph.D. student is the presentation of a written dissertation resulting from independent investigation that contributes to knowledge in the area of cancer biology. An oral examination is also required for the Ph.D. degree. In the Cancer Biology Program, a public seminar (one hour) is presented by the Ph.D. candidate, followed by a closed-door oral examination. The oral examination committee consists of at least four examiners (the members of the doctoral dissertation reading committee) and a chair. The oral examination chair must be from outside the Cancer Biology Program faculty and may not have a full or joint appointment in the adviser's or student's home department. However, a courtesy appointment does not affect eligibility. The oral examination chair may be from the same department as any other member(s) of the examination committee. All members of the oral examination committee are normally members of the Academic Council, as the oral examination chair must be. With the prior approval of the program director or school dean, one of the examiners may be a person who is not a member of the Academic Council if that individual contributes expertise not otherwise available. Official responsibility for selecting the oral examination chair rests with the program. Cancer Biology delegates this to the student and dissertation adviser.

*Program Director:* Amato Giaccia (Radiation Oncology)

*Committee on Cancer Biology:* Steven Artandi (Medicine, Hematology), Jeffrey Axelrod (Pathology), Katrin Chua (Medicine, Endocrinology), Max Diehn (Radiation Oncology), Edward Graves (Radiation Oncology), Ashby Morrison (Biology), Sylvia Plevritis (Radiology), Jonathan Pollack (Pathology), Alejandro Sweet-Cordero (Pediatrics), Monte Winslow (Genetics)

### Participating Departments and Faculty

*Biochemistry:* Philip Beachy (Professor), Mark Krasnow (Professor), Julia Salzman (Assistant Professor)

*Bioengineering:* Jennifer Cochran (Associate Professor), Jan Liphardt, (Associate Professor), Lei Stanley Qi (Assistant Professor)

*Biology (School of Humanities and Sciences):* Martha Cyert (Professor), Scott J. Dixon (Assistant Professor), Judith Frydman (Professor), Or Gozani (Associate Professor), Ashby Morrison (Assistant Professor), W. James Nelson (Professor), Jan M Skotheim (Assistant Professor), Tim Stearns (Professor)

*Chemical And Systems Biology:* James K. Chen (Associate Professor), Karlene Cimprich (Professor), James E. Ferrell (Professor), Tobias Meyer (Professor), Mary Teruel (Assistant Professor)

*Dermatology:* Howard Y. Chang (Professor), Paul A. Khavari (Professor), M. Peter Marinkovich (Associate Professor), Anthony Oro (Professor), Kevin Wang (Assistant Professor)

*Developmental Biology:* Margaret Fuller (Professor), Seung Kim (Professor), Stuart Kim (Professor), Roeland Nusse (Professor), Matthew Scott (Professor)

*Genetics:* Michael Bassik (Assistant Professor), Anne Brunet (Associate Professor), Michele Calos (Professor), Stanley Cohen (Professor), Monte Winslow (Assistant Professor)

*Medicine/Endocrinology/Gerontology/Metabolism:* Katrin Chua (Associate Professor), Andrew R. Hoffman (Professor)

*Medicine/Gastroenterology and Hepatology:* Christine Cartwright (Professor), Anson Lowe (Associate Professor)

*Medicine/Hematology:* Steven Artandi (Professor), Linda Boxer (Professor), Calvin Kuo (Professor), Ravindra Majeti (Assistant Professor)

*Medicine/Oncology:* Ash Alizadeh (Assistant Professor), Gilbert Chu (Professor), Michael Clarke (Professor), Dean Felsher (Associate Professor), James Ford (Associate Professor), Hanlee Ji (Assistant Professor), Ronald Levy (Professor), Beverly S. Mitchell (Professor; Director, Stanford Cancer Institute), Mark Pegram (Professor), Rajat Rohatgi (Assistant Professor), Branimir Sikic (Professor)

*Microbiology and Immunology:* Helen M. Blau (Professor), Peter Jackson (Professor), Garry Nolan (Professor)

*Neurology and Neurological Sciences:* Thomas Rando (Professor)

*Neurology and Neurosurgery:* Yoon-Jae Cho (Assistant Professor), Michelle Monje (Assistant Professor)

*Neurosurgery:* Albert J. Wong (Professor)

*Orthopaedic Surgery:* Nidhi Bhutani (Assistant Professor)

*Otolaryngology:* John Sunwoo (Assistant Professor)

*Pathology:* Jeff Axelrod (Professor), Sean Bendall (Assistant Professor), Matthew Bogoy (Professor), Michael Cleary (Professor), Gerald Crabtree (Professor), Edgar Engleman (Professor), Andrew Fire (Professor), Isabella Graef (Assistant Professor), Joseph Lipsick (Professor), Bingwei Lu (Associate Professor), Jonathan Pollack (Associate Professor), Irving Weissman (Professor; Virginia & D.K. Ludwig Professor for Clinical Investigation in Cancer Research, Professor of Developmental Biology), Marius Wernig (Assistant Professor)

*Pediatrics/Cancer Biology:* Matthew Porteus (Associate Professor), Julien Sage (Associate Professor), Alejandro Sweet-Cordero (Associate Professor)

*Pediatrics/Cardiology:* Marlene Rabinovitch (Professor)

*Pediatrics/Endocrinology:* Brian Feldman (Assistant Professor)

*Pediatrics/Human Gene Therapy:* Mark Kay (Professor)

*Pediatrics/Hematology/Oncology:* Harvey Cohen (Professor), Kathleen Sakamoto (Professor)

*Pediatrics/Neonatal & Developmental Medicine:* Christopher Contag (Professor)

*Radiation Oncology/Radiation Biology:* Laura Attardi (Associate Professor), Amato Giaccia (Professor; Director, Stanford University Cancer Biology Program)

*Radiation Oncology/Radiation Physics:* Edward Graves (Associate Professor)

*Radiation Oncology/Radiation Therapy:* Max Diehn (Assistant Professor), Susan Knox (Associate Professor), Albert Koong (Professor), Quynh-Thu Le (Professor)

*Radiology/Diagnostic Radiology:* Parag Mallick (Assistant Professor, Research), Sylvia Plevritis (Associate Professor), Jianghong Rao (Associate Professor)

*Structural Biology:* William Weis (Professor)

*Urology:* Donna Peehl (Professor, Research), Zijie Sun (Associate Professor)

## Chemical and Systems Biology

Courses offered by the Department of Chemical and Systems Biology are listed under the subject code CSB on the (<https://explorecourses.stanford.edu/search?q=CSB&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-CSB=on&filter-catalognumber-CSB=on>) Stanford Bulletin's ExploreCourses web site.

The department emphasizes individualized training at the interface of physical science and biomedical science. The program encourages students to draw upon a variety of modern scientific techniques, ranging from recent advances in molecular biology and protein biochemistry to synthetic organic chemistry and single cell imaging. Graduate students in the department take courses in signal transduction networks, chemical biology, and other areas of importance to their research goals.

## Master of Science in Chemical and Systems Biology

Students in the Ph.D. program may apply for an M.S. degree after having satisfactorily completed the course and laboratory requirements of the first two years. The degree also requires a written thesis based on literature or laboratory research. Postdoctoral research training is available to graduates having the Ph.D. or M.D. degree.

## Doctor of Philosophy in Chemical and Systems Biology

University requirements for the Ph.D. are described in the "Graduate Degrees (<http://exploreddegrees.stanford.edu/schoolofmedicine/chemicalandsystemsbiology/%20/graduatedegrees>)" section of this bulletin.

The Department of Chemical and Systems Biology offers interdisciplinary training to prepare students for independent careers in biomedical science. The main focus of the program is cell signaling, chemical biology, and systems biology.

The program leading to the Ph.D. degree includes formal and informal study in chemical biology, systems biology, drug discovery, biochemistry, and other areas of relevance to the interests of particular students. First-year students spend one quarter in each of three different laboratories, working closely with other graduate students, a professor, and postdoctoral fellows on various research projects. During the fourth quarter, the student chooses a faculty mentor with whom to undertake thesis research, based on available positions and the student's interest. During or before the eighth quarter of study, students must pass a qualifying exam which consists of an oral exam on general knowledge and a defense of a research proposal. Course requirements are fulfilled during the first two years of study; the later years of the four- to six-year program are devoted to full-time dissertation research. Close tutorial contact between students and faculty is stressed throughout the program.

Research opportunities also exist for medical students and undergraduates. The limited size of the labs in the department allows for close tutorial contact between students, postdoctoral fellows, and faculty.

The department participates in the four quarter Health and Human Disease and Practice of Medicine sequence which provides medical

students with a comprehensive, systems-based education in physiology, pathology, microbiology, and pharmacology.

*Emeriti: (Professors)* Robert H. Dreisbach, Avram Goldstein, Dora B. Goldstein, Tag E. Mansour, Oleg Jardetzky, Richard A. Roth, James P. Whitlock

## Comparative Medicine

Courses offered by the Department of Comparative Medicine are listed under the subject code COMPMED on the Stanford Bulletin's ExploreCourses web site.

The Department of Comparative Medicine at Stanford is an academic, basic science department, the department is comprised of eleven faculty, eight of whom are veterinarians. All of our faculty members are immersed in laboratory animal science and translational research. They teach at the undergraduate, graduate, professional and post-graduate levels. Our clinical and basic science faculty welcome, review and accept student candidates for participation in research projects. The Department of Comparative Medicine was established at Stanford in 1990.

The Department's faculty are also engaged in collaborative and comparative research, with animal model expertise and programs in veterinary pathology, pain and anesthesia, rodent reproductive biology, infectious disease, cancer, bioengineering, animal welfare and neuroscience. In addition, the veterinary faculty in the Department of Comparative Medicine have oversight responsibility for the campus-wide animal research program and provide clinical service in the Veterinary Service Center. Our mission is to advance human and animal health through outstanding research, veterinary care and training.

## Master of Science in Laboratory Animal Science

This degree is designed for individuals who wish to undertake in-depth study of biomedical research focusing on animal modeling and bio-methodology, laboratory animal science, organizational management and facility design, regulation and compliance, and animal welfare.

The first year involves acquiring concepts and tools through course work and research project involvement. All first- and second-year students are expected to devote 50 percent or more of their time participating in research projects. Research rotations are not required, but can be done with approval of the academic adviser or training program director. This degree requires a master's thesis project to be approved by two faculty members.

## Admissions Requirements

Applicants must have a bachelor's degree from an accredited U.S. college or University or an equivalent international institution. Applicants should have completed courses in at least two of the following areas:

- Genetics
- Molecular Biology
- Chemistry
- Physiology

Official transcripts from all postsecondary institutions where courses were attempted or completed are also required. Applicants must submit GRE scores obtained within the last five years and three letters of reference must be provided with at least one from a science professor.

## Degree Requirements:

1. At least 45 units of academic work, all of which must be in courses at or above the 100 level, 36 units of which must be at or above the 200 level.
2. At least 3 quarters of graduate research, COMPMED 399.
3. Completion of a biostatistics course.
4. Students must complete a master's thesis, which may take the following form:
  - a. Original analysis of original data
  - b. A comprehensive literature review with a meta-analysis of data or a critical reanalysis of data.
  - c. Evaluation of a methodological problem using real data
  - d. A comprehensive literature review with a grant proposal (NIH style format) for a new study to bridge a gap in the existing knowledge.
5. Participation in the Comparative Medicine journal club, and attendance at the Laboratory Animal Medicine seminar series.

## Master of Science in Laboratory Animal Science (Coterminal)

The coterminal degree program allows Stanford University undergraduates to study for a master's degree while completing their bachelor's degree(s) in the same or a different department. See the "Coterminal Degrees" section of this bulletin for additional information.

The coterminal Master of Science program follows the same program requirements as the Master of Science. The coterminal degree is available only to current Stanford undergraduates. Coterminal students are enrolled full-time and courses are taken on campus. Their added year focuses on biostatistics, the research laboratory experience, and animal modeling. The specific curriculum is tailored to the students' needs. This degree requires a written research paper to be approved by two faculty members.

Programs of at least 45 Stanford units that meet the following guidelines are normally approved:

1. Completion of the core requirements with overall GPA of 3.0.
2. Students are expected to participate regularly in Comparative Medicine journal club, and attendance at the Laboratory Animal Medicine seminar series.

3. Electives: additional courses to bring the total to 45 or more units taken at Stanford to fulfill the University's residency requirement.

### University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 42)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 46)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate adviser be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

*Chair:* Sherril Green

*Professors:* Donna M. Bouley, Paul Buckmaster, Sherril Green, Shaul Hestrin

## Developmental Biology

Courses offered by the Department of Development Biology are listed under the subject code DBIO on the Stanford Bulletin's ExploreCourses web site.

A fundamental problem in biology is how the complex set of multicellular structures that characterize an adult animal is generated from the fertilized egg. Recent advances at the molecular level, particularly with respect to the genetic control of development, have been explosive. These advances represent the beginning of a major movement in the biological sciences toward the understanding of the molecular mechanisms underlying developmental decisions and the resulting morphogenetic processes. This new thrust in developmental biology derives from the extraordinary methodological advances of the past decade in molecular genetics, immunology, and biochemistry. However, it also derives from groundwork laid by the classical developmental studies, the rapid advances in cell biology and animal virology, and from models borrowed from prokaryotic systems. Increasingly, the work is directly related to human diseases, including oncogene function and inherited genetic disease.

The Department of Developmental Biology includes a critical mass of scientists who are leading the thrust in developmental biology and who can train new leaders in the attack on the fundamental problems of

development. Department labs work on a wide variety of organisms from microbes to worms, flies, and mice. The dramatic evolutionary conservation of genes that regulate development makes the comparative approach of the research particularly effective. Scientists in the department labs have a very high level of interaction and collaboration. The discipline of developmental biology draws on biochemistry, cell biology, genetics, molecular biology, and genomics. People in the department have a major interest in regenerative medicine and stem cell biology.

The department is located in the Beckman Center for Molecular and Genetic Medicine within the Stanford University Medical Center.

## Master of Science in Developmental Biology

University requirements for the M.S. are described in the "Graduate Degrees (p. 45)" section of this bulletin.

Students in the Ph.D. program in Developmental Biology may apply for an M.S. degree, assuming completion of their course requirements and preparation of a written proposal. The master's degree awarded by the Department of Developmental Biology does not include the possibility of minors for graduate students enrolled in other departments or programs.

Students are required to take, and satisfactorily complete, at least three lecture courses offered by the department, including DBIO 210 Developmental Biology. In addition, students are required to take three courses outside the department. Students are also expected to attend Developmental Biology seminars and journal clubs. In addition, the candidate must complete a research paper proposing a specific experimental approach and background in an area of science relative to developmental biology.

## Doctor of Philosophy in Developmental Biology

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 45)" section of this bulletin.

The graduate program in Developmental Biology leads to the Ph.D. degree. The department also participates in the Medical Scientists Training Program (MSTP (<http://mstp.stanford.edu>)) in which individuals are candidates for both the M.D. and Ph.D. degrees.

### Units

Students are required to complete at least five courses, including:

DBIO 210	Developmental Biology	4
DBIO 215	Frontiers in Biological Research (1 unit per quarter; students are required to take at least two quarters)	2
An advanced graduate course in genetics or genomics;		
An advanced graduate course in cell biology of biochemistry;		
A course in quantitative or computational biology.		

Students are expected to attend Developmental Biology seminars and journal clubs.

Completion of a qualifying examination is required for admission to Ph.D. candidacy. The examination consists an off-topic proposal on a subject different from the dissertation research. The final requirements of the program include presentation of a PhD dissertation as the result of independent investigation and constituting a contribution to knowledge in the area of developmental biology. The student must pass the University oral examination, taken only after the student has substantially completed research. The examination is preceded by a public seminar in

which the research is presented by the candidate. The oral examination is conducted by a dissertation reading committee.

*Emeriti: (Professors)* David S. Hogness, A. Dale Kaiser, Harley McAdams, Ellen Porzig

*Chair:* Roeland Nusse

*Associate Chair:* David Kingsley

*Professors:* Ben Barres, Philip Beachy, Gerald Crabtree, Margaret Fuller, Seung Kim, Stuart Kim, David Kingsley, Roeland Nusse, Lucy Shapiro, William Talbot, Anne Villeneuve, Irving Weissman

*Associate Professors:* Gill Bejerano, James Chen, Joanna Wysocka

*Assistant Professors:* Maria Barna, Daniel Jarosz

## Genetics

Courses offered by the Department of Genetics are listed under the subject code GENE on the Stanford Bulletin's ExploreCourses web site.

An underlying theme in the department is that genetics is not merely a set of tools but a coherent and fruitful way of thinking about biology and medicine. To this end, the department emphasizes a spectrum of approaches based on molecules, organisms, populations, and genomes. It provides training through laboratory rotations, dissertation research, seminar series, didactic and interactive course work, and an annual three-day retreat of nearly 200 students, faculty, postdoctoral fellows, and research staff.

The mission of the department includes education and teaching as well as research; graduates from our program pursue careers in many different venues including research in academic or industrial settings, health care, health policy, and education. The department is especially committed to increasing diversity within the program, and to the training of individuals from traditionally underrepresented minority groups.

## Master of Science in Human Genetics

The University requirements for the M.S. are described in the "Graduate Degrees (<http://www.stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin.

The Department of Genetics offers an M.S. in Human Genetics, which is accredited by the American Board of Genetic Counseling. This program prepares students to practice in the healthcare profession of genetic counseling. The program is a full time two-year program, and accepts students to begin the program only in Autumn Quarter. Students must be admitted directly into this program, and cannot automatically transfer from the Ph.D. programs within the department, or vice versa. While courses are oriented primarily towards genetic counseling students, they may also be taken by medical students, other graduate students, residents or post-doctoral fellows, and (with permission) undergraduates.

The degree requires the completion of clinical rotations and an approved research project.

Students must also complete:

- required course work:

GENE 271	Human Molecular Genetics	4
GENE 272	Introduction to Medical Genetics	2-3
GENE 273	Introduction to Clinical Genetics Testing	1
GENE 274A	A Case Based Approach to Clinical Genetics	2
GENE 274B	A Case Based Approach to Clinical Genetics	2
GENE 275	Role Play and Genetic Counseling Observations	2

GENE 276	Genetic Counseling Clinical Rotations	4-7
GENE 278	Prenatal Genetic Counseling	1
GENE 279	Pediatric and Adult Genetic Counseling	1
GENE 280	Metabolic Genetic Counseling	1
GENE 281	Cancer Genetic Counseling	1
GENE 282A	Genetic Counseling Research Seminar	1
GENE 282B	Genetic Counseling Research Seminar	1
GENE 283	Genetic Counseling Research	1-8
GENE 284	Medical Genetics Seminar	1-2
GENE 285A	Genetic Counseling Seminar	2-3
GENE 285B	Genetics Counseling Seminar	2
GENE 285C	Genetic Counseling Seminar	2
GENE 286	Advanced Genetic Counseling Seminar	2

- several additional required courses (bioethics, research ethics and developmental biology),
- and are encouraged to take 2-4 elective courses of their choice, including a research methods elective.

Faculty members include members of the Stanford faculty from Genetics, Pediatrics, Obstetrics, Pathology, Developmental Biology, Biomedical Ethics, Law, and Psychology, and practicing genetic counselors and clinical geneticists in various medical centers across the Bay Area.

Applications are due in December (see web site) for admission in the following Autumn Quarter. Applicants should demonstrate a combination of academic preparation, exposure to genetic counseling, and counseling and/or laboratory experiences. Exposure to persons with disabilities or chronic illness is also helpful. Additional information about the program is available at Stanford's Master's Program in Human Genetics (<http://www.med.stanford.edu/genetic-counseling>) web site.

## Doctor of Philosophy in Genetics

University requirements for the Ph.D. degree are described in the "Graduate Degrees (p. 45)" section of this bulletin.

The Ph.D. program in the Department of Genetics offers graduate students the opportunity to pursue a discipline that encompasses both a set of tools and a coherent way of thinking about biology and medicine. All major areas of genetics and genomics are represented in the department, including human genetics (molecular identification of Mendelian traits and the pathophysiology of genetic disease, gene therapy, genetic epidemiology, analysis of complex traits, genome functional analysis and human evolution), and application of model organisms such as bacteria, yeast, flies, worms, and mice to basic and translational areas of biomedical research. The department is especially strong in genomic and bioinformatic approaches to genome biology and evolution, and includes several genome-scale databases and Centers such as the Center for Genomics and Personalized Medicine (SCGPM), Saccharomyces Genome Database (SGD), the Stanford Microarray Database (SMD), and the Pharmacogenetics and Pharmacogenomics Knowledge Base (PharmGKB), the ENCODE project and the Stanford Genome Technology Center (SGTC).

Exposure to the intellectual scope of the department is provided by laboratory rotations, dissertation research, advanced courses in genetics and other areas of biomedical science, seminar series, journal clubs, and an annual three-day retreat of faculty, students, postdoctoral fellows, and staff scientists. Emphasis is placed on interactions and collaborations among students, postdoctoral students, and faculty within the department and throughout the campus.

During their first year, graduate students in the department take graduate courses and sample areas of research by carrying out rotations in three or four laboratories. At the end of the first three quarters, students may select a laboratory in which to do their dissertation

research. While the dissertation research is generally performed in one laboratory, collaborative projects with more than one faculty member are encouraged. In addition to interacting with their faculty adviser, graduate students receive advice regularly from other faculty members who serve as members of their dissertation committee. Study for the Ph.D. generally requires between four and five years of graduate work, most of which is focused on dissertation research.

Students are generally enrolled in the program to receive the Ph.D. degree, although a limited number of M.D. candidates can combine research training in genetics with their medical studies. Ph.D. candidates who have passed the qualifying exam in the second year can opt to receive the M.S. as a terminal degree.

There are opportunities for graduate students to teach in graduate-level and professional-school courses. In addition, students have the opportunity to participate in educational outreach activities coordinated by the department, which include opportunities to interact with secondary school students and teachers, lay groups, and local science museums.

Students who have recently received a bachelor's, master's, M.D., or Ph.D. degree in related fields may apply for graduate study. Prospective students must have a background in biology, mathematics, physics, and chemistry. Decisions for admission are based on comparison of the relative merits of all the candidates' academic abilities and potential for research and the department's interest in promoting a diverse learning environment. Interviews take place in late February or early March and successful applicants are offered admission by early spring. Students who wish to pursue a combined M.D./Ph.D. degree are considered for admission into the graduate program in the department after they have been admitted to the M.D. program in the School of Medicine.

Students begin graduate studies in Autumn Quarter. Prospective students are encouraged to start the application process early to ensure that they are able to submit a complete application by the December deadline. All students accepted into the Ph.D. program in the Department of Genetics are provided with full tuition and a stipend. Two training grants from the National Institutes of Health provide major support for the graduate training program in the department. Other student support is provided by departmental funds and from research grants, both federal and private, of the faculty. In addition, a number of graduate students are funded by fellowships, including those from the National Science Foundation and the Stanford Graduate Fellows program.

## Health Research and Policy

Courses offered by the Department of Health Research and Policy are listed under the subject code HRP on the Stanford Bulletin's ExploreCourses web site.

The Department of Health Research and Policy has three principal areas of scholarly interest:

1. Biostatistics deals with scientific methodology in the medical sciences, emphasizing the use of statistical techniques.
2. Epidemiology is the study of the distribution and determinants of illness and impairment in human populations. Epidemiology training provides analytic tools for clinical and translational research, including studies of disease etiology, prevention, and therapy.
3. Health Services Research is concerned with many aspects of health policy analysis in the public and private sectors

### Graduate Programs in Health Research Policy

The Program in Epidemiology and the Program in Health Services Research are housed in the Department of Health Research and Policy. These programs offer M.S. degrees in Epidemiology and in Health Services Research. Students with an interest in pursuing advanced degrees with an emphasis on biostatistics can do so through programs offered by the Department of Statistics. Division of Biostatistics faculty participate in these programs.

For additional information, address inquiries to the Educational Coordinator, Department of Health Research and Policy, Stanford University School of Medicine, HRP Redwood Building, Room T-152F, Stanford, California 94305-5405.

### Master of Science in Health Policy

The master's degree program in Health Policy seeks to train students in the quantitative analysis of issues in health and medical care. The program emphasizes an individually designed program of course work and completion of a master's project under the mentorship of a faculty member. The typical student in the program is either a physician who has completed residency training and is preparing for a research career, or a student with a strong background in policy analysis who wishes to focus on problems in health or medical care. Faculty interests include outcomes research, health economics, health care organization, health care access, quality of care, decision analysis, clinical guidelines, and assessment of patient preferences and quality of life.

University requirements for the M.S. degree are described in the "Graduate Degrees (p. 45)" section of this bulletin.

To receive the degree, students are expected to demonstrate knowledge of issues in health policy and the quantitative skills necessary for research in this area. Students must take at least 45 units of course work and write a University thesis. The course work requirements are:

1. At least 8 units from the following group of Health Research and Policy (HRP) core courses:

		Units
HRP 256	Economics of Health and Medical Care	5
HRP 391	Health Law: Finance and Insurance	3
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4
Total Units		12

2. At least 6 units of graduate-level statistics courses.

HRP 261 & HRP 262	Intermediate Biostatistics: Analysis of Discrete Data and Intermediate Biostatistics: Regression, Prediction, Survival Analysis (strongly recommended)	6
Total Units		6

3. At least 3 units of:

HRP 283	Health Services Research Core Seminar	1
Total Units		1

4. At least 15 units:

HRP 299 or HRP 399	Directed Reading in Health Research and Policy Graduate Research	1-18
Total Units		1-18

5. An additional set of approved elective courses to complete the program total of at least 45 units.

For additional information, address inquiries to the Educational Coordinator, Department of Health Research and Policy, Stanford University School of Medicine, HRP Redwood Building, Room T138C, Stanford, California 94305-5405.

## Master of Science in Epidemiology

The Graduate Program in Epidemiology offers instruction and interdisciplinary research opportunities leading to the M.S. degree in Epidemiology. Epidemiology is the study of the distribution and determinants of illness and impairment in human populations. It is important in its own right, and epidemiologic methods are used by clinical investigators and by other scientists who conduct observational and experimental research on the identification, prevention, and treatment of human disorders.

Core and affiliated faculty come from the Department of Health Research and Policy; other Stanford University departments, and notable Bay Area research facilities. The Program has particular strengths in cancer epidemiology, cardiovascular disease epidemiology, infectious disease epidemiology, musculoskeletal disease epidemiology, neuroepidemiology, and aspects of epidemiologic methods, genetic epidemiology, and reproductive epidemiology and women's health.

The mission of the Stanford University School of Medicine is to be a premier research-intensive medical school that improves health through leadership and collaborative discoveries and innovation in patient care, education and research. With support from a NIH Clinical and Translational Science Award, the graduate program in Epidemiology fosters this mission through the training of physician investigators in techniques of clinical research. The department also considers students from other disciplines who would benefit from formal training in epidemiologic methods.

A typical student has the M.D. degree and is in the fellowship stage of his or her postgraduate training, or in an early stage of faculty development. Other students may not have prior clinical training. These may include behavioral, social, and life scientists; law students; and students with the baccalaureate degree. They may wish to bring an epidemiologic orientation to their research or practice, or they may be considering careers in epidemiology or a related discipline.

University requirements for the M.S. degree are described in the "Graduate Degrees (p. 45)" section of this bulletin. Other programmatic requirements are in Graduate Program in Epidemiology, Information and

Guidelines, available from the educational coordinator in the Department of Health Research and Policy.

To receive the M.S. degree, students are expected to obtain a grounding in epidemiologic methods and applied biostatistics and to demonstrate research skills through the completion of a thesis. Students must complete at least 45 units of course work:

1. Epidemiologic methods:

Units	HRP 225	Design and Conduct of Clinical and Epidemiologic Studies	3-4
	HRP 226	Advanced Epidemiologic and Clinical Research Methods	3-4
	HRP 251	Design and Conduct of Clinical Trials	3

Units

2. Biostatistics:

	HRP 259	Introduction to Probability and Statistics for Epidemiology	3-4
	HRP 261	Intermediate Biostatistics: Analysis of Discrete Data	3
	HRP 262	Intermediate Biostatistics: Regression, Prediction, Survival Analysis	3

3. Research seminars:

	HRP 236	Epidemiology Research Seminar (at least 3 units)	1
--	---------	--	---

4. Research:

	HRP 399	Graduate Research (at least 12 units)	1-18
--	---------	---------------------------------------	------

5. Research conduct:

	MED 255	The Responsible Conduct of Research	1
	Attend a Human Subjects Institutional Review Board meeting.		

6. Additional approved selective and elective courses to complete the program total of at least 45 units.

Students are assigned a methodology mentor from the Department of Health Research and Policy, and they also select a research mentor, who may be from another department. For physicians, the research mentor is often an affiliated faculty member from the department of the student's clinical specialty.

## Ph.D. in Epidemiology and Clinical Research

### Overview

The field of epidemiology is poised to undergo major changes, and this Ph.D. program offers a cutting-edge curriculum that reflects this shift. Driven by technological advancements, the availability of very large datasets, and the omics revolution, epidemiology is moving toward what some have called Big Epidemiology, where epidemiologists partner with other scientists to study vast amounts of data. Thus, this program will train epidemiologists and clinical researchers to be savvy in technology, computing, data mining, bioinformatics, and genomics. The curriculum capitalizes on Stanford's unique strengths in these disciplines.

After matriculating, students will meet with their academic advisers to plan out an individually tailored curriculum. Students who matriculate with prior training in epidemiology and statistics may replace introductory core courses with more advanced courses, subject to

approval. Beyond core course requirements, students select electives that delve deeper into a particular area of specialization of their choosing. Innovative online learning approaches will help meet the needs of physician-students, who will also be busy with clinical duties.

Students will take core courses in epidemiology and biostatistics. In addition to these core courses, Ph.D. students must additionally take 3 "big epidemiology" elective courses in three key areas:

1. an advanced quantitative course (encompassing statistics, computer science, or economics)
2. a big data course
3. a genetics/genomics/bioinformatics course.

## Degree Requirements

University requirements for the Ph.D. are described in the "Graduate Degrees (<http://stanford.edu/dept/registrar/bulletin/4901.htm>)" section of this bulletin.

Ph.D. students must complete a minimum of 135 units (as per University requirements), including 45 course units exclusive of HRP 236 Epidemiology Research Seminar, HRP 299 Directed Reading in Health Research and Policy, and HRP 399 Graduate Research .

### Epidemiologic methods sequence

HRP 225	Design and Conduct of Clinical and Epidemiologic Studies	3-4
HRP 226	Advanced Epidemiologic and Clinical Research Methods	3-4
HRP 251	Design and Conduct of Clinical Trials	3

### Biostatistics sequence

HRP 259	Introduction to Probability and Statistics for Epidemiology	3-4
HRP/STATS 261	Intermediate Biostatistics: Analysis of Discrete Data	3

### "Big Epidemiology" elective course

Take one of the following advanced quantitative courses 3-4

Any 200-level STATS course (other than STATS 260)		
STATS 116	Theory of Probability	
HRP 216	Analytical and Practical Issues in the Conduct of Clinical and Epidemiologic Research	
HRP/STATS 262	Intermediate Biostatistics: Regression, Prediction, Survival Analysis	
HRP 252	Outcomes Analysis	
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	
HRP/MED 206/STATS 211	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	

### Big data course

Take one of the following big data courses 3-4

BIOMEDIN 215	Data Driven Medicine	
CS 246	Mining Massive Data Sets	
STATS 202	Data Mining and Analysis	
CS 229A		

### Genetics/genomics/bioinformatics course

Take one of the following genetics/genomics/bioinformatics courses 3-4

HRP 228	Genetic Epidemiology	
BIOMEDIN 217/CS 275	Translational Bioinformatics	
GENE 244	Introduction to Statistical Genetics	

BIOMEDIN 258		
GENE 224	Principles of Pharmacogenomics	
CS 262	Computational Genomics	
BIOMEDIN/DBIO/CS 273A	A Computational Tour of the Human Genome	
GENE 210/DBIO 220	Genomics and Personalized Medicine	
STATS 345	Statistical and Machine Learning Methods for Genomics	
GENE 245	Statistical and Machine Learning Methods for Genomics	
STATS 166		
<b>Other core courses/requirements</b>		
HRP 236	Epidemiology Research Seminar ((take at least 6 quarters))	6
MED 255	The Responsible Conduct of Research	1
<b>Electives</b>		
Take electives chosen in consultation with the academic adviser to total 135 units.		64-71
<b>Total Units Required</b>		135

## Additional Requirements

1. Attendance at one meeting of the Human Subjects Panel (Institutional Review Board).
2. Attendance at one meeting of the GCRC Protocol Review Committee.
3. R Proficiency: students must show proficiency in the computing language R or must take an approved course in R.
4. Each doctoral student must also serve as a teaching assistant for at least one quarter in either an epidemiology core course, a biostatistics course, or an approved elective course.
5. Doctoral students fulfill the remaining University unit requirements through doctoral dissertation work.

## Ph.D. in Health Policy

Stanford Health Policy, through the Department of Health Research and Policy at the Stanford University School of Medicine, offers a Ph.D. program which promises to educate students to be scholarly leaders in the field of health policy, and to be highly knowledgeable about the theoretical and empirical approaches that can be applied in the development of improvements in health policy and the health care system. The curriculum offers courses across a wide range of health policy areas including health economics, health insurance and government program operation, health financing, international health policy and economic development, cost-effectiveness analysis and the evaluation of new technologies, relevant statistical and methodological approaches, and health policy issues related to public health concerns such as obesity and chronic disease.

In addition to taking a set of core courses, students are expected to complete course work in one of two tracks:

- *Health Economics*: including the economic behavior of individuals, providers, insurers, and governments and how their actions affect health and medical care.
- *Decision Sciences*: with quantitative techniques to assess the effectiveness and value of medical treatments and for decision making about medical care at the individual and/or collective level.

## How to Apply?

Applications and supporting documents (see below) must be submitted through Stanford's Office of Graduate Admissions by December 7, 2015.

Applications are evaluated based on the applicant's commitment to and aptitude for a career in health policy research as demonstrated via transcripts, and described in a statement of purpose, relevant work and research experience, and letters of recommendation. The Graduate Record Examination (GRE) is required. Applicants from non-English speaking countries should provide evidence of competence in English on the Test of English as a Foreign Language (TOEFL). See the Graduate Admission web site (<https://gradadmissions.stanford.edu/about/frequently-asked-questions/gre-and-toefl>) for further information on GRE and TOEFL requirements and exemptions.

### Required Supporting Documents (in addition to Stanford's central application form):

- Statement of Purpose that includes the specialization track and policy area(s) of interest
- Three letters of recommendation
- Official GRE General Test scores
- Official TOEFL scores (if necessary)
- Official transcripts for all college/university degrees and courses
- CV with relevant work and research experience

*Note:* While not required, it is recommended that applicants have, or plan to have at the time of matriculation, mathematical skill at the level at the level of multivariate calculus, and one course each in linear algebra, analysis, probability, and statistics.

### Interviews:

Applicant interviews, if offered, will be held February 4, 5, and 8, 2016.

## Requirements

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 45)" section of this bulletin.

### First Year

- Completion of first year course work with minimum grades of 'B'.
- Individual development plan (IDP) meeting with primary adviser within the first quarter.
- Meeting with adviser(s) on a regular basis, to be determined with adviser(s).

### Second Year

- Completion of course work with minimum grades of 'B'.
- Final course work must total at least 40 units for core courses, and 40 units for area of specialization.
- Individual development plan (IDP) meeting with primary adviser before the end of Autumn Quarter.
- Meeting with adviser(s) on a regular basis, to be determined with adviser(s).

### Third and Fourth Years

- Advancement to PhD Candidacy (see below).
- Individual development plan (IDP) meeting with primary adviser before the end of Autumn Quarters.
- Meeting with adviser(s) on a regular basis, to be determined with adviser(s).

### Course Work

Complete course work in one of the following two tracks.

## Health Economics Track

Units

### Statistical Data Analysis, Econometrics, and Casual Inference

Required:		
ECON 270	Intermediate Econometrics I	2-5
ECON 271	Intermediate Econometrics II	2-5
ECON 272	Intermediate Econometrics III	2-5

### Micro-Economics

ECON 202N	Microeconomics I For Non-Economics PhDs	2-5
ECON 203N	Microeconomics II For Non-Economics PhDs	2-5

### Discipline-Specific Courses

Required course:		
ECON 204	Microeconomics III	2-5

Choose 2 of the following 4 fields in economics and complete 2 courses in each:

Development Economics

Public Finance

Labor Economics

Industrial Organization

### Health Policy

Required:		
HRP 252	Outcomes Analysis	4
HRP 256	Economics of Health and Medical Care	5
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4

Choose 3 additional health-related courses such as:

ECON 249	Topics in Health Economics	2-5
HRP 391	Health Law: Finance and Insurance	3
LAW 762	Health Law: Improving Public Health	3
LAW 727	Health Law: Quality and Safety of Care	3

### Practice of Research

Required:		
First-year core tutorial		
Second-year core tutorial		
Research in Progress Seminar		
Health Economics Seminar		

## Decision Science Track

Units

### Statistical Data Analysis, Econometrics, and Casual Inference

Required; complete one of the two following sequences:		
ECON 270	Intermediate Econometrics I	2-5
ECON 271	Intermediate Econometrics II	2-5
ECON 272	Intermediate Econometrics III	2-5

Or

HRP 261	Intermediate Biostatistics: Analysis of Discrete Data	3
HRP 262	Intermediate Biostatistics: Regression, Prediction, Survival Analysis	3

### Micro-Economics

ECON 202N	Microeconomics I For Non-Economics PhDs	2-5
ECON 203N	Microeconomics II For Non-Economics PhDs	2-5

### Discipline-Specific Courses

Required:		
HRP 263	Advanced Decision Science Methods and Modeling in Health	3
HRP 206	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	3

Choose 4 methods courses such as:

MS&E 201	Dynamic Systems	3-4
MS&E 211	Linear and Nonlinear Optimization	3-4
MS&E 223	Simulation	3
MS&E 252	Decision Analysis I: Foundations of Decision Analysis	3-4
MS&E 263	Healthcare Operations Management	3

#### Health Policy

Required:

HRP 252	Outcomes Analysis	4
HRP 256	Economics of Health and Medical Care	5
HRP 392	Analysis of Costs, Risks, and Benefits of Health Care	4

Choose 3 additional health-related courses such as:

HRP 391	Health Law: Finance and Insurance	3
LAW 762	Health Law: Improving Public Health	3
LAW 727	Health Law: Quality and Safety of Care	3

#### Practice of Research

Required:

- First-year core tutorial
- Second-year core tutorial
- Research in Progress Seminar

### Ph.D. Candidacy

- Submission and approval of Ph.D. candidacy paper by end of the second year.
- Either between second and third year, or during Autumn Quarter of the third year, students must pass an oral and written qualifying exam.
- Approval by advisors.

### Ph.D. Dissertation:

- Must present a Ph.D. dissertation that is the result of independent investigation and that constitutes a contribution to knowledge in health services research and health policy.
- Must select a primary dissertation adviser and at least two additional faculty members to serve on the dissertation committee.
- Presentation of a prospectus outlining the proposed research to the committee (normally as part of the qualifying examination).
- Receipt of written approval from the dissertation committee chair.
- Passing of the University oral examination, taken after the student has substantially completed his or her research, before their thesis committee (primary and secondary advisers, additional members including a University chair from outside the program).
- Oral exam is an oral presentation of thesis work followed by questions about work and/or other areas of research deemed relevant to the research.
- Orals should occur a few months before completion of research.
- Submission of a final draft of the work signed by all members of the dissertation committee.

### Advising

All matriculating students are assigned a faculty adviser from the group of core faculty to help them design their academic program. Students remain with this adviser until the time that they have developed other arrangements for advising.

Students are expected to identify a group of normally three thesis advisers before or, at the latest, shortly after the time that they advance to candidacy for the degree. This group consists of one primary and two secondary advisers, who may or may not be the same as the initially

assigned faculty adviser. The primary adviser must be from the group of core faculty, unless specific approval of the executive committee is obtained. Such approval would not be routinely granted. However, in rare cases, it may be optimal for a student's progress to implement a co-primary mentor arrangement in which a core faculty member from health policy and another faculty member from outside the core faculty jointly serve as primary mentors. This arrangement might occur in rare circumstances with students seeking to integrate areas of science into their policy training that are outside the expertise of the core faculty.

Secondary advisers are normally expected to come from the core faculty, but could include faculty from outside the core group upon approval of the executive committee. Students are encouraged to seek advisers with complementary expertise as needed, and the Director of Graduate Studies and executive committee monitor advising arrangements to ensure that students receive adequate supervision.

### Funding

Though circumstances may be different from one student to another, the program anticipates being able to provide and/or help students obtain financial support for the 4 years of the program.

## Health Research and Policy

*Emeriti: (Professors)* Dan Bloch, John Farquhar, Victor R. Fuchs

*Chair:* Phil Lavori

*Co-Chair:* Robert Tibshirani

*Professors:* Laurence Baker, Bradley Efron, Trevor Hastie, Victor W. Henderson, Mark Hlatky, John Ioannidis, Iain M. Johnstone, Abby C. King, Philip W. Lavori, Ying Lu, Yvonne Maldonado, Richard A. Olshen, Julie Parsonnet, Robert Tibshirani, Alice S. Whittemore, Dee W. West, Wing Wong

*Associate Professor:* M. Kate Bundorf, Lorene M. Nelson, Chiara Sabatti

*Assistant Professors:* Marc Coram, Allison Kurian, Mei-Chiung Shih, Weiva Sieh, Lu Tian

*Assistant Professors (Clinical):* Rita Papat, Kristin Sainani

*Courtesy Professors:* Mary Goldstein, Paul Heidenreich, Daniel Kessler, Alex Macario, Douglas Owens, Paul Wise

*Courtesy Associate Professors:* Jay Bhattacharya, David R. Rogosa

*Courtesy Assistant Professors:* Grant Miller

*Senior Lecturer:* Irene Corso

*Lecturers:* Raymond Balise, Scarlett Gomez, Laurel Habel, De Kun Li, David Lilienfeld, Cynthia O'Malley, Caroline Tanner, Stephen Van Den Eeden

*Consulting Professors:* Gary Friedman, Elizabeth Holly, Marion Lee, George Lundberg, Peggy Reynolds

*Consulting Associate Professors:* Paul Barnett, Sally Glaser, Pamela Horn-Ross, Esther John, Ciaran Phibbs

*Consulting Assistant Professors:* Ellen Chang, Christina Clarke-Dur, Theresa Keegan, Bang Nguyen, Ingrid Oakley-Girvan, Rudy Rull, Todd Wagner

## Health Services Research

*Director:* Mark Hlatky (Professor, Health Research and Policy, and Medicine)

*Executive Committee:* Laurence Baker (Professor, Health Research and Policy), M. Kate Bundorf (Associate Professor, Health Research and

Policy), Mary Goldstein (Professor, Medicine), Mark Hlatky (Professor, Health Research and Policy, and Medicine), Douglas Owens (Professor, Medicine)

*Participating Faculty and Staff by Department:*

*Anesthesia:* Alex Macario (Professor)

*Business:* Alain Enthoven (Professor, emeritus)

*Health Research and Policy:* Laurence Baker (Professor), Paul Barnett (Consulting Associate Professor), M. Kate Bundorf (Associate Professor), Victor Fuchs (Professor, emeritus), Trevor Hastie (Professor), Mark Hlatky (Professor), Philip Lavori (Professor), Richard Olshen (Professor), Ciaran Phibbs (Consulting Associate Professor), Joseph Selby (Consulting Professor), Robert Tibshirani (Professor)

*Law:* Henry Greely (Professor), Daniel Kessler (Professor)

*Management Science and Engineering:* Margaret Brandeau (Professor)

*Medicine:* Jay Bhattacharya (Associate Professor), Jeremy Goldhaber-Fiebert (Assistant Professor), Mary Goldstein (Professor), Michael Gould (Associate Professor), Paul Heidenreich (Associate Professor), Mark Hlatky (Professor), Grant Miller (Assistant Professor), Douglas Owens (Professor), Wolfgang Winkelmayer (Associate Professor)

*Pediatrics:* Paul Wise (Professor)

*Psychiatry:* Rudolph Moos (Professor, emeritus)

*Sociology:* Richard Scott (Professor, emeritus)

## Epidemiology

*Director:* Victor W. Henderson (Professor, Health Research and Policy, and Neurology and Neurological Sciences)

*Core Faculty and Academic Teaching Staff:* Raymond R. Balise (Lecturer, Health Research and Policy), Gary D. Friedman (Consulting Professor, Health Research and Policy), Victor W. Henderson (Professor, Health Research and Policy, and Neurology and Neurological Sciences), Abby C. King (Professor, Health Research and Policy, and Medicine), Allison Kurian (Assistant Professor, Medicine, and Health Research and Policy), Philip Lavori (Professor, Health Research and Policy), Yvonne A. Maldonado (Professor, Pediatrics), Lorene M. Nelson (Associate Professor, Health Research and Policy), Julie Parsonnet (Professor, Medicine, and Health Research and Policy), Rita A. Popat (Clinical Assistant Professor, Health Research and Policy), Kristin L. Sainani (Clinical Assistant Professor, Health Research and Policy), Weiva Sieh (Assistant Professor, Health Research and Policy), Dee W. West (Professor, Health Research and Policy), Alice S. Whittemore (Professor, Health Research and Policy)

## Immunology

Courses offered by the Immunology Program are listed under the subject code IMMUNOL on the Stanford Bulletin's ExploreCourses web site.

Stanford Immunology is home to faculty, students, postdocs, and staff who work together to produce internationally recognized research in many areas of immunology. The long tradition of collaboration among the immunology laboratories at Stanford fosters productive interdisciplinary research, with an emphasis on the application of current approaches to problems in cellular, molecular and clinical immunology. Faculty research interests include both bench-to bedside and basic science research. Graduate students and postdoctoral scholars receive outstanding training through their participation in research, teaching, seminars, journal clubs, and the annual Stanford Immunology Scientific Conference.

## Mission of the Ph.D. Program in Immunology

The Immunology doctoral program offers instruction and research opportunities leading to a Ph.D. in Immunology. Two tracks are offered:

1. Track 1: Molecular, Cellular, and Translational Immunology
2. Track 2: Computational and Systems Immunology

The goal of the Ph.D. Program in Immunology is to develop investigators who have a strong foundation in Immunology and related sciences in order to carry out innovative research. The program features a flexible choice of courses and seminars combined with extensive research training in the laboratories of participating Immunology faculty. Specifically, immunology graduate students:

1. acquire a fundamental, broad, and comprehensive body of knowledge and skills through an extensive curriculum.
2. identify important scientific questions, design, and conduct experiments using the most appropriate methods.
3. read and critically analyze current literature in immunology and other relevant fields.
4. present research findings and communicate ideas effectively to a variety of audiences.
5. prepare manuscripts that will be published in leading journals.
6. learn to teach effectively.

## Master of Science in Immunology

Students in the Ph.D. program in Immunology may apply for an M.S. degree in Immunology only under special circumstances, assuming completion of appropriate requirements. Students must complete:

1. At least 45 units of academic work, all of which must be in courses at or above the 100 level, 36 units of which must be at or above the 200 level.
2. 3 quarters of graduate research (IMMUNOL 399 Graduate Research), consisting of rotations in the labs of three faculty members.
3. Participation in the Immunology journal club (IMMUNOL 305 Immunology Journal Club), and attendance at the Immunology seminar series and at the annual Stanford Immunology Scientific Conference.
4. First Year Rotations Presentations and General Advising Sessions, June. Students present on one of three lab rotations.
5. Students must submit a master's thesis paper on one of their rotations. This requirement may be waived under special circumstances.

Course work in Immunology as follows:

### Track: Molecular, Cellular and Translational Immunology

		Units
BIOS 200	Foundations in Experimental Biology	6
BIO 230A	Molecular and Cellular Immunology Literature Review	1
IMMUNOL 201	Advanced Immunology I	3
IMMUNOL 202	Advanced Immunology II	3
IMMUNOL 203	Advanced Immunology III	2
IMMUNOL 311	Seminar in Immunology	1
IMMUNOL 311A	Discussions in Immunology	1
IMMUNOL 305	Immunology Journal Club	1
IMMUNOL 215	Principles of Biological Technologies	3
IMMUNOL 399	Graduate Research	1-15
BIO 141	Biostatistics	3-5

MED 255	The Responsible Conduct of Research	1
Take one of the following courses:		
MI 210	Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites	4
BIO 214	Advanced Cell Biology	4
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	2

### Track: Computational and Systems Immunology

		Units
BIOS 200	Foundations in Experimental Biology	6
BIO 230A	Molecular and Cellular Immunology Literature Review	1
IMMUNOL 201	Advanced Immunology I	3
IMMUNOL 202	Advanced Immunology II	3
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	2
IMMUNOL 207	Essential Methods in Computational and Systems Immunology	3
IMMUNOL 209	Translational Immunology	1
IMMUNOL 310	Seminars in Computational and Systems Immunology	1
BIOMEDIN 212	Introduction to Biomedical Informatics Research Methodology	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4
IMMUNOL 399	Graduate Research	1-15
MED 255	The Responsible Conduct of Research	1

### Doctor of Philosophy in Immunology

Courses offered by the Stanford Graduate Program in Immunology are listed under the subject code IMMUNOL on the Stanford Bulletin's ExploreCourses (<https://explorecourses.stanford.edu/search?q=IMMUNOL&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&filter-departmentcode-IMMUNOL=on&collapse=&filter-catalognumber-IMMUNOL=on&filter-catalognumber-IMMUNOL=on>) web site.

### Admissions

Students seeking admissions to the Immunology Ph.D. Program typically have an undergraduate major in biological sciences, but majors from other areas are acceptable if the applicants have sufficient coursework in biology, chemistry, general physics, and mathematics (through calculus). Applications are evaluated by the Immunology Graduate Program committee based upon: GRE scores; grades; evidence of research experience; letters of recommendation, including letters from research sponsor(s); and commitment to a career in biomedical research. The GRE Subject test is not required. Applicants should plan on taking the GRE at least one month prior to the application deadline of December 2nd to ensure that official scores are available when applications are evaluated. Interested Stanford medical students are welcome to apply to the program and should also submit a formal application by December 2.

Prospective graduate students must apply via Stanford's online graduate application.

### Financial Aid

Students admitted to the program are offered financial support for tuition, a living stipend, insurance coverage, and a small allowance for books/travel. Applicants are urged to apply for independent fellowships such as from the National Science Foundation or National Defense Science and Engineering Graduate Fellowships. NSF Fellowship applications

are due in November of the year prior to matriculation in the graduate program, but Immunology graduate students may continue to apply for outside fellowships after matriculation. Admitted students are typically offered financial support in the form of Stanford Graduate Fellowships, NIH traineeships, or research assistantships.

### General Requirements

#### Immunology Startup and the First-Year Advising Process

Since students enter with differing backgrounds, each student is assisted by the first-year adviser in selecting courses and lab rotations in the first year and in choosing a lab for the dissertation research. In addition, the *Immunology Startup*, a six-day long introduction to immunology in the second week of September, exposes incoming Immunology Ph.D. students to a variety of techniques and concepts. Students learn basic laboratory techniques in immunology and participate in in-depth discussions with faculty.

All students must be enrolled in exactly 10 units during Autumn, Winter, Spring, and Summer quarters until reaching TGR status in the spring quarter of their fourth year. Students are required to pass all courses in which they are enrolled; required and elective courses must be taken for a letter grade. Students must earn a grade of 'B-' or better in all courses applicable to the degree that are taken for a letter grade. Satisfactory completion of each year's general and track specific requirements listed below is required. During the first year, degree progress is monitored closely by the first-year adviser in quarterly meetings and by the Stanford Graduate Program Committee in a final advising session in June.

First-year students are required to complete three rotations in at least two immunology labs. In the spring quarter, two mini-rotations of six weeks each may be arranged.

A specific program of study for each student is developed individually with the first-year adviser.

#### Core Courses:

All students in the two tracks, Molecular, Cellular, and Translational Immunology (MCTI) and Computational and Systems Immunology (CSI) are required to enroll in the following core courses:

		Units
BIOS 200	Foundations in Experimental Biology	6
BIO 230A	Molecular and Cellular Immunology Literature Review	1
IMMUNOL 201	Advanced Immunology I	3
IMMUNOL 202	Advanced Immunology II	3
IMMUNOL 305	Immunology Journal Club	1
IMMUNOL 311	Seminar in Immunology	1
IMMUNOL 311A	Discussions in Immunology	1
BIO 141	Biostatistics	3-5
IMMUNOL 399	Graduate Research	1-15
IMMUNOL 290	Teaching in Immunology	1-15
MED 255	The Responsible Conduct of Research	1

In the third week of June, first-year immunology graduate students are required to give a presentation on one of their three rotations to the Immunology Graduate Program Committee (Qualifying Examination Process, Part I). After the rotation presentation, the first-year student will meet with the Stanford Graduate Program Committee in a one-on-one advising session to review degree progress and choice of a PhD thesis lab. The first-year graduate student is asked to complete a "Big Picture" advising document, which takes stock of the first year student's accomplishments in the past year, discusses near- and long-term plans, and serves as a transitional document for the PhD thesis adviser.

Once a dissertation adviser has been selected, a dissertation committee, including the dissertation adviser and two additional Immunology faculty, is constituted to guide the student during the dissertation research.

The student must meet with the dissertation committee at least once a year. In the first through third years, the student must meet with the dissertation committee at least once a year. In the 4th and 5th years, students are expected to meet twice a year with their thesis committees. For students in their 5th years and above, a member of the Immunology Graduate Program Committee will also attend these bi-annual thesis committee meetings. In addition, a secondary adviser is assigned who can provide additional advice on issues such as career path choices and other non-academic issues.

**Individual Development Plan:** Graduate students are required to meet with their faculty mentors once a year to discuss an "Individual Development Plan (IDP)." The IDP is intended to help the students take ownership of their training and professional development. The goals of the IDP are to: 1) pause, reflect and intentionally think on short-, mid- and long-term goals; 2) identify resources that will help achieve these goals; 3) have open and direct dialogue with the PhD thesis adviser and establish clear expectations and steps.

## Track Specific Requirements

In addition to the general requirements listed above, students must also complete requirements within their track. Written petitions for exemptions to core curriculum and lab rotation requirements are considered only in the first year by the advising committee and the chair of the Graduate Program committee. Approval is contingent upon special circumstances and is not routinely granted.

## Molecular, Cellular, and Translational Immunology

MCTI first-year students are required to take the following courses in their first year for a letter grade:

		Units
IMMUNOL 203	Advanced Immunology III	2
IMMUNOL 215	Principles of Biological Technologies	2
Take one of the following courses:		
MI 210	Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites	4
BIO 214	Advanced Cell Biology	4
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	2

### Electives:

One elective (see elective list below)

		Units
IMMUNOL 260	HIV: The Virus, the Disease, the Research	3-4
IMMUNOL 275	Tumor Immunology	3
CSB 210	Cell Signaling	4
SBIO 241	Biological Macromolecules	3-5
DBIO 210	Developmental Biology	4
CBIO 241	Cellular Basis of Cancer	4
IMMUNOL 204	Innate Immunology	3
IMMUNOL 205	Immunology in Health and Disease	4

## Computational and Systems Immunology

The CSI curriculum trains students to be computational and experimental scientists who are expected to identify important problems in immunology and to devise integrated computational/ experimental plans for addressing them.

CSI students are required to take the following courses in their first and second years.

### First Year:

		Units
CS 106A	Programming Methodology	3-5
CS 109	Introduction to Probability for Computer Scientists	3-5
CS 161	Design and Analysis of Algorithms	3-5
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	1-2
IMMUNOL 207	Essential Methods in Computational and Systems Immunology	3
IMMUNOL 310	Seminars in Computational and Systems Immunology	1
BIOMEDIN 212	Introduction to Biomedical Informatics Research Methodology	3
BIOMEDIN 217	Translational Bioinformatics	4

### Second Year:

		Units
IMMUNOL 207	Essential Methods in Computational and Systems Immunology	3
STATS 216	Introduction to Statistical Learning	3
BIOMEDIN 214	Representations and Algorithms for Computational Molecular Biology	3-4

### Electives:

Two electives (see elective list below)

		Units
STATS 116	Theory of Probability	3-5
CME 206	Introduction to Numerical Methods for Engineering	3
CME 263	Introduction to Linear Dynamical Systems	3
CME 309	Randomized Algorithms and Probabilistic Analysis	3
CME 334	Advanced Methods in Numerical Optimization	3
BIOMEDIN 260	Computational Methods for Biomedical Image Analysis and Interpretation	3-4
BIOMEDIN 262	Computational Genomics	3
BIOMEDIN 374	Algorithms in Biology	2-3
STATS 201	Design and Analysis of Experiments	3-5
STATS 202	Data Mining and Analysis	3
STATS 217	Introduction to Stochastic Processes	2-3
EE 376A	Information Theory	3
CME 364A	Convex Optimization I	3
CME 372	Applied Fourier Analysis and Elements of Modern Signal Processing	3
EE 278	Introduction to Statistical Signal Processing	3
EE 378A	Statistical Signal Processing	3
Other		

## Qualifying Exam and Admission to Candidacy

Second-year students are required to pass a general orals examination and write a thesis dissertation proposal, which will be presented to and evaluated by a committee of three faculty members (the dissertation advising committee). All students must be admitted to candidacy by the end of their second year. This is contingent upon satisfactory completion of course work, all first and second year requirements, the dissertation proposal, and the University's requirements for candidacy outlined in the Candidacy section of this bulletin. If a student does not meet the requirements for admission to candidacy by the end of the second year, the student is subject to dismissal from the PhD program.

Candidates for Ph.D. degrees at Stanford must satisfactorily complete a program of study that includes 135 units of graduate course work and research. At least 3 units must be taken with each of four different Stanford faculty members. All core course requirements must be completed by the end of the second year.

## Journal Clubs

Both MCTI and CSI students are required to attend the IMMUNOL 305 Immunology Journal Club for their first through third years. Attendance is optional for fourth year and above graduate students.

## Immunology and CSI Seminar Series

Graduate seminars are an important means of attaining a broad and comprehensive exposure to all areas in immunology as well as gaining a professional perspective and competence in the field. First-year students are required to attend all immunology seminars (IMMUNOL 311 Seminar in Immunology, Tuesdays, 4:15 pm) and the companion immunology seminar discussions course (IMMUNOL 311A Discussions in Immunology, Mondays, 10:00 am); in the latter, the seminar speakers' papers are discussed. Students in their second year and above are required to attend 50% of the seminar series each academic year.

Students in the CSI track are required to attend the IMMUNOL 311 Seminar in Immunology for the Autumn and Winter quarters of their first year. In the Spring quarter, attendance in IMMUNOL 311 Seminar in Immunology is optional so that graduate students in the CSI track may attend IMMUNOL 310 Seminars in Computational and Systems Immunology for the Spring and Summer quarters.

## Immunology Scientific Retreat

The annual Retreat is held at the Asilomar Conference Grounds, Pacific Grove, CA, and is attended by students, staff, postdocs and faculty of the Stanford immunology community. All immunology graduate students are required to attend. In the third through fifth years, students will present a poster and give a talk on their graduate research.

## Teaching Assistantships

Teaching experience and training are part of the graduate curriculum. Each student assists in teaching two courses in the immunology core or electives. A TA match process is held in summer quarter in order to match the graduate student's research and teaching preferences to the appropriate courses.

## First Author Paper Submission

By the 4th or 5th year, graduate students are expected to submit a first author paper for publication. This milestone, the submission of a first author paper, should be completed before defending a PhD thesis.

## Doctoral Dissertation

Before embarking on the dissertation defense process, the graduate student must submit a Petition to Defend to the Chair of the Immunology Graduate Program. Important milestones and degree requirements must be met before proceeding to the oral examination. A substantial draft of the dissertation must be turned in to the student's oral examination committee at least one month before the oral exam is scheduled to take place. In addition, the final written dissertation must be approved by the student's reading committee, and submitted to the Registrar's Office. Upon completion of this final requirement, a student is eligible for conferral of the degree.

The Reading Dissertation Committee must be comprised of at least four faculty members. The minimum number of faculty members in the immunology program may be 2, but typically, 3 of the 4 Reading Dissertation Committee members are from the Graduate Program in Immunology. At the time of the PhD orals defense, an Orals Chair is chosen to lead the Orals Committee (distinct from the Reading

Dissertation Committee), and the minimum number for this committee is 5.

## Faculty

*Director, Executive Committee for the Immunology Program:* Patricia Jones (Professor, Biology)

*Chair for Immunology Graduate Program:* Olivia Martinez (Professor, Research, Surgery, Transplantation)

## Participating Departments and Faculty (Molecular, Cellular, Translational Immunology)

*Biochemistry:* Peter Kim (Professor)

*Bioengineering:* Stephen Quake (Professor, and Applied Physics and Physics)

*Biology:* Patricia P. Jones (Professor)

*Genetics:* Leonore A. Herzenberg (Professor, Research), Karla Kirkegaard (Professor), Michael Snyder (Professor)

*Med/Biomedical Informatics:* Purvesh Khatri (Assistant Professor)

*Medicine/Blood and Bone Marrow Transplantation Program:* Everett Meyer (Assistant Professor), David Miklos (Assistant Professor), Robert Negrin (Professor), Judith Shizuru (Associate Professor)

*Medicine/Cardiovascular Medicine:* Joseph Wu (Professor, and Radiology)

*Medicine/Endocrinology:* Joy Wu (Assistant Professor)

*Medicine/Gastroenterology and Hepatology:* Aida Habtezion (Assistant Professor)

*Medicine/Hematology:* Ravi Majeti (Assistant Professor)

*Medicine/Immunology and Rheumatology:* C. Garrison Fathman (Professor), Jorg Goronzy (Professor), William Robinson (Associate Professor), Samuel Strober (Professor), Paul J. Utz (Professor), Cornelia Weyand (Professor)

*Medicine/Infectious Diseases:* Catherine Blish (Assistant Professor), Paul Bollyky (Assistant Professor)

*Medicine/Oncology:* Ash Alizadeh (Assistant Professor), Gilbert Chu (Professor, and Biochemistry), Dean Felsher (Professor, and Pathology), Holbrook Kohrt (Assistant Professor), Ronald Levy (Professor), Shoshana Levy (Professor, Research)

*Medicine/Pulmonary and Critical Care Medicine:* Mark Nicolls (Associate Professor)

*Microbiology and Immunology:* John Boothroyd (Professor), Yueh-Hsiu Chien (Professor), Mark M. Davis (Professor, and Director, Institute for Immunity, Transplantation and Infection), Juliana Idoyaga (Assistant Professor), Holden Maecker (Associate Professor, Research), Hugh McDevitt (Professor, Emeritus), Denise Monack (Associate Professor), Garry P. Nolan (Professor), David Schneider (Associate Professor)

*Molecular and Cellular Physiology:* K. Christopher Garcia (Professor, and Structural Biology), Richard S. Lewis (Professor)

*Neurology and Neurological Sciences:* May Han (Assistant Professor), Lawrence Steinman (Professor, and Pediatrics), Tony Wyss-Coray (Professor)

*Neurosurgery:* Theo Palmer (Associate Professor)

*Otolaryngology/Head and Neck Surgery (ENT):* Jayakar Nayak (Assistant Professor), John B. Sunwoo (Associate Professor)

*Pathology:* Sean Bendall (Assistant Professor), Scott Boyd (Assistant Professor), Eugene C. Butcher (Professor), Michael Cleary (Professor), Gerald R. Crabtree (Professor, and Developmental Biology), Edgar G. Engleman (Professor, and Medicine/Immunology and Rheumatology), Andrew Fire (Professor, and Genetics), Stephen Galli (Professor and Chair), Sara Michie (Professor), Raymond A. Sobel (Professor), Irving Weissman (Professor, and Director, Stem Cell Institute)

*Pediatrics:* Manish Butte (Assistant Professor), Christopher Contag (Professor, Research, and Microbiology and Immunology, and Radiology), David B. Lewis (Professor), Maria Grazia Roncarolo (Professor, and Medicine/Blood and Marrow Transplantation), Elizabeth Mellins (Professor), Kari Nadeau (Associate Professor)

*Psychiatry and Behavioral Sciences:* Firdaus Dhabhar (Associate Professor), Emmanuel Mignot (Professor)

*Radiology:* Parag Mallick (Assistant Professor and Diagnostic Radiology)

*Structural Biology:* Peter Parham (Professor, and Microbiology and Immunology), Theodore Jardetzky (Professor)

*Surgery/Multi-Organ Transplantation:* Sheri Krams (Associate Professor, Research), Olivia Martinez (Professor, Research)

## Participating Departments and Faculty (Computational and Systems Immunology)

*Bioengineering:* Stephen Quake (Professor, and Applied Physics and Physics)

*Genetics:* Michael Snyder (Professor), Karla Kirkegaard (Professor)

*Med/Biomedical Informatics:* Purvesh Khatri (Assistant Professor)

*Med/Immunology and Rheumatology:* Paul J. Utz (Professor)

*Med/Oncology:* Ash Alizadeh (Assistant Professor)

*Microbiology and Immunology:* John Boothroyd (Professor), Mark M. Davis (Professor, and Director, Institute for Immunity, Transplantation and Infection), Holden Maecker (Associate Professor, Research), Garry Nolan (Professor)

*Pathology:* Sean Bendall (Assistant Professor), Scott Boyd (Assistant Professor), Andrew Fire (Professor, and Genetics)

*Radiology:* Parag Mallick (Assistant Professor, and General Radiology)

## Affiliate Members:

*Biochemistry:* Ron Davis (Professor, and Genetics)

*Bioengineering:* Russ Altman (Professor, and Genetics and Computer Science)

*Health and Research Policy - Biostatistics:* Robert Tibshirani (Professor, and Statistics)

## Microbiology and Immunology

Courses offered by the Department of Microbiology and Immunology are listed under the subject code MI on the Stanford Bulletin's ExploreCourses web site.

### Graduate Programs in Microbiology and Immunology

The Department of Microbiology and Immunology offers a program of training leading to the Ph.D. degree, as well as research training, courses,

and seminars for medical students and postdoctoral fellows. Research interests focus on two broad areas: host/parasite interactions, and the function of the immune system. Laboratories investigate mechanisms of pathogenesis and the physiology of viruses, bacteria, and protozoan parasites, as well as the lymphocyte function in antigen recognition, immune response, and autoimmunity.

## Master of Science

A regular M.S. program is not offered, although this degree is awarded under special circumstances. Candidates for master's degrees are expected to have completed the preliminary requirements for the B.S. degree, or the equivalent. In addition, the candidate is expected to complete 45 quarter units of work related to microbiology; at least 25 of these units should concern research devoted to a thesis. The thesis must be approved by the student's committee.

## Doctor of Philosophy in Microbiology and Immunology

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 45)" section of this bulletin.

### Application, Admission, and Financial Aid

Prospective Ph.D. candidates should have completed a bachelor's degree in a discipline of biology or chemistry, including course work in biochemistry, chemistry, genetics, immunology, microbiology, and molecular biology.

Applicants must file a report of scores on the general subject tests of the Graduate Record Examination (GRE). It is strongly recommended that the GRE be taken before October so that scores are available when applications are evaluated.

In the absence of independent fellowship support, entering predoctoral students are fully supported with a stipend and tuition award. Highly qualified applicants may be honored by a nomination for a Stanford Graduate Fellowship. Successful applicants have been competitive for predoctoral fellowships such as those from the National Science Foundation.

### Program for Graduate Study

The Ph.D. degree requires course work and independent research demonstrating an individual's creative, scholastic, and intellectual abilities. On entering the department, students meet an advisory faculty member; together they design a timetable for completion of the degree requirements. Typically, this consists of first identifying gaps in the student's undergraduate education and determining courses that should be taken. Then, a tentative plan is made for two to four lab rotations (one rotation per quarter). During the first year of graduate study in the department, each student also takes six or seven upper-level (200-series) courses.

Course requirements:

		Units
BIOS 200	Foundations in Experimental Biology	6
BIO 214	Advanced Cell Biology	4
MED 255	The Responsible Conduct of Research	1
MI 204	Innate Immunology	3
MI 210	Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites	4
MI 215	Principles of Biological Technologies	3
MI 250	Frontiers in Microbiology and Immunology (Taken once in the first year and once in the second year for a total of 2 units.)	1

Recommended courses:

BIO 230 Molecular and Cellular Immunology

One Elective from the following:

DBIO 210	Developmental Biology	4
CSB 210	Cell Signaling	4
CSB 220	Chemistry of Biological Processes	3
MCP 202	Advanced Immunology II	3
MI 211	Advanced Immunology I	3
MI 245	Computational Modeling of Microbial Communities	4
S BIO 241	Biological Macromolecules	3-5
GENE 205	Advanced Genetics	3
MCP 256	How Cells Work: Energetics, Compartments, and Coupling in Cell Biology	4

Prior approval from the student's adviser and department Graduate Program Director is required for courses not from the elective list.

In Autumn Quarter of the second year, each student defends orally a formal research proposal on a topic outside the intended thesis project. This qualifying examination proposal is due to the graduate program steering committee by September 1. Based on successful performance on this proposal, the student is admitted to candidacy. In Spring Quarter of the second year, a research proposal based on the student's own thesis topic is defended to the thesis committee. The written thesis proposal is due May 1 and the oral defense will be presented and completed by the end of the Spring quarter. Teaching experience and training are also part of the graduate curriculum. Graduate students are required to act as teaching assistants for two courses. In addition, first- and second-year graduate students are required to participate in a bi-weekly journal club. Full program requirements can be found at <http://microimmuno.stanford.edu/education/>.

*Emeriti: (Professors)* Stanley Falkow, Hugh O. McDevitt, Edward S. Mocarski

*Chair:* Peter Sarnow

*Associate Chair:* David Schneider

*Professors:* Ann Arvin, Helen Blau, Matthew Bogoy, John C. Boothroyd, Yueh-Hsiu Chien, Christopher Contag, Mark M. Davis, Stephen J. Galli, Harry B. Greenberg, Peter Jackson, Karla Kirkegaard, A. C. Matin, Garry Nolan, Peter Parham, Phillip Pizzo, Charles Prober, David Relman, Peter Sarnow, Gary K. Schoolnik, Julie Theriot, Lucy S. Tompkins

*Professor (Teaching):* Robert D. Siegel

*Associate Professors:* Manuel Amieva, Jeffrey Glenn, K.C. Huang, Denise Monack, David Schneider, Upinder Singh, Justin Sonnenburg

*Assistant Professors:* Jan Carette, Shirin Einav, Juliana Idoyaga, Ellen Yeh

*Institute for Immunity, Transplantation and Infection*

*Director, Human Immune Monitoring Center and Associate Professor (Research):* Holden Maecker

## Molecular and Cellular Physiology

Courses offered by the Department of Molecular and Cellular Physiology are listed under the subject code MCP on the Stanford Bulletin's ExploreCourses web site.

The Department of Molecular and Cellular Physiology is located in the Beckman Center for Molecular and Genetic Medicine.

### Units

4 A central goal of physiology in the post-genomic era is to understand how thousands of encoded proteins serve to bring about the highly coordinated behavior of cells and tissues. Research in the department approaches this goal at many levels of organization, ranging from

### Units

single molecules and individual cells to multicellular systems and the whole organism. The faculty share common interests in the molecular mechanisms of cell signaling and behavior, with a special focus on structure/function analysis of ion channels and G-protein coupled receptors, and their roles at the cellular, organ, and whole-organism levels; the molecular basis of sensory transduction, synaptic transmission, plasticity and memory; the role of ion channels and calcium in controlling gene expression in neural and immune cells; and the regulation of vesicle trafficking and targeting, cell polarity, and cell-cell interactions in the nervous system and in epithelia. Research programs employ a wide range of approaches, including molecular and cell biology, biochemistry, genetics, biophysics, x-ray crystallography and solution NMR, electrophysiology, and in vitro and in vivo imaging with confocal and multi-photon microscopy.

## Graduate Programs in Molecular and Cellular Physiology

The department offers required and elective courses for students in the School of Medicine and is also open to other qualified students with the consent of the instructor. Training of medical, graduate, and postdoctoral students is available. The program offers a course of study leading to the Ph.D. degree. No B.S. is offered, and an M.S. is offered only in the unusual circumstance where a student completes the course work, rotation, and the written section of the qualifying exam, but is unable to complete the requirements for the Ph.D.

## Doctor of Philosophy in Molecular and Cellular Physiology

Students with undergraduate or master's degrees who have completed a year each of college chemistry (including lectures in organic and physical chemistry), physics, calculus, and biology are considered for admission to graduate study. Applicants submit a report of scores from the Graduate Record Examination (verbal, quantitative, analytical, and an advanced subject test in one of the sciences) as part of the application. Students who do not speak English as their native language must submit scores from TOEFL unless waived by Graduate Admissions.

Study toward the Ph.D. is expected to occupy five years, including summers. The course requirements for the program are as follows:

- MCP 221 Advanced Cell Biology
- MCP 256 How Cells Work: Energetics, Compartments, and Coupling in Cell Biology
- BIOS 200 Foundations in Experimental Biology
- Advanced graduate courses or mini-courses for a minimum of 6 units total. These courses do not need to be MCP courses but must be in relevant scientific topic and approved by the Director of Graduate Studies.
- Two of the following courses:
  - BIOC 241 Biological Macromolecules
  - N BIO 216
  - GENE 205 Advanced Genetics
- MED 255 The Responsible Conduct of Research, if funded on NSF or NIH training grants
- MCP 207 MCP Bootcamp

Students are also required to participate in the Molecular and Cellular Physiology Seminar Series and attend the department scientific meeting. Grades for course work and mini-courses must be a minimum of 'B',

and students must maintain a grade point average (GPA) of at least 3.3 for their required courses as a whole. Courses may be retaken once to improve an unsatisfactory grade. Failure to maintain the required grades and grade point average is taken as evidence of unsatisfactory progress in the program.

## Qualifying Examination

At the beginning of the second year in residence as a graduate student, each Ph.D. candidate presents a written thesis proposal to be defended at an oral comprehensive examination. The examination should be taken prior of all course work completed by the required standard. Students undertake individual research studies as early as possible after consultation with their preceptor. Upon passing this exam, the student is advanced to candidacy for the Ph.D.

## Dissertation and University Oral Examination

The results of independent, original work by the students are presented in a dissertation. The oral examination is largely a defense of the dissertation.

## Advisers and Advisory Committees

A graduate advisory committee, currently professors Feng, Lewis, Nachury and Madison, advises students during the period before the formation of their qualifying committees.

## Financial Aid

Students may be funded by their advisers' research grants, by training grants, by department funds, or by extramural funds. Students are encouraged to obtain funding from outside sources such as NIH and NSF.

*Chair:* Axel T. Brunger

*Associate Chair:* Miriam B. Goodman

*Professors:* Axel T. Brunger, K. Christopher Garcia, Brian K. Kobilka, Richard S. Lewis, Thomas C. Sudhof

*Associate Professors:* Miriam B. Goodman, V. Daniel Madison, Merritt C. Maduke

*Assistant Professors:* Liang Feng, Maxence V. Nachury, Lucy E. O'Brien

*Joint Professors:* Steve Chu, W. James Nelson, William Weis

*Courtesy Associate Professor:* Ron Dror, Michael McConnell, Richard J. Reimer

*Courtesy Assistant Professor:* Gregory Scherrer

*Emeritus Faculty:* Stephen J. Smith, Richard W. Tsien

## Neurobiology

Courses offered by the Department of Neurobiology are listed under the subject code NBIO on the Stanford Bulletin's ExploreCourses web site.

## Graduate Program in Neurobiology

Graduate students in the Department of Neurobiology obtain the Ph.D. degree through the interdepartmental Neurosciences Ph.D. program (p. 701). Accepted students receive funding for tuition and a living stipend. Applicants should familiarize themselves with the research interests of the faculty and, if possible, indicate their preference on the application form which is submitted directly to the Neurosciences Program.

Medical students also are encouraged to enroll in the Ph.D. program. The requirements of the Ph.D. program are fitted to the interests and time schedules of the student. Postdoctoral training is available to graduates holding Ph.D. or M.D. degrees, and further information is obtained directly from the faculty member concerned.

Research interests of the department include information processing in vertebrate retina; structure, function, and development of auditory and visual systems; development and regeneration in the central and peripheral nervous system; neural mechanisms mediating higher nervous system functions, including perception, learning, attention and decision making.

## Faculty

*Emeritus:* Denis Baylor, Uel J. McMahan, Eric Shooter, Lubert Stryer

*Chair:* Ben Barres

*Professors:* Eric I. Knudsen, Thomas Clandinin, Tirin Moore, William T. Newsome

*Associate Professors:* Stephen Baccus, Jennifer Raymond

*Assistant Professor:* Lisa Giocomo, Michael Z. Lin

## Neurosciences

Courses offered by the Neurosciences Program are listed under the subject code NEPR on the Stanford Bulletin's ExploreCourses web site.

## Doctor of Philosophy in Neurosciences

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 45)" section of this bulletin.

The interdepartmental Neurosciences Program offers instruction and research opportunities leading to a Ph.D. in Neurosciences. The requirements for a Ph.D. degree follow those of the University and in addition are tailored to fit the background and interests of the student. Qualified applicants should, where possible, apply for the predoctoral fellowships in open competition, especially those from the National Science Foundation.

## Admissions

Applications are made through the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site and are due in early December each year. Applicants should familiarize themselves with the research interests of the faculty and indicate their preferences clearly on the application form. Admitted students are notified from early March through mid-April. Accepted students receive an award covering tuition, a basic health plan, and a living stipend.

## Course Requirements

Since students enter with differing backgrounds, and the labs in which they may elect to work cover several different disciplines, the specific program for each student is developed individually with an advisory committee. Students rotate through at least three labs during the first year while taking core modules. Passing of a comprehensive oral qualifying examination given by the student's advisory committee must be taken by the end of the second year, and is required for admission to Ph.D. candidacy. The student is required to present a Ph.D. dissertation, which is the result of independent investigation contributing to knowledge in an area of neuroscience, and to defend his or her dissertation in a University oral examination, which includes a public seminar. Students must also publish a first-author paper in a major scientific journal and submit a written dissertation prior to completing the Ph.D. degree.

Medical students may participate in this program provided they meet the prerequisites and satisfy all the requirements of the graduate program as listed above. The timing of the program may be adjusted to fit their special circumstances.

### Students Enrolled Starting Autumn 2015 and Later

- Stanford Intensive Neuroscience (SIN) Boot Camp
- Nine (9) Neuroscience Core Modules:
  - a. NEPR 202 Neurosciences Development Core
  - b. NEPR 203 Neuroscience Systems Core
  - c. NEPR 204 Neuroscience Molecular Core
  - d. NEPR 205 Neurosciences Anatomy Core
  - e. NEPR 207 Neurosciences Cognitive Core
  - f. NEPR 208 Neuroscience Computational Core
  - g. NEPR 213 Neurogenetics Core
  - h. NEPR 201 Neuro-Cellular Core (same as COMPMED 201 Neuro-Cellular Core)
  - i. NEPR 214 Neuroscience Core Curriculum: Translational Neuroscience (same as NENS 207 Neuroscience Core Curriculum: Translational Neuroscience)
- Nine (9) quarters of NEPR 300/MCP 300 Neuroscience Journal Club and Professional Development Series
- Statistics Course (STATS 216 Introduction to Statistical Learning or similar)
- Four (4) advanced level courses

### Students Enrolled Starting Autumn 2014 and Earlier

- Introduction to Neurobiology (NBIO 206 The Nervous System or equivalent).
- Nine (9) quarters of NBIO 300/NEPR 300/MCP 300 Neuroscience Journal Club and Professional Development Series
- Five (5) advanced level courses within - and at least one course in each of - the following three areas:
  1. Systems, Computational, Cognitive and Behavioral Neuroscience. Courses at this level focus on the computations performed by neural circuits and the role such computations play in behavior, perceptions, and plasticity. Students can expect to learn how neurons: Organize circuits into larger functional units; Represent and transform information; Produce myriad movement; and Subserve higher-level processing related to perception, reasoning and learning. Predominant methods in this area include modeling single cells and circuits, design of behavioral paradigms, and statistical analysis of behavioral and electrophysiological data.

Courses offered this academic year that can fulfill this include:

- COMPMED 207 Comparative Brain Evolution
- NBIO 218 Neural Basis of Behavior
- NBIO 220 Central Mechanisms in Vision-based Cognition
- NBIO 258 Information and Signaling Mechanisms in Neurons and Circuits
- NENS 205 Neurobiology of Disease Seminar
- NENS 220 Computational Neuroscience
- PSYCH 202 Cognitive Neuroscience
- PSYCH 204A Human Neuroimaging Methods
- PSYCH 232 Brain and Decision Making
- PSYCH 251 Affective Neuroscience
- PSYCH 266 Current Debates in Learning and Memory

2. Cellular, Molecular and Developmental Neuroscience. Courses in this area address fundamental mechanisms that enable cells of the nervous system to develop, function in adulthood, change

during learning and memory, and/or malfunction in disease states. Students can expect to learn core concepts in: Cell-cell communication; Intracellular signal transduction; Transcriptional and translational control; mRNA and protein trafficking; Membrane biophysics; and Cell motility. Dominant methods include molecular biology, genetics, cell biology, electrophysiology, and subcellular or multicellular imaging.

Courses offered this academic year that can fulfill this include:

- BIO 214 Advanced Cell Biology/BIOC 224 Advanced Cell Biology/MCP 221 Advanced Cell Biology
- BIO 217 Neuronal Biophysics
- BIO 254 Molecular and Cellular Neurobiology
- BIOS 200 Foundations in Experimental Biology
- COMPMED 215 Synaptic Properties and Neuronal Circuits
- GENE 221 Current Issues in Aging
- MCP 256 How Cells Work: Energetics, Compartments, and Coupling in Cell Biology/MCP 156 How Cells Work: Energetics, Compartments, and Coupling in Cell Biology
- NBIO 218 Neural Basis of Behavior
- NBIO 220 Central Mechanisms in Vision-based Cognition
- NBIO 254 Molecular and Cellular Neurobiology
- NBIO 258 Information and Signaling Mechanisms in Neurons and Circuits
- PSYCH 204B Computational Neuroimaging: Analysis Methods

Courses offered in previous years that fulfilled this requirement include:

- MCP 216 Genetic Analysis of Behavior (NBIO 216)
- NBIO 216 Genetic Analysis of Behavior (MCP 216)

3. Translational Neuroscience. Courses in this area address fundamental concepts in studying disorders of the human brain and the peripheral nervous system and their treatment. Students can expect to learn about basic themes in: Pathophysiological mechanisms; Modeling of human diseases; Approaches to designing diagnoses and treatments; Implementing diagnoses and treatments. The courses highlight studies of human diseases that use genetics, molecular biology, psychological testing, and functional imaging.

Courses offered this academic year that can fulfill this include:

- BIO 267 Molecular Mechanisms of Neurodegenerative Disease / NENS 267 Molecular Mechanisms of Neurodegenerative Disease
- GENE 210 Genomics and Personalized Medicine / DBIO 220 Genomics and Personalized Medicine
- NENS 205 Neurobiology of Disease Seminar

Courses offered in previous years that fulfilled this requirement include:

- CSB 278 Systems Biology
- IMMUNOL 285 Brain and the Immune System

The previously-approved courses from outside the Neuroscience core listed below can satisfy the remaining elective requirements:

- BIO 217 Neuronal Biophysics
- BIO 222 Exploring Neural Circuits
- BIO 230 Molecular and Cellular Immunology

- BIO 245 Ecology and evolution of animal behavior
- BIO 258 Developmental Neurobiology
- BIOC 224 Advanced Cell Biology/BIO 214 Advanced Cell Biology/MCP 221 Advanced Cell Biology
- BIOE 291 Principles and Practice of Optogenetics for Optical Control of Biological Tissues
- BIOE 332 Large-Scale Neural Modeling
- BIOS 200 Foundations in Experimental Biology
- BIOS 210 Axonal Transport and Neurodegenerative Diseases
- BIOS 241 Dissecting algorithms for RNA Sequencing
- COMPMED 207 Comparative Brain Evolution
- COMPMED 215 Synaptic Properties and Neuronal Circuits
- CS 221 Artificial Intelligence: Principles and Techniques
- CS 229 Machine Learning
- CSB 210 Cell Signaling
- DBIO 201 Development and Disease Mechanisms
- DBIO 210 Developmental Biology
- EE 263 Introduction to Linear Dynamical Systems/CME 263 Introduction to Linear Dynamical Systems
- MCP 221 Advanced Cell Biology/BIO 214 Advanced Cell Biology/BIOC 224 Advanced Cell Biology
- MCP 222 Imaging: Biological Light Microscopy
- NENS 267 Molecular Mechanisms of Neurodegenerative Disease/BIO 267 Molecular Mechanisms of Neurodegenerative Disease
- PSYCH 204 Computation and cognition: the probabilistic approach
- RAD 227 Functional MRI Methods/BIOPHYS 227 Functional MRI Methods

The previously-approved courses from outside the Neuroscience core listed below satisfied the remaining elective requirements:

- BIO 222 Exploring Neural Circuits
- CS 379 Interdisciplinary Topics
- IMMUNOL 285 Brain and the Immune System
- MUSIC 257 Neuroplasticity and Musical Gaming
- NENS 204 Stroke Seminar

Other courses not listed here can satisfy program requirements with prior approval of the Program Director.

Director: Anthony J. Ricci (Edward C. and Amy H. Sewall Professor in the School of Medicine and, Professor, by courtesy, of Molecular and Cellular Physiology)

Anesthesia: Gregory Scherrer

Applied Physics: Surya Ganguli

Bioengineering: Kwabena Boahen, Karl Deisseroth

Biology: Xiaoke Chen, Russ Fernald, Ron Kopito, Liqun Luo, Susan McConnell, Robert Sapolsky, Mark Schnitzer, Carla Shatz, Kang Shen

Comparative Medicine: Paul Buckmaster, Shaul Hestrin

Developmental Biology: David Kingsley

Electrical Engineering: Krishna Shenoy

Genetics: Aaron Gitler, Anne Brunet

Microbiology and Immunology: Helen Blau

Molecular and Cellular Physiology: Axel Brunger, Miriam Goodman, Daniel Madison, Merritt Maduke, Stephen Smith, Thomas Sudhof

Neurobiology: Stephen Baccus, Ben Barres, Thomas Clandinin, Lisa Giocomo, Eric Knudsen, Tirin Moore, William Newsome, Jennifer Raymond

Neurology and Neurological Sciences: Katrin Andreasson, Marion Buckwalter, Jun Ding, John Huguenard, Michelle Monje-Deisseroth, Josef Parvizi, Richard Reimer, Tony Wyss-Coray, Yanmin Yang

Neurosurgery: Theo Palmer, Giles Plant, Xinnan Wang

Ophthalmology: E.J. Chichilnisky

Otolaryngology: Stefan Heller, Anthony Ricci

Pathology: Isabella Graef

Pediatrics: Michael Lin

Psychiatry and Behavioral Sciences: Lu Chen, Firdaus Dhabhar, David Lyons, Robert Malenka, Vinod Menon, Karen Parker, Sergiu Pasca, Allan Reiss, Jamie Zeitler

Psychology: James McClelland, Anthony Norcia

Radiology: Gary Glover

## Obstetrics and Gynecology

Courses offered by the Department of Obstetrics and Gynecology are listed under the subject code OBGYN on the Stanford Bulletin's ExploreCourses web site.

The Department of Obstetrics and Gynecology does not offer degrees; however, qualified medical, graduate, or undergraduate students with an interest in basic research in reproductive biology may apply to arrange individual projects under the supervision of the faculty. The focus for the Division of Reproductive, Stem Cell and Perinatal Biology is the study of the molecular and cellular biology of male and female reproductive organs.

*Chair:* Jonathan S. Berek, M.D., M.M.S., Professor, Laurie Kraus Lacob Professor

*Vice Chair:* Maurice L. Druzin, M.D., Professor

### Gynecology Service

Paul Blumenthal, M.D., M.P.H., Chief

### Division of Gynecology

Paul Blumenthal, M.D., M.P.H., Professor – Director

Paula Hillard, M.D., Professor

Deirdre Lum, M.D., Clinical Assistant Professor

Kate Shaw, M.D., Clinical Assistant Professor

## Division of Reproductive, Stem Cell, and Perinatal Biology (Research)

Virginia Winn, M.D., Ph.D., Associate Professor; Director

Bertha Chen, M.D., Professor

Aaron J. Hsueh, Ph.D., Professor

Vittorio Sebastiano, Ph.D., Assistant Professor

## Pathology

Courses offered by the Department of Pathology are listed under the subject code PATH on the Stanford Bulletin's ExploreCourses web site.

## Programs of Study in Pathology

The Department of Pathology offers advanced courses in aspects of pathology. The department does not offer advanced degrees in pathology, but qualified graduate students who are admitted to department-based or interdepartmental graduate programs may elect to pursue their thesis requirements in the department's research laboratories. The discipline of pathology has served as a bridge between the preclinical and clinical sciences and is focused on the application of advances in the basic biological sciences, both to the diagnosis of human disease and the elucidation of the mechanisms of normal molecular, cellular, and organ structure and function that manifest themselves in clinical disease. Accordingly, the department's research interests extend from fundamental molecular biology to clinical-pathological correlations, with an emphasis on experimental oncology.

Investigation in the department includes basic studies in areas using molecular biological, biochemical, and genetic cell biological techniques: DNA replication in yeast and cultured eukaryotic cells, cell cycle control

in animal cells and yeast, identification and pathogenetic role of chromosomal aberrations in human malignancies and mechanisms of activation of oncogenes in human and animal cells, lymphocyte and neutrophil-interactions with endothelial cells, cell type specification and signal transduction pathways leading to specific gene expression or modulation of cytoskeletal behavior; cytoskeletal architecture, cell-matrix interaction, developmental biology of hematopoietic stem cells and thymus, regulation of the immune system, mechanisms of immune and other responses in the central nervous system, and neuro-degenerative diseases. Various studies focus on the development of novel diagnostic and immunotherapeutic treatment modalities and techniques for solid tumors, lymphomas, HIV, and genetic diseases. Research training in all of these areas is available for qualified medical and graduate students by individual arrangement with the appropriate faculty member. A summary of the research interests of the department faculty is available at Sanford's School of Medicine (<http://pathology.stanford.edu>) web site.

*Clinician Educators:* Jennifer Andrews, Raffick Bowen, Susan Atwater, David Bingham, Brittany Holmes, Christian Kunder, Steven Long, Melanie Manning, Roberto Novoa, David Oh, Tho Pham, Kerri Rieger, Matthew Rumery, Darren Salmi, Neil Shah, Run Shi, Carlos Suarez, Brent Tan, Eric Yang

*Instructors:* Mike Angelo, Joseph Hernandez, Marisa Juntilla, Franklin Mullins, Justin Odegaard, Riccardo Sibiliano, Albert Tsai, Kitchener Wilson

*Adjunct Clinical Faculty:* Swaroop Aradhya, Robert Archibald, Jerome S. Burke, Glenn Cockerham, Seth Haber, Maie K. Herrick, Paul W. Herrmann, Michelle Jorden, Charles Lombard, Robert Luo, Gregory Moes, Joseph O'Hara, William Rueh, Matrina Schmidt, Thomas W. Rogers

*Clinical Educators (Affiliated):* Melissa Clark, Dean Fong, Barbara Egbert

## Radiation Oncology

Courses offered by the Department of Radiation Oncology are listed under the subject code RADO on the Stanford Bulletin's ExploreCourses web site.

Radiation Oncology focuses on the use of radiation for cancer therapy and research. The department does not offer degrees; however, its faculty teach courses open to medical students, graduate students, and undergraduates. The department also accepts students in other curricula as advisees for study and research. Graduate students in Biophysics and Cancer Biology may perform their thesis research in the department. Undergraduates may arrange individual research projects under supervision of faculty.

At the present time, the major areas of basic research investigation in the department include: DNA repair in mammalian cells after ionizing irradiation; studies of the mechanism of tumor hypoxia in animal tumors; development of new anti-cancer drugs to exploit tumor hypoxia; cytogenetic and molecular methods of predicting the sensitivity of individual tumors to cancer therapy; radiolabeled monoclonal antibodies for cancer detection and treatment; studies of oxygen levels in human tumors using polarographic electrodes; clinical trials of a new hypoxic cytotoxic agent (tirapazamine); studies of the late effects of cancer therapy; and techniques of conformal and intensity modulated radiation therapy.

## Faculty

*Emeriti:* Malcolm A. Bagshaw, Peter Fessenden, Don R. Goffinet, George M. Hahn, Kendric Smith

*Chair:* Richard T. Hoppe

*Professors:* J. Martin Brown, Sarah S. Donaldson, Amato J. Giaccia, Steven L. Hancock, Richard T. Hoppe, Quynh-Thu Le, Daniel S. Kapp, Steven A. Liebel

*Associate Professors:* Iris C. Gibbs, Paul Keall, Christopher R. King, Susan J. Knox, Gary Luxton, Lei Xing

*Assistant Professors:* Laura Attardi, Daniel Chang, Nicholas Denko, Edward Graves, Albert C. Koong

*Consulting Professor:* Robert M. Sutherland

## Radiology

Web Site: <http://www-radiology.stanford.edu>

Courses offered by the Department of Radiology are listed under the subject code RAD on the Stanford Bulletin's ExploreCourses web site.

The Department of Radiology does not offer degrees; however, its faculty teach courses open to medical students, graduate students, and undergraduates. The department also accepts students in other curricula as advisees for study and research. Undergraduates may also arrange individual research projects under the supervision of the department's faculty. This discipline focuses on the use of radiation, ultrasound, and magnetic resonance as diagnostic, therapeutic, and research tools. The fundamental and applied research within the department reflects this broad spectrum as it relates to anatomy, pathology, physiology, and interventional procedures. Original research and development of new clinical applications in medical imaging is supported within the Radiological Sciences Laboratory.

## Faculty

*Emeriti: (Professors)* Herbert L. Abrams, Ronald Castellino, Barton Lane, Gerald Friedland, David A. Goodwin, Michael L. Goris, Henry H. Jones, William Marshall, I. Ross McDougall, Robert E. Mindelzun, Matilde Nino-Murcia, William H. Northway, Bruce R. Parker, Lewis Wexler, Leslie M. Zatz

*Chair:* Sanjiv Sam Gambhir

**Professors:** Patrick Barnes, Richard A. Barth, Christopher F. Beaulieu, Bruce Daniel, Huy M. Do, Michael Federle, Nancy Fischbein, Dominik Fleischmann, Sanjiv Sam Gambhir, Gabriela Gayer, Gary H. Glover, Garry E. Gold, Robert J. Herfkens, Lawrence Hofmann, Dave Hovsepian, Debra M. Ikeda, R. Brooke Jeffrey, Peter Kane, Ralph Lachman, Barton Lane, Ann Leung, Craig Levin, Michael Marks, Tarik Massoud, Michael Moseley, Peter Moskowitz, Sandy Napel, Beverley Newman, Norbert J. Pelc, Allan Reiss, Brian Rutt, George Segall, F. Graham Sommer, Daniel Spielman, Daniel Y. Sze, Volney Van Dalsem, Joseph Wu

**Professor (Research):** R. Kim Butts-Pauly, Sylvia Plevritis

**Associate Professors:** Sandip Biswal, Francis Blankenberg, Francis P. Chan, Terry Desser, Andrei H. Iagaru, Nishita Kothary, William Kuo, David Larson, John Louie, Eric W. Olcott, Sunita Pal, Andrew Quon, Geoffrey Riley, Erika Rubesova, Kathryn J. Stevens, Shreyas Vasanaawala, Juergen Willmann, Dorcas Yao, Greg Zaharchuk

**Associate Professors (Research):** Roland Bammer, Zhen Cheng, Heike Daldrop-Link, Rebecca Fahrig, Brian Hargreaves, Sylvia Plevritis, Jianghong Rao

**Assistant Professors:** Robert Dodd, Pejman Ghanouni, Howard Harvin, Gloria Hwang, Aya Kamaya, Sirisha Komakula, Jafi Lipson, Amelie Lutz, Payam Massaband, Erik Mittra, Zina Payman, Peter Poulos, Jianghong Rao, Daniel Rubin, Lisa Schmelzel, Rajesh Shah, Lewis Shin, Minal Vasanaawala, David Wang, Joseph Wu, Kristen Yeom, Michael Zeineh, Ashwini, Zenooz

**Assistant Professors (Research):** Frederick T. Chin, Parag Mallick, Jennifer McNab, David Paik, Ramasamy Paulmurugan, Sharon Pitteri

**Clinical Instructors:** Bao Do, H. Henry Guo, Stefan Hura, Linda Morimoto

## Stem Cell Biology and Regenerative Medicine

Courses offered by the Program in Stem Cell Biology and Regenerative Medicine are listed under the subject code STEMREM on the Stanford Bulletin's Explore Courses web site.

## Graduate Program in Stem Cell Biology and Regenerative Medicine

The Stanford Stem Cell Biology and Regenerative Medicine (SCBRM) program is dedicated to doctoral education that translates basic science to clinical applications, typically referred to as Translational Science, and of intense interest internationally in medical schools and universities. Our doctoral program provides exceptional didactic education and research experience in the basic sciences underlying stem cell biology. In addition, program participants will receive specialized training in the development and clinical application of discoveries in the basic sciences to achieve regenerative therapies. Thus, our graduates will be uniquely positioned to develop successful translational careers in Stem Cell Biology and Regenerative Medicine, and will emerge prepared to deliver on their passion to improve the human condition. The core curriculum is combined with unique research and clinical/professional immersion rotations to provide opportunities for doctoral students to specialize in the broad subject of translational medicine and yet focus specifically on fundamentals of SCBRM. The curriculum combines education in genetics and developmental biology with an introductory laboratory-based stem cell course, an advanced course in stem cell biology and regenerative medicine, and a clinical rotation with alternative opportunities in law, business and/or engineering.

The mission of the SCBRM graduate program is to produce future leaders in translational science through a combination of basic science and clinical/professional immersion. The program aims to be innovative

and to change the landscape for graduate education in the biomedical sciences by having the immersion tailored to each student's translational goals. The program accommodates students who wish to focus primarily at the basic science level alongside those who wish to focus specifically on innovation such as a new device to solve a clinical problem. In the former case, the student might seek out a primary mentor affiliated with the basic sciences and take electives that reflect the more basic interest. In the latter case, the student might select an elective with an engineering focus and seek out primary mentorship with a more clinically or engineering focused mentor. In this way, graduates from our doctoral program receive exceptional didactic education and research experience and are well positioned to develop successful translational careers in SCBRM by applying their knowledge and passion to improve human health.

## Master of Science in Stem Cell Biology and Regenerative Medicine

University requirements for the M.S. degree are described in the "Graduate Degree (p. 45)s" section of this bulletin.

Students in the Ph.D. program in SCBRM may apply for an M.S. degree in SCBRM, assuming completion of appropriate requirements. The program does not accept applications for a standalone M.S. degree.

To receive an M.S. in Stem Cell Biology and Regenerative Medicine, Students must complete the following:

1. Four full-tuition quarters of residency as a graduate student at Stanford.
2. At least 45 units of academic work, all of which must be in courses at or above the 100 level, 16 units of which must be at or above the 200 level.
3. Four quarters of graduate research, consisting of rotations in the labs of at least three SCBRM faculty members.
4. Course work in Stem Cell Biology and Regenerative Medicine as well as other core requirements:
  - a. STEMREM 200 Stem Cell Intensive hands-on immersion to learn basic methods of tissue culture, mouse embryo fibroblast (MEF) preparation, embryonic stem and induced pluripotent stem (ES/iPS) cell culture, differentiation, DNA isolation, polymerase chain reaction (PCR), sequencing, and basic microscopy.
  - b. BIOS 200 Foundations in Experimental Biology focuses on the broad themes of Evolution, Energy and Information.
  - c. STEMREM 201A Stem Cells and Human Development: From Embryo to Cell Lineage Determination and STEMREM 201B Stem Cells and Human Development Laboratory develop a fundamental understanding of introductory stem cell principles in human development, aging, and disease accompanied by a laboratory-based module with immersion in stem cell-based methods (embryology, embryonic stem cells, reprogramming, adult stem cells).
  - d. STEMREM 202 Stem Cells and Translational Medicine, advanced topics related to individual organ systems, cancer stem cells, translational principles of medicine and immunology as related to regenerative medicine, as well as bioengineering and bioinformatics as related to stem cell biology.
  - e. STEMREM 203 Stem Cells Immersion: Applications in Medicine, Business and Law, students specialize and choose a clinical immersion, rotation in a biotechnology company or venture firm, or further delve into cutting edge technologies, bioinformatics, materials and/or engineering approaches for stem cell applications in industry, diagnostics and medicine.
  - f. STEMREM 250 Regenerative Medicine Seminar Series, a forum for researchers to meet and discuss Stem Cell Biology and

Regenerative Medicine and to spark collaborations. 6 units of this course is required.

- g. STEMREM 280 Stem Cell Biology and Regenerative Medicine Journal Club, review and discussion of current literature in both basic and translational medicine as it relates to stem cell biology and/or regenerative medicine.

STEMREM 200	Stem Cell Intensive	1
BIOS 200	Foundations in Experimental Biology	6
STEMREM 201A	Stem Cells and Human Development: From Embryo to Cell Lineage Determination	1-2
STEMREM 201B	Stem Cells and Human Development Laboratory	3
STEMREM 202	Stem Cells and Translational Medicine	3-5
STEMREM 203	Stem Cells Immersion: Applications in Medicine, Business and Law	3
STEMREM 250	Regenerative Medicine Seminar Series	1
STEMREM 280	Stem Cell Biology and Regenerative Medicine Journal Club	2
BIOC 224/ BIO 214/ MCP 221	Advanced Cell Biology	4
GENE 205	Advanced Genetics	3
MED 255	The Responsible Conduct of Research	1
DBIO 210	Developmental Biology	4
STEMREM 399	Graduate Research	1-18
Total Units		33-53

- h. Students are also required to take 2 electives, totaling a minimum of 6 units.
- i. Biochemistry proficiency is required by the end of the second year, as well as a total of 80 units and completed qualifying examinations. Students who do not pass the qualifying examination may retake a full qualifying exam, be retested in a few areas, or be asked to redo their presentation.
5. Participation and attendance at the annual SCBRM Retreat.
6. The qualifying examination process in SCBRM before admission to Ph.D. candidacy has two parts:
- Part I: a comprehensive written exam in the form of a 5-page NIH grant proposal
  - Part II: a 15-minute oral presentation of the proposal to the thesis committee followed by open questions from the qualifying exam committee on the proposal or encompassing areas of research/academic scholarship that are deemed relevant to the proposal.

Students who do not pass the qualifying exam may retake the full qualifying exam, be retested in a sub-area, or be asked to redo their presentation. Those students who fail the qualifying exam twice may be awarded a master's degree based on completion of course work and rotations. In addition, students who choose to voluntarily leave the program are also awarded a master's degree based on completion of the qualifying exam.

## Doctor of Philosophy in Stem Cell Biology and Regenerative Medicine

University requirements for the Ph.D. are discussed in the "Graduate Degrees (p. 45)" section of this bulletin.

The Stem Cell Biology and Regenerative Medicine curriculum, combined with the research and rotation opportunities, provides a flexible educational opportunity for doctoral students to specialize in the broad

subject of translational medicine while being focused more specifically on the fundamentals of Stem Cell Biology and Regenerative Medicine while training in the laboratories of participating SCBRM faculty. The goal of the SCBRM program is to provide an avenue for graduate education to translate the best of basic research into a clinical setting.

## Application and Admission

Applications are made through the Graduate Admissions (<http://gradadmissions.stanford.edu>) web site.

Applicants will be assessed based on their undergraduate transcripts, test scores, research experience, statement of purpose and letters of recommendation that document exceptional potential, ability, or achievements.

Students admitted to the program are offered financial support covering tuition, a living stipend, and insurance coverage. Applicants are urged to apply for independent fellowships such as from the National Science Foundation. Fellowship applications are due in November of the year prior to matriculation in the graduate program, but SCBRM graduate students may continue to apply for outside fellowships after matriculation. Because of the small number of department-funded slots, students who have been awarded an outside fellowship have an improved chance of acceptance into the program. Upon matriculation, each student is assisted in selecting courses and lab rotations in the first year and in choosing a lab for the dissertation research. Once a dissertation adviser has been selected, a dissertation committee is composed to include the dissertation adviser and two additional SCBRM faculty, to guide the student during their dissertation research. The student must meet with the dissertation committee at least once a year.

## Degree Requirements

Candidates for Ph.D. degrees at Stanford must satisfactorily complete a program of study that includes 135 units of graduate course work and research.

Requirements for the Ph.D. degree in SCBRM include:

1. Completion of at least 3 research rotations in the labs of SCBRM faculty members.
2. Completion of the following courses:
  - a. STEMREM 200 Stem Cell Intensive hands-on immersion to learn basic methods of tissue culture, mouse embryo fibroblast (MEF) preparation, embryonic stem and induced pluripotent stem (ES/iPS) cell culture, differentiation, DNA isolation, polymerase chain reaction (PCR), sequencing, and basic microscopy.
  - b. BIOS 200 Foundations in Experimental Biology focuses on the broad themes of Evolution, Energy and Information.
  - c. STEMREM 201A Stem Cells and Human Development: From Embryo to Cell Lineage Determination and STEMREM 201B Stem Cells and Human Development Laboratory develop a fundamental understanding of introductory stem cell principles in human development, aging, and disease accompanied by a laboratory-based module with immersion in stem cell-based methods (embryology, embryonic stem cells, reprogramming, adult stem cells).
  - d. STEMREM 202 Stem Cells and Translational Medicine advanced topics related to individual organ systems, cancer stem cells, translational principles of medicine and immunology as related to regenerative medicine, as well as bioengineering and bioinformatics as related to stem cell biology.
  - e. STEMREM 203 Stem Cells Immersion: Applications in Medicine, Business and Law students specialize and choose a clinical immersion, rotation in a biotechnology company or venture firm, or further delve into cutting edge technologies, bioinformatics, materials and/or engineering approaches for stem cell applications in industry, diagnostics and medicine.

- f. STEMREM 250 Regenerative Medicine Seminar Series a forum for researchers to meet and discuss Stem Cell Biology and Regenerative Medicine and to spark collaborations. 6 units of this course is required.
- g. STEMREM 280 Stem Cell Biology and Regenerative Medicine Journal Club review and discussion of current literature in both basic and translational medicine as it relates to stem cell biology and/or regenerative medicine.
3. Students have the option to select from the following courses in the first year:

STEMREM 200	Stem Cell Intensive	1
BIOS 200	Foundations in Experimental Biology (Offered in Autumn and Spring)	6
STEMREM 201A	Stem Cells and Human Development: From Embryo to Cell Lineage Determination	1-2
STEMREM 201B	Stem Cells and Human Development Laboratory	3
STEMREM 202	Stem Cells and Translational Medicine	3-5
STEMREM 203	Stem Cells Immersion: Applications in Medicine, Business and Law	3
STEMREM 250	Regenerative Medicine Seminar Series	1
STEMREM 280	Stem Cell Biology and Regenerative Medicine Journal Club	2
BIOC 224/ BIO 214/ MCP 221	Advanced Cell Biology	4
GENE 205	Advanced Genetics	3
MED 255	The Responsible Conduct of Research	1
DBIO 210	Developmental Biology	4
STEMREM 399	Graduate Research	1-18
Total Units		33-53

4. Students are also required to take 2 electives, totaling a minimum of 6 units.
5. Biochemistry proficiency is required by the end of the second year, as well as a total of 80 units and completed qualifying examinations. Students who do not pass the qualifying examination may retake a full qualifying exam, be retested in a few areas, or be asked to redo their presentation.
6. STEMREM 802 TGR Dissertation.

Students unable to meet Ph.D. milestones after remediation are offered a M.S. degree if they have completed all requirements.

*Program Director:*Theo D. Palmer

*Program Co-Directors:*Margaret Fuller, Irving L. Weissman, Joanna Wysocka,

*Teaching Faculty:*

- Philip A. Beachy (Professor, Institute for Stem Cell Biology and Regenerative Medicine, Department of Biochemistry and Developmental Biology)
- Michael F. Clarke (Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Medicine-Oncology and Member of Bio-X and Stanford Cancer Institute)
- Maximilian Diehn (Assistant Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Radiation Oncology/Radiation Therapy and Member of the Stanford Cancer Institute)
- Margaret Fuller (Reed-Hodgson Professor in Human Biology and Professor of Genetics, Member of the Stanford Cancer Institute)

- Sarah C. Heilshorn (Assistant Professor, Materials Science and Engineering, Professor (by courtesy), Chemical Engineering and Bioengineering and Member of Bio-X)
- Michael T. Longaker (Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Surgery/Plastic and Reconstructive Surgery, Professor (by courtesy), Bioengineering and Materials Science and Engineering/Engineering Materials and Science and Member of Bio-X and Stanford Cancer Institute)
- Ravindra Majeti (Assistant Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Medicine/Hematology and Member of Bio-X and Stanford Cancer Institute)
- Michelle Monje-Deisseroth (Assistant Professor, Institute for Stem Cell Biology and Regenerative Medicine and Neurology and Neurological Sciences and Member of Bio-X and Child Health Research Institute)
- Hiromitsu Nakauchi (Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Genetics)
- Roeland Nusse (Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Developmental Biology and Member of Bio-X and Stanford Cancer Institute)
- Theo D. Palmer (Associate Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Neurosurgery and Member of Bio-X and Stanford Cancer Institute)
- Maria-Grazia Roncarolo (George D. Smith Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Medicine)
- Vittorio Sebastiano (Assistant Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of OBGYN and Member of the Stanford Cancer Institute)
- Irving L. Weissman (Professor, Institute for Stem Cell Biology and Regenerative Medicine, Department of Pathology and Developmental Biology, Professor (By courtesy) Department of Biology and Member of Bio-X and Stanford Cancer Institute)
- Marius Wernig (Assistant Professor, Institute for Stem Cell Biology and Regenerative Medicine and Department of Pathology and Member of Bio-X)
- Joseph Wu (Stanford Cardiovascular Institute and Professor in the Department of Medicine (Cardiology) and Department of Radiology (Molecular Imaging Program))
- Joanna Wysocka (Assistant Professor, Institute for Stem Cell Biology and Regenerative Medicine, Department of Chemical and Systems Biology and Developmental Biology and Member of the Stanford Cancer Institute)

#### Units

## Structural Biology

Courses offered by the Department of Structural Biology are listed under the subject code SBIO on the Stanford Bulletin's ExploreCourses web site.

The department offers course work and opportunities for research in structural biology.

The emphasis of research in the department is on understanding fundamental cellular processes in terms of the structure and function of biological macromolecules and their assemblies. Techniques used include standard methods of biochemistry, cell culture, single-molecule fluorescence spectroscopy, genetic engineering, and three dimensional structure determination by x-ray diffraction, nuclear magnetic resonance spectroscopy and electron microscopy, coupled with the development of computational methods.

## Doctor of Philosophy in Structural Biology

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 45)" section of this bulletin.

The graduate program in Structural Biology leads to the Ph.D. degree. The department also participates in the Medical Scientists Training Program (MSTP) in which individuals are candidates for both Ph.D. and M.D. degrees.

The graduate program is intended to prepare students for careers as independent investigators in cell and molecular biology. The principal requirement of a Ph.D. degree is the completion of research constituting an original and significant contribution to the advancement of knowledge.

**The requirements and recommendations for applying to the Ph.D. program in the Department of Structural Biology include:**

		<b>Units</b>
CHEM 131	Organic Polyfunctional Compounds	3
CHEM 171	Physical Chemistry I	3
CHEM 173	Physical Chemistry II	3
CHEM 175	Physical Chemistry III	3
BIOC 200	Applied Biochemistry	2

**Ph.D. students in the Department of Structural Biology are required to complete all the following requirements:**

		<b>Units</b>
SBIO 241	Biological Macromolecules	3-5
SBIO 242	Methods in Molecular Biophysics	3
MED 255	The Responsible Conduct of Research	1
AND, 4 graduate level courses in physical or biological science, with		
at least 1 course in physical science		
at least 1 course in literature-based biological science		

1. Training in a major with connections to biophysics (e.g., physics, chemistry, or biology, with a quantitative background equivalent to that of an undergraduate physics or chemistry major at Stanford).
2. Opportunities for teaching are available during the first nine quarters at the discretion of the advising committee.
3. The student must prepare a dissertation proposal defining the research to be undertaken including methods of procedure. This proposal should be submitted by the end of summer quarter of the second year, and it must be approved by a committee of at least three members including the principal research adviser and at least one member from the Department of Structural Biology. The candidate must defend the dissertation proposal in an oral examination. The dissertation reading committee normally evolves from the dissertation proposal review committee.
4. The student must present a Ph.D. dissertation as the result of independent investigation and expressing a contribution to knowledge in the field of structural biology.
5. The student must pass the University oral examination, taken only after the student has substantially completed the research. The examination is preceded by a public seminar in which the research is presented by the candidate.

Applicants to the program should have a bachelor's degree and should have completed at least a year of course work in biology, mathematics, organic chemistry, physical chemistry, and physics. Application forms must be received by the department before December 15 for notification by April 15. Application to the National Science Foundation for fellowship support is also encouraged. Remission of fees and a personal stipend are available to graduate students in the department. Prospective applicants should contact the Department of Structural Biology for further information.

Current topics of research in the department lie in the areas of gene expression; theoretical, crystallographic, and genetic analysis of protein

structure; and cell-cell interaction. See Stanford's School of Medicine (<http://www.med.stanford.edu/school/structuralbio>) web site for further information.

## OTHER OFFICES

These pages list various offices, centers, laboratories, and institutes of direct relevance to study at Stanford. The listings are not all-inclusive. Click on the "Expand Menus" link at the top of the right hand menu to show a broad selection of other sites at Stanford University.

- A comprehensive list of Stanford offices is available on the University's A to Z Index page (<http://www.stanford.edu/atoz>).
- A comprehensive list of Independent Labs, Institutes and Centers (<http://doresearch.stanford.edu/research-scholarship/interdisciplinary-laboratories-centers-and-institutes>)

## Student Affairs

Web Site: <http://studentaffairs.stanford.edu/>

Student Affairs is led by the Vice Provost for Student Affairs. There are six main units in Student Affairs:

1. BEAM, Stanford Career Education
2. Community Engagement and Diversity
3. Dean of Students
4. Office of Residential Education
5. Student and Academic Services, and University Registrar
6. Vaden Health Center

The division encompasses a broad range of programs and services for undergraduates and graduate students, which are administered by the following offices and centers:

- Asian American Activities Center
- BEAM, Stanford Career Education
- Bechtel International Center
- Black Community Services Center
- Dean of Students
- Diversity and First-Gen Office
- El Centro Chicano y Latino
- Graduate Life Office
- Haas Center for Public Service
- LGBT Community Resources Center
- The Markaz: Resource Center
- Native American Cultural Center
- Office for Military-Affiliated Communities
- Office of Accessible Education
- Office of Alcohol Policy and Education
- Office of Community Standards
- Office of Residential Education
- Office of Student Activities and Leadership
- Student Services Center
- Student Financial Services
- University Registrar
- Vaden Health Center
- Women's Community Center

The Vice Provost for Student Affairs reports directly to the Provost and is responsible for providing leadership, policy direction, and administrative support for budget, personnel, facilities, and development, as well as oversight of the efficiency and effectiveness of each of the division's units. The Vice Provost interacts with the President, the Provost, the Vice Provosts, faculty, schools, department representatives, students, and parents. The Vice Provost is a member of the Stanford University

Cabinet, and ex officio member of the Stanford Alumni Association Board of Directors, Stanford Athletic Board, and Haas Center for Public Service National Advisory Board. The Vice Provost also attends the Senate meetings of the Academic Council.

## Bechtel International Center

Office: 584 Capistrano Way

Web Site: <https://bechtel.stanford.edu>

The Bechtel International Center (I-Center) is a meeting place for students and senior research scholars at Stanford from throughout the world and for internationally oriented U.S. students, faculty, and short-term visitors on the campus. Through a variety of social, cultural, and educational programs, I-Center facilities are used to acquaint students and scholars with the life of the university and the community, and to bring them together in activities of mutual interest.

The Center believes that international educational exchange nurtures a lifelong global perspective, and plays a key role in supporting Stanford's standing as a truly international university in the following ways:

- Provides information about and assistance with obtaining and maintaining legal status in the U.S. to foreign students, scholars, and Stanford departments.
- Advises U.S. students who are pursuing scholarships for study and research abroad.
- Enables foreign students, scholars, and their family members at Stanford to receive maximum academic, cultural, and personal benefit from their stays in the U.S.
- Contributes to international activities at Stanford by helping to create a welcoming and supportive environment that is responsive to the needs of the international community.
- Facilitates professional meetings between visiting international delegations and their Stanford counterparts.
- Provides opportunities for Stanford students, faculty, staff, and members of the local community to broaden their horizons by interacting with people from different cultures through programs to increase international awareness and understanding.

## BEAM, Stanford Career Education

Offices: 563 Salvatierra Walk

Web Site: <https://beam.stanford.edu/>

BEAM (Bridging Education, Ambition and Meaningful Work), Stanford Career Education empowers students to cultivate personalized networks that shape their professional journey through customized support for students based on their interests, academic majors and degrees. BEAM offers many opportunities to engage with employers and alumni via events, mentorships, experiential learning, and much more. Tools and digital resources are also made available through meetups, labs, or individual appointments to help students transform their ambitions into meaningful work.

Support is available to undergraduate and graduate students, and all students are encouraged to login to Handshake, our online platform that connects students and employers, to stay up to date on events and opportunities. Events and appointments are free to students and limited services are available to first-year alumni and student spouses/domestic partners.

The following suggestions may assist students in getting the most out of their journey toward meaningful work:

- Begin building your personalized network early in your Stanford career.

- Register with Handshake to access career events, internships, part-time and full-time jobs, and interview opportunities.
- Discover yourself and gain clarity of your interests and skills through meetups, assessments, and taking advantage of individual career coaching appointments that can be made via Handshake.
- Make exploration a priority by connecting with alumni mentors, planning informational interviews, signing up for a career trek, and meet with an industry consultant.
- Make a plan to pursue opportunities by attending labs, familiarizing yourself with resources, and utilize your connections.

*Visit Career Communities for career coaching in academic departments and student communities:*

Monday–Friday, 9 a.m. to noon, 1 p.m. to 5 p.m.; (650) 725-1789

*Visit Career Ventures for customized industry connections and employer engagement opportunities:*

Monday–Friday, 8:15 a.m. to 4:30 p.m.; (650) 723-9014

## Community Centers

There are seven ethnic and community centers that support students who seek services associated with a particular group or community. Each center has its own site and professional staff who advise and counsel students. In addition, the centers sponsor programs throughout the year that foster intellectual, personal, and cultural growth. Detailed information is available on the following web sites:

- Asian American Activities Center (<https://a3c.stanford.edu>)
- Black Community Services Center (<https://bcsc.stanford.edu>)
- El Centro Chicano y Latino (<https://elcentro.stanford.edu>)
- LGBT Community Resources Center (<https://lgbt.stanford.edu>)
- The Markaz: Resource Center for Engagement with the Cultures and Peoples of the Muslim World (<https://markaz.stanford.edu>)
- Native American Cultural Center (<https://nacc.stanford.edu>)
- Women's Community Center (<https://wcc.stanford.edu>)

The programs offered through the centers are open to all Stanford students.

## Dean of Students

Dean of Student Life: Chris Griffith

Office: Old Union

Phone: (650) 723-2733

Web Site: <https://studentaffairs.stanford.edu/who-we-are/dean-students>

The Dean of Students has responsibility for overseeing the Graduate Life Office, Office of Community Standards, and the Office of Alcohol Policy and Education, as well as responsibility for the Acts of Intolerance Protocol. The Dean reports to the Vice Provost for Student Affairs and is a member of his executive committee.

## Diversity and First-Gen Office

Office: Old Union, 520 Lasuen Mall, Suite 206

Phone: (650) 723-2733

Email: [jrolen@stanford.edu](mailto:jrolen@stanford.edu) (<http://exploreddegrees.stanford.edu/studentaffairs/jrolen@stanford.edu>)

Web Site: <https://diversityandfirstgen.stanford.edu/>

Established in 2010 to serve first-generation and low-income students and help them be successful, the Diversity and First-Gen Office provides:

- a Thrive Guide to publicize the abundance of support available
- contact information for student groups, staff, faculty, and alumni for networking and mentoring
- signature programs and special events to build community

- administrative support and advocacy for diversity programs, especially those highlighting socioeconomic issue

## Graduate Life Office (GLO)

Graduate Life Office: Escondido Village Office, 859 Comstock Circle  
Graduate Life Office, Graduate Community Center: 750 Escondido Road  
Phone: (650) 736-7078

Email: [graduatelife@stanford.edu](mailto:graduatelife@stanford.edu)

Web Site: <https://glo.stanford.edu>

The Graduate Life Office (GLO) works with students on and off campus and with student groups, including Community Associates (student residence staff), the Graduate Student Programming Board, and the Graduate Student Council, to create an inclusive environment through programs in the residences and campus-wide. The Graduate Community Center (GCC) serves as a focal point for meetings and activities in the graduate community.

The GLO staff also works with individual students who need information and support or who may be experiencing personal difficulties. Staff members are knowledgeable about and have access to support and resources available throughout the university. Staff work closely with student services administrators in academic departments to provide consultation and services to students in need.

## Graduate Student Residence Program

The university's philosophy of graduate student housing is based on the premise that supporting high quality graduate scholarship and research is central to the mission of the university. By providing affordable housing in proximity to academic resources, the university creates an environment conducive to research and intellectual dialogue among students, their peers, and faculty members. The Community Associate (CA) program in the residences serves as a supportive resource for residents and to connect student neighbors through social events and activities to build a sense of community in the residences.

## Haas Center for Public Service

Center Office: 562 Salvatierra Walk

Mail Code: 8620

Phone: (650) 723-0992

Web Site: <https://haas.stanford.edu>

- The Haas Center for Public Service engages Stanford students in local and global public service across diverse pathways: direct service, community engaged learning and research, activism, philanthropy, public policy, and social entrepreneurship. The Haas Center offers:
  - Walk-in advising on public service opportunities and careers.
  - Community engaged learning and research across disciplines.
  - Supported full-time, quarter-long service opportunities in the U.S. and abroad.
  - Tutoring and mentoring programs rooted in enduring partnerships and cutting-edge education research.
  - Leadership training, service trips, and support for more than 125 service-related student organizations.

The Haas Center is the hub for Cardinal Service, a university-wide initiative to elevate service at Stanford in four areas:

- Cardinal Quarter: Students can select from more than 350 supported opportunities to participate full-time in service for a quarter or more. In the next five years, this will grow to 500 local, national and global opportunities.
- Cardinal Courses: Students can participate in more than 70 courses across 25 academic disciplines that integrate a community experience, examine a public issue, and explore civic identities.

- Cardinal Commitments: Students participate in and sustain a significant service experience to explore particular social issues or concerns.
- Cardinal Careers: Students explore multiple public service career options and learn about ways to integrate service into any career.

## Office for Military-Affiliated Communities (OMAC)

Office: Tresidder Memorial Union, 2nd floor  
 Phone: (650) 721-1563  
 Web Site: <https://military.stanford.edu>

The Office for Military-Affiliated Communities (OMAC) focuses on the administration and management of VA financial benefits, coordinates and supports educational opportunities for military-affiliated communities, and conducts outreach to faculty regarding engagement and support for faculty grants or other funding specifically identified for military and veteran communities.

## Office of Accessible Education (OAE)

Offices: 563 Salvatierra Walk  
 Phone: (650) 723-1066; TDD (650) 723-1067  
 Web Site: <https://oae.stanford.edu/>

The Office of Accessible Education (OAE) is the campus office designated to work with students, faculty, and staff to put in place appropriate accommodations for all Stanford students with disabilities, at both the undergraduate and graduate levels (including the professional schools). The OAE provides a wide array of support services, accommodations, and programs to remove barriers to full participation in the life of the university.

In reaching its determinations about appropriate accommodations, the OAE considers factors such as the documentation from professionals specializing in the area of the student's diagnosed disability, the student's functional limitations, and the student's input and accommodation history in regard to particular needs and limitations. The OAE then works with the student and relevant faculty and staff through an interactive process designed to achieve an accommodation that meets the needs of all parties.

## Office of Alcohol Policy and Education (OAPE)

Offices: Rogers House, 581 Capistrano Way  
 Phone: (650) 723-5947  
 Web Site: <http://studentaffairs.stanford.edu/alcohol>  
<https://alcohol.stanford.edu/>

The Office of Alcohol Policy and Education (OAPE) empowers students to make healthy decisions about drinking behaviors that not only affect them as individuals, but ultimately impact the campus community as a whole. OAPE is focused on reducing the harm of high-risk behaviors while increasing safe, legal, responsible actions. Services offered include individual consultation, educational workshops and seminars, and academic coursework. OAPE also sponsors Cardinal Nights, a program of weekly events that allow students to socialize in an environment free of alcohol.

## Office of Community Standards

Office: Tresidder Memorial Union, 2nd floor  
 Mailing Address: 459 Lagunita Drive, Suite 9  
 Mail Code: 94305-3010  
 Phone: (650) 725-2485  
 Fax: (650) 736-0247  
 Web Site: <https://communitystandards.stanford.edu/>

Email: [community\\_standards@stanford.edu](mailto:community_standards@stanford.edu)  
[judicial.affairs@stanford.edu](mailto:judicial.affairs@stanford.edu)

The primary codes of conduct for students are the Fundamental Standard and Honor Code. Cases of alleged violations of the university's Honor Code, Fundamental Standard, and other student conduct or University policies proceed through an established student conduct process (<https://communitystandards.stanford.edu/student-conduct-process>) outlined in the Student Judicial Charter of 1997, which can be found in its entirety at the Office of Community Standards (<https://communitystandards.stanford.edu>) web site. The web site also contains the policies, rules, and interpretations, as well as the university's Student Conduct Penalty Code, applicable to those students found responsible for violating the Honor Code, the Fundamental Standard, or other university policy or rule.

Allegations of sexual misconduct, sexual harassment, stalking, or dating violence proceed through the Dean's Alternate Misconduct Review Process (<http://studentaffairs.stanford.edu/judicialaffairs/process/alternate-review>).

When a violation of the Fundamental Standard, Honor Code, or other university policy or rule governing student conduct is alleged, or whenever a member of the university community believes such a violation has occurred, he or she should contact the Office of Community Standards.

## Fundamental Standard

Students at Stanford are expected to know, understand, and abide by the Fundamental Standard, which is the university's basic statement on behavioral expectations articulated in 1896 by Stanford's first President, David Starr Jordan, as follows:

"Students are expected to show both within and without the University such respect for order, morality, personal honor, and the rights of others as is demanded of good citizens. Failure to do this will be sufficient cause for removal from the University."

The Fundamental Standard is an aspirational statement of Stanford's ideal of civic and moral community. Although the spirit of the Fundamental Standard remains unchanged since 1896, these aspirational learning goals for all Stanford students elaborate its basic values today:

- i. Students are expected to respect and uphold the rights and dignity of others regardless of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity, or socioeconomic status.
- ii. Students are expected to uphold the integrity of the university as a community of scholars in which free speech is available to all and intellectual honesty is demanded of all.
- iii. Students are expected to respect university policies as well as state and federal law.
- iv. For the purposes of clarity, students should be aware that they may be subject to discipline at Stanford University for acts of misconduct including:
  - Violation of university policy
  - Violation of a specific university directive
  - Violation of an applicable law
  - Physical assault
  - Sexual misconduct, sexual assault, sexual harassment, stalking
  - Theft of property or services
  - Threats
  - Hazing

- Hate crimes
- Alcohol- and drug-related violations, including driving under the influence
- Intentional or reckless property damage
- Seeking a university benefit to which a student is not entitled
- Falsifying a document
- Impersonating another
- Computer violations
- Knowingly or recklessly exposing others to significant danger

There is no standard penalty that applies to violations of the Fundamental Standard. Infractions have led to penalties ranging from formal warning and community service to expulsion. In each case, the nature and seriousness of the offense, the motivation underlying the offense, and precedent in similar cases are considered.

## Honor Code

The Honor Code is the University's statement on academic integrity. It is essentially the application of the Fundamental Standard to academic matters. Provisions of the Honor Code date from 1921, when the honor system was established by the Academic Council of the University Faculty at the request of the student body and with the approval of the President. The Honor Code reads:

"1. The Honor Code is an undertaking of the students, individually and collectively:

- a. that they will not give or receive aid in examinations; that they will not give or receive unpermitted aid in class work, in the preparation of reports, or in any other work that is to be used by the instructor as the basis of grading;
- b. that they will do their share and take an active part in seeing to it that others as well as themselves uphold the spirit and letter of the Honor Code.

2. The faculty on its part manifests its confidence in the honor of its students by refraining from proctoring examinations and from taking unusual and unreasonable precautions to prevent the forms of dishonesty mentioned above. The faculty will also avoid, as far as practicable, academic procedures that create temptations to violate the Honor Code.

3. While the faculty alone has the right and obligation to set academic requirements, the students and faculty will work together to establish optimal conditions for honorable academic work."

Examples of conduct that has been found to be in violation of the Honor Code include:

- Copying from another's examination paper or allowing another to copy from one's own paper
- Unpermitted collaboration
- Plagiarism
- Revising and resubmitting a quiz or exam for regrading without the instructor's knowledge and consent
- Representing as one's own work the work of another
- Giving or receiving aid on an academic assignment under circumstances in which a reasonable person should have known that such aid was not permitted

For more information, see the Student Conduct Process (<https://communitystandards.stanford.edu/student-conduct-process>) pages at the Community Standards (<http://communitystandards.stanford.edu>) web site. The standard sanction for a first violation is a one quarter suspension from the University and 40 hours of community service. In addition, many faculty members issue a 'No Pass' for the course in

which the violation occurred. Information for teachers is available on the Teaching Commons web site (<https://teachingcommons.stanford.edu/resources/teaching-resources/how-evaluate-students/academic-honesty-and-dishonesty>).

## Office of Residential Education

Office: Tresidder Memorial Union  
Phone: (650) 725-2800  
Web Site: <https://resed.stanford.edu/>

The Office of Residential Education is responsible for developing the policies, programs, and staffing which support the intellectual, educational, and community-building activities in student residences. The conviction behind the Stanford residence program is that formal teaching, informal learning, and personal support in residences play an important role in a Stanford education.

## Residential Education Program

The Residential Education program provides Stanford undergraduates with a small community experience within a large research university. Residential Education programs extend the classroom into the residences and complement the academic curriculum with activities and experiences that contribute to students' preparation for a life of leadership, intellectual engagement, citizenship, and service. An extensive network of staff, including many who live in the residence halls, supports students during their undergraduate careers.

## Residence Deans

Residence Deans provide assistance to on- and off-campus undergraduate students. They can advise students about personal matters, occasionally intervene directly in behavioral problems or mental health concerns, and assist with personal emergencies. Advice is also available on issues of academic probation or suspension, leaves of absence, special concerns of students, and administrative matters. Residence Deans work closely with the Dean of Student Life and other University offices. They are assigned to specific residences and to off-campus students. For further information, undergraduates should call Residential Education at (650) 725-2800. For assistance, graduate students can consult assistant deans in the Graduate Life Office at (650) 736-7078.

## Office of Student Activities and Leadership (SAL)

Office: Old Union, 520 Lasuen Mall, Suite 206  
Web Site: <https://sal.stanford.edu/>

The Office of Student Activities and Leadership (SAL), located in Old Union, supports student activities, over 600 student organizations and the ASSU through publications, workshops, one-on-one consultation, advising and major event planning support.

## Voluntary Student Organizations

There are over 600 different Voluntary Student Organizations (VSOs) at Stanford. VSOs are organizations

1. in which membership is not mandatory and is nondiscriminatory,
2. in which membership is both open and limited to current Stanford students registered in a degree-granting program,
3. in which students make all organizational decisions, and
4. whose purposes and procedures are consistent with the goals and standards of the University. In order to use University facilities, the Stanford name, or to receive ASSU funding, all voluntary student organizations must register with the University through the Office of Student Activities, Old Union, room 206.

As a condition of registration, each voluntary student organization must file and have approved each of the following:

1. A statement of purpose and organizational constitution.
2. A statement about membership eligibility.
3. Clear procedures for officer elections.
4. Identification of the authorized representatives of the group, who must be a currently registered student, and at least five active members in the organization who are currently registered students.

Each voluntary student organization must renew its registration with the University annually, early in Autumn Quarter, by submitting new registration materials.

If a voluntary student organization that is registered with the University seeks to use University facilities for meetings open to more than its own members and to specifically invited guests, such meetings shall be subject to the policies of the Committee on Public Events. All organization events held in University facilities must receive event approval from the Student Activities and Leadership and Stanford Events.

A voluntary student religious organization may hold open meetings in University facilities only with the approval of the Office of the Dean for Religious Life (as the delegatee of Student Activities and Leadership).

A registered voluntary student organization may advocate publicly a position on a public issue, provided the organization clearly identifies itself, and provided such an organization in any public statement makes clear it does not represent or speak for the University or the Associated Students.

No student group or individual student(s) may use University space or facilities or receive other University support for purposes of supporting candidates for public office. Groups may use White Plaza for tables, speeches, and similar activities and may request to reserve auditoriums and similar space for public events including speeches by political candidates as long as all University guidelines are followed.

## Student Financial Services

Office: Tresidder Memorial Union, 2nd floor  
Phone: (866) 993-7772 (toll-free)  
Web Site: <https://sfs.stanford.edu>

Student Financial Services is responsible for managing billing, payment, and collections of student accounts receivable; and managing student loan receivables and collections. Student Financial Services also manages the refunding of aid to students in collaboration with the financial aid offices and in compliance with Title IV regulations. Furthermore, Student Financial Services provides resources and guidance to University departments to ensure accurate receipting and depositing of monies.

## Student Services Center

Office: Tresidder Memorial Union, 2nd floor  
Contact via HelpSU: <https://remedyweb.stanford.edu/helpsu/helpsu?pcat=StuAcct&dtag=10772> (http)  
Phone: (650) 723-7772 or (866) 993-7772 (toll-free)  
Web Site: <https://studentservicescenter.stanford.edu>

The Student Services Center (SSC) is committed to providing a single point of friendly, professional service for answers to questions concerning administrative and financial issues. The center strives to resolve 90 percent of students' issues upon first contact. The SSC represents Student Financial Services, the Office of the University Registrar, the University Cashier's Office, the Financial Aid Office, and Stanford ID Card Services, and is able to assist students with questions including those related to University billing, financial aid disbursements,

refunds, payroll deductions, payment plan, enrollment, Stanford degree policies and procedures, Stanford ID card, and forms pickup and submission.

## Vaden Health Center

Center Office: 866 Campus Drive  
Web Site: <https://vaden.stanford.edu>

The Allene G. Vaden Health Center strictly protects the confidentiality of information obtained in medical care and counseling.

### Medical Services

Medical Services (650-498-2336, ext. 1) is the first stop for diagnosis and treatment of illness, injury, and ongoing conditions, as well as preventive counseling and education. Services available without additional charge for students who have paid the Campus Health Service fee include:

- Medical appointments in general medicine and sports medicine.
- Medical advice for routine concerns throughout the day. When Medical Services is closed, advice for urgent conditions is available from the on-call physician.
- Referral to specialists, primarily at Stanford Hospital and Clinics and Menlo Medical Clinic.

### Additional services (fees apply):

- Allergy injections, immunizations, travel services, physical exams for employment and scholarships, HIV testing, laboratory, X-rays, drug screening (academic year only).
- Pharmacy (650-498-2336, ext. 3) and physical therapy (650-723-3195) are available on site.

### Counseling and Psychological Services (CAPS)

CAPS (650-723-3785) helps students who experience a wide variety of personal, academic, and relationship concerns. Services available without additional charge for students who have paid the Campus Health Service Fee include:

- Evaluation and brief counseling, including personal, couples and group therapy. Students requesting or requiring longer, ongoing therapy incur fees.
- Workshops and groups that focus on students' social, personal and academic effectiveness.
- Crisis counseling for urgent situations 24 hours a day.
- Consultation and outreach to faculty, staff, and student organizations.

### Confidential Support Team (CST)

Office: Mariposa House, 585 Capistrano Way, 2nd Floor, Rooms 208 and 209  
Phone: 650-736-6933  
Web Site: <http://vaden.stanford.edu/sexual-assault>

The Confidential Support Team (CST) offers emotional support, consultation, and short-term individual counseling to Stanford students impacted by sexual assault and relationship/domestic violence as well as intimate partner abuse, stalking, and sexual harassment. CST is staffed by clinical psychologists and a clinical social worker. At CST, students can receive information and guidance about their rights and reporting options. Confidentiality is strictly maintained. There is no charge for Stanford students.

### Additional Services

- Consultation to faculty, staff and student organizations
- Assistance connecting to other on- and off-campus support resources

## Hours of Service

- To access CST services, call the hotline at 650-725-9955 or stop by the main office at Rogers House (<https://campus-map.stanford.edu/?id=&lat=37.4234371992&lng=-122.171889161&zoom=15&srch=Rogers%20House>) on Monday, Tuesday, Thursday, and Friday from noon-5 pm and Wednesday from 10 am-3:30 pm. Counseling sessions are held at Stanford University Medical Center.
- At all other times, call the hotline at 650-725-9955, which is directed to a CAPS on-call clinician.
- To contact the CST Office when not seeking to access confidential support services, call the general business line at 650-736-6933.

## Health Promotion Services

Health Promotion Services (650-723-0821) educates and supports students to help them make informed, healthy decisions about their lifestyle. Services include:

- Individual preventive counseling and resource referral concerning nutrition, weight management, eating and body image, alcohol, tobacco and other drug use, sexual assault and harassment, relationships, intimacy and gender issues, and sexual health.
- Health education speakers, programs, and events and workshops at student residences, community centers, student organizations, and for new students (such as Real World: Stanford).
- Academic courses and internships.
- Student groups and volunteer opportunities including Peer Health Educators, HIV Peer Anonymous Counseling and Testing (HIV\*PACT), Sexual Health Peer Resource Center (SHPRC), and CPR/First Aid classes.

## Health Insurance

All registered students are required to have health insurance. Call (650) 723-2135 for more information. Cardinal Care (<http://vaden.stanford.edu/insurance>), the University-sponsored plan for students, fulfills this requirement. Insured by Aetna Student Health (medical), and ValueOptions (mental health), Cardinal Care features comprehensive, worldwide coverage, services by referral at Stanford University Medical Center and Menlo Medical Clinic, and lowest costs when one initiates care at Vaden Health Center. Stanford does not sponsor a health insurance plan for dependents; for available options, see the Dependent Health Insurance (<http://vaden.stanford.edu/insurance/dependent-coverage>) web site. Options for voluntary dental insurance are also offered.

Under certain circumstances, students with their own health insurance may waive Cardinal Care coverage. Domestic students who choose not to participate in Cardinal Care only have to waive once each academic year and must waive coverage before the first quarter in which they are enrolled for that academic year. At that time, and that time only, they will be able to waive Cardinal Care for the rest of the year by documenting equivalent health insurance in AxBSS (<http://axess.stanford.edu>) by the applicable deadline listed on Vaden's web site ([http://vaden.stanford.edu/insurance/using\\_your\\_own.html#wave](http://vaden.stanford.edu/insurance/using_your_own.html#wave)). International students must have coverage that meets or exceeds minimum standards established by the University in order to opt out of Cardinal Care; for more information see Vaden's web site ([http://vaden.stanford.edu/insurance/using\\_your\\_own.html#international](http://vaden.stanford.edu/insurance/using_your_own.html#international)).

*Vice Provost for Student Affairs:* Greg Boardman

*Associate Vice Provost and University Registrar, Student and Academic Services:* Thomas C. Black

*Associate Vice Provost and Dean of Career Education:* Farouk Dey

*Associate Vice Provost and Dean of Community Engagement and Diversity:* Nicole Taylor

*Associate Vice Provost and Director of Vaden Health Center:* Jim Jacobs (effective March 1, 2016). Ira Friedman (through February 29, 2016)

*Associate Vice Provost and Dean of Students:* Chris Griffith

*Associate Vice Provost and Dean of Residential Education:* Deborah Golder

*Associate Vice Provost for Administration:* Margaret Dyer-Chamberlain

## Centers, Laboratories, and Institutes

Independent research laboratories, centers, and institutes perform multidisciplinary research that extends beyond the scope of any one of the University's organized schools. The listings are not all-inclusive. A comprehensive list of Stanford offices is available on the University's A to Z Index page (<http://www.stanford.edu/atoz>).

The following tabs contain information on programs for undergraduates:

- Arts Institute (p. 716)
  - Interdisciplinary Honors in the Arts Program
- Center for Spatial and Textual Analysis (CESTA) (<https://cesta.stanford.edu>)
  - Graduate Certificate of Digital Humanities
- Center for the Study of Poverty and Inequality (CPI (p. 717))
  - Certificate Program on Poverty and Inequality
- Freeman Spogli Institute for International Studies (FSI) (p. 719)
  - Interschool Honors Program in Democracy, Development, and the Rule of Law
  - Interschool Honors Program in International Security Studies

## Office of Vice Provost and Dean of Research

*Vice Provost and Dean of Research:* Ann M. Arvin

Office: 450 Serra Mall, Main Quadrangle, Building 60  
 Mail Code: 94305-2064  
 Phone: 650-723-8789 / Fax 650-723-0662  
 Web Site: <http://stanford.edu/dept/DoR>  
 Office Fax: 650-723-0662

The following independent Laboratories, Centers, and Institutes report to the Vice Provost and Dean of Research:

### Biological and Life Sciences

- Bio-X, the interdisciplinary program related to bioengineering, biomedicine, and biosciences, <http://biox.stanford.edu>
- Spectrum (formerly the Stanford Center for Clinical and Translational Education and Research), <http://spectrum.stanford.edu>

### Environmental Sciences

- Precourt Institute for Energy, <http://pie.stanford.edu/>
  - Precourt Energy Efficiency Center, <http://peec.stanford.edu>
  - Global Climate and Energy Project (G-CEP), <http://gcep.stanford.edu>
- Woods Institute for the Environment, <http://woods.stanford.edu>

### Humanities and Social Sciences

## Centers Reporting to the Dean of Humanities and Sciences

- Center for Space Science and Astrophysics (<http://www.stanford.edu/group/CSSA>)
- Center for Spatial and Textual Analysis (CESTA) (<https://cesta.stanford.edu>)
  - CESTA offers a graduate Certificate of Digital Humanities program
- Institute for Research in the Social Sciences (<http://iriss.stanford.edu>) (IRiSS)
  - Stanford Center for Population Research (<http://iriss.stanford.edu/scpr>) (SCPR)
  - Stanford Center for the Study of Poverty and Inequality (<http://iriss.stanford.edu/CPI>) (CPI)

- Stanford Center for American Democracy (<https://iriss.stanford.edu/ANES>) (SCAD)
- Stanford Center on Philanthropy and Civil Society (<http://pacscenter.stanford.edu>) (PACS)
- Center for Computational Social Science (<https://css-center.stanford.edu>)
- Immigration and Integration Policy Lab (<http://immigrationlab.stanford.edu>)
- Center for the Advancement of Research through Online Learning (CAROL)
- Michelle R. Clayman Institute for Gender Research (<http://gender.stanford.edu>)
- Morrison Institute for Population and Resource Studies (<http://www.stanford.edu/group/morrinst>)
- Stanford Arts Institute (<http://artsinstitute.stanford.edu>)

## Contacts

Office: Stanford Arts Institute, Littlefield Center, 2nd Floor

Mail Code: 94305-2255

Email: [artsinstitute@stanford.edu](mailto:artsinstitute@stanford.edu)

Web Site: <http://artsinstitute.stanford.edu/programs/honors-in-the-arts-program/>

Courses offered by the Stanford Arts Institute are listed under the subject code ARTSINST (<http://http://explorecourses.stanford.edu/search?page=0&q=ARTSINST&filter-coursestatus-Active=on&view=catalog&collapse=&academicYear=20142015>) on the Stanford Bulletin's ExploreCourses web site.

The Stanford Arts Institute forges arts connections across the University; gives grants for faculty, staff, and students; presents arts events; incubates new arts projects; and supports artists and cultural groups across campus. Since its founding in 2006, the Stanford Arts Institute has been a catalyst helping the Stanford arts community to grow.

## Honors in the Arts

The Stanford Arts Institute offers the interdisciplinary Honors in the Arts program, which is open to undergraduates in all majors.

Stanford students in any major can complete a capstone project integrating their major studies with a broad arts perspective and receive "Honors in the Arts." The program features two tracks:

- *Interdisciplinary honors within the arts*—for students majoring in an arts discipline who wish to incorporate other arts disciplines into their work. Students in this track are typically majors in a department such as Art and Art History (<http://art.stanford.edu>); departments within the Division of Languages, Cultures, and Literatures (<https://dlcl.stanford.edu>); English (<https://english.stanford.edu>); Music (<http://music.stanford.edu/Home>); or Theater and Performance Studies (<http://taps.stanford.edu>), who wish to do an honors project involving approaches from another arts field.
- *Interdisciplinary honors for non-arts majors*—for students majoring in a non-arts discipline who complete a capstone project incorporating the arts. Students in this track are typically majors in a department other than those described above, who wish to do an honors project involving an arts element. This project should incorporate themes, discourse, or learning from a student's major.

## Admission

A minimum overall GPA of 3.67 (A-) is typically required for admission into the program. Upon petition, exceptions may be granted by the

program director in the case of students demonstrating particular strengths relevant to honors in the arts.

Students are required to take at least three courses identified as preparing them to execute an interdisciplinary capstone project. These courses should be in either an art practice area relevant to the capstone project or should explore the methodology of interdisciplinary arts study. A sample list of courses can be found on the Arts Institute web site (<http://artsinstitute.stanford.edu/program/idhp-recommended-courses>). It is recommended that students complete at least two of these courses prior to entering the program. However, upon approval of the program director, students may take these courses while pursuing their honors project. Courses are typically at least 2 units and must be taken for a letter grade.

Prospective students must submit a brief essay outlining their preparation and proposing a capstone project.

Students interested in pursuing Honors in the Arts can apply for acceptance in the junior year. Students should contact the program coordinator at [artsinstitute@stanford.edu](mailto:artsinstitute@stanford.edu) to begin the application process.

## Requirements

- Prior to Spring Quarter, Junior Year: Two preparatory courses for interdisciplinary study, 4-8 Units
- Prior to Spring Quarter, Junior Year/Concurrent with Capstone: Preparatory course for interdisciplinary study, 2-4 Units
- Winter Quarter, Junior Year: Apply for admission to Interdisciplinary Arts Honors
- Spring Quarter, Junior Year: Confirm preparatory courses with honors program director
- Autumn Quarter, Senior Year: ARTSINST 200A, 2 Units
- Winter Quarter, Senior Year: ARTSINST 200B, 2 Units
- Spring Quarter, Senior Year: ARTSINST 200C, 2 Units

The capstone project is developed during the senior year through three quarters of workshops. To receive Honors in the Arts, students must fulfill all requirements and must receive at least an 'A-' on the capstone project.

## Stanford Center on Poverty and Inequality Certificate Program on Poverty and Inequality

The Stanford Center on Poverty and Inequality (CPI) monitors and publicizes trends in poverty and inequality, publishes the country's leading magazine on poverty and inequality (*Pathways Magazine*), supports research on the causes of poverty and inequality, and examines the effects of public policy on poverty and inequality. The center carries out these activities with ten research groups addressing the following topics:

- poverty measurement and trends
- educational access and achievement
- income inequality
- social mobility
- safety net use
- recession and recovery effects
- spatial segregation
- racial and ethnic inequality
- discrimination, poverty, and the labor market
- Hispanic poverty, inequality, and mobility.

The Certificate in Poverty and Inequality recognizes undergraduates who have developed expertise in one or more of these research areas. The certificate is conferred as soon as the coursework and research

requirements listed below are completed. Although the certificate does not appear on an official University transcript, it provides formal recognition of a rigorous program of study in the field of poverty and inequality.

### Admission

Applications to the CPI certificate program are available on the CPI web site (<http://www.stanford.edu/group/scspi>) and may be filed at any time. Admitted students are assigned an adviser who assists in planning coursework and providing research opportunities within CPI. Contact CPI ([inequality@stanford.edu](mailto:inequality@stanford.edu)) with any questions.

### Requirements

The student's course and research plan, which is submitted with the application, should meet the four requirements listed below.

1. *Core Foundation Course*: (SOC 140 Introduction to Social Stratification. This required introductory course examines the causes and consequences of poverty, inequality, and mobility. It is available as both a regular and online course.
2. *Elective Foundation Course*: The second foundation course is selected from among the normative, empirical, and policy courses listed below. These courses examine the principles by which certain types of living conditions may be deemed unjust or impoverished (i.e., normative analysis), the social processes and forces by which poverty and inequality are generated and maintained (i.e., empirical analysis), and the types of policies and interventions that might reduce or increase poverty and inequality (i.e., policy analysis).

#### Elective Foundation Courses

##### Normative Foundation

ETHICSOC 136R	Introduction to Global Justice	4
ETHICSOC 171	Justice	4-5
INTNLREL 136R	Introduction to Global Justice	4
PHIL 76	Introduction to Global Justice	4
PHIL 171	Justice	4-5
POLISCI 136R	Introduction to Global Justice	4
POLISCI 136S	Justice	4-5
PUBLPOL 103C	Justice	4-5

##### Empirical Foundation

SOC 141	Controversies about Inequality	5
SOC 144	Inequality and the Workplace	5

##### Policy Foundation

ECON 11N	Understanding the Welfare System	3
SOC 135	Poverty, Inequality, and Social Policy in the United States	3

3. *Research Project*: Students must complete a research paper on poverty or inequality. Students are invited to join one of the ten CPI research groups and become involved in an ongoing CPI research project that might become the basis for their research paper. Alternatively, students write an independent research paper rather than joining a CPI Research Group. The research paper may either take the form of a research proposal or an empirical research project based on quantitative or qualitative methods. This paper should be completed while the student is enrolled in Independent Study with a CPI faculty affiliate (<http://www.stanford.edu/group/scspi>).
4. *Additional Elective*: Students must take an elective course with a poverty or inequality focus. This requirement may be satisfied by taking an additional foundation course from the list provided above or by taking any of the preapproved elective courses listed below. Additionally, other unlisted courses addressing issues of poverty and inequality may also satisfy this requirement, although such courses require CPI approval (which is requested by submitting the Course Approval Form (<http://www.stanford.edu/group/scspi>)). It

Units

Other Offices

is recommended that approval be secured in advance of taking an unlisted course. If a new applicant to the certificate program wishes to count a completed course toward the requirements, that should be indicated on the application form and, if necessary, the Course Approval Form (<http://www.stanford.edu/group/scspi>) should be filled out).

#### Preapproved Elective Courses

Poverty		
EARTHSYS 106	World Food Economy	5

## Graduate Certificate in Digital Humanities Overview

The Center for Spatial and Textual Analysis (CESTA) offers a Graduate Certificate in Digital Humanities (GDCH) to meet a growing need among the humanities for training in digital methods by leveraging existing resources at Stanford University. The Graduate Certificate in Digital Humanities allows graduate students to acquire and deepen their technical and conceptual skills as well as to strengthen their position in the competitive job market within and beyond the academy. The certificate program has been established as a pilot program from 2014-17.

Completion of the program results in a Certificate, signed by the CESTA director and the chair of the doctoral student's home department.

The Graduate Certificate in Digital Humanities is issued by the Center for Spatial and Textual Analysis (CESTA) and will not appear on any University record, including the student's transcript.

### Contact

Office: Wallenberg Hall, 450 Serra Mall, Building 160  
 Mail Code: 94305-2084  
 Phone: (650) 721-1385. Fax: (650) 725-5916  
 Email: [mattbryant.stanford@gmail.com](mailto:mattbryant.stanford@gmail.com)  
 Web Site: <http://cesta.stanford.edu>

### Staff

*Core Faculty:* Mark Algee-Hewitt, Franco Moretti, Richard White, Dan Edelstein, Paula Findlen, Giovanna Ceserani, Walter Scheidel, Elaine Treharne, Amir Eschel, Zephyr Frank

*Affiliated CESTA Faculty:* Allyson Hobbs, Edith Scheffer, Caroline Winterer, Mark McGurl, Ana Minian, Mikael Wolfe.

*CESTA Staff, Affiliates, and others:* Celena Allen (GIS), Erik Steiner (visualization design and cartography), Ryan Heuser (programming), Nicole Coleman (information design and visualization), Jason Hepler (digital history), Elijah Meeks (information design), Karl Grossner (information design and cartography).

### Admission

Admission to the program is on a rolling basis, and students may apply at any time. Submit a letter of interest and any supporting information to CESTA Lab Manager Matt Bryant ([mattbryant.stanford@gmail.com](mailto:mattbryant.stanford@gmail.com)) at [mattbryant.stanford@gmail.com](mailto:mattbryant.stanford@gmail.com). For more information about the new GDCH program or CESTA in general, see the program's web site (<http://cesta.stanford.edu/gdch>) or contact Matt Bryant ([mattbryant.stanford@gmail.com](mailto:mattbryant.stanford@gmail.com)) at [mattbryant.stanford@gmail.com](mailto:mattbryant.stanford@gmail.com).

## Course work

Students wishing to take part in the first cohort starting in 2014-15 and thereafter are expected to complete one GCDH-approved graduate core course for a letter grade, and one additional approved elective course. The approved core courses for the first year of the program are:

- HISTORY 401A Spatial History: Concepts, Methods, Problems
- ENGLISH 303C
- DLCL 396 Humanities+Design: Visualizing the Grand Tour (same as CLASSICS 396, HISTORY 336E)

Students who have completed any of the core courses, or equivalent courses taught by members of the program, in past years are eligible to move to the next step in the GCDH program.

Following or concurrent with the completion of the required core course, students must complete the following two certificate components:

1. Additional course work (1 or more classes, may be taken credit/no credit, and must be approved in advance by the committee in charge) in computer science, information design, statistics, network analysis, linguistics, or other fields approved by the student's supervisor and the CESTA committee in charge. A list of course recommendations is forthcoming.
2. One of the following:
  - a. Independent research project and portfolio including a finished project which is evaluated and approved by an Academic Council supervisor and accepted as an affiliated project in one of CESTA's labs. The duration of such projects must be a minimum of one academic quarter. Students may take up to 5 units of credit of directed reading for the purpose of completing the independent research project. Final projects are included in the student's ePortfolio and published on the CESTA web site.
  - b. Supervised collaborative research in a CESTA lab with the expectation that the student's participation culminates in a digital humanities product substantially of the authorship of the student; this must be a minimum of two quarters in duration. The student's portion of the research is included in the ePortfolio and published on the CESTA web site.

## Freeman Spogli Institute for International Studies (FSI)

### Contacts

Office: Encina Hall Center, First Floor, 616 Serra Street  
 Mail Code: 94305-6055  
 Phone: 650-723-4581 / Fax 650-725-2592  
 Web Site: <http://fsi.stanford.edu/>

The Freeman Spogli Institute for International Studies (FSI) provides opportunities for undergraduate research through the CDDRL Undergraduate Honors Program and the CISAC Interschool Honors Program in International Security Studies.

## Interschool Honors Program in Democracy, Development, and the Rule of Law

*Director:* Stephen J. Stedman

The Center on Democracy, Development, and the Rule of Law (CDDRL) Undergraduate Senior Honors Program provides students majoring in any Stanford academic department the opportunity to conduct an independent research project focused on the fields of democracy, development, and the rule of law under CDDRL faculty guidance. Students

are required to complete a year-long honors research seminar that begins autumn quarter of the junior year. They will spend the last quarter of the senior year working independently with their faculty adviser to complete and submit their honors thesis ahead of their formal defense in mid-May. Upon fulfilling individual department course requirements and completing the honors program, students graduate with a certificate in Honors in Democracy, Development, and the Rule of Law.

Students interested in the program consult with their prospective honors advisers in their junior year to determine the tentative thesis topic, which should have some degree of policy relevance. Prerequisites for the program include; a 3.5 grade-point average at the time they apply; a strong overall academic record; sufficient depth and breadth in the fields of democracy, economic and social development, rule of law, and human rights course work; and demonstrated skills in writing and conducting independent research.

Students are required to attend honors college in Washington, D.C. in September before Autumn Quarter classes begin. Applicants are discouraged from studying abroad during the duration of the CDDRL Undergraduate Honors program.

### Required Course Work

Two courses that explore the areas of democracy, development, and the rule of law. CDDRL's flagship undergraduate lecture course taught during Autumn Quarter, which ideally should be completed before the student enters the honors program. DDRL Honors Research Methods Seminars meet on a weekly basis to present their project theses and receive feedback.

### Typical Schedule for CDDRL Honors Program

Junior	Units		
	Autumn	Winter	Spring
Select one of the following:		5	
Democracy, Development, and the Rule of Law (INTNLREL 114D)			
Democracy, Development, and the Rule of Law (POLISCI 114D)			
DDRL 189 Honors Research Methods			3
Year Total:		5	3
Senior	Units		
	Autumn	Winter	Spring
DDRL 190 Honors Research Workshop		3	
DDRL 190 Honors Research Workshop			3
DDRL 191 Independent Study (Optional) <sup>1</sup>			
Year Total:		3	3
Total Units in Sequence:			14

<sup>1</sup> Optional any quarter during senior year for 1-5 units, repeatable once for credit.

Admitted students must be able to fulfill all course requirements in their individual majors by the time they graduate, in addition to the units required for the honors program. For more information, contact Alice Kada, CDDRL Administrative Manager at [akada@stanford.edu](mailto:akada@stanford.edu) or go to <http://cddrl.stanford.edu/>.

## Interschool Honors Program in International Security Studies

*Co-Directors:* Coit D. Blacker, Martha Crenshaw

The Center for International Security and Cooperation (CISAC) coordinates a University-wide Interschool Honors Program in International Security Studies. Students chosen for the honors program intern with a security-related organization, attend the program's honors

college in Washington, D.C., in September, participate in a year-long core seminar, and under the direction of a faculty advisor produce an honors thesis relevant to international security policy. Upon fulfilling individual department course requirements and completing the honors program, students graduate in their major with the award of Honors in International Security Studies. To be considered for the program, students must demonstrate sufficient depth and breadth of international security course work. Successful applicants to the program are expected to have taken:

		Units
MS&E 193	Technology and National Security	3
POLISCI 114S	International Security in a Changing World	5
	and at least one related course such as	4-5
ECON 106	World Food Economy	5
HISTORY 103F	The Changing Face of War: Introduction to Military History	5
HISTORY 204E	Totalitarianism	4-5
HUMBIO 129S	Global Public Health	4
INTNLREL 114D	Democracy, Development, and the Rule of Law	5
INTNLREL 140A	International Law and International Relations	5
LAW 479	International Law	4
MS&E 93Q	Nuclear Weapons, Energy, Proliferation, and Terrorism	3
MS&E 190	Methods and Models for Policy and Strategy Analysis	3
MS&E 295	Energy Policy Analysis	3
POLISCI 42Q	The Rwandan Genocide	5
POLISCI 110D	War and Peace in American Foreign Policy	5
POLISCI 116	The International History of Nuclear Weapons	5
POLISCI 123/ PUBLPOL 101	Politics and Public Policy	5
PUBLPOL 102	Organizations and Public Policy	4-5
SOC 160	Formal Organizations	4

Students in the program enroll in IIS 199 Interschool Honors Program in International Security Studies, in Autumn, Winter, and Spring quarters for 3-5 credits for quarter (9-12 total credits). Information about and applications to this program may be obtained from the Center for International Security and Cooperation, C206-10, Encina Hall Central, telephone (650) 725-5365 or [http://cisac.stanford.edu/docs/undergraduate\\_honors\\_program](http://cisac.stanford.edu/docs/undergraduate_honors_program).

## Center for Space Science and Astrophysics

*Emeriti:* (Professors) Robert Cannon, (Professors, Research) Donald L. Carpenter, Aldo V. daRosa, Daniel B. DeBra, W. Gary Ernst, Von R. Eshleman, Antony Fraser-Smith, Robert A. Helliwell, Bruce B. Lusignan, Ronald J. P. Lyon, Laurence A. Manning, Bradford W. Parkinson, J. David Powell, Peter A. Sturrock, G. Leonard Tyler, Robert V. Wagoner

*Director:* Roger W. Romani

*Associate Directors:* Umran S. Inan, Philip H. Scherrer

*Professors:* Roger Blandford (Physics, SLAC), Elliot Bloom (SLAC), Lambertus Hesselink (Electrical Engineering), Umran S. Inan (Electrical Engineering), Steven Kahn (Physics, SLAC), Tune Kame (SLAC), Peter F. Michelson (Physics), Vahé Petrosian (Physics), Roger W. Romani (Physics), Norman H. Sleep (Geophysics), Guenther Walther (Statistics), Howard Zebker (Electrical Engineering, Geophysics)

*Associate Professors:* Tom Abel (Physics, SLAC), Steve Allen (Physics, SLAC), Sarah Church (Physics),

*Assistant Professors:* Stefan Funk (Physics, SLAC), Chao-Lin Kuo (Physics, SLAC), Risa Wechsler (Physics, SLAC)

*Professors (Research):* C-W. Francis Everitt (HEPL), Philip H. Scherrer (Physics)

*SLAC Staff Physicist:* Grzegorz Madejski

Center Offices: Varian, Room 340

Mail Code: 94305-4060

Phone: (650) 723-1439

Email: [danav@stanford.edu](mailto:danav@stanford.edu)

Web Site: <http://www.stanford.edu/dept/astro>

The Center for Space Science and Astrophysics is an interdepartmental organization coordinating research in space science and astrophysics. Its members are drawn from the Department of Geological and Environmental Sciences in the School of Earth Sciences; the departments of Aeronautics and Astronautics, Electrical Engineering, and Mechanical Engineering in the School of Engineering; the departments of Applied Physics, Physics, and Statistics in the School of Humanities and Sciences; the W. W. Hansen Experimental Physics Laboratory; and the SLAC National Accelerator Laboratory. Its membership also includes all faculty and appropriate staff at the Kavli Institute for Particle Astrophysics and Cosmology, located at SLAC and the Physics department.

The facilities of the center are available to any interested and qualified student, who must be admitted by and registered in a department. The departments of Aeronautics and Astronautics, Applied Physics, Electrical Engineering, Mechanical Engineering, and Physics offer opportunities leading to an M.S. or Ph.D. degree for work in space science or astrophysics. The center also offers opportunities to undergraduates who may, for instance, participate in research projects in their junior or senior years, on a part-time basis during the school year or on a full-time basis during the summer. The Astronomy Course Program operates a small student observatory where students may gain practical experience in astronomical observing.

## Other Academic Programs and Centers, and Independent Research Laboratories, Centers, and Institutes

- Hoover Institution on War, Revolution and Peace, <http://www.hoover.org>
- SLAC National Accelerator Laboratory (SLAC), <http://www.slac.stanford.edu>
- Stanford Synchrotron Radiation Laboratory (SSRL), <http://ssrl.slac.stanford.edu>

## Libraries and Computing Resources

### Stanford University Libraries and Academic Information Resources

University Librarian and Director of Academic Information Resources: Michael A. Keller  
Web Site: <http://library.stanford.edu>

Stanford University Libraries and Academic Information Resources (SULAIR) includes more than 30 libraries and programs supporting research, teaching, and learning at Stanford University. SULAIR acquires and delivers library collections in all formats, establishes policies and standards to guide the use of academic information resources, develops training and support programs for academic uses of computers, and maintains a broad array of electronic information resources, including the

online library catalog and several hundred article and indexing databases and electronic journal subscriptions.

In each library unit, knowledgeable professional staff provide assistance in locating and using print and online information resources. Subject specialists and reference librarians are available for individual consultation, group classes, demonstrations, and special workshops by request.

Libraries throughout campus provide group and individual study spaces, public computers, personal laptop connections, photocopy machines, and digital scanners for use by Stanford faculty, staff, and students.

For information about library hours, see the Library Hours (<http://libraryhours.stanford.edu>) web site.

In support of the University's academic mission, Academic Computing Services provides technology expertise, resources and services to students and faculty. Academic Computing Services supports the use of technology in teaching, learning, research, and community; operates and manages technology-enabled teaching and learning environments including classrooms and public study spaces, the Multimedia Studio in Meyer Library, the Digital Language Lab, and computer clusters in Green Library, Tresidder Union, and the student residences; provides technology education, consulting support, and multimedia services at Meyer and in the residences; provides faculty-specific computing resources through the Academic Technology Specialist Program and Academic Technology Lab; and provides technology support to Stanford University Libraries' services.

Information about the library collections, facilities, services, and policies is available at the Libraries & Academic Information Resources (<http://library.stanford.edu>) web site.

Further information about library services and resources is available from the Information Center staff in Cecil H. Green Library (<http://infocenter.stanford.edu>) and from reference staff in all University libraries.

## Central Campus Libraries

The Cecil H. Green Library (East and Bing Wings) maintains research collections in the humanities, social sciences, area studies, and interdisciplinary areas. These collections number approximately 2.8 million volumes. Major services in Green Library include: the Information Center, the Media Microtext Center, the Jonsson Reading Room, the Lane Reading Room, the Bender Room, Loan Desk and Privileges, Interlibrary Services, course reserves, the Department of Special Collections, and the University Archives.

The J. Henry Meyer Memorial Library houses the East Asia Library as well as the Academic Computing Services group of SULAIR and provides study, multimedia, consulting, and instructional support services. In addition, Meyer Library houses the University's Digital Language Lab, technology enabled study spaces and classrooms, the Academic Technology Lab, and the central offices of Student Computing and Academic Computing Services.

## Branch Libraries

Humanities and Social Sciences Branch Libraries include the Art and Architecture Library, Cubberley Education Library, East Asia Library, Music Library, and Archive of Recorded Sound.

Science Branch Libraries include the Branner Earth Sciences Library, Engineering Library, Falconer Biology Library, Mathematical and Computer Sciences Library, Harold A. Miller Library at the Hopkins Marine Station, Physics Library, and Swain Library of Chemistry and Chemical Engineering.

For a complete list of campus libraries, see the Libraries and Collections (<http://libraries.stanford.edu>) web site.

## Coordinate Libraries

**J. Hugh Jackson Library** (<http://www.gsb.stanford.edu/jacksonlibrary>), **Graduate School of Business**

*Director:* Kathy Long

**Lane Medical Library** (<http://lane.stanford.edu>)

*Director:* Debra Ketchell

**Crown Law Library** (<http://www.law.stanford.edu/library>)

*Director:* Paul Lomio

**SLAC Research Library** (<http://www-group.slac.stanford.edu/library>)

*Director of Technical Information Services:* Patricia Kreitz

## Hoover Institution Library and Archives

*Director:* John Raisian

Web Site: <http://www.hoover.org/library-and-archives>

Since its founding by Herbert Hoover in 1919 as a special collection dealing with the causes and consequences of World War I, the Hoover Institution has become an international center for documentation, research, and publication on political, economic, social, and educational change in the 20th and 21st centuries.

The Hoover Library and Archives include one of the largest private archives in the world and contain outstanding area collections on Africa, East Asia, Eastern Europe, Russia and the former Soviet Union, Latin America, the Middle East, North America, and Western Europe.

Holdings include government documents, files of newspapers and serials, manuscripts, memoirs, diaries, and personal papers of men and women who have played significant roles in the events of these centuries, the publications of societies and of resistance and underground movements, the publications and records of national and international bodies, both official and unofficial, and books and pamphlets, many of them rare and irreplaceable. The materials are open to all Stanford students, faculty, and staff, to scholars from outside the University, and to the public at large.

## Information Technology Services (IT Services)

Web Site: <http://itservices.stanford.edu>

IT Services manages the University's central information technology infrastructure and provides hundreds of services and applications for use in academic and business activities. Support is provided in four layers:

- Participation and client-focused leadership in institutional IT planning, including strategies for data center expansion, centrally managed storage and backup, and business continuity and disaster recovery.
- Applications and services for departments and end-users including email, calendaring, wireless connectivity, web authentication, and Windows and Linux server hosting. These services are supported by a help desk, contract-support consultants, online self-help, and training.
- Applications and services that support other campus service providers, including the help desk, change management, and network registration systems.

- A communications and collaboration infrastructure robust enough to support advanced network, voice, and web-based services.

To learn about the variety of information technology resources available at Stanford, see the Information Technology Services (<http://computing.stanford.edu>) web site. For assistance with technology services at Stanford, contact the Stanford IT Help Desk at (650) 725-HELP (5-4357) or submit a request through the HelpSU (<http://helpsu.stanford.edu>) web site.

## The Continuing Studies Program

The Continuing Studies Program provides adults from the surrounding communities the opportunity to take courses for the purpose of intellectual enrichment. Courses and events are offered in all four academic quarters, with over 400 courses planned throughout the year. The Continuing Studies Program, except for the MLA program, is a non-degree granting program.

The instructors are largely drawn from the ranks of the University's professoriate and academic staff. The program presents a wide variety of courses, with a central concentration in the liberal arts, including literature, history, art and architecture, and music.

Tuition discounts are available to University employees, Stanford students and faculty, Stanford Alumni Association members, educators, and those over age 65.

For a list of offered courses, see the Courses tab the Continuing Studies web site (<http://continuingstudies.stanford.edu>).

## Master of Liberal Arts Program

*Associate Dean and Director:* Linda Paulson

*Participating Faculty:* Jonathan Berger (Music), Russell Berman (Comparative Literature, German Studies), Marc Bertrand (French and Italian, emeritus), Jay Bhattacharya (Medicine), George Brown (English, emeritus), Eamonn Callan (Education), William Chace (English, emeritus), James Daughton (History), Gerry Dorfman (Hoover Institution, Political Science), William Durham (Anthropology), Michele Elam (English), Martin Evans (English), Paula Findler (History), Larry Friedlander (English), Kenneth Fields (English), Hester Gelber (Religious Studies), Albert Gelpi (English, emeritus), Barbara Gelpi (English, emerita), Denise Gigante (English), Robert Gregg (Religious Studies, emeritus), Tom Grey (Music), Hans Ulrich Gumbrecht (French and Italian), Van Harvey (Religious Studies, emeritus), Allyson Hobbs (History), (Gavin Jones (English), Charles Junkerman (Continuing Studies Program), Nancy Kollmann (History), Herbert Lindenberger (English, emeritus), Marsh McCall (Classics, emeritus), Mark Mancall (History, emeritus), Scotty McLennan (Religious Life), Thomas Mullaney (History), Alexander Nemerov (Arts), David Palumbo-Liu (Comparative Literature), Linda Paulson (English), Grant Parker (Classics), Arnold Rampersad (Humanities, emeritus), Ronald Rebolz (English, emeritus), Rush Rehm (Drama, Classics), John Rick (Anthropology), John Rickford (Linguistics), David Riggs (English, Emeritus), Eric Roberts (Engineering), Paul Robinson (History, emeritus), Jeremy Sabol (SLE), Ramón Saldivar (English), Paul Seaver (History, emeritus), Thomas Sheehan (Religious Studies), Robert Siegel (Microbiology and Immunology), Peter Stansky (History, emeritus), Stephen Stedman (Freeman Spogli Institute for International Studies), Barton Thompson (Law), Peter Vitousek (Biology), Caroline Winterer (History), Yvonne Yarbro-Bejarano (Latin American Cultures), Ernlé Young (Medicine, emeritus), Steven Zipperstein (Jewish Culture and History)

Program Offices: 365 Lasuen Street, Littlefield Center, Level G  
Mail Code: 2078

Phone: (650) 725-0061 Fax: (650) 725-4248

Email: [mlaprogram@stanford.edu](mailto:mlaprogram@stanford.edu)

Web Site: <http://mla.stanford.edu>

Courses offered by the Master of Liberal Arts Program are listed under the subject code MLA on the Stanford Bulletin's ExploreCourses web site.

## Program Description

The Master of Liberal Arts (MLA) program aims to provide a flexible, interdisciplinary program for returning adult students who seek a broad education in the liberal arts. The underlying premise of the MLA program is that knowledge gained through an interdisciplinary course of study leads to intellectual independence and satisfaction not always found in discipline-based programs of study. The goals of the MLA program are to develop advanced critical thinking, to foster intellectual range and flexibility, and to cultivate an individual's ability to find the connections among different areas of human thought: art, history, literature, music, philosophy, political science, science, and theology.

The program is designed with part-time students in mind: seminars meet in the evening, and students complete the degree in 4-5 years. All master's seminars are taught by members of the Stanford faculty. Seminar size is limited to 20 students.

## Learning Outcomes (Graduate)

The purpose of the Master of Liberal Arts Program is to address subjects that cross disciplinary boundaries; to develop an understanding of the strength and the shortcomings of disciplinary evaluation; to help students to refine their skills in writing, research, critical thinking, collaborative work, and collegial discussion. While students are not being groomed for academic careers, graduates of the program have used their experience to gain acceptance into Ph.D. programs at Stanford and elsewhere. Students who complete the MLA program are well positioned to advance in careers that require the careful analytical and rhetorical training they receive. This training is achieved through the completion of four foundations courses, which together emphasize the program's goals as stated above; seven seminars that offer a more specific engagement with interdisciplinary subject matter; and a master's thesis, accomplished under the direction of a Stanford faculty member who is expert in the subject of the thesis.

## Degree Requirements

Candidates for the MLA degree must complete a minimum of 50 units of course work with at least a grade point average of 3.3 (B+). These units must include a three-quarter foundation course (equal to 12 units total), one 4-unit core introductory seminar for second-year students, at least seven 4-unit MLA seminars, and a 6-unit master's thesis. Students must also fulfill distribution requirements in each of the following areas: humanities; social science or social policy; and science, engineering, or medicine.

## Foundation Course

During the Autumn, Winter, and Spring quarters following admission to the program, a three quarter foundation course is required of all students. The purpose of this course is to lay the groundwork for the interdisciplinary, intercultural studies the student will shortly undertake. The foundation course introduces students to the broad framework of history, literature, philosophy, political science, and art.

## Core Seminar

During the first quarter of the second year, students take the core introductory seminar, MLA 102 An Introduction to Interdisciplinary Graduate Study. This seminar prepares students for interdisciplinary graduate work at Stanford. Students concentrate on writing a critical graduate paper, conducting library research, presenting the results of their research, and productively participating in a collaborative seminar.

## MLA Seminars

Students are required to take at least seven MLA seminars of 4 units each. Each year, at least nine seminars are offered in the MLA program. Each MLA course requires a substantial seminar paper. Students are encouraged to use these papers as a way to investigate new fields of interest, as well as a way to develop different perspectives on issues in which they have an ongoing interest.

## Master's Thesis

The MLA program culminates in the master's thesis. Students approaching the end of the program write a thesis, approximately 75-100 pages in length, that evolves out of work they have pursued during their MLA studies. The thesis is undertaken with the prior approval of the MLA program, and under the supervision of a Stanford faculty member. During the process of writing the thesis, students are members of a work-in-progress group, which meets regularly to provide peer critiques, motivation, and advice. Each student presents the penultimate draft of the thesis to a colloquium of MLA faculty and students, in preparation for revising and submitting the final draft to the adviser and to the MLA program.

## Enrollment Requirements

MLA students must enroll for each academic year from the time of original matriculation until conferral of the degree. To remain active, students must either:

1. complete a minimum of two courses (eight units) in one academic year, defined as from the beginning of Autumn Quarter through the end of the following Summer Quarter; or,
2. be actively working on their thesis and regularly attend a minimum of three quarters of the work-in-progress meetings from the time the student enrolls in work-in-progress through graduation.

## Timeline for Completion

All requirements for the Master of Liberal Arts degree must be completed within five years after the student's first term of enrollment in the program. If extraordinary circumstances prevent completion within five years, a student may submit a written petition for a maximum one-year extension to the Associate Dean and Director. This petition is reviewed by a committee which makes a recommendation to the Director; the final decision is at the discretion of the Director. To be considered, the petition must be submitted on or before May 1 of the student's fifth year in the program.

## Registration

Master of Liberal Arts students enroll in courses through Stanford's Axess (<http://axess.stanford.edu>) system.

## Summer Session

*Associate Dean & Director of Stanford Summer Session: Bill Whobrey*

## Contact

Program Offices: 365 Lasuen Street  
 Mail Code: 94305-6079  
 Phone: (650) 723-3109; Fax: (650) 725-6080  
 Email: [summersession@stanford.edu](mailto:summersession@stanford.edu)  
 Web Site: <http://summer.stanford.edu>

Students attending Stanford Summer Session are either matriculated Stanford students, visiting undergraduate or graduate students, or enrolled in the High School Summer College.

Degree-seeking Stanford students should indicate on Axess during Spring Quarter that they intend to register for Summer Quarter. Separate application is not required.

Visiting undergraduate or graduate students are not presently candidates for a Stanford degree. These are students and adults who have taken at least one course at another college or university. These students must complete a short application, available at <http://summer.stanford.edu>. Qualified high school students who are at least sixteen years old may apply to the High School Summer College (<http://summer.stanford.edu/programs>) program.

Students in Stanford Summer Session, in general, enjoy the privileges of students in the regular degree programs except that work completed cannot be applied toward a Stanford degree or credential unless and until the student has been admitted to regular Stanford student standing. Admission as a visiting student does not imply later admission to matriculated status. However, should the visiting student matriculate at a later date through normal admission procedures, the summer work may be applied toward the requirements for a Stanford degree or credential at the discretion of the University or academic department.

Visiting undergraduate and graduate students and students in the High School Summer College are not matriculated Stanford University students, and not all University student policies apply to such students. The University reserves the right, at its discretion, to withhold registration from or require withdrawal from Stanford Summer Session for these students or applicants.

Individuals who commit violations of University policy, the Honor Code, or the Fundamental Standard are subject to termination. Individuals in non-degree granting programs are subject to removal or discipline according to the program's policies or practices, not through the Office of Community Standards.

For more information, contact Summer Session by email, mail, phone, or fax using the listings above. Information is updated annually in January and may also be found online at <http://summer.stanford.edu>.

## Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email). Stanford's Title IX Coordinator, Cathy Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), [titleix@stanford.edu](mailto:titleix@stanford.edu) (email).

*Dean and Associate Provost: Charles Junkerman*

*Associate Dean and Director: Dan Colman*

## Other Services and Programs

### Bookstore

Web Site: <http://stanfordbookstore.com>

Organized in 1897, Stanford Bookstore, (650) 329-1217, located at 519 Lasuen Mall (White Plaza), provides a diverse selection of books, course materials, and supplies to the students, faculty, staff, and community in and surrounding Stanford. The bookstore carries over 130,000 titles, including a wide selection of medical books and books written by Stanford authors, making it one of the largest bookstores in the nation. The bookstore also carries medical instruments, Stanford logo apparel, gifts and souvenirs, periodicals, and features a café that provides an enhanced shopping experience. The Computer Store, in the main branch, sells academically priced computer hardware and software. Other services include shipping of purchases, gift cards, book buyback, fax service, postage stamp sales, an ATM, and Enterprise Rent-A-Car hotline. There are four branches in addition to the Stanford Bookstore that also serve the community: the Stanford Athletics Shop (formerly the Track House Sports Shop), (650) 327-8870, underneath the Cobb Track and Angell Field bleachers, is the headquarters for Stanford Athletic Gear; Tresidder Express convenience store, (650) 723-9224 in Tresidder Union; the Stanford Shop, (650) 614-0295, at the Stanford Shopping Center, provides Stanford apparel; and the Bookshop, (650) 725-2775, at the Cantor Center for the Arts, carries books on the arts, fine gifts, apparel, and jewelry.

