MUSIC 161D. Stanford Brass Ensemble. 1 Unit.
Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure. Performance of works for full brass choir and for smaller ensembles of brass instruments. Once weekly rehearsals. May be repeated for credit. Prerequisite: audition and consent of instructor. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 161DZ. Stanford Brass Ensemble. 0 Units.
Performance of works for full brass choir and for smaller ensembles of brass instruments. Once weekly rehearsals. May be repeated for credit. Prerequisite: audition and consent of instructor. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 161E. Stanford Afro-Latin Jazz Orchestra. 1 Unit.
Ensemble dedicated to the performance, interpretation and study of Afro-Latin music and its fusion with North American jazz. Repertoire includes the music of Brazil, Cuba, Dominican Republic, Puerto Rico, Peru and Argentina, as well as the United States. Idioms studied include Latin Jazz, Danzon, Son Montuno, Samba, Bossa, Traditional and Modern Salsa, Timba, Lando, and Candombe. African roots of the music are also presented including songs and rhythms from the Lucumi and Arara traditions. Focus is placed on learning rhythms, associated syncopations and also clave phrasing. One weekly rehearsal and a concert are required per quarter. Other playing opportunities available at the discretion of the group. Regular openings for brass/wind players, drummers, percussionists, pianists, bassists, and vocalists. Guest openings on violin, guitar and vibraphone. Inclusion of other instruments at the discretion of the director. Members should have basic reading ability and some related ensemble experience (e.g, jazz band). Ability to read and play complex syncopations are mandatory. Percussionists with experience in bongo, congas, timbales and pandeiro desired. Vocalists with fluency or exposure to Spanish and/or Portuguese also preferred. May be repeat for credit. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University. While COVID restrictions are in effect, class will be a mixture of live sectionals, interactive sessions over Zoom and Jacktrip, and a possible live stream concert.

MUSIC 161F. Ottoman Music ensemble. 1 Unit.
Stanford's Ottoman Music Ensemble introduces select music played in the present day that hearkens back to musical practices from diverse communities of Ottoman Constantinople or Istanbul. Much of this music has now fallen under the guise of Turkish art, folk, or classical music. Through oral transmission and collective practice, we will attune our voices, instruments, and ears to hear and play select Ottoman pieces. Ensemble members will additionally be introduced to the microtonal (makam) music theory system and to the arts of solo improvisation (taksim) during the course. No previous experience required. The course culminates in a final end-of-quarter concert.

MUSIC 161FZ. Ottoman Music Ensemble. 0 Units.

Students will explore drumset technique, coordination, reading and a study various styles including, Jazz, Rock, R&B, Blues, Latin and Brazilian music. Students will use different texts as needed. These texts may include: Syncopation by Ted Reed, Modern Reading Text in 4/4 by Louis Bellson, A Funky Primer by Charles Dowd, Advanced Techniques for the Modern Drummer by Jim Chapin, and others. Students will also use material created by David for his classes "Around the World on a Drumset" and "Chart Reading Demystified." These lessons are designed to be both fun and challenging. Students will play along with recordings and are encouraged to bring in recordings of music that they enjoy. May be repeated for credit a total of 15 times. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 179Z. Applied Music Private Lessons. 0 Units.
Students enroll in appropriate instructor section for private instrumental/vocal lessons using this zero unit enrollment option. Available only with instructor permission. See website: (http://music.stanford.edu) for policy and procedure. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information.

MUSIC 181. Jazz Combos. 1 Unit.
Admission based on audition. These small jazz ensembles meet weekly and typically include coaching, one masterclass and one performance per quarter. May be repeated for credit. All participants must enroll. Zero unit enrollment option available with instructor permission. See website for policy, procedure, and audition information: https://music.stanford.edu/stanford-jazz-combos.

MUSIC 181Z. Jazz Combo. 0 Units.
Admission based on audition. These small jazz ensembles meet weekly and typically include coaching, one masterclass and one performance per quarter. May be repeated for credit. All participants must enroll. Zero unit enrollment option available with instructor permission. See website for policy, procedure, and audition information: https://music.stanford.edu/stanford-jazz-combos.

MUSIC 182. Diction for Singers. 1 Unit.
The international phonetic alphabet and its application to German, French, and Italian vocal literature. Open also to pianists interested in vocal coaching and choral conducting.

MUSIC 183A. German Art Song Interpretation. 1 Unit.
By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Beethoven, Schubert, Wolf and Strauss. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).

MUSIC 183B. French Art Song Interpretation. 1 Unit.
By audition only. For advanced singers and pianists as partners. Performance class in a workshop setting. Composers include Fauré, Debussy, Ravel and Poulenc. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists) or 182 (singers).

MUSIC 183C. Interpretation of Musical Theater Repertoire. 1-2 Unit.
By audition only: Contact instructor prior to enrolling (mlcats@stanford.edu). Ability to read music expected, but students with experience singing in musical theater can be accepted. For singers and pianists as partners. Performance class in a workshop setting along with lecture/discussion of important eras of musical theater history. Composers include Kern, Porter, Gershwin, Rodgers, Sondheim, Lloyd Weber, Jason Robert Brown and others. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists).
Same as: TAPS 183C

MUSIC 183CZ. Interpretation of Musical Theater Repertoire. 0 Units.
By audition only: Contact instructor prior to enrolling (mlcats@stanford.edu). Ability to read music expected, but students with experience singing in musical theater can be accepted. For singers and pianists as partners. Performance class in a workshop setting along with lecture/discussion of important eras of musical theater history. Composers include Kern, Porter, Gershwin, Rodgers, Sondheim, Lloyd Weber, Jason Robert Brown and others. May be repeated for credit a total of 2 times. Enrollment limit: 20 (ten singers maximum). Prerequisite: consent of instructor. Recommended prerequisite: 170 (pianists).

MUSIC 183D. Musical Theater. 1-3 Unit.
In this workshop we will traverse the landscape of world of Musical Theater. It will serve as an introduction for the beginning actor and singer, and expand the more experienced performer's range in this genre. The world of Musical Theater is filled with stories of love, passion, joy, violence, heartbreak and rage. The class will include an introduction to vocal and movement skills for musical theater, beginning with exercises to build an ensemble and encourage a sense of play and relaxation in supportive environment. Our class must be a place where everyone feels safe. As ensemble members, we will be responsible for each other in this environment. nStudents will choose one solo song, and perform in a group number from this exciting discipline. The instructor will work with the actors on technique, utilization of action, specificity of language, personalization, and emotional truth. A professional coach from the theater community will conduct vocal coaching. Physical warm-ups and choreography will be suited for both the dancer and non-dancer.nThe class will culminate in the last week with live performance for friends and family.nSTUDENTS ARE ENCOURAGED TO BRING THEIR OWN SUGGESTIONS. (Isn't there a role you've always wanted to sing?)nRequired text: Broadway Musicals Show by Show: Sixth Edition - Stanley Green; Paperback.
Same as: TAPS 115

MUSIC 183E. Singing for Musicals. 2 Units.
Do you love singing in musicals? Do you know how to sing in musicals? This course provides training in vocal technique and acting for students interested in performing musical theater. Students will learn about the physical process of singing, including posture, breath support, and vocal exercises. They will incorporate vocal technique with the study of phrasing in different styles of Broadway repertoire, and apply both to the art of acting the song. Each student will work on solo selections and ensembles, and sing in most classes. Through understanding vocal technique, students will become more confident and joyful performers. The course will culminate in a final public workshop performance. Admission to course by audition or permission of the instructor. Due to the COVID-19 situation, the Singing for Musicals class will be taught online. As this can pose a problem with students in various time zones and internet arrangements, the instructor will contact all waitlisted students with more detailed information regarding video auditions and a questionnaire.
Same as: TAPS 183E

MUSIC 184A. Editing and Performing Early Music. 1-3 Unit.
This course is a practical workshop in early music vocal repertoire. The main focus of this course is to use original source material to explore editorial practice. Having prepared the score, students learn to perform the piece from an historically informed performance practice point of view. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal for performance and/or recording. Enrollment by audition only. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 184AZ. Editing and Performing Early Music. 0 Units.
This course is a practical workshop in early music vocal repertoire. The main focus of this course is to use original source material to explore editorial practice. Having prepared the score, students learn to perform the piece from an historically informed performance practice point of view. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal for performance and/or recording. Enrollment by audition only. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. All participants must enroll. May be repeated for a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 184B. Topics on the Musical Stage. 1-3 Unit.
This course is a practical workshop in vocal repertoire for the stage. Each quarter's offering emphasizes a specific genre or period, therefore the course can be repeated with permission of the instructor. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal etiquette for performance and/or recording. Enrollment by audition only. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 184BZ. Topics on the Musical Stage. 0 Units.
This course is a practical workshop in vocal repertoire for the stage. Each quarter's offering emphasizes a specific genre or period, therefore the course can be repeated with permission of the instructor. In addition to broadening the student's knowledge of vocal repertoire, the following skills are developed: text preparation, foreign language translation and diction; rehearsal etiquette for performance and/or recording. Enrollment by audition only. Prerequisite: vocal or instrumental instruction, as the class is open to singers or collaborative artists. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 184C. Dramatic Vocal Arts: Songs and Scenes Onstage. 1-2 Unit.
Studies in stagecraft, acting and performance for singers, culminating in a public performance. Repertoire to be drawn from the art song, opera, American Songbook and musical theater genres. Enrollment by audition only. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.
Same as: TAPS 184C

MUSIC 184CZ. Dramatic Vocal Arts: Songs and Scenes Onstage. 0 Units.
Studies in stagecraft, acting and performance for singers, culminating in a public performance. Repertoire to be drawn from the art song, opera, American Songbook and musical theater genres. Enrollment by audition only. May be repeated for credit a total of 4 times. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure. By enrolling in this course you are giving consent for the video and audio recording and distribution of your image and performance for use by any entity at Stanford University.