### Stanford Conference Services

Phone: (650) 723-3126

Email: [conferenceinquiries@stanford.edu](mailto:conferenceinquiries@stanford.edu)

Web Site: <http://conference.stanford.edu>

A conference is defined as any student, youth, or adult group that convenes for part of a day (including a luncheon), overnight, or for several days, outside the regular or summer academic sessions for registered students. Policies concerning conferences are the responsibility of the offices of the President and the Provost.

To make arrangements for hosting a new, academically sponsored residential summer conference during the mid-June through late-August time frame, contact Stanford Conference Services by phone or email as listed above. Stanford Conference Services also offers meeting planning services on a year-round basis for academically sponsored conference groups seeking assistance with planning and managing residential and non-residential conferences. In addition, conference organizers seeking to conduct conferences outside of the late August to early June time frame can also contact the non-academic facilities scheduling in the Office of the University Registrar, (650) 723-6755 or [reg-events@stanford.edu](mailto:reg-events@stanford.edu), or contact Stanford Events, (650) 723-2551 or [stanfordevents@stanford.edu](mailto:stanfordevents@stanford.edu).

Academic sponsorship by a Stanford dean or department head is required for first time conferences hosted by University departments or by conferences hosted by external organizations interested in meeting at Stanford. Conferences initiated by University departments or external organizations must demonstrate consistency with the University's academic mission. For summer conferences, the sponsoring department submits its proposal to the Director of Stanford Conference Services for review in terms of available facilities and for the approval of the President's Office. At least half of the participants in any summer conference at Stanford hosted by an external organization must be housed in Stanford's campus residences and participate in daily meal plans provided by Stanford Dining. On-campus residential housing and dining services are normally available from the Sunday following Commencement through late August.

Summer conference groups should contact Stanford Conference Services concerning arrangements for tables, chairs, audio-visual aids, signage, janitorial services, trash pick-up and removal, sprinkler shutoffs, and other conference-related products/services. During the academic year, housing arrangements for University-sponsored visitors can be made through the Stanford Guest House (<http://guesthouse.stanford.edu>) web site or call (650) 926-2800.

### Ombuds

Stanford University Ombuds: David Rasch

Ombuds Office: Mariposa House, 585 Capistrano Way, Room 210

Phone: (650) 723-3682

Fax: (650) 725-7288

Mail Code: 94305-8200

Email: [rasch@stanford.edu](mailto:rasch@stanford.edu)

Web Site: <http://stanford.edu/dept/ombuds>

School of Medicine Ombuds: James Laflin

Office: Medical School Office Building, 1265 Welch Road, Suite X301, MC: 5404

Phone: (650) 498-5744

Fax: (650) 498-5865

Mail Code: 94305-5404

Email: [jlafalin@stanford.edu](mailto:jlafalin@stanford.edu)

Web Site: <http://med.stanford.edu/ombuds>

The charge to the Ombuds office at Stanford is: "The Ombudsperson's task is to protect the interests and rights of members of the Stanford community from injustices or abuses of discretion, from gross inefficiency, from unnecessary delay and complication in the administration of University rules and regulations, and from inconsistency, unfairness, unresponsiveness, and prejudice in the individual's experience with University activities. The Ombudsperson's office exists to receive, examine, and channel the complaints and grievances of members of the Stanford community, and to secure expeditious and impartial redress."

Any troublesome matter in the University community may be discussed in confidence with the University Ombuds. Services of the office are available to students, staff, and faculty. Although possessing no decision making authority, the Ombuds has wide powers of inquiry. The Ombuds refers matters to the proper person or office expeditiously and also provides conflict resolution services. For the role of the office of the Ombuds in cases of sexual harassment, see the "Non-Academic Regulations (p. 70)" section of this bulletin.

### Police Services

Department Office: Corner of Campus Drive and Serra Street

Phone: (650) 723-9633

Web Site: <http://police.stanford.edu>

The Stanford Department of Public Safety is a full service police department that operates 24 hours a day, 7 days a week. For police, fire, or ambulance response, dial 9-1-1, or 9-9-1-1 from a University phone. Emergency assistance can also be obtained by using one of the nearly 100 Blue Emergency Phone Towers strategically placed around campus.

The department is composed of the following divisions:

The Field Services Division consists of sworn and non-sworn officers who patrol the campus and respond to calls for service. Sworn officers receive their police powers through the Santa Clara County Sheriff's Office. Sworn officers have the legal authority to stop vehicles, make arrests, and enforce all laws. Non-sworn officers assist the sworn officers with security patrols, evidence collection, crime prevention presentations, and other assigned tasks.

Community Service Division: Community Service Officers (CSOs) enforce the parking rules and regulations on campus, and provide traffic control at special events, construction zones, and accident scenes. CSOs also provide building security during emergency or critical incidents.

The Support Services Division provides logistical, technical, and accounting support to the department. Special events are handled through this division as well. Special Events Personnel (SEPs) provide security at campus events including athletic events, concerts, student-sponsored events, and dignitary visits. SEPs are available for hire by groups needing security at their University events. Contact the special events office at (650) 723-4924, or email [event\\_security@stanford.edu](mailto:event_security@stanford.edu), for more information.

The Administrative Support Division supports the department through training, recruiting, payroll, human resources, and other business functions.

For additional safety information or to view the yearly crime statistics, see the Stanford Safety and Security Almanac, available free from the Public Safety (<http://police.stanford.edu>) web site.

## Office for Religious Life

Office: Memorial Church  
Phone: (650) 723-1762  
Web Site: <http://religiouslife.stanford.edu>

The mission of the Office for Religious Life (ORL) is to guide and enhance spiritual, religious, and ethical life within the Stanford University community. Multifaith exploration and dialogue, central in Stanford's history from its founding, is a vital part of both its ethos and education.

The ORL is committed to welcoming students of all genders and sexual identities, all religious and non-religious traditions, and all cultural backgrounds, striving to ensure that students, faculty, and staff have access to supportive contexts in which to pursue their spiritual journeys on the Stanford campus.

The ORL oversees and provides support for Stanford Associated Religions (SAR), more than thirty religious organizations that offer their spiritual services to the campus, as well as the Center for Inter-Religious Community, Learning, and Experiences (the CIRCLE). Located on the third floor of the remodeled Old Union, the CIRCLE offers an interfaith sanctuary, a seminar room, a common room, a student lounge, a non-lending library, and offices housing many SAR member groups.

## Stanford Alumni Association

Web Site: <http://stanfordalumni.org>  
Phone: (800) 786-2586 or (650) 723-2021

The Stanford Alumni Association (SAA) seeks to serve all Stanford alumni and students by offering programs and services such as reunions, regional events, Stanford Magazine, online services, volunteer and learning opportunities, and the alumni directory.

The Stanford Alumni Association's alumni and student class outreach department (ASCO) provides undergraduates and graduate students with networking opportunities, celebratory and social events, and programs that enhance their Stanford experience and help connect them to the 200,000 alumni worldwide who make up the Stanford alumni community. ASCO programs bring students and alumni together through Reunion Homecoming Weekend each autumn and Commencement weekend in the spring, along with alumni networking events throughout the year.

For students, SAA sponsors events such as student tailgates, alumni panels, Senior Send-off, Senior Dinner on the Quad, and Class Day. The Alumni Association gives out the J.E. Wallace Sterling Award and the Stanford Award of Excellence annually to honor graduating seniors for

exemplary service to the University. For more information on student programs at the Stanford Alumni Association (<http://police.stanford.edu>) web site.

## Office of Special Events & Protocol and the Stanford Ticket Office

The Office of Special Events & Protocol (OSEP) (<https://osep.stanford.edu>) and Stanford Ticket Office (STO) (<http://tickets.stanford.edu>) are divisions of the Office of Public Affairs (<http://publicaffairs.stanford.edu>). OSEP manages the University's public ceremonies such as Commencement, Baccalaureate, New Student Orientation Convocation, and the Founders' Celebration. The organization also designs and produces other high-profile university events hosted by the President and Provost, such as the Roundtable at Stanford, international symposia and visits to campus by foreign delegations and heads of state.

OSEP also serves in an advisory capacity and/or can provide direct planning expertise to campus schools, departments, and student groups.

The department has final approval authority of Stanford facility and open space use for non-academic events on campus. For information or event planning assistance, information about policies, procedures, and University facilities, see the OSEP (<https://osep.stanford.edu>) web site, or call (650) 724-1387.

The STO is the University's official full-service box office that provides online, in-person and by phone ticketing services, as well as day-of-event staffing support to hundreds of events throughout the year. Important arts organizations and venues it serves include Stanford Live, Stanford Jazz and Music Departments, the Bing Concert Hall, Frost Amphitheater, and Memorial Auditorium. The Stanford Ticket Office also provides professional ticketing and registration services to all academic departments, institutes, and student groups for lectures, festivals, concerts, and various high profile public events. For more information, see the Stanford Ticket Office (<http://tickets.stanford.edu>) web site, or call (650) 725-ARTS (2787).

## Diversity and Access Office

*Director of the Diversity and Access Office:* Rosa Gonzalez  
*Office:* Mariposa House, 585 Capistrano Way  
*Mail Code:* 94305-8230  
*Phone:* (650) 723-0755; TTY: (650) 723-1216  
*Email:* [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu), [disability.access@stanford.edu](mailto:disability.access@stanford.edu)  
*Web Site:* <https://diversityandaccess.stanford.edu/>

The Diversity and Access Office ensures compliance with Titles VI and VII of the Civil Rights Act, the Equal Pay Act, the Americans with Disabilities Act (ADA) and Sections 503 and 504 of the Rehabilitation Act, the Age Discrimination in Employment Act, and Executive Order 11246, the California Fair Employment and Housing Act (FEHA), and the Unruh Civil Rights Act, among other laws.

The Diversity and Access Office was created to advance Stanford University's equal opportunity and affirmative action goals and commitment to diversity. The office also ensures University compliance with federal, state and local regulations concerning nondiscrimination and disability access. The Director of the Diversity and Access Office is responsible for administering the ADA/Section 504 Grievance Procedure (Student) and the Student Non-Academic Grievance Procedure. Finally, the office also provides an array of services and resources designed to ensure equal opportunity and address bias and discrimination prohibited by law or official University policy, as well as assists individuals with disabilities who have requests for accommodations in the workplace and access to Stanford facilities, programs, and activities.

## Nondiscrimination Policy

Stanford University admits qualified students of any race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, and gender identity to all the rights, privileges, programs, and activities generally accorded or made available to students at the University. Consistent with its obligations under the law, Stanford prohibits unlawful discrimination on the basis of race, color, national or ethnic origin, sex, age, disability, religion, sexual orientation, gender identity or expression, veteran status, or any other characteristic protected by applicable law in the administration of the University's programs and activities; Stanford also prohibits unlawful harassment including sexual harassment and sexual violence. The following person has been designated to handle inquiries regarding this nondiscrimination policy: Director of the Diversity and Access Office, Mariposa House, 585 Capistrano Way, Stanford University, Stanford, CA 94305-8230; (650) 723-0755 (voice), (650) 723-1791 (fax), [equal.opportunity@stanford.edu](mailto:equal.opportunity@stanford.edu) (email). Stanford's Title IX Coordinator, Cathy Glaze, has been designated to handle inquiries regarding sexual harassment and sexual violence: Mariposa House (2nd floor), 585 Capistrano Way, Stanford, CA 94305, (650) 497-4955 (voice), (650) 497-9257 (fax), [titleix@stanford.edu](mailto:titleix@stanford.edu) (email).

## Awards and Honors

### Faculty and Staff Awards

#### Kenneth M. Cuthbertson Award

The Kenneth M. Cuthbertson Award was established in 1981 to recognize exceptional service to Stanford University. It was established by members of the faculty who wish to remain anonymous. All members of the Stanford community are eligible for the award; the sole criterion is the quality of the contribution that the recipients have made to the University. The award provides a way of honoring members of the staff and faculty for their efforts on behalf of the University.

Ordinarily, one award is made each year. The award was first presented in 1981 to the person for whom it is named. Kenneth M. Cuthbertson was one of the early architects of Stanford's long-term financial planning and fundraising program. His service to Stanford set an enduring standard for those who will come after him. The award is made annually at the University Commencement Ceremony.

#### Lloyd W. Dinkelspiel Awards

The Lloyd W. Dinkelspiel Awards recognize distinctive and exceptional contributions to undergraduate education at Stanford University. The two principal awards are made to the faculty or staff members adjudged to have made the most distinctive contribution to the development and enrichment of undergraduate education in its broadest sense. Two awards are also made to graduating seniors who combine academic achievement with effective contributions to undergraduate student life. Preference is given to service in the School of Humanities and Sciences in the area of liberal education. The awards are made from an endowment fund established in memory of Lloyd W. Dinkelspiel, a Stanford alumnus and trustee. The awards are made annually at the University Commencement Ceremony.

#### Walter J. Gores Awards

The Walter J. Gores Faculty Achievement Awards for excellence in teaching were established by bequest of Walter J. Gores, Stanford Alumnus of the Class of 1917 and a professor at the University of Michigan for 30 years. Teaching is understood in its broadest sense and includes, in particular, lecturing, leading discussions, tutoring, and advising at the undergraduate or graduate levels. Any member of the teaching staff of the University is eligible for an award, including all faculty of professorial rank, instructors, lecturers, teaching fellows, and teaching and course assistants. Ordinarily, awards are made to a senior faculty member (associate or full professor) or senior lecturer; a junior faculty member or member of the teaching staff; and a teaching

assistant (graduate or undergraduate student). The awards are made annually at the University Commencement Ceremony.

#### Allan Cox Medal For Faculty Excellence Fostering Undergraduate Research

The Allan Cox Medal for Faculty Excellence Fostering Undergraduate Research is awarded annually to a faculty member who has established a record of excellence directing undergraduate research over a number of years. It may also go to a faculty member who has done an especially outstanding job with just one or two undergraduates who have demonstrated superior work. The medal was established in memory of the former professor of Geophysics and Dean of the School of Earth Sciences, a strong supporter of faculty-student research collaboration.

#### Herbert Hoover Medal For Distinguished Service

David Starr Jordan's belief that every academic degree should represent work actually done in or under the direction of the institution granting it has meant that, since its founding, Stanford has awarded no honorary degrees. As a means of recognizing extraordinary individuals who deserve special acknowledgment, the Stanford Alumni Association in 1962 voted to establish the Herbert Hoover Medal for Distinguished Service. The name pays tribute to the former President's example of service to his University, to his country, and to the cause of world humanitarianism. Indeed, Mr. Hoover was the first award recipient. The gold medal is presented following selection by an anonymous committee appointed by the Chair of the Board of Directors of the Alumni Association.

### Student Awards

#### Boothe Prize for Excellence in Writing

Awarded during the freshman year, the Boothe Prize recognizes excellence in writing. Students are selected for this honor on the basis of essays written for courses fulfilling the Introduction to the Humanities or Writing and Rhetoric requirements. The prize is named for Mr. and Mrs. D. Power Boothe, Jr., whose gifts to the University reflect their interest in the humanities.

#### President's Award for Academic Excellence in the Freshman Year

The President's Award honors students in the top 3% of the class who have exceptionally distinguished academic records that exemplify a strong program of study in the freshman year. Students eligible for the award normally have completed Writing and Rhetoric and Introduction to the Humanities requirements during their first year at Stanford.

#### Deans' Award for Academic Achievement

The Deans of Earth Sciences, Engineering, and Humanities and Sciences recognize from five to ten undergraduate students each year for their academic endeavors. Honorees are cited for noteworthy accomplishments which represent more than a high grade point average or success in course work. Faculty nominate students who have exceptional tangible achievements in classes or independent research, national academic competitions, a presentation or publication for a regional or national audience, or exceptional performance in the creative arts.

#### Firestone Medal for Excellence in Research

The Firestone Medal is awarded to seniors in recognition of excellence in undergraduate research. Departments in the School of Humanities and Sciences nominate students who have completed outstanding honors projects in the social, physical, and natural sciences.

#### Robert M. Golden Medal for Excellence in the Humanities and Creative Arts

The Golden Medal recognizes outstanding achievement in the humanities and the creative arts. Seniors receive these medals upon nomination by their major department.

### Hoefler Prize for Excellence in Undergraduate Writing

The Hoefler Prize recognizes students and faculty for their work in courses that meet the University Writing Requirement for writing in the major. Prizes are awarded in each of the five areas of the undergraduate curriculum: humanities, social sciences, natural sciences, engineering, and earth sciences.

### Frederick Emmons Terman Engineering Scholastic Award

The School of Engineering annually presents the Terman Award to seniors for outstanding academic achievement. The awardees share their award with a high school teacher of their nomination.

### Phi Beta Kappa

Phi Beta Kappa is a nationwide society honoring students for the excellence and breadth of their undergraduate scholarly accomplishments. Membership in the Stanford Chapter (Beta of California) is open to undergraduates of all majors. To be elected to Phi Beta Kappa at Stanford, a student must achieve academic distinction in the major as well as in courses across a broad range of fields.

Approximately a tenth of the members of a graduating class are elected to Phi Beta Kappa. Of this number, about one fifth are chosen in their junior year, the remainder in their senior year.

The chapter's election guidelines define breadth of study as excellence beyond the major field. To be considered for election, a student must have taken at least three courses of 3 units or more at Stanford by the time elections are held early in the Spring Quarter with a letter grade of 'B-' or better in each of the following three major domains of knowledge: humanities; science, engineering, and math; and social sciences. Students who transfer in their junior year must have taken at least two courses at Stanford in two of the major domains and at least one course in the third domain, and must have completed a minimum of 75 units of academic work at Stanford by the end of Winter Quarter. Students who transfer in their sophomore year must have taken at least two courses at Stanford in each of the major domains.

There is no direct correlation between Stanford University General Education Requirements (GERs) and Phi Beta Kappa breadth requirements. The elections committee analyzes the content of individual courses to determine which major domain requirement they may satisfy. IHUM, PWR, and first-year language courses do not satisfy the PBK breadth criterion.

A grade of '+' or 'CR' is not considered a sign of distinction. Minimally satisfying the breadth criterion is not considered a sign of distinction.

The academic records of eligible students are automatically reviewed, so no special action is required for students wishing to be considered for membership. Anonymity in the election process is ensured by removal of the students' names from their academic records before consideration. Students who desire that their records not be made available for consideration by the Stanford chapter of Phi Beta Kappa should inform the Registrar, 630 Serra Street, Suite 120, Stanford, CA 94305-6032.

## Exchange Programs and Cross-enrollment Agreements

Stanford has exchange programs and cross-enrollment agreements with a number of other colleges and universities. The purpose of these programs and agreements is to offer Stanford students courses and training that are not available in the Stanford curriculum.

### Undergraduate

Stanford has exchange programs with four colleges and universities that allow students to exchange schools for a quarter/semester or for a year, depending on the school. These programs are best suited to students in their junior year, when the major area of study has been determined.

Stanford students register for zero units at Stanford during the quarter(s) in which they are attending another college or university and pay the regular Stanford tuition. Courses taken at the other institution are treated as transfer credit back to Stanford. Students should contact the External Credit Evaluation section of the Office of the University Registrar to determine whether the courses taken through an exchange program may qualify for credit toward a Stanford degree. Only the number of units accepted in transfer, not the course titles or the grades received, are recorded on the Stanford transcript.

Exchange programs are currently available at three historically black institutions: Howard University in Washington D.C.; and Morehouse College and Spelman College in Atlanta, Georgia. The exchange program at Dartmouth College in Hanover, New Hampshire, focuses on Native American Studies. Further information is available at the Undergraduate Advising and Research Center.

### Graduate

The Exchange Scholar Program is open to doctoral students in programs other than the Graduate School of Business or Stanford Law School who have completed one full year of study at one of the participating institutions. These students may apply to study at Stanford, and Stanford students may apply to one of these other institutions, for a maximum of one academic year (Autumn, Winter, and Spring quarters) to take advantage of particular educational opportunities not available on the home campus. The participating institutions are Brown University, University of Chicago, Columbia University, Cornell University, Harvard University, Massachusetts Institute of Technology, Princeton University, Stanford University, University of Pennsylvania, and Yale University. Further information on the program may be obtained from the Office of the University Registrar, or the graduate dean's office at participating institutions. Some institutions may place restrictions on specific departments.

Stanford also has separate exchange programs with the University of California, Berkeley, the University of California, San Francisco, and the University of California, Santa Cruz for students in marine sciences. Further information may be obtained at the Office of the University Registrar.

## Cross-Enrollment

See the "ROTC section (p. 97)" of this bulletin for information on ROTC cross-enrollment programs.

# DESCRIPTIONS

## Courses

## Courses

## Courses

### Accounting Courses

#### ACCT 210. Financial Accounting. 4 Units.

Financial accounting is the measurement of economic activity for decision-making. Financial statements are a key product of this measurement process and an important component of firms' financial reporting activities. The objective of this course is not to train you to become an accountant but rather to help you develop into an informed user of financial statement information. While financial statement users face a wide variety of decisions, they are often interested in understanding the implications of financial statement information for the future cash flows and earnings potential of a firm. We will focus on understanding the mapping between underlying economic events and financial statements, and on understanding how this mapping affects inferences about future profitability and liquidity. The following learning objectives will be emphasized: (1) familiarity with the transactions businesses engage in, (2) fluency in accounting terminology, (3) understanding the structure that maps transactions into accounting numbers, (4) understanding the rationale for various accounting methods, and (5) awareness of the judgment involved and the discretion allowed in choosing accounting methods, making estimates, and disclosing information in financial statements.

#### ACCT 212. Managerial Accounting: Base. 2 Units.

This course provides an introduction to the concepts and tools of managerial accounting. The first part of the course covers alternative costing methods and illustrates how the resulting cost information can be used to analyze the profitability of individual products and customers. The second part of the course will examine the role of internal accounting systems in evaluating the performance of individual business segments and divisions of the firm. Included in this part are topics related to the choice of internal pricing methods for transferring goods and services across divisions of the firm and the use of financial metrics for assessing the profitability of these divisions.

#### ACCT 213. Financial Accounting - Accelerated. 4 Units.

This course develops students' ability to read, understand, and use corporate financial statements. The course is oriented toward the user of financial accounting data (rather than the preparer) and emphasizes the reconstruction and interpretation of economic events from published accounting reports. The course is geared toward students with some familiarity in dealing with financial statement information and allows for deeper coverage and discussion in class.

#### ACCT 215. Managerial Accounting: Accelerated. 3 Units.

This course provides a comprehensive introduction to the concepts and tools of managerial accounting. The first part of the course demonstrates how management can rely on internal accounting information to measure and manage the profitability of individual products and customers. As part of that analysis, we examine alternative costing methods and illustrate how the resulting cost information can be used for decision making. The second part of the course focuses on the role of the internal accounting system in evaluating managerial performance and in coordinating the activities among business units within the firm. Our focus here will be on performance metrics that enable effective decentralization by aligning the objectives of individual business units with the overall corporate goals.

#### ACCT 219. MSx: Accounting. 3 Units.

A characteristic of business is the extensive use of accounting data. The financial accounting course has the general objective of developing students' understanding of the nature, scope, and limitations of accounting information. To achieve this objective the course attempts to: (1) develop students' understanding of the conceptual accounting framework, including the objectives of financial reporting, and (2) develop students' ability to understand and critically evaluate the financial disclosures made by corporations. An issue of particular interest will be the managerial incentive aspects of accounting information and disclosures.

#### ACCT 311. Global Financial Reporting. 4 Units.

This course is designed to enhance students' understanding of current financial reporting issues through a detailed analysis and comparison of U.S. and International Financial Reporting Standards. The course will cover the development of accounting standards, implementation of these standards, and how to interpret output from these standards. The course highlights intermediate and advanced financial reporting topics including fair value accounting, asset securitization, consolidation including special purpose entities, foreign currency translation, derivatives and hedging, leases, revenue recognition, pensions, and equity compensation. The course also focuses on evaluating emerging financial reporting issues such as proposed financial reporting standards put forth by U.S. or international standard setting bodies. This course should help students better understand the environment governing global financial reporting and how firms develop financial statement information within this environment.

#### ACCT 312. Evaluating Earnings Quality. 4 Units.

This course aims to develop students' understanding of the relation between accounting numbers and underlying economic activity, and to develop students' ability to evaluate the quality of reported accounting numbers. The course will then focus on how to use them in decision contexts including evaluating profitability, forecasting future earnings and cash flows, selecting an appropriate financial reporting strategy, and assessing risk. Accordingly, the course will focus on several factors essential to this goal. These include understanding (1) the business environment a firm operates in, its contracting practices and their implications for what accounting principles are applied and what judgments are required; (2) the process that generates accounting numbers and its implications for the quality of those numbers for decision purposes; (3) approaches for assessing the sustainability and growth of a firm's revenues and earnings using financial statement information; and (4) approaches to evaluate earnings quality, the risk of earnings restatements, liquidity and solvency. This course should be of value to students who will be in senior positions within corporations and will determine financial reporting policies, as well as those outside corporations who will make investment or other decisions at least partially based on financial statement information.

**ACCT 313. Accounting-Based Valuation. 3 Units.**

This course is designed to develop students' ability to interpret and use financial accounting information in an equity valuation context. The perspective taken is that of an outsider relying on publicly available financial information for investment purposes. The course relies heavily upon financial statement analysis tools and the residual income framework for equity valuation. Through lectures, in-depth case studies, and real-time exercises, the first half of the course covers traditional financial statement analysis-based tools for critically analyzing and assessing a firm's current financial performance and economic condition, including ratio analysis, accounting quality analysis and financial distress / bankruptcy prediction models. The second half of the course introduces the accounting-based valuation framework and develops the link between financial statement analysis, forecasting and equity valuation. The capstone to the course is the completion of a comprehensive, real-time valuation of a publicly traded firm (or registered IPO candidate). The course is structured for students to gain a deeper understanding of the economic pressures behind the valuation creation and valuation process, and will be useful to those students who anticipate making investment or credit decisions at least partially based on historical and prospective financial statement information.

**ACCT 317. Managerial Accounting: Performance Measurement, Compensation, and Governance. 3 Units.**

The course will examine the academic and professional controversies surrounding corporate governance and executive compensation. A basic framework will be developed to integrate the many important dimensions of corporate governance in the U.S. and international settings. The institutional features of corporate governance and executive compensation will be documented using the professional business and legal literatures. In addition, the scientific research in accounting, economics, finance, and organizational behavior will be used to provide insights into the measurement and consequences of observed corporate governance and executive compensation choices. After successfully finishing the course, a student should be able to (i) understand the debates about appropriate choices for corporate governance and executive compensation and (ii) critically evaluate the implications of academic and professional research studies on these controversial issues.

**ACCT 332. Mergers and Acquisitions. 3 Units.**

This course provides a comprehensive overview of accounting, economic, and financial issues related to mergers and acquisitions. Specifically, we review the market for corporate control, discuss strategic and corporate governance issues related to firms' decision to acquire or be acquired, and examine the M&A regulatory environment (e.g., anti-trust). We also review various pricing and deal structure considerations, and identify some of the strategies that underlay a successful negotiation. We also review the financial reporting effects of business acquisitions and the various income tax implications of such deals. In covering these and other related issues, we will discuss both the theory and practice of mergers and acquisitions. To provide some specific context we will analyze several M&A deals (e.g., Google/Motorola, HP/Compaq, UpJohn/Pharmacia, AOL/Time Warner, Oracle/PeopleSoft, and many more). In discussing these cases, we will examine the situation faced by the company, the issues surrounding the transaction, including the financial reporting implications, and focus on the managerial incentives and the judgment applied. We will also review some of the related literature in accounting, economic, and finance, to gain broader perspectives and insights into the financial issues associated with M&A transactions. Class time comprises mini lectures that introduce some of the more technical concepts, case discussions, and guest speakers who will offer additional perspectives on the subject matters. The course is co-taught by Ron Kasznik (GSB) and Safra Catz (Oracle Corporation). Ms. Catz is President of Oracle and a member of its Board of Directors. She has led Oracle through nearly 100 acquisitions in recent years (including PeopleSoft, Siebel, BEA, Sun Microsystems, and many more). Prior to joining Oracle in 1999, Ms. Catz was Managing Director at Donaldson, Lufkin & Jenrette, a global investment bank (now part of CSFB). Ms. Catz also serves on the board of directors for HSBC Holdings plc since 2008.

**ACCT 333. Taxes and Business Strategy. 3 Units.**

Traditional business courses analyze an array of factors affecting business decisions but provide little systematic consideration of the role of taxes. By contrast, tax accounting courses traditionally concentrate on technical legal and administrative issues while ignoring the environment in which taxes enter an individual's or firm's decision. This case-based course intends to bridge this gap by providing a framework for recognizing how taxes affect strategic personal and business decisions and gaining experience analyzing a wide range of tax-related issues. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, retirement planning, cash and equity compensation, organizational form, tax planning for multiple jurisdictions, and M&A. The goal of this course is to provide an approach to thinking about taxes that will be valuable across jurisdictions even as laws change.

**ACCT 340. Alphanomics: Informational Arbitrage in Equity Markets. 4 Units.**

This is an advanced elective course on the economics of active investing in equity markets. The course is designed as a "start-up kit for an equity hedge fund." We will cover some of the foundational skills needed to select and trade stocks, as well as build and manage a portfolio of public equity. Specifically, the course material is designed to improve student skills in: (1) assessing the relative attractiveness of individual companies, (2) building stock screens to filter and rank firms based on user-specified parameters, (3) trading individual equity positions, and (4) monitoring and managing portfolio risk. This is a hands-on course with an emphasis on experiential learning. Students will make extensive use of the analytical tools in the new "Real-time Analytics and Investment Lab" (R.A.I.L.) facility in the Bass Center. There is no final exam. However, there will be a number of individual cases and a final group project. 25% of the grade will be based on class participation, and 75% will be based on cases and projects. Because it is an advanced elective, students taking this class are expected to be well versed in core economic, accounting, and finance skills. Material covered in a second Financial Modeling course, as well as in Accounting 312 (Evaluating Financial Statement Information) and Accounting 313 (Accounting-based Valuation) will come in handy. However, none of these courses are required.

**ACCT 354. Analysis and Valuation for Event-Driven Investing. 3 Units.**

This Bass seminar is designed to develop students' ability to interpret and use financial accounting information in credit and equity valuation contexts. The course will focus on valuing the securities of companies undergoing significant changes as a result of litigation, restructuring, regulatory changes, mergers, spin-offs or significant industry shifts. Throughout the course, students will (1) enrich their understanding of how alternative economic, legal, political and regulatory outcomes affect the value of various components of a company's capital structure and (2) develop their ability to apply financial statement analysis to assess the likelihood and valuation implications of the events of interest. Event-driven investing follows the life cycle of companies as they revamp their corporate structures in response to economic and regulatory environments. For example, in rising economic periods companies may undertake acquisitions or spin off divisions to enhance shareholder value. During adverse environments, bankruptcy and reorganizations often reshape the capital structure by offering opportunities to create value through the restructuring process. During economic transitions, debt and equity investors may make significantly different assessments of the quality of a company's earnings, its assets, and its likelihood to meet its debt obligations. To assess the probability of corporate events, investors must make judgments about the quality of a company's earnings and assets and understand how accounting policies may influence management's representations. Investors must also interpret how accounting policies function at various points in a firm's life cycle, influencing the quality of earnings for firms differently in different economic environments. In the first half of the course, we will develop the course framework, and apply it to illustrative cases. Companies featured in past years include Tyco, AIG, CIT, Fannie Mae, Tesla and Pharmasset and Gilead. Students will interpret information from companies' public financial disclosures to assess the likelihood of different events or outcomes. The course will also feature readings on current accounting standards, articles from the popular press, publicly available financial statement information, and guest speakers with in-depth knowledge of investing strategies vis a vis the case companies. The latter part of the course will be devoted to project work, with students working in teams to develop an event-driven investing strategy. The aim is to allow students to conduct independent research on a company, industry, economic context, or financial reporting environment of particular interest. Students will develop their investment idea, articulate their sense of the possible outcomes for the components of the firm's capital structure, and explain how they have assessed the likelihood and valuation consequences of those outcomes. At the conclusion of the course, students will present their strategies to the class and a panel of expert judges.

**ACCT 506. Evaluating Earnings Quality. 2 Units.**

This course aims to develop students' understanding of the relation between accounting numbers and underlying economic activity, and to develop students' ability to evaluate the quality of accounting numbers. The course will focus on several skills essential to these goals. These include (1) understanding the process that generates accounting numbers and its implications for the quality of those numbers for decision purposes, (2) understanding the business environment a firm operates in and the firm's financial, accounting and operating strategies, (3) tools for assessing a firm's performance including ratio and cash flow analysis, and (4) identifying patterns that suggest low earnings quality and/or earnings manipulation. This course should be of value to students who expect to be in senior positions within corporations and will determine financial reporting policies, as well as those in investment banking, venture capital, investment management, consulting or public accounting. Class sessions will be devoted to a mix of lecture, discussion, group exercises and cases. The class will conclude with a mini-project where you analyze how a firm manipulated its financial statements or disclosures and identify the key clues that are visible in their financial statements.

**ACCT 516. Analysis and Valuation of Emerging Market Firms. 2 Units.**

This course examines the unique institutional, governance and transparency issues affecting corporate valuations in emerging markets. Through lectures, case discussions and the students' real-time analysis of an emerging market firm, this condensed course is structured for students to gain a deeper understanding of the economic pressures behind the value creation, value destruction and valuation process in emerging economies. The course focuses on critically interpreting financial and non-financial information for purposes of assessing firm fundamentals and risk in the presence of weak legal systems, strong political forces, limited investor protections, limited market development, strong macro-economic forces, opacity and resultant business arrangements. The course is beneficial for entrepreneurs, consultants, investors and managers operating in or considering expansion to developing markets.

**ACCT 518. Analysis and Valuation of Emerging Market Firms. 2 Units.**

The course is designed to introduce students to the unique institutional, corporate governance and transparency issues facing managers and investors in emerging economies, and the impact these issues have on assessment of firm performance and value. The goal of the class is to gain an understanding of how country-level institutional forces interact with firm-level factors to shape firm value in these countries, how to interpret published financial reports in this environment to identify the source of firm-level value creation, and to use your assessment of the firm to identify the primitive sources of the firm's risks and opportunities. Topics covered will include an assessment of related party transactions, importance of political factors and social networks, governance conflicts, and the risk of expropriation. Students will be expected to: (1) make one presentation (most likely as a part of a two-to-three person group) that explores the valuation and value drivers of a specific emerging market firm and (2) attend all four classes. Grades will be on a pass/fail basis. Professor Piotroski teaches the Accounting-based Valuation and Valuation in Emerging Economies courses at the GSB.

**ACCT 523. Board Governance. 2 Units.**

This course is focused on helping students understand the role boards and board members play in corporate governance and the lives of businesses large and small. This case-driven course is designed to help students who plan to serve on boards as private-equity or venture investors, entrepreneurs who will need to assemble and manage boards, and executives who realize they will need to interact with and answer to boards. The course is designed to help students understand the issues boards face - both routine and non-routine - through the eyes of the board member. By understanding the roles and responsibilities of board members and the mechanisms through which they exercise these duties, students will come away with an understanding of how boards function effectively (and in too many cases fail to function effectively). The course will include examining boards in a variety of contexts with a focus on three types of situations: public for-profit companies, early-stage private companies, and non-for-profit companies of different sizes.

**ACCT 533. Taxes and Business Strategy. 2 Units.**

The objective of this course is to develop a framework for understanding how taxes affect business decisions. The key themes of the framework - all parties, all taxes and all costs - are applied to decision contexts such as investments, compensation, and organizational form. The goal of this course is to provide a new approach to thinking about taxes that will be valuable across jurisdictions even as laws change.

**ACCT 541. Alphanomics II. 2 Units.**

This is a 2-credit advanced elective in equity investing that will be offered in the Spring 2013 quarter. This course is open only to students that were enrolled in Alphanomics (ACCT340) in the Fall of 2012. If you complete ACCT340 in the Fall of 2012, your spot in this course will be automatically reserved. However, you still have a chance to opt out of this course at the end of the Fall 2012 quarter. The Fall (ACCT340) course is designed as a "start-up kit for an equity hedge fund". In the Fall quarter, we will cover some of the foundational skills needed to build and manage a portfolio of public stocks. Towards the end of Fall, student who choose to continue onto the Spring course (ACCT541) will form teams (of 4 to 6 each) and submit a proposal for a hedge fund product. Once their proposal is approved, each team will be given a \$1 million paper portfolio. Students then manage this portfolio for the rest of the school year (their trades and portfolio statistics are automatically tracked). Students enrolled in the Spring (ACCT541) will reconvene in the second half of the quarter for a series of class lectures/talks as well as team presentations, summarizing their experience. The ACCT541 portion of the course will require each student group to make a class presentation, as well as turn in a written report. 25% of the grades will be based on class participation, and 75% will be based on the presentations and reports. The overall goal of this course is to improve student skills in assessing the relative attractiveness of individual companies, as well as in managing portfolio risk according to pre-specified targets. This is a hands-on course with an emphasis on experiential learning. Students will make extensive use of analytical tools in the new "Real-time Analytics and Investment Lab" (High-speed R.A.I.L.) facility in the Bass Center. As part of this course, students will be required to design stock screens, conduct back-tests, do detailed company analyses, execute (virtual) trades, and manage portfolio risk.

**ACCT 554. Project in Event-Driven Investing. 2 Units.**

This project-focused course is designed to develop students' ability to interpret and use financial accounting information in credit and equity valuation contexts. The course will focus on valuing the securities of companies undergoing significant changes as a result of litigation, restructuring, regulatory changes, mergers, spin-offs or significant industry shifts. Students will work in groups to develop a recommendation for an event-driven investment strategy. The project will feature financial statement and valuation analysis to assess the risks and rewards of the proposed strategy. Groups will be mentored by experienced investors. The course will be of value to those students who anticipate making investment decisions using financial statement information.

**ACCT 609. Financial Reporting and Management Control. 3 Units.**

This course is aimed at doctoral students in accounting and neighboring fields including economics, finance, political economics and operations management. The course seeks to provide an introduction to the role of accounting information in (i) measuring firm performance, (ii) projecting profitability and firm value for external constituents, (iii) and motivating and controlling the firm's management. The main topics covered in this course include: 1. Profitability Measurement and Accrual Accounting. 2. Performance Evaluation and Managerial Incentives. 3. Accounting-based Equity Valuation. 4. The Informational Role of Accounting Numbers. 5. Earnings Quality Constructs and Measures. The primary objective of the course is to introduce students to current research paradigms on these topics and to identify promising avenues for future research. The course readings include recent theoretical and empirical papers.

**ACCT 610. Seminar in Empirical Accounting Research. 3 Units.**

Empirical Research on Financial Reporting: This doctoral-level course covers research on the role of accounting information in capital markets. The focus is on introducing students to key themes in empirical accounting and capital markets research, and to key research designs applied to examine information-related questions. Course topics include market efficiency, the role of accounting in providing information to investors, anomalies, alternative sources of information, accounting measurement attributes, earnings management, earnings quality, and the role of auditors in the provision of information to investors. The course is interdisciplinary in nature. The readings focus on research design, and key theories, themes and approaches from the accounting, finance, economics and psychology literature. Our overall goal is not only to review existing research, but also to identify new research opportunities.

**ACCT 611. Applications of Information Economics in Management and Accounting. 3 Units.**

This course develops tools from information economics to study the strategic interactions between agents inside a firm and between firm insiders and market participants. Common to these studies is that agents acquire private information that is valuable to other parties. The range of applications includes: the structure of managerial performance measures, buyer-supplier contracting arrangements, earnings management, voluntary and mandatory disclosure and financial analysts.

**ACCT 612. Financial Reporting Seminar. 3 Units.**

The purpose of this PhD seminar is to facilitate your conception and execution of substantive individual research in financial reporting. It provides a vehicle for supplementing and integrating your knowledge of basic research tools and methods, as well as an exposure to the dimensions of contemporary research in the field of financial reporting. The focus of the research we will discuss in this seminar is on global financial reporting. Such research encompasses studies dealing with contemporary financial reporting issues as well as research addressing issues relating to the globalization of financial reporting. Because these issues are also of concern to financial reporting standard setters, we will discuss whether and how the research we study informs standard setting debates. Prerequisite: Consent of the instructor.

**ACCT 615. Selected Topics in Empirical Accounting Research. 3 Units.**

This course examines selected topics in accounting research. The course features four faculty who will each give a focused look at a given area, introduce students to important questions in that area, key papers in the related literature, and critical aspects of the research designs applied in the area. The aim is to increase student's familiarity with empirical accounting research, their ability to critically evaluate research and research designs, and to prepare students to conduct independent research.

**ACCT 617. Managerial Incentives and Corporate Governance: Concepts and Empirical Methodology. 4 Units.**

The course will consist of three set of topics. The first part of the class will examine a set of applied econometric topics that are useful in empirical accounting research. Each of these topics will be illustrated using contemporary examples from accounting, economics, and finance. The second part of the class will cover some of the basic theoretical work in moral hazard agency models and various extensions to this type of research. The final part of the course will discuss the empirical literature on corporate governance and executive compensation. The course will be taught in a seminar style and students will be required to develop a series of research projects on the topics covered in the class.

**ACCT 618. Market Efficiency and Informational Arbitrage. 3 Units.**

The informational efficiency of stock markets has been a central theme in financial economic research in the past 50 years. Over this period, the focus of academic research has gradually shifted from the general to the more specific. While earlier studies tend to view the matter as a yes/no debate, many recent studies now acknowledge the impossibility of fully efficient markets, and have focused instead on analyses of factors that could materially affect the timely incorporation of information into prices. At the same time, increasing attention is being paid to regulatory and market design issues that could either impede or enhance market pricing efficiency. In this course, we will cover recent research on the role of informational arbitrage in asset pricing. Our starting point is the observation that, with costly information, equilibrium prices will invariably reflect some mispricing. The existence of mispricing introduces a role for informational arbitrage, whereby some traders will invest resources to become informed about the mispricing, with hopes of profiting from it. We review recent academic evidence on this process, and reflect on its implications for future market-related research. We will also discuss how academic research might help lower information/arbitrage costs. This is a doctoral level course. Our goal is not only to review existing research, but also to stimulate new work in the area. As such, I expect it will be of primary interest to Ph.D. students majoring in accounting, finance, and economics. Given our focus on returns prediction and the role of information in arbitrage strategies, this course should be of particular interest to those interested exploring the relation between information flows and market pricing dynamics. The course content is interdisciplinary in nature, spanning finance, economics, and accounting. Most of the readings in the earlier readings derive from finance and economics (market efficiency, limits to arbitrage, and behavioral finance); most of the later readings derive from financial accounting (equity valuation, fundamental analysis, earnings management, and analyst behavior).

**ACCT 691. PhD Directed Reading. 1-15 Unit.**

This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the faculty member who is willing to supervise the reading.

Same as: FINANCE 691, GSBGEN 691, HRMGT 691, MGTECON 691, MKTG 691, OB 691, OIT 691, POLECON 691, STRAMGT 691

**ACCT 692. PhD Dissertation Research. 1-15 Unit.**

This course is elected as soon as a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

Same as: FINANCE 692, GSBGEN 692, HRMGT 692, MGTECON 692, MKTG 692, OB 692, OIT 692, POLECON 692, STRAMGT 692

**ACCT 698. Doctoral Practicum in Teaching. 1 Unit.**

Doctoral Practicum in Teaching.

**ACCT 699. Doctoral Practicum in Research. 1 Unit.**

Doctoral Practicum in Research.

**ACCT 802. TGR Dissertation. 0 Units.**

Same as: FINANCE 802, GSBGEN 802, HRMGT 802, MGTECON 802, MKTG 802, OB 802, OIT 802, POLECON 802, STRAMGT 802

## Aeronautics & Astronautics Courses

### AA 47SI. Why Go To Space?. 1 Unit.

Why do we spend billions of dollars exploring space? What can modern policymakers, entrepreneurs, and industrialists do to help us achieve our goals beyond planet Earth? Whether it is the object of exploration, science, civilization, or conquest, few domains have captured the imagination of a species like space. This course is an introduction to space policy issues, with an emphasis on the modern United States. We will present a historical overview of space programs from all around the world, and then spend the last five weeks discussing present policy issues, through lectures and guest speakers from NASA, the Department of Defense, new and legacy space industry companies, and more. Students will present on one issue that piques their interest, selecting from various domains including commercial concerns, military questions, and geopolitical considerations.

### AA 93. Building Trust in Autonomy. 1 Unit.

Preparatory course for Bing Overseas Studies summer course in Edinburgh. Prerequisite: Requires instructor consent.

### AA 100. Introduction to Aeronautics and Astronautics. 3 Units.

The principles of fluid flow, flight, and propulsion; the creation of lift and drag, aerodynamic performance including takeoff, climb, range, and landing performance, structural concepts, propulsion systems, trajectories, and orbits. The history of aeronautics and astronautics. Prerequisites: MATH 20, 21 or MATH 41, 42; elementary physics.

### AA 115N. The Global Positioning System: Where on Earth are We, and What Time is It?. 3 Units.

Preference to freshmen. Why people want to know where they are: answers include cross-Pacific trips of Polynesians, missile guidance, and distraught callers. How people determine where they are: navigation technology from dead-reckoning, sextants, and satellite navigation (GPS). Hands-on experience. How GPS works; when it does not work; possibilities for improving performance.

### AA 116Q. Electric Automobiles and Aircraft. 3 Units.

Transportation accounts for nearly one-third of American energy use and greenhouse gas emissions and three-quarters of American oil consumption. It has crucial impacts on climate change, air pollution, resource depletion, and national security. Students wishing to address these issues reconsider how we move, finding sustainable transportation solutions. An introduction to the issue, covering the past and present of transportation and its impacts; examining alternative fuel proposals; and digging deeper into the most promising option: battery electric vehicles. Energy requirements of air, ground, and maritime transportation; design of electric motors, power control systems, drive trains, and batteries; and technologies for generating renewable energy. Two opportunities for hands-on experiences with electric cars. Prerequisites: Introduction to calculus and Physics AP or elementary mechanics.

### AA 190. Directed Research and Writing in Aero/Astro. 3-5 Units.

For undergraduates. Experimental or theoretical work under faculty direction, and emphasizing development of research and communication skills. Written report(s) and letter grade required; if this is not appropriate, enroll in 199. Consult faculty in area of interest for appropriate topics, involving one of the graduate research groups or other special projects. May be repeated for credit. Prerequisite: consent of student services manager and instructor.

### AA 199. Independent Study in Aero/Astro. 1-5 Unit.

Directed reading, lab, or theoretical work for undergraduate students. Consult faculty in area of interest for appropriate topics involving one of the graduate research groups or other special projects. May be repeated for credit. Prerequisite: consent of instructor.

### AA 200. Applied Aerodynamics. 3 Units.

Analytical and numerical techniques for the aerodynamic analysis of aircraft, focusing on airfoil theory, finite wing theory, far-field and Trefftz-plane analysis, two-dimensional laminar and turbulent boundary layers in airfoil analysis, laminar-to-turbulent transition, compressibility effects, and similarity rules. Biweekly assignments require MATLAB or a suitable programming language. Prerequisite: undergraduate courses in basic fluid mechanics and applied aerodynamics, AA 210A.

### AA 201A. Fundamentals of Acoustics. 3 Units.

Acoustic equations for a stationary homogeneous fluid; wave equation; plane, spherical, and cylindrical waves; harmonic (monochromatic) waves; simple sound radiators; reflection and transmission of sound at interfaces between different media; multipole analysis of sound radiation; Kirchoff integral representation; scattering and diffraction of sound; propagation through ducts (dispersion, attenuation, group velocity); sound in enclosed regions (reverberation, absorption, and dispersion); radiation from moving sources; propagation in the atmosphere and underwater. Prerequisite: first-year graduate standing in engineering, mathematics, sciences; or consent of instructor.

### AA 201B. Topics in Aeroacoustics. 3 Units.

Acoustic equations for moving medium, simple sources, Kirchoff formula, and multipole representation; radiation from moving sources; acoustic analogy approach to sound generation in compact flows; theories of Lighthill, Powell, and Mohring; acoustic radiation from moving surfaces; theories of Curl, Ffowcs Williams, and Hawkings; application of acoustic theories to the noise from propulsive jets, and airframe and rotor noise; computational methods for acoustics. Prerequisite: 201A or consent of instructor.

### AA 203. Introduction to Optimal Control and Dynamic Optimization. 3 Units.

Basic solution techniques for optimal control and dynamic optimization problems. Dynamic programming, calculus of variations, and numerical techniques for trajectory optimization. Special cases (chiefly LQR and robotic motion planning); modern solution approaches (such as MPC and MILP); and introduction to stochastic optimal control. Examples in MATLAB and CVX.

### AA 206. Bio-Aerodynamics. 3 Units.

Topics: flapping flight, low Reynolds number aerodynamics, wing design, flocks, swarms, and dynamic soaring. Readings from current and historical literature dealing with theoretical and observational studies. Applications in aircraft design, and simulation-based problem sets. Prerequisite: course in aerodynamics such as 100, 200A, or 241A.

### AA 208. Aerodynamics of Aircraft Dynamic Response and Stability. 3 Units.

Companion to 200A for those interested in control and guidance. Typical vehicles and the technical tradeoffs affecting their design. Equations of motion, stressing applications to dynamic performance, stability, and forced response. Forms and sources for the required aerodynamic data. Response to small disturbances and stability derivatives. Static stability and trim. Review of aerodynamic fundamentals, leading to airload predictions for wings, bodies, and complete aircraft. Paneling and other methods for derivative estimation. Natural motions of the aircraft, and the influence on them of various configuration parameters. Vehicle behavior in maneuvers of small and large amplitudes. Prerequisites: 200A, 210A, or equivalents (may be taken concurrently).

**AA 210A. Fundamentals of Compressible Flow. 3 Units.**

Topics: development of the three-dimensional, non-steady, field equations for describing the motion of a viscous, compressible fluid; differential and integral forms of the equations; constitutive equations for a compressible fluid; the entropy equation; compressible boundary layers; area-averaged equations for one-dimensional steady flow; shock waves; channel flow with heat addition and friction; flow in nozzles and inlets; oblique shock waves; Prandtl-Meyer expansion; unsteady one-dimensional flow; the shock tube; small disturbance theory; acoustics in one-dimension; steady flow in two-dimensions; potential flow; linearized potential flow; lift and drag of thin airfoils. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.

**AA 210B. Fundamentals of Compressible Flow. 3 Units.**

Continuation of 210A with emphasis on more general flow geometry. Use of exact solutions to explore the hypersonic limit. Identification of similarity parameters. Solution methods for the linearized potential equation with applications to wings and bodies in steady flow; their relation to physical acoustics and wave motion in nonsteady flow. Nonlinear solutions for nonsteady constant area flow and introduction to Riemann invariants. Elements of the theory of characteristics; nozzle design; extension to nonisentropic flow. Real gas effects in compressible flow. Flows in various gas dynamic testing facilities. Prerequisite: 210A.

**AA 212. Advanced Feedback Control Design. 3 Units.**

Analysis and design techniques for multivariable feedback systems. Loop shaping and limitations of performance. Structural properties of multi-input, multi-output linear time-invariant systems. Study of the stability and robustness of feedback loops. Approaches for optimal and robust feedback control design, chiefly  $H_2$ ,  $H_\infty$ , and  $\mu$  synthesis. Use of computer-aided design with MATLAB. Prerequisite: ENGR 205. Recommended: Linear algebra (EE 263 or equivalent).

**AA 214A. Numerical Methods in Engineering and Applied Sciences. 3 Units.**

Scientific computing and numerical analysis for physical sciences and engineering. Advanced version of CME206 that, apart from CME206 material, includes nonlinear PDEs, multidimensional interpolation and integration and an extended discussion of stability for initial boundary value problems. Recommended for students who have some prior numerical analysis experience. Topics include: 1D and multi-D interpolation, numerical integration in 1D and multi-D including adaptive quadrature, numerical solutions of ordinary differential equations (ODEs) including stability, numerical solutions of 1D and multi-D linear and nonlinear partial differential equations (PDEs) including concepts of stability and accuracy. Prerequisites: linear algebra, introductory numerical analysis (CME 108 or equivalent). Same as: CME 207, GEOPHYS 217

**AA 214B. Numerical Methods for Compressible Flows. 3 Units.**

For M.S.-level graduate students. Covers the hierarchy of mathematical models for compressible flows. Introduction to finite difference, finite volume, and finite element methods for their computation. Ideal potential flow; transonic potential flow; Euler equations; Navier-Stokes equations; representative model problems; shocks, expansions, and contact discontinuities; treatment of boundary conditions; time and pseudo-time integration schemes. Prerequisites: basic knowledge of linear algebra and ODEs (CME 206 or equivalent).

**AA 214C. Numerical Computation of Viscous Flow. 3 Units.**

Numerical methods for solving parabolic sets of partial differential equations. Numerical approximation of the equations describing compressible viscous flow with adiabatic, isothermal, slip, and no-slip wall boundary conditions. Applications to the Navier-Stokes equations in two and three dimensions at high Reynolds number. Computational problems are assigned. Prerequisite: 214B.

**AA 215A. Advanced Computational Fluid Dynamics. 3 Units.**

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent. Same as: CME 215A

**AA 215B. Advanced Computational Fluid Dynamics. 3 Units.**

High resolution schemes for capturing shock waves and contact discontinuities; upwinding and artificial diffusion; LED and TVD concepts; alternative flow splittings; numerical shock structure. Discretization of Euler and Navier Stokes equations on unstructured meshes; the relationship between finite volume and finite element methods. Time discretization; explicit and implicit schemes; acceleration of steady state calculations; residual averaging; math grid preconditioning. Automatic design; inverse problems and aerodynamic shape optimization via adjoint methods. Pre- or corequisite: 214B or equivalent. Same as: CME 215B

**AA 218. Introduction to Symmetry Analysis. 3 Units.**

Methods of symmetry analysis and their use in the reduction and simplification of physical problems. Topics: dimensional analysis, phase-space analysis of autonomous systems of ordinary differential equations, use of Lie groups to reduce the order of nonlinear ODEs and to generate integrating factors, use of Lie groups to reduce the dimension of partial differential equations and to generate similarity variables, exact solutions of nonlinear PDEs generated from groups. Mathematica-based software developed by the instructor is used for finding invariant groups of ODEs and PDEs.

**AA 222. Introduction to Multidisciplinary Design Optimization. 3-4 Units.**

Design of aerospace systems within a formal optimization environment. Mathematical formulation of the multidisciplinary design problem (parameterization of design space, choice of objective functions, constraint definition); survey of algorithms for unconstrained and constrained optimization and optimality conditions; description of sensitivity analysis techniques. Hierarchical techniques for decomposition of the multidisciplinary design problem; use of approximation theory. Applications to design problems in aircraft and launch vehicle design. Prerequisites: multivariable calculus; familiarity with a high-level programming language: FORTRAN, C, C++, MATLAB, Python, or Julia.

**AA 228. Decision Making under Uncertainty. 3-4 Units.**

This course is designed to increase awareness and appreciation for why uncertainty matters, particularly for aerospace applications. Introduces decision making under uncertainty from a computational perspective and provides an overview of the necessary tools for building autonomous and decision-support systems. Following an introduction to probabilistic models and decision theory, the course will cover computational methods for solving decision problems with stochastic dynamics, model uncertainty, and imperfect state information. Topics include: Bayesian networks, influence diagrams, dynamic programming, reinforcement learning, and partially observable Markov decision processes. Applications cover: air traffic control, aviation surveillance systems, autonomous vehicles, and robotic planetary exploration. Prerequisites: basic probability and fluency in a high-level programming language. Same as: CS 238

**AA 229. Advanced Topics in Sequential Decision Making. 3-4 Units.**  
Survey of recent research advances in intelligent decision making for dynamic environments from a computational perspective. Efficient algorithms for single and multiagent planning in situations where a model of the environment may or may not be known. Partially observable Markov decision processes, approximate dynamic programming, and reinforcement learning. New approaches for overcoming challenges in generalization from experience, exploration of the environment, and model representation so that these methods can scale to real problems in a variety of domains including aerospace, air traffic control, and robotics. Students are expected to produce an original research paper on a relevant topic. Prerequisites: AA 228/CS 238 or CS 221. Same as: CS 239

**AA 236A. Spacecraft Design. 3-5 Units.**  
The design of unmanned spacecraft and spacecraft subsystems emphasizing identification of design drivers and current design methods. Topics: spacecraft configuration design, mechanical design, structure and thermal subsystem design, attitude control, electric power, command and telemetry, and design integration and operations.

**AA 236B. Spacecraft Design Laboratory. 3-5 Units.**  
Continuation of 236A. Emphasis is on practical application of systems engineering to the life cycle program of spacecraft design, testing, launching, and operations. Prerequisite: 236A or consent of instructor.

**AA 236C. Spacecraft Design Laboratory. 3-5 Units.**

**AA 240A. Analysis of Structures. 3 Units.**  
Elements of two-dimensional elasticity theory. Boundary value problems; energy methods; analyses of solid and thin walled section beams, trusses, frames, rings, monocoque and semimonocoque structures. Prerequisite: ENGR 14 or equivalent.

**AA 240B. Analysis of Structures. 3 Units.**  
Thin plate analysis. Structural stability. Material behavior: plasticity and fracture. Introduction of finite element analysis; truss, frame, and plate structures. Prerequisite: 240A or consent of instructor.

**AA 241A. Introduction to Aircraft Design, Synthesis, and Analysis. 3 Units.**  
New aircraft systems emphasizing commercial aircraft. Economic and technological factors that create new aircraft markets. Determining market demands and system mission performance requirements; optimizing configuration to comply with requirements; the interaction of disciplines including aerodynamics, structures, propulsion, guidance, payload, ground support, and parametric studies. Applied aerodynamic and design concepts for use in configuration analysis. Application to a student-selected aeronautical system; applied structural fundamentals emphasizing fatigue and fail-safe considerations; design load determination; weight estimation; propulsion system performance; engine types; environmental problems; performance estimation. Direct/indirect operating costs prediction and interpretation. Aircraft functional systems; avionics; aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

**AA 241B. Introduction to Aircraft Design, Synthesis, and Analysis. 3 Units.**  
New aircraft systems emphasizing commercial aircraft. Economic and technological factors that create new aircraft markets. Determining market demands and system mission performance requirements; optimizing configuration to comply with requirements; the interaction of disciplines including aerodynamics, structures, propulsion, guidance, payload, ground support, and parametric studies. Applied aerodynamic and design concepts for use in configuration analysis. Application to a student-selected aeronautical system; applied structural fundamentals emphasizing fatigue and fail-safe considerations; design load determination; weight estimation; propulsion system performance; engine types; environmental problems; performance estimation. Direct/indirect operating costs prediction and interpretation. Aircraft functional systems; avionics; aircraft reliability and maintainability. Prerequisite: 100 or equivalent.

**AA 241X. Design, Construction, and Testing of Autonomous Aircraft. 3 Units.**  
Students grouped according to their expertise to carry out the multidisciplinary design of a solar-powered autonomous aircraft that must meet a clearly stated set of design requirements. Design and construction of the airframe, integration with existing guidance, navigation, and control systems, and development and operation of the resulting design. Design reviews and reports. Prerequisites: expertise in any of the following disciplines by having satisfied the specified courses or equivalent work elsewhere: conceptual design (241A,B); applied aerodynamics (200A,B); structures (240A); composite manufacturing experience; guidance and control (208/271, ENGR 205).

**AA 242A. Classical Dynamics. 3 Units.**  
Accelerating and rotating reference frames. Kinematics of rigid body motion; Euler angles, direction cosines. D'Alembert's principle, equations of motion. Inertia properties of rigid bodies. Dynamics of coupled rigid bodies. Lagrange's equations and their use. Dynamic behavior, stability, and small departures from equilibrium. Prerequisite: ENGR 15 or equivalent.

**AA 242B. Mechanical Vibrations. 3 Units.**  
For M.S.-level graduate students. Covers the vibrations of discrete systems and continuous structures. Introduction to the computational dynamics of linear engineering systems. Review of analytical dynamics of discrete systems; undamped and damped vibrations of N-degree-of-freedom systems; continuous systems; approximation of continuous systems by displacement methods; solution methods for the Eigenvalue problem; direct time-integration methods. Prerequisites: AA 242A or equivalent (recommended but not required); basic knowledge of linear algebra and ODEs; no prior knowledge of structural dynamics is assumed. Same as: ME 242B

**AA 244A. Introduction to Plasma Physics and Engineering. 3 Units.**  
Physics and engineering of plasmas, including space and laboratory plasmas. Debye length and distribution functions. Single-particle motion and drifts. Plasmas as fluids and fluid drifts. Waves in plasmas, including electrostatic and electromagnetic. Diffusion and resistivity. Magnetohydrodynamics.

**AA 244B. Advanced Plasma Physics and Engineering. 3 Units.**  
Equilibrium and instability. Turbulent flow in plasmas. Kinetic theory and the Vlasov equation. Nonlinear effects and solutions. Radiation in a plasma. Plasma diagnostics in ground- and space-based experiments.

**AA 250. Nanomaterials for Aerospace. 3 Units.**  
Properties of nanomaterials and current approaches for engineering spacecraft, aircraft, and subsystems with nanotechnology. Manufacturing of nanomaterials; nano-fiber reinforced composites; structural mechanics of nanomaterials; structure-property relationships; and application of nanotechnology for lightweight structures, thermal protection, nanopropellants, and nanoelectronics.

**AA 251. Introduction to the Space Environment. 3 Units.**

The environment through which space probes and vehicles travel and orbit. Survey of physical phenomena in the sun, solar wind, magnetospheres, ionospheres, and upper atmospheres of objects in the solar system. Introduction to the physical processes governing space plasmas, solar-terrestrial interactions, and ionized and neutral media surrounding the Earth and other solar system bodies. Prerequisite: AA 244A.

**AA 252. Techniques of Failure Analysis. 3 Units.**

Introduction to the field of failure analysis, including fire and explosion analysis, large scale catastrophe projects, traffic accident reconstruction, aircraft accident investigation, human factors, biomechanics and accidents, design defect cases, materials failures and metallurgical procedures, and structural failures. Product liability, failure modes and effects analysis, failure prevention, engineering ethics, and the engineer as expert witness.

**AA 256. Mechanics of Composites. 3 Units.**

Fiber reinforced composites. Stress, strain, and strength of composite laminates and honeycomb structures. Failure modes and failure criteria. Environmental effects. Manufacturing processes. Design of composite structures. Individual design project required of each student, resulting in a usable computer software. Prerequisite: ENGR 14 or equivalent.

**AA 257. Design of Composite Structures. 3 Units.**

Hands-on design, analysis, and manufacturing in composites. Composite beams, columns, and plates; application of finite element methods to composite structures; failure analysis and damage tolerance design of composite structures; and impact damage, compression after impact, and bolted and bonded composites joints. Class divided into working teams (design, analysis, manufacturing, and tests) to design and build a composite structure to be tested to failure; the structure may enter the national SAMPE composite bridge design contest. Prerequisite: 256 or consent of instructor.

**AA 260. Sustainable Aviation. 3 Units.**

Quantitative assessment of the impact of aviation on the environment including noise, local, and global emissions, and models used to predict it. Current and future technologies that may allow the air transportation system to meet anticipated growth while reducing or minimizing environmental problems. Atmospheric effects of NO<sub>x</sub>, CO<sub>2</sub>, particulates, unburned hydrocarbons, and water vapor deposition at high altitudes and metrics for assessing global climate effects. Noise sources, measurement, and mitigation strategies. Fundamentals of aircraft and engine performance needed to assess current and future concepts. Major national and international policy implications of existing and future technology choices. Recommended: AA 241B.

**AA 270. Distributed Space Systems. 3 Units.**

Keplerian orbital mechanics and orbital perturbations; the general relative motion problem; linear formation flying dynamics and control; impulsive station-keeping and reconfiguration; high order relative motion equations; formulation of relative motion using orbital elements; perturbation-invariant formations; nonlinear formation control; low-thrust propulsion for formation flying; relative navigation using GNSS and optical navigation; applications: sparse-aperture imaging, remote sensing, on-orbit servicing, rendezvous, and docking. Prerequisite: AA 242A, ENGR 105, AA 279A, and familiarity with MatLab.

**AA 271A. Dynamics and Control of Spacecraft and Aircraft. 3 Units.**

The dynamic behavior of aircraft and spacecraft, and the design of automatic control systems for them. For aircraft: non-linear and linearized longitudinal and lateral dynamics; linearized aerodynamics; natural modes of motion; autopilot design to enhance stability, control the flight path, and perform automatic landings. For spacecraft in orbit: natural longitudinal and lateral dynamic behavior and the design of attitude control systems. Prerequisites: AA242A, ENGR 105.

**AA 271B. Advanced Dynamics and Control of Spacecraft. 3 Units.**

Attitude representation and parametrization; unperturbed and perturbed attitude dynamics and stability; attitude sensors and actuators; linear and nonlinear attitude control; optimal attitude maneuvers; dynamics of flexible spacecraft and space tethers; invited lectures from industry. Prerequisites: AA 242A, ENGR 105, AA 279A, and familiarity with MatLab.

**AA 272C. Global Positioning Systems. 3 Units.**

The principles of satellite navigation using GPS. Positioning techniques using code tracking, single and dual frequency, carrier aiding, and use of differential GPS for improved accuracy and integrity. Use of differential carrier techniques for attitude determination and precision position determination. Prerequisite: familiarity with matrix algebra and MatLab (or another mathematical programming language).

**AA 272D. Integrated Navigation Systems. 3 Units.**

Navigation satellites (GPS, GLONASS), GPS receivers, principles of inertial navigation for ships, aircraft, and spacecraft. Kalman Filters to integrate GPS and inertial sensors. Radio navigation aids (VOR, DME, LORAN, ILS). Doppler navigation systems. Prerequisites: 272C; ENGR 15, 105. Recommended: ENGR 205.

**AA 277. Multi-robot Control, Communication, and Sensing. 3 Units.**

Survey of current research topics in multi-robot systems including multi-agent consensus, formation control, coverage control and sensor deployment, collision avoidance, cooperative mapping, and distributed Bayesian filtering. Students will develop skills in evaluating and critiquing research papers, and will conduct a final research project.

**AA 279A. Space Mechanics. 3 Units.**

Orbits of near-earth satellites and interplanetary probes; relative motion in orbit; transfer and rendezvous; orbit determination; influence of earth's oblateness; sun and moon effects on earth satellites; decay of satellite orbits; invited lectures from industry. Prerequisite: ENGR 15 and familiarity with MatLab.

**AA 279B. Advanced Space Mechanics. 3 Units.**

Restricted 3-body problem. Relative motion, Hill's and Clohessy-Wiltshire equations. Lambert's problem. Satellite constellations and optimization. Communications and link budgets. Space debris. High fidelity simulation. Interplanetary mission planning, launch windows and gravity assists. Basic trajectory optimization. Several guest lectures from practitioners in the field. Individual final project chosen in consultation with instructor. Prerequisites: 279A or equivalent with permission of instructor. Fluency with MATLAB (or another mathematical programming language with 2D and 3D plotting capabilities).

**AA 280. Smart Structures. 3 Units.**

Mechanics of smart materials and current approaches for engineering smart structures to monitor health, self heal, and adapt to environment. Definition of smart structures; constitutive models for smart materials; piezoelectric ceramics; electro-active polymers; shape memory alloys; bio-inspired materials and structures; self-healing materials; sensors and sensor networks; structural health monitoring; and energy harvesting. Prerequisite: AA 240A or consent of instructor.

**AA 283. Aircraft and Rocket Propulsion. 3 Units.**

Introduction to the design and performance of airbreathing and rocket engines. Topics: the physical parameters used to characterize propulsion system performance; gas dynamics of nozzles and inlets; cycle analysis of ramjets, turbojets, turbofans, and turboprops; component matching and the compressor map; introduction to liquid and solid propellant rockets; multistage rockets; hybrid rockets; thermodynamics of reacting gases. Prerequisites: undergraduate background in fluid mechanics and thermodynamics.

**AA 284A. Advanced Rocket Propulsion. 3 Units.**

The principles of rocket propulsion system design and analysis. Fundamental aspects of the physics and chemistry of rocket propulsion. Focus is on the design and analysis of chemical propulsion systems including liquids, solids, and hybrids. Nonchemical propulsion concepts such as electric and nuclear rockets. Launch vehicle design and optimization issues including trajectory calculations. Limited enrollment. Prerequisites: 283 or consent of instructor.

**AA 284B. Propulsion System Design Laboratory. 3 Units.**

Propulsion systems engineering through the design and operation of a sounding rocket. Students work in small teams through a full project cycle including requirements definition, performance analysis, system design, fabrication, ground and flight testing, and evaluation. Prerequisite: 284A and consent of instructor.

**AA 284C. Propulsion System Design Laboratory. 3 Units.**

Continuation of 284A,B. Prerequisite: 284B, and consent of instructor.

**AA 290. Problems in Aero/Astro. 1-5 Unit.**

(Undergraduates register for 190 or 199.) Experimental or theoretical investigation. Students may work in any field of special interest. Register for section belonging to your research supervisor. May be repeated for credit.

**AA 291. Practical Training. 1-3 Unit.**

Educational opportunities in high-technology research and development labs in aerospace and related industries. Internship integrated into a student's academic program. Research report outlining work activity, problems investigated, key results, and any follow-on projects. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own employment and should see department student services manager before enrolling. May be repeated for credit.

**AA 294. Case Studies in Aircraft Design. 1 Unit.**

Presentations by researchers and industry professionals. Registration for credit optional. May be repeated for credit.

**AA 295. Aerospace Structures and Materials. 1 Unit.**

Presentations by researchers and industry professionals in aerospace structures and materials. May be repeated for credit.

**AA 297. Seminar in Guidance, Navigation, and Control. 1 Unit.**

For graduate students with an interest in automatic control applications in flight mechanics, guidance, navigation, and mechanical design of control systems; others invited. Problems in all branches of vehicle control, guidance, and instrumentation presented by researchers on and off campus. Registration for credit optional. May be repeated for credit.

**AA 300. Engineer Thesis. 1-15 Unit.**

Thesis for degree of Engineer. Students register for section belonging to their thesis adviser.

**AA 301. Ph.D. Dissertation. 1-15 Unit.**

Prerequisite: completion of Ph.D qualifying exams. Students register for section belonging to their thesis adviser. (Staff).

**AA 801. TGR Engineer Thesis. 0 Units.**

Engineer's thesis or non-doctoral work for a TGR student.

**AA 802. TGR Ph.D. Dissertation. 0 Units.**

Doctoral dissertation for a TGR student in PhD program.

**African & African American Studies Courses****AFRICAAM 8. Conjure and Manifest: Building a Sustainable Artistic Practice. 3 Units.**

In this course, student-artists spend time investigating their artistic practice as a framework for promoting power, wellness, and creativity; and as a tangible means for navigating the first steps of their artistic careers. We spend time critically examining the philosophies and works of Black artists including James Baldwin, Octavia Butler, RZA (Wu-Tang Clan) and Nayyirah Waheed, in order to explore new visions for the artist as activist, as futurist and as spiritual healer. We then use a mixture of these ideas and our own, along with meditation and mindfulness experiences, to begin conjuring and manifesting intimate relationships with our art practice and ourselves. Student-artists will develop creative confidence, formulate game plans for success, and begin to find balance between the uncertainty and ultimate freedom that life as an artist can bring.

Same as: CSRE 8

**AFRICAAM 16N. African Americans and Social Movements. 3 Units.**

Theory and research on African Americans' roles in post-Civil Rights, US social movements. Topics include women's right, LGBT rights, environmental movement, and contemporary political conservatism. Same as: CSRE 16N, SOC 16N

**AFRICAAM 18A. Jazz History: Ragtime to Bebop, 1900-1940. 3 Units.**

From the beginning of jazz to the war years.

Same as: MUSIC 18A

**AFRICAAM 18B. Jazz History: Bebop to Present, 1940-Present. 3 Units.**

Modern jazz styles from Bebop to the current scene. Emphasis is on the significant artists of each style.

Same as: MUSIC 18B

**AFRICAAM 19. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.**

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.)

Same as: AMSTUD 147J, CSRE 147J, MUSIC 147J, MUSIC 247J

**AFRICAAM 20A. Jazz Theory. 3 Units.**

Introduces the language and sounds of jazz through listening, analysis, and compositional exercises. Students apply the fundamentals of music theory to the study of jazz. Prerequisite: 19 or consent of instructor.

Same as: MUSIC 20A

**AFRICAAM 21. African American Vernacular English. 3-5 Units.**

The English vernacular spoken by African Americans in big city settings, and its relation to Creole English dialects spoken on the S. Carolina Sea Islands (Gullah), in the Caribbean, and in W. Africa. The history of expressive uses of African American English (in soundin' and rappin'), and its educational implications. Service Learning Course (certified by Haas Center).

Same as: LINGUIST 65

**AFRICAAM 24. Introduction to Dance in the African Diaspora. 4 Units.**

This course introduces students to dance as an important cultural force in the African Diaspora. From capoeira in Brazil to dance hall in Jamaica to hip hop in the United States and Ghana, we will analyze dance as a form of resistance to slavery, colonialism, and oppression; as an integral component of community formation; and as a practice that shapes racial, gendered, and national identity. We will explore these topics through readings, film viewings, and movement workshops (no previous dance experience required). Students will have the option to do a creative performance as part of their final project.

Same as: CSRE 24D, DANCE 24, TAPS 152D

**AFRICAAM 28. Health and Medical Impact of Sexual Assault across the Lifecourse. 1-3 Unit.**

Cross-listed with SOMGEN 237 and FEMGEN 237. HumBio students must enroll in HumBio 28 or AFRICAAM 28. An overview of the acute and chronic physical and psychological health impact of sexual abuse through the perspective of survivors of childhood, adolescent, young and middle adult, and elder abuse, including special populations such as pregnant women, military and veterans, prison inmates, individuals with mental or physical impairments. Also addresses: race/ethnicity, gender identity, sexual orientation, and other demographic and societal factors, including issues specific to college culture. Professionals with expertise in sexual assault present behavioral and prevention efforts such as bystander intervention training, medical screening, counseling and other interventions to manage the emotional trauma of abuse. Undergraduates must enroll for 3 units. Medical and graduate students should enroll in SOMGEN 237 for 1-2 units. To receive a letter grade in any listing, students must enroll for 3 units.

Same as: HUMBIO 28

**AFRICAAM 30. The Egyptians. 3-5 Units.**

Overview of ancient Egyptian pasts, from predynastic times to Greco-Roman rule, roughly 3000 BCE to 30 BCE. Attention to archaeological sites and artifacts; workings of society; and cultural productions, both artistic and literary. Participation in class is required.

Same as: CLASSICS 82, HISTORY 48, HISTORY 148

**AFRICAAM 31. RealTalk: Intimate Discussions about the African Diaspora. 1 Unit.**

Students to engage in an intellectual discussion about the African Diaspora with leading faculty at Stanford across departments including Education, Linguistics, Sociology, History, Political Science, English, and Theater & Performance Studies. Several lunches with guest speakers. This course will meet in the Program for African & African American Studies Office in Building 360 Room 362B (Main Quad). This course is limited to Freshman and Sophomore enrollment.

**AFRICAAM 32. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.**

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations.

Same as: AMSTUD 32, CSRE 32A, EDUC 32, EDUC 432, TAPS 32

**AFRICAAM 36. REPRESENT! Covering Race, Culture, and Identity In The Arts through Writing, Media, and Transmedia.. 5 Units.**

Probably since the first audience formed for the first chalk scrawls in a cave, there have been storytellers to narrate that caveperson's art and life, and critics to troll that caveperson's choice and usage of color. And so it goes. This course is an exploration into how to cover race, culture, and identity in the arts in journalism, such as print, web, video, radio, and podcasting. It is also an arts journalism practicum. During the quarter, we will be working toward creating work that is publishable in various venues and outlets. In this course, we will be discussing exemplary arts writers and their works and interrogating critical questions around race, identity, representation, and ethics. Experienced journalists, editors, and experts from different platforms and backgrounds will also be imparting important skills and training that will help you to navigate today's working media and transmedia environments. Those who enroll in the class will be expected to produce quality content (e.g. articles, blog posts, video reports, podcasts) for media outlets. Some travel outside of class may be required for additional reporting and training. This seminar class will be By Instructor Approval Only. Please submit an application by February 22 at 11:59pm. Starred items are required. The app is available at: <http://bit.ly/RepresentClass36> Those selected for this class will be informed by March 2nd so that they may enroll in the course. Please do not apply for the course if you are unsure about completing it. If you have any questions, you may email the instructor at: [jeffc410@stanford.edu](mailto:jeffc410@stanford.edu).

Same as: CSRE 36

**AFRICAAM 37. Chocolate Heads Movement Band Performance Workshop. 2 Units.**

Students from diverse dance styles (ballet to hip-hop to contemporary) participate in the dance-making/remix process and collaborate with musicians, visual artists, designers and spoken word artists, to co-create multidisciplinary fully produced production and installation. Open to student artists of different genres, styles, disciplines and levels. By audition and/or discussion with the instructor.

Same as: DANCE 30

**AFRICAAM 40. Liquid Flow: Introduction to Contemporary Dance and Dance-making. 1 Unit.**

This introductory dance course combines the fundamentals of contemporary dance technique and exercises from various movement practices, such as yoga and Tai chi. Liquid Flow implies the continuum from the dance of the everyday to the studio to the stage. Students will develop articulation, flexibility and "grace", learn contemporary, popular and classic dance vocabulary, and gain freedom dancing with others. Designed for beginners, we welcome student movers from diverse dance traditions, non-dancers, athletes, and more advanced dancers, who desire fluidity in their daily life, from thought to action.

Same as: DANCE 43

**AFRICAAM 40SI. Possessive Investment in Whiteness. 1-2 Unit.**

An approachable but nuanced way of developing a notion of the construction and maintenance of whiteness in the United States. By focusing on George Lipsitz's book, the class works to challenge and refine the ideas of white privilege and race in the history and contemporary United States. By focusing on the single text, with some outside supplementary material, the course does not contend that Lipsitz is providing the only truth, but the class looks to complicate his notions and expand them with personal and outside understandings. May be repeated for credit.

**AFRICAAM 41. Genes and Identity. 3 Units.**

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and anthropological works (ethnographies). We will explore several case studies where the use of DNA markers (as proof of heritage, disease risk, or legal standing) has spawned cultural movements that are biosocial in nature. Throughout we will look at how new social movements are organized around gene-based definitions of personhood, health, and legal truth. Several examples include political analyses of citizenship and belonging. On this count we will discuss issues of African ancestry testing as evidence in slavery reparations cases, revisit debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, and hear arguments on whether people with genetic links to Jewish groups should have a right of return to Israel. We will also examine the ways genetic knowledge may shape different health politics at the individual and societal level. On this count we will do close readings of how personal genomics testing companies operate, we will investigate how health disparities funding as well as orphan disease research take on new valences when re-framed in genetic terms, and we will see how new articulations of global health priorities are emerging through genetic research in places like Africa. Finally we will explore social implications of forensic uses of DNA. Here we will examine civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects, and inquire into the use of DNA to generate digital mugshots of suspects that re-introduce genetic concepts of race. Same as: ANTHRO 41, CSRE 41A

**AFRICAAM 43. Introduction to English III: Introduction to African American Literature. 5 Units.**

(Formerly English 43/143). In his bold study, *What Was African American Literature?*, Kenneth Warren defines African American literature as a late nineteenth- to mid-twentieth-century response to the nation's Jim Crow segregated order. But in the aftermath of the Jim Crow era and the Civil Rights movement, can critics still speak, coherently, of "African American literature"? And how does this political conception of African American literary production compare with accounts grounded in black language and culture? Taking up Warren's intervention, this course will explore African American literature from its earliest manifestations in the spirituals and slave narratives to texts composed at the height of desegregation and decolonization struggles at mid-century and beyond. Same as: AMSTUD 12A, ENGLISH 12A

**AFRICAAM 45. Dance Improvisation Techniques and Strategies Lab: From Hip Hop to Contact. 2 Units.**

By learning various dance improvisation forms across cultures, students will develop techniques to gain a deep understanding of generating movement from the inside-out, inspired by conceptual strategies from master improvisors while harnessing that potential for creating dances. Guest dancer/choreographer workshops and Dance Jams enhance the learning experience. All Levels welcome. Same as: DANCE 45

**AFRICAAM 47. History of South Africa. 3 Units.**

(Same as HISTORY 147. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis. Same as: HISTORY 47

**AFRICAAM 48Q. South Africa: Contested Transitions. 4 Units.**

Preference to sophomores. The inauguration of Nelson Mandela as president in May 1994 marked the end of an era and a way of life for South Africa. The changes have been dramatic, yet the legacies of racism and inequality persist. Focus: overlapping and sharply contested transitions. Who advocates and opposes change? Why? What are their historical and social roots and strategies? How do people reconstruct their society? Historical and current sources, including films, novels, and the Internet.

Same as: HISTORY 48Q

**AFRICAAM 50B. 19th Century America. 3 Units.**

(Same as HISTORY 150B. History majors and others taking 5 units, register in 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture.

Same as: HISTORY 50B

**AFRICAAM 52. Introduction to Improvisation in Dance: From Salsa to Vodun to Tap Dance. 3-4 Units.**

This seminar introduces students to Dance Studies by exploring the topic of improvisation, a central concept in multiple genres of dance and music. We will survey a range of improvised dance forms; from salsa to vodun to tap dance; through readings, video viewings, discussion, and movement exercises (no previous dance experience required). When studying each genre, we will examine how race, gender, sexuality, citizenship, and other power structures affect the practices and theorizations of improvisation. Topics include community and identity formation; questions of technique versus "natural" ability; improvisation as a spiritual practice; and the role of history in improvisers' quest for spontaneity. Course material will focus on improvised dance, but we will also read pertinent literature in jazz music, theatre, and the law.

Same as: CSRE 152, DANCE 152, TAPS 152

**AFRICAAM 52N. Mixed-Race Politics and Culture. 3 Units.**

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? In this course, we approach issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st century U.S. We will examine issues surrounding the role of multiculturalism, immigration, acculturation, racial representation and racial prejudice in American society. Topics we will explore include the political and social formation of "race"; racial representation in the media, arts, and popular culture; the rise and decline of the "one-drop rule"; and its effect on political and cultural attachments; the politicization of Census categories and the rise of the Multiracial Movement.

Same as: ENGLISH 52N, POLISCI 29N

**AFRICAAM 54N. African American Women's Lives. 3-4 Units.**

Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality.

Same as: AMSTUD 54N, CSRE 54N, FEMGEN 54N, HISTORY 54N

**AFRICAAM 54Q. African American Women's Lives. 3-4 Units.**

Preference to sophomores. African American women have been placed on the periphery of many historical documents. This course will encourage students to think critically about historical sources and to use creative and rigorous historical methods to recover African American women's experiences. Drawing largely on primary sources such as letters, personal journals, literature and film, this course explores the everyday lives of African American women in 19th- and 20th-century America. We will begin in our present moment with a discussion of Michelle Obama and then we will look back on the lives and times of a wide range of African American women including: Charlotte Forten Grimké, a 19th-century reformer and teacher; Nella Larsen, a Harlem Renaissance novelist; Josephine Baker, the expatriate entertainer and singer; and Ida B. Wells and Ella Baker, two luminaries of civil rights activism. We will examine the struggles of African American women to define their own lives and improve the social, economic, political and cultural conditions of black communities. Topics will include women's enslavement and freedom, kinship and family relations, institution and community building, violence, labor and leisure, changing gender roles, consumer and beauty culture, social activism, and the politics of sexuality.

Same as: AMSTUD 54Q, FEMGEN 54Q, HISTORY 54Q

**AFRICAAM 64C. From Freedom to Freedom Now!: African American History, 1865-1965. 3 Units.**

(Same as HISTORY 164C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music.

**AFRICAAM 75E. Black Cinema. 2 Units.**

How filmmakers represent historical and cultural issues in Black cinema.

**AFRICAAM 87. Egyptomania! The Allure of Ancient Egypt Over the Past 3,500 Years. 5 Units.**

Why does Egypt fascinate us? From Napoleon's invasion to Katy Perry's latest music video, we have interpreted ancient Egyptian history and mythology for centuries; in fact, this obsession dates back to the Egyptians themselves. This seminar explores Egyptomania from the Pharaonic period to the 20th century. Topics include: ancient Egypt, Greek historians, medieval Arabic scholars, hieroglyphic decipherment, 19th century travel, 20th century pop culture, and how historians have interpreted this past over the centuries.

Same as: CLASSICS 87, HISTORY 244

**AFRICAAM 100. Grassroots Community Organizing: Building Power for Collective Liberation. 4-5 Units.**

This course explores the theory, practice and history of grassroots community organizing as a method for developing community power to promoting social justice. We will develop skills for 1-on-1 relational meetings, media messaging, fundraising strategies, power structure analysis, and strategies organizing across racial/ethnic difference. And we will contextualize these through the theories and practices developed in the racial, gender, queer, environmental, immigrant, housing and economic justice movements to better understand how organizing has been used to engage communities in the process of social change. Through this class, students will gain the hard skills and analytical tools needed to successfully organize campaigns and movements that work to address complex systems of power, privilege, and oppression. As a Community-Engaged Learning course, students will work directly with community organizations on campaigns to address community needs, deepen their knowledge of theory and history through hands-on practice, and develop a critical analysis of inequality at the structural and interpersonal levels. Placements with community organizations are limited. Enrollment will be determined on the first day through a simple application process. Students will have the option to continue the course for a second quarter in the Winter, where they will execute a campaign either on campus or in collaboration with their community partner.

Same as: CSRE 100, FEMGEN 100X, URBANST 108

**AFRICAAM 101F. Race & Technology. 1-2 Unit.**

The program in African & African American Studies will be offering a weekly lecture series to expose and introduce underrepresented groups to the world of technology by creating a space where the idea of starting can lead to a "Start Up". The AAAS "Race & Technology" course endeavors to de-code the language of technology creation, how to build a team, problem solving, pitching an idea, leveraging the work of all disciplines in creating an entrepreneurship mindset. nnnScholars and industry people will cover topics such as the digital divide, women in technology, and social media.

Same as: AFRICAAM 201F

**AFRICAAM 102. Introduction to Public History and Public Service. 4-5 Units.**

Gateway course for the History and Public Service interdisciplinary track. Topics include the production, presentation, and practice of public history through narratives, exhibits, web sites, and events in museums, historical sites, parks, and public service settings in nonprofit organizations, government agencies, and educational institutions. Service Learning Course (certified by Haas Center).

Same as: CSRE 201, HISTORY 201, HISTORY 301

**AFRICAAM 103. Dance, Text, Gesture: Performance and Composition. 1 Unit.**

Students practice, compose and combine the languages of dance, gestural movement, music and text, to render complete expression in performance. Suitable for dancers, actors, spoken word artists and triple threat performers to devise original performance, dance and theater, culminating in an end of quarter showing.

Same as: DANCE 103

**AFRICAAM 105. Introduction to African and African American Studies. 5 Units.**

Interdisciplinary. Central themes in African American culture and history related to race as a definitive American phenomenon. African survivals and interpretations of slavery in the New World, contrasting interpretations of the Black family, African American literature, and art. Possible readings: Frederick Douglass, Harriet Jacobs, Booker T. Washington, W.E.B. DuBois, Richard Wright, Maya Angelou, James Baldwin, Malcolm X, Alice Walker, and Bell Hooks. Focus may vary each year.

**AFRICAAM 106. Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices. 3-5 Units.**

Focus is on classrooms with students from diverse racial, ethnic and linguistic backgrounds. Studies, writing, and media representation of urban and diverse school settings; implications for transforming teaching and learning. Issues related to developing teachers with attitudes, dispositions, and skills necessary to teach diverse students.

Same as: CSRE 103B, EDUC 103B, EDUC 337

**AFRICAAM 107C. The Black Mediterranean: Greece, Rome and Antiquity. 4-5 Units.**

Explore problems of race and ethnicity as viable criteria in studying ancient societies and consider the question, What is the Mediterranean?, in relation to premodern evidence. Investigate the role of blackness as a marker of ethnicity; the demography of slavery and its roles in forming social identities; and environmental determinism as a factor in ethnic and racial thinking. Consider Greek and Roman perspectives and behavior, and their impact on later theories of race and ethnicity as well as the Mediterranean as a whole.

Same as: CSRE 107

**AFRICAAM 111. AIDS, Literacy, and Land: Foreign Aid and Development in Africa. 5 Units.**

Is foreign aid a solution? or a problem? Should there be more aid, less aid, or none at all? How do foreign aid and local initiatives intersect? A clinic in Uganda that addresses AIDS as a family and community problem. Multiple strategies in Tanzania to increase girls' schooling. These are imaginative and innovative approaches to pressing and contested policy challenges. We will examine several contentious issues in contemporary Africa, exploring their roots and the intense conflicts they engender, with special attention to foreign aid and the aid relationship. As African communities and countries work to shape their future, what are the foreign roles and what are their consequences?.

Same as: AFRICAST 112, AFRICAST 212

**AFRICAAM 112. Urban Education. 3-4 Units.**

(Graduate students register for EDUC 212X or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.

Same as: CSRE 112X, EDUC 112, EDUC 212, SOC 129X, SOC 229X

**AFRICAAM 115. South African Encounters. 1 Unit.**

This course is a prerequisite for all those accepted to or on the wait list for the following quarter's BOSP Cape Town term abroad. It will explore issues in contemporary South Africa.

Same as: AFRICAST 115

**AFRICAAM 116. Education, Race, and Inequality in African American History, 1880-1990. 3-5 Units.**

Seminar. The relationship among race, power, inequality, and education from the 1880s to the 1990s. How schools have constructed race, the politics of school desegregation, and ties between education and the late 20th-century urban crisis.

Same as: CSRE 216X, EDUC 216, HISTORY 255E

**AFRICAAM 121X. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.**

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture.

Same as: AMSTUD 121X, ANTHRO 121A, CSRE 121X, EDUC 121, LINGUIST 155

**AFRICAAM 122E. Art in the Streets: Identity in Murals, Site-specific works, and Interventions in Public Spaces. 4 Units.**

This class will introduce students to both historical and contemporary public art practices and the expression of race and identity through murals, graffiti, site-specific works and performative interventions in public spaces. Involving lectures, guest speakers, field trips, and hands-on art practice, students will be expected to produce both an individual and group piece as a final project.

Same as: CSRE 122E

**AFRICAAM 123. Great Works of the African American Tradition. 5 Units.**

Foundational African and African American scholarly figures and their work from the 19th century to the present. Historical, political, and scholarly context. Dialogues distinctive to African American culture. May be repeated for credit.

**AFRICAAM 125V. The Voting Rights Act. 5 Units.**

Focus is on whether and how racial and ethnic minorities including African Americans, Asian Americans, and Latinos are able to organize and press their demands on the political system. Topics include the political behavior of minority citizens, the strength and effect of these groups at the polls, the theory and practice of group formation among minorities, the responsiveness of elected officials, and the constitutional obstacles and issues that shape these phenomena.

Same as: CSRE 125V, POLISCI 125V

**AFRICAAM 126B. Curricular Public Policies for the Recognition of Afro-Brazilians and Indigenous Population. 3-4 Units.**

Recently two laws in Brazil (10639/2003 and 13465/2008), which came about due to intense pressure from Black and Indigenous social movements throughout the 20th century, have introduced changes in public education curriculum policies. These new curriculum policies mandate that the study of Afro-Brazilian, African, and Indigenous histories and cultures must be taught at all educational levels including at the elementary, secondary, and post-secondary levels. As part of this mandate, educators are now directed to incorporate considerations of ethnic-racial diversity in relation to people's thinking and experiences. These policies aim to fight racism as well as other forms of discrimination, and moreover, encourage the building of more equitable pedagogies. This course will discuss past and current policies and practices in Brazilian education from the point of view of different social projects organized by Indigenous Peoples, Afro-Brazilians, Asian-Brazilians, as well as Euro-Brazilians. It will also focus on Latin American efforts to promote equity in education, as well as to articulate different points of view, and reinforce and build epistemologies that support the decolonization of thinking, behaviors, research and policies. As part of this process, the course will study the experiences of people demanding these new public policies in terms of the extent to which they were able to influence institutional structures and to establish particular policy reforms. The course will also analyze theoretical frameworks employed by opponents of these movements to resist policies that might challenge their privileged place in society. In doing this, the course will offer theoretical and methodological avenues to promote research that can counter hegemonic curricular policies and pedagogical practices. The course will be fully participatory and oriented towards generating ongoing conversations and discussion about the various issues that arose in Brazil in relation to these two recent laws. To meet these goals, we will do a close reading of relevant scholarly works, paying particular attention to their theoretical frameworks, research designs, and findings.

Same as: CSRE 126B, EDUC 136B, EDUC 236B, PUBLPOL 126B

**AFRICAAM 127A. Can't Stop Won't Stop: A History Of The Hip-Hop Arts. 4 Units.**

This course explores the history and development of the hip-hop arts movement, from its precursor movements in music, dance, visual arts, literature, and folk and street cultures to its rise as a neighborhood subculture in the Bronx in the early 1970s through its local, regional and global expansion and development. Hip-hop aesthetics, structures, and politics will be explored within the context of the movement's rise as a post-multicultural form in an era of neoliberal globalization.

Same as: CSRE 127A

**AFRICAAM 130. Community-based Research As Tool for Social Change: Discourses of Equity in Communities & Classrooms. 3-5 Units.**

Issues and strategies for studying oral and written discourse as a means for understanding classrooms, students, and teachers, and teaching and learning in educational contexts. The forms and functions of oral and written language in the classroom, emphasizing teacher-student and peer interaction, and student-produced texts. Individual projects utilize discourse analytic techniques.

Same as: CSRE 130, EDUC 123, EDUC 322

**AFRICAAM 131. Genes and Identity. 5 Units.**

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and ethnographies. We will explore several case studies where the use of DNA markers (either as proof of heritage or disease risk) has spawned cultural movements that are biosocial in nature. Examples include legal and political analyses of African ancestry testing as evidence in slavery reparations cases, debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, considerations on whether people with genetic links to Jewish groups should have a right of return to Israel, close readings of The U.S. Food and Drug Administration's crackdown on personal genomics testing companies (such as 23andMe), examinations of genetic identity politics in health disparities funding and orphan disease research, inquiries into new social movements organized around gene-based definitions of personhood, and civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects. Students will engage in a short observational pilot ethnographic project that allows them to further explore issues from the course for their final paper.

Same as: ANTHRO 131, CSRE 131

**AFRICAAM 132. Social Class, Race, Ethnicity, and Health. 4 Units.**

Examines health disparities in the U.S., looking at the patterns of those disparities and their root causes. Explores the intersection of lower social class and ethnic minority status in affecting health status and access to health care. Compares social and biological conceptualizations of race and ethnicity.

Same as: HUMBIO 122S

**AFRICAAM 133. Literature and Society in Africa and the Caribbean. 4 Units.**

This course aims to equip students with an understanding of the cultural, political and literary aspects at play in the literatures of Francophone Africa and the Caribbean. Our primary readings will be Francophone novels and poetry, though we will also read some theoretical texts, as well as excerpts of Francophone theater. The assigned readings will expose students to literature from diverse French-speaking regions of the African/Caribbean world. This course will also serve as a "literary toolbox," with the intention of facilitating an understanding of literary forms, terms and practices. Students can expect to work on their production of written and spoken French (in addition to reading comprehension) both in and outside of class. Required readings include: Aimé Césaire, "Cahier d'un retour au pays natal," Albert Memmi, "La Statue de Sel," Kaouther Adimi, "L'envers des autres," Maryse Condé, "La Vie sans fards". Movies include "Goodbye Morocco", "Aya de Yopougon", "Rome plûtôt sue Vous". Taught in French. Prerequisite: FRENLANG 124 or consent of instructor.

Same as: FRENCH 133, JEWISHST 143

**AFRICAAM 145A. Poetics and Politics of Caribbean Women's Literature. 5 Units.**

Mid 20th-century to the present. How historical, economic, and political conditions in Haiti, Cuba, Jamaica, Antigua, and Guadeloupe affected women. How Francophone, Anglophone, and Hispanophone women novelists, poets, and short story writers respond to similar issues and pose related questions. Caribbean literary identity within a multicultural and diasporic context; the place of the oral in the written feminine text; family and sexuality; translation of European master texts; history, memory, and myth; and responses to slave history, colonialism, neocolonialism, and globalization.

**AFRICAAM 145B. Africa in the 20th Century. 5 Units.**

(Same as HISTORY 45B. History majors and others taking 5 units, register for 145B.) The challenges facing Africans from when the continent fell under colonial rule until independence. Case studies of colonialism and its impact on African men and women drawn from West, Central, and Southern Africa. Novels, plays, polemics, and autobiographies written by Africans.

Same as: HISTORY 145B

**AFRICAAM 146A. African Politics. 4-5 Units.**

Africa has lagged the rest of the developing world in terms of economic development, the establishment of social order, and the consolidation of democracy. This course seeks to identify the historical and political sources accounting for this lag, and to provide extensive case study and statistical material to understand what sustains it, and how it might be overcome.

Same as: POLISCI 146A

**AFRICAAM 147. History of South Africa. 5 Units.**

(Same as HISTORY 47. History majors and others taking 5 units, register for 147.) Introduction, focusing particularly on the modern era. Topics include: precolonial African societies; European colonization; the impact of the mineral revolution; the evolution of African and Afrikaner nationalism; the rise and fall of the apartheid state; the politics of post-apartheid transformation; and the AIDS crisis.

Same as: HISTORY 147

**AFRICAAM 148. Africa in Atlantic Writing. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condé, Olinto), prose poetry (Césaire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Ouologuem) and autobiography (Barack Obama).

Same as: AFRICAST 145B, COMPLIT 145B, COMPLIT 345B, CSRE 145B, FRENCH 145B, FRENCH 345B

**AFRICAAM 150B. 19th-Century America. 5 Units.**

(Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture.

Same as: AMSTUD 150B, HISTORY 150B

**AFRICAAM 152G. Harlem Renaissance and Modernism. 5 Units.**

Examination of the explosion of African American artistic expression during 1920s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of "vicious Modernism", as a "BangClash", that impacted and was impacted by political, cultural and aesthetic changes not only in the U.S. but Europe, the Caribbean and Latin America. Focus on the literature, graphic arts, and the music of the era in this global context.

Same as: AMSTUD 152G, ENGLISH 152G

**AFRICAAM 154. Black Feminist Theory. 5 Units.**

This course will examine black feminist theoretical traditions, marking black women's analytic interventions into sexual and pleasure politics, reproduction, citizenship, power, violence, agency, art, representation, and questions of the body. Exploring concepts like intersectionality, matrices of violence, the politics of respectability, womanism, and other contours of a black feminist liberation politic, we will look to black feminist scholars, activists, and artists from the 19th century to today.

Same as: FEMGEN 154

**AFRICAAM 156. Performing History: Race, Politics, and Staging the Plays of August Wilson. 4 Units.**

This course purposefully and explicitly mixes theory and practice. Students will read and discuss the plays of August Wilson, the most celebrated and most produced contemporary American playwright, that comprise his 20th Century History Cycle. Class stages scenes from each of these plays, culminating in a final showcase of longer scenes from his work as a final project.

Same as: TAPS 156, TAPS 356

**AFRICAAM 157P. Solidarity and Racial Justice. 4-5 Units.**

Many activists in the racial justice, immigrant, indigenous, feminist, and LGBTQ movements, are committed to principles of leadership by frontline communities - their goal is to build power in communities that are disempowered by dominant institutions and practices. This makes for complicated relationships with those that are not part of those frontline communities but recognize that their own silence makes them complicit in systems of oppression. In this course, we will examine how power and privilege can undermine attempts to collaborate in social justice work, and then explore principles and practices of solidarity and allyship that attempt to overcome these challenges. We will discuss texts on white privilege and anti-racism as our primary point of reference, but will connect to other kinds of ally work and movements for collective liberation. As a community-engaged learning course, students will work with community partners to establish long-term relationships based in solidarity. Students are encouraged to work with movements and organizations with whom they already have relationships (e.g., through student-activism). Throughout the quarter, we will have guest lectures and workshops with community partners and movement strategy organizations.

Same as: AMSTUD 157P, CSRE 157P, FEMGEN 157P

**AFRICAAM 158. Black Queer Theory. 5 Units.**

This course takes a multifaceted approach to black queer theory, not only taking up black theories of gender and queer sexuality, but queer theoretical interrogations of blackness and race. The course will also examine some of the important ways that black queer theory reads and is intersected with issues like affect, epistemology, space and geography, power and subjectivity, religion, economy, the body, and the law, asking questions like: How have scholars critiqued the very language of queer and the ways it works as a signifier of white marginality? What are the different spaces we can find queer black relationality, eroticism, and kinship? How do we negotiate issues like trans\*misogyny or tensions around gender and sexuality in the context of race? Throughout the course, students will become versed in foundational and emerging black queer theory as we engage scholars like Sharon Holland, Cathy Cohen, Hortense Spillers, Marlon B. Ross, Aliyyah Abdur-Rahman, Barbara Smith, Roderick Ferguson, Robert Reid-Pharr, E. Patrick Johnson, and many others. Students will also gain practice applying black queer theory as an interpretive lens for contemporary social issues and cultural production including film, music, art, and performance.

Same as: FEMGEN 158

**AFRICAAM 159. James Baldwin & Twentieth Century Literature. 5 Units.**

Black, gay and gifted, Baldwin was hailed as a spokesperson for the race, although he personally, and controversially, eschewed titles and classifications of all kinds. This course examines his classic novels and essays as well his exciting work across many lesser-examined domains: poetry, music, theatre, sermon, photo-text, children's literature, public media, comedy and artistic collaboration. Placing his work in context with other writers of the 20C (Faulkner, Wright, Morrison) and capitalizing on a resurgence of interest in the writer (NYC just dedicated a year of celebration of Baldwin and there are 2 new journals dedicated to study of Baldwin), the course seeks to capture the power and influence of Baldwin's work during the Civil Rights era as well as his relevance in the post-race transnational 21st century, when his prescient questioning of the boundaries of race, sex, love, leadership and country assume new urgency.

Same as: ENGLISH 159, FEMGEN 159

**AFRICAAM 165. Race, Athletics and College Achievement. 3 Units.**

How do social identities affect how people experience academic interactions? How can learning environments be better structured to support the success of all students? In this class, we will explore how a variety of identities such as race, gender, social class, and athletic participation can affect academic achievement, with the goal of identifying concrete strategies to make learning environments at Stanford and similar universities more inclusive. Readings will draw from psychology, sociology, education, and popular press. This class is a seminar format.

Same as: CSRE 165, VPTL 165

**AFRICAAM 166. Introduction to African American History - the Modern Freedom Struggle. 3-5 Units.**

Using the unique documentary resources and publications of Stanford's Martin Luther King Jr. Research and Education Institute, this course will utilize multi-media materials to shed light on the relationship between grassroots activism and King's visionary leadership.

Same as: AMSTUD 166, HISTORY 66, HISTORY 166

**AFRICAAM 176B. Documentary Fictions. 4 Units.**

More and more of our best fiction, plays, and comics are being created out of documentary practices such as in-depth interviewing, oral histories, and reporting. Novels like Dave Egger's *What is the What* and plays like Anna Deavere Smith's *Let Me Down Easy* act as both witnesses and translators of people's direct experience and push art into social activism in new ways. This course takes a close look at a diverse range of these contemporary works and explores how to adopt their research and aesthetic strategies for work of your own. We start with a brief look back at the recent origins of this trend and look at excerpts from forerunners such as Richard Wright, Truman Capote, and Bertolt Brecht. We then turn to the rise of documentary fictions in the last few decades and read works by Eggers, Adam Johnson, G.B. Tran, Maria Hummel, and Daniel Alarcon and watch performances by the Tectonic Theater Project and Elevator Repair Service. Students write one analytic essay and then conduct or study interviews to design a work of their own. The course will feature class visits by a number of our authors and a special half-day workshop with Smith.

Same as: TAPS 176B

**AFRICAAM 181Q. Alternative Viewpoints: Black Independent Film. 4 Units.**

Preference to sophomores. Do you want to learn more about independent film as it was practiced in major urban centers by young filmmakers? This class focuses on major movements by groups such as the Sankofa Film Collective and the L.A. Rebellion. Learn how to analyze film and to discuss the politics of production as you watch films by Spike Lee, Julie Dash, Melvin Van Peebles, Ngozi Onwurah and more. We will discuss representation, lighting, press material, and of course the films themselves. This course includes a workshop on production, trips to local film festivals and time to critique films frame-by-frame. It matters who makes film and how they do so. When you have completed this class you will be able to think critically about "alternative viewpoints" to Hollywood cinema. You will understand how independent films are made and you will be inspired to seek out and perhaps produce or promote new visions.

Same as: FILMSTUD 181Q, TAPS 181Q

**AFRICAAM 188. Who We Be: Art, Images & Race in Post-Civil Rights America. 2-4 Units.**

Over the past half-century, the U.S. has seen profound demographic and cultural change. But racial progress still seems distant. After the faith of the civil rights movement, the fervor of multiculturalism, and even the brief euphoria of a "post-racial" moment, we remain a nation divided. Resegregation is the norm. The culture wars flare as hot as ever. This course takes a close examination of visual culture, particularly images, works, and ideas in the contemporary arts, justice movements, and popular culture to discuss North American demographic and cultural change and cultural politics over the past half-century. From the Watts uprising to the #BlackLivesMatter movement, from multiculturalism through hip-hop to "post-identity" art, we will deeply explore the questions: How do Americans see race now? Do we see each other any more clearly than before?

**AFRICAAM 189. Black Life and Death in the Neoliberal Era. 5 Units.**

Professor Robin Kelley will teach this course. Of course, this is a history/genealogy of how we got to this place - precarity, mass incarceration, privatization and (re)dispossession of black lives, and the movements that erupted "all since the early 1970s. It is as much an intellectual history as it is a political and cultural one since I will circle back to the roots of "neoliberal thinking" in 18th and 19th century liberalism, colonialism, imperialism, social Darwinism in the so-called "Gilded Age." Will also touch on the rise of social democracy and its recasting of "liberal" as the welfare state, the ascendance of military Keynesianism, and Hayek's and Milton Friedman's Cold War resuscitation and revision of 19th century liberalism. Much of our reading and discussion will examine the global economic crisis of the 1970s, and the subsequent restructuring of the political economy, the state, and culture (not limited to the U.S. but looking at the "Third World" or Global South) issues of debt, austerity and structural adjustment policies, environmental destruction, and military intervention. But the main focus is on how neoliberalism assaulted most black lives while enriching a handful of others; how is spawned a level of state violence that sometimes feels unprecedented and against which many movements emerged.

**AFRICAAM 190. Directed Reading. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**AFRICAAM 192. Sexual Violence in America. 4-5 Units.**

This undergraduate/graduate colloquium explores the history of sexual violence in America, with particular attention to the intersections of gender and race in the construction of rape. We discuss the changing definitions of sexual violence in law and in cultural representations from early settlement through the late-twentieth century, including slavery, wartime and prison rape, the history of lynching and anti-lynching movements, and feminist responses to sexual violence. In addition to introducing students to the literature on sexual violence, the course attempts to teach critical skills in the analysis of secondary and primary historical texts. Students write short weekly reading responses and a final paper; no final exam; fifth unit research or CEL options. Limited enrollment, permission of instructor required. Submit application form (available on Coursework) by Dec. 1, 2015 and indicate interest in CEL option. Priority admission to History, FGSS, CSRE, AFRICAAM, and AMSTUD declared majors and minors.

**AFRICAAM 194. Topics in Writing & Rhetoric: "We Gon Be Alright": Contemporary Black Rhetorics. 4 Units.**

Does not fulfill NSC requirement. What does the difference between Kendrick Lamar's "We Gon Be Alright" and older movement anthems like "Let Nobody Turn Us Around" tell us about differences in perspective held by contemporary Black activists and those of other eras? What strategies are people engaged in various kinds of work to "assert their collective humanity" and "gain acceptance for ideas relative to Black survival and Black liberation" using in the pursuit of those goals? What debates are taking place inside Black communities about activism? About community itself? What is it about twitter, vines and memes that have made those spaces such rich spaces for Black expressive cultures? What stylistic or aesthetic features mark those communicative efforts? Finally, what do young people themselves have to say about activism in this moment? This course will examine Black rhetoric from overtly persuasive political and activist discourse to Scandal watch parties and everyday conversation. Prerequisite: first level of the writing requirement or equivalent transfer credit. For topics, see <https://undergrad.stanford.edu/programs/pwr/courses/advanced-pwr-courses>. Same as: PWR 194AJ

**AFRICAAM 195. Independent Study. 5 Units.****AFRICAAM 199. Honors Project. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**AFRICAAM 200X. Honors Thesis and Senior Thesis Seminar. 5 Units.**

Required for seniors. Weekly colloquia with AAAS Director and Associate Director to assist with refinement of research topic, advisor support, literature review, research, and thesis writing. Readings include foundational and cutting-edge scholarship in the interdisciplinary fields of African and African American studies and comparative race studies. Readings assist students situate their individual research interests and project within the larger. Students may also enroll in AFRICAAM 200Y in Winter and AFRICAAM 200Z in Spring for additional research units (up to 10 units total).

**AFRICAAM 200Y. Honors Thesis and Senior Thesis Research. 3-5 Units.**

Winter. Required for students writing an Honors Thesis. Optional for Students writing a Senior Thesis.

**AFRICAAM 200Z. Honors Thesis and Senior Thesis Research. 3-5 Units.**

Spring. Required for students writing an Honors Thesis. Optional for Students writing a Senior Thesis.

**AFRICAAM 201F. Race & Technology. 1-2 Unit.**

The program in African & African American Studies will be offering a weekly lecture series to expose and introduce underrepresented groups to the world of technology by creating a space where the idea of starting can lead to a "Start Up". The AAAS "Race & Technology" course endeavors to de-code the language of technology creation, how to build a team, problem solving, pitching an idea, leveraging the work of all disciplines in creating an entrepreneurship mindset. nnnScholars and industry people will cover topics such as the digital divide, women in technology, and social media. Same as: AFRICAAM 101F

**AFRICAAM 223. Literature and Human Experimentation. 3-5 Units.**

This course introduces students to the ways literature has been used to think through the ethics of human subjects research and experimental medicine. We will focus primarily on readings that imaginatively revisit experiments conducted on vulnerable populations: namely groups placed at risk by their classification according to perceived human and cultural differences. We will begin with Mary Shelley's *Frankenstein* (1818), and continue our study via later works of fiction, drama and literary journalism, including Toni Morrison's *Beloved*, David Feldshuh's *Miss Evers Boys*, Hannah Arendt's *Eichmann and Vivien Spitz's Doctors from Hell*, Rebecca Skloot's *Immortal Life of Henrietta Lacks*, and Kazuo Ishiguro's *Never Let Me Go*. Each literary reading will be paired with medical, philosophical and policy writings of the period; and our ultimate goal will be to understand modes of ethics deliberation that are possible via creative uses of the imagination, and literature's place in a history of ethical thinking about humane research and care.

**AFRICAAM 226. Mixed-Race Politics and Culture. 5 Units.**

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? This course approaches issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st-century U.S. Issues surrounding the role of multiculturalism, immigration, acculturation, racial representation, and racial prejudice in American society. Topics include the political and social formation of race; racial representation in the media, arts, and popular culture; the rise and decline of the "one-drop rule" and its effect on political and cultural attachments; the politicization of census categories and the rise of the multiracial movement.

Same as: AMSTUD 152K, CSRE 152K

**AFRICAAM 229. Literature and Global Health. 3-5 Units.**

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with a call made by the editor-in-chief of *The Lancet* for a literature of global health, namely fiction modeled on the social reform novels of the nineteenth century, understood to have helped readers develop a conscience for public health as the field emerged as a modern medical specialty. We will then spend the quarter understanding how colonial, postcolonial, and world literatures have answered and complicated this call. Readings will include prose fiction by Albert Camus, Joseph Conrad, Tsitsi Dangaremba, Amitav Ghosh, Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese, Paul Farmer. And each literary reading will be paired with medical, philosophical, and policy writings that deeply inform the field of global health.

Same as: AFRICAST 229, COMPLIT 229, CSRE 129B, FRENCH 229, HUMBIO 175L, MED 234

**AFRICAAM 233A. Counseling Theories and Interventions from a Multicultural Perspective. 3-5 Units.**

In an era of globalization characterized by widespread migration and cultural contacts, professionals face a unique challenge: How does one practice successfully when working with clients/students from so many different backgrounds? This course focuses upon the need to examine, conceptualize, and work with individuals according to the multiple ways in which they identify themselves. It will systematically examine multicultural counseling concepts, issues, and research. Literature on counselor and client characteristics such as social status or race/ethnicity and their effects on the counseling process and outcome will be reviewed. Issues in consultation with culturally and linguistically diverse parents and students and work with migrant children and their families are but a few of the topics covered in this course.

Same as: CSRE 233A, EDUC 233A

**AFRICAAM 245. Understanding Racial and Ethnic Identity Development. 3-5 Units.**

African American, Native American, Mexican American, and Asian American racial and ethnic identity development; the influence of social, political and psychological forces in shaping the experience of people of color in the U.S. The importance of race in relationship to social identity variables including gender, class, and occupational, generational, and regional identifications. Bi- and multiracial identity status, and types of white racial consciousness.

Same as: CSRE 245, EDUC 245

**AFRICAAM 254D. Law, Slavery, and Race. 5 Units.**

(Same as LAW 747.) This course will explore the interaction of law, slavery and race in the United States, as well as from a comparative perspective. We will read original documents, including excerpts of trial transcripts, appellate opinions, treatises, codes, and first-person narratives. We will study the way law, politics and culture interacted to shape the institution of slavery and the development of modern conceptions of race. Course lectures and discussions will focus on questions such as: Did different legal regimes (Spanish, French, British) foster different systems of race and slavery in the Americas? How did/ does law work "on the ground" to shape the production of racial hierarchy and creation of racial identities? In what ways did slavery influence the U.S. Constitution? How has race shaped citizenship in the U.S., and how can we compare it to other constitutional regimes? The course will begin with the origins of New World slavery, race and racism, and move chronologically to the present day.

Same as: CSRE 154D, HISTORY 254D, HISTORY 354

**AFRICAAM 255. Racial Identity in the American Imagination. 4-5 Units.**

From Sally Hemings to Barack Obama, this course explores the ways that racial identity has been experienced, represented and contested throughout American history. Engaging historical, legal and literary texts and films, this course examines major historical transformations that have shaped our understanding of racial identity. This course also draws on other imaginative modes including autobiography, memoir, photography and music to consider the ways that racial identity has been represented in American society. Most broadly, this course interrogates the problem of American identity and examines the interplay between racial identity and American identity. This course moves along both chronological and thematic axes to investigate the problems of racial mixture, mixed-race identity, racial passing and racial performance across historical periods. Themes of ambiguous, hidden and hybrid identity will be critical to this course. This course will also explore the interplay of the problems of class, gender and sexuality in the construction of racial identity.

**AFRICAAM 261E. Mixed Race Literature in the U.S. and South Africa. 5 Units.**

As scholar Werner Sollors recently suggested, novels, poems, stories about interracial contacts and mixed race constitute an orphan literature belonging to no clear ethnic or national tradition. Yet the theme of mixed race is at the center of many national self-definitions, even in our U.S. post-Civil Rights and South Africa's post-Apartheid era. This course examines aesthetic engagements with mixed race politics in these trans- and post-national dialogues, beginning in the 1700s and focusing on the 20th and 21st centuries.

Same as: AMSTUD 261E

**AFRICAAM 262D. African American Poetics. 5 Units.**

Examination of African American poetic expressive forms from the 1700s to the 2000s, considering the central role of the genre—from sonnets to spoken word, from blues poetry to new media performance—in defining an evolving literary tradition and cultural identity.

Same as: AMSTUD 262D

**AFRICAAM 267E. Martin Luther King, Jr. - His Life, Ideas, and Legacy. 4-5 Units.**

Using the unique documentary resources and publications of Stanford's King Research and Education Institute, this course will provide a general introduction to King's life, visionary ideas, and historical significance. In addition to lectures and discussions, the course will include presentations of documentaries such as *Eyes on the Prize*.

Students will be expected to read the required texts, participate in class discussions, and submit a research paper or an audio-visual project developed in consultation with the professor.

Same as: AMSTUD 267E, HISTORY 267E

**AFRICAAM 290. Human Rights in a Global Frame: Race, Place, Redress, Resistance. 3-5 Units.**

A presentation of human rights discourse around issues of how we "occupy" space. Centering on racialized spaces and the effects on a wide range rights in US and in other countries. Readings on human rights, history, critique. Deep readings in cultural texts and practices that name injustice and seek redress in a number of forms.

Same as: COMPLIT 290, CSRE 290

**African & Middle Eastern Languages Courses****AMELANG 15T. Intermediate to Advanced Turkish Conversation. 2 Units.**

Students develop communicative skills while discussing real-life issues, current events and cultural topics. The goal is to use culturally appropriate forms in formal and informal conversations, expressing emotions, feelings, and ideas in social and academic contexts. Pronunciation, vocabulary building, presentational language and daily readings are stressed. Students lead class discussions and prepare short presentations. Prerequisite: consent of instructor.

**AMELANG 51A. Reading Biblical Hebrew, First Quarter. 2 Units.****AMELANG 70A. Accelerated First-Year Swahili, Part 1. 5 Units.**

First quarter of the two-quarter accelerated sequence. For students with little or no prior experience studying Swahili. Students acquire beginning proficiency in Swahili at an accelerated pace through intensive listening, speaking, reading, and writing, with special insight into Swahili-speaking cultures. Emphasis is on authentic materials and active use of the language in real-world contexts in order to develop functional abilities. Completion of AMELANG 70B fulfills the University foreign language requirement.

**AMELANG 70B. Accelerated first-year Swahili part 2. 5 Units.**

Continuation of AMELANG 70A. Completes the first-year sequence in two rather than three quarters. Students develop first-year proficiency in Swahili at an accelerated pace through active language use and participation in Swahili-speaking practices. Emphasis is on development of speaking, listening, reading, and writing through authentic materials and appropriate cultural contexts. Fulfills the University foreign language requirement. Prerequisite: AMELANG 70A or consent of instructor.

**AMELANG 71A. Accelerated Second-Year Swahili, Part 1. 4 Units.**

Accelerated Second-Year Swahili, Part 1. Accelerated Swahili second year is the third part of the accelerated sequence. It is designed for students who have prior experience studying Swahili. Completion of accelerated first year Swahili, or equivalent is a prerequisite. Students acquire proficiency in Swahili at an accelerated pace through intensive listening, speaking, reading, and writing, with special insight into Swahili-speaking cultures. Emphasis is on authentic materials and active use of the language in real-world contexts in order to develop functional abilities.

**AMELANG 71B. Accelerated Second-Year Swahili, Part 2. 4 Units.**

It is designed for students who have prior experience in studying Swahili. Completion of second year accelerated part two Swahili, or equivalent is a prerequisite. Students acquire proficiency in Swahili at an accelerated pace through intensive listening, speaking, reading, and writing, with special insight into Swahili-speaking cultures. Emphasis is on authentic materials and active use of the language in real-world contexts in order to develop functional abilities.

**AMELANG 84A. Accelerate First-Year Turkish, Part 1. 5 Units.**

First part of the accelerated first-year sequence. AMELANG 84A and 84B complete the first year in two quarters rather than three quarters. Fulfills the University Language requirement. Goal is to engage in interactions with Turkish speakers using socially and culturally appropriate forms. Emphasis is on the accelerated development of language proficiency, listening comprehension, reading and writing skills through conversational practice and in-class/online writing activities. Discussion of culture and social life is integrated into daily language learning activities through authentic materials.

**AMELANG 84B. Accelerated First-Year Turkish, part 2. 5 Units.**

Second part of the accelerated first-year sequence. AMELANG 84A and 84B complete the first year in two rather than three quarters. AMELANG 84B (Accelerated First-Year Turkish, Part 2) fulfills the University language requirement. Goal is to engage in interactions with Turkish speakers using socially and culturally appropriate forms. Emphasis is on the accelerated development of language proficiency, listening comprehension, reading and writing skills through conversational practice and in-class/online writing activities. Discussion of culture and social life is integrated into daily language learning activities through authentic materials.

**AMELANG 99. Undergraduate Directed Reading. 1-3 Unit.**

This course does not fulfill the University language requirement.

**AMELANG 100A. Beginning Amharic, First Quarter. 4 Units.****AMELANG 100B. First-Year Amharic, Second Quarter. 4 Units.**

Continuation of AMELANG 100A. Prerequisite AMELANG 100A.

**AMELANG 100C. First-Year Amharic, Third Quarter. 4 Units.**

Continuation of AMELANG 100B. Prerequisite AMELANG 100B. Fulfills the University Foreign Language Requirement.

**AMELANG 101A. Second-Year Amharic, First Quarter. 4 Units.**

Continuation of AMELANG 100C. Prerequisite: AMELANG 100C.

**AMELANG 157C. Second-Year Zulu, Third Quarter. 4 Units.**

Continuation of AMELANG 157B. Prerequisite: AMELANG 157B.

**AMELANG 170A. Biblical Hebrew, First Quarter. 2 Units.**

Establish a basic familiarity with the grammar and vocabulary of Biblical Hebrew and will begin developing a facility with the language. Students that are enrolled in this course must also enroll in Beginning Hebrew. This course requires no prior knowledge of Hebrew and will begin with learning the alphabet. By the end of the year, students will be able to translate basic biblical texts, will be familiar with common lexica and reference grammars, and will have sufficient foundational knowledge to enable them to continue expanding their knowledge either in a subsequent course or on their own.

Same as: JEWISHST 107A, RELIGST 170A

**AMELANG 170B. Biblical Hebrew, Second Quarter. 2 Units.**

Continuation of 170A.

Same as: JEWISHST 107B

**AMELANG 170C. Biblical Hebrew, Third Quarter. 2 Units.**

Continuation of 170B.

Same as: JEWISHST 107C

**AMELANG 171. The Bible in Modern Hebrew Literature. 3-4 Units.**

The role of biblical myths in shaping Israeli identity and the development of a secular Hebrew literature. Readings include modern Hebrew poems and novels which offer new meanings to the stories of Genesis, Exodus, David, and the Song of Songs and make them relevant to the context of modern and postmodern Israeli culture. Readings in Hebrew and English. Prerequisite: intermediate Hebrew.

**AMELANG 175. Co-Existence in Hebrew Literature. 4-5 Units.**

Is co-existence possible? Does pluralism require co-existence? Can texts serve as forms of co-existence? The class will focus on these and other questions related to coexistence and literature. Through reading works mostly by Jewish authors writing in Europe, Israel and the US we will explore attempts for complete equality, for a variety of hierarchical systems and for different kinds of co-dependence. Guest speaker: professor Anat Weisman, Ben Gurion University of the Negev.

Same as: COMPLIT 161, JEWISHST 146

**AMELANG 176. Introduction to Ladino: Language, Literature, and Culture. 1-4 Unit.**

Prerequisite: two quarters of Spanish.

**AMELANG 177. Middle Eastern Cities in Literature and Film. 4-5 Units.**

Sources include short stories, novels, and movies about Beirut, Tel Aviv, Jerusalem, Cairo, and Amman. Focus is on a cultural and intellectual history of each city. Issues such as the role that Middle Eastern cities play in the development of the modern Hebrew and Arabic novels, the city as a center of social and political life, and the city as a space of collective memory.

**AMELANG 180A. First-Year Kinyarwanda, First Quarter. 4 Units.****AMELANG 180B. First-Year Kinyarwanda, Second Quarter. 4 Units.**

Continuation of AMELANG 180A. Prerequisite: AMELANG 180A.

**AMELANG 182A. Intermediate Fulani, First Quarter. 3 Units.**

Fulfill the University foreign language requirement.

**AMELANG 182B. Intermediate Fulani, Second Quarter. 3 Units.**

Continuation of 182A.

**AMELANG 182C. Intermediate Fulani, Third Quarter. 3 Units.**

Continuation of 182B.

**AMELANG 184A. First-Year Turkish, First Quarter. 5 Units.**

Designed for students who have interest in learning Turkish language, culture, history, cuisine and social life. Proficiency-based orientation with emphasis on oral comprehension and speaking. The grammar is presented through communicative activities where students are exposed to authentic input.

**AMELANG 184B. First-Year Turkish, Second Quarter. 5 Units.**

Continuation of AMELANG184A. Emphasis on speaking, oral comprehension and beginning reading and writing skills. Turkish culture and social life is integrated in daily language learning process through authentic materials. Prerequisite: AMELANG 184A.

**AMELANG 184C. First-Year Turkish, Third Quarter. 5 Units.**

Continuation of AMELANG 184B. Emphasis is on speaking, oral comprehension, reading and writing skills. Reading simple texts, studying Turkish pop music, viewing short documentaries and communicative writing exercises are part of daily class activities. Prerequisite: AMELANG 184B or consent of instructor. Fulfills the University Foreign Language Requirement.

**AMELANG 185A. Second-Year Turkish, First Quarter. 4 Units.**

Continuation of AMELANG 184C. Designed for students with previous knowledge of Turkish who wish to learn in depth about Turkish culture, history, social life, literature, cuisine and artistic trends. Emphasis on developing intermediate proficiency in reading, writing, listening and speaking. Class discussions and activities aim to enable students to perform various tasks in the target language. Prerequisite: AMELANG 184C.

**AMELANG 185B. Second-Year Turkish, Second Quarter. 5 Units.**

Continuation of AMELANG 185A. Main focus is on class discussions and essay writing practices about daily life in Turkey. Prerequisite: AMELANG 185A.

**AMELANG 185C. Second-Year Turkish, Third Quarter. 5 Units.**

Continuation of AMELANG 185B. Main focus is on class discussions and essay writing practices about daily life in Turkey. End of quarter presentation in Turkish. Prerequisite: AMELANG 185B.

**AMELANG 186A. Third-Year Turkish, First Quarter. 3 Units.**

Continuation of AMELANG 185C. Prerequisite: AMELANG 185C.

**AMELANG 186B. Third-Year Turkish, Second Quarter. 3 Units.**

Continuation of AMELANG 186A. Prerequisite: AMELANG 186A.

**AMELANG 186C. Third-Year Turkish, Third Quarter. 4 Units.**

Continuation of AMELANG 186B. Prerequisite: AMELANG 186B.

**AMELANG 187A. First-Year Yoruba, First Quarter. 4 Units.**

**AMELANG 187B. First-Year Yoruba, Second Quarter. 4 Units.**  
Continuation of 187A.

**AMELANG 187C. First-Year Yoruba, Third Quarter. 4 Units.**  
Continuation of 187B.

**AMELANG 188A. Second - Year Yoruba. 4 Units.**  
The continuation of 187C.

**AMELANG 188B. Second Year Yoruba. 4 Units.**  
Continuation of 188B.

**AMELANG 203A. Beginning Hausa, First Quarter. 3 Units.**  
For grads only.

**AMELANG 203B. Beginning Hausa, Second Quarter. 3 Units.**  
For grads only.

**AMELANG 206B. Intensive Beginning Swahili, Part B. 4 Units.**

**AMELANG 206C. Intensive Beginning Swahili, Part C. 4 Units.**

**AMELANG 216A. Contemporary Language of Iran, First Quarter. 3 Units.**

**AMELANG 216B. Contemporary Language of Iran, Second Quarter. 3 Units.**

**AMELANG 216C. Contemporary Language of Iran, Third Quarter. 3 Units.**

**AMELANG 221A. Beginning Tigrinya, first quarter. 4 Units.**

The basic introductory course in Tigrinya is designed for students who have no previous knowledge of Tigrinya and who are interested in learning about the culture, literature, social life. Introductory courses in Tigrinya that will help students with all the four language skills: reading, writing, speaking and listening. In addition, cultural elements through audiovisual will be introduced throughout the course.

**AMELANG 221B. Beginning Tigrinya, second quarter. 4 Units.**  
Continuation of amelang 221A . Prerequisite 221A.

**AMELANG 221C. Beginning Tigrinya, Third Quarter. 4 Units.**  
Continuation of Amelang 211B- Prerequisite Amelang 221B- Fulfills the University Foreign Language requirement.

**AMELANG 250A. Reading Hebrew, First Quarter. 2-4 Units.**  
Introduction to Hebrew literature through short stories and poetry by notable Israeli writers. In Hebrew. Prerequisite: one year of Hebrew or equivalent.  
Same as: JEWISHST 205

**AMELANG 297. Directed Reading in African and Middle Eastern Languages. 1-5 Unit.**  
May be repeated for credit. Prerequisite: consent of instructor.

**AMELANG 395. Graduate Studies in African and Middle Eastern Languages. 1-5 Unit.**  
Prerequisite: consent of instructor.

## African Studies Courses

**AFRICAST 31. Media and Conflict in Africa. 3-5 Units.**

Introduction to the variety of roles played by local and international media in covering conflict situations across the continent in the late 20th- and early 21st-centuries. The objective is to develop a theoretical and empirical understanding of the media as active participants in conflicts, rather than neutral witnesses. How the media in the African context have become tools for propaganda and for encouraging violence, as well as their role in promoting dialogue, peace and reconciliation between communities. These questions are relevant to the context of contemporary Africa where conflicts fueled by ethnic hatred or democratic aspirations have unfolded along with the development of media and communication technologies. Key concepts such as objectivity, impartiality, hate speech, peace journalism, citizen journalism, and cosmopolitanism, to analyze the role played by the media in case studies in Burundi, Cameroon, Egypt, Ethiopia, Kenya, Nigeria, Rwanda and Uganda. A wide variety of material including: readings drawn from a fields such as media and journalism studies, political sciences, anthropology, and postcolonial theory; linguistic, visual, audio, video and multimedia material produced by news media; and films and documentaries.

Same as: AFRICAST 131

**AFRICAST 48S. History of Health, Science and Medicine in 20th Century Africa. 5 Units.**

This course will examine the impact of colonial policies and post-colonial development on patterns of sickness, wellness and health care in twentieth century sub-Saharan Africa. Some topics will include: the role of colonial science in the formulation of ideas about race, colonial epidemics, labor migration and disease, urban health, encounters between African healers and biomedicine, histories of HIV/AIDS, the impact of debt and Structural Adjustment Programs on public health, and the politics of humanitarian interventions in African health. Priority given to history majors and minors.

Same as: ANTHRO 48S, HISTORY 48S

**AFRICAST 72SI. Conflict in the Congo. 1-2 Unit.**

**AFRICAST 109. Running While Others Walk: African Perspectives on Development. 5 Units.**

Throughout the history of modern Africa, Africans have specified their desired future development, understood broadly, and identified the major obstacles in achieving it. Debates about development have intensified in the post-colonial period, especially as African countries have replaced the leaders installed at independence. Amidst the general critique of the imposition of external values and rules, Africans have differed, sometimes sharply, on priorities, process, and programs. While for some the challenge is to catch up with development elsewhere, for others it is essential to leap ahead, to set the pace, to initiate a radical social, economic, and political transformation. To ground and extend the common approaches to studying development that emphasize economics and that rely largely on external commentators, we will explore African perspectives. Our major task will be a broad overview, sampling the analyses of Africa's intellectuals in several domains. Course participants will review, compare, and analyze major contributions, developing an understanding of contemporary intellectual currents.

Same as: AFRICAST 209

**AFRICAST 111. Education for All? The Global and Local in Public Policy Making in Africa. 5 Units.**

Policy making in Africa and the intersection of policy processes and their political and economic dimensions. The failure to implement agreements by international institutions, national governments, and nongovernmental organizations to promote education. Case studies of crowded and poorly equipped schools, overburdened and underprepared teachers, and underfunded education systems.

Same as: AFRICAST 211

**AFRICAST 112. AIDS, Literacy, and Land: Foreign Aid and Development in Africa. 5 Units.**

Is foreign aid a solution? or a problem? Should there be more aid, less aid, or none at all? How do foreign aid and local initiatives intersect? A clinic in Uganda that addresses AIDS as a family and community problem. Multiple strategies in Tanzania to increase girls' schooling. These are imaginative and innovative approaches to pressing and contested policy challenges. We will examine several contentious issues in contemporary Africa, exploring their roots and the intense conflicts they engender, with special attention to foreign aid and the aid relationship. As African communities and countries work to shape their future, what are the foreign roles and what are their consequences?  
Same as: AFRICAAM 111, AFRICAST 212

**AFRICAST 115. South African Encounters. 1 Unit.**

This course is a prerequisite for all those accepted to or on the wait list for the following quarter's BOSP Cape Town term abroad. It will explore issues in contemporary South Africa.  
Same as: AFRICAAM 115

**AFRICAST 116. Islam in Africa through the Arts. 5 Units.**

This course will survey the history of Islam and Muslim societies in Africa through their arts. Covering three periods (Pre-colonial, Colonial, and Post-colonial), and four geographic regions (North, East, West, and Southern Africa), the course will explore the various forms and functions of Qur'anic recitation and calligraphy, architecture, illumination, dress, poetry, music, literature, portraiture, and the contemporary cinematic arts of Muslim societies on the continent from a variety of perspectives (spiritual, intellectual, aesthetic, social, political, etc.). Through these artistic works and traditions we will explore the general themes of philosophy/ theology/ mysticism, trade, Islam's relationship with other religions, state formation and revolution, gender and ethnic dynamics, colonial constructions of religious identity, diasporic communities, and contemporary conflicts and debates between Sufis, Salafis, and the state across the continent. Students will become familiar with the basic vocabulary and concepts of Islam, as well as various forms of African Islamic artistic traditions and those of African Muslim societies. Students will become familiar with what these artistic productions mean(t) for the communities that produce(d) them, and what they can tell us about the philosophy, beliefs, history, and socioeconomic and political circumstances in which they are/were produced. This course will feature a number of creative assignments in which students will get a chance to produce their own piece of calligraphy, design their own mosque, and write their own Sufi poem or Sufi commentary on a popular song. These creative projects will be featured in an exhibit at the end of the class.  
Same as: AFRICAST 216

**AFRICAST 127. African Art and Politics, c. 1900 - Present. 4 Units.**

This course explores the relationship between art and politics in twentieth century Africa. Artistic production and consumption is considered in the context of various major political shifts, from the experience of colonialism to the struggle against Apartheid. Each week we will look closely at different works of art and examine how artists and designers responded to such challenges as independence, modernization and globalization. We will look at painting, sculpture, religious art, public and performance art, photography and film. How western perceptions and understanding of African art have shifted, and how museums have framed African art throughout the twentieth century will remain important points of discussion throughout the course.  
Same as: ARTHIST 127A

**AFRICAST 131. Media and Conflict in Africa. 3-5 Units.**

Introduction to the variety of roles played by local and international media in covering conflict situations across the continent in the late 20th- and early 21st-centuries. The objective is to develop a theoretical and empirical understanding of the media as active participants in conflicts, rather than neutral witnesses. How the media in the African context have become tools for propaganda and for encouraging violence, as well as their role in promoting dialogue, peace and reconciliation between communities. These questions are relevant to the context of contemporary Africa where conflicts fueled by ethnic hatred or democratic aspirations have unfolded along with the development of media and communication technologies. Key concepts such as objectivity, impartiality, hate speech, peace journalism, citizen journalism, and cosmopolitanism, to analyze the role played by the media in case studies in Burundi, Cameroon, Egypt, Ethiopia, Kenya, Nigeria, Rwanda and Uganda. A wide variety of material including: readings drawn from a fields such as media and journalism studies, political sciences, anthropology, and postcolonial theory; linguistic, visual, audio, video and multimedia material produced by news media; and films and documentaries.  
Same as: AFRICAST 31

**AFRICAST 133B. Covering Islam: On What We Learn to See, Think and Hear about Islam & Muslims. 3-5 Units.**

In this course, students will think critically about how knowledge about Islam, Muslims, and Muslim Societies is produced and circulated. As a class, we will consider why and how certain kinds of ideas about Islam and Muslims become representative (i.e., authoritative discourse) while others ideas do not. This is an interdisciplinary class; course material will draw on readings from anthropology, literary criticism, history, sociology and media and cultural studies. We will also be engaging with other kinds of material, including news articles, editorials, documentaries, and films.  
Same as: ANTHRO 133B, CSRE 133B

**AFRICAST 135. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.**

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students.  
Same as: AFRICAST 235, EDUC 135, EDUC 335, HRP 235, HUMBIO 26, MED 235

**AFRICAST 138. Conflict and Reconciliation in Africa: International Intervention. 3-5 Units.**

This course will explore recent debates on the causes and structural terms of large-scale violence in Africa in the context of key contemporary models for reconciliation and transitional justice. Discussions will emphasize the broader international legal and political order each presupposes, and specifically whether their underlying reconstitution of rights and subjectivities are compatible with cultural, political or legal diversity. A historical assessment of the predominating Nuremberg paradigm of transitional justice; structured around international military intervention and criminal trials based on international criminal courts; will be contrasted with other regional models that engage with the challenges of the political reconciliation of formerly divided political communities. The necessity of understanding the specificities of both global and local historical and structural contexts will be examined with respect to various proposals for how to balance of balance concerns for both justice and peace. Readings will cover case studies from South Africa, Rwanda, DRC, northern Uganda, Sudan (including Darfur and South Sudan), Libya, Mali, and CAR.

Same as: AFRICAST 238, ANTHRO 138A, ANTHRO 238A

**AFRICAST 138B. Urban Africa. 5 Units.**

This course explores the production of urban space and the social, cultural, and political significance of cities in sub-Saharan Africa. Topics include: architecture and the built environment; urban planning and colonial public health; migration and rural-urban dynamics; youth, politics, and popular culture; violence, policing, and the privatization of public space; (in)formality in housing, transportation, and employment; class, gender, and mobility in the public sphere; urban citizenship and 'right to the city; movements; gentrification, tourism, and the commodification of poverty; and efforts to (re)theorize postcolonial African cities. Readings are drawn from anthropology, history, urban studies, and geography. Discussion will situate struggles over urban forms and the contours of everyday life within broader trends in the political economy of the region from the late colonial period to the present.

Same as: ANTHRO 138B, URBANST 139

**AFRICAST 139A. Forgotten Africa: An Introduction to the Archaeology of Africa. 5 Units.**

This course provides an introductory survey of Africa's past from prehistoric times through the 19th-century. The course will challenge Western depictions of Africa as a dark continent 'without history; by highlighting the continent's vibrant cultures, sophisticated technologies, complex political systems and participation in far-reaching commercial networks, all predating European colonization. In tandem, the course explores how these histories are mobilized in the production of negative ideas about Africa in contemporary discourse.

Same as: ANTHRO 139A, ARCHLGY 139A

**AFRICAST 141A. Science, Technology, and Medicine in Africa. 4 Units.**

Africa is often depicted as a place simply in need of science, technology, and medicine. This class will introduce students to the culture and politics of science in sub-Saharan Africa: to the diverse and rich traditions, histories, and contemporary predicaments of knowledge practices on the continent. We will consider the role of science in the colonial period, covering the expansion of European empires into Africa and the forms of technical knowledge that colonial governments encountered, especially as they relate to health and the environment. We will examine the role of science at African independence and in international development work. Finally, we will discuss the technopolitics of medical training and research, resource extraction, and the internet in contemporary Africa. This course will provide some important background for those with an applied interest in Africa as well as provide an introduction to a growing area of scholarship. Course materials include historical and ethnographic works, as well as primary sources and films emphasizing scientific practice in the context of geopolitical relations of power and inequality.

Same as: ANTHRO 141A

**AFRICAST 142. Challenging the Status Quo: Social Entrepreneurs Advancing Democracy, Development and Justice. 3-5 Units.**

This seminar is part of a broader program on Social Entrepreneurship at CDDRL in partnership with the Haas Center for Public Service. It will use practice to better inform theory. Working with three visiting social entrepreneurs from developing and developed country contexts students will use case studies of successful and failed social change strategies to explore relationships between social entrepreneurship, gender, democracy, development and justice. It interrogates current definitions of democracy and development and explores how they can become more inclusive of marginalized populations. This is a service learning class in which students will learn by working on projects that support the social entrepreneurs' efforts to promote social change. Students should register for either 3 OR 5 units only. Students enrolled in the full 5 units will have a service-learning component along with the course. Students enrolled for 3 units will not complete the service-learning component. Limited enrollment. Attendance at the first class is mandatory in order to participate in service learning.

Same as: INTNLREL 142

**AFRICAST 145B. Africa in Atlantic Writing. 3-5 Units.**

This course explores the central place Africa holds in prose writing emerging during periods of globalization across the Atlantic, including the middle passage, colonialism, black internationalism, decolonization, immigration and diasporic return. We will begin with Equiano's *Interesting Narrative* (1789), a touchstone for the Atlantic prose tradition, and study how writers crossing the Atlantic have continued to depict Africa in later centuries: to dramatize scenes of departure and arrival in stories of new citizenship, to evoke histories of racial unity and examine social fragmentation, to imagine new national communities or question their norms and borders. Our readings will be selected from English, French, Portuguese and Spanish-language traditions. And we will pay close attention to genres of prose fiction (Adichie, Condé, Olinto), prose poetry (Césaire, Neto, Walcott), theoretical reflection (Fanon, Glissant), reportage (Gide, Gourevitch), ethnography (Leiris, Ouologuem) and autobiography (Barack Obama).

Same as: AFRICAAM 148, COMPLIT 145B, COMPLIT 345B, CSRE 145B, FRENCH 145B, FRENCH 345B

**AFRICAST 151. AIDS in Africa. 3 Units.**

Medical, social, and political aspects of the HIV epidemic in sub-Saharan Africa including: biology, transmission, diagnosis, and treatment of HIV; mother-to-child transmission and breastfeeding; vaccines; community and activist responses to the HIV epidemic; economics of HIV treatment; governance and health; ethics in research and program implementation.

**AFRICAST 181. Media Representations of Africa. 5 Units.**

The course explores a range of media (including cinema, advertisement, news, literature, humanitarian communication, TV, digital media) to reflect on different epistemologies that have shaped images of Africa. Essential readings include: Valentin Yves Mudimbe, Ngugi Wa Thiongo, Achille Mbembe, Edward Said, Frantz Fanon, Paul Gilroy, Stuart Hall. Topics include among others: Otherness and race; genealogy of the idea of Africa; colonial culture and media representation; afro-pessimism; diasporic representations; pan-Africanism; Afropolitanism and Afrochic; voluntourism and the white-savior industrial complex.

**AFRICAST 190. Madagascar Prefield Seminar. 1-2 Unit.**

The purpose of this seminar is to prepare students for their overseas field experience in Madagascar. The seminar will provide an introduction to island biogeography and culture, with emphasis on Madagascar. During the seminar, students will give presentations on specific aspects of biogeography and will also lay the groundwork for the presentations they will be giving during the field seminar where access to the internet and to other scholarly resources will be quite limited. In addition, we will cover logistics, health and safety, cultural sensitivity, geography and politics, and basic language skills. We will also deal with post-field issues such as reverse culture shock, and ways in which participants can consolidate and build up their abroad experiences after they return to campus. Students will have the opportunity to participate pilot study aimed at developing a series of innovative online curriculum based upon their field experience.

**AFRICAST 195. Back from Africa Workshop. 1-2 Unit.**

For students who conducted research over the summer in Africa. Students reflect on their time in Africa, transform their observations and research into scholarship, and connect as a community. Cape Town fellows and any others who conducted summer research in Africa can use this course to finish their research.

**AFRICAST 199. Independent Study or Directed Reading. 1-5 Unit.**

May be repeated for credit.

**AFRICAST 200. The HIV/AIDS Epidemic in Tanzania: A Pre-Field Seminar. 1 Unit.**

Goal is to prepare students for an HIV/AIDS prevention, service-learning experience in Tanzania. Topics include: history of HIV/AIDS epidemic globally and in Tanzania; social and economic impact of AIDS; national and societal responses; ethical issues in crosscultural service learning; teaching for prevention; biology of HIV transmission, disease progression, and prevention; introduction to Tanzanian history and politics; HIV/AIDS and development; social, cultural, and economic context of HIV risk; and strategies for HIV prevention in Tanzania.

**AFRICAST 209. Running While Others Walk: African Perspectives on Development. 5 Units.**

Throughout the history of modern Africa, Africans have specified their desired future development, understood broadly, and identified the major obstacles in achieving it. Debates about development have intensified in the post-colonial period, especially as African countries have replaced the leaders installed at independence. Amidst the general critique of the imposition of external values and rules, Africans have differed, sometimes sharply, on priorities, process, and programs. While for some the challenge is to catch up with development elsewhere, for others it is essential to leap ahead, to set the pace, to initiate a radical social, economic, and political transformation. To ground and extend the common approaches to studying development that emphasize economics and that rely largely on external commentators, we will explore African perspectives. Our major task will be a broad overview, sampling the analyses of Africa's intellectuals in several domains. Course participants will review, compare, and analyze major contributions, developing an understanding of contemporary intellectual currents.

Same as: AFRICAST 109

**AFRICAST 211. Education for All? The Global and Local in Public Policy Making in Africa. 5 Units.**

Policy making in Africa and the intersection of policy processes and their political and economic dimensions. The failure to implement agreements by international institutions, national governments, and nongovernmental organizations to promote education. Case studies of crowded and poorly equipped schools, overburdened and underprepared teachers, and underfunded education systems.

Same as: AFRICAST 111

**AFRICAST 212. AIDS, Literacy, and Land: Foreign Aid and Development in Africa. 5 Units.**

Is foreign aid a solution? or a problem? Should there be more aid, less aid, or none at all? How do foreign aid and local initiatives intersect? A clinic in Uganda that addresses AIDS as a family and community problem.

Multiple strategies in Tanzania to increase girls' schooling. These are imaginative and innovative approaches to pressing and contested policy challenges. We will examine several contentious issues in contemporary Africa, exploring their roots and the intense conflicts they engender, with special attention to foreign aid and the aid relationship. As African communities and countries work to shape their future, what are the foreign roles and what are their consequences?

Same as: AFRICAAM 111, AFRICAST 112

**AFRICAST 216. Islam in Africa through the Arts. 5 Units.**

This course will survey the history of Islam and Muslim societies in Africa through their arts. Covering three periods (Pre-colonial, Colonial, and Post-colonial), and four geographic regions (North, East, West, and Southern Africa), the course will explore the various forms and functions of Qur'anic recitation and calligraphy, architecture, illumination, dress, poetry, music, literature, portraiture, and the contemporary cinematic arts of Muslim societies on the continent from a variety of perspectives (spiritual, intellectual, aesthetic, social, political, etc.). Through these artistic works and traditions we will explore the general themes of philosophy/ theology/ mysticism, trade, Islam's relationship with other religions, state formation and revolution, gender and ethnic dynamics, colonial constructions of religious identity, diasporic communities, and contemporary conflicts and debates between Sufis, Salafis, and the state across the continent. Students will become familiar with the basic vocabulary and concepts of Islam, as well as various forms of African Islamic artistic traditions and those of African Muslim societies. Students and will become familiar with what these artistic productions mean(t) for the communities that produce(d) them, and what they can tell us about the philosophy, beliefs, history, and socioeconomic and political circumstances in which they are/were produced. This course will feature a number of creative assignments in which students will get a chance to produce their own piece of calligraphy, design their own mosque, and write their own Sufi poem or Sufi commentary on a popular song. These creative projects will be featured in an exhibit at the end of the class.

Same as: AFRICAST 116

**AFRICAST 224. Memory and Heritage In South Africa Syllabus. 1 Unit.**

The focus of this course is to provide a forum in which students examine the role of memory and heritage in South Africa. The course will include visiting speakers, discussion and other activities. The complex relationship between memory and heritage in South Africa will provide the basis for a series of broad conversations about citizenship, national reconciliation, memorialization, justice, modernity and heritage ethics.

**AFRICAST 229. Literature and Global Health. 3-5 Units.**

This course examines the ways writers in literature and medicine have used the narrative form to explore the ethics of care in what has been called the developing world. We will begin with a call made by the editor-in-chief of *The Lancet* for a literature of global health, namely fiction modeled on the social reform novels of the nineteenth century, understood to have helped readers develop a conscience for public health as the field emerged as a modern medical specialty. We will then spend the quarter understanding how colonial, postcolonial, and world literatures have answered and complicated this call. Readings will include prose fiction by Albert Camus, Joseph Conrad, Tsitsi Dangaremba, Amitav Ghosh, Susan Sontag as well as physician memoirs featuring Frantz Fanon, Albert Schweitzer, Abraham Verghese, Paul Farmer. And each literary reading will be paired with medical, philosophical, and policy writings that deeply inform the field of global health.

Same as: AFRICAAM 229, COMPLIT 229, CSRE 129B, FRENCH 229, HUMBIO 175L, MED 234

**AFRICAST 235. Designing Research-Based Interventions to Solve Global Health Problems. 3-4 Units.**

The excitement around social innovation and entrepreneurship has spawned numerous startups focused on tackling world problems, particularly in the fields of education and health. The best social ventures are launched with careful consideration paid to research, design, and efficacy. This course offers students insights into understanding how to effectively develop, evaluate, and scale social ventures. Using TeachAIDS (an award-winning nonprofit educational technology social venture used in 78 countries) as a primary case study, students will be given an in-depth look into how the entity was founded and scaled globally. Guest speakers will include world-class experts and entrepreneurs in Philanthropy, Medicine, Communications, Education, and Technology. Open to both undergraduate and graduate students. Same as: AFRICAST 135, EDUC 135, EDUC 335, HRP 235, HUMBIO 26, MED 235

**AFRICAST 238. Conflict and Reconciliation in Africa: International Intervention. 3-5 Units.**

This course will explore recent debates on the causes and structural terms of large-scale violence in Africa in the context of key contemporary models for reconciliation and transitional justice. Discussions will emphasize the broader international legal and political order each presupposes, and specifically whether their underlying reconstitution of rights and subjectivities are compatible with cultural, political or legal diversity. A historical assessment of the predominating Nuremberg paradigm of transitional justice, structured around international military intervention and criminal trials based on international criminal courts, will be contrasted with other regional models that engage with the challenges of the political reconciliation of formerly divided political communities. The necessity of understanding the specificities of both global and local historical and structural contexts will be examined with respect to various proposals for how to balance of balance concerns for both justice and peace. Readings will cover case studies from South Africa, Rwanda, DRC, northern Uganda, Sudan (including Darfur and South Sudan), Libya, Mali, and CAR.

Same as: AFRICAST 138, ANTHRO 138A, ANTHRO 238A

**AFRICAST 239. The Politics of Development: Social Service Delivery in the Developing World. 3-5 Units.**

In this course we will examine variation in service delivery across the developing world, with an eye to identifying key factors in success or failure, and to understanding how the interests of individuals, governments, donors, and non-state actors shape the outcomes we observe in the world. The course will include a practicum component, where students will work directly with development practitioners in developing countries to problem-solve and to write case studies. Much of the course material will be drawn from sub-Saharan Africa, but we will also cover material from Latin America, South Asia, and Southeast Asia. Same as: IPS 239

**AFRICAST 299. Independent Study or Directed Reading. 1-10 Unit.****AFRICAST 300. Contemporary Issues in African Studies. 1 Unit.**

Guest scholars present analyses of major African themes and topics. Brief response papers required. May be repeated for credit.

**AFRICAST 301A. The Dynamics of Change in Africa. 4-5 Units.**

Crossdisciplinary colloquium; required for the M.A. degree in African Studies. Open to advanced undergraduates and PhD students. Addresses critical issues including patterns of economic collapse and recovery; political change and democratization; and political violence, civil war, and genocide. Focus on cross-cutting issues including the impact of colonialism; the role of religion, ethnicity, and inequality; and Africa's engagement with globalization.

Same as: HISTORY 246, HISTORY 346, POLISCI 246P, POLISCI 346P

**AFRICAST 302. Research Workshop. 1 Unit.**

Required for African Studies master's students. Student presentations.

**American Studies Courses****AMSTUD 1B. Media, Culture, and Society. 5 Units.**

The institutions and practices of mass media, including television, film, radio, and digital media, and their role in shaping culture and social life. The media's shifting relationships to politics, commerce, and identity. Same as: COMM 1B

**AMSTUD 2. Introduction to American National Government and Politics. 5 Units.**

American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. (This course has merged with Political Science 123/ PubPol 101).

Same as: POLISCI 2

**AMSTUD 10Q. Dystopian California: Imagining the Golden State in Disaster and Science Fiction Film. 3 Units.**

Dystopian California examines the ways the Golden State has been popularly imagined both historically as the Land of Promise and more recently as the land of apocalypse in science fiction and disaster films. Through this lens, we'll be exploring anxieties articulated through images of natural disaster, environmental degradation, urbanization and urban decay, invasion (both viral and alien), societal collapse, overpopulation, and nuclear holocaust, as well as the tenacity of the human spirit. We'll be discussing conceptions of survival and the ways these films both articulate societal fears and help to neutralize them. More broadly we will discuss how these films metaphorically address, through the loss of innocence, the possibility of establishing a truly Utopian California, the Golden Land of Opportunity promised to us, that had been unattainable or lost in the melee of postmodernity.

**AMSTUD 12A. Introduction to English III: Introduction to African American Literature. 5 Units.**

(Formerly English 43/143). In his bold study, *What Was African American Literature?*, Kenneth Warren defines African American literature as a late nineteenth- to mid-twentieth-century response to the nation's Jim Crow segregated order. But in the aftermath of the Jim Crow era and the Civil Rights movement, can critics still speak, coherently, of "African American literature"? And how does this political conception of African American literary production compare with accounts grounded in black language and culture? Taking up Warren's intervention, this course will explore African American literature from its earliest manifestations in the spirituals and slave narratives to texts composed at the height of desegregation and decolonization struggles at mid-century and beyond. Same as: AFRICAAM 43, ENGLISH 12A

**AMSTUD 15. Global Flows: The Globalization of Hip Hop Art, Culture, and Politics. 1-2 Unit.**

This course consists of film screenings, dialogues, and performances that examine and engage Hip Hop Cultures and artists from around the world. We will explore diverse scenes and artists, from the formation of new musical genres such as hiplife in Ghana, to the impact of the first Hip Hop concert in Morocco, to comparative investigations of race and citizenship in Japan, Cuba, Palestine, France, and the United States (including Black, Mexican and Arab-Americans).

**AMSTUD 25Q. The Origins of the Modern American City, 1865-1920. 3 Units.**

Are we living in a new Gilded Age? To answer this question, we go back to the original Gilded Age, as well as its successor, the Progressive Era. How did urban Americans around the turn of the twentieth century deal with stark inequalities of class, race, ethnicity, gender, and sexuality? And what can we learn from their struggles for our own time? Students use primary and secondary sources in digital and print formats. Possible field trip to San Francisco.

Same as: HISTORY 55Q, URBANST 25Q

**AMSTUD 32. The 5th Element: Hip Hop Knowledge, Pedagogy, and Social Justice. 1-5 Unit.**

This course-series brings together leading scholars with critically-acclaimed artists, local teachers, youth, and community organizations to consider the complex relationships between culture, knowledge, pedagogy and social justice. Participants will examine the cultural meaning of knowledge as "the 5th element" of Hip Hop Culture (in addition to MCing, DJing, graffiti, and dance) and how educators and cultural workers have leveraged this knowledge for social justice. Overall, participants will gain a strong theoretical knowledge of culturally relevant and culturally sustaining pedagogies and learn to apply this knowledge by engaging with guest artists, teachers, youth, and community youth arts organizations.

Same as: AFRICAAM 32, CSRE 32A, EDUC 32, EDUC 432, TAPS 32

**AMSTUD 50N. The Literature of Inequality: Have and Have-Nots from the Gilded Age to the Occupy Era. 3 Units.**

Not since the turn of the last century have Americans experienced such a profound gap between those who have and those who do not, between wealthy and working poor, between defacto upper and lower classes, between those of the status quo and those who slip to the social periphery. We will be examining literary and artistic explorations of social and economic inequity, fiction and art that looks at reversals of fortune as well as the possibilities for social change. Readings include Jacob Riis's *How the Other Half Lives*, W.E.B. Du Bois's *The Souls of Black Folk*, Edith Wharton's *House of Mirth*, James Agee & Walker Evans's *Let Us Not Forget Famous Men*, T.C. Boyle's *The Tortilla Curtain*, Julie Otsuka's *When the Emperor Was Divine* and Occupy Movement art.

**AMSTUD 51Q. Comparative Fictions of Ethnicity. 4 Units.**

We may "know" "who" we "are," but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of "the Self"? After all, don't we tell stories in response to the question, "who are you"? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question--Does this universal issue ("who am I") become skewed differently when we add a qualifier before it, like "ethnic"?

Same as: COMPLIT 51Q, CSRE 51Q

**AMSTUD 54N. African American Women's Lives. 3-4 Units.**

Preference to freshmen. The everyday lives of African American women in 19th- and 20th-century America in comparative context of histories of European, Hispanic, Asian, and Native American women. Primary sources including personal journals, memoirs, music, literature, and film, and historical texts. Topics include slavery and emancipation, labor and leisure, consumer culture, social activism, changing gender roles, and the politics of sexuality.

Same as: AFRICAAM 54N, CSRE 54N, FEMGEN 54N, HISTORY 54N

**AMSTUD 54Q. African American Women's Lives. 3-4 Units.**

Preference to sophomores. African American women have been placed on the periphery of many historical documents. This course will encourage students to think critically about historical sources and to use creative and rigorous historical methods to recover African American women's experiences. Drawing largely on primary sources such as letters, personal journals, literature and film, this course explores the everyday lives of African American women in 19th- and 20th-century America. We will begin in our present moment with a discussion of Michelle Obama and then we will look back on the lives and times of a wide range of African American women including: Charlotte Forten Grimké, a 19th-century reformer and teacher; Nella Larsen, a Harlem Renaissance novelist; Josephine Baker, the expatriate entertainer and singer; and Ida B. Wells and Ella Baker, two luminaries of civil rights activism. We will examine the struggles of African American women to define their own lives and improve the social, economic, political and cultural conditions of black communities. Topics will include women's enslavement and freedom, kinship and family relations, institution and community building, violence, labor and leisure, changing gender roles, consumer and beauty culture, social activism, and the politics of sexuality.

Same as: AFRICAAM 54Q, FEMGEN 54Q, HISTORY 54Q

**AMSTUD 55N. Social Movements through Song in Modern America. 3-4 Units.**

This discussion class will explore a series of social movements in modern America through the songs produced to support efforts to achieve labor unions, civil rights and racial justice, peace, and women's rights. For each class we will read short historical texts to provide contexts for the movements and then concentrate on the role of music within them. We will listen to and discuss several core songs for each topic. Biographical and autobiographical readings on a key set of musicians (including Joe Hill, Woody Guthrie, Pete Seeger, Malvina Reynolds, and Bernice Johnson Reagon) will provide personal accounts of the relationship of songs to social movement. The music we include in class will range from ballads to anthems, from oral traditions to the work of singer-songwriters.

Same as: HISTORY 55N

**AMSTUD 63N. The Feminist Critique: The History and Politics of Gender Equality. 3-4 Units.**

This course explores the emergence of concepts of gender equality in world history. It asks how gender inequality relates to racial, ethnicity, and sexual identities, how men engage with feminism, whether gender equality is purely a western cultural tradition, and much more. We approach the long history of ideas about gender and equality by reading primary historical documents from around the world, moving from the 15th century to the present. Topics include education, the body, sexuality, violence, labor, and politics.

Same as: CSRE 63N, FEMGEN 63N, HISTORY 63N

**AMSTUD 66. Ten Ways to Study Cars. 1 Unit.**

This class is a lunch seminar on the car and auto-mobility in twentieth-century America. We will talk about cars with a guest each week from one of ten disciplines; and topics will range from design and mechanics, to film and literature, the mapping of the United States, a gas dependent economy, social mobility, car collectability, and the history of the driver's license. Guests from Design and the Stanford Revs Digital Archive will also attend. Once a week TBD at Noon. Manzanita Seminar Room.

Limited Enrollment. Sophomore Priority. One Unit.

**AMSTUD 68N. Mark Twain and American Culture. 4 Units.**

Preference to freshmen. Mark Twain defined the rhythms of our prose and the contours of our moral map. He recognized our extravagant promise and stunning failures, our comic foibles and tragic flaws. He is viewed as the most American of American authors—and as one of the most universal. How does his work illuminate his society's (and our society's) responses to such issues as race, gender, technology, heredity vs. environment, religion, education, art, imperialism, animal welfare, and what it means to be American?

Same as: ENGLISH 68N

**AMSTUD 91. Exploring American Religious History. 4 Units.**

This course will trace how contemporary beliefs and practices connect to historical trends in the American religious landscape.

Same as: RELIGST 91

**AMSTUD 101. American Fiction into Film: How Hollywood Scripts and Projects Black and White Relations. 3-5 Units.**

Movies and the fiction that inspires them; power dynamics behind production including historical events, artistic vision, politics, and racial stereotypes. What images of black and white does Hollywood produce to forge a national identity? How do films promote equality between the races? What is lost or gained in film adaptations of books? Limited Enrollment, Instructor's Consent Required. Class meetings held in Manzanita Multipurpose Room.

**AMSTUD 102. Art and Social Criticism. 5 Units.**

Contemporary visual artists have long been in the forefront of social criticism in America and their key works have become anchors for discourses on racism, sexism, economic inequality, and immigrant rights. We will consider political art by artists such as ACT-UP, Judy Chicago, Fred Wilson, Guerilla Girls, Ai Weiwei and many others that raises social awareness, inspires social change and galvanizes activism. What makes their art enduring social criticism? How have they contributed to our understanding of American history?

Same as: ARTHIST 162B, CSRE 102A

**AMSTUD 103. On the Road: Cars and the Auto-Mobility of Race, Gender, Class, and Age in American Literature. 3-5 Units.**

The car in American literature, history, and culture, provides hope and makes it possible to relocate, transcend social status, and reinvent oneself. In this class we will examine how the car allows Americans to navigate identity in new ways. Readings include: Fitzgerald, Stein, Steinbeck, Escovedo-Colton, Nabokov, Barrett, Walker, Murray, Simpson, Wolfe, Kerouac, Davis, Freeman, Gilroy, Lucasi, Hamper, Moore, and Nass.

**AMSTUD 104. AMERICA AT PLAY: A HISTORY OF LEISURE IN THE UNITED STATES. 5 Units.**

This course examines recreational pursuits from the 19th century to the present. It investigates how changes in values, economics, politics, technology, and modes of social interaction affected what Americans did for fun. We will see how the 1950s' DIY craze and today's maker movement, for instance, differ due to historical context. Central course themes include the work/leisure dichotomy, consumption, community formation, gendered divisions, and amateurs' expertise. The class draws upon popular and critical sources, conversations with guests, and hands-on experience.

**AMSTUD 105N. Law and Popular Culture. 3 Units.**

This seminar focuses on the interface between two important subjects: law and popular culture. Before class, students will see a series of films or television shows relating to law, lawyers, and the legal system. There is also a weekly homework assignment based on materials in the assigned text and the assigned film or TV show. We will discuss the pop culture treatment of subjects such as the adversary system, good and bad lawyers, female and gay lawyers, the work life of lawyers, legal education, ethical issues, the jury system, and criminal and civil justice. The seminar discussions will draw on film theory and film-making technique to deepen understanding of the interrelationship between law and popular culture. The discussions will illuminate the ways in which pop culture products both reflect and change social views about law and lawyers. The assigned text is Michael Asimow & Shannon Mader, "Law and Popular Culture: A Course Book" (Peter Lang 2013).

**AMSTUD 106. SPECTACULAR TRIALS: SEX, RACE AND VIOLENCE IN MODERN AMERICAN CULTURE. 5 Units.**

This course will use the phenomenon of the spectacular trial as a framework for exploring the intersections of sex, race, and violence in the formation of modern American culture. Beginning in the late nineteenth century and continuing through the 1990s, we will focus our inquiry on a number of notorious cases, some associated with familiar names—the Scottsboro Boys, Emmett Till, O.J. Simpson—others involving once-infamous actors like Joan Little and Inez Garcia whose ordeals have receded into historical memory, considering a range of questions arising from this thematic nexus. For instance, in what ways are sexual transgressions racialized and gendered? What are the practical and theoretical ramifications of the seemingly inextricable conjunction of sex and violence in legal and popular discourse? And what insights might such spectacles afford when broached as an arena in which sexual meanings, identities, and practices are refracted and ultimately constructed? We will also examine the role of the pertinent professions in the evolution of these events, in particular how the interplay of law, medicine, psychiatry, and forensic science helped define the shifting boundaries of legality, and how print, radio, and television journalism operated not only in sensationalizing, but also in reflecting, modeling, and shaping prevailing attitudes and behaviors. Our study of this vital facet of our society of the spectacle will draw on a series of compelling secondary readings complemented by a diverse array of primary sources—from contemporaneous pamphlets and newspaper accounts to photographs, letters, trial testimony, and psychological commentary—that will enable class members to evaluate the strengths and weaknesses of different textual genres, experiment with alternative methods of fashioning historical interpretations, and contemplate the ways history might be employed to illuminate the persistent problems of racial bias, reflexive sexualization, and the packaging of trials as mass entertainment in the present day.

Same as: CSRE 66

**AMSTUD 107. Introduction to Feminist, Gender, and Sexuality Studies. 4-5 Units.**

Introduction to interdisciplinary approaches to gender, sexuality, queer, trans and feminist studies. Topics include the emergence of sexuality studies in the academy, social justice and new subjects, science and technology, art and activism, history, film and memory, the documentation and performance of difference, and relevant socio-economic and political formations such as work and the family. Students learn to think critically about race, gender, and sexuality from local and global perspectives.

Same as: CSRE 108, FEMGEN 101, TAPS 108

**AMSTUD 108. Race and the Law: Historical and Contemporary Perspectives. 5 Units.**

When Obama began his presidential tenure in 2009, many commentators declared the U.S. a truly colorblind society, a place where race (read: non-whiteness) no longer served as an impediment to individual and group aspirations, indeed had become so insignificant as to be practically invisible. In late fall 2014, in the aftermath of the police-involved killings of Eric Garner, Michael Brown, and Tamir Rice, society is confronted with a radically different social and political landscape. Yet events like these, while doubtless underscoring the fallaciousness of the equalitarian narrative, are regrettably commonplace. What, if anything, occurred during the intervening years that might explain the apparent displacement of hope by despair? With the advent of the Black Lives Matter movement, the persistence of bias and discrimination against people of color, particularly at the interface of African American males and law enforcement authorities, has attained a place of prominence on the public agenda, presenting a significant opportunity for citizen-activists, legislators, and policymakers to combine forces to effectuate meaningful change. To take advantage of this moment, it is imperative to understand the origins and development of the entrenched structural inequalities manifest in contemporary America. What role have law and legal institutions played in hindering and facilitating the promise of equality for all citizens? How far are we from realizing that vaunted democratic aspiration? This course offers participants an opportunity to systematically engage with recent events in Baltimore, Ferguson, and elsewhere in an historically informed manner that foregrounds questions of race, citizenship, and law. Against the backdrop of the achievements of the Civil Rights Movement, it considers such topics as the rise of urban ghettos and the use of segregationist practices like redlining and steering in helping to sustain them; resegregation in the late 20th-early 21st century; differential arrest and sentencing patterns; and, crucially, the extraordinary growth of the American carceral state.

**AMSTUD 109Q. On the Road: A Cultural History of Travel in 20th Century America. 4-5 Units.**

From Mark Twain's *Roughing It* to Cheryl Strayed's *Wild*, this seminar explores epic road trips of the twentieth century. Travel is a cultural practice through which Americans have constructed ideas about the self, society, race, the past, and the future. Engaging historical and literary texts, film, autobiography, photography, and music, we will consider how writers have explored the theme of travel and what the differences in their texts tell us about American writing, American history, and American life. Same as: HISTORY 69Q

**AMSTUD 111. Transnational Reproductive Politics. 3-5 Units.**

This course examines the issues and debates surrounding women's reproduction in a transnational framework, including birth control, abortion, surrogacy, prenatal diagnosis, labor and delivery, menstruation, sex trafficking, and the reproductive justice movement. It pays special attention to how knowledge and technology travel across national/cultural borders and how women's reproductive functions are deeply connected to international politics and events abroad. Same as: FEMGEN 111

**AMSTUD 111Q. Recording Race and Religion in America. 5 Units.**

This course will explore the relationship between race and religion, as manifest in America's aural cultures. From Gospel and Avant Garde jazz to Contemporary Christian Music and hip hop, we will listen in on the ways in which music has served as a powerful mode of organizing, constructing, transcending and complicating ideas about religion and race in America. Focusing on a select playlist, this course will expand our critical vocabularies and enable us to hear American culture differently.

**AMSTUD 114Q. Visions of the 1960s. 5 Units.**

Preference to sophomores. Introduction to the ideas, sensibility, and, to a lesser degree, the politics of the American 60s. Topics: the early 60s vision of a beloved community; varieties of racial, generational, and feminist dissent; the meaning of the counterculture; and current interpretive perspectives on the 60s. Film, music, and articles and books.

**AMSTUD 116. American Economic History. 5 Units.**

The American economy from colonial times to the present, illustrating the role of history in economic life. Topics: U.S. economic development in global and comparative context; slavery as an economic system; emergence of American technology and business organization; economics of the Great Depression and the New Deal; post-World War II economic performance and social change; globalization, information technology, and inequality. Prerequisite: 1 or 1A or 1V. Same as: ECON 116, HISTORY 156

**AMSTUD 117N. Losing My Religion: Secularism and Spirituality in American Lives. 3 Units.**

In this seminar you will explore theory and practice, sociological data, spiritual writing, and case studies in an effort to gain a more nuanced understanding about how religion, spirituality, and secularism attempt to make legible the constellation of concerns, commitments, and behaviors that bridge the moral and the personal, the communal and the national, the sacred, the profane, and the rational. Together we will cultivate critical perspectives on practices and politics, beliefs and belonging that we typically take for granted. Same as: EDUC 117N, RELIGST 117X

**AMSTUD 120. Digital Media in Society. 4-5 Units.**

Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Priority to juniors, seniors, and graduate students. To request a permission number, please email blazzari@stanford.edu. Include your student ID, major, and year. Same as: COMM 120W, COMM 220

**AMSTUD 121L. Racial-Ethnic Politics in US. 5 Units.**

This course examines various issues surrounding the role of race and ethnicity in the American political system. Specifically, this course will evaluate the development of racial group solidarity and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. We will also examine the politics surrounding the Multiracial Movement and the development of racial identity and political attitudes in the 21st century. Stats 60 or Econ 1 is strongly recommended. Same as: CSRE 121L, POLISCI 121L, PUBLPOL 121L

**AMSTUD 121X. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.**

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture. Same as: AFRICAAM 121X, ANTHRO 121A, CSRE 121X, EDUC 121, LINGUIST 155

**AMSTUD 121Z. Political Power in American Cities. 5 Units.**

The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances. Same as: POLISCI 121, PUBLPOL 133, URBANST 111

**AMSTUD 123D. American Literature, 1855 to World War I. 5 Units.**

A survey of American writers from Whitman to T.S. Eliot, including Emily Dickinson, Mark Twain, Stephen Crane, Frank Norris, Kate Chopin, Theodore Dreiser, and Henry James. Topics include the tension between romance and realism, the impact of naturalism and modernism, as well as race, gender, and the literary evolution of the American language.

**AMSTUD 123G. Mark Twain: A Fresh Look at an Icon and Iconoclast, 100 Years after His Death. 3-5 Units.**

The vitality and versatility of a writer who has been called America's Rabelais, Cervantes, Homer, Tolstoy, and Shakespeare. Journalism, travel books, fiction, drama, and sketches by Mark Twain; how Twain engaged such issues as personal and national identity, satire and social justice, imperialism, race and racism, gender, performance, travel, and technology. What are Twain's legacies in 2010, the centennial of his death, the 175th anniversary of his birth, and the 125th anniversary of his most celebrated novel? Guests include actor Hal Holbrook.

**AMSTUD 123X. Politics and Public Policy. 4-5 Units.**

(Formerly PS 2) American political institutions (the Presidency, Congress, and the Court) and political processes (the formation of political attitudes and voting) have for some time now been criticized as inadequate to the task of making modern public policy. Against the backdrop of American culture and political history we examine how public policy has been and is being made. We use theories from Political Science and Economics to assess the state of the American system and the policy making process. We use case studies and lectures to analyze contemporary issues including environmental policy, taxes and spending, gun control, economic growth and inequality and mobility. In some of these issue areas we use comparative data from other countries to see how the U.S. is doing relative to other countries. In addition to class room lecture and discussion, student groups are formed to analyze policy issues of relevance to them. Undergraduate Public Policy students are required to enroll in this class for five units.

Same as: POLISCI 102, POLISCI 123, PUBLPOL 101, PUBLPOL 201

**AMSTUD 124A. The American West. 5 Units.**

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.

Same as: ARTHIST 152, ENGLISH 124, HISTORY 151, POLISCI 124A

**AMSTUD 125. Perspectives on American Journalism. 4-5 Units.**

(Graduate students register for COMM 225.) An examination of the practice of American journalism, focusing on the political, social, cultural, economic and technological forces that have shaped the U. S. press since the early 1800s. Aimed at consumers as well as producers of news, the objective of this course is to provide a framework and vocabulary for judging the value and quality of everyday journalism.

Same as: COMM 125, COMM 225

**AMSTUD 125C. The Lost Generation: American literature between the World Wars. 5 Units.**

An exploration of American literature between the World Wars, with a focus on themes such as expatriation, trauma, technology, race, modernism; writers include Gertrude Stein, Sherwood Anderson, F. Scott Fitzgerald, Ernest Hemingway, Langston Hughes, Jean Toomer, William Faulkner, Richard Wright, John Steinbeck, John Dos Passos.

Same as: ENGLISH 125C

**AMSTUD 127. American Style and the Rhetoric of Fashion. 4-5 Units.**

Focus on the visual culture of fashion, especially in an American context. Topics include: the representation of fashion in different visual media (prints, photographs, films, window displays, and digital images); the relationship of fashion to its historical context and American culture; the interplay between fashion and other modes of discourse, in particular art, but also performance, music, economics; and the use of fashion as an expression of social status, identity, and other attributes of the wearer. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.

Same as: ARTHIST 165B, FILMSTUD 165B

**AMSTUD 132. American Art and Culture, 1528-1910. 4 Units.**

The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others.

Same as: ARTHIST 132, ARTHIST 332

**AMSTUD 134. Museum Cultures: Material Representation in the Past and Present. 3-5 Units.**

Students will open the "black box" of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores "museum cultures": representations of self and other within museums and institutional cultures of the museum world itself. 3 credits (no final project) or 5 credits (final project). May be repeat for credit.

Same as: ARCHLGY 134, ARCHLGY 234, ARTHIST 284B, CSRE 134, EDUC 214, NATIVEAM 134

**AMSTUD 135. Deliberative Democracy and its Critics. 3-5 Units.**

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.

Same as: COMM 135, COMM 235, COMM 335, POLISCI 234P, POLISCI 334P

**AMSTUD 136X. Indigenous Peoples and Environmental Change in the North American West. 5 Units.**

This course explores the dynamic relationships between indigenous communities and the continuously changing environmental landscapes of the North American West from before European contact to the present. In particular, it examines how specific indigenous communities of the region have navigated and adapted their relationship with the natural world amidst the challenges of colonialism, globalization, climate change, and an increasing national dependency on the natural resources of the North American West.

**AMSTUD 137. The Dialogue of Democracy. 4-5 Units.**

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized.

Same as: COMM 137W, COMM 237, POLISCI 232T, POLISCI 332T

**AMSTUD 139B. American Women Writers, 1850-1920. 5 Units.**

The ways in which female writers negotiated a series of literary, social, and intellectual movements, from abolitionism and sentimentalism in the nineteenth century to Progressivism and avant-garde modernism in the twentieth. Authors include Harriet Beecher Stowe, Harriet Jacobs, Rebecca Harding Davis, Emily Dickinson, Kate Chopin, Edith Wharton, Gertrude Stein, Willa Cather, and Charlotte Perkins Gilman.  
Same as: ENGLISH 139B, FEMGEN 139B

**AMSTUD 140. Stand Up Comedy and the "Great American Joke" Since 1945. 5 Units.**

Development of American Stand Up Comedy in the context of social and cultural eruptions after 1945, including the Borscht Belt, the Chitlin' Circuit, the Cold War, censorship battles, Civil Rights and other social movements of the 60s and beyond. The artistry of stories, monologues, jokes, impersonations, persona, social satire, scatology, obscenity, riffs, rants, shtick, and more by such artists as Lenny Bruce, Dick Gregory, Richard Pryor, George Carlin, Margaret Cho, Sarah Silverman, Jon Stewart, Stephen Colbert, as well as precursors such as Mark Twain, minstrelsy and vaudeville and related films, TV shows, poems and other manifestations of similar sensibilities and techniques.  
Same as: CSRE 140C

**AMSTUD 142. The Literature of the Americas. 5 Units.**

A wide-ranging overview of the literatures of the Americas in comparative perspective, emphasizing continuities and crises that are common to North American, Central American, and South American literatures as well as the distinctive national and cultural elements of a diverse array of primary works. Topics include the definitions of such concepts as empire and colonialism, the encounters between worldviews of European and indigenous peoples, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, twentieth-century avant-gardes, and distinctive modern episodes—the Harlem Renaissance, the Beats, magic realism, Noigandres—in unaccustomed conversation with each other.  
Same as: COMPLIT 142, CSRE 142, ENGLISH 172E

**AMSTUD 143A. American Architecture. 4 Units.**

A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today's globalized world.  
Same as: ARTHIST 143A, ARTHIST 343A, CEE 32R

**AMSTUD 143X. Starstuff: Space and the American Imagination. 5 Units.**

Course on the history of twentieth and twenty-first century American images of space and how they shape conceptions of the universe. Covers representations made by scientists and artists, as well as scientific fiction films, TV, and other forms of popular visual culture. Topics will include the importance of aesthetics to understandings of the cosmos; the influence of media and technology on representations; the social, political, and historical context of the images; and the ways representations of space influence notions of American national identity and of cosmic citizenship.  
Same as: ARTHIST 264B, FILMSTUD 264B

**AMSTUD 145M. Culture Wars: Art and Social Conflict in the USA, 1890-1950. 4 Units.**

This course examines social conflicts and political controversies in American culture through the lens of visual art and photography. We consider how visual images both reflect and participate in the social and political life of the nation and how the terms of citizenship have been represented—and, at times, contested—by artists throughout the first half of the 20th century. The class explores the relation between American art and the body politic by focusing on issues of poverty, war, censorship, consumerism, class identity, and racial division.  
Same as: ARTHIST 145, ARTHIST 345, FEMGEN 145

**AMSTUD 146. Asian American Culture and Community. 3-5 Units.**

This course introduces students to the histories of Asians in America, specifically as these histories are part of a broader Asia-US-Pacific history that characterized the 20th century and now the 21st. We will combine readings in history, literature, sociology, with community-based learning. The course takes place over two quarters. The first quarter focuses on gaining knowledge of Asian America and discussing key topics that students wish to focus on collaboratively. During this first quarter we also learn about community-based learning, set up teams and projects, and develop relationships with community organizations. The second quarter students work with student liaisons (senior students who have experience in service learning) and complete their work with the community; there are no formal class meetings this second quarter. Service Learning Course (certified by Haas Center). Course can be repeated once.  
Same as: ASNAMST 146S, COMPLIT 146, CSRE 146S

**AMSTUD 146C. Hemingway, Hurston, Faulkner, and Fitzgerald. 5 Units.**

While Hemingway and Fitzgerald were flirting with the expatriate avant-garde in Europe, Hurston and Faulkner were performing anthropological field-work in the local cultures of the American South. Focus on the tremendous diversity of concerns and styles of four writers who marked America's coming-of-age as a literary nation with their multifarious experiments in representing the regional and the global, the racial and the cosmopolitan, the macho and the feminist, the decadent and the impoverished.

**AMSTUD 147J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.**

The African American tradition of soul music from its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Style such as rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, disco, Chicago house, Detroit techno, trip hop, and neo-soul. Soul's cultural influence and global reach; its interaction with politics, gender, place, technology, and the economy. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.)  
Same as: AFRICAAM 19, CSRE 147J, MUSIC 147J, MUSIC 247J

**AMSTUD 150. Introduction to English II: American Literature and Culture to 1855. 5 Units.**

(Formerly English 23/123). A survey of early American writings, including sermons, poetry, captivity and slave narratives, essays, autobiography, and fiction, from the colonial era to the eve of the Civil War.  
Same as: ENGLISH 11B

**AMSTUD 150A. Colonial and Revolutionary America. 5 Units.**

(Same as HISTORY 50A. History majors and others taking 5 units, register for HISTORY 150A.) Survey of the origins of American society and polity in the 17th and 18th centuries. Topics: the migration of Europeans and Africans and the impact on native populations; the emergence of racial slavery and of regional, provincial, Protestant cultures; and the political origins and constitutional consequences of the American Revolution.  
Same as: HISTORY 150A

**AMSTUD 150B. 19th-Century America. 5 Units.**

(Same as HISTORY 50B. History majors and others taking 5 units, register for 150B.) Territorial expansion, social change, and economic transformation. The causes and consequences of the Civil War. Topics include: urbanization and the market revolution; slavery and the Old South; sectional conflict; successes and failures of Reconstruction; and late 19th-century society and culture.  
Same as: AFRICAAM 150B, HISTORY 150B

**AMSTUD 150C. The United States in the Twentieth Century. 5 Units.**

(Same as HISTORY 50C. History majors and others taking 5 units, register for 150C.) Major political, economic, social, and diplomatic developments in the U.S. Themes: the economic and social role of government (Progressive, New Deal, Great Society, and Reagan-Bush eras); ethnic and racial minorities in society (mass immigration at the turn of the century and since 1965, the civil rights era of the 50s and 60s); the changing status of women since WW II; shifting ideological bases, institutional structures, and electoral characteristics of the political system (New Deal and post-Vietnam); determinants of foreign policy in WW I and II, and the Cold War.

Same as: HISTORY 150C

**AMSTUD 150X. From Gold Rush to Google Bus: History of San Francisco. 5 Units.**

This class will examine the history of San Francisco from Native American and colonial settlement through the present. Focus is on social, environmental, and political history, with the theme of power in the city. Topics include Indians and Spanish settlers, the Gold Rush, immigration and nativism, earthquake and fire, progressive reform and unionism, gender, race and civil rights, sexuality and politics, redevelopment and gentrification.

Same as: HISTORY 152E, URBANST 150

**AMSTUD 151H. ID21 STRATLAB: Interdisciplinary Approaches to Improvising Identities. 4-5 Units.**

A quarter-long exploration of improvisation in relationship to identity and race in the 21st century in which students investigate new dynamics of doing and thinking identities through the arts. Panel discussions, performances, and talks that engage critically with the theme, concept, and practice of improvising identity across a variety of contexts and genres such as jazz music, modern dance, contemporary art, race comedy, food, and hip-hop poetry/freestyle. Strategies that artists/scholars have used to overturn essentializing notions of identity in theory and practice.

Same as: CSRE 151H, DANCE 151H, DANCE 251H, TAPS 151H, TAPS 351H

**AMSTUD 152A. "Mutually Assured Destruction": American Culture and the Cold War. 5 Units.**

The temperature of the early Cold War years via readings of Soviet and U.S. propaganda; documentary film and film noir; fiction by Bellow, Ellison, O'Connor, and Mailer; social theory by Arendt, the New York Intellectuals, and the Frankfurt School; and political texts such as Kennan's *Sources of Soviet Conduct*, the Truman Doctrine speech, and the National Security Council Report 68. Major themes include the discourse of totalitarianism, McCarthyism, strategies of containment, the nuclear threat, the figure of the outsider and the counterculture, and the cultural shift from sociological to psychological idioms.

**AMSTUD 152C. The JFK Era and American Literature. 5 Units.**

Few U.S. presidents have exerted so great a fascination on the national and global post-World War II imagination as John F. Kennedy. As the 2013 semi-centennial anniversary of Kennedy's assassination attests, the production of films, television and multimedia programs, biographies, conspiracy theories, academic studies, and literary texts about the iconic JFK and his fabled, thousand-day presidency continues unabated. In this course, we will explore the attention Kennedy has drawn from writers and filmmakers in texts by Norman Mailer, Don DeLillo, Mario Vargas Llosa, and others.

Same as: ENGLISH 152C

**AMSTUD 152G. Harlem Renaissance and Modernism. 5 Units.**

Examination of the explosion of African American artistic expression during 1920s and 30s New York known as the Harlem Renaissance. Amiri Baraka once referred to the Renaissance as a kind of "vicious Modernism", as a "BangClash", that impacted and was impacted by political, cultural and aesthetic changes not only in the U.S. but Europe, the Caribbean and Latin America. Focus on the literature, graphic arts, and the music of the era in this global context.

Same as: AFRICAAM 152G, ENGLISH 152G

**AMSTUD 152K. Mixed-Race Politics and Culture. 5 Units.**

Today, almost one-third of Americans identify with a racial/ethnic minority group, and more than 9 million Americans identify with multiple races. What are the implications of such diversity for American politics and culture? This course approaches issues of race from an interdisciplinary perspective, employing research in the social sciences and humanities to assess how race shapes perceptions of identity as well as political behavior in 21st-century U.S. Issues surrounding the role of multiculturalism, immigration, acculturation, racial representation, and racial prejudice in American society. Topics include the political and social formation of race; racial representation in the media, arts, and popular culture; the rise and decline of the "one-drop rule" and its effect on political and cultural attachments; the politicization of census categories and the rise of the multiracial movement.

Same as: AFRICAAM 226, CSRE 152K

**AMSTUD 154. American Intellectual and Cultural History to the Civil War. 5 Units.**

(Same as HISTORY 54. History majors and others taking 5 units, register for 154.) How Americans considered problems such as slavery, imperialism, and sectionalism. Topics include: the political legacies of revolution; biological ideas of race; the Second Great Awakening; science before Darwin; reform movements and utopianism; the rise of abolitionism and proslavery thought; phrenology and theories of human sexuality; and varieties of feminism. Sources include texts and images.

Same as: HISTORY 154

**AMSTUD 154X. The American Civil War: A Visual History. 4 Units.**

A painting of men charging across a field, a photograph of dead bodies in a ditch, a fragment of metal, a sliver of bone, and a brass button: how do we make sense of the visual record of the American Civil War (1861-65)? From the Capitol Dome to a skeleton dug up in a highway project a hundred years after the last battle, the course will consider the strange and scattered remnants of a famous era. Drawing on the poetry of Walt Whitman, Emily Dickinson, and Herman Melville, the paintings of Winslow Homer, the photographs of Alexander Gardner, and the oratory of Abraham Lincoln, the course will examine what cannot be portrayed: the trauma of war.

Same as: ARTHIST 154, ARTHIST 354

**AMSTUD 155C. Abstract Expressionism: Painting/Modern/America. 4 Units.**

The course will focus on American abstract painting from the 1930s to the 1960s, emphasizing the works of art at the Anderson Collection at Stanford. We will focus on looking closely at pictures by Jackson Pollock, Mark Rothko, Willem de Kooning, and other renowned abstract painters, developing skills of speaking and writing about these works of art. We will also place these pictures in their mid-20th century context: World War II and the Cold War; Hollywood and popular culture generally; Beat literature; and locations such as New York and San Francisco.

Same as: ARTHIST 155C

**AMSTUD 156H. Women and Medicine in US History: Women as Patients, Healers and Doctors. 5 Units.**

Women's bodies in sickness and health, and encounters with lay and professional healers from the 18th century to the present. Historical construction of thought about women's bodies and physical limitations; sexuality; birth control and abortion; childbirth; adulthood; and menopause and aging. Women as healers, including midwives, lay physicians, the medical profession, and nursing.

Same as: FEMGEN 156H, HISTORY 156G

**AMSTUD 157. The Constitution: A Brief History. 5 Units.**

A broad survey of the Constitution, from its Revolutionary origins to the contemporary disputes over interpretation. Topics include the invention of the written constitution and interpretative canons; the origins of judicial review; the Civil War and Reconstruction as constitutional crises; the era of substantive due process; the rights revolution; and the Constitution in wartime.

Same as: HISTORY 157, POLISCI 128S

**AMSTUD 157P. Solidarity and Racial Justice. 4-5 Units.**

Many activists in the racial justice, immigrant, indigenous, feminist, and LGBTQ movements, are committed to principles of leadership by frontline communities - their goal is to build power in communities that are disempowered by dominant institutions and practices. This makes for complicated relationships with those that are not part of those frontline communities but recognize that their own silence makes them complicit in systems of oppression. In this course, we will examine how power and privilege can undermine attempts to collaborate in social justice work, and then explore principles and practices of solidarity and allyship that attempt to overcome these challenges. We will discuss texts on white privilege and anti-racism as our primary point of reference, but will connect to other kinds of ally work and movements for collective liberation. As a community-engaged learning course, students will work with community partners to establish long-term relationships based in solidarity. Students are encouraged to work with movements and organizations with whom they already have relationships (e.g., through student-activism). Throughout the quarter, we will have guest lectures and workshops with community partners and movement strategy organizations.

Same as: AFRICAAM 157P, CSRE 157P, FEMGEN 157P

**AMSTUD 157X. Language as Social and Political Activism: Feminist and LGBTQ Social and Political Movements. 3-5 Units.**

How does a social or political movement gain traction? For example, how did 20th-century movements of the disenfranchised, such as the Civil Rights movement or Women's Suffrage, gain a voice and eventually enact change? In the mediascape of today, where everyone with access to a computer has voice, how does a movement like Occupy Wall Street change the national conversation? How do written and verbal choices of the movements impact their success? In this course, students will write and revise their own arguments in order to best understand the writing in these movements and to best produce future work for social change. We'll examine the role of rhetoric; the use of argument to persuade; in social movements working toward social justice.

Same as: FEMGEN 157, FEMGEN 257

**AMSTUD 159X. American Photographs, 1839-1971: A Cultural History. 4 Units.**

This course concentrates on many important American photographers, from the era of daguerreotypes to near the end of the pre-digital era. We study photographs of the Civil War, western exploration, artistic subjects, urban and rural poverty, skyscrapers, crime, fashion, national parks, and social protest, among other topics. Among the photographers we study: Carleton Watkins, Eadweard Muybridge, Walker Evans, Dorothea Lange, Garry Winogrand, and Diane Arbus. Emphasis on developing students' abilities to discuss and write about photography; to see it.

Same as: ARTHIST 159, ARTHIST 359

**AMSTUD 160. Perspectives on American Identity. 5 Units.**

Required for American Studies majors. In this seminar we trace diverse and changing interpretations of American identity by exploring autobiographical, literary, and/or visual texts from the 18th through the 20th century in conversation with sociological, political, and historical accounts.

**AMSTUD 161. Women in Modern America. 4-5 Units.**

This course explores the transition from Victorian to modern womanhood in the U.S. from the 1890s to the end of the 20th century, including the experiences of Native, European, African, Mexican, and Asian American women. It asks how, when, and why the majority of American women become wage earners, gained full citizenship, and enacted political opportunities; how race- and class-specific ideals of womanhood changed in popular culture; and how women have redefined their reproductive and sexual relations.

Same as: CSRE 162, FEMGEN 161, HISTORY 161

**AMSTUD 163. Queer America. 4 Units.**

This class explores queer art, photography and politics in the United States since 1930. Our approach will be grounded in close attention to the history and visual representation of sexual minorities in particular historical moments and social contexts. We will consider the cultural and political effects of World War II, the Cold War, the civil rights movement, psychedelics, hippie culture and sexual liberation, lesbian separatism, the AIDS crisis, and marriage equality.

Same as: ARTHIST 163, FEMGEN 163

**AMSTUD 164C. From Freedom to Freedom Now: African American History, 1865-1965. 5 Units.**

(Same as HISTORY 64C. History majors and others taking 5 units, register for 164C.) Explores the working lives, social worlds, political ideologies and cultural expressions of African Americans from emancipation to the early civil rights era. Topics include: the transition from slavery to freedom, family life, work, culture, leisure patterns, resistance, migration and social activism. Draws largely on primary sources including autobiographies, memoirs, letters, personal journals, newspaper articles, pamphlets, speeches, literature, film and music.

Same as: HISTORY 164C

**AMSTUD 165. History of Higher Education in the U.S.. 3-5 Units.**

Major periods of evolution, particularly since the mid-19th century. Premise: insights into contemporary higher education can be obtained through its antecedents, particularly regarding issues of governance, mission, access, curriculum, and the changing organization of colleges and universities.

Same as: EDUC 165, EDUC 265, HISTORY 158C

**AMSTUD 166. Introduction to African American History - the Modern Freedom Struggle. 3-5 Units.**

Using the unique documentary resources and publications of Stanford's Martin Luther King Jr. Research and Education Institute, this course will utilize multi-media materials to shed light on the relationship between grassroots activism and King's visionary leadership.

Same as: AFRICAAM 166, HISTORY 66, HISTORY 166

**AMSTUD 178. Ethnicity and Dissent in United States Art and Literature. 4 Units.**

The role of the visual arts of the U.S. in the construction and contesting of racial, class, and gender hierarchies. Focus is on artists and writers from the 18th century to 1990s. How power, domination, and resistance work historically. Topics include: minstrelsy and the invention of race; mass culture and postmodernity; hegemony and language; memory and desire; and the borderlands.

Same as: ARTHIST 178, ARTHIST 378

**AMSTUD 179. Introduction to American Law. 3-5 Units.**

For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general.

Same as: POLISCI 122, PUBLPOL 302A

**AMSTUD 183. Re- Imagining American Borders. 5 Units.**

How novelists, filmmakers, and poets perceive racial, ethnic, gender, sexual preference, and class borders in the context of a national discussion about the place of Americans in the world. How Anna Deavere Smith, Sherman Alexie, or Michael Moore consider redrawing such lines so that center and margin, or self and other, do not remain fixed and divided. How linguistic borderlines within multilingual literature by Caribbean, Arab, and Asian Americans function. Can Anzaldúa's conception of borderlands be constructed through the matrix of language, dreams, music, and cultural memories in these American narratives? Course includes examining one's own identity.

Same as: CSRE 183, FEMGEN 183

**AMSTUD 185. American Studies Internship. 1-3 Unit.**

Restricted to declared majors. Practical experience working in a field related to American Studies for six to ten weeks. Students make internship arrangements with a company or agency, under the guidance of a sponsoring faculty member, and with the consent of the director or a program coordinator of American Studies. Required paper focused on a topic related to the internship and the student's studies. May be repeated for credit.

**AMSTUD 186. Tales of Three Cities: New York, Chicago, Los Angeles. 5 Units.**

How urban form and experience shape literary texts and how literary texts participate in the creation of place, through the literature of three American cities as they ascended to cultural and iconographical prominence: New York in the early to mid 19th century; Chicago in the late 19th and early 20th centuries; and Los Angeles in the mid to late 20th century.

**AMSTUD 186A. American Hauntings. 5 Units.**

Cultural, psychological, social, and political dynamics of haunting in American literature, from the early national period to the late 20th century. Sources include ghost stories and other instances of supernatural, emotional, or mental intervention. Authors include Charles Brockden Brown, Washington Irving, Edgar Allan Poe, Nathaniel Hawthorne, Louisa May Alcott, Charlotte Perkins Gilman, Charles Chesnutt, Henry James, Edith Wharton, Toni Morrison, and Stephen King.

**AMSTUD 186B. American Song in the 20th Century and after. 3-4 Units.**

Critical and creative exploration of song in the Americas. About twenty-five key examples will guide discussion of the interactions between words, music, performance and culture. Weekly listening, reading and assignments will be organized around central themes: love, sex and romance; war and politics; labor and money; place; identity; society and everyday life. Genres include art song; blues, gospel, jazz and country; pop, soul, rock and hip-hop; bossa nova, nueva canción and salsa; electronic and experimental. Takehome and in-class assignments will include critical and creative writing, and music composition, production and performance; final projects may emphasize any of the above. Same as: MUSIC 186B, MUSIC 286B

**AMSTUD 195. Individual Work. 1-5 Unit.****AMSTUD 201. History of Education in the United States. 3-5 Units.**

How education came to its current forms and functions, from the colonial experience to the present. Focus is on the 19th-century invention of the common school system, 20th-century emergence of progressive education reform, and the developments since WW II. The role of gender and race, the development of the high school and university, and school organization, curriculum, and teaching.

Same as: EDUC 201, HISTORY 158B

**AMSTUD 214. The American 1960s: Thought, Protest, and Culture. 5 Units.**

The meaning of the American 60s emphasizing ideas, culture, protest, and the new sensibility that emerged. Topics: black protest, the new left, the counterculture, feminism, the new literature and journalism of the 60s, the role of the media in shaping dissent, and the legacy of 60s protest. Interpretive materials from film, music, articles, and books.

**AMSTUD 226. Race and Racism in American Politics. 5 Units.**

Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

Same as: CSRE 226, POLISCI 226, POLISCI 326

**AMSTUD 226X. Curating Experience: Representation in and beyond Museums. 2-4 Units.**

In an age when some 50% of museum visitors only "visit" museums online and when digital technologies have broken open archival access, anyone can be a curator, a critic, an historian, an archivist. In this context, how do museums create experiences that teach visitors about who they are and about the world around them? What are the politics of representation that shape learning in these environments? Using an experimental instructional approach, students will reconsider and redefine what it means to curate experience.

Same as: CSRE 226X, EDUC 226

**AMSTUD 231X. Knowing God: Learning Religion in Popular Culture. 4 Units.**

This course will examine how people learn religion outside of school, and in conversation with popular cultural texts and practices. Taking a broad social-constructivist approach to the variety of ways people learn, this course will explore how people assemble ideas about faith, identity, community, and practice, and how those ideas inform individual, communal and global notions of religion. Much of this work takes place in formal educational environments including missionary and parochial schools, Muslim madrasas or Jewish yeshivot. However, even more takes place outside of school, as people develop skills and strategies in conversation with broader social trends. This course takes an interdisciplinary approach to questions that lie at the intersection of religion, popular culture, and education.

Same as: EDUC 231, JEWISHST 291X, RELIGST 231X

**AMSTUD 240A. Pre-Honors Seminar. 1-5 Unit.**

Methods, interpretations, and issues pertinent to honors work in American Studies. Open to juniors interested in honors.

**AMSTUD 241K. Technology in Modern American Culture. 4-5 Units.**

This class displays the significance of technology in American culture by examining two principal technologies and their implications for politics, business, leisure, and social interaction, as well as for other technological systems. As starting points, we consider how computing systems and atomic weapons emerged at particular moments in history, including how their developments were intimately connected. This contextual approach leads us to the related study of topics within the histories of space travel, nuclear power, amateur electronics, and the Web.

Same as: HISTORY 241K, HISTORY 341K

**AMSTUD 244. The Visual Culture of the American Home Front, 1941-1945. 5 Units.**

How does home front of WWII look now? What sort of meanings appear with the vantage of more than sixty years' distance? Examining Hollywood films from those years -films made during the war but mostly not directly about the war - the seminar focuses on developing students' abilities to write emotion-based criticism and history. Weekly short papers, each one in response to a film screening, are required. Among the films screened: Shadow of a Doubt, Gaslight, I Walked with a Zombie, The Best Years of Our Lives.

Same as: ARTHIST 244

**AMSTUD 246B. Pop Art. 5 Units.**

A new course on the history and meaning of Pop art in the United States and abroad. The course will feature close study of paintings, photographs, and prints at the Cantor Art Center. The course will be given in the Denning Family Resource Room, located in The Anderson Collection building. If you have any questions regarding the location, please contact Linda Esquivel at lindae@stanford.edu.

Same as: ARTHIST 246B

**AMSTUD 250. Senior Research. 1-15 Unit.**

Research and writing of senior honors thesis under the supervision of a faculty member. The final grade for the thesis is assigned by the chair based on the evaluations of the primary thesis adviser and a second reader appointed by the program. Prerequisite: consent of chair.

**AMSTUD 255D. Racial Identity in the American Imagination. 4-5 Units.**

From Sally Hemings to Barack Obama, this course explores the ways that racial identity has been experienced, represented and contested throughout American history. Engaging historical, legal and literary texts and films, this course examines major historical transformations that have shaped our understanding of racial identity. This course also draws on other imaginative modes including autobiography, memoir, photography and music to consider the ways that racial identity has been represented in American society. Most broadly, this course interrogates the problem of American identity and examines the interplay between racial identity and American identity. This course moves along both chronological and thematic axes to investigate the problems of racial mixture, mixed-race identity, racial passing and racial performance across historical periods. Themes of ambiguous, hidden and hybrid identity will be critical to this course. This course will also explore the interplay of the problems of class, gender and sexuality in the construction of racial identity.

Same as: AFRICAAM 255, CSRE 255D, HISTORY 255D, HISTORY 355D

**AMSTUD 257. Journalism and Imaginative Writing in America. 5 Units.**

Walt Whitman spent twenty-five years as a journalist before publishing his first book of poems. Mark Twain was a journalist for twenty years before publishing his first novel. Topics include examination of how writers' backgrounds in journalism shaped the poetry or fiction for which they are best known; study of recent controversies surrounding writers who blurred the line between journalism and fiction. Writers include Whitman, Fanny Fern, Twain, Pauline Hopkins, Theodore Dreiser, Charlotte Perkins Gilman, Ernest Hemingway, Meridel LeSueur.

Same as: COMM 278

**AMSTUD 258. Sexual Violence in America. 4-5 Units.**

This undergraduate/graduate colloquium explores the history of sexual violence in America, with particular attention to the intersections of gender and race in the construction of rape. We discuss the changing definitions of sexual violence in law and in cultural representations from early settlement through the late-twentieth century, including slavery, wartime and prison rape, the history of lynching and anti-lynching movements, and feminist responses to sexual violence. In addition to introducing students to the literature on sexual violence, the course attempts to teach critical skills in the analysis of secondary and primary historical texts. Students write short weekly reading responses and a final paper; no final exam; fifth unit research or CEL options. Limited enrollment, permission of instructor required. Submit application form (available on Coursework) by Dec. 1, 2015 and indicate interest in CEL option. Priority admission to History, FGSS, CSRE, AFRICAAM, and AMSTUD declared majors and minors.

Same as: AFRICAAM 192, CSRE 192E, FEMGEN 258, FEMGEN 358, HISTORY 258, HISTORY 358

**AMSTUD 260. Women and Disabilities. 5 Units.**

Course explores visible and invisible disabilities, women's psychological as well as physical health, and disabled women's identities and diversity of experiences. Disabilities covered include blindness, multiple sclerosis, diabetes, arthritis, emotional and learning disabilities, and conditions requiring wheelchairs and other forms of assistance. We deal with issues such as who identifies as disabled, social and political dimensions, self-labeling, caretaking, stigma and passing, and the difference gender makes to how disabilities are experienced. Course uses a personal approach and readings draw from first-person accounts by women. \*Instructor Consent Required.

Same as: FEMGEN 260, FEMGEN 360

**AMSTUD 261A. Geography, Time, and Trauma in Asian American Literature. 5 Units.**

The notion that homes can be stable locations for cultural, racial, ethnic, and similarly situated identity categories. The possibility that there really is no place like home for Asian American subjects. How geography, landscape, and time situate traumas within fictional Asian American narratives.

Same as: ASNAMST 187

**AMSTUD 261E. Mixed Race Literature in the U.S. and South Africa. 5 Units.**

As scholar Werner Sollors recently suggested, novels, poems, stories about interracial contacts and mixed race constitute "an orphan literature belonging to no clear ethnic or national tradition." Yet the theme of mixed race is at the center of many national self-definitions, even in our U.S. post-Civil Rights and South Africa's post-Apartheid era. This course examines aesthetic engagements with mixed race politics in these trans- and post-national dialogues, beginning in the 1700s and focusing on the 20th and 21st centuries.

Same as: AFRICAAM 261E

**AMSTUD 262C. African American Literature and the Retreat of Jim Crow. 5 Units.**

After the unprecedented carnage of WWII, the postwar era witnessed the slow decline of the segregated Jim Crow order and the onset of landmark civil rights legislation. What role did African American literature and culture play in this historical process? What does this shift in racial theory and praxis mean for black literary production, a tradition constituted by the experience of slavery and racial oppression? Focus on these questions against the backdrop of contemporaneous developments: the onset of the Cold War, decolonization and the formation of the Third World, and the emergence of the "new liberalism." Same as: ENGLISH 262C

**AMSTUD 262D. African American Poetics. 5 Units.**

Examination of African American poetic expressive forms from the 1700s to the 2000s, considering the central role of the genre—from sonnets to spoken word, from blues poetry to new media performance—in defining an evolving literary tradition and cultural identity.

Same as: AFRICAAM 262D

**AMSTUD 265. Writing Asian American History. 5 Units.**

Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper.

Same as: ASNAMST 265, HISTORY 265, HISTORY 365

**AMSTUD 267E. Martin Luther King, Jr. - His Life, Ideas, and Legacy. 4-5 Units.**

Using the unique documentary resources and publications of Stanford's King Research and Education Institute, this course will provide a general introduction to King's life, visionary ideas, and historical significance. In addition to lectures and discussions, the course will include presentations of documentaries such as *Eyes on the Prize*. Students will be expected to read the required texts, participate in class discussions, and submit a research paper or an audio-visual project developed in consultation with the professor.

Same as: AFRICAAM 267E, HISTORY 267E

**AMSTUD 271. Mexicans in the United States. 5 Units.**

This course explores the lives and experiences of Mexicans living in the United States, from 1848 to the present. Themes and topics include: the legacies of colonialism, the Mexican-American War, transnational migration, the effects of economic stratification, race and racialization, and the impact of sexual and gender ideologies on the lives of Mexicans residing north of the border.

Same as: CHILATST 171, CSRE 171H, HISTORY 271

**AMSTUD 272E. Theories of Citizenship and Sovereignty in a Transnational Context. 4-5 Units.**

This course explores the multiple meanings of citizenship and the ways in which they change when examined using different geographic scales (from the local to the transnational). The course will pair theoretical readings on citizenship with case studies that focus on North America. Topics include: definitions of citizenship; the interrelation of ideas of citizenship with those of race, ethnicity, gender, and sexuality; the relationship between sovereignty and territoriality; human and civil rights; and immigration.

Same as: CHILATST 172, CSRE 172H, FEMGEN 272E, HISTORY 272E, HISTORY 372E

**AMSTUD 275B. History of Modern Mexico. 4-5 Units.**

Surveys the history of governance, resistance, and identity formation in Mexico from the nineteenth century to the present. Explores Mexico's historical struggles to achieve political stability, economic prosperity, and social justice and examines how regional, class, ethnic, and gender differences have figured prominently in the shaping of Mexican affairs. Topics include Mexico's wars and their legacies, the power of the state, violence and protest, debates over the meaning of "Mexicanness," youth culture, and the politics of indigenismo.

Same as: CHILATST 275B, CSRE 275B, HISTORY 275B, HISTORY 375C

**AMSTUD 275R. Roads Not Taken, 1880-1960. 4 Units.**

This course is intended to illuminate ideas about justice, freedom, equality, democracy, peace, and social conflict, and to raise persisting questions about such topics as the role of violence in politics through looking at the ideas of America writers such as Edward Bellamy, W.E.B. DuBois, Eugene Debs, Jane Addams, Emma Goldman, John Dewey and Reinhold Niebuhr.

Same as: ETHICSOC 275R, PHIL 275R, POLISCI 335L

**AMSTUD 279X. American Jewish History: Learning to be Jewish in America. 2-4 Units.**

This course will be a seminar in American Jewish History through the lens of education. It will address both the relationship between Jews and American educational systems, as well as the history of Jewish education in America. Plotting the course along these two axes will provide a productive matrix for a focused examination of the American Jewish experience. History students must take course for at least 3 units.

Same as: EDUC 279, HISTORY 288D, JEWISHST 297X, RELIGST 279X

**AMSTUD 281. Asian Religions in America; Asian American Religions. 4 Units.**

This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.

Same as: ASNAMST 281, RELIGST 281, RELIGST 381

**AMSTUD 293. Church, State, & Schools: Issues in Education & Religion. 4 Units.**

This course will examine interactions between religion and education, focusing on both formal and experiential sites in which people and communities explore, articulate, encounter, and perform religious ideologies and identities. The class will focus on different religious traditions and their encounters the institutions and structures of education in American culture, both in the United States and as it manifests in American culture transnationally.

Same as: EDUC 293, RELIGST 293X

**Anesthesia Courses****ANES 70Q. Critical Illness: Patients, Physicians, and Society. 3 Units.**

Examines the various factors involved in shaping the critical care illness experience for three groups of people: the clinicians, the patients, and patients' families. Medical issues, economic forces and cost concerns, cultural biases, and communication errors can all influence one's perception. Helps students understand the arc of critical illness, and how various factors contribute to the interactions between those various groups. Includes an immersion experience (students are expected to round with clinicians in the ICU and to attend Schwartz rounds, a debriefing meeting about difficult emotional situation) and a mentoring experience (with critical care fellows), in addition to routine class work.

**ANES 72Q. The Art of Medical Diagnosis: Enhancing Observational Skills through the Study of Art. 3 Units.**

The Art of Medical Diagnosis: Enhancing Observational Skills through the Study of Art is an interactive, multidisciplinary undergraduate course that explores various ways in which studying art increases critical observational skills vital for aspiring health care providers. Students will be introduced to the concept of 'Visual Thinking Strategies' through classroom, art creation, and museum based activities. Students will apply these skills to both works of art and medical cases. Significant focus will be on engaging in group discussions where they will collaboratively use visual evidence to generate and defend hypothesis. Drawing and sketching from life will play a critical role in honing observational skills through weekly assignments, workshops, and a final project. The interactive nature of this course pivots students away from a typical lecture based course to a self-directed learning experience.

**ANES 80Q. Researching Strange Things. 3 Units.**

Devising and implementing strong scientific research designs to better understand complex and mysterious phenomena. Parapsychology topics include remote viewing, telekinesis, precognition, telepathic communication, and other forms of extrasensory perception. History of parapsychology research, including how science has debunked popular claims of supernatural feats; therapeutic approaches still used today but often discredited (such as homeopathy and crystal healing), as well as commonly-supported but controversial techniques such as hypnosis, acupuncture, and naturopathy. Emphasis on distinguishing between scientific and pseudoscientific research methods and how to properly design experiments regardless of the subject matter. Course format includes lectures, discussion, group projects, and research experimentation.

**ANES 199. Undergraduate Research. 1-18 Unit.**

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**ANES 202. Anesthesiology and Pathophysiologic Implications for the Perioperative Patient. 1 Unit.**

Provides participants a patient-care-related review of organ physiology and an in- depth discussion of the pathophysiologic mechanisms at work in the perioperative period that influence outcome in the surgical patient and their management. Organ systems addressed include cardiovascular, respiratory, renal, hematologic, and cerebral. Subject matter including airway management, ventilatory support, transfusion practices and the acute management of shock provides useful information for all students currently or in the future involved in acute care of the critically ill patient. Additional topics specific to anesthesia, including anesthetic pharmacology. Lecturers are Stanford anesthesia faculty and visiting guest faculty. Prerequisite: completion of first year curriculum is strongly encouraged.

**ANES 204. Medical Education in the New Millennium: Innovation and Digital Disruption. 1-2 Unit.**

Focus is on the unique learning preferences and needs of today's Millennial medical learners (medical students, residents, fellows, practicing physicians, nurses, pharmacists, allied medical professionals) and the role thoughtful learning design and use of technology can play in meeting their unique needs. Grounded in learning theory, colloquium course will provide accessible information for learners at all levels to understand learning design and use of educational technologies in the new Millennium. Features speakers from wide range of medical education-related fields, including experts in instructional design, learning theory and medical education technologies. Students enrolling for 2 units prepare a final paper.

**ANES 205. Engage and Empower Me: Myths and Truths of Designing for Patient Behavior. 2-3 Units.**

Focus is on patient stories and real-life experiences of patient engagement, the neuroscience of behavior change and the principles of patient engagement. Together with patients, students participate in design sessions at Stanford's simulation center to create and test ways to modify behavior through design. Topics include the neuroscience behind motivating individuals into healthy behaviors, including patients in the care design process, how health educators, designers, techies and investors can improve success. Students enrolling for 3 units complete a class project.

**ANES 206. 3D Printing. 1-2 Unit.**

Focus is on medical possibilities of 3D printing. Additive manufacturing is often termed 3D printing and uses automated techniques to produce physical objects using layer-by-layer construction methods. Biofabrication applies these same techniques to print physical objects from biological cells. Such techniques hold great promise to transform health and medicine to deliver more personalized care solutions for patients. This colloquium course will explore the future of 3D printing and its impact on health and medicine. Students enrolling for 2 units prepare a final paper.

**ANES 207. Medical Acupuncture. 2 Units.**

Acupuncture is part of a comprehensive system of traditional Chinese Medicine developed over the past two millennia. This course reviews the history and theoretical basis of acupuncture for the treatment of various diseases as well as for the alleviation of pain. Issues related to the incorporation of acupuncture into the current health care system and the efficacy of acupuncture in treating various diseases are addressed. Includes practical, hands-on sections.

**ANES 215. Journal Club for Neuroscience, Behavior and Cognition Scholarly Concentration. 1 Unit.**

Review of current literature in both basic and clinical neuroscience in a seminar format consisting of both faculty and student presentations.

**ANES 243. Introduction to Integrative Medicine. 1 Unit.**

Presentations by local, national, and international experts in various modalities of integrative medicine commonly used by patients in the US, including mind-body medicine (biofeedback, clinical hypnosis, meditation, yoga); traditional whole systems of medicine (traditional Chinese medicine, Ayurveda); biological therapies (botanical medicine, supplements, herbal medicine); manipulative therapies (chiropractic, massage); and acupuncture. Lectures focus on evidence supporting the potential value of various treatment modalities and explanations of both the traditional and proposed scientific mechanisms of actions. Most classes include an experiential portion.  
Same as: FAMMED 243

**ANES 280. Early Clinical Experience in Anesthesia. 1-2 Unit.**

Provides an observational experience as determined by the instructor and student. Prerequisite: consent of instructor.

**ANES 299. Directed Reading in Anesthesiology. 1-18 Unit.**

Prerequisite: consent of instructor.

**ANES 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**ANES 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Problems related to metabolism, toxicity, and mechanisms of anesthesia; pharmacologic studies involving pain management; the genetic and molecular basis of hemodynamic insufficiency. Animal studies may be included. Interested students should contact Drs. Trudell, MacIver, Clark, Giffard, Patterson, Angelotti, Drover, Chu, or Angst.

**Anthropology Courses****ANTHRO 1. Introduction to Cultural and Social Anthropology. 3-5 Units.**

This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.

Same as: ANTHRO 201

**ANTHRO 1S. Introduction to Cultural and Social Anthropology. 3-5 Units.**

This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.

Same as: ANTHRO 101S

**ANTHRO 3. Introduction to Prehistoric Archeology. 3-5 Units.**

Aims, methods, and data in the study of human society's development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each.

Same as: ARCHLGY 1

**ANTHRO 4. Language and Culture. 4-5 Units.**

Comparative approach, using examples from many languages. Emphasis is on generally non-Western speech communities. Topics include: the structure of language; the theory of signs; vocabulary and culture; grammar, cognition, and culture (linguistic relativism and determinism); encodability of cultural information in language; language adaptiveness to social function; the ethnography of speaking; registers; discourse (conversation, narrative, verbal art); language and power; language survival and extinction; and linguistic ideology (beliefs about language).

Same as: ANTHRO 204

**ANTHRO 6. Human Origins. 5 Units.**

The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them.

Same as: ANTHRO 206, HUMBIO 6

**ANTHRO 10A. The Archaeology of Home. 3-5 Units.**

Homes evoke powerful emotions about place and also highlight the dynamic and complex nature of people, their relationships, and the broader society they live in. Focus on the ways that material traces from the past shed light on the diversity of domestic life, which includes household organization, economic strategies, diet and status, rituals, and identity. Archaeological case studies to see how archaeologists identify reoccurring patterns in material culture found in homes or domestic dwellings to reconstruct household patterns and social relations.

Same as: ARCHLGY 10

**ANTHRO 11SC. Conservation and Development Dilemmas in the Amazon. 2 Units.**

This course explores the human dimensions of conservation efforts under way in the Amazon Basin of South America. It has two specific goals: (1) to introduce the human ecology of Amazonia; and (2) to assess the prospects for joint efforts at biodiversity conservation and community development. We will draw on case studies to investigate such topics as the causes and consequences of deforestation, the social impact of parks and protected areas, and the potential for "Integrated Conservation and Development Projects" (ICDPs) such as extractive reserves, natural forest management, biodiversity prospecting, and community-based ecotourism. The course views Amazonia as a microcosm of the challenges facing conservation and development efforts today in the Third World. Part of the course is an intensive 11-day expedition to the Peruvian Amazon, at no extra cost, to observe firsthand the conservation and development dilemmas discussed in class. We will visit ecolodges in the rainforest, walking miles of trails to learn about local flora, fauna, and conservation efforts. We will also visit Machu Picchu in the upper reaches of the rainforest. For the travel portion of the class, undergraduates will be joined by a group of Stanford alumni and friends. Student contributions and presentations are emphasized throughout the course. Students are expected to come well-prepared to each session, to lead discussions, and to carry out literature research. The final assignment is a 6 to 8 page paper on a case study of your own choosing or an equivalent piece of a longer collaborative paper that offers a critical assessment of one particular conservation and/or development project in or near the region we will visit. Students will present the main findings of their papers in a joint seminar of undergraduates and alumni as we travel in the Peruvian Amazon. Note: Students will arrive on campus and will be housed at Stanford until we leave for the Amazon. Travel to and from Peru organized by the Travel/Study Program of the Stanford Alumni Association is included; costs are defrayed by the Stanford Field Seminar Fund and generous donors.

Same as: HUMBIO 18SC

**ANTHRO 12. Anthropology and Art. 5 Units.**

Modernity. How the concept of art appears timeless and commonsensical in the West, and with what social consequences. Historicizing the emergence of art. Modernist uses of primitive, child art, asylum, and outsider art.

**ANTHRO 13A. Islamic Routes: Archaeology and Heritage of Muslim Societies. 3-5 Units.**

How has archaeology changed our knowledge of the spread of Islam and past Muslim societies? How does archaeology shape heritage debates, conflicts and ideas about Islam today? Topics include the city and urban change, secular and religious life, gender, economy, and globalization. These topics are explored using archaeological and critical heritage approaches. Focus is on examples drawn from Syria-Palestine, Egypt, Iraq, Arabian Peninsula, India, and Africa. Sources include archaeological data and material culture, historical texts in translation, and photography. Same as: ARCHLGY 13, HISTORY 7E, HISTORY 107E

**ANTHRO 13SI. Zombies: Anthropology of the American Undead. 1-2 Unit.**

The zombie apocalypse, affectionately known as the *Zombiepocalypse*. In this combination class on zombie history, ethnography, biology, and culture, we will explore the origins of zombie legends (or truths?) and how the undead have been represented in American culture for the past 200 years. Classes will include lectures, film clip viewings, literary analysis, medical anthropology components, and disaster survival planning.

**ANTHRO 14. Introduction to Anthropological Genetics. 3 Units.**

For upper division undergraduates. The extent and pattern of variation among human genomes, the origin of these patterns in human evolution, and the social and medical impact of recent discoveries. Topics include: the Human Genome Project; human origins; ancient DNA; genetic, behavioral, linguistic, cultural, and racial diversity; the role of disease in shaping genetic diversity; DNA forensics; genes and reproductive technology.

**ANTHRO 15. Sex and Gender. 3 Units.**

Commonality and diversity of gender roles in crosscultural perspective. Cultural, ecological, and evolutionary explanations for such diversity. Theory of the evolution of sex and gender, changing views about men's and women's roles in human evolution, conditions under which gender roles vary in contemporary societies, and issues surrounding gender equality, power, and politics.

**ANTHRO 16. Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America. 5 Units.**

What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural collapse, and assimilation, the relationships between Native Americans and American society. Focus is on three themes leading to in-class moot court trials: colonial encounters and colonizing discourses; frontiers and boundaries; and sovereignty of self and nation. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popular culture.

Same as: ANTHRO 116C, ARCHLGY 16, NATIVEAM 16

**ANTHRO 19Q. Hauntings, Visions, and Prophecy. 1-3 Unit.**

Preference to sophomores. Why do people see ghosts? Why do people believe that stars foretell the future? When do people see demons and angels? Focus is on the conditions under which people experience themselves as having sensory evidence of supernatural phenomena and the role of training and expectation in the process. Intellectual exploration of what is known from the ethnographic, historical, and psychological record. Practical experimental projects involve attempting to induce positive supernatural experience. Prerequisite: consent of instructor.

**ANTHRO 21N. The Anthropology of Globalization. 4 Units.**

Preference to freshmen. Anthropological approach to how cultural change, economic restructuring, and political mobilization are bound up together in the process of globalization.

**ANTHRO 22. Archaeology of North America. 3-5 Units.**

Why and how people of N. America developed. Issues and processes that dominate or shape developments during particular periods considering the effects of history and interactions with physical and social environment. Topics include the peopling of the New World, explaining subsequent diversity in substance and settlement adaptations, the development of social complexity, and the impact of European contact.

**ANTHRO 22N. Ethnographies of North America: An Introduction to Cultural and Social Anthropology. 3-4 Units.**

Preference to freshmen. Ethnographic look at human behavior, including cultural transmission, social organization, sex and gender, culture change, and related topics in N. America. Films.

**ANTHRO 23N. Glimpses of Divinity. 3 Units.**

Preference to freshmen. How human beings search for and identify the presence of the divine in everyday human life. Sources include spiritual classics in the Christian, Jewish, and Hindu traditions including works by Augustine, Teresa of Avila, Jonathan Edwards, the Bhagavad Gita, the Zohar, and some ethnographies of non-literate traditions.

**ANTHRO 24N. Maya Hieroglyphic Writing. 4 Units.**

Preference to freshmen. Decipherment of classic Maya writing. Principles of archaeological decipherment. Maya calendrical, astronomical, historical, mythological, and political texts on stone, wood, bone, shell, murals, ceramics, and books (screenfold codices). Archaeology and ethnohistory of Maya scribal practice and literacy. Related Mesoamerican writing systems. The evolution of writing and the relevance of writing to theories of culture and civilization.

**ANTHRO 25N. Contemporary Japanese Popular Culture. 3 Units.**

This is a seminar focusing on the intersection between politics and popular culture in contemporary Japan. It will survey a range of social and political implications of practices of popular culture. Topics include representations of gender in J-pop, manga, and anime, the otaku culture and its pathologization. Students will be introduced to theories of popular culture in general, and a variety of contemporary anthropological studies on Japanese popular culture in particular as well.

**ANTHRO 25SC. Parks and Peoples in Patagonia: Dilemmas of Protected Area Conservation. 2 Units.**

This course uses the diverse parks and reserves of Patagonia as a laboratory for understanding the pros and cons of protected area conservation as they impact flora, fauna, and local people. We will explore national parks and protected areas (PAs) in both Argentina and Chile, as well as the flourishing establishment of private parks and reserves in the region. We will use a series of case studies to ask: (1) What approach to protected area (PA) conservation has been taken in each case? Who are/were the key proponents and what are/were their main objectives? Was climate change taken into account and if so, how? (2) What have been the main costs and benefits of the PA, and who has received them? Where benefits are not commensurate to costs what is being done to address the imbalance? And (3) Are there alternatives or variations-on-the-theme of protected area conservation that would be more beneficial for wildlife and local people? How could the interests of parks and people be made more compatible in each case? Throughout the course we will look for ways to achieve conservation in a manner that is socially just, biologically successful, and beneficial to local livelihoods. The class will begin on the Stanford campus at the same time as other Sophomore College courses. But on Sept. 12 we depart on an intensive thirteen-day expedition (at no extra cost) to Argentina and Chile to observe firsthand many of the conservation issues and successes discussed in class. For this portion of the class, undergraduates will be joined by a group of Stanford alumni and friends in a format called a Stanford "Field Seminar." Because our class time on campus is limited to one week before travel, students will be required to complete all course readings over the summer. Both on campus and in South America, the course emphasizes student contributions and presentations. Students will be asked to lead discussions and carry out literature research on the conservation challenges of particular Patagonian protected areas and species. The final assignment for the seminar is to complete a seven- to ten-page paper on their findings and to present the main conclusions of that paper in a joint seminar of undergrads and alumni as we travel in Patagonia. Note: Students will arrive on campus and will be housed at Stanford until we leave for Patagonia. The travel components of the course are organized and managed by the Travel/Study Program of the Stanford Alumni Association. The costs of the trip (except incidentals) are included, thanks to the support of the Stanford Field Seminar Fund and generous donors. Students will return to campus on Sunday, September 25, the day before the fall term begins. Sophomore College course, applications required. Submit by April 5, 2016 at <http://soco.stanford.edu>.

Same as: HUMBIO 15SC

**ANTHRO 26N. God and the Supernatural. 3-5 Units.**

This course explores the conditions under which people have experiences that they identify as "supernatural": experiences of something that is not physically present. We will explore the cultural and psychological dimensions of this very real phenomenon. We will not, however, make ontological judgments about whether something which is experienced as externally present is in fact externally present: in other words, this is a class about culture and psychology, not about metaphysics. We will do experimental work, using our selves and fellow classmates, as subjects, to understand who, when and how people have experiences that they deem "supernatural."

**ANTHRO 27N. Ethnicity and Violence: Anthropological Perspectives. 3-5 Units.**

Ethnicity is one of the most compelling and most modern ways in which people - in the midst of considerable global and local uncertainty - all across the world imagine and narrate themselves. This seminar will take an anthropological look at both the modernity and the compulsions of ethnic allegiance, and, why struggles over ethnic identity are so frequently violent. Our questions will be both historical & how, why and when did people come to think of themselves as possessing different ethnic identities - and contemporary & how are these identities lived, understood, narrated, and transformed and what is the consequence of such ethnicisation. We follow this through anthropological perspectives which ask persistently how people themselves locally narrate and act upon their experiences and histories. Through this we will approach some of the really big and yet everyday questions that many of us around the world face: how do we relate to ourselves and to those we define as others; and how do we live through and after profound violence? The seminar will take these larger questions through a global perspective focusing on cases from Rwanda and Burundi, India, Sri Lanka, Northern Ireland, Guatemala, and the countries of Former Yugoslavia among others. These cases cover a broad canvas of issues from questions of historicity, racial purity, cultural holism, and relations to the state, to contests over religious community, indigeneity, minority identities, globalization, gender, and generation.

**ANTHRO 28N. Secularism and its Critics. 3-5 Units.**

Secularism is often taken to be a necessary prerequisite for democracy in the modern world. The separation of religion and politics is often written into constitutions as a fundamental priority. Yet around the world, growing numbers of religious movements have sought to dispute the legitimacy of secularism. Social scientists, including anthropologists, are beginning to research the forms of domination and political violence that have been justified in the name of secularism. This course seeks to make sense of this global debate about secularism. It does so by taking up an anthropological perspective: much as anthropologists might study culture, religion, or kinship, we will interrogate secularism as a comparative social artifact, constituted by historically specific repertoires of signs, identities, everyday practices, and institutional powers. The course focuses on case studies in the United States, Western Europe, the Middle East, and South Asia.

**ANTHRO 30. Linguistic Field Methods. 3-4 Units.**

Practical training in the collection and analysis of linguistic data from native speakers of a language largely unknown to the investigator. Documentation of endangered languages. Research goals, field trip preparation, ethics (including human subjects, cooperation with local investigators, and governmental permits), working in the community, technical equipment, and analytical strategies. Emphasis is on the use of recording devices and computers in collection and analysis. Students are strongly encouraged to make a commitment to both 274A and 274B in the same year. Prerequisites: One course in phonetics or phonology and syntax, or permission of the instructor. Open to undergraduates with permission of instructor only.

Same as: LINGUIST 274A

**ANTHRO 30Q. The Big Shift. 4 Units.**

Is the middle class shrinking? How do people who live at the extremes of American society- the super rich, the working poor and those who live on the margins, imagine and experience "the good life"? How do we understand phenomena such as gang cultures, addiction and the realignment of white consciousness? This class uses the methods and modes of ethnographic study in an examination of American culture. Ethnographic materials range from an examination of the new American wealth boom of the last 20 years (Richistan by Robert Frank) to the extreme and deadly world of the invisible underclass of homeless addicts on the streets of San Francisco (Righteous Dopefiend by Phillippe Bourgois and Jeff Schonberg). The experiences of Hispanic immigrants and the struggle to escape gang life in Los Angeles are highlighted in the story of Homeboy Industries a job creation program initiated by a priest working in LA's most deadly neighborhoods (G-Dog and the Homeboys by Celeste Fremon). Finally in Searching for Whitopia: an improbable journey into the heart of White America, Rich Benjamin explores the creation of ethnic enclaves (whitopias) as fear over immigration and the shrinking white majority redefine race consciousness in the 21st century. Each of these narratives provides a window into the various ways in which Americans approach the subjects of wealth and the good life, poverty and the underclass, and the construction of class, race, and gender in American society. Students will not be required to have any previous knowledge, just curiosity and an open mind.

**ANTHRO 31. Ecology, Evolution, and Human Health. 3-5 Units.**

Ecology, Evolution, and Human Health Human ecology, environments, adaptation and plasticity, and their relationship to health and well-being considered in the broad comparative context. Topics include human population history, subsistence ecology, demography, reproductive decision making, urbanization, migration, infectious disease, the physiology of stress and the inflammatory response, social capital and social networks, nutrition, nutritional deficiencies, growth, and social inequalities. No prior course work in ecological or medical anthropology required.

**ANTHRO 32. Theories in Race and Ethnicity: A Comparative Perspective. 5 Units.**

This undergraduate course employs an anthropological and historical perspective to introduce students to ideas and concepts of race and ethnicity that emerged primarily in Europe and the United States in the eighteenth and nineteenth centuries and that continue to shape contemporary racial attitudes, interactions, and inequalities. Ideas about race and ethnicity forged outside the U.S. and case studies from other nations are presented to broaden students' understanding and to overcome the limitations of an exclusive focus on the U.S. This course is geared to sophomores and juniors who have already taken at least one course on race and ethnicity, anthropology, African American Studies, Asian American Studies, Chicana/o Studies, Jewish Studies or Native American Studies.

Same as: CSRE 32

**ANTHRO 34. Animals and Us. 5 Units.**

The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts. This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of 'animals as social actors' is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognized as a viable mechanism for understanding our cultural and economic past. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.

Same as: ARCHLGY 34

**ANTHRO 41. Genes and Identity. 3 Units.**

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and anthropological works (ethnographies). We will explore several case studies where the use of DNA markers (as proof of heritage, disease risk, or legal standing) has spawned cultural movements that are biosocial in nature. Throughout we will look at how new social movements are organized around gene-based definitions of personhood, health, and legal truth. Several examples include political analyses of citizenship and belonging. On this count we will discuss issues of African ancestry testing as evidence in slavery reparations cases, revisit debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, and hear arguments on whether people with genetic links to Jewish groups should have a right of return to Israel. We will also examine the ways genetic knowledge may shape different health politics at the individual and societal level. On this count we will do close readings of how personal genomics testing companies operate, we will investigate how health disparities funding as well as orphan disease research take on new valences when re-framed in genetic terms, and we will see how new articulations of global health priorities are emerging through genetic research in places like Africa. Finally we will explore social implications of forensic uses of DNA. Here we will examine civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects, and inquire into the use of DNA to generate digital mugshots of suspects that re-introduce genetic concepts of race. Same as: AFRICAAM 41, CSRE 41A

**ANTHRO 42. Megacities. 5 Units.**

In this course we will examine the meaning, processes, and challenges of urbanization. Through a series of targeted readings across history and geography and through the study of varied means of representation (anthropology, literature, cartography, film, etc), the class will analyze the ways in which urban forms have come into being and created, met, and/or ignored challenges such as disease, water, transport, religious and class conflict, colonialism, labor, and trade. Students will read anthropology in conjunction with other disciplines (literature, urban planning, public health, architecture, and economics) to learn the ways in which ethnographies of immigration, urban poverty, class disparity, economic development and indicators, noise, and transportation substantively augment our understandings of how people live within globalization.

**ANTHRO 48S. History of Health, Science and Medicine in 20th Century Africa. 5 Units.**

This course will examine the impact of colonial policies and post-colonial development on patterns of sickness, wellness and health care in twentieth century sub-Saharan Africa. Some topics will include: the role of colonial science in the formulation of ideas about race, colonial epidemics, labor migration and disease, urban health, encounters between African healers and biomedicine, histories of HIV/AIDS, the impact of debt and Structural Adjustment Programs on public health, and the politics of humanitarian interventions in African health. Priority given to history majors and minors.

Same as: AFRICAST 48S, HISTORY 48S

**ANTHRO 49. Violence and Belonging in the Middle East. 5 Units.**

This course examines politics in the Middle East from an anthropological perspective. We will explore the symbolic expression of political identities, the effects of religious revival on political institutions, and the tumultuous culture of protest in the region. Readings discuss the historical development of rights and citizenship, Islamic politics, sectarian tensions, and imaginings of revolution. Course materials are drawn from ethnographic studies and films, which provide a rich contextualization of social life and cultural politics in the region.

**ANTHRO 54A. Central Asia Through Films: A Weekly 3-Hour Seminar. 3-5 Units.**

Through films this course explores major issues of contemporary peoples of Central Asia while learning fundamental concepts in cultural anthropology. In this seminar we will consider a wide range of examples, including first of all the new feature films, which will be used as a window into the modern reality and therefore could be served in a certain sense as anthropological fieldwork data. Films are prearranged by the instructor according to certain thematic subjects for in-class discussions. Same as: REES 54A

**ANTHRO 77. Japanese Society and Culture. 5 Units.**

Focus is on power, identity, and the politics of knowledge production. How transnational interactions influence Japanese identity. How anthropological knowledge has contributed to understanding Japanese culture and society. Gender, race and class; contemporary ethnographies. Modernity and globalization. Cultural politics, domestic work, labor management, city planning, ad images, anime, martial art, fashion, theater, leisure, and tourism. Same as: ANTHRO 277

**ANTHRO 82. Medical Anthropology. 4 Units.**

Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science. Same as: ANTHRO 282, HUMBIO 176A

**ANTHRO 90B. Theory of Cultural and Social Anthropology. 5 Units.**

Preference to Anthropology majors. Anthropological interpretations of other societies contain assumptions about Western societies. How underlying assumptions and implicit categories have influenced the presentation of data in major anthropological monographs. Emphasis is on Karl Marx, Emile Durkheim, Max Weber, and anthropological analyses of non-Western societies.

**ANTHRO 90C. Theory of Ecological and Environmental Anthropology. 5 Units.**

Dynamics of culturally inherited human behavior and its relationship to social and physical environments. Topics include a history of ecological approaches in anthropology, subsistence ecology, sharing, risk management, territoriality, warfare, and resource conservation and management. Case studies from Australia, Melanesia, Africa, and S. America. Same as: HUMBIO 118

**ANTHRO 90D. Social Theory in the Anthropological Sciences. 5 Units.**

Required of majors. Foundational course in the history of social theory in anthropology from the late 19th century to the present. Major approaches to human culture and society: symbolic, social, material, and psychological. Questions about the role of theory in anthropology and how it can be applied to human issues. (HEF IV).

**ANTHRO 91. Method and Evidence in Anthropology. 5 Units.**

This course provides a broad introduction to various ways of designing anthropological questions and associated methods for collecting evidence and supporting arguments. We review the inherent links between how a question is framed, the types of evidence that can address the question, and way that data are collected. Research activities such as interviewing, participant observation, quantitative observation, archival investigation, ecological survey, linguistic methodology, tracking extended cases, and demographic methods are reviewed. Various faculty and specialists will be brought in to discuss how they use different types of evidence and methods for supporting arguments in anthropology.

**ANTHRO 91A. Archaeological Methods. 5 Units.**

Methodological issues related to the investigation of archaeological sites and objects. Aims and techniques of archaeologists including: location and excavation of sites; dating of places and objects; analysis of artifacts and technology and the study of ancient people, plants, and animals. How these methods are employed to answer the discipline's larger research questions.

Same as: ARCHLGY 102

**ANTHRO 92A. Undergraduate Research Proposal Writing Workshop. 2-3 Units.**

Practicum. Students develop independent research projects and write research proposals. How to formulate a research question; how to integrate theory and field site; and step-by-step proposal writing.

**ANTHRO 92B. Undergraduate Research Proposal Writing Workshop. 2-3 Units.**

Practicum. Students develop independent research projects and write research proposals. How to formulate a research question; how to integrate theory and field site; and step-by-step proposal writing.

**ANTHRO 93. Prefield Research Seminar. 5 Units.**

For Anthropology majors only; non-majors register for 93B. Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnohistory, and the use of documentary materials. Strategies of successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Prerequisites: two ANTHRO courses or consent of instructor.

**ANTHRO 93B. Prefield Research Seminar: Non-Majors. 5 Units.**

Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnohistory, and the use of documentary materials. Strategies for successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Service Learning Course (certified by Haas Center).

**ANTHRO 94. Postfield Research Seminar. 5 Units.**

Goal is to produce an ethnographic report based on original field research gathered during summer fieldwork, emphasizing writing and revising as steps in analysis and composition. Students critique classmates' work and revise their own writing in light of others' comments. Ethical issues in fieldwork and ethnographic writing, setting research write-up concerns within broader contexts.

**ANTHRO 95. Research in Anthropology. 1-10 Unit.**

Independent research conducted under faculty supervision, normally taken junior or senior year in pursuit of a senior paper or an honors project. May be repeated for credit.

**ANTHRO 95B. Directed Study in Honors and Senior Papers. 1-10 Unit.**

Taken in the final quarter before graduation. Independent study and work on senior paper for students admitted to the program. Prerequisite: consent of program adviser and instructor.

**ANTHRO 96. Directed Individual Study. 1-10 Unit.**

Prerequisite: consent of instructor.

**ANTHRO 97. Internship in Anthropology. 1-10 Unit.**

Opportunity for students to pursue their specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency. May be repeated for credit. Service Learning Course (certified by Haas Center).

**ANTHRO 98B. Digital Methods in Archaeology. 3-5 Units.**

This is a course on digital technologies in archaeology used for documentation, visualization, and analysis of archaeological spaces and objects. Emphasizes hands-on approaches to image manipulation, virtual reality, GIS, CAD, and photogrammetry modeling methods.

Same as: ANTHRO 298B, ARCHLGY 98B

**ANTHRO 98C. Digital Methods in Anthropology. 3-5 Units.**

The course provides an introduction to a broad range of digital tools and techniques for anthropological research. It is geared towards those interested in exploring such methodologies for their research and wanting to add hands-on experience with state-of-the-art digital tools to their skill set. Students will learn to work with some of the most common tools used to collect and manage digital data, and to perform various types of analysis and visualization. Undergraduate students register for 5 Units, Graduate students can register for 5 or 3 units.  
Same as: ANTHRO 298C

**ANTHRO 98E. Catalhoyuk and Neolithic Archaeology. 1-3 Unit.**

Catalhoyuk as a case study to understand prehistoric social life during the Neolithic in Anatolia and the Near East. Developments in agriculture, animal domestication, material technology, trade, art, religion, skull cults, architecture, and burial practices. Literature specific to Catalhoyuk and other excavations throughout the Anatolian and Levantine regions to gain a perspective on diversity and variability throughout the Neolithic. The reflexive methodology used to excavate Catalhoyuk, and responsibilities of excavators to engage with larger global audiences of interested persons and stakeholders.

**ANTHRO 98F. Field School Training Workshop. 1-3 Unit.**

Provides students important preparatory orientation to anthropology as well as the methods, ethics, and logistics of the specific field school each student will be attending in the summer.

**ANTHRO 100A. India's Forgotten Empire: The Rise and Fall of Indus Civilization. 3 Units.**

How and why cities with public baths, long-distance trade, sophisticated technologies, and writing emerged, maintained themselves, and collapsed in the deserts of present-day Pakistan and India from 2500 to 1900 B.C.

**ANTHRO 100B. Lifeways of the Ancient Maya. 5 Units.**

This course engages with the world of the pre- and post-contact Maya people through scholarship that explores the material culture of daily life. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, and how interpretations of daily life in the ancient Maya world are formulated. We consider how perceptions of the ancient Maya are marshaled in contemporary politics and policies. The course is designed to provide a broad overview of sites and materials in the Maya area, focusing on the dynamic interplay between the material and the social. Students will create interpretive frameworks for a public audience as a component of the final project.  
Same as: ANTHRO 200B

**ANTHRO 100D. Chavin de Huanter Research |Seminar. 3-5 Units.**

Archaeological analytical techniques appropriate for data recovered during archaeological fieldwork in Chavin de Huanter, Peru. Open to all interested students; fieldwork participants are expected to take the course. Students work on data from the previous field season to produce synthetic written reports, focusing on specific methodological issues.

**ANTHRO 101. The Aztecs and Their Ancestors: Introduction to Mesoamerican Archaeology. 3-5 Units.**

The prehispanic cultures of Mesoamerica through archaeology and ethnohistory, from the archaic period to the Spanish conquest in the 16th century.

**ANTHRO 101B. ARCHAEOLOGY OF TECHNOLOGY. 5 Units.**

The course is an introduction to the social organization of material production and to the theoretical, ethnographic, and historical frameworks used by archaeologists to link the technologies of the past to salient sociocultural information about the people who employed them. Comparison of metallurgical, ceramic, lithic, and textile industries in different cultural and historical settings will inform critical discussions of how and to what extent analyses of artifacts, workshops, and industrial installations can provide insight into past societies.  
Same as: ANTHRO 201B, ARCHLGY 100, ARCHLGY 200

**ANTHRO 101S. Introduction to Cultural and Social Anthropology. 3-5 Units.**

This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.

Same as: ANTHRO 1S

**ANTHRO 102. Urban Ethnography. 5 Units.**

Ethnographic research and writing focuses on the ways our lives are shaped by interacting forces such as history, political economy, and creative cultural practices. In the last fifty years, more and more cultural anthropology has been carried out in urban contexts, due to both urbanization around the world and changes in anthropology as a field. This seminar focuses on careful reading and analysis of book-length ethnographies about urban cultures, people and dynamics to consider what the theory and methodological tools of anthropology have to offer us as we seek to better understand the city. Readings include a variety of approaches to ethnographic research in and/or about cities, with a mix from different eras and about different cities around the world.

Same as: URBANST 140

**ANTHRO 102A. Ancient Civilizations: Complexity and Collapse. 3-5 Units.**

How archaeology contributes to understanding prehistoric civilizations. How and why complex social institutions arose, and the conditions and processes behind their collapse. The development of monumental architecture, craft specialization, trade and exchange, and social stratification using examples from the archaeological record. (HEF II, III; DA-B).

Same as: ANTHRO 202A

**ANTHRO 102B. Aztec Language and Culture. 3 Units.**

Introduction to Nahuatl, the language of the Aztecs. Also known as Mexicano, Nahuatl was once used as a lingua franca throughout Mesoamerica, and is today spoken by about 1.5 million people. Emphasis on vocabulary, colonial documents, including Central Mexican codices, and archaeology. Attention also given to modern dialects, the place of Nahuatl in the Uto-Aztecan language phylum, and the relationship between Nahuatl and Aztec culture. Appropriate for students interested in linguistics, anthropology, archaeology, and history, and those desiring to better understand the native linguistic heritage of Mesoamerica and its impact on Spanish.

**ANTHRO 103. The Archaeology of Modern Urbanism. 5 Units.**

Seminar. Urbanism as a defining feature of modern life. The perspective of archaeology on the history and development of urban cultures. Case studies are from around the globe; emphasis is on the San Francisco Bay Area megalopolis. Cities as cultural sites where economic, ethnic, and sexual differences are produced and transformed; spatial, material, and consumption practices; and the archaeology of communities and neighborhoods.

**ANTHRO 103A. Human Osteoarchaeology. 5 Units.**

The course will cover the methodological and theoretical backgrounds to human osteoarchaeology, introduce the student to the chemical and physical characteristics of bone, and to the functional morphology of the human skeleton. Classes will consist of a taught component that outlines how osteoarchaeologists reconstruct individual life-histories based on age, sex etc.; this is combined with hands-on identification of different skeletal elements and the markers used to inform the analytical methods. Additional scientific methodologies are also introduced that increasingly form a major component of human osteoarchaeology.

Same as: ANTHRO 203A

**ANTHRO 105. Ancient Cities in the New World. 3-5 Units.**

Preindustrial urbanism as exemplified by prehispanic New World societies. Case studies: the central and southern highlands of Mesoamerica, and the Maya region. Comparative material from highland S. America.

Same as: ANTHRO 205

**ANTHRO 105A. Archaeological Fieldwork: Critical Analysis and Practical Application. 2-3 Units.**

This introduction to archaeological fieldwork involves both field and seminar components, each component meeting once per week. During the field sessions, we will investigate an archaeological site on campus using methods of survey, mapping, testing, and excavation (digging, recording units/features, profile illustration). In seminar, we will critically examine archaeological fieldwork through reading, writing, and discussion, exploring topics such as history of archaeological excavation, production of archaeological knowledge, disjunction between theory and practice, reflexive methodologies, ethics, collaboration, and specialization. No experience necessary, but students with fieldwork experience are welcome.

Same as: ANTHRO 205A

**ANTHRO 105B. Heritage & Neoliberalism: Theorizations of the Past. 3-5 Units.**

This course explores the emergence of heritage from within the broader field of modern historical thought. Readings explore how transformations in economic theory and changes in traditional philosophies of history have shaped how the historical event and historical figures are cast and recast within heritage. The distinctive modes by which archaeological sites and heritage sites are spatialized, linked and narrated are explored as these relate to corresponding turns in the modern concepts of freedom, inequality, personhood, sovereignty, community and culture.

Same as: ANTHRO 205B, ARCHLGY 105

**ANTHRO 106. Incas and their Ancestors: Peruvian Archaeology. 3-5 Units.**

The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred.

Same as: ANTHRO 206A, ARCHLGY 102B

**ANTHRO 106A. Gang Colors: The Racialization of Violence and the American City. 5 Units.**

Street gangs (e.g. Bloods, Crips, Mara Salvatrucha, M-18, etc.) serve as a window onto the experience of racial, ethnic and economic marginalization under late capitalism. This class explores the context that gives rise to gang violence through a combination of anthropological, sociological, and historical approaches. Students will be familiarized with the macro-social factors that shape both gangs and the politics of violence in the Americas, North and South.

Same as: CSRE 106A

**ANTHRO 108A. The Formation of Political State in the Peruvian Andes. 3-5 Units.**

This course provides a panorama of the prehistory and history of the political state developed in Peruvian Andes. The Peruvian Andes is a rich cultural area in South America the first generations of Andean state societies developed. Beginning in Formative times with Chavin Culture we have an important development of different forms of state from theocratic to military, and most importantly, the Inca Empire. This richness and diversity of state societies was a consequence of an interesting relationship between societies of different levels of development, economies, and of course, the related diverse ecologies of the region. In 1532, Spanish conquerors came to the Inca Empire and introduced their new vision of politics and economics, and created corresponding new institutions in the Andes. The ensuing colonial age had an interesting development and brought new tensions to this New World. Native ways of work and thought survive in colonial times, creating a distinctive political and ideological scenario including deep ethnic and economic differences. These political tensions established the foundations for revolutionary movements based in indigenous belief as for example *Taky Onkoy* (dancing sickness) or *Neo-Incanism*. Finally, with independence from Spain, a new republic is established from Lima but many problems in the native structures conditioned the development of new liberal politics.

**ANTHRO 108E. Catalhoyuk and Neolithic Archaeology. 3 Units.**

Catalhoyuk as a case study to understand prehistoric social life during the Neolithic in Anatolia and the Near East. Developments in agriculture, animal domestication, material technology, trade, art, religion, skull cults, architecture, and burial practices. Literature specific to Catalhoyuk and other excavations throughout the Anatolian and Levantine regions to gain a perspective on diversity and variability throughout the Neolithic. The reflexive methodology used to excavate Catalhoyuk, and responsibilities of excavators to engage with larger global audiences of interested persons and stakeholders.

Same as: ARCHLGY 108E

**ANTHRO 109. Archaeology: World Cultural Heritage. 5 Units.**

Focus is on issues dealing with rights to land and the past on a global scale including conflicts and ethnic purges in the Middle East, the Balkans, Afghanistan, India, Australia, and the Americas. How should world cultural heritage be managed? Who defines what past and which sites and monuments should be saved and protected? Are existing international agreements adequate? How can tourism be balanced against indigenous rights and the protection of the past?.

Same as: ANTHRO 209

**ANTHRO 109A. Archaeology of the Modern World. 3-5 Units.**

Historical archaeology, also called the archaeology of the modern world, investigates the material culture and spatial history of the past five centuries. As a discipline, historical archaeology has been characterized by (1) a methodological conjunction between history and archaeology; (2) a topical focus on the *three Cs*: colonization, captivity, and capitalism *forces* which arguably are constitutive of the modern world; and (3) an epistemological priority to recovering the perspectives of *people without history*. Each of these three trends is widely debated yet they continue to profoundly shape the field. This seminar provides an in-depth examination of the emergence and development of this historical archaeology, with a focus on current issues in theory and method. For undergraduates, the prerequisite is Anthro 3 or consent of instructor.

Same as: ANTHRO 209A, ARCHLGY 109A

**ANTHRO 110A. Neandertals and Modern Humans: Origin, Evolution, Interactions. 3 Units.**

The expansion out of Africa of our species represents the last spectacular step in the course of Human Evolution. It resulted in the colonization of the whole planet and the replacement of archaic forms of humans in Eurasia. One way to investigate why *Homo sapiens* has been such a successful species is to compare its evolution with that of its closest relative, the Neandertals. Exploring the bio-cultural processes at work in the two lineages leads to examine some of the main issues in Paleoanthropology and the most recent methodological advances in the field.

Same as: ANTHRO 210A

**ANTHRO 110B. Examining Ethnographies. 5 Units.**

Eight or nine important ethnographies, including their construction, their impact, and their faults and virtues.

Same as: ANTHRO 210B

**ANTHRO 111. Archaeology of Sex, Sexuality, and Gender. 5 Units.**

How archaeologists study sex, sexuality, and gender through the material remains left behind by past cultures and communities. Theoretical and methodological issues; case studies from prehistoric and historic archaeology.

Same as: ANTHRO 211

**ANTHRO 111A. Archaeology of the Andes of Argentina. 3-5 Units.**

The aim of this course is to provide a panorama of the archaeology of the andean region of Argentina, along some main topics of past and current researches. North andean Argentina has been considered for a long time as subordinated to the major developments in the central Andes and Puna, as if it were in a marginal position that mirrored their history. More than a hundred years of research in the area have produced different insights, which put that affirmation in relative terms. The course will give an overview of major historical contributions and contemporary trends in the archaeological thinking in relation to themes such as time, the space, people, things and nature. An overview of the conceptions and construction of time. Space seen as cultural area; natural environment and built landscape; archaeological areas as national territory. Historical conceptions of people; bodies; social inequality; the past and present others in the archaeological research. Artefacts, classifications and typologies; material archaeological contexts as cultural units; from artefacts to things; past ontologies. Nature and environment; domestication; ecological approaches; agropastoralism; nature/culture. It is expected that by the end of the course students will gain a panorama of the major problems of the archaeology of andean Argentina with historically and theoretically informed perspectives.

Same as: ANTHRO 211A

**ANTHRO 111B. Muwekma: Landscape Archaeology and the Narratives of California Natives. 3-5 Units.**

This course explores the unique history of San Francisco Bay Area tribes with particular attention to Muwekma Ohlone- the descendent community associated with the landscape surrounding and including Stanford University. The story of Muwekma provides a window into the history of California Indians from prehistory to Spanish exploration and colonization, the role of Missionaries and the controversial legacy of Junipero Serra, Indigenous rebellions throughout California, citizenship and land title during the 19th century, the historical role of anthropology and archaeology in shaping policy and recognition of Muwekma, and the fight for acknowledgement of Muwekma as a federally recognized tribe. We will visit local sites associated with this history and participate in field surveys of the landscape of Muwekma.

Same as: ARCHLGY 111B, NATIVEAM 111B

**ANTHRO 112. Public Archaeology: Market Street Chinatown Archaeology Project. 4-5 Units.**

This internship-style course centers on the practice and theory of historical archaeology research and interpretation through a focused study of San Jose's historic Chinese communities. The course includes classroom lectures, seminar discussion, laboratory analysis of historic artifacts, and participation in public archaeology events. Course themes include immigration, urbanization, material culture, landscape, transnational identities, race and ethnicity, gender, cultural resource management, public history, and heritage politics. The course includes required lab sections, field trips, and public service. Transportation will be provided for off-site activities.

Same as: ANTHRO 212, ASNAMST 112

**ANTHRO 112B. Advanced Study in Public Archaeology. 2-5 Units.**

This service-learning course is offered only to students who have completed Anthro 112a and wish to deepen their scholarship in public archaeology and heritage practice through continued study. Students enrolled in Anthro 112b complete readings, collections management study, public archaeology events, and community-based research oriented towards their specific interests. Prerequisite: Completion of Anthro 112a AND instructor consent.

**ANTHRO 113. Culture and Epigenetics: Towards A Non-Darwinian Synthesis. 4-5 Units.**

The course examines the impact of new research in epigenetics on our understanding of long-term cultural change. The course examines the various attempts that have been made over recent decades to find a synthesis between cultural and biological evolution. These approaches, often termed neo-Darwinian, include memes, dual inheritance theory, theories of cultural selection and transmission, niche construction theory and macro-evolutionary approaches. Research in all these areas will be examined, with particular reference to explanations for the origins of agriculture, but also including other transformations, and critiqued. New research in epigenetics offers an alternative non-Darwinian evolutionary perspective that avoids many of the problems and pitfalls in the neo-Darwinian approaches. Cultural evolution comes to be viewed as cumulative, directional and Lamarckian, since heritable epigenetic variation can underlie evolutionary change. Epigenetics opens the way for human cultural entanglements to become the drivers for evolutionary change, thus allowing the full range of social processes studied in the social and cultural sciences to take their place in the study and analysis of long-term change.

Same as: ANTHRO 213

**ANTHRO 113B. Religious Practices in Archaeological Cultures. 5 Units.**

According to Hawkes (1954), religion or ideology is the most difficult part of social life to access archaeologically. Luckily, not all scholars agree; according to Fogelin (2008) 'religion is not something people think about, but something people do'. Thus, archaeology, an inherently multidisciplinary subject that studies material culture, is well suited to delve into religion and its underpinnings. This course will explore religious practices, as they can be defined and interpreted from archaeological contexts spanning the Paleolithic to historic periods. Definitions of religion differ from author to author but they mostly agree that religion is a fully integrated and thus integral part of human social life. Politics, economics, identity and social class influence religion, and religion influences how these forces play out in society. Thus, the course will also examine the significance of ritual and religion in a variety of social contexts.

Same as: ANTHRO 213B, ARCHLGY 113B

**ANTHRO 114. Prehistoric Stone Tools: Technology and Analysis. 5 Units.**

Archaeologists rely on an understanding of stone tools to trace much of what we know about prehistoric societies. How to make, illustrate, and analyze stone tools, revealing the method and theory intrinsic to these artifacts.

Same as: ANTHRO 214

**ANTHRO 114A. Introduction to South Asian Archaeology. 5 Units.**

This seminar will survey the archaeology of South Asia, beginning with animal and plant domestication in the early Holocene and ending with the late Medieval Period. Given its chronological breadth and spatial scope, the class will interrogate a variety of social and historical contexts that contribute to a broad range of anthropological research concerns, including the intersections of authority, ritual, alterity and landscape, and at the same time critically consider the epistemological bases for their analyses through archaeological remains.

Same as: ANTHRO 214A, ARCHLGY 114A

**ANTHRO 114B. Landscape Archaeology and Global Information Systematics. 3-5 Units.**

This course is meant to lay groundwork for analysis of archaeological landscapes using the methods of GIS. Throughout, we consider the various understandings of landscape, from the biographical to the biological. The course explores the history of various typologies of landscape, incorporating the cultural, the topographical, the ecological, and the topological; reviews different types of landscape data and analysis, including aerial imagery, stratigraphic excavations, and specialized analyses; addresses how to integrate different sorts of data sets and carry out analytical assessment of interrelated "layers" as dynamic constituents of landscape; considers implications of landscape studies in modern policy and management. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 214B

**ANTHRO 115. The Social life of Human Bones. 3-5 Units.**

Skeletal remains serve a primary function of support and protection for the human body. However, beyond this, they have played a range of social roles once an individual is deceased. The processes associated with exarnation, interment, exhumation and reburial all speak to the place that the body, and its parts, play in our cultural as well as physical landscape. This course builds on introductory courses in human skeletal anatomy by adding the social dynamics that govern the way humans treat other humans once they have died. It draws on anthropological, biological and archaeological research, with case studies spanning a broad chronological and spatial framework to provide students with an overview of social practice as it relates to the human body.

Same as: ANTHRO 215, ARCHLGY 115

**ANTHRO 115A. The Aegean in the Neolithic and Bronze Age. 3-5 Units.**

This course provides a survey of Aegean prehistory (7th-2nd millennium BC), focusing on traditions that were picked up or renegotiated, instead of taking a standpoint that evaluates phenomena as steps leading up to a "state-like" palatial society. It will draw on the region's wealth of data, and will be set within a theoretically informed, problem-oriented framework, aiming to introduce students to current interpretations and debates, mainly through discussion of specific case-studies.

Same as: ANTHRO 215A, ARCHLGY 139, ARCHLGY 239

**ANTHRO 115B. Peoples and Cultures of Ancient Mesoamerica. 5 Units.**

This course engages with the world of ancient Mesoamerica, focusing on the Mixtec, Aztec, Maya, Zapotec, Chichimec, Olmec, and Teotihuacan peoples. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, how interpretations of daily life in the ancient Mesoamerican world are formulated, and how these interpretations are marshaled in contemporary politics and policies. We explore different scales of Mesoamerican communities, and compare the diverse material culture and lifeways represented in Mesoamerica at different time periods. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 215B

**ANTHRO 116. Data Analysis for Quantitative Research. 5 Units.**

This course allows graduate and advanced undergraduate students in archaeology and anthropology to acquire practical skills in quantitative data analysis. Some familiarity with basic statistical methods is useful but not assumed; the structure of the course will be flexible enough to accommodate a range of student expertise and interests. Topics covered include: statistics and graphics in R; database design, resampling methods, diversity measures, contingency table analysis, and introductory methods in spatial analysis.

Same as: ANTHRO 216

**ANTHRO 116C. Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America. 5 Units.**

What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural collapse, and assimilation, the relationships between Native Americans and American society. Focus is on three themes leading to in-class moot court trials: colonial encounters and colonizing discourses; frontiers and boundaries; and sovereignty of self and nation. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popular culture.

Same as: ANTHRO 16, ARCHLGY 16, NATIVEAM 16

**ANTHRO 117. Thinking Through Animals. 5 Units.**

The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts. This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of "animals as social actors" is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognised as a viable mechanism for understanding our cultural and economic past. The module presents an overview covering a broad timespan from the Pleistocene to the modern day. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.

Same as: ANTHRO 217

**ANTHRO 118. Heritage, Environment, and Sovereignty in Hawaii. 4 Units.**

This course explores the cultural, political economic, and environmental status of contemporary Hawaiians. What sorts of sustainable economic and environmental systems did Hawaiians use in prehistory? How was colonization of the Hawaiian Islands informed and shaped by American economic interests and the nascent imperialism of the early 20th century? How was sovereignty and Native Hawaiian identity been shaped by these forces? How has tourism and the leisure industry affected the natural environment? This course uses archaeological methods, ethnohistorical sources, and historical analysis in an exploration of contemporary Hawaiian social economic and political life.

Same as: EARTHSYS 118

**ANTHRO 118A. Digital Heritage: Bringing the Past Online with the Chinese American Historical Museum. 5 Units.**

Interpreting the past is no longer just for people like historians and archaeologists, and it's no longer confined to the pages of books. More and more, community-based organizations are gathering stories and perspectives from everyday people, and they're putting them out for the world to see online. With these big changes, what will be the future of thinking about the past? In this course, students will work through the dynamics of digital heritage through readings, discussion, and original research. The course centers around artifacts unearthed at the Market Street Chinatown in San Jose. Each student will analyze and gather stories relating to a single artifact in order to contribute to a multimedia exhibit for the Chinese American Historical Museum in San Jose. Class time will be devoted both to discussion and to work on artifact-based projects, and will also include a fieldtrip to the museum and collaboration time with members of the Chinese Historical and Cultural Project.

Same as: ASNAMST 118A, CSRE 118A

**ANTHRO 119. Zooarchaeology: An Introduction to Faunal Remains. 5 Units.**

As regularly noted, whether historic or pre-historic, animal bones are often the most commonly occurring artefacts on archaeological sites. As bioarchaeological samples, they offer the archaeologist an insight into food culture, provisioning, trade and the social aspects of human-animal interactions. The course will be taught through both practical and lecture sessions: the hands-on component is an essential complement to the lectures. The lectures will offer grounding in the main methodological approaches developed, as well as provide case-studies to illustrate where and how the methods have been applied. The practical session will walk students through the skeletal anatomy of a range of species. It will guide students on the identification of different parts of the animal, how to age / sex individuals, as well as recognize taphonomic indicators and what these mean to reconstructing post-depositional modifications.

Same as: ANTHRO 219, ARCHLGY 119

**ANTHRO 119A. Spirits, Selves, and the Social: Histories of Thinking about Religion. 5 Units.**

Why do humans worship gods, spirits, and ancestors? What roles do religion, witchcraft, and magic play in everyday life? How does religious action become meaningful in a particular context? In what sense can we know about the religious experiences of others? Focus is on approaches to religion throughout anthropology's history. Each student will carry out a mini-ethnography on a religious community of their choice. Students will not be required to have any previous knowledge in anthropology or the study of religion.

Same as: RELIGST 119X

**ANTHRO 120B. Indian Popular Culture. 5 Units.**

This course will explore key topics in contemporary India through an analysis of its popular culture. Bollywood and Kollywood films, Hindi soap operas and reality shows, vernacular music in Bihar, Tamil pulp fiction, matchboxes from Bangalore, clothing styles of Kerala college students, advertising in Mumbai, and cell phones used in Varanasi will all be brought together to help us shape an image of India as complex, contested, and changing. As an anthropology course, we will focus on the consumption of these media and discuss what they do in the world. Looking at both the source material itself and the way in which it is used, we will explore topics such as: nationalism, gender and sexuality, middle class aspiration, globalization, neoliberal consumerism, and the postcolonial condition.

**ANTHRO 121. Language and Prehistory. 4-5 Units.**

Language classification and its implications for human prehistory. The role of linguistic data in analyzing prehistoric populations, cultures, contact, and migrations. Comparison of linguistic and biological classifications. Reconstruction, proto-vocabularies, and culture. Archaeological decipherment and the origins and evolution of writing. Archaeological and genetic evidence for human migrations. (DA-A; HEF II,III).

Same as: ANTHRO 221

**ANTHRO 121A. Hip Hop, Youth Identities, and the Politics of Language. 3-4 Units.**

Focus is on issues of language, identity, and globalization, with a focus on Hip Hop cultures and the verbal virtuosity within the Hip Hop nation. Beginning with the U.S., a broad, comparative perspective in exploring youth identities and the politics of language in what is now a global Hip Hop movement. Readings draw from the interdisciplinary literature on Hip Hop cultures with a focus on sociolinguistics and youth culture. Same as: AFRICAAM 121X, AMSTUD 121X, CSRE 121X, EDUC 121, LINGUIST 155

**ANTHRO 121B. Vital Infrastructures: The Foundations of Modern Life. 5 Units.**

Infrastructure describes the material grids that exist beneath society, economy and culture: the foundation upon which everyday life rests and depends. While meant to remain invisible, out of sight and out of mind, diverse infrastructures have become lightning rods for political protest and demands for justice, rights, and a good life. From anti-dam activism in India, to campaigns for clean drinking water in South Africa, to transportation networks in urban Bolivia, and to the energy networks of the United States, infrastructure reveals the connections and disconnections of the globalized world. Taking an anthropological perspective, this course asks: why has infrastructure taken on vital importance to the modern nation-state? What do infrastructural histories reveal about the vital political ideals like freedom, development, equality, and nature? When does infrastructure take on a life of its own, undermining even the best laid plans? What happens when infrastructures fail? Through multi-disciplinary readings and exploratory assignments, this course challenges students see the world beneath their feet in new ways and to trace the material connections that define and sustain modern life itself.

**ANTHRO 122A. Race and Culture in Mexico and Central America. 3-5 Units.**

This course addresses the role of racial ideologies in the historical configuration of multiple hierarchies of inequality that determine the place of everyone in society in Mexico and Central America. Based on readings from the humanities and social sciences, we will discuss the cultural and racial politics of authoritarianism and indigenous insurgency, emphasizing narratives of laziness and vagrancy that have been central to the discipline of labor that shapes local processes of regressive modernization and nation building. We will analyze the hegemony of dictatorship as political necessity, the relationship between local racisms and global Whiteness, and the emergence of new local and transnational contestations to the multiple hierarchies that determine the place of everyone in society.

Same as: ANTHRO 222A

**ANTHRO 122C. Research in Maya Hieroglyphic Writing. 1-2 Unit.**

Workshop. Current issues in the decipherment and analysis of Maya hieroglyphic writing and literacy.

Same as: ANTHRO 222C

**ANTHRO 123. Readings in Linguistic Anthropology. 2 Units.**

One or two major related works on language in its cultural context. Works for 2007-08 involve attempts to correlate linguistic and non-linguistic data for analysis of prehistoric human contact and migrations. May be repeated for credit.

Same as: ANTHRO 223

**ANTHRO 124. Maya Mythology and the Popol Vuh. 3-5 Units.**

The mythology and folklore of the ancient Maya, emphasizing the relationship between the 16th-century Quiché Maya mythological epic *Popol Vuh* (Book of the Council) and classic lowland Maya art, architecture, religion, and politics. General Mesoamerican mythology. Anthropological and other theories of mythology. Class participates in the creation of a web project on the *Popol Vuh*.

**ANTHRO 124N. Maya Mythology and the Popol Vuh. 3 Units.**

Shortly after the Spanish conquest of Highland Guatemala, an anonymous Quiché Mayan noble translated a sacred text of his people, Popol Vuh (Council Book), and committed the Mayan to Spanish letters. His book, with its account of creations and destructions of the world by the gods, the descent of the Hero Twins into the Underworld and their ball games with its lords, and a history of the ruling clan of the Quiché state, is a grand apology for the values and world of the Quiché Maya, but it is no drab political treatise. It relates the daily life of the Quiché to their natural world (including the skies) and to the underworld journey that they expected in death, and is a compilation crafted to instruct and entertain at several levels of interpretation, from those of sophisticated scholars to children. In the 1970s, we began to realize that many of the ceramic vessels unearthed from the tombs of the Classic Lowland Maya, originally intended to accompany their owners on their perilous journey through the underworld, actually illustrate scenes described in Popol Vuh. More recently, it has been possible to relate the mythology to texts newly deciphered from Mayan inscriptions as well as vases. The Popol Vuh has thus been shown to be a survival of a much older and more widespread culture. Like most survivals, though, it had been re-crafted in the image of the contemporary Quiché culture. When are mythological similarities sufficient to imply relatedness of the stories through common descent? How can mythical similarities imply universals of mind and culture? How have myths been used as state political instruments? This is an exciting combination of archaeology, linguistics, cultural anthropology, art, and literature. Students will analyze the text critically, examine Mayan art, and help develop a web site. No prerequisites.

**ANTHRO 125. Language and the Environment. 4-5 Units.**

Lecture course on vocabulary and grammar as keys to peoples' understanding and use of the environment. Ethnobotany, ethnobiology, and ethnosemantics in the analysis of the language of place, plants and animals, the earth, the body, and disease. Terminological gaps and gluts and what they imply. Language as a strategic resource in environmental management. Language contact and conflict in the modern global environment, with particular attention to the vocabularies of capitalism and property. Language extinction and its environmental implications. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 225

**ANTHRO 125A. International Criminal Courts and the Question of Global Justice. 3-5 Units.**

What are the cultural, legal and political implications of the global extrapolation of our understanding of the rule of law, in general, and criminal law, in particular? This course will look at the theory and practice of the new international criminal courts, the criminalization and individualization (or humanization) of international law, and the broader system of cosmopolitan order that it presupposes, with special reference to how it differs from earlier projects for international order (international law, war crimes, human rights, and the UN system). Case studies will follow the historical development of the key institutions, individuals and legal precedents that have been determinative for the new international criminal jurisdiction, including Nuremberg and Tokyo, the ad hoc (Yugoslavia, Rwanda) and hybrid tribunals (Liberia, Sierra Leone, Lebanon, Cambodia) and now the International Criminal Court (DRC, northern Uganda, Sudan, Libya and Kenya).

**ANTHRO 125S. International Criminal Courts and the Question of Global Justice. 3 Units.**

What are the cultural, legal and political implications of the globalization of our understanding of the rule of law, in general, and criminal law, in particular? This course will look at the theory and practice of the new international criminal courts, the criminalization and individualization (or humanization) of international law, and the broader system of cosmopolitan order that it presupposes, with special reference to how it differs from earlier projects for international order (international law, war crimes, human rights, and the UN system). Case studies will follow the historical development of the key institutions, individuals and legal precedents that have been determinative for the new international criminal jurisdiction, including Nuremberg and Tokyo, the ad hoc (Yugoslavia, Rwanda) and hybrid tribunals (Liberia, Sierra Leone, Lebanon, Cambodia) and now the International Criminal Court (DRC, northern Uganda, Sudan, Libya and Kenya).

**ANTHRO 126. Urban Culture in Global Perspective. 5 Units.**

Core course for Urban Studies majors. We will study urban space both historically and cross-culturally. Urban Studies, by definition, is an interdisciplinary field, where the methodological approaches draw upon a diverse set of analytic tools. Disciplines that occupy a prominent place in this class are geography, cultural anthropology, sociology, history, media studies, and literature. In this context, we will discuss the importance of cities around the world to the economic, cultural, and political well-being of modern societies and examine how forces such as industrialization, decentralization, and globalization affect the structure and function of cities.

Same as: URBANST 114

**ANTHRO 127. City and Sounds. 5 Units.**

How do people experience modern cities and urban public cultures through auditory channels? How does sound mediate and constitute urban space? How to listen to and write about culture through sound. Students carry out narrative interviews and sound fieldwork in the Bay Area. Readings include urban anthropology, semiotics, art history, social studies of science and technology, media studies, and musicology.

**ANTHRO 127A. Cities and the Future: Utopias, Dystopias, and Other Urbanisms to Come. 3 Units.**

What sort of futures are being imagined for the cities of the twenty-first century? An interdisciplinary seminar, this course will critically analyze how the future of cities, and the cities of the future, are being thought about and acted upon in the present. It is designed for graduate students and advanced undergraduates with experience in the social sciences and humanities and who also have a keen interest in urban studies. Its primary objective is to develop sophisticated ways of thinking about the future of cities, since doing so has real significance for the kind of city we want to, and eventually will, ourselves inhabit.

**ANTHRO 128. Visual Studies. 5 Units.**

Drawing on anthropology, art history, cultural studies, and other fields, this course explores how and why one might want to think critically about the politics of visibility, social imagination, the politics of making and consuming images and things, iconophilia and iconophobia, the classification of people and things into artists and art, and cultural production more generally.

**ANTHRO 128A. The Boundaries of Humanity: Humans, Animals and Machines in the Age of Biotechnology. 3-4 Units.**

Advances in research and technology are blurring the boundaries between humans, animals, and machines, challenging conventional notions of human nature. Seminar explores the question of what it now means to be human and the personal, social, and ethical implications of our advancing technologies through the lens of various disciplines, including anthropology, cognitive psychology, neuroscience, genetics, evolutionary biology, biotechnology, and artificial intelligence. Includes guest speakers from fields and industries where important questions are being raised.

**ANTHRO 130A. Interpreting Space and Place: An Introduction to Mapmaking. 5 Units.**

How mapmaking, geographical information systems (GIS), and spatial tools can be applied in social research. Qualitative and quantitative approaches in the use of geospatial information. Methodologies and case examples.

**ANTHRO 130B. Introduction to GIS in Anthropology. 5 Units.**

How GIS and spatial tools can be applied in social research. Case studies and student projects address questions of social and cultural relevance using real data sets, including the collection of geospatial data and building of spatial evidence. Analytical approaches and how they can shape a social and cultural interpretation of space and place.

Same as: ANTHRO 230B

**ANTHRO 130D. Spatial Approaches to Social Science. 5 Units.**

This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.

Same as: ANTHRO 230D, POLISCI 241S, URBANST 124

**ANTHRO 131. Genes and Identity. 5 Units.**

In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and ethnographies. We will explore several case studies where the use of DNA markers (either as proof of heritage or disease risk) has spawned cultural movements that are biosocial in nature. Examples include legal and political analyses of African ancestry testing as evidence in slavery reparations cases, debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, considerations on whether people with genetic links to Jewish groups should have a right of return to Israel, close readings of The U.S. Food and Drug Administration's crackdown on personal genomics testing companies (such as 23andMe), examinations of genetic identity politics in health disparities funding and orphan disease research, inquiries into new social movements organized around gene-based definitions of personhood, and civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects. Students will engage in a short observational pilot ethnographic project that allows them to further explore issues from the course for their final paper.

Same as: AFRICAAM 131, CSRE 131

**ANTHRO 132. Religion and Politics in the Muslim World. 5 Units.**

This course provides an ethnographic examination of religion and politics in the Muslim world. What is the role of Islam in the political life of modern Muslim societies? Conversely, how do modern political powers shape and constrain the terms of religious life? This course takes an anthropological perspective on the study of Islam: our investigations will not focus on the origins of scriptures and doctrines but rather on the use of religious texts and signs in social context and on the political significance of ritual and bodily practices. A major aim of the course is provide students with analytical resources for thinking critically about the history and politics of modern Muslim societies, with a particular focus on issues of religious authority, gender and sexuality, and the politics of secularism.

**ANTHRO 132B. Islam Law in Muslim and Non-Muslim Societies. 3-5 Units.**

In this course, students will engage with scholarly material that demonstrates the multiple and varying ways in which Islam is invoked as a legal discourse in Muslim and Non-Muslim societies. In this course, we look at Islam not merely as being in the domain of legislation and adjudication, but as a cultural object; an important signifier in politics, for the state to enforce itself, as well as a technology for people's strategic use. The point of this course is therefore to consider how Islam operates in legal contexts as a 1) discourse of power and of strategy (at personal and political levels) and 2) as a discourse of identity that concerns issues of ethics, rights, gender, kinship, class and nation.

**ANTHRO 133A. Anthropology of the Middle East. 3-5 Units.**

This course examines social, political, and religious dimensions of various Middle Eastern societies. Key topics include the development of the modern nation-state, the Islamic revival, human rights, and discourses of democracy. Course materials include ethnographic studies, novels, and films, which provide a rich contextualization of social life and cultural politics in the region.

Same as: CSRE 133A

**ANTHRO 133B. Covering Islam: On What We Learn to See, Think and Hear about Islam & Muslims. 3-5 Units.**

In this course, students will think critically about how knowledge about Islam, Muslims, and Muslim Societies is produced and circulated. As a class, we will consider why and how certain kinds of ideas about Islam and Muslims become representative (i.e., authoritative discourse) while others ideas do not. This is an interdisciplinary class; course material will draw on readings from anthropology, literary criticism, history, sociology and media and cultural studies. We will also be engaging with other kinds of material, including news articles, editorials, documentaries, and films.

Same as: AFRICAST 133B, CSRE 133B

**ANTHRO 134. Object Lessons. 5 Units.**

Human-object relations in the processes of world making. Objectification and materiality through ethnography, archaeology, material culture studies, and cultural studies. Interpretive connotations around and beyond the object, the unstable terrain of interrelationships between sociality and materiality, and the cultural constitution of objects. Sources include: works by Marx, Hegel, and Mauss; classic Pacific ethnographies of exchange, circulation, alienability, and fetishism; and material culture studies.

Same as: ANTHRO 234

**ANTHRO 134B. Conflict and Change in the Middle East. 5 Units.**

Following the Arab Spring, the hope for political and social change has been widely raised and celebrated in the Middle East. This hope, however, has been shattered alongside the recent cycles of violence and conflict in different parts of the region, from Syria and Iraq to Egypt. This course examines political violence, change, and boundary making in the modern Middle East. By taking a historical and anthropological look at the political conflict and change, this course will explore how particular political, economic, and social narratives, encounters, and contradictions have accompanied the conflict and change in the region. The course will focus on the cases from Turkey, Iraq, Syria, Iran, Egypt, Morocco, and Israel/Palestine.

**ANTHRO 135. Cultural Studies. 5 Units.**

Identity, community, and culture; their interactions and formation.

Same as: ANTHRO 235

**ANTHRO 135A. The Anthropology of Security. 3-5 Units.**

This seminar begins by outlining the main theoretical and empirical challenges in the areas of surveillance studies and security studies. The seminar provides a space wherein students will be able to discuss these inter-disciplinary areas and develop their own Anthropology-informed perspectives. The seminar then discusses the work of Anthropologists who through their ethnographic and theoretical work have helped developed and important and emergent area: *The Anthropology of Security*. Areas covered include, inter alia, national security, security and war, biometrics, gated-ness, and environmental and bio-security threats. Same as: ANTHRO 235A

**ANTHRO 135H. Conversations in CSRE: Case Studies in the Stanford Community. 1-2 Unit.**

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

Same as: CSRE 135H

**ANTHRO 135I. CSRE House Seminar: Race and Ethnicity at Stanford. 1-2 Unit.**

Race, ethnicity, gender, and religion using the tools, analytical skills and concepts developed by anthropologists.

Same as: CSRE 135I

**ANTHRO 136. The Anthropology of Global Supply Chains. 5 Units.**

This upper-division undergraduate seminar focuses on recent studies by anthropologists and scholars in related disciplines on global supply chains and consumption practices. The goal of the course is to assess concepts and methods for integrating a cultural analysis of transnational production with a cultural analysis of transnational consumption. We will review ethnographic studies of the production and consumption of commodities linked by transnational and global networks. The class will then pursue collaborative research on the global production, distribution, and consumption of a selected commodity. Prerequisite: junior or senior standing and previous coursework in cultural anthropology or permission of instructor.

Same as: ANTHRO 236

**ANTHRO 137. The Politics of Humanitarianism. 5 Units.**

What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issue generis a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical or political stakes *or* that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the *cause* of humanity. In the early years of humanitarian intervention, political neutrality was a key principle; it has now come under ever greater analytical and political scrutiny. We will examine the reasons for the politicization and militarization of aid – be it humanitarian aid in natural disasters or political crises; development programs in the impoverished south (*the Third World*), or peace-keeping. We will end with a critical exploration of the concept of human rights, humanity, and personhood. The overall methodological aim of the course is to demonstrate what insights an ethnographic approach to the politics, ethics, and aesthetics of humanitarianism can offer.

Same as: ANTHRO 237

**ANTHRO 137A. Traditional Medicine in the Modern World. 3 Units.**

This class considers "traditional medicine" in contemporary times. We will survey major systems of traditional medicine while considering their broader social, cultural, and political contexts. The class will study the symbolic uses of traditional medicine, the role of traditional medicines in early modern medical knowledge, the place of indigenous knowledge in bioprospecting, health-seeking behavior and medical pluralism, and the WHO's approach to traditional medicine and how it has affected government health policies. The class emphasizes a critical approach to the concepts of tradition and modernity, and an understanding of traditional medicine as a changing, flexible, and globalized category of healing.

**ANTHRO 138. Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise. 5 Units.**

This course will explore historical as well as current market transformations of medical ethics in different global contexts. We will examine various aspects of the research enterprise, its knowledge-generating and life-saving goals, as well as the societal, cultural, and political influences that make medical research a site of brokering in need of oversight and emergent ethics. This seminar will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state, the media, and certain publics in shaping scientific research agendas. We will also examine how structural violence, poverty, global standing, and issues of citizenship also influence issues of consent and just science and medicine.

Same as: ANTHRO 238, CSRE 138

**ANTHRO 138A. Conflict and Reconciliation in Africa: International Intervention. 3-5 Units.**

This course will explore recent debates on the causes and structural terms of large-scale violence in Africa in the context of key contemporary models for reconciliation and transitional justice. Discussions will emphasize the broader international legal and political order each presupposes, and specifically whether their underlying reconstitution of rights and subjectivities are compatible with cultural, political or legal diversity. A historical assessment of the predominating Nuremberg paradigm of transitional justice structured around international military intervention and criminal trials based on international criminal courts will be contrasted with other regional models that engage with the challenges of the political reconciliation of formerly divided political communities. The necessity of understanding the specificities of both global and local historical and structural contexts will be examined with respect to various proposals for how to balance of balance concerns for both justice and peace. Readings will cover case studies from South Africa, Rwanda, DRC, northern Uganda, Sudan (including Darfur and South Sudan), Libya, Mali, and CAR.

Same as: AFRICAST 138, AFRICAST 238, ANTHRO 238A

**ANTHRO 138B. Urban Africa. 5 Units.**

This course explores the production of urban space and the social, cultural, and political significance of cities in sub-Saharan Africa. Topics include: architecture and the built environment; urban planning and colonial public health; migration and rural-urban dynamics; youth, politics, and popular culture; violence, policing, and the privatization of public space; (in)formality in housing, transportation, and employment; class, gender, and mobility in the public sphere; urban citizenship and *right to the city* movements; gentrification, tourism, and the commodification of poverty; and efforts to (re)theorize postcolonial African cities. Readings are drawn from anthropology, history, urban studies, and geography. Discussion will situate struggles over urban forms and the contours of everyday life within broader trends in the political economy of the region from the late colonial period to the present.

Same as: AFRICAST 138B, URBANST 139

**ANTHRO 139. Ethnography of Africa. 5 Units.**

The politics of producing knowledge in and about Africa through the genre of ethnography, from the colonial era to the present. The politics of writing and the ethics of social imagination. Sources include novels juxtaposed to ethnographies.

Same as: ANTHRO 239

**ANTHRO 139A. Forgotten Africa: An Introduction to the Archaeology of Africa. 5 Units.**

This course provides an introductory survey of Africa's past from prehistoric times through the 19th-century. The course will challenge Western depictions of Africa as a dark continent "without history" by highlighting the continent's vibrant cultures, sophisticated technologies, complex political systems and participation in far-reaching commercial networks, all predating European colonization. In tandem, the course explores how these histories are mobilized in the production of negative ideas about Africa in contemporary discourse.

Same as: AFRICAST 139A, ARCHLGY 139A

**ANTHRO 140. Ethnography of Africa. 3 Units.**

This course is an exploration of some central themes and issues in contemporary African society through close readings of a selection of recent ethnographies. It aims to understand Africa as a place where many of the most challenging issues of a modern, globalized world are being thought about in exciting and creative ways, both by ethnographers and by the people about whom they write. Among the key issues that the course seeks to address are: the history and politics of colonial domination; the ways that medicine and government intersect; the increasing use of humanitarian frames of reference in understanding African realities; the changing meanings of HIV/AIDS, sex, and love; and the role of mass media in enabling cultural and imaginative production to take form.

**ANTHRO 140A. Ethnographic Archaeologies. 4-5 Units.**

How have ethnographic and archaeological methods been combined in anthropological research? What methodological and theoretical implications do these kinds of projects generate? Seminar topics will include ethnoarchaeology, ethnographies of archaeological practice, public archaeology and heritage ethics. Lecture and discussion.

Same as: ANTHRO 240A, ARCHLGY 137

**ANTHRO 141A. Science, Technology, and Medicine in Africa. 4 Units.**

Africa is often depicted as a place simply in need of science, technology, and medicine. This class will introduce students to the culture and politics of science in sub-Saharan Africa: to the diverse and rich traditions, histories and contemporary predicaments of knowledge practices on the continent. We will consider the role of science in the colonial period, covering the expansion of European empires into Africa and the forms of technical knowledge that colonial governments encountered, especially as they relate to health and the environment. We will examine the role of science at African independence and in international development work. Finally, we will discuss the technopolitics of medical training and research, resource extraction, and the internet in contemporary Africa. This course will provide some important background for those with an applied interest in Africa as well as provide an introduction to a growing area of scholarship. Course materials include historical and ethnographic works, as well as primary sources and films emphasizing scientific practice in the context of geopolitical relations of power and inequality.

Same as: AFRICAST 141A

**ANTHRO 141B. The Anthropology of Bits and Bytes: Digital Media in the Developing World. 5 Units.**

Recent historical developments, including the widespread adoption of the mobile phone across Africa and Southeast Asia, the Arab Spring, and the rise of technology sectors in cities such as Nairobi, Bangalore, and Accra, have turned digital technology in the "global South" into a topic of growing popular interest and increasing scholarly concern. This course attempts to make sense of these developments by interrogating diverse theoretical approaches to digital technology and assessing what these approaches reveal and obscure in specific cases of technology adoption in Africa, Asia, and Latin America. Students will be introduced to an overview of scholarly approaches to digital technology from anthropology, science and technology studies (STS), critical theory, geography, and communications studies. We will analyze the relative utility of these explanations through case studies of specific instances of technological production and/or use. These case studies will be drawn from both secondary texts and primary materials such as social media, digital maps, videos, blogs, and news reports. At the same time, we will examine how digital discourses and practices both draw upon and inform broader issues of context-specific political and cultural importance. Major topics to be discussed include "development" and the State, civil society and the "public sphere," youth culture, gender politics, mobility, and globalization. Students will come away from the course with a strong understanding of the major issues at stake in the increasing digitalization of the "global South," and the socio-cultural, political, and technical debates that frame them.

**ANTHRO 142A. Youth in the Global South: Beyond Active Subjects and Passive Objects. 5 Units.**

In this course, we will explore the wide variety of ways youth has been culturally constructed (as well as dynamically experienced) across the Global South. Youth is an enduring and powerful concept for understanding competing forms of cultural contestations and political transformations. In the wake of global economic inequality, political instabilities and the emergence of new indigenous movements and social demands, youth is simultaneously associated with discourses over "crisis" and "possibilities."

**ANTHRO 143. Title Social Change in Contemporary China: Modernity and the Middle Kingdom. 4-5 Units.**

Over the last twenty years, residents of the People's Republic of China have experienced dramatic changes in nearly every facet of life. This undergraduate seminar introduces students to contemporary China through an examination of various types of social transformation. We will analyze how PRC residents of different backgrounds are confronting such processes as economic liberalization, migration, kinship transformation, sexual commodification, media proliferation, industrialization, and transnationalism? Priority is placed on reading, discussing and assessing research that uses qualitative methods and that situates political economy in dialogue with lived experience.

Same as: ANTHRO 243

**ANTHRO 143B. Anthropology and International Development. 3-5 Units.**

International development as a set of projects, policies, and controversies has been a major force in shaping the world over the past seventy years. Throughout, the discipline of anthropology has been involved both as participant and as critical observer. After a brief overview of development theory and history, this course will discuss (1) the ways in which anthropology has contributed to development projects and ideas and (2) how the discipline has critiqued development practice over the past three decades. What has anthropology offered to those who work towards social and economic development and how has development shaped the discipline itself? Readings will include detailed ethnographic and historical case studies from across the developing world.

**ANTHRO 144A. Practice of Everyday Life in Kazakhstan: From Nomadism to Modernity. 3-5 Units.**

An interdisciplinary introduction to the historically nomadic land of Kazakhstan, its peoples and their lifestyles & the practice of everyday life. Ranked as the ninth largest country in the world, Kazakhstan is also the world's largest landlocked country; its territory is greater than Western Europe: it stretches from the fringes of Europe to the borders of Mongolia and China. The seminar surveys language and society, traditional economics and customary law, rituals and folk customs, local dwelling, craft and art, the cultural panorama, the historical relationship between sedentary and nomadic peoples as well as new approaches to the study of nomads in modernity. Speaking of the present time, we will follow the changing nomads in a changing world. The instructor is going to base, to the extent possible, on the extremely rich fieldwork data recently discovered in Kazakhstan -- the data is yet little known in the West. The seminar will make extensive use of audio-visual materials and films.

Same as: REES 244A

**ANTHRO 144B. The Buddhist Body in East Asia: Charisma, Gender, and the Gift of the Body. 5 Units.**

This course introduces Buddhist practices and texts of embodiment as a subject of the anthropology of the body. We draw on research in social/cultural anthropology, history, and religious studies, and examine a selection of approaches to the Buddhist body: the body of power in Buddhist charisma, the gender of the bodhisattva's and monastic body, the techniques of the body in meditation and martial arts, healing and cultivation, and the gift of the body in bioethics and medical education. We draw on examples in different traditions of Buddhism in a range of societies with a special focus on Chinese Buddhism.

Same as: ANTHRO 244B

**ANTHRO 145. Race and Power. 5 Units.**

This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the construction of race as a literally made phenomenon, where historical, colonial, bodily, market, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race and capital.

Same as: ANTHRO 245, CSRE 145F

**ANTHRO 145B. Reinventing the Other: Greeks, Romans, Barbarians. 3-5 Units.**

Ancient ethnography was a highly conventionalized tradition stretching from "the father of History," Herodotus, to the last historian of the ancient world, Procopius. We will read selections of these two authors' works as well as of Sallust, Tacitus, and lesser known ones. Within various theoretical frameworks--rhetorical, anthropological, structuralist we will reconstruct the shifting images of The Other, explore what they tell us about their producers, and reflect on what ancient ethnography contributed to its modern descendant.

**ANTHRO 146A. Anthropology of Youth. 5 Units.**

This course will be a survey of classical texts and contemporary research on youth and generations. We will explore the historical and cultural construction of 'youth' and youth practices across regions over time. We will pay special attention to the organization of contemporary capitalism, its effect in producing marginality and exclusion, and issues underlying youth political movements.

**ANTHRO 146B. Global Heritage, World Heritage: History and Intersections in Contemporary Society. 5 Units.**

This Course will provide an overview of global heritage by focusing on the UNESCO World Heritage Program, which is based on an international treaty, the 1972 Convention Concerning the Protection of the World Cultural and Natural Heritage. The first part of the course will provide an historical overview on the development of the international preservation movements, the second part of the course will concentrate on how anthropology can contribute to the study of intergovernmental organizations and cultural bureaucracies, the third part and will discuss specific issues related to heritage by providing case studies from the World Heritage. This course will provide theoretical and empirical interpretations of contemporary issues in heritage and will give students a critical understanding of the complexities related to various uses of past in the present.

Same as: ARCHLGY 146B

**ANTHRO 147. Nature, Culture, Heritage. 5 Units.**

Seminar. Shared histories of natural and cultural heritage and their subsequent trajectories into the present. How thought about archaeological sites and natural landscapes have undergone transformations due to factors including indigenous rights, green politics, and international tourism. The development of key ideas including conservation, wilderness, sustainability, indigenous knowledge, non-renewability and diversity. Case studies draw on cultural and natural sites from Africa, the Americas and Australia.

Same as: ANTHRO 247

**ANTHRO 147A. Folklore, Mythology, and Islam in Central Asia. 3-5 Units.**

Central Asian cults, myths, and beliefs from ancient time to modernity. Life crisis rites, magic ceremonies, songs, tales, narratives, taboos associated with childbirth, marriage, folk medicine, and calendrical transitions. The nature and the place of the shaman in the region. Sources include music from the fieldwork of the instructor and the Kyrgyz epoch *Manas*. The cultural universe of Central Asian peoples as a symbol of their modern outlook.

Same as: REES 247A

**ANTHRO 147B. World Heritage in Global Conflict. 5 Units.**

Heritage is always political, it is typically said. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has over 1000 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally, but has found it's own history increasingly entwined with that of international politics and violence.

Same as: ANTHRO 247B, ARCHLGY 147B

**ANTHRO 148. Health, Politics, and Culture of Modern China. 4-5 Units.**

One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.

Same as: ANTHRO 248

**ANTHRO 149. South Asia: History, People, Politics. 5 Units.**

The South Asian subcontinent (comprising of India, Pakistan, Bangladesh, Nepal, Bhutan and Sri Lanka) is one of the most diverse and densely populated regions in the world and increasingly prominent in new global political and cultural economies. South Asia has also provided the inspiration for cutting edge theories about the colonial state, postcolonial studies, democracy, popular culture, and religious conflict. The course will provide an overview of major historical events and social trends in contemporary South Asia and focus on themes such as gender, religion, caste, migration and movement, new technologies, the urban and rural, the state, and new forms of consumption among others. Thus, the course will give students historically and theoretically informed perspectives on contemporary South Asia, as well as how to apply insights learned to larger debates within the political and social sciences.

Same as: ANTHRO 249

**ANTHRO 149A. Cities and Citizens in the Middle East. 4 Units.**

This course will explore historical formation of cities and citizens in the Eastern Mediterranean since the 19th century. We will explore urban development, economy, social classes and local politics with a focus Egypt and Turkey and in particular two world-historical cities, Cairo and Istanbul. Drawing on history, cultural anthropology, geography and sociology disciplines, we will examine how urban space in Egypt and Turkey have reconfigured through histories of colonialism, nationalism, developmentalism and globalization. Rural to urban immigration, informality, gendered places, consumption, urban regeneration, local politics and branding the city will be the themes of our discussion. We will study these themes in relation to two main questions: How do spatial changes engender new social practices and redefine cultural difference?; How do power struggles at the intersection of local and global interests shape urban change? It will be of interest for urban studies majors and other students at all levels who would like to study urban struggles and change in Turkey, Egypt, the Middle East and the Global South.

Same as: URBANST 144

**ANTHRO 150. The Ordinary: The History of a Concept. 5 Units.**

The ordinary has today acquired something like a cultic status in contemporary culture. `Ordinary` citizens are the touchstone and essence of political democracy; the holy grail of effective marketing, the byword for earthy ethical judgment. In social science, the ordinary has blended in with the `normal` and the statistical mean. In Anthropology, ordinary life has all but replaced `cultural practice` as the epistemic gold standard of evidence. But this was not always so, and the ordinary has many, varied and contradictory meanings across the world. This course will (a) trace the historical emergence of the ordinary as a central ideological and metaphysical concept in modern thought and practice; (b) trace how the ordinary and the everyday have acquired unprecedented authority in anthropology; (3) trace the various meanings and connotations of `the ordinary` in different socio-historical contexts from Asia, Africa and Euro-America. The literature will consist of ethnographies, and works of philosophical and historical scholarship.

Same as: ANTHRO 250

**ANTHRO 150A. Minaret and Mahallah: Women and Islam in Central Asia. 3-5 Units.**

Introduction to women's culture and art in Muslim countries of Central Asia. Women, bearers of family rites and folklore, are the key figures in transmission of traditional culture and guardians of folk Islam. Women helped to keep the continuity of Islamic education in Central Asia during the harsh times of Communist dominance. The whole wealth of women's oral tradition will be demonstrated and examined to the extent possible. The course will make broad use of audio-visual materials.

Same as: FEMGEN 150A, REES 250A

**ANTHRO 151. Women, Fertility, and Work. 5 Units.**

How do choices relating to bearing, nursing, and raising children influence women's participation in the labor force? Cultural, demographic, and evolutionary explanations, using crosscultural case studies. Emphasis is on understanding fertility and work in light of the options available to women at particular times and places.

Same as: ANTHRO 251, HUMBIO 148W

**ANTHRO 151A. Contemporary Chinese Society Through Independent Documentary Film. 3-5 Units.**

An overview of social issues in contemporary China as seen through its emerging independent documentary film movement. Topics covered include representations of history, political power and accountability in the reform era, human rights, urbanization, the environment, homelessness and inequality, sexualities, addiction, and the role of media in society. Each viewing is accompanied by readings in media theory or the anthropological/sociological study of contemporary China. Can be taken with or without research component. Films include English subtitles.

Same as: ANTHRO 251A

**ANTHRO 152. Ritual, Politics, Power. 5 Units.**

Our everyday lives are made up of multiple routines, some consciously staged and imagined and others unconscious and insidious. Anthropologists call these rituals. Rituals shape every aspect of our lives, creating our symbolic universes and governing the most minute of our practices. For early anthropologists and for those interested in religious and symbolic life, rituals and rites were seen as both one of the most universal features of human existence, and, as that which enables us to reflect upon our human existence. A prominent example are that of the *rites de passage* found in every culture, from puberty initiation rites, weddings or funerals, which socially signal the change from one status to another. While initially for anthropologists, rituals marked the difference between the sacred and the profane, soon scholars began to see the ubiquity of ritual and the symbolic in shaping even the most mundane activity such as the structure of a meal and why one is not meant to eat dessert before the main course. The first half of the class examines these different debates surrounding the meaning and effects of rituals and rites. The second half of the class takes these debates to think about the question of power and politics. We return to the question of how our symbolic universes are staged and imagined by us through ritual forms such as the annual Presidential *pardoning the turkey* at Thanksgiving. The question of power however pushes us even further to ask why it is that we obey particular kinds of authority, consent to particular actions, and find ourselves doing things we haven't consciously decided to do. Many have argued that these kinds of political questions about how we respond and are shaped by power have something to do with our symbolic worlds and ritual, from the most obvious (the monarchy) to the most subtle (listening in a classroom). Throughout the course, these abstract questions will be grounded in cross-cultural examples and analysis.

Same as: SOC 156

**ANTHRO 152A. Urban Poverty and Inequality in Contemporary China. 5 Units.**

Experiences of poverty and inequality and their relationship to gender, space development, post-socialism, and globalization. How processes of class-making in China's cities are bound up with transformations in the country's sociopolitical landscape.

**ANTHRO 153A. Population and social trends in Japan. 3-5 Units.**

Anthropological theories and concepts as applied to Japan. Postwar demographic trends. Delayed marriage. Declining nuclear family. Restructuring of education and workplace. Problems for the seniors. Foreign laborers shaking fundamentals of Japan.

Same as: ANTHRO 253A

**ANTHRO 154. Anthropology of Drugs: Experience, Capitalism, Modernity. 5 Units.**

This course examines the significant role of drugs in shaping expressions of the self and social life; in the management of populations, and in the production of markets and inequality. It engages these themes through cultural representations of drugs and drug use, analyses of scientific discourse, and social theory. Topics include: the social construction of the licit and illicit; the shifting boundaries of deviance, disease and pleasure; and the relationship between local markets and global wars.

Same as: ANTHRO 254B, CSRE 154

**ANTHRO 155. Research Methods in Ecological Anthropology. 5 Units.**

The course prepares students for the methodological and practical aspects of doing ecologically oriented, quantitative anthropological field research. The primary goal is to explore what it means to ask anthropological questions in a systematic way. We will focus on understanding what can constitute an interesting question, how to frame a question in way that facilitates investigation, and how to design methods to begin investigating a question. In turn, the course will provide a format to refine research projects in preparation for doing more extensive fieldwork.

Same as: ANTHRO 255

**ANTHRO 156. Japanese Anthropology. 5 Units.**

This is an advanced reading seminar in the field of Japanese Anthropology. It will explore the historical development of the field and the contemporary issues and topics taken up by scholars of Japanese anthropology. Prior knowledge of Japanese language, history, and society is required.

Same as: ANTHRO 256

**ANTHRO 156B. Environment, Nature and Race. 3-5 Units.**

Environment, nature and race: Politics of belonging, exclusion, and embodiment. Scientific and popular understandings of race and ethnicity remain deeply entangled with ideas about "nature" and the "environment". This course will introduce students to some of the many ways that nature, environment, and race have been and remain intertwined, for better or for worse. What does it mean to claim race is "natural"? To what extent is race shaped by environment and vice versa? How are the politics of race linked to the politics of environmentalism? The class will begin with a brief treatment of current critical consensus on the biology of race and the cultural politics of race and nature, and move on to a theoretical discussion of how humans and "nature" interact. From there, the course moves into historical and ethnographic examples of the politics of race and the environment: the racialized and racializing character of particular environments; the ways that racial politics shape natural environments; and the politics of exclusion and belonging in environmental movements. Case studies will be both rural and urban and draw from anthropology, geography, history, and biology. The course will end by considering the recent resurgence of the race concept in biology.

Same as: CSRE 156J

**ANTHRO 160. Social and Environmental Sustainability: The Costa Rican Case. 3-5 Units.**

Seminar focused on issues of tropical sustainability with a particular emphasis on the Osa Peninsula of Costa Rica. Offered in conjunction with the Osa Initiative in the Woodrow Wilson Institute for the Environment, the course highlights issues of human development in the tropics, through such means as agricultural development, ecotourism, conservation efforts, private and indigenous reserves, and mining. The course will draw from diverse disciplines including anthropology, rural sociology, conservation biology, geosciences, history, political science, and journalism. In addition to weekly discussions, students will develop a research paper throughout the term which will be presented to a panel of selected Woodrow Wilson Faculty during the final week of the term.

Same as: ANTHRO 260

**ANTHRO 160A. Tragedy of the Commons: Human Ecology of Communal Resources. 5 Units.**

The "tragedy of the commons" is a classic social dilemma—a situation in which individual interests conflict with collective ones—and key to understanding past, present and future environmental degradation. This course surveys a variety of scientific perspectives on the essence of the tragedy: common property resources will ultimately be destroyed by overexploitation. Major themes include the effects of human population density and social organization on the health and management of commons, self-interest versus collective action, and potential solutions to commons problems. Modern and prehistoric case studies are examined from ecological and evolutionary perspectives.

Same as: ANTHRO 260A

**ANTHRO 161. Human Behavioral Ecology. 3-5 Units.**

Theory, method, and application in anthropology. How theory in behavioral ecology developed to understand animal behavior is applied to questions about human economic decision making in ecological and evolutionary contexts. Topics include decisions about foraging and subsistence, competition and cooperation, mating, and reproduction and parenting.

Same as: ANTHRO 261, HUMBIO 117H

**ANTHRO 161A. Human Ecology: Adaptations to Climate and Climate Change. 5 Units.**

Humans face essentially the same adaptive challenges as all organisms but are unique for having successfully adapted to virtually every environment on Earth. The resulting diversity of phenotypes and cultures—past and present—is key to understanding how interactions with environments shape the economic, social, and cultural lives of hunter-gatherers, pastoralists and agriculturalists. This course surveys the range of human adaptations from an ecological and evolutionary perspective to understand human adaptive capacity and vulnerability to climate change.

Same as: ANTHRO 261A

**ANTHRO 162. Indigenous Peoples and Environmental Problems. 3-5 Units.**

The social and cultural consequences of contemporary environmental problems. The impact of market economies, development efforts, and conservation projects on indigenous peoples, emphasizing Latin America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas.

Same as: ANTHRO 262

**ANTHRO 163. Conservation and Evolutionary Ecology. 5 Units.**

Environmental degradation resulting from human behavior, and what can be done about it. Patterns of interaction between people and environments, and why they vary over time and space. Topics include adaptation and behavior, resource acquisition and utilization, conflicts of interest, collective action problems, conspicuous consumption, waste, land management, and public policy.

Same as: ANTHRO 263

**ANTHRO 163A. Endangered Languages and Language Revitalization. 3-4 Units.**

Languages around the world are dying at such a rapid rate that the next century could see half of the world's 6800 languages and cultures become extinct unless action is taken now. This course looks at how and why languages die, and what is lost from a culture when that occurs. We will investigate how this trend can be reversed by methods of language documentation and description, the use of innovative technologies, multimodal fieldwork, writing dictionaries and grammars for different audiences, language planning, and data creation, annotation, preservation, and dissemination. We will focus on a number of current programs around the world to revitalize languages. Finally, the course will examine ethical modes of fieldwork within endangered language communities, and the possibilities of successful collaborations and capacity building, focusing especially on Northern California Indian peoples and their languages.

Same as: ANTHRO 263A, LINGUIST 163A, LINGUIST 263, NATIVEAM 163

**ANTHRO 164. Natural Resource Extraction: Use and Development: Assessing Policies, Practices and Outcomes. 3-5 Units.**

This interdisciplinary course explores natural resource extraction from multiple conceptual perspectives. Logging and non-timber resource harvesting practices are examined through ecological dynamics of species and community life histories, natural and anthropogenic disturbance regimes and resilience and recovery to diverse perturbations through alternative stable states. Using a political ecology lens, we then examine historical and current policies and practices aimed to manage terrestrial resource use and extraction: maximum sustained yield, community-based forest management, certification systems, payment for ecosystem services and Reducing Emissions from Deforestation and Degradation (REDD). Through problem sets and lab/field exercises, we employ quantitative ecological measurements and experiments coupled with quantitative and qualitative methods and analyses used to assess socio-economic drivers and ecological impacts. Diverse benefits/costs imparted throughout the supply chain - from extraction to consumer - are explored across temporal and spatial scales with local to global agents. No Prerequisites: course or foundation in Ecology, Community Ecology, and/or Ecosystem Ecology strongly suggested.

Same as: ANTHRO 264

**ANTHRO 164A. Anthropology of Ecotourism. 5 Units.**

Ecotourism has been touted as a win-win scenario for both biodiversity conservation and the well-being of local residents. In practice, these lofty ideals of ecotourism have proven difficult to implement. The rapid development of ecotourism over the last two decades. Focus is on the scholarly literature relating to ecotourism from both supporting and critical perspectives.

**ANTHRO 164B. Anthropology of Tourism. 5 Units.**

As the largest scale movement of goods, services, and people that humanity has ever seen, tourism is an immense phenomenon and is currently the world's most immense industry, reaching some of the most remote people and places on the planet. Yet scholars have only begun to focus on the topic in recent decades. This seminar-style course will focus on the key anthropological and social science literature relating to tourism from both supporting and critical perspectives; however, tourism is an inherently multi-disciplinary subject and students from all disciplines are encouraged to enroll. After providing an initial overview of this phenomenon and field of study, later sections of the course will focus on emerging sub-types of tourism including sustainable tourism, ecotourism, agritourism, and geotourism to name just a few.

**ANTHRO 165. Parks and Peoples: The Benefits and Costs of Protected Area Conservation. 5 Units.**

Seminar. Emphasis is on the social impact of parks and reserves. Integrated conservation and development projects (ICDPs) based on protected areas; alternative ways to derive local social benefits from them. Cases include Yellowstone, Manu, Galápagos, Ngorongoro, and Guanacaste.

**ANTHRO 165A. People and Parks: Management of Protected Areas. 5 Units.**

As resources become scarcer, parks increasingly serve as ideological battlegrounds for contested core human values and often put livelihoods at stake. Their historical development and the complex array of present-day issues associated with the formal protection of biodiversity. The ideas behind parks and the evolution of these ideas.

**ANTHRO 166. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness. 3-5 Units.**

Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses?.

Same as: ANTHRO 266

**ANTHRO 167A. A Wilderness Empire: The Political Ecology of California. 5 Units.**

This course traverses the historical and geographic space of California to explore the intersection of nature, economy and politics in the making of the contemporary American West. The course links popular historical accounts of the state to related core theoretical literature from anthropology, preparing students to use the analytic tools of anthropology to pursue questions about the people, processes and landscapes that are part of our taken for granted lived experience in California. The class draws theoretically from cultural anthropology, ecological anthropology, cultural and economic geography, and literature to develop a holistic understanding of the historical and social co-production of nature and economy in California and the American West.

**ANTHRO 167B. Networks in Anthropology. 5 Units.**

“Social network” may now be a household term but network concepts long predate the internet age. In fact, networks are an important part of some of the earliest (and most enduring) theoretical ideas in anthropology and sociology. Starting from the premise that relationships between individuals provide the raw material for the emergence of social structure, this course focuses on how network analysis can be used to examine and explain both system-level patterning and outcomes for individuals. In addition to the theoretical foundations of social network analysis, students will learn basic techniques for collecting, analyzing, and visualizing network data, through workshops in class and hands-on assignments. We will also explore contemporary applications of network analysis in economic anthropology, kinship studies, human evolutionary studies, and epidemiology, among other topics. Prerequisite: None. Students will be expected to learn some mathematical concepts.

**ANTHRO 168. Everest: Extreme Anthropology. 3-5 Units.**

Using Mt. Everest as a touch point, this class will examine the anthropology of nature, specifically focusing on exploration and adventure travel.

**ANTHRO 168A. Risky Environments: The Nature of Disaster. 5 Units.**

This seminar explores topics including environmental movements and countercultures, human agency and geengineering ecotourism, and indigenous perspectives of changing climates to query how humans view “nature” in terms of stability, instability, risk and disaster in the 21st century. Case studies draw upon a broad range of geographical regions including the Arctic, Iceland, Australia, and the Americas. Discussions will draw upon film portrayals and interviews with researchers in addition to readings.

Same as: ANTHRO 268A

**ANTHRO 169. The Ecology of Cuisine: Food, Nutrition, and the Evolution of the Human Diet. 3-5 Units.**

This course is an interdisciplinary approach to understanding human food consumption and nutrition, incorporating biological, evolutionary, ecological and social perspectives. Topics include a broad survey of primate diets and their physiological and behavioral correlates; fossil and archaeological evidence for early human diets; adaptations to dietary shifts since the Neolithic; infant and early child feeding practices and their role in shaping human social arrangements, metabolic syndrome, food security, food taboos; the origins of spices; cultural diversity in the social uses and meanings of food and the sharing of food; gathering, hunting and locavorism as high hipster cuisine. Emphasis is on understanding the diversity of human foodways through time and space: how biology, culture, and ecology interact to shape the food we eat, and how the food we eat shapes us.

Same as: ANTHRO 269

**ANTHRO 169A. New Citizenship: Grassroots Movements for Social Justice in the U.S.. 5 Units.**

Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis.

Same as: CHILATST 168, CSRE 168, FEMGEN 140H

**ANTHRO 170. Australian Ecosystems: Human Dimensions and Environmental Dynamics. 3 Units.**

This cross-disciplinary course surveys the history and prehistory of human ecological dynamics in Australia, drawing on geology, climatology, archaeology, geography, ecology and anthropology to understand the mutual dynamic relationships between the continent and its inhabitants. Topics include anthropogenic fire and fire ecology, animal extinctions, aridity and climate variability, colonization and spread of *Homo sapiens*, invasive species interactions, changes in human subsistence and mobility throughout the Pleistocene and Holocene as read through the archaeological record, the totemic geography and social organization of Aboriginal people at the time of European contact, the ecological and geographical aspects of the "Dreamtime", and contemporary issues of policy relative to Aboriginal land tenure and management.

Same as: ANTHRO 270, EARTHSYS 172

**ANTHRO 170A. Multispecies Ethnography: Human, Animal, Plant, Mineral, and Microbe. 5 Units.**

This course explores new modes of writing and researching in anthropology. Multispecies ethnography considers nonhuman life as objects of analysis—animals, plants, fungi, bacteria, and viruses—as having political lives and import. By studying how these nonhuman entities, including metals, interact with and shape human existence, multispecies ethnographers who study "life" from the human down to the microbe, must engage in multiple worlds: from the jungle to the laboratory, from the field to the desk. This course will incorporate readings on "zoe" and "bios," the making of species categories, relationships between the human and nonhuman, current debates on breaking with the species concept and "the rights of mother earth." We will read the conceptual works in conjunction with current multispecies ethnographies to give grounding to the theory.

Same as: ANTHRO 270A

**ANTHRO 171. The Biology and Evolution of Language. 4-5 Units.**

Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language itself, and the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 271, HUMBIO 145L

**ANTHRO 171A. Linguistic Field Methods. 5 Units.**

Workshop applying methods for gathering and analyzing linguistic data in the field, i.e., from consultants who are native speakers of a language essentially unknown to the investigator. Principles of language documentation. Students will do local field projects and work on these both in and out of class. Format involves lectures, discussion, working with native speakers, and student presentations. Topics include: choosing a language; planning the project; computerized collection, storage, and analysis of linguistic data; field recording equipment; interviews and elicitation; diagnostic vocabulary lists and grammatical schedules; field study of everyday communication and discourse; area surveys and the ethnography of communication; ethics, reflexivity, and bias; working with human subjects and governments. Prerequisite: a course in linguistics or in anthropological field methods.

**ANTHRO 172. Seminar on Cultural Evolution and Coevolution. 3-5 Units.**

Upper division/graduate seminar on recent approaches to the study of cultural evolution and coevolution. Critical evaluation of Darwinian and non-Darwinian theories, with special attention to the interplay of culture, genes, environment and society. Students will undertake projects of their own design to review, test, or improve current theoretical formulations. Prerequisite: a university-level course in evolution, ecology, or human behavioral biology.

Same as: ANTHRO 272

**ANTHRO 172B. Anthropology of Gender/Sexuality: Eco-Feminist Perspectives. 5 Units.**

This course takes an eco-feminist approach to anthropology, investigating the different meanings of "eco" in eco-nomy and eco-logy. The term, "oikos," from the Greek, "oikos," means "household," "house," or "family," laying the foundation for examining women's roles in changing forms of kinship, beyond and within the concept of the human.

Same as: ANTHRO 272B

**ANTHRO 173. Human Dimensions of Global Environmental Change: Resilience, Vulnerability, and Environmental Justice. 3 Units.**

The complexity of social and political issues surrounding global environmental change. Emphasis is on synergies precipitated by human-induced climatic change. Case studies and scenarios to explore the vulnerability and resilience in households, communities, regions, and nation-states most affected by extreme weather conditions. Their concerns, livelihood changes, and diverse responses of rural smallholders, indigenous communities, the state, and local and regional migrants. Central theme is environmental justice.

Same as: HUMBIO 111

**ANTHRO 174. Beginnings of Social Complexity. 5 Units.**

Models and examples of the social evolution of stratification and political centralization in prehistoric human societies. Inferences from the archaeological record concerning the forces and mechanisms behind the rise and fall of complex societies, particularly in S. America. (HEF II; DA-B).

Same as: ANTHRO 274

**ANTHRO 175. Human Skeletal Anatomy. 5 Units.**

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.

Same as: ANTHRO 275, BIO 174, BIO 274, HUMBIO 180

**ANTHRO 176. Cultures, Minds, and Medicine. 1 Unit.**

This workshop aims to bring together scholars from the social sciences, humanities, medicine and bio-science and technology to explore the ways that health and illness are made through complex social forces. We aim for informal, interactive sessions, full of debate and good will. Dates of meetings will be listed in the notes section in the time schedule.

Same as: ANTHRO 276

**ANTHRO 177. Environmental Change and Emerging Infectious Diseases. 3-5 Units.**

The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.

Same as: ANTHRO 277, HUMBIO 114

**ANTHRO 178. Evolution and Conservation in Galapagos. 5 Units.**

The contribution of research in the Galapagos Islands to our current understanding of evolution and conservation. Writings from Darwin to Dawkins, as they reveal patterns and processes of evolution including selection, adaptation, speciation, and coevolution. Current conservation strategies in the archipelago, and urgent measures needed today before unique species and adaptations are lost.

Same as: ANTHRO 278

**ANTHRO 178A. Culture, Narrative, and Medicine. 5 Units.**

This course examines the ways in which medicine is practiced in diverse cultural contexts with narrative skills of recognizing, interpreting and being moved by the stories of illness. It is an examination of the human experience of illness and healing through narratives as presented in literature, film, and storytelling. We explore how cultural resources enable and empower healing and how narrative medicine can guide the practice of culturally competent medical care.

Same as: HUMBIO 177C

**ANTHRO 179. Cultures of Disease: Cancer and HIV/AIDS. 5 Units.**

History, politics, science, and anthropology of cancer; political and economic issues of disease and health care in the U.S., including the ethics and economics of health care provision, the pharmaceutical industry, carcinogen production, and research priorities.

Same as: ENGLISH 179

**ANTHRO 179A. Health, Illness, and Healing in South Asia. 5 Units.**

This course has three related goals pertinent to medicine and healing in South Asia. The first is to understand the experiences of illness, and therapy in ordinary South Asian communities. How do social and economic inequality, religious commitments, available healing traditions, and community and family contexts shape the experience of illness and healing? The second goal is to think about South Asian medical systems using a broad historical perspective. How had biomedicine been used during the colonial period to manage the health of native populations? What is the legacy of this colonial history on current practices? What happens when South Asian medical traditions (such as Ayurveda) become global? Third, we will explore crucial health problems in South Asia from the perspective of medical anthropology. Possible topics for the third portion of the course include: child birth and maternal health, sex-selection technologies, malnutrition, metabolic diseases, the selling of organs, medical tourism, tuberculosis, HIV, suicide, and schizophrenia.

Same as: ANTHRO 279A

**ANTHRO 180. Science, Technology, and Gender. 3-5 Units.**

Why is engineering often seen as a masculine profession? What have women's experiences been in entering fields of science and technology? How has gender been defined by scientists? Issues: the struggles of women in science to negotiate misogyny and cultural expectation (marriage, children), reproductive issues (surrogate motherhood, visual representations of the fetus, fetal surgery, breast feeding, childbirth practices), how the household became a site of consumerism and technology, and the cultural issues at stake as women join the ranks of scientists.

**ANTHRO 181A. Gender in the Middle East: Iran, Turkey, and Egypt. 4 Units.**

This course explores the construction of gender in the Middle East. Drawing on the historical, sociological and anthropological research in the region, the course aims to question the stereotypes about the subordination of Muslim women and to offer students a systematic reading and analytical discussion of the political, economic and cultural structures that inform gender relations and practices in the region. The course starts with an examination of early Islam and religious sources with regard to women's status, then moves on to nationalist and modernization movements in the 19th and 20th centuries, and finally explores women's and men's lives in contemporary Egypt, Turkey and Iran. In this framework, we will pay special attention to Islamist mobilizations, family and sexual relations, as well as women's changing livelihoods and labor.

Same as: FEMGEN 181A

**ANTHRO 182. An Anthropology of Annihilation: Tobacco at the Turn of the Millennium. 3-5 Units.**

The cigarette as the world's greatest weapon of mass destruction: 100 million dead worldwide from cigarettes during the 20th century, one billion expected to die in the 21st century. How to understand this toll, its production, management, politicization, and depoliticization? What can anthropological and allied perspectives disclose? How does the catastrophe challenge key precepts within anthropology and other branches of the academy?

**ANTHRO 182A. Down and Out: Marginal Lives and Institutional Technologies. 5 Units.**

This course examines the neglect and management of socially marginalized persons including the mentally ill, youth runaways, child wards of the state, drug addicts and prisoners. In this course, we will approach the concept of marginality by investigating the spaces and institutions of decay, neglect and rehabilitation to which unwanted and indigent individuals are relegated. Readings are focused on qualitative research conducted within institutions of health, welfare, and reform. There will be two comparative public mental health sections in this course: one focused on South Asia and the second on Africa. This course is relevant for students interested in medical anthropology, applied anthropology, public health policy, or clinical careers in medicine, psychology, or social work.

Same as: ANTHRO 282A

**ANTHRO 182N. Smoke and Mirrors in Global Health. 3 Units.**

A few years ago, health experts began calling out tobacco as engendering a global health crisis, categorizing the cigarette as the world's greatest weapon of mass destruction. A "global health crisis"? What merits that title if not tobacco use? A hundred million people were killed by tobacco in the 20th century, and ten times that number of a billion people are predicted to die prematurely from exposure to cigarette smoke over the next hundred years. How has tobacco come to be labeled a global health crisis over the last decade and what has been the political response? From whence does activism and ongoing complacency regarding tobacco arise? How are they created in different cultural contexts? This course aims to provide students conceptual tools to tackle two specific thought projects: (1) to understand how institutional actors compete to define a situation in the world today as a problem of global health, and (2) to understand the sociocultural means by which something highly dangerous to health such as the cigarette is made both politically contentious and inert. On both fronts, special attention will be given to the ways global health activism and complacency unfold in the U.S. and China.

**ANTHRO 183B. Human Mobility and Adaptability. 5 Units.**

Mobility, whether in the form of seasonal or permanent migration, is an ancient practice necessary for many subsistence strategies, including hunting-and-gathering and pastoralism. Many new forms of mobility have emerged and now it is nearly impossible to consider a patch of human society that is not engaged in or directly impacted by habitual, patterned geographic mobility. Today, almost everywhere in the world, people can get farther, faster; urbanization, environmental degradation, and civil unrest are driving groups of people who do not have a cultural tradition of nomadic migration to adopt a mobile lifestyle, sometimes permanently, sometimes temporarily, in search of new economic or resource opportunities. In this seminar course, we will explore modern patterns of human mobility and migration as adaptive strategies for predictably and unpredictably changing environments. Using a framework of biological and cultural adaptation, we will discuss the major types of current human mobility (e.g. nomadism, immigration, migrant labor, displacement) and how they influence and are influenced by social systems, resource access, and health.

Same as: ANTHRO 283B

**ANTHRO 184. Spirituality and Healing. 3-5 Units.**

The puzzle of symbolic healing. How have societies without the resources of modern medicine approached healing? Why do these rituals have common features around the world? Shamanism, spirit possession, prayer, and the role of placebos in modern biomedicine. Students do ethnographic work and practical explorations along with more traditional scholarly approaches to learning.

Same as: HUMBIO 179S

**ANTHRO 185. Medical Anthropology of Contemporary Africa. 5 Units.**

In this course we will examine the place of Africa in global health discourses while reading in-depth histories and ethnographies of the varied causes and consequences of some of the most difficult problems facing African countries today. We will study the effects of colonialism and conflict on health, explore the military and humanitarian connections in the fight against HIV/AIDS, weigh the risks and benefits of population genetic studies on African populations, examine biomedical interventions on, and erasures of, local health problems, and query the role of violence, memory, insecurity, and power in daily life on the continent.

Same as: ANTHRO 285

**ANTHRO 185A. Race and Biomedicine. 3-5 Units.**

Race, identity, culture, biology, and political power in biomedicine. Biological theories of racial ordering, sexuality and the medicalization of group difference. Sources include ethnography, film, and biomedical literature. Topics include colonial history and medicine, the politics of racial categorization in biomedical research, the protection of human subjects and research ethics, immigration health and citizenship, race-based models in health disparities research and policy, and recent developments in human genetic variation research.

Same as: ASNAMST 185A

**ANTHRO 186. Culture and Madness. 5 Units.**

'Madness' lends insight into the construction of the normal and abnormal; the boundaries of reason and unreason; the epistemological relation of mind and body, and the management of difference and disease. Taking an interdisciplinary perspective, this course explores the fundamental questions madness poses to subjectivity, culture and modernity.

Same as: ANTHRO 286

**ANTHRO 186N. The Most Rational People in the World. 4 Units.**

Humans, broadly construed, emerged as bipedal apes in the African mixed savanna-woodlands approximately two million years ago. From humble beginnings, humans have gone on to become the ecologically dominant species in most biomes and grown to a global population in excess of seven billion. This dominance arises from a combination of features of the human organism including its extreme degree of behavioral flexibility and flexible social organization. The prima facie evidence of human evolutionary and ecological success raises a paradox with respect to recent work in economics and psychology which increasingly argues for pervasive irrationality in human decision-making in a wide array of behavioral contexts. How is it possible for an organism with such seemingly flawed software supporting decision-making to become the globally dominant species? We will use this contradiction as the launching point for understanding what rationality means in a broad ecological and cross-cultural context. What do we mean by 'rationality'? How do different disciplines conceive of rationality in different ways? Is there such a thing as a rationality that transcends cultural differences or is the very idea of rationality a cultural construction that is used to justify imperialism and other modes of paternalism? Are there systematic factors that promote or impede rational decision-making? The seminar will provide a gentle introduction to the formal approaches of decision theory which we will apply to an unusual array of topics centered on the subsistence and reproductive decisions of hunter-gatherers, horticulturalists, pastoralists, and agrarian peasants, in short, people living in face-to-face, subsistence societies. In addition to doing reading from a broad array of social and natural science disciplines around the topic of rationality, students will regularly engage in exercises to assess their own approaches to decision-making.

**ANTHRO 187. Nuclear Cultures. 5 Units.**

This course examines the new cultural forms that arose out of the use of nuclear technology. Subjects covered will include: The Manhattan Project, nuclear activism, nuclear experimentation in medicine, pre-nuclear history, nuclear energy, and nuclear waste and trade.

**ANTHRO 187A. The Anthropology of Race, Nature, and Animality. 5 Units.**

As recently as the 40s, the S. Africa government labeled indigenous San people part of the animal landscape. Using the San example as a starting point, course examines socially, culturally, and politically constructed ideas about race, animality, and nature in the cultural and geographic settings of N. America, Australia, and Africa. How connections between race and nature have served as terrains of power through which people and governments have claimed territories and justified violence. Classic texts by nature writers and philosophers and current social science works that focus on race and ethnicity. Concepts such as gender, sex, and nature; environmental tourism; natural resource development; and indigeneity and animality. How ideas about race and nature have come together around concepts such as the myth of wilderness and the violence of considering certain people to be less-than-human. Issues of environmental politics and activism.

Same as: CSRE 187A

**ANTHRO 193. Anthropology Capstone: Contemporary Debates in Anthropology. 5 Units.**

Do you know what an anthropological perspective is? Can you describe some of the key assumptions and questions within the discipline? nA major in Anthropology is composed of many specialized courses in different tracks, different emphases and seemingly a never-ending multiplication of perspectives and ethnographies. However, Anthropology is also an ongoing intellectual conversation with foundational questions, some of longstanding and some new. These foundational questions have stimulated different responses and answers and thus have also led to constant renewal of the discipline in the midst of profound disagreement. In this Anthropology Capstone course students across tracks and emphases will address some of the critical debates that have been central to the discipline as it has developed. We will feature three debate questions in the class. Preparation for each debate will be through class discussion of critical readings as well as extra-mural reading and preparation with one's debating partners.

**ANTHRO 199. Senior and Master's Paper Writing Workshop. 1-2 Unit.**

Techniques of interpreting data, organizing bibliographic materials, writing, editing and revising. Preparation of papers for conferences and publications in anthropology. Seniors register for 199; master's students register for 299.

Same as: ANTHRO 299

**ANTHRO 200B. Lifeways of the Ancient Maya. 5 Units.**

This course engages with the world of the pre- and post-contact Maya people through scholarship that explores the material culture of daily life. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, and how interpretations of daily life in the ancient Maya world are formulated. We consider how perceptions of the ancient Maya are marshaled in contemporary politics and policies. The course is designed to provide a broad overview of sites and materials in the Maya area, focusing on the dynamic interplay between the material and the social. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 100B

**ANTHRO 201. Introduction to Cultural and Social Anthropology. 3-5 Units.**

This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.

Same as: ANTHRO 1

**ANTHRO 201B. ARCHAEOLOGY OF TECHNOLOGY. 5 Units.**

The course is an introduction to the social organization of material production and to the theoretical, ethnographic, and historical frameworks used by archaeologists to link the technologies of the past to salient sociocultural information about the people who employed them. Comparison of metallurgical, ceramic, lithic, and textile industries in different cultural and historical settings will inform critical discussions of how and to what extent analyses of artifacts, workshops, and industrial installations can provide insight into past societies.

Same as: ANTHRO 101B, ARCHLGY 100, ARCHLGY 200

**ANTHRO 202A. Ancient Civilizations: Complexity and Collapse. 3-5 Units.**

How archaeology contributes to understanding prehistoric civilizations. How and why complex social institutions arose, and the conditions and processes behind their collapse. The development of monumental architecture, craft specialization, trade and exchange, and social stratification using examples from the archaeological record. (HEF II, III; DA-B).

Same as: ANTHRO 102A

**ANTHRO 203A. Human Osteoarchaeology. 5 Units.**

The course will cover the methodological and theoretical backgrounds to human osteoarchaeology, introduce the student to the chemical and physical characteristics of bone, and to the functional morphology of the human skeleton. Classes will consist of a taught component that outlines how osteoarchaeologists reconstruct individual life-histories based on age, sex etc.; this is combined with hands-on identification of different skeletal elements and the markers used to inform the analytical methods. Additional scientific methodologies are also introduced that increasingly form a major component of human osteoarchaeology.

Same as: ANTHRO 103A

**ANTHRO 204. Language and Culture. 4-5 Units.**

Comparative approach, using examples from many languages. Emphasis is on generally non-Western speech communities. Topics include: the structure of language; the theory of signs; vocabulary and culture; grammar, cognition, and culture (linguistic relativism and determinism); encodability of cultural information in language; language adaptiveness to social function; the ethnography of speaking; registers; discourse (conversation, narrative, verbal art); language and power; language survival and extinction; and linguistic ideology (beliefs about language).

Same as: ANTHRO 4

**ANTHRO 205. Ancient Cities in the New World. 3-5 Units.**

Preindustrial urbanism as exemplified by prehispanic New World societies. Case studies: the central and southern highlands of Mesoamerica, and the Maya region. Comparative material from highland S. America.

Same as: ANTHRO 105

**ANTHRO 205A. Archaeological Fieldwork: Critical Analysis and Practical Application. 2-3 Units.**

This introduction to archaeological fieldwork involves both field and seminar components, each component meeting once per week. During the field sessions, we will investigate an archaeological site on campus using methods of survey, mapping, testing, and excavation (digging, recording units/features, profile illustration). In seminar, we will critically examine archaeological fieldwork through reading, writing, and discussion, exploring topics such as history of archaeological excavation, production of archaeological knowledge, disjunction between theory and practice, reflexive methodologies, ethics, collaboration, and specialization. No experience necessary, but students with fieldwork experience are welcome.

Same as: ANTHRO 105A

**ANTHRO 205B. Heritage & Neoliberalism: Theorizations of the Past. 3-5 Units.**

This course explores the emergence of heritage from within the broader field of modern historical thought. Readings explore how transformations in economic theory and changes in traditional philosophies of history have shaped how the historical event and historical figures are cast and recast within heritage. The distinctive modes by which archaeological sites and heritage sites are spatialized, linked and narrated are explored as these relate to corresponding turns in the modern concepts of freedom, inequality, personhood, sovereignty, community and culture.

Same as: ANTHRO 105B, ARCHLGY 105

**ANTHRO 206. Human Origins. 5 Units.**

The human fossil record from the first non-human primates in the late Cretaceous or early Paleocene, 80-65 million years ago, to the anatomically modern people in the late Pleistocene, between 100,000 to 50,000 B.C.E. Emphasis is on broad evolutionary trends and the natural selective forces behind them.

Same as: ANTHRO 6, HUMBIO 6

**ANTHRO 206A. Incas and their Ancestors: Peruvian Archaeology. 3-5 Units.**

The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred.

Same as: ANTHRO 106, ARCHLGY 102B

**ANTHRO 209. Archaeology: World Cultural Heritage. 5 Units.**

Focus is on issues dealing with rights to land and the past on a global scale including conflicts and ethnic purges in the Middle East, the Balkans, Afghanistan, India, Australia, and the Americas. How should world cultural heritage be managed? Who defines what past and which sites and monuments should be saved and protected? Are existing international agreements adequate? How can tourism be balanced against indigenous rights and the protection of the past?.

Same as: ANTHRO 109

**ANTHRO 209A. Archaeology of the Modern World. 3-5 Units.**

Historical archaeology, also called the archaeology of the modern world, investigates the material culture and spatial history of the past five centuries. As a discipline, historical archaeology has been characterized by (1) a methodological conjunction between history and archaeology; (2) a topical focus on the three Cs: colonization, captivity, and capitalism forces which arguably are constitutive of the modern world; and (3) an epistemological priority to recovering the perspectives of people without history. Each of these three trends is widely debated yet they continue to profoundly shape the field. This seminar provides an in-depth examination of the emergence and development of this historical archaeology, with a focus on current issues in theory and method. For undergraduates, the prerequisite is Anthro 3 or consent of instructor.

Same as: ANTHRO 109A, ARCHLGY 109A

**ANTHRO 210A. Neandertals and Modern Humans: Origin, Evolution, Interactions. 3 Units.**

The expansion out of Africa of our species represents the last spectacular step in the course of Human Evolution. It resulted in the colonization of the whole planet and the replacement of archaic forms of humans in Eurasia. One way to investigate why *Homo sapiens* has been such a successful species is to compare its evolution with that of its closest relative, the Neandertals. Exploring the bio-cultural processes at work in the two lineages leads to examine some of the main issues in Paleoanthropology and the most recent methodological advances in the field.

Same as: ANTHRO 110A

**ANTHRO 210B. Examining Ethnographies. 5 Units.**

Eight or nine important ethnographies, including their construction, their impact, and their faults and virtues.

Same as: ANTHRO 110B

**ANTHRO 211. Archaeology of Sex, Sexuality, and Gender. 5 Units.**

How archaeologists study sex, sexuality, and gender through the material remains left behind by past cultures and communities. Theoretical and methodological issues; case studies from prehistoric and historic archaeology.

Same as: ANTHRO 111

**ANTHRO 211A. Archaeology of the Andes of Argentina. 3-5 Units.**

The aim of this course is to provide a panorama of the archaeology of the andean region of Argentina, along some main topics of past and current researches. North andean Argentina has been considered for a long time as subordinated to the major developments in the central Andes and Puna, as if it were in a marginal position that mirrored their history. More than a hundred years of research in the area have produced different insights, which put that affirmation in relative terms. The course will give an overview of major historical contributions and contemporary trends in the archaeological thinking in relation to themes such as time, the space, people, things and nature. An overview of the conceptions and construction of time. Space seen as cultural area; natural environment and built landscape; archaeological areas as national territory. Historical conceptions of people; bodies; social inequality; the past and present others in the archaeological research. Artefacts, classifications and typologies; material archaeological contexts as cultural units; from artefacts to things; past ontologies. Nature and environment; domestication; ecological approaches; agropastoralism; nature/culture. It is expected that by the end of the course students will gain a panorama of the major problems of the archaeology of andean Argentina with historically and theoretically informed perspectives.

Same as: ANTHRO 111A

**ANTHRO 212. Public Archaeology: Market Street Chinatown Archaeology Project. 4-5 Units.**

This internship-style course centers on the practice and theory of historical archaeology research and interpretation through a focused study of San Jose's historic Chinese communities. The course includes classroom lectures, seminar discussion, laboratory analysis of historic artifacts, and participation in public archaeology events. Course themes include immigration, urbanization, material culture, landscape, transnational identities, race and ethnicity, gender, cultural resource management, public history, and heritage politics. The course includes required lab sections, field trips, and public service. Transportation will be provided for off-site activities.

Same as: ANTHRO 112, ASNAMST 112

**ANTHRO 213. Culture and Epigenetics: Towards A Non-Darwinian Synthesis. 4-5 Units.**

The course examines the impact of new research in epigenetics on our understanding of long-term cultural change. The course examines the various attempts that have been made over recent decades to find a synthesis between cultural and biological evolution. These approaches, often termed neo-Darwinian, include memes, dual inheritance theory, theories of cultural selection and transmission, niche construction theory and macro-evolutionary approaches. Research in all these areas will be examined, with particular reference to explanations for the origins of agriculture, but also including other transformations, and critiqued. New research in epigenetics offers an alternative non-Darwinian evolutionary perspective that avoids many of the problems and pitfalls in the neo-Darwinian approaches. Cultural evolution comes to be viewed as cumulative, directional and Lamarckian, since heritable epigenetic variation can underlie evolutionary change. Epigenetics opens the way for human cultural entanglements to become the drivers for evolutionary change, thus allowing the full range of social processes studied in the social and cultural sciences to take their place in the study and analysis of long-term change.

Same as: ANTHRO 113

**ANTHRO 213B. Religious Practices in Archaeological Cultures. 5 Units.**

According to Hawkes (1954), religion or ideology is the most difficult part of social life to access archaeologically. Luckily, not all scholars agree; according to Fogelin (2008) 'religion is not something people think about, but something people do'. Thus, archaeology, an inherently multidisciplinary subject that studies material culture, is well suited to delve into religion and its underpinnings. This course will explore religious practices, as they can be defined and interpreted from archaeological contexts spanning the Paleolithic to historic periods. Definitions of religion differ from author to author but they mostly agree that religion is a fully integrated and thus integral part of human social life. Politics, economics, identity and social class influence religion, and religion influences how these forces play out in society. Thus, the course will also examine the significance of ritual and religion in a variety of social contexts.

Same as: ANTHRO 113B, ARCHLGY 113B

**ANTHRO 214. Prehistoric Stone Tools: Technology and Analysis. 5 Units.**

Archaeologists rely on an understanding of stone tools to trace much of what we know about prehistoric societies. How to make, illustrate, and analyze stone tools, revealing the method and theory intrinsic to these artifacts.

Same as: ANTHRO 114

**ANTHRO 214A. Introduction to South Asian Archaeology. 5 Units.**

This seminar will survey the archaeology of South Asia, beginning with animal and plant domestication in the early Holocene and ending with the late Medieval Period. Given its chronological breadth and spatial scope, the class will interrogate a variety of social and historical contexts that contribute to a broad range of anthropological research concerns, including the intersections of authority, ritual, alterity and landscape, and at the same time critically consider the epistemological bases for their analyses through archaeological remains.

Same as: ANTHRO 114A, ARCHLGY 114A

**ANTHRO 214B. Landscape Archaeology and Global Information Systematics. 3-5 Units.**

This course is meant to lay groundwork for analysis of archaeological landscapes using the methods of GIS. Throughout, we consider the various understandings of landscape, from the biographical to the biological. The course explores the history of various typologies of landscape, incorporating the cultural, the topographical, the ecological, and the topological; reviews different types of landscape data and analysis, including aerial imagery, stratigraphic excavations, and specialized analyses; addresses how to integrate different sorts of data sets and carry out analytical assessment of interrelated "layers" as dynamic constituents of landscape; considers implications of landscape studies in modern policy and management. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 114B

**ANTHRO 215. The Social life of Human Bones. 3-5 Units.**

Skeletal remains serve a primary function of support and protection for the human body. However, beyond this, they have played a range of social roles once an individual is deceased. The processes associated with excarnation, interment, exhumation and reburial all speak to the place that the body, and its parts, play in our cultural as well as physical landscape. This course builds on introductory courses in human skeletal anatomy by adding the social dynamics that govern the way humans treat other humans once they have died. It draws on anthropological, biological and archaeological research, with case studies spanning a broad chronological and spatial framework to provide students with an overview of social practice as it relates to the human body.

Same as: ANTHRO 115, ARCHLGY 115

**ANTHRO 215A. The Aegean in the Neolithic and Bronze Age. 3-5 Units.**

This course provides a survey of Aegean prehistory (7th-2nd millennium BC), focusing on traditions that were picked up or renegotiated, instead of taking a standpoint that evaluates phenomena as steps leading up to a "state-like" palatial society. It will draw on the region's wealth of data, and will be set within a theoretically informed, problem-oriented framework, aiming to introduce students to current interpretations and debates, mainly through discussion of specific case-studies.

Same as: ANTHRO 115A, ARCHLGY 139, ARCHLGY 239

**ANTHRO 215B. Peoples and Cultures of Ancient Mesoamerica. 5 Units.**

This course engages with the world of ancient Mesoamerica, focusing on the Mixtec, Aztec, Maya, Zapotec, Chichimec, Olmec, and Teotihuacan peoples. We address how questions about the past are framed through ethnographic and ethnohistoric accounts of daily life, how diverse scientific methods and theoretical perspectives are used to address these questions, how interpretations of daily life in the ancient Mesoamerican world are formulated, and how these interpretations are marshaled in contemporary politics and policies. We explore different scales of Mesoamerican communities, and compare the diverse material culture and lifeways represented in Mesoamerica at different time periods. Students will create interpretive frameworks for a public audience as a component of the final project.

Same as: ANTHRO 115B

**ANTHRO 216. Data Analysis for Quantitative Research. 5 Units.**

This course allows graduate and advanced undergraduate students in archaeology and anthropology to acquire practical skills in quantitative data analysis. Some familiarity with basic statistical methods is useful but not assumed; the structure of the course will be flexible enough to accommodate a range of student expertise and interests. Topics covered include: statistics and graphics in R; database design, resampling methods, diversity measures, contingency table analysis, and introductory methods in spatial analysis.

Same as: ANTHRO 116

**ANTHRO 217. Thinking Through Animals. 5 Units.**

The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts. This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of "animals as social actors" is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognised as a viable mechanism for understanding our cultural and economic past. The module presents an overview covering a broad timespan from the Pleistocene to the modern day. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.

Same as: ANTHRO 117

**ANTHRO 219. Zooarchaeology: An Introduction to Faunal Remains. 5 Units.**

As regularly noted, whether historic or pre-historic, animal bones are often the most commonly occurring artefacts on archaeological sites. As bioarchaeological samples, they offer the archaeologist an insight into food culture, provisioning, trade and the social aspects of human-animal interactions. The course will be taught through both practical and lecture sessions: the "hands-on" component is an essential complement to the lectures. The lectures will offer grounding in the main methodological approaches developed, as well as provide case-studies to illustrate where and how the methods have been applied. The practical session will walk students through the skeletal anatomy of a range of species. It will guide students on the identification of different parts of the animal, how to age / sex individuals, as well as recognize taphonomic indicators and what these mean to reconstructing post-depositional modifications.

Same as: ANTHRO 119, ARCHLGY 119

**ANTHRO 221. Language and Prehistory. 4-5 Units.**

Language classification and its implications for human prehistory. The role of linguistic data in analyzing prehistoric populations, cultures, contact, and migrations. Comparison of linguistic and biological classifications. Reconstruction, proto-vocabularies, and culture. Archaeological decipherment and the origins and evolution of writing. Archaeological and genetic evidence for human migrations. (DA-A; HEF II,III).

Same as: ANTHRO 121

**ANTHRO 222A. Race and Culture in Mexico and Central America. 3-5 Units.**

This course addresses the role of racial ideologies in the historical configuration of multiple hierarchies of inequality that determine the place of everyone in society in Mexico and Central America. Based on readings from the humanities and social sciences, we will discuss the cultural and racial politics of authoritarianism and indigenous insurgency, emphasizing narratives of laziness and vagrancy that have been central to the discipline of labor that shapes local processes of regressive modernization and nation building. We will analyze the hegemony of dictatorship as political necessity, the relationship between local racisms and global Whiteness, and the emergence of new local and transnational contestations to the multiple hierarchies that determine the place of everyone in society.

Same as: ANTHRO 122A

**ANTHRO 222C. Research in Maya Hieroglyphic Writing. 1-2 Unit.**

Workshop. Current issues in the decipherment and analysis of Maya hieroglyphic writing and literacy.

Same as: ANTHRO 122C

**ANTHRO 223. Readings in Linguistic Anthropology. 2 Units.**

One or two major related works on language in its cultural context. Works for 2007-08 involve attempts to correlate linguistic and non-linguistic data for analysis of prehistoric human contact and migrations. May be repeated for credit.

Same as: ANTHRO 123

**ANTHRO 225. Language and the Environment. 4-5 Units.**

Lecture course on vocabulary and grammar as keys to peoples' understanding and use of the environment. Ethnobotany, ethnobiology, and ethnosemantics in the analysis of the language of place, plants and animals, the earth, the body, and disease. Terminological gaps and gluts and what they imply. Language as a strategic resource in environmental management. Language contact and conflict in the modern global environment, with particular attention to the vocabularies of capitalism and property. Language extinction and its environmental implications. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 125

**ANTHRO 230B. Introduction to GIS in Anthropology. 5 Units.**

How GIS and spatial tools can be applied in social research. Case studies and student projects address questions of social and cultural relevance using real data sets, including the collection of geospatial data and building of spatial evidence. Analytical approaches and how they can shape a social and cultural interpretation of space and place.

Same as: ANTHRO 130B

**ANTHRO 230D. Spatial Approaches to Social Science. 5 Units.**

This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.

Same as: ANTHRO 130D, POLISCI 241S, URBANST 124

**ANTHRO 234. Object Lessons. 5 Units.**

Human-object relations in the processes of world making. Objectification and materiality through ethnography, archaeology, material culture studies, and cultural studies. Interpretive connotations around and beyond the object, the unstable terrain of interrelationships between sociality and materiality, and the cultural constitution of objects. Sources include: works by Marx, Hegel, and Mauss; classic Pacific ethnographies of exchange, circulation, alienability, and fetishism; and material culture studies.

Same as: ANTHRO 134

**ANTHRO 235. Cultural Studies. 5 Units.**

Identity, community, and culture; their interactions and formation.

Same as: ANTHRO 135

**ANTHRO 235A. The Anthropology of Security. 3-5 Units.**

This seminar begins by outlining the main theoretical and empirical challenges in the areas of surveillance studies and security studies. The seminar provides a space wherein students will be able to discuss these inter-disciplinary areas and develop their own Anthropology-informed perspectives. The seminar then discusses the work of Anthropologists who through their ethnographic and theoretical work have helped developed and important and emergent area: 'The Anthropology of Security'. Areas covered include, inter alia, national security, security and war, biometrics, gated-ness, and environmental and bio-security threats.

Same as: ANTHRO 135A

**ANTHRO 236. The Anthropology of Global Supply Chains. 5 Units.**

This upper-division undergraduate seminar focuses on recent studies by anthropologists and scholars in related disciplines on global supply chains and consumption practices. The goal of the course is to assess concepts and methods for integrating a cultural analysis of transnational production with a cultural analysis of transnational consumption. We will review ethnographic studies of the production and consumption of commodities linked by transnational and global networks. The class will then pursue collaborative research on the global production, distribution, and consumption of a selected commodity. Prerequisite: junior or senior standing and previous coursework in cultural anthropology or permission of instructor.

Same as: ANTHRO 136

**ANTHRO 237. The Politics of Humanitarianism. 5 Units.**

What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issue generis a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical or political stakes or that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the 'cause of humanity'. In the early years of humanitarian intervention, political neutrality was a key principle; it has now come under ever greater analytical and political scrutiny. We will examine the reasons for the politicization and militarization of aid -- be it humanitarian aid in natural disasters or political crises; development programs in the impoverished south ('the Third World'), or peace-keeping. We will end with a critical exploration of the concept of human rights, humanity, and personhood. The overall methodological aim of the course is to demonstrate what insights an ethnographic approach to the politics, ethics, and aesthetics of humanitarianism can offer.

Same as: ANTHRO 137

**ANTHRO 238. Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise. 5 Units.**

This course will explore historical as well as current market transformations of medical ethics in different global contexts. We will examine various aspects of the research enterprise, its knowledge-generating and life-saving goals, as well as the societal, cultural, and political influences that make medical research a site of brokering in need of oversight and emergent ethics. This seminar will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state, the media, and certain publics in shaping scientific research agendas. We will also examine how structural violence, poverty, global standing, and issues of citizenship also influence issues of consent and just science and medicine.

Same as: ANTHRO 138, CSRE 138

**ANTHRO 238A. Conflict and Reconciliation in Africa: International Intervention. 3-5 Units.**

This course will explore recent debates on the causes and structural terms of large-scale violence in Africa in the context of key contemporary models for reconciliation and transitional justice. Discussions will emphasize the broader international legal and political order each presupposes, and specifically whether their underlying reconstitution of rights and subjectivities are compatible with cultural, political or legal diversity. A historical assessment of the predominating Nuremberg paradigm of transitional justice; structured around international military intervention and criminal trials based on international criminal courts; will be contrasted with other regional models that engage with the challenges of the political reconciliation of formerly divided political communities. The necessity of understanding the specificities of both global and local historical and structural contexts will be examined with respect to various proposals for how to balance of balance concerns for both justice and peace. Readings will cover case studies from South Africa, Rwanda, DRC, northern Uganda, Sudan (including Darfur and South Sudan), Libya, Mali, and CAR.

Same as: AFRICAST 138, AFRICAST 238, ANTHRO 138A

**ANTHRO 239. Ethnography of Africa. 5 Units.**

The politics of producing knowledge in and about Africa through the genre of ethnography, from the colonial era to the present. The politics of writing and the ethics of social imagination. Sources include novels juxtaposed to ethnographies.

Same as: ANTHRO 139

**ANTHRO 240A. Ethnographic Archaeologies. 4-5 Units.**

How have ethnographic and archaeological methods been combined in anthropological research? What methodological and theoretical implications do these kinds of projects generate? Seminar topics will include ethnoarchaeology, ethnographies of archaeological practice, public archaeology and heritage ethics. Lecture and discussion.

Same as: ANTHRO 140A, ARCHLGY 137

**ANTHRO 241. The State in Africa. 5 Units.**

Postcolonial African states in historical and ethnographic context. Focus is on contemporary African states not as failures, but as the products of distinctive regional histories and political rationalities.

**ANTHRO 243. Title Social Change in Contemporary China: Modernity and the Middle Kingdom. 4-5 Units.**

Over the last twenty years, residents of the People's Republic of China have experienced dramatic changes in nearly every facet of life. This undergraduate seminar introduces students to contemporary China through an examination of various types of social transformation.

We will analyze how PRC residents of different backgrounds are confronting such processes as economic liberalization, migration, kinship transformation, sexual commodification, media proliferation, industrialization, and transnationalism? Priority is placed on reading, discussing and assessing research that uses qualitative methods and that situates political economy in dialogue with lived experience.

Same as: ANTHRO 143

**ANTHRO 244B. The Buddhist Body in East Asia: Charisma, Gender, and the Gift of the Body. 5 Units.**

This course introduces Buddhist practices and texts of embodiment as a subject of the anthropology of the body. We draw on research in social/cultural anthropology, history, and religious studies, and examine a selection of approaches to the Buddhist body: the body of power in Buddhist charisma, the gender of the bodhisattva's and monastic body, the techniques of the body in meditation and martial arts, healing and cultivation, and the gift of the body in bioethics and medical education. We draw on examples in different traditions of Buddhism in a range of societies with a special focus on Chinese Buddhism.

Same as: ANTHRO 144B

**ANTHRO 245. Race and Power. 5 Units.**

This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the construction of race as a literally made phenomenon, where historical, colonial, bodily, market, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race and capital.

Same as: ANTHRO 145, CSRE 145F

**ANTHRO 245A. Evolutionary Theory in Archaeology. 3-5 Units.**

The ability of scientific evolutionary theory to explain human behavior as represented in the archaeological record. Past attempts to apply evolutionary theory in archaeology are compared to more recent Darwinian efforts, as are current evolutionary approaches to human behavior in related fields. The ontological underpinnings and methodological requirements of a Darwinian archaeology and its potential contribution to archaeology as an explanatory system. (HEF I).

**ANTHRO 247. Nature, Culture, Heritage. 5 Units.**

Seminar. Shared histories of natural and cultural heritage and their subsequent trajectories into the present. How thought about archaeological sites and natural landscapes have undergone transformations due to factors including indigenous rights, green politics, and international tourism. The development of key ideas including conservation, wilderness, sustainability, indigenous knowledge, non-renewability and diversity. Case studies draw on cultural and natural sites from Africa, the Americas and Australia.

Same as: ANTHRO 147

**ANTHRO 247B. World Heritage in Global Conflict. 5 Units.**

Heritage is always political, it is typically said. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has over 1000 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally, but has found its own history increasingly entwined with that of international politics and violence.

Same as: ANTHRO 147B, ARCHLGY 147B

**ANTHRO 248. Health, Politics, and Culture of Modern China. 4-5 Units.**

One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.

Same as: ANTHRO 148

**ANTHRO 249. South Asia: History, People, Politics. 5 Units.**

The South Asian subcontinent (comprising of India, Pakistan, Bangladesh, Nepal, Bhutan and Sri Lanka) is one of the most diverse and densely populated regions in the world and increasingly prominent in new global political and cultural economies. South Asia has also provided the inspiration for cutting edge theories about the colonial state, postcolonial studies, democracy, popular culture, and religious conflict. The course will provide an overview of major historical events and social trends in contemporary South Asia and focus on themes such as gender, religion, caste, migration and movement, new technologies, the urban and rural, the state, and new forms of consumption among others. Thus, the course will give students historically and theoretically informed perspectives on contemporary South Asia, as well as how to apply insights learned to larger debates within the political and social sciences.

Same as: ANTHRO 149

**ANTHRO 250. The Ordinary: The History of a Concept. 5 Units.**

The ordinary has today acquired something like a cultic status in contemporary culture. `Ordinary` citizens are the touchstone and essence of political democracy; the holy grail of effective marketing, the byword for earthy ethical judgment. In social science, the ordinary has blended in with the `normal` and the statistical mean. In Anthropology, ordinary life has all but replaced `cultural practice` as the epistemic gold standard of evidence. But this was not always so, and the ordinary has many, varied and contradictory meanings across the world. This course will (a) trace the historical emergence of the ordinary as a central ideological and metaphysical concept in modern thought and practice; (b) trace how the ordinary and the everyday have acquired unprecedented authority in anthropology; (3) trace the various meanings and connotations of `the ordinary` in different socio-historical contexts from Asia, Africa and Euro-America. The literature will consist of ethnographies, and works of philosophical and historical scholarship.

Same as: ANTHRO 150

**ANTHRO 251. Women, Fertility, and Work. 5 Units.**

How do choices relating to bearing, nursing, and raising children influence women's participation in the labor force? Cultural, demographic, and evolutionary explanations, using crosscultural case studies. Emphasis is on understanding fertility and work in light of the options available to women at particular times and places.

Same as: ANTHRO 151, HUMBIO 148W

**ANTHRO 251A. Contemporary Chinese Society Through Independent Documentary Film. 3-5 Units.**

An overview of social issues in contemporary China as seen through its emerging independent documentary film movement. Topics covered include representations of history, political power and accountability in the reform era, human rights, urbanization, the environment, homelessness and inequality, sexualities, addiction, and the role of media in society. Each viewing is accompanied by readings in media theory or the anthropological/sociological study of contemporary China. Can be taken with or without research component. Films include English subtitles.

Same as: ANTHRO 151A

**ANTHRO 253A. Population and social trends in Japan. 3-5 Units.**

Anthropological theories and concepts as applied to Japan. Postwar demographic trends. Delayed marriage. Declining nuclear family. Restructuring of education and workplace. Problems for the seniors. Foreign laborers shaking fundamentals of Japan.

Same as: ANTHRO 153A

**ANTHRO 254B. Anthropology of Drugs: Experience, Capitalism, Modernity. 5 Units.**

This course examines the significant role of drugs play in shaping expressions of the self and social life; in the management populations, and in the production of markets and inequality. It engages these themes through cultural representations of drugs and drug use, analyses of scientific discourse, and social theory. Topics include: the social construction of the licit and illicit; the shifting boundaries of deviance, disease and pleasure; and the relationship between local markets and global wars.

Same as: ANTHRO 154, CSRE 154

**ANTHRO 255. Research Methods in Ecological Anthropology. 5 Units.**

The course prepare students for the methodological and practical aspects of doing ecologically oriented, quantitative anthropological field research. The primary goal is to explore what it means to ask anthropological questions in a systematic way. We will focus on understanding what can constitute an interesting question, how to frame a question in way that facilitates investigation, and how to design methods to begin investigating a question. In turn, the course will provide a format to refine research projects in preparation for doing more extensive fieldwork.

Same as: ANTHRO 155

**ANTHRO 256. Japanese Anthropology. 5 Units.**

This is an advanced reading seminar in the field of Japanese Anthropology. It will explore the historical development of the field and the contemporary issues and topics taken up by scholars of Japanese anthropology. Prior knowledge of Japanese language, history, and, society is required.

Same as: ANTHRO 156

**ANTHRO 260. Social and Environmental Sustainability: The Costa Rican Case. 3-5 Units.**

Seminar focused on issues of tropical sustainability with a particular emphasis on the Osa Peninsula of Costa Rica. Offered in conjunction with the Osa Initiative in the Woodz's Institute for the Environment, the course highlights issues of human development in the tropics, through such means as agricultural development, ecotourism, conservation efforts, private and indigenous reserves, and mining. The course will draw from diverse disciplines including anthropology, rural sociology, conservation biology, geosciences, history, political science, and journalism. In addition to weekly discussions, students will development a research paper throughout the term which will be presented to a panel of selected Woodz's Faculty during the final week of the term.

Same as: ANTHRO 160

**ANTHRO 260A. Tragedy of the Commons: Human Ecology of Communal Resources. 5 Units.**

The `tragedy of the commons` is a classic social dilemma - a situation in which individual interests conflict with collective ones - and key to understanding past, present and future environmental degradation. This course surveys a variety of scientific perspectives on the essence of the tragedy: common property resources will ultimately be destroyed by overexploitation. Major themes include the effects of human population density and social organization on the health and management of commons, self-interest versus collective action, and potential solutions to commons problems. Modern and prehistoric case studies are examined from ecological and evolutionary perspectives.

Same as: ANTHRO 160A

**ANTHRO 261. Human Behavioral Ecology. 3-5 Units.**

Theory, method, and application in anthropology. How theory in behavioral ecology developed to understand animal behavior is applied to questions about human economic decision making in ecological and evolutionary contexts. Topics include decisions about foraging and subsistence, competition and cooperation, mating, and reproduction and parenting.