MUSIC 184D. Creating a Musical. 4 Units.
This practical, hands on class in the making of musicals explores all aspects of creating musical theater, including writing, composing, producing, directing, designing, and casting this most American of theater genres. The class will include direct engagement and discussion with the producers and artists of TheatreWorks Silicon Valley's production of The Bridges of Madison County, book by Marsha Norman and music by Jason Robert Brown, including off-campus field trip to rehearsal of the show. The class will explore the creation of several renowned musicals including Stephen Sondheim's Merrily We Roll Along, and will include live Skype interviews with Broadway composers Andrew Lippa (The Wild Party), Paul Gordon (Jane Eyre), and David Hein and Irene Sankoff (Come from Away, winner of the 2017 Drama Desk Award for Best Musical). The quarter will culminate in the creation, production, and performance of several mini-musicals created by members of the class. Instructor Robert Kelley is the Founding Artistic Director of TheatreWorks Silicon Valley, where he has directed 170 productions, including many world and regional premieres.
Same as: TAPS 177C

MUSIC 184E. Musical Theater Dance Styles. 1 Unit.
Students will be able to demonstrate period specificity, character of style through learning different musical theater dances from the early 20th C.to the present. ALL students will participate in an end of quarter showing of the choreography developed and composed in class. Class will be supplemented with the occasional guest, DJ accompaniment and video viewing.
Same as: DANCE 102

MUSIC 184F. Introduction to Theater Sound Design. 4 Units.
This course explores the history and aesthetics,of theatre sound design, and provides the basic technical knowledge to create your own work. Learn how to analyze a script for sound design elements, gain practical knowledge of microphones and loudspeakers, sound editing and cueing software, and put your knowledge to work creating your own design.
Same as: TAPS 138

MUSIC 186B. American Song in the 20th Century and after. 3-4 Units.
Critical and creative exploration of song in the Americas. About twenty-five key examples will guide discussion of the interactions between words, music, performance and culture. Weekly listening, reading and assignments will be organized around central themes: love, sex and romance; war and politics; labor and money; place; identity; society and everyday life. Genres include art song; blues, gospel, jazz and country; pop, soul, rock and hip-hop; bossa nova, nueva canción and salsa; electronic and experimental. Takehome and in-class assignments will include critical and creative writing, and music composition, production and performance; final projects may emphasize any of the above.
Same as: AMSTUD 186B, MUSIC 286B

MUSIC 186E. Sounds of Islam. 3 Units.
This course explores diverse intersections of sound and Islam in religious and secular contexts throughout the world. From studying Islamic philosophies about the art of listening to interrogating Muslim hip hop, we examine how sonic practices simultaneously reflect and shape different Muslim identities globally. Issues of nationalism, war and trauma, class, race and ethnicity, gender and sexualities, colonialism, social in/justice, and migration will remain central to our exploration of spirituality, secularism, piety, and religiosity for the individuals and communities making or listening to sounds of Islam.
Same as: RELIGST 156X

MUSIC 187. Spiritual Sound of Central Asia: Introduction to the Music of Central Asia. 1-5 Unit.
In this course, master-musician Imamyar Hasanov teaches students to perform and appreciate music from Central Asia. Students learn a spectrum of traditional Azerbaijani, Kazakh, Kyrgyz, Uyghur and Uzbek folk melodies, including improvisational art music of mugham. The class is also a seminar, with discussions led by Professor Denise Gill on music of Central Asia, guest lectures and demonstrations, and Skype interviews with a musician in Kyrgyzstan and instrument maker in Istanbul. No prerequisites or prior knowledge of Azeri, Uzbek and Kyrgyz music for this course. Both a music workshop and seminar, this course is open to students who have experience playing musical instruments and those who do not. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways-ED credit. For Ways-CE credit, it may be taken for any number of units.

MUSIC 192A. Foundations of Sound-Recording Technology. 3 Units.
This course serves as an introduction to recording technologies and practices in a studio, at home, and in the field. The facilities available at CCRMA provide a basis for learning studio operation, as well as a space for recording projects remotely. Students also receive a portable recording kit* to develop professional-sounding projects at home with audio recordings from inside and outside their location. The course addresses various audio engineering topics: room acoustics, analog and digital recording, microphone selection and placement, audio editing and mixing, audio effects processing (equalization, compression, convolution reverb, etc.), and sound design. (*subject to availability of funds). Prerequisite: MUSIC 101 or consent of instructor.

MUSIC 192B. Advanced Sound Recording Technology. 3 Units.
This course aims to heighten the listening skills of students. In a series of group sessions and discussions students compare and contrast a variety of dynamic based processes and other audio effects/plug-ins which might be used in their mixes. Students also explore recording concepts and technologies that will augment their studio practices such as making customized impulse response recordings, advanced equalization practices, and exploring additional advanced studio/non-studio techniques and software. Prerequisite: 192A or consent of instructor.

MUSIC 192C. Session Recording. 1-3 Unit.
Independent engineering of recording sessions combined with instruction in the use and maintenance of other CCRMA audio/studio facilities and equipment that is required for the realization of studio informed artistic projects. Students will explore how ideas such as acoustic phenomena, interactivity, or new instruments can augment their studio practice. May be repeated for credit a total of 14 times (1 unit per quarter throughout the year - recommended - or 3 units in Spring). Prerequisite: Consent of instructor.

MUSIC 192F. Sound Installation. 4 Units.
This class will cover creative, historical and theoretical aspects of sited artworks based in sound. We will create, install and critique new works that use sound with special attention the ways that sound intersects with time, space and architecture. Attention will be given both to sound as immaterial signal and to sound in its relation to visual environments and objects. The class is intended for artists, composers and others who want to explore the spatial, social and aesthetic dimensions of sound. Assigned readings will cover sound practices in the contexts of art, music, sound studies and anthropology. Experience in sound recording or production, signal processing and spatialization, or installation are valuable but not required. Curiosity and attention to sounds are.
Same as: ARTSTUDI 175

MUSIC 196. Music Outside the Concert Hall. 1 Unit.
Some of the most engaging and important work we do as musicians is outside of the concert hall at the intersection of music and public service. Candidates will be encouraged to explore these intersections either by reviewing existing programs or by participating in or creating new initiatives. Some jumping off points may include exploring programming for incarcerated populations through the work of Arts on the Edge in Alaska, DeCoda in NY, Community Music Works and more locally, SLSQ¿s community programming. Quarterly informational meetings will be convened to point students to resources, programs, etc., they could research or in which they can become involved.

MUSIC 197. Undergraduate Teaching Apprenticeship. 1-2 Unit.
Work in an apprentice-like relationship with faculty teaching a student-initiated course. Prerequisite: consent of instructor. (Staff).

MUSIC 198. Concentrations Project. 2 Units.
For concentration program participants only. Must be taken in senior year. Multiple concentrators may enroll in one section of 198 per concentration.

MUSIC 199. Independent Study. 1-5 Unit.
For advanced undergraduates and graduate students who wish to do work outside the regular curriculum. Before registering, student must present specific project and enlist a faculty sponsor. May be repeated for credit a total of 14 times.

MUSIC 200A. Proseminar in Musicology and Music Bibliography. 3-4 Units.
Introduction to research in music, bibliographical materials, major issues in the field, philosophy, and methods in music history. Guest lecturers and individual research topics.

MUSIC 200B. Proseminar in Ethnomusicology. 3-5 Units.
A graduate-level introduction to the field of ethnomusicology. Issues and debates are traced through the history of the discipline, with emphasis on influences from anthropology, performance studies, linguistics, and cultural studies. Topics include music and: social organization, "culture," structure, practice, comparison, representation, globalization, identity, transcription, and embodiment.

MUSIC 201. CCRMA Colloquium. 1 Unit.
Weekly review of work being done in the field, research taking place at CCRMA, and tools to make the most of the CCRMA technical facilities.

MUSIC 202. The Art of Music Video: Practice and Analysis. 2-4 Units.
Making and understanding music videos and other short audiovisual genres. This course is a critical and creative exploration of music and performing bodies in moving media. Listening/viewing includes music videos from the 1980s to today, along with musicals, dance, and opera on film, experimental film and video, and segments from feature film. We'll attend to both music and image, focusing on gesture, rhythm, and affect, and considering visual parameters like décor, lighting, texture, camera movement, and editing. Requirements include choosing and documenting a live performance; producing a short audiovisual work involving post-production; several short writing assignments; and weekly reading and viewing/listening assignments. No prerequisites; no previous videomaking experience required. This course must be taken for a minimum of 3 units for Ways-AII and a letter grade to be eligible for Ways-AII credit.
Same as: MUSIC 102

MUSIC 203. Audiovisual Performance. 3-4 Units.
Students perform with music and video in synergy. This course explores theories and practices of engaging audiovisual media in performance on stage and online. Examples come from the scenes of experimental music and multimedia performance. Other audiovisual categories to be approached: avant-garde film, visual music, video art, music video, network art. Readings, listening-viewings, discussions, and analyses of relevant works provide a conceptual framework. Labs and assignments give students hands-on experience in crafting and performing their own audiovisual works. The course culminates with a public live streaming show. A background in either music or visual arts is recommended, but not required.

MUSIC 220A. Fundamentals of Computer-Generated Sound. 2-4 Units.
What are the basic tools that computer music researchers and artists use to create sound? This course will include a summary of digital synthesis techniques (additive, subtractive, wavetable, frequency modulation and physical-modeling), signal processing techniques for digital effects, (reverberation, panning, filters), and basic psychoacoustics. Programming experience is recommended, but not required. The course will use the Web Audio/MIDI API (JavaScript) for computer music programming. Majors (undergraduate or graduate) must take for 4 units. See https://ccrma.stanford.edu/courses/220a/.

MUSIC 220B. Compositional Algorithms, Psychoacoustics, and Computational Music. 2-4 Units.
The use of high-level programming language as a compositional aid in creating musical structures. Advanced study of sound synthesis techniques. Simulation of a reverberant space and control of the position of sound within the space. To satisfy a Ways requirement, this course must be taken for at least 3 units. In AY 2020-21, a letter grade or `CR¿ grade satisfies the Ways requirement. See http://ccrma.stanford.edu/. Prerequisite: 220A.

MUSIC 220C. Research Seminar in Computer-Generated Music. 2-4 Units.
Individual projects in composition, psychoacoustics, or signal processing. See http://ccrma.stanford.edu. May be repeated for credit. Prerequisite: 220B.

MUSIC 220D. Research in Computer-Generated Music. 1-10 Unit.
Independent research projects in composition, psychoacoustics, or signal processing. See http://ccrma.stanford.edu/. May be repeated for credit. Prerequisite: 220C.

MUSIC 221N. Deep Learning for Music and Audio. 1 Unit.
Seminar reviewing the development of deep-learning methods in music and audio fields.

MUSIC 222. Sound in Space. 1-4 Unit.
Historical background, techniques and theory on the use of space in music composition and diffusion. Listening and analysis of relevant pieces. Experimental work in spatialization techniques leading to short studies to be diffused in concert at the end of the quarter.

MUSIC 223B. Sonic Experiments in Composition. 2-3 Units.
The course will present post-1945 works with timbre serving as an organizing principle or compositional metaphor, in the context of historical works in which timbre plays a structural role. Composers considered may include: Alvin Lucier, Pauline Oliveros and other American experimentalists; Scelsi and his influence on the French Spectral school; the first and subsequent generations of French Spectralism; and contemporary composers of experimental music such as Peter Ablinger. Topics will include: process and form; timbre in relation to time and space; harmonicity and noise; and the influence of analog and digital technology on instrumental composition. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit for AII.