Same as: ANTHRO 161, HUMBIO 117H

**ANTHRO 261A. Human Ecology: Adaptations to Climate and Climate Change. 5 Units.**

Humans face essentially the same adaptive challenges as all organisms but are unique for having successfully adapted to virtually every environment on Earth. The resulting diversity of phenotypes and cultures; past and present; is key to understanding how interactions with environments shape the economic, social, and cultural lives of hunter-gatherers, pastoralists and agriculturalists. This course surveys the range of human adaptations from an ecological and evolutionary perspective to understand human adaptive capacity and vulnerability to climate change. Same as: ANTHRO 161A

**ANTHRO 262. Indigenous Peoples and Environmental Problems. 3-5 Units.**

The social and cultural consequences of contemporary environmental problems. The impact of market economies, development efforts, and conservation projects on indigenous peoples, emphasizing Latin America. The role of indigenous grass roots organizations in combating environmental destruction and degradation of homeland areas. Same as: ANTHRO 162

**ANTHRO 263. Conservation and Evolutionary Ecology. 5 Units.**

Environmental degradation resulting from human behavior, and what can be done about it. Patterns of interaction between people and environments, and why they vary over time and space. Topics include adaptation and behavior, resource acquisition and utilization, conflicts of interest, collective action problems, conspicuous consumption, waste, land management, and public policy. Same as: ANTHRO 163

**ANTHRO 263A. Endangered Languages and Language Revitalization. 3-4 Units.**

Languages around the world are dying at such a rapid rate that the next century could see half of the world's 6800 languages and cultures become extinct unless action is taken now. This course looks at how and why languages die, and what is lost from a culture when that occurs. We will investigate how this trend can be reversed by methods of language documentation and description, the use of innovative technologies, multimodal fieldwork, writing dictionaries and grammars for different audiences, language planning, and data creation, annotation, preservation, and dissemination. We will focus on a number of current programs around the world to revitalize languages. Finally, the course will examine ethical modes of fieldwork within endangered language communities, and the possibilities of successful collaborations and capacity building, focusing especially on Northern California Indian peoples and their languages. Same as: ANTHRO 163A, LINGUIST 163A, LINGUIST 263, NATIVEAM 163

**ANTHRO 264. Natural Resource Extraction: Use and Development: Assessing Policies, Practices and Outcomes. 3-5 Units.**

This interdisciplinary course explores natural resource extraction from multiple conceptual perspectives. Logging and non-timber resource harvesting practices are examined through ecological dynamics of species and community life histories, natural and anthropogenic disturbance regimes and resilience and recovery to diverse perturbations through alternative stable states. Using a political ecology lens, we then examine historical and current policies and practices aimed to manage terrestrial resource use and extraction: maximum sustained yield, community-based forest management, certification systems, payment for ecosystem services and Reducing Emissions from Deforestation and Degradation (REDD). Through problem sets and lab/field exercises, we employ quantitative ecological measurements and experiments coupled with quantitative and qualitative methods and analyses used to assess socio-economic drivers and ecological impacts. Diverse benefits/costs imparted throughout the supply chain - from extraction to consumer - are explored across temporal and spatial scales with local to global agents. No Prerequisites: course or foundation in Ecology, Community Ecology, and/or Ecosystem Ecology strongly suggested. Same as: ANTHRO 164

**ANTHRO 266. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness. 3-5 Units.**

Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses?. Same as: ANTHRO 166

**ANTHRO 268A. Risky Environments: The Nature of Disaster. 5 Units.**

This seminar explores topics including environmental movements and countercultures, human agency and geoengineering ecotourism, and indigenous perspectives of changing climates to query how humans view "nature" in terms of stability, instability, risk and disaster in the 21st century. Case studies draw upon a broad range of geographical regions including the Arctic, Iceland, Australia, and the Americas. Discussions will draw upon film portrayals and interviews with researchers in addition to readings. Same as: ANTHRO 168A

**ANTHRO 269. The Ecology of Cuisine: Food, Nutrition, and the Evolution of the Human Diet. 3-5 Units.**

This course is an interdisciplinary approach to understanding human food consumption and nutrition, incorporating biological, evolutionary, ecological and social perspectives. Topics include a broad survey of primate diets and their physiological and behavioral correlates; fossil and archaeological evidence for early human diets; adaptations to dietary shifts since the Neolithic; infant and early child feeding practices and their role in shaping human social arrangements, metabolic syndrome, food security, food taboos; the origins of spices; cultural diversity in the social uses and meanings of food and the sharing of food; gathering, hunting and locavorism as high hipster cuisine. Emphasis is on understanding the diversity of human foodways through time and space: how biology, culture, and ecology interact to shape the food we eat, and how the food we eat shapes us. Same as: ANTHRO 169

**ANTHRO 270. Australian Ecosystems: Human Dimensions and Environmental Dynamics. 3 Units.**

This cross-disciplinary course surveys the history and prehistory of human ecological dynamics in Australia, drawing on geology, climatology, archaeology, geography, ecology and anthropology to understand the mutual dynamic relationships between the continent and its inhabitants. Topics include anthropogenic fire and fire ecology, animal extinctions, aridity and climate variability, colonization and spread of *Homo sapiens*, invasive species interactions, changes in human subsistence and mobility throughout the Pleistocene and Holocene as read through the archaeological record, the totemic geography and social organization of Aboriginal people at the time of European contact, the ecological and geographical aspects of the "Dreamtime", and contemporary issues of policy relative to Aboriginal land tenure and management. Same as: ANTHRO 170, EARTHSYS 172

**ANTHRO 270A. Multispecies Ethnography: Human, Animal, Plant, Mineral, and Microbe. 5 Units.**

This course explores new modes of writing and researching in anthropology. Multispecies ethnography considers nonhuman life as objects of analysis—animals, plants, fungi, bacteria, and viruses—as having political lives and import. By studying how these nonhuman entities, including metals, interact with and shape human existence, multispecies ethnographers who study life from the human down to the microbe, must engage in multiple worlds: from the jungle to the laboratory, from the field to the desk. This course will incorporate readings on zoe and bios, the making of species categories, relationships between the human and nonhuman, current debates on breaking with the species concept and the rights of mother earth. We will read the conceptual works in conjunction with current multispecies ethnographies to give grounding to the theory.

Same as: ANTHRO 170A

**ANTHRO 271. The Biology and Evolution of Language. 4-5 Units.**

Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language itself, and the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites.

Same as: ANTHRO 171, HUMBIO 145L

**ANTHRO 272. Seminar on Cultural Evolution and Coevolution. 3-5 Units.**

Upper division/graduate seminar on recent approaches to the study of cultural evolution and coevolution. Critical evaluation of Darwinian and non-Darwinian theories, with special attention to the interplay of culture, genes, environment and society. Students will undertake projects of their own design to review, test, or improve current theoretical formulations. Prerequisite: a university-level course in evolution, ecology, or human behavioral biology.

Same as: ANTHRO 172

**ANTHRO 272B. Anthropology of Gender/Sexuality: Eco-Feminist Perspectives. 5 Units.**

This course takes an eco-feminist approach to anthropology, investigating the different meanings of eco in eco-nomy and eco-logy. The term, eco, from the Greek, oikos, means household, house, or family, laying the foundation for examining women's roles in changing forms of kinship, beyond and within the concept of the human.

Same as: ANTHRO 172B

**ANTHRO 274. Beginnings of Social Complexity. 5 Units.**

Models and examples of the social evolution of stratification and political centralization in prehistoric human societies. Inferences from the archaeological record concerning the forces and mechanisms behind the rise and fall of complex societies, particularly in S. America. (HEF II; DA-B).

Same as: ANTHRO 174

**ANTHRO 275. Human Skeletal Anatomy. 5 Units.**

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.

Same as: ANTHRO 175, BIO 174, BIO 274, HUMBIO 180

**ANTHRO 276. Cultures, Minds, and Medicine. 1 Unit.**

This workshop aims to bring together scholars from the social sciences, humanities, medicine and bio-science and technology to explore the ways that health and illness are made through complex social forces. We aim for informal, interactive sessions, full of debate and good will. Dates of meetings will be listed in the notes section in the time schedule.

Same as: ANTHRO 176

**ANTHRO 277. Environmental Change and Emerging Infectious Diseases. 3-5 Units.**

The changing epidemiological environment. How human-induced environmental changes, such as global warming, deforestation and land-use conversion, urbanization, international commerce, and human migration, are altering the ecology of infectious disease transmission, and promoting their re-emergence as a global public health threat. Case studies of malaria, cholera, hantavirus, plague, and HIV.

Same as: ANTHRO 177, HUMBIO 114

**ANTHRO 278. Evolution and Conservation in Galapagos. 5 Units.**

The contribution of research in the Galapagos Islands to our current understanding of evolution and conservation. Writings from Darwin to Dawkins, as they reveal patterns and processes of evolution including selection, adaptation, speciation, and coevolution. Current conservation strategies in the archipelago, and urgent measures needed today before unique species and adaptations are lost.

Same as: ANTHRO 178

**ANTHRO 279A. Health, Illness, and Healing in South Asia. 5 Units.**

This course has three related goals pertinent to medicine and healing in South Asia. The first is to understand the experiences of illness, and therapy in ordinary South Asian communities. How do social and economic inequality, religious commitments, available healing traditions, and community and family contexts shape the experience of illness and healing? The second goal is to think about South Asian medical systems using a broad historical perspective. How had biomedicine been used during the colonial period to manage the health of native populations? What is the legacy of this colonial history on current practices? What happens when South Asian medical traditions (such as Ayurveda) become global? Third, we will explore crucial health problems in South Asia from the perspective of medical anthropology. Possible topics for the third portion of the course include: child birth and maternal health, sex-selection technologies, malnutrition, metabolic diseases, the selling of organs, medical tourism, tuberculosis, HIV, suicide, and schizophrenia.

Same as: ANTHRO 179A

**ANTHRO 282. Medical Anthropology. 4 Units.**

Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science.

Same as: ANTHRO 82, HUMBIO 176A

**ANTHRO 282A. Down and Out: Marginal Lives and Institutional Technologies. 5 Units.**

This course examines the neglect and management of socially marginalized persons including the mentally ill, youth runaways, child wards of the state, drug addicts and prisoners. In this course, we will approach the concept of marginality by investigating the spaces and institutions of decay, neglect and rehabilitation to which unwanted and indigent individuals are relegated. Readings are focused on qualitative research conducted within institutions of health, welfare, and reform. There will be two comparative public mental health sections in this course: one focused on South Asia and the second on Africa. This course is relevant for students interested in medical anthropology, applied anthropology, public health policy, or clinical careers in medicine, psychology, or social work.

Same as: ANTHRO 182A

**ANTHRO 283. Ecology, Evolution, and Human Health. 3-5 Units.**

Human ecology, human environments, adaptation and plasticity, and their relationship to health and well-being. Comparative context. Topics include human population history, subsistence ecology, demography, reproductive decision making, migration, infectious disease, risk management, and social inequalities. Particular attention will be paid to small-scale subsistence populations. Small-scale societies demonstrate an enormous range of variation in both environmental challenges faced and adaptations thereto. The process of human adaptation cannot be understood in the absence of a grounding in this range of challenge and adaptation.

**ANTHRO 283B. Human Mobility and Adaptability. 5 Units.**

Mobility, whether in the form of seasonal or permanent migration, is an ancient practice necessary for many subsistence strategies, including hunting-and-gathering and pastoralism. Many new forms of mobility have emerged and now it is nearly impossible to consider a patch of human society that is not engaged in or directly impacted by habitual, patterned geographic mobility. Today, almost everywhere in the world, people can get farther, faster; urbanization, environmental degradation, and civil unrest are driving groups of people who do not have a cultural tradition of nomadic migration to adopt a mobile lifestyle; sometimes permanently, sometimes temporarily, in search of new economic or resource opportunities. In this seminar course, we will explore modern patterns of human mobility and migration as adaptive strategies for predictably and unpredictably changing environments. Using a framework of biological and cultural adaptation, we will discuss the major types of current human mobility (e.g. nomadism, immigration, migrant labor, displacement) and how they influence and are influenced by social systems, resource access, and health.

Same as: ANTHRO 183B

**ANTHRO 285. Medical Anthropology of Contemporary Africa. 5 Units.**

In this course we will examine the place of Africa in global health discourses while reading in-depth histories and ethnographies of the varied causes and consequences of some of the most difficult problems facing African countries today. We will study the effects of colonialism and conflict on health, explore the military and humanitarian connections in the fight against HIV/AIDS, weigh the risks and benefits of population genetic studies on African populations, examine biomedical interventions on, and erasures of, local health problems, and query the role of violence, memory, insecurity, and power in daily life on the continent.

Same as: ANTHRO 185

**ANTHRO 286. Culture and Madness. 5 Units.**

'Madness' lends insight into the construction of the normal and abnormal; the boundaries of reason and unreason; the epistemological relation of mind and body, and the management of difference and disease. Taking an interdisciplinary perspective, this course explores the fundamental questions madness poses to subjectivity, culture and modernity.

Same as: ANTHRO 186

**ANTHRO 293B. Master's Thesis Writing Seminar. 2-4 Units.**

May be repeated for credit.

**ANTHRO 298B. Digital Methods in Archaeology. 3-5 Units.**

This is a course on digital technologies in archaeology used for documentation, visualization, and analysis of archaeological spaces and objects. Emphasizes hands-on approaches to image manipulation, virtual reality, GIS, CAD, and photogrammetry modeling methods.

Same as: ANTHRO 98B, ARCHLGY 98B

**ANTHRO 298C. Digital Methods in Anthropology. 3-5 Units.**

The course provides an introduction to a broad range of digital tools and techniques for anthropological research. It is geared towards those interested in exploring such methodologies for their research and wanting to add hands-on experience with state-of-the-art digital tools to their skill set. Students will learn to work with some of the most common tools used to collect and manage digital data, and to perform various types of analysis and visualization. Undergraduate students register for 5 Units, Graduate students can register for 5 or 3 units.

Same as: ANTHRO 98C

**ANTHRO 299. Senior and Master's Paper Writing Workshop. 1-2 Unit.**

Techniques of interpreting data, organizing bibliographic materials, writing, editing and revising. Preparation of papers for conferences and publications in anthropology. Seniors register for 199; master's students register for 299.

Same as: ANTHRO 199

**ANTHRO 300. Reading Theory Through Ethnography. 5 Units.**

Required of and restricted to first-year ANTHRO Ph.D. students. Focus is on contemporary ethnography and related cultural and social theories generated by texts. Topics include agency, resistance, and identity formation, and discourse analysis. Prerequisite: consent of instructor.

**ANTHRO 301. History of Anthropological Theory, Culture and Society. 5 Units.**

Required of Anthropology Ph.D. students. The history of cultural and social anthropology in relation to historical and national contexts and key theoretical and methodological issues as these inform contemporary theory and practices of the discipline. Enrollment limited to 15.

Prerequisite: consent of instructor.

**ANTHRO 301A. Foundations of Social Theory. 5 Units.**

The purpose of this course is to introduce key themes in social theory - the social, the modern subject, reason, autonomy, civility, interests, exchange, morality, life, the senses - through a reading of classic texts from Descartes up to psychoanalysis and phenomenology. Each section has original texts, commentaries, and background readings that place these texts in their deeper historical setting. Many of these commentaries trace how practical theories of 'lower' or minor selves - the subject people of the colonies, slaves, and other - were integral to the very development of ideas of the modern, autonomous and reasonable self in the western world. Prerequisite, by instructor consent.

**ANTHRO 302. History of Anthropological Theory, Ecology and Environment. 5 Units.**

Evolutionary and ecological theory from the 19th century to present. Theory and concepts from evolution and ecology, emphasizing anthropological applications. Evolutionary theories of human behavior, culture, and societies. Ecological theory behind carrying capacity, sustainable yield, and population growth. Emphasis is on tools of analysis and formulating research questions in anthropology today. Upper division undergrads require consent of instructor.

**ANTHRO 303. Introduction to Archaeological Theory. 5 Units.**

The history of archaeological thought emphasizing recent debates. Evolutionary theories, behavioral archaeology, processual and cognitive archaeology, and approaches termed feminist and post-processual archaeology in the context of wider debate in adjacent disciplines. The application and integration of theory on archaeological problems and issues. Prerequisite: consent of instructor.

**ANTHRO 304. Data Analysis for Quantitative Research. 5 Units.**

Univariate, multivariate, and graphical methods used for analyzing quantitative data in anthropological research. Archaeological and paleobiological examples. Recommended: algebra. Prerequisite: consent of instructor.

**ANTHRO 305. Research Methods in Ecological Anthropology. 5 Units.**

The course prepare students for the methodological and practical aspects of doing ecologically oriented, quantitative anthropological field research. The primary goal is to explore what it means to ask anthropological questions in a systematic way. We will focus on understanding what can constitute an interesting question, how to frame a question in way that facilitates investigation, and how to design methods to begin investigating a question. In turn, the course will provide a format to refine research projects in preparation for doing more extensive fieldwork.

**ANTHRO 306. Anthropological Research Methods. 5 Units.**

Required of ANTHRO Ph.D. students; open to all graduate students. Research methods and modes of evidence building in ethnographic research. Prerequisite: consent of instructor.

**ANTHRO 307. Archaeological Methods. 5 Units.**

Methodological aspects of field and laboratory practice from traditional archaeological methods to the latest interdisciplinary analytical techniques. The nature of archaeological data and inference; interpretive potential of these techniques. Prerequisite: consent of instructor.

**ANTHRO 308. Proposal Writing Seminar in Cultural and Social Anthropology. 5 Units.**

Required of second-year Ph.D. students in the culture and society track. The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment. Prerequisite: consent of instructor.

**ANTHRO 308A. Proposal Writing Seminar in Archaeology. 5 Units.**

Required of second-year Ph.D. students in the archaeology track. The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment. Prerequisite: consent of instructor.

**ANTHRO 309. Advanced Evolutionary Theory in Anthropological Sciences. 5 Units.**

History of evolutionary theory from the 19th century to present, emphasizing anthropological applications. Theory and concept in evolutionary biology; evolutionary theories of culture; and interactions of genetic, social, and cultural evolution and their implications. Emphasis is on tools of analysis and the value of evolutionary thinking for formulating research questions in anthropology today. Prerequisite: graduate standing or consent of instructor. (HEF II, III).

**ANTHRO 310C. Intersections. 5 Units.**

Themes of materiality and visuality, aesthetic and other forms of cultural production, and the meanings of creativity and convention. Ethnographic and archaeological material and case studies from worldwide cultural contexts. Prerequisite: consent of instructor.

**ANTHRO 310G. Introduction to Graduate Studies. 2 Units.**

Required graduate seminar. The history of anthropological theory and key theoretical and methodological issues of the discipline. Prerequisite: consent of instructor.

**ANTHRO 311. Ethnographic Writing. 3-5 Units.**

For graduate students writing or planning to write a dissertation using ethnographic methods. The choices made by the authors of ethnographies in constructing an argument, using data and speaking to an audience of readers. Readings include chapters written by class members currently writing dissertations. Prerequisite: consent of instructor.

**ANTHRO 311G. Introduction to Culture and Society Graduate Studies in Anthropology. 2 Units.**

Required graduate seminar for CS track. The history of anthropological theory and key theoretical and methodological issues in cultural anthropology. Prerequisites: this course is open only to Ph.D. students in anthropology or by permission of the instructor.

**ANTHRO 312. Writing Across Audiences: Styles and Methods. 5 Units.**

This course examines the way anthropologists and others write to different audiences. What do you need to do communicate to a mainstream anthropology audience? How does that change when you write an editorial or place something in a popular venue? When you try to capture a non-anthropological medical audience? What methods might you consider adding to enable that cross-talk? We will examine a series of examples of people who have written across. Prerequisite: consent of instructor.

**ANTHRO 313. Anthropology of Neoliberalism. 5 Units.**

How is the recent worldwide restructuring under the name neoliberalism understood as a social, cultural, and economic phenomenon? Focus is on interrogation of analytic categories, and ethnographic explorations of social and political processes. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 316. Politics of the Mass Subject. 5 Units.**

Harbinger of democracy or arbiter of tyrannous rule? Source of collective agency or threat to political order? Over the past century, notions of the masses, the multitudes, and the people have served as volatile focal points for political theory and for institutions of governance. Drawing on historical, ethnographic, and theoretical readings, this course explores how tensions haunting these concepts continue to animate, as much as beleaguer, contemporary discussions of democratic citizenship and political modernity.

**ANTHRO 317. Colonial Archives and Archaeology: Models and Methods of Analysis. 5 Units.**

This course details the methodological challenges associated with using primary historical documents, ethnographic methods and sources and archaeological data. How do archaeologists deal with multiple sources of data, primary texts (translated and original) and ethnographic materials? This course examines archaeological monographs as models for individual student projects leading to dissertation research and publishing beyond the dissertation. Students will be required to present materials, research questions and primary source materials to the class in order to expand our understanding of the challenges and insights provided by archival and archaeological studies.

**ANTHRO 318. Democracy and Political Authority. 5 Units.**

Democracy is commonly defined in formalist terms as a form of government (involving the consent of the governed) and a procedure of governance (involving the rule of law). In place of a formalist definition, this course examines democracy as a historical and discursive form. In what ways have the rights of citizenship for some been premised on the domination of others (workers, women, the colonized, etc.)? What forms of violence are not only tolerated as practical necessity in the contemporary order of democratic states but sanctioned as morally just? What mechanisms of political authority operate by defining the boundaries between the tolerable and the intolerable, between citizenly belonging and terrorism  $\zeta$  in short, between democracy and its others (e.g., an arbitrary despot, a feudal economy, a religious fundamentalism)? These questions require urgent interrogation in the present day: the past thirty years have witnessed a virtual explosion of new constitutions proclaiming democratic sovereignty across the world. What forms of global power and institutional domination are constitutive of the contemporary era of liberty, freedom, and equality? Readings are drawn from a variety of disciplines, including anthropology, political theory, and political philosophy. Prerequisite: consent of instructor.

**ANTHRO 319. South Asia: History, People, Politics. 5 Units.**

The South Asian subcontinent (comprising of India, Pakistan, Bangladesh, Nepal, Bhutan and Sri Lanka) is one of the most diverse and densely populated regions in the world and increasingly prominent in new global political and cultural economies. South Asia has also provided the inspiration for cutting edge theories about the colonial state, postcolonial studies, democracy, popular culture, and religious conflict. The course will provide an overview of major historical events and social trends in contemporary South Asia and focus on themes such as gender, religion, caste, migration and movement, new technologies, the urban and rural, the state, and new forms of consumption among others. Thus, the course will give students historically and theoretically informed perspectives on contemporary South Asia, as well as how to apply insights learned to larger debates within the political and social sciences. Prerequisite: consent of instructor.

**ANTHRO 320A. Race, Ethnicity, and Language. 3-4 Units.**

This seminar explores the linguistic construction of race and ethnicity across a wide variety of contexts and communities. Throughout the course, we will take a comparative perspective and highlight how different racial/ethnic formations participate in similar, yet different, ways of "doing race" through language, interaction and culture. Readings draw heavily from perspectives in (linguistic) anthropology and sociolinguistics. Prerequisite: consent of instructor. Same as: LINGUIST 253

**ANTHRO 321. Reading Marx, Reading Weber. 5 Units.**

This advanced graduate seminar is devoted to a critical reading of selected writings by two nineteenth century social theorists who continue to shape anthropology and social analysis more broadly. Prerequisites: Graduate standing in Anthropology or permission of the instructor. Previous graduate level coursework in cultural or social anthropology, social theory or cultural studies is required. No auditing is permitted. Maximum enrollment 12.

**ANTHRO 321A. Anthropology and Literature: Problems of Representation, Power, and Textuality. 5 Units.**

How are literary and social scientific forms of cultural description, evocation, and interpretation related? The seminar reads classic texts as well as recent experiments, addressing issues of genre, rhetoric, epistemology, translation, authority, and collaboration. The emphasis is on writing as a situated practice, embodied, relational, and historically circumscribed. Authors may include Malinowski, Mead, Benedict, Lévi-Strauss, Geertz, Taussig, Leiris, Conrad, Achebe, Said, Barthes, Kroeber, Le Guin, and selected contemporary ethnographies. Examples from film, visual culture, and performance art may also be included. Same as: COMPLIT 321B

**ANTHRO 321B. From Marx TO Piketty: Toward An Anthropology Of Wealth, Inequality and Power. 5 Units.**

This seminar will explore the ways in which theorists and researchers from Karl Marx to Thomas Piketty have conceptualized, studied, and analyzed inequality in capitalist societies. In considering the ways in which Marx, Piketty and other scholars approach profit, accumulation, wealth, inequality, class and power, we will be especially interested in how these are shaped by their ideas and assumptions about kinship, sentiment, gender, and subjectivity. We will work toward developing an anthropological framework and ethnographic research projects that build on our critical understanding of Marx and Piketty. The course is limited to graduate students and anthropology majors who have taken Anthropology 90b.

**ANTHRO 322. From Biopolitics to Necropolitics and Beyond. 5 Units.**

Scholarship produced and informed by Michel Foucault. Focus is on the final period of Foucault's life; how his discussions of biopolitics, subjectification, governmentality, and death have served as touchstones for recent empirical research. Key interventions initially made under these rubrics; how anthropologists and others have applied, challenged, and extended them. Prerequisite: consent of instructor.

**ANTHRO 323. Graduate Seminar in Economic Anthropology. 5 Units.**

Classical and contemporary anthropological perspectives on topics such as money, markets and exchange; capitalist and non-capitalist modes of production; class and socio-economic differentiation; globalization and neoliberalism; and the social and cultural construction of the object, "the economy". Prerequisite: consent of instructor.

**ANTHRO 324. Political Anthropology. 5 Units.**

An anthropological approach to politics through bringing anthropological ways of thinking and modes of analysis to bear on key presuppositions of modern Western political thought. Ideas of rights, the individual, society, liberty, democracy, equality, and solidarity; ethnographic accounts used to identify the limits of conventional analytical approaches and to document the forms of politics that such approaches either ignore or misunderstand. Prerequisite: consent of instructor.

**ANTHRO 326. Postcolonial and Indigenous Archaeologies. 5 Units.**

The role of postcolonial and Indigenous archaeologies as emergent disciplinary activities within contemporary society. Community based archaeologies; the roles of oral history, landscape, and memory; archaeology as political action; and history in archaeological projects. The emergence of Indigenous archaeology within N. America in relation to limitations imposed by processual or new archaeology; and NAGPRA, Kennewick, essentialism, and terminal narratives within this context. Prerequisite: consent of instructor.

**ANTHRO 327. Language and Political Economy. 5 Units.**

Theories of language: Saussure, Jakobson, Hymes, Marx, Foucault, Butler, and Derrida. The theorization of language in its linkages to power, social relations, and history. Prerequisites: Linguistics or Anthropology course work. Prerequisite: consent of instructor.

**ANTHRO 328. Making. 5 Units.**

The politics of visibility, social imagination, and the ethics of visual production and consumption in the current moment. Sources include anthropology, art history, and philosophy. Prerequisite: consent of instructor.

**ANTHRO 331. The Anthropology of Technology. 5 Units.**

Iconic discipline-building works of the last three decades; readings that lay out and intervene in contemporary debates. Prerequisite: consent of instructor.

**ANTHRO 332A. The Anthropology of Heritage: Concepts, Contexts and Critique. 3-5 Units.**

This seminar will explore foundational concepts currently employed within heritage practice and debates. Readings will examine the historically formative context of colonial-era and nationalist discourses on stewardship and culture, as well as postcolonial reformulations of such concepts as cultural property, cultural recognition and public history. The seminar will engage the question of the relationship between foundational concepts and the current cosmopolitan and internationalist vision for heritage, probing the enduring dynamics of North-South divides in heritage development and archaeological practice. Same as: ARCHLGY 132, ARCHLGY 232, ARCHLGY 332

**ANTHRO 333. Anthropologies of Evidence. 5 Units.**

Drawing on literature in Anthropology and Science and Technology Studies, this course will examine what kinds of artifacts and arguments count as evidence in intellectual and scientific debate.

**ANTHRO 333A. The Cultural Politics of Ambiguity. 5 Units.**

Contemporary conceptual approaches to understanding the politics and production of certainty, ambiguity, and doubt. The seemingly ambiguous nature of the science of industrial pollution and contamination exonerate corporate and government polluters from rising rates of cancer, while the science of liberal economic models seems to create no alternative to massive economic subsidies of the financial sector. How culpability, exoneration, transformative action, institutional stasis, and political rely on the production of certainty, ambiguity, and doubt. Prerequisite: consent of instructor.

**ANTHRO 334. Trauma and Healing. 5 Units.**

This course considers class and recent work on culture and psychiatry with an emphasis on trauma. We consider work on the main diagnostic categories like depression and schizophrenia, but also the work on dissociation, war combat, PTSD, and psychosis.

**ANTHRO 335A. Animism and Alter-Native Modernities. 5 Units.**

For many years indigenous knowledges were treated as a field of research for anthropologists and as "mistaken epistemologies," i. e., unscientific and irrational folklore and childish worldviews. This old view of animism was a product of the evolutionist and anthropocentric worldview of the Enlightenment. However within the framework of ecological humanities, current interest in posthumanism, postsecularism and discussions on building altermodernity (Michael Hardt and Antonio Negri), indigenous thought is used to critique modern epistemology and develop an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge is presented as a decolonizing and liberating practice. The term alter-native modernities as response to the challenges of Euromodernity and suggests modernities that might emerge out of indigenous ways of being in the world. Comparison between literature on indigenous cultures from Latin America and from Russia (animism in Amazonia and Siberia). Following recent works by anthropologists and archaeologists such as Nurit Bird-Rose, Philippe Descola, Graham Harvey, Tim Ingold and Viveiros de Castro, new animism is treated as an alternative (relational) ontology that allows rethinking the problem of matter and agency, goes beyond human exceptionalism and embraces non-humans. Topics include: alternative and alter-native modernities; Jean Piaget's theory of childhood animism; problem of anthropomorphism and personification; indigenous knowledge and the problem of epistemic violence; vitalist materialism (Jane Bennett, Rosi Braidotti); connectedness as the principle of life (relational epistemologies and ontologies); non-human agency (Bruno Latour). Same as: FRENCH 335A, REES 335A

**ANTHRO 336. Anthropology of Rights. 5 Units.**

Ideas of rights at the center of contemporary politics around the world. An anthropological perspective on how rights are invoked, claimed, and translated into institutional policies in ethnographic cases. The limitations of liberal notions of rights and innovative forms of politics emerging within and against rights talk. Prerequisite: consent of instructor.

**ANTHRO 337. The Politics of Humanitarianism. 5 Units.**

What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issues a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical or political stakes or that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the cause of humanity. In the early years of humanitarian intervention, political neutrality was a key principle; it has now come under ever greater analytical and political scrutiny. We will examine the reasons for the politicization and militarization of aid -- be it humanitarian aid in natural disasters or political crises; development programs in the impoverished south (¿the Third World¿), or peace-keeping. We will end with a critical exploration of the concept of human rights, humanity, and personhood. The overall methodological aim of the course is to demonstrate what insights an ethnographic approach to the politics, ethics, and aesthetics of humanitarianism can offer. Prerequisite, by instructor consent.

**ANTHRO 337B. Anthropological Approaches to Health Issues in Contemporary Latin America. 5 Units.**

The purpose of this course is to examine the anthropological and ethnographic research on emerging health issues and sufferings in Latin America. In particular, the class explores how anthropologists understand and ponder social, economic, political, environmental, spatial processes that shape patterns of health, suffering and death, and the strategies to address them. By analyzing paradigmatic case studies, we will discuss theoretical concepts and social perspectives, as well as ethnographic dilemmas and methods. Taking a critical perspective, this class will not only explore the standard topics on Latin American health (hunger, infectious disease, mental health, etc.). We will also focus on emerging sufferings (drug use, epidemics, environmental discomforts and sufferings, etc.). Both standard and emerging topics are examined with respect to the changes in political economy, medical institutions and policy approaches, models of care and caregiving, gender violence, circulation and appropriation of expert knowledge, contamination, migration, spatial segregation, violence, marginalization, abandonment, justice and human rights. Interdisciplinary investigation is conducted into most of these health issues, not only in the global health field. They are addressed by the South American Social Medicine and Collective Health approaches. This class will include a description and critical analysis of their theoretical frameworks and core concepts, as well as their relationships to international and local medical anthropological theory and research.

**ANTHRO 338. Anthropological Approaches to Religion. 5 Units.****ANTHRO 339. Anthropology of Religion. 5 Units.**

This course presents classic and contemporary work on the anthropology of religion: Durkheim *Elementary Forms of the Religious Life*; Levy-Bruhl; *Primitive Mentality*; Douglas *Purity and Danger*; Evans Pritchard *Nuer Religion*; and recent ethnographies/scholarly work by Robbins, Keane, Keller, Boyer, Barrett, and others.

**ANTHRO 339A. Technologies of Extinctions: Ecocides and Genocides. 5 Units.**

This course will explore the relationship between history, ecological evolution and mass killing in the age of humanly caused species extinction. It will explore the universalization of the notion of the Jewish Holocaust, its use to integrate into genocide studies the Native American "spiritual" holocaust, the Japanese nuclear holocaust and the Rwandan genocide, and the ethical dilemmas posed by the ideas of biotic, animal and ecological holocausts. Anthropology and history of genocides and extinctions as well as posthumanist, multispecies theories will provide theoretical frames for the course.

Same as: FRENCH 339A

**ANTHRO 340A. Post-secular Humanities: Religion and Spirituality in the Contemporary World. 5 Units.**

The term ¿postsecularism¿ refers to various theories and approaches regarding the revival of religion in the present, as well as current reevaluations of the relationship between faith and reason in knowledge building. When thinking about a postsecular humanities, the course would follow scholars that are usually associated with this trend (like Agamben, Badiou, Derrida, Habermas), on the one hand, and discuss Braidotti's ideas of a new vitalism, Chakrabarty's postcolonial postsecularism, and Harvey's new animism, on the other. The course will examine the way interactions and collisions among various worldviews can provoke the rethinking of key ideas of our times: what it means to be secular, religious, a citizen, a hybrid, an indigenous, a non-human.

**ANTHRO 341. The Archaeology of Religious Crusading in Medieval Europe. 5 Units.**

This course will present a chronologically framed outline of the three main regions that witnessed the greatest impact of the crusading period. Commencing with the initial capture of Jerusalem and the subsequent establishment of a crusader kingdom in the Middle East in AD1099, till its eventual end in 1291, this will be followed by the pagan conversions of the Northern Baltic. Centred on Poland (Prussia) and Latvia (Livonia) from the 13th to 15th c., this example will also be compared with neighbouring Lithuania, which never fell under the political hegemony of the Monastic Orders. Finally, the course covers the Iberian case, where the Reconquista or reconquest - of lands from Muslim groups concluded with the fall of Granada and the unification of Spain in 1492. Through archaeological and historical evidence, the materials, technologies and ideas of the crusading groups will be compared and contrasted, with a particularly emphasis on bioarchaeological datasets. Ultimately, the course deals with the economic, social and practical mechanisms used by the religious orders to colonise, once the initial conquest had been achieved. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 343. Culture as Commodity. 5 Units.**

Focus is on theories of commodification, interests in tourism, national cultures as marketable objects, and how identities are constituted through production and consumption. The formation of global style and taste. Prerequisite: consent of instructor.

**ANTHRO 344. Graphic Medicine. 5 Units.**

In this course students will study medical cultures through visual communication ranging from x-rays and PET scans to graphic novels. Course will also include literature on visual theory.

**ANTHRO 345. New Visions in Medical Anthropology. 5 Units.**

Recent experimental histories of the field. Emphasis is on how, working within anthropology's classic format, the ethnographic monograph, authors have innovatively responded to the challenges of representing amorphous, unspoken, and often violent relationships between the body and social change. The authors' expository techniques, and how they engage and extend theoretical debate. How to assess works within medical anthropology and its allied fields. Prerequisite: consent of instructor.

**ANTHRO 345A. Race and Power: The Making of Human Difference in History, Biology and Capital. 5 Units.**

This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the reality of race as a literally constructed phenomenon, where historical, colonial, bodily, market, penal, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race in systems of capital accumulation.

**ANTHRO 346. The Social Imagination. 5 Units.**

The imagination as such has not been an accustomed object of ethnographic fieldwork or theoretical debate in anthropology. This seminar consists of a cluster of thematic explorations including: the spatial imagination of states; the imagination of race, colonialism, and domination; the social imagination of evil and of the good; and conceptualizations of the creative imagination.

**ANTHRO 346A. Sexuality Studies in Anthropology. 5 Units.**

Current research on sexuality from perspectives including paleoanthropology, archaeology, ethnography, and linguistic anthropology. Readings paired with case studies that explore theoretical and methodological issues. Prerequisite: consent of instructor.

**ANTHRO 347. Religion and Modernity. 5 Units.**

What role has the category of religion played in the development of the modern state, both colonial and national? How have central concepts of liberal political thought, such as freedom, progress, and history, depended on certain normative ideas of religion? Through various genealogical, historical, and ethnographic inquiries, this course examines how the category of religion has both subtended and disturbed formations of colonial and post-colonial modernity.

Same as: RELIGST 332X

**ANTHRO 348. Representing Medicine. 5 Units.**

The seminar will offer the opportunity to discuss the recent work of a series of 9 scholars known for their innovation in writing and research. The seminar will offer professional networking as well as the opportunity to engage authors in questions of writing, approaches to fieldwork, strategies for career advancement, and brainstorming on how to structure relevant arguments. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 349. Anthropology of Capitalism. 5 Units.**

This advanced graduate seminar explores capitalism as an historically-situated and culturally-mediated articulation of practices rather than as an economic system or social structure governed by an internal logic. It draws on poststructural theories of culture, society and subjectivity to investigate the processes through which diverse capitalist practices are produced. Prerequisite: Graduate standing in Anthropology or permission of the instructor. Previous graduate level coursework in cultural anthropology, social theory or cultural studies is required. No auditing is permitted. Enrollment limited to 12.

**ANTHRO 349A. Advanced Archaeological Field Methods: A Practical Approach to Working With and Within Communities. 5 Units.**

This is a graduate level course (open to undergraduates with permission) in archaeological field methods at several archaeological and cultural sites in the San Francisco Bay area. This is a practical course designed to help students identify potential archaeological sites (using GIS) historical maps, historical archives and extant site reports. Students will gain hands-on experience with mapping, field survey and strategies and methods of field excavation. Study of local artifact types and lab techniques for artifact cleaning and identification and written analysis. The course emphasizes a community based model of archaeology, working with members of local indigenous cultures. The seminar will begin with readings and classroom instruction and proceed to the field. Students will be required to hike to field sites and conduct experiments using a variety of equipment, recording devices and strategies. Prerequisite, by instructor consent.

**ANTHRO 350. Topics in Linguistic Anthropology. 5 Units.**

Reading seminar; restricted to Anthropology graduate students. The anthropology of language and semiotics. Focus is on the limits of textualism, and alternative semiotic and epistemic bases for theorizing language and representation. No linguistic anthropology course work required. Prerequisite, by instructor consent.

**ANTHRO 351. The Ordinary: The History of a Concept. 5 Units.**

The ordinary has today acquired something like a cultic status in contemporary culture. 'Ordinary' citizens are the touchstone and essence of political democracy; the holy grail of effective marketing, the byword for earthy ethical judgment. In social science, the ordinary has blended in with the 'normal' and the statistical mean. In Anthropology, ordinary life has all but replaced 'cultural practice' as the epistemic gold standard of evidence. But this was not always so, and the ordinary has many, varied and contradictory meanings across the world. This course will (a) trace the historical emergence of the ordinary as a central ideological and metaphysical concept in modern thought and practice; (b) trace how the ordinary and the everyday have acquired unprecedented authority in anthropology; (3) trace the varied meanings and connotations of 'the ordinary' in different socio-historical contexts from Asia, Africa and Euro-America. The literature will consist of ethnographies, and works of philosophical and historical scholarship.

**ANTHRO 352. Foucault: The Question of Method. 5 Units.**

Foucault as methodological exemplar for historical and social research. Emphasis is on his historical studies of clinical medicine, prisons, and sexuality, and on applying his methods to empirical studies of topics such as colonialism, race, and liberal governmental rationality.

**ANTHRO 353. Landscape. 5 Units.**

This seminar offers an interdisciplinary approach to the study of landscape, noting the various processes and projects that have helped create them. Readings draw together a broad range of theoretical approaches that are attentive to human-non-human interactions and the overlapping and divergent spatial and temporal questions of the exchanges between landscapes and humans. The readings will also draw attention to representational and non-representational ways that material and symbolic aspects of landscapes help constitute the making of place. The aim of the seminar is to explore the various methodologies for what they offer for the study of place.

**ANTHRO 355. Cities in Global Perspective. 5 Units.**

Interdisciplinary approach to examining global cities. The concept of the global city, and the interdependent processes that help produce urban spaces. Situating the transformation of urban spaces within globalization and its differential effects; current explanatory frameworks that pay attention to multiple scales of spatial and economic articulation. Prerequisite: graduate standing. Prerequisite: consent of instructor.

**ANTHRO 356. The Anthropology of Development. 5 Units.**

Multidisciplinary. Topics vary annually. Areas include Africa, S. Asia, and Latin America. Prerequisite: consent of instructor.

**ANTHRO 357. Other Minds: Puzzles in Psychiatric and Psychological Anthropology. 5 Units.**

Problems in the way anthropologists explore other minds anthropologically and the ways in which anthropologists seek to understand the models of other minds held by the people observed. Topics include theory of mind, witchcraft, belief, empathy, psychosis, trauma, Freud, Vygotsky, and cognitive dissonance. Prerequisite: consent of instructor. Undergrads cannot take this class without permission of the instructor.

**ANTHRO 358. Anthropology and the Limit of Experience. 5 Units.**

In this course, we will examine the concept of the "limit" in relation to questions of experience. Taking an interdisciplinary perspective, we will explore how the limit (as border, threshold, other, transgression, liminality, etc.) frames and disrupts discourses of experience in ethnography, philosophy and literature.

**ANTHRO 359. Copies, Collections, and Commodities. 5 Units.**

In this class we will grapple with multiple questions that arise with reproduction. On the one hand, reproducibility is good: we want generic drugs to work as well as the originals, we want trial subjects to adequately stand in for the people likely to be having a treatment, and we want a cartographic map to describe the landscape that unfolds before us. On the other hand, the copy threatens the value the object it is meant to imitate or represent, and to take on a life of its own. A series of classic and new ethnographies will be organized around these issues.

**ANTHRO 360. Social Structure and Social Networks. 5 Units.**

In this course, we will explore social network analysis, a set of methods and theories used in the analysis of social structure. The fundamental conceit underlying social network analysis is that social structure emerges from relationships between individuals. We will therefore concentrate in particular on the measurement of relationships, emphasizing especially practical methodology for anthropological fieldwork. This is a somewhat unusual course because of its focus on social network research coming out of anthropological and ethological traditions. While most current practitioners of social network analysis are (probably) sociologists, many of both the methodological antecedents and theoretical justifications for the field can be found in these two traditions. A major goal of this course is to understand how the methods and perspectives of social network analysis can be usefully incorporated into contemporary approaches to ethnography and other anthropological modes of investigation. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 361. Life and Death in Contemporary Latin America: An Anthropological Inquiry. 5 Units.**

This seminar explores life and death in contemporary Latin America. We will address anthropological understanding of the role of colonialism, migration, violence, urbanization, democratic transition and neoliberalism as they configure the experience of, and threshold between, vital and deadly processes. This is not a standard survey course, covering the region as a whole however. Instead, we will critically engage several recent ethnographies that explore, for example: the politics and practices of memory; border thinking and living; the political economy of death and desire; state violence and social movements; the relationship between the laboring city and body. We will supplement ethnographies with contemporary Latin American critical theory, film, and literary texts. Prerequisite: consent of instructor.

**ANTHRO 362. Human Spatial Dynamics: Seminar in Communicating Contemporary Science. 5 Units.**

This seminar is designed to bring together all students and faculty currently working on issues related to human use of land and spatially defined resources. The focus is to provide a forum for reporting on recent results and question development, providing students with vital skills in designing and communicating the results of research. Undergrads by permission of instructor.

**ANTHRO 362A. Introduction to Human Evolution, Ecology, Genetics, and Culture. 5 Units.**

Themes and topics of lasting heuristic value in the anthropological sciences. Combines the lecture content of 2A and 2B with a discussion section for graduate students. Must be taken in the Autumn Quarter of a student's first year in the graduate program.

**ANTHRO 363. Demography and Life History Theory. 5 Units.**

Problems in demography and theoretical population biology applied to human systems. Emphasis is on establishing relationships between models in theoretical population biology and empirical demographic methodology. Topics include philosophy of models and model building, population dynamics, stable population theory, species interactions in human ecology, models of infectious diseases and their control, cultural evolution. Prerequisites: HUMBIO 137 or consent of instructor.

**ANTHRO 363A. Anthropology of Environmental Conservation. 5 Units.**

Graduate seminar focused on key works by anthropologists on environmental conservation. We will discuss both classics (ie, works by Ostrom, Lansing, Bray) as well recent debates regarding communities, neoliberalism and conservation. Students will present on topics of particular interest or relevance to their research.

**ANTHRO 364. EcoGroup: Current Topics in Ecological, Evolutionary, and Environmental Anthropology. 2-5 Units.**

Seminar; restricted to graduate students. Topics vary with instructor. How to ask appropriate questions, how to derive research hypotheses from theory, how to design methodologies for testing hypotheses, and how to present results by reading and critiquing key contemporary papers in the field. Ph.D. students enrolling in this course to fulfill the department review course requirement must enroll in 5 units. Graduate students enrolling in this course to participate in a topical forum may enroll in 2 units. Course may be repeated for 2 units. Prerequisites: by consent of instructor.

**ANTHRO 364A. EcoGroup: Problems in Ecological and Evolutionary Anthropology. 2-5 Units.**

Seminar; restricted to graduate students. Topics vary with instructor. How to ask appropriate questions, how to derive research hypotheses from theory, how to design methodologies for testing hypotheses, and how to present results by reading and critiquing key contemporary papers in the field. Ph.D. students enrolling in this course to fulfill the department review course requirement must enroll in 5 units. Graduate students enrolling in this course to participate in a topical forum may enroll in 2 units. Course may be repeated for 2 units. Prerequisites: by consent of instructor.

**ANTHRO 365. The Theory of the Modern Subject. 5 Units.**

This course traces the emergence of a coherent theory of the modern subject through readings of philosophical works and social theory from 18th century to the 20th century. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 366. Material Semiotics. 5 Units.**

This seminar will focus on the emerging body of literature on the materiality of the production, circulation, and mediation of paperwork as constitutive of modern forms of governance. We will discuss specific genres of paperwork—notes, memos, files, documents, as well as archives and other mnemonic technologies—both as cultural practices and reflexive objects, and examine how they produce modern social epistemologies of accountability, evidence, the fact, and truth in the fields of law, business, and public administration, as well as in civil society generally. Readings will include works by Max Weber, Bruno Latour, Jacques Derrida, Michel Foucault, Cornelia Vismann, Ann Stoler, and others. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 367. The Anthropology of Science: Global Politics and Laboratory Life. 5 Units.**

Science and technology are important cultural products that often dramatically reorganize various aspects of human life. In this course we will explore how recent innovations in the life sciences and biomedicine may reconfigure crucial elements of social institutions, lend new structures to identity politics, and often change the way we interact with and conceive of nature. We will examine these issues in various global settings to explore how everyday politics shape politics of life in different locales. Prerequisite, by instructor consent.

**ANTHRO 367B. The Intellectual and Political Career of Stuart Hall and British Cultural Studies from 1960 to 2014. 5 Units.**

The seminar traces the trajectory of Stuart Hall and British Cultural Studies, beginning with the first New Left in 1960; then the Birmingham Centre period, Thatcherism and Gramscian analysis; race, gender, and identity politics; global and diasporic approaches; New Times, neo-liberalism, and the problem of historicizing the present conjuncture. Case studies from other parts of the world will put cultural studies tools to the test.

**ANTHRO 368. Dynamics of Coupled Human-Natural Systems. 5 Units.**

This is a graduate research seminar on the interdisciplinary approach to the study of the dynamics of what is known as “coupled human-natural systems.” We will take a critical perspective on such systems, asking to what extent the idea of coupling of discrete subsystems is intellectually profitable and what defines a “human” vs. a “natural” system? We will explore concepts such as coupling, nonlinearity, threshold behavior, feedback, complexity, resilience, and catastrophes. Case studies will be drawn from the literature on human ecology, population dynamics, disease ecology, and social dynamics. Emphasis will be on developing a working knowledge of mathematical and computational models of coupled systems embedded within a rigorous empirical framework of biosocial data collection.

**ANTHRO 369. Advanced Topics in Human Behavioral. 2-5 Units.**

Course covers a variety of advanced topics which rotate annually, such as: ownership and egalitarianism, the integration of landscape and behavioral ecology, conservation and indigenous subsistence, or fertility and demography. Course may be repeated for credit when topics change.

**ANTHRO 370. Advanced Theory and Method in Historical Archaeology. 5 Units.**

Current debates about theory and method. Prerequisite: consent of instructor.

**ANTHRO 371. Living and Dying in the Contemporary World. 5 Units.**

This seminar explores how biological, political and social conditions transform and conjoin experiences of living and dying in the world today. Engaging contemporary ethnographies and social theory, we will examine how life and death, the natural and the social, the individual and the collective, are braided together in ways that challenge conclusions about what constitutes care, community, health, rights, and violence, among other issues. We will also reflect on whether and how the braiding together of these domains leaves room for the recognition of their singularity. Thus, an abiding question for this seminar is the relation of history to the present. Prerequisite: consent of instructor.

**ANTHRO 372. Urban Ecologies. 5 Units.**

At the intersections of urbanism and environmental studies, political ecology, postcolonial theory and the new materialism, new fields are in formation. This seminar explores scholarship that connects cities with countryside rough questions of resources and infrastructures. We will consider questions of inequality access and community as well as unexpected urban ecologies.

**ANTHRO 372A. Materiality. 5 Units.**

The relationships between people and things. The world of objects plays a major role in materialism and the anthropology of material culture. Approaches that break down subject-object opposition. New social and psychological approaches that explore the mutual constitution of people and things, and object and subject. Approaches in which objects are seen to have agency, and people are seen as entangled in object worlds. Authors include Hegel, Marx, Benjamin, Miller, Gell, and Latour. Prerequisite, by instructor consent.

**ANTHRO 373. Things: An Archaeology of the Relationships Between Humans and Things. 5 Units.**

This course examines a variety of approaches that claim to explore the relationships between humans and things. Some of the approaches include Marx and material culture studies; Heidegger; cognitive and phenomenological; Actor Network Theory. But there is a need also to examine behavioral and ecological and Darwinian approaches. Many of these approaches do not adequately deal with the physicality of things as objects and there is a need to seek a way to incorporate such aspects of things into social theory. Prerequisite: graduate standing or consent of instructor.

**ANTHRO 374. Archaeology of Colonialism/Postcolonialisms. 5 Units.**

Advanced graduate seminar focused on the archaeology of colonial and postcolonial contexts, both prehistoric and historic. Emphasis on intersections between archaeological research and subaltern, postcolonial, and transnational feminist/queer theory. Prerequisite: consent of instructor.

**ANTHRO 375. Archaeology and Globalism. 4-5 Units.**

The emergence of archaeology as a discipline in the context of the rise of the nation state. Global economies and other issues have created a new context for archaeology. How are archaeology and heritage responding? The idea of world heritage. The impact of postcolonialism. The commodification of the past: the past as theme park, as travel tourism or nostalgia, as exotic and other. Conflict between uses of the past for identity and as theme park; between heritage and resource or play. The impact of the Goddess, New Age, and other movements. Archaeology and human rights issues including forensic archaeology. Prerequisite: consent of instructor.

**ANTHRO 376. Archaeology: The Emergence of a Discipline. 5 Units.**

This course explores the key thinkers and practitioners who have founded the discipline of archaeology. Reaching back into the nineteenth century, the course examines in depth the key figures, their preoccupations and projects that shaped the way that archaeology grew through the 20th and into the 21st century. Global in scope, the emphasis will be on field projects and practical problems that stimulated the intellectual development of archaeology as an independent discipline closely tied to geology, history, anthropology, and the natural sciences. Prerequisite: consent of instructor.

**ANTHRO 377. The Mystery of Ministry: What is Authority?. 5 Units.**

Why do people obey others in the absence of explicit coercion? Why do people accept some leaders but not others? What does it mean to say something or someone has authority? Is authority personal or institutional? Why do people believe in the Pope? Why do people believe some objects have power and others not? Is charisma only a perfume? Can institutions wield charismatic power? These are questions that from Max Weber onwards classical and contemporary anthropologists and sociologists continue to ask. Returning to (Weberian) questions of authority and legitimacy this course takes a question posed by Bourdieu: what is the mystery of ministry? We will apply the question of authority broadly, not just in the explicitly political realm but also to understand, for example, how (culturally specific) charismatic and sacral authority can be fashioned through persons and through objects (eg. relics). The course will thus move between interrelated religious, moral, and political notions to try to generate some critical questions for how a contemporary anthropology that explicitly (rather than implicitly) re-addresses authority might look.

**ANTHRO 378. Dynamics of Coupled Human-Natural Systems. 5 Units.**

This is a graduate research seminar on the interdisciplinary approach to the study of the dynamics of what is known as "coupled human-natural systems." We will take a critical perspective on such systems, asking to what extent the idea of coupling of discrete subsystems is intellectually profitable and what defines a "human" vs. a "natural" system? We will explore concepts such as coupling, nonlinearity, threshold behavior, feedback, complexity, resilience, and catastrophes. Case studies will be drawn from the literature on human ecology, population dynamics, disease ecology, and social dynamics. Emphasis will be on developing a working knowledge of mathematical and computational models of coupled systems embedded within a rigorous empirical framework of biosocial data collection.

**ANTHRO 379. Empathy Lab. 5 Units.**

This lab-based class examines the ways in which various disciplines and art forms conceive of, and tell stories about, the experiences and stories of others. With permission of instructor.  
Same as: TAPS 284, TAPS 384

**ANTHRO 379A. Empathy Lab II: The Potential of Anthropology for the 21st Century. 1-5 Unit.**

This interdisciplinary arts/anthropology lab class will study and practice methods from performing arts to expand our understandings of cultural contact and develop methods of thinking more expansively about the creative elements and possibilities for ethnographic fieldwork and critical cultural studies. Prerequisite, by instructor consent.  
Same as: TAPS 379A

**ANTHRO 379B. Empathy Lab II: The Potential of Anthropology for the 21st Century. 1 Unit.**

This interdisciplinary arts/anthropology lab class will study and practice methods from performing arts to expand our understandings of cultural contact and develop methods of thinking more expansively about the creative elements and possibilities for ethnographic fieldwork and critical cultural studies.

**ANTHRO 380. Practice and Performance: Bourdieu, Butler, Giddens, de Certeau. 5 Units.**

Poststructuralist theories of iteration and mimesis used by social scientists to negotiate the tension between social structure and social practice: Giddens's structuration theory; Bourdieu's practice theory; Butler's theories of gender performativity; and de Certeau's analysis of tactics and strategies. Ethnographic and archaeological case studies that employ methodologies inspired by these approaches. Intersections and contradictions between these theorists' work; their use in anthropological practice. Issues of gender, sexuality, and ethnicity. Prerequisite: consent of instructor.

**ANTHRO 381. Archaeology of Violence. 5 Units.**

This advanced graduate seminar reflects on archaeological research on violence in relation to readings in philosophy, political anthropology, cultural studies, and gender and ethnic studies. While some forensic approaches are discussed, the emphasis is more on structural and collective violence and the role of violence in the formation of the archaeological record.

**ANTHRO 382. Advanced Topics in Medical Anthropology. 5 Units.**

Graduate seminar. The history and theories of medical anthropology. Focus is on medical anthropology's transformations in the 20th century: how medical anthropology has emerged as a field of inquiry, grown in dialogue with other areas of scholarship, and come to offer a unique array of theoretical positions and modes of ethnographic engagement. Emphasis is on debates within interpretive and critical medical anthropology, and how an understanding of these debates may be used to assess contemporary works within the field. Prerequisite: consent of instructor.

**ANTHRO 384. Sacrifice, Ethics and Modern Convictions. 5 Units.**

This course is an investigation of how notions of sacrifice, of ethics and conviction are embedded in both ordinary and extraordinary practices in our contemporary world. The key question is how the modern global condition has transformed the way in which it is possible to hold convictions, and to frame forms of ethical conduct, be they religious or secular. We will ask if convictions based on choice or moral outrage differ from convictions based on inhabiting and reversing stigmatized racial and social identities. Rather than maintaining a categorical distinction between "the religious" and "the secular," we will focus on how groups and individuals have attached themselves passionately to ideas, abstractions, ritual communities or ethical frames. When do certain attachments appear necessary and compelling, almost beyond choice? How does one forge a sense of ethics and ethical conduct through social media rather than face-to-face contact? Students will acquire a grounded and guided understanding of philosophical and anthropological theories of ideas of ethics, sacrifice, and political conviction as well as explore these ideas through contemporary ethnographic contexts. Readings will be philosophical, historical and ethnographic; drawing on original texts and ethnographic accounts from Europe, Asia and Africa.

**ANTHRO 386. Epidemics, Chronics, and Contagion. 5 Units.**

The seminar will take as its focal point the question: how do institutional and personal responses to disease result from judgements about threat level? Through a series of contemporary monographs on obesity, HIV/AIDS, avian flu, vaccination, cancer, and other health issues, this class will examine ways of understanding broader ideologies of health in the United States.

**ANTHRO 387. Strangers and Intimate: Exploring Civility. 5 Units.**

How do we encounter and read each other in public and private spaces? How are these very spaces historically constituted around such distinctions and manners of reading? What do these questions look like in dense heterogeneous cities with differentiated class, caste and ethnic communities? How might we consider the differentiation between private and public in different ethnographic contexts? What kinds of sociality might emerge from these kinds of encounters? This course will explore these questions through social theory and ethnographies. There are two major sets of concepts that will be explored and interrogated. The first is that deriving from the essays of the Georg Simmel such as *The Face* and *The Stranger* which explore the new forms of sociality enabled by seemingly anonymous city life, which in turn have been interpreted very differently by Zygmunt Bauman and James Siegel to understand the place of continually excluded outsiders and the high stakes of reading each other. The other is the strand of work on the emergence of the public sphere such as the work of Jurgen Habermas, Richard Sennet, Michael Warner, Nancy Fraser etc. While much of the social theory on the public, the stranger and civility emerge from studies of Euro-American politics and city spaces, in this course we will move some of these discussion into considering these questions in the global south and the kinds of sociality (including their historicity) that make up the dense fabric of ordinary life. How does this work out in contexts where we take into account intense social differentiation by class, race, and communitarian divisions? This could be asked of the historical and social context addressed in these theories as well as from the postcolonial world. The course will attempt to understand whether such theorizations can indeed be re-rooted and re-imagined or whether ethnographic and historical difference re-route them instead. In doing so we will also bring theories of the private and the intimate to bear on questions of the public and the stranger.

**ANTHRO 388. Anthropology of the Extraordinary: Ontologies and Phenomenologies. 5 Units.**

In the last few years anthropology has taken what has come to be called an *ontological turn* in which the ways an object or experience is felt to be real is explored from different perspectives. Often this involves exploring phenomena (like ghosts, talking trees and humans who become jaguars) which could be called *extraordinary* and which challenge secular, western expectations of what is real. There has also been a *phenomenological turn* in which anthropologists have become interested in classifying and categorizing human experience in particular detail. The class will explore the scholarship in this area. Readings will include an introduction to classic philosophical writing (William James, Karl Jaspers, Martin Heidegger) and more recent work such as David Hufford, *The Terror that Comes in the Night*; Eduardo Kohn *How Forests Think*; Morton Pederson *Not Quite Shamans*; Ann Taves *Religious Experience Reconsidered*; Annemarie Mol, *The Body Multiple*; Roger Lohmann *Dream Travelers*, and others.

**ANTHRO 389. Ethnographic Writing and Beyond. 3-5 Units.**

In this class we analyze anthropological writing that has examined and pushed the bounds of the discipline. We will focus on how writing itself is a practice in anthropology, and how styles of writing impact argument, affect, and ultimately, the discipline itself. Students will also work in different genres of writing to better understand writing as a craft, a discipline, and a means of communication.

**ANTHRO 390. Psychological Anthropology. 5 Units.**

Introduction to psychological anthropology as a subfield. We read through ethnographies on the anthropology of childhood, of emotion, of human relationship and of cognition, drawing analytic tools not only from anthropology but also from psychoanalysis, developmental psychology, and cognitive science. We will read some earlier classic work but focus on more contemporary theory. Prerequisite, by instructor consent.

**ANTHRO 400. Dissertation Writers Seminar. 1-3 Unit.**

Required of fifth-year Ph.D. students returning from dissertation field research and in the process of writing dissertations and preparing for professional employment. Prerequisite: consent of instructor.

**ANTHRO 401A. Qualifying Examination: Topic. 2-5 Units.**

Required of second- and third-year Ph.D. students writing the qualifying paper or the qualifying written examination. May be repeat for credit.

**ANTHRO 401B. Qualifying Examination: Area. 2-5 Units.**

Required of second- and third-year Ph.D. students writing the qualifying paper or the qualifying written examination. May be repeated for credit one time.

**ANTHRO 440. Teaching Assistantship. 3-5 Units.**

Supervised experience as assistant in one undergraduate course.

**ANTHRO 441. Master's Research Thesis. 1-15 Unit.**

Supervised work for terminal and coterminal master's students writing the master's project in the final quarter of the degree program.

**ANTHRO 442. Reading Group. 2-3 Units.**

Graduate student reading group on a thematic topic of interest. Intended for first or second-year cohort PhD students. Sections: Liisa Malkki, Sylvia Yanagisako, Thomas Hansen, Paulla Ebron, and Miyako Inoue.

**ANTHRO 444. Anthropology Colloquium. 1 Unit.**

Department Colloquia Lecture Series. Lectures presented on a variety of anthropological topics. Colloquium is intended for the Department of Anthropology's under graduate majors and graduate students. May be repeated for credit.

**ANTHRO 445. Anthropology Brown Bag Series. 1 Unit.**

Current topics and trends in cultural/social anthropology, archaeology, and environmental and ecological anthropology. Enrollment in this noon-time series is restricted to the Department of Anthropology Master's students and First and Second-year PhD students.

**ANTHRO 446A. Method of Analysis Program in the Social Sciences. 1 Unit.**

Colloquium series. Creation and application of new methodological techniques for social science research. Presentations on methodologies of use for social scientists across departments at Stanford by guest speakers from Stanford and elsewhere. See <http://mapss.stanford.edu>. Same as: COMM 310

**ANTHRO 450. Research Apprenticeship. 1-15 Unit.**

Supervised work on a research project with an individual faculty member. May be repeated for credit.

**ANTHRO 451. Directed Individual Study. 1-15 Unit.**

Supervised work for a qualifying paper, examination, or project with an individual faculty member.

**ANTHRO 452. Graduate Internship. 3-5 Units.**

Provides graduate students with the opportunity to pursue their area of specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency.

**ANTHRO 801. TGR Project. 0 Units.**

.

**ANTHRO 802. TGR Dissertation. 0 Units.**

.

## Applied Physics Courses

### APPPHYS 10AX. The Expressive Vessel: An Immersive Introduction to Clay. 2 Units.

Students learn to make and to analyze functional ceramic forms with a focus on wheel-thrown pottery. Studio time dedicated to the acquisition and refinement of shaping, marking/glazing and finishing skills; supplementary lectures and discussions to explore contemporary studio ceramics and major historical traditions. No prior experience necessary; instructors will tailor assignments for students at all levels of ability.

### APPPHYS 77N. Functional Materials and Devices. 3 Units.

Preference to freshmen. Exploration via case studies how functional materials have been developed and incorporated into modern devices. Particular emphasis is on magnetic and dielectric materials and devices. Recommended: high school physics course including electricity and magnetism.

### APPPHYS 79N. Energy Options for the 21st Century. 3 Units.

Preference to freshmen. Choices for meeting the future energy needs of the U.S. and the world. Basic physics of energy sources, technologies that might be employed, and related public policy issues. Trade-offs and societal impacts of different energy sources. Policy options for making rational choices for a sustainable world energy economy.

### APPPHYS 100. The Questions of Clay: Craft, Creativity and Scientific Process. 5 Units.

Students will create individual studio portfolios of ceramic work and pursue technical investigations of clay properties and the firing process using modern scientific equipment. Emphasis on development of creative process; parallels between science and traditional craft; integration of creative expression with scientific method and analysis. Prior ceramics experience desirable but not necessary. Limited enrollment. Prerequisite: any level of background in physics.

### APPPHYS 201. Electrons and Photons. 4 Units.

Applied Physics Core course appropriate for graduate students and advanced undergraduate students with prior knowledge of elementary quantum mechanics, electricity and magnetism, and special relativity. Interaction of electrons with intense electromagnetic fields from microwaves to x-ray, including electron accelerators, x-ray lasers and synchrotron light sources, attosecond laser-atom interactions, and x-ray matter interactions. Mechanisms of radiation, free-electron lasing, and advanced techniques for generating ultrashort brilliant pulses. Characterization of electronic properties of advanced materials, prospects for single-molecule structure determination using x-ray lasers, and imaging attosecond molecular dynamics. Same as: PHOTON 201

### APPPHYS 203. Atoms, Fields and Photons. 4 Units.

Applied Physics Core course appropriate for graduate students and advanced undergraduate students with prior knowledge of elementary quantum mechanics, electricity and magnetism, and ordinary differential equations. Structure of single- and multi-electron atoms and molecules, and cold collisions. Phenomenology and quantitative modeling of atoms in strong fields, with modern applications. Introduction to quantum optical theory of atom-photon interactions, including quantum trajectory theory, mechanical effects of light on atoms, and fundamentals of laser spectroscopy and coherent control.

### APPPHYS 204. Quantum Materials. 4 Units.

Applied Physics Core course appropriate for graduate students and advanced undergraduate students with prior knowledge of elementary quantum mechanics. Introduction to materials and topics of current interest. Topics include superconductivity, magnetism, charge and spin density waves, frustration, classical and quantum phase transitions, multiferroics, and interfaces. Prerequisite: elementary course in quantum mechanics.

### APPPHYS 205. Introduction to Biophysics. 3-4 Units.

Core course appropriate for advanced undergraduate students and graduate students with prior knowledge of calculus and a college physics course. Introduction to how physical principles offer insights into modern biology, with regard to the structural, dynamical, and functional organization of biological systems. Topics include the roles of free energy, diffusion, electromotive forces, non-equilibrium dynamics, and information in fundamental biological processes.

Same as: BIO 126, BIO 226

### APPPHYS 206. Dynamical Systems: Linear, Non-Linear, and Stochastic. 4 Units.

Introduction to dynamical systems including linear, nonlinear, stochastic and spatiotemporal models. Emphasis on asymptotic and multi-scale analysis as well as fundamental concepts of stability, bifurcation and oscillation. Prerequisites: linear algebra and familiarity with ordinary and partial differential equations; basic probability.

### APPPHYS 207. Laboratory Electronics. 4 Units.

Lecture/lab emphasizing analog and digital electronics for lab research. RC and diode circuits. Transistors. Feedback and operational amplifiers. Active filters and circuits. Pulsed circuits, voltage regulators, and power circuits. Precision circuits, low-noise measurement, and noise reduction techniques. Circuit simulation tools. Analog signal processing techniques and modulation/demodulation. Principles of synchronous detection and applications of lock-in amplifiers. Common laboratory measurements and techniques illustrated via topical applications. Prerequisites: undergraduate device and circuit exposure.

### APPPHYS 208. Laboratory Electronics. 4 Units.

Lecture/lab emphasizing analog and digital electronics for lab research. Continuation of APPPHYS 207 with emphasis on applications of digital techniques. Combinatorial and synchronous digital circuits. Design using programmable logic. Analog/digital conversion. Microprocessors and real time programming, concepts and methods of digital signal processing techniques. Current lab interface protocols. Techniques commonly used for lab measurements. Development of student lab projects during the last three weeks. Prerequisites: undergraduate device and circuit exposure. Recommended: previous enrollment in APPPHYS 207.

### APPPHYS 215. Numerical Methods for Physicists and Engineers. 4 Units.

Fundamentals of numerical methods applied to physical systems. Derivatives and integrals; interpolation; quadrature; FFT; singular value decomposition; optimization; linear and nonlinear least squares fitting; error estimation; deterministic and stochastic differential equations; Monte Carlo methods. Lectures will be accompanied by guided project work enabling each student to make rapid progress on a project of relevance to their interests.

### APPPHYS 217. Estimation and Control Methods for Applied Physics. 4 Units.

Recursive filtering, parameter estimation, and feedback control methods based on linear and nonlinear state-space modeling. Topics in: dynamical systems theory; practical overview of stochastic differential equations; model reduction; and tradeoffs among performance, complexity, and robustness. Numerical implementations in MATLAB. Contemporary applications in systems biology and quantum precision measurement. Prerequisites: linear algebra and ordinary differential equations.

### APPPHYS 219. Solid State Physics Problems in Energy Technology. 3 Units.

Technology issues for a secure energy future; role of solid state physics in energy technologies. Topics include the physics principles behind future technologies related to solar energy and solar cells, solid state lighting, superconductivity, solid state fuel cells and batteries, electrical energy storage, materials under extreme condition, nanomaterials.

**APPPHYS 220. Applied Electrodynamics. 3 Units.**

Techniques for general electrodynamics, illustrated by examples from geophysics, microwave engineering, optical devices, accelerators, antennas, and plasma physics. RF/microwave structure representations, scattering matrices, treatments for periodic systems. Perturbation and variational techniques applied to approximate solutions, fundamentals of numerical techniques. Analysis methods via expansions in terms of natural modes. Introduction to finite element methods via the application of variational techniques. Laboratory experiments including time domain and frequency domain methods. Solutions of inverse electrodynamic problems via perturbation techniques coupled with lab measurements (such as estimation of a physical structure via experimental measurements and formal models). Prerequisites: PHYSICS 121, MATH 106 and MATH 132, or equivalent experience.

**APPPHYS 223B. Nonlinear Dynamics: This Side of Chaos. 3 Units.**

Linear dynamics, periodic systems, Hamiltonian motion and phase space. The physics of nonlinear motion: thinking in phase space. Perturbation theory, periodic orbits, resonances, stability and instability. Integrability and symplectic integration. The KAM theorem and renormalization description of the transition to chaos. Dissipation and bifurcation. Application of methods to nanoscience, lasers and accelerators, condensed matter physics and biophysics. Prerequisites: differential equations and classical mechanics.

**APPPHYS 225. Probability and Quantum Mechanics. 3 Units.**

Structure of quantum theory emphasizing states, measurements, and probabilistic modeling. Generalized quantum measurement theory; parallels between classical and quantum probability; conditional expectation in the Schrödinger and Heisenberg pictures; covariance with respect to symmetry groups; reference frames and super-selection rules. Classical versus quantum correlations; nonlocal aspects of quantum probability; axiomatic approaches to interpretation. Prerequisites: undergraduate quantum mechanics, linear algebra, and basic probability and statistics.

**APPPHYS 232. Advanced Imaging Lab in Biophysics. 4 Units.**

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor. Same as: BIO 132, BIO 232, BIOPHYS 232, GENE 232

**APPPHYS 236. Biology by the Numbers. 3 Units.**

For PhD students and advanced undergraduates. Students will develop skills in quantitative reasoning over a wide range of biological problems. Topics: biological size scales ranging from proteins to ecosystems; biological times time scales ranging from enzymatic catalysis and DNA replication to evolution; biological energy, motion and force from molecular to organismic scales; mechanisms of environmental sensing ranging from bacterial chemotaxis to vision. Same as: BIOC 236

**APPPHYS 240. From Atom Smashers to X-ray Lasers. 3 Units.**

Physics and impact of particle beams and accelerators from their origins up to the present state of the art. Accelerator fundamentals, special topic lectures by expert scientists, laboratory accelerator experiment using state of the art accelerators at SLAC. Prerequisites: Advanced undergraduate courses in Maxwell's equations, special relativity, mathematical physics, and introductory quantum mechanics. Same as: PHOTON 240

**APPPHYS 270. Magnetism and Long Range Order in Solids. 3 Units.**

Cooperative effects in solids. Topics include the origin of magnetism in solids, crystal electric field effects and anisotropy, exchange, phase transitions and long-range order, ferromagnetism, antiferromagnetism, metamagnetism, density waves and superconductivity. Emphasis is on archetypal materials. Prerequisite: PHYSICS 172 or MATSCI 209, or equivalent introductory condensed matter physics course.

**APPPHYS 272. Solid State Physics. 3 Units.**

Introduction to the properties of solids. Crystal structures and bonding in materials. Momentum-space analysis and diffraction probes. Lattice dynamics, phonon theory and measurements, thermal properties. Electronic structure theory, classical and quantum; free, nearly-free, and tight-binding limits. Electron dynamics and basic transport properties; quantum oscillations. Properties and applications of semiconductors. Reduced-dimensional systems. Undergraduates should register for PHYSICS 172 and graduate students for APPPHYS 272. Prerequisites: PHYSICS 170 and PHYSICS 171, or equivalents. Same as: PHYSICS 172

**APPPHYS 273. Solid State Physics II. 3 Units.**

Introduction to the many-body aspects of crystalline solids. Second quantization of phonons, anharmonic effects, polaritons, and scattering theory. Second quantization of Fermi fields. Electrons in the Hartree-Fock and random phase approximation; electron screening and plasmons. Magnetic exchange interactions. Electron-phonon interaction in ionic/covalent semiconductors and metals; effective attractive electron-electron interactions, Cooper pairing, and BCS description of the superconducting state. Prerequisite: APPPHYS 272 or PHYSICS 172.

**APPPHYS 280. Phenomenology of Superconductors. 3 Units.**

Phenomenology of superconductivity viewed as a macroscopic quantum phenomenon. Topics include the superconducting pair wave function, London and Ginzburg-Landau theories, the Josephson effect, type I type II superconductivity, and the response of superconductors to currents, magnetic fields, and RF electromagnetic radiation. Introduction to thermal fluctuation effects in superconductors and quantum superconductivity.

**APPPHYS 285. Physics of Disordered Systems. 3 Units.**

Topics include types of disorder, percolation, localization, glasses and spin glasses, fractals, self-organized criticality, aggregation, gelation, and other random processes leading to disordered media.

**APPPHYS 290. Directed Studies in Applied Physics. 1-15 Unit.**

Special studies under the direction of a faculty member for which academic credit may properly be allowed. May include lab work or directed reading.

**APPPHYS 291. Practical Training. 3 Units.**

Opportunity for practical training in industrial labs. Arranged by student with research adviser's approval. Summary of activities required.

**APPPHYS 293. Theoretical Neuroscience. 3 Units.**

Introduction to fundamental theoretical ideas that provide conceptual insights into how networks of neurons cooperatively mediate important brain functions. Topics include basic mathematical models of single neurons, neuronal computation through feedforward and recurrent network dynamics, principles of associative memory, applications of information theory to early sensory systems, correlations and neural population coding, network plasticity and the self-organization of stimulus selectivity, and supervised and unsupervised learning through multiple mechanisms of synaptic plasticity. Emphasis on developing mathematical and computational skills to analyze complex neural systems. Prerequisites: calculus, linear algebra, and basic probability theory, or consent of instructor.

**APPPHYS 294. Cellular Biophysics. 3 Units.**

Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.

Same as: BIO 294, BIOPHYS 294

**APPPHYS 302. Experimental Techniques in Condensed Matter Physics. 4 Units.**

Cryogenics; low signal measurements and noise analysis; data collection and analysis; examples of current experiments. Prerequisites: PHYSICS 170, PHYSICS 171, and PHYSICS 172, or equivalents.

**APPPHYS 304. Lasers Laboratory. 4 Units.**

Theory and practice. Theoretical and descriptive background for lab experiments, detectors and noise, and lasers (helium neon, beams and resonators, argon ion, cw dye, titanium sapphire, semiconductor diode, and the Nd:YAG). Measurements of laser threshold, gain, saturation, and output power levels. Laser transverse and axial modes, linewidth and tuning, Q-switching and modelocking. Limited enrollment. Prerequisites: EE 236C and EE 332, or consent of instructor.

**APPPHYS 305. Advanced Nonlinear Optics Laboratory. 4 Units.**

Core concepts and experiments in the nonlinear interaction of laser light with matter. Experiments on second harmonic generation and optical parametric oscillation culminate with assembly and use of an optical frequency comb for student-defined, open-ended experiments. Supercontinuum light generation, carrier-envelope phase stabilization, and metrology and spectroscopy. Prerequisites: APPPHYS 304, or consent of instructor.

**APPPHYS 315. Methods in Computational Biology. 3 Units.**

Methods of bioinformatics and biomolecular modeling from the standpoint of biophysical chemistry. Methods of genome analysis; cluster analysis, phylogenetic trees, microarrays; protein, RNA and DNA structure and dynamics, structural and functional homology; protein-protein interactions and cellular networks; molecular dynamics methods using massively parallel algorithms.

**APPPHYS 324. Introduction to Accelerator Physics. 3 Units.**

Physics of particle beams in linear and circular accelerators. Transverse and longitudinal beam dynamics, equilibrium emittances in electron storage rings, high-brightness electron sources, RF acceleration and emittance preservation, bunch compression and associated collective effects, accelerator physics design for x-ray FELs, advanced accelerator concepts.

**APPPHYS 325. X-rays: Past, Present and Future. 3 Units.**

Introduction to the physics of bright x-ray sources. Topics include: physics and basic properties of short wavelength radiation, X-ray generation via incoherent Compton scattering and High Harmonic Generation (HHG), applications and impact of insertion devices in synchrotron radiation facilities and the development of x-ray free electron lasers. Includes selected laboratory tours of the Linac Coherent Light Source and/or measurements at SLAC. Prerequisite: graduate-level electrodynamics, or consent of instructor.

Same as: PHOTON 325

**APPPHYS 345. Advanced Numerical Methods for Data Analysis and Simulation. 3 Units.**

Gaussian and unit sphere quadrature, singular value decomposition and principal component analysis, Krylov methods, non-linear fitting and super-resolution, independent component analysis, 3d reconstruction, "shrink-wrap", hidden Markov methods, support vector machines, simulated annealing, molecular dynamics and parallel tempering, Markov state methods, Monte Carlo methods for constrained systems.

**APPPHYS 376. Literature of Ultracold Atomic Physics. 3 Units.**

Ultracold atomic gases in modern quantum optics, metrology, quantum information science, and quantum many-body physics. Review of basic concepts and survey of key literature in seminar format.

**APPPHYS 383. Introduction to Atomic Processes. 3 Units.**

Atomic spectroscopy, matrix elements using the Coulomb approximation, summary of Racah algebra, oscillator and line strengths, Einstein A coefficients. Radiative processes, Hamiltonian for two- and three-state systems, single- and multi-photon processes, linear and nonlinear susceptibilities, density matrix, brightness, detailed balance, and electromagnetically induced transparency. Inelastic collisions in the impact approximation, interaction potentials, Landau-Zener formulation. Continuum processes, Saha equilibrium, autoionization, and recombination.

**APPPHYS 387. Quantum Optics and Measurements. 3 Units.**

Basic concerns and fundamental postulates in quantum theory of measurements. Quantum non-demolition measurements, nonlinear measurements and continuous measurements. Non-local quantum correlation and Bell's inequality. Generation, detection, and application of single photons and entangled photon-pairs. Reservoir theory of an open dissipative system. Laser phase transition versus BCS transition in microcavities.

**APPPHYS 390. Dissertation Research. 1-15 Unit.**

.

**APPPHYS 392. Topics in Molecular Biophysics: Biophysics of Functional RNA. 3 Units.**

Survey of methods used to relate RNA sequences to the structure and function of transcribed RNA molecules. Computation of contributions of the counter-ion cloud to the dependence of free energy on conformation of the folded RNA. The relation of structure to function of riboswitches and ribozymes.

Same as: BIOPHYS 392

**APPPHYS 393. Biophysics of Solvation. 3 Units.**

Statistical mechanics of water-protein or water-DNA (or RNA) interactions; effects of coulomb forces on molecular hydration shells and ion clouds; limitations of the Poisson-Boltzmann equations; DNA collapse, DNA-protein interactions; structure-function relationships in ion channels.

Same as: BIOPHYS 393

**APPPHYS 453A. Collective Instabilities in Accelerators. 3 Units.**

A beam in an accelerator can become unstable if its intensity is too high. Topics include the physical mechanism causing these instabilities; establishing the framework by introducing the concepts of wakefield and impedance; various instability mechanisms with a special emphasis on the underlying physical principles; new types of instabilities encountered in modern high performance accelerators such as the fast ion and the electron cloud instabilities. Course may be repeated when a different course is offered as a Special Topics.

Same as: PHOTON 453A

**APPPHYS 470. Condensed Matter Seminar. 1 Unit.**

Current research and literature; offered by faculty, students, and outside specialists. May be repeated for credit.

**APPPHYS 473B. Topics in Condensed Matter Physics: Quantum Matter Meets Quantum Optics. 3 Units.**

Graduate seminar to survey the contemporary literature on emerging topics in light-matter interactions, including novel optical spectroscopy approaches to the study of material properties and exotic optical properties of novel materials.

**APPPHYS 483. Optics and Electronics Seminar. 1 Unit.**

Current research topics in lasers, quantum electronics, optics, and photonics by faculty, students, and invited outside speakers. May be repeated for credit.

**APPPHYS 801. TGR Master's Project. 0 Units.**

.

**APPPHYS 802. TGR PhD Dissertation. 0 Units.**

## Arabic Language Courses

### **ARABLANG 1. First-Year Arabic, First Quarter. 5 Units.**

(Formerly AMELANG 1A.) One-year sequence designed to develop beginning proficiency, with additional emphasis is on reading and writing standard Arabic.

### **ARABLANG 1A. Accelerated First-Year Arabic, Part I. 5 Units.**

Completes first-year sequence in two rather than three quarters. For students with previous knowledge of Arabic. Prerequisite: Placement Test or consent of instructor.

### **ARABLANG 1H. First-Year Arabic for Heritage Learners, First Quarter. 5 Units.**

(Formerly AMELANG 1H). For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: Placement Test or consent of instructor.

### **ARABLANG 2. First-Year Arabic, Second Quarter. 5 Units.**

(Formerly AMELANG 1B.) One-year sequence designed to develop beginning proficiency, with additional emphasis on reading and writing standard Arabic. Prerequisite: Placement Test, ARABLANG 1.

### **ARABLANG 2A. Accelerated First-Year Arabic, Part II. 5 Units.**

Completes first-year sequence in two rather than three quarters. For students with previous knowledge of Arabic. Prerequisite: Placement Test, completion of ARABLANG 1A. This course fulfills the University Foreign Language Requirement.

### **ARABLANG 2H. First-Year Arabic for Heritage Learners, Second Quarter. 5 Units.**

(Formerly AMELANG 2H). Continuation of ARABLANG 1H. For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: Placement Test, ARABLANG 1H.

### **ARABLANG 3. First-Year Arabic, Third Quarter. 5 Units.**

(Formerly AMELANG 1C.) Continuation of ARABLANG 2. One-year sequence designed to develop beginning proficiency, with additional emphasis on reading and writing standard Arabic (*fusha*). Fulfills the University Foreign Language Requirement. Prerequisite: Placement Test, ARABLANG 2.

### **ARABLANG 3H. Beginning Arabic for Heritage Learners, Third Quarter. 5 Units.**

Continuation of ARABLANG 2H. For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: ARABLANG 2H.

### **ARABLANG 5. Intensive first year Arabic. 15 Units.**

Same as ARABLANG 1, 2, 3 combined. One-year sequence designed to develop beginning proficiency, with additional emphasis on reading and writing standard Arabic.

### **ARABLANG 10. Arabic Calligraphy. 2 Units.**

(Formerly AMELANG 30). Calligraphy requires no linguistic background, stipulates no artistic skill for one to appreciate it and is the supreme art form of the Islamic world. Other Islamic arts (architecture, metal work, ceramics, glass, and textiles) draw on calligraphy as their principal source of embellishment. Interactive lecture-workshop sketches its development and illustrates the forms of Arabic calligraphy in use today.

### **ARABLANG 14A. Short Stories and Poetry from the Arab World - Part I. 2-4 Units.**

(Formerly AMELANG 34). Short Stories and Poetry from the Arab World - Selections of short stories and poetry written by contemporary Arab writers. Discussion and analysis of representative samples spanning a wide spectrum of the Arab world, e.g., Egypt, Iraq, Lebanon, Libya, Morocco, Palestine, Sudan, Syria, Tunisia, and Yemen. The creative impulses and cultural symbols involved in the interpretation of each work. The stories and poetry illustrate the rich diversity of the Arab world and accentuate the various cultural issues and forces influencing Arab writers. Prerequisite: completion of 2nd year Arabic or equivalent.

### **ARABLANG 21. Second-Year Arabic, First Quarter. 5 Units.**

(Formerly AMELANG 11A.) One-year sequence designed to develop intermediate proficiency, with additional emphasis on functional applications and reading and writing standard Arabic. Prerequisite: Placement Test, ARABLANG 3.

### **ARABLANG 21H. Second-Year Arabic for Heritage Learners, First Quarter. 5 Units.**

(Formerly AMELANG 11H). For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: Placement Test, ARABLANG 3H.

### **ARABLANG 22. Second-Year Arabic, Second Quarter. 5 Units.**

(Formerly AMELANG 11B.) Continuation of ARABLANG 21. One-year sequence designed to develop intermediate proficiency, with additional emphasis on functional applications and reading and writing standard Arabic. Prerequisite: Placement Test, ARABLANG 21.

### **ARABLANG 22A. Accelerated second-Year Arabic, Part II. 5 Units.**

Completes Second-year sequence in two rather than three quarters. For students with previous knowledge of Arabic. Prerequisite: Placement Test, ARABLANG 22A.

### **ARABLANG 22H. Second-Year Arabic for Heritage Learners, Second Quarter. 5 Units.**

(Formerly AMELANG 12H). Continuation of ARABLANG 21H. For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: Placement Test, ARABLANG 21H.

### **ARABLANG 23. Second-Year Arabic, Third Quarter. 5 Units.**

(Formerly AMELANG 11C.) Continuation of ARABLANG 22. One-year sequence designed to develop intermediate proficiency, with additional emphasis on functional applications and reading and writing standard Arabic. Prerequisite: Placement Test, ARABLANG 22.

**ARABLANG 23H. Second-Year Arabic for Heritage Learners, Third Quarter. 5 Units.**

(Formerly AMELANG 13H). Continuation of ARABLANG 22H. For students with home background or study/living experience in the Arab world. Designed to develop reading, writing, speaking and listening abilities in Arabic, as well as cultural knowledge. The course offers Arabic heritage and semi-heritage learners an opportunity to reactivate and expand their skills while studying both Modern Standard and Colloquial Arabic (Levantine Arabic) formally in an academic setting. Prerequisite: Placement Test, ARABLANG 23H.

**ARABLANG 25. Intensive 2nd year Arabic. 15 Units.**

Same as ARABLANG 21, 22, 23 combined. Prerequisite: one year of college-level Arabic or equivalent or completion of ARABLANG 3. Stanford graduate students restricted to 9 units may take ARABLANG 225 for a total of 9 units.

**ARABLANG 125A. Colloquial Arabic, First Quarter. 4 Units.**

(Formerly AMELANG 25A.) Sources include authentic videotaped conversations with native speakers, conversations, and texts of these conversations to enhance comprehension and improve aural skills. Prerequisite: 2 years of Arabic.

**ARABLANG 125B. Colloquial Arabic, Second Quarter. 4 Units.**

Formerly AMELANG 25B.) Continuation of ARABLANG 125A. Sources include authentic videotaped conversations with native speakers, conversations, and texts of these conversations to enhance comprehension and improve aural skills. Prerequisite: ARABLANG 125A (Colloquial Levantine) may be repeated for credit.

**ARABLANG 125C. Colloquial Arabic, Third Quarter. 4 Units.**

(Formerly AMELANG 25C.) Continuation of ARABLANG 125B. Sources include authentic videotaped conversations with native speakers, conversations, and texts of these conversations to enhance comprehension and improve aural skills. Prerequisite: ARABLANG 125B. Colloquial Levantine may be repeated for credit.

**ARABLANG 126A. Media Arabic, First Quarter. 2-4 Units.**

(Formerly AMELANG 26A.) Arabic language used today in the printed and electronic media, including the Internet. Emphasizes current vocabulary and structures used in different modes of media coverage. Prerequisite: 2 years of Arabic.

**ARABLANG 126B. Media Arabic, Second Quarter. 2-4 Units.**

(Formerly AMELANG 26B.) Continuation of ARABLANG 126A. Arabic language used today in the printed and electronic media, including the Internet. Emphasizes current vocabulary and structures used in different modes of media coverage. Prerequisite: ARABLANG 126A.

**ARABLANG 126C. Media Arabic, Third Quarter. 2-4 Units.**

(Formerly AMELANG 26C.) Continuation of ARABLANG 126B. Arabic language used today in the printed and electronic media, including the Internet. Emphasizes current vocabulary and structures used in different modes of media coverage. Prerequisite: ARABLANG 126B.

**ARABLANG 127. Intermediate to Advanced Conversation. 3 Units.**

Students develop communication skills (listening and speaking) in Arabic while discussing real-life issues, current events, and cultural topics. Pronunciation, vocabulary development, and group discussion skills are stressed. May be taken concurrently with other Arabic courses. Prerequisite: Completion of First-Year Arabic.

**ARABLANG 131. Third-Year Arabic, First Quarter. 5 Units.**

(Formerly AMELANG 21A.) Continuation of ARABLANG 23. One-year sequence designed to develop advanced proficiency with emphasis on complex and compound sentences through use of literary works, media Arabic, the Internet, and cultural productions. Prerequisite: Placement Test, ARABLANG 23.

**ARABLANG 131H. Third-Year Arabic for Heritage Learners, First Quarter. 5 Units.**

Continuation of ARABLANG 23H. Prerequisite ARABLANG 23H.

**ARABLANG 132. Third-Year Arabic, Second Quarter. 5 Units.**

(Formerly AMELANG 21B.) Continuation of ARABLANG 131. One-year sequence designed to develop advanced proficiency with emphasis on complex and compound sentences through use of literary works, media Arabic, the Internet, and cultural productions. Prerequisite: Placement Test, ARAB;AMG 131.

**ARABLANG 132H. Third-Year Arabic for Heritage Learners, Second Quarter. 5 Units.**

Continuation of ARABLANG 131H. Prerequisite: ARABLANG 131H.

**ARABLANG 133. Third-Year Arabic, Third Quarter. 5 Units.**

(Formerly AMELANG 21C.) Continuation of ARABLANG 132. One-year sequence designed to develop advanced proficiency with emphasis on complex and compound sentences through use of literary works, media Arabic, the Internet, and cultural productions. Prerequisite: Placement Test, ARABLANG 132.

**ARABLANG 133H. Third-Year Arabic for Heritage Learners, Third Quarter. 5 Units.**

Continuation of ARABLANG 132H. Prerequisite: ARABLANG 132H.

**ARABLANG 141. Fourth-Year Arabic, First Quarter. 4 Units.**

(Formerly AMELANG 23A.) Prerequisite: three years of Arabic.

**ARABLANG 142. Fourth-Year Arabic, Second Quarter. 4 Units.**

(Formerly AMELANG 23B.) Continuation of ARABLANG 141. Prerequisite: ARABLANG 141.

**ARABLANG 143. Fourth-Year Arabic, Third Quarter. 4 Units.**

(Formerly AMELANG 23C.) Continuation of ARABLANG 142. Prerequisite ARABLANG 142.

**ARABLANG 225. Intensive Second-Year Arabic for Graduate Students. 6-9 Units.**

Equivalent to ARABLANG 21, 22, 23 combined or ARABLANG 25. Prerequisite one year of College Arabic or equivalent or completion of ARABLANG 3. Stanford graduate students restricted to 9 units may take ARABLANG 225 for a total of 9 units.

**ARABLANG 297. Directed Reading. 1-5 Unit.**

.

**ARABLANG 394. Graduate Studies in Arabic Conversation. 1-3 Unit.**

Prerequisite: Consent of Instructor.

**ARABLANG 395. Graduate Studies in Arabic. 1-5 Unit.**

Prerequisite: Consent of instructor.

## Archaeology Courses

**ARCHLGY 1. Introduction to Prehistoric Archeology. 3-5 Units.**

Aims, methods, and data in the study of human society's development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each.

Same as: ANTHRO 3

**ARCHLGY 10. The Archaeology of Home. 3-5 Units.**

Homes evoke powerful emotions about place and also highlight the dynamic and complex nature of people, their relationships, and the broader society they live in. Focus on the ways that material traces from the past shed light on the diversity of domestic life, which includes household organization, economic strategies, diet and status, rituals, and identity. Archaeological case studies to see how archaeologists identify reoccurring patterns in material culture found in homes or domestic dwellings to reconstruct household patterns and social relations.

Same as: ANTHRO 10A

**ARCHLGY 12. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years. 3-5 Units.**

Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis.

**ARCHLGY 13. Islamic Routes: Archaeology and Heritage of Muslim Societies. 3-5 Units.**

How has archaeology changed our knowledge of the spread of Islam and past Muslim societies? How does archaeology shape heritage debates, conflicts and ideas about Islam today? Topics include the city and urban change, secular and religious life, gender, economy, and globalization. These topics are explored using archaeological and critical heritage approaches. Focus is on examples drawn from Syria-Palestine, Egypt, Iraq, Arabian Peninsula, India, and Africa. Sources include archaeological data and material culture, historical texts in translation, and photography. Same as: ANTHRO 13A, HISTORY 7E, HISTORY 107E

**ARCHLGY 16. Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America. 5 Units.**

What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural collapse, and assimilation, the relationships between Native Americans and American society. Focus is on three themes leading to in-class moot court trials: colonial encounters and colonizing discourses; frontiers and boundaries; and sovereignty of self and nation. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popular culture.

Same as: ANTHRO 16, ANTHRO 116C, NATIVEAM 16

**ARCHLGY 21Q. Eight Great Archaeological Sites in Europe. 3-5 Units.**

(Formerly CLASSART 21Q.) Preference to sophomores. Focus is on excavation, features and finds, arguments over interpretation, and the place of each site in understanding the archaeological history of Europe. Goal is to introduce the latest archaeological and anthropological thought, and raise key questions about ancient society. The archaeological perspective foregrounds interdisciplinary study: geophysics articulated with art history, source criticism with analytic modeling, statistics interpretation. A web site with resources about each site, including plans, photographs, video, and publications, is the basis for exploring.

Same as: CLASSICS 21Q

**ARCHLGY 34. Animals and Us. 5 Units.**

The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts. This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of 'animals as social actors' is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognized as a viable mechanism for understanding our cultural and economic past. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.

Same as: ANTHRO 34

**ARCHLGY 42. Pompeii. 3-5 Units.**

(Formerly CLASSART 42 and CLASSGEN 60.) The Roman town of Pompeii, buried by the eruption of Mt. Vesuvius in 79 C.E., provides information about the art and archaeology of ancient social life, urban technology and production, and ancient spatial patterns and experience. Its fame illustrates modern relationships to the ancient past, from Pompeii's importance on the Grand Tour, to plaster casts of vaporized bodies, to debates about reconstruction, preservation, and archaeological methods.

**ARCHLGY 51. Introduction to Greek Archaeology. 3-5 Units.**

An introduction to the archaeology of ancient Greece, from the first city states through the cultural achievements of classical Athens to the conquest by Rome.

Same as: CLASSICS 51

**ARCHLGY 64. Cultural Heritage and Human Rights. 1 Unit.**

This interdisciplinary research workshop will critically engage the issue of the growing currency of human rights discourse within cultural heritage. Epistemological and practical areas of tension between rights discourse and cultural discourse will be surveyed within the context of current global challenges facing heritage practice, conservation and archaeology. Topics will include the inequities of cultural recognition between North-South globalizations, questions of cultural property and rights, the role of tourism, and the impact of environmental conservation discourse on cultural rights.

Same as: ARCHLGY 164

**ARCHLGY 81. Introduction to Roman Archaeology. 3-5 Units.**

(Formerly CLASSART 81.) This course will introduce you to the material culture of the ancient Roman world, from spectacular imperial monuments in the city of Rome to cities and roads around the Mediterranean, from overarching environmental concerns to individual human burials, from elite houses and army forts to the lives of slaves, freedmen and gladiators. Key themes will be change and continuity over time; the material, spatial and visual workings of power; how Roman society was materially changed by its conquests and how conquered peoples responded materially to Roman rule.

Same as: CLASSICS 52

**ARCHLGY 97. Archaeology Internship. 1-10 Unit.**

Opportunity for students to pursue their specialization in an institutional setting such as a laboratory, clinic, research institute, museums or government agency. May be repeated for credit. Prior instructor consent needed.

**ARCHLGY 98B. Digital Methods in Archaeology. 3-5 Units.**

This is a course on digital technologies in archaeology used for documentation, visualization, and analysis of archaeological spaces and objects. Emphasizes hands-on approaches to image manipulation, virtual reality, GIS, CAD, and photogrammetry modeling methods.

Same as: ANTHRO 98B, ANTHRO 298B

**ARCHLGY 99A. Historical Archaeology in the Archive, Lab, and Underground: Methods. 5 Units.**

The practice of historical archaeology through methodologies including archival research, oral history, material culture analysis, and archaeological excavation. Students use these methods to analyze the history and archaeology of a local park, the Thornewood Open Space Preserve.

**ARCHLGY 100. ARCHAEOLOGY OF TECHNOLOGY. 5 Units.**

The course is an introduction to the social organization of material production and to the theoretical, ethnographic, and historical frameworks used by archaeologists to link the technologies of the past to salient sociocultural information about the people who employed them. Comparison of metallurgical, ceramic, lithic, and textile industries in different cultural and historical settings will inform critical discussions of how and to what extent analyses of artifacts, workshops, and industrial installations can provide insight into past societies.

Same as: ANTHRO 101B, ANTHRO 201B, ARCHLGY 200

**ARCHLGY 102. Archaeological Methods. 5 Units.**

Methodological issues related to the investigation of archaeological sites and objects. Aims and techniques of archaeologists including: location and excavation of sites; dating of places and objects; analysis of artifacts and technology and the study of ancient people, plants, and animals. How these methods are employed to answer the discipline's larger research questions.

Same as: ANTHRO 91A

**ARCHLGY 102B. Incas and their Ancestors: Peruvian Archaeology. 3-5 Units.**

The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred.

Same as: ANTHRO 106, ANTHRO 206A

**ARCHLGY 103. History of Archaeological Thought. 5 Units.**

Introduction to the history of archaeology and the forms that the discipline takes today, emphasizing developments and debates over the past five decades. Historical overview of culture, historical, processual and post-processual archaeology, and topics that illustrate the differences and similarities in these theoretical approaches.

**ARCHLGY 104C. The Archaeology of Ancient China. 5 Units.**

Early China from the perspective of material remains unearthed from archaeological sites; the development of Chinese culture from early hominid occupation nearly 2 million years ago through the development of agriculture in the Neolithic period and complex society in the Bronze Age to the political unification of China under the Qin Dynasty. Continuity of Chinese culture from past to present, history of Chinese archaeology, relationships between archaeology and politics, and food in early China.

Same as: ARCHLGY 304C

**ARCHLGY 105. Heritage & Neoliberalism: Theorizations of the Past. 3-5 Units.**

This course explores the emergence of heritage from within the broader field of modern historical thought. Readings explore how transformations in economic theory and changes in traditional philosophies of history have shaped how the historical event and historical figures are cast and recast within heritage. The distinctive modes by which archaeological sites and heritage sites are spatialized, linked and narrated are explored as these relate to corresponding turns in the modern concepts of freedom, inequality, personhood, sovereignty, community and culture.

Same as: ANTHRO 105B, ANTHRO 205B

**ARCHLGY 106A. Museums and Collections. 5 Units.**

Practical, theoretical, and ethical issues which face museums and collections. Practical collections-based work, museum visits, and display research. The roles of the museum in contemporary society. Students develop their own exhibition and engage with the issues surrounding the preservation of material culture.

Same as: ARCHLGY 306A

**ARCHLGY 108E. Catalhoyuk and Neolithic Archaeology. 3 Units.**

Catalhoyuk as a case study to understand prehistoric social life during the Neolithic in Anatolia and the Near East. Developments in agriculture, animal domestication, material technology, trade, art, religion, skull cults, architecture, and burial practices. Literature specific to Catalhoyuk and other excavations throughout the Anatolian and Levantine regions to gain a perspective on diversity and variability throughout the Neolithic. The reflexive methodology used to excavate Catalhoyuk, and responsibilities of excavators to engage with larger global audiences of interested persons and stakeholders.

Same as: ANTHRO 108E

**ARCHLGY 109A. Archaeology of the Modern World. 3-5 Units.**

Historical archaeology, also called the archaeology of the modern world, investigates the material culture and spatial history of the past five centuries. As a discipline, historical archaeology has been characterized by (1) a methodological conjunction between history and archaeology; (2) a topical focus on the three Cs: colonization, captivity, and capitalism; (3) forces which arguably are constitutive of the modern world; and (4) an epistemological priority to recovering the perspectives of people without history. Each of these three trends is widely debated yet they continue to profoundly shape the field. This seminar provides an in-depth examination of the emergence and development of this historical archaeology, with a focus on current issues in theory and method. For undergraduates, the prerequisite is Anthro 3 or consent of instructor.

Same as: ANTHRO 109A, ANTHRO 209A

**ARCHLGY 111. Emergence of Chinese Civilization from Caves to Palaces. 3-4 Units.**

Introduces processes of cultural evolution from the Paleolithic to the Three Dynasties in China. By examining archaeological remains, ancient inscriptions, and traditional texts, four major topics will be discussed: origins of modern humans, beginnings of agriculture, development of social stratification, and emergence of states and urbanism.

Same as: CHINGEN 141, CHINGEN 241

**ARCHLGY 111B. Muwekma: Landscape Archaeology and the Narratives of California Natives. 3-5 Units.**

This course explores the unique history of San Francisco Bay Area tribes with particular attention to Muwekma Ohlone- the descendent community associated with the landscape surrounding and including Stanford University. The story of Muwekma provides a window into the history of California Indians from prehistory to Spanish exploration and colonization, the role of Missionaries and the controversial legacy of Junipero Serra, Indigenous rebellions throughout California, citizenship and land title during the 19th century, the historical role of anthropology and archaeology in shaping policy and recognition of Muwekma, and the fight for acknowledgement of Muwekma as a federally recognized tribe. We will visit local sites associated with this history and participate in field surveys of the landscape of Muwekma.

Same as: ANTHRO 111B, NATIVEAM 111B

**ARCHLGY 113B. Religious Practices in Archaeological Cultures. 5 Units.**

According to Hawkes (1954), religion or ideology is the most difficult part of social life to access archaeologically. Luckily, not all scholars agree; according to Fogelin (2008) 'religion is not something people think about, but something people do'. Thus, archaeology, an inherently multidisciplinary subject that studies material culture, is well suited to delve into religion and its underpinnings. This course will explore religious practices, as they can be defined and interpreted from archaeological contexts spanning the Paleolithic to historic periods. Definitions of religion differ from author to author but they mostly agree that religion is a fully integrated and thus integral part of human social life. Politics, economics, identity and social class influence religion, and religion influences how these forces play out in society. Thus, the course will also examine the significance of ritual and religion in a variety of social contexts.

Same as: ANTHRO 113B, ANTHRO 213B

**ARCHLGY 114A. Introduction to South Asian Archaeology. 5 Units.**

This seminar will survey the archaeology of South Asia, beginning with animal and plant domestication in the early Holocene and ending with the late Medieval Period. Given its chronological breadth and spatial scope, the class will interrogate a variety of social and historical contexts that contribute to a broad range of anthropological research concerns including the intersections of authority, ritual, alterity and landscape and at the same time critically consider the epistemological bases for their analyses through archaeological remains.

Same as: ANTHRO 114A, ANTHRO 214A

**ARCHLGY 115. The Social life of Human Bones. 3-5 Units.**

Skeletal remains serve a primary function of support and protection for the human body. However, beyond this, they have played a range of social roles once an individual is deceased. The processes associated with excarnation, interment, exhumation and reburial all speak to the place that the body, and its parts, play in our cultural as well as physical landscape. This course builds on introductory courses in human skeletal anatomy by adding the social dynamics that govern the way humans treat other humans once they have died. It draws on anthropological, biological and archaeological research, with case studies spanning a broad chronological and spatial framework to provide students with an overview of social practice as it relates to the human body.  
Same as: ANTHRO 115, ANTHRO 215

**ARCHLGY 118. Engineering the Roman Empire. 4-5 Units.**

(Formerly CLASSART 117.) Enter the mind, the drafting room, and the building site of the Roman architects and engineers whose monumental projects impressed ancient and modern spectators alike. This class explores the interrelated aesthetics and mechanics of construction that led to one of the most extensive building programs undertaken by a pre-modern state. Through case studies ranging from columns, domes and obelisks to road networks, machines and landscape modification, we investigate the materials, methods, and knowledge behind Roman innovation, and the role of designed space in communicating imperial identity.  
Same as: CLASSICS 168

**ARCHLGY 119. Zooarchaeology: An Introduction to Faunal Remains. 5 Units.**

As regularly noted, whether historic or pre-historic, animal bones are often the most commonly occurring artefacts on archaeological sites. As bioarchaeological samples, they offer the archaeologist an insight into food culture, provisioning, trade and the social aspects of human-animal interactions. The course will be taught through both practical and lecture sessions: the 'hands-on' component is an essential complement to the lectures. The lectures will offer grounding in the main methodological approaches developed, as well as provide case-studies to illustrate where and how the methods have been applied. The practical session will walk students through the skeletal anatomy of a range of species. It will guide students on the identification of different parts of the animal, how to age / sex individuals, as well as recognize taphonomic indicators and what these mean to reconstructing post-depositional modifications.  
Same as: ANTHRO 119, ANTHRO 219

**ARCHLGY 124. Archaeology of Food: production, consumption and ritual. 3-5 Units.**

This course explores many aspects of food in human history from an archaeological perspective. We will discuss how the origins of agriculture helped to transform human society; how food and feasting played a prominent role in the emergence of social hierarchies and the development of civilization; and how various foodways influenced particular cultures. We will also conduct experimental studies to understand how certain methods of food procurement, preparation, and consumption can be recovered archaeologically.  
Same as: ARCHLGY 224

**ARCHLGY 125. ARCHAEOLOGICAL FIELD SURVEY METHODS. 3 Units.**

Practicum applying a variety of survey techniques to discover, map, and record archaeological sites. Basic cartographic skills for archaeologists and an introduction to GIS tools, GPS instruments, and geophysical techniques. Participants should be able to walk 3 - 4 miles over uneven terrain or make special arrangements with the instructor for transportation.

**ARCHLGY 126. Archaeobotany. 5 Units.**

Archaeobotany, also known as paleoethnobotany, is the study of the interrelationships of plants and humans through the archaeological record. Knowledge and understanding of Archaeobotany sufficient to interpret, evaluate, and understand archaeobotanical data. Dominant approaches in the study of archaeobotanical remains: plant macro-remains, pollen, phytoliths, and starch grains in the identification of diet and environmental reconstruction.  
Same as: ARCHLGY 226

**ARCHLGY 127. Introduction to bioarchaeological Method and Theory. 3-5 Units.**

This course deals with the skeletal biology of past populations, covering both the theoretical approaches and methods used in the study of skeletal and dental remains. Issues surrounding the reconstruction of the individual and population, which include age, sex and other paleodemographic factors, will be explored. The health and disease of teeth and bones, and the biomechanical and chemical analyses of bone will also be explored to illustrate how the variety of methods available to bioarchaeologists can be used to reconstruct past lifeways. While this course will be of primary interest to students interested in skeletal biology and archaeology, it is not exclusive to those pursuing careers in biological anthropology. The emphasis is on critical analysis, research skills, and communication skills that can be useful to students pursuing careers in other sub-disciplines of anthropology, laboratory research, or other lateral health-related fields. Required readings will be selected from current literature, and in some classes there will be practical material/exercises so that students can learn some of these techniques. The class is intended to be an interactive learning process in discussion format, and students are required to take an active part in class along with lectures.  
Same as: ARCHLGY 227

**ARCHLGY 132. The Anthropology of Heritage: Concepts, Contexts and Critique. 3-5 Units.**

This seminar will explore foundational concepts currently employed within heritage practice and debates. Readings will examine the historically formative context of colonial-era and nationalist discourses on stewardship and culture, as well as postcolonial reformulations of such concepts as cultural property, cultural recognition and public history. The seminar will engage the question of the relationship between foundational concepts and the current cosmopolitan and internationalist vision for heritage, probing the enduring dynamics of North-South divides in heritage development and archaeological practice.  
Same as: ANTHRO 332A, ARCHLGY 232, ARCHLGY 332

**ARCHLGY 134. Museum Cultures: Material Representation in the Past and Present. 3-5 Units.**

Students will open the "black box" of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores "museum cultures": representations of self and other within museums and institutional cultures of the museum world itself. 3 credits (no final project) or 5 credits (final project). May be repeat for credit.  
Same as: AMSTUD 134, ARCHLGY 234, ARTHIST 284B, CSRE 134, EDUC 214, NATIVEAM 134

**ARCHLGY 135. Constructing National History in East Asian Archaeology. 3-5 Units.**

Archaeological studies in contemporary East Asia share a common concern, to contribute to building a national narrative and cultural identity. This course focuses on case studies from China, Korea, and Japan, examining the influence of particular social-political contexts, such as nationalism, on the practice of archaeology in modern times.  
Same as: ARCHLGY 235, CHINGEN 118, CHINGEN 218

**ARCHLGY 137. Ethnographic Archaeologies. 4-5 Units.**

How have ethnographic and archaeological methods been combined in anthropological research? What methodological and theoretical implications do these kinds of projects generate? Seminar topics will include ethnoarchaeology, ethnographies of archaeological practice, public archaeology and heritage ethics. Lecture and discussion. Same as: ANTHRO 140A, ANTHRO 240A

**ARCHLGY 138. Economic Archaeology: Investigating Production, Distribution, and Exchange in the Past. 5 Units.**

This seminar is an exploration of archaeological approaches to the study of economic life in ancient, historical, and recent times. In-depth discussions of economy and comparison of different approaches to the subject will ground examination of economic archaeology's unique role, its contributions to the discipline, and its defining characteristics. Selected readings will: (1) train students in essential theoretical and intellectual background, (2) critically explore current research, and (3) furnish a comparative perspective on the role of economy in archaeology. Same as: ARCHLGY 238

**ARCHLGY 139. The Aegean in the Neolithic and Bronze Age. 3-5 Units.**

This course provides a survey of Aegean prehistory (7th-2nd millennium BC), focusing on traditions that were picked up or renegotiated, instead of taking a standpoint that evaluates phenomena as steps leading up to a "state-like" palatial society. It will draw on the region's wealth of data, and will be set within a theoretically informed, problem-oriented framework, aiming to introduce students to current interpretations and debates, mainly through discussion of specific case-studies. Same as: ANTHRO 115A, ANTHRO 215A, ARCHLGY 239

**ARCHLGY 139A. Forgotten Africa: An Introduction to the Archaeology of Africa. 5 Units.**

This course provides an introductory survey of Africa's past from prehistoric times through the 19th-century. The course will challenge Western depictions of Africa as a dark continent "without history" by highlighting the continent's vibrant cultures, sophisticated technologies, complex political systems and participation in far-reaching commercial networks, all predating European colonization. In tandem, the course explores how these histories are mobilized in the production of negative ideas about Africa in contemporary discourse. Same as: AFRICAST 139A, ANTHRO 139A

**ARCHLGY 140. Post-Socialist Heritages: memorialisation, past mastering and nostalgia in Eurasia. 3-5 Units.**

The post-Soviet story is far from resolved! While national identities and geopolitical alliances are being (re)negotiated across Eurasia, unresolved atrocities continue to reopen old wounds. Within this process the past is skillfully embraced to support and sustain conflicting political discourses. Drawing on a variety of highly topical case studies this course will explore the main dynamics and historically entrenched structures that define how the past plays out in the present since the disintegration of the Soviet Empire. Same as: ARCHLGY 240, REES 240

Same as: ARCHLGY 240, REES 240

**ARCHLGY 141. Heritage and The State: Nationalism, Indigeneity, and Neoliberalism. 3-5 Units.**

Heritage has been popularly connected with the romantic nation. And many debates about the use of the past in the present have used this vocabulary of modernist nationalism. Today, however, we live in an age where neoliberalism and transnationalism is challenging well-known modes of national sovereignty and citizenship. This course will investigate the changing nature of statecraft in the globalized 21st century. Spotlighting the state's specific application and reinvention of technologies such as cultural policy, heritage management and historiography. Same as: ARCHLGY 241

Same as: ARCHLGY 241

**ARCHLGY 142. Lost and found: Roman Coinage. 4-5 Units.**

New trends in Roman numismatics (from the late Republic to the early Empire, 3rd-c. BCE-1st-c. CE). Archaeology from coins. Barter, money, and coinage. The introduction of coinage in Rome and the provinces. Making money (coin production), using money (monetary, non-monetary and ritual uses), losing money (coin circulation, hoards, single finds): contextual interpretations. Monetary systems: coins from Rome and coins from the provinces. Coinage and identity. False coinage. Same as: ARCHLGY 242, CLASSART 232

**ARCHLGY 143. Classical Archaeology Today: Ethical Issues of Excavation, Ownership, and Display. 3-5 Units.**

(Formerly CLASSART 143.) While Classical archaeology engages with material remains from the Greco-Roman past, it is embedded within and inseparable from contemporary practice. Through an examination of case studies, legal statutes, professional codes, and disciplinary practices, this seminar discusses ethical dilemmas raised by Classical archaeology in the 21st century. We will focus on broad issues ranging from ownership, looting, reconstruction, and collecting to nationalism, religion, tourism, and media, with an eye toward defining ethical "best practices" for Classical archaeology.

**ARCHLGY 145. Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean. 3-4 Units.**

(Formerly CLASSART 145.) Why do we care about shipwrecks? What can sunken sites and abandoned ports tell us about our past? Focusing primarily on the archaeological record of shipwrecks and harbors, along with literary evidence and contemporary theory, this course examines how and why ancient mariners ventured across the "wine-dark seas" of the Mediterranean for travel, warfare, pilgrimage, and especially commerce. We will explore interdisciplinary approaches to the development of maritime contacts and communication from the Bronze Age through the end of Roman era. At the same time, we will engage with practical techniques of maritime archaeology, which allows us to explore the material record first hand.

Same as: CLASSICS 154

**ARCHLGY 146B. Global Heritage, World Heritage: History and Intersections in Contemporary Society. 5 Units.**

This Course will provide an overview of global heritage by focusing on the UNESCO World Heritage Program, which is based on an international treaty, the 1972 Convention Concerning the Protection of the World Cultural and Natural Heritage. The first part of the course will provide an historical overview on the development of the international preservation movements, the second part of the course will concentrate on how anthropology can contribute to the study of intergovernmental organizations and cultural bureaucracies, the third part and will discuss specific issues related to heritage by providing case studies from the World Heritage. This course will provide theoretical and empirical interpretations of contemporary issues in heritage and will give students a critical understanding of the complexities related to various uses of past in the present.

Same as: ANTHRO 146B

**ARCHLGY 147B. World Heritage in Global Conflict. 5 Units.**

Heritage is always political, it is typically said. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has over 1000 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally, but has found its own history increasingly entwined with that of international politics and violence.

Same as: ANTHRO 147B, ANTHRO 247B

**ARCHLGY 148. Ceramic Analysis for Archaeologists. 3-5 Units.**

The analysis and interpretation of ceramic remains allow archaeologists to accomplish varied ends: establish a time scale, document interconnections between different areas, and suggest what activities were carried out at particular sites. The techniques and theories used to bridge the gap between the recovery of ceramics and their interpretation within archaeological contexts is the focus of this seminar.

Same as: ARCHLGY 248

**ARCHLGY 151. Ten Things: An Archaeology of Design. 3 Units.**

(Formerly CLASSART 113/213.) Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgewood teapot, Edison's electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology.

Same as: CLASSICS 151

**ARCHLGY 153. Ancient Urbanism. 3-5 Units.**

(Formerly CLASSART 112/212.) Archaeology of Greek, Roman and early Islamic cities and urbanism in the Mediterranean and western Asia. Comparison and contrast of the shaping role of religion and politics; definitions of public and private space, monumental buildings, houses, streets, infrastructure. Special themes are city and country connections; the problems of giant cities; cities in the longue durée. Case studies include Athens, Olynthos, Rome, Pompeii, Constantinople, Damascus and Cairo.

Same as: CLASSICS 153, URBANST 119

**ARCHLGY 156. Design of Cities. 3-5 Units.**

Long-term, comparative and archaeological view of urban planning and design. Cities are the fastest changing components of the human landscape and are challenging our relationships with nature. They are the historical loci of innovation and change, are cultural hotspots, and present a tremendous challenge through growth, industrial development, the consumption of goods and materials. We will unpack such topics by tracking the genealogy of qualities of life in the ancient Near Eastern city states and those of Graeco-Roman antiquity, with reference also to prehistoric built environments and cities in the Indus Valley and through the Americas. The class takes an explicitly human-centered view of urban design and one that emphasizes long term processes.

Same as: CLASSICS 156

**ARCHLGY 164. Cultural Heritage and Human Rights. 1 Unit.**

This interdisciplinary research workshop will critically engage the issue of the growing currency of human rights discourse within cultural heritage. Epistemological and practical areas of tension between rights discourse and cultural discourse will be surveyed within the context of current global challenges facing heritage practice, conservation and archaeology. Topics will include the inequities of cultural recognition between North-South globalizations, questions of cultural property and rights, the role of tourism, and the impact of environmental conservation discourse on cultural rights.

Same as: ARCHLGY 64

**ARCHLGY 165. Roman Gladiators. 3-5 Units.**

Description TBD.

Same as: CLASSICS 164

**ARCHLGY 166. The Body in Roman Art. 4-5 Units.**

(Formerly CLASSART 105.) Ancient and modern ideas about the body as ideal and site of lived experience. Themes include representation, portrayal, power, metamorphosis, and replication. Works that exemplify Roman ideas of heroism and power versus works portraying nude women, erotic youth, preserved corpses, and suffering enemies.

Recommended: background in ancient Mediterranean art, archaeology, history, or literature. May be repeated for credit.

Same as: CLASSICS 166

**ARCHLGY 169. Archaeology of Britannia. 3-4 Units.**

Life in the Roman Empire: this course is a broad introduction to the archaeology of one of the best known provinces of the empire.

Same as: CLASSICS 169

**ARCHLGY 190. Archaeology Directed Reading/Independent Study. 1-5 Unit.****ARCHLGY 195. Independent Study/Research. 1-5 Unit.**

Students conducting independent study and or research with archaeology faculty members.

**ARCHLGY 199. Honors Independent Study. 5-6 Units.**

Independent study with honors faculty adviser.

**ARCHLGY 200. ARCHAEOLOGY OF TECHNOLOGY. 5 Units.**

The course is an introduction to the social organization of material production and to the theoretical, ethnographic, and historical frameworks used by archaeologists to link the technologies of the past to salient sociocultural information about the people who employed them. Comparison of metallurgical, ceramic, lithic, and textile industries in different cultural and historical settings will inform critical discussions of how and to what extent analyses of artifacts, workshops, and industrial installations can provide insight into past societies.

Same as: ANTHRO 101B, ANTHRO 201B, ARCHLGY 100

**ARCHLGY 222. Pottery Analysis for Archaeologists: The Social and Material Dimensions of Ceramic Containers. 5 Units.**

Due to the dominance of pottery in the archaeological record for the past 10,000 years, its analysis has attracted a great deal of research attention, making it imperative that all archaeologists have at least a working knowledge of ceramics. This course provides classroom and laboratory perspectives for understanding the information about ancient society, economy, and culture that can be plausibly derived from pottery and the visual, structural, and compositional methods that best help obtain that information.

**ARCHLGY 224. Archaeology of Food: production, consumption and ritual. 3-5 Units.**

This course explores many aspects of food in human history from an archaeological perspective. We will discuss how the origins of agriculture helped to transform human society; how food and feasting played a prominent role in the emergence of social hierarchies and the development of civilization; and how various foodways influenced particular cultures. We will also conduct experimental studies to understand how certain methods of food procurement, preparation, and consumption can be recovered archaeologically.

Same as: ARCHLGY 124

**ARCHLGY 226. Archaeobotany. 5 Units.**

Archaeobotany, also known as paleoethnobotany, is the study of the interrelationships of plants and humans through the archaeological record. Knowledge and understanding of Archaeobotany sufficient to interpret, evaluate, and understand archaeobotanical data. Dominant approaches in the study of archaeobotanical remains: plant macro-remains, pollen, phytoliths, and starch grains in the identification of diet and environmental reconstruction.

Same as: ARCHLGY 126

**ARCHLGY 227. Introduction to bioarchaeological Method and Theory. 3-5 Units.**

This course deals with the skeletal biology of past populations, covering both the theoretical approaches and methods used in the study of skeletal and dental remains. Issues surrounding the reconstruction of the individual and population, which include age, sex and other paleodemographic factors, will be explored. The health and disease of teeth and bones, and the biomechanical and chemical analyses of bone will also be explored to illustrate how the variety of methods available to bioarchaeologists can be used to reconstruct past lifeways. While this course will be of primary interest to students interested in skeletal biology and archaeology, it is not exclusive to those pursuing careers in biological anthropology. **ARCHLGY 240. Post-Socialist Heritages: memorialisation, past mastering and nostalgia in Eurasia. 3-5 Units.**

The post-Soviet story is far from resolved! While national identities and geopolitical alliances are being (re)negotiated across Eurasia, unresolved atrocities continue to reopen old wounds. Within this process the past is skillfully embraced to support and sustain conflicting political discourses. Drawing on a variety of highly topical case studies this course will explore the main dynamics and historically entrenched structures that define how the past plays out in the present since the disintegration of the Soviet Empire.

Same as: ARCHLGY 140, REES 240

**ARCHLGY 241. Heritage and The State: Nationalism, Indigeneity, and Neoliberalism. 3-5 Units.**

Heritage has been popularly connected with the romantic nation. And many debates about the use of the past in the present have used this vocabulary of modernist nationalism. Today, however, we live in an age where neoliberalism and transnationalism is challenging well-known modes of national sovereignty and citizenship. This course will investigate the changing nature of statecraft in the globalized 21st century. Spotlighting the state's specific application and reinvention of technologies such as cultural policy, heritage management and historiography.

Same as: ARCHLGY 141

**ARCHLGY 242. Lost and found: Roman Coinage. 4-5 Units.**

New trends in Roman numismatics (from the late Republic to the early Empire, 3rd-c. BCE-1st-c. CE). Archaeology from coins. Barter, money, and coinage. The introduction of coinage in Rome and the provinces. Making money (coin production), using money (monetary, non-monetary and ritual uses), losing money (coin circulation, hoards, single finds): contextual interpretations. Monetary systems: coins from Rome and coins from the provinces. Coinage and identity. False coinage. Same as: ARCHLGY 142, CLASSART 232

**ARCHLGY 248. Ceramic Analysis for Archaeologists. 3-5 Units.**

The analysis and interpretation of ceramic remains allow archaeologists to accomplish varied ends: establish a time scale, document interconnections between different areas, and suggest what activities were carried out at particular sites. The techniques and theories used to bridge the gap between the recovery of ceramics and their interpretation within archaeological contexts is the focus of this seminar. Same as: ARCHLGY 148

**ARCHLGY 270. Heritage Ecologies: Heritage, Culture, and the Environment. 3-5 Units.**

Conceptual and theoretical approaches to examine cultural and natural heritage from an interdisciplinary perspective. We ask: What are heritage ecologies? How are natural and cultural heritages interpreted, managed, and defined? Do heritage managers privilege nature and conservation over cultural heritage? This course uses archaeological data, ethnographic methods, archival analysis, and guest lectures to examine case studies representing key issues including conservation, indigenous rights, cultural landscapes, heritage in conflict, international heritage policy, and the use of expert knowledge in heritage contexts.

**ARCHLGY 299. INDEPENDENT STUDY/RESEARCH. 1-5 Unit.**  
nnINDEPENDENT STUDY/RESEARCH.**ARCHLGY 304C. The Archaeology of Ancient China. 5 Units.**

Early China from the perspective of material remains unearthed from archaeological sites; the development of Chinese culture from early hominid occupation nearly 2 million years ago through the development of agriculture in the Neolithic period and complex society in the Bronze Age to the political unification of China under the Qin Dynasty. Continuity of Chinese culture from past to present, history of Chinese archaeology, relationships between archaeology and politics, and food in early China. Same as: ARCHLGY 104C

**ARCHLGY 306A. Museums and Collections. 5 Units.**

Practical, theoretical, and ethical issues which face museums and collections. Practical collections-based work, museum visits, and display research. The roles of the museum in contemporary society. Students develop their own exhibition and engage with the issues surrounding the preservation of material culture. Same as: ARCHLGY 106A

**ARCHLGY 319. Archaeological Theory: Graeco-Roman Antiquity. 3-5 Units.**

The ways that archaeology is a medium of understanding Classical antiquity. We will selectively and deeply review themes in archaeological theory as they inform the academic study of Graeco-Roman antiquity. The aim is not to acquire comprehensive coverage of contemporary archaeological theory, but to focus on concepts, methodologies and practices that have a strong connection with agendas in contemporary Classics, and to explore interdisciplinary links through social and cultural theory and critique, performance studies, science studies (including the history and sociology of technology), design studies and approaches to material culture.

**ARCHLGY 327. Doing Business in Classical Antiquity: Mediterranean Exchange. 3-5 Units.**

Exchange was everywhere in the Mediterranean, from the individual household to the state. Yet the specific models by which goods changed hands were as varied as the ideas and values that moved alongside them. This seminar will explore theoretical approaches to commercial and non-commercial exchange, drawing primarily on the crucial but uneven bodies of archaeological evidence and historical sources in an effort to investigate the simple but hardly straightforward question of how business was undertaken in the Greco-Roman world. Same as: CLASSICS 352

**ARCHLGY 332. The Anthropology of Heritage: Concepts, Contexts and Critique. 3-5 Units.**

This seminar will explore foundational concepts currently employed within heritage practice and debates. Readings will examine the historically formative context of colonial-era and nationalist discourses on stewardship and culture, as well as postcolonial reformulations of such concepts as cultural property, cultural recognition and public history. The seminar will engage the question of the relationship between foundational concepts and the current cosmopolitan and internationalist vision for heritage, probing the enduring dynamics of North-South divides in heritage development and archaeological practice. Same as: ANTHRO 332A, ARCHLGY 132, ARCHLGY 232

**ARCHLGY 335. Models in Archaeology. 3-5 Units.**

(Formerly CLASSART 335.) This seminar explores how we can use archaeological sources to build models of Graeco-Roman antiquity. A model is defined as a systematic and schematic representation of the way the ancient world worked, and particularly by using social and cultural theory. We will take in classic works of Marx and Weber, as well as contemporary approaches. A key objective is for class members to connect this most important aspect of social science to their own research project.

**ARCHLGY 342. Archaeology of Roman Slavery. 4-5 Units.**

(Formerly CLASSART 342.) The archaeological study of Roman slavery has been severely limited by a focus on identifying the traces of slaves in the material record. This seminar explores a range of newer and more broadly conceived approaches to understanding slavery and slaves' experiences, including spatial analysis, bioarchaeology, epigraphy, visual imagery, and comparative archaeologies of slavery. Students will learn about the current state of research, work with different kinds of evidence and a range of methodologies, and develop original research projects of their own. Same as: CLASSICS 372

**ARCHLGY 353. Archaeology: Post-Humanist Agendas. 3-5 Units.**

How do people and their artifacts connect? Just what is the subject of archaeological history? A seminar reviewing the latest materialist approaches in archaeology and heritage studies. Same as: CLASSICS 353

**ARCHLGY 355. Landscape & Archaeology. 3-5 Units.**  
TBD.

Same as: CLASSICS 355

**ARCHLGY 356. Mediterranean Regionalism. 3-5 Units.**

The ancient world enjoys scholarly traditions of both grand pan-Mediterranean narratives and focused studies of the individual landscapes and peoples who comprise them. Within archaeology, these latter explorations generally rely on expedient geographical designations, modern political boundaries, or survey areas as focused regions for discussion. Defining and interrogating the regions created and experienced by ancient peoples and assembling these into a coherent larger ancient picture proves far more difficult. This seminar explores the varied forms of ancient regionalisms from archaeological (architecture, ceramics, coinage, sculpture, etc.) to social (language, religion, etc.) and tools for investigating such patterns of human interaction. Same as: CLASSICS 356

**ARCHLGY 367. Mediterranean Networks. 3-5 Units.**

The ancient Mediterranean was highly interconnected is common knowledge, and the idea of integration has become a defining factory in current approaches to Greco-Roman cultural identities. Yet how connectivity functioned, and how we should effectively analyze it, are less well understood. This seminar highlights emerging network approaches—both broad theoretical network paradigms and specific network science methodologies—as conceptual tools for archaeological and historical investigations of cultural interaction (economic, religious, artistic, colonial, etc.) across the Mediterranean world.

Same as: CLASSICS 367

**Art History Courses****ARTHIST 1A. Introduction to the Visual Arts: Prehistoric through Medieval. 5 Units.**

A survey of the art and architecture from the cave paintings of Lascaux to the Gothic Cathedrals of France; the material is organized both chronologically and thematically and covers a multiplicity of religions: pagan, Christian, and Islamic.

Same as: CLASSICS 56

**ARTHIST 1B. Introduction to the Visual Arts: History of Western Art from the Renaissance to the Present. 5 Units.**

This course surveys the history of Western painting from the start of the 14th century to the late 20th century and our own moment. Lectures introduce important artists (Giotto, Rembrandt, Velazquez, Goya, Manet, Matisse, Pollock, and others), and major themes associated with the art of particular periods and cultures. The course emphasizes training students to look closely at - and to write about - works of art.

**ARTHIST 2. Asian Arts and Cultures. 5 Units.**

An introduction to major monuments, themes, styles, and media of East and South Asian visual arts, in their social, literary, religious, and political contexts. Through close study of primary monuments of architectural, pictorial, and sculptural arts and related texts, this course will explore ritual and mortuary arts; Buddhist arts across Asia; narrative and landscape images; and courtly, urban, monastic, and studio environments for art from Bronze Age to modern eras.

Same as: JAPANGEN 60

**ARTHIST 3. Introduction to World Architecture. 5 Units.**

This lecture course surveys the history of architecture and urbanism, from the first societies to the present, in Europe, West and East Asia, the Americas, and Africa. The course progresses by case studies of exemplary monuments and cities, and examines the built environment as both cultural artifact and architectural event. It considers the social and political circumstances of architectural invention as well as plumbing the depth of artistic context by which particular formal choices resonate with an established representational culture.

Same as: CLASSICS 54

**ARTHIST 10SC. Photography: Truth or Fiction or.... 2 Units.**

"All photographs are accurate. None is the truth." Richard Avedon (1923-2004)  
The invention of photography inspired the belief that there could be a truthful and objective way to visually record the world. From portraits to travel photographs to documentary, photography has influenced how modern history is understood and remembered. Yet, a photograph is a manipulated image, shaped by the perspective of the photographer and further framed by its printing, presentation, and interpretation. The complex ethical and political issues associated with photography significantly impact how events and moments are recorded by history. Consider, for example, the US government's 18-year ban (ended in 2009) on photographing the flag-draped coffins of America's war dead as their bodies are returned to the United States. What matters most: protecting the privacy of military families or protecting American citizens from the death toll of war? Over the past decade, the number of photographers has increased exponentially, further blurring the boundary between what is truth and what is fiction. Even the concept of "gatekeepers" is obsolete: anyone with a smartphone is armed with a camera and can create their own stories, their own records, and their own truths. Further, the Internet grants nearly universal freedom to document and disseminate images that record, incriminate, illuminate, persuade, enrage, and glorify. In this course, we will examine the ethical parameters of photography and the many ways in which photography contributes to presenting powerful truths, creating compelling fictions, and recontextualizing history. The course will feature opportunities to work with photographs in the Cantor's collection and to explore the many photographic communities of the Bay Area including extensive field trips to museums, galleries, artists studios, private collections, photo studios, and more. Our discussions will also be informed by course readings. In addition, special sessions covering photographic techniques will familiarize students with the diversity of the medium and hands on experience to create work, if interested. No prior experience required. Sophomore College Course: Application required, due noon, April 5, 2016. Apply at <http://soco.stanford.edu>.

**ARTHIST 80N. The Portrait: Identities in Question. 3 Units.**

Most of us hold libraries of hundreds or thousands of portraits—more or less instantly available posed images of ourselves and others. For most of human history, before the development of portable and digital cameras, portraiture was a much rarer and more deliberate social act and cultural practice, involving special materials and techniques, encounters with expert portraitists or photographers, and established settings for display. What almost all portraits, of whatever time or cultural place, have in common are presentations of social identities, roles, or persona, as well as a potential fascination and power that may be based in our neurological capacities for facial recognition and "mind-reading" through facial expressions. This introductory seminar will explore many aspects of this basically simple category of thing—images of particular persons. Our point of departure will be from the history of art, focusing on portrait sculptures, paintings, and photographs from many eras and cultures, some of which are among the most studied and discussed of all artistic monuments. We will consider techniques and approaches of portrait making, including the conventions that underlie seemingly realistic portraits, posing, the portrait situation, and portrait genres. Our primary focus will be on the multiple purposes of portraiture, from commemoration, political glorification, and self-fashioning to making claims of social status, cultural role, and personal identity. We will also discuss the changing status of portraiture under modern states of social dislocation, technological change, and psychoanalytic interrogation, and in postmodern conditions of multi-mediated realities and distributed subjectivities. Along the way, we will see that our understandings of portraiture benefits from the approaches and insights of many fields—political and social history, anthropology, neuroscience, and literary studies among others.

**ARTHIST 90. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 2 Units.**

This new interdisciplinary seminar explores challenges and avenues for furthering protection of the cultural heritage rights enshrined in the UN Declaration on the Rights of Indigenous Peoples (UNDRIP). Using an innovative combination of in-class lectures and videos of interviews with renowned experts, including Indigenous leaders, scholars, artists and performers and museum professionals from around the world, this seminar will analyze current and potential tribal, domestic and international legal and ethical frameworks for indigenous cultural heritage protection and repatriation. Among other subjects, we will discuss and problematize: the impact of colonialism, urbanization and other political, legal, economic, religious and cultural forces on understandings and definitions of "indigenous" and "cultural heritage"; the development of international law relating to Indigenous peoples; cultural rights; tribal and domestic heritage protection and repatriation laws/initiatives including the 1990 US Indian Arts and Crafts Act and Native American Graves Protection and Repatriation Act; past and present Western museum practices relating to display, preservation, provenance research and repatriation of Indigenous peoples' cultural material; the meaning of repatriation to Indigenous peoples and other stakeholders; and resolving repatriation disputes, including by alternative dispute resolution (ADR) processes. While case studies will relate primarily to Indigenous peoples of North America, including the Arizona Hopi and Northwest Coast First Nations, comparisons will be drawn with the situation of Indigenous peoples in other regions, such as Oceania and Russia. The overall seminar experience will involve discussions of lectures and video content, assigned readings, a class visit to the Cantor Center Native Americas collection, and visits to our classroom by renowned experts, including Dr. Morten Rasmussen, who participated in the recent DNA analysis of Kennewick Man/The Ancient One. Students who have taken this course are eligible to join a guided weekend trip to Hopi territory tentatively planned for Spring Quarter 2016. Elements used in grading: class participation, attendance and a final project (one-day take-home exam; or research paper or film project with instructor's consent). Registration: Students may seek the instructor's consent via email (sjdenant@stanford.edu). Same as: ARTHIST 490A

**ARTHIST 99A. Student Guides at the Cantor Center for the Visual Arts. 2 Units.**

This course prepares students to lead interactive public tours in the galleries of the Cantor Arts Center. Engaging directly with works of art, students will develop their personal responses to art, think critically about tour-leading methods, develop public speaking and research skills, and practice leading informative and engaging group discussions in the galleries. Guest presentations by museum staff will introduce students to a range of professional practices and standards in the art museum including curatorship, art conservation, and collections management.

**ARTHIST 100N. The Artist in Ancient Greek Society. 3 Units.**

Given the importance of art to all aspects of their lives, the Greeks had reason to respect their artists. Yet potters, painters and even sculptors possessed little social standing. Why did the Greeks value the work of craftsmen but not the men themselves? Why did Herodotus dismiss those who worked with their hands as "mechanics?" What prompted Homer to claim that "there is no greater glory for a man than what he achieves with his own hands," provided that he was throwing a discus and not a vase on a wheel? Painted pottery was essential to the religious and secular lives of the Greeks. Libations to the gods and to the dead required vases from which to pour them. Economic prosperity depended on the export of wine and oil in durable clay containers. At home, depictions of gods and heroes on vases reinforced Greek values and helped parents to educate their children. Ceramic sets with scenes of Dionysian excess were reserved for elite symposia from which those who potted and painted them were excluded. Sculptors were less lowly but even those who carved the Parthenon were still regarded as "mechanics," with soft bodies and soft minds (Xenophon) "indifferent to higher things" (Plutarch). The seminar addresses these issues. Students will read and discuss texts, write response papers and present slide lectures and gallery talks on aspects of the artist's profession. Same as: CLASSICS 18N

**ARTHIST 101. Introduction to Greek Art I: The Archaic Period. 4 Units.**

In the decades 480-460, just before work began on the Parthenon, the sculptor Myron, creator of the Discus-Thrower, was even more celebrated for his bronze cow. Ancient authors describe an image so palpably alive that shepherds threw stones at her, thinking that she had strayed from the herd, and bulls vied for her attention. A century later, the quest for mimesis prompted a contest between two artists. Zeuxis painted a bunch of grapes seductive enough to attract hungry birds; Parrhasios then added a linen curtain, which Zeuxis asked to be removed from his painting. Zeuxis conceded defeat since he had fooled only birds, whereas Parrhasios had deceived an artist. This course explores the art and culture of the ancestors of these men. The Greeks of the archaic period (1000-480) would have understood the painters' competitive zeal, but only toward the end of the period would they have recognized naturalism as an artistic aim. Earlier Greek art is more abstract than life-like, closer to Calder than Michelangelo. In the eighth century Homer's descriptions of the rippling muscles (and egos) of his heroes, and the grief of Achilles' horses, evoke living men and sentient animals, but his fellow sculptors and painters prefer abstraction. This changes in the seventh century as a result of commercial contacts with the Near East and Egypt. Imported bronzes, ivories and other Near Eastern exotica alerted Greek artists to a wider range of subjects, techniques and intentions, including naturalism. Later in the century, Greek expatriates learned the art of carving hard stone from Egyptian masters and soon marble sculpture and architecture spread throughout Greece. In the course of the sixth and early fifth centuries Greek artists assimilate what they had borrowed, compete with one another, obey and disobey their teachers, test the tolerance of the gods and eventually produce works of art that speak with a Greek accent. When the Persians invaded the Acropolis in 480 and 479, they encountered artifacts with little trace of alien influence or imprint and, at Salamis and Plataea, fought decisive battles in which the Greeks prevailed. In the aftermath of the war, as the Greeks rebuilt their cities and their lives, Myron's cow reminded them of their debts to other cultures and their resolve to remain true to their own. Same as: CLASSICS 161

**ARTHIST 102. Introduction to Greek Art II: The Classical Period. 4 Units.**

The class begins with the art, architecture and political ideals of Periclean Athens, from the emergence of the city as the political and cultural center of Greece in 450 to its defeat in the Peloponnesian War in 404. It then considers how Athens and the rest of Greece proceed in the fourth century to rebuild their lives and the monuments that define them. Earlier artistic traditions endure, with subtle changes, in the work of sculptors such as Kephisodotos. Less subtle are the outlook and output of his son Praxiteles. In collaboration with Phryne, his muse and mistress, Praxiteles challenged the canons and constraints of the past with the first female nude in the history of Greek sculpture. His gender-bending depictions of gods and men were equally audacious, their shiny surfaces reflecting Plato's discussion of Eros and androgyny. Scopas was also a man of his time but pursued different interests. Drawn to the inner lives of men and woman, his tormented Trojan War heroes and victims are still scarred by memories of the Peloponnesian War, and a world away from the serene faces of the Parthenon. His famous Maenad, a devotee of Dionysos who has left this world for another, belongs to the same years as Euripides' Bacchae and, at the same time, anticipates the torsion and turbulence of Bernini and the Italian Baroque. In the work of these and other fourth century personalities, the stage is set for Alexander the Great and his conquest of a kingdom extending from Greece to the Indus River. (Formerly CLASSART 102).

Same as: CLASSICS 162

**ARTHIST 105. Art & Architecture in the Medieval Mediterranean. 4 Units.**

Chronological survey of Byzantine, Islamic, and Western Medieval art and architecture from the early Christian period to the Gothic age. Broad art-historical developments and more detailed examinations of individual monuments and works of art. Topics include devotional art, court and monastic culture, relics and the cult of saints, pilgrimage and crusades, and the rise of cities and cathedrals.

Same as: ARTHIST 305, CLASSICS 172

**ARTHIST 105B. Medieval Journeys: Tales of Devotion and Discovery. 3-5 Units.**

This course explores the experience and imagination of medieval journeys through interdisciplinary, cross-cultural, and skills-based approaches. As a foundations class, this survey of medieval culture engages with an array of written texts from the period. Narratives of medieval journeys are studied across a wide range of categories, including pilgrimages, crusades, quests, and sagas. The journey as metaphor, along with the resulting and very real cultural interactions, will provide a main focus for examining this rich tradition of literature. Students will have the opportunity to produce a creative project that brings medieval ideas about travel into dialogue with modern conceptions. The course will satisfy the Ways-Creative Expression requirement as well as one of the following two: Ways-Analytical Interpretive or Ways-Engaging Difference.

Same as: DLCL 123

**ARTHIST 106. Byzantine Art and Architecture, 300-1453 C.E.. 4 Units.**

(Formerly CLASSART 106/206.) This course and its study trip to the Getty (Los Angeles) to view the new Byzantine exhibition explores the art and architecture of the Eastern Mediterranean: Constantinople, Jerusalem, Alexandria, Antioch, Damascus, Thessaloniki, and Palermo, 4th-15th centuries. Applying an innovative approach, we will probe questions of phenomenology and aesthetics, focusing our discussion on the performance and appearance of spaces and objects in the changing diurnal light, in the glitter of mosaics and in the mirror reflection and translucency of marble.

Same as: ARTHIST 306, CLASSICS 171

**ARTHIST 106B. What Do Medieval Images Want? Theories of the Image in Byzantium, Islam, and the Latin West. 4 Units.**

What is an image? The medieval response was tied to religious identity. At the core of the debate was whether the image was just a mimetic representation or a living entity: matter imbued with divine spirit. Byzantium, Islam, and the Latin West each developed their own positions and used it as a platform for political legitimacy. We will study the development of the medieval image theories by focusing on specific monuments and objects and by reading both primary sources in translation and current scholarly interpretations.

Same as: ARTHIST 306B

**ARTHIST 107A. St. Petersburg, a Cultural Biography: Architecture, Urban Planning, the Arts. 4 Units.**

The most premeditated city in the whole world, according to Dostoevsky; created in 1703 by Peter the Great as a counterpoise to Moscow and old Russian culture; planned as a rational, west-European-appearing capital city of the Russian Empire. St. Petersburg's history through works of its artists, architects, urban planners, writers, and composers.

**ARTHIST 108. Virginitly and Power: Mary in the Middle Ages. 4 Units.**

The most influential female figure in Christianity whose state cult was connected with the idea of empire. The production and control of images and relics of the Virgin and the development of urban processions and court ceremonies through which political power was legitimized in papal Rome, Byzantium, Carolingian and Ottonian Germany, Tuscany, Gothic France, and Russia.

Same as: ARTHIST 308

**ARTHIST 109. The Book in the Medieval World. 4 Units.**

Studying the design and function of books in medieval society from the 7th to the 15th century, and the ways in which manuscripts are designed to meet (and shape) the cultural and intellectual demands of their readers. Major themes are the relationships between text and image, and between manuscripts and other media; the audience and production context of manuscripts; and changing ideas about pictorial space, figural style, page design, and progression through the book. Final project may be either a research paper or an original artist's book.

Same as: ARTHIST 309

**ARTHIST 109D. Means, Media and Mode: An Introduction to Western Medieval Art. 4 Units.**

The course is an introduction to western medieval art approached primarily through distinctions of materials and media. We work with a combination of medieval and later sources, often engaging with the modern objects and spaces available for study on campus in order to create new perspectives on the historical material. Medieval case studies are chosen that raise particularly complex issues of materiality, mixed-media form, and cross-media citation.

Same as: ARTHIST 309D

**ARTHIST 111. Introduction to Italian Renaissance, 1420-1580. 4 Units.**

New techniques of pictorial illusionism and the influence of the humanist revival of antiquity in the reformulation of the pictorial arts in 15th-century Italy. How different Italian regions developed characteristic artistic cultures through mutual interaction and competition.

Same as: ARTHIST 311

**ARTHIST 114. Mystical Naturalism: Van Eyck, Dürer, and the Northern Renaissance. 4 Units.**

A survey of the major innovations in Northern European painting ca. 1400-1600, in light of the social status of the artist between city and court. In the early fifteenth century painters began to render an idealized world down to its smallest details in ways that engaged new devotional practices. Later Hieronymus Bosch would identify the painter's imagination with the bizarre and grotesque. In response to Renaissance humanism, some painters introduced classical mythology and allegorical subjects in their works, and many traveled south to absorb Italianate pictorial styles. We will be visiting art museums in San Francisco and Stanford. May be repeat for credit.

Same as: ARTHIST 314

**ARTHIST 117. Picturing the Papacy, 1300-1850. 4 Units.**

Popes deployed art and architecture to glorify their dual spiritual and temporal authority, being both Christ's vicars on earth and rulers of state. After the return of the papacy from Avignon, Rome underwent numerous campaigns of renovation that staged a continuity between the pontiffs and the ancient Roman emperors. Patronage of art and architecture became important tools in the fight against Protestantism. Artists include Botticelli, Michelangelo, Caravaggio, and Bernini.  
Same as: ARTHIST 317

**ARTHIST 118. Titian, Veronese, Tintoretto. 4 Units.**

The course addresses the ways in which Venetian painters of the sixteenth century redefined paradigms of color, design, and invention. Themes to be examined include civic piety, new kinds of mythological painting, the intersection between naturalism and eroticism, and the relationship between art and rituals of church and statecraft.  
Same as: ARTHIST 318

**ARTHIST 118N. Pagan Mythology and the Making of Modern Europe. 3 Units.**

Once a religion loses its claim to truth it enters the sphere of the mythic. From the fifteenth through the seventeenth century, European artists turned to the legends and poetry of Greco-Roman paganism for pictorial subjects. What roles could Venus and Mars, Mercury and Minerva play in a Christian culture? Artists and humanists had different answers to this question. As relics from the past the stories of the ancient gods could serve as the prehistory of worldly and religious institutions and hence legitimize them. Or pagan myth, because of its alien nature, could convey fantasies of the body, which could not be articulated otherwise. Among the artists who explored creatively the ancient legends were Donatello, Botticelli, Michelangelo, Raphael, Velazquez, Rubens, Rembrandt, Bernini, and Poussin. Next to ancient authors such as Homer and Ovid we shall be reading excerpts from the humanists Dante, Boccaccio, Petrarch, and Vasari as we explore word/image relationships. The seminar includes excursions to the Cantor Arts Center at Stanford University to look at Old Master prints from the museum's storage, not normally on display, and we shall study paintings and sculptures with mythological subjects in the Legion of Honor, the Fine Arts Museum of San Francisco.

**ARTHIST 120. Living in a Material World: Seventeenth-century Dutch and Flemish Painting. 4 Units.**

Painting and graphic arts by artists in Flanders and Holland from 1600 to 1680, a period of political and religious strife. Historical context; their relationship to developments in the rest of Europe and contributions to the problem of representation. Preferences for particular genres such as portraits, landscapes, and scenes of everyday life; the general problem of realism as manifested in the works studied.  
Same as: ARTHIST 320

**ARTHIST 121. 18th-Century Art in Europe, ca 1660-1780. 4 Units.**

Major developments in painting across Europe including the High Baroque illusionism of Bernini, the founding of the French Academy, and the revival of antiquity during the 1760s, with parallel developments in Venice, Naples, Madrid, Bavaria, and London. Shifts in themes and styles amidst the emergence of new viewing publics. Artists: the Tiepolos, Giordano, Batoni, and Mengs; Ricci, Pellegrini, and Thornhill; Watteau and Boucher; Chardin and Longhi; Reynolds and West; Hogarth and Greuze; Vien, Fragonard, and the first works by David. Additional discussion for graduate students.  
Same as: ARTHIST 321

**ARTHIST 122. The Age of Revolution: Painting in Europe 1780-1830. 4 Units.**

Survey of European painting bracketed by the French Revolution and the end of the Napoleonic conquest. Against this background of social upheaval, the visual arts were profoundly affected by shifts in patronage, public, and ideas about the social utility of image making. Lectures and readings align ruptures in the tradition of representation with the unfolding historical situation, and trace the first manifestations of a "romantic" alternative to the classicism that was the cultural legacy of pre-Revolutionary Europe.  
Same as: ARTHIST 322

**ARTHIST 123N. Thinking about Visual Attention : from Balzac to Facebook. 3 Units.**

Writing in 1829, the French author Honoré de Balzac celebrated the acute visual attention of the flâneur, a character he closely associates with modern life: "To flâne is to take pleasure, to collect flashes of wit, to admire sublime scenes of unhappiness, of love, of joy as well as graceful or grotesque portraits, to thrust one's attention into the depths of a thousand lives." In July 2012 the Huffington Report pointed to a fact of modern life: "On city streets, in suburban parking lots and in shopping centers, there is usually someone strolling while talking on a phone, texting with his head down, listening to music, or playing a video game. The problem isn't as widely discussed as distracted driving, but the danger is real." These two very different ways of circulating in urban space suggest that a major shift in how we humans relate to our environment has occurred over the course of nearly two centuries—especially in the densely populated spaces of modern cities. Where the great spectacle of urban life was a marvel of the nineteenth century, today's inhabitants want mainly to block it out by insulating themselves in a cocoon of favorite music or personal conversation, whether by voice or text, that they risk stepping into traffic, colliding with lightposts, or bumping into others similarly self-absorbed. This seminar proposes to think about the hows and whys of that important shift from the unique perspective of art history, a field of study especially attuned to the limits and exigencies of visual acuity. We will explore the topic across a range of media, from daguerreotypes to stereoscopes, from paintings to films, from television screen to the hand-held displays of our smartphones.

**ARTHIST 124. The Age of Naturalism, Painting in Europe 1830-1874. 4 Units.**

Survey of European painting from the heyday of Romanticism to the first Impressionist exhibition. Lectures and readings focus on the tensions between traditional forms and ambitions of history painting and the challenge of "modern" subjects drawn from contemporary life. Attention to the impact of painting in the open-air, and the effect of new imaging technologies— notably lithography and photography - to provide "popular" alternatives to the hand-wrought character and elitist appeal of "high art" cultural forms.  
Same as: ARTHIST 324

**ARTHIST 126. Post-Naturalist Painting. 4 Units.**

How conceptual models from language, literature, new technologies, and scientific theory affected picture making following the collapse of the radical naturalism of the 1860s and 1870s. Bracketed in France by the first Impressionist exhibition (1874) and the first public acclamation of major canvases by Matisse and Picasso (1905), the related developments in England, Germany, Belgium, and Austria. Additional weekly discussion for graduate students. Recommended: some prior experience with 19th-century art.  
Same as: ARTHIST 326

**ARTHIST 127A. African Art and Politics, c. 1900 - Present. 4 Units.**

This course explores the relationship between art and politics in twentieth century Africa. Artistic production and consumption is considered in the context of various major political shifts, from the experience of colonialism to the struggle against Apartheid. Each week we will look closely at different works of art and examine how artists and designers responded to such challenges as independence, modernization and globalization. We will look at painting, sculpture, religious art, public and performance art, photography and film. How western perceptions and understanding of African art have shifted, and how museums have framed African art throughout the twentieth century will remain important points of discussion throughout the course.

Same as: AFRICAST 127

**ARTHIST 132. American Art and Culture, 1528-1910. 4 Units.**

The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others.

Same as: AMSTUD 132, ARTHIST 332

**ARTHIST 140N. Couture Culture: Fashion, Art & Modernism from Manet to Mondrian. 3-4 Units.**

This course examines the ways in which fashion has figured in the construction of modern experience and how it has been represented in the visual arts, primarily in Europe and the United States between about 1850 and 1965. Alongside the emergence of haute couture, the rise of the ready-to-wear industry during this period coincided with the consolidation of the department store; these institutions contributed to the development of a culture of consumption and display that continues to shape our lives today. Manet, Degas and other Impressionist painters were sensitive to the nuances of fashion, which they, like Baudelaire, saw as an aspect of modernity indispensable to their art. Clothing was no less significant in the context of the Russian revolution, when Alexander Rodchenko, for example, outfitted himself in a home-made version of workers' overalls in order to reinforce his identification with factory laborers and thereby to suggest the breaking down of class distinctions. The course also explores the significance of fashion for an abstract painter like Piet Mondrian, but, more to the point, we look at how Mondrian's work was appropriated to the world of fashion by Yves Saint-Laurent, who assured that Mondrian's signature geometric style would become instantly recognizable and eventually function as a hugely popular brand. The circuits through which we can trace the historical trajectory of fashion will illuminate its importance for understanding many facets of modern culture.

**ARTHIST 142. Architecture Since 1900. 4 Units.**

Art 142 is an introduction to the history of architecture since 1900 and how it has shaped and been shaped by its cultural contexts. The class also investigates the essential relationship between built form and theory during this period.

Same as: CEE 32G

**ARTHIST 142A. Home Alone: Houses that Artists and Thinkers Design for Themselves. 4 Units.**

This course investigates houses, hideaways, and studios that artists and thinkers have designed for themselves with varying degrees of self-consciousness, from subconscious images of the self to knowing stages for the contemplative life. Case studies range from antiquity to the present, from the studio-house of Peter Paul Rubens to that of Kurt Schwitters; from the house-museum of Sir John Soane to the Vittoriale of Gabriele D'Annunzio; from the philosophical dwelling of the Emperor Hadrian to that of Ludwig Wittgenstein.

Same as: ARTHIST 342A

**ARTHIST 143A. American Architecture. 4 Units.**

A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today's globalized world.

Same as: AMSTUD 143A, ARTHIST 343A, CEE 32R

**ARTHIST 144. On Looking: Art, Obscenity, and the Ethics of Spectatorship. 4 Units.**

This course considers the ethics of looking at art, photography, and other forms of visual representation that have been declared obscene or indecent, whether by religious authorities, government officials, community representatives, or legal opinions. What are the ethical stakes of looking at such materials? And what are the ethical implications of looking away and insisting that others do so as well? The creation of vanguard art since the late 19th-century has often been linked to the concept of transgression. Is it, we will ask, the modern artist's responsibility to challenge accepted standards of representation and the protocols of looking? If so, how are we, as viewers and students of art, to distinguish between legitimate art and unfit obscenity?.

**ARTHIST 145. Culture Wars: Art and Social Conflict in the USA, 1890-1950. 4 Units.**

This course examines social conflicts and political controversies in American culture through the lens of visual art and photography. We consider how visual images both reflect and participate in the social and political life of the nation and how the terms of citizenship have been represented, and, at times, contested, by artists throughout the first half of the 20th century. The class explores the relation between American art and the body politic by focusing on issues of poverty, war, censorship, consumerism, class identity, and racial division.

Same as: AMSTUD 145M, ARTHIST 345, FEMGEN 145

**ARTHIST 146X. What is Contemporary Art, and Where Did it Come From?. 3 Units.**

"Contemporary art challenges us to question our assumptions," wrote philanthropist and collector Eli Broad. "It asks us to think beyond the limits of conventional wisdom." This course aims to introduce both the difficulties and the great rewards presented by Contemporary Art (1970 to the present). Examining the historical foundations of Contemporary Art in the 18th, 19th, and 20th centuries, we will learn about the century's most game-changing art practices and movements such as cubism, abstract expressionism, conceptual art, and performance art. Working from the assumption that art in its moment of production was always contemporary, the course will organize content through various thematic lenses such as "portraiture and vision", "the photographic", and "the hand and the mind." Lectures occur both as traditional classroom sessions as well as on-site sessions at Stanford University's public sculpture collection, the Cantor Art Center, and the Anderson Collection, emphasizing close and direct engagement with artworks. Drawing on these experiences and on close readings of key texts, assignments will range from short essays to online curation to gallery talks. Students will develop and enhance their critical visual literacy and ability to grapple with the unknown through skills of creative synthesis, identifying patterns across time and space, and exercising conceptual and visual analysis. Broadly, the goals of the class are to understand the present through the past, to demystify the often confusing nature of contemporary art, and to question why art matters and how.

**ARTHIST 147. MODERNISM AND MODERNITY. 4 Units.**

The development of modern art and visual culture in Europe and the US, beginning with Paris in the 1860s, the period of Haussmann, Baudelaire and Manet, and ending with the Bauhaus and Surrealism in the 1920s and 30s. Modernism in art, architecture and design (e.g., Gauguin, Picasso, Duchamp, Mondrian, Le Corbusier, Breuer, Dali) will be explored as a compelling dream of utopian possibilities involving multifaceted and often ambivalent, even contradictory responses to the changes brought about by industrialization, urbanization, and the rise of mass culture.

Same as: ARTHIST 347

**ARTHIST 148. Art and the First Amendment: Testing the Limits of Expression. 5 Units.**

This course will take place in Washington D.C.  
Same as: SIW 148

**ARTHIST 149S. Art After the A-bomb: American and European Art, 1945-1989. 4 Units.**

This course surveys the major movements, figures, and themes in American and European art during the Cold War, from the drop of the A-bomb in 1945 to the fall of the Berlin Wall in 1989. It examines the formative relationship between art and politics in this explosive period. We will consider the changed role of the avant-garde after the catastrophes of World War II; the use and abuse of modern art as propaganda; spectacular postwar affluence and the rise of the culture industry; multimedia, intermedia, and the invention of new communications technologies; the burgeoning military-industrial complex and the Vietnam War; the revolutionary efforts of second-wave feminism, sexual liberation, and the counterculture; and the charged debates of the culture wars and the crisis of representation in the 1980s. What was art's social, cultural, and political function in the recent past and how is this role instructive in the present? Topics include Abstract Expressionism, Color Field Painting, Neo-Dada, Pop, Op, Fluxus, Happenings, Minimalism, Conceptualism, Performance, Institutional Critique, Process Art, Systems Art, Earth Art, Video Art, and theories of modernism and postmodernism. We will visit the Cantor Arts Center to view original works.

**ARTHIST 152. The American West. 5 Units.**

The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.

Same as: AMSTUD 124A, ENGLISH 124, HISTORY 151, POLISCI 124A

**ARTHIST 154. The American Civil War: A Visual History. 4 Units.**

A painting of men charging across a field, a photograph of dead bodies in a ditch, a fragment of metal, a sliver of bone, and a brass button: how do we make sense of the visual record of the American Civil War (1861-65)? From the Capitol Dome to a skeleton dug up in a highway project a hundred years after the last battle, the course will consider the strange and scattered remnants of a famous era. Drawing on the poetry of Walt Whitman, Emily Dickinson, and Herman Melville, the paintings of Winslow Homer, the photographs of Alexander Gardner, and the oratory of Abraham Lincoln, the course will examine what cannot be portrayed: the trauma of war.

Same as: AMSTUD 154X, ARTHIST 354

**ARTHIST 155C. Abstract Expressionism: Painting/Modern/America. 4 Units.**

The course will focus on American abstract painting from the 1930s to the 1960s, emphasizing the works of art at the Anderson Collection at Stanford. We will focus on looking closely at pictures by Jackson Pollock, Mark Rothko, Willem de Kooning, and other renowned abstract painters, developing skills of speaking and writing about these works of art. We will also place these pictures in their mid-20th century context: World War II and the Cold War; Hollywood and popular culture generally; Beat literature; and locations such as New York and San Francisco.

Same as: AMSTUD 155C

**ARTHIST 156. American and European Art, 1945-1968. 4 Units.**

Examines the pivotal figures, movements, themes and practices of art in the United States and Europe, from the conclusion of World War 2 to the end of the 1960s. Emphasis is on the changed nature of the avant-garde after the catastrophic events of midcentury. Topics include: modern art, ideology and the Cold War; the rise of consumer society and the "Society of the Spectacle"; concepts of medium specificity; the impact of new media and technologies on postwar art making; the role of the artist as worker and activist. Movements include: Abstract Expressionism, Art Informel, Pop, minimalism, process, performance conceptual art. An introductory art history course is recommended.

Same as: ARTHIST 356

**ARTHIST 156N. Art and the Power of Place: Site, Location, Environment. 3 Units.**

Many iconic works in the history of art draw their power and significance from the place in which they are sited or installed. The cave paintings of Altamira, Spain; Michelangelo's Sistine Chapel and the monumental "earthworks" made in the deserts of the American Southwest during the 1960s are just a few examples showcasing the important relationship between art and place. In this seminar we will explore how works of art throughout history create a sense of place; and how place, in turn, changes the interpretation of works of art. We will learn how to analyze works of art in terms of their immediate contexts and surroundings, whether temples, museums, spaces of the city or unexpected environments, charting the historical meanings of place in the process. We will look at a range of examples throughout time, from prehistory to the present day. A critical feature of the seminar will be to consider works of art outside the classroom, on both the Stanford campus and beyond. Possible field trips include visits to Alcatraz Prison (where the famous Chinese artist, Ai Weiwei, will install a new work in the fall of 2014).

**ARTHIST 157A. Histories of Photography. 4 Units.**

This course investigates multiple histories of photography. It begins in early nineteenth-century Europe with the origins of the medium and ends in the United States on September 11, 2001, a day that demonstrated the limits of photographic seeing. Rather than stabilizing any single trajectory of technological iterations, the course is more interested in considering the work performed by photography. Through historical case studies, it considers how to photograph is to order and to construct the world; to incite action and to persuade; to describe and to document; to record and to censor; to wound; to heal.

Same as: ARTHIST 357A

**ARTHIST 157B. Picture This: A History of Photography from the Civil War to the Selfie. 4 Units.**

TBA.

**ARTHIST 159. American Photographs, 1839-1971: A Cultural History. 4 Units.**

This course concentrates on many important American photographers, from the era of daguerreotypes to near the end of the pre-digital era. We study photographs of the Civil War, western exploration, artistic subjects, urban and rural poverty, skyscrapers, crime, fashion, national parks, and social protest, among other topics. Among the photographers we study: Carleton Watkins, Eadweard Muybridge, Walker Evans, Dorothea Lange, Garry Winogrand, and Diane Arbus. Emphasis on developing students' abilities to discuss and write about photography; to see it.

Same as: AMSTUD 159X, ARTHIST 359

**ARTHIST 160. Intro to Contemporary Art. 4 Units.**

Introduction to major themes, figures, movements and ideas in contemporary art, beginning with the question of art and politics in the 1960s. Topics: Postmodernism and the rise of consumer and spectacle culture; the "death" of painting, the impact of technology, cybernetics and the rise of new media; art at the end of the Cold War; globalization and the new global art world. An intro art history course is recommended.

**ARTHIST 160N. The Sisters: Poetry & Painting. 3 Units.**

Poetry and painting have often been called the "sister arts". Why? Sometimes a poem or a painting stands out to us, asking that we stay with it, that we remember it, although we cannot exactly say why. Poems have a way of making pictures in the mind, and paintings turn "rhymes" amid the people, places, and things they portray. Each is a concentrated world, inviting an exhilarating closeness of response: why does this line come first? Why does the artist include that detail? Who knows but that as we write and talk about these poems and pictures we will be doing what John Keats said a painter does: that is, arriving at a "trembling delicate and snail-horn perception of Beauty." Each week explore the kinship between a different pair of painter and poet and also focuses on a particular problem or method of interpretation. Some of the artist/poet combinations we will consider: Shakespeare and Caravaggio; Jorie Graham and (the photographer) Henri Cartier-Bresson; Alexander Pope and Thomas Gainsborough; William Wordsworth and Caspar David Friedrich; Christina Rossetti and Mary Cassatt; Walt Whitman and Thomas Eakins; Thomas Hardy and Edward Hopper.  
Same as: ENGLISH 51N

**ARTHIST 162. Race, Gender, and Sexuality in Contemporary Art. 4 Units.**

This course focuses on issues of race, gender, and sexuality in American art and criticism from 1972 to the present. How have the terms of racial identity and sexual difference shaped the production and reception of contemporary art across the last four decades? What status has the body—and more specifically, the body of the artist—been accorded within recent work on identity and difference? Throughout the course of the semester, we will be particularly attentive to issues of racial and sexual stereotype. What critical or subversive uses have contemporary artists found for pictorial stereotype? How have stereotypes of race, gender, and sexuality been recycled in order to be mocked or deconstructed?  
Same as: ARTHIST 362

**ARTHIST 162B. Art and Social Criticism. 5 Units.**

Contemporary visual artists have long been in the forefront of social criticism in America and their key works have become anchors for discourses on racism, sexism, economic inequality, and immigrant rights. We will consider political art by artists such as ACT-UP, Judy Chicago, Fred Wilson, Guerilla Girls, Ai Weiwei and many others that raises social awareness, inspires social change and galvanizes activism. What makes their art enduring social criticism? How have they contributed to our understanding of American history?  
Same as: AMSTUD 102, CSRE 102A

**ARTHIST 163. Queer America. 4 Units.**

This class explores queer art, photography and politics in the United States since 1930. Our approach will be grounded in close attention to the history and visual representation of sexual minorities in particular historical moments and social contexts. We will consider the cultural and political effects of World War II, the Cold War, the civil rights movement, psychedelics, hippie culture and sexual liberation, lesbian separatism, the AIDS crisis, and marriage equality.  
Same as: AMSTUD 163, FEMGEN 163

**ARTHIST 164A. Technology and the Visual Imagination. 4 Units.**

An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.  
Same as: ARTHIST 364A, FILMSTUD 164A, FILMSTUD 364A

**ARTHIST 165A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.**

The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.  
Same as: ARTHIST 365A, FILMSTUD 165A, FILMSTUD 365A

**ARTHIST 165B. American Style and the Rhetoric of Fashion. 4-5 Units.**

Focus on the visual culture of fashion, especially in an American context. Topics include: the representation of fashion in different visual media (prints, photographs, films, window displays, and digital images); the relationship of fashion to its historical context and American culture; the interplay between fashion and other modes of discourse, in particular art, but also performance, music, economics; and the use of fashion as an expression of social status, identity, and other attributes of the wearer. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.  
Same as: AMSTUD 127, FILMSTUD 165B

**ARTHIST 166. Representing Fashion. 4 Units.**

Course on the representation of fashion in the 20th and 21st century, with focus on fashion photography. Topics include: history of fashion illustration, fashion photography, and fashion films; intersection of art and commerce; role of designers, photographers, editors, and models; studio v. street photography; the place of mass media, alternative magazines, and online publications; and use of media, photography, and design theory for interpretation of fashion representations. Illustrators and artists include Lepape, Erte, Avedon, Penn, Klein, Newton, Sherman, and Leibovitz.

**ARTHIST 167. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.**

Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each week's theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.  
Same as: ARTHIST 367, FILMSTUD 167B, FILMSTUD 367B

**ARTHIST 171. Baudelaire to Bardot: Art, Fashion, and Film in Modern France. 4 Units.**

This course primarily concerns how French artists, writers, and filmmakers have explored the intersecting themes of fashion and modernity in various media including painting, sculpture, architecture, the decorative arts, poetry, novels, film, dance, and mass advertising. Using modern France as a case study, we will think critically about how the fashion, design, and luxury industries have influenced the production and reception of modern art - and vice versa. While the course is organized thematically, we will move chronologically from the late-18th century to the 1950s, conducting a survey of some of the major developments in French visual culture along the way. Finally, we will consider the ways that fashion-minded artists, designers, and entrepreneurs have helped to create, reflect, and critique modern French identities.

**ARTHIST 173. Issues in Contemporary Art. 4 Units.**

Major figures, themes, and movements of contemporary art from the 80s to the present. Readings on the neo-avant garde; postmodernism; art and identity politics; new media and technology; globalization and participatory aesthetics. Prerequisite: ARTHIST 155, or equivalent with consent of instructor.  
Same as: ARTHIST 373

**ARTHIST 176. Feminism and Contemporary Art. 4 Units.**

(Same as ARTHIST 176) The impact of second wave feminism on art making and art historical practice in the 70s, and its reiteration and transformation in contemporary feminist work. Topics: sexism and art history, feminist studio programs in the 70s, essentialism and self-representation, themes of domesticity, the body in feminist art making, bad girls, the exclusion of women of color and lesbians from the art historical mainstream, notions of performativity.

Same as: ARTHIST 376

**ARTHIST 178. Ethnicity and Dissent in United States Art and Literature. 4 Units.**

The role of the visual arts of the U.S. in the construction and contesting of racial, class, and gender hierarchies. Focus is on artists and writers from the 18th century to 1990s. How power, domination, and resistance work historically. Topics include: minstrelsy and the invention of race; mass culture and postmodernity; hegemony and language; memory and desire; and the borderlands.

Same as: AMSTUD 178, ARTHIST 378

**ARTHIST 182B. Cultures in Competition: Arts of Song-Era China. 4 Units.**

The Song dynasty (mid-10th to late 13th c.) was a period of extraordinary diversity and technical accomplishment in Chinese painting, ceramics, calligraphy, architecture and sculpture. Artistic developments emerged within a context of economic dynamism, urban growth, and competition in dynastic, political, cultural and social arenas as between Chinese and formerly nomadic neighboring regimes, or between reformers and conservatives. This course will consider major themes and topics in Song art history, including innovations in architectural and ceramic technologies; developments in landscape painting and theory; the rise of educated artists; official arts and ideologies of Song, Liao and Jin court regimes; new roles for women as patrons and cultural participants; and Chan and popular Buddhist imagery.

Same as: ARTHIST 382B

**ARTHIST 183N. Making Paradises on the Silk Road: Buddhist Arts of the Dunhuang Grottoes. 3 Units.**

The cave temples of Dunhuang in far northwest China are the greatest repository of Chinese and Central Asian Buddhist arts from the medieval period of 5th to 14th centuries. This seminar will focus on caves that will be exhibited as full-scale replicas as part of the Getty Malibu Museum's International Dunhuang exhibition, which we will visit in a seminar field trip to Los Angeles. We will explore the spatial arrangement of sculptures and wall paintings, the imagery of Pure Land paradise scenes and narrative story cycles, and the embodied experience of movement around the caves. Through readings, discussions, VR simulation viewings, and exhibition visits we will also explore varied approaches to understanding the patronage, artistic styles, production techniques, devotional practices, and significance of these sacred spaces.

**ARTHIST 184. Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting. 4 Units.**

Changes marking the transition from medieval to early modern Japanese society that generated a revolution in visual culture, as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch.

Same as: ARTHIST 384, JAPANGEN 184, JAPANGEN 384

**ARTHIST 186. Theme and Style in Japanese Art. 4 Units.**

A mixture of lecture and discussion, this course presents a chronological introduction to some of the defining monuments in the history of Japanese visual culture from prehistory to the mid-19th century. This introductory class presumes no prior knowledge of art history or of Japan. We will emphasize certain overarching themes like religious life; notions of decorum appropriate to various classes (court, warrior, and commoner); the relationship between and among the arts, such as the visual and the verbal, or the symphonic assemblage arts as seen in the tea ceremony; pervasive cultural tropes like nostalgia, seasonality, or the sense of place; and broader issues such as censorship, patronage, gender issues, and the encounters between Japanese and foreign cultures.

Same as: ARTHIST 386, JAPANGEN 186, JAPANGEN 286

**ARTHIST 187. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868. 4 Units.**

Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan.

Same as: ARTHIST 387, JAPANGEN 185

**ARTHIST 188A. The History of Modern and Contemporary Japanese and Chinese Architecture and Urbanism. 4 Units.**

The recent rapid urbanization and architectural transformation of Asia; focus is on the architecture of Japan and China since the mid-19th century. History of forms, theories, and styles that serve as the foundation for today's buildings and cityscapes. How Eastern and Western ideas of modernism have merged or diverged and how these forces continue to shape the future of Japanese and Chinese architecture and urban form.

Same as: ARTHIST 388A

**ARTHIST 188B. From Shanghai Modern to Global Contemporary: Frontiers of Modern Chinese Art. 4 Units.**

Chinese artistic engagements with international arenas and with the cultural politics of modernity, from the late 19th century to the present. Topics will include Shanghai modernity and public media; artistic reform and political activism at the end of empire; competition between national style painting and international modernisms; politicized arts of resistance and revolution; post-Mao era experimental and avant-garde movements; transnational careers and exhibition circuits.

**ARTHIST 189C. Global Currents: Early Modern Art Enterprises, Economies, and Imaginaries. 4 Units.**

Episodes of global artistic exchange from the 16th to 19th centuries involving commodities (porcelains and textiles), technologies (printmaking, perspective, and cartography), and imaginaries (Chinoiserie, East Asian Occidenteries, Orientalism, Japonisme). The role of enterprises, institutions, and power relations in artistic economies, from the Portuguese Empire, Jesuit mission networks and East India Companies to imperialist systems.

Same as: ARTHIST 389C

**ARTHIST 192B. Art of the African Diaspora. 4 Units.**

This introduction to the art of the African Diaspora uses art and visual culture as means to explore the history and impact of the global spread of African peoples from slavery until the present day. Lectures and discussions will examine a range of artistic practices from street festivals and Afro-Caribbean religious traditions to the work of studio-trained artists of international repute.

**ARTHIST 200M. The Artist in Ancient Greek Society. 4-5 Units.**

An exploration of the low status of artists in a culture that valued their work but not the men themselves. Potters were especially scorned but even sculptors of gold and ivory statues were seen as "mechanics" (Herodotus), with soft bodies and soft minds (Xenophon), "indifferent to higher things" (Plutarch). Topics include case studies of individual artists, their importance to the polis, their workshops, wages and occupational hazards and the impact of social isolation on the quality of their work.

Same as: ARTHIST 400M

**ARTHIST 203. Greek Art In and Out of Context. 5 Units.**

The seminar considers Greek artifacts in the context of Greek life (including the life of the workshop), and the endless ways in which craftsmen served the needs of Greek society. Their foundries, factories and ceramic studios produced the material goods that defined Greek life: temples, statues and other offerings for the gods; arms and armor for warriors; sporting equipment and prizes for athletes; houses, clothing and crockery for the family; ships and sailcloth, wagons and ploughs, wine and oil-presses for a thriving domestic and overseas economy; gravestones and funeral vases for the dead. (Formerly CLASSART 109.) Most of the antiquities exhibited in museums, or purchased by private collectors from galleries and auction houses, survive because they were buried with people who used and cherished them. The Greeks' belief that the artifacts they valued in life would serve them in the afterlife informs the second part of the seminar, which is devoted to the recent history of tomb looting and the illicit trafficking in antiquities.

Same as: CLASSICS 163

**ARTHIST 205. Cairo and Istanbul: Urban Space, Memory, Protest. 5 Units.**

In the aftermath of the Arab Spring, the city of Cairo has become a theater of social and political upheaval. In Istanbul, the Gezi protests in spring and summer 2013 drew attention to the contested public space. These events are the result of longstanding developments in the urban and social fabric. This seminar introduces students to the architectural and urban history of Istanbul and Cairo, with the current transformations as a central point of reference. Readings will focus on the tension between historical center and recent urban development, the social problems arising from the segregation, and reactions of scholars, architects, and artists to these issues.

**ARTHIST 205A. Islamic Painting: Landscape, Body, Power. 5 Units.**

This seminar focuses on the production of paintings, mostly but not exclusively miniatures in books, in the Islamic world. A particular focus lies on the Muslim Empires of the sixteenth to eighteenth centuries, namely the Ottoman, Safavid, and Mughal realms, together stretching from the Balkans to India. During this period, illustrated books were popular objects of high-level patronage, and numerous examples have survived that allow a detailed study of the implications of these images. Themes discussed include: figural representation in Islam, patronage and court culture; gender and the body; illustrations of literature and history; images of Sufis ceremonies; portraiture; images of animals and nature; the impact of European prints and paintings; space and landscape. A field-trip to the Museum of Asian Art in San Francisco to view Mughal paintings from India is planned.

**ARTHIST 206H. Women and the Book: Scribes, Artists, and Readers from Late Antiquity through the Fourteenth Century. 4-5 Units.**

This course examines the cultural worlds of medieval women through particular attention to the books that they owned, commissioned, and created. Beginning with the earliest Christian centuries, the course proceeds chronologically, charting women's book ownership, scribal and artistic activity, and patronage from Late Antiquity through the fourteenth century. In addition to examining specific manuscripts (in facsimile, or digitally), we will consider ancillary questions to do with women's authorship, education and literacy, reading patterns, devotional practices, and visual traditions and representation.

Same as: FEMGEN 216, HISTORY 216, HISTORY 316

**ARTHIST 207C. Phenomenology and Aesthetics in Medieval Art. 5 Units.**

This course explores the phenomenal aspects of the medieval image and space such as glitter, shadow, smoke, reverberation and how these presence effects were conceptualized in medieval culture as animation. Focus is on a select group of monuments as well as engagement with medieval objects at the Cantor Art Museum and the facsimiles of medieval manuscripts kept at the Art Library and Special Collections. Among the monuments we will study are the Alhambra in Spain, the Apocalypse MSS, the Cantigas of Alfonso X, the Byzantine Joshua Roll, the Homilies of the Monk Kokkinobaphos, the Ashburnhamensis Pentateuch, and the Rossano Gospels.

Same as: ARTHIST 407C

**ARTHIST 208. Hagia Sophia. 5 Units.**

By employing a methodology based in psychoacoustics, semiotics, and phenomenology, this course explores the relationship among sound, water, marble, meaning, and religious experience in the sixth-century church of Hagia Sophia built by emperor Justinian in Constantinople. We will read medieval sources describing the interior and ritual, make short movies exploring the shimmer of marble in buildings on campus, and study the acoustics of domed buildings through computer auralization done at Stanford's CCRMA (Center for Computer Research in Music and Acoustics).

Same as: ARTHIST 408, CLASSICS 173, CLASSICS 273

**ARTHIST 208B. The Art of Medieval Spain: Muslims, Christians, Jews. 5 Units.**

The seminar and its study trip explore the hybrid character of the art of Medieval Spain between the sixth and the fifteenth centuries. Rather than strictly chronological, our exploration of the artistic production of Muslims, Jews, and Christians is structured around major topics such as imperial power, pilgrimage, word and image. The readings juxtapose historical studies of specifically Spanish sites and objects with theoretical approaches tied to the broader themes.

**ARTHIST 208C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 408C, CLASSICS 175, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

**ARTHIST 209. Art and Religious Experience in Byzantium and Islam. 5 Units.**

This course presents a comparative study of Christian and Islamic paradigms (sixth to the thirteenth centuries) in the construction of religious experience through the material fabric of the building, the interior decor, objects, and rituals. We will read medieval ekphrastic texts and poetry, which stirred the viewer/participant to experience the building/object as animate. Among the sites we will study are: Hagia Sophia, the Ka'ba, the Dome of the Rock, the Mosque at Damascus and at Cordoba. We will read Byzantine and Arabic writers such as Paul the Silentiary, Patriarch Germanos, Maximus Confessor, Shahrawardi, and Ibn Arabi.

Same as: ARTHIST 309, CLASSICS 174

**ARTHIST 209C. Iconoclasm. 5 Units.**

Iconoclasm, iconophobia, and aniconism as markers of cultural transformation of the Mediterranean in the 7th-9th centuries. The identity crisis in the region as the Arabs established the Umayyad caliphate, conquering the Holy Land, Egypt, and Spain. The West consolidated around the Carolingians versus the East split between the Byzantines and the Arabs. How each of these three empires emerged from the ashes of late antique culture and carved an identity out of a common cultural foundation. The course will take place in the seminar room of the Art and Architectural Library located in the Cummings Art Building.

Same as: ARTHIST 409, CLASSICS 158, CLASSICS 258, REES 409

**ARTHIST 210. Giotto. 5 Units.**

Often hailed as the father of western painting, Giotto was seen as a revolutionary figure even in his own day. We will begin with Giotto's critical reception, his artistic predecessors and contemporaries, and his work for patrons ranging from the Franciscan order to the king of Naples. We will most closely examine Giotto's masterpiece, the frescoes of the Arena Chapel in Padua, and consider topics including Giotto's figural realism, the layered readings of the program, its use of visual rhetoric, and issues of gender, sexuality, and ethnicity.

Same as: ARTHIST 410B

**ARTHIST 212. Renaissance Florence, 1440-1540. 5 Units.**

Notions of cultural superiority in light of changes in Florentine society as it went from being a republic to a duchy ruled by the Medici. Artists and architects such as Donatello, Brunelleschi, Botticelli, Michelangelo, and Pontormo praised as having revived the arts and returned them to a level of ancient splendor. The role of the sacred in daily life and uses of the pagan past for poetic and scholarly expressions and as vehicles for contemporary experience.

**ARTHIST 213. Renaissance Print Culture: Art in the Cantor Arts Center. 5 Units.**

The seminar takes place in the Cantor Arts Center and provides a unique opportunity to study original works of art from the museum's storage. Beginning in the fifteenth century new techniques of reproduction changed the pictorial culture of Europe. Some engravings called attention to the engraver's virtuosity, and the private nature of the medium was explored for erotic imagery. By the sixteenth century printed images were used for political and religious propaganda during the societal upheavals.

**ARTHIST 214. From the Pantheon to the Capitol: Architecture, Cosmology, Mathematics and Illusion. 5 Units.**

This course traces the history of the dome over two millennia, from temples to the gods to Temples of the State, and from cosmic archetype to architectural fetish. The narrative interweaves the themes of the dome as image of the Cosmos, religious icon, national landmark, and political monument. It examines the dome not only as a venue for structural innovation, but also metaphysical geometry and transcendent illusionism. Individual case studies will familiarise you with major architects from Hadrian to Richard Rogers and historical milestones from the Dome of the Rock to the Capitol in Washington DC.

Same as: SIW 214

**ARTHIST 217B. The Classical Theory of Architecture from Antiquity to the French Revolution. 5 Units.**

This seminar focuses on themes and theories in architectural design from antiquity until the early twentieth century. Modern and contemporary architecture has often claimed its modernity through the incorporation of theory, but this seminar examines selections from key texts that have also moulded architectural and urbanistic thought in the ancient, medieval, and early modern eras in combination with analytical comparisons of built architecture.

Same as: ARTHIST 417B

**ARTHIST 225. Cezanne. 5 Units.**

This seminar will study the complexity and richness of pictures made by Paul Cézanne that affected the course of modernist painting during the early twentieth century. Usually called an Impressionist, Cézanne shares only partially Monet's concern for fleeting effects, and he evokes little of Renoir's charm. He did not paint the bustle of city life like Manet or Degas. Cézanne spent most of his career near his hometown of Aix-en-Provence painting landscapes, a few local residents, and many still-lives. Yet Matisse was serious when he said, "Cézanne, you see is a sort of god of painting. Dangerous his influence? So what? Too bad for those without the strength to survive it." The seminar will explore the foundations of that influence.

**ARTHIST 229D. Topophilia: Place in Japanese Visual Culture through 19th Century. 5 Units.**

Attachments to "place" and "home" are hard-wired into the biology of humans and animals alike, although such attachments vary according to specific times, cultures, and states of mind. Can we speak of a "Japanese sense of place" and if so, what is distinctive about it? Seminar explores religious visions and ritual fields; narratives of itinerancy; cityscapes; topographic taxonomies. Knowledge of Japanese culture is beneficial but not mandatory.

Same as: JAPANGEN 229

**ARTHIST 243C. The Art of Travel. 5 Units.**

This undergraduate seminar explores a variety of objects upon which we see the marks of makers smitten and/or stymied by new technologies of transportation: objects about the steamship, the railroad, the automobile, the airplane, the space shuttle, the internet. Among many types of material culture, the course considers scrimshaw, album quilts, maps, paintings, photographs, city plans, hood ornaments, and advertisements from the early Republic to the present. How do objects mark geographic movement, and the social relationships forged in the process? What do these marks tell us about how we, as contemporary viewers, experience the world?

**ARTHIST 244. The Visual Culture of the American Home Front, 1941-1945. 5 Units.**

How does home front of WWII look now? What sort of meanings appear with the vantage of more than sixty years' distance? Examining Hollywood films from those years -films made during the war but mostly not directly about the war - the seminar focuses on developing students' abilities to write emotion-based criticism and history. Weekly short papers, each one in response to a film screening, are required. Among the films screened: Shadow of a Doubt, Gaslight, I Walked with a Zombie, The Best Years of Our Lives.

Same as: AMSTUD 244

**ARTHIST 245. Art, Business & the Law. 5 Units.**

This course examines the intersection of art, business, and the law from a number of different angles, focusing on issues that impact our understanding of works of art and their circulation in the modern and contemporary periods. Topics range from individual case studies (e.g., Leonardo da Vinci; Richard Serra) to the consolidation of the art market, and include cultural heritage issues, problems of censorship, and conceptions of authorship and intellectual property.

**ARTHIST 246A. California Dreaming: West Coast Art and Visual Culture, 1848 - present. 5 Units.**

This seminar examines art, photography, and other forms of cultural production (e.g. film, advertisements, postcards) in and about California from the middle of the 19th century to the present. It approaches California as a contested political, historical and geographical site and as a series of images and alternative "lifestyles." How have artists pictured the state's diverse landscapes, both natural and commercial, as well as its complex history of labor, immigration, ethnicity, tourism, and social division?

**ARTHIST 246B. Pop Art. 5 Units.**

A new course on the history and meaning of Pop art in the United States and abroad. The course will feature close study of paintings, photographs, and prints at the Cantor Art Center. The course will be given in the Denning Family Resource Room, located in The Anderson Collection building. If you have any questions regarding the location, please contact Linda Esquivel at linda@stanford.edu.  
Same as: AMSTUD 246B

**ARTHIST 248B. Architecture, Urbanism, and Visual Culture in Early Modern Rome. 5 Units.**

This seminar investigates architecture in Rome, from Michelangelo to Piranesi. It examines the origins of modern urbanism; the piazza as ceremonial theater; the water network and fountain displays; palace design inside and out; religious institutions, from convents to confraternities; church design inside and out; the devotional and illusionistic space of the family chapel; festival architecture; light symbolism and geometry; the use of new materials and technologies; the relationship of early modern architecture to painting and sculpture; and the question of a unity of the arts.

**ARTHIST 252. Transatlantic American Art. 5 Units.**

This is an American art history course from a transatlantic perspective, considering the ties between the United States and England from the colonial era to World War I, a period in which both nations underwent a similar trajectory of industrialization, urbanization, democratization, and expansionism/imperialism. We will explore the ways in which American attitudes towards England oscillated between anxious emulation and proud repudiation, as the ideas of “British culture” and “Englishness” became catalysts for national self-definition and touchstones for gendered and racialized metaphors of national vigor or decline. We will also examine how American artists received aesthetic conventions and artistic genres from Britain, and how the geography of the American landscape and questions of national character and taste challenged these traditions.

**ARTHIST 255. Hidden Histories: Art and Misrepresentation. 5 Units.**

What happens when art functions as a decoy, taking us away from stories that it refuses to tell? We will explore three modern artists who grapple, in unpredictable ways, with the historical events that have shaped them: Philip Guston and the Holocaust; Martin Puryear and the Civil Rights movement; and South African artist William Kentridge and apartheid. When appropriate, we will look at objects at the Cantor Art Center (Stanford) as well as museums in the Bay Area. The course will provide the foundation for an exhibition at the Cantor Arts Center and the Yale University Art Gallery in 2016.

**ARTHIST 262. Office of Metropolitan Architecture: Workshop of the New. 4-5 Units.**

This seminar investigates all aspects of the work of the Office of Metropolitan Architecture (OMA) and its leader Rem Koolhaas. Topics for class research and inquiry include but are not limited to: Koolhaas’s early work at the Architectural Association and the founding of OMA, the publications of OMA and their style of presentation and theoretical foundations, the importance of AMO, and the architects who have left OMA and founded their own practices and how these differ from OMA. Each student completes an in-depth research paper and an in-class presentation.  
Same as: CEE 132Q

**ARTHIST 263B. The View through the Windshield: Cars and the American Landscape. 4 Units.**

Both cars and the landscape are fundamental to American identity. This seminar will consider the relationship between them: how they have shaped each other, how one mediates the experience of the other, and how American artists such as Ansel Adams, Edward Hopper, and Ed Ruscha have represented both. We will discuss the relationship between nature and technology; the aesthetics of highways and parkways; the phenomenology of driving and road trips; maps and way finding; and the future of cars, mapping, and the landscape.

**ARTHIST 264A. Picturing the Cosmos. 5 Units.**

This seminar explores the place of images in how we understand and imagine the universe. The course draws on art, science, and popular culture, and pays particular attention to the ways they inform each other. Examples include: star maps, science fiction films, appropriated astronomical images, and telescopic views of stars, planets, and nebulae. Using these representations as well as accompanying readings we will discuss the importance of aesthetics for conceptions of the cosmos; the influence of technology on representations; strategies for representing concepts that exceed the limits of human vision; and the ways that views of the universe reflect and shape their cultural context. Open to undergraduates and graduates.

**ARTHIST 264B. Starstuff: Space and the American Imagination. 5 Units.**

Course on the history of twentieth and twenty-first century American images of space and how they shape conceptions of the universe. Covers representations made by scientists and artists, as well as scientific fiction films, TV, and other forms of popular visual culture. Topics will include the importance of aesthetics to understandings of the cosmos; the influence of media and technology on representations; the social, political, and historical context of the images; and the ways representations of space influence notions of American national identity and of cosmic citizenship.  
Same as: AMSTUD 143X, FILMSTUD 264B

**ARTHIST 273. Visual Culture of the Arctic. 5 Units.**

TBA.

**ARTHIST 278. Curating Africa: Anatomy of an Exhibition. 5 Units.**

Gain hands-on curatorial experience redesigning the African galleries at the Cantor Arts Center. Explore and debate strategies for presenting diverse art forms, including a mummy from Ancient Egypt, early twentieth-century masks, and contemporary photography. Conduct research, prepare wall texts and labels, and participate in designing a new exhibition space in collaboration with fellow students, faculty, and community members.

**ARTHIST 284B. Museum Cultures: Material Representation in the Past and Present. 3-5 Units.**

Students will open the “black box” of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores “museum cultures”: representations of self and other within museums and institutional cultures of the museum world itself. 3 credits (no final project) or 5 credits (final project). May be repeat for credit.  
Same as: AMSTUD 134, ARCHLGY 134, ARCHLGY 234, CSRE 134, EDUC 214, NATIVEAM 134

**ARTHIST 287. Pictures of the Floating World: Images from Japanese Popular Culture. 5 Units.**

Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles.

Same as: ARTHIST 487X, JAPANLIT 287

**ARTHIST 287A. The Japanese Tea Ceremony: The History, Aesthetics, and Politics Behind a National Pastime. 5 Units.**

The Japanese tea ceremony, the ultimate premodern multimedia phenomenon, integrates architecture, garden design, ceramics, painting, calligraphy, and other treasured objects into a choreographed ritual wherein host, objects, and guests perform designated roles on a tiny stage sometimes only six feet square. In addition to its much-touted aesthetic and philosophical aspects, the practice of tea includes inevitable political and rhetorical dimensions. This course traces the evolution of tea practice from its inception within the milieu of courtier diversions, Zen monasteries, and warrior villas, through its various permutations into the 20th century, where it was manipulated by the emerging industrialist class for different-but ultimately similar-ends. Same as: JAPANGEN 287A

**ARTHIST 288B. The Enduring Passion for Ink: Contemporary Chinese Ink Painting. 5 Units.**

Contemporary Chinese ink painters are exploring new ground. They push the limits of the medium, creating installations and performances, mixing ink with other media, and advancing age-tested brushstrokes and compositions. The recent flurry of exhibitions attests to contemporary ink painting's increasing importance. This seminar introduces major figures (Xu Bing, Liu Dan, Zheng Chongbin, Li Huasheng, etc.) and movements in contemporary Chinese ink art. Emphasis is placed on improving writing abilities and on in-class reports and discussion. Topics for discussion include readings, individual works of art, and broad issues in contemporary art. Prerequisite: courses in Art History and/or Studio Art OR permission of instructor. open to undergraduates and graduates.

**ARTHIST 289A. Making the Masterpiece in Song Dynasty China. 5 Units.**

Studies of canon formation involving Song Dynasty (10-13th c.) Chinese works of painting, calligraphy, ceramics, and architecture. The roles of early art writing and criticism; collecting histories; art historical theory; / copying, imitation, and reproductive practices; period and regional taste; and modern museological and art historical discourses in identifying and constructing a canon of Song masterworks. Same as: ARTHIST 489A

**ARTHIST 294. Writing and the Visual (WIM): Pre-Modern Perceptions of Materiality. 5 Units.**

The course examines how various forms of writing and description—from wall labels to scholarly texts—shape the history and perception of visual objects. Through concrete examples, we will analyze the limits of language in describing visual images and consider how those limits might be expanded or redrawn. Required course for Art History majors. WIM Course.

**ARTHIST 295. Visual Arts Internship. 1-5 Unit.**

Professional experience in a field related to the Visual Arts for six to ten weeks. Internships may include work for galleries, museums, art centers, and art publications. Students arrange the internship, provide a confirmation letter from the hosting institution, and must receive consent from the faculty coordinator to enroll in units. To supplement the internship students maintain a journal and write a research paper related to the experience and their area of academic interest. Evaluations from the student and the supervisor are submitted at the end of the internship. Restricted to declared majors and minors. May be repeated for credit.

**ARTHIST 296. Junior Seminar: Methods & Historiography of Art History. 5 Units.**

Historiography and methodology. Through a series of case studies, this course introduces a range of influential critical perspectives in art history as a discipline and a practice. The goal is to stimulate thinking about what it means to explore the history of art today, to expose and examine our assumptions, expectations and predilections as we undertake to learn and write about works of art, their meanings and their status in the world.

**ARTHIST 297. Honors Thesis Writing. 1-5 Unit.**

May be repeated for credit.

**ARTHIST 298. Individual Work: Art History. 1-15 Unit.**

For approved independent research with individual faculty members. Letter grades only. May be repeated for credit.

**ARTHIST 305. Art & Architecture in the Medieval Mediterranean. 4 Units.**

Chronological survey of Byzantine, Islamic, and Western Medieval art and architecture from the early Christian period to the Gothic age. Broad art-historical developments and more detailed examinations of individual monuments and works of art. Topics include devotional art, court and monastic culture, relics and the cult of saints, pilgrimage and crusades, and the rise of cities and cathedrals.

Same as: ARTHIST 105, CLASSICS 172

**ARTHIST 306. Byzantine Art and Architecture, 300-1453 C.E.. 4 Units.**

(Formerly CLASSART 106/206.) This course and its study trip to the Getty (Los Angeles) to view the new Byzantine exhibition explores the art and architecture of the Eastern Mediterranean: Constantinople, Jerusalem, Alexandria, Antioch, Damascus, Thessaloniki, and Palermo, 4th-15th centuries. Applying an innovative approach, we will probe questions of phenomenology and aesthetics, focusing our discussion on the performance and appearance of spaces and objects in the changing diurnal light, in the glitter of mosaics and in the mirror reflection and translucency of marble.

Same as: ARTHIST 106, CLASSICS 171

**ARTHIST 306B. What Do Medieval Images Want? Theories of the Image in Byzantium, Islam, and the Latin West. 4 Units.**

What is an image? The medieval response was tied to religious identity. At the core of the debate was whether the image was just a mimetic representation or a living entity: matter imbued with divine spirit. Byzantium, Islam, and the Latin West each developed their own positions and used it as a platform for political legitimacy. We will study the development of the medieval image theories by focusing on specific monuments and objects and by reading both primary sources in translation and current scholarly interpretations.

Same as: ARTHIST 106B

**ARTHIST 308. Virginity and Power: Mary in the Middle Ages. 4 Units.**

The most influential female figure in Christianity whose state cult was connected with the idea of empire. The production and control of images and relics of the Virgin and the development of urban processions and court ceremonies through which political power was legitimized in papal Rome, Byzantium, Carolingian and Ottonian Germany, Tuscany, Gothic France, and Russia.

Same as: ARTHIST 108

**ARTHIST 309. Art and Religious Experience in Byzantium and Islam. 5 Units.**

This course presents a comparative study of Christian and Islamic paradigms (sixth to the thirteenth centuries) in the construction of religious experience through the material fabric of the building, the interior decor, objects, and rituals. We will read medieval ekphrastic texts and poetry, which stirred the viewer/participant to experience the building/object as animate. Among the sites we will study are: Hagia Sophia, the Ka'ba, the Dome of the Rock, the Mosque at Damascus and at Cordoba. We will read Byzantine and Arabic writers such as Paul the Silentiary, Patriarch Germanos, Maximus Confessor, Shahrawardi, and Ibn Arabi.

Same as: ARTHIST 209, CLASSICS 174

**ARTHIST 309D. Means, Media and Mode: An Introduction to Western Medieval Art. 4 Units.**

The course is an introduction to western medieval art approached primarily through distinctions of materials and media. We work with a combination of medieval and later sources, often engaging with the modern objects and spaces available for study on campus in order to create new perspectives on the historical material. Medieval case studies are chosen that raise particularly complex issues of materiality, mixed-media form, and cross-media citation.

Same as: ARTHIST 109D

**ARTHIST 311. Introduction to Italian Renaissance, 1420-1580. 4 Units.**  
New techniques of pictorial illusionism and the influence of the humanist revival of antiquity in the reformulation of the pictorial arts in 15th-century Italy. How different Italian regions developed characteristic artistic cultures through mutual interaction and competition.  
Same as: ARTHIST 111

**ARTHIST 314. Mystical Naturalism: Van Eyck, Dürer, and the Northern Renaissance. 4 Units.**  
A survey of the major innovations in Northern European painting ca. 1400-1600, in light of the social status of the artist between city and court. In the early fifteenth century painters began to render an idealized world down to its smallest details in ways that engaged new devotional practices. Later Hieronymus Bosch would identify the painter's imagination with the bizarre and grotesque. In response to Renaissance humanism, some painters introduced classical mythology and allegorical subjects in their works, and many traveled south to absorb Italianate pictorial styles. We will be visiting art museums in San Francisco and Stanford. May be repeat for credit.  
Same as: ARTHIST 114

**ARTHIST 317. Picturing the Papacy, 1300-1850. 4 Units.**  
Popes deployed art and architecture to glorify their dual spiritual and temporal authority, being both Christ's vicars on earth and rulers of state. After the return of the papacy from Avignon, Rome underwent numerous campaigns of renovation that staged a continuity between the pontiffs and the ancient Roman emperors. Patronage of art and architecture became important tools in the fight against Protestantism. Artists include Botticelli, Michelangelo, Caravaggio, and Bernini.  
Same as: ARTHIST 117

**ARTHIST 318. Titian, Veronese, Tintoretto. 4 Units.**  
The course addresses the ways in which Venetian painters of the sixteenth century redefined paradigms of color, design, and invention. Themes to be examined include civic piety, new kinds of mythological painting, the intersection between naturalism and eroticism, and the relationship between art and rituals of church and statecraft.  
Same as: ARTHIST 118

**ARTHIST 320. Living in a Material World: Seventeenth-century Dutch and Flemish Painting. 4 Units.**  
Painting and graphic arts by artists in Flanders and Holland from 1600 to 1680, a period of political and religious strife. Historical context; their relationship to developments in the rest of Europe and contributions to the problem of representation. Preferences for particular genres such as portraits, landscapes, and scenes of everyday life; the general problem of realism as manifested in the works studied.  
Same as: ARTHIST 120

**ARTHIST 321. 18th-Century Art in Europe, ca 1660-1780. 4 Units.**  
Major developments in painting across Europe including the High Baroque illusionism of Bernini, the founding of the French Academy, and the revival of antiquity during the 1760s, with parallel developments in Venice, Naples, Madrid, Bavaria, and London. Shifts in themes and styles amidst the emergence of new viewing publics. Artists: the Tiepolos, Giordano, Batoni, and Mengs; Ricci, Pellegrini, and Thornhill; Watteau and Boucher; Chardin and Longhi; Reynolds and West; Hogarth and Greuze; Vien, Fragonard, and the first works by David. Additional discussion for graduate students.  
Same as: ARTHIST 121

**ARTHIST 322. The Age of Revolution: Painting in Europe 1780-1830. 4 Units.**  
Survey of European painting bracketed by the French Revolution and the end of the Napoleonic conquest. Against this background of social upheaval, the visual arts were profoundly affected by shifts in patronage, public, and ideas about the social utility of image making. Lectures and readings align ruptures in the tradition of representation with the unfolding historical situation, and trace the first manifestations of a "romantic" alternative to the classicism that was the cultural legacy of pre-Revolutionary Europe.  
Same as: ARTHIST 122

**ARTHIST 324. The Age of Naturalism, Painting in Europe 1830-1874. 4 Units.**  
Survey of European painting from the heyday of Romanticism to the first Impressionist exhibition. Lectures and readings focus on the tensions between traditional forms and ambitions of history painting and the challenge of "modern" subjects drawn from contemporary life. Attention to the impact of painting in the open-air, and the effect of new imaging technologies- notably lithography and photography - to provide "popular" alternatives to the hand-wrought character and elitist appeal of "high art" cultural forms.  
Same as: ARTHIST 124

**ARTHIST 326. Post-Naturalist Painting. 4 Units.**  
How conceptual models from language, literature, new technologies, and scientific theory affected picture making following the collapse of the radical naturalism of the 1860s and 1870s. Bracketed in France by the first Impressionist exhibition (1874) and the first public acclamation of major canvases by Matisse and Picasso (1905), the related developments in England, Germany, Belgium, and Austria. Additional weekly discussion for graduate students. Recommended: some prior experience with 19th-century art.  
Same as: ARTHIST 126

**ARTHIST 332. American Art and Culture, 1528-1910. 4 Units.**  
The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others.  
Same as: AMSTUD 132, ARTHIST 132

**ARTHIST 342A. Home Alone: Houses that Artists and Thinkers Design for Themselves. 4 Units.**  
This course investigates houses, hideaways, and studios that artists and thinkers have designed for themselves with varying degrees of self-consciousness, from subconscious images of the self to knowing stages for the contemplative life. Case studies range from antiquity to the present, from the studio-house of Peter Paul Rubens to that of Kurt Schwitters; from the house-museum of Sir John Soane to the Vittoriale of Gabriele D'Annunzio; from the philosophical dwelling of the Emperor Hadrian to that of Ludwig Wittgenstein.  
Same as: ARTHIST 142A

**ARTHIST 343A. American Architecture. 4 Units.**  
A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today's globalized world.  
Same as: AMSTUD 143A, ARTHIST 143A, CEE 32R

**ARTHIST 345. Culture Wars: Art and Social Conflict in the USA, 1890-1950. 4 Units.**

This course examines social conflicts and political controversies in American culture through the lens of visual art and photography. We consider how visual images both reflect and participate in the social and political life of the nation and how the terms of citizenship have been represented—and, at times, contested—by artists throughout the first half of the 20th century. The class explores the relation between American art and the body politic by focusing on issues of poverty, war, censorship, consumerism, class identity, and racial division.

Same as: AMSTUD 145M, ARTHIST 145, FEMGEN 145

**ARTHIST 347. MODERNISM AND MODERNITY. 4 Units.**

The development of modern art and visual culture in Europe and the US, beginning with Paris in the 1860s, the period of Haussmann, Baudelaire and Manet, and ending with the Bauhaus and Surrealism in the 1920s and 30s. Modernism in art, architecture and design (e.g., Gauguin, Picasso, Duchamp, Mondrian, Le Corbusier, Breuer, Dali) will be explored as a compelling dream of utopian possibilities involving multifaceted and often ambivalent, even contradictory responses to the changes brought about by industrialization, urbanization, and the rise of mass culture.

Same as: ARTHIST 147

**ARTHIST 354. The American Civil War: A Visual History. 4 Units.**

A painting of men charging across a field, a photograph of dead bodies in a ditch, a fragment of metal, a sliver of bone, and a brass button: how do we make sense of the visual record of the American Civil War (1861-65)? From the Capitol Dome to a skeleton dug up in a highway project a hundred years after the last battle, the course will consider the strange and scattered remnants of a famous era. Drawing on the poetry of Walt Whitman, Emily Dickinson, and Herman Melville, the paintings of Winslow Homer, the photographs of Alexander Gardner, and the oratory of Abraham Lincoln, the course will examine what cannot be portrayed: the trauma of war.

Same as: AMSTUD 154X, ARTHIST 154

**ARTHIST 356. American and European Art, 1945-1968. 4 Units.**

Examines the pivotal figures, movements, themes and practices of art in the United States and Europe, from the conclusion of World War 2 to the end of the 1960s. Emphasis is on the changed nature of the avant-garde after the catastrophic events of midcentury. Topics include: modern art, ideology and the Cold War; the rise of consumer society and the "Society of the Spectacle"; concepts of medium specificity; the impact of new media and technologies on postwar art making; the role of the artist as worker and activist. Movements include: Abstract Expressionism, Art Informel, Pop, minimalism, process, performance conceptual art. An introductory art history course is recommended.

Same as: ARTHIST 156

**ARTHIST 357A. Histories of Photography. 4 Units.**

This course investigates multiple histories of photography. It begins in early nineteenth-century Europe with the origins of the medium and ends in the United States on September 11, 2001, a day that demonstrated the limits of photographic seeing. Rather than stabilizing any single trajectory of technological iterations, the course is more interested in considering the work performed by photography. Through historical case studies, it considers how to photograph is to order and to construct the world; to incite action and to persuade; to describe and to document; to record and to censor; to wound; to heal.

Same as: ARTHIST 157A

**ARTHIST 359. American Photographs, 1839-1971: A Cultural History. 4 Units.**

This course concentrates on many important American photographers, from the era of daguerreotypes to near the end of the pre-digital era. We study photographs of the Civil War, western exploration, artistic subjects, urban and rural poverty, skyscrapers, crime, fashion, national parks, and social protest, among other topics. Among the photographers we study: Carleton Watkins, Eadweard Muybridge, Walker Evans, Dorothea Lange, Garry Winogrand, and Diane Arbus. Emphasis on developing students' abilities to discuss and write about photography; to see it.

Same as: AMSTUD 159X, ARTHIST 159

**ARTHIST 362. Race, Gender, and Sexuality in Contemporary Art. 4 Units.**

This course focuses on issues of race, gender, and sexuality in American art and criticism from 1972 to the present. How have the terms of racial identity and sexual difference shaped the production and reception of contemporary art across the last four decades? What status has the body—and more specifically, the body of the artist—been accorded within recent work on identity and difference? Throughout the course of the semester, we will be particularly attentive to issues of racial and sexual stereotype. What critical or subversive uses have contemporary artists found for pictorial stereotype? How have stereotypes of race, gender, and sexuality been recycled in order to be mocked or deconstructed?

Same as: ARTHIST 162

**ARTHIST 364A. Technology and the Visual Imagination. 4 Units.**

An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.

Same as: ARTHIST 164A, FILMSTUD 164A, FILMSTUD 364A

**ARTHIST 365A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.**

The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.

Same as: ARTHIST 165A, FILMSTUD 165A, FILMSTUD 365A

**ARTHIST 367. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.**

Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each week's theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.

Same as: ARTHIST 167, FILMSTUD 167B, FILMSTUD 367B

**ARTHIST 373. Issues in Contemporary Art. 4 Units.**

Major figures, themes, and movements of contemporary art from the 80s to the present. Readings on the neo-avant garde; postmodernism; art and identity politics; new media and technology; globalization and participatory aesthetics. Prerequisite: ARTHIST 155, or equivalent with consent of instructor.

Same as: ARTHIST 173

**ARTHIST 376. Feminism and Contemporary Art. 4 Units.**

(Same as ARTHIST 176) The impact of second wave feminism on art making and art historical practice in the 70s, and its reiteration and transformation in contemporary feminist work. Topics: sexism and art history, feminist studio programs in the 70s, essentialism and self-representation, themes of domesticity, the body in feminist art making, bad girls, the exclusion of women of color and lesbians from the art historical mainstream, notions of performativity.

Same as: ARTHIST 176

**ARTHIST 378. Ethnicity and Dissent in United States Art and Literature. 4 Units.**

The role of the visual arts of the U.S. in the construction and contesting of the racial, class, and gender hierarchies. Focus is on artists and writers from the 18th century to 1990s. How power, domination, and resistance work historically. Topics include: minstrelsy and the invention of race; mass culture and postmodernity; hegemony and language; memory and desire; and the borderlands.

Same as: AMSTUD 178, ARTHIST 178

**ARTHIST 382B. Cultures in Competition: Arts of Song-Era China. 4 Units.**

The Song dynasty (mid-10th to late 13th c.) was a period of extraordinary diversity and technical accomplishment in Chinese painting, ceramics, calligraphy, architecture and sculpture. Artistic developments emerged within a context of economic dynamism, urban growth, and competition in dynastic, political, cultural and social arenas as between Chinese and formerly nomadic neighboring regimes, or between reformers and conservatives. This course will consider major themes and topics in Song art history, including innovations in architectural and ceramic technologies; developments in landscape painting and theory; the rise of educated artists; official arts and ideologies of Song, Liao and Jin court regimes; new roles for women as patrons and cultural participants; and Chan and popular Buddhist imagery.

Same as: ARTHIST 182B

**ARTHIST 384. Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting. 4 Units.**

Changes marking the transition from medieval to early modern Japanese society that generated a revolution in visual culture, as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch.

Same as: ARTHIST 184, JAPANGEN 184, JAPANGEN 384

**ARTHIST 386. Theme and Style in Japanese Art. 4 Units.**

A mixture of lecture and discussion, this course presents a chronological introduction to some of the defining monuments in the history of Japanese visual culture from prehistory to the mid-19th century. This introductory class presumes no prior knowledge of art history or of Japan. We will emphasize certain overarching themes like religious life; notions of decorum appropriate to various classes (court, warrior, and commoner); the relationship between and among the arts, such as the visual and the verbal, or the symphonic assemblage arts as seen in the tea ceremony; pervasive cultural tropes like nostalgia, seasonality, or the sense of place; and broader issues such as censorship, patronage, gender issues, and the encounters between Japanese and foreign cultures.

Same as: ARTHIST 186, JAPANGEN 186, JAPANGEN 286

**ARTHIST 387. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868. 4 Units.**

Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan.

Same as: ARTHIST 187, JAPANGEN 185

**ARTHIST 388A. The History of Modern and Contemporary Japanese and Chinese Architecture and Urbanism. 4 Units.**

The recent rapid urbanization and architectural transformation of Asia; focus is on the architecture of Japan and China since the mid-19th century. History of forms, theories, and styles that serve as the foundation for today's buildings and cityscapes. How Eastern and Western ideas of modernism have merged or diverged and how these forces continue to shape the future of Japanese and Chinese architecture and urban form.

Same as: ARTHIST 188A

**ARTHIST 389C. Global Currents: Early Modern Art Enterprises, Economies, and Imaginaries. 4 Units.**

Episodes of global artistic exchange from the 16th to 19th centuries involving commodities (porcelains and textiles), technologies (printmaking, perspective, and cartography), and imaginaries (Chinoiserie, East Asian Occidenteries, Orientalism, Japonisme). The role of enterprises, institutions, and power relations in artistic economies, from the Portuguese Empire, Jesuit mission networks and East India Companies to imperialist systems.

Same as: ARTHIST 189C

**ARTHIST 400M. The Artist in Ancient Greek Society. 4-5 Units.**

An exploration of the low status of artists in a culture that valued their work but not the men themselves. Potters were especially scorned but even sculptors of gold and ivory statues were seen as "mechanics" (Herodotus), with soft bodies and soft minds (Xenophon), "indifferent to higher things" (Plutarch). Topics include case studies of individual artists, their importance to the polis, their workshops, wages and occupational hazards and the impact of social isolation on the quality of their work.

Same as: ARTHIST 200M

**ARTHIST 405. Art, Ekphrasis, and Music in Byzantium and Islam. 5 Units.**

Focus is on the interrelation of art, architecture, verbal description, poetry, and music, including the singing of psalms and recitation of the Qur'an. How ekphrasis, the style of writing vividly intended to transform the listeners into spectators, structures the perception of and response to artistic production be it an art object, building, or a musical performance. The role of ekphrasis in animating the inanimate and the importance of breath and spirit, which become manifest in visual, acoustic, olfactory, and gustatory terms. Religious and courtly settings: Hagia Sophia, the Great Palace of Constantinople, the Dome of the Rock, the palaces of Baghdad and Samarra, the mosque at Cordoba, Medinat al-Zahra and the Alhambra. Greek and Arabic writers on ekphrasis in translation, juxtaposing the medieval material to the ancient theories of ekphrasis and modern scholarship.

Same as: CLASSICS 376

**ARTHIST 405A. Graduate Pedagogy Course. 2 Units.**

This course is designed for graduate students in Art History and Film Studies preparing to work as teaching assistants in the Department of Art and Art History. The seminar will focus on a range of theoretical and practical concerns pertaining to the successful conceptualization, organization, and execution of class lectures and discussion sections. Students will be exposed to a variety of perspectives and strategies related to quality teaching at the college level.

**ARTHIST 407. The Resurrected Body: Animacy in Medieval Art. 5 Units.**

This course explores the relationship of spirit and matter in medieval art and architecture, more specifically how the changing appearance of objects and spaces evokes the presence of the metaphysical as glitter, reverberation, and shadow. We will engage objects and monuments across the Mediterranean, studying the way they were staged in order to produce the perception of liveliness. The phenomenology of liveliness will be tied to the development of the theology of resurrection of the body.

**ARTHIST 407C. Phenomenology and Aesthetics in Medieval Art. 5 Units.**

This course explores the phenomenal aspects of the medieval image and space such as glitter, shadow, smoke, reverberation and how these presence effects were conceptualized in medieval culture as animation. Focus is on a select group of monuments as well as engagement with medieval objects at the Cantor Art Museum and the facsimiles of medieval manuscripts kept at the Art Library and Special Collections. Among the monuments we will study are the Alhambra in Spain, the Apocalypse MSS, the Cantigas of Alfonso X, the Byzantine Joshua Roll, the Homiles of the Monk Kokkinobaphos, the Ashburnhamensis Pentateuch, and the Rossano Gospels.  
Same as: ARTHIST 207C

**ARTHIST 408. Hagia Sophia. 5 Units.**

By employing a methodology based in psychoacoustics, semiotics, and phenomenology, this course explores the relationship among sound, water, marble, meaning, and religious experience in the sixth-century church of Hagia Sophia built by emperor Justinian in Constantinople. We will read medieval sources describing the interior and ritual, make short movies exploring the shimmer of marble in buildings on campus, and study the acoustics of domed buildings through computer auralization done at Stanford's CCRMA (Center for Computer Research in Music and Acoustics).

Same as: ARTHIST 208, CLASSICS 173, CLASSICS 273

**ARTHIST 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.**

Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, CLASSICS 175, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

**ARTHIST 409. Iconoclasm. 5 Units.**

Iconoclasm, iconophobia, and aniconism as markers of cultural transformation of the Mediterranean in the 7th-9th centuries. The identity crisis in the region as the Arabs established the Umayyad caliphate, conquering the Holy Land, Egypt, and Spain. The West consolidated around the Carolingians versus the East split between the Byzantines and the Arabs. How each of these three empires emerged from the ashes of late antique culture and carved an identity out of a common cultural foundation. The course will take place in the seminar room of the Art and Architectural Library located in the Cummings Art Building.

Same as: ARTHIST 209C, CLASSICS 158, CLASSICS 258, REES 409

**ARTHIST 410B. Giotto. 5 Units.**

Often hailed as the father of western painting, Giotto was seen as a revolutionary figure even in his own day. We will begin with Giotto's critical reception, his artistic predecessors and contemporaries, and his work for patrons ranging from the Franciscan order to the king of Naples. We will most closely examine Giotto's masterpiece, the frescoes of the Arena Chapel in Padua, and consider topics including Giotto's figural realism, the layered readings of the program, its use of visual rhetoric, and issues of gender, sexuality, and ethnicity.

Same as: ARTHIST 210

**ARTHIST 411. Animation, Performance, Presence in Medieval Art. 5 Units.**

(Formerly CLASSART 311.) This course will explore concepts of animacy, performance, and presence in the art of Byzantium, focusing on the concept of image understood as the living bodies of the saints, the space of Hagia Sophia and its Eucharist ritual, the polymorphism of the mixed-media icon, and the interaction with these objects in prayer and recitation of epigrams.

Same as: CLASSICS 377

**ARTHIST 413. Michelangelo. 5 Units.**

Michelangelo's long career in light of recent scholarship. Topics include the status of the cult image, the paragon between poetry and the pictorial arts, painting and questions of literary genre, and Counter Reformation reactions to his art.

**ARTHIST 415. Baroque: 1900-2000. 5 Units.**

The seminar, which is largely methodological and historiographic, problematizes issues of periodization. The course examines different approaches to the question of "what is baroque," from Alois Riegl and Erwin Panofsky to Michel Foucault, Svetlana Alpers and Giovanni Careri.

**ARTHIST 416. Bernini and Baroque Rome. 5 Units.**

This seminar examines the career of Gianlorenzo Bernini (1598-1680), sculptor, architect, painter, stage designer and playwright, the premier artist of the popes. It will examine his cultural, political and religious milieu and lay particular emphasis on the theoretical relations between the arts that his oeuvre is seen to embody. In the process it will also review the genre of artistic biography, the historiography of the baroque and the myths of dynamism, theatricality, eroticism (and others) always associated with the period, and Bernini's work in particular. Limited to PhD students in Art History and Film Studies, and advanced undergraduates with permission of instructor.

**ARTHIST 417B. The Classical Theory of Architecture from Antiquity to the French Revolution. 5 Units.**

This seminar focuses on themes and theories in architectural design from antiquity until the early twentieth century. Modern and contemporary architecture has often claimed its modernity through the incorporation of theory, but this seminar examines selections from key texts that have also moulded architectural and urbanistic thought in the ancient, medieval, and early modern eras in combination with analytical comparisons of built architecture.

Same as: ARTHIST 217B

**ARTHIST 422. Reception and Literacy in Roman Art. 5 Units.**

(Formerly CLASSART 322.) Beyond a focus on artists and patrons: how Roman art was seen and understood by its contemporary viewers. Themes include memory, performance, gender, replication, and constructions of space. Goal is to draft a differentiated model of viewing and literacy, with attention to collective experience, hierarchy, access, and subversion.

Same as: CLASSICS 373

**ARTHIST 423. The Material Imagination. 5 Units.**

This seminar deals with the materials that artists have chosen in art and construction from antiquity to the early modern era. The particular focus is upon pre-modern perceptions of the inherent properties of materials, from amber and ivory to marble and granite, as well as the diverse ways in which societies have associated particular substances with social and cultural values. Particular emphasis is laid upon the architectural use of materials.

**ARTHIST 426. NARRATIVE THEORY & VISUAL FORM. 5 Units.**

The theoretical terrain of narrative studies in literary criticism and historiography. The critical implications of narrative analysis for the writing of history in general. Readings integrated with students' current research projects.

**ARTHIST 429. Vienna and Hamburg : Readings in the Science of Art History. 5 Units.**

The place of art history in a university curriculum was established in Europe only during the course of the nineteenth century, and only after demonstrating that its methods are rigorous and that its goals have little to do with subjective connoisseurship or personal taste. The ambition was to develop a properly "scientific" [wissenschaftlich] practice able to claim legitimacy among the traditional disciplines of university study and research. Two German-speaking centers were critical to this development: the Institute for Austrian Historical Research in Vienna and the Warburg Library for the Science of Culture at the University of Hamburg. The best-known author of the first is Alois Riegl, while the second counts Aby Warburg, Erwin Panofsky, and Ernst Cassirer among its members. Recent books on both centers, and the availability of texts in English by others of each group now make it possible to revisit their debates about "scientific" art history that shaped the field as we know it today. This seminar will read closely a selection of these texts with the aim of understanding more fully our own intellectual history and its impact upon discussions concerning the place of our discipline within the humanities today.

**ARTHIST 432. Rethinking American Art. 5 Units.**

A re-examination of American art of the 18th and 19th centuries, focusing on works in the collection of the de Young Museum, San Francisco. The class will meet weekly at the de Young, where we will be joined by Professor Margaretta Lovell and students from the University of California, Berkeley. Each student will pursue an in-depth study of a single work in the Museum's superb American collections, using documents of social and cultural history. We will pay particular attention to recent scholarship, questions of genre (landscape, portrait, still life and images of everyday life), and the "biography of objects" (the way works of art shift in context and interpretation over time). Graduate seminar open to advanced undergraduates with the instructor's approval.

**ARTHIST 440A. The Art Market. 5 Units.**

This seminar is designed to examine aspects of the art market in the current moment and since the mid 19th century. Participants will have an opportunity to engage with problems and perspectives that, until recently, have generally been overlooked or marginalized in narratives of the history of art. Each week, students will write a response to the readings to be shared in advance of the class meeting, and each week, discussion will be initiated by a different student. In individual research projects culminating in a seminar paper, students will be encouraged to focus on how the art market may have impacted the production, reception, and/or circulation of a work or works by a particular artist.

**ARTHIST 442. Looking at Violence. 5 Units.**

Violence in the media and its effects upon viewers, especially then, is an issue of national concern that has produced legislation for the ratings of movies, television shows, and computer/video games. Parental control software makes it possible to program cable boxes and computers to censor what broadcasts or websites are accessible to children. These are political and technical fixes to a perceived social problem. They do not ask why one is drawn to watch violence in the first place, nor why certain kinds of violent imagery is compelling. Debates about how such measures should be implemented usually proceed from the given that images of violence are subject-specific, with little or no consideration of their formal qualities or visual protocols. This seminar assumes that the tools and categories of visual analysis specific to the History of Art might enrich our thinking about the attraction and impact of violence across media and across time. The seminar proposes to situate its topic at the intersection of social, philosophic, and visual traditions so as to allow productive points of view to emerge. Readings will include texts from the history of aesthetics, psychology, and moral philosophy. Research projects will encourage analysis of all forms of visual media: painting, sculpture, prints, photographs, film, video, and computer graphics.

**ARTHIST 445. What's not American about American Art?. 5 Units.**

This seminar focuses on American art as a history of migration (of people but also of visual objects) across national and continental boundaries. We examine trans-Atlantic and trans-Pacific dialogues and consider how anxieties about foreigners, immigrants, and political dissidents shaped American art and culture at particular moments in the 20th century. In the second half of the course, we consider a series of museum exhibitions that repositioned American art as a history of social conflict and exclusion.

**ARTHIST 447. Piet Mondrian: Art, History and Historiography. 5 Units.**

Taking Mondrian as a case study, this seminar will examine some of the salient factors that shape how a modern artist emerges into history. Participants will explore Mondrian's work and ideas, attending not only to his own self-fashioning but also to the myriad forces that have shaped his reception since his death in New York in 1944, including scholarship, museum exhibitions, the art market, the responses of innumerable subsequent artists, and the wide circulation of his work in popular culture.

**ARTHIST 452. Ghosts. 5 Units.**

Is history a form of ghost story? Historians summon the past—making it live in the present. Even the most empirical history is a kind of necromancy: the historian conjures the past, making it appear before our eyes. Tables and figures and other statistical data, no less than other objective information, flutter in front of the reader like other sorts of ectoplasm in the crystal ball. In this course we will consider ghost stories and ghost paintings for what they reveal about the historian's occult craft. We will devote special attention to Stanford's campus as a haunted place, and students will write their final papers on some ghostly aspect of the university.

**ARTHIST 453. Reading Walter Benjamin. 5 Units.**

Few cultural critics are so often cited by scholars in the humanities as Walter Benjamin. The impact of his writings has been decisive to some of the most influential art historians of recent memory, although usually based on a small number of texts (the *Kunstwerk* essay, the writings on photography, the flâneur, and cinema). Literary historians have turned to somewhat different studies with great profit, notably his writings on Baudelaire, translation, and German tragic drama. The publication of Benjamin's entire oeuvre in English has made his work more accessible to a broad range of scholars with diverse interests; one direction emerging from this familiarity is a deeper awareness of his commitment to materialist history. With the palpable collapse of "social art history" amongst younger art historians, dispersed ambitions of where "visual studies" might lead, and the return to aesthetic meditations derived from protracted analyses of single works, it may be the time to re-read Benjamin with an eye towards understanding his ambitions for a "materialist history." That is the objective of this seminar: we will read deeply in Benjamin's writings, configure some ideas of what history meant to him, and attempt to export some of those practices to our current art-historical projects.

**ARTHIST 454. The Image in Question : French theory after Foucault. 5 Units.**

TBD.

**ARTHIST 457. Abstract Expressionism. 5 Units.**

Coinciding with the opening of the Anderson Collection in the fall of 2014, this seminar considers the expanded field of Abstract Expressionism relative to both domestic and international cultural politics. Topics: Modernism and existentialism; transnational avant-gardes; interdisciplinary approaches to the visual image at mid-century; the ideologies of formalism and autonomous art; cold war aesthetics. Pollock, de Kooning, Guston, Newman, Rothko, Still, Gorky others. Close readings of Greenberg, Rosenberg and critics associated with *Partisan Review* and little magazines. Enrollment limited by application only; PhD students only with preference to Art History.

**ARTHIST 458. Warhol and After. 5 Units.**

This seminar focuses on the wide-ranging career of Andy Warhol as a means to consider the broader history of American art and culture since 1950. It examines little-studied aspects of Warhol's visual production (e.g. his career as a commercial artist in the 1950s, his everyday photographs of the 1970s and 1980s) as well as now-canonical Pop paintings of the early-to-mid 1960s. Warhol's critical and scholarly reception will be scrutinized in detail, as will published interviews of and writings by the artist. Finally, we will consider Warhol's legacy and influence on American art in the decades since his death in 1987.

**ARTHIST 461. The American Civil War: An Experiential History. 5 Units.**

Can one write a history of lived experience, of ephemeral states that never were represented? Can one look at representations of paintings, photographs, and literature to see where these ephemeral states might be trapped, or might otherwise be pictured? Feeling that the real war did not get in the books (for the most part), the course examines those books and other representations and so many things that never attained so exalted a form to look at the war anew. Methodological readings as well as readings about the Civil War.

**ARTHIST 462. The Sense of Place in American Art. 5 Units.**

The course will focus on places in American art, literature, and material culture—how places are imagined; how they are conceived in opposition to the pure flow of forgettable experience; how what happens in a place somehow remains.

**ARTHIST 463. Grad Seminar: American - Ekphrasis. 5 Units.**

Description is a prime skill for an art historian. How to make a reader (or listener) see a work, whether it is illustrated or not, is arguably the most fundamental and important task and pleasure in this discipline. How to make a world—both for oneself and for one's audience—is the larger purpose of such imagistic writing. Considering historical and more recent examples of ekphrasis, the course will concentrate on works of art in the Cantor Arts Center, requiring each student to select a work that will become the basis for a quarter-long writing project.

**ARTHIST 465. Media Technology Theory. 3-5 Units.**

This course surveys major theoretical approaches to the study of media technologies, including Frankfurt School critical theory, media archaeology, actor network theory, science and technology studies, platform studies and theories of critical making. By the end of the course, students should have a rich familiarity with the literature in this area, as well as with exemplary empirical studies conducted within each tradition. Preference to Ph.D. students in Communication and Art and Art History. Consent of instructor required for non-PhD students. Same as: COMM 384

**ARTHIST 470. Globalization and Contemporary Art. 5 Units.**

Enrollment restricted to graduate students. Globalization as the most important paradigm for the production, circulation, and reception of contemporary art since the 1990s. The expanding terrain of the art world; biennial culture; new economies of scale and the art market along with its critique in the discourses of empire and multitudes. Debates on the thematics of hybridity; post-Fordism; the flat world and capital flows; exteriority and site specificity; and new models of collectivism in recent art.

**ARTHIST 472. Mellon Curating Course. 5 Units.**

This course focuses on the production, criticism, and curating of art. It encompasses both the study of curatorial work and the organization of an exhibition at the Cantor. Through a series of required readings, intensive class discussions, class trips, guest lectures, and first-hand encounters with art objects and exhibitions, we will investigate the history and contemporary practice of curating. Our work together will culminate in an exhibition at the Cantor organized by class members in close consultation with Cantor staff. The show will open in late fall 2015-16 and will be on view for approximately 12-15 weeks. Students are expected to enroll in both the Spring 2014-15 and Fall 2015-16 quarters. For graduate students only and with the approval of the faculty. Course will be co-taught by Richard Meyer and Connie Wolf.

**ARTHIST 475. Media Cultures of the Cold War. 3-5 Units.**

The intersection of politics, aesthetics, and new media technologies in the U.S. between the end of WW II and the fall of the Berlin Wall. Topics include the aesthetics of thinking the unthinkable in the wake of the atom bomb; abstract expressionism and 'modern man' discourse; game theory, cybernetics, and new models of art making; the rise of television, intermedia, and the counterculture; and the continuing influence of the early cold war on contemporary media aesthetics. Readings from primary and secondary sources in art history, communication, and critical theory. Same as: COMM 386

**ARTHIST 478. Problems in the History of Collecting, Circulation and Display. 5 Units.**

This graduate seminar involves intensive study of art collecting, circulation and display through the lens of one of the principal institutions of art history: the museum. It will include a site visit to the Solomon R. Guggenheim Museum to gain a comprehensive view of this complex institution as a basis for seminar-related research and writing. Limited to PhD students in Art History and Film Studies, or by permission of the instructor.

**ARTHIST 482A. Approaching Dunhuang: Methods and Debates. 5 Units.**

This seminar will explore recent scholarly approaches to the visual arts of the Buddhist cave shrine complex at Dunhuang in northwest China between the 5th and 9th c. CE. Topics will include real and virtual spatiality of the cave shrines; questions of function (ritual, memorial, meditative, visualization); textual and doctrinal relationships of images and spaces; patronage and political contexts; production techniques; narrative and paradise iconographies; icons and illustrations. The seminar group will visit the concurrent major Dunhuang exhibition at the Getty Museum in Los Angeles and focus especially on banner paintings, sculptures, and replica cave shrines (275, 285, 320) represented in the exhibition.

**ARTHIST 485. The Situation of the Artist in Traditional Japan. 5 Units.**

Topics may include: workshop production such as that of the Kano and Tosa families; the meaning of the signature on objects including ceramics and tea wares; the folk arts movement; craft guilds; ghost painters in China; individualism versus product standardization; and the role of lineage. How works of art were commissioned; institutions supporting artists; how makers purveyed their goods; how artists were recognized by society; the relationship between patrons' desires and artists' modes of production. Same as: JAPANGEN 220

**ARTHIST 485A. Exhibiting East Asian Art. 1-5 Unit.**

This seminar will explore the history, conceptual approaches, design, and practicalities of museum-based exhibitions of East Asian art. Through readings, field trips, and site-based exercises the seminar will look to inform the planned reinstallation of the Cantor Center's East Asian galleries. Open to graduate and undergraduate students with interests in art history, museology, design, and cultural representation. Permission of the instructor required.

**ARTHIST 487X. Pictures of the Floating World: Images from Japanese Popular Culture. 5 Units.**

Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles.

Same as: ARTHIST 287, JAPANLIT 287

**ARTHIST 489. Connoisseurship Studies of Chinese Painting, Calligraphy, and Seals. 5 Units.**

This course focuses on taking connoisseurship out of the classroom and into the collecting world. With many classes being held at the Asian Art Museum and private collections in the Bay Area, students will learn not only what the role connoisseurship plays in the current art landscape, but how a museum works. Combines case studies in the field, reading material, eyes-on experience, and discussion, this class will address the topics of utilizing resources, conducting research, cultivating collectors, building collections, and curating exhibitions through the lens of connoisseurship.

**ARTHIST 489A. Making the Masterpiece in Song Dynasty China. 5 Units.**

Studies of canon formation involving Song Dynasty (10-13th c.) Chinese works of painting, calligraphy, ceramics, and architecture. The roles of early art writing and criticism; collecting histories; art historical theory; / copying, imitation, and reproductive practices; period and regional taste; and modern museological and art historical discourses in identifying and constructing a canon of Song masterworks.

Same as: ARTHIST 289A

**ARTHIST 490. Curatorial Activism in the Arts of Africa. 5 Units.**

Enrollment restricted to graduate students and advanced undergraduates. What is contemporary in African art and how does one curate the contemporary in and through African art? The course examines curatorial practices and activist projects. Topics include redefining museum exhibitions and collections of African art at the Cantor Arts Center and museums around the world; breaking away from stereotypical representations of the arts and cultures of Africa; controversial issues and dilemmas; curatorial activities directed toward cultural, social, and political activism; strategic modes of display and design; subjectivity vs. objectivity; and fostering critical dialogues about the arts and cultures of Africa.

**ARTHIST 490A. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 2 Units.**

This new interdisciplinary seminar explores challenges and avenues for furthering protection of the cultural heritage rights enshrined in the UN Declaration on the Rights of Indigenous Peoples (UNDRIP). Using an innovative combination of in-class lectures and videos of interviews with renowned experts, including Indigenous leaders, scholars, artists and performers and museum professionals from around the world, this seminar will analyze current and potential tribal, domestic and international legal and ethical frameworks for indigenous cultural heritage protection and repatriation. Among other subjects, we will discuss and problematize: the impact of colonialism, urbanization and other political, legal, economic, religious and cultural forces on understandings and definitions of "indigenous" and "cultural heritage"; the development of international law relating to Indigenous peoples; cultural rights; tribal and domestic heritage protection and repatriation laws/initiatives including the 1990 US Indian Arts and Crafts Act and Native American Graves Protection and Repatriation Act; past and present Western museum practices relating to display, preservation, provenance research and repatriation of Indigenous peoples' cultural material; the meaning of repatriation to Indigenous peoples and other stakeholders; and resolving repatriation disputes, including by alternative dispute resolution (ADR) processes. While case studies will relate primarily to Indigenous peoples of North America, including the Arizona Hopi and Northwest Coast First Nations, comparisons will be drawn with the situation of Indigenous peoples in other regions, such as Oceania and Russia. The overall seminar experience will involve discussions of lectures and video content, assigned readings, a class visit to the Cantor Center Native Americas collection, and visits to our classroom by renowned experts, including Dr. Morten Rasmussen, who participated in the recent DNA analysis of Kennewick Man/The Ancient One. Students who have taken this course are eligible to join a guided weekend trip to Hopi territory tentatively planned for Spring Quarter 2016. Elements used in grading: class participation, attendance and a final project (one-day take-home exam; or research paper or film project with instructor's consent). Registration: Students may seek the instructor's consent via email (sjdenant@stanford.edu).

Same as: ARTHIST 90

**ARTHIST 502. Methods and Issues in Visual Studies. 5 Units.**

This course introduces grad students to a range of interpretive methods in the study of art, visual culture, and media. Required for incoming PhD students in Art History.

**ARTHIST 600. Art History Bibliography and Library Methods. 1 Unit.**

.

**ARTHIST 610. Teaching Praxis. 1-5 Unit.**

.

**ARTHIST 620. Area Core Examination Preparation. 5 Units.**

For Art History Ph.D. candidates. Prerequisite: consent of instructor.

**ARTHIST 640. Dissertation Proposal Preparation. 5 Units.**

(Staff).

**ARTHIST 650. Dissertation Research. 5 Units.**

(Staff).

**ARTHIST 660. Independent Study. 1-15 Unit.**

For graduate students only. Approved independent research projects with individual faculty members.

**ARTHIST 660E. Extended Seminar. 4 Units.**

May be repeated for credit. (Staff).

**ARTHIST 670. Dissertation Seminar. 3-5 Units.**

For graduate students writing and researching dissertations and dissertation proposals. How to define research projects, write grant proposals, and organize book-length projects.

**ARTHIST 680. Curricular Practical Training. 1-3 Unit.**

CPT course required for international students completing degree. Prerequisite: Art History Ph.D. candidate.

**ARTHIST 802. TGR Dissertation. 0 Units.**

## Art Studio Courses

**ARTSTUDI 10AX. Filmmaking. 2 Units.**

Production skills and project development in documentary filmmaking. The fundamentals of filmmaking using digital video production techniques focused on documentary storytelling. Shooting in mini-DV format and editing with Final Cut Pro software, students actualize their ideas in an audiovisual medium from conceptualization through post-production and exhibition.

**ARTSTUDI 11A. Drawing: Means & Alternate Means. 2 Units.**

The first half of the quarter students explore more traditional ways of drawing (still life, models, etc.) to develop a hand/eye relationship. The class will focus on seeing and documenting what is in front of them. The second half of the quarter expands into using alternative means of mark making to deconstruct and re-construct ideas learned in the first half of the quarter. String, tape, body parts and shadows are all fair game. This will be a lively class. The students are graded on their attendance, participation, weekly assignments and one final assignment consisting of two finished works, one being traditional, the other experimental.

**ARTSTUDI 11AX. Digital Art and Design in Practice. 2 Units.**

Hands-on exploration of art and design using digital tools. Overview of contemporary digital art and design including fine art, graphic design, film, and animation. Analysis of new work in these areas and visits to Bay Area production and artist studios. Demos will focus on 2D and time-based techniques, but students interested in procedural or 3D computer graphic are welcome. Students will complete a multi-part visual project to be included in a final exhibit.

**ARTSTUDI 12AX. Drawing Intensive: Revisiting Nature. 2 Units.**

As increasing technological advances can further separate us from direct impressions of nature, this class is designed to reconnect and enhance our relationship to the natural world and our surrounding environment. To do this we will develop visual skills and critical thinking through careful observation and classical drawing techniques. Inspired by Stanford's natural and manicured landscapes, students will enjoy the great outdoors while learning elements of perspective, composition, light, and form. Students will learn about master landscape artists, investigate the built and natural environment of the campus, and experiment with various drawing techniques, mediums, and styles.

**ARTSTUDI 13A. Fundamentals of Oil Painting. 2 Units.**

This course is an introduction to oil painting. Students concentrate primarily on the technical aspects of the medium (i.e. how to paint as opposed to what to paint.) We examine color: how to mix it, how it establishes spatial relationships, light, and shadow. The class progresses through a series of problems designed to develop a sensitivity to paint application and surface quality; as well as to value, composition, volume, light, and space as the necessary elements of recreating perceptual experience. By the end of the course, students are able to apply some sophisticated techniques to visual problem solving. The aim of the course is to demonstrate the mechanical structure of oil painting.

**ARTSTUDI 13AX. Photography. 2 Units.**

This hands-on course in photography will emphasize the techniques, aesthetics, and conceptual considerations of traditional black and white photography. Students will also explore photography's history and applications as an expressive tool, with the power to communicate ideas and move the viewer. Throughout the course, students will master the use of their own manual 35mm camera and process the film themselves in our lab. They will also learn the techniques needed to make quality black and white prints in the darkroom. Students will coordinate an exhibition and present their finest work in a professional manner.

**ARTSTUDI 13BX. Narrative Painting For Non-Majors. 2 Units.**

This course will introduce students to the fundamentals of painting using acrylic paints, while simultaneously examining the narrative in visual art. Content for this course will be centered on how human experience is remembered and transformed through self-reflexive, experiential learning that connects our artwork to our personal lives. Formal issues will include the use of color, paint handling, value, and composition. Students will become familiar with the materials through hands-on demonstrations, discussions of historical context for the medium, and in-class critiques. We will also discuss surface preparation, clean-up, and safety. Slide lectures, readings, and a visit to the Cantor museum will enhance studio work time. Drawing background preferred but not required.

**ARTSTUDI 14. Drawing for Non-Majors. 2 Units.**

Functional anatomy and perspective as they apply to problems of drawing the form in space. Individual and group instruction as students work from still life set-ups, nature, and the model. Emphasis is on the development of critical skills and perceptual drawing techniques for those with little or no previous experience with graphite, charcoal, conte, and inks. Lectures alternate with studio work.

**ARTSTUDI 14AX. Sculpture and the Expanded Field. 2 Units.**

Sculpture involves space, materials, techniques, and ideas. It is an art of the extraordinary as well as the everyday. No longer tied to architecture, mimesis, or commemorative representation, sculpture now appears in a variety of forms including as installations, collaborations, projections, appropriations, interventions, performances, and experimental projects that address formal concerns as well as issues of identity, historical memory, narrative, economics, the environment, popular culture, technology, globalism, politics, and time. Examples of such *expanded* sculpture include public art made to attach to buildings or to be given away, inflatable homeless shelters, and wearable art for street demonstrations. The principle area of knowledge addressed in this course involves exploratory learning about the formal, historical, and global dimensions of contemporary sculptural art. Students will work alone or in groups using a range of materials from cardboard to wood, to found objects, social affects, and conceptual ideas.

**ARTSTUDI 15AX. Introduction to Sculpture. 2 Units.**

This course offers a unique and interdisciplinary perspective on contemporary sculpture and art practice with the purpose of enabling artistic creation and discovery. The class will become familiar with traditional and non-traditional techniques through hands on workshops and instruction as well as lectures, visiting artists, and studio visits with working sculptors. There will be three major projects resulting in three complete works of art including a self-guided final project building on techniques and concepts covered in this course.

**ARTSTUDI 16. Sculpture for Non-Majors. 2 Units.**

This class offers an opportunity for students to investigate sculpture as a method to chronicle events and understand the physical environment. Data-based approaches to three-dimensional art making will be introduced in theory and practice. The syllabus will be structured around three projects: a two week individual piece, a three week collaborative project to gain experience working at scales larger than the human body, and a four week final project. Classes will be held in the sculpture shop, and will include hands-on skill building, introduction to tool use, presentation of relevant art works, and discussion of a few assigned readings.

**ARTSTUDI 16AX. Drawing Marathon. 2 Units.**

Hosted by the New York Studio School of Drawing, Painting, and Sculpture and based entirely in New York, Drawing Marathon helps students learn the importance of drawing as the basis of understanding one's experience of the world. Drawing is seen here as the most direct route to the examination of our perceptions. Unorthodox tools and exercises will be introduced to broaden the students' drawing vocabulary. This course will investigate many implications of drawing as a physical and cerebral activity as well as drawing as a philosophy. It will discuss key issues, including those of scale, tiny to huge; the use of different formats; the use of the rectangle; the vertical axis and its significance; the nature of distortions; the compression of space and depth; the search for "form" and its consequences; space and its meaning; functions and the different kinds of space; and the nature of relational drawing. Students can expect to be in the studio 9 a.m. to 9 p.m. most days. The average day is spent mostly drawing from perspective and includes several group critiques; most nights accumulate in a lengthy final critique at the end of the physical drawing session. This practice intensifies for the last critique at the end of the course. Students learn to engage in clear and succinct dialogue and discussions within the group. Instruction encourages students to participate in and understand the visual language of drawing. The Marathons are intensive all-day programs that run for two weeks at the beginning of each semester at the acclaimed NY Studio School. Students reside in New York City during the program period. Daily drawing sessions at the Studio School, field trips, and creative exploration of the city are all included in the program. Drawing marathon is led both by full-time NYSS faculty and distinguished visiting artists. The Drawing Marathon is open to beginning and advanced artists, regardless of their major.

**ARTSTUDI 17A. Black and White Darkroom. 2 Units.**

A beginning black & white darkroom photography class with an emphasis on project conceptualization and the utilization of local environments. Students in addition to learning photography basics, will complete a cohesive, short body(s) of work. Students work collectively to realize a group exhibition. Theme and title of the exhibition are chosen at the beginning of the quarter and projects will be developed within its framework.

**ARTSTUDI 17X. Photography for Non-Majors: Discovering Photography. 2 Units.**

This course is designed to introduce the beginning photographer to the basics of making, looking at and discussing fine-art photographs. Students will learn the fundamentals of camera operation including focus, exposure, depth of field, and motion control. Emphasis will also be placed on learning the basic visual and linguistic vocabulary of photography through in-class discussions focused on the concerns addressed by fine-art photographers since the inception of the media. Students will be encouraged to approach their own image making with the intent of developing a series or set of images, rather than thinking in singular pictures. Admission determined on the first day of class.

**ARTSTUDI 18. Introduction to Video Compositing. 2 Units.**

This course will introduce students to video editing and 3D software (After Effects, Premiere Pro, Cinema 4D), as well as techniques for combining 3D elements and video footage (chroma keying, layer based compositing, camera tracking). We will take an experimental approach to these techniques, prioritizing imagination and critical thinking. Furthermore, students will look at art pieces that involve digital editing and analyze how they integrate into contemporary fine art practice. The structure of the course is divided between lectures, where we discuss existing art projects, and a lab section, where students will receive technical guidance in their exercises and final project. The course primarily addresses students who have little or no previous experience in this field.

**ARTSTUDI 24. Game Engines for Artmaking. 2 Units.**

Introduction to using Video Game Engines as art making tools. Utilizing the Unity video game authoring environment primarily, students will create interactive and dynamic artworks and artifacts within the virtual space. Rudimentary 3D scanning of physical assets merging with the creation of digital ones combine with sound, physics and simulations. Experimentation with both narrative and non-narrative forms as well as display solutions (Virtual Reality, Augmented Reality, Printed Sculpture and Digital Projection) is discussed and encouraged.

**ARTSTUDI 31X. New Art-Cinema for Non Majors. 2 Units.**

This is a studio course in contemporary cinema art, focusing on actionable, ultra-low budget methods for creating sprawling, proprietary cinematic expressions. Students will build familiarity with the myriad tools of and approaches to digital cinema creation and their practical use in works of art. Students will also be encouraged to conceive of cinema art expansively—as an opportunity to enclose, express and explore other forms of art: the written word, sound, sculpture, image-making and performance. We will think, talk, and work through the question of the role of art in cinema, and vice versa. We will create as a class no less than two short films. For each film, students will have the opportunity to reinvent their role (thinker-actor, writer-dancer, sound recordist, location scout, human sculpture, etc.). Together, we will smash the myth of the auteur as we hone ourselves into a finely ground machine for breakneck film-making.

**ARTSTUDI 130. Interactive Art: Making it with Arduino. 4 Units.**

Students use electronics and software to create kinetic and interactive elements in artwork. No prior knowledge of electronics or software is required. Students learn to program the Arduino, a small easy-to-use microprocessor control unit ( see <http://www.arduino.cc/> ). Learn to connect various sensors such as light, motion, sound and touch and use them to control software. Learn to interface actuators like motors, lights and solenoids to create movement. Learn to connect the Arduino to the MAX/MSP/Jitter programming environment to create media-intensive video and audio environments. Explore the social dimensions of electronic art. (lower level).

**ARTSTUDI 130N. Introduction to Art Practice. 3 Units.**

This hands-on introduction course will introduce students to formal and conceptual visual strategies in expression through a diversity of artistic mediums which may include drawing, digital media, printmaking, photography, performance and sculpture. This course is meant to give students an overview of many of the mediums and facilities that are available in the Art Practice program. Field trips, guest artists.

**ARTSTUDI 131. Sound Art I. 4 Units.**

Acoustic, digital and analog approaches to sound art. Familiarization with techniques of listening, recording, digital processing and production. Required listening and readings in the history and contemporary practice of sound art. (lower level).  
Same as: MUSIC 154A

**ARTSTUDI 138. Sound and Image. 4 Units.**

Practices that combine audio and visual media. Topics include synesthesias, visual music, film soundtracks, and immersive multimedia practices that combine sound, music, still and moving images, projections, and performance. (lower level).

**ARTSTUDI 139. Portraiture and Facial Anatomy for Artists. 4 Units.**

Focus is on the art of portraiture and underlying structures of the face, fundamental anatomical elements such as the skull and muscles of facial expressions, and the intersections between human anatomy and art. Studio sessions incorporate plastic models, dry bones, cadaveric specimens, and live models. Encourages use of proper anatomical terminology for describing structures and their relationships.  
Same as: SURG 241

**ARTSTUDI 140. Drawing I. 4 Units.**

Functional anatomy and perspective as they apply to problems of drawing the form in space. Individual and group instruction as students work from still life set-ups, nature, and the model. Emphasis is on the development of critical skills and perceptual drawing techniques for those with little or no previous experience with pastels, inks, charcoal, conte, and pencil. Lectures alternate with studio work. (lower level).

**ARTSTUDI 141. Plein Air Painting Now. 4 Units.**

Surrounded by so many technologies for image production, why choose to take a course based on a style of painting developed over a hundred years ago? The standard answer to this question has changed remarkably little. Rather than answering that the camera cannot capture what the eye sees, we might instead respond that neither the computer, nor the camera, nor video, can reproduce in paint the subjective gaze of the contemporary viewer. Contained within this answer lies the trajectory for the class "PLEIN AIR PAINTING NOW!" In this course students will be introduced to various water based media appropriate for plein air painting and learn various techniques and strategies for making paintings outdoors. The course will include the traditional discussions of brushes, paints, the different types of supports as well as easels, umbrellas and chairs. A broad variety of painting techniques will be demonstrated. We will set up in various locations around campus, paying particular attention to the specifics of the sites this will serve as the jumping off point for discussion of the readings that form the second component of the class. Please note that this class takes place outdoors. Plan accordingly, as we will be meeting in various locations around campus, and will be subject to inclement weather. Freshmen and Sophomores receive priority for enrollment. This is a designated CREATIVE EXPRESSIONS course.

**ARTSTUDI 141S. Drawing Outdoors. 3 Units.**

In this introductory class, we take drawing out into the world, exploring different environments, techniques, and approaches as we go. The fundamental nuts-and-bolts of basic drawing techniques: light logic, depicting depth and drawing the figure, are integrated into each environment. From the Stanford campus & its cafe's, architecture and landscaping, to redwoods and water, to more urban settings, drawings will range from high-speed gestures to longer, more contemplative work. Through pen, graphite, charcoal, ink, watercolor/gouache and mixed media, we explore dichotomous relationships, as well as those in seemingly perfect harmony. We move from the inanimate to animate, figure and architecture, motion and stillness, to the micro and macro, considering how even the smallest patch of earth may be as monumental as Hoover Tower. Both beginning and advanced students are welcome. Summer.

**ARTSTUDI 145. Painting I. 4 Units.**

Introduction to techniques, materials, and vocabulary in oil painting. Still life, landscape, and figure used as subject matter. Emphasis is on painting and drawing from life. (lower level).

**ARTSTUDI 147. Artist's Book. 4 Units.**

Explores contemporary aesthetic interpretations of the book as an art object while invigorating traditional artistic practices of the art of the book. Through the medium of drawing, collage, and mixed media students produce their own artist's book. The course familiarizes students with bookbinding and the various techniques used, as well as exploring the narrative, text and image, and the book as a sculptural object.

**ARTSTUDI 147S. DRAWING AND PAINTING INTENSIVE. 3 Units.**

This introductory course teaches the basic tools of drawing and painting with acrylics, along with an introduction to a range of artists for inspiration. From the beginning, we take advantage of Stanford's beautiful campus, drawing and painting outside, along with studio work and slide lectures. We begin with our unique gestures and mark-making, moving through linear perspective, light logic, photo-realism, and the figure, using a range of media from graphite and charcoal to bamboo brush and ink. The introduction to acrylic painting explores the many ways we may use acrylic paint, looking at different art historical approaches along the way. A flexible medium, acrylic can be used to mimic watercolor, oil paint, or even cement, and works on a variety of surfaces. We begin by learning color theory and different paint applications through abstract painting, taking as our inspiration Piet Mondrian, Hans Hofmann, and J.W. Turner. Using thick, impasto paint, we move outdoors for plein air painting, stealing strategies from the Impressionists, and adapting them in our personal projects with today's technologies. Moving back indoors, we switch it up again, exploring the expressive gesture, and figurative distortion, using acrylic now more thinly, a la watercolor or gouache, along with charcoal, creating dramatic effects, and working on different surfaces. Each student will finish the quarter with a wide range of techniques and materials at the ready. No previous painting or drawing experience is necessary.

**ARTSTUDI 148. Monotype. 4 Units.**

Introduction to printmaking using monotype, a graphic art medium used by such artists as Blake, Degas, Gauguin, and Pendergast. May be repeated for credit. Prerequisite: 140. (lower level). May be repeated 2 times for total of 8 units.

**ARTSTUDI 148A. Lithography. 4 Units.**

The classic technique of printing from limestones. Techniques to draw an image on the stone, etch and fix the image on the stone, and print it in numbered editions. Students work on a variety of stone sizes. Field trips to local publishers of lithography or lithography exhibitions. (lower level).

**ARTSTUDI 148B. Introduction to Printmaking Techniques. 4 Units.**

Techniques such as monotype, monoprint, photocopy transfers, linocut and woodcut, intaglio etching. Demonstrations of these techniques. Field trips to local print collections or print exhibitions. (lower level).

**ARTSTUDI 148P. DIGITAL PRINTMAKING. 4 Units.**

The Digital Printmaking course explores a combination of experimental printmaking methods and investigates print media within contemporary art and culture. Techniques like large-format inkjet printing and laser plate etching will be demonstrated in class. Students will have in-class access to a flatbed printer that is capable of printing digital images on a wider variety of materials like glass, fabric, and wood. Through a series of hands-on labs, students will develop projects using a combination of methods and discussions will address issues relating to print media today; audience, distribution, repetition, originality, and reproduction.

**ARTSTUDI 149C. Etching. 4 Units.**

In this class students will explore various techniques of etching (or intaglio) on zinc plates such as, hard ground, soft ground, aquatint, marbling aquatint and sugar lift, through an electrolytic process that uses no acid but sulfates and very low electrical power (1.5 V or the same as a AA battery). This process is much less toxic than the traditional etching with nitric (which produces toxic fumes) or ferric acid (difficult to clean). These techniques will be complemented by other ones that can be mixed with etching such as photocopy transfers, Chine collé (attaching a different color paper between plate and main paper), and mono-printing. Etching/Intaglio (making a mark under the surface of the plate) is one of the most tactile and elegant forms of printmaking. The plate leaves a 3-D line mark and embossed marks in the deep etched areas as well as at the edges of the plate. Many major artists have left memorable images by working in this medium (Rembrandt, Goya, Kathe Kollwitz, Eduard Munch, and many others) influencing many contemporary artists.

**ARTSTUDI 151. Sculpture I. 4 Units.**

Traditional and non-traditional approaches to sculpture production through working with materials including wood, metal, and plaster. Conceptual and technical skills, and safe and appropriate use of tools and materials. Impact of material and technique upon form and content; the physical and expressive possibilities of diverse materials. Historical and contemporary forming methods provide a theoretical basis for studio work. Field trips; guest lecturers.

**ARTSTUDI 153. Ecology of Materials. 4 Units.**

Studio-based sculpture course. Materials used in sculpture and environmental concerns surrounding them. Artists concerned with environmental impact and the interconnection of art with other fields. The impact of material and technique upon form and content; understanding the physical and expressive possibilities of diverse materials. Conceptual and technical considerations. Group discussions, critiques, readings, video presentations, a field trip to a local artist-in-residence program, and visiting lecturers. (lower level).

**ARTSTUDI 153N. Ecology of Materials. 3 Units.**

This hands on studio based sculpture course takes a critical look at the materials used in sculpture and addresses the environmental concerns surrounding them. We will look at artists concerned with environmental impact and the interconnection of art to other fields. This class also addresses the impact of material and technique upon form and content; therefore understanding the physical and expressive possibilities of diverse materials. Conceptual and technical considerations will be addressed. Students will learn traditional building techniques as needed (wood shop, metal shop, mold making, found object) as well as anti-object techniques. Existing at the intersection of art, science, technology and ecology, environmental art often functions to inform and/or interpret natural conditions and the processes associated with both "non-human" and "human-made" constructions. It will also educate us about environmental issues and concerns. This course introduces and provides a context for this area of interdisciplinary exchange and artist production by examining areas commonly known as cradle to cradle design, land art, eco art, environmental art, and art and technology. What role does sculpture play in a fragile world with depleting natural resources, global economies and media dominance? What is the life cycle of object making and creating? What is our relationship to objects in a growing technological age? Students will make 3-4 projects based on these questions. Group discussions, critiques, readings, video presentations, a field trip to a local artist-in-residence program Recology at the San Francisco Dump, visiting artists and visiting faculty from Stanford doing environmental research will augment this class.

**ARTSTUDI 155. Social Sculpture. 4 Units.**

This course investigates the immediacy of the body as material and sculpture in order to investigate private and social spaces. Actions are often used to understand or question the function and psychological aspects of a space and are documented for the perpetuation of these ideas. Throughout the quarter we will investigate the body as material and develop site specific performances enacted for: Private/Domestic and Public Space; Constructed Space & Physical Space; ecological systems; and generate both Individual & Collaborative based Actions, Interventions, & Events."

**ARTSTUDI 156Q. Installation Art in Time and Space. 4 Units.**

This hands on studio based sculpture course focuses on developing concepts, and creating a site-specific installation art project. This class will address the impact of material and technique upon form and content; therefore understanding the physical and expressive possibilities of diverse materials. Conceptual and technical considerations will be addressed. Students will learn traditional building techniques as needed (wood shop, metal shop, mold making, found object) as well as anti-object techniques. Students will make 3-4 projects that will culminate in a final site-specific installation. We will look at contemporary artists working in the field of installation art. Group discussions, critiques, readings, video presentations, field trips and visiting artists will augment the class. Installation Art is based on the merger of Space and Time and on a relationship between the artist and the visitor. Utilizing your interests and abilities in a variety of subjects and media, you will create environments that immerse the viewer in a sensory/ intellectual/ emotional experience. The material and methods you use can range from everyday objects, to highly personalized forms, from appropriated sounds to surveillance video, from large wall drawings to interactive switches for the participant to manipulate. The class will consist of demonstrations of art skills particularly useful in installation (sculptural, video, audio, interactive media, etc), presentations by the professor, research and reports and journal entries, and weekly critique. Installation Art is a pervasive, varied, global practice for art-making that acts as a gathering place for expression in all media addressing all subjects in a wide range of styles by broad grouping of artists."

**ARTSTUDI 157. Art, Invention, Activism in the Public Sphere. 4 Units.**

How can art comment on and influence our understanding of the public spaces that we inhabit on a daily basis? This course will explore the many roles that art can play in social spaces as well as the history of art interventions in the public realm. Art can activate a wide variety of sites from the natural to the urban. Through site-specific sculpture and performance we will interact with the political, ecological and social aspects of public space in order to see these places and each other in a new light.

**ARTSTUDI 160. Intro to Digital / Physical Design. 3-4 Units.**

Contemporary production processes  $\zeta$  both manufacturing and media processes  $\zeta$  often span the digital and the physical. 3D Depth cameras can scan real world models or movements, which can be manipulated or adjusted digitally, then re-output to the physical world via a myriad of 2D and 3D printing and laser cutting technologies. Crowd sourced information is uploaded to social media, which in turn guides our physical meeting places. Google street-view maps our physical world, and augmented reality displays overlay it. How as artists or designers to we grapple with and use this digital / physical permeability to create new experiences and meaning for our current time? This introductory studio course explores various tool sets as well as artists working across these genres. This course is a good baseline exploration for anyone interested in designing or making art with emerging contemporary tools.

**ARTSTUDI 161. Catalysts for Design. 3-4 Units.**

Nature and science as sources of design inspiration. Projects in natural pattern formation, biological growth and form, Fibonacci numbers and the golden section, planar and spatial symmetry, mechanics, chaos, and fractals. Emphasis is on importance of creative synthesis to the design process. Projects take the form of physical constructions as opposed to renderings or computer models. Field trips. (lower level).

**ARTSTUDI 162. Embodied Interfaces. 4 Units.**

Our computers, phones and devices ¿see¿ us predominately as fingers and single eyes staring at screens. What would happen if our technology acknowledged more of our rich physical presence and capabilities in its design? How have artists and designers used different sensing technologies to account for more of our embodied selves in their works? In this studio course we will explore various sensing technologies and design pieces that engage our whole selves. Interfaces explored will range from the practical to the poetic. Sensors may involve flex sensors, heat sensors, microphones and simple camera tracking technology. We will analyze different tools for their appropriateness for different tasks and extend them through our designs.

**ARTSTUDI 163. Drawing with Code. 4 Units.**

This studio course will engage coding practices as drawing tools. What makes a good algorithmic composition? How do we craft rule-sets and parameters to shape an interesting work? What changes if we conceive of still outputs, ongoing processes, or interactive processes as the "finished" work? We will look at the history of algorithmic drawing, including analog precedents like Sol LeWitt and other conceptual artists, along with current pioneers like John Simon Jr., Casey Reas, and LIA. Outputs will involve prints as well as screen-based works. Some basic coding experience is helpful, but not required. Assignments are based on conceptual principals that students can engage with at different coding skill levels. This is a good way for non CS students to explore coding practices as well as for CS students to hone their skills. We will work primarily in the free Processing software for our explorations.

**ARTSTUDI 164. DESIGN IN PUBLIC SPACES. 4 Units.**

How does our design of public spaces and elements of our built environment influence and control people¿s movements and expressions in these spaces? Can re-designing a trashcan or a stairway change how people throw away their trash or use the stairs? What are the principles of democracy, surveillance, or personal expression at stake in our current shared spaces? How have artists and designers used their skills to question or re-direct people¿s behavior in these public spheres, or in other spheres of shared cultural heritage? Strategies include re-designing components of the built environment, but also other strategies of intervention, tactical media and reality hacking.

**ARTSTUDI 165. Social Media and Performative Practices. 4 Units.**

How can social media, mobile applications, or other more traditional media be used to engage people in new social situations? Could you design an app that gets people to talk with strangers (Miranda July), or a poster that causes a revolt in an office space (Packard Jennings), or a truck that changes how people think about nursing mothers (Jill Miller)? What about platforms that encourage political dialog or social changes? This studio course examines how contemporary artists and designers engage people in a process of social dialog, critique and political change through the existing media and non-traditional art practices. With the constant development of new apps and social media platforms and the pressure from society of everyone having an online presence, the class will investigate and focus specifically on how these tools can be used as a resource to create and present artworks creatively. The students in this class will be introduced to a variety of artwork examples and study different artist¿s approach to media, technically as well as conceptually. Experimentation is highly emphasized throughout this course, as the goal is for the students to create and produce works that uses social media in new ways to tell stories, connect with, mystify or surprise the audience. A selection of software such as Photoshop, Premiere Pro, After Effects, and other tools will be introduced in class that will assist the students in producing work for the required assignments.

**ARTSTUDI 166. Design in Motion. 3-4 Units.**

Design areas for which movement and transformation are essential. Experimentation with mechanical means such as linking, hinging, inflating, and rotating. Projects in lighting, automata, tools and utensils, chain reactions, toys and games, festival props, and quasi-architecture emphasize the creation of works in which motion is a significant agent for aesthetic gratification. No experience in mechanical engineering required. (lower level).

**ARTSTUDI 167. Introduction to Animation. 3-4 Units.**

Projects in animation techniques including flipbook, cutout/collage, stop-motion such as claymation, pixilation, and puppet animation, rotoscoping, and time-lapse. Films. Computers used as post-production tools, but course does not cover computer-generated animation. (lower level).

**ARTSTUDI 168. Data as Material. 4 Units.**

How can data be used as ¿material¿ in art and design projects. Beyond straight-forward ideas of ¿data-visualization¿, this studio course seeks to investigate how we construct meaning from sets of information, and how the construction of those sets determines the meaning itself. This course also investigates different display aesthetics and how this is also a strategy for generating meaning. Artists studied include those who use various forms of personal, public, and social data as part of their practice. Historical examples from conceptual artists and other genres are considered along with contemporary artists working with data in digital or hybrid digital/physical formats.

**ARTSTUDI 170. Introduction to Photography. 4 Units.**

Critical, theoretical, and practical aspects of creative photography through camera and lab techniques. Field work. Cantor Art Center and Art Gallery exhibitions. Course requires the use of a 35mm camera. The Department will supply if necessary. (lower level).

**ARTSTUDI 170S. Introduction to Photo- Summer. 3 Units.**

Critical, theoretical, and practical aspects of creative photography through camera and lab techniques. Field work. Cantor Art Center and Art Gallery exhibitions. Course requires the use of a 35mm camera. The Department will supply if necessary. Summer. (lower level).

**ARTSTUDI 171. Intro to Digital Photo. 3 Units.**

This course offers an introduction to creative digital imaging. Students will master camera controls and explore meaningful image production. Course topics include: image capture, composition, artificial & natural light, image correction, data storage, night photography, and photography as a communicative tool.

**ARTSTUDI 173E. Cell Phone Photography. 4 Units.**

The ubiquity of cell phone photography has had a widespread impact on the tradition, practice, and purposes of photography, as well as concepts of art and what art should be for. In this class, we discuss the documentarian bent of much cell phone photography, its potential as a component of citizen journalism, the ways in which the environments of these photographs (Instagram, Tumblr) are changing ideas of the image and of authorship, and effects that cell phone photography may be having on us as subjects. Alongside these discussions, students will create works of art utilizing the experimental, documentary, and social potentials of cell phone photography.

**ARTSTUDI 174B. Creativity in the Age of Facebook: Making Art for and from Networks. 4 Units.**

This class explores the history, practice and technique of creating art on and for the internet. Discussions, projects and readings focus on the ways in which internet art embodies changing ideas about artistic creation, technology, and interactivity as a way of blurring the line between artist and audience. Setting recent work against the backdrop of earlier moments in contemporary art (found object art, photomontage), this course also situates internet art in the pre-internet tradition of finding new perspectives on, and meanings in, overfamiliar or banal media surroundings. In collaborative and individual projects, students will create visual compositions on online platforms such as NewHive and explore social media interventions, Twitter experiments, crowdsourced work, collections of online found imagery, supercuts, GIFs, and "choose your own adventure"- style online storytelling.

**ARTSTUDI 176. Time Shifts. 4 Units.**

In this course, we examine how both individual perceptions and artistic representations of time have historically shifted with changes in technology. What are the current possibilities to extend/re-imagine how we represent time using digital tools? How do these possibilities, in turn, re-inform traditional media? This is a conceptual and experimental class with a studio focus. Examples are mainly from an art context, but include interaction design, information visualization, and scientific illustration of time-based events and processes. Students should have previous experience with a set of digital tools - Photoshop, FinalCutPro, AfterEffects, or a programming language that will allow you to digitally manipulate images. Assignments include exercises using traditional media, and digitally based projects. Occasional writing assignments also required.

**ARTSTUDI 177. Video Art I. 4 Units.**

Students create experimental video works. Conceptual, formal, and performance-based approaches to the medium. The history of video art since the 70s and its influences including experimental film, television, minimalism, conceptual art, and performance and electronic art. Topics: camera technique, lighting, sound design, found footage, cinematic conventions, and nonlinear digital editing. (lower level).

**ARTSTUDI 178. Art and Electronics. 4 Units.**

Analog electronics and their use in art. Basic circuits for creating mobile, illuminated, and responsive works of art. Topics: soldering; construction of basic circuits; elementary electronics theory; and contemporary electronic art. (lower level).

**ARTSTUDI 179. Digital Art I. 4 Units.**

Contemporary electronic art focusing on digital media. Students create works exploring two- and three-dimensional, and time-based uses of the computer in fine art. History and theoretical underpinnings. Common discourse and informative resources for material and inspiration. Topics: imaging and sound software, web art, and rethinking the computer as interface and object. (lower level).

**ARTSTUDI 180. Color. 3-4 Units.**

Hands-on study of color to develop color sensitivity and the ability to manipulate color to exploit its expressive potential. Guided experimentation and observation. Topics include color relativity, color and light, color mixing, color harmony, and color and content. (lower level).

Same as: TAPS 180P

**ARTSTUDI 230. Interdisciplinary Art Survey. 4 Units.**

This course is designed to develop diversity of concepts and strategies within the student's artistic practice. The course includes a survey of artists using different media taught in the department's studio program such as painting, drawing, video and digital art, printmaking, photography, and sculpture. This seminar-style class seeks to expand the artistic practice outside of traditional media boundaries and focuses on the translation of concepts across various media. Priority to Art Practice majors and minors. (upper level).

**ARTSTUDI 236. Future Media, Media Archaeologies. 3-4 Units.**

Hand-on. Media technologies from origins to the recent past. Students create artworks based on Victorian era discoveries and inventions, early developments in electronic media, and orphaned technologies. Research, rediscover, invent, and create devices of wonder and impossible objects. Readings in history and theory. How and what media technologies mediate.

Same as: MUSIC 236

**ARTSTUDI 239. Intermedia Workshop. 3-4 Units.**

Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit.

Same as: MUSIC 155, MUSIC 255

**ARTSTUDI 240. Drawing II. 4 Units.**

Intermediate/advanced. Observation, invention, and construction. Development of conceptual and material strategies, with attention to process and purpose. May be repeated for credit. Prerequisite: 140 or consent of instructor. (upper level).

**ARTSTUDI 245. Painting II. 4 Units.**

Symbolic, narrative, and representational self-portraits. Introduction to the pictorial strategies, painting methods, and psychological imperatives of Dürer, Rembrandt, Cézanne, Kahlo, Beckmann, Schiele, and Munch. Students paint from life, memory, reproductions, and objects of personal significance to create a world in which they describe themselves. May be repeated for credit. Prerequisites: 140, 145, or consent of instructor. (upper level).

**ARTSTUDI 246. Individual Work: Drawing and Painting. 1-15 Unit.**

Prerequisites: two quarters of painting or drawing and consent of instructor.

**ARTSTUDI 249. Advanced Undergraduate Seminar. 3-4 Units.**

Capstone experience for majors in Art Practice. Interdisciplinary. Methods of research, cross-media critiques, and strategies for staging and presenting work, including a group exhibition for Commencement. Guest artists from the Bay Area. Minors may interview for possible inclusion. (upper level).

**ARTSTUDI 250. Individual Work: Sculpture. 1-15 Unit.**

May be repeated for credit.

**ARTSTUDI 252. Sculpture II. 4 Units.**

Builds upon 151. Installation and non-studio pieces. Impact of material and technique upon form and content; the physical and expressive possibilities of diverse materials. Historical and contemporary forming methods provide a theoretical basis for the studio work. Field trips; guest lecturers. (upper level).

**ARTSTUDI 253. ECOLOGY OF MATERIALS. 4 Units.**

Advanced studio-based sculpture course. Artists concerned with environmental impact and the interconnection of art with other fields. Students will take a critical look at the materials used in sculpture, in relation to environmental concerns, and the impact of material and technique upon form and content; therefore understanding the physical, expressive and environmental possibilities of diverse materials. Conceptual and technical considerations. Group discussions, critiques, readings, video presentations, a field trip to a local artist-in-residence program, and visiting lecturers.

**ARTSTUDI 254. Kinetic Sculpture. 3-4 Units.**

This course is focused on developing a practical, hands on understanding of kinetic mechanisms applied to objects and materials in sculpture and installation. Class time will take the form of lectures and technical demos, and hands-on labs where you will be exposed to different strategies for making movement in the physical world. Topics investigated include Rube Goldberg machines, devices of wonder, interactivity, audience experience and participation. This course will not be co-taught this year.

**ARTSTUDI 261. Individual Work: Design. 1-15 Unit.**

May be repeated for credit.

**ARTSTUDI 263. Paper. 3-4 Units.**

Beyond conventional use of paper as a foundation for mark-making to its potential as a medium in its own right. Students experiment with papers to develop facility with techniques of folding, scoring, curling, cutting, tearing, piercing, embossing, layering, and binding to create three-dimensional forms, patterned/textured surfaces, reliefs, interactive dynamic structures such as pop-ups, containers, and book forms. (upper level). May be repeated for credit.

**ARTSTUDI 264. Advanced Interaction Design. 4 Units.**

This upper level studio course will continue and create a sustained investigation into designed interactivity in real space. Students will create interactive installations, or public interventions using sensors or other computational devices. Prerequisites include one of the following - Embodied Interfaces, Media Archaeologies, Making it with Arduino, Digital Art 1, Electronic Art or permission of instructor.

**ARTSTUDI 266. Sculptural Screens / Malleable Media. 4 Units.**

This upper level studio course will allow students sustained time to experiment with computational outputs embedded in physical materials. What new physical formats are made possible by contemporary screen and projection technology? How can we make expressive use of LCD screens, Pico projectors, i-pad arrays, LEDs etc. This is a studio based class that will examine the screen as sculptural medium. (Example artists ∫ Nam June Paik, Tony Oursler, John Simon, Leo Villareal, Luc Courchesne, Robert Seidel, Janet Zweig). Prerequisites include one of the following ∫ Intro to Digital/Physical Design, Embodied Interfaces, Media Archaeologies, Making it with Arduino, Digital Art 1, Electronic Art or permission of instructor.

**ARTSTUDI 267. Emerging Technology Studio. 4 Units.**

This course will explore the new media topics of time-based media, data art, and the status of the body through the practice of live visual performance with a focus on digitally manipulated and generated media. It will draw on on historical practices of animation, audio-visual performance, and algorithmic art as well as contemporary and popular art practices to inform a studio approach. Students will develop their own work by instrumentalizing imagery, signals and data in both scored and improvised performances. Occasional writing assignments will also be required. Prerequisites include one of the following : Intro to Digital/Physical Design, Embodied Interfaces, Media Archaeologies, Making it with Arduino, Digital Art 1, Electronic Art or permission of instructor.

**ARTSTUDI 270. Advanced Photography Seminar. 1-5 Unit.**

Student continues with own work, showing it in weekly seminar critiques. May be repeated for credit. (upper level).

**ARTSTUDI 271. The View Camera: Its Uses and Techniques. 4 Units.**

For students of photography who wish to gain greater control and refine skills in image making. 4x5 view cameras provided. Enrollment limited to 8. (upper level).

**ARTSTUDI 272. Individual Work: Photography. 1-5 Unit.**

Student continues with own work, showing it in weekly seminar critiques. May be repeated for credit.

**ARTSTUDI 273. Individual Work: Experimental Media Art. 1-15 Unit.**

May be repeated for credit.

**ARTSTUDI 274. Alternative Processes. 4 Units.**

Priority to advanced students. Technical procedures and the uses of primitive and hand-made photographic emulsions. Enrollment limited to 10. Prerequisites: 170, 270, or consent of instructor. (upper level).

**ARTSTUDI 275. Introduction to Digital Photography and Visual Images. 4 Units.**

Students use Adobe Lightroom to organize and edit images, manipulate and correct digital files, print photographs, create slide shows, and post to the Internet. How to use digital technology to concentrate on visual thinking rather than darkroom techniques. (upper level). May be repeated 2 times for a total of 8 units.

**ARTSTUDI 276. The Photographic Book. 4 Units.**

Grouping and sequencing photographic images to produce a coherent body of work with a thematic structure. (lower level).

**ARTSTUDI 277. Project class: Digital and Analogue Projects in Photography. 4 Units.**

Students pursue a topic of their own definition. Further exploration of darkroom and other printing techniques; contemporary theory and criticism. (lower level). May be repeated for credit 2 times for a maximum of 8 units.

**ARTSTUDI 278. Intermediate Black and White Photography. 4 Units.**

This course explores several intermediate-level topics and techniques in film based photography. These include medium format photography utilizing the school's cameras; fine printing techniques using fiber paper; the full range of black and white films currently available; and alternative black and white techniques such as pinhole photography, photograms, and Holga cameras. We briefly discuss basic lighting techniques. The course emphasizes improving the student's image content and sequencing of images.

**ARTSTUDI 279A. Digital Art II. 4 Units.**

Advanced. Interactive art works using multimedia scripting software. Experimental interfaces, computer installation work, and mobile technologies. Contemporary media art theory and practice. (upper level).

**ARTSTUDI 284. Art and Biology. 4 Units.**

The relationship between biology and art. Rather than how art has assisted the biological sciences as in medical illustration, focus is on how biology has influenced art making practice. New technologies and experimental directions, historical shifts in artists' relationship to the living world, the effects of research methods on the development of theory, and changing conceptions of biology and life. Projects address these themes and others that emerge from class discussions and presentations. (upper level).

**ARTSTUDI 285. Topics in Media Studies: Street Media. 4 Units.**

Literal and figurative meanings of street and how they provide potential to media technologies and invite innovative forms of artistic practice. Contemporary art as the juncture where street movements and new media collide. Small projects. May be repeated for credit.

**ARTSTUDI 297. HONORS THESIS EXHIBITION. 1-5 Unit.**

May be repeated for credit.

**ARTSTUDI 310A. Directed Reading: Studio. 1-15 Unit.**

.

**ARTSTUDI 310B. Directed Reading: Studio. 1-15 Unit.**

.

**ARTSTUDI 310C. Directed Reading: Studio. 1-15 Unit.**

.

**ARTSTUDI 342. MFA Project: Tutorial. 1-15 Unit.**

Students construct an individual tutorial with an instructor selected from the studio art faculty, including visiting artists. The student must take tutorials with at least three different faculty members during the six-quarter program. Prior approval of advisor is required.

**ARTSTUDI 342A. MFA: Object Seminar. 1-15 Unit.**

Weekly seminars, studio practice, and individual tutorials. Student work is critiqued on issues of identity, presentation, and the development of coherent critical language. May be repeated for credit. Restricted to M.F.A. studio students only.

**ARTSTUDI 342B. MFA: Concept Seminar. 1-15 Unit.**

Weekly seminars, studio practice, and individual tutorials. Modes of conceptualization to broaden the base of cognitive and generative processes. May be repeated for credit. Restricted to M.F.A. studio students only.

**ARTSTUDI 342C. M.F.A Seminar. 1-15 Unit.**

Professional practices; preparation of documentation; exhibition and presentation. Restricted to M.F.A. studio students only. May be repeat for credit total units allowed 45 and total completion 6.

**ARTSTUDI 350A. Art & Design I: History and Theory. 3 Units.**

This two part graduate level course is required for all first year JPD students (both MFA and ME students), and open to all MFA Art Practice students. The first quarter of the course is a seminar, which focuses on the history of design practices and theories in a broad range of fields including design, art, and architecture. We will examine how well known concepts such as "The Bauhaus", "the designer", "Design Thinking", and metaphors such as "workshop", "school", "laboratory", "studio", or "post-studio" arise, and how they shape the artist or designer's work in a particular cultural context. Through reading, writing, and discussion, students will attempt to define their current position within a historical context and chart their future vision. The course may involve guest lectures and visits to various collections and archives.

**ARTSTUDI 350B. Art & Design II: Personal Practice. 3 Units.**

This two part graduate level course is required for all first year JPD students (both MFA and ME students), and open to all MFA Art Practice students. The second quarter of the course is a studio class, which examines our personal relationships to various creative processes (technical, procedural, and conceptual). Our goal is to gain new insights into our creative processes and find new possibilities within our available working methods. We will investigate issues such as constraint, iteration, collaboration, delegation, daily practice, and tools. Assignments such as "handmade-readymade-fablab" will challenge students to work with various processes and conceptual frameworks within single projects. The course will include four major projects, many minor studio exercises, readings, and discussion.

**ARTSTUDI 360A. Design Masters Project I. 4 Units.**

This two part graduate level seminar and studio course is required for second year JPD MFA students, and open to second year JPD ME students and all MFA art practice students. The first quarter of this course examines artists as contextually engaged problem solvers and provocateurs. What strategies have artists used to draw attention to, and drive change regarding issues they care about? How is art used to change habits, shift the directions of cultural discussions, and make the invisible visible? We will study artists and designers who use innovative techniques to these ends such as Merle Ukeles, Krzysztof Wodiczko, Eduardo Kac, Jon Rubin, Amy Franceschini, Alfredo Jaar, Stamen Design (cab spotting), and Rebar. In addition to readings and discussions, students will create and critique a series of four studio projects that engage participants to rethink a specific site or situation.

**ARTSTUDI 360B. Design Masters Project II. 4 Units.**

This two part graduate level seminar and studio course is required for second year JPD MFA students, and open to second year JPD ME students and all MFA art practice students. In this second quarter of the course, students will refine and expand one of their assignments from Sites/Situations I to create a completed site-specific installation, intervention, or product/object, which provokes discussion or change in our community. Works will be realized at various sites around campus, or in the community at large. Issues such as budget, public safety and code will be addressed. Time will be allotted for documentation, critique, and assessment of these projects.

**ARTSTUDI 360C. Master's Project: Design. 2-4 Units.**

Students enroll concurrently in ME 316. Over the course of the year, students create and present two master's theses involving the synthesis of aesthetics and technological concerns in the service of human need and possibility.

**ARTSTUDI 361. MFA First Year Seminar: Context. 1-15 Unit.**  
tbd.**ARTSTUDI 801. TGR Project. 0 Units.****Arts Institute Courses****ARTSINST 11Q. Art in the Metropolis. 3 Units.**

This seminar is offered in conjunction with the annual "Arts Immersion" trip to New York that takes place over the spring break and is organized by the Stanford Arts Institute (SAI). Participation in the trip is a requirement for taking part in the seminar (and vice versa). The trip is designed to provide a group of students with the opportunity to immerse themselves in the cultural life of New York City guided by faculty and the SAI programming director. Students will experience a broad range and variety of art forms (visual arts, theater, opera, dance, etc.) and will meet with prominent arts administrators and practitioners, some of whom are Stanford alumni. For further details and updates about the trip, see <http://arts.stanford.edu>.

Same as: TAPS 11Q

**ARTSINST 15. The Stillness of the Dunes. 3 Units.**

An advanced writing course in nonfiction craft, drawing, and contemplative practice. A significant portion of each class meeting will focus on the development and sharpening of writing craft, especially of the essay, in a hybrid form both scholarly and personal. We will also explore writing as meditative practice, through examples and through short exercises. We will deepen our cultural understanding of the desert and its impact, through art, literature, philosophy, film, and contemplative practice, and the course will build toward a four-day camping trip to the dunes of Death Valley, six weeks into the quarter.

**ARTSINST 40. Public Service Internship Preparation. 1 Unit.**

Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is primarily designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do the assignments for 1 unit of credit.

Same as: EARTHSYS 9, EDUC 9, HUMBIO 9, PUBLPOL 74, URBANST 101

**ARTSINST 150. The Changing World of Popular Music. 2 Units.**

This course will cover changes in the business, economics, and practices of the popular music industry. It will provide a brief historical overview of the industry and its business models. The majority of the course will focus on the industry as it works today and on forces that are causing it to change rapidly. The course will feature guest artists and executives with current experience in the field, as well as project-based assignments designed to give students hands-on experience. Topics will include: Economics and business models of commercial music business, Technology and music production, Technology and music distribution, Technology and marketing, Leadership in the music industry: case studies, Managing creative projects, Copyright and legal issues.

**ARTSINST 160. The Changing Arts Ecosystem: Entrepreneurial Approaches for Artists and Arts Organizations. 2 Units.**

This course looks at opportunities created by a rapidly changing art world. Artists, arts leaders, and creative entrepreneurs are taking advantage of new platforms and models for making art and for bringing art to new audiences. The course will feature guest speakers who are developing new ways to engage audiences, create powerful collaborations, and identify new funding sources for artistic activity. While drawing upon speakers and examples in the visual arts, this course will introduce methods for understanding and engaging with audiences and funders that are applicable to all types of art. Students will also have the opportunity to investigate collaborative models of their own choosing and will be encouraged to design completely new models—either for realizing an individual art project or for establishing an arts organization. Students will be taught methods for investigating the needs, motivations and resources of audiences/funders. Grading will be based on class participation, which will be supported by submitting periodic reflections and questions, and one project presentation. The course is available to advanced undergraduate students and graduate students and will be offered pass/fail.

Same as: ARTSINST 360

**ARTSINST 199. Independent Study. 1-5 Unit.**

May be repeated for credit.

**ARTSINST 200A. Honors in the Arts Workshop. 2 Units.**

First in a three-quarter series required of all Honors in the Arts participants. Students initiate and develop interdisciplinary creative projects with the support of peers and mentors in a small, workshop format. Required enrollment in 200 A,B,C.

**ARTSINST 200B. Honors in the Arts Workshop. 2 Units.**

Second in a three-quarter series required of all Honors in the Arts participants. Students initiate and develop interdisciplinary creative projects with the support of peers and mentors in a small, workshop format. Required enrollment in 200 A,B,C.

**ARTSINST 200C. Honors in the Arts Workshop. 2 Units.**

Third in a three-quarter series required of all Honors in the Arts participants. Students initiate and develop interdisciplinary creative projects with the support of peers and mentors in a small, workshop format. Required enrollment in 200 A,B,C.

**ARTSINST 360. The Changing Arts Ecosystem: Entrepreneurial Approaches for Artists and Arts Organizations. 2 Units.**

This course looks at opportunities created by a rapidly changing art world. Artists, arts leaders, and creative entrepreneurs are taking advantage of new platforms and models for making art and for bringing art to new audiences. The course will feature guest speakers who are developing new ways to engage audiences, create powerful collaborations, and identify new funding sources for artistic activity. While drawing upon speakers and examples in the visual arts, this course will introduce methods for understanding and engaging with audiences and funders that are applicable to all types of art. Students will also have the opportunity to investigate collaborative models of their own choosing and will be encouraged to design completely new models—either for realizing an individual art project or for establishing an arts organization. Students will be taught methods for investigating the needs, motivations and resources of audiences/funders. Grading will be based on class participation, which will be supported by submitting periodic reflections and questions, and one project presentation. The course is available to advanced undergraduate students and graduate students and will be offered pass/fail.

Same as: ARTSINST 160

**Asian American Studies Courses****ASNAMST 17Q. Perspectives in North American Taiko. 4 Units.**

Preference to sophomores. Taiko, or Japanese drum, is a newcomer to the American music scene. Emergence of the first N. American taiko groups coincided with increased Japanese American activism, and to some it is symbolic of Japanese American identity. N. American taiko is associated with Japanese American Buddhism. Musical, cultural, historical, and political perspectives of taiko. Hands-on drumming. Japanese music and Japanese American history, and relations among performance, cultural expression, community, and identity. Same as: MUSIC 17Q

**ASNAMST 52D. Asian American Human Development: Cultural Perspectives on Psychology, Education and Critical Issues. 3 Units.**

In this course, we will examine the critical issues in Asian American growth and development with particular attention given to current theoretical and research perspectives within a diverse society. We will consider topics related to their cultural identity, cognitive, and socio-emotional development, engaging in the ethnic discourse on Confucian history and culture, Eastern and Western thought and learning, tiger parenting, gender roles, the model minority stereotype, acculturation and bicultural identity, and mental health. This course uniquely integrates the fields of history, education, psychology, human biology, and ethnic studies as we seek to understand the underlying processes of the Asian American person as an individual and as an effective member of the larger society.

Same as: CSRE 52D

**ASNAMST 107. Asian American Leadership: Controversies, Dilemmas, and Decision-Making Strategies. 3-5 Units.**

This course examines the experiences of Asian Americans in a variety of contemporary leadership contexts to identify the complexities of race, gender, class, and ethnicity for both understanding and responding to social relations of power. Through seminar discussion, readings, guest speakers, case studies, and experiential activities, students evaluate situated practices of Asian American leadership in consideration of longstanding themes that have animated the field of Asian American Studies: self- and collective identification, representation and equality, community organizing and advocacy, interracial coalition-building, and minority empowerment. Students explore how Asian American leadership is conceptualized, practiced, and assessed in relation to the following contexts: campus and community activism of the Asian American movement of the 1960s to the present, institutional settings of employment, electoral politics, the field of Asian American Studies, and public intellectual life. A multidisciplinary approach will draw upon anthropology, psychology, political science, sociology, and Asian American Studies.

**ASNAMST 110. The Development of the Southeast Asian American Communities: A comparative analysis. 3 Units.**

This course will examine the establishment of the Cambodian, Hmong, and Vietnamese communities in the US. We will focus on the historical events that resulted in their immigration and arrival to the US as well as the similarities and differences in the ways in which they were received. In addition, the course will focus on issues that impacted in the development of these communities focusing on the social, political, and economic processes by which new immigrant groups are incorporated into the American society. The second part of the course will be devoted to analyzing contemporary issues including but not limited to: class status, educational attainment, ethnic identity, racialization, second generation, mass media representation, poverty, and economic mobility.

**ASNAMST 112. Public Archaeology: Market Street Chinatown Archaeology Project. 4-5 Units.**

This internship-style course centers on the practice and theory of historical archaeology research and interpretation through a focused study of San Jose's historic Chinese communities. The course includes classroom lectures, seminar discussion, laboratory analysis of historic artifacts, and participation in public archaeology events. Course themes include immigration, urbanization, material culture, landscape, transnational identities, race and ethnicity, gender, cultural resource management, public history, and heritage politics. The course includes required lab sections, field trips, and public service. Transportation will be provided for off-site activities.

Same as: ANTHRO 112, ANTHRO 212

**ASNAMST 118A. Digital Heritage: Bringing the Past Online with the Chinese American Historical Museum. 5 Units.**

Interpreting the past is no longer just for people like historians and archaeologists, and it's no longer confined to the pages of books. More and more, community-based organizations are gathering stories and perspectives from everyday people, and they're putting them out for the world to see online. With these big changes, what will be the future of thinking about the past? In this course, students will work through the dynamics of digital heritage through readings, discussion, and original research. The course centers around artifacts unearthed at the Market Street Chinatown in San Jose. Each student will analyze and gather stories relating to a single artifact in order to contribute to a multimedia exhibit for the Chinese American Historical Museum in San Jose. Class time will be devoted both to discussion and to work on artifact-based projects, and will also include a fieldtrip to the museum and collaboration time with members of the Chinese Historical and Cultural Project.

Same as: ANTHRO 118A, CSRE 118A

**ASNAMST 131. Trauma, healing, and empowerment in Asian America. 3-5 Units.**

This course will look at the ways in which Asian Americans are affected by the legacy of war, occupation and colonialism through themes of home, displacement, community, roots, identity, and inter-generational trauma. The approach is integrative, including scholarly investigation, embodied practice, and creative approach. This self-reflective process uses narrative, oral and written, as a means of becoming whole and healing personal, historical, and collective wounds.

Same as: CSRE 131C

**ASNAMST 144. Transforming Self and Systems: Crossing Borders of Race, Nation, Gender, Sexuality, and Class. 5 Units.**

Exploration of crossing borders within ourselves, and between us and them, based on a belief that understanding the self leads to understanding others. How personal identity struggles have meaning beyond the individual, how self healing can lead to community healing, how the personal is political, and how artistic self expression based in self understanding can address social issues. The tensions of victimization and agency, contemplation and action, humanities and science, embracing knowledge that comes from the heart as well as the mind. Studies are founded in synergistic consciousness as movement toward meaning, balance, connectedness, and wholeness. Engaging these questions through group process, journaling, reading, drama, creative writing, and storytelling. Study is academic and self-reflective, with an emphasis on developing and presenting creative works in various media that express identity development across borders.

Same as: CSRE 144, FEMGEN 144X

**ASNAMST 146S. Asian American Culture and Community. 3-5 Units.**

This course introduces students to the histories of Asians in America, specifically as these histories are part of a broader Asia-US-Pacific history that characterized the 20th century and now the 21st. We will combine readings in history, literature, sociology, with community-based learning. The course takes place over two quarters. The first quarter focuses on gaining knowledge of Asian America and discussion key topics that students wish to focus on collaboratively. During this first quarter we also learn about community-based learning, set up teams and projects, and develop relationships with community organizations. The second quarter students work with student liaisons (senior students who have experience in service learning) and complete their work with the community; there are no formal class meetings this second quarter. Service Learning Course (certified by Haas Center). Course can be repeated once.

Same as: AMSTUD 146, COMPLIT 146, CSRE 146S

**ASNAMST 185A. Race and Biomedicine. 3-5 Units.**

Race, identity, culture, biology, and political power in biomedicine. Biological theories of racial ordering, sexuality and the medicalization of group difference. Sources include ethnography, film, and biomedical literature. Topics include colonial history and medicine, the politics of racial categorization in biomedical research, the protection of human subjects and research ethics, immigration health and citizenship, race-based models in health disparities research and policy, and recent developments in human genetic variation research.

Same as: ANTHRO 185A

**ASNAMST 187. Geography, Time, and Trauma in Asian American Literature. 5 Units.**

The notion that homes can be stable locations for cultural, racial, ethnic, and similarly situated identity categories. The possibility that there really is no place like home for Asian American subjects. How geography, landscape, and time situate traumas within fictional Asian American narratives.

Same as: AMSTUD 261A

**ASNAMST 189. The Vietnamese Experience in America. 3 Units.**

The purpose of this course to study the experience of the Vietnamese refugees from their exodus after the Vietnam War to their resettlement in America, and to examine larger historical, social, political, and economic processes at work. We will focus on the processes that lead to the formation of this community the variables leading to various locations.

**ASNAMST 193F. Psychological Well-Being on Campus: Asian American Perspectives. 1 Unit.**

Topics: the Asian family structure, and concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on empathic understanding of Asians in America. Group exercises.

Same as: EDUC 193F

**ASNAMST 200R. Directed Research. 1-5 Unit.**

May be repeated for credit.

**ASNAMST 200W. Directed Reading. 1-5 Unit.**

(Staff).

**ASNAMST 265. Writing Asian American History. 5 Units.**

Recent scholarship in Asian American history, with attention to methodologies and sources. Topics: racial ideologies, gender, transnationalism, culture, and Asian American art history. Primary research paper.

Same as: AMSTUD 265, HISTORY 265, HISTORY 365

**ASNAMST 281. Asian Religions in America; Asian American Religions. 4 Units.**

This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.

Same as: AMSTUD 281, RELIGST 281, RELIGST 381

**ASNAMST 295F. Race and Ethnicity in East Asia. 4-5 Units.**

Intensive exploration of major issues in the history of race and ethnicity in China, Japan, and Korea from the early modern period to the present day.

Same as: HISTORY 295F, HISTORY 395F

**Asian Languages Courses**

**ASNLANG 1. 1ST YR JPNESE. 0-60 Units.**

**Astronomy Courses****Athletics, Physical Education, Recreation Courses****ATHLETIC 3M. Aikido. 1 Unit.**

Aikido originated in the centuries-old tradition of the Japanese martial arts and is a form of budo, a way of life that seeks to polish the self through a blend of rigorous physical training and spiritual discipline. There is no attack in Aikido. Its uniqueness as a martial art lies in its awareness of a deep sense of harmony with all of creation with training to defend not only the self but to bring the attacker under control without the necessity of inflicting injury. Because of Aikido's noncompetitive, harmonious philosophy, men and women of all ages can train together in a mutually supportive atmosphere, at an energy level appropriate for each individual. This class is part of the Stanford Martial Arts program, in order to receive credit you must be meet program requirements. For more information visit: <http://aikido.stanford.edu>.

**ATHLETIC 4C. Archery Club Team. 1 Unit.**

Restricted to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. Not a PE class or for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. Students new to a team should register for the course in future quarters once committed as a team member. (AU).

**ATHLETIC 5C. Climbing Club Team. 1 Unit.**

This class is for members of the Climbing Club Sports team. All students must complete 21 hours of participation with the team and meet any other team requirements during the quarter. While many teams are open to beginners, this class is for returning athletes committed to the team for the year and are at an intermediate or advanced level. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. May be repeat for credit.

**ATHLETIC 10. Band, Sports Activity. 1 Unit.**  
(AU).**ATHLETIC 12V. Baseball, Varsity Men. 1-2 Unit.**  
(AU).**ATHLETIC 14V. Basketball, Varsity Men. 1-2 Unit.**  
(AU).**ATHLETIC 15V. Basketball, Varsity Women. 1-2 Unit.**  
(AU).**ATHLETIC 20M. Capoeira Club. 1 Unit.**

Capoeira is a breathtaking Afro-Brazilian art which combines practical martial arts, dance, acrobatics, music, history and philosophy. The origin of Capoeira is obscure since the evolution of Capoeira during the Brazilian slave trade was not well documented. Most theories point toward adapted movements from traditional Angola dance which evolved into techniques of self-defense. When Capoeira was outlawed by slave owners the fighting art became disguised as a dance through the addition of music and acrobatic movements. In the 1930's Capoeira was legalized in Brazil and is now spreading throughout the world. This class is part of the Stanford Martial Arts program, in order to receive credit you must be meet program requirements.

**ATHLETIC 21C. Soccer Club Team. 1 Unit.**

This credit is offered to returning members of the Soccer Club Sports team. All students must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

Same as: Men

**ATHLETIC 22C. Competitive Cheer Club. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member.

**ATHLETIC 25V. Crew, Varsity Men. 1-2 Unit.**  
(AU).**ATHLETIC 26V. Crew, Varsity Women. 1-2 Unit.**  
(AU).**ATHLETIC 28V. Cross Country, Varsity Men. 1-2 Unit.**  
(AU).**ATHLETIC 29V. Cross Country, Varsity Women. 1-2 Unit.**  
(AU).**ATHLETIC 31C. Cycling Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

**ATHLETIC 34V. Diving, Varsity Men. 1-2 Unit.**  
(AU).**ATHLETIC 35V. Diving, Varsity Women. 1-2 Unit.**  
(AU).**ATHLETIC 37C. Equestrian Club Team. 1 Unit.**  
(AU).**ATHLETIC 38M. Eskrima. 1 Unit.**

Eskrima is the study of the Filipino martial art. It focuses on practical self-defense from a unique weapons-oriented perspective. Unlike most martial arts, Eskrima teaches students empty hand and weapon techniques concurrently. Here at Stanford, we study the Inayan System of Eskrima under the instruction of Suro Jason Inay. This class is part of the Stanford Martial Arts program, in order to receive credit you must be meet program requirements. For more information visit: <http://eskrima.stanford.edu>.

**ATHLETIC 41V. Fencing, Varsity Men. 1-2 Unit.**  
(AU).**ATHLETIC 42V. Fencing, Varsity Women. 1-2 Unit.**  
(AU) (Milgram).**ATHLETIC 47V. Field Hockey, Varsity Women. 1-2 Unit.**  
(AU).**ATHLETIC 48V. Football, Varsity. 1-2 Unit.**  
(AU).**ATHLETIC 55V. Golf, Varsity Men. 1-2 Unit.**  
(AU).

**ATHLETIC 56V. Golf, Varsity Women. 1-2 Unit.**  
(AU).

**ATHLETIC 60V. Gymnastics, Varsity Men. 1-2 Unit.**  
(AU).

**ATHLETIC 61V. Gymnastics, Varsity Women. 1-2 Unit.**  
(AU).

**ATHLETIC 70C. Horse Polo Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member.  
(AU).

**ATHLETIC 72C. Ice Hockey Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. Men  
(AU).

**ATHLETIC 73M. JKA Shotokan Karate. 1 Unit.**

Shotokan Karate is a weaponless martial art developed in Okinawa and Japan, emphasizing power and efficiency in combat. Skilled karateka defeat their opponents with minimal number of techniques and effort, which is particularly useful when facing multiple opponents. Shotokan is distinguished from other martial arts by the linearity and strength of its punches, blocks, and kicks. Precise techniques, accompanied by mastery and focus of energy flows and a deep knowledge of the body's vital points, make this karate style a comprehensive system for self-defense and combat. However, Shotokan Karate is much more than just a way to defend and fight; it is an holistic system in which the training itself has far reaching effects on the trainee. It is an ideal way to become and stay fit, as it combines intense aerobic and anaerobic exercises. It is a way to gain self-discipline and the confidence to surmount everyday obstacles, whether tangible or not. Shotokan Karate encourages and helps in the exploration and understanding of both the physical and mental self. This class is part of the Stanford Martial Arts program, in order to receive credit you must be meet program requirements. For more information visit: <http://karate.stanford.edu>.

**ATHLETIC 74C. Judo Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member.  
(AU).

**ATHLETIC 75M. Jujitsu Self Defense. 1 Unit.**

The Stanford Self-Defense Class teaches practical methods of self-defense drawn from all the martial arts. This coed course is available to beginners every quarter. Advanced training also is available year-round through senior black belt level, and is offered to improve and widen each student's skills. All Stanford students, faculty and staff members are invited to join our relaxed atmosphere, as we work on conditioning and coordination. Students who have completed the beginners' course can further refine their basic skills, as well as learn more complicated techniques. Advanced students may continue as long as they wish, with the possibility of receiving formal belt ranks in Aiki Jujitsu. This class is part of the Stanford Martial Arts program, in order to receive credit you must be meet program requirements. For more information visit: <http://jujitsu.stanford.edu>.

**ATHLETIC 76M. Kendo. 1 Unit.**

Kendo is a Japanese form of fencing with two-handed bamboo swords, originally developed as a safe form of sword training for samurai. This is part of the Stanford Martial Arts program.

**ATHLETIC 77C. Lacrosse Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member.  
(AU).

Same as: Men

**ATHLETIC 78M. Kenpo Karate. 1 Unit.**

The Stanford Kenpo Karate Association teaches vital self-defense techniques, designed to maximize effectiveness regardless of size or strength. Beginning students will learn tools for responding to a modern street-fight situation, including single- or multiple-attackers, with or without weapons, under a variety of circumstances. Kenpo students learn multiple-strike defenses, hand strikes, kicks, joint locks, evasions, pressure points, sweeps, throws and even falls and rolls. In addition to self-defense, SKKA also teaches sparring and kata, encouraging balance, flexibility, strength and personal growth in the martial arts. This class is part of the Stanford Martial Arts program, in order to receive credit you must be meet program requirements. For more information visit: <http://www.stanfordkenpo.com>.

**ATHLETIC 78V. Lacrosse, Varsity Women. 1-2 Unit.**  
(AU).

**ATHLETIC 81M. Muay Thai. 1 Unit.**

Muay Thai or Thai Kickboxing is a martial art developed in Thailand about 500 years ago to defend the country against invaders. Muay Thai combines Western-style boxing with kicking, and includes the use of elbows and knees. Though traditionally Muay Thai is designed to be fatal to the opponent, in our class we focus on self-defense and counter attack. Usually light sparring is practiced with minimal use of elbows. During class, students will wear boxing gloves, shin guards, and mouth protectors. Head protection is required for sparring. In order to excel in Muay Thai, one will need to develop flexibility, strength, endurance, concentration, and reflexes. One will learn to adapt the techniques according to their strengths and weaknesses on their own pace. This class is part of the Stanford Martial Arts program, in order to receive credit you must be meet program requirements. For more information visit: <http://kickboxing.stanford.edu>.

**ATHLETIC 82. Manager: Athletic Team. 1 Unit.**

For student managers of intercollegiate teams. Prerequisite: consent of respective varsity team head coach. (AU).

**ATHLETIC 91C. Rugby Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

**ATHLETIC 104V. Sailing, Varsity Men. 1-2 Unit.**

(AU).

**ATHLETIC 105V. Sailing, Varsity Women. 1-2 Unit.**

(AU).

**ATHLETIC 107C. Ski Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

**ATHLETIC 118V. Soccer, Varsity Men. 1-2 Unit.**

(AU).

**ATHLETIC 119V. Soccer, Varsity Women. 1-2 Unit.**

(AU).

**ATHLETIC 121V. Softball, Varsity Women. 1-2 Unit.**

(AU).

**ATHLETIC 125C. Squash Club Team. 1 Unit.**

(AU).

Same as: Men

**ATHLETIC 126V. Squash, Varsity Women. 1-2 Unit.**

(AU).

**ATHLETIC 135V. Swimming, Synchronized: Varsity. 1-2 Unit.**

(AU).

**ATHLETIC 136V. Swimming, Varsity Men. 1-2 Unit.**

(AU).

**ATHLETIC 137V. Swimming, Varsity Women. 1-2 Unit.**

(AU).

**ATHLETIC 141C. Tae Kwon Do Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

**ATHLETIC 143C. Tennis Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

**ATHLETIC 148V. Tennis, Varsity Men. 1-2 Unit.**

(AU).

**ATHLETIC 149V. Tennis, Varsity Women. 1-2 Unit.**

(AU).

**ATHLETIC 153V. Track and Field, Varsity Men. 1-2 Unit.**

(AU).

**ATHLETIC 154V. Track and Field, Varsity Women. 1-2 Unit.**

(AU).

**ATHLETIC 156C. Triathlon Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

**ATHLETIC 158C. Ultimate Frisbee Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

Same as: Men

**ATHLETIC 159C. Ultimate Frisbee Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU) (Staff).

Same as: Women

**ATHLETIC 166V. Volleyball, Varsity Men. 1-2 Unit.**

(AU).

**ATHLETIC 167V. Volleyball, Varsity Women. 1-2 Unit.**

(AU).

**ATHLETIC 168C. Volleyball Club Team. 1 Unit.**

This credit is offered to returning members of the specified Club Sports team. All enrollees must complete 21 hours of participation with the team and meet any other team requirements during the quarter. This is NOT a PE class or credit for beginners. While many teams are open to beginners joining, the credit is offered to returning athletes committed to the team for the year. If you are new to the team, please look to register for the credit in future quarters once you are committed as a team member. (AU).

**ATHLETIC 171V. Water Polo, Varsity Men. 1-2 Unit.**

(AU).

**ATHLETIC 172V. Water Polo, Varsity Women. 1-2 Unit.**

(AU).

**ATHLETIC 178M. Wing Chun Kung Fu. 1 Unit.**

Wing Chun Kung Fu's roots can be traced from the Southern Shaolin Temple in China to the late Grand Master Yip Man. It is one of the few martial arts that attributes its origins to a woman. Although popularized as Bruce Lee's "mother art," the practice of Wing Chun remains substantially different from his Jeet Kune Do. Taught as a predominantly internally-oriented style stressing technique, sensitivity, and subtle awareness instead of brute force, Wing Chun provides practical self-defense for men and women and a means for developing the mind and spirit. This class is part of the Stanford Martial Arts program, in order to receive credit you must be meet program requirements. For more information visit: <http://wingchun.stanford.edu>.

**ATHLETIC 180V. Wrestling, Varsity. 1-2 Unit. (AU).****ATHLETIC 181M. Wushu. 1 Unit.**

Modern Wushu is a martial art which combines a foundation in the traditional Chinese fighting arts with a modern disposition towards aesthetics, grace, and performance. It emphasizes a combination of strength, speed, and flexibility rarely seen in other martial arts or sports. Both a martial art and a performance art, Wushu is the national sport of China, and is practiced throughout the world. Along with open hand training, Wushu athletes do extensive training with weapons such as broadsword, staff, spear, and straight sword. This class is part of the Stanford Martial Arts program, in order to receive credit you must be meet program requirements. For more information visit: <http://wushu.stanford.edu>.

**Biochemistry Courses****BIOC 109A. The Human Genome and Disease. 3 Units.**

The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. Students with a major, minor or coterm in Biology: 109A/209A or 109B/209B may count toward degree program but not both.

Same as: BIO 109A, BIOC 209A, HUMBIO 158

**BIOC 109B. The Human Genome and Disease: Genetic Diversity and Personalized Medicine. 3 Units.**

Continuation of 109A/209A. Genetic drift: the path of human predecessors out of Africa to Europe and then either through Asia to Australia or through northern Russia to Alaska down to the W. Coast of the Americas. Support for this idea through the histocompatibility genes and genetic sequences that predispose people to diseases. Guest lectures from academia and pharmaceutical companies. Prerequisite: Biology or Human Biology core. Students with a major, minor or coterm in Biology: 109A/209A or 109B/209B may count toward degree program but not both.

Same as: BIO 109B

**BIOC 118Q. Genomics and Medicine. 3 Units.**

Preference to sophomores. Knowledge gained from sequencing human genomes and implications for medicine and biomedical research. Novel diagnoses and treatment of diseases, including stem cells, gene therapy and rational drug design. Personal genomics and how it is used to improve health and well being. Social and ethical implications of genetic information such as privacy, discrimination and insurability. Course Webpage: <http://biochem118.stanford.edu/>.

**BIOC 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**BIOC 200. Applied Biochemistry. 2 Units.**

Enrollment limited to MD candidates. Fundamental concepts of biochemistry as applied to clinical medicine. Topics include vitamins and cofactors, metabolism of carbohydrates, lipids, amino acids and nucleotides, and the integration of metabolic pathways. Clinical case studies discussed in small-group, problem-based learning sessions.

**BIOC 202. Biochemistry Bootcamp. 1 Unit.**

Open to first year Biochemistry students and to other PhD students with consent of instructor. Hands-on, week-long immersion in biochemical methods and practice, high-throughput sequencing and data analysis, theory and application of light microscopy, and computational approaches to modern biological problems.

**BIOC 205. Molecular Foundations of Medicine. 3 Units.**

For medical students. Topics include DNA structure, replication, recombination, and repair; gene expression via transcription and translation; biotechnology; and genomics. Patient presentations, journal clubs, and class presentations discuss the impact of molecular biology on medicine.

**BIOC 209A. The Human Genome and Disease. 3 Units.**

The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. Students with a major, minor or coterm in Biology: 109A/209A or 109B/209B may count toward degree program but not both.

Same as: BIO 109A, BIOC 109A, HUMBIO 158

**BIOC 215. Frontiers in Biological Research. 1 Unit.**

Students analyze cutting edge science, develop a logical framework for evaluating evidence and models, and enhance their ability to design original research through exposure to experimental tools and strategies. The class runs in parallel with the Frontiers in Biological Research seminar series. Students and faculty meet on the Tuesday preceding each seminar to discuss a landmark paper in the speaker's field of research. Following the Wednesday seminar, students meet briefly with the speaker for a free-range discussion which can include insights into the speakers' paths into science and how they pick scientific problems. Same as: DBIO 215, GENE 215

**BIOC 221. The Teaching of Biochemistry. 3 Units.**

Required for teaching assistants in Biochemistry. Practical experience in teaching on a one-to-one basis, and problem set design and analysis. Familiarization with current lecture and text materials; evaluations of class papers and examinations. Prerequisite: enrollment in the Biochemistry Ph.D. program or consent of instructor.

**BIOC 223. Open Problems in Biology. 1 Unit.**

Introduces open problems in biology to those outside the field with quantitative backgrounds (e.g. science, computer science, engineering, and mathematics). Ten different experts cover ten different topics.

**BIOC 224. Advanced Cell Biology. 4 Units.**

For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, and differentiation. Weekly reading of current papers from the primary literature. Preparation of an original research proposal. Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor.

Same as: BIO 214, MCP 221

**BIOC 236. Biology by the Numbers. 3 Units.**

For PhD students and advanced undergraduates. Students will develop skills in quantitative reasoning over a wide range of biological problems. Topics: biological size scales ranging from proteins to ecosystems; biological times time scales ranging from enzymatic catalysis and DNA replication to evolution; biological energy, motion and force from molecular to organismic scales; mechanisms of environmental sensing ranging from bacterial chemotaxis to vision.

Same as: APPPHYS 236

**BIOC 241. Biological Macromolecules. 3-5 Units.**

The physical and chemical basis of macromolecular function. Topics include: forces that stabilize macromolecular structure and their complexes; thermodynamics and statistical mechanics of macromolecular folding, binding, and allostery; diffusional processes; kinetics of enzymatic processes; the relationship of these principles to practical application in experimental design and interpretation. The class emphasizes interactive learning, and is divided equally among lectures, in-class group problem solving, and discussion of current and classical literature. Enrollment limited to 50. Prerequisites: Background in biochemistry and physical chemistry recommended but material available for those with deficiency in these areas; undergraduates with consent of instructor only.

Same as: BIOPHYS 241, GENE 241, SBIO 241

**BIOC 257. Currents in Biochemistry. 1 Unit.**

Seminars by Biochemistry faculty on their ongoing research. Background, current advances and retreats, general significance, and tactical and strategic research directions.

**BIOC 299. Directed Reading in Biochemistry. 1-18 Unit.**

Prerequisite: consent of instructor.

**BIOC 350. Development of Thesis Research. 2 Units.**

Biochemistry 2nd year PhD students with permission of instructor only. Students place their thesis research into a broader scientific perspective, identify important questions to ask, and learn to communicate these clearly. The course includes a series of roundtable discussions with students and faculty about the students' proposed research topics. The initial focus is on developing the equivalent of a specific aims page for a research grant.

**BIOC 360. Developing an Original Research Proposal. 1 Unit.**

Biochemistry 3rd year PhD students with permission of instructor only. Students foster broad familiarity with the biomedical literature and learn to develop new research directions. Topics well outside of each student's research topic are chosen for regular informal journal club presentations. Students work with faculty to hone skills for identifying important open scientific questions, formulating hypotheses, and refining experimental logic. Students work collectively to create a "model" research proposal on a topic of general interest to the group, and then individually to develop an original proposal on a topic of each student's choice.

**BIOC 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**BIOC 399. Graduate Research and Special Advanced Work. 1-18 Unit.**

Allows for qualified students to undertake investigations sponsored by individual faculty members.

**BIOC 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.**

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIO 459, BIOE 459, CHEM 459, CHEMENG 459, PSYCH 459

**BIOC 801. TGR Project. 0 Units.**

.

**BIOC 802. TGR Dissertation. 0 Units.**

.

**Bioengineering Courses****BIOE 10N. Form and Function of Animal Skeletons. 3 Units.**

Preference to freshmen. The biomechanics and mechanobiology of the musculoskeletal system in human beings and other vertebrates on the level of the whole organism, organ systems, tissues, and cell biology.

Field trips to labs.

Same as: ME 10N

**BIOE 32Q. Bon Appétit, Marie Curie! The Science Behind Haute Cuisine. 3 Units.**

This seminar is for anyone who loves food, cooking or science! We will focus on the science and biology behind the techniques and the taste buds. Not a single lecture will pass by without a delicious opportunity - each weekly meeting will include not only lecture, but also a lab demonstration and a chance to prepare classic dishes that illustrate that day's scientific concepts.

**BIOE 36Q. The Biophysics of Innate Immunity. 3 Units.**

The innate immune system provides our first line of defense against disease—both infections, and cancer. Innate immune effectors such as host defense peptides are deployed by numerous cell types (for instance neutrophils, macrophages, NK cells, epithelial cells and keratinocytes) and work by biophysical mechanisms of action. The course draws from the primary literature and covers the evolution, structures, mechanisms, and physiological functions of important "innate immune effectors" (components of the innate immune system that can attack pathogens, and infected or host cells, and kill or incapacitate them directly). The course is aimed at students who have an interest in biochemistry, molecular/cellular biology, biophysics, and/or bioengineering.

**BIOE 41. Physical Biology of Macromolecules. 4 Units.**

Principles of statistical physics, thermodynamics, and kinetics with applications to molecular biology. Topics include entropy, temperature, chemical forces, enzyme kinetics, free energy and its uses, self assembly, cooperative transitions in macromolecules, molecular machines, feedback, and accurate replication. Prerequisites: MATH 41, 42; CHEM 31A, B (or 31X); strongly recommended: PHYSICS 41, CME 100 or MATH 51, and CME 106; or instructor approval.

**BIOE 42. Physical Biology of Cells. 4 Units.**

Principles of transport, continuum mechanics, and fluids, with applications to cell biology. Topics include random walks, diffusion, Langevin dynamics, transport theory, low Reynolds number flow, and beam theory, with applications including quantitative models of protein trafficking in the cell, mechanics of the cell cytoskeleton, the effects of molecular noise in development, the electromagnetics of nerve impulses, and an introduction to cardiovascular fluid flow. Prerequisites: MATH 41, 42; CHEM 31A, B (or 31X); strongly recommended: CS 106A, PHYSICS 41, CME 100 or MATH 51, and CME 106; or instructor approval. 4 units, Spr (Huang, K).

**BIOE 44. Fundamentals for Engineering Biology Lab. 4 Units.**

Introduction to next-generation techniques in genetic, molecular, biochemical, and cellular engineering. Lab modules build upon current research including: gene and genome engineering via decoupled design and construction of genetic material; component engineering focusing on molecular design and quantitative analysis of experiments; device and system engineering using abstracted genetically encoded objects; and product development based on useful applications of biological technologies. Concurrent or previous enrollment in BIO 41.

**BIOE 51. Anatomy for Bioengineers. 4 Units.**

Fundamental human anatomy, spanning major body systems and tissues including nerve, muscle, bone, cardiovascular, respiratory, gastrointestinal, and renal systems. Explore intricacies of structure and function, and how various body parts come together to form a coherent and adaptable living being. Correlate clinical conditions and therapeutic interventions. Participate in lab sessions with predissected cadaveric material and hands-on learning to gain understanding of the bioengineering human application domain. Encourage anatomical thinking, defining challenges and opportunities for bioengineers.

**BIOE 70Q. Medical Device Innovation. 3 Units.**

BIOE 70Q invites students to apply design thinking to the creation of healthcare technologies. Students will learn about the variety of factors that shape healthcare innovation, and through hands-on design projects, invent their own solutions to clinical needs. Guest instructors will include engineers, doctors, entrepreneurs, and others who have helped bring ideas from concept to clinical use.

**BIOE 80. Introduction to Bioengineering (Engineering Living Matter). 4 Units.**

Students completing BIOE.80 should have a working understanding for how to approach the systematic engineering of living systems to benefit all people and the planet. Our main goals are (1) to help students learn ways of thinking about engineering living matter and (2) to empower students to explore the broader ramifications of engineering life. Specific concepts and skills covered include but are not limited to: capacities of natural life on Earth; scope of the existing human-directed bioeconomy; deconstructing complicated problems; reaction & diffusion systems; microbial human anatomy; conceptualizing the engineering of biology; how atoms can be organized to make molecules; how to print DNA from scratch; programming genetic sensors, logic, & actuators; biology beyond molecules (photons, electrons, etc.); what constraints limit what life can do?; what will be the major health challenges in 2030?; how does what we want shape bioengineering?; who should choose and realize various competing bioengineering futures?.

Same as: ENGR 80

**BIOE 101. Systems Biology. 3 Units.**

Complex biological behaviors through the integration of computational modeling and molecular biology. Topics: reconstructing biological networks from high-throughput data and knowledge bases. Network properties. Computational modeling of network behaviors at the small and large scale. Using model predictions to guide an experimental program. Robustness, noise, and cellular variation. Prerequisites: CME 102; BIO 41, BIO 42; or consent of instructor.

Same as: BIOE 210

**BIOE 103. Systems Physiology and Design. 4 Units.**

Physiology of intact human tissues, organs, and organ systems in health and disease, and bioengineering tools used (or needed) to probe and model these physiological systems. Topics: Clinical physiology, network physiology and system design/plasticity, diseases and interventions (major syndromes, simulation, and treatment, instrumentation for intervention, stimulation, diagnosis, and prevention), and new technologies including tissue engineering and optogenetics. Discussions of pathology of these systems in a clinical-case based format, with a view towards identifying unmet clinical needs. Learning computational skills that not only enable simulation of these systems but also apply more broadly to biomedical data analysis. Prerequisites: CME 102; PHYSICS 41; BIO 41, 42.

**BIOE 103B. Systems Physiology and Design. 4 Units.**

\*ONLINE Offering of BIOE103. This pilot class, BIOE103B, is an entirely online offering with the same content, learning goals, and prerequisites as BIOE103. Students attend class by watching videos and completing assignments remotely. Students may attend recitation and office hours in person, but cannot attend the BIOE103 in-person lecture due to room capacity restraints.\* Physiology of intact human tissues, organs, and organ systems in health and disease, and bioengineering tools used (or needed) to probe and model these physiological systems. Topics: Clinical physiology, network physiology and system design/plasticity, diseases and interventions (major syndromes, simulation, and treatment, instrumentation for intervention, stimulation, diagnosis, and prevention), and new technologies including tissue engineering and optogenetics. Discussions of pathology of these systems in a clinical-case based format, with a view towards identifying unmet clinical needs. Learning computational skills that not only enable simulation of these systems but also apply more broadly to biomedical data analysis. Prerequisites: MATH 41, 42; CME 102; PHY 41; BIO 41, 42; strongly recommended PHY 43; or instructor approval.

**BIOE 115. Computational Modeling of Microbial Communities. 4 Units.**

Provides biologists with basic computational tools and knowledge to confront large datasets in a quantitative manner. Students learn basic programming skills focused on Matlab, but also are introduced to Perl and Python. Topics include: image analysis, bioinformatics algorithms, reaction diffusion modeling, Monte Carlo algorithms, and population dynamics. Students apply computational skills to a miniature research project studying the human gut microbiota.

Same as: MI 245

**BIOE 122. Biosecurity and Bioterrorism Response. 4-5 Units.**

Overview of the most pressing biosecurity issues facing the world today. Guest lecturers have included former Secretary of State Condoleezza Rice, former Special Assistant on BioSecurity to Presidents Clinton and Bush Jr. Dr. Ken Bernard, Chief Medical Officer of the Homeland Security Department Dr. Alex Garza, eminent scientists, innovators and physicians in the field, and leaders of relevant technology companies. How well the US and global healthcare systems are prepared to withstand a pandemic or a bioterrorism attack, how the medical/healthcare field, government, and the technology sectors are involved in biosecurity and pandemic or bioterrorism response and how they interface, the rise of synthetic biology with its promises and threats, global bio-surveillance, making the medical diagnosis, isolation, containment, hospital surge capacity, stockpiling and distribution of countermeasures, food and agriculture biosecurity, new promising technologies for detection of bio-threats and countermeasures. Open to medical, graduate, and undergraduate students. No prior background in biology necessary. This course satisfies the TiS requirement for Engineering students; please check with your major advisor to verify this. 4 units for twice weekly attendance (Mon. and Wed.); additional 1 unit for writing a research paper for 5 units total maximum. PLEASE NOTE: This class will meet for the first time on Wednesday, April 1.

Same as: EMED 122, PUBLPOL 122

**BIOE 123. Biomedical System Prototyping Lab. 4 Units.**

The Bioengineering System Prototyping Laboratory is a fast-paced, team-based system engineering experience, in which teams of 2-3 students design and build a fermenter that meets a set of common requirements along with a set of unique team-determined requirements. Students learn-by-doing hands-on skills in electronics and mechanical design and fabrication. Teams also develop process skills and an engineering mindset by aligning specifications with requirements, developing output metrics and measuring performance, and creating project proposals and plans. The course culminates in demonstration of a fully functioning fermenter that meets the teams' self-determined metrics.

Learning goals:

1. Hands-on skills and experience with design, fabrication, integration, and characterization of practical electronic and mechanical hardware systems relevant to Bioengineering
2. Practice using modern rapid prototyping and device equipment and techniques, including CAD, 3D printing, laser cutting, microcontrollers, design thinking
3. Experience working as a team to build an end-to-end functional biomedical system (e.g., a fermenter)

Prerequisites: BIOE 41 and Matlab recommended.

**BIOE 131. Ethics in Bioengineering. 3 Units.**

Bioengineering focuses on the development and application of new technologies in the biology and medicine. These technologies often have powerful effects on living systems at the microscopic and macroscopic level. They can provide great benefit to society, but they also can be used in dangerous or damaging ways. These effects may be positive or negative, and so it is critical that bioengineers understand the basic principles of ethics when thinking about how the technologies they develop can and should be applied. On a personal level, every bioengineer should understand the basic principles of ethical behavior in the professional setting. This course will involve substantial writing, and will use case-study methodology to introduce both societal and personal ethical principles, with a focus on practical applications.

**BIOE 141A. Senior Capstone Design I. 4 Units.**

Lecture/Lab. First course of two-quarter capstone sequence. Team based project introduces students to the process of designing new biological technologies to address societal needs. Topics include methods for validating societal needs, brainstorming, concept selection, and the engineering design process. First quarter deliverable is a design for the top concept. Second quarter involves implementation and testing. Guest lectures and practical demonstrations are incorporated. Prerequisites: BIOE 123 and BIOE 44. This course is open only to seniors in the undergraduate Bioengineering program.

**BIOE 141B. Senior Capstone Design II. 4 Units.**

Lecture/Lab. Second course of two-quarter capstone sequence. Team based project introduces students to the process of designing new biological technologies to address societal needs. Emphasis is on implementing and testing the design from the first quarter with the at least one round of prototype iteration. Guest lectures and practical demonstrations are incorporated. Prerequisites: BIOE123 and BIOE44. This course is open only to seniors in the undergraduate Bioengineering program. **IMPORTANT NOTE:** class meets in Shriram 112.

**BIOE 191. Bioengineering Problems and Experimental Investigation. 1-5 Unit.**

Directed study and research for undergraduates on a subject of mutual interest to student and instructor. Prerequisites: consent of instructor and adviser. (Staff).

**BIOE 191X. Out-of-Department Advanced Research Laboratory in Bioengineering. 1-15 Unit.**

Individual research by arrangement with out-of-department instructors. Credit for 191X is restricted to declared Bioengineering majors pursuing honors and requires department approval. See <http://bioengineering.stanford.edu/education/undergraduate.html> for additional information. May be repeated for credit.

**BIOE 196. INTERACTIVE MEDIA AND GAMES. 1 Unit.**

Interactive media and games increasingly pervade and shape our society. In addition to their dominant roles in entertainment, video games play growing roles in education, arts, and science. This seminar series brings together a diverse set of experts to provide interdisciplinary perspectives on these media regarding their history, technologies, scholarly research, industry, artistic value, and potential future.

Same as: BIOPHYS 196

**BIOE 201C. Diagnostic Devices Lab. 2 Units.**

This course exposes students to the engineering principles and clinical application of medical devices through lectures and hands-on labs, performed in teams of two. Teams take measurements with these devices and fit their data to theory presented in the lecture. Devices covered include X-ray, CT, MRI, EEG, ECG, Ultrasound and BMI (Brain-machine interface). Prerequisites: BioE 103 or BioE 300B or EE 122B. Same as: BIOE 301C

**BIOE 210. Systems Biology. 3 Units.**

Complex biological behaviors through the integration of computational modeling and molecular biology. Topics: reconstructing biological networks from high-throughput data and knowledge bases. Network properties. Computational modeling of network behaviors at the small and large scale. Using model predictions to guide an experimental program. Robustness, noise, and cellular variation. Prerequisites: CME 102; BIO 41, BIO 42; or consent of instructor. Same as: BIOE 101

**BIOE 211. Biophysics of Multi-cellular Systems and Amorphous Computing. 2-3 Units.**

Provides an interdisciplinary perspective on the design, emergent behavior, and functionality of multi-cellular biological systems such as embryos, biofilms, and artificial tissues and their conceptual relationship to amorphous computers. Students discuss relevant literature and introduced to and apply pertinent mathematical and biophysical modeling approaches to various aspect multi-cellular systems, furthermore carry out real biology experiments over the web. Specific topics include: (Morphogen) gradients; reaction-diffusion systems (Turing patterns); visco-elastic aspects and forces in tissues; morphogenesis; coordinated gene expression, genetic oscillators and synchrony; genetic networks; self-organization, noise, robustness, and evolvability; game theory; emergent behavior; criticality; symmetries; scaling; fractals; agent based modeling. The course is geared towards a broadly interested graduate and advanced undergraduates audience such as from bio / applied physics, computer science, developmental and systems biology, and bio / tissue / mechanical / electrical engineering. Prerequisites: Previous knowledge in one programming language - ideally Matlab - is recommended; undergraduate students benefit from BIOE 41, BIOE 42, or equivalent.

Same as: BIOE 311, BIOPHYS 311, DBIO 211

**BIOE 212. Introduction to Biomedical Informatics Research Methodology. 3 Units.**

Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 211 or 214 or 217 or consent of instructor.

Same as: BIOMEDIN 212, CS 272, GENE 212

**BIOE 214. Representations and Algorithms for Computational Molecular Biology. 3-4 Units.**

Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units.

Same as: BIOMEDIN 214, CS 274, GENE 214

**BIOE 215. Physics-Based Simulation of Biological Structure. 3 Units.**

Modeling, simulation, analysis, and measurement of biological systems. Computational tools for determining the behavior of biological structures from molecules to organisms. Numerical solutions of algebraic and differential equations governing biological processes. Simulation laboratory examples in biology, engineering, and computer science. Limited enrollment. Prerequisites: basic biology, mechanics ( $F=ma$ ), ODEs, and proficiency in C or C++ programming.

**BIOE 220. Introduction to Imaging and Image-based Human Anatomy. 3 Units.**

Focus on learning the fundamentals of each imaging modality including X-ray Imaging, Ultrasound, CT, and MRI, to learn normal human anatomy and how it appears on medical images, to learn the relative strengths of the modalities, and to answer, "What am I looking at?" Course website: <http://rad220.stanford.edu>.

Same as: RAD 220

**BIOE 221. Physics and Engineering of Radionuclide Imaging. 3 Units.**

Physics, instrumentation, and algorithms for positron emission tomography (PET) and single photon emission computed tomography (SPECT). Topics include basic physics of photon emission and detection, electronics, system design, strategies for tomographic image reconstruction, data correction algorithms, methods of image quantification, and image quality assessment, and current developments in the field. Prerequisites: A year of university mathematics and physics. Same as: RAD 221

**BIOE 222. Instrumentation and Applications for Multi-modality Molecular Imaging of Living Subjects. 3-4 Units.**

Focuses on instruments, algorithms and other technologies for imaging of cellular and molecular processes in living subjects. Introduces preclinical and clinical molecular imaging modalities, including strategies for molecular imaging using PET, SPECT, MRI, Ultrasound, Optics, and Photoacoustics. Covers basics of instrumentation physics, the origin and properties of the signal generation, and image data quantification.

Same as: RAD 222

**BIOE 223. Physics and Engineering of X-Ray Computed Tomography. 3 Units.**

CT scanning geometries, production of x-rays, interactions of x-rays with matter, 2D and 3D CT reconstruction, image presentation, image quality performance parameters, system components, image artifacts, radiation dose. Prerequisites: differential and integral calculus. Knowledge of Fourier transforms (EE261) recommended.

Same as: RAD 223

**BIOE 224. Probes and Applications for Multi-modality Molecular Imaging of Living Subjects. 4 Units.**

Focuses on molecular contrast agents (a.k.a. "probes") that interrogate and target specific cellular and molecular disease mechanisms. Covers the ideal characteristics of molecular probes and how to optimize their design for use as effective imaging reagents that enables readout of specific steps in biological pathways and reveal the nature of disease through noninvasive imaging assays. Prerequisites: none.

Same as: RAD 224

**BIOE 225. Ultrasound Imaging and Therapeutic Applications. 3 Units.**

Covers the basic concepts of ultrasound imaging including acoustic properties of biological tissues, transducer hardware, beam formation, and clinical imaging. Also includes the therapeutic applications of ultrasound including thermal and mechanical effects, visualization of the temperature and radiation force with MRI, tissue assessment with MRI and ultrasound, and ultrasound-enhanced drug delivery. Course website: <http://bioe325.stanford.edu>.

Same as: RAD 225

**BIOE 227. Functional MRI Methods. 3 Units.**

(Same as RAD 227, BIOPHYS 227) Basics of functional magnetic resonance neuroimaging, including data acquisition, analysis, and experimental design. Journal club sections. Cognitive neuroscience and clinical applications. Prerequisites: basic physics, mathematics; neuroscience recommended.

**BIOE 229. Advanced Research Topics in Multi-modality Molecular Imaging of Living Subjects. 3-4 Units.**

Covers advanced topics and controversies in molecular imaging in the understanding of biology and disease. Lectures will include discussion on instrumentation, probes and bioassays. Topics will address unmet needs for visualization and quantification of molecular pathways in biology as well as for diagnosis and disease management. Areas of unmet clinical needs include those in oncology, neurology, cardiovascular medicine and musculoskeletal diseases. The aim is to identify important problems and controversies in a field and address them by providing background and relevance through review of the relevant primary literature, and then proposing and evaluating innovative imaging strategies that are designed to address the problem. The organization of lectures is similar to the thought process that is necessary for writing an NIH grant proposal in which aims are proposed and supported by background and relevance. The innovation of proposed approaches will be highlighted. An aim of the course is to inform students on how to creatively think about a problem and propose a solution focusing on the key elements of writing a successful grant proposal. Prerequisites: none.

**BIOE 231. Protein Engineering. 3 Units.**

The design and engineering of biomolecules emphasizing proteins, antibodies, and enzymes. Combinatorial and rational methodologies, protein structure and function, and biophysical analyses of modified biomolecules. Clinically relevant examples from the literature and biotech industry. Prerequisite: basic biochemistry. Winter, Cochran.

Same as: BIOE 331

**BIOE 236. Biophysical Mechanisms of Innate Immunity. 3 Units.**

The innate immune system provides our first line of defense against infections of all kinds as well as cancer. Innate immune effectors, e.g. host defense peptides are deployed by numerous cell types (neutrophils, macrophages, NK cells, as well as epithelial cells, keratinocytes, and others) and attack by biophysical mechanisms of action. Disorders of innate immunity are increasingly being implicated in human autoimmune disease. Using primary literature, we will cover the evolution, structures, mechanisms, and functions of innate immune effectors.

**BIOE 244. Advanced Frameworks and Approaches for Engineering Integrated Genetic Systems. 4 Units.**

Concepts and techniques for the design and implementation of engineered genetic systems. Topics covered include the quantitative exploration of tools that support (a) molecular component engineering, (b) abstraction and composition of functional genetic devices, (c) use of control and dynamical systems theory in device and systems design, (d) treatment of molecular "noise", (e) integration of DNA-encoded programs within cellular chassis, (f) designing for evolution, and (g) the use of standards in measurement, genetic layout architecture, and data exchange. Prerequisites: CME104, CME106, CHEM 33, BIO41, BIO42, BIOE41, BIOE42, and BIOE44 (or equivalents), or permission of the instructors.

**BIOE 253. Science and Technology Policy. 3-4 Units.**

How U.S. and international political institutions and processes govern science and technology; the roles of scientists, engineers, and physicians in creating and implementing policies; introduction to analytical techniques that are common to research and policy analysis in technology and public policy; and examples from specific mission areas (e.g., economic growth, health, climate, energy and the environment, information technology, international security). Assignments: analyzing the politics of particular legislative outcomes, assessing options for trying to reach a policy objective, and preparing a mock policy memo and congressional testimony.  
Same as: PUBLPOL 353

**BIOE 260. Tissue Engineering. 3 Units.**

Principles of tissue engineering and design strategies for practical applications for tissue repair. Topics include tissue components and dynamics, morphogenesis, stem cells, cellular fate processes, cell and tissue characterization, controlled drug and gene delivery, bioreactors, cell-materials interactions, and host integration. Present research proposal to solve a real life tissue engineering problem.  
Same as: ORTHO 260

**BIOE 261. Principles and Practice of Stem Cell Engineering. 3 Units.**

Quantitative models used to characterize incorporation of new cells into existing tissues emphasizing pluripotent cells such as embryonic and neural stem cells. Molecular methods to control stem cell decisions to self-renew, differentiate, die, or become quiescent. Practical, industrial, and ethical aspects of stem cell technology application. Final projects: team-reviewed grants and business proposals.  
Same as: NSUR 261

**BIOE 273. BIODESIGN FOR MOBILE HEALTH. 1-3 Unit.**

This seminar examines the emerging mobile health industry. Mobile health is the provision of health services and information via mobile technologies such as mobile phones and wearable sensors. Faculty from Stanford University and other academic institutions and guest lecturers from the mobile health industry discuss the driving needs, opportunities and challenges that characterize the emerging mobile health innovation landscape, and present an overview of the technologies, initiatives and companies that are transforming the way we access health care today.  
Same as: MED 273

**BIOE 280. Skeletal Development and Evolution. 3 Units.**

The mechanobiology of skeletal growth, adaptation, regeneration, and aging is considered from developmental and evolutionary perspectives. Emphasis is on the interactions between mechanical and chemical factors in the regulation of connective tissue biology. Prerequisites: BIO 42, and ME 80 or BIOE 42.  
Same as: ME 280

**BIOE 281. Biomechanics of Movement. 3 Units.**

Experimental techniques to study human and animal movement including motion capture systems, EMG, force plates, medical imaging, and animation. The mechanical properties of muscle and tendon, and quantitative analysis of musculoskeletal geometry. Projects and demonstrations emphasize applications of mechanics in sports, orthopedics, and rehabilitation.  
Same as: ME 281

**BIOE 282. Performance, Development, and Adaptation of Skeletal Muscle. 3 Units.**

Fundamentals of skeletal muscle by study of classical and recent research articles. Emphasis on the interactions between mechanics, biology, and electrophysiology in skeletal muscle performance, development, adaptation, control, and disease. Lab activities explore research methods discussed in class. Limited Enrollment. Applications due Friday, September 16th by 5pm. Applications available at <http://bioe282.stanford.edu/>. Prerequisites: engineering or biology core coursework. Fall (Cromie, Liske, Steele, Delp).

**BIOE 283. Mechanotransduction in Cells and Tissues. 3 Units.**

Mechanical cues play a critical role in development, normal functioning of cells and tissues, and various diseases. This course will cover what is known about cellular mechanotransduction, or the processes by which living cells sense and respond to physical cues such as physiological forces or mechanical properties of the tissue microenvironment. Experimental techniques and current areas of active investigation will be highlighted.  
Same as: BIOPHYS 244, ME 244

**BIOE 284B. Cardiovascular Bioengineering. 3 Units.**

Continuation of ME/BIOE 284A. Integrative cardiovascular physiology, blood fluid mechanics, and transport in the microcirculation. Sensing, feedback, and control of the circulation. Overview of congenital and adult cardiovascular disease, diagnostic methods, and treatment strategies. Engineering principles to evaluate the performance of cardiovascular devices and the efficacy of treatment strategies.  
Same as: ME 284B

**BIOE 287. Introduction to Physiology and Biomechanics of Hearing. 3 Units.**

Hearing is fundamental to our ability to communicate, yet in the US alone over 30 million people suffer some form of hearing impairment. As engineers and scientists, it is important for us to understand the underlying principles of the auditory system if we are to devise better ways of helping those with hearing loss. The goal of this course is to introduce undergraduate and graduate students to the anatomy, physiology, and biomechanics of hearing. Principles from acoustics, mechanics, and hydrodynamics will be used to build a foundational understanding of one of the most complex, interdisciplinary, and fascinating areas of biology. Topics include the evolution of hearing, computational modeling approaches, fluid-structure interactions, ion-channel transduction, psychoacoustics, diagnostic tools, and micrometer to millimeter scale imaging methods. We will also study current technologies for mitigating hearing loss via passive and active prostheses, as well as future regenerative therapies.  
Same as: ME 166, ME 266

**BIOE 291. Principles and Practice of Optogenetics for Optical Control of Biological Tissues. 3 Units.**

Principles and practice of optical control of biological processes (optogenetics), emphasizing bioengineering approaches. Theoretical, historical, and current practice of the field. Requisite molecular-genetic, optoelectronic, behavioral, clinical, and ethical concepts, and mentored analysis and presentation of relevant papers. Final projects of research proposals and a laboratory component in BioX to provide hands-on training. Contact instructor before registering.

**BIOE 299B. Practical Training. 1 Unit.**

For Ph.D. students. Educational opportunities in high technology research and development labs in industry. Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity, problems investigated, key results, and follow-up projects they expect to perform. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. All paperwork must be completed by student and faculty sponsor, as the student services office does not sponsor CPT. Students are allowed only two quarters of CPT per degree program. Course may be repeated twice.

**BIOE 300A. Molecular and Cellular Bioengineering. 3 Units.**

The molecular and cellular bases of life from an engineering perspective. Analysis and engineering of biomolecular structure and dynamics, enzyme function, molecular interactions, metabolic pathways, signal transduction, and cellular mechanics. Quantitative primary literature. Prerequisites: CHEM 171 and BIO 41 or equivalents; MATLAB or an equivalent programming language.

**BIOE 300B. Engineering Concepts Applied to Physiology. 3 Units.**

This course focuses on engineering approaches to quantifying, modeling and controlling the physiology and pathophysiology of complex systems, from the level of individual cells to tissue, organ and multi-organ systems.

**BIOE 300C. Medical Devices, Diagnostics, and Pharmaceuticals: Technologies, Regulation, and Applications. 3 Units.**

Preference to Bioengineering graduate students. Major classes of technologies including imaging techniques, chemical diagnostics, drug design and delivery. Topics include pacemakers, fMRI, PCR, stents, and biomaterials. Principles, practical limitations, and feature trade-offs in clinical settings.

**BIOE 301A. Molecular and Cellular Engineering Lab. 2 Units.**

Preference to Bioengineering graduate students. Practical applications of biotechnology and molecular bioengineering including recombinant DNA techniques, molecular cloning, microbial cell growth and manipulation, and library screening. Emphasis is on experimental design and data analysis. Limited enrollment. Fall (Cochran).

**BIOE 301B. Clinical Needs and Technology. 2 Units.**

The goal of this course is to introduce bioengineering students to medical technology as it is used in current clinical practice, in the modern tertiary care, subspecialty hospital. Half of the course will be devoted to labs, in which small groups of students participate in hands-on experiences using advanced clinical technology in areas such as medical imaging, robotic surgery, and minimally invasive diagnosis and treatment. The second half of the course brings pairs of students and clinical faculty mentors together for a more in-depth, focused exposure to clinical care in one specific area. Final grades will be based on attendance, and presentations made by each pair of student to the class about their mentoring experience.

**BIOE 301C. Diagnostic Devices Lab. 2 Units.**

This course exposes students to the engineering principles and clinical application of medical devices through lectures and hands-on labs, performed in teams of two. Teams take measurements with these devices and fit their data to theory presented in the lecture. Devices covered include X-ray, CT, MRI, EEG, ECG, Ultrasound and BMI (Brain-machine interface). Prerequisites: BioE 103 or BioE 300B or EE 122B. Same as: BIOE 201C

**BIOE 311. Biophysics of Multi-cellular Systems and Amorphous Computing. 2-3 Units.**

Provides an interdisciplinary perspective on the design, emergent behavior, and functionality of multi-cellular biological systems such as embryos, biofilms, and artificial tissues and their conceptual relationship to amorphous computers. Students discuss relevant literature and introduced to and apply pertinent mathematical and biophysical modeling approaches to various aspect multi-cellular systems, furthermore carry out real biology experiments over the web. Specific topics include: (Morphogen) gradients; reaction-diffusion systems (Turing patterns); visco-elastic aspects and forces in tissues; morphogenesis; coordinated gene expression, genetic oscillators and synchrony; genetic networks; self-organization, noise, robustness, and evolvability; game theory; emergent behavior; criticality; symmetries; scaling; fractals; agent based modeling. The course is geared towards a broadly interested graduate and advanced undergraduates audience such as from bio / applied physics, computer science, developmental and systems biology, and bio / tissue / mechanical / electrical engineering. Prerequisites: Previous knowledge in one programming language - ideally Matlab - is recommended; undergraduate students benefit from BIOE 41, BIOE 42, or equivalent.

Same as: BIOE 211, BIOPHYS 311, DBIO 211

**BIOE 313. Neuromorphics: Brains in Silicon. 3 Units.**

Neuromorphic systems run perceptual, cognitive and motor tasks in real-time on a network of highly interconnected nonlinear units. To maximize density and minimize energy, these units—like the brain's neurons—are heterogeneous and stochastic. The first half of the course covers learning algorithms that automatically synthesize network configurations to perform a desired computation on a given heterogeneous neural substrate. The second half of the course surveys system-on-a-chip architectures that efficiently realize highly interconnected networks and mixed analog-digital circuit designs that implement area and energy-efficient nonlinear units. Prerequisites: EE102A and EE108 are required; EE114 is recommended.

Same as: EE 304

**BIOE 326A. In Vivo MR: SpinPhysics and Spectroscopy. 3 Units.**

Collections of independent identical nuclear spins are well described by the classical vector model of magnetic resonance imaging, however, interaction among spins, as occur in many in vivo processes, require a more complete description. This course develops the basic physics and engineering principles of these interactions with emphasis on current research questions and clinical spectroscopy applications. Prerequisite: EE396b; familiarity with MRI, linear algebra recommended.

Same as: RAD 226A

**BIOE 326B. In Vivo MR: Relaxation Theory and Contrast Mechanisms. 3 Units.**

Principles of nuclear magnetic resonance relaxation theory as applicable to in vivo processes with an emphasis on medical imaging. Topics: physics and mathematics of relaxation, relaxation times in normal and diseased tissues, magnetization transfer contrast, chemical exchange saturation transfer, MRI contrast agents, and hyperpolarized <sup>13</sup>C.

Prerequisites: RAD 226.

Same as: RAD 226B

**BIOE 331. Protein Engineering. 3 Units.**

The design and engineering of biomolecules emphasizing proteins, antibodies, and enzymes. Combinatorial and rational methodologies, protein structure and function, and biophysical analyses of modified biomolecules. Clinically relevant examples from the literature and biotech industry. Prerequisite: basic biochemistry. Winter, Cochran.

Same as: BIOE 231

**BIOE 332. Large-Scale Neural Modeling. 3 Units.**

This course examines the dynamics of large networks of spiking neurons (several thousand), with particular focus on how these networks achieve cognitive behaviors such as working memory, selective attention, and decision making. The course will feature lectures and labs using two Python-based simulators: Brian, a software platform, and Neurogrid, a hardware platform that simulates up to a million spiking neurons in real time. Most of the course will be project-based, allowing students to explore their individual interests.

**BIOE 333. Interfacial Phenomena and Bionanotechnology. 3 Units.**

Control over and understanding of interfacial phenomena and colloidal science are the essential foundation of bionanotechnology. Key mathematical relationships derived by Laplace, Gibbs, Kelvin and Young are derived and explained, along with the thermodynamics of systems of large interfacial area. Forces controlling surface and interfacial phenomena and surfactant and biomacromolecule self-assembly are discussed. Protein folding/unfolding and aggregation, and nano- and microfluidics are elucidated in these terms. Students will gain insight into the interplay between physical and chemical properties of biomolecules. Spring, (Barron, A.).

**BIOE 334. Engineering Principles in Molecular Biology. 3 Units.**

The achievements and difficulties that exemplify the interface of theory and quantitative experiment. Topics include: bistability, cooperativity, robust adaptation, kinetic proofreading, analysis of fluctuations, sequence analysis, clustering, phylogenetics, maximum likelihood methods, and information theory. Sources include classic papers.

**BIOE 335. Molecular Motors I. 3 Units.**

Physical mechanisms of mechanochemical coupling in biological molecular motors, using F1 ATPase as the major model system. Applications of biochemistry, structure determination, single molecule tracking and manipulation, protein engineering, and computational techniques to the study of molecular motors.

**BIOE 337. Organismic Biophysics and Living Soft-matter. 3 Units.**

Integrated physical biology; from molecules to organisms. Tree of life, diversity of life forms. Multi-scale/hierarchical systems in biophysics, Hierarchical self-organization. Basic theory of squishy materials, colloidal physics. Phase transitions in living soft-matter. Experimental techniques in soft-matter physics. Active fluid models for living matter. Design of self-assembling and self-organizing, biomimetic supramolecular systems.

**BIOE 355. Advanced Biochemical Engineering. 3 Units.**

Combines biological knowledge and methods with quantitative engineering principles. Quantitative review of biochemistry and metabolism; recombinant DNA technology and synthetic biology (metabolic engineering). The production of protein pharmaceuticals as a paradigm for the application of chemical engineering principles to advanced process development within the framework of current business and regulatory requirements. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41, or equivalent.

Same as: CHEMENG 355

**BIOE 361. Biomaterials in Regenerative Medicine. 3 Units.**

Materials design and engineering for regenerative medicine. How materials interact with cells through their micro- and nanostructure, mechanical properties, degradation characteristics, surface chemistry, and biochemistry. Examples include novel materials for drug and gene delivery, materials for stem cell proliferation and differentiation, and tissue engineering scaffolds. Prerequisites: undergraduate chemistry, and cell/molecular biology or biochemistry.

Same as: MATSCI 381

**BIOE 370. Microfluidic Device Laboratory. 2 Units.**

Fabrication of microfluidic devices for biological applications. Photolithography, soft lithography, and micromechanical valves and pumps. Emphasis is on device design, fabrication, and testing.

**BIOE 371. Global Biodesign: Medical Technology in an International Context. 3 Units.**

(Same as OIT 587) This course examines the development and commercialization of innovative medical technologies in different global settings. Faculty and guest speakers from the medtech field will discuss the status of the industry, as well as opportunities in and challenges to medical technology innovation unique to seven primary geographic regions: Africa, China, Europe, India, Japan, United States and Latin America. Students will be exposed to the biodesign innovation process, which provides a proven approach for identifying important unmet medical needs and inventing meaningful solutions to address them. They will also explore key differences between the covered geographies, which range from emerging markets with vast bottom-of-the-pyramid and growing middle class populations, to well-established markets with sophisticated demands and shifting demographics. The class will utilize real-world case studies and class projects (for 3-unit students) to promote engagement and provide a hands-on learning experience. There is no 2 unit option for this course.

Same as: MED 271

**BIOE 372. Design for Service Innovation. 4 Units.**

(Same as OIT 343/01) Open to graduate students from all schools and departments. An experiential project course in which students work in multidisciplinary teams to design new services to address the needs of medically patients. Project teams partner with "safety net" hospitals and clinics to find better ways to deliver care to the low income and uninsured patients these institutions serve. Students learn proven innovation processes from experienced GSB, d. school, and SoM faculty, interface with students from across the university, and have the opportunity to see their ideas translated into improvements in the quality and efficiency of healthcare in the real world. Prerequisite: admission to the course is by application only. Applications available at <http://DesignForService.stanford.edu>. Applications must be submitted by November 16, 2011.

Same as: HRP 274, MED 274

**BIOE 374A. Biodesign Innovation: Needs Finding and Concept Creation. 4 Units.**

This is the first quarter of a two-quarter course series. In this two-quarter course (BIOE 374A/B, MED 272A/B, ME 368A/B, OIT 384/5), multidisciplinary student teams identify real-world unmet healthcare needs, invent new medtech products to address them, and plan for their development into patient care. During the first quarter (winter 2016), students select and characterize an important unmet healthcare problem, validate it through primary interviews and secondary research, and then brainstorm and screen initial technology-based solutions. In the second quarter (spring 2016), teams select a lead solution and move it toward the market through prototyping, technical re-risking, strategies to address healthcare-specific requirements (regulation, reimbursement), and business planning. Final presentations in winter and spring are made to a panel of prominent medtech experts and investors. Class sessions include faculty-led instruction and case demonstrations, coaching sessions by industry specialists, expert guest lecturers, and interactive team meetings. Enrollment is by application only, and students are expected to participate in both quarters of the course. Visit <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp> to access the application, examples of past projects, and student testimonials. More information about the Biodesign program, which has led to the creation of more than 30 venture-backed healthcare companies and has helped hundreds of student launch medtech careers, can be found at <http://biodesign.stanford.edu/>.

Same as: ME 368A, MED 272A

**BIOE 374B. Biodesign Innovation: Concept Development and Implementation. 4 Units.**

This is the second quarter of a two-quarter course series. In this two-quarter course (BIOE 374A/B, MED 272A/B, ME 368A/B, OIT 384/5), multidisciplinary student teams identify real-world unmet healthcare needs, invent new medtech products to address them, and plan for their development into patient care. During the first quarter (winter 2016), students select and characterize an important unmet healthcare problem, validate it through primary interviews and secondary research, and then brainstorm and screen initial technology-based solutions. In the second quarter (spring 2016), teams select a lead solution and move it toward the market through prototyping, technical re-risking, strategies to address healthcare-specific requirements (regulation, reimbursement), and business planning. Final presentations in winter and spring are made to a panel of prominent medtech experts and investors. Class sessions include faculty-led instruction and case demonstrations, coaching sessions by industry specialists, expert guest lecturers, and interactive team meetings. Enrollment is by application only, and students are expected to participate in both quarters of the course. Visit <http://biodesign.stanford.edu/bdn/courses/bioe374.jsp> to access the application, examples of past projects, and student testimonials. More information about the Biodesign program, which has led to the creation of more than 30 venture-backed healthcare companies and has helped hundreds of student launch medtech careers, can be found at <http://biodesign.stanford.edu/>.

Same as: ME 368B, MED 272B

**BIOE 375A. Biodesign Innovation: Needs Finding and Concept Creation. 2 Units.**

Enrollment limited to SCPD students. Two quarter sequence. Inventing new medical devices and instrumentation, including: methods of validating medical needs; techniques for analyzing intellectual property; basics of regulatory (FDA) and reimbursement planning; brainstorming and early prototyping. Guest lecturers and practical demonstrations.

**BIOE 375B. Biodesign Innovation: Concept Development and Implementation. 2 Units.**

Enrollment limited to SCPD students. Two quarter sequence. How to take a medical device invention forward from early concept to technology translation and development. Topics include prototyping; patent strategies; advanced planning for reimbursement and FDA approval; choosing translation route (licensing versus start-up); ethical issues including conflict of interest; fundraising approaches and cash requirements; essentials of writing a business or research plan; strategies for assembling a development team. Prerequisite: BIOE 375A.

**BIOE 376. Startup Garage: Design. 4 Units.**

A hands-on, project-based course, in which teams identify and work with users, domain experts, and industry participants to identify an unmet customer need, design new products or services that meet that need, and develop business models to support the creation and launch of startup products or services. This course integrates methods from human-centered design, lean startup, and business model planning. Each team will conceive, design, build, and field-test critical aspects of both the product or service and the business model.

**BIOE 377. Startup Garage: Testing and Launch. 4 Units.**

STRAMGT 356/BIOE 376 teams that concluded at the end of fall quarter that their preliminary product or service and business model suggest a path to viability, may continue with STRAMGT 366/BIOE 377 in winter quarter. Teams develop more elaborate versions of their product/service and business model, perform a series of experiments to test key hypotheses about their product and business model, and prepare and present an investor pitch for a seed round of financing to a panel of seasoned investors and entrepreneurs.

**BIOE 381. Orthopaedic Bioengineering. 3 Units.**

Engineering approaches applied to the musculoskeletal system in the context of surgical and medical care. Fundamental anatomy and physiology. Material and structural characteristics of hard and soft connective tissues and organ systems, and the role of mechanics in normal development and pathogenesis. Engineering methods used in the evaluation and planning of orthopaedic procedures, surgery, and devices. Same as: ME 381

**BIOE 386. Neuromuscular Biomechanics. 3 Units.**

The interplay between mechanics and neural control of movement. State of the art assessment through a review of classic and recent journal articles. Emphasis is on the application of dynamics and control to the design of assistive technology for persons with movement disorders. Same as: ME 386

**BIOE 390. Introduction to Bioengineering Research. 1-2 Unit.**

Preference to medical and bioengineering graduate students with first preference given to Bioengineering Scholarly Concentration medical students. Bioengineering is an interdisciplinary field that leverages the disciplines of biology, medicine, and engineering to understand living systems, and engineer biological systems and improve engineering designs and human and environmental health. Students and faculty make presentations during the course. Students expected to make presentations, complete a short paper, read selected articles, and take quizzes on the material.

Same as: MED 289

**BIOE 391. Directed Study. 1-6 Unit.**

May be used to prepare for research during a later quarter in 392. Faculty sponsor required. May be repeated for credit.

**BIOE 392. Directed Investigation. 1-10 Unit.**

For Bioengineering graduate students. Previous work in 391 may be required for background; faculty sponsor required. May be repeated for credit.

**BIOE 393. Bioengineering Departmental Research Colloquium. 1 Unit.**

Bioengineering department labs at Stanford present recent research projects and results. Guest lecturers. Topics include applications of engineering to biology, medicine, biotechnology, and medical technology, including biodesign and devices, molecular and cellular engineering, regenerative medicine and tissue engineering, biomedical imaging, and biomedical computation. Aut, Win, Spr (Lin, Riedel-Kruse, Barron).

**BIOE 450. Advances in Biotechnology. 3 Units.**

Guest academic and industrial speakers. Latest developments in fields such as bioenergy, green process technology, production of industrial chemicals from renewable resources, protein pharmaceutical production, industrial enzyme production, stem cell applications, medical diagnostics, and medical imaging. Biotechnology ethics, business and patenting issues, and entrepreneurship in biotechnology.

Same as: CHEMENG 450

**BIOE 454. Synthetic Biology and Metabolic Engineering. 3 Units.**

Principles for the design and optimization of new biological systems. Development of new enzymes, metabolic pathways, other metabolic systems, and communication systems among organisms. Example applications include the production of central metabolites, amino acids, pharmaceutical proteins, and isoprenoids. Economic challenges and quantitative assessment of metabolic performance. Pre- or corequisite: CHEMENG 355 or equivalent.

Same as: CHEMENG 454

**BIOE 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.**

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIO 459, BIOC 459, CHEM 459, CHEMENG 459, PSYCH 459

**BIOE 484. Computational Methods in Cardiovascular Bioengineering. 3 Units.**

Lumped parameter, one-dimensional nonlinear and linear wave propagation, and three-dimensional modeling techniques applied to simulate blood flow in the cardiovascular system and evaluate the performance of cardiovascular devices. Construction of anatomic models and extraction of physiologic quantities from medical imaging data. Problems in blood flow within the context of disease research, device design, and surgical planning.

Same as: ME 484

**BIOE 485. Modeling and Simulation of Human Movement. 3 Units.**

Direct experience with the computational tools used to create simulations of human movement. Lecture/labs on animation of movement; kinematic models of joints; forward dynamic simulation; computational models of muscles, tendons, and ligaments; creation of models from medical images; control of dynamic simulations; collision detection and contact models. Prerequisite: 281, 331A,B, or equivalent.

Same as: ME 485

**BIOE 500. Thesis. 1-15 Unit.**

(Staff).

Same as: Ph.D.

**BIOE 802. TGR Dissertation. 0 Units.**

(Staff).

## Biology Courses

### BIO 1. Human Evolution and Environment. 3 Units.

Human genetic and cultural evolution and how people interact with their environments, from the ancestors of *Australopithecus* to current events. Issues include race, gender, and intelligence; pesticide and antibiotic resistance; abortion and contraception; ecosystem services; environmental economics and ethics; the evolution of religion; climate change; population growth and overconsumption; origins and spread of ideas and technologies; and the distribution of political and economic power.

### BIO 2N. Ecology and Evolution of Infectious Disease in a Changing World. 3 Units.

This seminar will explore the ways in which anthropogenic change, climate change, habitat destruction, land use change, and species invasions effects the ecology and evolution of infectious diseases. Topics will include infectious diseases of humans, wildlife, livestock, and crops, effects of disease on threatened species, disease spillover, emerging diseases, and the role of disease in natural systems. Course will be taught through a combination of popular and scientific readings, discussion, and lecture.

### BIO 3. Frontiers in Marine Biology. 1 Unit.

An introduction to contemporary research in marine biology, including ecology, conservation biology, environmental toxicology, behavior, biomechanics, evolution, neurobiology, and molecular biology. Emphasis is on new discoveries and the technologies used to make them. Weekly lectures by faculty from the Hopkins Marine Station.

### BIO 3N. Views of a Changing Sea: Literature & Science. 3 Units.

The state of a changing world ocean, particularly in the eastern Pacific, will be examined through historical and contemporary fiction, non-fiction and scientific publications. Issues will include harvest and mariculture fisheries, land-sea interactions and oceanic climate change in both surface and deep waters.

### BIO 4N. Peopleomics: The science and ethics of personalized genomic medicine. 3 Units.

Exploration of the new field of personalized genomic medicine. Personalized medicine is based on the idea that each person's unique genome sequence can be used to predict risk of acquiring specific diseases, and to make more informed medical choices. The science behind these approaches; where they are heading in the future; and the ethical implications such technology presents. Lectures augmented with hands-on experience in exploring and analyzing a real person's genome.

### BIO 7N. Introduction to Conservation Photography. 3 Units.

Introduction to the field of conservation photography and the strategic use of visual communication in addressing issues concerning the environment and conservation. Students will be introduced to basic digital photography, digital image processing, and the theory and application of photographic techniques. Case studies of conservation issues will be examined through photographs and multimedia platforms including images, video, and audio. Lectures, tutorials, demonstrations, and optional field trips will culminate in the production of individual and group projects.