MUSIC 223C. Tradition, Experimentation, and Technology in String Quartet Composition and Performance. 1-3 Unit.
This course will explore string quartet composition and performance by focusing in on the act of composer-performer collaboration. It will investigate this relationship and its facets through the composition of a work for the Saint Lawrence String Quartet by Patricia Alessandrini based on the SLSQ's relationship with the Opus 76 quartets of Haydn employing Artificial Intelligence (AI) techniques, in addition to workshopping of student exercises and compositions. Students will have the opportunity to participate in the class as performers, composers, technologists, or musicologically, through analysis of the collaborative process informed by concepts such as agency, representation, interpretation, expression, and experimentation.

MUSIC 223D. Sound Practice: Embodiment and the Social. 2-3 Units.
How can sound-making impact interpersonal relations and institutional practices? This class offers space to creatively re-think and challenge received relationships between artists, audiences, technologies, and environments. In class, we will create, perform, and analyze sound and music. We will explore sound¿s potential to catalyze social change via experimental and embodied approaches to sound-making. We will engage with sound practices that compose communal solidarity, augment and transform vocal identities, and potentially, alter how we listen to and live in the world. Readings/listenings include Björk, Maria Chavez, Donna Haraway, Pauline Oliveros, George Lewis, Meredith Monk, Maurice Merleau-Ponty, Hildegard Westerkamp, and Pamela Z.

MUSIC 230. Advanced Orchestral Conducting. 2-3 Units.
Advanced study of orchestral conducting through individual weekly meetings with the instructor. Develop skills in score reading and analysis, baton technique and the physical art of conducting, performance practice, and rehearsal technique. Expand knowledge of the orchestral repertoire through score study plus reading and listening assignments. This course is intended primarily for juniors, seniors, and graduate students with prior conducting experience. Prerequisites: MUSIC 130B and MUSIC 136, or two equivalent beginning and intermediate conducting courses. May be taken for credit a maximum of 6 times.

MUSIC 231. Advanced Choral Conducting. 2-3 Units.
Individual instruction continuing trajectory of Music 130C. Focus on gestural technique and analysis of works by genre and historical period. May be repeated for credit a total of 8 times. Prerequisite: 130C.

MUSIC 236. Future Media, Media Archaeologies. 3-4 Units.
Hand-on. Media technologies from origins to the recent past. Students create artworks based on Victorian era discoveries and inventions, early developments in electronic media, and orphaned technologies. Research, rediscover, invent, and create devices of wonder and impossible objects. Readings in history and theory. How and what media technologies mediate.
Same as: ARTSTUDI 236

MUSIC 242K. Studies in Music of the Baroque: Handel the Cosmopolitan. 4-5 Units.
Music history seminar on the operatic, sacred, and instrumental works of G.F. Handel as examples of the diversity, cosmopolitanism, expression, formal and technical features, and social uses of music in the first half of eighteenth century. Traces Handel¿s career from his native Germany to an elite Roman circle of musical connoisseurs, and to the Italian opera company he founded in London and his transformation of Italian opera into a new genre of English oratorio. By analyzing Handel¿s works in context, we examine the aesthetic, harmonic, and dramatic principles of the major European Baroque art-music genres. Prerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.).
Same as: MUSIC 142K

MUSIC 243J. Studies in Music of the Classical Period: Haydn and Mozart: Music in the Age of Enlightenment. 3-4 Units.
Music and Musicians in the Age of EnlightenmentnPrerequisites: MUSIC 22, MUSIC 41. (WIM at 4-unit level only.).
Same as: MUSIC 143J

MUSIC 244M. Robert Schumann and the Interpretation of Musical Romanticism. 3-4 Units.
The creative personality, compositions, and writings of Robert Schumann (1810-1856) as exemplars of musical Romanticism in early nineteenth century European culture. Musical "interpretation" explored through a writing focus and a performance focus. Weekly writing assignments interpret compositions as texts, performances, and cultural documents. Students study and interpret up to three works (solo piano, chamber music, art-songs) by Schumann and/or contemporary figures (Schubert, Mendelssohn, Chopin, Brahms, Clara Schumann) for in-class presentation and final lecture-recital. Prerequisites: Music 42, and Music 22 or equivalent (intermediate music theory), intermediate or higher performance ability in piano, strings, or voice. (WIM at 4-unit level only.).
Same as: MUSIC 144M

MUSIC 245K. Studies in Western Art Music Since 1900: Concepts of New Music. 4 Units.
A survey of the history of Western classical music in the twentieth century, concentrating on shifts in the concept of New Music in the first half of the century. The aim is twofold: to study in depth a representative selection of works and to develop a historiographical framework for that study. Relevant concepts to be examined include Expressionism, Neo-Classicism, New Objectivity, Serialism, Aleatoricism, and Minimalism -- all of them key terms used by music historians and critics to describe and delineate the multifaceted phenomenon of "New Music." Composers to be studied include Schoenberg, Stravinsky, Berg, Weill, Shostakovich, Reich and Glass, and others. Prerequisites: MUSIC 23, MUSIC 42. (WIM course for Music majors.).
Same as: MUSIC 145K

MUSIC 246M. New Keywords in African Sound. 3-4 Units.
This course identifies and considers new keywords for the study of contemporary African music and sound. Each week we will foster discussion around a keyword and a constellation of case studies. The sonic practices we will encounter range from South African house music to Ghanaian honk horns; from Congolese rumba bands to Tunisian trance singers; from listening to the radio in a Tanzanian homestead to making hip hop music videos on the Kenyan coast. By exploring the unexpected interconnections between contemporary African musical communities, we will discuss new keywords arising in current scholarship, including technologies like the amplifier and the hard drive, spaces like the studio and the city, and analytics like pleasure and hotness. We will also engage with established concepts for the study of postcolonial African cultures, including nationalism, cosmopolitanism, globalization, diaspora, and Pan-Africanism. This is a seminar-based course open to graduate students, upper level undergraduate students, and other students with consent of the instructor. Proficiency in music is not required. WIM at 4 units only.
Same as: AFRICAAM 146D, AFRICAST 146M, CSRE 146D, MUSIC 146M

MUSIC 246N. Transcultural Perspectives of South-East Asian Music and Arts. 2-4 Units.
This course will explore the links between aspects of South-East Asian cultures and their influence on modern and contemporary Western art and literature, particularly in France; examples of this influence include Claude Debussy (Gamelan music), Jacques Charpentier (Karnatak music), Auguste Rodin (Khmer art) and Antonin Artaud (Balinese theater). In the course of these interdisciplinary analyses - focalized on music and dance but not limited to it - we will confront key notions in relation to transculturality: orientalism, appropriation, auto-ethnography, nostalgia, exoticism and cosmopolitanism. We will also consider transculturality interior to contemporary creation, through the work of contemporary composers such as Tran Kim Ngoc, Chinary Ung and Tôn-Thât Tiêt. Viewings of sculptures, marionette theater, ballet, opera and cinema will also play an integral role. To satisfy a Ways requirement, this course must be taken for at least 3 units. In AY 2020-21, a letter grade or `CR¿ grade satisfies the Ways requirement. WIM credit in Music at 4 units and a letter grade.
Same as: COMPLIT 148, COMPLIT 267, FRENCH 260A, MUSIC 146N

MUSIC 247J. Studies in Music, Media, and Popular Culture: The Soul Tradition in African American Music. 3-4 Units.
1960s and 70s Black music, including rhythm and blues, Motown, Southern soul, funk, Philadelphia soul, and disco. Its origins in blues, gospel, and jazz to its influence on today's r&b, hip hop, and dance music. Soul's cultural influence and global reach; its interaction with politics, racism, gender, place, technology, and the economy. Synchronous and asynchronous remote learning, with class discussions, small-group activities, guest presenters, and opportunities for activism. Pre-/co-requisite (for music majors): MUSIC 22. (WIM at 4 units only.).
Same as: AFRICAAM 19, AMSTUD 147J, CSRE 147J, MUSIC 147J

MUSIC 247K. Studies in Music, Media, and Popular Culture: Music and Urban Film. 3-4 Units.
How music and sound work in urban cinema. What happens when music's capacity to transform everyday reality combines with the realism of urban films? Provides an introduction to traditional theories of film music and film sound; considers how new technologies and practices have changed the roles of music in film. Readings discuss film music, realistic cinema, urban musical practices and urban culture. Viewing includes action/adventure, Hindi film, documentary, film noir, hip hop film, the musical, and borderline cases by Jean-Luc Godard, Spike Lee, Wong Kar-Wai and Tsai Ming-Liang. Pre- or corequisite (for music majors): MUSIC 22. (WIM at 4 unit level only.).
Same as: CSRE 147D, MUSIC 147K

MUSIC 250A. Physical Interaction Design for Music. 3-4 Units.
This lab and project-based course explores how we can physically interact with real-time electronic sound. Students learn to use and design sensors, circuits, embedded computers, communication protocols and sound synthesis. Advanced topics include real-time media, haptics, sound synthesis using physical model analogs, and human-computer interaction theory and practice. Course culminates in musical performance with or exhibition of completed design projects. An $80 lab fee will be added to your bill upon enrollment in this course. See https://ccrma.stanford.edu/courses/250a.

MUSIC 250C. Interaction - Intermedia - Immersion. 2-3 Units.
This course explores creative and technical approaches to the design of digital musical instruments (DMIs) and other systems for interactive performance, composition and/or installations in audio, audiovisual, and other intermedia practice. Various paradigms of Human Computer Interaction (HCI) and techniques such as motion tracking, biosignal analysis, Music Information Retrieval (MIR), concatenation, and machine learning will be considered through analysis of examples of historical and current intermedia practice, framed by key concepts such as affordances and embodiment. It will focus on individual creative output and process, with a final project consisting of the realization of a creative work applying these principles. Please note that attendance of both sessions listed here is not required: the weekly sessions will consist of a lecture and discussion in the first half, and lab time with optional attendance in the second. We plan to concentrate principally on digital - including online - interactive/intermedial/immersive projects. This course is in the P3D program and, therefore, each student has the possibility of receiving a personal 3D printer for their home use. Further equipment loans from CCRMA for student projects involving physical media may be possible. Feedback on projects will be provided by Denning Visiting Artist Pamela Z, in addition to tutorials/consultations with the course co-instructors and teaching assistant.

MUSIC 251. Psychophysics and Music Cognition. 1-5 Unit.
Lecture, lab and experiment-based course in perception, psychoacoustics, cognition, and neuroscience of music. (WIM at 4 or 5 units only.).