### BIO 7S. Introduction to Biology. 3 Units.

The major fields of biology: biochemistry, the cell, evolution, and diversity. Foundation for higher-level biology courses.

### BIO 7SL. Introduction to Biology Lab. 2 Units.

Optional lab to be taken concurrently with BIO 7S.

### BIO 9S. Introduction to Biological Research Methods. 3 Units.

Theory and practice of experimental biology. Introduction to how to plan an experiment, conduct, and analyze data. Introduction to scientific writing and reading scientific journal articles. Prerequisite: high school biology.

### BIO 10AX. Conservation Photography. 2 Units.

Account of the genre of conservation photography and strategic use of visual communication in the environmental arena. Introduction to use of digital SLR cameras and digital image processing. Case studies of conservation issues accompanied by multimedia platforms including images, video, and audio. Theory and application of photographic techniques. Lectures, tutorials, demonstrations, and field trips. Individual and group projects.

### BIO 10SC. Natural History, Marine Biology, and Research. 2 Units.

Monterey Bay is home to the nation's largest marine sanctuary and also home to Stanford's Hopkins Marine Station. This course, based at Hopkins, explores the spectacular biology of Monterey Bay and the artistic and political history of the region. We will conduct investigations across all of these contexts toward an inclusive understanding of *place*, ultimately to lead us to explore our own lives in relation to the natural world, historical and cultural milieu, and the direction of our individual life path. The location at the entry point to the Big Sur Coast of California provides a unique outdoor laboratory in which to study the biology of the bay and the adjacent coastal lands. It is also an area with a deep cultural, literary and artistic history. We will meet marine biologists, experts in the literary history of Cannery Row and the writings of John Steinbeck, local artists and photographers, experts in the neuroscience of creativity, as well as people who are very much involved in the forces and fluxes that steer modern culture. This rich and immersive approach provides students a rare opportunity to reflect on their relationships to nature, culture, and their own individual goals. The course emphasizes interactions and discussions. We will be together all of the time, either at our base at the Belden House in Pacific Grove, hiking and camping in Big Sur's pristine Big Creek Reserve on the rocky coast, and traveling to the Tassajara Mountain Zen Center in the Ventana wilderness for several days. This is not an ordinary academic experience, instead it is an adventure of a personal, intellectual, spiritual and physical kind. We welcome people with wide interests; artists, poets, writers, engineers, scientists and musicians. Mostly we invite people with an open mind and a sense of adventure. Students are expected to have read the several books provided as introductory material before the course begins, and each is also expected to become our local expert in an area such as plant identification, bird identification, poetry, weather prediction, photography, history, ethnography, etc. The course requires an individual research project of your choice on a topic related to the general theme. Final reports will be presented at the last meeting of the group and may involve any medium, including written, oral, and performance media. Note: This course will be held at the Hopkins Marine Station in the Monterey region, and housing will be provided nearby. Transportation from campus to the housing site will be provided once students arrive to campus on Monday, September 5 (Labor Day). Transportation to campus from the Belden House in Pacific Grove will be provided on Saturday, September 24. Sophomore College Course: Application required, due noon, April 5, 2016. Apply at <http://soco.stanford.edu>.

### BIO 12N. Sensory Ecology of Marine Animals. 3 Units.

Animals living in the oceans experience a highly varied range of environmental stimuli. An aquatic lifestyle requires an equally rich range of sensory adaptations, including some that are totally foreign to us. In this course we will examine sensory system in marine animals from both an environmental and behavioral perspective and from the point of view of neuroscience and information systems engineering.

### BIO 14. Bio-logging and Bio-telemetry. 3 Units.

Bio-logging is a rapidly growing discipline that includes diverse fields such as consumer electronics, medicine, and marine biology. The use of animal-attached digital tags is a powerful approach to study the movement and ecology of individuals over a wide range of temporal and spatial scales. This course is an introduction to bio-logging methods and analysis. Using whales as a model system, students will learn how use multi-sensor tags to study behavioral biomechanics.

**BIO 15N. Environmental Literacy. 3 Units.**

Preference to freshmen. Lack of public understanding of the details of most environmental problems is cited as a cause of environmental deterioration. Good citizenship requires literacy about the elements of the scientific and decision making processes that accompany most environmental issues. Whether we are aware of them or not, environmental problems significantly decrease the quality of our lives, those of future generations and of other species. For example, when the average global temperature increases to 2oC (3.6oF) above natural, as many as 400,000 species could go extinct, and definitely some of those species, such as pollinators, currently enhance our quality of life greatly. Your grandchildren may need to learn to survive in a qualitatively different world than the one we know today. In this class we will explore many of the major problems our world is facing today including: over population, over consumption, sustainability impediments, toxins and pollution, and climate change. In addition, we will explore policies or lack thereof, communication missteps and breakdowns, and the role of the media to educate yet they often cause confusion. Each week we will read articles, mainly from the scientific literature, but also some from the policy world, and discuss them in class.

**BIO 16. Conservation Storytelling: Pre-course for BOSP South Africa. 1 Unit.**

Limited to students admitted to the BOSP South Africa overseas seminar. Through 4 workshop meetings, students will develop and pitch story ideas, form teams in which a writer and a photographer agree to collaborate on a story, and conduct background research prior to departing for South Africa.

**BIO 18Q. Plant Evolutionary Ecology. 3 Units.**

Plant EcoEvo analyzes the conceptual basis of ecology and evolution from the plants' perspective. After a broad overview of the biomes of the world, it explores population ecology, community ecology and biotic interactions. This is followed by an analysis of biodiversity from the botanical perspective and closes with a discussion of anthropogenic impact on plants. The course is based on lectures and practical activities (discussion of selected papers; analysis of data; laboratory activities, 2 field trips). Emphasis: Latin American ecosystems.

**BIO 20. Introduction to Brain and Behavior. 3 Units.**

Evolutionary principles to understand how the brain regulates behavior physiologically, and is also influenced by behavioral interactions. Topics include neuron structure and function, transmission of neural information, anatomy and physiology of sensory and motor systems, regulation of body states, the biological basis of learning and memory, and behavioral abnormalities.  
Same as: HUMBIO 21

**BIO 21. The Science of the Extreme Life of the Sea. 3 Units.**

Based on the book *Extreme Life of the Sea*, this course will explore the new science about how marine species thrive in some of the world's most difficult environments. Species that live in the hottest, coldest, deepest and shallowest habitats will be described along with the genetic, biochemical, physiological and behavioral adaptations that allow them to persist. We will also examine the fastest, the oldest, the most archaic, the smallest, biggest and the most numerous species. Emphasis will be on the scientific discoveries about these species that give insight into their lives.

**BIO 25Q. The Molecular Basis of Genetic Disease. 3 Units.**

Preference to sophomores. Focus is on two genetic diseases resulting from the production of protein molecules that are unable to fold into their native conformations, called conformational diseases: cystic fibrosis and amyotrophic lateral sclerosis or Lou Gehrig's disease. Hypotheses and controversies surrounding the molecular basis of these disorders, and implications for novel therapeutics. Readings from research literature.

**BIO 26N. Maintenance of the Genome. 3 Units.**

Preference to freshmen. The precious blueprint for life is entrusted to the genomic DNA molecules in all living cells. Multiple strategies have evolved to prevent the deleterious consequences from endogenous DNA alterations and damage from radiation or genotoxic chemicals in the environment. In this seminar you will learn about the remarkable systems that scan cellular DNA for alterations and make repairs to ensure genomic stability. Deficiencies in DNA repair have been implicated in many hereditary diseases involving developmental defects, premature aging, and/or predisposition to cancer. An understanding of DNA repair mechanisms is important for advances in the fields of cancer biology, neurobiology, and gerontology. Background readings, introductory lectures, student presentations, short term paper.

**BIO 28Q. Hacking the Genetic Code. 3 Units.**

How do scientists use the tools of molecular biology to engineer microorganisms, plants, and animals to advance knowledge and improve human health? In this Sophomore Seminar, we will explore the molecular details of genome manipulation tools; the biological, medical, and environmental applications of these tools; and the ethical implications of genetic engineering. Throughout the quarter, you will have an opportunity to analyze journal articles, talk with genome engineering experts, design experiments, engage in debates, and develop an original research proposal.

**BIO 29N. PARTY WITH TREES. 3 Units.**

Ever marveled at the imposing trees around campus? This course will explore trees on campus using Bracewell's marvelous "Trees of Stanford" as a rough guide. We will develop tools and explore ideas that will allow the wider community to cherish and appreciate the oft-neglected trees on campus. The course will include guest lectures that focus on the theme of trees: from literature to the physics and biology of trees, to the environmental impact of global forest loss.

**BIO 30. Ecology for Everyone. 4 Units.**

Everything is connected, but how? Ecology is the science of interactions and the changes they generate. This project-based course links individual behavior, population growth, species interactions, and ecosystem function. Introduction to measurement, observation, experimental design and hypothesis testing in field projects, mostly done in groups. The goal is to learn to think analytically about everyday ecological processes involving bacteria, fungi, plants, animals and humans. The course uses basic statistics to analyze data; there are no math prerequisites except arithmetic. Open to everyone, including those who may be headed for more advanced courses in ecology and environmental science.  
Same as: EARTHSYS 30

**BIO 30N. Extinctions in Near Time: Biodiversity loss since the Pleistocene. 3 Units.**

The transition 11,700 years ago from the Pleistocene glacial period into the Holocene interglacial witnessed the expansion of humans around the world, climatic warming and the demise of many large vertebrate species. Since that time extinctions have continued on land and in the sea, culminating with the biodiversity crisis we are experiencing today. We will explore these prehistoric extinctions: "Who? When? Where? and Why?" in order to learn more about our planet's future.

**BIO 33N. Conservation Science and Practice. 3 Units.**

Preference to freshmen. This course will explore the potential for harmonizing people and nature, for achieving improved outcomes in the well-being of both as a result of conservation investments and interventions. We will consider biophysical, economic, social, and psychological perspectives, examining an array of conservation goals, from protecting endangered species to securing ecosystem services (such as flood control and climate stability) to alleviating poverty and improving mental well-being. We will also study the design and implementation of real conservation and human development efforts worldwide, among the many farmers, ranchers, fishing people, and others managing Earth's lands and waters. Highlights include a field trip to Jasper Ridge Biological Preserve, Stanford's very own nature reserve, and guest visits of some impressive conservation leaders internationally.

**BIO 34N. Hunger. 3 Units.**

The biology of hunger and satiety, disease states that disrupt normal responses to hunger and satiety, starvation responses and adaptations to starvation in a variety of organisms, food production and distribution mechanisms, historic famines and their causes, the challenges of providing adequate food and energy for the Earth's growing population, local and global efforts to alleviate hunger, and hunger in fiction.

**BIO 41. Genetics, Biochemistry, and Molecular Biology. 5 Units.**

Emphasis is on macromolecules (proteins, lipids, carbohydrates, and nucleic acids) and how their structure relates to function and higher order assembly; molecular biology, genome structure and dynamics, gene expression from transcription to translation. Prerequisites: CHEM 31X (or 31A,B), 33. Recommended: CHEM 35; MATH 19, 20, 21 or 41, 42.

**BIO 41A. Bio Solve-It. 1 Unit.**

Students enrolled in Bio41 lecture and regular discussion sections attend two additional 80 min sections per week. The objective of the course is to help students to solidify basic concepts, identify areas to work on, and apply core concepts learned that week in Bio41 lecture and section. Space is limited, by application only. Co-Requisite: Bio 41.

**BIO 41S. Biochemistry, Genetics, and Molecular Biology. 5 Units.**

Emphasis is on macromolecules (proteins, lipids, carbohydrates, and nucleic acids) and how their structure relates to function and higher order assembly; molecular biology, genome structure and dynamics, gene expression from transcription to translation. Prerequisites: CHEM 31X (or 31A,B), 33; MATH 19, 20, 21 or 41, 42. Recommended: CHEM 35.

**BIO 42. Cell Biology and Animal Physiology. 5 Units.**

Cell structure and function; principles of animal physiology (immunology, renal, cardiovascular, sensory, motor physiology, and endocrinology); neurobiology from cellular basis to neural regulation of physiology. Prerequisites: CHEM 31X (or 31A,B), 33. Recommended: BIO 41; CHEM 35; MATH 19, 20, 21 or 41, 42.

**BIO 42A. Bio Solve-It. 1 Unit.**

Students enrolled in Bio42 lecture and regular discussion sections attend two additional 80 min sections per week. The objective of the course is to help students to solidify basic concepts, identify areas to work on, and apply core concepts learned that week in Bio42 lecture and section. Space is limited, by application only. Co-Requisite: Bio 42.

**BIO 43. Plant Biology, Evolution, and Ecology. 5 Units.**

Principles of evolution: macro- and microevolution and population genetics. Ecology: the principles underlying the exchanges of mass and energy between organisms and their environments; population, community, and ecosystem ecology; populations, evolution, and global change. Equivalent to BIOHOPK 43. Prerequisites: CHEM 31X (or 31A,B), 33. Recommended: BIO 41, 42; CHEM 35; MATH 19, 20, 21 or 41, 42.

**BIO 43A. Bio Solve-It. 1 Unit.**

Students enrolled in Bio43 lecture and regular discussion sections attend two additional 80 min sections per week. The objective of the course is to help students to solidify basic concepts, identify areas to work on, and apply core concepts learned that week in Bio43 lecture and section. Space is limited, by application only. Co-Requisite: Bio 43.

**BIO 44X. Core Molecular Biology Laboratory. 5 Units.**

Investigate yeast strains that are engineered to express the human protein, p53, and use modern molecular methods to identify the functional consequences of p53 mutations isolated from tumor cells. Learn about the protein's role as a tumor suppressor through lectures and by reading and discussing journal articles. Use molecular visualization programs to examine the structure of wild type and mutant p53 proteins. Formulate a testable hypothesis and assay the ability of mutant p53 to direct expression of several reporter genes. During guided reflection, formulate further analyses to determine whether mutant p53 is present in the cell, can bind to DNA, and/or can enter the nucleus. Conduct lab experiments, present findings through a team oral presentation, as well as a scientific poster. Prerequisites: CHEM 31X, or 31A,B, and 33; concurrent or past enrollment in Biology or Human Biology core. 44X,Y should be taken sequentially in the same year, preferably as sophomores, to prepare for internships. Preference given to juniors and seniors in fall quarter, preference given to sophomores in winter quarter. Prerequisite: BIO 41. Lab fee. Information about this class is available at <http://bio44.stanford.edu>.

**BIO 44Y. Core Plant Biology & Eco Evo Laboratory. 5 Units.**

The goal of this course is to develop an understanding of how to conduct biological research, using a topic in Ecology, Evolutionary Biology, and Plant Biology as a practical example. This includes the complete scientific process: assessing background literature, generating testable hypotheses, learning techniques for field- and lab-based data collection, analyzing data using appropriate statistical methods, and finally writing and sharing results. To build these skills, this course will focus on communities of microorganisms living in floral nectar at Stanford's nearby Jasper Ridge Biological Preserve. Students, working in teams, will develop novel research hypotheses and execute the necessary experiments and measurements to test these hypotheses. The capstone of the course will be an oral defense of students' findings, as well as a research paper in the style of a peer-reviewed journal article. Labs will be completed both on campus and at Jasper Ridge. Lab fee. Information about this class is available at <http://bio44.stanford.edu>. Satisfies WIM in Biology.

**BIO 50S. Introduction to cancer biology. 3 Units.**

Introduction to the molecular basis of cancer. This course will examine the biological processes that are disrupted in cancer, such as DNA repair, cell cycle control and signaling pathways, as well as the science behind some current treatments. Prerequisites: general biology.

**BIO 54SI. Aberrant Immune Responses: Allergy, Asthma, and Autoimmunity. 1 Unit.**

This is a discussion-based course for advanced undergraduate and graduate students. Its purpose is to introduce students to a basic understanding of diseases involving overactive immune responses and immune responses directed against the host. Lectures may include a history of the disease, etiology, epidemiology, current and future treatments, and relevant research. This class will emphasize key scientific discoveries in molecular and cellular biology that have benefited our understanding and treatment of these diseases.

**BIO 101. Ecology. 4 Units.**

The principles of ecology. Topics: interactions of organisms with their environment, dynamics of populations, species interactions, structure and dynamics of ecological communities, biodiversity. Half-day field trip required. Satisfies Central Menu Area 4. Prerequisite: 43, or consent of instructor. Recommended: statistics.

**BIO 104. Advanced Molecular Biology. 5 Units.**

Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Satisfies Central Menu Area 1. Prerequisite: Biology core. Same as: BIO 200

**BIO 105A. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.**

Formerly 96A - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course.

Same as: EARTHSYS 105A

**BIO 105B. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.**

Formerly 96B - Jasper Ridge Docent Training. First of two-quarter sequence training program to join the Jasper Ridge education/docent program. The scientific basis of ecological research in the context of a field station, hands-on field research, field ecology and the natural history of plants and animals, species interactions, archaeology, geology, hydrology, land management, multidisciplinary environmental education; and research projects, as well as management challenges of the preserve presented by faculty, local experts, and staff. Participants lead research-focused educational tours, assist with classes and research, and attend continuing education classes available to members of the JRBP community after the course.

Same as: EARTHSYS 105B

**BIO 107. Human Physiology Laboratory. 4 Units.**

This laboratory course is active and inquiry based. Aspects of exercise and temperature are explored; however, the specific questions the class tackles differ each quarter. Samples of past questions: Does lactic acid accumulation correlate with exercise fatigue at different exercise and body temperatures? Does palm cooling during exercise mitigate the effect of body temperature on fatigue with or without evaporative cooling? Students participate both as experimenters and as subjects of the experiments in two-person teams. Participants must be in good physical condition, though not necessarily athletes, and must be willing to participate in strenuous exercise routines under adverse environmental conditions. Varsity athletes concurrently participating in a spring sport must consult the instructor before applying. Discussion sessions include student presentations of journal articles, data analyses, and feedback on individual WIM research proposals. By application only, see [sites.stanford.edu/bio107/](https://sites.stanford.edu/bio107/) for the application form. Prerequisite: Bio 42 or HumBio 4A. Satisfies WIM for Biology.

Same as: HUMBIO 136

**BIO 108. Essential Statistics for Human Biology. 4 Units.**

Introduction to statistical concepts and methods that are essential to the study of questions in biology, environment, health, epidemiology and related areas. The course will teach and use the computer language R. Topics include distributions, probabilities, likelihood, linear models; illustrations will be based on recent research.

Same as: HUMBIO 85A

**BIO 109A. The Human Genome and Disease. 3 Units.**

The variability of the human genome and the role of genomic information in research, drug discovery, and human health. Concepts and interpretations of genomic markers in medical research and real life applications. Human genomes in diverse populations. Original contributions from thought leaders in academia and industry and interaction between students and guest lecturers. Students with a major, minor or cotermin in Biology: 109A/209A or 109B/209B may count toward degree program but not both.

Same as: BIOC 109A, BIOC 209A, HUMBIO 158

**BIO 109B. The Human Genome and Disease: Genetic Diversity and Personalized Medicine. 3 Units.**

Continuation of 109A/209A. Genetic drift: the path of human predecessors out of Africa to Europe and then either through Asia to Australia or through northern Russia to Alaska down to the W. Coast of the Americas. Support for this idea through the histocompatibility genes and genetic sequences that predispose people to diseases. Guest lectures from academia and pharmaceutical companies. Prerequisite: Biology or Human Biology core. Students with a major, minor or cotermin in Biology: 109A/209A or 109B/209B may count toward degree program but not both.

Same as: BIOC 109B

**BIO 110. Chromatin Regulation of the Genome. 3 Units.**

Maintenance of the genome is a prerequisite for life. In eukaryotes, all DNA-templated processes are tightly connected to chromatin structure and function. This course will explore epigenetic and chromatin regulation of cellular processes related to aging, cancer, stem cell pluripotency, metabolic homeostasis, and development. Course material integrates current literature with a foundational review of histone modifications and nucleosome composition in epigenetic inheritance, transcription, replication, cell division and DNA damage responses.

Same as: BIO 210

**BIO 112. Human Physiology. 4 Units.**

Human physiology will be examined by organ systems: cardiovascular, respiratory, renal, gastrointestinal and endocrine. Molecular and cell biology and signaling principles that underlie organ development, pathophysiology and opportunities for regenerative medicine are discussed, as well as integrative control mechanisms and fetal development. Prerequisite: Biology or Human Biology core.

Same as: HUMBIO 133

**BIO 113. Fundamentals of Molecular Evolution. 4 Units.**

The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Satisfies Central Menu Areas 1 or 4. Prerequisites: Biology core or graduate standing in any department, and consent of instructor.

Same as: BIO 244

**BIO 115. The hidden kingdom - evolution, ecology and diversity of fungi. 4 Units.**

Fungi are critical, yet often hidden, components of the biosphere. They regulate decomposition, are primary partners in plant symbiosis and strongly impact agriculture and economics. Students will explore the fascinating world of fungal biology, ecology and evolution via lecture, lab, field exercises and Saturday field trips that will provide traditional and molecular experiences in the collection, analysis and industrial use of diverse fungi. Students will choose an environmental niche, collect and identify resident fungi, and hypothesize about their community relationship. Prerequisite: Bio 43 recommended.

Same as: BIO 239

**BIO 116. Ecology of the Hawaiian Islands. 4 Units.**

Terrestrial and marine ecology and conservation biology of the Hawaiian Archipelago. Taught in the field in Hawaii as part of quarter-long sequence of courses including Earth Sciences and Anthropology. Topics include ecological succession, plant-soil interactions, conservation biology, biological invasions and ecosystem consequences, and coral reef ecology. Restricted to students accepted into the Earth Systems of Hawaii Program.

Same as: EARTHSYS 116

**BIO 117. Biology and Global Change. 4 Units.**

The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or graduate standing.

Same as: EARTHSYS 111, ESS 111

**BIO 118. Genetic Analysis of Biological Processes. 4 Units.**

Focus is on using mutations and genetic analysis to study biological and medical questions. The first portion of the course covers how the identification and analysis of mutations can be used in model systems to investigate biological processes such as development and metabolism. In the second portion of the course, we focus on the use of existing genetic variation in humans and other species to identify disease-associated genes as well as to investigate variation in morphological traits such as body size and shape.

**BIO 120. Bacteria in Health and Disease. 3 Units.**

Enrollment limited to junior and senior undergraduates, graduate students and medical students. Introduces students to the bacteria that live in and on humans and, in some cases, can cause disease and sometimes death. Topics include the biology of the interaction of the simple microbe with complex human biology and the factors that determine whether or not we coexist relatively peacefully, suffer from overt disease, or succumb to the bacterial onslaught.

Same as: MI 120

**BIO 121. Biogeography. 3 Units.**

Global distributions of organisms through the Phanerozoic, with emphasis on historical causes. Topics: plate tectonics, island biogeography, climatic change, dispersal, vicariance, ecology of invasions, extinction, gradients, diversity. Satisfies Central Menu Area 4.

**BIO 123A. Cell and Developmental Biology I. 4 Units.**

This is the first of a two course series that explores organizing principles of development at the cellular and tissue level. Students will learn the mechanisms by which cells polarize, interact with each other and their environment, divide, and generate force and movement and how these processes are utilized during the development of multicellular organisms. The course will also cover how cells communicate to pattern cell specification and morphogenesis during tissue and organ formation and during stem cell regulated homeostasis.

**BIO 123B. Cell and Developmental Biology II. 4 Units.**

This is the second of a two course series that explores organizing principles of development at the molecular, cellular and tissue level. Students will learn the biochemical and cellular mechanisms by which cells shape and interpret development signals in order to accomplish important developmental tasks such as directed cell movement, regulated growth of organs and tissues, and the establishment of cell-type specific gene expression. Emphasis will be placed on experimental logic and methods with discussions of primary research papers. Prerequisite: Enrollment in BIO 123B requires completion of BIO 123A.

**BIO 124. Topics in Cancer Biology. 3 Units.**

This discussion-based course will explore the scientific tools used to study the molecular and genetic basis of cancer and to develop treatments for this disease. Topics covered may include cancer models, traditional and targeted cancer therapies, and the development of resistance to treatment. Students will develop skills in critical reading of primary research articles and will also complete a final project. Prerequisites: Biology/Human Biology core or equivalent or consent of instructor.

**BIO 126. Introduction to Biophysics. 3-4 Units.**

Core course appropriate for advanced undergraduate students and graduate students with prior knowledge of calculus and a college physics course. Introduction to how physical principles offer insights into modern biology, with regard to the structural, dynamical, and functional organization of biological systems. Topics include the roles of free energy, diffusion, electromotive forces, non-equilibrium dynamics, and information in fundamental biological processes.

Same as: APPPHYS 205, BIO 226

**BIO 127. From Generation to Generation: Scientific and Cultural Approaches to Jewish Genetics. 1 Unit.**

This series of guest lectures aims to explore the connections between genetics and Jewish Studies. How do different Jewish populations relate to each other? To what extent are Jewish populations of the present descended from those of the past? What are the causes of diseases that occur disproportionately in Jewish populations? These and other questions will be addressed in a program that crosses the boundaries between science and Jewish Studies, culture and biology.

**BIO 128. Geographic Impacts of Global Change: Mapping the Stories. 4 Units.**

Forces of global change (eg., climate disruption, biodiversity loss, disease) impart wide-ranging political, socioeconomic, and ecological impacts, creating an urgent need for science communication. Students will collect data for a region of the US using sources ranging from academic journals to popular media and create an interactive Story Map (<http://stanford.maps.arcgis.com/apps/StorytellingTextLegend/index.html?appid=dafe2393fd2e4acc8b0a4e6e71d0b6d5>) that merges the scientific and human dimensions of global change. Students will interview stakeholders as part of a community-engaged learning experience and present the Map to national policy-makers. Our 2014 Map is being used by the CA Office of Planning & Research.

Same as: EARTHSYS 129

**BIO 129A. Cellular Dynamics I: Cell Motility and Adhesion. 4 Units.**

Cell motility emphasizing role of actin assembly and dynamics coupling actin organization to cell movement. Interaction of cells with extracellular matrix, and remodelling of extracellular matrix in development and disease. Directed cell migration by chemotaxis (neuronal path-finding, immune cells). Cell-cell adhesion, formation of intercellular junctions and mechanisms regulating cell-cell interactions in development and diseases. Emphasis is on experimental logic, methods, problem solving, and interpretation of results. Students present research papers. Satisfies Central Menu Area 2. Prerequisite: Biology core.

**BIO 129B. Cellular Dynamics II: Building a Cell. 4 Units.**

Principles of cell organization; how common biochemical pathways are modified to generate diversity in cell structure and function. Roles of actin and microtubule cytoskeletons in cellular architecture. Mechanisms of protein sorting and trafficking, and protein modules and switches in regulating cell polarity. Yeast to polarized epithelial cells and neurons. Emphasis is on experimental logic, methods, problem solving, and interpretation of results. Students present research papers. Satisfies Central Menu Area 2. Prerequisite: Biology core. Recommended: 129A.

**BIO 131. Complex Systems Lab. 1 Unit.**

Applications of complex systems will be explored in this seminar through lectures, discussions, and a class project. Lecture topics include a discussion of chaos in weather modeling and aircraft turbulence, application of network science to understand Ebola and the ALS ice bucket challenge, and self-organized processes such as crowd dynamics and Wikipedia. The first half of the course will emphasize complex systems applications. Students will apply complex systems analysis techniques to their personal research, a current event, or repeat a classic complex systems experiment. Projects can include topics such as calculating the fractal dimension of a forest, simulating crowd dynamics, studying the degree distribution of social networks, or making a Van der Pol oscillator. Graduate student led seminar. Can be repeated for credit.

**BIO 132. Advanced Imaging Lab in Biophysics. 4 Units.**

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor. Same as: APPPHYS 232, BIO 232, BIOPHYS 232, GENE 232

**BIO 136. Evolutionary Paleobiology. 4 Units.**

A paleontological approach to evolutionary theory. Topics: history of life, speciation, heterochrony, evolutionary constraint, coevolution, macroevolution, the Cambrian Explosion, mass extinctions, taphonomy, life on land, life in the sea, life in the air. Satisfies Central Menu Area 4. Prerequisite: Biology Core.

**BIO 137. Plant Genetics. 3-4 Units.**

Gene analysis, mutagenesis, transposable elements; developmental genetics of flowering and embryo development; biochemical genetics of plant metabolism; scientific and societal lessons from transgenic plants. Satisfies Central Menu Area 2. Prerequisite: Biology core or consent of instructor. Satisfies WIM in Biology.

**BIO 138. Ecosystem Services: Frontiers in the Science of Valuing Nature. 3 Units.**

This advanced course explores the science of valuing nature, beginning with its historical origins, and then its recent development in natural (especially ecological), economic, psychological, and other social sciences. We will use the ecosystem services framework (characterizing benefits from ecosystems to people) to define the state of knowledge, core methods of analysis, and research frontiers, such as at the interface with biodiversity, resilience, human health, and human development. Intended for diverse students, with a focus on research and real-world cases. To apply, please email the instructor (gdaily@stanford.edu) with a brief description of your background and research interests. Same as: BIO 238

**BIO 141. Biostatistics. 3-5 Units.**

Introductory statistical methods for biological data: describing data (numerical and graphical summaries); introduction to probability; and statistical inference (hypothesis tests and confidence intervals). Intermediate statistical methods: comparing groups (analysis of variance); analyzing associations (linear and logistic regression); and methods for categorical data (contingency tables and odds ratio). Course content integrated with statistical computing in R. Same as: STATS 141

**BIO 143. Evolution. 3 Units.**

Principles of evolution. Adaptation and natural selection. Darwin and the history of evolutionary thought. Population genetics, including genetic variation and mutation, and effects of migration, drift, linkage, and recombination. Evolutionary phenomena: developmental evolution, life history evolution, molecular evolution, sexual selection, social evolution, and speciation. Pattern and process in biological diversity. Case studies, including human evolution. Satisfies central menu area 4, ecology & evolution.

**BIO 144. Conservation Biology: A Latin American Perspective. 3 Units.**

Principles and application of the science of preserving biological diversity. Conceptually, this course is designed to explore 4 major components relevant to the conservation of biodiversity, as exemplified by the Latin American region. The conceptual frameworks and principles, however, should be generally applicable, and provide insights for all regions of the world, including those of lesser biodiversity. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. Graduate level students will be expected to conduct a literature research exercise leading to a written paper, addressing a topic of their choosing, derived from any of the themes discussed in class. Same as: BIO 234, HUMBIO 112

**BIO 145. Ecology and evolution of animal behavior. 3 Units.**

Ecological and evolutionary perspectives on animal behavior, with an emphasis on social and collective behavior. This is a project-based course in a lecture/seminar format. Seminars will be based on discussion of journal articles. Independent research projects on the behavior of animals on campus. Prerequisites: Biology or Human Biology core, Biology/ES 30. Recommended: statistics. Same as: BIO 245

**BIO 146. Population Studies. 1 Unit.**

Series of talks by distinguished speakers introducing approaches to population and resource studies.

**BIO 149. The Neurobiology of Sleep. 4 Units.**

Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16. Same as: BIO 249, HUMBIO 161

**BIO 150. Human Behavioral Biology. 5 Units.**

Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness. Same as: HUMBIO 160

**BIO 151. Mechanisms of Neuron Death. 3 Units.**

For Biology majors with background in neuroscience. Cell and molecular biology of neuron death during neurological disease. Topics: the amyloid diseases (Alzheimer's), prion diseases (kuru and Creutzfeldt-Jakob), oxygen radical diseases (Parkinson's and ALS), triplet repeat diseases (Huntington's), and AIDS-related dementia. Student presentations. Enrollment limited to 15; application required.

**BIO 152. Imaging: Biological Light Microscopy. 3 Units.**

Survey of instruments which use light and other radiation for analysis of cells in biological and medical research. Topics: basic light microscopy through confocal fluorescence and video/digital image processing. Lectures on physical principles; involves partial assembly and extensive use of lab instruments. Lab. Prerequisites: some college physics, Biology core. Same as: MCP 222

**BIO 153. Cellular Neuroscience: Cell Signaling and Behavior. 4 Units.**

Neural interactions underlying behavior. Prerequisites: PSYCH 1 or basic biology. Same as: PSYCH 120

**BIO 154. Molecular and Cellular Neurobiology. 4 Units.**

For advanced undergraduate students. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Satisfies Central Menu Areas 2 or 3 for Bio majors. Prerequisite for undergraduates: Biology core or equivalent, or consent of instructors.

**BIO 156. Epigenetics. 2 Units.**

Epigenetics is the process by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. Course will cover the molecular mechanisms governing epigenetics, ranging from the discovery of epigenetic phenomena to present-day studies on the role of chromatin, DNA methylation, and RNA in regulating epigenetics processes. Topics include: position effect gene expression, genome regulation, gene silencing & heterochromatin, histone code, DNA methylation & imprinting, epigenetics & disease, and epigenetic-based therapeutics. Prerequisite: BIO41 and BIO42 or consent of instructor, advanced biology course such as Bio104. Same as: BIO 256

**BIO 157. Biochemistry and Molecular Biology of Plants. 3-4 Units.**

Biochemical and molecular basis of plant growth and adaptation. Topics include: hormone signal transduction; photoreceptor chemistry and signaling; metabolite sensing and transport; dynamics of photosynthesis; plant innate immunity and symbiosis. Lectures and readings will emphasize research methods. Prerequisite: Biology core or equivalent, or consent of instructor. Same as: BIO 257

**BIO 158. Developmental Neurobiology. 4 Units.**

For advanced undergraduates and coterminial students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and trophic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Satisfies Central Menu Areas 2 or 3. Prerequisite: BIO 42 or equivalent. Same as: BIO 258

**BIO 163. Neural Systems and Behavior. 4 Units.**

The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A. Same as: BIO 263, HUMBIO 163

**BIO 165. Molecular and Cellular Mechanisms of Neurological Disease. 1 Unit.**

Current topics in research and investigative therapies of neurological disorders, including epilepsy, OCD, Alzheimer's disease, stroke and multiple sclerosis. Analysis and discussion of primary research papers as well as sources directed at general public. Emphasis on critical thinking, experimental design, therapeutic approaches. Guest lecturers include Dr. Lawrence Steinman and Dr. Gary Steinberg."

**BIO 168. Explorations in Stem Cell Biology. 3 Units.**

A discussion-based course for advanced undergraduates. The purpose of this course is to introduce students to key topics in stem cell biology and foster the development of strong scientific writing skills. We will review and discuss some landmark and current primary literature in the stem cell field. Topics will include embryonic and adult stem cells, cellular reprogramming and stem cells in disease and regenerative medicine. Students will present a current research paper in their preferred stem cell topic area and compose a novel research proposal. Prerequisites: Biology or Human Biology core. Satisfies WIM in Biology.

**BIO 173. Chemical Biology. 3 Units.**

Chemical biology is an integrative discipline that seeks to apply chemical tools and approaches to understand biology. This course will introduce students to various methods and approaches used in this field, with an emphasis on the use of natural products and synthetic small molecules as probes of biological function. Specific examples will be used to illustrate the ramifications of chemical biology with molecular, cell and developmental biology. The interaction between disease and drug discovery will be considered in detail. Prerequisites: Completion of BioCore (BIO 41, 42, 43).

**BIO 174. Human Skeletal Anatomy. 5 Units.**

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week. Same as: ANTHRO 175, ANTHRO 275, BIO 274, HUMBIO 180

**BIO 177. Plant Microbe Interaction. 3 Units.**

Molecular basis of plant symbiosis and pathogenesis. Topics include mechanisms of recognition and signaling between microbes and plant hosts, with examples such as the role of small molecules, secreted peptides, and signal transduction pathways in symbiotic or pathogenic interactions. Readings include landmark papers together with readings in the contemporary literature. Prerequisites: Biology core and two or more upper division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry. Same as: BIO 277

**BIO 178. Microbiology Literature. 3 Units.**

For advanced undergraduates and first-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; recent literature on bacterial pathogens such as Salmonella, Vibrio, and/or Yersinia. Diverse experimental approaches: biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Biology Core and two upper-division courses in genetics, molecular biology, or biochemistry. Same as: BIO 278

**BIO 180. Microbial Physiology. 3 Units.**

Introduction to the physiology of microbes including cellular structure, transcription and translation, growth and metabolism, mechanisms for stress resistance and the formation of microbial communities. These topics will be covered in relation to the evolution of early life on Earth, ancient ecosystems, and the interpretation of the rock record. Recommended: introductory biology and chemistry. Same as: EARTHSYS 255, ESS 255, GS 233A

**BIO 181. Human Genetic Variation. 3 Units.**

The geographic distribution of human genetic variation; the genetic perspective on ancient and recent human migrations; quantitative methods for inference of human evolutionary history from patterns of genetic variation. Connections of human genetic variation to current topics such as ancestry testing, DNA forensics, and identification of disease genes. Prerequisites; Bio or HumBio core, calculus.

**BIO 182. Modeling Cultural Evolution. 3 Units.**

Seminar. Quantitative models for the evolution of socially transmitted traits. Rates of change of learned traits in populations and patterns of cultural diversity as a function of innovation and cultural transmission. Learning in constant and changing environments. Possible avenues for gene-culture coevolution. Same as: BIO 282

**BIO 183. Theoretical Population Genetics. 3 Units.**

Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and their influence on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor.  
Same as: BIO 283

**BIO 186. Natural History of the Vertebrates. 4 Units.**

Broad survey of the diversity of vertebrate life. Discussion of the major branches of the vertebrate evolutionary tree, with emphasis on evolutionary relationships and key adaptations as revealed by the fossil record and modern phylogenetics. Modern orders introduced through an emphasis on natural history, physiology, behavioral ecology, community ecology, and conservation. Lab sessions focused on comparative skeletal morphology through hands-on work with skeletal specimens. Discussion of field methods and experience with our local vertebrate communities through field trips to several of California's distinct biomes. Prerequisite: Biology core.  
Same as: BIO 286

**BIO 188. Biochemistry I. 3 Units.**

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. (CHEMENG offerings formerly listed as 188/288.) Prerequisites: CHEM 33, 35, 131, and 135 or 171.  
Same as: CHEM 181, CHEMENG 181, CHEMENG 281

**BIO 189. Biochemistry II. 3 Units.**

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).  
Same as: CHEM 183, CHEMENG 183, CHEMENG 283

**BIO 196A. Biology Senior Reflection. 3 Units.**

Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C. Satisfies WIM in Biology.

**BIO 196B. Biology Senior Reflection. 3 Units.**

Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C.

**BIO 196C. Biology Senior Reflection. 3 Units.**

Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C.

**BIO 197WA. Senior Writing Project: The Personal Essay in Biology. 3 Units.**

Seminar focused on writing. Compose, workshop and revise scientifically relevant and personal essays in biology directed at a mainstream audience, interweaving research, interview, memoir, and other elements of nonfiction craft. Satisfies WIM in Biology.

**BIO 198. Directed Reading in Biology. 1-15 Unit.**

Individually arranged under the supervision of members of the faculty.

**BIO 198X. Out-of-Department Directed Reading. 1-15 Unit.**

Individually arranged under the supervision of members of the faculty. Credit for work arranged with out-of-department faculty is restricted to Biology majors and requires department approval. See <http://biohonors.stanford.edu> for information and petitions. May be repeated for credit.

**BIO 199. Advanced Research Laboratory in Experimental Biology. 1-15 Unit.**

Individual research taken by arrangement with in-department instructors. See <http://biohonors.stanford.edu> for information on research sponsors, units, and credit for summer research. May be repeated for credit.

**BIO 199W. Senior Honors Thesis: How to Effectively Write About Scientific Research. 3 Units.**

Workshop. For seniors pursuing an honors thesis in a biology-focused major or program. Focus on improving scientific writing and synthesizing in the context of students' individual research projects. Complete literature review which will form the basis for the thesis introduction. Develop methods section of the thesis. Small seminar-style discussion sections with research-based discussions, student led PowerPoint presentations, and writing workshops. Co-requisite: Concurrent enrollment in 199 or 199X or equivalent. Satisfies WIM in Biology.

**BIO 199X. Out-of-Department Advanced Research Laboratory in Experimental Biology. 1-15 Unit.**

Individual research by arrangement with out-of-department instructors. Credit for 199X is restricted to declared Biology majors and requires department approval. See <https://biology.stanford.edu/academics/undergraduate-research/research> for information on research sponsors, units, petitions, deadlines, credit for summer research, and out-of-Stanford research. May be repeated for credit.

**BIO 200. Advanced Molecular Biology. 5 Units.**

Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Satisfies Central Menu Area 1. Prerequisite: Biology core.  
Same as: BIO 104

**BIO 202. Ecological Statistics. 3 Units.**

Intended for graduate students (and advanced undergraduates in special circumstances with consent of instructors) in biology and related environmental sciences, this course is an introduction to statistical methods for ecological data analysis, using the programming language R. The course will have lectures, discussions, and independent research projects using the students' own data or simulated or publicly available data.

**BIO 204. Neuroplasticity: From Synapses to Behavior. 3 Units.**

This course will focus on neuroplasticity from a broad perspective, from molecular cellular mechanism to its involvement in behavior and diseases. Emphasis will be on: a) molecular and cellular mechanisms underlying various forms of neuroplasticity; b) the neuroplasticity during brain development; c) the neuroplasticity in adult brain with respect to learning and memory; and d) maladaptive neuroplasticity in neurodegenerative disease and drug addiction. This course is designed for Ph.D. students from both the Biology and Neuroscience programs. Open to advanced undergraduates by consent of instructor.

**BIO 208. Spanish in Science/Science in Spanish. 2 Units.**

For graduate and undergraduate students interested in the natural sciences and the Spanish language. Students will acquire the ability to communicate in Spanish using scientific language and will enhance their ability to read scientific literature written in Spanish. Emphasis on the development of science in Spanish-speaking countries or regions. Course is conducted in Spanish and intended for students pursuing degrees in the sciences, particularly disciplines such as ecology, environmental science, sustainability, resource management, anthropology, and archeology.

Same as: EARTHSYS 207, LATINAM 207

**BIO 210. Chromatin Regulation of the Genome. 3 Units.**

Maintenance of the genome is a prerequisite for life. In eukaryotes, all DNA-templated processes are tightly connected to chromatin structure and function. This course will explore epigenetic and chromatin regulation of cellular processes related to aging, cancer, stem cell pluripotency, metabolic homeostasis, and development. Course material integrates current literature with a foundational review of histone modifications and nucleosome composition in epigenetic inheritance, transcription, replication, cell division and DNA damage responses.

Same as: BIO 110

**BIO 214. Advanced Cell Biology. 4 Units.**

For Ph.D. students. Current research on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, compartmentalization, transport and trafficking, motility and adhesion, and differentiation. Weekly reading of current papers from the primary literature. Preparation of an original research proposal. Prerequisite for advanced undergraduates: BIO 129A,B, and consent of instructor.

Same as: BIOC 224, MCP 221

**BIO 216. Terrestrial Biogeochemistry. 3 Units.**

Nutrient cycling and the regulation of primary and secondary production in terrestrial, freshwater, and marine ecosystems; land-water and biosphere-atmosphere interactions; global element cycles and their regulation; human effects on biogeochemical cycles. Prerequisite: graduate standing in science or engineering; consent of instructor for undergraduates or coterminal students.

Same as: ESS 216

**BIO 217. Neuronal Biophysics. 4 Units.**

Biophysical descriptions and mechanisms of passive and excitable membranes, ion channels and pumps, action potential propagation, and synaptic transmission. Introduction to dynamics of single neurons and neuronal networks. Emphasis is on the experimental basis for modern research applications. Interdisciplinary aspects of biology and physics. Literature, problem sets, and student presentations. Prerequisites: undergraduate physics, calculus, and biology.

**BIO 222. Exploring Neural Circuits. 3 Units.**

Seminar. The logic of how neural circuits control behavior; how neural circuits are assembled during development and modified by experience. Emphasis is on primary literature. Topics include: neurons as information processing units; simple and complex circuits underlying sensory information processing and motor control; and development and plasticity of neural circuits. Advanced undergraduates and graduate students with background in physical science, engineering, and biology may apply to enroll. Recommended: background in neuroscience.

**BIO 226. Introduction to Biophysics. 3-4 Units.**

Core course appropriate for advanced undergraduate students and graduate students with prior knowledge of calculus and a college physics course. Introduction to how physical principles offer insights into modern biology, with regard to the structural, dynamical, and functional organization of biological systems. Topics include the roles of free energy, diffusion, electromotive forces, non-equilibrium dynamics, and information in fundamental biological processes.

Same as: APPPHYS 205, BIO 126

**BIO 227. Foundations of Community Ecology. 2 Units.**

Discussion of classic papers in community ecology (Forbes, Clements, Gleason, Grinnell, Lindeman, Preston, Elton, Hutchinson, May, MacArthur, Odum, Connell, Paine, Tilman, etc.) and contemporary papers on related topics, to develop historical perspectives to understand current issues and identify future directions. Prerequisite for undergraduates: consent of instructor.

**BIO 230. Molecular and Cellular Immunology. 4 Units.**

Components of the immune system and their functions in immune responses in health and disease: development of the immune system; innate and adaptive immunity; structure and function of antibodies; molecular biology and biochemistry of antigen receptors and signaling pathways; cellular basis of immune responses and their regulation; genetic control of immune responses and disease susceptibility. Lectures and discussion in class and in sections. Satisfies Central Menu Areas 1 or 2. For upper class undergraduates and graduate students who have not previously taken an introductory immunology course. Prerequisite for undergraduates: Biology or Human Biology core, or consent of instructor.

**BIO 230A. Molecular and Cellular Immunology Literature Review. 1 Unit.**

Special discussion section for graduate students. Supplement to 230. Corequisite: 230.

**BIO 232. Advanced Imaging Lab in Biophysics. 4 Units.**

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

Same as: APPPHYS 232, BIO 132, BIOPHYS 232, GENE 232

**BIO 234. Conservation Biology: A Latin American Perspective. 3 Units.**

Principles and application of the science of preserving biological diversity. Conceptually, this course is designed to explore 4 major components relevant to the conservation of biodiversity, as exemplified by the Latin American region. The conceptual frameworks and principles, however, should be generally applicable, and provide insights for all regions of the world, including those of lesser biodiversity. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: BIO 101, or BIO 43 or HUMBIO 2A with consent of instructor. Graduate level students will be expected to conduct a literature research exercise leading to a written paper, addressing a topic of their choosing, derived from any of the themes discussed in class.

Same as: BIO 144, HUMBIO 112

**BIO 238. Ecosystem Services: Frontiers in the Science of Valuing Nature. 3 Units.**

This advanced course explores the science of valuing nature, beginning with its historical origins, and then its recent development in natural (especially ecological), economic, psychological, and other social sciences. We will use the ecosystem services framework (characterizing benefits from ecosystems to people) to define the state of knowledge, core methods of analysis, and research frontiers, such as at the interface with biodiversity, resilience, human health, and human development. Intended for diverse students, with a focus on research and real-world cases. To apply, please email the instructor (gdaily@stanford.edu) with a brief description of your background and research interests.  
Same as: BIO 138

**BIO 239. The hidden kingdom - evolution, ecology and diversity of fungi. 4 Units.**

Fungi are critical, yet often hidden, components of the biosphere. They regulate decomposition, are primary partners in plant symbiosis and strongly impact agriculture and economics. Students will explore the fascinating world of fungal biology, ecology and evolution via lecture, lab, field exercises and Saturday field trips that will provide traditional and molecular experiences in the collection, analysis and industrial use of diverse fungi. Students will choose an environmental niche, collect and identify resident fungi, and hypothesize about their community relationship. Prerequisite: Bio 43 recommended.  
Same as: BIO 115

**BIO 244. Fundamentals of Molecular Evolution. 4 Units.**

The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Satisfies Central Menu Areas 1 or 4. Prerequisites: Biology core or graduate standing in any department, and consent of instructor.  
Same as: BIO 113

**BIO 245. Ecology and evolution of animal behavior. 3 Units.**

Ecological and evolutionary perspectives on animal behavior, with an emphasis on social and collective behavior. This is a project-based course in a lecture/seminar format. Seminars will be based on discussion of journal articles. Independent research projects on the behavior of animals on campus. Prerequisites: Biology or Human Biology core, Biology/ES 30. Recommended: statistics.  
Same as: BIO 145

**BIO 249. The Neurobiology of Sleep. 4 Units.**

Preference to seniors and graduate students. The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. Enrollment limited to 16.  
Same as: BIO 149, HUMBIO 161

**BIO 254. Molecular and Cellular Neurobiology. 3-5 Units.**

For graduate students. Includes lectures for BIO 154. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases.  
Same as: NBIO 254

**BIO 256. Epigenetics. 2 Units.**

Epigenetics is the process by which phenotypes not determined by the DNA sequence are stably inherited in successive cell divisions. Course will cover the molecular mechanisms governing epigenetics, ranging from the discovery of epigenetic phenomena to present-day studies on the role of chromatin, DNA methylation, and RNA in regulating epigenetics processes. Topics include: position effect gene expression, genome regulation, gene silencing & heterochromatin, histone code, DNA methylation & imprinting, epigenetics & disease, and epigenetic-based therapeutics. Prerequisite: BIO41 and BIO42 or consent of instructor, advanced biology course such as Bio104.  
Same as: BIO 156

**BIO 257. Biochemistry and Molecular Biology of Plants. 3-4 Units.**

Biochemical and molecular basis of plant growth and adaptation. Topics include: hormone signal transduction; photoreceptor chemistry and signaling; metabolite sensing and transport; dynamics of photosynthesis; plant innate immunity and symbiosis. Lectures and readings will emphasize research methods. Prerequisite: Biology core or equivalent, or consent of instructor.  
Same as: BIO 157

**BIO 258. Developmental Neurobiology. 4 Units.**

For advanced undergraduates and coterminal students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and trophic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Satisfies Central Menu Areas 2 or 3. Prerequisite: BIO 42 or equivalent.  
Same as: BIO 158

**BIO 263. Neural Systems and Behavior. 4 Units.**

The field of neuroethology and its vertebrate and invertebrate model systems. Research-oriented. Readings include reviews and original papers. How animal brains compare; how neural circuits are adapted to species-typical behavior; and how the sensory worlds of different species represent the world. Lectures and required discussions. Satisfies Central Menu Area 3 for Bio majors. Prerequisites: BIO 42, HUMBIO 4A.  
Same as: BIO 163, HUMBIO 163

**BIO 267. Molecular Mechanisms of Neurodegenerative Disease. 4 Units.**

The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.  
Same as: GENE 267, NENS 267

**BIO 268. Statistical and Machine Learning Methods for Genomics. 3 Units.**

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets.  
Same as: BIOMEDIN 245, CS 373, GENE 245, STATS 345

**BIO 274. Human Skeletal Anatomy. 5 Units.**

Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.

Same as: ANTHRO 175, ANTHRO 275, BIO 174, HUMBIO 180

**BIO 274S. Hopkins Microbiology Course. 3-12 Units.**

(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A and CEE 274B, or equivalents.

Same as: BIOHOPK 274, CEE 274S, ESS 253S

**BIO 277. Plant Microbe Interaction. 3 Units.**

Molecular basis of plant symbiosis and pathogenesis. Topics include mechanisms of recognition and signaling between microbes and plant hosts, with examples such as the role of small molecules, secreted peptides, and signal transduction pathways in symbiotic or pathogenic interactions. Readings include landmark papers together with readings in the contemporary literature. Prerequisites: Biology core and two or more upper division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry.

Same as: BIO 177

**BIO 278. Microbiology Literature. 3 Units.**

For advanced undergraduates and first-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; recent literature on bacterial pathogens such as *Salmonella*, *Vibrio*, and/or *Yersinia*. Diverse experimental approaches: biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Biology Core and two upper-division courses in genetics, molecular biology, or biochemistry.

Same as: BIO 178

**BIO 282. Modeling Cultural Evolution. 3 Units.**

Seminar. Quantitative models for the evolution of socially transmitted traits. Rates of change of learned traits in populations and patterns of cultural diversity as a function of innovation and cultural transmission. Learning in constant and changing environments. Possible avenues for gene-culture coevolution.

Same as: BIO 182

**BIO 283. Theoretical Population Genetics. 3 Units.**

Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and their influence on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor.

Same as: BIO 183

**BIO 286. Natural History of the Vertebrates. 4 Units.**

Broad survey of the diversity of vertebrate life. Discussion of the major branches of the vertebrate evolutionary tree, with emphasis on evolutionary relationships and key adaptations as revealed by the fossil record and modern phylogenetics. Modern orders introduced through an emphasis on natural history, physiology, behavioral ecology, community ecology, and conservation. Lab sessions focused on comparative skeletal morphology through hands-on work with skeletal specimens. Discussion of field methods and experience with our local vertebrate communities through field trips to several of California's distinct biomes. Prerequisite: Biology core.

Same as: BIO 186

**BIO 287. Advanced topics in human population genetics. 3 Units.**

Focused examination of specific topics in human population genetics, with emphasis on primary literature. Course themes may include: mathematical properties of statistics used in human population genetics, population genetics and biological race, and statistical inference of human migrations.

**BIO 290. Teaching of Biology. 1-5 Unit.**

Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. May be repeated for credit. Prerequisite: consent of instructor.

**BIO 291. Development and Teaching of Core Experimental Laboratories. 1-2 Unit.**

Preparation for teaching the core experimental courses (44X and 44Y). Emphasis is on lab, speaking, and writing skills. Focus is on updating the lab to meet the changing technical needs of the students. Taken prior to teaching either of the above courses. May be repeated for credit. Prerequisite: selection by instructor.

**BIO 292. Curricular Practical Training. 1-3 Unit.**

CPT course required for international students completing degree requirements.

**BIO 294. Cellular Biophysics. 3 Units.**

Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.

Same as: APPPHYS 294, BIOPHYS 294

**BIO 299. Biology PhD Lab Rotation. 1-10 Unit.**

Limited to first year Biology PhD students. Lab rotations with Biosciences faculty.

**BIO 300. Graduate Research. 1-10 Unit.**

For graduate students only. Individual research by arrangement with in-department instructors.

**BIO 300X. Out-of-Department Graduate Research. 1-10 Unit.**

Individual research by arrangement with out-of-department instructors. Master's students: credit for work arranged with out-of-department instructors is restricted to Biology students and requires approved department petition. See <http://biohonors.stanford.edu> for more information. May be repeated for credit.

**BIO 301. Frontiers in Biology. 1-3 Unit.**

Limited to and required of first-year Ph.D. students in molecular, cellular, and developmental biology. Current research in molecular, cellular, and developmental biology emphasizing primary research literature. Held in conjunction with the department's Monday seminar series. Students and faculty meet weekly before the seminar for a student presentation and discussion of upcoming papers.

**BIO 302. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.**

Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course is open only to Biology PhD students and is not open to auditors."

**BIO 303. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.**

Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course is open only to Biology PhD students and is not open to auditors."

**BIO 304. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.**

Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course is open only to Biology PhD students and is not open to auditors."

**BIO 306. Current Topics in Integrative Organismal Biology. 1 Unit.**

Limited to and required of graduate students doing research in this field. At Hopkins Marine Station.

**BIO 312. Ethical Issues in Ecology and Evolutionary Biology. 1 Unit.**

Focus is on ethical issues addressed in Donald Kennedy's *Academic Duty* and others of importance to academics and scientists in the fields of ecology, behavior, and evolutionary biology. Discussions led by faculty and outside guests. Satisfies ethics course requirement for ecology and evolutionary biology. Prerequisite: PhD student in the ecology and evolutionary biology or marine program, or consent of instructor.

**BIO 321. Ecological Genetics. 1-3 Unit.**

Systematic exploration of (1) the types of questions that can be addressed by ecological genetics techniques (i.e., community genomics, genetic variation between species in the same ecosystem, resource use, landscape genetics, etc.); (2) laboratory techniques available; and (3) analyses and modeling best suited for ecological genetics questions. Analysis of specific research problems and efforts (now underway or planned for the near future) among seminar participants, and discussion of these efforts with group review of the relative merits of alternative approaches.

**BIO 325. The Evolution of Body Size. 2 Units.**

Preference to graduate students and upper-division undergraduates in GS and Biology. The influence of organism size on evolutionary and ecological patterns and processes. Focus is on integration of theoretical principles, observations of living organisms, and data from the fossil record. What are the physiological and ecological correlates of body size? Is there an optimum size? Do organisms tend to evolve to larger size? Does productivity control the size distribution of consumers? Does size affect the likelihood of extinction or speciation? How does size scale from the genome to the phenotype? How is metabolic rate involved in evolution of body size? What is the influence of geographic area on maximum body size? Same as: GS 325

**BIO 326. Foundations in Biogeography. 2 Units.**

Seminar. Focus on classic papers covering the global distribution and abundance of organisms through time. Topics include: phylogenetics, phylogeography, plate tectonics, island biogeography, climatic change, dispersal, vicariance, ecology of invasions, extinction, gradients, diversity, conservation and a history of the field.

**BIO 340. The History of Evolution. 4-5 Units.**

This course examines the history of evolutionary biology from its emergence around the middle of the eighteenth century. We will consider the continual engagement of evolutionary theories of life with a larger, transforming context: philosophical, political, social, economic, institutional, aesthetic, artistic, literary. Our goal will be to achieve a historical rich and nuanced understanding of how evolutionary thinking about life has developed to its current form.

Same as: HISTORY 240, HISTORY 340

**BIO 342. Plant Biology Seminar. 1-3 Unit.**

Topics announced at the beginning of each quarter. Current literature. May be repeated for credit. See <http://carnegiedpb.stanford.edu/seminars/seminars.php>.

**BIO 346. Advanced Seminar on Prokaryotic Molecular Biology. 1 Unit.**

Enrollment limited to PhD students associated with departmental research groups in genetics or molecular biology.

**BIO 355. Ecology and Conservation of the Brazilian Cerrado: a neglected Latin American Ecosystem. 2 Units.**

This course addresses the origin, evolution and ecology of the second major biome of South America, the Brazilian Cerrado. Strong environmental filters have shaped the most diverse savanna in the world. The Cerrado is under strong pressure due to the expansion of agriculture, cattle ranching, and now afforestation programs. Land use change is the major driver of its destruction and fragmentation, which leads to the erosion of biodiversity and ecosystem services, and loss of cultural heritage. Prerequisite: BioCore or equivalent.

**BIO 356. Ecology & Conservation beyond Amazon and the Andes: The Rupestrian Grasslands of Tropical Mountains. 2 Units.**

The course addresses the biodiversity, ecosystem services and impacts of land use change in the sole mountain chain found in Brazil, the Espinhaço Mountains. Although representing only 3% of the Brazilian savanna, these mountains support 50% of its biodiversity. The biodiversity, and particularly the concentration of endemic organisms these mountains hold, and the degree of threat by human activities, make this system a real global biodiversity hotspot. Course will address its ecology and conservation and major threats such as mining, biological invasions, and other anthropogenic drivers of change. Prerequisites: Biocore or equivalent.

**BIO 375. Field Ecology & Conservation. 4 Units.**

This course is based on question-driven research in the field, addressing both conceptual frameworks and methodological aspects of evolutionary ecology and conservation biology. It consists of faculty-led research projects and student independent projects. The field part takes place in a tropical rain forest research station in Mexico September 5-15, 2014. The field component is followed by sessions on campus, where the research data are analyzed, discussed and prepared as scientific papers. The training includes presentations of the papers in a mini-symposium organized as a professional meeting.

**BIO 383. Seminar in Population Genetics. 1-3 Unit.**

Literature review, research, and current problems in the theory and practice of population genetics and molecular evolution. May be repeated for credit. Prerequisite: consent of instructor.

**BIO 384. Theoretical Ecology. 1-3 Unit.**

Recent and classical research papers in ecology, and presentation of work in progress by participants. Prerequisite: consent of instructor.

**BIO 387. Hacking Consciousness: Consciousness, Cognition, and the Brain. 1 Unit.**

Listen to renowned physicists, nutritionists, neuroscientists, etc. as they investigate the nature of consciousness as a field of all possibilities. We'll explore consciousness as the source not only of the human mind and its ability to experience, know, innovate... but also as the source of all structures and functions in creation, from fine particles to DNA to galaxies, in parallel with the scientific notion of a unified field, or superstring at the basis of the infinite diversity of time and space.

**BIO 390. Topics in Biology. 1 Unit.**

Seminar. Topics in biology ranging from neurobiology to ecology.

**BIO 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.**

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIOC 459, BIOE 459, CHEM 459, CHEMENG 459, PSYCH 459

**BIO 802. TGR Dissertation. 0 Units.****Biology/Hopkins Marine Courses****BIOHOPK 43. Plant Biology, Evolution, and Ecology. 5 Units.**

Introduction to biology in a marine context. Principles of plant biology: physiology, structure, diversity. Principles of evolution: macro and microevolution, population genetics. Ecology: the principles governing the distribution and abundance of organisms; population, community, and ecosystem ecology. Equivalent to BIO 43. Corequisite: BIOHOPK 44Y.

**BIOHOPK 44Y. Core Laboratory in Plant Biology, Ecology and Evolution. 5 Units.**

Laboratory and field projects provide working familiarity with the concepts, organisms, and techniques of plant and evolutionary biology, and ecology. Emphasis is on hands-on experimentation in the marine environment, analysis of data, and written and oral presentation of the experiments. Equivalent to BIO 44Y. Corequisite: BIOHOPK 43. Satisfies WIM in Biology.

**BIOHOPK 150H. Ecological Mechanics. 3 Units.**

(Graduate students register for 250H.) The principles of life's physical interactions. We will explore basic physics: fluid mechanics, thermal dynamics, and materials science to see how the principles of these fields can be used to investigate ecology at levels from the individual to the community. Topics include: diffusion, boundary layers, fluid-dynamic forces, locomotion, heat-budget models, fracture mechanics, adhesion, beam theory, the statistics of extremes, and the theory of self-organization. Open to students from all backgrounds. Some familiarity with basic physics and calculus advantageous but not necessary. Same as: BIOHOPK 250H

**BIOHOPK 152H. Physiology of Global Change. 2 Units.**

(Graduate students register for 252H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits.

Same as: BIOHOPK 252H

**BIOHOPK 153H. Current Topics and Concepts in Quantitative Fish Dynamics and Fisheries Management. 1 Unit.**

(Graduate students register for 253H) The course will focus on extensive reading of seminal and reference papers published in the literature in the last decade on modeling population biology, community dynamics and fishery management in the marine environment. Basic knowledge of population dynamics is welcome. The goal is to develop an appreciation on both traditional and cutting-edge modeling approaches to study the dynamics and management of marine populations subjected to natural or anthropogenic shocks and pressures.

Same as: BIOHOPK 253H

**BIOHOPK 154H. Animal Diversity: An Introduction to Evolution of Animal Form and Function from Larvae to Adults. 7 Units.**

Survey of invertebrate diversity, emphasizing form and function of both adult and larval life history stages. Focuses on how morphology, life histories, and development contribute to current views of the evolutionary diversification of multicellular animals. Labs are a hands-on exploration of animal diversity using local marine species as examples, as well as techniques of obtaining, handling, and maintaining larvae from early development through settlement. Lectures, labs, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructors.

Same as: BIOHOPK 254H

**BIOHOPK 155H. Developmental Biology and Evolution. 4 Units.**

(Graduate students register for 255) This course focusses on how animals form their basic body plans; from the formation of their germ layers; ectoderm, endoderm and mesoderm, to how they are organized along the main developmental axes; the anteroposterior and dorsoventral axes. The course will focus in part on the molecular mechanisms that underlie these developmental decisions from work carried out in established developmental model species. However, we will also explore the current understanding of how these mechanisms evolved from new insights from emerging models representing a broad range of animal phyla. The setting at Hopkins Marine Station will allow us to carry out experiments from animals collected in the field, and the course will involve a substantial lab component to complement concepts and approaches presented in lecture. nPre-requisites : Biocore or by permission of instructor.

Same as: BIOHOPK 255H

**BIOHOPK 160H. Developmental Biology in the Ocean: Diverse Embryonic & Larval Strategies of marine invertebrates. 5-8 Units.**

(Graduate students register for 261H). Lab course is designed to introduce students to the diversity in the early developmental strategies of marine invertebrates and how an understanding of these microscopic life histories is key to understanding the evolutionary diversification of phyla and the distribution of their more familiar adults. Emphasis is on hands-on collection, spawning, observation and manipulation of embryos and their larvae.

Same as: BIOHOPK 260H

**BIOHOPK 161H. Invertebrate Zoology. 5 Units.**

(Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine forms as examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lectures, lab, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor. Same as: BIOHOPK 261H

**BIOHOPK 162H. Comparative Animal Physiology. 5 Units.**

(Graduate students register for 262H.) How animals work. Topics: physiology of respiration, circulation, energy metabolism, thermal regulation, osmotic regulation, muscle physiology, and locomotion. Evolutionary and ecological physiology. Lectures, lab, and field research. An option to combine the course work with a more intensive research focus, with more units, is available. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor. Same as: BIOHOPK 262H

**BIOHOPK 163H. Oceanic Biology. 4 Units.**

(Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Satisfies Central Menu Area 4 for Bio majors. Recommended: PHYSICS 21 or 51, CHEM 31, Biology core, or consent of instructor. Same as: BIOHOPK 263H

**BIOHOPK 165H. The Extreme Life of the Sea. 3 Units.**

(Graduate students register for 265H.) Lecture course that explores the way marine species live in extreme ocean habitats. We will cover the deepest, hottest, coldest, and shallowest habitats and the biggest, fastest, most fecund, oldest and smallest species. We will focus on the molecular, physiological and ecological adaptations that allow species to thrive in these unusual environments. Same as: BIOHOPK 265H

**BIOHOPK 166H. Molecular Ecology. 5 Units.**

(Graduate students register for 266H.) How modern technologies in gene sequencing, detection of nuclear nucleotide polymorphisms, and other approaches are used to gather data on genetic variation that allow measurement of population structure, infer demographic histories, inform conservation efforts, and advance understanding of the ecology of diverse types of organisms. Same as: BIOHOPK 266H

**BIOHOPK 167H. Nerve, Muscle, and Synapse. 5 Units.**

(Graduate students register for 267H.) Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Satisfies Central Menu Area 3 for Bio majors Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, 135; calculus; or consent of instructor. Same as: BIOHOPK 267H

**BIOHOPK 168H. Disease Ecology: from parasites evolution to the socio-economic impacts of pathogens on nations. 3 Units.**

(Graduate students register for 268H.) Course will lead participants on a journey through the dynamics of infectious diseases that will start at the smallest level from within-host parasite dynamics and will progressively scale up to parasite evolution, disease ecology, public health policies, disease driven poverty traps and the socio-economic impact of infectious diseases on nations. The course will be organized around case studies, including among the others, schistosomiasis, malaria, cholera and sleeping sickness. Participants will have the opportunity to develop a capstone project. Same as: BIOHOPK 268H

**BIOHOPK 172H. Marine Ecology: From Organisms to Ecosystems. 5 Units.**

(Graduate students register for 272H.) This course incorporates the approaches of experimental ecology, biomechanics (ecomechanics), and physiology to develop an integrated perspective on the factors that govern the structures of marine ecosystems and how environment change, including anthropogenic influences, affects ecosystems' species composition and health. Focus is on rocky intertidal, kelp forest, estuarine, and midwater ecosystems of Monterey Bay. Experimental projects done in the field offer experience in a variety of ecological techniques and in analysis of ecological data. Students will engage in presentation and debates of current topics in marine ecology and conservation. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: Biology core or consent of instructor. Fulfills WIM in Biology. Same as: BIOHOPK 272H

**BIOHOPK 173H. Marine Conservation Biology. 4 Units.**

(Graduate students register for 273H.) Introduction to the key concepts of ecology and policy relevant to marine conservation issues at the population to ecosystems level. Focus on the origin and maintenance of biodiversity and conservation applications from both the biology and policy perspectives (for example, endangered species, captive breeding, reserve design, habitat fragmentation, ecosystem restoration/rehabilitation). Also includes emerging approaches such as ecosystem based management, ocean planning, and coupled social-ecological systems. The course will include lectures, readings and discussions of primary literature, and attendance at seminars with visiting scholars. Prerequisite: introductory biology; suggested: a policy and/or introductory ecology course. Same as: BIOHOPK 273H

**BIOHOPK 174H. Experimental Design and Probability. 3 Units.**

(Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on analysis of variance, when and how to use it, why it works, and how to interpret the results. Design of complex, but practical, asymmetrical experiments and environmental impact studies, and regression and analysis of covariance. Computer-based data analysis. Prerequisite: Biology core or consent of instructor. Same as: BIOHOPK 274H

**BIOHOPK 177H. Dynamics and Management of Marine Populations. 4 Units.**

(Graduate students register for 277H.) Course examines the ecological factors and processes that control natural and harvested marine populations. Course emphasizes mathematical models as tools to assess the dynamics of populations and to derive projections of their demographic fate under different management scenarios. Course objectives will be met by a combination of theoretical lectures, assigned readings and class discussions, case study analysis and interactive computer sessions. Same as: BIOHOPK 277H

**BIOHOPK 179H. Physiological Ecology of Marine Megafauna. 3 Units.**

(Graduate students register for 279H.) The ocean is home to the largest animals of all-time. How, when, and why did gigantism evolve in different taxa? What are the consequences of large body size? This course will focus on how biological processes scale with body size, with an emphasis on oceanic megafauna including marine mammals, birds, fishes, and reptiles. In particular, the course will explore the functional mechanisms that generate the scaling relationships for physiological and ecological traits, such as metabolism, ecosystem function and body size evolution. Students will also be introduced to state-of-the-art technologies used to student marine megafauna in some of the most logistically challenging habitats on earth. Same as: BIOHOPK 279H

**BIOHOPK 180H. Air and Water. 3 Units.**

(Graduate students register for 280H.) Introduction to environmental physics. The physical properties of life's fluids compared and contrasted. How and why life has evolved differently on land than in water. Topics: density, viscosity, diffusion, thermal properties, sound, light, evaporation, and surface tension. Recommended: PHYSICS 21, 23, or 51, 53; calculus; Biology core; or consent of instructor.  
Same as: BIOHOPK 280H

**BIOHOPK 182H. Stanford at Sea. 16 Units.**

(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.  
Same as: BIOHOPK 323H, EARTHSYS 323, EESS 323

**BIOHOPK 184H. Holistic Biology. 16 Units.**

(Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems is examined from complementary points of view, including scientific, historical, philosophical and literary. Lectures and discussions will focus on the writings of Ed Ricketts and John Steinbeck, poetry of Robinson Jeffers and on historical and contemporary works concerning marine and fresh-water systems, resource management and climate change. A group project with individual contributions will be carried out and presented at a symposium. This course will involve a significant amount of creative writing, and it satisfies the Writing in Major requirement for Biology. It is open to all majors and classes. Only 6 units may count towards the Biology major.  
Same as: BIOHOPK 284H

**BIOHOPK 185H. Ecology and Conservation of Kelp Forest Communities. 5 Units.**

(Graduate students register for 285H.) Five week course. Daily lectures, labs, and scuba dives focused on kelp forest biology. Topics include identification and natural history of resident organisms, ecological processes that maintain biodiversity and community organization, field methods, data analysis, and research diving techniques. Class projects contribute to ongoing studies associated with Hopkins Marine Life Observatory. It is recommended that students complete Stanford's Scientific Diver Training workshop, offered during spring break and the week before the course starts, although this is not a requirement. Prerequisites: consent of instructor; advanced scuba certification and scuba equipment.  
Same as: BIOHOPK 285H

**BIOHOPK 187H. Sensory Ecology. 4 Units.**

(Graduate students register for 287H.) Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature. The laboratory portion of the class explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior.  
Same as: BIOHOPK 287H

**BIOHOPK 189H. Sustainability and Marine Ecosystems. 3 Units.**

(Graduate students register for 289H.) The health of marine ecosystems is in decline due to overfishing, pollution, habitat damage, invasive species, and climate change. Because human communities are tightly coupled to coastal marine resources, understanding pathways to sustainability require understanding as much about humans as about the ocean. In this course, we explore factors that contribute to the sustainability and resilience of marine ecosystems and the human communities that depend upon them. This course is based on readings in the primary literature, discussions, and student projects.  
Same as: BIOHOPK 289H

**BIOHOPK 198H. Directed Instruction or Reading. 1-15 Unit.**

May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research. Credit for work arranged with out-of-department instructors restricted to Biology majors and requires department approval. May be repeated for credit. (Staff).

**BIOHOPK 199H. Undergraduate Research. 1-15 Unit.**

Qualified undergraduates undertake individual work in the fields listed under 300H. Arrangements must be made by consultation or correspondence.

**BIOHOPK 250H. Ecological Mechanics. 3 Units.**

(Graduate students register for 250H.) The principles of life's physical interactions. We will explore basic physics. fluid mechanics, thermal dynamics, and materials science to see how the principles of these fields can be used to investigate ecology at levels from the individual to the community. Topics include: diffusion, boundary layers, fluid-dynamic forces, locomotion, heat-budget models, fracture mechanics, adhesion, beam theory, the statistics of extremes, and the theory of self-organization. Open to students from all backgrounds. Some familiarity with basic physics and calculus advantageous but not necessary.  
Same as: BIOHOPK 150H

**BIOHOPK 252H. Physiology of Global Change. 2 Units.**

(Graduate students register for 252H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits.  
Same as: BIOHOPK 152H

**BIOHOPK 253H. Current Topics and Concepts in Quantitative Fish Dynamics and Fisheries Management. 1 Unit.**

(Graduate students register for 253H) The course will focus on extensive reading of seminal and reference papers published in the literature in the last decade on modeling population biology, community dynamics and fishery management in the marine environment. Basic knowledge of population dynamics is welcome. The goal is to develop an appreciation on both traditional and cutting-edge modeling approaches to study the dynamics and management of marine populations subjected to natural or anthropogenic shocks and pressures.  
Same as: BIOHOPK 153H

**BIOHOPK 254H. Animal Diversity: An Introduction to Evolution of Animal Form and Function from Larvae to Adults. 7 Units.**

Survey of invertebrate diversity, emphasizing form and function of both adult and larval life history stages. Focuses on how morphology, life histories, and development contribute to current views of the evolutionary diversification of multicellular animals. Labs are a hands-on exploration of animal diversity using local marine species as examples, as well as techniques of obtaining, handling, and maintaining larvae from early development through settlement. Lectures, labs, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructors.  
Same as: BIOHOPK 154H

**BIOHOPK 255H. Developmental Biology and Evolution. 4 Units.**

(Graduate students register for 255) This course focusses on how animals form their basic body plans; from the formation of their germ layers; ectoderm, endoderm and mesoderm, to how they are organized along the main developmental axes; the anteroposterior and dorsoventral axes. The course will focus in part on the molecular mechanisms that underlie these developmental decisions from work carried out in established developmental model species. However, we will also explore the current understanding of how these mechanisms evolved from new insights from emerging models representing a broad range of animal phyla. The setting at Hopkins Marine Station will allow us to carry out experiments from animals collected in the field, and the course will involve a substantial lab component to complement concepts and approaches presented in lecture. nPre-requisites : Biocore or by permission of instructor.

Same as: BIOHOPK 155H

**BIOHOPK 260H. Developmental Biology in the Ocean: Diverse Embryonic & Larval Strategies of marine invertebrates. 5-8 Units.**

(Graduate students register for 261H.) Lab course is designed to introduce students to the diversity in the early developmental strategies of marine invertebrates and how an understanding of these microscopic life histories is key to understanding the evolutionary diversification of phyla and the distribution of their more familiar adults. Emphasis is on hands-on collection, spawning, observation and manipulation of embryos and their larvae.

Same as: BIOHOPK 160H

**BIOHOPK 261H. Invertebrate Zoology. 5 Units.**

(Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine forms as examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lectures, lab, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor.

Same as: BIOHOPK 161H

**BIOHOPK 262H. Comparative Animal Physiology. 5 Units.**

(Graduate students register for 262H.) How animals work. Topics: physiology of respiration, circulation, energy metabolism, thermal regulation, osmotic regulation, muscle physiology, and locomotion. Evolutionary and ecological physiology. Lectures, lab, and field research. An option to combine the course work with a more intensive research focus, with more units, is available. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructor.

Same as: BIOHOPK 162H

**BIOHOPK 263H. Oceanic Biology. 4 Units.**

(Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Satisfies Central Menu Area 4 for Bio majors. Recommended: PHYSICS 21 or 51, CHEM 31, Biology core, or consent of instructor.

Same as: BIOHOPK 163H

**BIOHOPK 264H. POPULATION GENOMICS. 1-2 Unit.**

Introduces students to the analysis of single nucleotide polymorphism data from next generation sequencing projects. Computer analysis, hypothesis testing, and projects based on existing data sets will be pursued.

**BIOHOPK 265H. The Extreme Life of the Sea. 3 Units.**

(Graduate students register for 265H.) Lecture course that explores the way marine species live in extreme ocean habitats. We will cover the deepest, hottest, coldest, and shallowest habitats and the biggest, fastest, most fecund, oldest and smallest species. We will focus on the molecular, physiological and ecological adaptations that allow species to thrive in these unusual environments.

Same as: BIOHOPK 165H

**BIOHOPK 266H. Molecular Ecology. 5 Units.**

(Graduate students register for 266H.) How modern technologies in gene sequencing, detection of nuclear nucleotide polymorphisms, and other approaches are used to gather data on genetic variation that allow measurement of population structure, infer demographic histories, inform conservation efforts, and advance understanding of the ecology of diverse types of organisms.

Same as: BIOHOPK 166H

**BIOHOPK 267H. Nerve, Muscle, and Synapse. 5 Units.**

(Graduate students register for 267H.) Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Satisfies Central Menu Area 3 for Bio majors Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, 135; calculus; or consent of instructor.

Same as: BIOHOPK 167H

**BIOHOPK 268H. Disease Ecology: from parasites evolution to the socio-economic impacts of pathogens on nations. 3 Units.**

(Graduate students register for 268H.) Course will lead participants on a journey through the dynamics of infectious diseases that will start at the smallest level from within-host parasite dynamics and will progressively scale up to parasite evolution, disease ecology, public health policies, disease driven poverty traps and the socio-economic impact of infectious diseases on nations. The course will be organized around case studies, including among the others, schistosomiasis, malaria, cholera and sleeping sickness. Participants will have the opportunity to develop a capstone project.

Same as: BIOHOPK 168H

**BIOHOPK 272H. Marine Ecology: From Organisms to Ecosystems. 5 Units.**

(Graduate students register for 272H.) This course incorporates the approaches of experimental ecology, biomechanics (ecomchanics), and physiology to develop an integrated perspective on the factors that govern the structures of marine ecosystems and how environment change, including anthropogenic influences, affects ecosystems' species composition and health. Focus is on rocky intertidal, kelp forest, estuarine, and midwater ecosystems of Monterey Bay. Experimental projects done in the field offer experience in a variety of ecological techniques and in analysis of ecological data. Students will engage in presentation and debates of current topics in marine ecology and conservation. Satisfies Central Menu Area 4 for Bio majors. Prerequisite: Biology core or consent of instructor. Fulfills WIM in Biology.

Same as: BIOHOPK 172H

**BIOHOPK 273H. Marine Conservation Biology. 4 Units.**

(Graduate students register for 273H.) Introduction to the key concepts of ecology and policy relevant to marine conservation issues at the population to ecosystems level. Focus on the origin and maintenance of biodiversity and conservation applications from both the biology and policy perspectives (for example, endangered species, captive breeding, reserve design, habitat fragmentation, ecosystem restoration/rehabilitation). Also includes emerging approaches such as ecosystem based management, ocean planning, and coupled social-ecological systems. The course will include lectures, readings and discussions of primary literature, and attendance at seminars with visiting scholars. Prerequisite: introductory biology; suggested: a policy and/or introductory ecology course.  
Same as: BIOHOPK 173H

**BIOHOPK 274. Hopkins Microbiology Course. 3-12 Units.**

(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A and CEE 274B, or equivalents.  
Same as: BIO 274S, CEE 274S, ESS 253S

**BIOHOPK 274H. Experimental Design and Probability. 3 Units.**

(Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on analysis of variance, when and how to use it, why it works, and how to interpret the results. Design of complex, but practical, asymmetrical experiments and environmental impact studies, and regression and analysis of covariance. Computer-based data analysis. Prerequisite: Biology core or consent of instructor.  
Same as: BIOHOPK 174H

**BIOHOPK 275H. Synthesis in Ecology. 2 Units.**

Introduction to frameworks and approaches to synthesizing large data sets, including meta-analysis and permutational multivariate analysis of variance. Hands-on data analysis sessions. May be repeated for credit.

**BIOHOPK 276H. Estimates and Errors: The Theory of Scientific Measurement. 3 Units.**

Measurement plays a fundamental role in science, but many biologists have no formal training in what it means to measure something. Errors are inevitable in any measurement. Which are inherent, and which can be controlled? How do errors propagate? How can you decide which data to reject? When are uncertainties normal? In this course we will work our way into the theory of measurement, covering some topics that overlap with inferential statistics (but from a new and perhaps more intuitive perspective), and extending beyond those basics to include spectral analysis and the dangers of measurement in the digital realm.

**BIOHOPK 277H. Dynamics and Management of Marine Populations. 4 Units.**

(Graduate students register for 277H.) Course examines the ecological factors and processes that control natural and harvested marine populations. Course emphasizes mathematical models as tools to assess the dynamics of populations and to derive projections of their demographic fate under different management scenarios. Course objectives will be met by a combination of theoretical lectures, assigned readings and class discussions, case study analysis and interactive computer sessions.  
Same as: BIOHOPK 177H

**BIOHOPK 279H. Physiological Ecology of Marine Megafauna. 3 Units.**

(Graduate students register for 279H.) The ocean is home to the largest animals of all-time. How, when, and why did gigantism evolve in different taxa? What are the consequences of large body size? This course will focus on how biological processes scale with body size, with an emphasis on oceanic megafauna including marine mammals, birds, fishes, and reptiles. In particular, the course will explore the functional mechanisms that generate the scaling relationships for physiological and ecological traits, such as metabolism, ecosystem function and body size evolution. Students will also be introduced to state-of-the-art technologies used to student marine megafauna in some of the most logistically challenging habitats on earth.  
Same as: BIOHOPK 179H

**BIOHOPK 280. Short Course on Ocean Policy. 3 Units.**

The course will introduce graduate students in the natural and social sciences to ocean policy and governance in the US at national, regional, state, and local levels. Together with leaders in ocean science and policy, students will examine pressing issues in ocean sustainability from natural science, social science, and legal and policy perspectives, with an emphasis on the role of science in the policy and governance processes. Students will learn and apply practical skills in communication, leadership and interdisciplinary problem-solving through participation in a group project, interactive discussions and simulations, and field trips. Prerequisite: consent of instructor and by application due in winter.

**BIOHOPK 280H. Air and Water. 3 Units.**

(Graduate students register for 280H.) Introduction to environmental physics. The physical properties of life's fluids compared and contrasted. How and why life has evolved differently on land than in water. Topics: density, viscosity, diffusion, thermal properties, sound, light, evaporation, and surface tension. Recommended: PHYSICS 21, 23, or 51, 53; calculus; Biology core; or consent of instructor.  
Same as: BIOHOPK 180H

**BIOHOPK 284H. Holistic Biology. 16 Units.**

(Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems is examined from complementary points of view, including scientific, historical, philosophical and literary. Lectures and discussions will focus on the writings of Ed Ricketts and John Steinbeck, poetry of Robinson Jeffers and on historical and contemporary works concerning marine and fresh-water systems, resource management and climate change. A group project with individual contributions will be carried out and presented at a symposium. This course will involve a significant amount of creative writing, and it satisfies the Writing in Major requirement for Biology. It is open to all majors and classes. Only 6 units may count towards the Biology major.  
Same as: BIOHOPK 184H

**BIOHOPK 285H. Ecology and Conservation of Kelp Forest Communities. 5 Units.**

(Graduate students register for 285H.) Five week course. Daily lectures, labs, and scuba dives focused on kelp forest biology. Topics include identification and natural history of resident organisms, ecological processes that maintain biodiversity and community organization, field methods, data analysis, and research diving techniques. Class projects contribute to ongoing studies associated with Hopkins Marine Life Observatory. It is recommended that students complete Stanford's Scientific Diver Training workshop, offered during spring break and the week before the course starts, although this is not a requirement. Prerequisites: consent of instructor; advanced scuba certification and scuba equipment.  
Same as: BIOHOPK 185H

**BIOHOPK 287H. Sensory Ecology. 4 Units.**

(Graduate students register for 287H.) Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature. The laboratory portion of the class explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior.

Same as: BIOHOPK 187H

**BIOHOPK 289H. Sustainability and Marine Ecosystems. 3 Units.**

(Graduate students register for 289H.) The health of marine ecosystems is in decline due to overfishing, pollution, habitat damage, invasive species, and climate change. Because human communities are tightly coupled to coastal marine resources, understanding pathways to sustainability require understanding as much about humans as about the ocean. In this course, we explore factors that contribute to the sustainability and resilience of marine ecosystems and the human communities that depend upon them. This course is based on readings in the primary literature, discussions, and student projects.

Same as: BIOHOPK 189H

**BIOHOPK 290H. Teaching of Biological Science. 1-15 Unit.**

Open to upper-division undergraduates and graduate students. Practical experience in teaching lab biology or serving as an assistant in a lecture course. Prerequisite: consent of instructor.nn (Staff).

**BIOHOPK 300H. Research. 1-15 Unit.**

Graduate study involving original work undertaken with staff in the fields indicated. B. Block: Comparative Vertebrate Physiology (biomechanics, metabolic physiology and phylogeny of pelagic fishes, evolution of endothermy); L. Crowder: Marine ecology, fisheries, bycatch, integrating science and policy, marine conservation; G. De Leo: Population dynamics and management, wildlife diseases, environmental policies and sustainable development; M. Denny: Biomechanics (the mechanical properties of biological materials and their consequences for animal size, shape, and performance); W. Gilly: Neurobiology (analysis of giant axon systems in marine invertebrates from molecular to behavioral levels); J. Goldbogen: Physiological and Behavioral Ecology (functional morphology and biomechanics of marine organisms); C. Lowe: Evolution of Development (origin of chordates, early evolution of body plans); F. Micheli: Marine Ecology (species interactions and community ecology, scale-dependent aspects of community organization, marine conservation and design of multi-species marine protected areas, behavioral ecology); S. Palumbi: Molecular Evolution (mechanisms of speciation, genetic differentiations of populations, use of molecular tools in conservation biology, design of marine protected areas); S. Thompson: Neurobiology (neuronal control of behavior and mechanisms of ion permeation, signal transduction, calcium homeostasis, and neurotransmission); J. Watanabe: Marine Ecology (kelp forest ecology and invertebrate zoology).

**BIOHOPK 315H. Career Development for Graduate Students. 2 Units.**

The course will cover multiple skills required to succeed in graduate school and beyond, including fund raising, publishing, selecting career options, job application and negotiation, and teaching, through lectures, group discussions, and practical exercises.

**BIOHOPK 320H. Physical Biology. 3 Units.**

Physics, mathematics, and biology are often studied as separate subjects. In this two-week intensive course we will attempt to bring them together in a dynamic combination of lectures and hands on projects. We will draw on the diverse flora and fauna of Monterey Bay for our experimental organisms, and will take advantage of the facilities at Hopkins Marine Station to explore questions at levels ranging from molecules to ecological communities.

**BIOHOPK 323H. Stanford at Sea. 16 Units.**

(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major.

Same as: BIOHOPK 182H, EARTHSYS 323, EESS 323

**BIOHOPK 801H. TGR Project. 0 Units.**

.

**BIOHOPK 802H. TGR Dissertation. 0 Units.**

.

**Biomedical Informatics Courses****BIOMEDIN 156. Economics of Health and Medical Care. 5 Units.**

Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51.

Same as: BIOMEDIN 256, ECON 126, HRP 256

**BIOMEDIN 200. Biomedical Informatics Colloquium. 1 Unit.**

Series of colloquia offered by program faculty, students, and occasional guest lecturers. May be repeated three times for credit.

**BIOMEDIN 201. Biomedical Informatics Student Seminar. 1 Unit.**

Participants report on recent articles from the Biomedical Informatics literature or their research projects. Goals are to teach critical reading of scientific papers and presentation skills. May be repeated three times for credit.

**BIOMEDIN 205. Precision Practice with Big Data. 1 Unit.**

Primarily for M.D. students; open to other graduate students. Provides an overview of how to leverage large amounts of clinical, molecular, and imaging data within hospitals and in cyberspace—big data—to practice medicine more effectively. Lectures by physicians, researchers, and industry leaders survey how the major methods of informatics can help physicians leverage big data to profile disease, to personalize treatment to patients, to predict treatment response, to discover new knowledge, and to challenge established medical dogma and the current paradigm of clinical decision-making based solely on published knowledge and individual physician experience. May be repeated for credit. Prerequisite: background in biomedicine. Background in computer science can be helpful but not required.

**BIOMEDIN 206. Informatics in Industry. 1 Unit.**

Effective management, modeling, acquisition, and mining of biomedical information in healthcare and biotechnology companies and approaches to information management adopted by companies in this ecosystem. Guest speakers from pharmaceutical/biotechnology companies, clinics/hospitals, health communities/portals, instrumentation/software vendors. May be repeated for credit.

**BIOMEDIN 207. Smart Health through Digital Medicine. 1 Unit.**

The widespread use of Health IT, such as electronic health records, and of health applications on the part of patients and consumers, will radically alter the practice of medicine in the coming decades. This seminar, comprised of guest lectures from healthcare professionals in industry and academia, will highlight the practical challenges and successes of health IT design and transformed care delivery programs. The goal of the course is to provide an understanding of how technology designs can advance the delivery and quality of healthcare. In addition to attending lectures, students will be asked to think through a health IT solution to a care delivery problem in a short report.

**BIOMEDIN 208. Clinical Informatics Literature Review Seminar. 1 Unit.**

Focus is on reading and discussing seminal papers in clinical and health informatics. Topics include biomedical informatics methods, systems design, implementation and evaluation. Limited enrollment.

**BIOMEDIN 210. Modeling Biomedical Systems: Ontology, Terminology, Problem Solving. 3 Units.**

Methods for modeling biomedical systems and for making those models explicit in the context of building software systems. Emphasis is on intelligent systems for decision support and Semantic Web applications. Topics: knowledge representation, controlled terminologies, ontologies, reusable problem solvers, and knowledge acquisition. Recommended: exposure to object-oriented systems, basic biology. Same as: CS 270

**BIOMEDIN 212. Introduction to Biomedical Informatics Research Methodology. 3 Units.**

Hands-on software building. Student teams conceive, design, specify, implement, evaluate, and report on a software project in the domain of biomedicine. Creating written proposals, peer review, providing status reports, and preparing final reports. Guest lectures from professional biomedical informatics systems builders on issues related to the process of project management. Software engineering basics. Because the team projects start in the first week of class, attendance that week is strongly recommended. Prerequisites: BIOMEDIN 210 or 211 or 214 or 217 or consent of instructor. Same as: BIOE 212, CS 272, GENE 212

**BIOMEDIN 214. Representations and Algorithms for Computational Molecular Biology. 3-4 Units.**

Topics: introduction to bioinformatics and computational biology, algorithms for alignment of biological sequences and structures, computing with strings, phylogenetic tree construction, hidden Markov models, Gibbs Sampling, basic structural computations on proteins, protein structure prediction, protein threading techniques, homology modeling, molecular dynamics and energy minimization, statistical analysis of 3D biological data, integration of data sources, knowledge representation and controlled terminologies for molecular biology, microarray analysis, machine learning (clustering and classification), and natural language text processing. Prerequisites: programming skills; consent of instructor for 3 units. Same as: BIOE 214, CS 274, GENE 214

**BIOMEDIN 215. Data Driven Medicine. 3 Units.**

With the spread of electronic health records and increasingly low cost assays for patient molecular data, powerful data repositories with tremendous potential for biomedical research, clinical care and personalized medicine are being built. But these databases are large and difficult for any one specialist to analyze. To find the hidden associations within the full set of data, we introduce methods for data-mining at the internet scale, the handling of large-scale electronic medical records data for machine learning, methods in natural language processing and text-mining applied to medical records, methods for using ontologies for the annotation and indexing of unstructured content as well as semantic web technologies. Prerequisites: CS 106A; familiarity with statistics and biology. Highly recommended: STATS 216. Recommended: one of CS 246, STATS 305, or CS 229.

**BIOMEDIN 216. Representations and Algorithms for Molecular Biology: Lectures. 1-2 Unit.**

Lecture component of BIOMEDIN 214. One unit for medical and graduate students who attend lectures only; may be taken for 2 units with participation in limited assignments and final project. Lectures also available via internet. Prerequisite: familiarity with biology recommended.

**BIOMEDIN 217. Translational Bioinformatics. 4 Units.**

Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming ability at the level of CS 106A and familiarity with statistics and biology. Same as: CS 275

**BIOMEDIN 218. Translational Bioinformatics Lectures. 2 Units.**

Same content as BIOMEDIN 217; for medical and graduate students who attend lectures and participate in limited assignments and final project. Analytic, storage, and interpretive methods to optimize the transformation of genetic, genomic, and biological data into diagnostics and therapeutics for medicine. Topics: access and utility of publicly available data sources; types of genome-scale measurements in molecular biology and genomic medicine; analysis of microarray data; analysis of polymorphisms, proteomics, and protein interactions; linking genome-scale data to clinical data and phenotypes; and new questions in biomedicine using bioinformatics. Case studies. Prerequisites: programming at the level of CS 106A; familiarity with statistics and biology.

**BIOMEDIN 219. Mathematical Models and Medical Decisions. 2 Units.**

Analytic methods for determining the optimal diagnostic and therapeutic decisions for the care of individual patients and for the design of policies affecting the care of patient populations. Topics: utility theory and probability modeling, empirical methods for estimating disease prevalence, probability models for periodic processes, binary decision-making techniques, Markov models of dynamic disease state problems, utility assessment techniques, parametric utility models, utility models for multidimensional outcomes, analysis of time-varying clinical outcomes, and the design of cost-constrained clinical policies. Extensive problem sets compliment course materials. Prerequisites: introduction to calculus and basic statistics.

**BIOMEDIN 224. Principles of Pharmacogenomics. 3 Units.**

This course is an introduction to pharmacogenomics, including the relevant pharmacology, genomics, experimental methods (sequencing, expression, genotyping), data analysis methods and bioinformatics. The course reviews key gene classes (e.g., cytochromes, transporters) and key drugs (e.g., warfarin, clopidogrel, statins, cancer drugs) in the field. Resources for pharmacogenomics (e.g., PharmGKB, Drugbank, NCBI resources) are reviewed, as well as issues implementing pharmacogenomics testing in the clinical setting. Reading of key papers, including student presentations of this work; problem sets; final project selected with approval of instructor. Prerequisites: two of BIO 41, 42, 43, 44X, 44Y or consent of instructor. Same as: GENE 224

**BIOMEDIN 225. Data Driven Medicine: Lectures. 2 Units.**

Lectures for BIOMEDIN 215. With the spread of electronic health records and increasingly low cost assays for patient molecular data, powerful data repositories with tremendous potential for biomedical research, clinical care and personalized medicine are being built. But these databases are large and difficult for any one specialist to analyze. To find the hidden associations within the full set of data, we introduce methods for data-mining at the internet scale, the handling of large-scale electronic medical records data for machine learning, methods in natural language processing and text-mining applied to medical records, methods for using ontologies for the annotation and indexing of unstructured content as well as semantic web technologies. Prerequisites: familiarity with statistics (STATS 202) and biology.

**BIOMEDIN 233. Intermediate Biostatistics: Analysis of Discrete Data. 3 Units.**

Methods for analyzing data from case-control and cross-sectional studies: the 2x2 table, chi-square test, Fisher's exact test, odds ratios, Mantel-Haenzel methods, stratification, tests for matched data, logistic regression, conditional logistic regression. Emphasis is on data analysis in SAS. Special topics: cross-fold validation and bootstrap inference. Same as: HRP 261, STATS 261

**BIOMEDIN 245. Statistical and Machine Learning Methods for Genomics. 3 Units.**

Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets.

Same as: BIO 268, CS 373, GENE 245, STATS 345

**BIOMEDIN 251. Outcomes Analysis. 4 Units.**

Methods of conducting empirical studies which use large existing medical, survey, and other databases to ask both clinical and policy questions. Econometric and statistical models used to conduct medical outcomes research. How research is conducted on medical and health economics questions when a randomized trial is impossible. Problem sets emphasize hands-on data analysis and application of methods, including re-analyses of well-known studies. Prerequisites: one or more courses in probability, and statistics or biostatistics.

Same as: HRP 252, MED 252

**BIOMEDIN 256. Economics of Health and Medical Care. 5 Units.**

Institutional, theoretical, and empirical analysis of the problems of health and medical care. Topics: demand for medical care and medical insurance; institutions in the health sector; economics of information applied to the market for health insurance and for health care; measurement and valuation of health; competition in health care delivery. Graduate students with research interests should take ECON 249. Prerequisites: ECON 50 and either ECON 102A or STATS 116 or the equivalent. Recommended: ECON 51.

Same as: BIOMEDIN 156, ECON 126, HRP 256

**BIOMEDIN 260. Computational Methods for Biomedical Image Analysis and Interpretation. 3-4 Units.**

The latest biological and medical imaging modalities and their applications in research and medicine. Focus is on computational analytic and interpretive approaches to optimize extraction and use of biological and clinical imaging data for diagnostic and therapeutic translational medical applications. Topics include major image databases, fundamental methods in image processing and quantitative extraction of image features, structured recording of image information including semantic features and ontologies, indexing, search and content-based image retrieval. Case studies include linking image data to genomic, phenotypic and clinical data, developing representations of image phenotypes for use in medical decision support and research applications and the role that biomedical imaging informatics plays in new questions in biomedical science. Includes a project. Enrollment for 3 units requires instructor consent. Prerequisites: programming ability at the level of CS 106A, familiarity with statistics, basic biology. Knowledge of Matlab highly recommended.

Same as: RAD 260

**BIOMEDIN 262. Computational Genomics. 3 Units.**

Applications of computer science to genomics, and concepts in genomics from a computer science point of view. Topics: dynamic programming, sequence alignments, hidden Markov models, Gibbs sampling, and probabilistic context-free grammars. Applications of these tools to sequence analysis: comparative genomics, DNA sequencing and assembly, genomic annotation of repeats, genes, and regulatory sequences, microarrays and gene expression, phylogeny and molecular evolution, and RNA structure. Prerequisites: 161 or familiarity with basic algorithmic concepts. Recommended: basic knowledge of genetics.

Same as: CS 262

**BIOMEDIN 273A. A Computational Tour of the Human Genome. 3 Units.**

Introduction to computational biology through an informatic exploration of the human genome. Topics include: genome sequencing (technologies, assembly, personalized sequencing); functional landscape (genes, gene regulation, repeats, RNA genes, epigenetics); genome evolution (comparative genomics, ultraconservation, co-option). Additional topics may include population genetics, personalized genomics, and ancient DNA. Course includes primers on molecular biology, the UCSC Genome Browser, and text processing languages. Guest lectures from genomic researchers. No prerequisites. See <http://cs273a.stanford.edu/>.

Same as: CS 273A, DBIO 273A

**BIOMEDIN 279. Computational Biology: Structure and Organization of Biomolecules and Cells. 3 Units.**

Computational approaches to understanding the three-dimensional spatial organization of biological systems and how that organization evolves over time. The course will cover cutting-edge research in both physics-based simulations and computational analysis of experimental data, at scales ranging from individual molecules to multiple cells. Prerequisites: elementary programming background (106A or equivalent) and an introductory course in biology or biochemistry.

Same as: BIOPHYS 279, CME 279, CS 279

**BIOMEDIN 290. Biomedical Informatics Teaching Methods. 1-6 Unit.**

Hands-on training in biomedical informatics pedagogy. Practical experience in pedagogical approaches, variously including didactic, inquiry, project, team, case, field, and/or problem-based approaches. Students create course content, including lectures, exercises, and assessments, and evaluate learning activities and outcomes. Prerequisite: instructor consent.

**BIOMEDIN 299. Directed Reading and Research. 1-18 Unit.**

For students wishing to receive credit for directed reading or research time. Prerequisite: consent of instructor. (Staff).

**BIOMEDIN 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**BIOMEDIN 371. Computational Biology in Four Dimensions. 3 Units.**

Computational approaches to understanding the three-dimensional spatial organization of biological systems and how that organization evolves over time. The course will cover cutting-edge research in both physics-based simulation and computational analysis of experimental data, at scales ranging from individual molecules to entire cells.

Prerequisite: CS 106A or equivalent, and an introductory course in biology or biochemistry. Recommended: some experience in mathematical modeling (does not need to be a formal course).

Same as: BIOPHYS 371, CME 371, CS 371

**BIOMEDIN 374. Algorithms in Biology. 2-3 Units.**

Algorithms and computational models applied to molecular biology and genetics. Topics vary annually. Possible topics include biological sequence comparison, annotation of genes and other functional elements, molecular evolution, genome rearrangements, microarrays and gene regulation, protein folding and classification, molecular docking, RNA secondary structure, DNA computing, and self-assembly. May be repeated for credit. Prerequisites: 161, 262 or 274, or BIOCHEM 218, or equivalents.

Same as: CS 374

**BIOMEDIN 390A. Curricular Practical Training. 1 Unit.**

Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

**BIOMEDIN 390B. Curricular Practical Training. 1 Unit.**

Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

**BIOMEDIN 390C. Curricular Practical Training. 1 Unit.**

Provides educational opportunities in biomedical informatics research. Qualified biomedical informatics students engage in internship work and integrate that work into their academic program. Students register during the quarter they are employed and must complete a research report outlining their work activity, problems investigated, key results, and any follow-up on projects they expect to perform. BIOMEDIN 390A, B, and C may each be taken only once.

**BIOMEDIN 432. Analysis of Costs, Risks, and Benefits of Health Care. 4 Units.**

(Same as MGTECON 332) For graduate students. How to do cost/benefit analysis when the output is difficult or impossible to measure. How do M.B.A. analytic tools apply in health services? Literature on the principles of cost/benefit analysis applied to health care. Critical review of actual studies. Emphasis is on the art of practical application.

Same as: HRP 392

**BIOMEDIN 801. TGR Master's Project. 0 Units.**

Project credit for masters students who have completed all course requirements and minimum of 45 Stanford units.

**BIOMEDIN 802. TGR PhD Dissertation. 0 Units.****Biophysics Courses****BIOPHYS 196. INTERACTIVE MEDIA AND GAMES. 1 Unit.**

Interactive media and games increasingly pervade and shape our society. In addition to their dominant roles in entertainment, video games play growing roles in education, arts, and science. This seminar series brings together a diverse set of experts to provide interdisciplinary perspectives on these media regarding their history, technologies, scholarly research, industry, artistic value, and potential future.

Same as: BIOE 196

**BIOPHYS 227. Functional MRI Methods. 3 Units.**

Basics of functional magnetic resonance neuroimaging, including data acquisition, analysis, and experimental design. Journal club sections. Cognitive neuroscience and clinical applications. Prerequisites: basic physics, mathematics; neuroscience recommended.

Same as: RAD 227

**BIOPHYS 228. Computational Structural Biology. 3 Units.**

Interatomic forces and interactions such as electrostatics and hydrophobicity, and protein structure in terms of amino acid properties, local chain conformation, secondary structure, domains, and families of folds. How protein motion can be simulated. Bioinformatics introduced in terms of methods that compare proteins via their amino acid sequences and their three-dimensional structures. Structure prediction via simple comparative modeling. How to detect and model remote homologues. Predicting the structure of a protein from knowledge of its amino acid sequence. Via Internet.

Same as: SBIO 228

**BIOPHYS 232. Advanced Imaging Lab in Biophysics. 4 Units.**

Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, Biology core or equivalent, and consent of instructor.

Same as: APPPHYS 232, BIO 132, BIO 232, GENE 232

**BIOPHYS 241. Biological Macromolecules. 3-5 Units.**

The physical and chemical basis of macromolecular function. Topics include: forces that stabilize macromolecular structure and their complexes; thermodynamics and statistical mechanics of macromolecular folding, binding, and allostery; diffusional processes; kinetics of enzymatic processes; the relationship of these principles to practical application in experimental design and interpretation. The class emphasizes interactive learning, and is divided equally among lectures, in-class group problem solving, and discussion of current and classical literature. Enrollment limited to 50. Prerequisites: Background in biochemistry and physical chemistry recommended but material available for those with deficiency in these areas; undergraduates with consent of instructor only.

Same as: BIOC 241, GENE 241, SBIO 241

**BIOPHYS 242. Methods in Molecular Biophysics. 3 Units.**

Experimental methods in molecular biophysics from theoretical and practical standpoints. Emphasis is on X-ray diffraction, nuclear magnetic resonance, and fluorescence spectroscopy. Prerequisite: physical chemistry or consent of instructor.

Same as: SBIO 242

**BIOPHYS 244. Mechanotransduction in Cells and Tissues. 3 Units.**

Mechanical cues play a critical role in development, normal functioning of cells and tissues, and various diseases. This course will cover what is known about cellular mechanotransduction, or the processes by which living cells sense and respond to physical cues such as physiological forces or mechanical properties of the tissue microenvironment. Experimental techniques and current areas of active investigation will be highlighted.

Same as: BIOE 283, ME 244

**BIOPHYS 250. Seminar in Biophysics. 1 Unit.**

Required of Biophysics graduate students. Presentation of current research projects and results by faculty in the Biophysics program. May be repeated for credit.

**BIOPHYS 279. Computational Biology: Structure and Organization of Biomolecules and Cells. 3 Units.**

Computational approaches to understanding the three-dimensional spatial organization of biological systems and how that organization evolves over time. The course will cover cutting-edge research in both physics-based simulations and computational analysis of experimental data, at scales ranging from individual molecules to multiple cells. Prerequisites: elementary programming background (106A or equivalent) and an introductory course in biology or biochemistry.

Same as: BIOMEDIN 279, CME 279, CS 279

**BIOPHYS 294. Cellular Biophysics. 3 Units.**

Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.

Same as: APPPHYS 294, BIO 294

**BIOPHYS 297. Bio-Inorganic Chemistry. 3 Units.**

Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function. Prerequisites: 153 and 173, or equivalents.

Same as: CHEM 297

**BIOPHYS 300. Graduate Research. 1-18 Unit.**

Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**BIOPHYS 311. Biophysics of Multi-cellular Systems and Amorphous Computing. 2-3 Units.**

Provides an interdisciplinary perspective on the design, emergent behavior, and functionality of multi-cellular biological systems such as embryos, biofilms, and artificial tissues and their conceptual relationship to amorphous computers. Students discuss relevant literature and introduced to and apply pertinent mathematical and biophysical modeling approaches to various aspect multi-cellular systems, furthermore carry out real biology experiments over the web. Specific topics include: (Morphogen) gradients; reaction-diffusion systems (Turing patterns); visco-elastic aspects and forces in tissues; morphogenesis; coordinated gene expression, genetic oscillators and synchrony; genetic networks; self-organization, noise, robustness, and evolvability; game theory; emergent behavior; criticality; symmetries; scaling; fractals; agent based modeling. The course is geared towards a broadly interested graduate and advanced undergraduates audience such as from bio / applied physics, computer science, developmental and systems biology, and bio / tissue / mechanical / electrical engineering. Prerequisites: Previous knowledge in one programming language - ideally Matlab - is recommended; undergraduate students benefit from BIOE 41, BIOE 42, or equivalent.

Same as: BIOE 211, BIOE 311, DBIO 211

**BIOPHYS 342A. Mechanobiology and Biofabrication Methods. 3 Units.**

Cell mechanobiology topics including cell structure, mechanical models, and chemo-mechanical signaling. Review and apply methods for controlling and analyzing the biomechanics of cells using traction force microscopy, AFM, micropatterning and cell stimulation. Practice and theory for the design and application of methods for quantitative cell mechanobiology. Weekly lecture and hands-on laboratory sessions. Same as: ME 342A

**BIOPHYS 371. Computational Biology in Four Dimensions. 3 Units.**

Computational approaches to understanding the three-dimensional spatial organization of biological systems and how that organization evolves over time. The course will cover cutting-edge research in both physics-based simulation and computational analysis of experimental data, at scales ranging from individual molecules to entire cells. Prerequisite: CS 106A or equivalent, and an introductory course in biology or biochemistry. Recommended: some experience in mathematical modeling (does not need to be a formal course).

Same as: BIOMEDIN 371, CME 371, CS 371

**BIOPHYS 392. Topics in Molecular Biophysics: Biophysics of Functional RNA. 3 Units.**

Survey of methods used to relate RNA sequences to the structure and function of transcribed RNA molecules. Computation of contributions of the counter-ion cloud to the dependence of free energy on conformation of the folded RNA. The relation of structure to function of riboswitches and ribozymes.

Same as: APPPHYS 392

**BIOPHYS 393. Biophysics of Solvation. 3 Units.**

Statistical mechanics of water-protein or water-DNA (or RNA) interactions; effects of coulomb forces on molecular hydration shells and ion clouds; limitations of the Poisson-Boltzmann equations; DNA collapse, DNA-protein interactions; structure-function relationships in ion channels.

Same as: APPPHYS 393

**BIOPHYS 399. Directed Reading in Biophysics. 1-18 Unit.**

Prerequisite: consent of instructor.

**BIOPHYS 801. TGR Project. 0 Units.**

.

**BIOPHYS 802. TGR Dissertation. 0 Units.**

.

**Biosciences Interdisciplinary Courses****BIOS 200. Foundations in Experimental Biology. 6 Units.**

This course is divided into three 3-week cycles and is focused on the broad themes of Evolution, Energy and Information. During each cycle, students work in small teams and will be coached by faculty to develop an original research project and compose a brief written proposal explaining the research. Skills emphasized include: 1) reading for breadth and depth; 2) developing compelling, creative arguments; 3) communicating with the spoken and written word; 4) working in teams. Peer assessment and workshops; substantial face-to-face discussion with faculty drawn from across the Biosciences programs.

**BIOS 201. Next Generation Sequencing and Applications. 2 Units.**

Usher in the golden age of biological discovery with next generation sequencing (NGS) through its wide spectrum of applications. Modules include general introduction of Next Generation Sequencing (NGS) technologies, applications of these sequencing technologies, caveats and comparisons with previous approaches, analysis and interpretation of sequencing data, principles of tools and resources and practical ways to utilize them, and features and pitfalls. Prerequisite: background in molecular biology.

**BIOS 202. Hippocampal Field Potentials, an Introduction to CNS in Vitro Electrophysiology. 1-3 Unit.**

Enrollment limited to graduate students in the School of Medicine; undergraduates may enroll with instructor consent. Introduces students to theory and practice of in vitro CNS electrophysiology. Lectures cover basic electrical and electrode theory, hippocampal anatomy, interpretation of these potentials, common pitfalls and misinterpretations, design of experiments using field potentials and other related topics. Practicum is hands on training in obtaining, recording and interpreting field potentials from in vitro hippocampal slices. Students develop skills in data collection, analysis and evaluation, art and design of electrophysiological studies of the brain.

**BIOS 203. Introduction to Atomistic Simulations for Biochemical Applications. 3 Units.**

Theory and application of atomistic simulations needed to model and understand systems of biological relevance (proteins, DNA, small molecule therapeutic drug properties) for beginners. Topics: molecular interactions and classical force fields, first principles energy approaches, molecular dynamics, rare event and transition-state finding techniques, protein folding, and solvation methods. Hands-on tutorials based on key topics in biochemical simulation that use variety of state-of-the-art software packages on both standard and new, advanced graphical processing unit hardware for simulation and analysis of biochemical properties. Prerequisites: Some knowledge of quantum mechanics, biochemistry, and shell scripting (BASH or python) preferred.

**BIOS 204. Practical Tutorial on the Modeling of Signal Transduction Motifs. 3 Units.**

Basics of ordinary differential equation modeling of signal transduction motifs, small circuits of regulatory proteins and genes that serve as building blocks of complex regulatory circuits. Morning session covers numerical modeling experiments. Afternoon session explores theory underpinning that day's modeling session. Modeling done using Mathematica, Standard Edition provided to enrolled students.

**BIOS 205. Introduction to R. 1 Unit.**

Autumn quarter enrollment limited to ADVANCE students; instructor consent required for enrollment. Topics include: basics of R (widely used, open-source programming and data analysis environment) programming language and data structures, reading/writing files, graphics tools for figure generation, basic statistical and regression operations, survey of relevant R library packages. Interactive format combining lectures and computer lab. For course and enrollment information, see <http://bios205.stanford.edu>.

**BIOS 206. Stem Cells and Regeneration: Transitioning from Basic Research to Clinical Therapies. 1-2 Unit.**

Presents emerging therapies based on stem cell by the scientists leading these pioneering efforts, including academic and industry-based groups. Provides hands-on instruction in laboratory methods valuable in development of stem cell therapies.

**BIOS 207. Interdisciplinary Approaches to Biochemistry: Single Molecule Biophysics to Clinical Outcomes. 1 Unit.**

Interdisciplinary analysis from basic biochemistry and biophysics to clinical outcomes of disease states and potential therapeutic interventions. Focus on cardiac system. Single molecule biophysics and classical enzyme kinetics and use of induced pluripotent stem (iPS) cells and single cell studies lay foundation for discussions of effects of cardiomyopathy mutations on heart function. Analytical approaches discussed include genetic analysis, reconstitution of functional assemblies, x-ray diffraction, 3D reconstruction of electron microscope images, spectroscopic methods, computational approaches, single molecule biophysics, use of induced pluripotent stem cells in research.

**BIOS 208. Computational Macromolecule Structure Modeling. 2 Units.**

Concepts, workflow, and methodology of protein structure modeling presented through short lectures followed by hands-on exercises with the Rosetta software package. Several problem types demonstrate how to formulate and test well-defined hypotheses, in addition to the design and engineering of structure, function, and interactions.

**BIOS 209. Practical Protein NMR Structure Determination. 2 Units.**

Work toward solving a high-resolution 3D structure from unprocessed NMR data acquired on a small well-characterized protein. Short lectures followed by hands-on computer exercises demonstrate best practices for data processing, spectra interpretation, and structure calculation with attention to troubleshooting and validation methods. Students should be familiar with fundamental concepts of protein structure and NMR spectroscopy and comfortable with the command-line environment. Prerequisite: SBIO242/BIOPHYS 242 strongly recommended, but not required.

**BIOS 210. Axonal Transport and Neurodegenerative Diseases. 1-2 Unit.**

Introduction to mechanisms underlying axonal transport, significance of proper regulation in maintaining neuronal activities, and its implication in disease pathology. Lab section: visualize axonal transport of various axonal organelles such as mitochondria, synaptic vesicles and dense core vesicles in live cells and tissues.

**BIOS 211. Histology for Biosciences. 1 Unit.**

Fundamentals of tissue organization as seen by light microscopy. Includes: epithelium, connective tissue, muscle, bone, cartilage, blood cells, nerve, and quick overview of several major organs. Each session has interactive 30 min presentation followed by 1.5 hours viewing glass histology slides using individual microscopes and a multi-headed microscope. Slide sessions interspersed with interactive exercises to stimulate discussions. Supporting materials include select readings from histology atlas, electron micrographs, and virtual (whole-slide) images provided online.

**BIOS 212. Plant Genetics: Large Scale Experiments and Clonal Analysis. 2 Units.**

Using sectored dahlia flowers student teams perform clonal analysis of petals. Brief lectures introduce key topics and dahlia biology ([http://www.stanford.edu/group/dahlia\\_genetics/](http://www.stanford.edu/group/dahlia_genetics/)). Discussion topics: papers on clonal analysis and specification of floral parts in advanced and primitive Angiosperms, theory and best practices for structuring maize crosses in transposon tagging, allelism with 20 loci, and bulk segregant and fine mapping. Genes likely contributing to petal form and pigmentation nominated from RNA-Seq data and qRT-PCR validated. Genetic screen of ~105 plants to find tagged male-sterile alleles and puton validation performed. Prerequisite: graduate Genetics course.

**BIOS 213. Scientific Illustration and Animation. 1 Unit.**

Techniques of presenting big picture ideas and detailed experiments as simple cartoons. Mixed lecture/lab course culminates with students producing figures and animations for an introduction/conclusion of a research presentation. Covers basic design principles to help produce figures useful for broad and focused audiences. Includes static illustrations, Flash style, and stop motion animation.

**BIOS 214. Molecules & Math. 1 Unit.**

Introduction to molecular systems and their behavior as well as fundamental mathematical and computational tools for modeling molecular systems. Application of tools to critical medical areas: modeling of cardiovascular physiology; simulation of protein interactions; modeling of cellular differentiation; extraction of useful information from anatomic, functional and molecular images. Weekly lectures, group discussions, and individual project work.

**BIOS 215. Transplantation Immunology and Tolerance. 2 Units.**

Extensive literature review of experimental strategies to promote tolerance, including limitations involved in translating tolerance-promoting strategies to the clinic and targets of immunosuppression. State of art approaches and limitations of current approaches. Discussions with prominent scientists and clinicians in field of transplantation. Student presentations on novel concepts and approaches in basic science, translational and clinical transplant.

**BIOS 216. Structural Biology and Vaccine Design. 1 Unit.**

Structural biology is playing an increasing role in the development and analysis of vaccines and deepening understanding of challenging vaccine targets. Structural studies of target antigens have allowed mapping of neutralizing antibody epitopes and antigenic variation. Studies of antibody:antigen complexes have clarified how rare antibodies can confer broad neutralization to highly variant viruses, such as influenza virus and HIV. Course explores current structure-based efforts to improve vaccines to highly potent neutralizing epitopes, utilizing protein fragments, carbohydrate engineering and epitope scaffolding. Research from current literature on viruses including HIV, influenza virus, RSV and others examined.

**BIOS 217. The Ultimate Face Book: Understanding Normal and Abnormal Craniofacial Development. 1 Unit.**

How the face is assembled during embryonic development to gain insights into facial birth defects and new "regenerative medicine" approaches to reconstruct the face following disease or injury. Learn how "a man finds room in the few square inches of the face for the traits of all his ancestors; for the expression of all his history, and his wants."

**BIOS 218. Molecular basis of membrane traffic. 2 Units.**

Transport of proteins through the secretory and endocytic pathways is essential for life; dysregulation causes disease and pathogens hijack these pathways to their best advantage. 5 international experts present didactic lectures and engage with students. Topics include: history of genetic and biochemical experiments to identify key components; reconstitution approaches; coated vesicle formation and cargo selection; control of membrane traffic by Rab GTPases; siRNA screens; high throughput microscopy analysis and systems biology approaches. Students devise and present research proposals based on the research of the guest speakers.

**BIOS 219. Human Gene Regulation: Genomic Thinking and Genomic Tools for Experimentalists. 1 Unit.**

Focused look at the promoter/enhancer and related landscape of the human genome. Genomics and epigenomics of human gene regulation - truth, myths and mysteries. Genomic tools for the interpretation of vertebrate gene regulation experiments and predictions, and the insights behind them. Genomic thinking: purity vs. comprehensiveness, genome-wide vs. single locus. Prerequisites: undergraduate Biology or equivalent. Programming skills not required or taught.

**BIOS 220. Adventures in the Human Virophere. 3 Units.**

Structure and function of viruses focusing on viruses that infect humans. Explore the interaction of humans and viruses from diverse perspectives: historical, cultural, political, demographic, organismal, molecular biological, biochemical, immunological, taxonomic. Emphasis on general principles of biology and matters of decision-making and policy. Selected case studies illustrate course material. Full-time immersive format of lectures, discussions, videos and model building. Recommended for non-virology students.

**BIOS 221. Modern Statistics for Modern Biology. 3 Units.**

Application based course in nonparametric statistics. Modern toolbox of visualization and statistical methods for the analysis of data, examples drawn from immunology, microbiology, cancer research and ecology. Methods covered include multivariate methods (PCA and extensions), sparse representations (trees, networks, contingency tables) as well as nonparametric testing (Bootstrap, permutation and Monte Carlo methods). Hands on, use R and cover many Bioconductor packages. Prerequisite: Minimal familiarity with computers. Instructor consent. Location: Li Ka Shing Center, room 120. Same as: STATS 366

**BIOS 222. Authentic Courage for Constructive Change: Skills and Practice for Leadership. 1 Unit.**

Explores concepts in decision making and constructive conflict as a mechanism for desired change via purposeful actions. Students assess personal conflict comfort zones and use case studies and class activities to develop skills with authenticity, active and intentional decision making, and other related topics.

**BIOS 223. Introduction to Quantitative Reasoning in Biology. 2 Units.**

Mini-course. Focus on development of basic skills for quantitative reasoning in biology, including order-of-magnitude estimation and use of the broad spectrum of time scales to enable understanding. Primary examples include going from molecular size and energy scales to functions of single cells and going from mutational and selective processes acting on organisms to evolution of populations on laboratory global scales.

**BIOS 224. Big Topics in Stem Cell Ethics. 2 Units.**

Mini-course. Focuses on framing the major ethical issues, legal issues, normative ethical guidelines and oversight in stem cell research. Includes discussion of religious and ethical debates around the moral status of the human embryo.

**BIOS 225. Gender in Science. 1 Unit.**

Introduction to the social science literature on factors contributing to gender disparities in the scientific workplace (e.g. implicit bias and stereotype threat). Discussions focus on steps that individuals and institutions can take to promote the advancement of women and other underrepresented groups in science, and thus promote the advancement of science.

**BIOS 226. Introduction to Force Spectroscopy. 1 Unit.**

Mini-course. Covers the fundamentals of major single-molecule manipulation methods (optical tweezers, magnetic tweezers, and atomic force microscopy), principles of force measurement signal and noise, and applications to studies of folding, binding, measurement signal and noise, and applications to studies of folding, binding, polymer elasticity, and structural transitions in proteins and nucleic acids. Intended for students with no previous exposure to single-molecule manipulation or for beginning practitioners. Lectures and discussion of current literature.

**BIOS 227. Mass Spectrometry and Proteomics: Opening the Black Box. 2 Units.**

Focus on designing and analyzing effective proteomics experiments using mass spectrometry and critically evaluating published mass spectrometry-based studies and datasets. Introduces students to the instrumentation, experimental strategies, and computational methods used for identifying and quantifying proteins and protein post-translational modifications using mass spectrometry. Topics include comparative evaluation of mass spectrometer instrument configurations, tandem mass spectrum interpretation, relative and absolute quantitation, and proteome-scale data set analysis. Laboratory time will focus on sample preparation methods, real-time data acquisition, and data analysis software and techniques.

**BIOS 228. Understanding Chemistry in Biology and Biological Experiments. 2 Units.**

Chemical transformations are central to biology and function and chemical methods provide some of the most powerful tools for everyday experimental biology. Focuses on the concepts and principles underlying biological chemical transformations, allowing students to generalize and understand cell metabolism and regulation. Topics include basic principles and procedures to evaluate and utilize in practice chemical approaches in biological experiments. In-class problems and evaluation of literature. Three-week mini-course.

**BIOS 229. Drug Discovery and Development Project Simulation. 2 Units.**

Two-day short course. Focus is on the progression of a drug discovery project from target identification through pre-clinical research, early and late clinical development, and registration with the health authorities. Presented by Novartis. Enrollment limited to postdoctoral students and graduate students with research experience.

**BIOS 230. Biomedical Data Analysis in MATLAB. 2 Units.**

Focuses on empowering biomedical scientists and engineers with MATLAB tools that are directly useful in their research. Topics include linear- and non-linear-parameter estimation, ordinary- and partial-differential equations, Simulink, GUI design and image processing. Weekly hands-on tutorials accompany lectures and help students code more efficiently and elegantly. Weekly problems sets use MATLAB to interrogate a biomedical phenomenon. Pre-requisites: permission of instructor required.

**BIOS 231. Neuroimaging Genomics. 3 Units.**

Preference to graduate students and medical students. Emphasis is on introducing students to the field of neuroimaging genomics, characterizing large-scale genomic and imaging datasets to uncover relationships between imaging features, molecular genomic profiles, and phenotype.

**BIOS 232. Two-photon Imaging of Neural Circuits. 2 Units.**

Focuses on application of two-photon imaging to modern neuroscience. Topics include microscopy and imaging.

**BIOS 233. Experimental Metagenomics: Nectar Microbes as a Model System. 3 Units.**

Preference to graduate students and post-docs; open to upper-level undergraduates with instructor consent. Emphasis on developing a practical understanding of how to conduct metagenomic research by combining cutting-edge molecular sequencing with experimental ecological approaches. Focuses on the community ecology of the bacterial and yeast species that colonize floral nectar via pollinators and the implications for plant-pollinator interactions within an agriculturally relevant framework. Ecological, evolutionary, and phylogenetic principles and microbiological and molecular techniques that will be taught are broadly applicable in many biological fields, including the medical ecology of the human microbiome. Inquiry-based with individual student-led projects.

**BIOS 234. Personalized Genomic Medicine. 1 Unit.**

Focuses on next-generation sequencing and its implications for personalized genomic medicine. Students gain hands-on experience with popular DNA sequence analysis tools as well as a practical understanding of the underlying algorithms and biomedicine.

**BIOS 235. Metabolism and Metabolic Ecology: Microbes, Gut and Cancer. 2 Units.**

Preference to graduate students. Focuses on modern aspects of metabolism and metabolic biochemistry as it affects fitness and ecology of cells and organisms on a systems level. Students obtain a broad understanding of the governing principles and logic of metabolic pathways and their networks as well as an intuition of metabolism in context of natural selection and fitness acting on the cell or host. Emphasis is primarily on microorganisms and their habitats in nature and the human gut, but topics also include metabolism of cancer cells and of engineered microbes.

**BIOS 236. Developmental Biology in the Ocean: Comparative Embryology and Larval Development. 4 Units.**

Three-week course at Hopkins Marine Station. Focuses on the embryology and larval development of a broad range of marine invertebrate phyla. The goal of the course is to give students an appreciation of the range of developmental strategies and larval forms in the ocean and why this is critical for constructing hypotheses of EvoDevo and animal evolution. Includes observation and documentation of the development of embryos and larvae by scientific illustration and photo/video microscopy. Pre-requisite: Developmental Biology coursework and instructor consent.

**BIOS 237. Investigating Biology with Fluorescent Proteins. 1 Unit.**

Focuses on fluorescent proteins, a proven research tool for imaging a wide range of biological phenomena and continuously uncover exciting discoveries in many areas. Students gain practical expertise in concepts, methodology, and data analysis through lectures, literature discussion, and hands-on computer exercises with "real world" data.

**BIOS 238. Quantitative single cell analysis of live cell images. 1 Unit.****BIOS 239. Synapse Development. 3 Units.**

Focuses on the mechanisms of synapse development, including the role of adhesion molecules in establishing neuronal contacts, the function of synapse-inducing molecules, how pre- and postsynaptic material is transported to nascent synapses, synapse maturation, synapse elimination as well as how synaptic dysfunction may lead to neurological disorders. Readings from primary literature.

**BIOS 240. Cellular Metabolism: An Emerging Hallmark of Cancer and Aging. 1 Unit.**

Introduction to cellular metabolism, including changes in metabolic flux that drive diverse disease states from cancer to aging. Topics covered include cancer metabolism, cellular nutrient sensing, metabolism in aging, and the influence of metabolism on stem cell fate. This course uses discussion of recent advances in the field to place an emphasis on practical applications, including the integration of metabolomics into the era of  $\zeta$ Big Data. This mini-course culminates with a lab section allowing the students to conduct an extracellular flux experiment using the Seahorse analyzer to study changes in mitochondrial respiration and glycolysis in cancer cells.

**BIOS 241. Dissecting algorithms for RNA Sequencing. 2 Units.**

Class focuses on a few popular and commonly used algorithms for RNA-Seq analysis. The course dissects the algorithmic assumptions, statistical methods they use to test hypotheses about RNA expression and evaluates properties such as robustness, sensitivity and specificity, highlighting some large "blind spots" in many algorithms.

**BIOS 242. Writing Compelling Fellowships and Career Development Awards. 2 Units.**

An overview of principles and fundamentals for writing competitive fellowships (e.g. NIH F31, F32) and career development awards (e.g. NIH K Awards). Topics include: developing specific aims and career development plans; using the review criteria to inform writing; timelines and resources. Participants develop proposals through guided exercises with an emphasis on in-class peer review and focused faculty feedback.

**BIOS 243. Grant Writing Academy Mini Course: Specific Aims. 1 Unit.**

Concise overview of the fundamentals for writing competitive NIH Kirschstein NRSA fellowships (F31, F32) and K Awards. Topics include developing specific aims; outlining research and career development plans; and using the review criteria to inform writing. Participants develop their one-page NIH-Specific Aims document with an emphasis on in-class peer review and protected daily proposal writing. Students enroll for units in one small-group section, and also attend two mandatory lectures as noted in class schedule.

**BIOS 244. Computer Applications in Pharmaceutical Research and Development. 1 Unit.**

After a brief introduction to drug discovery and development process in pharmaceutical industry, we discuss integrative computational approaches to drug discovery, development, and marketing. Illustrative case studies and examples explain how applications are used at various stages, including bioinformatics, data mining, high-throughput screening, predicting human response to drugs, and adverse drug event monitoring.

**BIOS 245. The Immune Response to Infectious Diseases. 1 Unit.**

Focuses on the immune defenses that the human body uses to prevent and control infectious diseases. Covers both innate and adaptive immune defenses against bacterial, fungal, and viral pathogens will be covered. This course is targeted primarily at graduate students and postdocs whose primary focus is not in immunology, but whose research and interests intersect with the host response to infectious diseases. Motivated undergraduates may also participate.

**BIOS 246. Introduction to Meta-Analysis. 4 Units.**

Meta-analysis is the quantitative synthesis and analysis of a collection of independent studies. It provides a more objective and powerful way of summarizing evidence across studies than descriptive reviews. The importance and utility of this quantitative method for answering new questions and synthesizing existing results in different fields of scientific research is demonstrated by the dramatic increase in the number of studies using meta-analysis in the last ten years. Focuses on the basics of meta-analysis. The emphasis of the course is both on the conceptual understanding and practical use of this method, as applied to biological questions.

**BIOS 247. Neuro-Cellular Core. 2 Units.**

Focus on fundamental aspects of cellular neurophysiology. Topics include: electrophysiological properties of neurons; synaptic structure and function; synaptic plasticity; didactic lecture component and student-led discussion of classical papers. Students use the simulation program Neuron.

**BIOS 248. Scientific Computing for Ecologists, Biologists and Environmental Scientists. 3 Units.**

One-week intensive course is specifically dedicated to graduate students and postdocs in Biology and Environmental Science eager to be introduced to, and get proficient in, scientific computing. Focus is on acquiring the necessary skills to boost their productivity by learning state-of-the-art and cutting-edge techniques to retrieve and process big data. Course introduces Unix/Linux, R, ggplot2 graphic package, regular expressions and version control, dynamic reporting generation through hands-on and interactive learning opportunities both during lectures and in extensive lab sessions based on real world case studies extracted from published papers.

**BIOS 249. Interactive Microbiology. 1 Unit.**

Focus is on phototactic behavior of single celled organisms and the biophysical principles of feedback control and hydrodynamics underlying it. Enables real biology experimentation in the cloud, and is ultimately intended to illustrate and teach the scientific method (free exploration, hypothesis formation, measurement, data analysis, modeling, conclusions).

**BIOS 250. Interdisciplinary Drug Discovery. 1 Unit.**

Focuses on decision making in science, with particular attention to skills for identifying when to solicit interdisciplinary input, and how to guide such discussions to productive endpoints. Uses case studies based on Novartis projects to teach ways to leverage interdisciplinary knowledge, effectively communicate across disciplines, and drive teams to decision points. Two-day workshop presented by Novartis scientists who lead participants through these real life examples of interactive teams within pharma solving problems through collaborative decision making. Participants develop collaborative decision making skills highlighted through group exercises.

**Cancer Biology Courses****CBIO 101. Cancer Biology. 4 Units.**

Experimental approaches to understanding the origins, diagnosis, and treatment of cancer. Focus on key experiments and discoveries with emphasis on genetics, molecular biology, and cell biology. Topics include carcinogens, tumor virology, oncogenes, tumor suppressor genes, cell cycle regulation, angiogenesis, invasion and metastasis, cancer genomics, cancer epidemiology, and cancer therapies. Discussion sections based on primary research articles that describe key experiments in the field. Satisfies Central Menu Areas 1 or 2 for Bio majors. Prerequisite: Biology or Human Biology core or equivalent, or consent of instructor.

Same as: PATH 101

**CBIO 240. Molecular Genetic Basis of Cancer. 4 Units.**

Required for first-year Cancer Biology graduate students. Focus is on fundamental concepts in the molecular biology of cancer, including oncogenes, tumor suppressor genes, and cellular signaling pathways. Emphasis will be given to seminal discoveries and key experiments in the field of cancer molecular biology. Course consists of two 1 hour lectures and one 2 hour discussion per week. Enrollment of undergraduates requires consent of the course director.

**CBIO 241. Cellular Basis of Cancer. 4 Units.**

Focus on tumor cell biology including angiogenesis, metastasis, metabolism, stem cells, and other topics. Prerequisite: CBIO240.

**CBIO 242. Cellular and Clinical Aspects of Cancer. 4 Units.**

Required for first-year Cancer Biology graduate students, and for first- and second-year medical students intending to complete the Cancer Biology Scholarly Concentration. Focus is on the cellular biology of cancer, including discussion of basic biology including tumor angiogenesis, metabolism, and immunology, as well as clinical oncology and cancer therapeutics. Emphasis will be given to seminal discoveries and key experiments in the field of cancer biology and oncology. Course consists of two 1 hour lectures and one 2 hour discussion per week. Enrollment of undergraduates requires consent of the course director.

**CBIO 243. Principles of Cancer Systems Biology. 3 Units.**

Focus is on major principles of cancer systems biology research that integrates experimental and computational biology in order to systematically unravel the complexity of cancer. The opportunity to embark on cancer systems biology research has been enabled by the rapid emergence of numerous and increasingly accessible technologies that provide global DNA, RNA and protein expression profiles of cells under a variety of conditions following environmental, drug and genetic perturbations. Course addresses the challenge of how to analyze high-dimensional and highly-multiplexed data in order to synthesize biologically and clinically relevant insights and generate hypotheses for further functional testing. Aims to broaden student exposure to the experimental and computational skills needed to apply the emerging principles of systems biology to the study of cancer.

**CBIO 244. Lecture Series in Cancer Systems Biology. 1 Unit.**

Presents new concepts in the field of cancer systems biology, demonstrating the integration of novel experimental and computational approaches for addressing outstanding critical questions in cancer biology. Invited speakers share insights about state-of-the-art trends and advice on navigating a career in cancer systems biology. Course required for CSBS Fellows.

**CBIO 260. Teaching in Cancer Biology. 1-10 Unit.**

Practical experience in teaching by serving as a teaching assistant in a cancer biology course. Unit values are allotted individually to reflect the level of teaching responsibility assigned to the student.

**CBIO 275. Tumor Immunology. 2 Units.**

Tumor Immunology focuses on the mechanisms by which tumors can escape from and subvert the immune system and conversely on the ability of innate and adaptive arms of the immune system to recognize and eliminate tumors. Topics include: tumor antigens, tumor immunosurveillance and immunoediting, tumor immunotherapy (including CAR-T and checkpoint antibodies) and cancer vaccines. Tracks the historical development of our understanding of modulating tumor immune response and discusses their relative significance in the light of current research findings. Prerequisite: for undergraduates, human biology or biology core.

Same as: IMMUNOL 275

**CBIO 280. Cancer Biology Journal Club. 1 Unit.**

Required of and limited to first- and second-year graduate students in Cancer Biology. Recent papers in the literature presented by graduate students. When possible, discussion relates to and precedes cancer-related seminars at Stanford. Attendance at the relevant seminar required.

**CBIO 299. Directed Reading in Cancer Biology. 1-18 Unit.**

Prerequisite: consent of instructor.

**CBIO 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Cancer Biology Ph.D. students must register as soon as they begin dissertation-related research work.

**CBIO 801. TGR Project. 0 Units.**

.

**CBIO 802. TGR Dissertation. 0 Units.**

.

**Cardiothoracic Surgery Courses****CTS 199. Undergraduate Research. 1-18 Unit.**

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**CTS 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**CTS 399. Graduate Research. 1-18 Unit.**

Allows for qualified students to undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**Catalan Language Courses Courses****CATLANG 1A. Accelerated First-Year Catalan, Part 1. 5 Units.**

First quarter of the two-quarter sequence. For students with knowledge of another Romance language, preferably Spanish. Emphasis is on developing beginning proficiency in interpersonal, interpretive, and presentational spheres. Prerequisite: consent of instructor.

**CATLANG 2A. Accelerated First-Year Catalan, Part 2. 5 Units.**

Continuation of CATLANG 1A. For students with knowledge of another Romance language, preferably Spanish. Further development of socially and culturally appropriate proficiency in interpersonal, interpretive, and presentational spheres. Completion of CATLANG 2A fulfills the University language requirement. Prerequisite: CATLANG 1A.

**CATLANG 11A. Accelerated Second-Year Catalan, Part A. 4-5 Units.**

Continuation of CATLANG 2A. Sequence integrating culture and language of the Catalan-speaking world. Socially and culturally appropriate forms in narrations, descriptions, and expression of ideas and opinions. Emphasis is on oral and written proficiency in formal, informal, academic, and professional contexts. Prerequisite: CATLANG 2A.

**CATLANG 199. Individual Work. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**CATLANG 395. Graduate Studies in Catalan. 2-5 Units.**

May be repeated for credit. Prerequisite consent of instructor.

**Center for Teaching & Learning Courses****Chemical & Systems Biology Courses****CSB 199. Undergraduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**CSB 201. Chemical and Systems Biology Bootcamp. 1 Unit.**

In this "boot camp" students perform hands-on original research in small groups, combining chemical biology systems-level approaches to investigate current biological problems. This year's course will investigate the function and regulation of uncharacterized genes. Students will acquire conceptual and methodological training in a wide range of modern techniques, including "omics" approaches, fluorescence microscopy, genome editing, computational approaches, and quantitative data analysis.

**CSB 210. Cell Signaling. 4 Units.**

The molecular mechanisms through which cells receive and respond to external signals. Emphasis is on principles of cell signaling, the systems-level properties of signal transduction modules, and experimental strategies through which cell signaling pathways are being studied. Prerequisite: working knowledge of biochemistry and genetics.

**CSB 220. Chemistry of Biological Processes. 3 Units.**

The principles of organic and physical chemistry as applied to biomolecules. The goal is a working knowledge of chemical principles that underlie biological processes, and chemical tools used to study and manipulate biological systems. Current topics may include chemical genetics, activity-based probes, DNA/RNA chemistry and molecular evolution, protein labeling, carbohydrate engineering, fluorescent proteins and sensors, optochemical/optogenetic methods, mass spectrometry, and genome-editing technologies. Prerequisites: organic chemistry and biochemistry, or consent of instructor.

**CSB 240A. A Practical Approach to Drug Discovery and Development. 3-4 Units.**

Advancing a drug from discovery of a therapeutic target to human trials and commercialization. Topics include: high throughput assay development, compound screening, lead optimization, protecting intellectual property, toxicology testing, regulatory issues, assessment of clinical need, defining the market, conducting clinical trials, project management, and commercialization issues, including approach to licensing and raising capital. Maximum units are available by taking an additional contact hour.

**CSB 240B. A Practical Approach to Drug Discover and Development. 3-4 Units.**

(Continuation of 240A) Advancing a drug from discovery of a therapeutic target to human trials and commercialization. Topics include: high throughput assay development, compound screening, lead optimization, protecting intellectual property, toxicology testing, regulatory issues, assessment of clinical need, defining the market, conducting clinical trials, project management, and commercialization issues, including approach to licensing and raising capital. Maximum units are available by taking an additional contact hour. Prerequisite: 240A.

**CSB 242. Drug Discovery and Development Seminar Series. 1 Unit.**

The scientific principles and technologies involved in making the transition from a basic biological observation to the creation of a new drug emphasizing molecular and genetic issues. Prerequisite: biochemistry, chemistry, or bioengineering.

**CSB 244. Drug Discovery and Development: A Case-based Approach. 2 Units.**

Provides an overview of the drug discovery and development process through use of case examples—successful and unsuccessful attempts to integrate the scientific, clinical, regulatory, and commercial requirements to bring a new drug to patients. Focus on the complex array of independent tasks that must be accomplished to bring a new drug to the clinic. Specific cases discussed in a seminar format.

**CSB 245. Economics of Biotechnology. 2 Units.**

Focuses on translation of promising research discovery into marketed drugs and the integration of scientific method, clinical needs assessment, clinical and regulatory strategy, market analysis, economic considerations, and the influence of the healthcare economic ecosystem necessary for successful translation. Explores the economic perspectives of various stakeholders—patients, providers, payers, biotechnology and pharmaceutical companies, FDA, and financial markets—and how they influence drug development.

**CSB 250. The Biology of Chromatin Templated Processes. 3 Units.**

Topics include mechanisms of DNA replication; gene expressions regulation; DNA damage sensing and DNA repair; chromatin structure and function; and epigenetics and nuclear reprogramming. Prerequisite: working knowledge of molecular biology, biochemistry and genetics, or instructor consent.

**CSB 260. Concepts and Applications in Chemical Biology. 3 Units.**

Current topics include chemical genetics, activity-based probes, inducible protein degradation, DNA/RNA chemistry and molecular evolution, protein labeling, carbohydrate engineering, fluorescent proteins and sensors, optochemical/optogenetic methods, mass spectrometry, and genome-editing technologies.

**CSB 261. Quantitative Principles in Cell Differentiation. 3 Units.**

Explores the common principles controlling cell differentiation from stem cells to terminally differentiated cells. Focus is on becoming familiar with the computational and single-cell experimental approaches that are needed to identify, probe, and dissect the dynamic decision to differentiate or de-differentiate in different cell systems including stem cells, adipocytes, neurons, pancreatic beta cells, cardiomyocytes, and hematopoietic cells. Topics include exploring how feedback mechanisms can be exploited to enable and precisely control tissue regeneration.

**CSB 270. Research Seminar. 1 Unit.**

Guest speakers and discussion on current research in pharmacology.

**CSB 299. Directed Reading in Chemical and Systems Biology. 1-18 Unit.**

Prerequisite: consent of instructor.

**CSB 370. Medical Scholars Research. 4-18 Units.**

Provides an opportunity for student and faculty interaction, as well as academic credit and financial support, to medical students who undertake original research. Enrollment is limited to students with approved projects.

**CSB 399. Graduate Research. 1-18 Unit.**

Students undertake investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

**CSB 801. TGR Project. 0 Units.**

.

**CSB 802. TGR Dissertation. 0 Units.**

.

**Chemical Engineering Courses****CHEMENG 10. The Chemical Engineering Profession. 1 Unit.**

Open to all undergraduates. Overview of and careers in chemical engineering; opportunities to develop networks with working professionals. Panel discussions on career paths and post-graduation opportunities available. Areas include biotechnology, electronics, energy, environment, management consulting, nanotechnology, and graduate school in business, law, medicine, and engineering.

**CHEMENG 12SC. An Exploration of Art Materials: The Intersection of Art and Science. 2 Units.**

There is growing interest in the intersection of art and science, whether from artists adapting technology to suit their visions or from scientists and engineers seeking to explain various visual effects. To take advantage of possible creative sparks at the art/science interface, it is necessary for fuzzies and techies to have some knowledge of the language used by the other side. This interface will be explored through examining approaches used by an artist and an engineer in the context of the materials science of cultural objects. In-class lectures, hands-on studio practice, and field trips will be used to illustrate these different perspectives. At the heart of the scientific approach is the notion that a cultural object, e.g., a painting, is a physical entity comprising materials with different physical properties and different responses to environmental stresses presented by light, heat, and water. In support of this outlook, in-class lectures and discussions will focus on the basic concepts of color, optics, mechanics, composite structures, and response of the object to environmental stress, and we will visit Bay Area museums to see how artists employ such techniques. The hands-on studio experience is designed to increase students' confidence and develop their appreciation of differences in materials. It is not necessary to have any artistic training, only a willingness to experiment. The in-class studio projects will include working with line and shadow; color, binders, and mordants; global sources of pigments; substrates and writing; and material failure. Students will make one technical presentation on a topic in one of the five areas relevant to a painting: color, optics, mechanics, composites, and stress response. In addition, they will prepare one essay on the issues surrounding the intersection of art and science. Finally, they will complete a project related to one of the thematic areas covered in the hands-on studio sessions and make a final oral presentation describing their project. Sophomore College Course: Application required, due noon, April 5, 2016. Apply at <http://soco.stanford.edu>.

**CHEMENG 20. Introduction to Chemical Engineering. 4 Units.**

Overview of chemical engineering through discussion and engineering analysis of physical and chemical processes. Topics: overall staged separations, material and energy balances, concepts of rate processes, energy and mass transport, and kinetics of chemical reactions. Applications of these concepts to areas of current technological importance: biotechnology, energy, production of chemicals, materials processing, and purification. Prerequisite: CHEM 31. Same as: ENGR 20

**CHEMENG 25B. Biotechnology. 3 Units.**

Biology and chemistry fundamentals, genetic engineering, cell culture, protein production, pharmaceuticals, genomics, viruses, gene therapy, evolution, immunology, antibodies, vaccines, transgenic animals, cloning, stem cells, intellectual property, governmental regulations, and ethics. Prerequisites: CHEM 31 and MATH 41 or equivalent courage. Same as: ENGR 25B

**CHEMENG 25E. Energy: Chemical Transformations for Production, Storage, and Use. 3 Units.**

An introduction and overview to the challenges and opportunities of energy supply and consumption. Emphasis on energy technologies where chemistry and engineering play key roles. Review of energy fundamentals along with historical energy perspectives and current energy production technologies. In depth analyses of solar thermal systems, biofuels, photovoltaics and electrochemical devices (batteries and fuel cells). Prerequisites: high school chemistry or equivalent. Same as: ENGR 25E

**CHEMENG 35N. Renewable Energy for a Sustainable World. 3 Units.**

Preference to freshmen. Organized to prepare a renewable energy plan for California. Energy concepts and quantitation approaches are learned, energy needs and natural resources are assessed, and renewable energy technologies are evaluated for economic performance and environmental impact. An investment plan is developed along with implementation and research recommendations. The same concepts are then applied to Mexico as a second model system.

**CHEMENG 60Q. Environmental Regulation and Policy. 3 Units.**

Preference to sophomores. How environmental policy is formulated in the U.S. How and what type of scientific research is incorporated into decisions. How to determine acceptable risk, the public's right to know of chemical hazards, waste disposal and clean manufacturing, brownfield redevelopment, and new source review regulations. The proper use of science and engineering including media presentation and misrepresentation, public scientific and technical literacy, and emotional reactions. Alternative models to formulation of environmental policy. Political and economic forces, and stakeholder discussions.

**CHEMENG 70Q. Masters of Disaster. 3 Units.**

Preference to sophomores. For students interested in science, engineering, politics, and the law. Learn from past disasters to avoid future ones. How disasters can be tracked to failures in the design process. The roles of engineers, artisans, politicians, lawyers, and scientists in the design of products. Failure as rooted in oversight in adhering to the design process. Student teams analyze real disasters and design new products presumably free from the potential for disastrous outcomes.

**CHEMENG 80Q. Art, Chemistry, and Madness: The Science of Art Materials. 3 Units.**

Preference to sophomores. Chemistry of natural and synthetic pigments in five historical palettes: earth (paleolithic), classical (Egyptian, Greco-Roman), medieval European (Middle Ages), Renaissance (old masters), and synthetic (contemporary). Composite nature of paints using scanning electron microscopy images; analytical techniques used in art conservation, restoration, and determination of provenance; and inherent health hazards. Paintings as mechanical structures. Hands-on laboratory includes stretching canvas, applying gesso grounds, grinding pigments, preparing egg tempera paint, bamboo and quill pens, gilding and illumination, and papermaking.

**CHEMENG 100. Chemical Process Modeling, Dynamics, and Control. 3 Units.**

Mathematical methods applied to engineering problems using chemical engineering examples. The development of mathematical models to describe chemical process dynamic behavior. Analytical and computer simulation techniques for the solution of ordinary differential equations. Dynamic behavior of linear first- and second-order systems. Introduction to process control. Dynamics and stability of controlled systems. Prerequisites: CHEMENG 20 or ENGR 20; CME 102 or MATH 53.

**CHEMENG 110. Equilibrium Thermodynamics. 3 Units.**

Thermodynamic properties, equations of state, properties of non-ideal systems including mixtures, and phase and chemical equilibria. Prerequisite: CHEM 171 or equivalent.

**CHEMENG 120A. Fluid Mechanics. 4 Units.**

The flow of isothermal fluids from a momentum transport viewpoint. Continuum hypothesis, scalar and vector fields, fluid statics, non-Newtonian fluids, shell momentum balances, equations of motion and the Navier-Stokes equations, creeping and potential flow, parallel and nearly parallel flows, time-dependent parallel flows, boundary layer theory and separation, introduction to drag correlations. Prerequisites: junior in Chemical Engineering or consent of instructor; 100 and CME 102 or equivalent.

**CHEMENG 120B. Energy and Mass Transport. 4 Units.**

General diffusive transport, heat transport by conduction, Fourier's law, conduction in composites with analogies to electrical circuits, advection-diffusion equations, forced convection, boundary layer heat transport via forced convection in laminar flow, forced convection correlations, free convection, free convection boundary layers, free convection correlations and application to geophysical flows, melting and heat transfer at interfaces, radiation, diffusive transport of mass for dilute and non-dilute transfer, mass and heat transport analogies, mass transport with bulk chemical reaction, mass transport with interfacial chemical reaction, evaporation. Prerequisite 120A or consent of instructor.

**CHEMENG 130. Separation Processes. 3 Units.**

Analysis and design of equilibrium and non-equilibrium separation processes. Possible examples: distillation, liquid-liquid extraction, flash distillation, electrophoresis, centrifugation, membrane separations, chromatography, and reaction-assisted separation processes.

**CHEMENG 140. Micro and Nanoscale Fabrication Engineering. 3 Units.**

(Same as CHEMENG 140) Survey of fabrication and processing technologies in industrial sectors, such as semiconductor, biotechnology, and energy. Chemistry and transport of electronic and energy device fabrication. Solid state materials, electronic devices and chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, thin film deposition, plasma processing. Micro and nanopatterning involving photolithography, unconventional soft lithography and self assembly. Recommended: CHEM 33, 171, and PHYSICS 55.

Same as: CHEMENG 240

**CHEMENG 142. Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations. 3 Units.**

(Formerly 124/224) Introduction to heterogeneous catalysis, including models of surface reactivity, surface equilibria, kinetics of surface reactions, electronic and geometrical effects in heterogeneous catalysis, trends in reactivity, catalyst structure and composition, electro-catalysis and photo-catalysis. Selected applications and challenges in energy transformations will be discussed. Prerequisites: CHEM 31AB or 31X, CHEM 171, CHEM 175 or CHEMENG 170 or equivalents. Recommended: CHEM 173.

Same as: CHEMENG 242

**CHEMENG 150. Biochemical Engineering. 3 Units.**

Systems-level combination of chemical engineering concepts with biological principles. The production of protein pharmaceuticals as a paradigm to explore quantitative biochemistry and cellular physiology, the elemental stoichiometry of metabolism, recombinant DNA technology, synthetic biology and metabolic engineering, fermentation development and control, product isolation and purification, protein folding and formulation, and biobusiness and regulatory issues. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41 or equivalent.

**CHEMENG 160. Polymer Science and Engineering. 3 Units.**

Interrelationships among molecular structure, morphology, and mechanical behavior of polymers. Topics include amorphous and semicrystalline polymers, glass transitions, rubber elasticity, linear viscoelasticity, and rheology. Applications of polymers in biomedical devices and microelectronics. Prerequisites: CHEM 31 A,B or CHEM 31X, CHEM 33 and 171, or equivalent.

Same as: CHEMENG 260

**CHEMENG 162. Polymers for Clean Energy and Water. 3 Units.**

The first five weeks of this course will be devoted to the fundamental aspects of polymers necessary to understand the applications in energy and the environment. These include: polymer chain configuration, morphology of semi-crystalline and amorphous solids, thermal transition behavior, thermodynamics of polymer blends and block copolymers, and the time/temperature dependence of linear viscoelasticity. The remaining five weeks of class will be devoted to applications, with special emphasis on membrane transport, including ion transport in fuel cell exchange membranes, gas transport in hydrogen enrichment membranes, and water transport in desalination membranes. In addition, completely degradable biocomposites will be discussed. Prerequisites: CHEM 31 A,B or CHEM 31X, CHEM 33, CHEM 171.

Same as: CHEMENG 262

**CHEMENG 170. Kinetics and Reactor Design. 3 Units.**

Chemical kinetics, elementary reactions, mechanisms, rate-limiting steps, and quasi-steady state approximations. Ideal isothermal and non-isothermal reactors; design principles. Steady state and unsteady state operation of reactors; conversion and limitations of thermodynamic equilibrium. Enzymes and heterogeneous catalysis and catalytic reaction mechanisms. Prerequisites: 110, 120A, 120B.

**CHEMENG 174. Environmental Microbiology I. 3 Units.**

Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents. Same as: CEE 274A, CHEMENG 274

**CHEMENG 180. Chemical Engineering Plant Design. 4 Units.**

Open to seniors in chemical engineering or by consent of instructor. Application of chemical engineering principles to the design of practical plants for the manufacture of chemicals and related materials. Topics: flow-sheet development from a conceptual design, equipment design for distillation, chemical reactions, heat transfer, pumping, and compression; estimation of capital expenditures and production costs; plant construction.

**CHEMENG 181. Biochemistry I. 3 Units.**

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. (CHEMENG offerings formerly listed as 188/288.) Prerequisites: CHEM 33, 35, 131, and 135 or 171. Same as: BIO 188, CHEM 181, CHEMENG 281

**CHEMENG 183. Biochemistry II. 3 Units.**

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288). Same as: BIO 189, CHEM 183, CHEMENG 283

**CHEMENG 185A. Chemical Engineering Laboratory A. 4 Units.**

CHEMENG185A: First quarter of two-quarter sequence. Experimental aspects of chemical engineering. Experimental research skills will be developed and practiced through guided lab modules. Emphasizes laboratory work, experimental design, and development of communication skills. In addition to lectures, students are required to attend one weekly lab section (5 hours each) where lab work will be conducted in student pairs. Students must enroll in a lab section on Axess. Final project will be a written research proposal prepared by student teams to be carried out in the following quarter in CHEMENG185B. Satisfies the Writing in the Major (WIM) requirement. Prerequisites: CHEMENG 120A, 120B, 181.

**CHEMENG 185B. Chemical Engineering Laboratory B. 4 Units.**

CHEMENG185B: Second quarter of two-quarter sequence. Experimental aspects of chemical engineering. Emphasizes experimental design, project execution, team organization, and communication skills. Lab section times will not be assigned, though students should expect to spend at least 5 hours per week on average in the lab working on their team research projects. Students will also partner with a local high school classroom for an outreach project. Labs will typically be available M-F between 1-6pm; to be arranged separately. Prerequisite: CHEMENG 185A. Corequisite: CHEMENG 150.

**CHEMENG 190. Undergraduate Research in Chemical Engineering. 1-6 Unit.**

Laboratory or theoretical work for undergraduates under the supervision of a faculty member. Research in one of the graduate research groups or other special projects in the undergraduate chemical engineering lab. Students should consult advisers for information on available projects. Course may be repeated.

**CHEMENG 190H. Undergraduate Honors Research in Chemical Engineering. 1-5 Unit.**

For Chemical Engineering majors pursuing a B.S. with Honors degree who have submitted an approved research proposal to the department. Unofficial transcript must document BSH status and at least 9 units of 190H research for a minimum of 3 quarters. May be repeated for credit.

**CHEMENG 191H. Undergraduate Honors Seminar. 1 Unit.**

For Chemical Engineering majors approved for B.S. with Honors research program. Honors research proposal must be submitted and unofficial transcript document BSH status prior to required concurrent registration in 190H and 191H. May be repeated for credit. Corequisite: 190H.

**CHEMENG 196. Creating New Ventures in Engineering and Science-based Industries. 3 Units.**

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects. Same as: CHEM 196, CHEM 296, CHEMENG 296

**CHEMENG 240. Micro and Nanoscale Fabrication Engineering. 3 Units.**

(Same as CHEMENG 140) Survey of fabrication and processing technologies in industrial sectors, such as semiconductor, biotechnology, and energy. Chemistry and transport of electronic and energy device fabrication. Solid state materials, electronic devices and chemical processes including crystal growth, chemical vapor deposition, etching, oxidation, doping, diffusion, thin film deposition, plasma processing. Micro and nanopatterning involving photolithography, unconventional soft lithography and self assembly. Recommended: CHEM 33, 171, and PHYSICS 55. Same as: CHEMENG 140

**CHEMENG 242. Basic Principles of Heterogeneous Catalysis with Applications in Energy Transformations. 3 Units.**

(Formerly 124/224) Introduction to heterogeneous catalysis, including models of surface reactivity, surface equilibria, kinetics of surface reactions, electronic and geometrical effects in heterogeneous catalysis, trends in reactivity, catalyst structure and composition, electro-catalysis and photo-catalysis. Selected applications and challenges in energy transformations will be discussed. Prerequisites: CHEM 31AB or 31X, CHEM 171, CHEM 175 or CHEMENG 170 or equivalents. Recommended: CHEM 173. Same as: CHEMENG 142

**CHEMENG 260. Polymer Science and Engineering. 3 Units.**

Interrelationships among molecular structure, morphology, and mechanical behavior of polymers. Topics include amorphous and semicrystalline polymers, glass transitions, rubber elasticity, linear viscoelasticity, and rheology. Applications of polymers in biomedical devices and microelectronics. Prerequisites: CHEM 31 A,B or CHEM 31X, CHEM 33 and 171, or equivalent. Same as: CHEMENG 160

**CHEMENG 262. Polymers for Clean Energy and Water. 3 Units.**

The first five weeks of this course will be devoted to the fundamental aspects of polymers necessary to understand the applications in energy and the environment. These include: polymer chain configuration, morphology of semi-crystalline and amorphous solids, thermal transition behavior, thermodynamics of polymer blends and block copolymers, and the time/temperature dependence of linear viscoelasticity. The remaining five weeks of class will be devoted to applications, with special emphasis on membrane transport, including ion transport in fuel cell exchange membranes, gas transport in hydrogen enrichment membranes, and water transport in desalination membranes. In addition, completely degradable biocomposites will be discussed. Prerequisites: CHEM 31 A,B or CHEM 31X, CHEM 33, CHEM 171.

Same as: CHEMENG 162

**CHEMENG 274. Environmental Microbiology I. 3 Units.**

Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents.

Same as: CEE 274A, CHEMENG 174

**CHEMENG 281. Biochemistry I. 3 Units.**

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. (CHEMENG offerings formerly listed as 188/288.) Prerequisites: CHEM 33, 35, 131, and 135 or 171.

Same as: BIO 188, CHEM 181, CHEMENG 181

**CHEMENG 283. Biochemistry II. 3 Units.**

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).

Same as: BIO 189, CHEM 183, CHEMENG 183

**CHEMENG 296. Creating New Ventures in Engineering and Science-based Industries. 3 Units.**

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects.

Same as: CHEM 196, CHEM 296, CHEMENG 196

**CHEMENG 300. Applied Mathematics in the Chemical and Biological Sciences. 3 Units.**

Mathematical solution methods via applied problems including chemical reaction sequences, mass and heat transfer in chemical reactors, quantum mechanics, fluid mechanics of reacting systems, and chromatography. Topics include generalized vector space theory, linear operator theory with eigenvalue methods, phase plane methods, perturbation theory (regular and singular), solution of parabolic and elliptic partial differential equations, and transform methods (Laplace and Fourier). Prerequisites: CME 102/ENGR 155A and CME 104/ENGR 155B, or equivalents.

Same as: CME 330

**CHEMENG 310. Microhydrodynamics. 3 Units.**

Transport phenomena on small-length scales appropriate to applications in microfluidics, complex fluids, and biology. The basic equations of mass, momentum, and energy, derived for incompressible fluids and simplified to the slow-flow limit. Topics: solution techniques utilizing expansions of harmonic and Green's functions; singularity solutions; flows involving rigid particles and fluid droplets; applications to suspensions; lubrication theory for flows in confined geometries; slender body theory; and capillarity and wetting. Prerequisites: 120A,B, 300, or equivalents.

Same as: ME 451D

**CHEMENG 320. Chemical Kinetics and Reaction Engineering. 3 Units.**

Theoretical and experimental tools useful in understanding and manipulating reactions mediated by small-molecules and biological catalysts. Theoretical: first classical chemical kinetics and transition state theory; then RRKM theory and Monte Carlo simulations. Experimental approaches include practical application of modern spectroscopic techniques, stopped-flow measurements, temperature-jump experiments, and single-molecule approaches to chemical and biological systems. Both theory and application are framed with regard to systems of particular interest, including industrially relevant enzymes, organometallic catalysts, heterogeneous catalysis, electron transfer reactions, and chemical kinetics within living cells.

**CHEMENG 340. Molecular Thermodynamics. 3 Units.**

Classical thermodynamics and quantum mechanics. Development of statistical thermodynamics to address the collective behavior of molecules. Establishment of theories for gas, liquid, and solid phases, including phase transitions and critical behavior. Applications include electrolytes, ion channels, surface adsorption, ligand binding to proteins, hydrogen bonding in water, hydrophobicity, polymers, and proteins.

**CHEMENG 345. Fundamentals and Applications of Spectroscopy. 3 Units.**

Development of theoretical approaches to spectroscopy, including spectroscopic transitions, transition probabilities, and selection rules. Application to photon and electron spectroscopies of the gas and solid phases. Topics: rotational spectroscopy; infrared and Raman vibrational spectroscopies; fluorescence spectroscopy; Auger, x-ray and ultraviolet photoelectron spectroscopies. Prerequisite: CHEM 271 or course in quantum mechanics.

Same as: PHOTON 345

**CHEMENG 355. Advanced Biochemical Engineering. 3 Units.**

Combines biological knowledge and methods with quantitative engineering principles. Quantitative review of biochemistry and metabolism; recombinant DNA technology and synthetic biology (metabolic engineering). The production of protein pharmaceuticals as a paradigm for the application of chemical engineering principles to advanced process development within the framework of current business and regulatory requirements. Prerequisite: CHEMENG 181 (formerly 188) or BIOSCI 41, or equivalent.

Same as: BIOE 355

**CHEMENG 399. Graduate Research Rotation in Chemical Engineering. 1 Unit.**

Introduction to graduate level laboratory and theoretical work. Performance in this course comprises part of the mandatory evaluation for pre-candidacy standing and suitability to continue in the chemical engineering Ph.D. program.

**CHEMENG 410. Public Communication of Research. 1 Unit.**

Develop skills for communicating complex science to the public through writing, video, and public speaking. Learn how to work with the media to explain scientific discoveries without overselling the science. Work in small groups and one-on-one with writers and guest speaker; develop a short written piece and video explaining own research; develop skills that will translate to future scientific projects. Open to graduate students in the biosciences, chemistry, and engineering. Enrollment limited to 20.

**CHEMENG 420. Growth and Form. 3 Units.**

Advanced topics course examining the role of physical forces in shaping living cells, tissues, and organs, making use of D'Arcy Thompson's classic text *On Growth and Form*. The course begins with a review of relevant physical principles drawn from statistical physics, polymer theory, rheology and materials science. We then examine current knowledge of cellular mechanotransduction pathways, the roles of physical forces in guiding embryonic development, and the contribution of aberrant cellular response to mechanical cues in heart disease and cancer. The course concludes by examining current frontiers in stem cell biology and tissue engineering.

**CHEMENG 432. Electrochemical Energy Conversion. 3 Units.**

Electrochemistry is playing an increasingly important role in renewable energy. This course aims to cover the fundamentals of electrochemistry, and then build on that knowledge to cover applications of electrochemistry in energy conversion. Topics to be covered include fuel cells, solar water-splitting, CO<sub>2</sub> conversion to fuels and chemicals, batteries, redox flow cells, and supercapacitors. Prerequisites: CHEM 31AB or 31 X, CHEM 33, CHEM 171, CHEM 175 or CHEMENG 170, or equivalents. Recommended: CHEM 173.

**CHEMENG 442. Structure and Reactivity of Solid Surfaces. 3 Units.**

The structure of solid surfaces including experimental methods for determining the structure of single crystal surfaces. The adsorption of molecules on these surfaces including the thermodynamics of adsorption processes, surface diffusion, and surface reactions. Molecular structure of adsorbates. Current topics in surface structure and reactivity, including systems for heterogeneous catalysis and electronic materials.

**CHEMENG 444. Electronic Structure Theory and Applications to Chemical Kinetics. 3 Units.**

Fundamentals of electronic structure theory as it applies to chemical reaction kinetics in homogeneous and heterogeneous reaction systems. Development and application of the theory of chemical kinetics, including traditional and harmonic transition state theories. Relationships between thermodynamics and kinetics to overall mechanism predictions. Lab involves chemical modeling including *ab initio* electronic structure calculations (Hartree-Fock, configuration interaction, coupled cluster, and many-body perturbation theory) and thermodynamic predictions. DFT calculations for catalysis applications are also covered. Prerequisite: quantum mechanics.

Same as: ENERGY 256

**CHEMENG 450. Advances in Biotechnology. 3 Units.**

Guest academic and industrial speakers. Latest developments in fields such as bioenergy, green process technology, production of industrial chemicals from renewable resources, protein pharmaceutical production, industrial enzyme production, stem cell applications, medical diagnostics, and medical imaging. Biotechnology ethics, business and patenting issues, and entrepreneurship in biotechnology.

Same as: BIOE 450

**CHEMENG 454. Synthetic Biology and Metabolic Engineering. 3 Units.**

Principles for the design and optimization of new biological systems. Development of new enzymes, metabolic pathways, other metabolic systems, and communication systems among organisms. Example applications include the production of central metabolites, amino acids, pharmaceutical proteins, and isoprenoids. Economic challenges and quantitative assessment of metabolic performance. Pre- or corequisite: CHEMENG 355 or equivalent.

Same as: BIOE 454

**CHEMENG 456. Microbial Bioenergy Systems. 3 Units.**

Introduction to microbial metabolic pathways and to the pathway logic with a special focus on microbial bioenergy systems. The first part of the course emphasizes the metabolic and biochemical principles of pathways, whereas the second part is more specifically directed toward using this knowledge to understand existing systems and to design innovative microbial bioenergy systems for biofuel, biorefinery, and environmental applications. There also is an emphasis on the implications of rerouting of energy and reducing equivalents for the fitness and ecology of the organism. Prerequisites: CHEMENG 174 or 181 and organic chemistry, or equivalents.

Same as: CEE 274B

**CHEMENG 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.**

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics.

Same as: BIO 459, BIOC 459, BIOE 459, CHEM 459, PSYCH 459

**CHEMENG 462. Complex Fluids and Non-Newtonian Flows. 3 Units.**

Definition of a complex liquid and microrheology. Division of complex fluids into suspensions, solutions, and melts. Suspensions as colloidal and non-colloidal. Extra stress and relation to the stresslet. Suspension rheology including Brownian and non-Brownian fibers. Microhydrodynamics and the Fokker-Planck equation. Linear viscoelasticity and the weak flow limit. Polymer solutions including single mode (dumbbell) and multimode models. Nonlinear viscoelasticity. Intermolecular effects in nondilute solutions and melts and the concept of reptation. Prerequisites: low Reynolds number hydrodynamics or consent of instructor.

Same as: ME 455

**CHEMENG 464. Polymer Chemistry. 3 Units.**

Polymer material design, synthesis, characterization, and application. Topics include organic and kinetic aspects of polymerization, polymer characterization techniques, and structure and properties of bulk polymers for commercial applications and emerging technologies.

**CHEMENG 466. Polymer Physics. 3 Units.**

Concepts and applications in the equilibrium and dynamic behavior of complex fluids. Topics include solution thermodynamics, scaling concepts, semiflexibility, characterization of polymer size (light scattering, osmotic pressure, size-exclusion chromatography, intrinsic viscosity), viscoelasticity, rheological measurements, polyelectrolytes, liquid crystals, biopolymers, and gels.

**CHEMENG 469. Solid Structure and Properties of Polymers. 3 Units.**

Fundamental structure-properties relationships of solid polymers in bulk and thin films. Topics include chain conformations in bulk amorphous polymers, glass transition, crystallization, semi-crystalline morphology, liquid crystalline order, polymer blends, block copolymers, polymer networks/gels, polymers of high current interest, and experimental methods of characterizing polymer structure.

**CHEMENG 470. Complex Fluid Interfaces: Capillarity and Interfacial Dynamics. 3 Units.**

Complex fluid interfaces arise whenever amphiphiles (surfactants, phospholipids, polymers, colloidal particles) collect at liquid-liquid surfaces, imbuing them with nonlinear mechanical responses. Examples in nature include the cell membrane, lung surfactants, and the tear film. Industrial applications include emulsions and foams that require stabilization. The course discusses concepts in capillarity and wetting, interfacial fluid dynamics, thin film stability, the microstructure of self-organized monolayers and bilayers. Experimental microstructural methods (Brewster angle microscopy, fluorescence microscopy, grazing incidence x-ray diffraction) will be described. Prerequisite: 310 or equivalent.

**CHEMENG 482. The Startup Garage: Design. 4 Units.**

(Same as STRAMGT 356) The Startup Garage is an experiential lab course that focuses on the design, testing and launch of a new venture. Multidisciplinary student teams work through an iterative process of understanding user needs, creating a point of view statement, ideating and prototyping new product and services and their business models, and communicating the user need, product, service and business models to end-users, partners, and investors. In the autumn quarter, teams will: identify and validate a compelling user need and develop very preliminary prototypes for a new product or service and business models. Students form teams, conduct field work and iterate on the combination of business model -- product -- market. Teams will present their first prototypes (business model - product - market) at the end of the quarter to a panel of entrepreneurs, venture capitalists, angel investors and faculty.

Same as: SOMGEN 282

**CHEMENG 484. The Startup Garage: Testing and Launch. 4 Units.**

This is the second quarter of the two-quarter series. In this quarter, student teams expand the field work they started in the fall quarter. They get out of the building to talk to potential customers, partners, distributors, and investors to test and refine their business model, product/service and market. This quarter the teams will be expected to develop and test a minimally viable product, iterate, and focus on validated lessons on: the market opportunity, user need and behavior, user interactions with the product or service, business unit economics, sale and distribution models, partnerships, value proposition, and funding strategies. Teams will interact with customers, partners, distributors, investors and mentors with the end goal of developing and delivering a funding pitch to a panel of entrepreneurs, venture capitalists, angel investors and faculty.

Same as: SOMGEN 284

**CHEMENG 500. Special Topics in Protein Biotechnology. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 501. Special Topics in Semiconductor Processing. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 503. Special Topics in Biocatalysis. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 505. Special Topics in Microrheology. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 507. Special Topics in Polymer Physics and Molecular Assemblies. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 510. Special Topics in Transport Mechanics. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 513. Special Topics in Functional Organic Materials for Electronic and Optical Devices. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 514. Special Topics in Biopolymer Physics. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 515. Special Topics in Molecular and Systems Biology. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 516. Special Topics in Energy and Catalysis. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 517. Special Topics in Microbial Physiology and Metabolism. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 518. Special Topics in Advanced Biophysics and Protein Design. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 519. Special Topics in Interface Science and Catalysis. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 520. Special Topics in Biological Chemistry. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 521. Special Topics in Nanostructured Materials for Energy and the Environment. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 522. SPECIAL TOPICS IN SOFT MATTER AND MOLECULAR PHYSICS. 1 Unit.**

Recent developments and current research. May be repeated for credit. Prerequisite: graduate standing and consent of instructor.

**CHEMENG 600. Graduate Research in Chemical Engineering. 1-12 Unit.**

Laboratory and theoretical work leading to partial fulfillment of requirements for an advanced degree. Course may be repeated for credit.

**CHEMENG 699. Colloquium. 1 Unit.**

Weekly lectures by experts from academia and industry in the field of chemical engineering. Course may be repeated for credit.

**CHEMENG 801. TGR Project. 0 Units.**

.

**CHEMENG 802. TGR Dissertation. 0 Units.**

.

## Chemistry Courses

**CHEM 1. Structure and Reactivity. 4 Units.**

First lecture class in summer organic series. Organic chemistry, functional groups, hydrocarbons, stereochemistry, thermochemistry, kinetics and chemical equilibria. Recitation. Prerequisite: 31 A, B or 31 X or an AP Chemistry score of 5. Course equivalent: Chem 33.

**CHEM 1L. Introduction to Organic Chemistry Lab. 2 Units.**

Techniques for separation of compounds: distillation, crystallization, extraction and chromatographic procedures in the context of reactions learned in Chem 1. Use of GC instrumentation for the analysis of reactions. Lecture treats theory; lab provides practice. Prerequisite: Chem 33 or Chem 1 co-requisite.

**CHEM 2. Organic Monofunctional Compounds. 4 Units.**

Second lecture class in summer organic series. Organic chemistry of oxygen and nitrogen aliphatic compounds. Recitation. Prerequisite: Chem 33 or Chem 1. Course equivalent: Chem 35.

**CHEM 2L. Organic Chemistry Lab I. 2 Units.**

Application of separation techniques in the context of reactions learned in Chem 2. Use of IR instrumentation for the analysis of reactions. Lecture treats theory; lab provides practice. Prerequisite: Chem 1L. Co-requisite: Chem 35 or Chem 2. Course equivalent in conjunction with Chem 3L: Chem 130.

**CHEM 3. Organic Polyfunctional Compounds. 4 Units.**

Last lecture class in summer organic series. Aromatic compounds, polysaccharides, amino acids, proteins, natural products, dyes, purines, pyrimidines, nucleic acids and polymers. Recitation. Prerequisite: Chem 35 or Chem 2. Course equivalent: Chem 131.

**CHEM 3L. Organic Chemistry Lab II. 2 Units.**

Qualitative and analytical techniques applied to reactions learned in Chem 3. Use of NMR instrumentation for the analysis of reactions. Lecture treats theory; lab provides practice. Prerequisite: Chem 2L. Co-requisite: Chem 131 or Chem 3. Course equivalent in conjunction with Chem 2L: Chem 130.

**CHEM 4. Biochemistry: Chemistry of Life. 4 Units.**

A four-week intensive biochemistry course from a chemical perspective. The chemical basis of life, including the biomolecular chemistry of amino acids, proteins, carbohydrates, lipids, and nucleic acids, as well as enzyme kinetics and mechanisms, thermodynamics, and core metabolism, control, and regulation. Recitation includes group work on case studies that support the daily lecture material. Prerequisites: CHEM 33, 35, 131 or 1 year of organic chemistry; Math 19, 20, 21 or 41, 42 or 1 year of single variable calculus.

**CHEM 10. Exploring Research and Problem Solving Across the Sciences. 2 Units.**

Development and practice of critical problem solving and study skills using wide variety of scientific examples that illustrate the broad yet integrated nature of current research. Student teams will have the opportunity to explore and present on topics revolving around five central issues: energy, climate change, water resources, medicine, and food & nutrition from a chemical perspective. Course offered in August prior to start of fall quarter.

**CHEM 25N. Science in the News. 3 Units.**

Preference to freshmen. Possible topics include: diseases such as avian flu, HIV, and malaria; environmental issues such as climate change, atmospheric pollution, and human population; energy sources in the future; evolution; stem cell research; nanotechnology; and drug development. Focus is on the scientific basis for these topics as a basis for intelligent discussion of societal and political implications. Sources include the popular media and scientific media for the nonspecialist, especially those available on the web.

**CHEM 26N. The What, Why, How and wow's of Nanotechnology. 3 Units.**

Preference to freshmen. Introduction to nanotechnology with discussion of basic science at the nanoscale, its difference from molecular and macroscopic scales, and implications and applications. Developments in nanotechnology in the past two decades, from imaging and moving single atoms on surfaces to killing cancer cells with nanoscale tools and gadgets.

**CHEM 27N. Light and Life. 3 Units.**

Preference given to freshman. Light plays a central role in many biological processes and color affects everything in our world. This includes familiar processes such as photosynthesis and vision, but also proton pumps in the organisms that make the Bay purple, green fluorescent protein (GFP), the light from fireflies, the blue and red light receptors responsible for directing how plants grow, the molecules responsible for fall colors, and repair enzymes such as DNA photolyase (this year's Nobel prize). Light is also used to interrogate (e.g. super-resolution microscopy, last year's Nobel prize) and manipulate (optogenetics) biological systems. Light causes sunburn, but can also be used in combination with special molecules to treat diseases. We will discuss the nature of light, how it is measured, how it is generated in the laboratory, how molecules are excited, and how one measures the fate of this excitation. Chem 31X or 31A preferred, but not required.

**CHEM 28N. Science Innovation and Communication. 3 Units.**

Preference to freshmen. The course will explore evolutionary and revolutionary scientific advances; their consequences to society, biotechnology, and the economy; and mechanisms for communicating science to the public. The course will engage academic and industrial thought leaders and provide an opportunity for students to participate in communicating science to the public.

**CHEM 31A. Chemical Principles I. 5 Units.**

For students with moderate or no background in chemistry. Stoichiometry; periodicity; electronic structure and bonding; gases; enthalpy; phase behavior. Emphasis is on skills to address structural and quantitative chemical questions; lab provides practice. Recitation.

**CHEM 31AC. Problem Solving in Science. 1 Unit.**

Development and practice of critical problem solving skills using chemical examples. Limited enrollment. Prerequisite: consent of instructor. Corequisite: CHEM 31A.

**CHEM 31B. Chemical Principles II. 5 Units.**

Chemical equilibrium; acids and bases; oxidation and reduction reactions; chemical thermodynamics; kinetics. Lab. Prerequisite: 31A.

**CHEM 31BC. Problem Solving in Science. 1 Unit.**

Development and practice of critical problem solving skills using chemical examples. Students should also be concurrently enrolled in the parent course 31B. Limited enrollment and with permission of the instructor.

**CHEM 31X. Chemical Principles Accelerated. 5 Units.**

Accelerated; for students with substantial chemistry background. Chemical equilibria concepts, equilibrium constants, acids and bases, chemical thermodynamics, quantum concepts, models of ionic and covalent bonding, atomic and molecular orbital theory, periodicity, and bonding properties of matter. Recitation. Prerequisites: AP chemistry score of 5 or passing score on chemistry placement test, and AP Calculus AB score of 4 or Math 20 or Math 41. Recommended: high school physics.

**CHEM 33. Structure and Reactivity. 5 Units.**

Organic chemistry, functional groups, hydrocarbons, stereochemistry, thermochemistry, kinetics, chemical equilibria. Recitation. Prerequisite: 31A,B, or 31X, or an AP Chemistry score of 5.

**CHEM 33C. Problem Solving in Science. 1 Unit.**

Development and practice of critical problem solving skills using chemical examples. Limited enrollment. Prerequisite: consent of instructor. Corequisite: CHEM 33.