MUSIC 253. Symbolic Musical Information. 2-4 Units.
Focus on symbolic data for music applications including advanced notation systems, optical music recognition, musical data conversion, and internal structure of MIDI files.
Same as: CS 275A

MUSIC 254. Computational Music Analysis. 2-4 Units.
Leveraging off three synchronized sets of symbolic data resources for notation and analysis, the lab portion introduces students to the open-source Humdrum Toolkit for music representation and analysis. Issues of data content and quality as well as methods of information retrieval, visualization, and summarization are considered in class. Grading based primarily on student projects. Prerequisite: 253 or consent of instructor.
Same as: CS 275B

MUSIC 255. Intermedia Workshop. 3-4 Units.
Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit.
Same as: ARTSTUDI 239, MUSIC 155

MUSIC 255A. Piano Literature. 1 Unit.
An exploration of the repertoire for piano and keyboards, providing experience with and context for this literature while engaging practical, technical and analytical features of the works. Each quarter will cover focused areas defined by time, place, composer, stylistic tradition, formal type, etc. Students will perform works in class, as well as listen to and compare performances through videos and recordings. Assignments include reading, listening, and a final project. Prerequisite: Private lesson proficiency level in piano, or consent of instructor.
Same as: MUSIC 155A

MUSIC 255S. String Literature. 1 Unit.
An exploration of the repertoire for stringed instruments, providing experience with and context for this literature while engaging practical, technical and analytical features of the works. Each quarter will cover focused areas defined by time, place, composer, stylistic tradition, formal type, etc. Students will perform works in class, as well as listen to and compare performances through videos and recordings. Assignments include reading, listening, and a final project. Prerequisite: Private lesson proficiency level in piano, or consent of instructor.
Same as: MUSIC 155S

MUSIC 256A. Music, Computing, Design: The Art of Design. 3-4 Units.
Creative design for computer music software. Programming, audiovisual design, as well as software design for musical tools, instruments, toys, and games. Provides paradigms and strategies for designing and building music software, with emphases on interactive systems, aesthetics, and artful product design. Course work includes several programming assignments and a "design+implement" final project. Prerequisite: experience in C/C++ and/or Java.See https://ccrma.stanford.edu/courses/256a/.
Same as: CS 476A

MUSIC 256B. Music, Computing, Design II: Virtual and Augmented Reality for Music. 3-4 Units.
Aesthetics, design, and exploration of creative musical applications of virtual reality (VR) and augmented reality (AR), centered around VR and mobile technologies. Comparison between AR, VR, and traditional software design paradigms for music. Topics include embodiment, interaction design, novel instruments, social experience, software design + prototyping. Prerequisite: MUSIC 256A / CS 476A.
Same as: CS 476B

MUSIC 257. Neuroplasticity and Musical Gaming. 3-5 Units.
What changes in a musician's brain after hours and years of daily practice? How do skills that make a great violinist transfer to other abilities? Can directed neuroplasticity be used to target skill learning? This course will include fundamentals of psychoacoustics and auditory neuroscience. Focus will be development of video games that use perceptually motivated tasks to drive neural change. Emphasis will be on music, linguistic, and acoustic based skills. Programming experience is highly recommended, but not required.

MUSIC 258. Orchestration and Timbral Analysis. 1-4 Unit.
Hands-on approach to orchestration and applied computational timbral analysis. For Music majors with a concentration or interest in composition or MST. Assignments in orchestration and timbre analysis, and computer-based timbre analysis. Final project involving either computer-based analysis or an advanced orchestration assignment. See http://ccrma.stanford.edu/courses/255/.

MUSIC 258A. Computational Music Theory & Analysis. 1-3 Unit.
Topics in music analysis, with emphasis on perception and cognition. Topics include engagement, expectation formulation and processing, timbre and time perception, with particular relevance to computer applications in music.

MUSIC 269. Research in Performance Practices. 1-5 Unit.
Directed reading and research. May be repeated for credit a total of 5 times.

MUSIC 271. Chamber Music Discovery. 1 Unit.
Weekly class to include a series of presentations by Stanford¿s Ensemble-in-Residence the St. Lawrence String Quartet with live and recorded performances and live discussion. Students are expected to develop a final project in the style of Discovery for presentation at the end of the quarter.

MUSIC 272A. Advanced Piano. 1-3 Unit.
Private lessons and group masterclass weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 272B. Advanced Organ. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 272C. Advanced Harpsichord. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 272D. Advanced Jazz Piano. 1-3 Unit.
Admission is by audition and/or invitation only; priority to majors and jazz-ensemble participants. All participants must enroll. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. Zero unit enrollment option available with instructor permission. May be repeated for credit a total of 14 times. Lessons meet for one hour per week at the mutual convenience of the instructor and student. Exact time to be determined during the first week of classes. Course to be taught online when COVID restrictions are in effect as a live private interactive session. Student should have access to a piano during the lesson. Students on campus who do not have such access, please contact instructor for further information.

MUSIC 272E. Advanced Fortepiano. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 272F. Advanced Carillon. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 272G. Advanced Gu-Zheng. 1-3 Unit.
Private lesson weekly. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 273. Advanced Voice. 1-3 Unit.
Private lessons and group master class weekly. May be repeated for credit. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 274A. Advanced Violin. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 274B. Advanced Viola. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 274C. Advanced Violoncello. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 274D. Advanced Contrabass. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 274E. Advanced Viola da Gamba. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.htmlfor class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 274F. Advanced Classical Guitar. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 274G. Advanced Harp. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 274H. Advanced Baroque Violin. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 274I. Advanced Jazz Bass. 1-3 Unit.
Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 274J. Advanced Jazz & Contemporary Guitar. 1-3 Unit.
An application of the performance techniques developed by the innovative, genius, and radical guitarists from 1930 to 2020. Improvising, comping, reading, repertoire, and technique will be studied in depth. Rhythm styles, the application of modern theory, transcribing solos, and chord melody arranging are developed through the course of study. May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 275A. Advanced Flute. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 275B. Advanced Oboe. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 275C. Advanced Clarinet. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 275D. Advanced Bassoon. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 275E. Advanced Recorder/Early Winds. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. http://music.stanford.edu/Academics/LessonSignups.html.

MUSIC 275F. Advanced Saxophone. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. http://music.stanford.edu/Academics/LessonSignups.html.

MUSIC 275G. Advanced Baroque Flute. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 275H. Advanced Jazz Saxophone. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 276A. Advanced French Horn. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 276B. Advanced Trumpet. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 276C. Advanced Trombone. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 276D. Advanced Tuba. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 276E. Advanced Jazz Trumpet. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 277. Advanced Percussion. 1-3 Unit.
May be repeated for credit a total of 14 times. Admission is by audition only. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 277A. Advanced Drum Set. 1-3 Unit.
May be repeated for credit a total of 15 times. There is a fee for this class. Please visit http://music.stanford.edu/Academics/LessonSignups.html for class fees and audition information. All participants must enroll. Zero unit enrollment option available with instructor permission. See website: (http://music.stanford.edu) for policy and procedure.

MUSIC 280. TA Training Course. 1 Unit.
Required for doctoral students serving as teaching assistants. Orientation to resources at Stanford, guest presentations on the principles of common teaching activities, supervised teaching experience. Students who entered in the Autumn should take 280 in the Spring prior to the Autumn they begin teaching.

MUSIC 285. Intermedia Lab. 1 Unit.
The Intermedia Lab is a space to develop projects bridging sound with other media through technology. Projects may involve instrument design, physical computing, audiovisual interaction, immersive audio engaging with acoustic environments, and/or other intermedial projects that engage listening in tandem with other senses. Students will be encouraged to develop creative projects using resources at CCRMA such as those of the Max Lab and Listening Room. Lab sessions will focus on skill-sharing, consideration of mapping strategies, critique sessions and problem-solving related to projects, contextualized by discussions of readings. It will feature guest-workshops and open studio project presentations. We plan to concentrate principally on digital - including online - intermedial projects in the Winter term, as the CCRMA spaces listed in the course description may not yet be accessible. This course is in the P3D program and, therefore, each student has the possibility of receiving a personal 3D printer for their home use. Further equipment loans from CCRMA for student projects involving physical media may be possible. This term we will be joined remotely by special guests, including Denning Visiting Artist Pamela Z.

MUSIC 286B. American Song in the 20th Century and after. 3-4 Units.
Critical and creative exploration of song in the Americas. About twenty-five key examples will guide discussion of the interactions between words, music, performance and culture. Weekly listening, reading and assignments will be organized around central themes: love, sex and romance; war and politics; labor and money; place; identity; society and everyday life. Genres include art song; blues, gospel, jazz and country; pop, soul, rock and hip-hop; bossa nova, nueva canción and salsa; electronic and experimental. Takehome and in-class assignments will include critical and creative writing, and music composition, production and performance; final projects may emphasize any of the above.
Same as: AMSTUD 186B, MUSIC 186B

MUSIC 298. MA/MST CAPSTONE PROJECT. 1-5 Unit.
The MA/MST capstone is intended to gather and focus skills acquired throughout the program toward an exploratory project aimed at bridging between the student¿s residency and whatever will follow beyond the MA. Mentorship can include your advisor augmented, should you chose, by any other faculty member from CCRMA or in other programs. The project can be in applied research areas such as design projects and/or mentored internships. Also, the capstone can be considered as a more flexible form of a master¿s thesis, aiming to produce research and publication(s). Students can also pursue the artistic projects to enhance the creative portfolio.

MUSIC 299. Independent Study. 1-5 Unit.
For advanced undergraduates and graduate students who wish to do work outside the regular curriculum. Before registering, student must present specific project and enlist a faculty sponsor. May be repeated for credit a total of 14 times.

MUSIC 300A. Medieval Notation. 3-4 Units.
Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.

MUSIC 300B. Renaissance Notation. 3-4 Units.
Western notation of the Middle Ages and Renaissance: principles, purposes, and transcription.

MUSIC 300D. Music Ethnography. 3-5 Units.
This graduate seminar serves as an introduction to the methodologies and theoretical approaches for the ethnography of sound and musical practices. While we center on research problems, ethics, and methods in the field of ethnomusicology, ethnographic field research on sound and sounding has long been an interdisciplinary venture. We will additionally draw on performance studies, critical ethnography, anthropology, and critical race and gender studies to broaden our exposure to diverse methods and approaches. Throughout the seminar, we will pay close attention to the multiple ethical implications of crafting ethnographies about musicians, music-making, sound, performance, and listening practices.

MUSIC 300E. Analysis and Repertoire: Medieval and Renaissance. 3-4 Units.
Analytical approaches to genres, styles, forms, and techniques of Western music from [chant and early polyphony through the sixteenth century]. Issues of aesthetics, history, and interpretation viewed through representative repertoire, readings, and analytical methods.

MUSIC 300F. Analysis and Repertoire: Baroque to Early Romantic. 3-4 Units.
Analytical approaches to genres, styles, forms, and techniques of Western music from the seventeenth through the mid-nineteenth centuries. Issues of aesthetics, history, and interpretation viewed through representative repertoire, readings, and analytical methods.

MUSIC 300G. Analysis and Repertoire: Late-Romantic to Contemporary. 3-4 Units.
Analytical approaches to genres, styles, materials and techniques of Western music from the mid-nineteenth century through the present. Questions of aesthetics, history and performance explored through musical analysis. Representative repertoire and readings, and a range of analytical methods.

MUSIC 300H. Aesthetics and Criticism of Music, Ancients and Moderns: Plato to Nietzsche. 3-4 Units.
For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.

MUSIC 300I. Aesthetics and Criticism of Music, Contemporaries: Heidegger to Today. 3-4 Units.
For graduate students. Primary texts focusing on the nature, purposes, and uses of music and other arts.

MUSIC 300J. Methods for Studying Gender and Sexuality in Music. 3-5 Units.
Introduction to graduate-level study of gender and sexuality in music; includes feminist and queer critiques of musical canons, historiography, biography, and genius; feminist, queer, and trans perspectives on musical performance, performers, subcultures, and cultures. Methods for studying gender/sexuality in a variety of classical and vernacular musics.

MUSIC 302. Research in Musicology. 1-5 Unit.
Directed reading and research. May be repeated for credit a total of 14 times.

MUSIC 305D. Analysis from a Compositional Perspective. 4 Units.
Introduction to analysis, examining diverse examples in part chosen from, otherwise supplementing and illuminating, the graduate composers' qualifying exam list; consideration of aesthetic premises and motivations, and of implications for contemporary compositional practice.

MUSIC 310. Research Seminar in Musicology. 3-5 Units.
For graduate students. Topics vary each quarter. May be repeated for credit a total of 8 times.

MUSIC 319. Research Seminar on Computational Models of Sound Perception. 1-3 Unit.
All aspects of auditory perception, often with emphasis on computational models. Topics: music perception, signal processing, auditory models, pitch perception, speech, binaural hearing, auditory scene analysis, basic psychoacoustics, and neurophysiology. See http://ccrma.stanford.edu/courses/. May be repeated for credit a total of 14 times.

MUSIC 320A. Introduction to Audio Signal Processing Part I: Spectrum Analysis. 3-4 Units.
Digital signal representations and transforms for music and audio research. Topics: complex numbers, sinusoids, spectrum representation, sampling and aliasing, the Discrete Fourier Transform (DFT), Fourier theorems, z transform, Laplace transform, and introduction to the associated Python software. See http://ccrma.stanford.edu/courses/320/.

MUSIC 320B. Introduction to Audio Signal Processing Part II: Digital Filters. 3-4 Units.
Digital filters for music and audio research. Topics: digital filter structures, frequency response, z transforms, transfer-function analysis, and associated Matlab software. See http://ccrma.stanford.edu/courses/320/.

MUSIC 320C. Software Projects in Music/Audio Signal Processing. 3-10 Units.
Course focuses on developing an audio signal-processing plugin or stand-alone application in C++. Prior experience is assumed with programming in Matlab/Octave and C/C++, and signal processing theory on the level of Music 320. Class time is devoted to presenting use of the Faust programming language for generating C++, the JUCE framework for creating audio plugins or stand-alone applications, related theory and projects, project progress reports, and project final presentations.

MUSIC 321. Readings in Music Theory. 1-5 Unit.
Directed reading and research. May be repeated for credit a total of 15 times.

MUSIC 323. Doctoral Seminar in Composition. 3-4 Units.
Illustrated discussions of compositional issues and techniques. Presentation of relevant topics, including students' own compositional practice. May be repeated for credit a total of 14 times.

MUSIC 324. Graduate Composition Forum. 1 Unit.
Community forum for all graduate student composers. Discussion of completed and in-progress work by students, faculty, and visiting composers. Repertoire listening sessions. Planning of upcoming Department events. Special area exam topic presentations, final doctoral project presentations, and review of portfolios. Many sessions are open to the public.May be repeated for credit.

MUSIC 325. Individual Graduate Projects in Composition. 1-5 Unit.
May be repeated for credit.

MUSIC 330. Musicology Dissertation Colloquium. 1-4 Unit.
Weekly meetings for all musicology students 4th year and beyond to discuss research and writing strategies, share and critique work in progress, and discuss issues in professional development (preparing abstracts, conference papers, C.V. and job interviews, book reviews, submitting articles for publication). Open to 3rd-year students.

MUSIC 332. Philosophy, Literature, and the Arts Core Seminar. 2-4 Units.
This course serves as the Core Seminar for the PhD Minor in Philosophy, Literature, and the Arts. It introduces students to a wide range of topics at the intersection of philosophy with literary and arts criticism. The seminar is intended for graduate students. It is suitable for theoretically ambitious students of literature and the arts, philosophers with interests in value theory, aesthetics, and topics in language and mind, and other students with strong interest in the psychological importance of engagement with the arts. May be repeated for credit. In this year¿s installment, we focus on how artistic kinds or genres help set the terms on which individual works are experienced, understood, and valued, with special attention to lyric poetry and music.
Same as: DLCL 333, ENGLISH 333, PHIL 333

MUSIC 333. Food, Text, Music: A Multidisciplinary Lab on the Art of Feasting. 3-5 Units.
Students cook a collection of unfamiliar recipes each week while learning about the cultural milieus in which they originated. The course focuses on the fourteenth and fifteenth centuries, a time of great banquets that brought together chefs, visual artists, poets, musicians, and dancers. Students read late-medieval cookbooks under the guidance of professional chefs, learn songs and poetry with the help of visiting performers, and delve into a burgeoning scholarly literature on food history and sensory experience. We will also study trade routes and food networks, the environmental impact of large-scale banquets, the science of food, and the politics of plenty. This course may count towards the Medieval component of the French major, and corresponds to DLCL 121, a course requirement for the Medieval Studies Minor. Students interested in applying for course must email the professor (jrodin@stanford.edu) by 20 September with a statement of up to 350 words that includes: (a) reasons for wanting to take the class; (b) relevant background in cooking/medieval studies/etc.; (c) stated commitment to attend all ten course meetings; and (d) any dietary restrictions/preferences.
Same as: FRENCH 166, FRENCH 266, FRENCH 366, MUSIC 133

MUSIC 341. Ph.D Dissertation. 1-10 Unit.
May be repeated for credit a total of 5 times.

MUSIC 351A. Seminar in Music Perception and Cognition I. 1-3 Unit.
A seminar on topics in music perception and cognition. Students will study and discuss recent research as well as design and implement experiments.

MUSIC 390. Practicum Internship. 1 Unit.
On-the-job training under the guidance of experienced, on-site supervisors. Meets the requirements for curricular practical training for students on F-1 visas. Students submit a concise report detailing work activities, problems worked on, and key results. May be repeated for credit. Prerequisite: qualified offer of employment and consent of adviser.

MUSIC 398. PhD Dissertation Proposal. 1-3 Unit.
Students have to identify a research advisor and enroll in this course with her/him to develop the dissertation proposal. By the end of this required course or its series (repeatable for three times), students are expected to have identified a) a special area exam committee, b) the structure of the dissertation proposal, and c) the scope of the thesis with the depth and breadth of the research field.

MUSIC 399. D.M.A. Final Project. 1-10 Unit.
May be repeated for credit a total of 5 times.

MUSIC 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.
Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.nnNOTE: This course is only offered on the graduate level and undergraduates would be admitted by request (sending a letter expressing interest to the instructor and specifying what other courses in music or art history has prepared them to tackle this subject) and special permission only.
Same as: ARTHIST 408C, REES 408C, RELIGST 308C

MUSIC 420A. Signal Processing Models in Musical Acoustics. 3-4 Units.
Computational methods in musical sound synthesis and digital audio effects based on acoustic physical models. Topics: mass-spring-dashpot systems; electric circuit analogies; finite difference schemes; state-space models and the modal representation; impedance; ports; acoustic simulation using delay lines, digital filters, and nonlinear elements; interpolation and sampling-rate conversion; delay effects; wave digital filters; real-time computational models for musical instruments and effects, both acoustic and electronic. See http://ccrma.stanford.edu/courses/420/. Prerequisites: MUSIC 320A and MUSIC 320B or equivalent; PHYSICS 21 or equivalent course applying Newton's laws of motion; and CS 106B or equivalent programming in C and C++.

MUSIC 421A. Time-Frequency Audio Signal Processing. 3-4 Units.
Spectrum analysis and signal processing using Fast Fourier Transforms (FFTs) with emphasis on audio applications. Topics: Fourier theorems; FFT windows; spectrum analysis; spectrograms; sinusoidal modeling; spectral modeling synthesis; FFT convolution; FIR filter design and system identification; overlap-add and filter-bank-summation methods for short-time Fourier analysis, modification, and resynthesis. See http://ccrma.stanford.edu/courses/421/. Prerequisites: Music 320A and Music 320B or equivalent background in spectrum analysis and linear systems.

MUSIC 421N. Deep Learning for Music and Audio. 1 Unit.
Seminar reviewing the development of deep-learning methods in music and audio fields. See the course website for latest information: http://ccrma.stanford.edu/courses/mus421n/.

MUSIC 422. Perceptual Audio Coding. 3 Units.
History and basic principles: development of psychoacoustics-based data-compression techniques; perceptual-audio-coder applications (radio, television, film, multimedia/internet audio, DVD, EMD). In-class demonstrations: state-of-the-art audio coder implementations (such as AC-3, MPEG) at varying data rates; programming simple coders. Topics: audio signals representation; quantization; time to frequency mapping; introduction to psychoacoustics; bit allocation and basic building blocks of an audio codec; perceptual audio codecs evaluation; overview of MPEG-1, 2, 4 audio coding and other coding standards (such asAC-3). Prerequisites: knowledge of digital audio principles, familiarity with C programming. Recommended: 320, EE 261. See http://ccrma.stanford.edu/.

MUSIC 423. Graduate Research in Music Technology. 1-10 Unit.
Research discussion, development, and presentation by graduate students, visiting scholars, and CCRMA faculty in the areas of music and/or audio technology. Permission of instructor required. See http://ccrma.stanford.edu/courses/423/ for latest information. May be repeated for credit.

MUSIC 424. Signal Processing Techniques for Digital Audio Effects. 3-4 Units.
Techniques for dynamic range compression, reverberation, equalization and filtering, panning and spatialization, digital emulation of analog processors, and implementation of time-varying effects. Single-band and multiband compressors, limiters, noise gates, de-essers, convolutional reverberators, parametric and linear-phase equalizers, wah-wah and envelope-following filters, and the Leslie. Students develop effects algorithms of their own design in labs. Prerequisites: digital signal processing, sampling theorem, digital filtering, and the Fourier transform at the level of 320 or EE 261; Matlab and modest C programming experience. Recommended: 420 or EE 264; audio effects in mixing and mastering at the level of 192.

MUSIC 451A. Basics in Auditory and Music Neuroscience. 2-5 Units.
Understanding basic concepts and techniques in cognitive neuroscience using electroencephalography (EEG) specific to auditory perception and music cognition via seminar and laboratory exercise work. Acquiring and practicing skills in experimental design, data analysis, and interpretation, writing for scientific reports and research proposals, and giving a critical review of others' scientific work. Seminar discusses related literature in neuroanatomy, neurophysiology, psychology, and neuroimaging. Laboratory focuses on electroencephalography (EEG) techniques, classic paradigms for recording evoked response, and associated data analysis methods.