**CHEM 35. Synthetic and Physical Organic Chemistry. 5 Units.**

The structure and reactivity of mono- and polyfunctionalized molecules; retrosynthetic analysis and multi-step chemical synthesis. Course will emphasize deductive logic and reasoning skills through conceptual learning. Students gain an appreciation for the profound impact of organic chemistry on humankind in fields ranging from biology and medicine to gastronomy, agriculture, and materials science. A three hour lab section provides hands on experience with modern chemical methods for preparative and analytical chemistry. Prerequisite: Chem 33.

**CHEM 110. Directed Instruction/Reading. 1-2 Unit.**

Undergraduates pursue a reading program under supervision of a faculty member in Chemistry; may also involve participation in lab. Prerequisites: superior work in 31A,B, 31X, or 33; and consent of instructor.

**CHEM 111. Exploring Chemical Research at Stanford. 1 Unit.**

Preference to freshmen and sophomores. Department faculty describe their cutting-edge research and its applications.

**CHEM 130. Organic and Bio-organic Chemistry Laboratory. 3 Units.**

Intermediate organic and bio-organic chemistry laboratory, including synthesis and spectroscopy. Nobel prize winning reactions and characterization techniques, such as Diels-Alder and modified Wittig reactions, as well as IR, NMR, and GCMS; Biodiesel synthesis and lipid characterization. Prerequisite: Chem 35 taken in Aut 2014-15 or later, or Chem 35 and 36. Corequisite: 131.

**CHEM 131. Organic Polyfunctional Compounds. 3 Units.**

Aromatic compounds, polysaccharides, amino acids, proteins, natural products, dyes, purines, pyrimidines, nucleic acids, and polymers. Prerequisite: 35.

**CHEM 132. Synthesis Laboratory. 3 Units.**

Focus is on longer syntheses with an emphasis upon using metal catalysts. Emphasis will be on complete characterization of final products using chromatographic and spectroscopic methods. Concludes with an individual synthesis project. Prerequisites: 35, 130.

**CHEM 134. Analytical Chemistry Laboratory. 5 Units.**

Classical analysis methods, statistical analyses, chromatography, and spectroscopy will be covered with an emphasis upon quantitative measurements and data analysis. WIM course with full lab reports and oral communication. Concludes with student-developed quantitative project. Prerequisite: Chem 35.

**CHEM 135. Physical Biochemistry. 3 Units.**

Introduction to the physical principles that underlie biological function for students in the life sciences. Chemical thermodynamics: first, second and third laws, heat & work, entropy, free energy, chemical equilibrium, physical equilibrium, osmotic pressure, other colligative properties. Chemical kinetics: rate laws, integration of rate laws, reaction mechanisms, enzyme kinetics. Applications to proteins, lipids, nucleic acids, carbohydrates, small molecules, and macromolecular assemblies. Prerequisites: 31A,B, or 31X, 33, 35 & calculus.

**CHEM 137. Special Topics in Synthesis. 3 Units.**

The course covers the basic toolbox for construction of more complex structures for function, largely directed towards molecules of biological relevance. The focus will be the ability to perform structural changes efficiently in order to enable the design of the best structure for a function. The concepts of catalytic processes are at the heart of the how small molecule drug discovery is performed. Fundamentals of the pertinent catalytic processes are discussed. The inter-relationship of synthetic chemistry and pharmaceuticals is emphasized. See more at: <http://library.stanford.edu/guides/chem-137-special-topics-organic-chemistry#sthash.vi9khNU5.dpuf>. Prerequisite CHEM 35.

**CHEM 150. Single-Crystal X-ray Diffraction. 3 Units.**

Practical X-ray crystallography of discrete molecules, which will emphasize crystal growth, measurement strategies, structure solution and refinement, and report generation. Example structures will include absolute configuration of organic compounds containing only second row atoms, metal containing complexes, and small molecule compounds with disorder. Students will gain knowledge of the underlying theory and concepts for each step of x-ray structural determination. Same as: CHEM 250

**CHEM 151. Inorganic Chemistry I. 3 Units.**

Theories of electronic structure, stereochemistry, and symmetry properties of inorganic molecules. Topics: ionic and covalent interactions, electron-deficient bonding, and molecular orbital theories. Emphasis is on the chemistry of the metallic elements. Prerequisites: 35. Recommended: 171.

**CHEM 153. Inorganic Chemistry II. 3 Units.**

The theoretical aspects of inorganic chemistry. Group theory; many-electron atomic theory; molecular orbital theory emphasizing general concepts and group theory; ligand field theory; application of physical methods to predict the geometry, magnetism, and electronic spectra of transition metal complexes. Prerequisites: 151, 173.

**CHEM 155. Advanced Inorganic Chemistry. 3 Units.**

Chemical reactions of organotransition metal complexes and their role in homogeneous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: one year of physical chemistry. Same as: CHEM 255

**CHEM 171. Physical Chemistry I. 3 Units.**

Chemical thermodynamics and kinetic molecular models; gases, phase changes, solutions and chemical equilibrium, chemical kinetics; roles of thermal motion and energy barriers, relationship between reaction mechanism and rate. The MATLAB programming language will be used for modeling, analysis and visualization throughout. Optional discussion section. Prerequisites: 31A,B, or 31X; 33; PHYS 41; either CME 100 or MATH 51 and (MATH 51M or CME 192 or CS 106A).

**CHEM 173. Physical Chemistry II. 3 Units.**

Introduction to quantum chemistry: the basic principles of wave mechanics, the harmonic oscillator, the rigid rotator, infrared and microwave spectroscopy, the hydrogen atom, atomic structure, molecular structure, valence theory. Prerequisites: CHEM 171; CME 102, 104 or MATH 53; PHYSICS 41, 43.

**CHEM 174. Electrochemical Measurements Lab. 3 Units.**

Introduction to modern electrochemical measurement in a hands-on, laboratory setting. Students assemble and use electrochemical cells including indicator, reference, working and counter electrodes, with macro, micro and ultramicro geometries, salt bridges, ion-selective membranes, electrometers, potentiostats, galvanostats, and stationary and rotated disk electrodes. The later portion of the course will involve a student-generated project to experimentally characterize some electrochemical system. Prerequisites: 134, 171, MATH 51, PHYSICS 44 or equivalent. Same as: CHEM 274

**CHEM 175. Physical Chemistry III. 3 Units.**

Molecular theory of kinetics and statistical mechanics: transport and reactions in gases and liquids, ensembles and the Boltzmann distribution law, partition functions, molecular simulation, structure and dynamics of liquids. Diffusion and activation limited reactions, potential energy surfaces, collision theory, transition-state theory and Marcus theory of reaction rates. Prerequisites: 171, 173.

**CHEM 176. Spectroscopy Laboratory. 3 Units.**

Use of spectroscopic instrumentation to study molecular properties and physical chemical time-dependent processes. Experiments include electronic ultraviolet/visible absorption, fluorescence, Raman, infrared vibrational and nuclear magnetic resonance spectroscopies. Prerequisite: 173.

**CHEM 181. Biochemistry I. 3 Units.**

Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. (CHEMENG offerings formerly listed as 188/288.) Prerequisites: CHEM 33, 35, 131, and 135 or 171.

Same as: BIO 188, CHEMENG 181, CHEMENG 281

**CHEM 183. Biochemistry II. 3 Units.**

Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: BIO 188/288 or CHEM 181 or CHEMENG 181/281 (formerly 188/288).

Same as: BIO 189, CHEMENG 183, CHEMENG 283

**CHEM 184. Biological Chemistry Laboratory. 4 Units.**

Modern techniques in biological chemistry including protein purification, characterization of enzyme kinetics, heterologous expression of His-tagged fluorescent proteins, site-directed mutagenesis, and single-molecule fluorescence microscopy. Prerequisite: 181.

**CHEM 185. Biophysical Chemistry. 3 Units.**

Primary literature based seminar/discussion course covering classical and contemporary papers in biophysical chemistry. Topics include: protein structure and stability, folding, single molecule fluorescence and force microscopy, simulations, ion channels, GPCRs, and ribosome structure/function. Prerequisites: 171 and 181.

**CHEM 187. Chemistry of Posttranslational Modification of Proteins. 1 Unit.**

This short course runs for the first four weeks of the quarter, January only. This course examines the chemical principles and mechanisms of major classes of covalent PTMs. Up to 2000 enzyme catalysts are dedicated to PTM creation and reversal, including phosphorylations, acylations, alkylations, glycosylations, oxygenations, automodifications such as green fluorescent protein formation, and controlled proteolysis, including protein splicing. The different PTM chemistries both constrain and enable the diverse biological functions of modified protein substrates. Prerequisite: Chem 181 or equivalent.

Same as: CHEM 287

**CHEM 187A. Antibiotics: Actions, Origins, Resistance. 1 Unit.**

This course provides a chemocentric view of three central aspects of antibiotics: (1) antibiotics can come from natural microbial sources or by medicinal chemistry efforts; (2) the mechanism of action of types of clinically used antibiotics towards five major target classes in pathogenic bacteria are assessed; (3) the widespread utilization of antibiotics selects for resistant bacterial pathogens: resistance mechanisms and possible solutions for next generation pathogens are addressed. This short course runs for the first five weeks of the quarter, from January through the first week of February. Prerequisite: Chem 181 or equivalent.

Same as: CHEM 287A

**CHEM 190. Advanced Undergraduate Research. 1-5 Unit.**

Limited to undergraduates who have completed Chem 35 and/or Chem 134, or by special arrangement with a faculty member. May be repeated 8 times for a max of 27 units. Prerequisite: 35 or 134. Corequisite: 300.

**CHEM 196. Creating New Ventures in Engineering and Science-based Industries. 3 Units.**

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects.

Same as: CHEM 296, CHEMENG 196, CHEMENG 296

**CHEM 200. Research and Special Advanced Work. 1-15 Unit.**

Qualified graduate students undertake research or advanced lab work not covered by listed courses under the direction of a member of the teaching staff. For research and special work, students register for 200.

**CHEM 221. Advanced Organic Chemistry. 3 Units.**

Physical organic chemistry: molecular structures, bonding, and non-covalent interactions; thermodynamic and kinetic understanding of reactivity and reaction mechanism. Prerequisites: 137, 175.

**CHEM 223. Advanced Organic Chemistry. 3 Units.**

Continuation of 221. Modern synthetic organic chemistry with an emphasis on structure, reactivity, and stereocontrol. Prerequisite: 221 or consent of instructor.

**CHEM 225. Advanced Organic Chemistry. 3 Units.**

Continuation of 223. Organic reaction science with an emphasis on mechanistic organic and organometallic chemistry, new synthetic methods, selectivity analysis, strategies for the design and synthesis of complex molecules, concepts for innovative problems solving and how to put these skills together in the generation of impactful ideas and proposals directed at solving problems in science. Prerequisite: 223 or consent of instructor.

**CHEM 225T. Advanced Organic Chemistry. 3 Units.**

Organic reactions, new synthetic methods with special attention to catalysis and atom economy, selectivity analysis, and exercises in the syntheses of complex molecules.

**CHEM 227. Therapeutic Science at the Chemistry - Biology Interface. 3 Units.**

Explores the design and enablement of new medicines that were born from a convergence of concepts and techniques from chemistry and biology. Topics include fundamental methods for biomolecule synthesis and engineering and application to hybrid chemical/biologic drugs, as well as modern approaches for target discovery and validation. Prerequisite: One year of undergraduate organic chemistry, as well as familiarity with concepts in biochemistry and molecular biology.

**CHEM 229. Organic Chemistry Seminar. 1 Unit.**

Required of graduate students majoring in organic chemistry. Students giving seminars register for 231.

**CHEM 231. Organic Chemistry Seminar Presentation. 1 Unit.**

Required of graduate students majoring in organic chemistry for the year in which they present their organic seminar. Second-year students must enroll all quarters.

**CHEM 233A. Creativity in Organic Chemistry. 1 Unit.**

Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr.

**CHEM 233B. Creativity in Organic Chemistry. 1 Unit.**

Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr.

**CHEM 233C. Creativity in Organic Chemistry. 1 Unit.**

Required of second- and third-year Ph.D. candidates in organic chemistry. The art of formulating, writing, and orally defending a research progress report (A) and two research proposals (B, C). Second-year students register for A and B; third-year students register for C. A: Aut, B: Spr, C: Spr.

**CHEM 235. Applications of NMR Spectroscopy. 3 Units.**

The uses of NMR spectroscopy in chemical and biochemical sciences, emphasizing data acquisition for liquid samples and including selection, setup, and processing of standard and advanced experiments.

**CHEM 250. Single-Crystal X-ray Diffraction. 3 Units.**

Practical X-ray crystallography of discrete molecules, which will emphasize crystal growth, measurement strategies, structure solution and refinement, and report generation. Example structures will include absolute configuration of organic compounds containing only second row atoms, metal containing complexes, and small molecule compounds with disorder. Students will gain knowledge of the underlying theory and concepts for each step of x-ray structural determination. Same as: CHEM 150

**CHEM 251. Advanced Inorganic Chemistry. 3 Units.**

Primarily intended for first-year graduate students, as a review of some of the basic concepts in inorganic chemistry. Specific topics covered will include: symmetry, group theory, electronic structure of molecules and solids, and reactivity of coordination complexes. Prerequisite: Advanced undergraduate-level inorganic chemistry.

**CHEM 253. Advanced Inorganic Chemistry. 3 Units.**

Electronic structure and physical properties of transition metal complexes. Ligand field and molecular orbital theories, magnetism and magnetic susceptibility, electron paramagnetic resonance including hyperfine interactions and zero field splitting and electronic absorption spectroscopy including vibrational interactions. Prerequisite: 153 or the equivalent.

**CHEM 255. Advanced Inorganic Chemistry. 3 Units.**

Chemical reactions of organotransition metal complexes and their role in homogeneous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: one year of physical chemistry. Same as: CHEM 155

**CHEM 258A. Research Progress in Inorganic Chemistry. 1 Unit.**

Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.

**CHEM 258B. Research Progress in Inorganic Chemistry. 1 Unit.**

Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.

**CHEM 258C. Research Progress in Inorganic Chemistry. 1 Unit.**

Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.

**CHEM 259. Inorganic Chemistry Seminar. 1 Unit.**

Required of graduate students majoring in inorganic chemistry.

**CHEM 271. Advanced Physical Chemistry. 3 Units.**

The principles of quantum mechanics. General formulation, mathematical methods, and applications of quantum theory. Exactly solvable problems and approximate methods including time independent perturbation theory and the variational method. Time dependent methods including exactly solvable problems, time dependent perturbation theory, and density matrix formalism. Different representations of quantum theory including the Schrödinger, matrix, and density matrix methods. Absorption and emission of radiation Angular momentum. Atomic structure calculations and simple molecular structure methods. Prerequisite: 175 or equivalent course.

**CHEM 273. Advanced Physical Chemistry. 3 Units.**

Statistical mechanics is a fundamental bridge that links microscopic world of quantum mechanics to macroscopic thermodynamic properties. We discuss the principles and methods of statistical mechanics from the ensemble point of view. Applications include statistical thermodynamics, quantum systems, heat capacities of gases and solids, chemical equilibrium, pair correlation functions in liquids, and phase transitions. Prerequisite: 271.

**CHEM 274. Electrochemical Measurements Lab. 3 Units.**

Introduction to modern electrochemical measurement in a hands-on, laboratory setting. Students assemble and use electrochemical cells including indicator, reference, working and counter electrodes, with macro, micro and ultramicro geometries, salt bridges, ion-selective membranes, electrometers, potentiostats, galvanostats, and stationary and rotated disk electrodes. The later portion of the course will involve a student-generated project to experimentally characterize some electrochemical system. Prerequisites: 134, 171, MATH 51, PHYSICS 44 or equivalent. Same as: CHEM 174

**CHEM 275. Advanced Physical Chemistry. 3 Units.**

Covering angular momentum theory with a special emphasis on scattering dynamics and the interaction of radiation and matter. Recommended: Chem 273 and either Chem 271 or Physics 230.

**CHEM 277. Materials Chemistry and Physics. 3 Units.**

Topics: structures and symmetries and of solid state crystalline materials, chemical applications of group theory in solids, quantum mechanical electronic band structures of solids, phonons in solids, synthesis methods and characterization techniques for solids including nanostructured materials, selected applications of solid state materials and nanostructures. May be repeated for credit.

**CHEM 278A. Research Progress in Physical Chemistry. 1 Unit.**

Required of all second- and third-year Ph.D. candidates in physical and biophysical chemistry and chemical physics. Second-year students present their research progress and plans in brief written and oral summaries (A); third-year students prepare a written progress report (B). A: Win, B: Win.

**CHEM 278B. Research Progress in Physical Chemistry. 1 Unit.**

Required of all second- and third-year Ph.D. candidates in physical and biophysical chemistry and chemical physics. Second-year students present their research progress and plans in brief written and oral summaries (A); third-year students prepare a written progress report (B). A: Win, B: Win.

**CHEM 279. Physical Chemistry Seminar. 1 Unit.**

Required of graduate students majoring in physical chemistry. May be repeated for credit.

**CHEM 280. Single-Molecule Spectroscopy and Imaging. 3 Units.**

Theoretical and experimental techniques necessary to achieve single-molecule sensitivity in laser spectroscopy: interaction of radiation with spectroscopic transitions; systematics of signals, noise, and signal-to-noise; modulation and imaging methods; and analysis of fluctuations; applications to modern problems in biophysics, cellular imaging, physical chemistry, single-photon sources, and materials science. Prerequisites: 271, previous or concurrent enrollment in 273.

**CHEM 287. Chemistry of Posttranslational Modification of Proteins. 1 Unit.**

This short course runs for the first four weeks of the quarter, January only. This course examines the chemical principles and mechanisms of major classes of covalent PTMs. Up to 2000 enzyme catalysts are dedicated to PTM creation and reversal, including phosphorylations, acylations, alkylations, glycosylations, oxygenations, automodifications such as green fluorescent protein formation, and controlled proteolysis, including protein splicing. The different PTM chemistries both constrain and enable the diverse biological functions of modified protein substrates. Prerequisite: Chem 181 or equivalent. Same as: CHEM 187

**CHEM 287A. Antibiotics: Actions, Origins, Resistance. 1 Unit.**

This course provides a chemocentric view of three central aspects of antibiotics: (1) antibiotics can come from natural microbial sources or by medicinal chemistry efforts; (2) the mechanism of action of types of clinically used antibiotics towards five major target classes in pathogenic bacteria are assessed; (3) the widespread utilization of antibiotics selects for resistant bacterial pathogens: resistance mechanisms and possible solutions for next generation pathogens are addressed. This short course runs for the first five weeks of the quarter, from January through the first week of February. Prerequisite: Chem 181 or equivalent. Same as: CHEM 187A

**CHEM 291. Introduction to Nuclear Magnetic Resonance. 3 Units.**

Introduction to quantum and classical descriptions of NMR; analysis of pulse sequences and nuclear spin coherences via density matrices and the product operator formalism; NMR spectrometer design; Fourier analysis of time-dependent observable magnetization; NMR relaxation in liquids and solids; NMR strategies for biological problem solving. Prerequisite: Chem 173.

**CHEM 296. Creating New Ventures in Engineering and Science-based Industries. 3 Units.**

Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects. Same as: CHEM 196, CHEMENG 196, CHEMENG 296

**CHEM 297. Bio-Inorganic Chemistry. 3 Units.**

Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function. Prerequisites: 153 and 173, or equivalents. Same as: BIOPHYS 297

**CHEM 299. Teaching of Chemistry. 1-3 Unit.**

Required of all teaching assistants in Chemistry. Techniques of teaching chemistry by means of lectures and labs.

**CHEM 300. Department Colloquium. 1 Unit.**

Required of graduate students. May be repeated for credit.

**CHEM 301. Research in Chemistry. 2 Units.**

Required of graduate students who have passed the qualifying examination. Open to qualified graduate students with the consent of the major professor. Research seminars and directed reading deal with newly developing areas in chemistry and experimental techniques. May be repeated for credit. Search for adviser name on Axess.

**CHEM 390. Curricular Practical Training for Chemists. 1 Unit.**

For Chemistry majors who need work experience as part of their program of study. Confer with Chem student services office for sign-up.

**CHEM 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.**

Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See <http://biox.stanford.edu/courses/459.html>. Recommended: basic mathematics, biology, chemistry, and physics. Same as: BIO 459, BIOC 459, BIOE 459, CHEMENG 459, PSYCH 459

**CHEM 802. TGR Dissertation. 0 Units.**

.

**Chicana/o Studies Courses****Chicana/o-Latina/o Studies Courses****CHILATST 14N. Growing Up Bilingual. 3 Units.**

This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants. Same as: CSRE 14N, EDUC 114N

**CHILATST 67. Contemporary Chicano & Latino Literature. 4 Units.**

What does it mean to be Chicano and Latino in the United States today? And, how have U.S. writers portrayed the evolution of a Latino identity as it has changed from the age of the Civil Rights Movement to the age of Twitter? This class provides students with an overview of 20th and 21st century U.S. Latino/a literature by focusing on American authors writing after the 1960s to the present. We will read a range of writers, including Gloria Anzaldúa, Sandra Cisneros, Héctor Tobar, and Junot Díaz, and examine how these authors grapple with the artistic task of representing the different national cultures and histories (Mexican American, Puerto Rican, etc.) that inform the U.S. Latino experience. Throughout the quarter we will explore how these fictional narratives offer insights into the topics of American identity, immigration, assimilation, class status, Women of Color feminism, gender and sexuality. In addition, we will also consider contemporary representations from film and television, ultimately working toward a comprehensive analysis of how literary genres and popular cultural contribute to the meaning of Latinidad in the U.S. Same as: ENGLISH 67

**CHILATST 125S. Chicano/Latino Politics. 5 Units.**

The political position of Latinos and Latinas in the U.S.. Focus is on Mexican Americans, with attention to Cuban Americans, Puerto Ricans, and other groups. The history of each group in the American polity; their political circumstances with respect to the electoral process, the policy process, and government; the extent to which the demographic category Latino is meaningful; and group identity and solidarity among Americans of Latin American ancestry. Topics include immigration, education, affirmative action, language policy, and environmental justice. Same as: POLISCI 125S

**CHILATST 140. Migration in 21st Century Latin American Film. 3-5 Units.**

Focus on how images and narratives of migration are depicted in recent Latin American film. It compares migration as it takes place within Latin America to migration from Latin America to Europe and to the U.S. We will analyze these films, and their making, in the global context of an evergrowing tension between "inside" and "outside"; we consider how these films represent or explore precariousness and exclusion; visibility and invisibility; racial and gender dynamics; national and social boundaries; new subjectivities and cultural practices. Films include: *El niño pez*, *Bolivia*, *Ulises*, *Faustino Mayta visita a su prima*, *Copacabana*, *Chico y Rita*, *Sin nombre*, *Los que se quedan*, *Amador*, and *En la puta calle*. Films in Spanish, with English subtitles. Discussions and assignments in Spanish. Same as: ILAC 140

**CHILATST 147L. Studies in Music, Media, and Popular Culture: Latin American Music and Globalization. 3-4 Units.**

Focuses on vernacular music of Latin America and the Caribbean, including Mexico, Cuba, Dominican Republic, Peru, Brazil, Colombia, and Argentina. Musical examples discussed in relation to: globalization, migration, colonialism, nationalism, diaspora, indigeneity, politics, religion, dance, ethnicity, and gender. How music reflects and shapes cultures, identities, and social structures. Genres addressed: bachata, bossa nova, cumbia, forro, ranchero, reggaeton, rock, salsa, tango, and others. Seminar, guest performances, reading, listening, and analysis. Pre-/corequisite (for music majors): MUSIC 22. (WIM at 4 units only.). Same as: CSRE 147L, MUSIC 147L, MUSIC 247L

**CHILATST 160N. Chican@/Latin@ Performance in the U.S.. 4 Units.**

This course will introduce works by U.S. Latino and Latina performance artists producing from the margins of the mainstream Euro-American theater world. We will examine how performance art serves as a kind of dramatized political forum for Latino/a artists, producing some of the most transgressive explorations of queer and national/ethnic identities in the U.S. today. By the course's conclusion, each student will create and perform in a staged reading of an original performance piece. Same as: TAPS 160N

**CHILATST 164. Immigration and the Changing United States. 4 Units.**

The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration. Same as: CSRE 164, SOC 164, SOC 264

**CHILATST 165. Mexican American History through Film. 5 Units.**

Focus is on the 20th century. Themes such as immigration, urbanization, ethnic identity, the role of women, and the struggle for civil rights. Same as: CSRE 165C, HISTORY 165

**CHILATST 168. New Citizenship: Grassroots Movements for Social Justice in the U.S.. 5 Units.**

Focus is on the contributions of immigrants and communities of color to the meaning of citizenship in the U.S. Citizenship, more than only a legal status, is a dynamic cultural field in which people claim equal rights while demanding respect for differences. Academic studies of citizenship examined in dialogue with the theory and practice of activists and movements. Engagement with immigrant organizing and community-based research is a central emphasis. Same as: ANTHRO 169A, CSRE 168, FEMGEN 140H

**CHILATST 171. Mexicans in the United States. 5 Units.**

This course explores the lives and experiences of Mexicans living in the United States, from 1848 to the present. Themes and topics include: the legacies of colonialism, the Mexican-American War, transnational migration, the effects of economic stratification, race and racialization, and the impact of sexual and gender ideologies on the lives of Mexicans residing north of the border. Same as: AMSTUD 271, CSRE 171H, HISTORY 271

**CHILATST 172. Theories of Citizenship and Sovereignty in a Transnational Context. 4-5 Units.**

This course explores the multiple meanings of citizenship and the ways in which they change when examined using different geographic scales (from the local to the transnational). The course will pair theoretical readings on citizenship with case studies that focus on North America. Topics include: definitions of citizenship; the interrelation of ideas of citizenship with those of race, ethnicity, gender, and sexuality; the relationship between sovereignty and territoriality; human and civil rights; and immigration. Same as: AMSTUD 272E, CSRE 172H, FEMGEN 272E, HISTORY 272E, HISTORY 372E

**CHILATST 177A. Well-Being in Immigrant Children & Youth: A Service Learning Course. 3 Units.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course. Same as: CSRE 177E, EDUC 177A, HUMBIO 29A

**CHILATST 177B. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-2 Unit.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course. Same as: CSRE 177F, EDUC 177B

**CHILATST 177C. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.**

This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course. Same as: CSRE 177G, EDUC 177C

**CHILATST 179. Chicano & Chicana Theater: Politics In Performance. 4 Units.**

This is a practicum course, where the basic tenets and evolving political and philosophies of Chicano and Latin American liberationist theater are examined through direct engagement with its theatrical forms, including, social protest & agit-prop, myth & ritual, scripting through improvisation, in-depth character and solo work, collective conceptualization and more. The course will culminate in an end-of-the quarter play performance in the Niterly Theater (Old Union) and at a Mission District theater in San Francisco.

Same as: TAPS 179, TAPS 379

**CHILATST 179F. Flor y Canto: Poetry Workshop. 3-5 Units.**

Poetry reading and writing. The poet as philosopher and the poet as revolutionary. Texts: the philosophical meditations of pre-Columbian Aztec poetry known as *flor y canto*, and reflections on the poetry of resistance born out of the nationalist and feminist struggles of Latin America and Aztlán. Required 20-page poetry manuscript.

Same as: CSRE 179F, TAPS 179F, TAPS 279F

**CHILATST 181. LATINO SOCIAL MOVEMENTS. 5 Units.**

Historically significant and contemporary political and social movements in Latino communities in the U.S., with a focus on events of the modern era such as the Spring 2006 marches and student walkouts, the 2009 Basta Dobbs campaign, the 2010 resistance to Arizona's SB1070, and ongoing efforts in 2014 and 2015 related to detention and deportation policies.

Same as: POLISCI 125M

**CHILATST 183X. Practicum in English-Spanish School & Community Interpreting. 3-4 Units.**

This practicum will assist students in developing a set of skills in English-Spanish interpreting that will prepare them to provide interpretation services in school and community settings. The course will build students' abilities to transfer intended meanings between two or more monolingual individuals of who are physically present in a school or community setting and who must communicate with each other for professional (and personal) purposes.

Same as: EDUC 183, EDUC 257

**CHILATST 193B. Peer Counseling in the Chicano/Latino Community. 1 Unit.**

Topics: verbal and non-verbal attending and communication skills, open and closed questions, working with feelings, summarization, and integration. Salient counseling issues including Spanish-English code switching in communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, and Chicana/o student experience in University settings. Individual training, group exercises, role play, and videotape practice.

Same as: EDUC 193B

**CHILATST 198. Internship for Public Service. 1-5 Unit.**

Students should consult with CCSRE Director of Community Engaged Learning ([ddmurray@stanford.edu](mailto:ddmurray@stanford.edu)) to develop or sign-up for a community service internship. Group meetings may be required. May be repeated for credit. Service Learning Course (certified by Haas Center).

Same as: CSRE 198

**CHILATST 200. Latin@ Literature. 3-5 Units.**

Examines a diverse set of narratives by U.S. Latin@s of Mexican, Puerto Rican, Cuban, Guatemalan, and Dominican heritage through the lens of *latinidad*. All share the historical experience of Spanish colonization and U.S. imperialism, yet their im/migration patterns differ, affecting social, cultural, and political trajectories in the US and relationships to "home" and "homeland," nation, diaspora, history, and memory. Explores how racialization informs genders as well as sexualities. Emphasis on textual analysis. Taught in English.

Same as: CSRE 200, ILAC 280, ILAC 382

**CHILATST 200R. Directed Research. 1-5 Unit.****CHILATST 200W. Directed Reading. 1-5 Unit.**

(Staff).

**CHILATST 201B. From Racial Justice to Multiculturalism: Movement-based Arts Organizing in the Post Civil Rights Era. 3 Units.**

How creative projects build and strengthen communities of common concern. Projects focus on cultural reclamation, multiculturalism, cultural equity and contemporary cultural wars, media literacy, independent film, and community-based art. Guest artists and organizers, films, and case studies.

Same as: CSRE 201B

**CHILATST 201C. Critical Concepts in Chican@ Literature. 3-5 Units.**

Combines primary texts of Chican@ literature with a metacritical interrogation of key concepts informing Chican@ literary criticism, the construction of Chican@ literary history, and a Chican@ literary canon. Interrogates the resistance paradigm and the "proper" subject of this literature, and critiques established genealogies and foundational authors and texts, as well as issues of periodization, including the notion of "emergence" (e.g. of feminist voices or dissident sexualities). Considers texts, authors and subjects that present alternatives to the resistance paradigm.

Same as: CSRE 201C, ILAC 380E

**CHILATST 275B. History of Modern Mexico. 4-5 Units.**

Surveys the history of governance, resistance, and identity formation in Mexico from the nineteenth century to the present. Explores Mexico's historical struggles to achieve political stability, economic prosperity, and social justice and examines how regional, class, ethnic, and gender differences have figured prominently in the shaping of Mexican affairs. Topics include Mexico's wars and their legacies, the power of the state, violence and protest, debates over the meaning of "Mexicanness," youth culture, and the politics of indigenismo.

Same as: AMSTUD 275B, CSRE 275B, HISTORY 275B, HISTORY 375C

**Chinese General Courses****CHINGEN 70N. Animal Planet and the Romance of the Species. 3-4 Units.**

Preference to freshmen. This course considers a variety of animal characters in Chinese and Western literatures as potent symbols of cultural values and dynamic sites of ethical reasoning. What does pervasive animal imagery tell us about how we relate to the world and our neighbors? How do animals define the frontiers of humanity and mediate notions of civilization and culture? How do culture, institutions, and political economy shape concepts of human rights and animal welfare? And, above all, what does it mean to be human in the pluralistic and planetary 21st century?.

Same as: COMPLIT 70N

**CHINGEN 73. Chinese Language, Culture, and Society. 4 Units.**

Topics include the origin of Chinese, development of dialects, emergence of the standard, preferred formulaic expressions, the evolution of writing, and language policies in greater China. Prerequisite: CHINLANG 1 or 1B, or equivalent.

Same as: CHINGEN 173

**CHINGEN 73N. Chinese Language, Culture, and Society. 4 Units.**

Functions of languages in Chinese culture and society, origin of the Chinese language, genetic relations with neighboring languages, development of dialects, language contacts, evolution of Chinese writing, language policies in Greater China. Prerequisite: one quarter of Chinese 1 or 1B or equivalent recommended. Freshman seminar.

Same as: CHINGEN 170

**CHINGEN 91. Introduction to China. 5 Units.**

Required for Chinese and Japanese majors. Introduction to Chinese culture in a historical context. Topics include political and socioeconomic institutions, religion, ethics, education, and art and literature.

**CHINGEN 95. Beauty and Decadence in China. 4-5 Units.**

An inquiry into the conception of aesthetic beauty in China. Special attention to the coupling of aesthetics ("beauty") and morality ("goodness") in the visual and literary arts, as well as the frequent dissonance or rivalry between them.

Same as: CHINGEN 195

**CHINGEN 101. How to Be Modern in China: A Gateway to the World Course. 3-4 Units.**

A gateway course on China, with a focus on the politics of everyday life, in the capital city of Beijing. Introduction to the history and politics of modern China. The pleasures, frictions, and challenges of daily living in the penumbra of power in Beijing as reported, represented, and reflected upon in fiction, film, reportage, social commentary, and scholarly writings. Priority to those preparing to participate in BOSP-Beijing Program or returning from the program.

**CHINGEN 118. Constructing National History in East Asian Archaeology. 3-5 Units.**

Archaeological studies in contemporary East Asia share a common concern, to contribute to building a national narrative and cultural identity. This course focuses on case studies from China, Korea, and Japan, examining the influence of particular social-political contexts, such as nationalism, on the practice of archaeology in modern times.

Same as: ARCHLGY 135, ARCHLGY 235, CHINGEN 218

**CHINGEN 119. Popular Culture and Casino Capitalism in China. 3-4 Units.**

Examination of different forms of Chinese popular culture used to gauge or control fate and uncertainty, from geomancy and qigong to ghost culture and mahjong. Ways in which Chinese are incorporating these cultural forms into the informal economy to get rich quick: rotating credit associations, stock market speculation, pyramid schemes, underground lotteries, counterfeiting. Impact of casino capitalism on Chinese culture and social life today.

Same as: CHINGEN 219

**CHINGEN 120. Soldiers and Bandits in Chinese Culture. 3-5 Units.**

Social roles and literary images of two groups on the margins of traditional Chinese society; historical and comparative perspectives.

Same as: CHINGEN 220

**CHINGEN 121. Classical Chinese Rituals. 3-5 Units.**

Meanings of rituals regarding death, wedding, war, and other activities; historical transformations of classical rituals throughout the premodern period; legacy of the Chinese ritual tradition. Sources include canonical texts.

Same as: CHINGEN 221

**CHINGEN 131. Chinese Poetry in Translation. 4 Units.**

From the first millennium B.C. through the 12th century. Traditional verse forms representative of the classical tradition; highlights of the most distinguished poets. History, language, and culture. Chinese language not required.

Same as: CHINGEN 231

**CHINGEN 132. Chinese Fiction and Drama in Translation. 4 Units.**

From early times to the 18th century, emphasizing literary and thematic discussions of major works in English translation.

Same as: CHINGEN 232

**CHINGEN 133. Literature in 20th-Century China. 4-5 Units.**

(Graduate students register for 233.) How modern Chinese culture evolved from tradition to modernity; the century-long drive to build a modern nation state and to carry out social movements and political reforms. How the individual developed modern notions of love, affection, beauty, and moral relations with community and family. Sources include fiction and film clips. WIM course.

Same as: CHINGEN 233

**CHINGEN 134. Early Chinese Mythology. 3-5 Units.**

The definition of a myth. Major myths of China prior to the rise of Buddhism and Daoism including: tales of the early sage kings such as Yu and the flood; depictions of deities in the underworld; historical myths; tales of immortals in relation to local cults; and tales of the patron deities of crafts.

Same as: CHINGEN 234

**CHINGEN 135. Chinese Bodies, Chinese Selves. 3-5 Units.**

Interdisciplinary. The body as a contested site of representational practices, identity politics, cultural values, and social norms. Body images, inscriptions, and practices in relation to health, morality, gender, sexuality, nationalism, consumerism, and global capitalism in China and Taiwan. Sources include anthropological, literary, and historical studies, and fiction and film. No knowledge of Chinese required.

Same as: CHINGEN 235

**CHINGEN 136. The Chinese Family. 3-5 Units.**

History and literature. Institutional, ritual, affective, and symbolic aspects. Perspectives of gender, class, and social change.

Same as: CHINGEN 236

**CHINGEN 137. Tiananmen Square: History, Literature, Iconography. 3-5 Units.**

Multidisciplinary. Literary and artistic representations of this site of political and ideological struggles throughout the 20th century. Tiananmen-themed creative, documentary, and scholarly works that shed light on the dynamics and processes of modern Chinese culture and politics. No knowledge of Chinese required. Held in Knight Bldg. Rm. 18.

Same as: CHINGEN 237

**CHINGEN 138. Love, Passion, and Politics in Chinese Film. 4-5 Units.**

Focusing on the emotional structure of love and passion in Chinese films, the course will investigate the structures of feelings and moral relations in modern Chinese history from the 1940s till the present. Examining the interplay between private desire, romantic sentiment, family relations, and political passion, we will explore how men and women in China grapple with emotional and social issues in modern transformations. We will consider romantic love, the uplifting of sexuality into political passion, the intertwining of aesthetic experience with politics, nostalgia in the disenchanting modern world, and the tensions between the individual's self-realization and the community's agenda. Students will learn to read films as a work of art and understand how film works as expression of desire, impulse, emotional connections, and communal bonding during times of crisis. Course work includes a midterm exam (25%) and a final exam (25%), a weekly 250-300 word reflection on the film of the week (10%), participation and oral presentation in class (10%), and a paper of 5-7 pages to be submitted after the midterm week (30%). Starting from the second week, film screening will begin 6:30 pm Monday before classes on Tuesday and Thursday. The course does not encourage private viewing. At least 5 dinners will be provided for movie-screening events.

Same as: CHINGEN 238, COMPLIT 104

**CHINGEN 139. Cultural Revolution as Literature. 4 Units.**

Literary form, aesthetic sensibility, and themes of trauma, identity, and the limits of representation in major literary works concerning the Cultural Revolution in China. Recommended: background in Chinese history or literature.

Same as: CHINGEN 239

**CHINGEN 140. Chinese Justice: Law, Morality, and Literature. 3-5 Units.**

Explores the relationship between law and morality in Chinese literature, culture, and society. Readings include court case romances, crime plays, detective novels, and legal dramas from traditional era and modern and contemporary periods. Prior coursework in Chinese history, civilization, or literature is recommended. All readings are in English.

Same as: CHINGEN 240

**CHINGEN 141. Emergence of Chinese Civilization from Caves to Palaces. 3-4 Units.**

Introduces processes of cultural evolution from the Paleolithic to the Three Dynasties in China. By examining archaeological remains, ancient inscriptions, and traditional texts, four major topics will be discussed: origins of modern humans, beginnings of agriculture, development of social stratification, and emergence of states and urbanism.  
Same as: ARCHLGY 111, CHINGEN 241

**CHINGEN 143. Images of Women in Ancient China and Greece. 3-5 Units.** (Formerly CLASSGEN 153/253.) Representation of women in ancient Chinese and Greek texts. How men viewed women and what women had to say about themselves and their societies. Primary readings in poetry, drama, and didactic writings. Relevance for understanding modern concerns; use of comparison for discovering historical and cultural patterns.  
Same as: CHINGEN 243, CLASSICS 143, CLASSICS 243

**CHINGEN 144. Science, Magic, and Religion in Early China. 3-5 Units.** If the categories we use to think about the world are products of particular cultural and historical experiences, what happens when we bring the categories of the modern West to bear on early China? In this seminar, we will examine early Chinese technologies designed to achieve ethical, physical, or political transformation, and technologies designed to interpret signs, in terms of three classical anthropological categories: science, magic, and religion. How may we apply science, magic, and religion to early China, and what problems might we encounter in doing so? What alternative terms do our sources present, and what questions might they allow us to ask? How was knowledge created in early China, and how do our categories shape the knowledge we create about early China?  
Same as: CHINGEN 244

**CHINGEN 146. Gods, Ghosts, and Ancestors: Anthropology of Chinese Folk Religion. 3-5 Units.**

Same as: CHINGEN 246

**CHINGEN 148. Love and Revenge. 2-4 Units.**

Readings of Tang and Song period stories, anecdotal literature, poetry, and song lyrics on the themes of romantic love, unfaithfulness, and revenge. In a society of parental arranged marriage, romantic love (usually outside marriage) takes on its own special meaning, forms of expression, and dangers.  
Same as: CHINGEN 248

**CHINGEN 150. Sex, Gender, and Power in Modern China. 3-5 Units.**

Investigates how sex, gender, and power are entwined in the Chinese experience of modernity. Topics include anti-footbinding campaigns, free love/free sex, women's mobilization in revolution and war, the new Marriage Law of 1950, Mao's iron girls, postsocialist celebrations of sensuality, and emergent queer politics. Readings range from feminist theory to China-focused historiography, ethnography, memoir, biography, fiction, essay, and film. All course materials are in English.  
Same as: CHINGEN 250, FEMGEN 150, FEMGEN 250

**CHINGEN 151. Manuscripts, Circulation of Texts, Printing. 3-4 Units.**

History of texts before the advent of printing as well as during the early period of printing, focus on Tang and Song periods. Attention to the material existence of texts, their circulation, reading habits before and after printing, the balance between orality and writing, the role of memorization, and rewriting during textual transmission. Readings in English.  
Same as: CHINGEN 251

**CHINGEN 152. Beijing: Microcosm of Modern China. 3-4 Units.**

Uses Beijing as a microcosm of China to examine the political, social, and cultural transformations of modern China. Explores critical issues affecting modern Chinese history and contemporary Chinese society through lectures, videos, presentations, and discussions.  
Same as: CHINGEN 252

**CHINGEN 153. Beijing and Shanghai: Twin Cities in Chinese History. 3-5 Units.**

This course discusses a story of twin cities – Beijing and Shanghai, from the imperial period to the present day. The historical movement of people, goods, knowledge, thoughts, technology and shifting of political power and cultural authority has closely linked the two cities together. No other two cities in the Chinese map have more communications, interactions, and mutual influences than Beijing and Shanghai. Indeed, geographic localities, ethnic traits, material lives, and foreign contacts have produced distinct cultural landscapes and patterns of urban development of the twin cities, which provide us with a good case of comparative studies. In Beijing and Shanghai, contemporary forces, including migration, industrialization, marketization, decentralization and globalization are transforming the urban societies. Both of them take center stage in China's drama of explosive growth and unprecedented changes. They continue to compete and influence each other in many ways.  
Same as: CHINGEN 253

**CHINGEN 155. Cultural Images in China-US Relations. 3-5 Units.**

New interpretation of the history of China-U.S. relations, 1784-2008, using image studies. Attention to people-to-people communication, cultural interaction, and political imagination during different times and power structures. Discussion of change and continuity of cultural images in textual descriptions, visual materials, symbolic and virtual identities in historical context. Understand how people in China and the United States created, presented, interpreted, and remembered cultural images of each other and how these images affected and were affected by their foreign policies and bilateral relations.  
Same as: CHINGEN 255

**CHINGEN 160. New Directions in the Study of Poetry and Literati Culture. 3-4 Units.**

Inquiry into new approaches and interpretations of the poetic tradition in China in the context of cultural history. Readings in recent scholarship and criticism that situate poetry in print history, manuscript culture, gender studies, social history, etc. Readings in English. Reading knowledge of Chinese desirable but not required.  
Same as: CHINGEN 260

**CHINGEN 169. What is Chinese Theater? The Formation of a Tradition. 3-4 Units.**

A survey of Chinese drama from its origins to late imperial China. Explores theories of the origins of Chinese drama, contrasting theories with the documented beginnings of theater and its first texts. How traditions turned into "elite theater" in the Ming and Qing dynasties, and how esthetic norms and moral values went into the process of theatrical transformation.  
Same as: CHINGEN 269

**CHINGEN 170. Chinese Language, Culture, and Society. 4 Units.**

Functions of languages in Chinese culture and society, origin of the Chinese language, genetic relations with neighboring languages, development of dialects, language contacts, evolution of Chinese writing, language policies in Greater China. Prerequisite: one quarter of Chinese 1 or 1B or equivalent recommended. Freshman seminar.  
Same as: CHINGEN 73N

**CHINGEN 173. Chinese Language, Culture, and Society. 4 Units.**

Topics include the origin of Chinese, development of dialects, emergence of the standard, preferred formulaic expressions, the evolution of writing, and language policies in greater China. Prerequisite: CHINLANG 1 or 1B, or equivalent.  
Same as: CHINGEN 73

**CHINGEN 193E. Female Divinities in China. 3-5 Units.**

The role of powerful goddesses, such as the Queen Mother of the West, Guanyin, and Chen Jinggu, in Chinese religion. Imperial history to the present day. What roles goddesses played in the spirit world, how this related to the roles of human women, and why a civilization that excluded women from the public sphere granted them such a major, even dominant place, in the religious sphere. Readings in English-language secondary literature.

Same as: CHINGEN 393E

**CHINGEN 194. The History and Culture of Peking Opera. 3-4 Units.**

Explores the history and culture of Peking opera from its regional origins to a major national form. It will focus on genre formation, the professional and social position of actors and the political role of Peking opera. In addition to academic texts, we will read memoirs, biographies and watch videos and movies.

Same as: CHINGEN 294

**CHINGEN 195. Beauty and Decadence in China. 4-5 Units.**

An inquiry into the conception of aesthetic beauty in China. Special attention to the coupling of aesthetics ("beauty") and morality ("goodness") in the visual and literary arts, as well as the frequent dissonance or rivalry between them.

Same as: CHINGEN 95

**CHINGEN 196. The Culture of Entertainment in China. 3-4 Units.**

Sophisticated, organized entertainment in China is evident at least as early as the second century B.C. in the court spectacles described in the early histories and in the depictions of jugglers, dancers and acrobats represented in tomb reliefs. The importance attached to entertainment from ancient times both at court and in society at large is manifest not just in the establishment of imperial institutions such as the Music Bureau, but also in the appearance of large entertainment districts within the cities where people would invest extraordinary amount of resources in the pursuit of pleasure, and in small scale gatherings. This class will look at the representation of play and pleasure in Chinese culture from a variety of sources (art, history, literature and performance) in different periods of Chinese history. In the process we will address the place of pleasure in Chinese culture, as well as ethical, socio-political and economical concerns. Held in old Knight Bldg., 521 Memorial Way, Rm. 102.

Same as: CHINGEN 296

**CHINGEN 198. Senior Colloquium in Chinese Studies. 1 Unit.**

Students research, write, and present a capstone essay or honors thesis.

**CHINGEN 200. Directed Readings in Asian Languages. 1-12 Unit.**

For Chinese literature. Prerequisite: consent of instructor. (Staff).

**CHINGEN 201. Teaching Chinese Humanities. 1 Unit.**

Prepares graduate students to teach humanities at the undergraduate level. Topics include syllabus development and course design, techniques for generating discussion, effective grading practices, and issues particular to the subject matter.

**CHINGEN 218. Constructing National History in East Asian Archaeology. 3-5 Units.**

Archaeological studies in contemporary East Asia share a common concern, to contribute to building a national narrative and cultural identity. This course focuses on case studies from China, Korea, and Japan, examining the influence of particular social-political contexts, such as nationalism, on the practice of archaeology in modern times.

Same as: ARCHLGY 135, ARCHLGY 235, CHINGEN 118

**CHINGEN 219. Popular Culture and Casino Capitalism in China. 3-4 Units.**

Examination of different forms of Chinese popular culture used to gauge or control fate and uncertainty, from geomancy and qigong to ghost culture and mahjong. Ways in which Chinese are incorporating these cultural forms into the informal economy to get rich quick: rotating credit associations, stock market speculation, pyramid schemes, underground lotteries, counterfeiting. Impact of casino capitalism on Chinese culture and social life today.

**CHINGEN 237. Tiananmen Square: History, Literature, Iconography. 3-5 Units.**

Multidisciplinary. Literary and artistic representations of this site of political and ideological struggles throughout the 20th century. Tiananmen-themed creative, documentary, and scholarly works that shed light on the dynamics and processes of modern Chinese culture and politics. No knowledge of Chinese required. Held in Knight Bldg. Rm. 18.

Same as: CHINGEN 137

**CHINGEN 238. Love, Passion, and Politics in Chinese Film. 4-5 Units.**

Focusing on the emotional structure of love and passion in Chinese films, the course will investigate the structures of feelings and moral relations in modern Chinese history from the 1940s till the present. Examining the interplay between private desire, romantic sentiment, family relations, and political passion, we will explore how men and women in China grapple with emotional and social issues in modern transformations. We will consider romantic love, the uplifting of sexuality into political passion, the intertwining of aesthetic experience with politics, nostalgia in the disenchanting modern world, and the tensions between the individual's self-realization and the community's agenda. Students will learn to read films as a work of art and understand how film works as expression of desire, impulse, emotional connections, and communal bonding during times of crisis. Course work includes a midterm exam (25%) and a final exam (25%), a weekly 250-300 word reflection on the film of the week (10%), participation and oral presentation in class (10%), and a paper of 5-7 pages to be submitted after the midterm week (30%). Starting from the second week, film screening will begin 6:30 pm Monday before classes on Tuesday and Thursday. The course does not encourage private viewing. At least 5 dinners will be provided for movie-screening events.

**CHINGEN 239. Cultural Revolution as Literature. 4 Units.**

Literary form, aesthetic sensibility, and themes of trauma, identity, and the limits of representation in major literary works concerning the Cultural Revolution in China. Recommended: background in Chinese history or literature.

Same as: CHINGEN 139

**CHINGEN 240. Chinese Justice: Law, Morality, and Literature. 3-5 Units.**

Explores the relationship between law and morality in Chinese literature, culture, and society. Readings include court case romances, crime plays, detective novels, and legal dramas from traditional era and modern and contemporary periods. Prior coursework in Chinese history, civilization, or literature is recommended. All readings are in English.

Same as: CHINGEN 140

**CHINGEN 241. Emergence of Chinese Civilization from Caves to Palaces. 3-4 Units.**

Introduces processes of cultural evolution from the Paleolithic to the Three Dynasties in China. By examining archaeological remains, ancient inscriptions, and traditional texts, four major topics will be discussed: origins of modern humans, beginnings of agriculture, development of social stratification, and emergence of states and urbanism.

Same as: ARCHLGY 111, CHINGEN 141

**CHINGEN 243. Images of Women in Ancient China and Greece. 3-5 Units.**

(Formerly CLASSGEN 153/253.) Representation of women in ancient Chinese and Greek texts. How men viewed women and what women had to say about themselves and their societies. Primary readings in poetry, drama, and didactic writings. Relevance for understanding modern concerns; use of comparison for discovering historical and cultural patterns.

Same as: CHINGEN 143, CLASSICS 143, CLASSICS 243

**CHINGEN 244. Science, Magic, and Religion in Early China. 3-5 Units.**

If the categories we use to think about the world are products of particular cultural and historical experiences, what happens when we bring the categories of the modern West to bear on early China? In this seminar, we will examine early Chinese technologies designed to achieve ethical, physical, or political transformation, and technologies designed to interpret signs, in terms of three classical anthropological categories: science, magic, and religion. How may we apply science, magic, and religion to early China, and what problems might we encounter in doing so? What alternative terms do our sources present, and what questions might they allow us to ask? How was knowledge created in early China, and how do our categories shape the knowledge we create about early China?

Same as: CHINGEN 144

**CHINGEN 246. Gods, Ghosts, and Ancestors: Anthropology of Chinese Folk Religion. 3-5 Units.**

Same as: CHINGEN 146

**CHINGEN 248. Love and Revenge. 2-4 Units.**

Readings of Tang and Song period stories, anecdotal literature, poetry, and song lyrics on the themes of romantic love, unfaithfulness, and revenge. In a society of parental arranged marriage, romantic love (usually outside marriage) takes on its own special meaning, forms of expression, and dangers.

Same as: CHINGEN 148

**CHINGEN 250. Sex, Gender, and Power in Modern China. 3-5 Units.**

Investigates how sex, gender, and power are entwined in the Chinese experience of modernity. Topics include anti-footbinding campaigns, free love/free sex, women's mobilization in revolution and war, the new Marriage Law of 1950, Mao's iron girls, postsocialist celebrations of sensuality, and emergent queer politics. Readings range from feminist theory to China-focused historiography, ethnography, memoir, biography, fiction, essay, and film. All course materials are in English.

Same as: CHINGEN 150, FEMGEN 150, FEMGEN 250

**CHINGEN 251. Manuscripts, Circulation of Texts, Printing. 3-4 Units.**

History of texts before the advent of printing as well as during the early period of printing, focus on Tang and Song periods. Attention to the material existence of texts, their circulation, reading habits before and after printing, the balance between orality and writing, the role of memorization, and rewriting during textual transmission. Readings in English.

Same as: CHINGEN 151

**CHINGEN 252. Beijing: Microcosm of Modern China. 3-4 Units.**

Uses Beijing as a microcosm of China to examine the political, social, and cultural transformations of modern China. Explores critical issues affecting modern Chinese history and contemporary Chinese society through lectures, videos, presentations, and discussions.

Same as: CHINGEN 152

**CHINGEN 253. Beijing and Shanghai: Twin Cities in Chinese History. 3-5 Units.**

This course discusses a story of twin cities—Beijing and Shanghai, from the imperial period to the present day. The historical movement of people, goods, knowledge, thoughts, technology and shifting of political power and cultural authority has closely linked the two cities together. No other two cities in the Chinese map have more communications, interactions, and mutual influences than Beijing and Shanghai. Indeed, geographic localities, ethnic traits, material lives, and foreign contacts have produced distinct cultural landscapes and patterns of urban development of the twin cities, which provide us with a good case of comparative studies. In Beijing and Shanghai, contemporary forces, including migration, industrialization, marketization, decentralization and globalization are transforming the urban societies. Both of them take center stage in China's drama of explosive growth and unprecedented changes. They continue to compete and influence each other in many ways.

Same as: CHINGEN 153

**CHINGEN 255. Cultural Images in China-US Relations. 3-5 Units.**

New interpretation of the history of China-U.S. relations, 1784-2008, using image studies. Attention to people-to-people communication, cultural interaction, and political imagination during different times and power structures. Discussion of change and continuity of cultural images in textual descriptions, visual materials, symbolic and virtual identities in historical context. Understand how people in China and the United States created, presented, interpreted, and remembered cultural images of each other and how these images affected and were affected by their foreign policies and bilateral relations.

Same as: CHINGEN 155

**CHINGEN 260. New Directions in the Study of Poetry and Literati Culture. 3-4 Units.**

Inquiry into new approaches and interpretations of the poetic tradition in China in the context of cultural history. Readings in recent scholarship and criticism that situate poetry in print history, manuscript culture, gender studies, social history, etc. Readings in English. Reading knowledge of Chinese desirable but not required.

Same as: CHINGEN 160

**CHINGEN 269. What is Chinese Theater? The Formation of a Tradition. 3-4 Units.**

A survey of Chinese drama from its origins to late imperial China. Explores theories of the origins of Chinese drama, contrasting theories with the documented beginnings of theater and its first texts. How traditions turned into "elite theater" in the Ming and Qing dynasties, and how esthetic norms and moral values went into the process of theatrical transformation.

Same as: CHINGEN 169

**CHINGEN 294. The History and Culture of Peking Opera. 3-4 Units.**

Explores the history and culture of Peking opera from its regional origins to a major national form. It will focus on genre formation, the professional and social position of actors and the political role of Peking opera. In addition to academic texts, we will read memoirs, biographies and watch videos and movies.

Same as: CHINGEN 194

**CHINGEN 296. The Culture of Entertainment in China. 3-4 Units.**

Sophisticated, organized entertainment in China is evident at least as early as the second century B.C. in the court spectacles described in the early histories and in the depictions of jugglers, dancers and acrobats represented in tomb reliefs. The importance attached to entertainment from ancient times both at court and in society at large is manifest not just in the establishment of imperial institutions such as the Music Bureau, but also in the appearance of large entertainment districts within the cities where people would invest extraordinary amount of resources in the pursuit of pleasure, and in small scale gatherings. This class will look at the representation of play and pleasure in Chinese culture from a variety of sources (art, history, literature and performance) in different periods of Chinese history. In the process we will address the place of pleasure in Chinese culture, as well as ethical, socio-political and economical concerns. Held in old Knight Bldg., 521 Memorial Way, Rm. 102.

Same as: CHINGEN 196

**CHINGEN 390. Practicum Internship. 1 Unit.**

On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit.

**CHINGEN 393E. Female Divinities in China. 3-5 Units.**

The role of powerful goddesses, such as the Queen Mother of the West, Guanyin, and Chen Jinggu, in Chinese religion. Imperial history to the present day. What roles goddesses played in the spirit world, how this related to the roles of human women, and why a civilization that excluded women from the public sphere granted them such a major, even dominant place, in the religious sphere. Readings in English-language secondary literature.

Same as: CHINGEN 193E

**CHINGEN 402T. Entrepreneurship in Asian High-Tech Industries. 1 Unit.**

Distinctive patterns and challenges of entrepreneurship in Asia; update of business and technology issues in the creation and growth of start-up companies in major Asian economies. Distinguished speakers from industry, government, and academia. Course may be repeated for credit.

**Chinese Language Courses****CHINLANG 1. First-Year Modern Chinese, First Quarter. 5 Units.**

Conversation, grammar, reading, elementary composition. Daily sections may be set at the beginning of the quarter to suit schedule requirements.

**CHINLANG 1B. First-Year Modern Chinese for Bilingual Students, First Quarter. 3 Units.**

For students with elementary comprehension and speaking skills who need work on conversation, grammar, reading, and composition.

**CHINLANG 2. First-Year Modern Chinese, Second Quarter. 5 Units.**

Continuation of CHINLANG 1. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Prerequisite: placement test, CHINLANG 1.

**CHINLANG 2B. First-Year Modern Chinese for Bilingual Students, Second Quarter. 3 Units.**

Continuation of CHINLANG 1B. For students with elementary comprehension and speaking skills who need work on conversation, grammar, reading, and composition. Prerequisite: Placement Test, CHINLANG 1B.

**CHINLANG 3. First-Year Modern Chinese, Third Quarter. 5 Units.**

Continuation of CHINLANG 2. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Fulfills the University language requirement. Prerequisite: Placement Test, CHINLANG 2.

**CHINLANG 3B. First-Year Modern Chinese for Bilingual Students, Third Quarter. 3 Units.**

Continuation of CHINLANG 2B. For students with elementary comprehension and speaking skills who need work on conversation, grammar, reading, and composition. Prerequisite: Placement Test, CHINLANG 2B or consent of instructor. Fulfills University language requirement.

**CHINLANG 5. Intensive First-Year Modern Chinese. 8 Units.**

Equivalent to 1,2,3 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University.

**CHINLANG 6. Beginning Conversational Chinese, First Quarter. 2 Units.**

Three quarter sequence. Basic language skills in Mandarin to function abroad.

**CHINLANG 7. Beginning Conversational Chinese, Second Quarter. 2 Units.**

Continuation of CHINLANG 6. Basic language skills in Mandarin to function abroad. Prerequisite: CHINLANG 6.

**CHINLANG 8. Beginning Conversational Chinese, Third Quarter. 2 Units.**

Continuation of CHINLANG 7. Basic language skills in Mandarin to function abroad. Prerequisite: CHINLANG 7.

**CHINLANG 10. Beginning Southern Min (Taiwanese) Conversation, First Quarter. 2 Units.**

Three quarter sequence. Basic language skills for everyday life situations.

**CHINLANG 11. Beginning Southern Min (Taiwanese) Conversation, Second Quarter. 2 Units.**

Continuation of CHINLANG 10. Prerequisite: CHINLANG 10.

**CHINLANG 12. Beginning Southern Min (Taiwanese) Conversation, Third Quarter. 2 Units.**

Continuation of 11. Prerequisite: 11.

**CHINLANG 13A. Intermediate Southern Min (Taiwanese) Conversation, First Quarter. 2 Units.**

Continuation of CHINLANG 12. Vocabulary including business-related terms, grammatical structures, and spontaneous conversations. Prerequisite: CHINLANG 12.

**CHINLANG 13B. Intermediate Southern Min (Taiwanese) Conversation, Second Quarter. 2 Units.**

Continuation of CHINLANG 13A. Vocabulary including business-related terms, grammatical structures, and spontaneous conversations. Prerequisite: CHINLANG 13A.

**CHINLANG 13C. Intermediate Southern Min (Taiwanese) Conversation, Third Quarter. 2 Units.**

Continuation of CHINLANG 13B. Vocabulary including business-related terms, grammatical structures, and spontaneous conversations. Prerequisite: CHINLANG 13B.

**CHINLANG 15. Beginning Conversational Cantonese, First Quarter. 2 Units.**

This is the first of the 3-course series on beginning Cantonese. The primary objective of the beginning series is to help students build up a repertoire of vocabulary and basic grammatical structures so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives. Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim-sum restaurant, or a Cantonese community every quarter to experience Cantonese culture.

**CHINLANG 15M. Beginning Conversational Cantonese for Mandarin Speakers, First Quarter. 2 Units.**

This is the first of the 3-course series on beginning Cantonese for Mandarin speakers. The primary objective of the beginning series is to help students build up a repertoire of vocabulary so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives. Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. In addition, students work on common pronunciation and grammatical errors due to influences from Mandarin. Cantonese-Chinese characters will also be taught.

**CHINLANG 16. Beginning Cantonese Conversation, Second Quarter. 2 Units.**

Continuation of CHINLANG 15. This is the second of the 3-course series on beginning Cantonese. The primary objective of the beginning series is to help students build up a repertoire of vocabulary and basic grammatical structures so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives. Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim-sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: CHINLANG 15.

**CHINLANG 16M. Beginning Conversational Cantonese for Mandarin Speakers, Second Quarter. 2 Units.**

Continuation of CHINLANG 15M. This is the second of the 3-course series on beginning Cantonese for Mandarin speakers. The primary objective of the beginning series is to help students build up a repertoire of vocabulary so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives. Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. In addition, students work on common pronunciation and grammatical errors due to influences from Mandarin. Cantonese-Chinese characters will also be taught. Prerequisite: CHINLANG 15M.

**CHINLANG 17. Beginning Conversational Cantonese, Third Quarter. 2 Units.**

Continuation of CHINLANG 16. This is the third of the 3-course series on beginning Cantonese. The primary objective of the beginning series is to help students build up a repertoire of vocabulary and basic grammatical structures so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives. Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim-sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: CHINLANG 16.

**CHINLANG 17M. Beginning Conversational Cantonese for Mandarin Speakers, Third Quarter. 2 Units.**

Continuation of CHINLANG 16M. This is the third of the 3-course series on beginning Cantonese for Mandarin speakers. The primary objective of the beginning series is to help students build up a repertoire of vocabulary so that they can: (a) introduce themselves in an informal social situation, (b) engage in simple transactions, (c) converse about themselves, their friends and families, and (d) talk about activities in daily lives. Authentic materials such as Cantopop and movie clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. In addition, students work on common pronunciation and grammatical errors due to influences from Mandarin. Cantonese-Chinese characters will also be taught. Prerequisite: CHINLANG 16M.

**CHINLANG 18. Intermediate Cantonese Conversation, First Quarter. 2 Units.**

Continuation of CHINLANG 17. This is the first of the 3-course series on intermediate Cantonese. The primary objective of the intermediate series is to help students acquire the vocabulary: (a) to engage in conversations about less concrete topics, (b) to give directions and instructions, and (c) to carry out transactions in linguistically unfamiliar situations. Students will work on more complex grammar that allows them to express their ideas in a variety of sentence structures. Authentic materials such as Cantopop, movies, and news clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: "Cantonese Proficiency Tests" on Coursework, CHINLANG 17.

**CHINLANG 19. Intermediate Conversational Cantonese, Second Quarter. 2 Units.**

Continuation of CHINLANG 18. This is the second of the 3-course series on intermediate Cantonese. The primary objective of the intermediate series is to help students acquire the vocabulary: (a) to engage in conversations about less concrete topics, (b) to give directions and instructions, and (c) to carry out transactions in linguistically unfamiliar situations. Students will work on more complex grammar that allows them to express their ideas in a variety of sentence structures. Authentic materials such as Cantopop, movies, and news clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: "Cantonese Proficiency Tests" on Coursework, CHINLANG 18.

**CHINLANG 20. Intermediate Conversational Cantonese, Third Quarter. 2 Units.**

Continuation of CHINLANG 19. This is the third of the 3-course series on intermediate Cantonese. The primary objective of the intermediate series is to help students acquire the vocabulary: (a) to engage in conversations about less concrete topics, (b) to give directions and instructions, and (c) to carry out transactions in linguistically unfamiliar situations. Students will work on more complex grammar that allows them to express their ideas in a variety of sentence structures. Authentic materials such as Cantopop, movies, and news clips are incorporated in the courses and Internet tools are used to enhance learning. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: "Cantonese Proficiency Tests" on Coursework, CHINLANG 19.

**CHINLANG 20A. Cantonese Through Films, First Quarter. 2 Units.**

This is the first of a series of courses that targets intermediate and low-advanced students interested in expanding their Cantonese repertoire to include vocabulary, grammar, and culture for talking about movies, current events, and topics of interest to them. Students watch authentic Cantonese movies, TV dramas, news clips, and documentaries. They engage in discussions about topics relevant to them, such as history and identity of Chinese Americans. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: "Cantonese Proficiency Tests" on Coursework, CHINLANG 17M, or CHINLANG 20.

**CHINLANG 20B. Cantonese Through Films, Second Quarter. 2 Units.**

Continuation of CHINLANG 20A. This is the second of a series of courses that targets intermediate and low-advanced students interested in expanding their Cantonese repertoire to include vocabulary, grammar, and culture for talking about movies, current events, and topics of interest to them. Students watch authentic Cantonese movies, TV dramas, news clips, and documentaries. They engage in discussions about topics relevant to them, such as history and identity of Chinese Americans. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: "Cantonese Proficiency Tests" on Coursework, CHINLANG 20A.

**CHINLANG 20C. Cantonese Through Films, Third Quarter. 2 Units.**

Continuation of CHINLANG 20B. This is the third of a series of courses that targets intermediate and low-advanced students interested in expanding their Cantonese repertoire to include vocabulary, grammar, and culture for talking about movies, current events, and topics of interest to them. Students watch authentic Cantonese movies, TV dramas, news clips, and documentaries. They engage in discussions about topics relevant to them, such as history and identity of Chinese Americans. There is also an optional field trip to a karaoke bar, a dim sum restaurant, or a Cantonese community every quarter to experience Cantonese culture. Prerequisite: "Cantonese Proficiency Tests" on Coursework, CHINLANG 20B.

**CHINLANG 21. Second-Year Modern Chinese, First Quarter. 5 Units.**

Continuation of CHINLANG 3. Listening, speaking, reading, writing. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Prerequisite: Placement Test, CHINLANG 3.

**CHINLANG 21B. Second-Year Modern Chinese for Bilingual Students, First Quarter. 3 Units.**

Continuation of CHINLANG 3B. For students with advanced comprehension and speaking skills, but lacking equivalent knowledge of grammar, reading, and writing Chinese characters. Equivalent to CHINLANG 21. Prerequisite: Placement Test, CHINLANG 3B.

**CHINLANG 22. Second-Year Modern Chinese, Second Quarter. 5 Units.**

Continuation of CHINLANG 21. Listening, speaking, reading, writing. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Prerequisite: Placement Test, CHINLANG 21.

**CHINLANG 22B. Second-Year Chinese for Bilingual Students, Second Quarter. 3 Units.**

Continuation of CHINLANG 21B. For students with advanced comprehension and speaking skills, but lacking equivalent knowledge of grammar, reading, and writing Chinese characters. Prerequisite: Placement Test, CHINLANG 21B.

**CHINLANG 23. Second-Year Modern Chinese, Third Quarter. 5 Units.**

Continuation of CHINLANG 22. Listening, speaking, reading, writing. Daily sections may be set at the beginning of the quarter to suit schedule requirements. Prerequisite: Placement Test, CHINLANG 22.

**CHINLANG 23B. Second-Year Chinese for Bilingual Students, Third Quarter. 3 Units.**

Continuation of CHINLANG 22B. For students with advanced comprehension and speaking skills, but lacking equivalent knowledge of grammar, reading, and writing Chinese characters. Prerequisite: Placement Test, CHINLANG 22B.

**CHINLANG 25. Intensive Second-Year Modern Chinese. 8 Units.**

Equivalent to 21,22,23 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 3 or equivalent.

**CHINLANG 27. Intermediate Chinese Conversation, First Quarter. 2 Units.**

This course is designed for students with basic conversational skills in Mandarin Chinese. It focuses on developing learners' communicative competence in Chinese by means of language practices, oral reports, discussions and group projects. The students will learn functional language skills for daily communication, and study a variety of topics related to school life, Chinese culture and society. Prerequisite: CHINLANG 3.

**CHINLANG 28. Intermediate Chinese Conversation, Second Quarter. 2 Units.**

This course is designed for students with basic conversational skills in Mandarin Chinese. It focuses on developing learners' communicative competence in Chinese by means of language practices, oral reports, discussions and group projects. The students will learn functional language skills for daily communication, and study a variety of topics related to school life, Chinese culture and society. Prerequisite: CHINLANG 27. Consent of instructor.

**CHINLANG 29. Intermediate Chinese Conversation, Third Quarter. 2 Units.**

This course is designed for students with basic conversational skills in Mandarin Chinese. It focuses on developing learners' communicative competence in Chinese by means of language practices, oral reports, discussions and group projects. The students will learn functional language skills for daily communication, and study a variety of topics related to school life, Chinese culture and society. Prerequisite: CHINLANG 28. Consent of Instructor.

**CHINLANG 31E. Accelerated Beginning Mandarin for Engineering Students, First Quarter. 4 Units.**

Restricted to engineering students participating in the China Internship Program. Grad students enroll in CHINLANG 331E.

**CHINLANG 33G. Accelerated Beginning Mandarin III. 4 Units.**

For GSB students only.

**CHINLANG 41. Intermediate-to-Advanced Chinese Conversation, First Quarter. 2 Units.**

Repeatable once for units. Prerequisite: CHINLANG 23.

**CHINLANG 42. Intermediate-to-Advanced Chinese Conversation, Second Quarter. 2 Units.**

Continuation of CHINLANG 41. Repeatable once for units. Prerequisite: CHINLANG 23.

**CHINLANG 43. Intermediate-to-Advanced Chinese Conversation, Third Quarter. 2 Units.**

Continuation of CHINLANG 42. Repeatable once for units. Prerequisite: CHINLANG 23.

**CHINLANG 99. Language Specials. 1-5 Unit.**

Prerequisite: consent of instructor.nn (Staff).

**CHINLANG 101. Third-Year Modern Chinese, First Quarter. 5 Units.**

Continuation of CHINLANG 23. Written and spoken styles of modern Chinese. Reading and discussion of authentic writings on cultural topics; newspaper reports, radio, and TV broadcasts and films; online Chinese software and email network to facilitate study. Prerequisite: Placement Test, CHINLANG 23.

**CHINLANG 101B. Third-Year Modern Chinese for Bilingual Students, First Quarter. 3 Units.**

Continuation of CHINLANG 23B. Equivalent to CHINLANG 101. For students with advanced listening and speaking abilities, but lacking equivalent knowledge in reading and writing. Prerequisite: Placement Test, CHINLANG 23B.

**CHINLANG 102. Third-Year Modern Chinese, Second Quarter. 5 Units.**

Continuation of CHINLANG 101. Written and spoken styles of modern Chinese. Reading and discussion of authentic writings on cultural topics; newspaper reports, radio, and TV broadcasts and films; online Chinese software and email network to facilitate study. Prerequisite: Placement Test, CHINLANG 101.

Continuation of CHINLANG 101B. Equivalent to CHINLANG 102. For students with advanced listening and speaking abilities, but lacking equivalent knowledge in reading and writing. Prerequisite: Placement Test, CHINLANG 101B.

**CHINLANG 103. Third-Year Modern Chinese, Third Quarter. 5 Units.**

Continuation of CHINLANG 102. Written and spoken styles of modern Chinese. Reading and discussion of authentic writings on cultural topics; newspaper reports, radio, and TV broadcasts and films; online Chinese software and email network to facilitate study. Prerequisite: Placement Test, CHINLANG 102.

**CHINLANG 103B. Third-Year Modern Chinese for Bilingual Students, Third Quarter. 3 Units.**

Continuation of CHINLANG 102B. Equivalent of CHINLANG 103. For students with advanced listening and speaking abilities, but lacking equivalent knowledge in reading and writing. Prerequisite: CHINLANG 102B.

**CHINLANG 105. Intensive Third-Year Modern Chinese. 8 Units.**

Equivalent to 101,102,103 combined if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 23 or equivalent.

**CHINLANG 121. Advanced Chinese Conversation, First Quarter. 2 Units.**

Continuation of CHINLANG 29. This is the first quarter of a three-quarter sequence designed for students who have completed Third-year Chinese, or its equivalent, and wish to continue to develop their speaking and listening skills. Content for the course is drawn from a wide variety of current multimedia materials. Topics include general interest and social issues, international relations, and others that lend themselves to lively and in-depth discussion. New grammatical structures and vocabulary will be regularly introduced, with occasional written assignments to support students, development of conversational skills. Placement Test, CHINLANG 103.

**CHINLANG 122. Advanced Chinese Conversation, Second Quarter. 2 Units.**

Continuation of CHINLANG 121. Second quarter of Advanced Conversational Chinese. It is designed for students who have completed Third-year Chinese, or its equivalent, and wish to continue to develop their speaking and listening skills. Content for the course is drawn from a wide variety of current multimedia materials. Topics include general interest and social issues, international relations, and others that lend themselves to lively and in-depth discussion. New grammatical structures and vocabulary will be regularly introduced, with occasional written assignments to support students, development of conversational skills. Prerequisite: CHINLANG 121.

**CHINLANG 123. Advanced Chinese Conversation, Third Quarter. 2 Units.**

Continuation of CHINLANG 122. Third quarter of Advanced Conversational Chinese. It is designed for students who have completed Third-year Chinese, or its equivalent, and wish to continue to develop their speaking and listening skills. Content for the course is drawn from a wide variety of current multimedia materials. Topics include general interest and social issues, international relations, and others that lend themselves to lively and in-depth discussion. New grammatical structures and vocabulary will be regularly introduced, with occasional written assignments to support students, development of conversational skills. Prerequisite: CHINLANG 122.

**CHINLANG 131. Business Chinese, First Quarter. 3-4 Units.**

Commercial, economic, and business-related vocabulary. Materials include formal business conversations, newspaper and journal articles, and TV news on trade and economic. Technical language and business etiquette. Student oral and written reports on their own research regarding recent economic developments, using sources in China. Prerequisite: CHINLANG 103 or equivalent.

**CHINLANG 132. Business Chinese, Second Quarter. 3-4 Units.**

Continuation of CHINLANG 131. Commercial, economic, and business-related vocabulary. Materials include formal business conversations, newspaper and journal articles, and TV news on trade and economic. Technical language and business etiquette. Student oral and written reports on their own research regarding recent economic developments, using sources in China. Prerequisite: CHINLANG 131.

**CHINLANG 133. Business Chinese, Third Quarter. 3-4 Units.**

Continuation of CHINLANG 132. Commercial, economic, and business-related vocabulary. Materials include formal business conversations, newspaper and journal articles, and TV news on trade and economic. Technical language and business etiquette. Student oral and written reports on their own research regarding recent economic developments, using sources in China. Prerequisite: CHINLANG 132.

**CHINLANG 199. Individual Reading. 1-5 Unit.****CHINLANG 200. Directed Reading. 1-5 Unit.**

May be repeated for credit. Prerequisite: consent of instructor.

**CHINLANG 205S. Intensive Third-Year Modern Chinese. 7 Units.**

Equivalent to 101, 102, 103 if taken together with the Beijing portion of the Summer Program. Five weeks at Stanford and four weeks at Peking University. Prerequisite: 23 or equivalent. Grads only.

**CHINLANG 211. Fourth-Year Modern Chinese, First Quarter. 5 Units.**

Continuation of CHINLANG 103. This is the first quarter of a three-quarter sequence designed for students with advanced-level proficiency in Chinese. Discussions are based on short stories, essays and newspaper articles, and academic journal articles. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal, or academic, interest more effectively and accurately. Prerequisite: placement test, CHINLANG 103.

**CHINLANG 211B. Fourth-Year Modern Chinese for Bilingual Students, First Quarter. 3 Units.**

Continuation of CHINLANG 103B. This is the first quarter of a three-quarter sequence designed for bilingual students with advanced-level proficiency in Chinese. Discussions are based on short stories, essays and newspaper articles, along with related media materials. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal, or public, interests more effectively and accurately. Prerequisite: CHINLANG 103B.

**CHINLANG 212. Fourth-Year Modern Chinese, Second Quarter. 5 Units.**

Continuation of CHINLANG 211. Second quarter of fourth year Chinese. Discussions are based on short stories, essays and newspaper articles, and academic journal articles. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal or academic interest more effectively and accurately. Prerequisite: Placement Test, CHINLANG 211.

**CHINLANG 212B. Fourth-Year Modern Chinese for Bilingual Students, Second Quarter. 3 Units.**

Continuation of CHINLANG 211B. Second quarter of Fourth Year Chinese for bilingual students. Discussions are based on short stories, essays and newspaper articles, along with related media materials. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal, or public, interests more effectively and accurately. Prerequisite: CHINLANG 211B.

**CHINLANG 213. Fourth-Year Modern Chinese, Third Quarter. 5 Units.**

Continuation of CHINLANG 212. Third quarter of Fourth Year Chinese. Discussions are based on short stories, essays and newspaper articles, and academic journal articles. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal, or academic, interests more effectively and accurately. Prerequisite: Placement Test, CHINLANG 212.

**CHINLANG 213B. Fourth-Year Modern Chinese for Bilingual Students, Third Quarter. 3 Units.**

Continuation of CHINLANG 212B. Third quarter of Fourth Year Chinese for bilingual students. Discussions are based on short stories, essays and newspaper articles, along with related media materials. Emphasis is on social and cultural issues in contemporary China. Students will learn speed-reading techniques and explore more subtle distinctions in Chinese language use, such as formal vs. informal styles and word choice, toward developing a more sophisticated understanding and command of the language. Having completed one year of study at this level, students will acquire sufficient skills in reading, writing, and speaking on various topics of personal, or public, interests more effectively and accurately. Prerequisite: CHINLANG 212B.

**CHINLANG 231. Fifth-Year Modern Chinese, First Quarter. 2-4 Units.**

Year-long sequence. Training of all four skills of listening, speaking, reading and writing focusing on formal reading and writing. Materials include works on social, political, economic, and cultural topics and literature in various genres. The course consists of two components: political and economic topics on Monday and Wednesday, and cultural and literary focus on Tuesday and Thursday. Students can take one component for 2 units, or take both for 4 units. Prerequisite: CHINLANG 213, CHINLANG 213B or consent of instructor.

**CHINLANG 232. Fifth-Year Modern Chinese, Second Quarter. 2-4 Units.**

Continuation of 231. Year-long sequence. Training of all four skills of listening, speaking, reading and writing focusing on formal reading and writing. Materials include works on social, political, economic, and cultural topics and literature in various genres. The course consists of two components: political and economic topics on Monday and Wednesday, and cultural and literary focus on Tuesday and Thursday. Students can take one component for 2 units, or take both for 4 units. Prerequisite: CHINLANG 231 or consent of instructor.

**CHINLANG 233. Fifth-Year Modern Chinese, Third Quarter. 2-4 Units.**

Continuation of 232. Year-long sequence. Training of all four skills of listening, speaking, reading and writing focusing on formal reading and writing. Materials include works on social, political, economic, and cultural topics and literature in various genres. The course consists of two components: political and economic topics on Monday and Wednesday, and cultural and literary focus on Tuesday and Thursday. Students can take one component for 2 units, or take both for 4 units. Prerequisite: CHINLANG 232 or consent of instructor.

**CHINLANG 331E. Accelerated Beginning Mandarin for Engineering Students, First Quarter. 2-5 Units.**

Restricted to graduate engineering students participating in the China Internship Program.

**CHINLANG 394. Graduate Studies in Chinese Conversation. 1-3 Unit.**

Prerequisite: consent of instructor.

**CHINLANG 395. Graduate Studies in Chinese. 1-5 Unit.**

Prerequisite: consent of instructor.

## Chinese Literature Courses

**CHINLIT 93. Late Imperial China. 3 Units.**

(Same as HISTORY 193. History majors and others taking 5 units, register for 193.) A survey of Chinese history from the 11th century to the collapse of the imperial state in 1911. Topics include absolutism, gentry society, popular culture, gender and sexuality, steppe nomads, the Jesuits in China, peasant rebellion, ethnic conflict, opium, and the impact of Western imperialism.

Same as: FEMGEN 93, HISTORY 93

**CHINLIT 125. Beginning Classical Chinese, First Quarter. 2-5 Units.**

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127 to satisfy Chinese major requirements must begin with 125. Prerequisite: CHINLANG 23 or equivalent.

Same as: CHINLIT 205

**CHINLIT 126. Beginning Classical Chinese, Second Quarter. 2-5 Units.**

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 125/205 or equivalent. Same as: CHINLIT 206

**CHINLIT 127. Beginning Classical Chinese, Third Quarter. 2-5 Units.**

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 126/206 or equivalent. Same as: CHINLIT 207

**CHINLIT 130. Lyrical and Local Prose. 3-5 Units.**

Informal and personal prose of Tang and Song dynasties, with special attention to lyrical expression (prose as close alternative to poetry) and local interest (e.g., in travel diaries). These new uses and styles of prose will be compared with more formal expository prose and with poetry written by the same authors, to better understand the distribution of expressive aims and effects. Prerequisite: Classical Chinese or advanced reading knowledge of Chinese. Same as: CHINLIT 230

**CHINLIT 132. Chinese Biographies of Women. 2-5 Units.**

Generic and historical analysis of the two-millennia long biographical tradition inaugurated by Liu Xiang, ca. 79-8 B.C.E. Chinese women's history, intellectual history, historiography, and literary studies. Same as: CHINLIT 232

**CHINLIT 135. Ghost Stories and Other Strange Tales. 3-4 Units.**

Study of the zhiguai tradition, with readings in landmark collections from different dynastic periods (e.g., Tang, Song, Qing). Consideration of the cultural significance as well as the literary qualities of this tradition of storytelling in China. Readings in English. Same as: CHINLIT 235

**CHINLIT 155. Classical Poetry: Reading, Theory, Interpretation. 4 Units.**

Introduction to the reading and interpretation of classical Chinese poetry, with attention to the language of poetry, aesthetics, expressive purposes, and social roles. Readings in Chinese. Prerequisite: three years of modern Chinese or equivalent. Same as: CHINLIT 255

**CHINLIT 165. Major Figures in Classical Chinese Poetry. 4 Units.**

Focus is on a major poet and relationships to previous and later poetry. Poetic form, including meter and rhyme schemes. Historical context. This year's poet is Du Fu. Prerequisite: 3 years Modern Chinese or equivalent. Same as: CHINLIT 265

**CHINLIT 166. Chinese Ci Poetry (Song Lyrics). 3-4 Units.**

Introduction to poetry in the ci "song lyrics" form. This year the focus is on song lyrics of Li Qingzhao (1084-1150s), read against song lyrics composed by male writers of her day. Attention to the special challenges she faced as a woman writer, and the ways that the tradition struggled to accommodate this "talented woman." Prerequisite: Classical Chinese or advanced reading knowledge of Chinese. Same as: CHINLIT 266

**CHINLIT 189A. Honors Research. 2-5 Units.****CHINLIT 189B. Honors Research. 5 Units.**

Open to senior honors students to write thesis.

**CHINLIT 190. Chinese Cultural Revolution: Performance, Politics, and Aesthetics. 4 Units.**

Events, arts, films, and operas of the Chinese Cultural Revolution. Analysis of political passion, aesthetics, and psychology of mass movements. Places the Cultural Revolution in the long-range context of art, social movements, and politics. Chinese language is not required. Same as: CHINLIT 290, COMPLIT 135

**CHINLIT 191. The Structure of Modern Chinese. 2-4 Units.**

Focus is on syntax and semantics. Prerequisite: CHINLANG 3 or equivalent, or consent of instructor. Same as: CHINLIT 291

**CHINLIT 192. The History of Chinese. 4 Units.**

Focuses on syntactic and semantic changes in Chinese over the last three millennia by using electronic corpus of vernacular texts from different times. Same as: CHINLIT 292

**CHINLIT 199. Individual Reading in Chinese. 1-4 Unit.**

Asian Language majors only. Prerequisite: CHINLANG 103 or consent of instructor. Units by arrangement.

**CHINLIT 200. Directed Reading in Chinese. 1-12 Unit.****CHINLIT 201. Proseminar: Bibliographic and Research Methods in Chinese Studies. 3-5 Units.**

Bibliographic, pedagogical, and research methods in Chinese studies. Prerequisite: 127/207 or equivalent.

**CHINLIT 205. Beginning Classical Chinese, First Quarter. 2-5 Units.**

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127 to satisfy Chinese major requirements must begin with 125. Prerequisite: CHINLANG 23 or equivalent. Same as: CHINLIT 125

**CHINLIT 206. Beginning Classical Chinese, Second Quarter. 2-5 Units.**

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 125/205 or equivalent. Same as: CHINLIT 126

**CHINLIT 207. Beginning Classical Chinese, Third Quarter. 2-5 Units.**

Goal is reading knowledge of classical Chinese. Basic grammar and commonly used vocabulary. Students with no background in classical Chinese who are taking 127/207 to satisfy Chinese major requirements must begin with 125/205. Prerequisite: CHINLANG 126/206 or equivalent. Same as: CHINLIT 127

**CHINLIT 221. Advanced Classical Chinese: Philosophical Texts. 3-5 Units.**

Prerequisite: 207 or equivalent.

**CHINLIT 222. Advanced Classical Chinese: Historical Narration. 2-5 Units.**

Prerequisite: 127/207 or equivalent.

**CHINLIT 223. Advanced Classical Chinese: Literary Essays. 2-5 Units.**

Readings and grammatical analyses of literary essays throughout imperial China. Prerequisite: CHINLIT 127/207 or equivalent.

**CHINLIT 230. Lyrical and Local Prose. 3-5 Units.**

Informal and personal prose of Tang and Song dynasties, with special attention to lyrical expression (prose as close alternative to poetry) and local interest (e.g., in travel diaries). These new uses and styles of prose will be compared with more formal expository prose and with poetry written by the same authors, to better understand the distribution of expressive aims and effects. Prerequisite: Classical Chinese or advanced reading knowledge of Chinese. Same as: CHINLIT 130

**CHINLIT 232. Chinese Biographies of Women. 2-5 Units.**

Generic and historical analysis of the two-millennia long biographical tradition inaugurated by Liu Xiang, ca. 79-8 B.C.E. Chinese women's history, intellectual history, historiography, and literary studies. Same as: CHINLIT 132

**CHINLIT 235. Ghost Stories and Other Strange Tales. 3-4 Units.**

Study of the zhiguai tradition, with readings in landmark collections from different dynastic periods (e.g., Tang, Song, Qing). Consideration of the cultural significance as well as the literary qualities of this tradition of storytelling in China. Readings in English.

Same as: CHINLIT 135

**CHINLIT 245. Li Qingzhao. 2-4 Units.**

This course examines the writings and reception history of Li Qingzhao (1084-1150s), the most renowned woman writer of imperial China. We will read her song lyrics (ci), the most celebrated form of her writings, as well as several of her poems in the shi form and her various prose writings as well. The singularity of her work as a poet and critic will be brought out through comparison with other writers of her day. Attention will also be given to the complicated reception history of her work, from her own day down through late imperial times and into the twentieth century. This history is inseparable from controversies surrounding her conduct and changing notions of womanly virtue in the Ming-Qing period. The legacy of those notions even in modern representations of Li Qingzhao will also be analyzed. Class meets in Knight Bldg, Rm 102.

Same as: CHINLIT 345

**CHINLIT 255. Classical Poetry: Reading, Theory, Interpretation. 4 Units.**

Introduction to the reading and interpretation of classical Chinese poetry, with attention to the language of poetry, aesthetics, expressive purposes, and social roles. Readings in Chinese. Prerequisite: three years of modern Chinese or equivalent.

Same as: CHINLIT 155

**CHINLIT 261. Sources of Chinese Poetry. 4 Units.**

The Book of Songs (ca. 1000-500 B.C.E.) and Songs of Chu (ca. 400 B.C.E.), the earliest anthologies of Chinese poetry.

**CHINLIT 263. Lyric (Shih) I. 2-4 Units.**

Han through Sui dynasties.

**CHINLIT 265. Major Figures in Classical Chinese Poetry. 4 Units.**

Focus is on a major poet and relationships to previous and later poetry. Poetic form, including meter and rhyme schemes. Historical context. This year's poet is Du Fu. Prerequisite: 3 years Modern Chinese or equivalent.

Same as: CHINLIT 165

**CHINLIT 266. Chinese Ci Poetry (Song Lyrics). 3-4 Units.**

Introduction to poetry in the ci "song lyrics" form. This year the focus is on song lyrics of Li Qingzhao (1084-1150s), read against song lyrics composed by male writers of her day. Attention to the special challenges she faced as a woman writer, and the ways that the tradition struggled to accommodate this "talented woman." Prerequisite: Classical Chinese or advanced reading knowledge of Chinese.

Same as: CHINLIT 166

**CHINLIT 272. Traditional Chinese Fiction: Novels. 2-4 Units.**

Major novels of late imperial China. Prerequisite: 127/207 or consent of instructor.

**CHINLIT 273. Readings in Chinese Drama. 2-4 Units.**

Yuan, Ming, and Qing periods emphasizing literary not theatrical qualities. Prerequisite: 127/207 or consent of instructor.

**CHINLIT 274. Modern Chinese Novel: Theory, Aesthetics, History. 4 Units.**

By reading theories of fiction along with 5 representative Chinese novels, the course explores the individual's relationships to the moral fabric of family, community, and society. In the transition from the traditional culture to the modern world, the traditional moral order was dismantled. Yet strands of old morality persist and are revitalized into new moral imperatives. The modern Chinese novel will be a prism to comprehend the critique and novelization of the moral norms in the formation of modern subjectivity. The theoretical half of the course includes Taylor's *Sources of the Self*, Slaughter's *Human Rights, Inc.*, Marston Anderson's *Limits of Realism*, and works by Chinese theorists. We will read fictions by Wu Woyao, Mao Dun, Ding Ling, Zhang Rong, and Yu Hua. This course will be part of the workshop *Moral Reform, Public Virtue, and Literature*, sponsored by Stanford's McCoy Family Center for Ethics in Society. Speakers will be invited to present their work. All books are provided for free.

Same as: COMPLIT 254

**CHINLIT 279. For Love of Country: National Narratives in Chinese Literature and Film. 3-5 Units.**

Explores the nation as it is constructed, deconstructed, and continuously contested in novels, short stories, films, and other media from the second half of the 20th century in mainland China and Taiwan. Asks how the trope of the nation and the ideology of nationalism mediate the relationships between politics and aesthetics. Explores the nation's internal fault lines of gender, ethnicity, geography, language, and citizenship.

Same as: CHINLIT 379

**CHINLIT 283. China's Dynastic Founders. 3-5 Units.**

This course examines the lives of China's dynastic founders, among whom we find the most influential, the most celebrated, the most complicated, and the most controversial rulers in premodern Chinese history. We seek to understand the ideas of leadership and legitimacy, the relationships among statecraft, military might, and moral virtue, and the importance of precedents and exemplars in traditional Chinese political culture. Primary readings are the biographies of the dynastic founders in the official histories, supplemented by the representations of these rulers in other genres of writings. Prerequisite: Two years of classical Chinese, or consent of instructor.

**CHINLIT 289. The Poetics and Politics of Affect in Modern China. 3-5 Units.**

The role of affect in modern Chinese aesthetics and politics. Cultural and social theories of affect (love, hate, fear, grief, resentment, rage, sympathy, sincerity, shame, and nostalgia); affective discourses across genres and media including fiction, poetry, film, journalism, and television; and mass social movements such as protest, uprising, and revolution. Advanced undergraduates requires consent of instructor. Recommended: reading knowledge of Chinese.

**CHINLIT 290. Chinese Cultural Revolution: Performance, Politics, and Aesthetics. 4 Units.**

Events, arts, films, and operas of the Chinese Cultural Revolution. Analysis of political passion, aesthetics, and psychology of mass movements. Places the Cultural Revolution in the long-range context of art, social movements, and politics. Chinese language is not required. Same as: CHINLIT 190, COMPLIT 135

**CHINLIT 291. The Structure of Modern Chinese. 2-4 Units.**

Focus is on syntax and semantics. Prerequisite: CHINLANG 3 or equivalent, or consent of instructor.

Same as: CHINLIT 191

**CHINLIT 292. The History of Chinese. 4 Units.**

Focuses on syntactic and semantic changes in Chinese over the last three millennia by using electronic corpus of vernacular texts from different times.

Same as: CHINLIT 192

**CHINLIT 295J. Chinese Women's History. 5 Units.**

The lives of women in the last 1,000 years of Chinese history. Focus is on theoretical questions fundamental to women's studies. How has the category of woman been shaped by culture and history? How has gender performance interacted with bodily disciplines and constraints such as medical, reproductive, and cosmetic technologies? How relevant is the experience of Western women to women elsewhere? By what standards should liberation be defined?.

Same as: FEMGEN 295J, HISTORY 295J

**CHINLIT 299. Master's Thesis or Translation. 1-5 Unit.**

A total of 5 units taken in one or more quarters.

**CHINLIT 345. Li Qingzhao. 2-4 Units.**

This course examines the writings and reception history of Li Qingzhao (1084-1150s), the most renowned woman writer of imperial China. We will read her song lyrics (ci), the most celebrated form of her writings, as well as several of her poems in the shi form and her various prose writings as well. The singularity of her work as a poet and critic will be brought out through comparison with other writers of her day. Attention will also be given to the complicated reception history of her work, from her own day down through late imperial times and into the twentieth century. This history is inseparable from controversies surrounding her conduct and changing notions of womanly virtue in the Ming-Qing period. The legacy of those notions even in modern representations of Li Qingzhao will also be analyzed. Class meets in Knight Bldg, Rm 102.

Same as: CHINLIT 245

**CHINLIT 369. Late Imperial Chinese Fiction. 2-5 Units.**

Primary works examined include Jin Ping Mei, Xingshi yinyuan zhuan, Hongloumeng, Qilu deng, Rulin waishi, and Ernu yingxiang zhuan. Secondary readings focus on social dimensions of the Chinese novel (ca. 1600-1850), but students may explore other aspects of the texts in their presentations and research papers. Comparisons with the English novel, particularly on the rise of the novel and the advent of modernity.

**CHINLIT 371. Aesthetics, Politics, Modernity and China. 2-5 Units.**

The making of global heroes—and the many bodies of Chairman Mao. This course explores a number of key motifs of critical theory relevant to Chinese studies. It introduces some seminal theories of visuality and the making of (global) heroes and problematizes the writing of visual histories and the uses of Digital Humanities for this purpose. Part of an ongoing research project which focuses on two hyper-visible male protagonists of the twentieth century—Mohandas Gandhi and Mao Zedong. How have these flesh and blood men been transformed through the work of visual imagery into globally recognizable, trans-cultural "bio-icons"? Prerequisite: CHINLIT 127/207 or consent of instructor.

Same as: COMPLIT 371

**CHINLIT 379. For Love of Country: National Narratives in Chinese Literature and Film. 3-5 Units.**

Explores the nation as it is constructed, deconstructed, and continuously contested in novels, short stories, films, and other media from the second half of the 20th century in mainland China and Taiwan. Asks how the trope of the nation and the ideology of nationalism mediate the relationships between politics and aesthetics. Explores the nation's internal fault lines of gender, ethnicity, geography, language, and citizenship.

Same as: CHINLIT 279

**CHINLIT 391. Seminar in Chinese Syntax. 4 Units.**

May be repeated for credit.

**CHINLIT 392B. Law and Society in Late Imperial China. 4-5 Units.**

(Same as LAW 773.) Connections between legal and social history. Ideology and practice, center and periphery, and state-society tensions and interactions. Readings introduce the work of major historians on concepts and problems in Ming-Qing history.

Same as: HISTORY 392B

**CHINLIT 399. Dissertation Research. 1-12 Unit.****Civil & Environmental Engineering Courses****CEE 1. Introduction to Environmental Systems Engineering. 1 Unit.**

Field trips visiting environmental systems installations in Northern California, including coastal, freshwater, and urban infrastructure. Requirements: Several campus meetings, and field trips. Enrollment limited; priority given to undergraduates who have declared Environmental Systems Engineering major. Contact hildemann@stanford.edu to request enrollment/permission code.

**CEE 1A. Graphics Course. 2 Units.**

This course, intended for students taking a design studio, will focus on presentation theories, skills and design approaches. Through readings and exercises, and ultimately the student's own work, students will develop skill and complexity in their graphic and verbal presentations.

**CEE 10A. Introduction to Architecture. 2 Units.**

This class introduces students to the discipline of architecture and to the fundamental question: What is an architect and how is architecture distinct from other arts and sciences? To answer this question, the class will focus on concepts important to the practice of architecture including: project conception, drawing, modeling, materials, structure, form, and professionalism. These terms will be investigated through short talks, site visits, historical precedent, in-class exercises, panel discussions and two on-campus case studies. No prior knowledge of architecture is required.

**CEE 10B. Presentation Skills. 0 Units.**

TBD.

**CEE 29N. Managing Natural Disaster Risk. 3 Units.**

Natural disasters arise from the interaction of natural processes, such as earthquakes or floods, with human development that suffers safety-related and economic losses. We cannot predict exactly when those disasters will occur, or prevent them entirely, but we have a number of engineering and policy options that can reduce the impacts of such events.

**CEE 31. Accessing Architecture Through Drawing. 5 Units.**

Preference to Architectural Design and CEE majors; others by consent of instructor. Drawing architecture to probe the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment.

**CEE 31Q. Accessing Architecture Through Drawing. 5 Units.**

Preference to sophomores. Drawing architecture provides a deeper understanding of the intricacies and subtleties that characterize contemporary buildings. How to dissect buildings and appreciate the formal elements of a building, including scale, shape, proportion, colors and materials, and the problem solving reflected in the design. Students construct conventional architectural drawings, such as plans, elevations, and perspectives. Limited enrollment.

**CEE 32A. Psychology of Architecture. 3 Units.**

This course argues that architecture often neglects the interdisciplinary investigation of our internal psychological experience and the way it impacts our creation of space. How does our inner life influence external design? How are we impacted emotionally, physically, psychologically by the spaces we inhabit day to day? How might we intentionally imbue personal and public spaces with specific emotions? This seminar serves as a call to action for students interested in approaching architecture with a holistic understanding of the emotional impact of space. Sample topics addressed will include: conscious vs. unconscious design; the ego of architecture; psycho-spatial perspectives; ideas of home; integral/holistic architecture; phenomenology of inner and outer spaces; exploring archetypal architecture; and translating emotion through environment.

**CEE 32B. Design Theory. 4 Units.**

This seminar focuses on the key themes, histories, and methods of architectural theory – a form of architectural practice that establishes the aims and philosophies of architecture. Architectural theory is primarily written, but it also incorporates drawing, photography, film, and other media. One of the distinctive features of modern and contemporary architecture is its pronounced use of theory to articulate its aims. One might argue that modern architecture is modern because of its incorporation of theory. This course focuses on those early-modern, modern, and late-modern writings that have been and remain entangled with contemporary architectural thought and design practice. Rather than examine the development of modern architectural theory chronologically, it is explored architectural through thematic topics. These themes enable the student to understand how certain architectural theoretical concepts endure, are transformed, and can be furthered through his/her own explorations.

**CEE 32D. Construction: The Writing of Architecture. 4 Units.**

This seminar focuses on the construction of architectural writing. The class will analyze this idea through four topics: formal analysis, manifesto, translation, and preservation. The seminar is divided into two-week modules with each of these four concepts functioning as organizing principles. The first week of each module will involve familiarizing the seminar with both the terms and rhetorical tactics of the given theme by reading and analyzing specific texts and completing a short written analysis (1-2 pages). The second week will expand upon this foundation and involve further analysis in addition to each student writing a short paper (3-4 pages) drawing on the examples discussed and their own experiences in the discipline. The goal of the seminar is for each student to be able to analyze how an architectural writing is constructed and to develop his/her skills in the construction of his/her own writing.

**CEE 32F. Light, Color, and Space. 3 Units.**

This course explores color and light as a medium for spatial perception. Through the introduction of color theory, color mixing, and light analyses, students will learn to see and use light and color fields as a way to shape experience. We will examine the work of a range of architects and artist who use light and color to expand the field of perception (i.e. Rothko, Turrell, Eliasson, Holl, Aalto).

**CEE 32G. Architecture Since 1900. 4 Units.**

Art 142 is an introduction to the history of architecture since 1900 and how it has shaped and been shaped by its cultural contexts. The class also investigates the essential relationship between built form and theory during this period.

Same as: ARTHIST 142

**CEE 32H. Responsive Structures. 2 Units.**

This Design Build seminar investigates the use of metal as a structural, spatial and experiential medium. We will examine the physical properties of a manufactured metal such as wire or mesh, and develop a structural system and design which respond to site and programmatic conditions. The process includes model building, prototyping, development of joinery, and culminates in the full scale installation of the developed design on campus. This course may be repeat for credit. Total Completions Allowed: 3.

Same as: CEE 132H

**CEE 32Q. Place: Making Space Now. 3 Units.**

This seminar argues that architects are ultimately "placemakers," and questions what that means in the contemporary world. Part I investigates the meaning of the word "place." Additional background for understanding contemporary place making will include a critique of the history of modern place-making through an examination of modern form. Part II examines two traditional notions of place by scale: from "home" to "the city." What elements give these conceptions of space a sense of place? To answer this question, themes such as memory, mapping, and boundary, among others, will be investigated. Part III presents challenges to the traditional notions of place discussed in Part II. Topics addressed include: What does it mean to be "out of place"? What sense of place does a nomad have, and how is this represented? What are the "non-places" and how can architects design for these spaces? Part IV addresses the need to re-conceptualize contemporary space. The role of digital and cyber technologies, the construction of locality in a global world, and the in-between places that result from a world in flux are topics discussed in this section of the seminar. Learning goals: Specific goals include close reading of texts, understanding of philosophical thinking and writing, argument under uncertainty, and developed concepts of place, space and architecture.

**CEE 32R. American Architecture. 4 Units.**

A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today's globalized world.

Same as: AMSTUD 143A, ARTHIST 143A, ARTHIST 343A

**CEE 32S. The Situated Workplace and Public Life. 4 Units.**

The modern workplace has undergone fundamental change and continues to evolve. The context of work in many industries is today being shaped substantially by changing workforce demographics, the pervasiveness of mobile and embedded information technologies, hyper-connected work models on a global scale, evolving notions of health and well being, etc. Our public realm is changing too. People are moving to cities in greater numbers than ever before posing both challenges and opportunities related to new levels of density, sustainable resource management, resilient infrastructures, as well as new forms of civic engagement at neighborhood levels, to name but a few. These changes at an urban scale impact how and where public life happens and how it interacts with new modalities at work. This course will combine research, conceptual explorations, studio design work, seminars and guest lectures to explore the impact of the changing workplace on the morphology of the city by examining these bi-coastal seats of innovation. As the creative workplace continues to evolve, how will it engage the public realm within both well-established urban frameworks such as San Francisco and Boston, and emerging suburban contexts, such as Silicon Valley? The course will join graduate students from the Northeastern University School of Architecture with students from the Stanford University Architectural Design program. Students will reside primarily at their prospective universities and will travel selectively for site research, team charrettes and project reviews. Project sites on both coasts will be utilized for research and studio work. This is an opportunity for students from two top universities, both situated in the epicenters of workplace change, to explore and conduct valuable research on an issue that is changing their urban environments.

**CEE 32T. Making and Remaking the Architect: Edward Durell Stone and Stanford. 4 Units.**

How does an architect establish a career? How is an architect remembered? What makes a building significant and how should it be preserved, if at all? Fundamental questions about the practice and production of architecture will be examined in this seminar that focuses on the work of Edward Durell Stone (1902-78) and specifically on his work at Stanford and in Palo Alto. By 1955, Stone was so well established that he founded an office in Palo Alto to design the Stanford Medical Center (currently slated for destruction) and several other significant local public buildings, such as the Palo Alto Civic Center. Through site visits to his buildings, research in the Stanford archives, and interviews with architects who worked in his office (among other strategies), students will question how architecture produced in the immediate post-WWII period is thought about historically and how and when it should be preserved.

**CEE 32U. Web of Apprenticeship. 4 Units.**

This course will study at the development of Modernism in pre and post WWII California. The class will investigate responses to climatic, technological, and cultural changes that were specific to the state but have now become an idealized trend. We will look at architects and landscape architects who apprenticed with significant design leaders and track how their involvement and explore resulted in changes in building technologies, and influenced the next generation of design thinking and experimentation. The investigations will occur through research, drawings and models, as well as site visits.

**CEE 32V. Architectural Design Lecture Series Course. 1 Unit.**

Seminar will be a companion to the Spring Architecture and Landscape Architecture Lecture Series. Students will converse with lecturers before the lectures, attend the lecture, and prepare short documents (written, graphic, exploratory) for two of the lectures. The course meeting dates will correspond with the lecture dates listed below.  
 April 6: Nic Rader of Snohetta (<http://snohetta.com>)  
 April 20: Mark Jensen (<http://jensen-architects.com>)  
 May 4: Kevin Conger of CMG Landscape Architecture (<http://www.cmgsite.com>)  
 May 18: Odile Decq (<http://www.odiledecq.com>)  
 June 2: Gregg Pasquarelli of SHoP Architects. (<http://www.shoparc.com>)  
 Gregg will be the Fourth Annual AD Program Graduation Speaker.

**CEE 48N. Managing Complex, Global Projects. 3 Units.**

This freshman seminar highlights the challenges the challenges associated with planning and executing complex and challenging global projects in private, governmental and nonprofit/NGO settings. Covers organization and project management theory, methods, and tools to optimize the design of work processes and organizations to enhance complex, global project outcomes. Student teams model and analyze the work process and organization of a real-world project team engaged in a challenging local or global project.

**CEE 50N. Multi-Disciplinary Perspectives on a Large Urban Estuary: San Francisco Bay. 3 Units.**

This course will be focused around San Francisco Bay, the largest estuary on the Pacific coasts of both North and South America as a model ecosystem for understanding the critical importance and complexity of estuaries. Despite its uniquely urban and industrial character, the Bay is of immense ecological value and encompasses over 90% of California's remaining coastal wetlands. Students will be exposed to the basics of estuarine biogeochemistry, microbiology, ecology, hydrodynamics, pollution, and ecosystem management/restoration issues through lectures, interactive discussions, and field trips. Knowledge of introductory biology and chemistry is recommended. Same as: EARTHSYS 49N, ESS 49N

**CEE 63. Weather and Storms. 3 Units.**

Daily and severe weather and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, wind energy, global circulation, jet streams, high and low pressure systems, inversions, el Niño, la Niña, atmosphere/ocean interactions, fronts, cyclones, thunderstorms, lightning, tornadoes, hurricanes, pollutant transport, global climate and atmospheric optics. Same as: CEE 263C

**CEE 64. Air Pollution and Global Warming: History, Science, and Solutions. 3 Units.**

Survey of Survey of air pollution and global warming and their renewable energy solutions. Topics: evolution of the Earth's atmosphere, history of discovery of chemicals in the air, bases and particles in urban smog, visibility, indoor air pollution, acid rain, stratospheric and Antarctic ozone loss, the historic climate record, causes and effects of global warming, impacts of energy systems on pollution and climate, renewable energy solutions to air pollution and global warming. UG Reqs: GER: DBNatSci. Same as: CEE 263D

**CEE 70. Environmental Science and Technology. 3 Units.**

Introduction to environmental quality and the technical background necessary for understanding environmental issues, controlling environmental degradation, and preserving air and water quality. Material balance concepts for tracking substances in the environmental and engineering systems. Same as: ENGR 90

**CEE 70N. Water, Public Health, and Engineering. 3 Units.**

Preference to frosh. Linkages between water, wastewater and public health, with an emphasis on engineering interventions. Topics include the history of water and wastewater infrastructure development in the U.S. and Europe; evolution of epidemiological approaches for water-related health challenges; biological and chemical contaminants in water and wastewater and their management; and current trends and challenges in access to water and sanitation around the world. Identifying ways in which freshwater contributes to human health; exposure routes for water- and sanitation-illness. Classifying illnesses by pathogen type and their geographic distribution. Identifying the health and economic consequences of water- and sanitation-related illnesses; costs and benefits of curative and preventative interventions. Interpreting data related to epidemiological and environmental concepts. No previous experience in engineering is required.

**CEE 73. Foundations of Water Science and Engineering. 3 Units.**

No water, no life. Water shapes the earth. Its utilization, management, and control are critical concerns of all human societies. This class introduces basic scientific and engineering concepts and applies them to aquatic systems. We explore how water properties and processes act to sustain the planet and how human actions modify (for both good and ill) our water world.

**CEE 100. Managing Sustainable Building Projects. 4 Units.**

Managing the life cycle of buildings from the owner, designer, and contractor perspectives emphasizing sustainability goals; methods to define, communicate, coordinate, and manage multidisciplinary project objectives including scope, quality, life cycle cost and value, schedule, safety, energy, and social concerns; roles, responsibilities, and risks for project participants; virtual design and construction methods for product, organization, and process modeling; lifecycle assessment methods; individual writing assignment related to a real world project.

**CEE 101A. Mechanics of Materials. 4 Units.**

Introduction to beam and column theory. Normal stress and strain in beams under various loading conditions; shear stress and shear flow; deflections of determinate and indeterminate beams; analysis of column buckling; structural loads in design; strength and serviceability criteria. Lab experiments. Prerequisites: ENGR 14.

**CEE 101B. Mechanics of Fluids. 4 Units.**

Physical properties of fluids and their effect on flow behavior; equations of motion for incompressible ideal flow, including the special case of hydrostatics; continuity, energy, and momentum principles; control volume analysis; laminar and turbulent flows; internal and external flows in specific engineering applications including pipes, open channels, estuaries, and wind turbines. Prerequisites: E14, PHYSICS 41 (formerly 53), MATH 51.

**CEE 101C. Geotechnical Engineering. 3-4 Units.**

Introduction to the principles of soil mechanics. Soil classification, shear strength and stress-strain behavior of soils, consolidation theory, analysis and design of earth retaining structures, introduction to shallow and deep foundation design, slope stability. Lab projects. Prerequisite: ENGR 14. Recommended: 101A.

**CEE 101D. Computations in Civil and Environmental Engineering. 3 Units.**

Computational and visualization methods in the design and analysis of civil and environmental engineering systems. Focus is on applications of MATLAB. How to develop a more lucid and better organized programming style.

Same as: CEE 201D

**CEE 101N. Mechanics of Fluids. 4 Units.**

Combination of CEE 101B and CEE 160 as a new four unit course. CEE 101B and CEE 160 will be taught separately, for the last time, during Spring in the 2015-16 academic year. Thereafter, CEE's undergraduate Mechanics of Fluids class will be taught in its new combined format only, in Autumn quarter. Students seeking to take this class without the laboratory should enroll in 3 units of CEE 101X. Prerequisites: E14, Physics 14, Math 51.

Same as: with lab

**CEE 101S. Science & Engineering Problem-Solving with MatLab.. 3 Units.**

Introduction to the application of MATLAB to an array of engineering systems. Emphasis on computational and visualization methods in the design, modeling and analysis of engineering problems.

Same as: CEE 201S

**CEE 101X. Mechanics of Fluids. 3 Units.**

Combination of CEE 101B and CEE 160 as a new four unit course. CEE 101B and CEE 160 will be taught separately, for the last time, during Spring in the 2015-16 academic year. Thereafter, CEE's undergraduate Mechanics of Fluids class will be taught in its new combined format only, in Autumn quarter. Students seeking to take this class with the laboratory should enroll in 4 units of CEE 101N. Prerequisites: E14, Physics 14, Math 51.

Same as: No Lab

**CEE 102. Legal Principles in Design, Construction, and Project Delivery. 3 Units.**

Introduction to the key legal principles affecting design, construction and the delivery of infrastructure projects. The course begins with an introduction to the structure of law, including principles of contract, negligence, professional responsibility, intellectual property, land use and environmental law, then draws on these concepts to examine current and developing means of project delivery.

**CEE 107A. Understanding Energy. 3 Units.**

Energy is one of the world's main drivers of opportunity and development for human beings. At the same time, our energy system has significant consequences for our society, political system, economy, and environment. For example, energy production and use is the #1 source of greenhouse gas emissions. This course surveys key aspects of each energy resource, including significance and potential conversion processes and technologies, drivers and barriers, policy and regulatory environment, and social, economic, and environmental impacts. Both depletable and renewable energy resources are covered, including oil, natural gas, coal, nuclear, biomass, hydroelectric, wind, solar, photovoltaics, geothermal, and ocean energy, with cross-cutting topics including electricity, storage, climate change, sustainability, green buildings, energy efficiency, transportation, and the developing world. Understanding Energy is part of a trio of inter-related courses aimed at gaining an in-depth understanding of each energy resource - from fossil fuels to renewable energy. The other two classes are CEE107W/207W Understanding Energy - Workshop, and CEE 107F/207F Understanding Energy -- Field Trips. Note that this course was formerly called Energy Resources (CEE 173A/207A & Earthsys 103). Prerequisites: Algebra. May not be taken for credit by students who have completed CEE 107S. Same as: CEE 207A, EARTHSYS 103

**CEE 107F. Understanding Energy -- Field Trips. 1 Unit.**

Understanding Energy -- Field Trips takes students on trips to some of the most significant energy resource sites in North America located within a few hours of Stanford University. Students visit at least two of the many field trips offered, including to Diablo Canyon nuclear power plant, an Altmont Pass wind farm, a geothermal facility at The Geysers, a solar photovoltaic (PV) farm, Shasta Dam and hydroelectric power plant, a major oil field, and a natural gas-fired power plant, an energy efficiency technology lab, among others. Students meet on a weekly basis to debrief previous field trips and prepare for future ones. Open to all majors and backgrounds. Understanding Energy Field Trips is part of a trio of inter-related courses aimed at gaining an in-depth understanding of each energy resource -- from fossil fuels to renewable energy. The other two classes are CEE 107A/207A Understanding Energy, and CEE 107W/207W Understanding Energy - Workshop. Priority is given to students who have taken or are concurrently enrolled in CEE 173A, CEE 107A, CEE 207A, Earthsys 103, or CEE 107S/207S.

Same as: CEE 207F, EARTHSYS 103F

**CEE 107S. Energy Resources: Fuels and Tools. 3 Units.**

Energy is a vital part of our daily lives. This course examines where that energy comes from, and the advantages and disadvantages across different fuels. Contextual analysis of energy decisions for transportation and electricity generation around the world. Energy resources covered include oil, biomass, natural gas, nuclear, hydropower, wind, solar, geothermal, and emerging technologies. Prerequisites: Algebra. Note: may not be taken by students who have completed CEE 173A, CEE 207 or EARTHSYS 103.

Same as: CEE 207S

**CEE 107W. Understanding Energy -- Workshop. 1 Unit.**

Interactive workshop that goes in depth into energy topics touched on by CEE 107A/207A & Earthsys 103 - Understanding Energy. Topics covered include energy and sustainability, energy information analysis, energy and climate change policy, electricity storage, energy and energy quality, energy-water nexus, energy and land use, energy and air quality, and transportation policy. Students are graded on attendance, participation, and a short final paper. Sessions will involve discussions, group activities, and fun debates. Open to all majors and backgrounds. This workshop is part of a trio of inter-related courses aimed at gaining an in-depth understanding of each energy resource -- from fossil fuels to renewable energy. The other two classes are CEE 107A/207A Understanding Energy, and CEE 107F/207F Understanding Energy Field Trips. Prerequisites: Must have taken or take concurrently CEE 173A, CEE 107A, CEE 207A, Earthsys 103, or CEE 107S/207S.

Same as: CEE 207W, EARTHSYS 103W

**CEE 109. Creating a Green Student Workforce to Help Implement Stanford's Sustainability Vision. 2 Units.**

Examination of program-based local actions that promote resource conservation and an educational environment for sustainability. Examination of building-level actions that contribute to conservation, lower utility costs, and generate understanding of sustainability consistent with Stanford's commitment to sustainability as a core value. Overview of operational sustainability including energy, water, buildings, waste, and food systems. Practical training to enable students to become sustainability coordinators for their dorms or academic units. Same as: EARTHSYS 109, ENVRINST 109

**CEE 112A. Industry Applications of Virtual Design & Construction. 2-4 Units.**

Building upon the concept of VDC Scorecard, CEE 112A/212A investigates in the management of Virtual Design and Construction (VDC) programs and projects in the building industry. Interacting with experts and professionals in real estate, architecture, engineering, construction and technology providers, students will learn from the industry applications of Building Information Modeling and its relationship with Integrated Project Delivery, Sustainable Design and Construction. Students will conduct case studies to evaluate the maturity of VDC planning, adoption, technology and performance in practice. Students taking 3 or 4 units will be paired up with independent research or case study projects on the industry applications of VDC. No prerequisite. See CEE112B/212B in the Winter Quarter and CEE 112C/212C in the Spring Quarter.

**CEE 112B. Industry Applications of Virtual Design & Construction. 2-4 Units.**

CEE 112B/212B is a practicum on the Industry Applications on Virtual Design and Construction (VDC). Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC and Building Information Modeling (BIM). Students can choose between one of the two project topics: [1] Industrialized Construction with Virtual Parts (No Prerequisite) or [2] Industry Benchmarking & Applications of the VDC Management Scorecard (Suggested Prerequisite: CEE 112A/212A). Same as: CEE 212B

**CEE 112C. Industry Applications of Virtual Design & Construction. 2-4 Units.**

Following the Autumn- and Winter-quarter course series, CEE 112C/212C is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC projects with public owners and private developers, such as GSA Public Buildings Service, the Hong Kong Mass Transit Railway, Optima, Walt Disney Imagineering, Microsoft facilities and/or other CIFE International members. Independently, students will conduct case studies and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE 112A/212A, CEE 112B/212B, CEE 159C/259C, CEE 159D/259D, or Instructor's Approval. Same as: CEE 212C

**CEE 112D. Industry Applications of Virtual Design and Construction. 2-4 Units.**

A continuation of the CEE 112/212 series, CEE 112D/212D is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC research or application opportunities with public owners and private developers, professional associations, and/or other member organizations of the Center for Integrated Facility Engineering at Stanford. Independently, students will conduct case studies, research activities, and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE110/210, CEE 112C/212C, CEE 122B/222B, or Instructor's Approval. Same as: CEE 212D

**CEE 113. Patterns of Sustainability. 1-4 Unit.**

This seminar examines the interrelated sustainability of the natural, built and social environments of places in which we live. Several BOSP centers and the home Stanford campus will hold this 1-2 unit seminar simultaneously and collaborate with a shared curriculum, assignments, web conference and a Wiki. The goal of the collaborative arrangement is to expose, share, compare and contrast views of sustainability in different parts of the world. We will look at and assess aspects of sustainability of the places we are living from a theoretical perspective from the literature, from observations and interviews in the countries in which we study.

Same as: CEE 213

**CEE 120A. Building Information Modeling Workshop. 2-4 Units.**

The foundational Building Information Modeling course introduces techniques for creating, managing, and applying of building information models in the building design and construction process. The course covers processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components and geometries to produce models used in architectural design, construction planning and documentation, rendering and visualization, simulation and analysis.

Same as: CEE 220A

**CEE 120B. Building Information Modeling Workshop. 2-4 Units.**

This course builds upon the Building Information Model concepts introduced in 120A/220A and illustrates how BIM modeling tools are used to design, analyze, and model building systems including structural, mechanical, electrical, plumbing and fire protection. Course covers the physical principles, design criteria, and design strategies for each system and explores processes and tools for modeling those systems and analyzing their performance. Topics include: building envelopes, access systems, structural systems modeling and analysis, mechanical / HVAC systems, plumbing and fire protection systems, electrical systems, and systems integration/coordination.

Same as: CEE 220B

**CEE 120C. Parametric Design and Optimization. 2-4 Units.**

This course explores tools and techniques for computational design and parametric modeling as a foundation for design optimization. Class sessions will introduce several parametric design modeling platforms and scripting environments that enable rapid generation of 3D models and enable rapid evaluation of parametrically-driven design alternatives. Topics to be featured include: Principles of parametric design vs. direct modeling; Design exploration using parametric modeling platforms (Revit/FormIt, Rhino); Visual scripting languages and environments (Dynamo, Grasshopper, DesignScript); Single- and multi-dimensional optimization techniques and guidance strategies.

Same as: CEE 220C

**CEE 120S. Building Information Modeling Special Study. 2-4 Units.**

Special studies of Building Information Modeling strategies and techniques focused on creating, managing, and applying models in the building design and construction process. Processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components to produce models used in design, construction planning, visualization, and analysis.

Same as: CEE 220S

**CEE 122A. Computer Integrated Architecture/Engineering/Construction. 2 Units.**

Undergraduates serve as apprentices to graduate students in the AEC global project teams in CEE 222A. Apprentices participate in all activities of the AEC team, including the goals, objectives, constraints, tasks, and process of a crossdisciplinary global AEC teamwork in the concept development phase of a comprehensive building project. Prerequisite: consent of instructor.

Same as: A/E/C

**CEE 122B. Computer Integrated A/E/C. 2 Units.**

Undergraduates serve as apprentices to graduate students in the AEC global project teams in CEE 222B. Project activity focuses on modeling, simulation, life-cycle cost, and cost benefit analysis in the project development phase. Prerequisite: CEE 122A.

**CEE 124. Sustainable Development Studio. 1-5 Unit.**

(Graduate students register for 224A.) Project-based. Sustainable design, development, use and evolution of buildings; connections of building systems to broader resource systems. Areas include architecture, structure, materials, energy, water, air, landscape, and food. Projects use a cradle-to-cradle approach focusing on technical and biological nutrient cycles and information and knowledge generation and organization. May be repeated for credit.

**CEE 125. Defining Smart Cities: Visions of Urbanism for the 21st Century. 1 Unit.**

In a rapidly urbanizing world, "the city" paves the way toward sustainability and social well-being. But what does it mean for a city to be smart? Does that also make it sustainable or resilient or livable? This seminar delves into current debates about urbanism through weekly talks by experts on topics such as big data, human-centered design, new urbanism, and natural capital. How urban spaces are shaped, for better or worse, by the complex interaction of cutting-edge technology, human societies, and the natural environment. The goal is to provoke vigorous discussion and to foster an understanding of cities that is at once technological, humanistic, and ecologically sound.

Same as: CEE 225, URBANST 174

**CEE 126. International Urbanization Seminar: Cross-Cultural Collaboration for Sustainable Urban Development. 4-5 Units.**

Comparative approach to sustainable cities, with focus on international practices and applicability to China. Tradeoffs regarding land use, infrastructure, energy and water, and the need to balance economic vitality, environmental quality, cultural heritage, and social equity. Student teams collaborate with Chinese faculty and students partners to support urban sustainability projects. Limited enrollment via application; see [internationalurbanization.org](http://internationalurbanization.org) for details. Prerequisites: consent of the instructor(s).

Same as: EARTHSYS 138, IPS 274, URBANST 145

**CEE 129S. Climate Change Adaptation in the Coastal Built Environment. 1 Unit.**

How will climate change impact coastal ports and harbors around the world? Leading experts discuss the latest science, policy, and engineering research on this important issue, including the necessary response to protect ports and harbors from significant sea-level rise and storm surge. Focus is on the built environment. Guest speakers. CEE 229/129 for research option. See [www.groupspaces.com/seaports2100](http://www.groupspaces.com/seaports2100).

Same as: CEE 229S

**CEE 130. Architectural Design: 3-D Modeling, Methodology, and Process. 4 Units.**

Preference to Architectural Design majors; others by consent of instructor. Projects investigate conceptual approaches to the design of key architectural elements, such as wall and roof. Functional and structural considerations. Focus is on constructing 3-D models in a range of materials; 3-D computer modeling. Students keep a graphic account of the evolution of their design process. Final project entails design of a simple structure. Limited enrollment. Pre- or corequisite: CEE 31 or 31Q.

**CEE 131A. Professional Practice: Mixed-Use Design in an Urban Setting. 4 Units.**

The delivery of a successful building design program involves unique collaboration between architect and client. This course will endeavor to teach the skills necessary for a designer to identify, evaluate, conceptualize and fully document a complex mixed-use urban design. Students will complete the course with a detailed knowledge of the consultants, engineers and other professionals needed for a complete program. Course deliverables will include three short assignments and a final project consisting of basic schematic drawings for the selected project. Guest presenters will cover topics of interest. Lectures, discussions, in-class studio-work and an oral presentation. Prerequisite: CEE 130.

**CEE 131B. Financial Management of Sustainable Urban Systems. 3 Units.**

Focus is on financial management of sustainable urban systems. The course will study different kinds of financial services available, the management of financial resources, and relationships to financial service providers. The course will also study how financial services and relationships to financial service providers can be used to accomplish construction management, energy, and architecture work in sustainable urban systems. The learning outcome is an understanding of how financial services can be used in development of sustainable urban systems. The course work is structured so that there are three modules: 1) general knowledge of financial management, 2) in-depth application in construction management, energy, or architecture, and 3) comparison of similarities and differences in-between the in-depth applications. Students will focus on one of the in-depth applications in a group work, and present the result of this application to students that make other applications. A key learning aspect is the understanding of how finance is used in construction management, energy, and architecture work. Students should be able to show the value, financial viability, and risk management of sustainable urban system development in construction management, energy, and architecture. Students should be able to finance construction management, energy, and architecture work. Readings include applications of finance and management to construction management, energy, or architecture. Guest speakers include developers, financial managers at construction firms, managers at energy firms, construction managers.

**CEE 131C. How Buildings are Made -- Materiality and Construction Methods. 4 Units.**

This course will provide an introduction to the materials and methods used in building construction. A combination of in-class lectures, reading assignments, and building site visits will provide students with an awareness of construction materials and their use within building systems. All relevant building types and construction materials will be explored, including wood, steel, concrete and masonry. Building foundations and basic structural systems will be explained. Building envelope elements will be considered, with an analysis of various glass and glazing materials, cladding types, and roofing systems. Interior Floor, wall and ceiling finishes will be discussed. New and emerging building trends will also be examined, such as prefabricated and modular construction. Guest presenters, drawn from Bay Area consulting firms, will cover several topics of interest. Students will have an opportunity to experience real world material applications at local construction sites, and gain a thorough understanding of the construction process.

**CEE 132H. Responsive Structures. 2 Units.**

This Design Build seminar investigates the use of metal as a structural, spatial and experiential medium. We will examine the physical properties of a manufactured metal such as wire or mesh, and develop a structural system and design which respond to site and programmatic conditions. The process includes model building, prototyping, development of joinery, and culminates in the full scale installation of the developed design on campus. This course may be repeat for credit. Total Completions Allowed: 3.

Same as: CEE 32H

**CEE 132Q. Office of Metropolitan Architecture: Workshop of the New. 4-5 Units.**

This seminar investigates all aspects of the work of the Office of Metropolitan Architecture (OMA) and its leader Rem Koolhaas. Topics for class research and inquiry include but are not be limited to: Koolhaas's early work at the Architectural Association and the founding of OMA, the publications of OMA and their style of presentation and theoretical foundations, the importance of AMO, and the architects who have left OMA and founded their own practices and how these differ from OMA. Each student completes an in-depth research paper and an in-class presentation.

Same as: ARTHIST 262

**CEE 133F. Principles of Freehand Drawing. 3 Units.**

Traditional methods of depicting shape, form, and surface are applied to the discipline of architectural drawing. Students develop abilities to observe visual phenomenon analytically and translate subjects onto a two-dimensional surface in a variety of media. Drawing techniques such as modeling form, shading, rendering materials, and articulating landscaping are explored. Linear perspective exercises provide a foundation for the construction of drawings to illustrate cohesive design proposals. Step-by-step constructions, quick freehand sketches from slides, and on-location studies.

**CEE 133G. Architectural History & Drawing in Eastern Europe. 2 Units.**

Students in this seminar will travel to Prague, Czech Republic and Krakow, Poland for a week of historical morning walks and discussions about architectural and urbanism in each city. Afternoon sketching sessions will focus attention on some of the locations visited earlier that day. Buildings, sites and monuments from the Middle Ages to the present will be assessed, questioned, and drawn. Short reading assignments and/or films provide a background for each day's examination of a section of these two cities. Possible day trips may include site visits to Auschwitz and the Wieliczka Salt Mine. Casual late afternoon excursions will complement themes of the course. Upon returning to Stanford, the seminar will meet four times to discuss observations and organize a small exhibition of the sketches made during the trip.

**CEE 134B. Intermediate Arch Studio. 5 Units.**

This studio offers students experience in working with a real site and a real client program to develop a community facility. Students will develop site analysis, review a program for development and ultimately design their own solutions that meet client and community goals. Sustainability, historic preservation, community needs and materials will all play a part in the development of students final project. Students will also gain an understanding of graphic conventions, verbal and presentation techniques. Course may be repeated for credit.

Same as: CEE 234B

**CEE 137B. Advanced Architecture Studio. 6 Units.**

This course will focus on the topic of interdisciplinary collaboration and its role in the development of design concepts. Specifically, the integration of structural with architectural considerations to produce a unified urban, spatial, tectonic and structural proposition will be our field of investigation. This course is an architecture studio course where class time will be spent primarily in individual or group desk critiques and pin-up sessions. May be repeat for credit. Total completions allowed: 3. Additionally, there will be lectures, case study presentations and a field trip. Prerequisites: required: CEE 31 (or 31Q) Drawing, CEE 110 BIM and CEE 130 Design.

Same as: CEE 237B

**CEE 139. Design Portfolio Methods. 4 Units.**

Students present designs completed in other studio courses to communicate design intentions and other aspects of their work. Instruction in photography; preparation of a design portfolio; and short essays that characterize portfolio contents. Oral presentation workshops offered through the Center for Teaching and Learning. Limited enrollment. Prerequisites: two Art or Architecture studio courses, or consent of instructor.

Same as: CEE 239

**CEE 141A. Infrastructure Project Development. 3 Units.**

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of the condition of the nation's infrastructure and how projects are planned and financed. Focus is on public works in the U.S. The role of public and private sectors through a step-by-step study of the project development process. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare project environmental impact statements.

Same as: CEE 241A

**CEE 141B. Infrastructure Project Delivery. 3 Units.**

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of how projects are designed, constructed, operated, and maintained. Focus is on public works projects in the U.S. Alternative project delivery approaches and organizational strategies. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare finance/design/build/operate/maintain project proposals.

Same as: CEE 241B

**CEE 141C. Global Infrastructure Projects Seminar. 1-2 Unit.**

Real infrastructure projects presented by industry guest speakers. Energy, transportation, water, public facilities and communications projects are featured. Course provides comparisons of project development and delivery approaches for mega-projects around the world. Alternative project delivery methods, the role of public and private sector, different project management strategies, and lessons learned. Field trips to local projects.

Same as: CEE 241C

**CEE 144. Design and Innovation for the Circular Economy. 3 Units.**

The last 150 years of our industrial evolution have been material and energy intensive. The linear model of production and consumption manufactures goods from raw materials, wells and uses them, and then discards the products as waste. Circular economy provides a framework for systems-level redesign. It builds on schools of thought including regenerative design, performance economy industrial ecology, blue economy, biomimicry, and cradle to cradle. This course introduces the concepts of the circular economy and applies them to case studies of consumer products, household goods, and fixed assets. Students will conduct independent projects on circular economy. Students may work alone or in small teams under the guidance of the teaching team and various collaborators worldwide. Class is limited to 14 students. All disciplines are welcome. This class fulfills the Writing & Rhetoric 2 requirement. Prerequisite: PWR 1.

**CEE 146A. Engineering Economy. 3 Units.**

Fundamentals of financial and economic analysis. Engineering Economy Principles. Interest rates, Present value, annual cash flow, internal rate of return, benefit-cost analysis. Economic Life, Life Cycle Costs. Replacement analysis. Project Selection - Mutually Exclusive Alternatives, Multiple Objective Criteria. Depreciation. Inflation and Taxes. Sensitivity and risk analysis. Uncertainty and Probability. Decision Trees. Capital Budgeting. For CEE 146A: enrollment is limited to juniors and seniors. Attendance to the first class is mandatory (for both CEE 146A and CEE 246A). Instructor consent is required. Students must please kindly email the instructor a short paragraph indicating if they are an undergrad or grad student, their current year (Fresh/Soph/Junior or Senior), their Department and Program, and their reason for taking the class. Same as: CEE 246A

**CEE 151. Negotiation. 3 Units.**

Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; see Coursework. Same as: CEE 251, EARTH 251

**CEE 155. Introduction to Sensing Networks for CEE. 3-4 Units.**

Introduce the design and implementation of sensor networks for monitoring the built and natural environment. Emphasis on the integration of modern sensor and communication technologies, signal processing and statistical models for network data analysis and interpretation to create practical deployments to enable sustainable systems, in areas such as energy, weather, transportation and buildings. Students will be involved in a practical project that may involve deploying a small sensor system, data models and analysis and signal processing. Limited enrollment. Same as: CEE 255

**CEE 156. Building Systems. 4 Units.**

HVAC, lighting, and envelope systems for commercial and institutional buildings, with a focus on energy efficient design. Knowledge and skills required in the development of low-energy buildings that provide high quality environment for occupants. Same as: CEE 256

**CEE 160. Mechanics of Fluids Laboratory. 2 Units.**

Lab experiments illustrate conservation principles and flows of real fluids, analysis of error and modeling of simple fluid systems. Corequisite: 101B.

**CEE 161A. Rivers, Streams, and Canals. 3-4 Units.**

Introduction to the movement of water through natural and engineered channels, streams, and rivers. Basic equations and theory (mass, momentum, and energy equations) for steady and unsteady descriptions of the flow. Application of theory to the design of flood-control and canal systems. Flow controls such as weirs and sluice gates; gradually varied flow; Saint-Venant equations and flood waves; and method of characteristics. Open channel flow laboratory experiments: controls such as weirs and gates, gradually varied flow, and waves. Limited enrollment in lab section. Prerequisite: CEE 101B. Same as: CEE 264A

**CEE 163E. International Climate Negotiations: Unpacking the Road to Paris. 3 Units.**

Interested in what's going on with international climate negotiations, why it has proven so difficult to reach a meaningful agreement? Wondering whether or not another UN agreement is even a meaningful part of climate policy in 2015? This course traces the history of climate negotiations from the very first awareness of the problem of climate change, through the Kyoto Protocol and Copenhagen Accord, to the current state of international negotiations in the lead-up to the 21st Conference of the Parties meeting in Paris in December 2015. The course covers fundamental concepts in climate change science and policy, international law and multilateral environmental agreements, as well as key issues of climate finance, climate justice, equity, adaptation, communication, and social movements that together comprise the subjects of debate in the negotiations. We will discuss all the key facets of what's being negotiated in Paris and prepare students to follow the outcome of the negotiation in detail. Students also participate in a three-day mock conference of the parties. By application only. Same as: CEE 263E, EARTHSYS 163E, EARTHSYS 263E

**CEE 163F. Groundwork for COP21. 1 Unit.**

This course will prepare undergraduate and cotermin students to observe the climate change negotiations (COP 21) in Paris in November/December 2015. Students will develop individual projects to be carried out before and during the negotiation session and be paired with mentors. Please note: Along with EARTHSYS 163E/CEE 163E, this course is part of the required two-course-set in which undergraduate and co-terminal masters degree students must enroll to receive accreditation to the climate negotiations. Same as: CEE 263F, EARTHSYS 163F, EARTHSYS 263F

**CEE 164. Introduction to Physical Oceanography. 4 Units.**

The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53). Same as: CEE 262D, EARTHSYS 164, ESS 148

**CEE 165C. Water Resources Management. 3 Units.**

Examination of the basic principles of surface and ground water resources management in the context of increasing water scarcity and uncertainty due to climate change and other factors. Specific topics include reservoir, river basin and aquifer management, conjunctive use of surface and ground water, and treated wastewater reuse. Special emphasis is placed on demand management through conservation, increased water use efficiency and economic measures. Besides the technical aspects of water management, an overview of its legal and institutional framework is provided. Same as: CEE 265C

**CEE 166A. Watersheds and Wetlands. 3 Units.**

Introduction to the occurrence and movement of water in the natural environment and its role in creating and maintaining terrestrial, wetland, and aquatic habitat. Hydrologic processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Rivers and lakes, springs and swamps. Emphasis is on observation and measurement, data analysis, modeling, and prediction. Prerequisite: 101B or equivalent. (Freyberg). Same as: CEE 266A

**CEE 166B. Floods and Droughts, Dams and Aqueducts. 3 Units.**

Sociotechnical systems associated with human use of water as a resource and the hazards posed by too much or too little water. Potable and non-potable water use and conservation. Irrigation, hydroelectric power generation, rural and urban water supply systems, storm water management, flood damage mitigation, and water law and institutions. Emphasis is on engineering design. Prerequisite: 166A or equivalent. (Freyberg). Same as: CEE 266B

**CEE 166D. Water Resources and Water Hazards Field Trips. 2 Units.**

Introduction to water use and water hazards via weekly field trips to local and regional water resources facilities (dams, reservoirs, fish ladders and hatcheries, pumping plants, aqueducts, hydropower plants, and irrigation systems) and flood damage mitigation facilities (storm water detention ponds, channel modifications, flood control dams, and reservoirs). Each trip preceded by an orientation lecture.

Same as: CEE 266D

**CEE 169. Environmental and Water Resources Engineering Design. 5 Units.**

Application of fluid mechanics, hydrology, water resources, environmental sciences, and engineering economy fundamentals to the design of a system addressing a complex problem of water in the natural and constructed environment. Problem changes each year, generally drawn from a challenge confronting the University or a local community. Student teams prepare proposals, progress reports, oral presentations, and a final design report. Prerequisite: senior in Civil Engineering or Environmental Engineering; 166B.

**CEE 171. Environmental Planning Methods. 3 Units.**

Intended primarily for juniors and seniors; first year graduate students welcome. Course introduces key environmental policy design and implementation concepts and provides opportunities to work with a range of environmental planning methods. Environmental laws and regulations (e.g., US Clean Water Act and the US National Environmental Policy Act) are examined. Course demonstrates how firms have gone beyond regulatory compliance and introduced environmental sustainability issues into core business strategies. Course uses a simulated negotiation of a financial penalty between a student team representing the US EPA (and other government agencies) and a team representing a firm that is out of compliance with Clean Water Act regulations. Professionals with experience in such negotiations provide coaching for student teams. Prerequisites: MATH 51. Recommended: 70.

**CEE 171F. New Indicators of Well-Being and Sustainability. 3 Units.**

Explore new ways to better measure human development, comprehensive wealth and sustainability beyond standard economic indicators such as income and GDP. Examine how new indicators shape global, national and local policy worldwide. Well-being topics include health, happiness, trust, inequality and governance. Sustainability topics include sustainable development, environmental performance indicators, material flow analysis and decoupling, and inclusive wealth indicators. Students will build their own indicator of well-being and sustainability for a term paper. Same as: CEE 271F

**CEE 172. Air Quality Management. 3 Units.**

Quantitative introduction to the engineering methods used to study and seek solutions to current air quality problems. Topics: global atmospheric changes, urban sources of air pollution, indoor air quality problems, design and efficiencies of pollution control devices, and engineering strategies for managing air quality. Prerequisites: 70, MATH 51.

**CEE 172A. Indoor Air Quality. 2-3 Units.**

Factors affecting the levels of air pollutants in the built indoor environment. The influence of ventilation, office equipment, floor coverings, furnishings, cleaning practices, and human activities on air quality including carbon dioxide, VOCs, resuspended dust, and airborne molds and fungi. Limited enrollment, preference to CEE students. Prerequisites: Math 42 or 21 and CEE 70, or equivalents. Same as: CEE 278C

**CEE 172S. Green House Gas Mitigation. 1-3 Unit.**

This course will introduce the main concepts of greenhouse gas (GHG) emissions measurement and management, and it will explore the main mitigation options for reducing emissions or sequestering carbon dioxide. It will address technical aspects of GHG mitigation via energy efficiency and demand-side management, energy in high-technology industry, distributed power and co-generation, the role of renewable energy in GHG management, carbon sequestration in forestry, agriculture, and geological formations. The course explores policy options, carbon trading and business strategies for GHG mitigation.

Same as: CEE 272S

**CEE 173C. Environmental Engineering Applications of Membrane Technology. 3 Units.**

Introduction to membrane technology and processes with applications in R&D, water/wastewater treatment, and renewable energy. Membrane separation principles, reverse osmosis, nanofiltration, membrane characterization techniques, mass transport phenomena, fouling processes, rejection of salts and trace organics, brine disposal system design, energy and cost considerations, and pre- and post-treatment procedures. Case studies in environmental sustainability issues related to full scale treatment engineering.

Same as: CEE 273C

**CEE 173E. Climate Change & Ecosystem Conservation. 2 Units.**

Examination of social and ecological effects of climate change on ecosystems and recommendations on conservation and management practices. Focus on broad-scale climate/forest interactions and the emergence of novel plant communities, change in species ranges, and climate-induced die-off. Explores ecological thresholds and vulnerabilities caused by drought, fog pattern changes, snow-cover loss, and secondary factors and implications of these emerging dynamics in the human dimension.

Same as: CEE 273E, ESS 173E

**CEE 174A. Providing Safe Water for the Developing and Developed World. 3 Units.**

This course will cover basic hydraulics and the fundamental processes used to provide and control water, and will introduce the basics of engineering design. In addition to understanding the details behind the fundamental processes, students will learn to feel comfortable developing initial design criteria (30% designs) for fundamental processes. Students should also develop a feel for the typical values of water treatment parameters and the equipment involved. The course should enable students to work competently in environmental engineering firms or on non-profit projects in the developing world such as Engineers without Borders. Pre-requisite: Chem31B/X.

**CEE 174B. Wastewater Treatment: From Disposal to Resource Recovery. 3 Units.**

This course builds upon CEE 174A, covering basic hydraulics and the fundamental processes used to treat wastewater. In addition to understanding the details behind the fundamental processes, students will learn to feel comfortable developing initial design criteria (30% designs) for fundamental processes. Students should also develop a feel for the typical values of water treatment parameters and the equipment involved. After covering conventional processes, the class addresses newer processes used to meet emerging treatment objectives, including nutrient removal, composting of biosolids and recycling of wastewater for beneficial uses, including potable reuse. Pre-requisites: CEE 174A.

**CEE 175A. California Coast: Science, Policy, and Law. 3-4 Units.**

Same as LAW 514. Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in field trips.

Same as: CEE 275A, EARTHSYS 175, EARTHSYS 275

**CEE 175P. Persuasive Communication for Environmental Scientists, Practitioners, and Entrepreneurs. 1 Unit.**

Achieving environmental goals depends not only on innovative ideas and great science but also persuasive communication. What makes communication persuasive? The ability of the communicator to create value for his or her audience. This course will teach students how to: 1) focus on their audience and 2) create value for their audience using research-proven communication techniques. Students will master these techniques through oral and written exercises so that, after taking this course, they will speak and write more persuasively.

Same as: CEE 275P

**CEE 175S. Environmental Entrepreneurship and Innovation. 2 Units.**

Our current infrastructure for provision of critical services-clean water, energy, transportation, environmental protection; requires substantial upgrades. As a complement to the scientific and engineering innovations taking place in the environmental field, this course emphasizes the analysis of economic factors and value propositions that align value chain stakeholder interests.

Same as: CEE 275S

**CEE 176A. Energy Efficient Buildings. 3-4 Units.**

Quantitative evaluation of technologies and techniques for reducing energy demand of residential-scale buildings. Heating and cooling load calculations, financial analysis, passive-solar design techniques, water heating systems, photovoltaic system sizing for net-zero-energy all-electric homes. Offered for 3 or 4 units; the 4-unit option includes a lab.

**CEE 176B. Electric Power: Renewables and Efficiency. 3-4 Units.**

Renewable and efficient electric power systems emphasizing analysis and sizing of photovoltaic arrays and wind turbines. Basic electric power generation, transmission and distribution, distributed generation, combined heat and power, fuel cells. End use demand, including lighting and motors. Lab.

**CEE 176C. Energy Storage Integration - Vehicles, Renewables, and the Grid. 3 Units.**

This course will provide in-depth introduction to existing energy storage solutions being used on the electric grid and in vehicles with a primary focus on batteries and electrochemical storage. We will discuss the operating characteristics, cost and efficiency of these technologies and how tradeoff decisions can be made. Special attention will be given to system-level integration of new storage technologies, including chargers, inverters, battery management systems and controls, into the existing vehicle and grid infrastructure. Further investigations include issues relating to integration of electric vehicle charging with demand-side management, scheduled renewable energy absorption and local grid balancing. Class format involves regular guest lectures, required lab participation, and field trips to relevant sites. Enrollment is limited; if you are interested in taking the course, please fill out a brief questionnaire at <http://goo.gl/forms/i3YH91Qx05n> Please contact [jtaggart@stanford.edu](mailto:jtaggart@stanford.edu) with any questions regarding the application or course information.

Same as: CEE 276C

**CEE 176G. Sustainability Design Thinking. 3 Units.**

Application design thinking to make sustainability compelling, impactful and realizable. Analysis of contextual, functional and human-centered design thinking techniques to promote sustainable design of products and environments by holistically considering space, form, environment, energy, economics, and health. Includes Studio project work in prototyping, modeling, testing, and realizing sustainable design ideas.

Same as: CEE 276G

**CEE 177. Aquatic Chemistry and Biology. 4 Units.**

Introduction to chemical and biological processes in the aqueous environment. Basic aqueous equilibria; the structure, behavior, and fate of major classes of chemicals that dissolve in water; redox reactions; the biochemistry of aquatic microbial life; and biogeochemical processes that govern the fate of nutrients and metals in the environment and in engineered systems. Prerequisite: CHEM 31.

**CEE 177L. Smart Cities & Communities. 2 Units.**

The role of information technology (IT) in enabling mankind to improve the operations and sustainability of cities and communities. Review of what a "smarter" city of community might be, the role of IT in enabling them to become "smarter" (including what IT cannot achieve). Case studies on water, energy, transportation urban design and resilience. Same as: CEE 277L

**CEE 177M. Smart Cities & Communities II. 2 Units.**

Building on CEE 177L the class expands on, and examines more deeply, the smart cities and communities topics explored there. Co-requisite: concurrent registration in CEE 177L.

Same as: CEE 277M

**CEE 177S. Design for a Sustainable World. 1-5 Unit.**

Technology-based problems faced by developing communities worldwide. Student groups partner with organizations abroad to work on concept, feasibility, design, implementation, and evaluation phases of various projects. Past projects include a water and health initiative, a green school design, seismic safety, and medical device. Admission based on written application and interview. See <http://esw.stanford.edu> for application. (Staff).

Same as: CEE 277S

**CEE 177X. Current Topics in Sustainable Engineering. 1-3 Unit.**

This course is the first half of a two quarter, project-based design course that addresses the cultural, political, organizational, technical, and business issues at the heart of implementing sustainable engineering projects in the developing world. Students will be placed into one of three project teams and tackle a real-world design challenge in partnership with social entrepreneurs and NGOs. In CEE 177X/277X, students will gain the background skills and context necessary to effectively design engineering projects in developing nations. Instructor consent required. Same as: CEE 277X

**CEE 178. Introduction to Human Exposure Analysis. 3 Units.**

(Graduate students register for 276.) Scientific and engineering issues involved in quantifying human exposure to toxic chemicals in the environment. Pollutant behavior, inhalation exposure, dermal exposure, and assessment tools. Overview of the complexities, uncertainties, and physical, chemical, and biological issues relevant to risk assessment. Lab projects. Recommended: MATH 51. Apply at first class for admission. Same as: CEE 276

**CEE 179A. Water Chemistry Laboratory. 3 Units.**

(Graduate students register for 273A.) Laboratory application of techniques for the analysis of natural and contaminated waters, emphasizing instrumental techniques.

Same as: CEE 273A

**CEE 179C. Environmental Engineering Design. 5 Units.**

Application of engineering fundamentals including environmental engineering, hydrology, and engineering economy to a design problem. Enrollment limited; preference to seniors in Civil and Environmental Engineering.

**CEE 179S. Seminar: Issues in Environmental Science, Technology and Sustainability. 1-2 Unit.**

Invited faculty, researchers and professionals share their insights and perspectives on a broad range of environmental and sustainability issues. Students critique seminar presentations and associated readings.

Same as: CEE 279S, EARTHSYS 179S, ESS 179S

**CEE 179X. Sustainable Urban System Seminar. 1 Unit.**

SYSTEM OF SYSTEMS: Cities are based on several different systems; infrastructures, networks and environments. The effectiveness and efficiency of these systems determine how cities work and how successful a city is at delivering critical services. These systems are not discrete and must be considered holistically as well as individually. These core systems are interconnected and must be treated as such. Understanding one system and making it work better means that cities must comprehend the larger context and how the various systems are interconnected. This seminar series will explore various aspects of these critical systems and how we can make them more resilient and robust, to meet future challenges. Guest speakers, discussion and critical readings. Same as: CEE 279X

**CEE 180. Structural Analysis. 4 Units.**

Analysis of beams, trusses, frames; method of indeterminate analysis by consistent displacement, least work, superposition equations, moment distribution. Introduction to matrix methods and computer methods of structural analysis. Prerequisite: 101A and ENGR 14.

**CEE 181. Design of Steel Structures. 4 Units.**

Concepts of the design of steel structures with a load and resistance factor design (LRFD) approach; types of loading; structural systems; design of tension members, compression members, beams, beam-columns, and connections; and design of trusses and frames. Prerequisite: 180.

**CEE 182. Design of Reinforced Concrete Structures. 3-4 Units.**

Properties of concrete and reinforcing steel; behavior of structural elements subject to bending moments, shear forces, torsion, axial loads, and combined actions; design of beams, slabs, columns and footings; strength design and serviceability requirements; design of simple structural systems for buildings. Prerequisite: 180.

**CEE 183. Integrated Civil Engineering Design Project. 4 Units.**

Studio format. Design concepts for civil engineering facilities from schematic design through construction, taking into account sustainable engineering issues. Design exercises culminating in the design of a civil engineering facility, emphasizing structural systems and materials and integration with architectural, construction and other project requirements. Prerequisites: CEE 180, 181, 182; CEE 120 (or equivalent background in BIM), civil engineering major; architectural design major with instructor consent.

**CEE 195. Fundamentals of Structural Geology. 3 Units.**

Techniques for mapping using GPS and differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; measurement and analysis of stress; elastic deformation and properties of rock; brittle deformation including fracture and faulting; linear viscous flow including folding and magma dynamics; model development and methodology. Models of tectonic processes are constructed and solutions visualized using MATLAB. Prerequisites: GS 1, MATH 51. Same as: GS 111

**CEE 196. Engineering Geology and Global Change. 3 Units.**

The application of geology and global change to the planning, design, and operation of engineering projects. Case histories taught in a seminar setting and field trips emphasize the impact of geology and global change on both individual engineering works and the built environment by considering Quaternary history and tectonics, anthropogenic sea level rise, active geologic processes, engineering properties of geologic deposits, site exploration, and professional ethics. Prerequisite: GS 1 or consent of instructor. Same as: GS 115

**CEE 198. Directed Reading or Special Studies in Civil Engineering. 1-4 Unit.**

Written report or oral presentation required. Students must obtain a faculty sponsor.

**CEE 199. Undergraduate Research in Civil and Environmental Engineering. 1-4 Unit.**

Written report or oral presentation required. Students must obtain a faculty sponsor.

**CEE 199A. Special Projects in Architecture. 1-4 Unit.**

Faculty-directed study or internship. May be repeated for credit. Prerequisite: consent of instructor.

**CEE 199B. Directed Studies in Architecture. 1-4 Unit.**

Projects may include studio-mentoring activities, directed reading and writing on topics in the history and theory of architectural design, or investigations into design methodologies.

**CEE 199E. Outreach and Mentoring Program Development in CEE. 1-2 Unit.**

Open to undergraduates who are declared majors in Civil Engineering, Environmental Engineering, Atmosphere/Energy, and Architectural Design. Will brainstorm and develop an innovative curriculum and engaging activities for CEE 10 (Intro. to the Civil & Environmental Engineering Professions).

**CEE 199H. Undergraduate Honors Thesis. 2-3 Units.**

For students who have declared the Civil Engineering B.S. honors major and have obtained approval of a topic for research under the guidance of a CEE faculty adviser. Letter grade only. Written thesis or oral presentation required. (Staff).

**CEE 199L. Independent Project in Civil and Environmental Engineering. 1-4 Unit.**

Prerequisite: Consent of Instructor.

**CEE 200A. Teaching of Civil and Environmental Engineering. 1 Unit.**

Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. 200A. Aut, 200B. Win, 200C. Spr.

**CEE 200B. Teaching of Civil and Environmental Engineering. 1 Unit.**

Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. May be repeated for credit. 200A. Aut, 200B. Win, 200C. Spr.

**CEE 200C. Teaching of Civil and Environmental Engineering. 1 Unit.**

Required of CEE Ph.D. students. Strategies for effective teaching and introduction to engineering pedagogy. Topics: problem solving techniques and learning styles, individual and group instruction, the role of TAs, balancing other demands, grading. Teaching exercises. Register for quarter of teaching assistantship. May be repeated for credit. 200A. Aut, 200B. Win, 200C. Spr.

**CEE 201D. Computations in Civil and Environmental Engineering. 3 Units.**

Computational and visualization methods in the design and analysis of civil and environmental engineering systems. Focus is on applications of MATLAB. How to develop a more lucid and better organized programming style.

Same as: CEE 101D

**CEE 201S. Science & Engineering Problem-Solving with MatLab.. 3 Units.**

Introduction to the application of MATLAB to an array of engineering systems. Emphasis on computational and visualization methods in the design, modeling and analysis of engineering problems.

Same as: CEE 101S

**CEE 202. Construction Law and Claims. 3 Units.**

Concepts include the preparation and analysis of construction claims, cost overrun and schedule delay analysis, general legal principles, contracts, integrated project delivery, public private partnerships and the resolution of construction disputes through ADR and litigation. Requires attendance of the ten weeks of Monday classes and the first five weeks of Wednesday classes.

**CEE 203. Probabilistic Models in Civil Engineering. 3-4 Units.**

Introduction to probability modeling and statistical analysis in civil engineering. Emphasis is on the practical issues of model selection, interpretation, and calibration. Application of common probability models used in civil engineering including Poisson processes and extreme value distributions. Parameter estimation. Linear regression.

**CEE 204. Structural Reliability. 3-4 Units.**

Procedures for evaluating the safety of structural components and systems. First-and second-order estimates of failure probabilities of engineered systems. Sensitivity of failure probabilities to assumed parameter values. Measures of the relative importance of random variables. Reliability of systems with multiple failure modes. Reliability updating. Simulation methods and variance reduction techniques. Prerequisite: 203 or equivalent.

**CEE 205A. Structural Materials Testing and Simulation. 3-4 Units.**

Hands-on laboratory experience with fabrication, computer simulation, and experimental testing of material and small-scale structural components. Comparison of innovative and traditional structural materials. Behavior and application of high-performance fiber reinforced concrete materials for new design, fiber-reinforced polymeric materials for structural retrofits and introduction to sustainable, bio-based composites. Prerequisites: basic course in reinforced concrete design CEE 182 or equivalent.

**CEE 205B. Advanced Topics in Structural Concrete. 3 Units.**

Concepts and application of strut and tie modeling including deep beams, design for torsion resistance, beam-column joints, bridge components, and post-tensioned anchor zones. Course project integrating computer simulation and physical experimentation of a structural concrete component. Prerequisites: CEE 285A or equivalent.

**CEE 206. Decision Analysis for Civil and Environmental Engineers. 3 Units.**

Current challenges in selecting an appropriate site, alternate design, or retrofit strategy based on environmental, economic, and social factors can be best addressed through applications of decision science. Basics of decision theory, including development of decision trees with discrete and continuous random variables, expected value decision making, utility theory value of information, and elementary multi-attribute decision making will be covered in the class. Examples will cover many areas of civil and environmental engineering problems. Prerequisite: CEE 203 or equivalent.

**CEE 207A. Understanding Energy. 3 Units.**

Energy is one of the world's main drivers of opportunity and development for human beings. At the same time, our energy system has significant consequences for our society, political system, economy, and environment. For example, energy production and use is the #1 source of greenhouse gas emissions. This course surveys key aspects of each energy resource, including significance and potential conversion processes and technologies, drivers and barriers, policy and regulatory environment, and social, economic, and environmental impacts. Both depletable and renewable energy resources are covered, including oil, natural gas, coal, nuclear, biomass, hydroelectric, wind, solar, photovoltaics, geothermal, and ocean energy, with cross-cutting topics including electricity, storage, climate change, sustainability, green buildings, energy efficiency, transportation, and the developing world. Understanding Energy is part of a trio of inter-related courses aimed at gaining an in-depth understanding of each energy resource - from fossil fuels to renewable energy. The other two classes are CEE107W/207W Understanding Energy - Workshop, and CEE 107F/207F Understanding Energy -- Field Trips. Note that this course was formerly called Energy Resources (CEE 173A/207A & Earthsys 103). Prerequisites: Algebra. May not be taken for credit by students who have completed CEE 107S. Same as: CEE 107A, EARTHYSYS 103

**CEE 207F. Understanding Energy -- Field Trips. 1 Unit.**

Understanding Energy -- Field Trips takes students on trips to some of the most significant energy resource sites in North American located within a few hours of Stanford University. Students visit at least two of the many field trips offered, including to Diablo Canyon nuclear power plant, an Altmont Pass wind farm, a geothermal facility at The Geysers, a solar photovoltaic (PV) farm, Shasta Dam and hydroelectric power plant, a major oil field, and a natural gas-fired power plant, an energy efficiency technology lab, among others. Students meet on a weekly basis to debrief previous field trips and prepare for future ones. Open to all majors and backgrounds. Understanding Energy Field Trips is part of a trio of inter-related courses aimed at gaining an in-depth understanding of each energy resource -- from fossil fuels to renewable energy. The other two classes are CEE 107A/207A Understanding Energy, and CEE 107W/207W Understanding Energy - Workshop. Priority is given to students who have taken or are concurrently enrolled in CEE 173A, CEE 107A, CEE 207A, Earthsys 103, or CEE 107S/207S.

Same as: CEE 107F, EARTHYSYS 103F

**CEE 207S. Energy Resources: Fuels and Tools. 3 Units.**

Energy is a vital part of our daily lives. This course examines where that energy comes from, and the advantages and disadvantages across different fuels. Contextual analysis of energy decisions for transportation and electricity generation around the world. Energy resources covered include oil, biomass, natural gas, nuclear, hydropower, wind, solar, geothermal, and emerging technologies. Prerequisites: Algebra. Note: may not be taken by students who have completed CEE 173A, CEE 207 or EARTHYSYS 103.

Same as: CEE 107S

**CEE 207W. Understanding Energy -- Workshop. 1 Unit.**

Interactive workshop that goes in depth into energy topics touched on by CEE 107A/207A & Earthsys 103 - Understanding Energy. Topics covered include energy and sustainability, energy information analysis, energy and climate change policy, electricity storage, exergy and energy quality, energy-water nexus, energy and land use, energy and air quality, and transportation policy. Students are graded on attendance, participation, and a short final paper. Sessions will involve discussions, group activities, and fun debates. Open to all majors and backgrounds. This workshop is part of a trio of inter-related courses aimed at gaining an in-depth understanding of each energy resource -- from fossil fuels to renewable energy. The other two classes are CEE 107A/207A Understanding Energy, and CEE 107F/207F Understanding Energy Field Trips. Prerequisites: Must have taken or take concurrently CEE 173A, CEE 107A, CEE 207A, Earthsys 103, or CEE 107S/207S.

Same as: CEE 107W, EARTHYSYS 103W

**CEE 209. Risk Quantification and Insurance. 2 Units.**

Principles of risk management along with concepts of frequency and severity and various risk measures such as probabilities of exceeding given loss level, probabilities of insolvency, and expected value of shortfall will be introduced. Various risk handling techniques will be discussed with particular emphasis on insurance. Ability to express preferences between random future gains or losses, will be presented in the context of stochastic ordering of risks. Credibility theory and generalized linear models will be used for claims predictions. Prerequisites: CEE 203 or equivalent.

**CEE 212A. Industry Applications of Virtual Design & Construction. 2-4 Units.**

Building upon the concept of the VDC Scorecard, CEE 112A/212A investigates in the management of Virtual Design and Construction (VDC) programs and projects in the building industry. Interacting with experts and professionals in real estate, architecture, engineering, construction and technology providers, students will learn from the industry applications of Building Information Modeling and its relationship with Integrated Project Delivery, Sustainable Design and Construction, and Virtual Design and Construction. Students will conduct case studies to evaluate the maturity of VDC planning, adoption, technology and performance in practice. Students taking 3 or 4 units will be paired up with independent research or case study projects on the industry applications of VDC. No prerequisite. See CEE 112B/212B in the Winter Quarter and CEE 112C/212C in the Spring Quarter.

**CEE 212B. Industry Applications of Virtual Design & Construction. 2-4 Units.**

CEE 112B/212B is a practicum on the Industry Applications on Virtual Design and Construction (VDC). Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC and Building Information Modeling (BIM). Students can choose between one of the two project topics: [1] Industrialized Construction with Virtual Parts (No Prerequisite) or [2] Industry Benchmarking & Applications of the VDC Management Scorecard (Suggested Prerequisite: CEE 112A/212A). Same as: CEE 112B

**CEE 212C. Industry Applications of Virtual Design & Construction. 2-4 Units.**

Following the Autumn- and Winter-quarter course series, CEE 112C/212C is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC projects with public owners and private developers, such as GSA Public Buildings Service, the Hong Kong Mass Transit Railway, Optima, Walt Disney Imagineering, Microsoft facilities and/or other CIFE International members. Independently, students will conduct case studies and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE 112A/212A, CEE 112B/212B, CEE 159C/259C, CEE 159D/259D, or Instructor's Approval. Same as: CEE 112C

**CEE 212D. Industry Applications of Virtual Design and Construction. 2-4 Units.**

A continuation of the CEE 112/212 series, CEE 112D/212D is an industry-focused and project-based practicum that focuses on the industry applications of Virtual Design and Construction (VDC). Students will be paired up with industry-based VDC research or application opportunities with public owners and private developers, professional associations, and/or other member organizations of the Center for Integrated Facility Engineering at Stanford. Independently, students will conduct case studies, research activities, and/or develop VDC and building information models (BIM) using off-the-shelf technologies for project analysis, collaboration, communication and optimization. Students will gain insights and develop skills that are essential for academic research, internships or industry practice in VDC. Prerequisite: CEE110/210, CEE 112C/212C, CEE 122B/222B, or Instructor's Approval. Same as: CEE 112D

**CEE 213. Patterns of Sustainability. 1-4 Unit.**

This seminar examines the interrelated sustainability of the natural, built and social environments of places in which we live. Several BOSP centers and the home Stanford campus will hold this 1-2 unit seminar simultaneously and collaborate with a shared curriculum, assignments, web conference and a Wiki. The goal of the collaborative arrangement is to expose, share, compare and contrast views of sustainability in different parts of the world. We will look at and assess aspects of sustainability of the places we are living from a theoretical perspective from the literature, from observations and interviews in the countries in which we study.

Same as: CEE 113

**CEE 217. Renewable Energy Infrastructure. 2 Units.**

Construction of renewable energy infrastructure: geothermal, solar thermal, solar photovoltaic, wind, biomass. Construction and engineering challenges and related issues and drivers for performance, cost, and environmental impact. Context of renewable energy infrastructure development including comparison of the types of renewable energy, key economic, environmental, and social contextual factors, applicability of a type of renewable energy given a context, related barriers and opportunities. Class project to plan a start-up for developing a type of energy infrastructure based on an engineering innovation.

**CEE 220A. Building Information Modeling Workshop. 2-4 Units.**

The foundational Building Information Modeling course introduces techniques for creating, managing, and applying of building information models in the building design and construction process. The course covers processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components and geometries to produce models used in architectural design, construction planning and documentation, rendering and visualization, simulation and analysis.

Same as: CEE 120A

**CEE 220B. Building Information Modeling Workshop. 2-4 Units.**

This course builds upon the Building Information Model concepts introduced in 120A/220A and illustrates how BIM modeling tools are used to design, analyze, and model building systems including structural, mechanical, electrical, plumbing and fire protection. Course covers the physical principles, design criteria, and design strategies for each system and explores processes and tools for modeling those systems and analyzing their performance. Topics include: building envelopes, access systems, structural systems modeling and analysis, mechanical / HVAC systems, plumbing and fire protection systems, electrical systems, and systems integration/coordination.

Same as: CEE 120B

**CEE 220C. Parametric Design and Optimization. 2-4 Units.**

This course explores tools and techniques for computational design and parametric modeling as a foundation for design optimization. Class sessions will introduce several parametric design modeling platforms and scripting environments that enable rapid generation of 3D models and enable rapid evaluation of parametrically-driven design alternatives. Topics to be featured include: Principles of parametric design vs. direct modeling; Design exploration using parametric modeling platforms (Revit/FormIt, Rhino); Visual scripting languages and environments (Dynamo, Grasshopper, DesignScript); Single- and multi-dimensional optimization techniques and guidance strategies. Same as: CEE 120C

**CEE 220S. Building Information Modeling Special Study. 2-4 Units.**

Special studies of Building Information Modeling strategies and techniques focused on creating, managing, and applying models in the building design and construction process. Processes and tools for creating, organizing, and working with 2D and 3D computer representations of building components to produce models used in design, construction planning, visualization, and analysis. Same as: CEE 120S

**CEE 221A. Planning Tools and Methods in the Power Sector. 3-4 Units.**

This course covers the planning methods most commonly used in the power sector today. It covers both the fundamental methods used and their applications to electricity generation, transmission and distribution planning, integrated resource planning using both energy efficiency and renewable resources as well as utility finance and ratemaking. The methods covered will include forecasting (time series, regression and the use of markets), resource assessment (including energy efficiency and demand-side management) optimization (in power markets operation and in expansion planning) and the processes used in decision-making.

**CEE 222A. Computer Integrated Architecture/Engineering/Construction (AEC) Global Teamwork. 3 Units.**

AEC students engage in a crossdisciplinary, collaborative, geographically distributed, and multicultural project-based teamwork. AEC teams exercise their domain knowledge and information technologies in a multidisciplinary context focusing on the design and construction concept development phase of a comprehensive building project. Prerequisite: interview with Instructor in Autumn Quarter.

**CEE 222B. Computer Integrated Architecture/Engineering/Construction (AEC) Global Teamwork. 2 Units.**

Global AEC student teams continue their project activity focusing on the most challenging concept developed in 222A and chosen jointly with their client. Comprehensive team project focusing on design and construction, including: project development and documentation; detailing, 3D and 4D modeling, simulation, sustainable concepts, cost benefit analysis, and life-cycle cost analysis; and final project presentation of product and process. Prerequisite: CEE 222A.

**CEE 223. Materials for Sustainable Urban Systems. 3 Units.**

Students will learn to evaluate alternate materials and make a case for materials selection for given urban infrastructure projects considering the material's performance over time, life cycle impacts, and effect on humans. Limited enrollment. Pre-requisites: CEE 226, CEE 101A or equivalent.

**CEE 223A. Cement-based Materials, Properties and Durability. 2 Units.**

Students will develop an understanding of the chemical and physical processes of cement and concrete hydration, strength development, mechanical performance and durability. Students will learn how the properties of materials and admixture combine to create a wide range of cement-based materials used in the built environment. The course will address sustainable construction, including the use of alternative cements, admixtures, and aggregates. Students will apply the principles in this course to various aspects of civil and structural engineering, including innovative mix design specification and review, structural investigations and failure analysis, and cementitious materials research.

**CEE 224A. Sustainable Development Studio. 1-5 Unit.**

(Undergraduates, see 124.) Project-based. Sustainable design, development, use and evolution of buildings; connections of building systems to broader resource systems. Areas include architecture, structure, materials, energy, water, air, landscape, and food. Projects use a cradle-to-cradle approach focusing on technical and biological nutrient cycles and information and knowledge generation and organization. May be repeated for credit.

**CEE 224X. Global Urban Development Program. 2-5 Units.**

A year-long Project-Based Learning course on sustainable urban systems, in collaboration with Sechuan University, Chengdu, China. Students will form multidisciplinary teams of 8-10 and be assigned to study one of two cities: Chengdu, CN and San Jose, CA. Teams will work closely with city partners including municipal officials, industry leaders, community groups, and local academics. First phase conducting research using geospatial data analysis of key performance indicators, second and third phases to address target goals identified in phase one. Teams will propose innovative plans, policies and/or programs for urban development to meet goals. Three quarter commitment preferred, two quarter commitment required. Enrollment limited to ten Stanford students by application. Preference to CEE graduate students within CEE (SDC) and from other departments, upperclass undergraduate applications accepted.

**CEE 224Y. Global Urban Development Program. 2-5 Units.**

GUDDP is a selective opportunity to engage in a unique, real-world learning experience being piloted for a new Sustainable Urban Systems initiative within the Department of Civil and Environmental Engineering. It combines a project-based learning model with real-world urban problem-solving. Students will work with the City of San Jose to develop strategic solutions for high-priority challenges like affordable housing, smart transportation, and water service. Immersive trips to San Jose are a core part of the Winter Quarter learning experience and students will engage in a variety of community activities throughout the quarter.

**CEE 224Z. Global Urban Development Program. 2-5 Units.**

GUDDP is a selective opportunity to engage in a unique, real-world learning experience being piloted for a new Sustainable Urban Systems initiative within the Department of Civil and Environmental Engineering. It combines a project-based learning model with real-world urban problem-solving. Students will work with the City of San Jose to develop strategic solutions for high-priority challenges like affordable housing, smart transportation, and water service. Immersive trips to San Jose are a core part of the Winter Quarter learning experience and students will engage in a variety of community activities throughout the quarter.

**CEE 225. Defining Smart Cities: Visions of Urbanism for the 21st Century. 1 Unit.**

In a rapidly urbanizing world, "the city" paves the way toward sustainability and social well-being. But what does it mean for a city to be smart? Does that also make it sustainable or resilient or livable? This seminar delves into current debates about urbanism through weekly talks by experts on topics such as big data, human-centered design, new urbanism, and natural capital. How urban spaces are shaped, for better or worse, by the complex interaction of cutting-edge technology, human societies, and the natural environment. The goal is to provoke vigorous discussion and to foster an understanding of cities that is at once technological, humanistic, and ecologically sound.

Same as: CEE 125, URBANST 174

**CEE 226. Life Cycle Assessment for Complex Systems. 3-4 Units.**

Life cycle modeling of products, industrial processes, and infrastructure/building systems; material and energy balances for large interdependent systems; environmental accounting; and life cycle costing. These methods, based on ISO 14000 standards, are used to examine emerging technologies, such as biobased products, building materials, building integrated photovoltaics, and alternative design strategies, such as remanufacturing, dematerialization, LEED, and Design for Environment: DfE. Student teams complete a life cycle assessment of a product or system chosen from industry.

**CEE 226E. Advanced Topics in Integrated, Energy-Efficient Building Design. 2-3 Units.**

Innovative methods and systems for the integrated design and evaluation of energy efficient buildings. Guest practitioners and researchers in energy efficient buildings. Student initiated final project. Prerequisites: CEE 156 or CEE 256. All students are expected to participate in the group project assignments. Students taking the course for two units will not be required to complete in-class assignments or individual homework assignments.

**CEE 227. Global Project Finance. 3-5 Units.**

Public and private sources of finance for large, complex, capital-intensive projects in developed and developing countries. Benefits and disadvantages, major participants, risk sharing, and challenges of project finance in emerging markets. Financial, economic, political, cultural, and technological elements that affect project structures, processes, and outcomes. Case studies. Limited enrollment.

**CEE 229S. Climate Change Adaptation in the Coastal Built Environment. 1 Unit.**

How will climate change impact coastal ports and harbors around the world? Leading experts discuss the latest science, policy, and engineering research on this important issue, including the necessary response to protect ports and harbors from significant sea-level rise and storm surge. Focus is on the built environment. Guest speakers. CEE 229/129 for research option. See [www.groupspaces.com/seaports2100](http://www.groupspaces.com/seaports2100). Same as: CEE 129S

**CEE 234B. Intermediate Arch Studio. 5 Units.**

This studio offers students experience in working with a real site and a real client program to develop a community facility. Students will develop site analysis, review a program for development and ultimately design their own solutions that meet client and community goals. Sustainability, historic preservation, community needs and materials will all play a part in the development of students final project. Students will also gain an understanding of graphic conventions, verbal and presentation techniques. Course may be repeated for credit. Same as: CEE 134B

**CEE 237B. Advanced Architecture Studio. 6 Units.**

This course will focus on the topic of interdisciplinary collaboration and its role in the development of design concepts. Specifically, the integration of structural with architectural considerations to produce a unified urban, spatial, tectonic and structural proposition will be our field of investigation. This course is an architecture studio course where class time will be spent primarily in individual or group desk critiques and pin-up sessions. May be repeat for credit. Total completions allowed: 3. Additionally, there will be lectures, case study presentations and a field trip. Prerequisites: required: CEE 31 (or 31Q) Drawing, CEE 110 BIM and CEE 130 Design. Same as: CEE 137B

**CEE 239. Design Portfolio Methods. 4 Units.**

Students present designs completed in other studio courses to communicate design intentions and other aspects of their work. Instruction in photography; preparation of a design portfolio; and short essays that characterize portfolio contents. Oral presentation workshops offered through the Center for Teaching and Learning. Limited enrollment. Prerequisites: two Art or Architecture studio courses, or consent of instructor. Same as: CEE 139

**CEE 241. Managing Fabrication and Construction. 4 Units.**

Methods to manage the physical production of construction projects; design, analysis, and optimization of the fabricate-assemble process including performance metrics. Project management techniques and production system design including: push versus pull methods; master scheduling and look-ahead scheduling; scope, cost, and schedule control; earned value analysis; critical path method; location-based scheduling; 4D modeling; workflow; trade coordination; methods to understand uncertainty and reduce process variability; and supply chain systems including made-to-stock, engineered-to-order, and made-to-order. Prerequisite: 100 or consent of instructor. Recommended corequisite: 240.

**CEE 241A. Infrastructure Project Development. 3 Units.**

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of the condition of the nation's infrastructure and how projects are planned and financed. Focus is on public works in the U.S. The role of public and private sectors through a step-by-step study of the project development process. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare project environmental impact statements. Same as: CEE 141A

**CEE 241B. Infrastructure Project Delivery. 3 Units.**

Infrastructure is critical to the economy, global competitiveness and quality of life. Topics include energy, transportation, water, public facilities, and communications sectors. Analysis of how projects are designed, constructed, operated, and maintained. Focus is on public works projects in the U.S. Alternative project delivery approaches and organizational strategies. Case studies of real infrastructure projects. Industry guest speakers. Student teams prepare finance/design/build/operate/maintain project proposals. Same as: CEE 141B

**CEE 241C. Global Infrastructure Projects Seminar. 1-2 Unit.**

Real infrastructure projects presented by industry guest speakers. Energy, transportation, water, public facilities and communications projects are featured. Course provides comparisons of project development and delivery approaches for mega-projects around the world. Alternative project delivery methods, the role of public and private sector, different project management strategies, and lessons learned. Field trips to local projects. Same as: CEE 141C

**CEE 241P. Integrated Management of Fabrication and Construction. 3-4 Units.**

Application of the fundamental fabrication and construction management concepts covered in CEE 241T to an actual project; integrated software environments; integration of scope, schedule, and cost information for scheduling, estimating, and progress control; scope management with BIM; off-site fabrication vs. on-site construction and supply chain coordination; group project; project permitting, potential for a joint project with CEE 242P. Prerequisites: CEE 210, CEE 241T.

**CEE 241T. Fundamentals of Managing Fabrication and Construction. 2 Units.**

Schedule representations including Gantt chart, critical path method (CPM), 4D modeling, and location-based schedules (LBS); activity definition; Product Breakdown Structure (PBS) and Work Breakdown Structure (WBS); consideration of resources constraints, variability, and types of materials in schedule definition; production systems including push, pull, and collaborative systems; project control including earned value analysis (EVA) and plan percent complete (PPC); schedule performance metrics. Class will be held during the first five weeks of Autumn Quarter only.

**CEE 242. Organization Design for Projects and Companies. 3-4 Units.**

Introduction to organizational behavior and organizational design for construction projects and companies. Class incorporates readings, individual, small group and large group case study assignments. Students use computer simulation to design real-world project organizations.

**CEE 242P. Designing Project Organizations. 2 Units.**

Sequel to CEE 242T. Course develops information-processing approach for designing project and project-based company organizations to deliver sustainable construction projects; includes design of organizations and work processes for integrated project delivery and public-private partnership concession project delivery. Term project applies computer-based organization simulation to optimize design of project organization for a participating company.

**CEE 242T. Organizational Behavior and Design for Construction. 2 Units.**

Introduction to organizational behavior and organizational design for Architecture, Engineering and Construction projects and companies. Class incorporates readings, individual and group case study assignments. Students use computer simulation to analyze project organizations and predict schedule, cost and quality risks. This class is a prerequisite for CEE 242P.

**CEE 244. Accounting, Finance & Valuation for Engineers & Constructors. 2 Units.**

Concepts of financial accounting and economics emphasizing the construction industry. Financial statements, accounting concepts, project accounting methods, and the nature of project costs. Case study of major construction contractor. Ownership structure, working capital, and the sources and uses of funds.

**CEE 244A. Sustainable Banking Seminar. 1 Unit.**

This seminar explores ideas for redesigning banks and the banking sector to achieve three goals: (1) keep the bank and its depositors safe, (2) keep the borrowers, communities, and societies affected by the bank's lending decisions safe, and (3) use bank transactions to improve the sustainability of natural ecosystems. Weekly speakers include bankers, bank regulators, and financial technology (fintech) innovators focused on sustainable banking.

**CEE 246. Entrepreneurship in Civil & Environmental Engineering. 3-4 Units.**

CEE 246 is a team project-based course geared toward developing entrepreneurial businesses related to civil and environmental engineering. With support of industry mentors, students are guided through the process of identifying opportunities, developing business plans, and determining funding sources. The class culminates with presentations to industry experts and venture capitalists (VC) to mimic typical investor pitches. The goal is to provide students with the knowledge and network to realize their business idea.