MUSIC 451B. Neuroscience of Auditory Perception and Music Cognition II: Neural Oscillations. 2-5 Units.
Building on 451A, this course will review basic knowledge and EEG techniques of neural oscillations related to auditory perception and music cognition via seminar and laboratory work. Through reviewing and replicating findings using classic and recent paradigms, the laboratory exercises offer multiple ways to understand how to design experiments and analyze data to observe neural oscillatory activities in different frequency bands, then interpret their functional significance in sensorimotor processing, attention, and social interaction ¿ important aspects of music listening and performance. Seminar discusses literature in neurophysiology, neuropsychology, and brain-computer interface. Prerequisite: Music 451A or permission of instructor.

MUSIC 451C. Auditory EEG Research III: Coordinated Actions and Hyperscanning. 2-5 Units.
Advancing EEG research skills in cognitive neuroscience specific to music cognition by conducting a group research project. In particular, this course focuses on basics for 2-person EEG (hyperscanning) paradigms and explores how coordinated actions and social interactions during musical ensemble are processed in the two brains. Laboratory works covers advanced electroencephalography (EEG) recording and analysis techniques specifically for oscillation and phase coherence across brain areas and between subjects. Seminar activities include surveying literature, discussing research articles and giving criticisms, and writing research reports. Lab scheduled separately Prerequisite: Music 451A.

MUSIC 801. TGR Project. 0 Units.
.

MUSIC 802. TGR Dissertation. 0 Units.
.

PHILOSOPHY

Courses offered by the Department of Philosophy are listed under the subject code PHIL on the Stanford Bulletin's ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PHIL&filter-catalognumber-PHIL=on).

Philosophy concerns itself with fundamental problems. Some are abstract and deal with the nature of truth, justice, value, and knowledge; others are more concrete, and their study may help guide conduct or enhance understanding of other subjects. Philosophy also examines the efforts of past thinkers to understand the world and people's experience of it.

Although it may appear to be an assortment of different disciplines, there are features common to all philosophical inquiry. These include an emphasis on methods of reasoning and the way in which judgments are formed, on criticizing and organizing beliefs, and on the nature and role of fundamental concepts.

Students of almost any discipline can find something in philosophy which is relevant to their own specialties. In the sciences, it provides a framework within which the foundations and scope of a scientific theory can be studied, and it may even suggest directions for future development. Since philosophical ideas have had an important influence on human endeavors of all kinds, including artistic, political, and economic, students of the humanities and social sciences should find their understanding deepened by acquaintance with philosophy.

Mission of the Undergraduate Program in Philosophy

The mission of the undergraduate program in Philosophy is to train students to think clearly and critically about the deepest and broadest questions concerning being, knowledge, and value, as well as their connections to the full range of human activities and interests. The Philosophy major presents students with paradigms and perspectives of past thinkers and introduces students to a variety of methods of reasoning and judgment formation. Courses in the major equip students with core skills involved in critical reading, analytical thinking, sound argumentation, and the clear, well-organized expression of ideas. Philosophy is an excellent major for those planning a career in law, medicine, business, or the non-profit sector. It provides analytical skills and a breadth of perspective helpful to those called upon to make decisions about their own conduct and the welfare of others. Philosophy majors who have carefully planned their undergraduate program have an excellent record of admission to professional and graduate schools.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. the ability to effectively communicate philosophical ideas orally and in writing.
2. close reading, argument evaluation, and analytical writing.
3. dialectical ability to identify strengths and weaknesses of an argument and devise appropriate and telling responses.
4. the ability to think critically and demonstrate clarity of conceptualization.
5. the ability to differentiate good from unpromising philosophical questions.
6. the ability to sustain an argument of substantial scope, showing control over logical, argumentative, and evidential relations among its parts.
7. mastery over a domain of literature, an area of philosophical problems, or an area in the history of thought.
8. an understanding of argumentative relations among different philosophical issues in their area, and an ability to discriminate between problems that must be addressed, and those that may be deferred to future work.
9. the ability to frame and pursue more deeply a philosophical question within the domain.
10. the ability to develop, articulate, and defend a thesis about the question.
11. knowledge and awareness of plausible objections to their arguments, and resourcefulness in responding to them.

Special and Joint Majors

The Special Program in the History and Philosophy of Science enables students to combine interests in science, history, and philosophy. Students interested in this program should see the special adviser.

The Special Option in Philosophy and Literary Thought enables students to combine interests in philosophy and literary studies. Interested students should see the Director of Undergraduate Studies for Philosophy and Literature.

The combined major in Philosophy and Religious Studies joins courses from both departments into a coherent theoretical pattern.

The joint major in Philosophy and Computer Science provides opportunities for the systematic study of computation together with philosophy in the broadest sense.

Graduate Program in Philosophy

The Department of Philosophy offers an M.A. and a Ph.D. degree. The University's basic requirements for the M.A. and Ph.D. degrees are discussed in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin.

Learning Outcomes (Graduate)

The purpose of the master's program is to develop knowledge and skills in Philosophy and to prepare students for a professional career or doctoral studies. This is achieved through completion of core courses, with an option for further specialization. (See below for details.)

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Philosophy. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Philosophy and to interpret and present the results of such research.

Library and Associations

The Tanner Memorial Library of Philosophy contains an excellent working library and ideal conditions for study. Graduate students and undergraduate majors in philosophy have formed associations for discussion of philosophical issues and the reading of papers by students, faculty, and visitors.

Bachelor of Arts in Philosophy

Preparation for the Major

Students must take an introductory course (under 100) and PHIL 80 Mind, Matter, and Meaning. (PHIL 80 should normally be taken no later than the first quarter after declaring the major.) Students taking a Philosophy

Thinking Matters course may count 4 units toward the introductory Philosophy requirement.

How to Declare the Bachelor of Arts in Philosophy

There are three ways of majoring in Philosophy:

- The General Program
- The Special Program in the History and Philosophy of Science
- The Special Option in Philosophy and Literature.

A student completing any of these receives a B.A. degree in Philosophy. There is also a major program offered in Philosophy and Religious Studies. To declare a major, a student should consult with the Director of Undergraduate Study and see the undergraduate student services administrator to be assigned an adviser and work out a coherent plan. The department recommends proficiency in at least one foreign language.

Degree Requirements

Course Requirements

		Units
Core Courses		
Logic		
More advanced logic courses may also be counted for this requirement by petition.		
Select one of the following:		
PHIL 49	Survey of Formal Methods	4
PHIL 150	Mathematical Logic	4
PHIL 151	Metalogic	4
PHIL 154	Modal Logic	4
Philosophy of Science		
Complete one course from:		
PHIL 60	Introduction to Philosophy of Science	5
PHIL 61	Philosophy and the Scientific Revolution	5
or an intermediate philosophy of science course numbered between PHIL 160-169		
Moral and Politicial Philosophy		
PHIL 2	Introduction to Moral Philosophy	5
or any intermediate course devoted to central topics in moral and political philosophy numbered between PHIL 170-172 or 174-176.		
Contemporary Theoretical Philosophy		
Any intermediate course numbered between PHIL 180-189.		
History of Philosophy		
PHIL 100	Greek Philosophy	4
PHIL 102	Modern Philosophy, Descartes to Kant	4
Philosophy Seminar		
One undergraduate seminar from PHIL 194 series		
Major Electives		
Any course 10 and above, at least 9 units must be 99 and above.		

1. Units for Tutorial, Directed Reading (PHIL 196 Tutorial, Senior Year, PHIL 197 Individual Work, Undergraduate, PHIL 198 The Dualist), The Dualist (PHIL 198 The Dualist), Honors Seminar (PHIL 199 Seminar for Prospective Honors Students), or affiliated courses may not be counted in the 55-unit requirement. No more than 10 units completed with grades of 'satisfactory' and/or 'credit' may be counted in the 55-unit requirement. Any courses taken for a letter grade in fulfillment of the core requirements listed under 1.b. must be taken for a minimum of 3 units and completed with a grade of 'C-' or higher.
2. A maximum of 10 transfer units or two courses can be used for the departmental major. In general, transfer courses cannot be used to satisfy the six area requirements or the undergraduate seminar requirement. Students may not substitute transfer units for the PHIL 80 requirement.

Subplan in History and Philosophy of Science

Undergraduates may major in Philosophy with a field of study in History and Philosophy of Science. This field of study is declared on Axess and is printed on the transcript.

Each participating student is assigned an adviser who approves the course of study. A total of 61 units are required for the sub-major, to be taken according to requirements 1 through 5 below. Substitutions for the listed courses are allowed only by written consent of the undergraduate adviser for History and Philosophy of Science.

Students are encouraged to consider doing honors work with an emphasis on the history and philosophy of science. Interested students should see the description of the honors thesis in Philosophy and consult their advisers for further information.

1. Three science courses (for example, biology, chemistry, physics) for 12 units.
2. The following Philosophy (PHIL) core courses must be completed with a letter grade by the end of the junior year:
   a.

		Units
Select one of the following:		3
PHIL 49	Survey of Formal Methods	4
PHIL 150	Mathematical Logic	4
PHIL 151	Metalogic	4
PHIL 154	Modal Logic	4

   b. either PHIL 60 Introduction to Philosophy of Science or PHIL 61 Philosophy and the Scientific Revolution.
   c. PHIL 80 Mind, Matter, and Meaning.
3. Three history of science courses.
4. Three philosophy of science courses, of which one must be PHIL 164 Central Topics in the Philosophy of Science: Theory and Evidence.
5. Three additional courses related to the major, in philosophy or history, to be agreed on by the adviser.
6. At least six courses in the major must be completed at Stanford with a letter grade. Units for Tutorial, Directed Reading, or The Dualist (PHIL 196 Tutorial, Senior Year, PHIL 197 Individual Work, Undergraduate, PHIL 198 The Dualist) may not be counted in the 61-unit requirement. No more than 10 units completed with grades of 'satisfactory' and/or 'credit' may be counted in the 61-unit requirement. Courses taken in fulfillment of the philosophy requirements under 2. must be taken for a minimum of 3 units and completed with a grade of 'C-' or higher.
7. Transfer units must be approved in writing by the Director of Undergraduate Study at the time of declaring a major. Transfer courses are strictly limited when used to satisfy major requirements.

Subplan in Philosophy and Literature

Undergraduates may major in Philosophy through a special track in Philosophy and Literature. This field of study is declared on Axess and is printed on the transcript. Students should also meet with the DUS of Philosophy and the Program Director of the Philosophy and Literature initiative to receive advising about course planning. The special track requires at least 65 units, and it consists of three main parts: a) core requirements in Philosophy (requirements 1, 4, and 6 below), b) a dedicated program of study in a single national literature, approved by the Program Director for Philosophy and Literature (requirement 3 below), and c) a group of courses exploring the interdisciplinary connections between philosophy and literature (requirements 2, 5, and 7 below). Students are encouraged to do honors work with an emphasis on philosophy and literature through the Philosophy honors program. (See

the description of the honors thesis in Philosophy and consult advisers for further information.)

Requirements:

1. Core requirements for the major in Philosophy, including:
   a. an introductory course
   b. PHIL 80 Mind, Matter, and Meaning
   c. the core distribution requirements listed in section 1b of the general program above.
   d. All courses taken for a letter grade in fulfillment of the philosophy core requirements (under 1., above) must be taken for a minimum of 3 units and completed with a grade of 'C-' or higher.
2. Gateway course in philosophy and literature (PHIL 81 Philosophy and Literature). This course should be taken as early as possible in the student's career, normally in the sophomore year.
3. Three courses in a single national literature, chosen by the student in consultation both with the adviser and with the director of undergraduate studies for Philosophy and Literature. In cases where a national literature department or program has a required or recommended three-course sequence, the student should normally take that sequence. In cases where the national literature is not in English, this normally involves meeting the language proficiency requirements of the relevant department.
4. Electives within Philosophy beyond the core requirements totaling at least 5 units, and drawn from courses numbered 100 or higher.
5. Two upper division courses of special relevance to the study of philosophy and literature, as identified by the committee in charge of the program. A list of approved courses is available from the program director of undergraduate studies, and is published on the web at https://philit.stanford.edu/undergraduates/undergraduate-special-relevance-courses (https://philit.stanford.edu/undergraduates/undergraduate-special-relevance-courses/)
6. Capstone seminar in the PHIL 194 series.
7. Capstone seminar of relevance to the study of philosophy and literature, as approved by the program committee. In some cases, with approval of the Philosophy Director of Undergraduate Study and the Philosophy and Literature Director of Undergraduate Studies, the same course may be used to meet requirements 6 and 7 simultaneously.

The following rules also apply to the special option:

1. Units for Honors Tutorial, Directed Reading (PHIL 196 Tutorial, Senior Year, PHIL 197 Individual Work, Undergraduate, PHIL 198 The Dualist), The Dualist (PHIL 198 The Dualist), Honors Seminar (PHIL 199 Seminar for Prospective Honors Students) may not be counted toward the 65-unit requirement. No more than 10 units with a grade of 'satisfactory' or 'credit' may be counted toward the unit requirement.
2. A maximum of 15 transfer units may be counted toward the major, at most 10 of which may substitute for courses within Philosophy. Transfer credits may not substitute for PHIL 80 or PHIL 81, and are approved as substitutes for the five area requirements or PHIL 194 only in exceptional cases.
3. Courses offered in other departments may be counted toward requirements 3, 5 and 7, but such courses, including affiliated courses, do not generally count toward the other requirements. In particular, such courses may not satisfy requirement 4.
4. Units devoted to meeting the language requirement are not counted toward the 65-unit requirement.

Philosophy and Religious Studies Combined Major

The undergraduate major in Philosophy and Religious Studies consists of 60 units of course work with approximately one third each in the philosophy core; the religious studies core; and additional coursework and a capstone requirement that completes the course of study.

No courses in either the philosophy or religious studies core may be taken satisfactory/no credit or credit/no credit.

In general, transfer units cannot be used to satisfy the core requirements. Transfer units and substitutions must be approved by the Director of Undergraduate Studies in the relevant department.

Students who have declared the combined major prior to Autumn 2019-20 may choose to follow the Degree Requirements listed in either the current Bulletin or the 2018-19 Bulletin (http://exploredegrees.stanford.edu/archive/2018-19/schoolofhumanitiesandsciences/philosophy/).

Core Requirements

1. Philosophy (PHIL) courses:
   a. Required course: PHIL 80 Mind, Matter, and Meaning (5 units).
   b. 16 units, including at least one Philosophy course from each of the following areas:
      i. Logic and philosophy of science: Students take either one from this list or an intermediate philosophy of science course numbered PHIL 160-169.

		Units
PHIL 49	Survey of Formal Methods	4
PHIL 60	Introduction to Philosophy of Science	5
PHIL 61	Philosophy and the Scientific Revolution	5
PHIL 150	Mathematical Logic	4
PHIL 151	Metalogic	4
PHIL 154	Modal Logic	4

      ii. Ethics and value theory: This requirement may be satisfied by PHIL 2 or any intermediate course devoted to central topics in moral and political philosophy numbered between PHIL 170-172 or 174-176.
      iii. Epistemology, metaphysics, and philosophy of language. This requirement may be satisfied by any intermediate course numbered between PHIL 180-189.
      iv. History of philosophy: Select one of

		Units
PHIL 100	Greek Philosophy	4
PHIL 101	Introduction to Medieval Philosophy	4
PHIL 102	Modern Philosophy, Descartes to Kant	4
PHIL 103	19th-Century Philosophy	4

   c. All philosophy courses taken for a grade in fulfillment of requirements under 1.a. and 1.b. must be taken for a minimum of 3 units and completed with a grade of 'C-' or higher.
2. Religious Studies (RELIGST) courses:
   a. One foundational course from RELIGST 1-99 (3-4 units).
   b. Two courses from RELIGST 100-289 in religious thought, broadly construed, chosen in consultation with, and approved by, the Religious Studies Director of Undergraduate Studies (8-10 units).
   c. Required Course: RELIGST 290 Majors' Seminar: Theories of Religion (5 units; offered Winter Quarter; junior year; fulfills WIM requirement).
3. The remaining coursework (approximately 20 units) is to be chosen according to interest, in consultation with the student's adviser, and with an eye to the senior capstone requirement.
   a. No more than 5 of these additional units in either department may come from courses numbered below PHIL/RELIGST 100.

b. No more than 10 units taken credit/no credit may count toward the major.
c. Students should ensure that their total complement of RELIGST courses (i.e. core and elective taken together) is not focused on a single religious tradition.

Capstone Requirement

The capstone experience aims to foster the integration of capacities, knowledge, and skills acquired in the student's core and elective coursework. Combined majors fulfill this requirement by completing the capstone requirement for *either* the B.A. in Philosophy or the B.A. in Religious Studies. Students should discuss this choice with their adviser during their junior year and consult the capstone requirements for Philosophy and the Religious Studies majors, respectively, in the Bulletin.

1. The capstone requirement in Philosophy is fulfilled by the successful completion of one of the PHIL 194 Capstone Seminars. The role of the PHIL Capstone Seminar is to provide students with an opportunity to synthesize their undergraduate educational careers and to demonstrate their capacity for independent and creative philosophical work.
   a. PHIL 194_ (4 units)
2. The capstone requirement in Religious Studies is fulfilled by the writing of either a senior essay or an honors thesis, which provides students with the opportunity to pursue independent research on a topic of interest under the direction of a Religious Studies faculty member. Two required courses support the successful completion of this senior project:

		Units
RELIGST 297	Senior Essay/Honors Thesis Research	5-10
	Senior Essay: 5 units, Winter Quarter, graded 'N' until submission	
	Honors Thesis: 5-10 units, spread over Autumn and Winter Quarters, graded 'N' until submission	
RELIGST 298	Senior Colloquium (Spring Quarter; grading option S/NC)	4

Honors Program

Students who wish to undertake a more intensive and extensive program of study, including seminars and independent work, are invited to apply for the honors program during Winter Quarter of the junior year. Admission is selective on the basis of demonstrated ability in Philosophy, including an average grade of at least 'A-' in a substantial number of Philosophy courses and progress towards satisfying the requirements of the major.

With their application, candidates should submit an intended plan of study for the remainder of the junior and the senior years. It should include at least 5 units of Senior Tutorial (PHIL 196 Tutorial, Senior Year) during Autumn and/or Winter quarter(s) of the senior year. Students who are applying to Honors College may use the same application for philosophy honors. In the quarter preceding the tutorial, students should submit an essay proposal to the Philosophy undergraduate director and determine an adviser.

Students applying for honors should enroll in Junior Honors Seminar (PHIL 199 Seminar for Prospective Honors Students) during the Spring Quarter of the junior year.

The length of the honors essay may vary considerably depending on the problem and the approach; usually it falls somewhere between 7,500 and 12,500 words. This essay may use work in previous seminars and courses as a starting point, but it cannot be the same essay that has been used, or is being used, in some other class or seminar. It must be a substantially new and different piece of work reflecting work in the tutorials.

A completed draft of the essay is submitted to the adviser at the end of the Winter Quarter of the senior year. Any further revisions must be finished by the fifth full week of the Spring Quarter, when three copies of the essay are to be given to the undergraduate secretary. The honors essay is graded by the adviser together with a second reader, chosen by the adviser in consultation with the student. The student also provides an oral defense of the thesis at a meeting with the adviser and second reader. The essay must receive a grade of 'A-' or better for the student to receive honors.

Honors tutorials represent units in addition to the 55-unit requirement.

For further information, contact the Honors Director.

Joint Major Program in Philosophy and Computer Science

The joint major program (JMP) was discontinued at the end of the academic year 2018-19. Students may no longer declare this program. All students with declared joint majors are permitted to complete their degree; faculty and departments are committed to providing the necessary advising support.

See the "Joint Major Program (p. 33)" section of this bulletin for a description of University requirements for the JMP. See also the Undergraduate Advising and Research JMP (https://majors.stanford.edu/more-ways-explore/joint-majors-csx/) web site and its associated FAQs.

Students completing the JMP receive a B.A.S. (Bachelor of Arts and Science).

The joint major in Philosophy and Computer Science provides opportunities for the systematic study of computation together with philosophy in the broadest sense.

The joint major is appropriate for three distinct groups of students:

1. students with separate interests in the two fields who wish to begin thinking about their interaction (or else applications of one set to the other);
2. students interested in exploring philosophical issues in, and foundations of, computing;
3. students who would like to pursue philosophical investigations using computational methods.

Philosophy Major Requirements in the Joint Major Program

See the "Computer Science Joint Major Progra (p. 714)m" section of this bulletin for details on Computer Science requirements.

Students in the joint major are required to complete the same introductory and core requirements as other Philosophy majors, with the exception of a more demanding logic requirement. In addition, joint majors must complete a senior capstone seminar in Philosophy (PHIL 194), and are normally expected to complete (separately from PHIL 194) an integrative senior capstone project, developed with faculty adviser(s) in CS and/or Philosophy, and approved in writing by the joint major's faculty adviser in Philosophy. Students may register for 5-10 units Individual Work, Undergraduate (PHIL 197) in association with the integrative capstone. These units may be taken across one or two quarters, and must be taken for a letter grade. Such projects must integrate the student's CS and philosophical learning.

In recognition of the student's work in the CS side of the joint major, the normal elective units required for Philosophy majors are reduced by

5 units for joint majors. Thus, the joint major requires 50 units within Philosophy.