**CEE 246A. Engineering Economy. 3 Units.**

Fundamentals of financial and economic analysis. Engineering Economy Principles. Interest rates, Present value, annual cash flow, internal rate of return, benefit-cost analysis. Economic Life, Life Cycle Costs. Replacement analysis. Project Selection - Mutually Exclusive Alternatives, Multiple Objective Criteria. Depreciation. Inflation and Taxes. Sensitivity and risk analysis. Uncertainty and Probability. Decision Trees. Capital Budgeting. For CEE 146A: enrollment is limited to juniors and seniors. Attendance to the first class is mandatory (for both CEE 146A and CEE 246A). Instructor consent is required. Students must please kindly email the instructor a short paragraph indicating if they are an undergrad or grad student, their current year (Frosh/Soph/Junior or Senior), their Department and Program, and their reason for taking the class. Same as: CEE 146A

**CEE 246B. Real Estate Finance. 3 Units.**

Introduction to the Real Estate Development Process from conception, feasibility analysis, due diligence, entitlements, planning, financing, market analysis, contract negotiation, construction, marketing, asset management and disposition. Pro-forma and Financial modeling in Real Estate. Financing options for different types of Real Estate projects and products. Redevelopment projects. Affordable Housing. The class will combine lectures, case studies, field work (Group Project) and guest speakers. Recommended knowledge of spreadsheets. Enrollment limited to 40; no auditors. Instructor consent is required. Only Seniors or Grad students. Students must please kindly email the instructor a short paragraph indicating if they are an undergrad or grad student, their current year (Frosh/Soph/Junior or Senior), their Department and Program, and their reason for taking the class. Prerequisites: Engineering Economy or CEE 246A or similar.

**CEE 247A. Network Governance. 3-4 Units.**

This course aims at providing students with insights, concepts and skills needed to understand the dynamics of multi-actor interaction processes in uncertain and often highly politicized contexts and to be able to cope with technological and strategic uncertainties and risks including the unpredictable behavior of actors. They will develop knowledge, skills and competences about how to manage divergent and conflicting interests of different actors including principles of integrative negotiation, communication and mediation.

**CEE 248. Real Estate Development. 3 Units.**

Critical activities and key participants. Topics: conceptual and feasibility studies, market perspectives, the public roles, steps for project approval, project finance, contracting and construction, property management, and sales. Group projects focus on actual developments now in the planning stage. Enrollment limited to 24; priority to graduate majors in the department's CEM and GSB programs. Prerequisites: 241, 244A or equivalent, ENGR 60.

**CEE 248S. Introduction to Real Estate Development Seminar. 1 Unit.**

This seminar will offer students an introduction to Real Estate Development. Senior Principals from Sares Regis, a regional commercial and residential real estate development company, will cover topics on all aspects of the development process. Guest speakers from the fields of architecture and engineering, finance and marketing will participate in some of the classes. They will offer the students a window into the world of how houses, apartments, office buildings and public facilities are conceived of, brought through the design and approval process, financed, marketed and then sold and/or rented. There will be five one-and-a-half-hour lectures (robust class discussion encouraged). Classes commence on April 9th and complete on May 7th. There will be one written project assignment due prior to class on April 23rd. No prior knowledge of real estate is required.

**CEE 249. Labor and Industrial Relations: Negotiations, Strikes, and Dispute Resolution. 2 Units.**

Labor/management negotiations, content of a labor agreement, strikes, dispute resolution, contemporary issues affecting labor and management, and union versus open shop competitiveness in the marketplace. Case studies; presentations by union leaders, legal experts, and contractor principals. Simulated negotiation session with union officials and role play in an arbitration hearing.

**CEE 251. Negotiation. 3 Units.**

Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; see Coursework.

Same as: CEE 151, EARTH 251

**CEE 252. Construction Methods for Concrete and Steel Structures. 3 Units.**

Providing technical support for concrete and steel construction operations on buildings or infrastructure projects. Concrete materials, construction properties of fresh concrete. Resources and operations for batching, transporting, placing, finishing, and curing concrete. Design, fabrication, and use of formwork. Special operations and formwork systems. Detailing, fabricating, erecting, and connecting structural steel. Lifting equipment and lift planning. Welding processes, operations, and quality control. Readings, exercises and course projects.

**CEE 252P. Construction Engineering Practicum. 3 Units.**

Construction engineering is a series of technical activities to meet project objectives related to cost and schedule, safety, quality, and sustainability. These activities include: 1) designing temporary works and construction work processes; 2) providing the required temporary and permanent resources; and 3) integrating activities to consider construction during all project phases and between projects. The objectives of CEE252P are to learn about the technical fundamentals, resources, and field operations required to complete construction engineering activities and to develop a foundation for continued related learning. The course requires reviewing recorded presentations and other online resources, completing queries, participating in class sessions with guest speakers and in field trips, completing group exercises and projects, and preparing an individual final paper. The exercises, completed by all groups, include construction engineering activities for earthwork, concrete construction, and steel erection. Each group will also complete a project to analyze one of the following types of systems or facilities: building electrical systems, lighting systems, HVAC systems, control systems, solar photovoltaic power plant, solar thermal power plant, and wind turbine power plant.

**CEE 252Q. Construction Engineering Fundamentals. 2 Units.**

Construction engineering is a series of technical activities to meet project objectives related to cost and schedule, safety, quality, and sustainability. These activities include: 1) designing temporary works and construction work processes; 2) providing the required temporary and permanent resources; and 3) integrating activities to consider construction during all project phases and between projects. The objectives of CEE 252Q are to learn about the technical fundamentals, resources, and field operations required to complete construction engineering activities and to develop a foundation for continued related learning. The course requires reviewing recorded presentations and other online resources, completing queries, participating in class sessions with guest speakers and in field trips, and completing group exercises and projects. The exercises, completed by all of the student groups, include construction engineering activities for earthwork, concrete construction, and steel erection. Each group will also complete a project to analyze one of the following types of systems or facilities: building electrical systems, lighting systems, HVAC systems, control systems, solar photovoltaic power plant, and wind turbine power plant.

**CEE 255. Introduction to Sensing Networks for CEE. 3-4 Units.**

Introduce the design and implementation of sensor networks for monitoring the built and natural environment. Emphasis on the integration of modern sensor and communication technologies, signal processing and statistical models for network data analysis and interpretation to create practical deployments to enable sustainable systems, in areas such as energy, weather, transportation and buildings. Students will be involved in a practical project that may involve deploying a small sensor system, data models and analysis and signal processing. Limited enrollment.

Same as: CEE 155

**CEE 256. Building Systems. 4 Units.**

HVAC, lighting, and envelope systems for commercial and institutional buildings, with a focus on energy efficient design. Knowledge and skills required in the development of low-energy buildings that provide high quality environment for occupants.

Same as: CEE 156

**CEE 258. Donald R. Watson Seminar in Construction Engineering and Management. 1 Unit.**

Presentations from construction industry leaders. Discussions with speakers from various segments of industry regarding career options. Student groups interact with industry representatives after class.

**CEE 258B. Donald R. Watson Seminar in Construction Engineering and Management. 1 Unit.**

Weekly seminars and field trips focusing on technical aspects of concrete and steel construction. Submission of abstract and paper required.

**CEE 259A. Construction Problems. 1-3 Unit.**

Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies.

Prerequisites: graduate standing in CEM program and consent of instructor.

**CEE 259B. Construction Problems. 1-3 Unit.**

Group-selected problems in construction techniques, equipment, or management; preparation of oral and written reports. Guest specialists from the construction industry. See 299 for individual studies.

Prerequisites: graduate standing in CEM program and consent of instructor.

**CEE 260A. Physical Hydrogeology. 4 Units.**

(Formerly GES 230.) Theory of underground water occurrence and flow, analysis of field data and aquifer tests, geologic groundwater environments, solution of field problems, and groundwater modeling. Introduction to groundwater contaminant transport and unsaturated flow. Lab. Prerequisite: elementary calculus.

Same as: ESS 220

**CEE 260B. Surface and Near-Surface Hydrologic Response. 3 Units.**

Quantitative review of process-based hydrology and geomorphology. Introduction to finite-difference and finite-element methods of numerical analysis. Topics: biometeorology, unsaturated and saturated subsurface fluid flow, overland and open channel flow, and physically-based simulation of coupled surface and near-surface hydrologic response. Links hydrogeology, soil physics, and surface water hydrology.

Same as: GS 237

**CEE 260C. Contaminant Hydrogeology and Reactive Transport. 4 Units.**

For earth scientists and engineers. Environmental, geologic, and water resource problems involving migration of contaminated groundwater through porous media and associated biogeochemical and fluid-rock reactions. Conceptual and quantitative treatment of advective-dispersive transport with reacting solutes. Predictive models of contaminant behavior controlled by local equilibrium and kinetics. Modern methods of contaminant transport simulation and reactive transport modeling using geochemical transport software. Some Matlab programming / program modification required. Prerequisite: Physical Hydrogeology ESS 220 / CEE 260A (Gorelick) or equivalent. Recommended: course work in environmental chemistry or geochemistry (e.g., one or more of the following: ESS 155, ESS 156/256 GS 90, GS 170/279, GS 171, CEE 177 or CEE 270).

Same as: ESS 221, GS 225

**CEE 261. Physics of Wind Energy. 3 Units.**

An introduction to the analysis and modeling of wind energy resources and their extraction. Topics include the physical origins of atmospheric winds; vertical profiles of wind speed and turbulence over land and sea; the wind energy spectrum and its modification by natural topography and built environments; theoretical limits on wind energy extraction by wind turbines and wind farms; modeling of wind turbine aerodynamics and wind farm performance. Final project will focus on development of a new wind energy technology concept. Prerequisites: CEE 262A or ME 351A.

Same as: ME 262

**CEE 262A. Hydrodynamics. 3-4 Units.**

The flow of incompressible viscous fluid; emphasis is on developing an understanding of fluid dynamics that can be applied to environmental flows. Topics: kinematics of fluid flow; equations of mass and momentum conservation (including density variations); some exact solutions to the Navier-Stokes equations; appropriate analysis of fluid flows including Stokes flows, potential flows, and laminar boundary layers; and an introduction to the effects of rotation and stratification through scaling analysis of fluid flows. Prerequisites: 101B or consent of instructor; and some knowledge of vector calculus and differential equations.

**CEE 262B. Transport and Mixing in Surface Water Flows. 3-4 Units.**

Application of fluid mechanics to problems of pollutant transport and mixing in the water environment. Mathematical models of advection, diffusion, and dispersion. Application of theory to problems of transport and mixing in rivers, estuaries, and lakes and reservoirs. Recommended: 262A and CME 102 (formerly ENGR 155A), or equivalents.

**CEE 262C. Modeling Environmental Flows. 3 Units.**

Introduction to numerical methods for modeling surface water flows in rivers, lakes, estuaries and the coastal ocean. Topics include stability and accuracy analysis, curvilinear and unstructured grids, implicit/explicit methods, transport and diffusion, shallow water equations, nonhydrostatic equations, Navier-Stokes solvers, turbulence modeling. Prerequisites: CEE262A, CME206, or equivalent.

**CEE 262D. Introduction to Physical Oceanography. 4 Units.**

The dynamic basis of oceanography. Topics: physical environment; conservation equations for salt, heat, and momentum; geostrophic flows; wind-driven flows; the Gulf Stream; equatorial dynamics and ENSO; thermohaline circulation of the deep oceans; and tides. Prerequisite: PHYSICS 41 (formerly 53).

Same as: CEE 164, EARTHSYS 164, ESS 148

**CEE 262E. Lakes and Reservoirs. 2-3 Units.**

Physics and water quality dynamics in lakes and reservoirs. Implementation of physical and biogeochemical processes in 1-D models. Recommended: 262B.

**CEE 262F. Ocean Waves. 3 Units.**

The fluid mechanics of surface gravity waves in the ocean of relevance to engineers and oceanographers. Topics include irrotational waves, wave dispersion, wave spectra, effects of bathymetry (shoaling), mass transport, effects of viscosity, and mean currents driven by radiation stresses. Prerequisite: CEE 262A or a graduate class in fluid mechanics.

**CEE 263A. Air Pollution Modeling. 3-4 Units.**

The numerical modeling of urban, regional, and global air pollution focusing on gas chemistry and radiative transfer. Stratospheric, free-tropospheric, and urban chemistry. Methods for solving stiff systems of chemical ordinary differential, including the multistep implicit-explicit method, Gear's method with sparse-matrix techniques, and the family method. Numerical methods of solving radiative transfer, coagulation, condensation, and chemical equilibrium problems. Project involves developing a basic chemical ordinary differential equation solver. Prerequisite: CS 106A or equivalent.

**CEE 263B. Numerical Weather Prediction. 3-4 Units.**

Numerical weather prediction. Continuity equations for air and water vapor, the thermodynamic energy equation, and momentum equations derived for the atmosphere. Numerical methods of solving partial differential equations, including finite-difference, finite-element, semi-Lagrangian, and pseudospectral methods. Time-stepping schemes: the forward-Euler, backward-Euler, Crank-Nicolson, Heun, Matsuno, leapfrog, and Adams-Bashforth schemes. Boundary-layer turbulence parameterizations, soil moisture, and cloud modeling. Project developing a basic weather prediction model. Prerequisite: CS 106A or equivalent.

**CEE 263C. Weather and Storms. 3 Units.**

Daily and severe weather and global climate. Topics: structure and composition of the atmosphere, fog and cloud formation, rainfall, local winds, wind energy, global circulation, jet streams, high and low pressure systems, inversions, el Niño, la Niña, atmosphere/ocean interactions, fronts, cyclones, thunderstorms, lightning, tornadoes, hurricanes, pollutant transport, global climate and atmospheric optics.

Same as: CEE 63

**CEE 263D. Air Pollution and Global Warming: History, Science, and Solutions. 3 Units.**

Survey of Survey of air pollution and global warming and their renewable energy solutions. Topics: evolution of the Earth's atmosphere, history of discovery of chemicals in the air, bases and particles in urban smog, visibility, indoor air pollution, acid rain, stratospheric and Antarctic ozone loss, the historic climate record, causes and effects of global warming, impacts of energy systems on pollution and climate, renewable energy solutions to air pollution and global warming. UG Reqs: GER: DBNatSci. Same as: CEE 64

**CEE 263E. International Climate Negotiations: Unpacking the Road to Paris. 3 Units.**

Interested in what's going on with international climate negotiations, why it has proven so difficult to reach a meaningful agreement? Wondering whether or not another UN agreement is even a meaningful part of climate policy in 2015? This course traces the history of climate negotiations from the very first awareness of the problem of climate change, through the Kyoto Protocol and Copenhagen Accord, to the current state of international negotiations in the lead-up to the 21st Conference of the Parties meeting in Paris in December 2015. The course covers fundamental concepts in climate change science and policy, international law and multilateral environmental agreements, as well as key issues of climate finance, climate justice, equity, adaptation, communication, and social movements that together comprise the subjects of debate in the negotiations. We will discuss all the key facets of what's being negotiated in Paris and prepare students to follow the outcome of the negotiation in detail. Students also participate in a three-day mock conference of the parties. By application only. Same as: CEE 163E, EARTHSYS 163E, EARTHSYS 263E

**CEE 263F. Groundwork for COP21. 1 Unit.**

This course will prepare undergraduate and cotermin students to observe the climate change negotiations (COP 21) in Paris in November/December 2015. Students will develop individual projects to be carried out before and during the negotiation session and be paired with mentors. Please note: Along with EARTHSYS 163E/CEE 163E, this course is part of the required two-course-set in which undergraduate and co-terminal masters degree students must enroll to receive accreditation to the climate negotiations.

Same as: CEE 163F, EARTHSYS 163F, EARTHSYS 263F

**CEE 263S. Atmosphere/Energy Seminar. 1 Unit.**

Interdisciplinary seminar with talks by researchers and practitioners in the fields of atmospheric science and renewable energy engineering. Addresses the causes of climate, air pollution, and weather problems and methods of addressing these problems through renewable and efficient energy systems. May be repeated for credit.

**CEE 264. Sediment Transport Modeling. 3 Units.**

Mechanics of sediment transport in rivers, estuaries and coastal oceans, with an emphasis on development of models and application of three-dimensional software tools. Topics include bottom boundary layers in steady and wave-driven flows, bedform dynamics, suspended and bedload transport, cohesive sediments. Prerequisites: CEE262A or consent of instructor.

**CEE 264A. Rivers, Streams, and Canals. 3-4 Units.**

Introduction to the movement of water through natural and engineered channels, streams, and rivers. Basic equations and theory (mass, momentum, and energy equations) for steady and unsteady descriptions of the flow. Application of theory to the design of flood-control and canal systems. Flow controls such as weirs and sluice gates; gradually varied flow; Saint-Venant equations and flood waves; and method of characteristics. Open channel flow laboratory experiments: controls such as weirs and gates, gradually varied flow, and waves. Limited enrollment in lab section. Prerequisite: CEE 101B.

Same as: CEE 161A

**CEE 265A. Sustainable Water Resources Development. 3 Units.**

Alternative criteria for judging the sustainability of projects. Application of criteria to evaluate sustainability of water resources projects in several countries. Case studies illustrate the role of political, social, economic, and environmental factors in decision making. Influence of international aid agencies and NGOs on water projects. Evaluation of benefit-cost analysis and environmental impact assessment as techniques for enhancing the sustainability of future projects. Limited enrollment. Prerequisite: graduate standing in Environmental and Water Studies, or consent of instructor.

**CEE 265C. Water Resources Management. 3 Units.**

Examination of the basic principles of surface and ground water resources management in the context of increasing water scarcity and uncertainty due to climate change and other factors. Specific topics include reservoir, river basin and aquifer management, conjunctive use of surface and ground water, and treated wastewater reuse. Special emphasis is placed on demand management through conservation, increased water use efficiency and economic measures. Besides the technical aspects of water management, an overview of its legal and institutional framework is provided.

Same as: CEE 165C

**CEE 265D. Water and Sanitation in Developing Countries. 1-3 Unit.**

Economic, social, political, and technical aspects of sustainable water supply and sanitation service provision in developing countries. Service pricing, alternative institutional structures including privatization, and the role of consumer demand and community participation in the planning process. Environmental and public health considerations, and strategies for serving low-income households. Limited enrollment. Prerequisite: consent of instructor, see [jennadavis.stanford.edu](http://jennadavis.stanford.edu) for application.

**CEE 266A. Watersheds and Wetlands. 3 Units.**

Introduction to the occurrence and movement of water in the natural environment and its role in creating and maintaining terrestrial, wetland, and aquatic habitat. Hydrologic processes, including precipitation, evaporation, transpiration, snowmelt, infiltration, subsurface flow, runoff, and streamflow. Rivers and lakes, springs and swamps. Emphasis is on observation and measurement, data analysis, modeling, and prediction. Prerequisite: 101B or equivalent. (Freyberg).

Same as: CEE 166A

**CEE 266B. Floods and Droughts, Dams and Aqueducts. 3 Units.**

Sociotechnical systems associated with human use of water as a resource and the hazards posed by too much or too little water. Potable and non-potable water use and conservation. Irrigation, hydroelectric power generation, rural and urban water supply systems, storm water management, flood damage mitigation, and water law and institutions. Emphasis is on engineering design. Prerequisite: 166A or equivalent. (Freyberg).

Same as: CEE 166B

**CEE 266D. Water Resources and Water Hazards Field Trips. 2 Units.**

Introduction to water use and water hazards via weekly field trips to local and regional water resources facilities (dams, reservoirs, fish ladders and hatcheries, pumping plants, aqueducts, hydropower plants, and irrigation systems) and flood damage mitigation facilities (storm water detention ponds, channel modifications, flood control dams, and reservoirs). Each trip preceded by an orientation lecture.

Same as: CEE 166D

**CEE 268. Groundwater Flow. 3-4 Units.**

Flow and mass transport in porous media. Applications of potential flow theory and numerical modeling methods to practical groundwater problems: flow to and from wells, rivers, lakes, drainage ditches; flow through and under dams; streamline tracing; capture zones of wells; and mixing schemes for in-situ remediation. Prerequisites: calculus and introductory fluid mechanics.

**CEE 269A. Environmental Fluid Mechanics and Hydrology Seminar. 1 Unit.**

Problems in all branches of water resources. Talks by visitors, faculty, and students. May be repeated two times for credit.

**CEE 269B. Environmental Fluid Mechanics and Hydrology Seminar. 1 Unit.**

Problems in all branches of water resources. Talks by visitors, faculty, and students. May be repeated two times for credit.

**CEE 269C. Environmental Fluid Mechanics and Hydrology. 1 Unit.**

Problems in all branches of water resources. Talks by visitors, faculty, and students. May be repeated two times for credit.

**CEE 270. Movement and Fate of Organic Contaminants in Waters. 3 Units.**

Transport of chemical constituents in surface and groundwater including advection, dispersion, sorption, interphase mass transfer, and transformation; impacts on water quality. Emphasis is on physicochemical processes and the behavior of hazardous waste contaminants. Prerequisites: undergraduate chemistry and calculus. Recommended: 101B.

**CEE 270B. Environmental Organic Reaction Chemistry. 2-3 Units.**

With over 70,000 chemicals now in production worldwide, predicting their fate in the environment is a difficult task. The course focuses on developing two key skills. First, students should develop the ability to derive mass balance equations used to quantify the fate of chemicals in the environment. With so many chemicals having been introduced in the past ~60 years, many of the key parameters needed for mass balance models have not been measured experimentally. The class builds on CEE 270, which developed methods of predicting equilibrium partitioning coefficients. For many situations involving reactions of target contaminants, equilibrium is not attained. The course develops methods of predicting the reactivity of chemicals based upon their chemical structures both qualitatively and quantitatively. Natural reaction processes covered include acid-base speciation, nucleophilic substitution, oxidation/reduction reactions, and photochemical reactions. Key treatment reactions (ozone, UV treatment and advanced oxidation) are also covered. Prerequisites: CEE 270, Chem 31B/X.

**CEE 271A. Physical and Chemical Treatment Processes. 3 Units.**

Physical and chemical unit operations for water treatment, emphasizing process combinations for drinking water supply. Application of the principles of chemistry, rate processes, fluid dynamics, and process engineering to define and solve water treatment problems by flocculation, sedimentation, filtration, disinfection, oxidation, aeration, and adsorption. Investigative paper on water supply and treatment. Prerequisites: 101B, 270. Recommended: 273.

**CEE 271B. Environmental Biotechnology. 4 Units.**

Stoichiometry, kinetics, and thermodynamics of microbial processes for the transformation of environmental contaminants. Design of dispersed growth and biofilm-based processes. Applications include treatment of municipal and industrial waste waters, detoxification of hazardous chemicals, and groundwater remediation. Prerequisites: 270; 177 or 274A or equivalents.

**CEE 271D. Introduction to Wastewater Treatment Process Modeling. 2 Units.**

The course will present a structured protocol for simulator application comprising project definition, data collection and reconciliation, model set-up, calibration and validation, and simulation and result interpretation. This course will include a series of guided simulation exercises evaluating resource consumption (e.g., electrical energy, natural gas, chemicals) and resource recovery (e.g., biogas, struvite, biosolids, recycled water) from a variety of treatment plant configurations. Coursework for all students will comprise guided simulation exercises begun in class. Students may elect to take the course for 2 units by completing a group project evaluating an assigned plant configuration and presenting the results before the class.

**CEE 271F. New Indicators of Well-Being and Sustainability. 3 Units.**

Explore new ways to better measure human development, comprehensive wealth and sustainability beyond standard economic indicators such as income and GDP. Examine how new indicators shape global, national and local policy worldwide. Well-being topics include health, happiness, trust, inequality and governance. Sustainability topics include sustainable development, environmental performance indicators, material flow analysis and decoupling, and inclusive wealth indicators. Students will build their own indicator of well-being and sustainability for a term paper. Same as: CEE 171F

**CEE 271M. Transport Phenomena: Momentum, heat and mass transport. 3 Units.**

Heat, mass and momentum transfer theory from the viewpoint of basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory. Prerequisites: fluid mechanics, ordinary differential equations. Same as: CEE 371M

**CEE 272. Coastal Contaminants. 3-4 Units.**

Coastal pollution and its effects on ecosystems and human health. The sources, fate, and transport of human pathogens and nutrients. Background on coastal ecosystems and coastal transport phenomena including tides, waves, and cross shelf transport. Introduction to time series analysis with MATLAB. Undergraduates require consent of instructor.

**CEE 272R. Modern Power Systems Engineering. 3 Units.**

Focus is on Power Engineering from a systems point of view. Topics covered may include modeling of generation, transmission and distribution systems, load flow analysis, transient and steady-state stability analysis. Special emphasis given to modern market operations and dispatch, modeling intermittent controllable power sources, storage technologies, mechanisms for demand response, sensing the grid and the role of market mechanisms for deep integration. Course content may vary year to year.

**CEE 272S. Green House Gas Mitigation. 1-3 Unit.**

This course will introduce the main concepts of greenhouse gas (GHG) emissions measurement and management, and it will explore the main mitigation options for reducing emissions or sequestering carbon dioxide. It will address technical aspects of GHG mitigation via energy efficiency and demand-side management, energy in high-technology industry, distributed power and co-generation, the role of renewable energy in GHG management, carbon sequestration in forestry, agriculture, and geological formations. The course explores policy options, carbon trading and business strategies for GHG mitigation. Same as: CEE 172S

**CEE 272T. SmartGrids and Advanced Power Systems Seminar. 1-2 Unit.**

A series of seminar and lectures focused on power engineering. Renowned researchers from universities and national labs will deliver bi-weekly seminars on the state of the art of power system engineering. Seminar topics may include: power system analysis and simulation, control and stability, new market mechanisms, computation challenges and solutions, detection and estimation, and the role of communications in the grid. The instructors will cover relevant background materials in the in-between weeks. The seminars are planned to continue throughout the next academic year, so the course may be repeated for credit. Same as: EE 292T

**CEE 273. Aquatic Chemistry. 3 Units.**

Chemical principles and their application to the analysis and solution of problems in aqueous geochemistry (temperatures near 25° C and atmospheric pressure). Emphasis is on natural water systems and the solution of specific chemical problems in water purification technology and water pollution control. Prerequisites: CHEM 31 and 33, or equivalents.

**CEE 273A. Water Chemistry Laboratory. 3 Units.**

(Graduate students register for 273A.) Laboratory application of techniques for the analysis of natural and contaminated waters, emphasizing instrumental techniques. Same as: CEE 179A

**CEE 273C. Environmental Engineering Applications of Membrane Technology. 3 Units.**

Introduction to membrane technology and processes with applications in R&D, water/wastewater treatment, and renewable energy. Membrane separation principles, reverse osmosis, nanofiltration, membrane characterization techniques, mass transport phenomena, fouling processes, rejection of salts and trace organics, brine disposal system design, energy and cost considerations, and pre- and post-treatment procedures. Case studies in environmental sustainability issues related to full scale treatment engineering. Same as: CEE 173C

**CEE 273D. Wastewater Treatment Process Simulators and Their Use for Emerging Technologies. 2 Units.**

Process simulators are used widely for analysis and design of municipal and industrial wastewater treatment facilities. The current generation of simulators integrates biological, chemical, and physical process models that enable steady-state and dynamic "whole plant" simulation of liquid and solids treatment process performance. This course reinforces the concepts presented in CEE 271A, CEE 271B, and CEE 273 and shows how these concepts are applied to analyze and design treatment systems for BOD removal, energy recovery, phosphorus removal and recovery, and nitrogen removal using BioWin TM 4, a commercially-available software package. A process-specific model for anaerobic treatment of domestic wastewater will also be developed for the new Staged Anaerobic Fluidized Membrane Bioreactor (SAF-MBR) based on the International Water Association (IWA) Anaerobic Digester Model No. 1 (ADM1) and implemented using the simulation software Aquasim.

**CEE 273E. Climate Change & Ecosystem Conservation. 2 Units.**

Examination of social and ecological effects of climate change on ecosystems and recommendations on conservation and management practices. Focus on broad-scale climate/forest interactions and the emergence of novel plant communities, change in species ranges, and climate-induced die-off. Explores ecological thresholds and vulnerabilities caused by drought, fog pattern changes, snow-cover loss, and secondary factors and implications of these emerging dynamics in the human dimension. Same as: CEE 173E, ESS 173E

**CEE 274A. Environmental Microbiology I. 3 Units.**

Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33, 35, and BIOSCI 41, CHEMENG 181 (formerly 188), or equivalents. Same as: CHEMENG 174, CHEMENG 274

**CEE 274B. Microbial Bioenergy Systems. 3 Units.**

Introduction to microbial metabolic pathways and to the pathway logic with a special focus on microbial bioenergy systems. The first part of the course emphasizes the metabolic and biochemical principles of pathways, whereas the second part is more specifically directed toward using this knowledge to understand existing systems and to design innovative microbial bioenergy systems for biofuel, biorefinery, and environmental applications. There also is an emphasis on the implications of rerouting of energy and reducing equivalents for the fitness and ecology of the organism. Prerequisites: CHEMENG 174 or 181 and organic chemistry, or equivalents. Same as: CHEMENG 456

**CEE 274D. Pathogens and Disinfection. 3 Units.**

Introduction to epidemiology, major pathogens and infectious diseases, the immune system, movement and survival of pathogens in the environment, transfer of virulence and antibiotic resistance genes, and pathogen control, with an emphasis on public health engineering measures (disinfection). Prerequisite: 274A.

**CEE 274P. Environmental Health Microbiology Lab. 3-4 Units.**

Microbiology skills including culture-, microscope-, and molecular-based detection techniques. Focus is on standard and EPA-approved methods to enumerate and isolate organisms used to assess risk of enteric illnesses, such as coliforms, enterococci, and coliphage, in drinking and recreational waters including lakes, streams, and coastal waters. Student project to assess the microbial water quality of a natural water. Limited enrollment; priority to CEE graduate students. An application form must be filed and approved before admission to the class.

**CEE 274S. Hopkins Microbiology Course. 3-12 Units.**

(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A and CEE 274B, or equivalents. Same as: BIO 274S, BIOHOPK 274, ESS 253S

**CEE 275A. California Coast: Science, Policy, and Law. 3-4 Units.**

Same as LAW 514. Interdisciplinary. The legal, science, and policy dimensions of managing California's coastal resources. Coastal land use and marine resource decision making. The physics, chemistry, and biology of the coastal zone, tools for exploring data from the coastal ocean, and the institutional framework that shapes public and private decision making. Primarily for graduate students; upper-level undergraduates may enroll with permission of instructor. Students will be expected to participate in field trips. Same as: CEE 175A, EARTHSYS 175, EARTHSYS 275

**CEE 275B. Process Design for Environmental Biotechnology. 3 Units.**

Use of microbial bioreactors for degradation of contaminants and recovery of clean water, clean energy and/or green materials. Student teams design, operate, and analyze bioreactors and learn to write consulting style reports. Limited enrollment. Prerequisites: 271B.

**CEE 275C. Water, Sanitation and Health. 1-4 Unit.**

Students acquire basic knowledge to participate in a dialogue on water, sanitation and health issues in developing and developed countries. The focus is on enteric pathogenic pollutants. Material includes: Important pathogens, their modes of transmission and the diseases they cause, their fate and transport in the environment, and the means by which they are measured; statistical methods for processing and interpreting waterborne pollutant concentrations, and interpreting data from epidemiology studies; microbial source tracking; epidemiology and quantitative microbial risk assessment; reduction of pathogens in water and sludge; and non-experimental water, sanitation, and hygiene research. Several laboratory sessions will allow students to measure indicator bacteria and viruses using culture-based techniques and expose students to molecular methods for measuring health-relevant targets in water.

**CEE 275K. The Practice of Environmental Consulting. 2 Units.**

Class consists of eight interactive two-hour seminars with discussions, and will cover the evolution of the environmental consulting business, strategic choices and alternative business models for private and public firms, a review of the key operational issues in managing firm, organizational strategies, knowledge management and innovation, and ethical issues in providing professional services. Case studies will be used to illustrate key concepts. Selected reading materials drawn from the technical and business literature on the consulting business. Student groups will prepare and present an abbreviated business plan for an environmental based business. Enrollment limited to CEE MS and PHD students.

**CEE 275P. Persuasive Communication for Environmental Scientists, Practitioners, and Entrepreneurs. 1 Unit.**

Achieving environmental goals depends not only on innovative ideas and great science but also persuasive communication. What makes communication persuasive? The ability of the communicator to create value for his or her audience. This course will teach students how to: 1) focus on their audience and 2) create value for their audience using research-proven communication techniques. Students will master these techniques through oral and written exercises so that, after taking this course, they will speak and write more persuasively. Same as: CEE 175P

**CEE 275S. Environmental Entrepreneurship and Innovation. 2 Units.**

Our current infrastructure for provision of critical services-clean water, energy, transportation, environmental protection; requires substantial upgrades. As a complement to the scientific and engineering innovations taking place in the environmental field, this course emphasizes the analysis of economic factors and value propositions that align value chain stakeholder interests. Same as: CEE 175S

**CEE 276. Introduction to Human Exposure Analysis. 3 Units.**

(Graduate students register for 276.) Scientific and engineering issues involved in quantifying human exposure to toxic chemicals in the environment. Pollutant behavior, inhalation exposure, dermal exposure, and assessment tools. Overview of the complexities, uncertainties, and physical, chemical, and biological issues relevant to risk assessment. Lab projects. Recommended: MATH 51. Apply at first class for admission. Same as: CEE 178

**CEE 276C. Energy Storage Integration - Vehicles, Renewables, and the Grid. 3 Units.**

This course will provide in-depth introduction to existing energy storage solutions being used on the electric grid and in vehicles with a primary focus on batteries and electrochemical storage. We will discuss the operating characteristics, cost and efficiency of these technologies and how tradeoff decisions can be made. Special attention will be given to system-level integration of new storage technologies, including chargers, inverters, battery management systems and controls, into the existing vehicle and grid infrastructure. Further investigations include issues relating to integration of electric vehicle charging with demand-side management, scheduled renewable energy absorption and local grid balancing. Class format involves regular guest lectures, required lab participation, and field trips to relevant sites. Enrollment is limited; if you are interested in taking the course, please fill out a brief questionnaire at <http://goo.gl/forms/i3YH91Qx05n> Please contact [jtaggart@stanford.edu](mailto:jtaggart@stanford.edu) with any questions regarding the application or course information. Same as: CEE 176C

**CEE 276G. Sustainability Design Thinking. 3 Units.**

Application design thinking to make sustainability compelling, impactful and realizable. Analysis of contextual, functional and human-centered design thinking techniques to promote sustainable design of products and environments by holistically considering space, form, environment, energy, economics, and health. Includes Studio project work in prototyping, modeling, testing, and realizing sustainable design ideas. Same as: CEE 176G

**CEE 277C. Environmental Governance. 3 Units.**

This interdisciplinary course presents an overview of environmental governance through an examination of how and why societies manage the relationships between human beings and the natural world. By comparing regulatory, community-based, and incentive-based environmental management systems, we address why certain environmental problems are managed as they are, and what approaches to environmental management are more (or less) successful. Designed for graduate students and upper-level undergraduates with some exposure to both the natural sciences (ecology/environmental chemistry), and the social sciences (anthropology, economics, political science, or sociology). A pre-course incoming survey is required. Same as: ENVRES 250

**CEE 277D. Water, Health & Development in Africa. 1 Unit.**

Graduate seminar focused on emerging research in the areas of water supply, sanitation, hygiene and health in developing countries. Limited enrollment; instructor permission required.

**CEE 277F. Advanced Field Methods in Water, Health and Development. 1-10 Unit.**

Field methods for assessing household stored water quality, hand contamination, behaviors, and knowledge related to water, sanitation and health. Limited enrollment. Instructor consent required.

**CEE 277L. Smart Cities & Communities. 2 Units.**

The role of information technology (IT) in enabling mankind to improve the operations and sustainability of cities and communities. Review of what a "smarter" city of community might be, the role of IT in enabling them to become "smarter" (including what IT cannot achieve). Case studies on water, energy, transportation urban design and resilience. Same as: CEE 177L

**CEE 277M. Smart Cities & Communities II. 2 Units.**

Building on CEE 177L the class expands on, and examines more deeply, the smart cities and communities topics explored there. Co-requisite: concurrent registration in CEE 177L. Same as: CEE 177M

**CEE 277S. Design for a Sustainable World. 1-5 Unit.**

Technology-based problems faced by developing communities worldwide. Student groups partner with organizations abroad to work on concept, feasibility, design, implementation, and evaluation phases of various projects. Past projects include a water and health initiative, a green school design, seismic safety, and medical device. Admission based on written application and interview. See <http://esw.stanford.edu> for application. (Staff). Same as: CEE 177S

**CEE 277X. Current Topics in Sustainable Engineering. 1-3 Unit.**

This course is the first half of a two quarter, project-based design course that addresses the cultural, political, organizational, technical, and business issues at the heart of implementing sustainable engineering projects in the developing world. Students will be placed into one of three project teams and tackle a real-world design challenge in partnership with social entrepreneurs and NGOs. In CEE 177X/277X, students will gain the background skills and context necessary to effectively design engineering projects in developing nations. Instructor consent required. Same as: CEE 177X

**CEE 278A. Air Pollution Fundamentals. 3 Units.**

The sources and health effects of gaseous and particulate air pollutants. The influence of meteorology on pollution: temperature profiles, stability classes, inversion layers, turbulence. Atmospheric diffusion equations, downwind dispersion of emissions from point and line sources. Removal of air pollutants via settling, diffusion, coagulation, precipitation. Mechanisms for ozone formation, in the troposphere versus in the stratosphere. Effects of airborne particle size and composition on light scattering/absorption, and on visual range. Prerequisites: MATH 51 or equivalent. Recommended: 101B, CHEM 31A, or equivalents.

**CEE 278C. Indoor Air Quality. 2-3 Units.**

Factors affecting the levels of air pollutants in the built indoor environment. The influence of ventilation, office equipment, floor coverings, furnishings, cleaning practices, and human activities on air quality including carbon dioxide, VOCs, resuspended dust, and airborne molds and fungi. Limited enrollment, preference to CEE students. Prerequisites: Math 42 or 21 and CEE 70, or equivalents. Same as: CEE 172A

**CEE 279. Environmental Engineering Seminar. 1 Unit.**

Current research, practice, and thinking in environmental engineering and science. Attendance at seminars is self-directed, the 20 hours of required seminar attendance may be accrued throughout the school year. Must prepare a publication synopsis, and maintain log of seminar attendance. See Aut Qtr CEE 279 syllabus for details on course requirements. Contact [hildemann@stanford.edu](mailto:hildemann@stanford.edu) to be added to Coursework website.

**CEE 279S. Seminar: Issues in Environmental Science, Technology and Sustainability. 1-2 Unit.**

Invited faculty, researchers and professionals share their insights and perspectives on a broad range of environmental and sustainability issues. Students critique seminar presentations and associated readings. Same as: CEE 179S, EARTHSYS 179S, ESS 179S

**CEE 279W. Innovation in Water Sector. 1 Unit.**

A project class on the diffusion of ReNUWIt technologies into practice (David Sedlak is the overall course lead at UC Berkeley, Chris Higgins is the lead at Colorado School of Mines, and Dick Luthy is the lead at Stanford). Specifically, the class will examine the pathway through which ReNUWIt's engineered wetland technologies will be adopted by utilities and consultants beyond our current group of industrial partners. We will work together to prepare background information that will be used in a 2-day workshop involving ReNUWIt researchers, utility leaders and technical experts in early 2015.

**CEE 279X. Sustainable Urban System Seminar. 1 Unit.**

SYSTEM OF SYSTEMS: Cities are based on several different systems; infrastructures, networks and environments. The effectiveness and efficiency of these systems determine how cities work and how successful a city is at delivering critical services. These systems are not discrete and must be considered holistically as well as individually. These core systems are interconnected and must be treated as such. Understanding one system and making it work better means that cities must comprehend the larger context and how the various systems are interconnected. This seminar series will explore various aspects of these critical systems and how we can make them more resilient and robust, to meet future challenges. Guest speakers, discussion and critical readings. Same as: CEE 179X

**CEE 280. Advanced Structural Analysis. 3-4 Units.**

Theoretical development and computer implementation of direct stiffness method of structural analysis; virtual work principles; computation of element stiffness matrices and load vectors; direct assembly procedures; equation solution techniques. Analysis of two- and three-dimensional truss and frame structures, thermal loads, and substructuring and condensation techniques for large systems. Practical modeling techniques and programming assignments. Introduction to nonlinear analysis concepts. Prerequisites: elementary structural analysis and matrix algebra.

**CEE 281. Mechanics and Finite Elements. 3 Units.**

Fluid conduction and solid deformation; conservation laws: balance of mass and balance of momentum; generalized Darcy's law and Hooke's law in 3D; the use of tensors in mechanics; finite element formulation of boundary-value problems; variational equations and Galerkin approximations; basic shape functions, numerical integration, and assembly operations.

**CEE 282. Nonlinear Structural Analysis. 3-4 Units.**

Introduction to methods of geometric and material nonlinear analysis, emphasizing modeling approaches for framed structures. Large-displacement analysis, concentrated and distributed plasticity models, and nonlinear solution methods. Applications to frame stability and performance-based seismic design. Assignments emphasize computer implementation and applications. Prerequisites: 280 and an advanced course in structural behavior (e.g., 285A, 285B or equivalent).

**CEE 283. Structural Dynamics. 3-4 Units.**

Vibrations and dynamic response of simple structures under time dependent loads; dynamic analysis of single and multiple degrees of freedom systems; support motion; response spectra.

**CEE 284. Finite Element Methods in Structural Dynamics. 3-4 Units.**

Computational methods for structural dynamics analysis of discrete and continuous systems in free and forced vibration; finite element formulation; modal analysis; numerical methods; introduction to nonlinear dynamics; advanced topics. Prerequisites: 280, 283.

**CEE 285A. Advanced Structural Concrete Behavior and Design. 3-4 Units.**

Behavior and design of reinforced and prestressed concrete for building and bridge design. Topics will include flexural behavior, prestressed concrete design, and two-way slab design & analysis, among others.

**CEE 285B. Advanced Structural Steel Behavior and Design. 3-4 Units.**

Advanced topics in structural steel design. Topics include composite floor systems; bolted and welded connections; beam-column connections; innovative lateral load resisting systems. As part of this course students design a 15-story steel building. Prerequisite: basic course in structural steel design CEE181 or equivalent.

**CEE 287. Earthquake Resistant Design and Construction. 3-4 Units.**

Evaluation, design, and construction of structures in seismic regions. Factors influencing earthquake ground motions, design spectra, design of linear and nonlinear single- and multiple-degree-of-freedom-system structures, force-based and displacement-based design methods, capacity design, detailing and construction of steel and reinforced concrete structures, introduction to performance-based design, seismic isolation, and energy dissipation. Prerequisites: 283 and either 285A or 285B.

**CEE 288. Introduction to Performance Based Earthquake Engineering. 3-4 Units.**

Earthquake phenomena, faulting, ground motion, earthquake hazard formulation, effects of earthquakes on manmade structures, response spectra, Fourier spectra, soil effects on ground motion and structural damage, methods for structural damage evaluation, and formulation of the performance-based earthquake engineering problems. Prerequisites: 203, 283.

**CEE 289. Random Vibrations. 3-4 Units.**

Introduction to random processes. Correlation and power spectral density functions. Stochastic dynamic analysis of multi-degree-of-freedom structures subjected to stationary and non-stationary random excitations. Crossing rates, first-exursion probability, and distributions of peaks and extremes. Applications in earthquake, wind, and ocean engineering. Prerequisite: 203 or equivalent.

**CEE 290. Structural Performance and Failures. 2 Units.**

Basic concepts in the definition of satisfactory structural performance; key elements in structural performance; types of failures, ranging from reduced serviceability to total collapse; failure sources and their root cause allocation, emphasizing design/construction process failures; failure prevention mechanisms; illustration with real life examples.

**CEE 291. Solid Mechanics. 3 Units.**

Introduction to vectors and tensors; kinematics, deformation, forces, and stress concept of continua and structures; balance principles; aspects of objectivity; hyperelastic materials; thermodynamics of materials; variational principles; applications to structural engineering.

**CEE 292. Computational Micromechanics. 3 Units.**

Thermodynamics of general internal variable formulations of inelasticity; 1D and 3D material models at small strains (nonlinear elasticity, viscoelasticity, plasticity, damage); development of efficient algorithms and finite element implementations; micromechanical based crystal plasticity models; review of nonlinear continuum mechanics; micromechanical based finite deformation rubber elasticity models; introduction to homogenization methods and micro-macro transitions. Prerequisite: CEE 281 or equivalent.

**CEE 293. Foundations and Earth Structures. 3 Units.**

Types, characteristics, analysis, and design of shallow and deep foundations; rigid and flexible retaining walls; braced excavations; settlement of footings in sands and clays; slope stability analysis by method of slices including search algorithms for the critical slip surface. Prerequisite: 101C or equivalent.

**CEE 294. Computational Poromechanics. 3 Units.**

Continuum and finite element formulations of steady-state and transient fluid conduction problems on geomechanics; elliptic, parabolic, and hyperbolic systems; variational inequality and free-boundary problems; three-dimensional consolidation theory; undrained condition, mesh locking, B-bar and strain projection methods; finite element formulations of multiphase dynamic problems. Computing assignments. Prerequisite: CEE 281 or equivalent.

**CEE 295. Plasticity Modeling and Computation. 3 Units.**

Rate-independent elastoplasticity; classical plasticity models for metals and cohesive-frictional materials; cap plasticity models for porous materials; return-mapping algorithm; shear bands, faults, and other discontinuities; Lagrange multipliers, penalty and augmented Lagrangian methods for frictional contact; multiscale techniques: extended finite element and strong discontinuity methods; fault rupture dynamics with bulk plasticity. Prerequisite: CEE 281 or equivalent.

**CEE 297M. Managing Critical Infrastructure. 2 Units.**

Safe and effective performance of infrastructure systems is critical to our economy, quality of life and safety. This course will present topics associated with risk analysis and management of critical civil infrastructure systems, tolerable risk and community resilience. Methods of risk analysis including systems analysis, reliability analysis, expert elicitation and systems analysis for spatially distributed infrastructure systems will be presented. Aspects of seismic and flood risk analysis will also be discussed. Case histories and lessons learned from Hurricane Katrina, Tohoku earthquake, among others will be presented. The evolution of change in the risk management of civil infrastructure systems; how they are analyzed, designed and operated is discussed. Guest speakers. Student presentations. (Prerequisite: CEE 203 or equivalent).

**CEE 297R. Structural Geology and Rock Mechanics. 4 Units.**

Quantitative field and laboratory data integrated with solutions to boundary value problems of continuum mechanics to understand tectonic processes in Earth's crust that lead to the development of geological structures including folds, faults, fractures and fabrics. Topics include: techniques and tools for structural mapping; differential geometry to characterize structures; dimensional analysis and scaling relations; kinematics of deformation and flow; traction and stress analysis, conservation of mass and momentum in a deformable continuum; linear elastic deformation and elastic properties; brittle deformation including fracture and faulting; model development and methodology. Data sets analyzed using MATLAB. Prerequisites: GS 1, MATH 53, MATLAB or equivalent. Same as: GEOPHYS 251, GS 215

**CEE 298. Structural Engineering and Geomechanics Seminar. 1 Unit.**

Recommended for all graduate students. Lectures on topics of current interest in professional practice and research.

**CEE 299. Independent Study in Civil Engineering for CEE-MS Students. 1-5 Unit.**

Directed study for CEE-MS students on subjects of mutual interest to students and faculty. Student must obtain faculty sponsor.

**CEE 299L. Independent Project in Civil and Environmental Engineering. 1-4 Unit.**

Prerequisite: Consent of Instructor.

**CEE 299S. Independent Project in Civil and Environmental Engineering. 1-4 Unit.**

Prerequisite: consent of instructor.

**CEE 300. Thesis. 1-15 Unit.**

Research by Engineer candidates. Same as: Engineer Degree

**CEE 301. The Energy Seminar. 1 Unit.**

Interdisciplinary exploration of current energy challenges and opportunities, with talks by faculty, visitors, and students. May be repeated for credit. Same as: ENERGY 301, MS&E 494

**CEE 305. Damage and Failure Mechanics of Structural Systems. 3-4 Units.**

Examine the mechanics and failure mechanisms of structural deterioration mechanisms and hazards. Overview of fracture mechanics concepts as a general basis for analyzing brittle failure modes in steel and concrete structures. Analysis and design theory for corrosion, fatigue, fire and other damage mechanisms in steel and concrete structures. New methods for mitigation of these failure modes and hazards will be introduced, including new construction materials, structural designs and protection methods.

**CEE 306. Computational Fracture Mechanics. 3 Units.**

Brief review continuum mechanics; energy principles of mechanics; introduction to fracture mechanics; constrained problems; advanced finite element concepts like mixed, assumed, and enhanced strain methods; computational fracture strategies like cohesive finite elements, embedded and extended finite element methods. Prerequisite: CEE 281 or equivalent.

**CEE 316. Sustainable Built Environment Research. 3 Units.**

Intended for early stage Ph.D. students in Sustainable Design and Construction (SDC). Covers dominant methodological approaches at the intersection of engineering, social management science and computer science. Overviews an array of methods available for research, focusing on methods commonly used in SDC. Publications using various methods will be analyzed, and journal review processes will be discussed. Major deliverable is research proposal using one or more of the methods discussed. Students will gain familiarity with the array of methods available for SDC research, know how to apply the methods in their own research area, and receive guidance on publishing their research in scientific journals.

**CEE 320. Integrated Facility Engineering. 1 Unit.**

Individual and group presentations on goals, research, and state-of-practice of virtual design and construction in support of integrated facility engineering, including objectives for the application and further development of virtual design and construction technologies. May be repeated for credit.

**CEE 322. Data Analytics for Urban Systems. 3 Units.**

TBA.

**CEE 323A. Infrastructure Finance and Governance. 1 Unit.**

Presentation and discussion of early stage or more mature research on a variety of topics related to financing, governance and sustainability of civil infrastructure projects by researchers associated with the Global Projects Center and visiting speakers. To obtain one unit of credit, students must attend and participate in all seminars, with up to two excused absences. Seminar meets weekly during Autumn, Winter and Spring Quarters.

**CEE 323B. Infrastructure Finance and Governance. 1 Unit.**

Presentation and discussion of early stage or more mature research on a variety of topics related to financing, governance and sustainability of civil infrastructure projects by researchers associated with the Global Projects Center and visiting speakers. To obtain one unit of credit, students must attend and participate in all seminars, with up to two excused absences. Seminar meets weekly during Autumn, Winter, and Spring quarters.

**CEE 323C. Infrastructure Finance and Governance. 1 Unit.**

Presentation and discussion of early stage or more mature research on a variety of topics related to financing, governance and sustainability of civil infrastructure projects by researchers associated with the Global Projects Center and visiting speakers. To obtain one unit of credit, students must attend and participate in all seminars, with up to two excused absences. Seminar meets weekly during Autumn, Winter and Spring Quarters.

**CEE 328A. Multidisciplinary Design and Simulation of Building Envelopes. 3 Units.**

Curtain walls are a manufactured product ubiquitous in the world of architecture and engineering that must meet structural, thermal, acoustic, environmental, and economic performance requirements. This course focuses on design strategies for building envelopes and explores new design approaches including parametric 3D modeling, simulation, and Multidisciplinary Design Optimization (MDO) methods that leverage computation to augment human abilities to identify novel, high performing solutions. Prerequisite: CEE 220A or equivalent. Limited to 16 students.

**CEE 361. Turbulence Modeling for Environmental Fluid Mechanics. 2-4 Units.**

An introduction to turbulence and its modeling, including Reynolds-averaged and large-eddy simulation models. Derivation of closure approximations and models. Impact of numerical code truncation error on turbulence model value and accuracy. Discussion of typical models and their applications to turbulent flows in rivers, estuaries, the coastal ocean and the atmospheric boundary layer (e.g., wind turbines and weather models). Prerequisites: knowledge of hydrodynamics or atmosphere dynamics and the basics of transport and mixing in the environment; consent of instructor.

**CEE 362. Numerical Modeling of Subsurface Processes. 3-4 Units.**

Numerical modeling including: problem formulation, PDEs and weak formulations, and choice of boundary conditions; solution using the finite-element code COMSOL Multiphysics with a variety of solvers and pre- and postprocessing of data; and interpretation of results. Problems include: flow in saturated porous media with complex boundaries and heterogeneities; solute transport with common reaction models; effects of heterogeneity on dispersion, dilution, and mixing of solutes; variable-density flow and seawater intrusion; upscaling or coarsening of scale; and biofilm modeling. Enrollment limited to 5.

**CEE 362G. Stochastic Inverse Modeling and Data Assimilation Methods. 3-4 Units.**

Stochastic methods for the solution of inverse problems that are algebraically underdetermined or have solutions that are sensitive to data. Emphasis is on geostatistical methods that, in addition to using data, incorporate information about structure such as spatial continuity and smoothness. Methods for real-time processing of new data. Prerequisite: consent of instructor.

**CEE 363A. Mechanics of Stratified Flows. 3 Units.**

The effects of density stratification on flows in the natural environment. Basic properties of linear internal waves in layered and continuous stratification. Flows established by internal waves. Internal hydraulics and gravity currents. Turbulence in stratified fluids. Prerequisites: 262A,B, CME 204.

**CEE 363B. Chaos and Turbulence. 3 Units.**

An overview of the statistical analysis of unsteady flows, with a focus on chaos and turbulence. Topics will include random variables and statistical analysis; self-similarity, scaling, and symmetries; the turbulent energy cascade and the Kolmogorov similarity hypotheses; intermittency, refined similarity, and multifractal analysis; mixing and transport in chaotic and turbulent flows; and an overview of the effects of additional conservation laws on flow statistics. Prerequisites: CEE 262A or ME 351A, or permission of instructor.

**CEE 363F. Oceanic Fluid Dynamics. 3 Units.**

Dynamics of rotating stratified fluids with application to oceanic flows. Topics include: inertia-gravity waves; geostrophic and cyclogeostrophic balance; vorticity and potential vorticity dynamics; quasi-geostrophic motions; planetary and topographic Rossby waves; inertial, symmetric, barotropic and baroclinic instability; Ekman layers; and the frictional spin-down of geostrophic flows. Prerequisite: CEE 262A or a graduate class in fluid mechanics.

Same as: ESS 363F

**CEE 363G. Field Techniques in Coastal Oceanography. 3 Units.**

This course focuses on the design and implementation of coastal oceanographic field studies from implementation through analysis. A wide range of field instrumentation and techniques, including AUVs and scientific diving is covered. Field studies. Data collection and analysis under instructor guidance.

**CEE 364F. Advanced Topics in Geophysical Fluid Dynamics. 2-3 Units.**

A seminar-style class covering the classic papers on the theory of the large-scale ocean circulation. Topics include: wind-driven gyres, mesoscale eddies and geostrophic turbulence, eddy-driven recirculation gyres, homogenization of potential vorticity, the ventilated thermocline, subduction, and the abyssal circulation. Prerequisite: EESS 363F or CEE 363F. Recommended: EESS 246B.

Same as: ESS 364F

**CEE 365A. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.**

Students must obtain a faculty sponsor.

**CEE 365B. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.**

Students must obtain a faculty sponsor.

**CEE 365C. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.**

Students must obtain a faculty sponsor.

**CEE 365D. Advanced Topics in Environmental Fluid Mechanics and Hydrology. 2-6 Units.**

Students must obtain a faculty sponsor.

**CEE 370A. Environmental Research. 5-6 Units.**

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

**CEE 370B. Environmental Research. 5-6 Units.**

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

**CEE 370C. Environmental Research. 5-6 Units.**

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

**CEE 370D. Environmental Research. 3-6 Units.**

Introductory research experience for first-year Ph.D. students in the Environmental Engineering and Science program. 15-18 hours/week on research over three quarters. 370A requires written literature survey on a research topic; 370B requires oral presentation on experimental techniques and research progress; 370C requires written or oral presentation of preliminary doctoral research proposal. Students must obtain a faculty sponsor.

**CEE 371L. Helminthic Disease Monitoring and Control. 5 Units.**

Assessment will be based upon weekly written and/or oral reports, with a final written critical review due at the end of the quarter.

**CEE 371M. Transport Phenomena: Momentum, heat and mass transport. 3 Units.**

Heat, mass and momentum transfer theory from the viewpoint of basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory. Prerequisites: fluid mechanics, ordinary differential equations.  
Same as: CEE 271M

**CEE 374A. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.**  
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

**CEE 374B. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.**  
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

**CEE 374C. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.**  
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

**CEE 374D. Introduction to Physiology of Microbes in Biofilms. 1-6 Unit.**  
Diversification of biofilm populations, control of gene expression in biofilm environments, and evolution of novel genetic traits in biofilms.

**CEE 374S. Advanced Topics in Microbial Pollution. 1-5 Unit.**  
May be repeated for credit. Prerequisite: consent of instructor.

**CEE 374T. Advanced Topics in Coastal Pollution. 1-5 Unit.**  
May be repeated for credit. Prerequisite: consent of instructor.

**CEE 374U. Advanced Topics in Submarine Groundwater Discharge. 1-5 Unit.**  
May be repeated for credit. Prerequisite: consent of instructor.

**CEE 374V. Advanced Topics in Microbial Source Tracking. 1-5 Unit.**  
May be repeated for credit. Prerequisite: consent of instructor.

**CEE 374W. Advanced Topics in Water, Health and Development. 1-18 Unit.**  
Advanced topics in water, health and development. Emphasis on low-and-middle-income countries. Class content varies according to interests of students. Instructor consent required.

**CEE 374X. Advanced Topics in Multivariate Statistical Analysis. 1-6 Unit.**  
Analysis of experimental and non-experimental data using multivariate modeling approaches. May be repeated for credit. Permission of instructor required for enrollment.

**CEE 377. Research Proposal Writing in Environmental Engineering and Science. 1-3 Unit.**  
For first- and second-year post-master's students preparing for thesis defense. Students develop progress reports and agency-style research proposals, and present a proposal in oral form. Prerequisite: consent of thesis adviser.

**CEE 378D. Seminar of Statistical Analysis of Multidisciplinary Primary Data. 1-3 Unit.**  
Practical management and analysis techniques for primary data collected in multidisciplinary projects. Selection of appropriate statistical tests, interpretation of results, and effective communication of findings to lay audiences. Univariate, bivariate and multivariate techniques, including hypothesis testing, nonparametric statistics, regression analysis and matching. Use of SPSS statistical package. Limited enrollment. Prerequisite: consent of instructor.

**CEE 379. Introduction to PHD Studies in Civil and Environmental Engineering. 1 Unit.**  
This seminar course will cover important topics for students considering a PhD in Civil and Environmental Engineering. Sessions will include presentations and discussions on career development, exploring research and adviser options, and the mechanics of PhD studies, including General Qualifying Exam requirements for all CEE PHD Students. In addition, CEE faculty will give presentations on their research. This seminar is required for CEE students considering a PHD or preparing to sit for the General Qualifying Exam in Civil and Environmental Engineering.

**CEE 381. Advanced Engineering Informatics. 1-4 Unit.**

**CEE 385. Performance-Based Earthquake Engineering. 3-4 Units.**  
Synthesis and application of approaches to performance-based design and assessment that recently have been developed or are under development. Emphasis is on quantitative decision making based on life-cycle considerations that incorporate direct losses, downtime losses, and collapse, and the associated uncertainties. Hazard analysis, response simulation, damage and loss estimation, collapse prediction. Case studies. Prerequisites: 282, 287, and 288.

**CEE 398. Report on Civil Engineering Training. 1 Unit.**  
On-the-job training under the guidance of experienced, on-site supervisors; meets the requirements for Curricular Practical Training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. Prerequisite: qualified offer of employment and consent of adviser as per I-Center procedures.

**CEE 399. Advanced Engineering Problems. 1-10 Unit.**  
Individual graduate work under the direction of a faculty member on a subject of mutual interest. For Engineer Degree students and Pre-quals Doctoral students. Student must have faculty sponsor. May be repeated for credit.

**CEE 400. Thesis. 1-15 Unit.**  
For students who have successfully completed the department general qualifying examination. Research and dissertation for the Ph.D. degree. Same as: Ph.D. Degree

**CEE 801. TGR Project. 0 Units.**

Same as: Engineer Degree

**CEE 802. TGR Dissertation. 0 Units.**

Same as: PhD degree

**Classics Courses**

**CLASSICS 1G. Beginning Greek. 5 Units.**  
(Formerly CLASSGRK 1.) No knowledge of Greek is assumed. Vocabulary and syntax of the classical language.

**CLASSICS 1L. Beginning Latin. 5 Units.**  
(Formerly CLASSLAT 1.) Vocabulary and syntax of the classical language. No previous knowledge of Latin is assumed.

**CLASSICS 2G. Beginning Greek. 5 Units.**  
(Formerly CLASSGRK 2.) Continuation of CLASSICS 1G. Vocabulary and syntax of the classical language.

**CLASSICS 2L. Beginning Latin. 5 Units.**  
(Formerly CLASSLAT 2.) Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 1L or equivalent placement.

**CLASSICS 3G. Beginning Greek. 5 Units.**  
(Formerly CLASSGRK 3.) Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 2G or equivalent placement. CLASSICS 3G fulfills University language requirement.

**CLASSICS 3L. Beginning Latin. 5 Units.**  
(Formerly CLASSLAT 3.) Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 2L or equivalent placement. CLASSICS 3L fulfills the University language requirement.

**CLASSICS 4L. Intensive Beginning Latin. 12 Units.**

(Formerly CLASSLAT 10/210) Equivalent to a year of beginning Latin (three quarters; CLASSICS 1L, 2: and 3L), this course is designed to teach the fundamentals of the Latin language in eight weeks. We will focus primarily on acquiring the basics of Latin grammar, morphology, and vocabulary and developing basic reading skills. At the end of the course, students should be able to read easy Latin prose and poetry. We will be using Wheelock's Latin textbook and meeting three hours a day, four days a week. Grades will depend on class participation and on performance in weekly quizzes and in a final written exam. Classics majors and minors must take course for letter grade. CLASSICS 4L fulfills the University language requirement.

**CLASSICS 6G. Biblical Greek. 3-5 Units.**

(Formerly CLASSGRK 5.) This is a one term intensive class in Biblical Greek. After quickly learning the basics of the language, we will then dive right into readings from the New Testament and the Septuagint, which is the ancient Greek translation of the Hebrew Bible. No previous knowledge of Greek required. If demand is high for a second term, an additional quarter will be offered in the Spring.

Same as: JEWISHST 5, RELIGST 171A

**CLASSICS 7G. Biblical Greek. 3-5 Units.**

(Formerly CLASSGRK 6) This is a continuation of the Winter Quarter Biblical Greek Course. Pre-requisite: CLASSICS 6G (Formerly CLASSGRK 5) or a similar introductory course in Ancient Greek.

Same as: JEWISHST 5B

**CLASSICS 11G. Intermediate Greek: Prose. 5 Units.**

(Formerly CLASSGRK 101.) Transition to reading narrative Grammar review and vocabulary-building.

**CLASSICS 11L. Intermediate Latin: Introduction to Literature. 5 Units.**

(Formerly CLASSLAT 101.) Phonology, morphology, (semantics, and syntax. Readings in prose and poetry. Analysis of literary language, including rhythm, meter, word order, narrative, and figures of speech.

**CLASSICS 12G. Intermediate Greek: Euripides' Medea. 5 Units.**

(Formerly CLASSGRK 102.) The Medea of Euripides was first performed in 431 BCE at the Great Dionysia of Athens, where it won last place. Euripides's vision of the Colchian princess as a spurned spouse and a murderous mother, however, would triumph in the imaginations of Western readers for millennia. In this class, we will study the script and stagecraft of the Medea in the original Greek in order to better appreciate how the artistry of the tragic poet made Medea a source of both admiration and terror. We will read selections from Medea and relevant secondary readings on Greek tragedy and the reception of Euripides after the fifth century. Our primary objective in this class is to achieve fluid reading ability with Euripides's vocabulary, syntax, and meter. Secondary goals include revisiting grammar concepts and learning about the historical contexts surrounding Medea's production. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 12L. Intermediate Latin: Petronius and Martial. 5 Units.**

(Formerly CLASSLAT 102.) Selections from Petronius "Satyricon" and Martial's epigrams. Our primary goal will be to read these texts in their original Latin with attention to the idiosyncrasies of each author's language and style. We will discuss the literary qualities of the works as well as the cultural contexts in which Petronius and Martial wrote. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 13G. Intermediate Greek: Homer's Iliad. 5 Units.**

(Formerly CLASSGRK 103.) Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 13L. Intermediate Latin: Selections from Vergil's Aeneid, Books 7 - 12. 5 Units.**

(Formerly CLASSLAT 103.) Vocabulary, forms and syntax. Discussion of biographical, political, and literary issues in the text. The connection between art and propaganda as you examine how Vergil either contributes to or subverts the vision of Rome's imperial destiny and civilizing mission. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 14. Greek and Latin Roots of English. 3 Units.**

(Formerly CLASSGEN 9) Goal is to improve vocabulary, comprehension of written English, and standardized test scores through learning the Greek and Latin components of English. Focus is on patterns and processes in the formation of the lexicon. Terminology used in medicine, business, education, law, and humanities; introduction to principles of language history and etymology. Greek or Latin not required.

**CLASSICS 16N. Sappho: Erotic Poetess of Lesbos. 4-5 Units.**

(Formerly CLASSGEN 24N.) Preference to freshmen. Sappho's surviving fragments in English; traditions referring to or fantasizing about her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times, and composers who put her poetry to music.

Same as: FEMGEN 24N

**CLASSICS 16SC. Memorials, Museums and Memory. 2 Units.**

The last time you walked past a public monument, did you stop to read the plaque (if there was one) or otherwise contemplate its meaning and commemorative purpose? Your answer may well reflect your familiarity with the terrain in which that monument stood. In any case, for various reasons we will want to discuss, monuments often struggle to convey the meanings intended, if indeed we can reconstruct those original intentions. This difficulty is especially true of monuments made in traditional form, yet more experimental forms are by no means safe from oblivion and indifference. Paradoxically, the longer a monument exists and some have lasted for millennia the further it is removed from its original context, a situation which engenders both problems of communication between creator and audience and at the same time rich histories, for objects too can have eventful life-histories. In this course, both object biographies and their long-term communicatory challenges will be part of a broader discussion. Our task will be to explore the commemorative landscape, including our own campus established by grieving parents in 1891 with the goal of remembering their fifteen-year-old son, who had died of typhoid while travelling in Italy. Apart from the university per se, statues and a museum were central to the elder Stanfords; commemoration of Leland jr. (1868-84). Through the tragic Stanford family story and other case studies, we will rethink the very nature of collective memory. What forms has it taken? What difference does materiality make? Why do some scholars insist on a difference between monuments (often triumphalist in character) and memorials (typically more reflective and somber), and is that a feasible distinction in practice? We shall discuss such themes with reference to core readings. Beyond that, students will work in groups to focus consistently on selected histories, as determined by collective identities. Students will regularly contribute to class discussions on the basis of these specializations. By way of a final project, students will design a memorial of their own choosing. They will motivate their choice of what or whom they are commemorating; likewise they will explain their choice of medium, location and form. The success of these memorials will hinge, in large measure, on the thoughtfulness of their choices and ultimately their ability to engage with viewers. Students will present their evolving projects to each other for formal peer critique (itself graded). Final public presentations of these memorials will be part of the symposium in the final week. The course will be timely in several senses: the nationwide remembrance of September 11th, 2001 coincides with the first week of classes; the university celebrates its 125th anniversary in 2016; and more generally emerging technologies both offer and demand new approaches to public commemoration. Sophomore College course, applications required. Submit by April 5, 2016 at <http://soco.stanford.edu>.

**CLASSICS 17N. To Die For: Antigone and Political Dissent. 4 Units.**

(Formerly CLASSGEN 6N.) Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of *Antigone* by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta. Same as: TAPS 12N

**CLASSICS 18N. The Artist in Ancient Greek Society. 3 Units.**

Given the importance of art to all aspects of their lives, the Greeks had reason to respect their artists. Yet potters, painters and even sculptors possessed little social standing. Why did the Greeks value the work of craftsmen but not the men themselves? Why did Herodotus dismiss those who worked with their hands as "mechanics?" What prompted Homer to claim that "there is no greater glory for a man than what he achieves with his own hands," provided that he was throwing a discus and not a vase on a wheel? Painted pottery was essential to the religious and secular lives of the Greeks. Libations to the gods and to the dead required vases from which to pour them. Economic prosperity depended on the export of wine and oil in durable clay containers. At home, depictions of gods and heroes on vases reinforced Greek values and helped parents to educate their children. Ceramic sets with scenes of Dionysian excess were reserved for elite symposia from which those who potted and painted them were excluded. Sculptors were less lowly but even those who carved the Parthenon were still regarded as "mechanics," with soft bodies and soft minds (Xenophon) "indifferent to higher things" (Plutarch). The seminar addresses these issues. Students will read and discuss texts, write response papers and present slide lectures and gallery talks on aspects of the artist's profession. Same as: ARTHIST 100N

**CLASSICS 21Q. Eight Great Archaeological Sites in Europe. 3-5 Units.**

(Formerly CLASSART 21Q.) Preference to sophomores. Focus is on excavation, features and finds, arguments over interpretation, and the place of each site in understanding the archaeological history of Europe. Goal is to introduce the latest archaeological and anthropological thought, and raise key questions about ancient society. The archaeological perspective foregrounds interdisciplinary study: geophysics articulated with art history, source criticism with analytic modeling, statistics interpretation. A web site with resources about each site, including plans, photographs, video, and publications, is the basis for exploring.

Same as: ARCHLGY 21Q

**CLASSICS 24N. What is a Map?. 4 Units.**

Exploration of the nature of maps via an overview of premodern mapping practices, combining theory and history of maps. Hands-on research involving Stanford's rare and historical maps, and chance to create own maps.

**CLASSICS 26N. The Roman Empire: Its Grandeur and Fall. 4 Units.**

(Formerly CLASSHIS 24N.) Preference to freshmen. Explore themes on the Roman Empire and its decline from the 1st through the 5th centuries C.E.. What was the political and military glue that held this diverse, multi-ethnic empire together? What were the bases of wealth and how was it distributed? What were the possibilities and limits of economic growth? How integrated was it in culture and religion? What were the causes and consequences of the conversion to Christianity? Why did the Empire fall in the West? How suitable is the analogy of the U.S. in the 21st century?. Same as: HISTORY 11N

**CLASSICS 28N. Inequality: the Last 100,000 Years. 3 Units.**

(Formerly CLASSHIS 13N.) This seminar traces the evolution of resource inequality from the Stone Age to the present. Only this long-term perspective reveals the forces that drive inequality and allows us to address two key questions: what causes inequality, and what factors have been capable of reducing it, at least for a while? We are going to confront challenging arguments: that inequality has been closely tied up with overall economic and human development, and that over the long course of history, war, revolution and pestilence were the most effective equalizers of income and wealth. This class will help you appreciate contexts and complexities that are usually obscured by partisan polemics and short-term thinking. Seminar participants will be directly involved in the instructor's current research project on the history of inequality. Same as: HISTORY 15N

**CLASSICS 31. Greek Mythology. 3-5 Units.**

(Formerly CLASSGEN 18.) The heroic and divine in the literature, mythology, and culture of archaic Greece. Interdisciplinary approach to the study of individuals and society. Illustrated lectures. Readings in translation of Homer, Hesiod, Herodotus, and the poets of lyric and tragedy. Weekly participation in a discussion section is required.

**CLASSICS 34. Ancient Athletics. 3-4 Units.**

(Formerly CLASSGEN 34.) How the Olympic Games developed and how they were organized. Many other Greek festivals featured sport and dance competitions, including some for women, and showcased the citizen athlete as a civic ideal. Roman athletics in contrast saw the growth of large-scale spectator sports and professional athletes. Some toured like media stars; others regularly risked death in gladiatorial contests and chariot-racing. We will also explore how large-scale games were funded and how they fostered the development of sports medicine. Weekly participation in a discussion section is required; enroll in sections on coursework.

**CLASSICS 35. Becoming Like God: An Introduction to Greek Ethical Philosophy. 3-5 Units.**

(Formerly CLASSGEN 35.) This course investigates key ethical philosophies in classical Greece. After reading several Greek tragedies (representing traditional Greek values), we examine the Greek philosophers' rejection of this tradition and their radically new ethical theories. Socrates, Plato, and Aristotle offered different ethical theories, but they shared basic conceptions of goodness and happiness. They argue that we could "become like gods" by achieving philosophic wisdom. What kind of wisdom is this? How does it make us ethically good and supremely happy people?

**CLASSICS 36. Gender and Power in Ancient Rome. 3-5 Units.**

(Formerly CLASSGEN 119.) Interactions of gender and power in ancient Roman politics, religion, spectacles, and daily life. Masculinity and femininity in founding legends and public rituals; the ambiguous status of Vestal Virgins; gendered behavior in the Roman Forum; the spatial logic of prostitution; sexual characterizations of good vs. bad emperors in ancient texts; gender and time in Roman houses; inversions of gender and space in early Christian martyr narratives. Readings include modern gender theory as well as ancient Roman texts and material culture.

**CLASSICS 41. Herodotus. 4-5 Units.**

For Ancient History field of study majors; others by consent of instructor. Close reading technique. Historical background to the Greco-Persian Wars; ancient views of empire, culture, and geography; the wars and their aftermath; ancient ethnography and historiography, including the first narrative of ancient Egypt.

**CLASSICS 42. Philosophy and Literature. 5 Units.**

Required gateway course for Philosophical and Literary Thought; crosslisted in departments sponsoring the Philosophy and Literature track. Majors should register in their home department; non-majors may register in any sponsoring department. Introduction to major problems at the intersection of philosophy and literature, with particular focus on the question of value: what, if anything, does engagement with literary works do for our lives? Issues include aesthetic self-fashioning, the paradox of tragedy, the paradox of caring, the truth-value of fiction, metaphor, authorship, irony, make-believe, expression, edification, clarification, and training. Readings are drawn from literature and film, philosophical theories of art, and stylistically interesting works of philosophy. Authors may include Sophocles, Chaucer, Dickinson, Proust, Woolf, Borges, Beckett, Kundera, Charlie Kaufman, Barthes, Foucault, Nussbaum, Walton, Nehamas; Plato, Montaigne, Schopenhauer, Nietzsche, and Sartre. Taught in English.

Same as: COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, ITALIAN 181, PHIL 81, SLAVIC 181

**CLASSICS 43. Exploring the New Testament. 4 Units.**

The New Testament is many things to many people. Around the globe, it is and has been for two millennia a source of culture, law, and faith. It has been used both to undergird battles for civil rights and to fight against them. It has been used both to justify wars and to argue that all war is unjust. Yet, many people haven't read the New Testament and still more haven't looked at it from historical, sociological, comparative and literary frameworks. This course will provide you the opportunity to read the New Testament and to study it closely. We will ask questions of the New Testament about the early Jesus movement, how it fits into its historical context and how it developed. We will look at the range of opinions and views about Jesus present in this literature. We will explore the different genres used by early Christians. We will examine how this set of Early Christian texts came to be considered the canon.

Same as: RELIGST 86

**CLASSICS 51. Introduction to Greek Archaeology. 3-5 Units.**

An introduction to the archaeology of ancient Greece, from the first city states through the cultural achievements of classical Athens to the conquest by Rome.

Same as: ARCHLGY 51

**CLASSICS 52. Introduction to Roman Archaeology. 3-5 Units.**

(Formerly CLASSART 81.) This course will introduce you to the material culture of the ancient Roman world, from spectacular imperial monuments in the city of Rome to cities and roads around the Mediterranean, from overarching environmental concerns to individual human burials, from elite houses and army forts to the lives of slaves, freedmen and gladiators. Key themes will be change and continuity over time; the material, spatial and visual workings of power; how Roman society was materially changed by its conquests and how conquered peoples responded materially to Roman rule.

Same as: ARCHLGY 81

**CLASSICS 54. Introduction to World Architecture. 5 Units.**

This lecture course surveys the history of architecture and urbanism, from the first societies to the present, in Europe, West and East Asia, the Americas, and Africa. The course progresses by case studies of exemplary monuments and cities, and examines the built environment as both cultural artifact and architectural event. It considers the social and political circumstances of architectural invention as well as plumbing the depth of artistic context by which particular formal choices resonate with an established representational culture.

Same as: ARTHIST 3

**CLASSICS 56. Introduction to the Visual Arts: Prehistoric through Medieval. 5 Units.**

A survey of the art and architecture from the cave paintings of Lascaux to the Gothic Cathedrals of France; the material is organized both chronologically and thematically and covers a multiplicity of religions: pagan, Christian, and Islamic.

Same as: ARTHIST 1A

**CLASSICS 76. Global History: The Ancient World. 3-5 Units.**

World history from the origins of humanity to the Black Death. Focuses on the evolution of complex societies, wealth, violence, and hierarchy, emphasizing the three great turning points in early history: the evolution of modern humans, the agricultural revolution, and the rise of the state.

Same as: HISTORY 1A

**CLASSICS 81. Ancient Empires: Near East. 4-5 Units.**

Why do imperialists conquer people? Why do some people resist while others collaborate? This course tries to answer these questions by looking at some of the world's earliest empires. The main focus is on the expansion of the Assyrian and Persian Empires between 900 and 300 BC and the consequences for the ancient Jews, Egyptians, and Greeks. The main readings come from the Bible, Herodotus, and Assyrian and Persian royal inscriptions, and the course combines historical and archaeological data with social scientific approaches. Weekly participation in a discussion section is required.

**CLASSICS 82. The Egyptians. 3-5 Units.**

Overview of ancient Egyptian pasts, from predynastic times to Greco-Roman rule, roughly 3000 BCE to 30 BCE. Attention to archaeological sites and artifacts; workings of society; and cultural productions, both artistic and literary. Participation in class is required. Same as: AFRICAAM 30, HISTORY 48, HISTORY 148

**CLASSICS 83. The Greeks. 4-5 Units.**

(Formerly CLASSHIS 101.) 250 years ago, for almost the first time in history, a few societies rejected kings who claimed to know what the gods wanted and began moving toward democracy. Only once before had this happened—in ancient Greece. This course asks how the Greeks did this, and what they can teach us today. It uses texts and archaeology to trace the material and military sides of the story as well as cultural developments, and looks at Greek slavery and misogyny as well as their achievements. Weekly participation in a discussion section is required. Same as: HISTORY 101

**CLASSICS 84. The Romans. 3-5 Units.**

(Formerly CLASSHIS 60.) How did a tiny village create a huge empire and shape the world, and why did it fail? Roman history, imperialism, politics, social life, economic growth, and religious change. Weekly participation in a discussion section is required; enroll in sections on Coursework. Same as: HISTORY 102A

**CLASSICS 87. Egyptomania! The Allure of Ancient Egypt Over the Past 3,500 Years. 5 Units.**

Why does Egypt fascinate us? From Napoleon's invasion to Katy Perry's latest music video, we have interpreted ancient Egyptian history and mythology for centuries; in fact, this obsession dates back to the Egyptians themselves. This seminar explores Egyptomania from the Pharaonic period to the 20th century. Topics include: ancient Egypt, Greek historians, medieval Arabic scholars, hieroglyphic decipherment, 19th century travel, 20th century pop culture, and how historians have interpreted this past over the centuries. Same as: AFRICAAM 87, HISTORY 244

**CLASSICS 88. Origins of History in Greece and Rome. 4-5 Units.**

(Formerly CLASSHIS 117.) The beginnings and development of historical writing in the ancient world. Emphasis on major classical historians and various models of history they invented, from local to imperial, military, cultural, biographical, world history and church history. Focus on themes of power, war, loss, growth and decline, as put by the ancients into historical narrative forms and probed by way of historical questioning and explanation. Attention to how these models resonate still today. Readings in translation: Herodotus, Thucydides, Tacitus, Livy and others. Participation in a weekly discussion section is required. Same as: HISTORY 114

**CLASSICS 101G. Advanced Greek: Plato on Poetry. 3-5 Units.**

(Formerly CLASSGRK 111.) Plato's discussions on poetry's inspiration, performance, and its relationship to philosophy had an immense influence on literary reception and aesthetics in classical antiquity. In this class, we will read Plato's *Ion* and selections from the *Republic* in order to better understand these and related topics in the original Greek language. Our primary objective will be to achieve a fluid reading ability for Plato's language and syntax. We will also participate in larger discussions of historical and literary contexts, and review difficult grammar concepts.

**CLASSICS 101L. Advanced Latin: Tacitus. 3-5 Units.**

(Formerly CLASSLAT 111.) We will read Book 4 of Tacitus's "Annals", a crucial piece in this famed historian's bleak depiction of the Roman empire. We will focus on the portrait here of the emperor Tiberius, which has long exemplified how to understand political power in psychological terms, and has been the model since for innumerable tyrannical figures in literature and arts. How did Tacitus the historian achieve such powerful, long lasting influence? Close attention to language, style and narrative techniques. Classics majors and minors must take for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 102G. Advanced Greek: Funeral Orations by Lysias, Gorgias, Thucydides and Plato. 3-5 Units.**

(Formerly CLASSGRK 112.) The funeral oration (epitaphios logos) is an important genre of speech whose performance in Classical Athens involved central aspects of the polis' life, such as collective memory, interpretation of the past, civic values, politics and, indeed, the art of speaking well. This genre was performed in real occasions (as archeological/historical sources show), and it was closely imitated in other genres such as philosophy and history. We will read the funeral orations by Lysias and Gorgias, the speech of Pericles in Thucydides (book II) and the speech of Aspasia, Pericles' mistress, preserved in one of Plato's most enigmatic dialogues, the *Menexenus*. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 102L. Advanced Latin: Virgil's Eclogues and Georgics. 4-5 Units.**

(Formerly CLASSLAT 112.) Detailed reading of Virgil's poems written before the *Aeneid*. Discussion of poetic style and to Triumviral and Augustan literary history. Special attention to the evolution of ancient pastoral (and comparison with modern pastoral); and didactic poetry. Classics majors and minors must take for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 103G. Advanced Greek: Aristophanes' "The Frogs". 3-5 Units.**

(Formerly CLASSGRK 113.) Classics majors and minors must take for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 103L. Advanced Latin: Letters of Cicero and Pliny. 3-5 Units.**

(Formerly CLASSLAT 113.) We will read selections from the letters of Cicero and Pliny, and explore the lives and careers of both statesmen as well as the social, cultural, and political world of the Late Republic and High Empire as revealed through their correspondence. Emphasis on improving reading fluency and analyzing letters as historical and biographical as well as literary documents. Classics majors and minors must take course for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

**CLASSICS 104A. Latin Syntax. 4 Units.**

(Formerly CLASSLAT 175A/275A.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204A. Same as: CLASSICS 204A

**CLASSICS 104B. Latin Syntax. 2 Units.**

(Formerly CLASSLAT 175B/275B) Intensive review of Latin syntax. Began with 104A/204A in Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204B. Same as: CLASSICS 204B

**CLASSICS 105A. Greek Syntax: Prose Composition. 2 Units.**

(Formerly CLASSGRK 175A/275A.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Prerequisite for undergraduates: three years of Greek. First-year graduate students register for 205A/B. Same as: CLASSICS 205A

**CLASSICS 105B. Greek Syntax: Prose Composition. 4 Units.**

(Formerly CLASSGRK 175B/275B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Prerequisite for undergraduates: three years of Greek. First-year graduate students register for 205A/B. Same as: CLASSICS 205B

**CLASSICS 112. Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice. 4 Units.**

(Formerly CLASSGEN 110.) Gods and heroes, fate and free choice, gender conflict, the justice or injustice of the universe: these are just some of the fundamental human issues that we will explore in about ten of the tragedies of Aeschylus, Sophocles, and Euripides.  
Same as: TAPS 167

**CLASSICS 121. Ecology in Philosophy and Literature. 3-5 Units.**

(Formerly CLASSGEN 116.) The basic principles of ecological thinking, exploring the ways that different writers represent and relate to the natural world. Some key questions: What is nature, and where do humans fit in the natural world? How exactly do humans differ from other animals? Do these differences make us superior beings? What are our ethical responsibilities towards the earth and its inhabitants? In what ways have the technologies of writing, television, and computers affected humankind's relationship to the natural world?.

**CLASSICS 124. Ancient and Modern Medicine. 3-4 Units.**

Imagine a world where the Universe has a built-in purpose and point. How would this belief impact man's place in nature? Imagine a world where natural substances have "powers." How might this impact diet and pharmacology? Magical vs. scientific healing: a clear divide? Disease and dehumanization: epilepsy, rabies. Physical and mental health: black bile and melancholy. The ethical and scientific assumptions hidden in medical language and imagery. How ancient medicine and modern medicine (especially alternative medicine) illuminate each other.

**CLASSICS 136. The Greek Invention of Mathematics. 3-5 Units.**

(Formerly CLASSGEN 103.) How was mathematics invented? A survey of the main creative ideas of ancient Greek mathematics. Among the issues explored are the axiomatic system of Euclid's Elements, the origins of the calculus in Greek measurements of solids and surfaces, and Archimedes' creation of mathematical physics. We will provide proofs of ancient theorems, and also learn how such theorems are even known today thanks to the recovery of ancient manuscripts.  
Same as: MATH 163

**CLASSICS 137. Ancient Dance and its Modern Legacy. 3-5 Units.**

Descriptions of dance in the Greek and Greco-Roman world; theories about dance in antiquity; dance and the senses; modern and modernist dancers and choreographers discussing ancient dance.  
Same as: CLASSICS 237, TAPS 165C, TAPS 265C

**CLASSICS 142. Emperor, Explorer, and God: Alexander the Great in the Global Imagination. 3 Units.**

(Formerly CLASSGEN 109.) This course will survey the changing image of Alexander the Great from the Hellenistic world to the contemporary. We shall study the appropriation of his life and legend in a variety of cultures both East and West and discuss his reception as both a divine and a secular figure by examining a variety of media including texts (primary and secondary) and images (statues, coins, mosaics, illuminated manuscripts, film, and TV) in the Hellenistic, Roman, Byzantine, Jewish, Islamic, Medieval, Renaissance, and Early Modern contexts. In concluding the quarter, students will evaluate contemporary representations in film and popular culture, such as Alexander directed by Oliver Stone and Pop Art in order to better appreciate his enduring legacy.  
Same as: RELIGST 109

**CLASSICS 143. Images of Women in Ancient China and Greece. 3-5 Units.**

(Formerly CLASSGEN 153/253.) Representation of women in ancient Chinese and Greek texts. How men viewed women and what women had to say about themselves and their societies. Primary readings in poetry, drama, and didactic writings. Relevance for understanding modern concerns; use of comparison for discovering historical and cultural patterns.  
Same as: CHINGEN 143, CHINGEN 243, CLASSICS 243

**CLASSICS 145. Early Christian Gospels. 4 Units.**

An exploration of Christian gospels of the first and second century. Emphasis on the variety of images and interpretations of Jesus and the good news, the broader Hellenistic and Jewish contexts of the gospels, the processes of developing and transmitting gospels, and the creation of the canon. Readings include the Gospel of John, the Gospel of Mark, the Gospel of Thomas, the Gospel of Mary and other canonical and non-canonical gospels.  
Same as: RELIGST 132D

**CLASSICS 146. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.**

Stretching from India to Ethiopia, the Persian Empire; the largest empire before Rome; has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West and Greek democracy. This course will provide a general introduction to the Persian Empire, beginning in the 6th century BCE to the fall of Persia to Alexander the Great in 331 BCE. We shall not only examine the originality of the first world empire of antiquity, but the course will also attempt to present a broad picture of the diverse cultural institutions and religious practices found within the empire. Readings in translation from the royal edicts and the inscriptions of Cyrus, Darius, and Xerxes will allow us to better appreciate the subtle ways in which these Persian kings used religion to justify and propagate the most ambitious imperial agenda the world had ever seen. In concluding the quarter, students will evaluate contemporary representations of Persia and the Persians in politics and popular culture in a wide array of media, such as the recent film 300 and the graphic novel on which it is based, in an attempt to better appreciate the enduring legacy of the Greco-Persian wars.  
Same as: CLASSICS 246, RELIGST 229, RELIGST 329

**CLASSICS 147. Priests, Prophets, and Kings: Religion and Society in Late Antique Iran. 4-5 Units.**

This course is designed as a broad introduction to the religious and social history of the Sasanian Empire, encompassing the period from 224-651 CE as well as the early years of Islamic rule in Iran. Among the topics we will discuss are: the lives and deeds of the powerful Iranian emperors such as Shapur I and II in relation to the Roman emperors Diocletian and Constantine; the transformation of Zoroastrianism into a powerful official religion of the state and its subsequent orthodoxy; the emergence of the prophet Mani and the confrontation of Manicheism with the Zoroastrian priesthood; the conversion of Constantine to Christianity and its political and social ramifications in Iran; the establishment of an independent Iranian Christian church; the importance of Armenia in the Sasanian-Roman conflict; and a brief discussion of the history of the Jewish community under the Sasanians. We will end the quarter by examining the Arab-Islamic conquests of Iran and the profound social changes experienced by the Zoroastrian communities in the early centuries of Islam in Iran.  
Same as: CLASSICS 247, RELIGST 209, RELIGST 309

**CLASSICS 148. Imperishable Heroes and Unblemished Goddesses: Myth, Ritual, and Epic in Ancient Iran. 3-5 Units.**

Designed as a broad introduction to the world of ancient Iran, students will be introduced to the Indo-European inheritance in ancient Iranian culture; the shared world of ritual, religion, and mythology between Zoroastrianism in Iran and Vedic Hinduism in India; and to the contours of early Zoroastrian religious thought. We will also survey mythoepic literature in translation from the archaic Avesta through the late antique Zoroastrian Middle Persian corpus to the early medieval national epic of Iran, the Book of Kings of Ferdowsi.  
Same as: CLASSICS 248, RELIGST 209E, RELIGST 309E

**CLASSICS 150. Majors Seminar. 5 Units.**

(Formerly CLASSGEN 176.) Required of Classics majors and minors in junior or senior year; students contemplating honors should take this course in junior year. Advanced skills course involving close reading, critical thinking, editing, and writing. In-class and take-home writing and revising exercises. Final paper topic may be on any subject related to Classics. Fulfills WIM requirement for Classics. Winter Quarter topic: investigating a wide range of ethical dilemmas raised by the ownership of the classical past in the 21st century. Spring Quarter topic: TBD.

**CLASSICS 151. Ten Things: An Archaeology of Design. 3 Units.**

(Formerly CLASSART 113/213.) Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgwood teapot, Edison's electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology.

Same as: ARCHLGY 151

**CLASSICS 153. Ancient Urbanism. 3-5 Units.**

(Formerly CLASSART 112/212.) Archaeology of Greek, Roman and early Islamic cities and urbanism in the Mediterranean and western Asia. Comparison and contrast of the shaping role of religion and politics; definitions of public and private space, monumental buildings, houses, streets, infrastructure. Special themes are city and country connections; the problems of giant cities; cities in the longue durée. Case studies include Athens, Olynthos, Rome, Pompeii, Constantinople, Damascus and Cairo.

Same as: ARCHLGY 153, URBANST 119

**CLASSICS 154. Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean. 3-4 Units.**

(Formerly CLASSART 145.) Why do we care about shipwrecks? What can sunken sites and abandoned ports tell us about our past? Focusing primarily on the archaeological record of shipwrecks and harbors, along with literary evidence and contemporary theory, this course examines how and why ancient mariners ventured across the "wine-dark seas" of the Mediterranean for travel, warfare, pilgrimage, and especially commerce. We will explore interdisciplinary approaches to the development of maritime contacts and communication from the Bronze Age through the end of Roman era. At the same time, we will engage with practical techniques of maritime archaeology, which allows us to explore the material record first hand.

Same as: ARCHLGY 145

**CLASSICS 156. Design of Cities. 3-5 Units.**

Long-term, comparative and archaeological view of urban planning and design. Cities are the fastest changing components of the human landscape and are challenging our relationships with nature. They are the historical loci of innovation and change, are cultural hotspots, and present a tremendous challenge through growth, industrial development, the consumption of goods and materials. We will unpack such topics by tracking the genealogy of qualities of life in the ancient Near Eastern city states and those of Graeco-Roman antiquity, with reference also to prehistoric built environments and cities in the Indus Valley and through the Americas. The class takes an explicitly human-centered view of urban design and one that emphasizes long term processes.

Same as: ARCHLGY 156

**CLASSICS 157. The Archaeology of Cyprus. 3-5 Units.**

This seminar course introduces students to the island of Cyprus in the eastern Mediterranean and its archaeology, from the origins of human occupation to the end of antiquity. Readings and discussions of material culture and texts will explore the history and practice of Cypriot archaeology in relation to those of Greece and the Near East. Key themes will include: islands and insularity, continuity vs. change, sex and identity, the rise of the state, regionalism, and imperial conquest. Suitable for both graduate and undergraduate students.

Same as: CLASSICS 257

**CLASSICS 158. Iconoclasm. 5 Units.**

Iconoclasm, iconophobia, and aniconism as markers of cultural transformation of the Mediterranean in the 7th-9th centuries. The identity crisis in the region as the Arabs established the Umayyad caliphate, conquering the Holy Land, Egypt, and Spain. The West consolidated around the Carolingians versus the East split between the Byzantines and the Arabs. How each of these three empires emerged from the ashes of late antique culture and carved an identity out of a common cultural foundation. The course will take place in the seminar room of the Art and Architectural Library located in the Cummings Art Building.

Same as: ARTHIST 209C, ARTHIST 409, CLASSICS 258, REES 409

**CLASSICS 159. Appropriations of Greek Art. 4-5 Units.**

Upper division seminar. The history of the appropriation of Greek art by Rome, the Renaissance, Lord Elgin, and Manet. Enrollment limited to 6. Prerequisite: ARTHIST 102 or consent of instructor.

**CLASSICS 161. Introduction to Greek Art I: The Archaic Period. 4 Units.**

In the decades 480-460, just before work began on the Parthenon, the sculptor Myron, creator of the Discus-Thrower, was even more celebrated for his bronze cow. Ancient authors describe an image so palpably alive that shepherds threw stones at her, thinking that she had strayed from the herd, and bulls vied for her attention. A century later, the quest for mimesis prompted a contest between two artists. Zeuxis painted a bunch of grapes seductive enough to attract hungry birds; Parrhasios then added a linen curtain, which Zeuxis asked to be removed from his painting. Zeuxis conceded defeat since he had fooled only birds, whereas Parrhasios had deceived an artist. This course explores the art and culture of the ancestors of these men. The Greeks of the archaic period (1000-480) would have understood the painters' competitive zeal, but only toward the end of the period would they have recognized naturalism as an artistic aim. Earlier Greek art is more abstract than life-like, closer to Calder than Michelangelo. In the eighth century Homer's descriptions of the rippling muscles (and egos) of his heroes, and the grief of Achilles' horses, evoke living men and sentient animals, but his fellow sculptors and painters prefer abstraction. This changes in the seventh century as a result of commercial contacts with the Near East and Egypt. Imported bronzes, ivories and other Near Eastern exotica alerted Greek artists to a wider range of subjects, techniques and intentions, including naturalism. Later in the century, Greek expatriates learned the art of carving hard stone from Egyptian masters and soon marble sculpture and architecture spread throughout Greece. In the course of the sixth and early fifth centuries Greek artists assimilate what they had borrowed, compete with one another, obey and disobey their teachers, test the tolerance of the gods and eventually produce works of art that speak with a Greek accent. When the Persians invaded the Acropolis in 480 and 479, they encountered artifacts with little trace of alien influence or imprint and, at Salamis and Plataea, fought decisive battles in which the Greeks prevailed. In the aftermath of the war, as the Greeks rebuilt their cities and their lives, Myron's cow reminded them of their debts to other cultures and their resolve to remain true to their own.

Same as: ARTHIST 101

**CLASSICS 162. Introduction to Greek Art II: The Classical Period. 4 Units.**

The class begins with the art, architecture and political ideals of Periclean Athens, from the emergence of the city as the political and cultural center of Greece in 450 to its defeat in the Peloponnesian War in 404. It then considers how Athens and the rest of Greece proceeded in the fourth century to rebuild their lives and the monuments that define them. Earlier artistic traditions endure, with subtle changes, in the work of sculptors such as Kephisodotos. Less subtle are the outlook and output of his son Praxiteles. In collaboration with Phryne, his muse and mistress, Praxiteles challenged the canons and constraints of the past with the first female nude in the history of Greek sculpture. His gender-bending depictions of gods and men were equally audacious, their shiny surfaces reflecting Plato's discussion of Eros and androgyny. Scopas was also a man of his time but pursued different interests. Drawn to the inner lives of men and woman, his tormented Trojan War heroes and victims are still scarred by memories of the Peloponnesian War, and a world away from the serene faces of the Parthenon. His famous Maenad, a devotee of Dionysos who has left this world for another, belongs to the same years as Euripides' Bacchae and, at the same time, anticipates the torsion and turbulence of Bernini and the Italian Baroque. In the work of these and other fourth century personalities, the stage is set for Alexander the Great and his conquest of a kingdom extending from Greece to the Indus River. (Formerly CLASSART 102).

Same as: ARTHIST 102

**CLASSICS 163. Greek Art In and Out of Context. 5 Units.**

The seminar considers Greek artifacts in the context of Greek life (including the life of the workshop), and the endless ways in which craftsmen served the needs of Greek society. Their foundries, factories and ceramic studios produced the material goods that defined Greek life: temples, statues and other offerings for the gods; arms and armor for warriors; sporting equipment and prizes for athletes; houses, clothing and crockery for the family; ships and sailcloth, wagons and ploughs, wine and oil-presses for a thriving domestic and overseas economy; gravestones and funeral vases for the dead. (Formerly CLASSART 109.) Most of the antiquities exhibited in museums, or purchased by private collectors from galleries and auction houses, survive because they were buried with people who used and cherished them. The Greeks' belief that the artifacts they valued in life would serve them in the afterlife informs the second part of the seminar, which is devoted to the recent history of tomb looting and the illicit trafficking in antiquities.

Same as: ARTHIST 203

**CLASSICS 164. Roman Gladiators. 3-5 Units.**

Description TBD.

Same as: ARCHLGY 165

**CLASSICS 166. The Body in Roman Art. 4-5 Units.**

(Formerly CLASSART 105.) Ancient and modern ideas about the body as ideal and site of lived experience. Themes include representation, portrayal, power, metamorphosis, and replication. Works that exemplify Roman ideas of heroism and power versus works portraying nude women, erotic youth, preserved corpses, and suffering enemies.

Recommended: background in ancient Mediterranean art, archaeology, history, or literature. May be repeated for credit.

Same as: ARCHLGY 166

**CLASSICS 167. Archaeology of Roman Slavery. 4-5 Units.**

The archaeology of Roman slavery embodies a paradox: slavery was ubiquitous in Roman society but did not leave distinct material traces that archaeologists can easily identify. Explore that paradox by examining ancient writings on Roman slavery in conjunction with built spaces, visual images, and artifacts. Discuss more recent slave societies for purposes of comparison and contrast. Learn to analyze different kinds of historical and archaeological evidence, how to reconstruct social and spatial dynamics, and how ancient Roman slavery and society worked.

**CLASSICS 168. Engineering the Roman Empire. 4-5 Units.**

(Formerly CLASSART 117.) Enter the mind, the drafting room, and the building site of the Roman architects and engineers whose monumental projects impressed ancient and modern spectators alike. This class explores the interrelated aesthetics and mechanics of construction that led to one of the most extensive building programs undertaken by a pre-modern state. Through case studies ranging from columns, domes and obelisks to road networks, machines and landscape modification, we investigate the materials, methods, and knowledge behind Roman innovation, and the role of designed space in communicating imperial identity.

Same as: ARCHLGY 118

**CLASSICS 169. Archaeology of Britannia. 3-4 Units.**

Life in the Roman Empire: this course is a broad introduction to the archaeology of one of the best known provinces of the empire.

Same as: ARCHLGY 169

**CLASSICS 171. Byzantine Art and Architecture, 300-1453 C.E.. 4 Units.**

(Formerly CLASSART 106/206.) This course and its study trip to the Getty (Los Angeles) to view the new Byzantine exhibition explores the art and architecture of the Eastern Mediterranean: Constantinople, Jerusalem, Alexandria, Antioch, Damascus, Thessaloniki, and Palermo, 4th-15th centuries. Applying an innovative approach, we will probe questions of phenomenology and aesthetics, focusing our discussion on the performance and appearance of spaces and objects in the changing diurnal light, in the glitter of mosaics and in the mirror reflection and translucency of marble.

Same as: ARTHIST 106, ARTHIST 306

**CLASSICS 172. Art & Architecture in the Medieval Mediterranean. 4 Units.**

Chronological survey of Byzantine, Islamic, and Western Medieval art and architecture from the early Christian period to the Gothic age. Broad art-historical developments and more detailed examinations of individual monuments and works of art. Topics include devotional art, court and monastic culture, relics and the cult of saints, pilgrimage and crusades, and the rise of cities and cathedrals.

Same as: ARTHIST 105, ARTHIST 305

**CLASSICS 173. Hagia Sophia. 5 Units.**

By employing a methodology based in psychoacoustics, semiotics, and phenomenology, this course explores the relationship among sound, water, marble, meaning, and religious experience in the sixth-century church of Hagia Sophia built by emperor Justinian in Constantinople. We will read medieval sources describing the interior and ritual, make short movies exploring the shimmer of marble in buildings on campus, and study the acoustics of domed buildings through computer auralization done at Stanford's CCRMA (Center for Computer Research in Music and Acoustics).

Same as: ARTHIST 208, ARTHIST 408, CLASSICS 273

**CLASSICS 174. Art and Religious Experience in Byzantium and Islam. 5 Units.**

This course presents a comparative study of Christian and Islamic religious paradigms (sixth to the thirteenth centuries) in the construction of religious experience through the material fabric of the building, the interior decor, objects, and rituals. We will read medieval ekphrastic texts and poetry, which stirred the viewer/participant to experience the building/object as animate. Among the sites we will study are: Hagia Sophia, the Ka'ba, the Dome of the Rock, the Mosque at Damascus and at Cordoba. We will read Byzantine and Arabic writers such as Paul the Silentiary, Patriarch Germanos, Maximus Confessor, Shahrawardi, and Ibn Arabi.

Same as: ARTHIST 209, ARTHIST 309

**CLASSICS 175. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.** Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.

Same as: ARTHIST 208C, ARTHIST 408C, MUSIC 208C, MUSIC 408C, REES 208C, REES 408C, RELIGST 208C, RELIGST 308C

**CLASSICS 177. Roman History. 3-5 Units.**  
TBD.

**CLASSICS 178. Ancient Greek Political Thought. 3-5 Units.**

This class traces some of the intellectual roots of modern political thought to authors of classical antiquity, such as Herodotus, Thucydides, Plato, Xenophon, and Aristotle. We will read portions of their work, in translation, as well as discuss the historical background. Topics will include: political duty, citizenship, and leadership; the origins and rise of Athenian direct democracy; the development of Greek law, constitutional change, and responses to civic strife and civil war.

**CLASSICS 183. Economy and Economics of Ancient Greece. 5 Units.**

(Formerly CLASSHIS 114.) Cultural and political background for Athens of the 5th and 4th century BC. Athenian economy of the 4th century BC. Economic ideas of Plato, Aristotle, and Xenophon. Pros and Cons of utilitarianism in light of the ethical theories of Plato and Aristotle. Economy and economics of ancient Greece will be compared to the same of ancient China. There is an interesting parallel.  
Same as: ECON 114

**CLASSICS 184. Ancient and Modern Slavery. 3-5 Units.**

The ancient Greeks and Roman created the largest and most durable slave system in world history. It formed one of the foundations of classical civilization. While cruelty and exploitation were ever-present features, ancient slavery was not race-based and many slaves came to be freed and fully integrated into society. We will investigate this complex institution from a comparative perspective and in the context of the experience of modern colonial slavery.

**CLASSICS 198. Directed Readings. 1-15 Unit.**

(Formerly CLASSGEN 160.) May be repeated for credit.  
Same as: Undergraduate

**CLASSICS 199. Undergraduate Thesis: Senior Research. 2-10 Units.**  
(Formerly CLASSGEN 199.) May be repeat for credit.

**CLASSICS 201G. Survey of Greek Literature: Archaic Greek. 3-5 Units.**

(Formerly CLASSGEN 208A.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

**CLASSICS 201L. Survey of Latin Literature: Literature of the Roman Republic. 3-5 Units.**

(Formerly CLASSGEN 207A.) One-year sequence focusing on the origins, development, and interaction of Latin literature, history, and philosophy. Greek and Latin material taught in alternate years. Focus is on translation, textual criticism, genre, the role of Greece in shaping Roman literature, and oral versus written discourse.

**CLASSICS 202G. Survey of Greek Literature: Classical Greek. 3-5 Units.**

(Formerly CLASSGEN 208B.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

**CLASSICS 202L. Survey of Latin Literature: Augustan Age Latin. 3-5 Units.**

(Formerly CLASSGEN 207B.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Texts of Augustan literature required by the graduate syllabus, emphasizing poetry and major authors.

**CLASSICS 203G. Survey of Greek Literature: Hellenistic and Late Greek. 3-5 Units.**

(Formerly CLASSGEN 208C.) Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

**CLASSICS 203L. Survey of Latin Literature: Imperial Latin. 3-5 Units.**

(Formerly CLASSGEN 207C.) One-year sequence focusing on the origins, development, and interaction of Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

**CLASSICS 204A. Latin Syntax. 4 Units.**

(Formerly CLASSLAT 175A/275A.) Intensive review of Latin syntax. Begins Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204A.

Same as: CLASSICS 104A

**CLASSICS 204B. Latin Syntax. 2 Units.**

(Formerly CLASSLAT 175B/275B) Intensive review of Latin syntax. Began with 104A/204A in Autumn Quarter and continues through the fifth week of Winter Quarter. See CLASSICS 206A/B for supplemental courses. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204B.

Same as: CLASSICS 104B

**CLASSICS 205A. Greek Syntax: Prose Composition. 2 Units.**

(Formerly CLASSGRK 175A/275A.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Prerequisite for undergraduates: three years of Greek. First-year graduate students register for 205A/B.

Same as: CLASSICS 105A

**CLASSICS 205B. Greek Syntax: Prose Composition. 4 Units.**

(Formerly CLASSGRK 175B/275B.) Review of Greek grammar and instruction in Greek prose composition skills. Begins sixth week of Winter Quarter and continues through Spring Quarter. Prerequisite for undergraduates: three years of Greek. First-year graduate students register for 205A/B.

Same as: CLASSICS 105B

**CLASSICS 206A. The Semantics of Grammar. 2 Units.**

(Formerly CLASSGEN 205A.) Supplements CLASSICS 104A/204A. 206A: Tense, Aspect, Argument Structure, Location. 206B: Quantification, Plurality, Modification, Negation, Modality.

**CLASSICS 206B. The Semantics of Grammar. 2 Units.**

(Formerly CLASSGEN 205B.) Supplements CLASSICS 104B/204B. 206A: Tense, Aspect, Argument Structure, Location. 206B: Quantification, Plurality, Modification, Negation, Modality.

**CLASSICS 207L. The Pastoral in Post-Classical Literature. 1 Unit.**

For modern readers, the words *pastoral* and *bucolic* evoke picturesque scenes of pastureland and flocks of sheep in an Arcadian paradise first envisaged by the classical poets Theocritus and Virgil. This weekly reading group traces the long legacy of pastoral poetry in post-classical Latin literature, including the works of Dante, Petrarch, Boccaccio, Sannazaro, and Milton. Through the songs of their shepherds, we will rediscover the pastoral landscape as a site of intergenerational conflict between poets from antiquity to the Renaissance. All readings will be done in the original Latin. Prerequisite: at least one full year of Latin or permission of instructor. Course may be taken independently or as an optional extra weekly session of CLASSICS 102L Advanced Latin: Virgil's Eclogues and Georgics (in the latter case, please register for CLASSICS 102L).

**CLASSICS 213. Proseminar: Documentary Papyrology. 3-5 Units.**

The focus will be on documentary papyrology. Students will be introduced to the basics of the discipline.

**CLASSICS 214. Ancient Numismatics. 3-5 Units.**

Graduate proseminar. Basic skills course required for ancient history graduate students; others by consent of instructor. Focus is on Greek and Roman coinage and monetary history; related material from the ancient Near East and Europe.

**CLASSICS 215. Paleography of Medieval and Early Modern Manuscripts. 3-5 Units.**

Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.

Same as: DLCL 209, HISTORY 309G, RELIGST 204

**CLASSICS 216. Advanced Paleography. 5 Units.**

This course will train students in the transcription and editing of original Medieval and Early Modern textual materials from c. 1000 to 1600, written principally in Latin and English (but other European languages are possible, too). Students will hone their archival skills, learning how to describe, read and present a range of manuscripts and single-leaf documents, before turning their hand to critical interpretation and editing. Students, who must already have experience of working with early archival materials, will focus on the full publication of one individual fragment or document as formal assessment.

Same as: HISTORY 315, RELIGST 329X

**CLASSICS 237. Ancient Dance and its Modern Legacy. 3-5 Units.**

Descriptions of dance in the Greek and Greco-Roman world; theories about dance in antiquity; dance and the senses; modern and modernist dancers and choreographers discussing ancient dance.

Same as: CLASSICS 137, TAPS 165C, TAPS 265C

**CLASSICS 243. Images of Women in Ancient China and Greece. 3-5 Units.**

(Formerly CLASSGEN 153/253.) Representation of women in ancient Chinese and Greek texts. How men viewed women and what women had to say about themselves and their societies. Primary readings in poetry, drama, and didactic writings. Relevance for understanding modern concerns; use of comparison for discovering historical and cultural patterns.

Same as: CHINGEN 143, CHINGEN 243, CLASSICS 143

**CLASSICS 244. Classical Seminar: Rethinking Classics. 4-5 Units.**

Literary and philosophical texts from Antiquity (including Homer, the Greek tragedians, Plato, Aristotle, Virgil, and Augustine). In each case, we will examine the cultural contexts in which each text was composed (e.g. political regimes and ideologies; attitudes towards gender and sexuality; hierarchies of class and status; discourses on "barbarians" and resident aliens). We will study various theoretical approaches to these books in an effort to "rethink" these texts in the 21st century.

Same as: DLCL 321

**CLASSICS 246. Winged Bulls and Sun Disks: Religion and Politics in the Persian Empire. 3-5 Units.**

Stretching from India to Ethiopia, the Persian Empire, the largest empire before Rome, has been represented as the exemplar of oriental despotism and imperial arrogance, a looming presence and worthy foil for the West and Greek democracy. This course will provide a general introduction to the Persian Empire, beginning in the 6th century BCE to the fall of Persia to Alexander the Great in 331 BCE. We shall not only examine the originality of the first world empire of antiquity, but the course will also attempt to present a broad picture of the diverse cultural institutions and religious practices found within the empire. Readings in translation from the royal edicts and the inscriptions of Cyrus, Darius, and Xerxes will allow us to better appreciate the subtle ways in which these Persian kings used religion to justify and propagate the most ambitious imperial agenda the world had ever seen. In concluding the quarter, students will evaluate contemporary representations of Persia and the Persians in politics and popular culture in a wide array of media, such as the recent film 300 and the graphic novel on which it is based, in an attempt to better appreciate the enduring legacy of the Greco-Persian wars.

Same as: CLASSICS 146, RELIGST 229, RELIGST 329

**CLASSICS 247. Priests, Prophets, and Kings: Religion and Society in Late Antique Iran. 4-5 Units.**

This course is designed as a broad introduction to the religious and social history of the Sasanian Empire, encompassing the period from 224-651 CE as well as the early years of Islamic rule in Iran. Among the topics we will discuss are: the lives and deeds of the powerful Iranian emperors such as Shapur I and II in relation to the Roman emperors Diocletian and Constantine; the transformation of Zoroastrianism into a powerful official religion of the state and its subsequent orthodoxy; the emergence of the prophet Mani and the confrontation of Manicheism with the Zoroastrian priesthood; the conversion of Constantine to Christianity and its political and social ramifications in Iran; the establishment of an independent Iranian Christian church; the importance of Armenia in the Sasanian-Roman conflict; and a brief discussion of the history of the Jewish community under the Sasanians. We will end the quarter by examining the Arab-Islamic conquests of Iran and the profound social changes experienced by the Zoroastrian communities in the early centuries of Islam in Iran.

Same as: CLASSICS 147, RELIGST 209, RELIGST 309

**CLASSICS 248. Imperishable Heroes and Unblemished Goddesses: Myth, Ritual, and Epic in Ancient Iran. 3-5 Units.**

Designed as a broad introduction to the world of ancient Iran, students will be introduced to the Indo-European inheritance in ancient Iranian culture; the shared world of ritual, religion, and mythology between Zoroastrianism in Iran and Vedic Hinduism in India; and to the contours of early Zoroastrian religious thought. We will also survey mythoepic literature in translation from the archaic Avesta through the late antique Zoroastrian Middle Persian corpus to the early medieval national epic of Iran, the Book of Kings of Ferdowsi.

Same as: CLASSICS 148, RELIGST 209E, RELIGST 309E

**CLASSICS 257. The Archaeology of Cyprus. 3-5 Units.**

This seminar course introduces students to the island of Cyprus in the eastern Mediterranean and its archaeology, from the origins of human occupation to the end of antiquity. Readings and discussions of material culture and texts will explore the history and practice of Cypriot archaeology in relation to those of Greece and the Near East. Key themes will include: islands and insularity, continuity vs. change, sex and identity, the rise of the state, regionalism, and imperial conquest. Suitable for both graduate and undergraduate students.

Same as: CLASSICS 157

**CLASSICS 258. Iconoclasm. 5 Units.**

Iconoclasm, iconophobia, and aniconism as markers of cultural transformation of the Mediterranean in the 7th-9th centuries. The identity crisis in the region as the Arabs established the Umayyad caliphate, conquering the Holy Land, Egypt, and Spain. The West consolidated around the Carolingians versus the East split between the Byzantines and the Arabs. How each of these three empires emerged from the ashes of late antique culture and carved an identity out of a common cultural foundation. The course will take place in the seminar room of the Art and Architectural Library located in the Cummings Art Building.

Same as: ARTHIST 209C, ARTHIST 409, CLASSICS 158, REES 409

**CLASSICS 273. Hagia Sophia. 5 Units.**

By employing a methodology based in psychoacoustics, semiotics, and phenomenology, this course explores the relationship among sound, water, marble, meaning, and religious experience in the sixth-century church of Hagia Sophia built by emperor Justinian in Constantinople. We will read medieval sources describing the interior and ritual, make short movies exploring the shimmer of marble in buildings on campus, and study the acoustics of domed buildings through computer auralization done at Stanford's CCRMA (Center for Computer Research in Music and Acoustics).

Same as: ARTHIST 208, ARTHIST 408, CLASSICS 173

**CLASSICS 298. Directed Reading in Classics. 1-15 Unit.**

(Formerly CLASSGEN 260.)

Same as: Graduate Students

**CLASSICS 301. Gateways to Classics. 1 Unit.**

(Formerly CLASSGEN 300A.) Focus on skills, methodologies and approaches in the study of Classics topics, with attention both to histories of the disciplines and to new developments. Required for first-year Classics graduate students.

**CLASSICS 302. Workshop on Teaching in Classics. 1 Unit.**

Introduction to pedagogical theories and techniques relevant to careers as Classics instructors. Classics faculty and advanced graduate students will lead sessions on language instruction, class discussions, assignments and feedback, and course design. Participants will read selections from modern scholarship on teaching and learning and engage in hands-on exercises.

**CLASSICS 304. Developing a Classics Dissertation Prospectus. 1-3 Unit.**

This workshop concentrates on the development process of writing a successful dissertation proposal and clarifies expectations of the defense process. Includes peer reviews of draft proposals with an aim to present provisional proposals by the end of term. Highly recommended for current third-year Classics Ph.D. students.

**CLASSICS 315. Aristotle and the Object of Mathematical Reasoning. 4 Units.**

The concept of definition plays a central role in Aristotle's treatment of both philosophical and scientific inquiry, as well as explanation. A definition is an account of what something is, and some definitions are used to guide causal inquiry whereas others function as explanatory starting points. In this course we will examine texts from his logic, natural science and metaphysics in order to see what the different kinds of definition are, how they obtained, and how they capture the nature or essence of a definable object. Particular attention will be given to the role of matter in the definition of the form of a natural substance, state, process or activity. For instance, what role does a specification of physiological processes play in the definitions of emotions such as anger? No knowledge of Greek is required. May be repeat for credit.

Same as: PHIL 318

**CLASSICS 318. Aristophanes: Comedy, and Democracy. 4-5 Units.**

(Formerly CLASSGEN 304.) Intensive study of three plays in Greek (Knights, Peace, Ecclesiazusae) and the rest of the corpus in English, with reference to formal features and a focus on how Old Comedy related to the democratic practices of Athens.

**CLASSICS 320. The Odes and Epodes of Horace. 3-5 Units.**

Critical analysis of poetic texts, strengthening and updating the understanding of Latin language and style, and discussion of some of the most influential lyric poetry of all time. Topics include language, style and meter, and also poetics, historical context, gender, ethics, genre, and the history of Western lyric poetry. Classics undergraduates as well as graduate students familiar with other traditions of poetry are welcome.

**CLASSICS 327. Petronius and Apuleius. 4-5 Units.**

Petronius' *Satyricon* and Apuleius' *Metamorphoses* represent the surviving Latin novel. Differences between them. Readings include Petronius' dinner at Trimalchio's and Apuleius' love story of Cupid and Psyche. Philological analysis, history of the novel, and social history of the Roman empire. The afterlife of these texts. Recent scholarship.

**CLASSICS 328. Augustine on Memory, Time, and the Self. 3-5 Units.**

(Formerly CLASSGEN 336.) This course examines Augustine's "Confessions" as an autobiographical discourse. It investigates his theories of memory and of time and address different theories of the "self." How does memory and the passing of time affect the notion of the self? Does Augustine's "subjective" theory of time offer an identifiable self? Is the self constructed by narratives? We will locate these issues in their cultural context by investigating Christian and pagan discourses and practices in Late Antiquity.

**CLASSICS 330. Satire. 3-5 Units.**

The concept of "satire" as a social and literary force will be examined with equal attention given to examples in Greek and Latin. Texts to be analyzed include Greek iambos from the 7th century BC to early Byzantine times; selected portions of Old Comedy; Herodas; Lucian; Lucilius; Horace, Ovid, Juvenal, Persius, and Martial. Particular attention will be paid to authorial self-fashioning; limitations on verbal abuse; and ideas of propriety. All texts to be read in the original languages, with supplementary readings in English and on occasion French, German or Italian.

**CLASSICS 331. Words and Things in the History of Classical Scholarship. 4-5 Units.**

How have scholars used ancient texts and objects since the revival of the classical tradition? How did antiquarians study and depict objects and relate them to texts and reconstructions of the past? What changed and what stayed the same as humanist scholarship gave way to professional archaeologists, historians, and philologists? Focus is on key works in the history of classics, such as Erasmus and Winckelmann, in their scholarly, cultural, and political contexts, and recent critical trends in intellectual history and the history of disciplines.

Same as: HISTORY 303F

**CLASSICS 335. Ekphrasis in Antiquity. 3-5 Units.**

What is "ekphrasis"? How was it theorized and practiced in antiquity? Description, interpretation, and the senses; The relationship between the verbal and the visual in antiquity from Homer to Philostratus.

**CLASSICS 336. Plato on Eros and Beauty. 3-5 Units.**

We read Plato's *Symposium* and *Phaedrus*; topics: love, beauty, language (oral and written). Graduate seminar, but open to seniors.

Same as: PHIL 306C

**CLASSICS 337. The Second Sophistic. 3-5 Units.**

The class will introduce students to the most important aspects of the Second Sophistic: linguistic and literary classicism, rhetoric and performance, typical literary forms. Particular emphasis will be on the social and political background of the movement (Greek identity, social distinction, sophists and gender). For students who wish to take the class for 4 or 5 units, part of the readings will be in the original Greek.

**CLASSICS 352. Doing Business in Classical Antiquity: Mediterranean Exchange. 3-5 Units.**

Exchange was everywhere in the Mediterranean, from the individual household to the state. Yet the specific models by which goods changed hands were as varied as the ideas and values that moved alongside them. This seminar will explore theoretical approaches to commercial and non-commercial exchange, drawing primarily on the crucial but uneven bodies of archaeological evidence and historical sources in an effort to investigate the simple but hardly straightforward question of how business was undertaken in the Greco-Roman world.  
Same as: ARCHLGY 327

**CLASSICS 353. Archaeology: Post-Humanist Agendas. 3-5 Units.**

How do people and their artifacts connect? Just what is the subject of archaeological history? A seminar reviewing the latest materialist approaches in archaeology and heritage studies.  
Same as: ARCHLGY 353

**CLASSICS 355. Landscape & Archaeology. 3-5 Units.**

TBD.  
Same as: ARCHLGY 355

**CLASSICS 356. Mediterranean Regionalism. 3-5 Units.**

The ancient world enjoys scholarly traditions of both grand pan-Mediterranean narratives and focused studies of the individual landscapes and peoples who comprise them. Within archaeology, these latter explorations generally rely on expedient geographical designations, modern political boundaries, or survey areas as focused *regions* for discussion. Defining and interrogating the regions created and experienced by ancient peoples and assembling these into a coherent larger ancient picture proves far more difficult. This seminar explores the varied forms of ancient regionalisms—from archaeological (architecture, ceramics, coinage, sculpture, etc.) to social (language, religion, etc.)—and tools for investigating such patterns of human interaction.  
Same as: ARCHLGY 356

**CLASSICS 358. The Archaeology of Ancient Mediterranean Environments. 4-5 Units.**

This seminar examines the interplay between classical archaeologists' conceptions and analyses of ancient Mediterranean environments. These themes loom large now - during what might be called the *environmental turn* of the Anthropocene in the humanities and social sciences - and their increasing resonance provides the basis for critical reflection of the discipline's past and future trends. Topics will include: environmental determinism, *non-human* agency, the role of science in archaeological/historical practice, and the compartmentalization of environment/climate as analytic focus.

**CLASSICS 367. Mediterranean Networks. 3-5 Units.**

The ancient Mediterranean was highly interconnected is common knowledge, and the idea of integration has become a defining factory in current approaches to Greco-Roman cultural identities. Yet how connectivity functioned, and how we should effectively analyze it, are less well understood. This seminar highlights emerging network approaches—both broad theoretical network paradigms and specific network science methodologies—as conceptual tools for archaeological and historical investigations of cultural interaction (economic, religious, artistic, colonial, etc.) across the Mediterranean world.  
Same as: ARCHLGY 367

**CLASSICS 372. Archaeology of Roman Slavery. 4-5 Units.**

(Formerly CLASSART 342.) The archaeological study of Roman slavery has been severely limited by a focus on identifying the traces of slaves in the material record. This seminar explores a range of newer and more broadly conceived approaches to understanding slavery and slaves' experiences, including spatial analysis, bioarchaeology, epigraphy, visual imagery, and comparative archaeologies of slavery. Students will learn about the current state of research, work with different kinds of evidence and a range of methodologies, and develop original research projects of their own.  
Same as: ARCHLGY 342

**CLASSICS 373. Reception and Literacy in Roman Art. 5 Units.**

(Formerly CLASSART 322.) Beyond a focus on artists and patrons: how Roman art was seen and understood by its contemporary viewers. Themes include memory, performance, gender, replication, and constructions of space. Goal is to draft a differentiated model of viewing and literacy, with attention to collective experience, hierarchy, access, and subversion.  
Same as: ARTHIST 422

**CLASSICS 376. Art, Ekphrasis, and Music in Byzantium and Islam. 5 Units.**

Focus is on the interrelation of art, architecture, verbal description, poetry, and music, including the singing of psalms and recitation of the Qur'an. How ekphrasis, the style of writing vividly intended to transform the listeners into spectators, structures the perception of and response to artistic production be it an art object, building, or a musical performance. The role of ekphrasis in animating the inanimate and the importance of breath and spirit, which become manifest in visual, acoustic, olfactory, and gustatory terms. Religious and courtly settings: Hagia Sophia, the Great Palace of Constantinople, the Dome of the Rock, the palaces of Baghdad and Samarra, the mosque at Cordoba, Medinat al-Zahra and the Alhambra. Greek and Arabic writers on ekphrasis in translation, juxtaposing the medieval material to the ancient theories of ekphrasis and modern scholarship.  
Same as: ARTHIST 405

**CLASSICS 377. Animation, Performance, Presence in Medieval Art. 5 Units.**

(Formerly CLASSART 311.) This course will explore concepts of animacy, performance, and presence in the art of Byzantium, focusing on the concept of image understood as the living bodies of the saints, the space of Hagia Sophia and its Eucharist ritual, the polymorphism of the mixed-media icon, and the interaction with these objects in prayer and recitation of epigrams.  
Same as: ARTHIST 411

**CLASSICS 378. Ancient Greek Law and Justice. 3-5 Units.**

The development and practice of law and legal procedure in the ancient Greek world, emphasizing the well documented case of classical Athens. Constitutional, criminal, and civil law, approached through analysis of actual laws and speeches by litigants in Athenian courtrooms. Review of a growing scholarship juxtaposing Greek law to other prominent legal traditions and exploring the role of law in Greek social relations, economics, and literature, and its relationship to Greek conceptions of justice.  
Same as: POLISCI 337L

**CLASSICS 380. Ancient Empires. 4-5 Units.**

What is an empire? How did they begin? Why have some imperialists been successful, while others failed dismally? Why do some people collaborate with imperialism, while others resist fiercely? This seminar examines the empires of the ancient East Mediterranean between 800 and 300 BC, focusing on two great imperial powers (Assyria, Persia) and three smaller societies on the receiving end of imperial conquest (Israel, Egypt, Greece), and asking why societies that were successful in resisting imperialism often then tried to create empires themselves. The evidence used comes mainly from epigraphy, the Hebrew Bible, and Herodotus. Some background in ancient history and/or comparative politics preferred.

**CLASSICS 382. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests. 3-5 Units.**

Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era.

Same as: POLISCI 231, POLISCI 331

**CLASSICS 384A. Ancient Greek Economic Development. 4-5 Units.**

(Formerly CLASSHIS 330A.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

Same as: POLISCI 430A

**CLASSICS 384B. Ancient Greek Economic Development. 1-5 Unit.**

(Formerly CLASSHIS 330B.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.

Same as: POLISCI 430B

**CLASSICS 391. Early Empires: Han and Rome. 4-5 Units.**

(Formerly CLASSHIS 344.) This course systematically compares the Han Empire and the Roman Empire in order to provide insight into the distinctive features of the empires as a political and social type. Topics examined will include geographic frames, the nature of the ruler, the role of the city, the form and function of military forces, religious aspects, legal codes, structures of kinship, and the relation of these states to the outside world.

**CLASSICS 396. Humanities+Design: Visualizing the Grand Tour. 4-5 Units.**

Study of the eighteenth-century Grand Tour of Italy through visualization tools of the digital age. Critical readings in both visual epistemology and current Grand Tour studies; interrogating the relationship between quantitative and qualitative approaches in digital humanities; what new insights in eighteenth-century British travel to Italy does data visualization offer us? Students will transform traditional texts and documents into digital datasets, developing individual data analysis projects using text mining, data capture and visualization techniques.

Same as: DLCL 396, HISTORY 336E

**CLASSICS 399. Dissertation Research in Classics. 1-10 Unit.**

(Formerly CLASSGEN 360.)

**CLASSICS 801. TGR M.A. Project. 0 Units.**

(Formerly CLASSGEN 801.)

**CLASSICS 802. TGR Ph.D. Dissertation. 0 Units.**

(Formerly CLASSGEN 802.)

**Communication Courses****COMM 1A. Mass Media, Society, and Democracy. 4-5 Units.**

(Graduate students register for COMM 211.) Open to non-majors. This course examines the role of the news media in contemporary society, with particular attention to cross-national variation in the relationships between journalists, politicians, and citizens. We further consider the potentially transforming effects of technology on the media-politics nexus.

Same as: COMM 211

**COMM 1B. Media, Culture, and Society. 5 Units.**

The institutions and practices of mass media, including television, film, radio, and digital media, and their role in shaping culture and social life. The media's shifting relationships to politics, commerce, and identity.

Same as: AMSTUD 1B

**COMM 86SI. College Media Lab: digital and reporting skills for student journalists. 1-2 Unit.**

Journalism, especially college journalism, is undergoing rapid change in the 21st century. As native digital users, we are uniquely positioned to create and innovate in the new media landscape. This class is designed to provide students with a hands-on education in digitally-fluent college media reporting. Topics include photo, video and data reporting, media rights and responsibilities, and communications careers outside of journalism. The 'basics' of writing, blogging, and reporting the news will be taught and applied throughout the quarter. Guest lectures from professional reporters, academics, and communications professionals. Work completed for this class can be submitted to The Stanford Daily for publication. Pizza provided.

**COMM 100S. Self-Representation in Digital Media. 3 Units.**

Digital media allows ordinary people to document, publicize and reinvent themselves in ways previously only available to the elite. In the first half of this course, we will examine how Westerners have represented themselves as individuals. We will focus on photography, as indicative of a shift in prevalence of self-representation to the masses. In the second half of the course, we will examine how the ways in which individuals are represented may affect their understanding of themselves. Students will experiment with self-representation in different media, including creating virtual representations (avatars) of themselves to be inhabited in immersive virtual reality in the Virtual Human Interaction Lab. In the process, they will learn how the shared digital world shadows, interprets and sometimes overwrites the physical world and day-to-day life.

**COMM 101S. Growing up Digital: Technology's role in Cognitive and Social Development. 3 Units.**

Interactive digital technology infiltrates homes, schools, and entertainment venues, changing how people think, and socialize. What is the impact of growing up with greater access? How might age influence its use? This course focuses on technology's role in cognitive and social development and how that impacts its design. Topics include brain development, social cognition, symbolic processing, media usage, and self-representation. Coursework includes interacting with digital technologies such as virtual reality and social networking websites and completing a design project.

**COMM 103S. Media Entertainment. 3 Units.**

The impact of media entertainment on individuals, social groups, and societies. Sources include a diverse cross-section of entertainment. Introduction to psychological and socio-psychological theories. Empirical findings relating to media entertainment as a stimulus and a reception phenomenon. What renders diverse genres of media content and format enjoyable? Why do individuals pursue entertainment experiences in ever-increasing numbers? What is the political impact of apolitical media entertainment?

**COMM 104W. Reporting, Writing, and Understanding the News. 5 Units.**

Techniques of news reporting and writing. The value and role of news in democratic societies. Gateway class to journalism. Prerequisite for all COMM 177/277 classes. Limited enrollment. Preference to COMM majors.

**COMM 105S. Media Power in American Culture. 3 Units.**

An exploration of media power, focused on both digital and mass media. This course aims to interrogate what it means to claim that media are powerful, with an eye toward power dynamics in an era of Edward Snowden, National Security Agency surveillance of Americans, and constant online tracking by Internet companies. The objective of this course is to develop a framework and vocabulary for critically understanding media power and its role in setting the conditions of everyday life.

**COMM 106. Communication Research Methods. 4-5 Units.**

(Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor. Same as: COMM 206

**COMM 107S. Engendering Compassion with Interactive Digital Media. 3 Units.**

This course will draw on research regarding behavioral, cognitive, and physiological indicators and predictors of compassion, as well as computer-mediated communication, intimate and ubiquitous computing, social networking, and multitasking to better understand how interactive digital media affects compassionate behaviors, including altruism and helping. For their final project, students will either (1) propose an experiment for future research investigating compassion in HCI, or (2) propose a design change for an extant technology to engender compassionate responses.

**COMM 108. Media Processes and Effects. 4-5 Units.**

(Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1.

Same as: COMM 208

**COMM 109S. Psychology of Technology & Human-Technology Interaction. 3 Units.**

Products of design surround us, and shape our lives. This course will explore the human relationship with technology from a psychological point of view, and probe how technology can be designed to work in concert with those who use it. To survey this vast space, the course will cover seminal readings in the areas of human factors, human-computer interaction, product design, and psychology. The course will also delve into the area of design, with a collaborative final project integrating design and psychology.

**COMM 111S. Creative Industries: The Business of Popular Culture. 3 Units.**

Examines the processes, institutions and cultural forces that shape production in creative industries. Examines book publishing, journalism, music, video/film, and games. Explores how these industries are organized, how work is structured and how technology and social media affect the production, distribution and discovery of products (like books, songs and videos) and experiences (like concerts). Asks how user-created content, like fan fiction and youtube videos, affect existing media institutions, and asks how digital technologies change the way culture is made.

**COMM 113. Computational Methods in the Civic Sphere. 4-5 Units.**

The widespread availability of public data provides a rich opportunity for those who can efficiently filter, interpret, and visualize information. Course develops necessary technical skills for data collection, analysis, and publication, including data mining and web visualization, with a focus on civic affairs and government accountability. Open to all majors and a range of technical skill levels. Involves tackling new tools and technical concepts in the pursuit of engaging, public-facing projects. (Graduate students enroll in 213).

Same as: COMM 213

**COMM 116. Journalism Law. 4-5 Units.**

(Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major.

Same as: COMM 216

**COMM 120W. Digital Media in Society. 4-5 Units.**

Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Priority to juniors, seniors, and graduate students. To request a permission number, please email blazzari@stanford.edu. Include your student ID, major, and year.

Same as: AMSTUD 120, COMM 220

**COMM 121. Behavior and Social Media. 5 Units.**

This course examines behavioral approaches to understanding social media. The course will begin by discussing the design factors that shape behavior online, considering research in human-computer interaction that reflects and reveals communication practices and contexts. Next, the course will examine the psychological aspects of computer-mediated communication and virtual collaboration, including impression formation and management, deception, audience and social networks. Finally, the course will explore the ways in which human behavior is situated inside of social and institutional structures and cultural formations; and with that in mind, it will examine the complex interactions between behavior, society, and information technology.

**COMM 121S. The Human Relationship with Machines. 3 Units.**

This course will survey ways in which people have thought about machines, in social and moral terms, from the late 18th century to the mid-20th century. Students will read mostly primary and secondary historical sources, originally published among industrial countries including France, Holland, England, Germany, and the United States, that illustrate major points of contention between actors brought into contact with one another through machine technologies. By the end of the course, students will have a greater understanding of the particular stances taken toward machines throughout modernity, how communication between people during this period has been shaped and occasioned by machines, the variety of forms taken by that communication, and what this history could mean for the role played by machines in our own lives. Topics include the censorship of Julien Offray de la Mettrie, automata and industrialization in 18th century England, the English and French Luddite movements, the literary dystopias of Samuel Butler and Charles Dickens, the American machine breakers movement, Taylorism and technocracy, and the post-war perspectives of Norbert Wiener and Martin Heidegger.

**COMM 122. Content Analysis: Studying Communication Artifacts. 4-5 Units.**

An empirical and systematic investigation of documented messages in print, graphical, and audio-visual forms and observed human communication behaviors. Focuses on the design and execution of content analytic studies, including manifest vs. latent content, measurement issues, reliability and validity assessment, computer text analysis, and traditional human-coder techniques. Prerequisite: junior, senior or grad standing; COMM 106/206 or an equivalent course in basic social science research. Limited enrollment.

Same as: COMM 222

**COMM 124. Digital Deception. 4-5 Units.**

Deception is one of the most significant and pervasive social phenomena of our age. Lies range from the trivial to the very serious, including deception between friends and family, in the workplace, and in security and intelligence contexts. At the same time, information and communication technologies have pervaded almost all aspects of human communication, from everyday technologies that support interpersonal interactions to, such as email and instant messaging, to more sophisticated systems that support organization-level interactions. Given the prevalence of both deception and communication technology in our personal and professional lives, an important set of questions have recently emerged about how humans adapt their deceptive practices to new communication and information technologies, including how communication technology affects the practice of lying and the detection of deception, and whether technology can be used to identify deception. Same as: COMM 224

**COMM 125. Perspectives on American Journalism. 4-5 Units.**

(Graduate students register for COMM 225.) An examination of the practice of American journalism, focusing on the political, social, cultural, economic and technological forces that have shaped the U. S. press since the early 1800s. Aimed at consumers as well as producers of news, the objective of this course is to provide a framework and vocabulary for judging the value and quality of everyday journalism. Same as: AMSTUD 125, COMM 225

**COMM 127X. The Ethics of Anonymity. 1 Unit.**

When is it ethical to conceal your identity or to permit another to remain anonymous? What is the value to remaining unknown, and what might be the cost? Does anonymity free you to think, act, or be in ways you wouldn't otherwise? What else might it allow or constrain? How might your answers differ depending on the circumstances or context? In this one-unit lunchtime seminar, guest speakers will discuss topics that might include: anonymous sources in journalism; anonymity online; the history of anonymous authorship and attribution; whistleblowers and confidential informants; anonymous egg or sperm donors and birth parents; anonymity vs. confidentiality for research participants; anonymity and art; technology and anonymity. Same as: CSRE 127X, ETHICSOC 2

**COMM 130N. The idea of a free press. 3-4 Units.**

Preference to freshmen. An examination of the meaning of freedom of the press, tied to but not bound by various Supreme Court rulings on the scope and purpose of the First Amendment's speech and press clauses. Discussions will include a look at the recent and rapid computerization of communication and what it portends for the future of a free press.

**COMM 131. Media Ethics and Responsibility. 4-5 Units.**

(Graduate students register for COMM 231.) The development of professionalism among American journalists, emphasizing the emergence of objectivity as a professional and the epistemological norm. An applied ethics course where questions of power, freedom, and truth autonomy are treated normatively so as to foster critical thinking about the origins and implications of commonly accepted standards of responsible journalism. Same as: COMM 231

**COMM 133. Need to Know: The Tension between a Free Press and National Security Decision Making. 4-5 Units.**

This seminar examines the dynamic interaction at the highest levels of government and the media when news coverage of secret national security policy and operations impinges on United States defense, diplomatic and intelligence activities and decision making. A prime example: the torrent of secret NSA programs disclosed by Edward Snowden in newspapers and other media. Students explore attitudes, practices, and actions by the media and the government through a series of case studies and simulations. Former editors, reporters, and government officials appear as guest speakers, including Condoleezza Rice. The goal of the course is to inform students about the vital but often fraught relationship between a free press and the government in a democratic society, especially in the management of national security affairs. For advanced undergraduates and graduate students. Application for enrollment required. The instructor is a former Washington bureau chief of The New York Times. Email Miles Lichtman (milesl@stanford.edu) to request an application. Completed applications are due by 6pm on March 19, 2016. Early applications welcome. Same as: COMM 233

**COMM 135. Deliberative Democracy and its Critics. 3-5 Units.**

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion. Same as: AMSTUD 135, COMM 235, COMM 335, POLISCI 234P, POLISCI 334P

**COMM 137W. The Dialogue of Democracy. 4-5 Units.**

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized. Same as: AMSTUD 137, COMM 237, POLISCI 232T, POLISCI 332T

**COMM 138. Deliberative Democracy Practicum: Applying Deliberative Polling. 3-5 Units.**

In this course, students will work directly on a real-world deliberative democracy project using the method of Deliberative Polling. Students in this course will work in partnership with the Center for Deliberative Democracy at Stanford, a research center devoted to the research in democracy and public opinion around the world. This unique practicum will allow students to work on an actual Deliberative Polling project on campus. In just one quarter, the students will prepare for, implement, and analyze the results for an Deliberative Polling project. This is a unique opportunity that allows students to take part in the entire process of a deliberative democracy project. Through this practicum, students will apply quantitative and qualitative research methods in a local community or local high school and subsequently, analyze the relevant quantitative and qualitative data. Students will explore the underlying challenges and complexities of what it means to actually do community-engaged research in the real world. As such, this course will provide students with skills and experience in research design in deliberative democracy, community and stakeholder engagement, and the practical aspects of working in local communities. This practicum is a collaboration between the Center for Deliberative Democracy, the Bill Lane Center for the American West and the Haas Center for Public Service. nCDD website: <http://cdd.stanford.edu> Bill Lane Center website: <http://west.stanford.edu> Haas Center website: <https://haas.stanford.edu>. Same as: CSRE 38

**COMM 140. Digital Media Entrepreneurship. 3-5 Units.**

(Graduate students register for COMM 240.) Primarily for graduate journalism and computer science students. Silicon Valley's new media culture, digital storytelling skills and techniques, web-based skills, and entrepreneurial ventures. Guest speakers. Prerequisite: Instructor consent/completed application. Application can be found at: <http://dme.stanford.edu>. Same as: COMM 240

**COMM 142W. Media Economics. 4-5 Units.**

Uses economics to examine the generation and consumption of information in communication markets. Covers concepts that play a large role in information economics, including public goods, economies of scale, product differentiation, and externalities. Looks at individuals' information demands as consumers, producers, audience members, and voters. Topics include economics of Internet, sustainability of accountability journalism, and marketplace of ideas. Same as: COMM 242

**COMM 143W. Communication Policy and Regulation. 4-5 Units.**

Focuses on the development, implementation, and evaluation of policies affecting communication markets. Policy issues include universal service, digital divide, Internet regulation, intellectual property, privacy, television violence, content diversity, media ownership, antitrust, and impact of news on government accountability. Examines political economy of communication policy and the evolution of policies across time. Same as: COMM 243

**COMM 151. The First Amendment: Freedom of Speech and Press. 4-5 Units.**

Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. In addition to a final and midterm exam, students participate in a moot court on a hypothetical case. (Grad students register for COMM 251). Same as: COMM 251, POLISCI 125P

**COMM 152. Constitutional Law. 3 Units.**

This course covers Supreme Court case law concerning governmental powers, equal protection, and certain fundamental rights. The course investigates the constitutional foundation for democratic participation in the United States, covering topics such as the Fourteenth Amendment's protections against discrimination on grounds of race, gender, and other classifications, as well as the individual rights to voting and intimate association, and an introduction to First Amendment rights of free speech and press. Students will be evaluated on class participation, a midterm moot court with both a written and oral component, and a take-home final exam. Lectures will be twice per week and a discussion section once per week.

Same as: COMM 252, POLISCI 126P

**COMM 157. Information Control in Authoritarian Regimes. 4-5 Units.**

Does information help autocrats and dictators stay in power? Or does information help topple authoritarian regimes? This course will examine how authoritarian regimes try to control information through surveillance, propaganda, and censorship, what influences the effectiveness of these information control measures, and how changes in technology (Internet, social media, mobile) affect the dynamics of information control. Same as: COMM 257

**COMM 160. The Press and the Political Process. 4-5 Units.**

(Graduate students register for COMM 260.) The role of mass media and other channels of communication in political and electoral processes. Same as: COMM 260, POLISCI 323R

**COMM 162. Campaigns, Voting, Media, and Elections. 4-5 Units.**

This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players – candidates, parties, journalists, and voters – in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process. Same as: COMM 262, POLISCI 120B

**COMM 164. The Psychology of Communication About Politics in America. 4-5 Units.**

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.

Same as: COMM 264, POLISCI 124L, PSYCH 170

**COMM 166. Virtual People. 4-5 Units.**

(Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.

Same as: COMM 266

**COMM 169. Computers and Interfaces. 4-5 Units.**

(Graduate students register for COMM 269.) Interdisciplinary. Interdisciplinary. User responses to interfaces and design implications of those responses. Theories from different disciplines illustrate cognitive, emotional, and social responses to textual, voice-based, pictorial, metaphoric, conversational, adaptive, agent-based, intelligent, and anthropomorphic interfaces. Group design project applying theory to the design of an interactive interface.

Same as: COMM 269

**COMM 171. Moving Pictures: How the Web, Mobile and Tablets are Revolutionizing Video Journalism. 3-5 Units.**

(Graduate students register for 271.) Examine the emerging role of video journalism across web, tablet and mobile platforms. What are the specific needs of these platforms? How can new reporting tools be integrated to efficiently produce video news content? We'll examine case studies and hear from guest speakers about innovations in video journalism on these platforms. Students will produce video journalism pieces using mobile tools, optimized for viewing on mobile devices. Prerequisite: Journalism MA student or instructor's consent.

Same as: COMM 271

**COMM 172. Media Psychology. 4-5 Units.**

(Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening.

Same as: COMM 272

**COMM 176. Advanced Digital Media Production. 4-5 Units.**

In-depth reporting and production using audio, images and video. Focus on an in-depth journalism project with appropriate uses of digital media: audio, photography, graphics, and video. Topics include advanced field techniques and approaches (audio, video, still) and emphasis on creating a non-fiction narrative arc in a multimedia piece of 10-12 minutes.

Prerequisite: COMM 275 or consent of instructor.

Same as: COMM 276

**COMM 177A. Computational Journalism. 4 Units.**

Focuses on using data and algorithms to lower the cost of discovering stories or telling stories in more engaging and personalized ways. Project based assignments based on real-world challenges faced in newsrooms. Prior experience in journalism or computational thinking helpful. Prerequisite: Comm 273D, COMM 113/213, or the consent of instructor.

Same as: COMM 277A

**COMM 177C. Specialized Writing and Reporting: Environmental Journalism. 4-5 Units.**

(Graduate students register for COMM / EARTHSYS 277C.) A practical, writing-intensive course for science and journalism students that begins with the assumption that you already know how to research and relay the essential facts of almost any environmental story. You will go beyond the basics, both as reporters and storytellers. Learn how to write stories that stand on fact but move like fiction, that have protagonists and antagonists, that create suspense, that reveal character through dialogue and action, and that pay off with resonant finales. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: COMM 104, EARTHSYS 200 or consent of instructor. Admission by application only, available from thayden@stanford.edu. Applications due Nov. 30, 2015.

Same as: COMM 277C, EARTHSYS 177C, EARTHSYS 277C

**COMM 177D. Specialized Writing and Reporting: Magazine Journalism. 4-5 Units.**

(Graduate students register for COMM 277D.) How to report, write, edit, and read magazine articles, emphasizing long-form narrative. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best magazine stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor.

Same as: COMM 277D

**COMM 177I. Becoming a Watchdog: Investigative Reporting Techniques. 4-5 Units.**

Graduate students register for COMM 277I.) Learn how to apply an investigative and data mindset to journalism, from understanding how to background an individual or entity using online databases to compiling or combining disparate sets of information in ways that unveil wrongdoing or mismanagement. Focuses on mining texts, tracking associations, and using visualizations. Stories produced apply investigative techniques to beat reporting, breaking news, and long form journalism. Prerequisite: COMM 104W, or consent of instructor.

Same as: COMM 277I

**COMM 177S. Specialized Writing and Reporting: Sports Journalism. 4-5 Units.**

(Graduate students register for COMM 277S.) Workshop. An examination of American sports writing from the 1920's Golden Age of Sports to present. Students become practitioners of the sports writing craft in an intensive laboratory. Hones journalistic skills such as specialized reporting, interviewing, deadline writing, creation of video projects, and conceptualizing and developing stories for print and online. Prerequisite: 104 or consent of instructor.

Same as: COMM 277S

**COMM 195. Honors Thesis. 5 Units.**

Qualifies students to conduct communication research. Student must apply for department honors thesis program during Spring Quarter of junior year.

**COMM 199. Individual Work. 1-5 Unit.**

For students with high academic standing. May be repeated for credit.

**COMM 206. Communication Research Methods. 4-5 Units.**

(Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor.

Same as: COMM 106

**COMM 208. Media Processes and Effects. 4-5 Units.**

(Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1.

Same as: COMM 108

**COMM 211. Mass Media, Society, and Democracy. 4-5 Units.**

(Graduate students register for COMM 211.) Open to non-majors. This course examines the role of the news media in contemporary society, with particular attention to cross-national variation in the relationships between journalists, politicians, and citizens. We further consider the potentially transforming effects of technology on the media-politics nexus.

Same as: COMM 1A

**COMM 212. Models of Democracy. 3-5 Units.**

Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments. Same as: COMM 312

**COMM 213. Computational Methods in the Civic Sphere. 4-5 Units.**

The widespread availability of public data provides a rich opportunity for those who can efficiently filter, interpret, and visualize information. Course develops necessary technical skills for data collection, analysis, and publication, including data mining and web visualization, with a focus on civic affairs and government accountability. Open to all majors and a range of technical skill levels. Involves tackling new tools and technical concepts in the pursuit of engaging, public-facing projects. (Graduate students enroll in 213). Same as: COMM 113

**COMM 216. Journalism Law. 4-5 Units.**

(Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major. Same as: COMM 116

**COMM 220. Digital Media in Society. 4-5 Units.**

Contemporary debates concerning the social and cultural impact of digital media. Topics include the historical origins of digital media, cultural contexts of their development and use, and influence of digital media on conceptions of self, community, and state. Priority to juniors, seniors, and graduate students. To request a permission number, please email blazzari@stanford.edu. Include your student ID, major, and year. Same as: AMSTUD 120, COMM 120W

**COMM 222. Content Analysis: Studying Communication Artifacts. 4-5 Units.**

An empirical and systematic investigation of documented messages in print, graphical, and audio-visual forms and observed human communication behaviors. Focuses on the design and execution of content analytic studies, including manifest vs. latent content, measurement issues, reliability and validity assessment, computer text analysis, and traditional human-coder techniques. Prerequisite: junior, senior or grad standing; COMM 106/206 or an equivalent course in basic social science research. Limited enrollment. Same as: COMM 122

**COMM 224. Digital Deception. 4-5 Units.**

Deception is one of the most significant and pervasive social phenomena of our age. Lies range from the trivial to the very serious, including deception between friends and family, in the workplace, and in security and intelligence contexts. At the same time, information and communication technologies have pervaded almost all aspects of human communication, from everyday technologies that support interpersonal interactions to, such as email and instant messaging, to more sophisticated systems that support organization-level interactions. Given the prevalence of both deception and communication technology in our personal and professional lives, an important set of questions have recently emerged about how humans adapt their deceptive practices to new communication and information technologies, including how communication technology affects the practice of lying and the detection of deception, and whether technology can be used to identify deception. Same as: COMM 124

**COMM 225. Perspectives on American Journalism. 4-5 Units.**

(Graduate students register for COMM 225.) An examination of the practice of American journalism, focusing on the political, social, cultural, economic and technological forces that have shaped the U. S. press since the early 1800s. Aimed at consumers as well as producers of news, the objective of this course is to provide a framework and vocabulary for judging the value and quality of everyday journalism. Same as: AMSTUD 125, COMM 125

**COMM 231. Media Ethics and Responsibility. 4-5 Units.**

(Graduate students register for COMM 231.) The development of professionalism among American journalists, emphasizing the emergence of objectivity as a professional and the epistemological norm. An applied ethics course where questions of power, freedom, and truth autonomy are treated normatively so as to foster critical thinking about the origins and implications of commonly accepted standards of responsible journalism. Same as: COMM 131

**COMM 233. Need to Know: The Tension between a Free Press and National Security Decision Making. 4-5 Units.**

This seminar examines the dynamic interaction at the highest levels of government and the media when news coverage of secret national security policy and operations impinges on United States defense, diplomatic and intelligence activities and decision making. A prime example: the torrent of secret NSA programs disclosed by Edward Snowden in newspapers and other media. Students explore attitudes, practices, and actions by the media and the government through a series of case studies and simulations. Former editors, reporters, and government officials appear as guest speakers, including Condoleezza Rice. The goal of the course is to inform students about the vital but often fraught relationship between a free press and the government in a democratic society, especially in the management of national security affairs. For advanced undergraduates and graduate students. Application for enrollment required. The instructor is a former Washington bureau chief of The New York Times. Email Miles Lichtman (milesl@stanford.edu) to request an application. Completed applications are due by 6pm on March 19, 2016. Early applications welcome. Same as: COMM 133

**COMM 235. Deliberative Democracy and its Critics. 3-5 Units.**

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion. Same as: AMSTUD 135, COMM 135, COMM 335, POLISCI 234P, POLISCI 334P

**COMM 237. The Dialogue of Democracy. 4-5 Units.**

All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized. Same as: AMSTUD 137, COMM 137W, POLISCI 232T, POLISCI 332T

**COMM 240. Digital Media Entrepreneurship. 3-5 Units.**

(Graduate students register for COMM 240.) Primarily for graduate journalism and computer science students. Silicon Valley's new media culture, digital storytelling skills and techniques, web-based skills, and entrepreneurial ventures. Guest speakers. Prerequisite: Instructor consent/completed application. Application can be found at: <http://dme.stanford.edu>.

Same as: COMM 140

**COMM 242. Media Economics. 4-5 Units.**

Uses economics to examine the generation and consumption of information in communication markets. Covers concepts that play a large role in information economics, including public goods, economies of scale, product differentiation, and externalities. Looks at individuals; information demands as consumers, producers, audience members, and voters. Topics include economics of Internet, sustainability of accountability journalism, and marketplace of ideas.

Same as: COMM 142W

**COMM 243. Communication Policy and Regulation. 4-5 Units.**

Focuses on the development, implementation, and evaluation of policies affecting communication markets. Policy issues include universal service, digital divide, Internet regulation, intellectual property, privacy, television violence, content diversity, media ownership, antitrust, and impact of news on government accountability. Examines political economy of communication policy and the evolution of policies across time.

Same as: COMM 143W

**COMM 251. The First Amendment: Freedom of Speech and Press. 4-5 Units.**

Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. In addition to a final and midterm exam, students participate in a moot court on a hypothetical case. (Grad students register for COMM 251).

Same as: COMM 151, POLISCI 125P

**COMM 252. Constitutional Law. 3 Units.**

This course covers Supreme Court case law concerning governmental powers, equal protection, and certain fundamental rights. The course investigates the constitutional foundation for democratic participation in the United States, covering topics such as the Fourteenth Amendment's protections against discrimination on grounds of race, gender, and other classifications, as well as the individual rights to voting and intimate association, and an introduction to First Amendment rights of free speech and press. Students will be evaluated on class participation, a midterm moot court with both a written and oral component, and a take-home final exam. Lectures will be twice per week and a discussion section once per week.

Same as: COMM 152, POLISCI 126P

**COMM 257. Information Control in Authoritarian Regimes. 4-5 Units.**

Does information help autocrats and dictators stay in power? Or does information help topple authoritarian regimes? This course will examine how authoritarian regimes try to control information through surveillance, propaganda, and censorship, what influences the effectiveness of these information control measures, and how changes in technology (Internet, social media, mobile) affect the dynamics of information control.

Same as: COMM 157

**COMM 260. The Press and the Political Process. 4-5 Units.**

(Graduate students register for COMM 260.) The role of mass media and other channels of communication in political and electoral processes.

Same as: COMM 160, POLISCI 323R

**COMM 262. Campaigns, Voting, Media, and Elections. 4-5 Units.**

This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players – candidates, parties, journalists, and voters – in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process.

Same as: COMM 162, POLISCI 120B

**COMM 264. The Psychology of Communication About Politics in America. 4-5 Units.**

Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.

Same as: COMM 164, POLISCI 124L, PSYCH 170

**COMM 266. Virtual People. 4-5 Units.**

(Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.

Same as: COMM 166

**COMM 269. Computers and Interfaces. 4-5 Units.**

(Graduate students register for COMM 269.) Interdisciplinary. Interdisciplinary. User responses to interfaces and design implications of those responses. Theories from different disciplines illustrate cognitive, emotional, and social responses to textual, voice-based, pictorial, metaphoric, conversational, adaptive, agent-based, intelligent, and anthropomorphic interfaces. Group design project applying theory to the design of an interactive interface.

Same as: COMM 169

**COMM 271. Moving Pictures: How the Web, Mobile and Tablets are Revolutionizing Video Journalism. 3-5 Units.**

(Graduate students register for 271.) Examine the emerging role of video journalism across web, tablet and mobile platforms. What are the specific needs of these platforms? How can new reporting tools be integrated to efficiently produce video news content? We'll examine case studies and hear from guest speakers about innovations in video journalism on these platforms. Students will produce video journalism pieces using mobile tools, optimized for viewing on mobile devices. Prerequisite: Journalism MA student or instructor's consent.

Same as: COMM 171

**COMM 272. Media Psychology. 4-5 Units.**

(Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening.

Same as: COMM 172

**COMM 273D. Public Affairs Data Journalism I. 4 Units.**

Even before the ubiquity of Internet access and high-powered computers, public accountability reporting relied on the concerted collection of observations and analytical problem-solving. We study the methods, and the data, used to discover leads and conduct in-depth reporting on public affairs, including election finance and safety regulations. Students gain practical experience with the digital tools and techniques of computer-assisted reporting. Prerequisite: Journalism M.A. student.

**COMM 274D. Public Affairs Data Journalism II. 4 Units.**

Learn how to find, create and analyze data to tell news stories with public service impact. Uses relational databases, advanced queries, basic statistics, and mapping to analyze data for storytelling. Assignments may include stories, blog posts, and data visualizations, with at least one in-depth project based on data analysis. Prerequisites: COMM 273D or Journalism M.A. student.

**COMM 275. Multimedia Storytelling: Reporting and Production Using Audio, Still Images, and Video. 3-4 Units.**

Multimedia assignments coordinated with deadline reporting efforts in COMM 273 from traditional news beats using audio, still photography, and video. Use of digital audio recorders and audio production to leverage voice-over narration, interviews, and natural sound; use of digital still cameras and audio to produce audio slideshows; and the combination of these media with video in post-production with Final Cut Pro. Prerequisite: Journalism M.A. student. Corequisite: COMM 273.

**COMM 276. Advanced Digital Media Production. 4-5 Units.**

In-depth reporting and production using audio, images and video. Focus on an in-depth journalism project with appropriate uses of digital media: audio, photography, graphics, and video. Topics include advanced field techniques and approaches (audio, video, still) and emphasis on creating a non-fiction narrative arc in a multimedia piece of 10-12 minutes. Prerequisite: COMM 275 or consent of instructor.

Same as: COMM 176

**COMM 277A. Computational Journalism. 4 Units.**

Focuses on using data and algorithms to lower the cost of discovering stories or telling stories in more engaging and personalized ways. Project based assignments based on real-world challenges faced in newsrooms. Prior experience in journalism or computational thinking helpful. Prerequisite: Comm 273D, COMM 113/213, or the consent of instructor.

Same as: COMM 177A

**COMM 277C. Specialized Writing and Reporting: Environmental Journalism. 4-5 Units.**

(Graduate students register for COMM / EARTHSYS 277C.) A practical, writing-intensive course for science and journalism students that begins with the assumption that you already know how to research and relay the essential facts of almost any environmental story. You will go beyond the basics, both as reporters and storytellers. Learn how to write stories that stand on fact but move like fiction, that have protagonists and antagonists, that create suspense, that reveal character through dialogue and action, and that pay off with resonant finales. Limited enrollment: preference to journalism students and students in the natural and environmental sciences. Prerequisite: COMM 104, EARTHSYS 200 or consent of instructor. Admission by application only, available from thayden@stanford.edu. Applications due Nov. 30, 2015.

Same as: COMM 177C, EARTHSYS 177C, EARTHSYS 277C

**COMM 277D. Specialized Writing and Reporting: Magazine Journalism. 4-5 Units.**

(Graduate students register for COMM 277D.) How to report, write, edit, and read magazine articles, emphasizing long-form narrative. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best magazine stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor.

Same as: COMM 177D

**COMM 277I. Becoming a Watchdog: Investigative Reporting Techniques. 4-5 Units.**

Graduate students register for COMM 277I.) Learn how to apply an investigative and data mindset to journalism, from understanding how to background an individual or entity using online databases to compiling or combining disparate sets of information in ways that unveil wrongdoing or mismanagement. Focuses on mining texts, tracking associations, and using visualizations. Stories produced apply investigative techniques to beat reporting, breaking news, and long form journalism. Prerequisite: COMM 104W, or consent of instructor.

Same as: COMM 177I

**COMM 277S. Specialized Writing and Reporting: Sports Journalism. 4-5 Units.**

(Graduate students register for COMM 277S.) Workshop. An examination of American sports writing from the 1920's Golden Age of Sports to present. Students become practitioners of the sports writing craft in an intensive laboratory. Hones journalistic skills such as specialized reporting, interviewing, deadline writing, creation of video projects, and conceptualizing and developing stories for print and online. Prerequisite: 104 or consent of instructor.

Same as: COMM 177S

**COMM 278. Journalism and Imaginative Writing in America. 5 Units.**

Walt Whitman spent twenty-five years as a journalist before publishing his first book of poems. Mark Twain was a journalist for twenty years before publishing his first novel. Topics include examination of how writers' backgrounds in journalism shaped the poetry or fiction for which they are best known; study of recent controversies surrounding writers who blurred the line between journalism and fiction. Writers include Whitman, Fanny Fern, Twain, Pauline Hopkins, Theodore Dreiser, Charlotte Perkins Gilman, Ernest Hemingway, Meridel LeSueur.

Same as: AMSTUD 257

**COMM 279. News Reporting & Writing Fundamentals. 3-4 Units.**

Learn beat reporting and writing skills including source development, interviewing, and story structure for news and features. Emphasis on developing news judgment, clear writing skills, and an ability to execute stories on deadline. Exercises and assignments mimic a newsroom. Students pursue local beats with a focus on public issues and complement written pieces with relevant data analyses and multimedia components. Prerequisite: Journalism M.A. student. Corequisite: COMM 275.

**COMM 289P. Journalism Thesis. 4 Units.**

MA thesis course. Focuses on development of in-depth journalism project, culminating in work of publishable quality.

**COMM 290. Media Studies M.A. Project. 1-2 Unit.**

Individual research for coterminal Media Studies students.

**COMM 291. Graduate Journalism Seminar. 1 Unit.**

Required of students in the graduate program in Journalism. Forum for current issues in the practice and performance of the press. The seminar frequently features Bay Area Journalists as guest speakers. May be repeated for credit.

**COMM 299. Individual Work. 1-4 Unit.**

.

**COMM 301. Communication Research, Curriculum Development and Pedagogy. 1 Unit.**

Designed to prepare students for teaching and research in the Department of Communication. Students will be trained in developing curriculum and in pedagogical practices, and will also be exposed to the research programs of various faculty members in the department. Required of all Ph.D. students.

**COMM 307. Summer Institute in Political Psychology. 3 Units.**

Lectures, discussion groups, and workshops addressing many applications of psychology to the analysis of political behavior. Public opinion, international relations, political decision-making, attitudes and beliefs, prejudice, social influence and persuasion, terrorism, news media influence, foreign policy, socialization, social justice.

**COMM 308. Graduate Seminar in Political Psychology. 1-3 Unit.**

For students interested in research in political science, psychology, or communication. Methodological techniques for studying political attitudes and behaviors. May be repeated for credit.

Same as: POLISCI 324

**COMM 310. Method of Analysis Program in the Social Sciences. 1 Unit.**

Colloquium series. Creation and application of new methodological techniques for social science research. Presentations on methodologies of use for social scientists across departments at Stanford by guest speakers from Stanford and elsewhere. See <http://mapss.stanford.edu>.

Same as: ANTHRO 446A

**COMM 311. Theory of Communication. 1-5 Unit.**

Basic communication theory for first-year Ph.D. students in the Department of Communication. Introduction to basic writings and concepts in communication research. The goal is an introduction to issues in the field that are common in communication research. First half of the class will emphasize classic literature about field organization, history and theory. Second half will emphasize contemporary theory in areas that students select.

**COMM 312. Models of Democracy. 3-5 Units.**

Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments. Same as: COMM 212

**COMM 314. Qualitative Social Science Research Methods. 1-5 Unit.**

Part of the doctoral research methods sequence. Focus is on the logic of qualitative research methods and modes of inquiry relevant to the study of communication and meaning. Prerequisite: Communication Ph.D. student, or consent of instructor.

**COMM 317. The Philosophy of Social Science. 1-5 Unit.**

Approaches to social science research and their theoretical presuppositions. Readings from the philosophy of the social sciences. Research design, the role of experiments, and quantitative and qualitative research. Cases from communication and related social sciences. Prerequisite: consent of instructor.

**COMM 318. Quantitative Social Science Research Methods. 1-5 Unit.**

An introduction to a broad range of social science research methods that are widely used in PhD work. Prerequisite: consent of instructor.

**COMM 320G. Advanced Topics in New Media and American Culture. 1-5 Unit.**

This course deals with advanced issues in computing and American cultural history since World War II. Primarily for Ph.D. students. Prerequisite: 220 or consent of instructor.

**COMM 324. Language and Technology. 3-5 Units.**

In this course we develop a model of how language reflects social and psychological dynamics in social media and other technologically-mediated contexts. The course lays out the main stages of analyzing language to understand social dynamics, including using theory to identify key discourse features, feature extraction, and classification and prediction. The course will draw on action-oriented language approaches to understand how people use language (e.g., grounding and joint action models), and then build on this approach to understand how discourse features from natural language can be used to answer questions from a wide range of social science questions, and ultimately, to the design of new technologies.

**COMM 325G. Comparative Studies of News and Journalism. 1-5 Unit.**

Focus is on topics such as the roles and responsibilities of journalists, news as a genre of popular literature, the nexus between press and state, and journalism's commitment to political participation.

**COMM 326. Advanced Topics in Human Virtual Representation. 1-5 Unit.**

Topics include the theoretical construct of person identity, the evolution of that construct given the advent of virtual environments, and methodological approaches to understanding virtual human representation. Prerequisite: PhD student or consent of instructor.

**COMM 331G. Communication and Media Ethics. 1-5 Unit.**

Limited to Ph.D. students. Advanced topics in press ethics and responsibility. Prerequisite: 231 or consent of instructor.

**COMM 335. Deliberative Democracy and its Critics. 3-5 Units.**

This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.

Same as: AMSTUD 135, COMM 135, COMM 235, POLISCI 234P, POLISCI 334P

**COMM 339. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.**

The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.

Same as: POLISCI 421K, PSYCH 231

**COMM 360G. Political Communication. 1-5 Unit.**

An overview of research in political communication with particular reference to work on the impact of the mass media on public opinion and voting behavior. Limited to Ph.D. students. Prerequisite: 260 or consent of instructor.

Same as: POLISCI 425

**COMM 361. Regulation of the Political Process. 3-5 Units.**

Combined with LAW 577. This course is intended to give students a basic understanding of the themes in the legal regulation of elections and politics. We will cover all the major Supreme Court cases on topics of voting rights, reapportionment/redistricting, ballot access, regulation of political parties, campaign finance, and the 2000 presidential election controversy. The course pays particular attention to competing political philosophies and empirical assumptions that underlie the Court's reasoning while still focusing on the cases as litigation tools used to serve political ends. Elements used in grading: Class participation and one day take home final exam. (POLISCI 327C; LAW 577). Same as: POLISCI 327C

**COMM 362. Topics in Political Communication: Media Bias, Selective Exposure, and Political Polarization. 1-5 Unit.**

This course surveys theories of media bias, biased processing of information, and the empirical challenges facing researchers attempting to link changes in the composition of audiences to attitudinal and behavioral outcomes. (Limited to PhD students). Same as: POLISCI 425S

**COMM 372G. Seminar in Psychological Processing. 1-5 Unit.**

Limited to Ph.D. students. Advanced topics. Prerequisite: 272 or consent of instructor.

**COMM 380. Curriculum Practical Training. 1-5 Unit.**

Practical experience in the communication industries. Prerequisite: consent of instructor. Meets requirements for Curricular Practical Training for students on F-1 visas. (Staff).

**COMM 382. BIG DATA AND CAUSAL INFERENCE. 1-5 Unit.**

Massive datasets of text, images, video, so-called "big data," are increasingly available for research because of the pervasive adoption of new information communication technologies such as social media. These data represent new opportunities for social science research, but prominent examples of big data and data science bear little resemblance to the research designs of social scientific inquiry for causal inference. In this course, we will harness the power of big data for causal inference by using machine learning and statistical tools on large-scale digital media datasets to answer social science questions of cause and effect. Prerequisite: PhD student or consent of instructor; students should have taken quantitative methods and be willing to learn programming. Familiarity with Python recommended.

**COMM 384. Media Technology Theory. 3-5 Units.**

This course surveys major theoretical approaches to the study of media technologies, including Frankfurt School critical theory, media archaeology, actor network theory, science and technology studies, platform studies and theories of critical making. By the end of the course, students should have a rich familiarity with the literature in this area, as well as with exemplary empirical studies conducted within each tradition. Preference to Ph.D. students in Communication and Art and Art History. Consent of instructor required for non-PhD students. Same as: ARTHIST 465

**COMM 386. Media Cultures of the Cold War. 3-5 Units.**

The intersection of politics, aesthetics, and new media technologies in the U.S. between the end of WW II and the fall of the Berlin Wall. Topics include the aesthetics of thinking the unthinkable in the wake of the atom bomb; abstract expressionism and 'modern man' discourse; game theory, cybernetics, and new models of art making; the rise of television, intermedia, and the counterculture; and the continuing influence of the early cold war on contemporary media aesthetics. Readings from primary and secondary sources in art history, communication, and critical theory. Same as: ARTHIST 475

**COMM 397. Minor Research Project. 1-6 Unit.**

Individual research for Ph.D. candidates. Course may be repeated for credit.

**COMM 398. Major Research Project. 1-6 Unit.**

Individual research for Ph.D. candidates.

**COMM 399. Advanced Individual Work. 1-9 Unit.**

.

**COMM 801. TGR Project. 0 Units.**

.

**COMM 802. TGR Dissertation. 0 Units.**

.

**Community Health and Prevention Research Courses****CHPR 125. The Role of Causal Inference, Study Design, and Outcomes in Community Research. 3-4 Units.**

(Same as CHPR 225) Provides foundational concepts and principles of epidemiology and other disciplines as they pertain specifically to research on the prevention of chronic disease. Focuses on application of this perspective in multiple disease and health behavior contexts to diverse communities across the life course. Provides foundational skills in epidemiology, including the measurement of disease and health behaviors, measures of association, and study design with close attention to minimizing error. Readings focus on the need and opportunity for interdisciplinary prevention and treatment approaches and illustrates how to conduct innovative research. Students enrolling for 4 units complete review paper on a specific topic mutually agreed upon with the instructor. Graduate students enroll in CHPR 225.

**CHPR 200. SPRC/GMD Research Seminar. 1 Unit.**

Focus is on research on prevention of chronic disease and related topics. Guest speakers present material.

**CHPR 206. Meta-research: Appraising Research Findings, Bias, and Meta-analysis. 3 Units.**

Open to graduate, medical, and undergraduate students. Appraisal of the quality and credibility of research findings; evaluation of sources of bias. Meta-analysis as a quantitative (statistical) method for combining results of independent studies. Examples from medicine, epidemiology, genomics, ecology, social/behavioral sciences, education. Collaborative analyses. Project involving generation of a meta-research project or reworking and evaluation of an existing published meta-analysis. Prerequisite: knowledge of basic statistics. Same as: HRP 206, MED 206, STATS 211

**CHPR 212. Methods for Health Care Delivery Innovation, Implementation and Evaluation. 2 Units.**

Preference given to postgraduate fellows and graduate students. Focus is on implementation science and evaluation of health care delivery innovations. Topics include implementation science theory, frameworks, and measurement principles; qualitative and quantitative approaches to designing and evaluating new health care models; hybrid design trials that simultaneously evaluate implementation and effectiveness; distinction between quality improvement and research, and implications for regulatory requirements and publication; and grant-writing strategies for implementation science and evaluation. Students will develop a mock (or actual) grant proposal to conduct a needs assessment or evaluate a Stanford/VA/community intervention, incorporating concepts, frameworks, and methods discussed in class. Priority for enrollment for CHPR 212 will be given to CHPR master's students. Same as: HRP 218, MED 212

**CHPR 213. Healthy/Sustainable Food Systems: Maximum Sustainability across Health, Economics, and Environment. 4 Units.**

(HumBio students must enroll in HumBio 113S) Discussion-based seminar. Focus on problems with and systems-based solutions to food system issues. Four particular settings are addressed: University, worksite, hospital, and school food. Traditional vs. disruptive food system models compared and contrasted. The goal is to determine how best to maximize sustainability across several dimensions, including health, economics, and the environment. Underlying class themes include social justice and the potential for changing social norms around food production and consumption.

Same as: HUMBIO 113S

**CHPR 223. Obesity in America: Clinical and Public Health Implications. 3-4 Units.**

(HumBio students must enroll in HumBio 123.) Interdisciplinary clinical, research, and policy approaches. The prevalence, predictors, and consequences of obesity and diabetes; biological and physiological mechanisms; clinical treatments including medications and surgery; and the relevance of behavioral, environmental, economic, and policy approaches to obesity prevention and control. Prerequisite: Human Biology core or equivalent, or consent of instructor. Same as: HUMBIO 123

**CHPR 225. The Role of Causal Inference, Study Design, & Outcomes in Community Research. 3-4 Units.**

(Same as CHPR 125) Provides foundational concepts and principles of epidemiology and other disciplines as they pertain specifically to research on the prevention of chronic disease. Focuses on application of this perspective in multiple disease and health behavior contexts to diverse communities across the life course. Provides foundational skills in epidemiology, including the measurement of disease and health behaviors, measures of association, and study design with close attention to minimizing error. Readings focus on the need and opportunity for interdisciplinary prevention and treatment approaches and illustrates how to conduct innovative research. Students enrolling for 4 units complete review paper on a specific topic mutually agreed upon with the instructor. CHPR students enroll in CHPR 225 for a letter grade.

**CHPR 226. Promoting Health Over the Life Course: Multidisciplinary Perspectives. 3 Units.**

(HUMBIO students must enroll in HumBio 126.) Disease prevention and health promotion topics pertinent to different stages of the life span emphasizing healthy lifestyle and reducing risk factors in both individuals and communities. Focus is on scientific investigation, the application of behavioral science to risk reduction strategies, and the importance of health promotion as a social and economic imperative. Topics include: epidemiology of chronic diseases; social determinants of health, behavior change; obesity, nutrition, and stress; children, young adult, mid-life and aging health issues; health care delivery and public health system; workplace wellness programs; and other additional issues. Prerequisite: Human Biology core or equivalent, or consent of instructor. Same as: HUMBIO 126

**CHPR 228. Theoretical Foundations and Design of Behavioral Intervention Trials. 3 Units.**

Focuses on the knowledge and skills, respect and thoughtful practice of designing health promotion interventions that are relevant, theoretically-informed, have broad impacts, and can endure. Provides an in-depth review of intervention approaches for health promotion and disease prevention and covers the leading theories of behavior change. Follows an integrative model to demonstrate similarities and differences between the theoretical approaches, seeking what is useful and worthwhile in each theoretical model rather than looking primarily for what is most easily criticized. Practical in nature with emphasis on the specifics of needs assessments and intervention development and delivery and how these may vary across community settings, with diverse populations, addressing different behaviors, and leveraging traditional and emerging delivery channels. Explores intervention creation, delivery, effectiveness, and sustainability to identify and better understand the resources and other practical considerations necessary to produce, deliver, monitor, and disseminate an intervention with demonstrated effectiveness. Examples drawn from across the behavioral spectrum and include tobacco control, physical activity, healthy diet, stress and distress, as well as consideration of the complexities of extending interventions to target multiple risk behaviors. Students develop a foundational understanding of behavior change theory, rigorous research methods, and creative design strategies to advance the health of individuals and communities.

**CHPR 231. Human Nutrition. 4 Units.**

The study of food, and the nutrients and substances therein. Their action, interaction, and balance in relation to health and disease. Emphasis is on the biological, chemical, and physiological processes by which humans ingest, digest, absorb, transport, utilize, and excrete food. Dietary composition and individual choices are discussed in relationship to the food supply, and to population and cultural, race, ethnic, religious, and social economic diversity. The relationships between nutrition and disease; ethnic diets; vegetarianism; nutritional deficiencies; nutritional supplementation; phytochemicals. HUMBIO students must enroll in HUMBIO 130.

Same as: HUMBIO 130

**CHPR 239. Program Internship and Engagement. 1 Unit.**

Enrollment limited to students in Master of Science in Community Health and Prevention. This course is designed to provide students in the Master of Science In Community Health & Prevention Research program with supervision and guidance as they conduct their Internships. Focus is on skills which will help students conduct productive Internships with community partners and faculty. Provides a space where students can reflect on their internship experiences and consider how they may connect with their coursework and/or future career aspirations. Students in this course engage regularly in peer learning and mentoring and receive feedback from PIE course instructors. Guest speakers and professional development workshops also an important component of this course.

Same as: PIE

**CHPR 240. Prevention Research and Public Health: the Science of Healthy Living. 3 Units.**

Features the research of faculty in the Stanford Prevention Research Center and focuses on key health issues over the life course (prenatal through childhood, young to middle-aged, older and elderly adults). Topics include chronic disease (global and U.S.) epidemiology; application of behavioral science to risk reduction; nutrition; weight management; physical activity; stopping smoking; public health; community health and community-based prevention; national prevention strategy; applying communication technology to health promotion.

**CHPR 247. Methods in Community Assessment, Evaluation, and Research. 3 Units.**

Development of pragmatic skills for design, implementation, and analysis of structured interviews, focus groups, survey questionnaires, and field observations. Topics include: principles of community-based participatory research, including importance of dissemination; strengths and limitations of different study designs; validity and reliability; construction of interview and focus group questions; techniques for moderating focus groups; content analysis of qualitative data; survey questionnaire design; and interpretation of commonly-used statistical analyses.

Same as: MED 147, MED 247

**CHPR 254. Disease control systems: epidemics, outbreaks, and modeling for public health. 4 Units.**

(HumBio students must enroll in HumBio 154A.) This course teaches operations research and modeling techniques to improve public health programs and disease control systems. Students will engage in in-depth interdisciplinary study of disease detection and control strategies from a "systems science" perspective, which involves the use of common mathematical modeling and operations research techniques such as optimization, queuing theory, Markov and Kermack-McKendrick models, and microsimulation. Lectures and problem sets will focus on applying these techniques to classical public health dilemmas such as how to optimize screening programs, reduce waiting times for healthcare services, solve resource allocation problems, and compare macro-scale disease control strategies that cannot be easily evaluated through randomized trials. Readings will complement the lectures and problem sets by offering critical perspectives from the public health history, sociology, and epidemiology. In-depth case studies from non-governmental organizations, departments of public health, and international agencies will drive the course. Open to upper-division undergraduate students.

Same as: HUMBIO 154A

**CHPR 255. The Responsible Conduct of Research for Clinical and Community Researchers. 1 Unit.**

Engages clinical researchers in discussions about ethical issues commonly encountered during their clinical research careers and addresses contemporary debates at the interface of biomedical science and society. Graduate students required to take RCR who are or will be conducting clinical research are encouraged to enroll in this version of the course. Prerequisite: research experience recommended.

Same as: MED 255C

**CHPR 260. Prevention Across Medical Disciplines. 3 Units.**

Coordinated seminar series presenting evidence-based health promotion and disease prevention guidelines by research and clinical faculty of multiple divisions of Stanford's Department of Medicine, including cardiovascular medicine, oncology, nephrology, immunology and rheumatology, infectious diseases, endocrinology, gerontology and metabolism, gastroenterology and hepatology, hematology, blood and marrow transplantation, pulmonary and critical care medicine, general medical disciplines (including family medicine). Key prevention issues addressed in primary care and outcomes research, biomedical informatics research and the Stanford Prevention Research Center also presented. Enrollment priority given to CHPR Master's students. CHPR students must enroll for letter grade.

**CHPR 266. Food and Society: Exploring Eating Behaviors in Social, Environmental, and Policy Context. 4 Units.**

(HumBio students must enroll in HumBio 166.) The class examines the array of forces that affect the foods human beings eat, and when, where, and how we eat them, including human labor, agriculture, environmental sustainability, politics, animal rights/welfare, ethics, policy, culture, economics, business, law, trade, and ideology, and psychology. The class addresses the impact of current policies and actions that might be taken to improve human nutrition and health; macro-scale influences on food, nutrition, and eating behavior.

Same as: HUMBIO 166

**CHPR 290. Advanced Statistical Methods for Observational Studies. 2-3 Units.**