Because logic is a core area of intersection between Philosophy and CS, students are in the best position to leverage the intersection of their work in the two fields if they develop a strong background in logical methods, and have a clear understanding of the way those formal methods are or can be used within Philosophy. Joint majors are therefore required to complete training in logic at least through successful completion of PHIL 150.

Thus, the Philosophy requirements of the joint major are:

1. An Introductory course (numbered under 100)
2. PHIL 80 (writing in the major)
3. Core requirements in philosophy
   a. One course in logic (PHIL 150 or higher);
   b. One course in philosophy of science;
   c. One course in moral or political philosophy (normally PHIL 2 or PHIL 170s)
   d. One course in contemporary theoretical philosophy (PHIL 180s)
   e. Two courses in the history of philosophy, namely
      i. PHIL 100 (ancient philosophy)
      ii. PHIL 102 (modern philosophy)
4. Capstone seminar within philosophy (PHIL 194s)
5. Expected integrative independent capstone project
6. Electives sufficient to bring the student's overall program up to a minimum total of 50 units in Philosophy.

Units for Independent Work, Directed Reading, the Dualist, and Honors Seminar (PHIL 196, 197, 198, 199) do not count toward the overall requirement of 50 units within Philosophy. No more than 10 units of courses completed with grades of 'Satisfactory' or 'Credit' may be counted toward the 50-unit requirement. Units taken for a letter grade in fulfillment of the core requirements listed under 3. must be completed with a grade of 'C-' or higher.

Students in the joint major should register their major declaration not only with the Director of Undergraduate Study (DUS) of Philosophy but also with the joint major's faculty adviser in Philosophy. In consultation with the faculty adviser (ideally beginning in the sophomore year), each joint major should work out an individualized program of courses to develop her/his philosophical interests and to explore the connections between them and her/his interests in computation. Each student should meet with the faculty adviser quarterly for a program update, during which there is discussion of opportunities for integrating the ongoing work in Philosophy and CS through course work, employment, projects, or other extracurricular activities. The faculty adviser assists students to develop coherent programs of study leading toward integrative senior experiences. If the normal expectation of a senior project turns out not to be suitable in individual cases, the student must obtain approval in writing from the faculty adviser of the substitute integrative activities and the faculty advisor of the joint major.

Learning Objectives

Because the joint major seeks to develop deep disciplinary knowledge within Philosophy, the learning objectives of the general philosophy major also apply in the case of the joint major. In this aspect, students are expected to demonstrate:

1. the ability to communicate philosophical ideas effectively orally and in writing.
2. close reading, argument evaluation, and analytical writing.
3. dialectical ability to identify strengths and weaknesses of an argument and devise appropriate and telling responses.
4. the ability to think critically and demonstrate clarity of conceptualization.
5. the ability to differentiate good from unpromising philosophical questions.
6. the ability to sustain an argument of substantial scope, showing control over logical, argumentative, and evidential relations among its parts.

In addition, the joint major has the ambition to develop key knowledge and capacities that are relevant to the intersection of Philosophy and CS. In this domain, students in the joint major are expected to:

1. develop problem solving skills suitable to their work in the Computer Science side of the major, in accordance with learning goals specified for the joint major by Computer Science.
2. develop mastery of logical and formal methods adequate to support their work at the intersection of computing and philosophy.
3. demonstrate a deep understanding of at least one particular area of intersection between the two fields, or of how methods and ideas from one of the disciplines can inform or be applied to the other.

Dropping a Joint Major Program

To drop the joint major, students must submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program (https://stanford.box.com/change-UG-program/). Students may also consult the Student Services Center (http://studentservicescenter.stanford.edu/) with questions concerning dropping the joint major.

Transcript and Diploma

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major." The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major."

Minor in Philosophy

A minor in Philosophy consists of at least 30 units of Philosophy courses satisfying the following conditions:

1. Students taking a Philosophy Thinking Matters course may count it as equivalent to a maximum of 4 units of Philosophy courses under 100. Students who took the Winter/Spring Philosophy Introduction to the Humanities (IHUM) track may count these courses as equivalent to a maximum of 5 units of Philosophy courses under 100. (IHUM courses are no longer offered).
2. The 30 units must include one of:
   a. a history of philosophy course numbered 100 or above and for a minimum of 3 units
   b. one quarter of Philosophy Thinking Matters (THINK)
3. Minors must take one course from any two of the following three areas (PHIL):
   a. Philosophy of Science and Logic: For philosophy of science, either PHIL 60, PHIL 61, or an intermediate philosophy of science courses numbered between PHIL 160 - 169; or else, for logic, one of:

		Units
Logic		
PHIL 49	Survey of Formal Methods	4
PHIL 150	Mathematical Logic	4
PHIL 151	Metalogic	4
PHIL 154	Modal Logic	4

   b. Moral and political philosophy: This requirement may be satisfied by PHIL 2 or any intermediate course devoted to central topics in

moral and political philosophy numbered between PHIL 170 - 172, or 174-176.

c. Contemporary theoretical philosophy: This requirement may be satisfied by most intermediate courses numbered between PHIL 180 - 189.

4. At least 10 units must be from courses numbered 100 or above.
5. Transfer units must be approved in writing by the Director of Undergraduate Study at the time of declaring. The number of transfer units is generally limited to a maximum of 10.
6. No more than 6 units completed with grades of 'satisfactory' or 'credit' count towards the 30-unit requirement.
7. Any courses taken for a letter grade in fulfillment of the 30-unit requirement must be taken for a minimum of 3 units and completed with a grade of 'C-' or higher.
8. Units for tutorials, directed reading, and affiliated courses may not be counted.

Students must declare their intention to minor in Philosophy in a meeting with the Director of Undergraduate Study. This formal declaration must be made no later than the last day of the quarter two quarters before degree conferral. The Permission to Declare a Philosophy Minor (signed by the Director of Undergraduate Study) lists courses taken and to be taken to fulfill minor requirements. This permission is on file in the department office. Before graduation, a student's record is checked to see that requirements have been fulfilled, and the results are reported to the University Registrar.

Master of Arts in Philosophy

University requirements for the M.A. are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

Three programs lead to the M.A. in Philosophy. One is a general program providing a grounding in all branches of the subject. The others provide special training in one branch.

Coterminal Bachelor's and Master's Degrees in Philosophy

It is possible to earn an M.A. in Philosophy while earning a B.A. or B.S. This can usually be done by the end of the fifth undergraduate year, although a student whose degree is not in Philosophy may require an additional year. Standards for admission to, and completion of, this program are the same as for M.A. applicants who already have the bachelor's degree when matriculating. Applicants for the coterminal program are not, however, required to take the Graduate Record Exam.

University requirements for the coterminal M.A. are described in the "Coterminal Bachelor's and Master's Degrees (p. 56)" section of this bulletin. See also the Registrar's Coterminal Degree Programs (https://registrar.stanford.edu/students/coterminal-degree-programs/) web site.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Admissions

All prospective master's students, including those currently enrolled in other Stanford programs, must apply for admission to the program. No fellowships are available. Entering students must meet with the director of the master's program and have their advisor's (p. 1874) approval, in writing, of program proposals. The master's program should not be considered a stepping stone to the doctoral program; these two programs are separate and distinct. Coterminal applications are only accepted in Winter Quarter, for a Spring Quarter start. The coterm deadline is the end of the second week of Winter Quarter.

Unit Requirements

Each program requires a minimum of 45 units in philosophy. Students in a special program may be allowed or required to replace up to 9 units of philosophy by 9 units in the field of specialization. Although the requirements for the M.A. are designed so that a student with the equivalent of a strong undergraduate philosophy major at Stanford might complete them in one year, most students need longer. Students should also keep in mind that although 45 units is the minimum required by the University, quite often more units are necessary to complete department requirements. Up to 6 units of directed reading in philosophy may be allowed. There is no thesis requirement, but an optional master's thesis or project, upon faculty approval, may count as the equivalent of up to 8 units. A special program may require knowledge of a foreign language. At least 45 units in courses numbered 100 or above must be completed with a grade of 'B-' or better at Stanford. Students are reminded of the University requirements for advanced degrees, and particularly of the fact that for the M.A., students must complete three full quarters as measured by tuition payment.

General Program

The General Program requires a minimum of 45 units in Philosophy courses numbered above 99. These courses must be taken for a letter grade, and the student must receive at least a 'B-' in the course. Courses taken to satisfy the undergraduate core or affiliated courses may not be counted in the 45 units. The requirement has three parts:

1. **Undergraduate Core**
   Students must have when they enter, or complete early in their program, the following undergraduate courses (students entering from other institutions should establish equivalent requirements with a master's advisor upon arrival or earlier):

   a. Logic:

   Select one of the following:

		Units
PHIL 49	Survey of Formal Methods	4
PHIL 150	Mathematical Logic	4
PHIL 151	Metalogic	4
PHIL 154	Modal Logic	4

   b. Philosophy of science: This requirement may be satisfied by PHIL 60, PHIL 61, or any intermediate philosophy of science course numbered between PHIL 160 - 169.

c. Moral and political philosophy: This requirement may be satisfied by any intermediate course devoted to central topics in moral and political philosophy numbered between PHIL 170 - 172, or PHIL 174-176.
d. Contemporary theoretical philosophy: This requirement may be satisfied by any intermediate course numbered between PHIL 180 - 189.
e. History of philosophy: two history of philosophy courses numbered 100 or above

2. **Graduate Core**
Students must take at least one course numbered over 105 from three of the following five areas (courses used to satisfy the undergraduate core cannot also be counted toward satisfaction of the graduate core). Crosslisted and other courses taught outside the Department of Philosophy do not count towards satisfaction of the core.
   a. Logic and semantics
   b. Philosophy of science and history of science
   c. Ethics, value theory, and moral and political philosophy
   d. Metaphysics, epistemology, philosophy of mind, and philosophy of language
   e. History of philosophy
3. **200-Level Course Requirement**
Each master's candidate must take at least two courses numbered above 200; these cannot be graduate sections of undergraduate courses.
4. **Specialization**
Students must take at least three courses numbered over 105 in one of the five areas.

Special Program in Symbolic Systems

Students should have the equivalent of the Stanford undergraduate major in Symbolic Systems. Students who have a strong major in one of the basic SSP disciplines (philosophy, psychology, linguistics, computer science) may be admitted, but are required to do a substantial part of the undergraduate SSP core in each of the other basic SSP fields. This must include the following philosophy courses:

		Units
PHIL 80	Mind, Matter, and Meaning	5
PHIL 151	Metalogic	4
And one of the following:		
PHIL 181	Philosophy of Language	4
PHIL 184	Topics in Epistemology	4
PHIL 186	Philosophy of Mind	4
PHIL 187	Philosophy of Action	4

This work does not count towards the 45-unit requirement.

Course Requirements

1. Four courses in philosophy at the graduate level (numbered 200 or above), including courses from three of the following five areas:
   a. Philosophy of language
   b. Logic
   c. Philosophy of mind
   d. Metaphysics and epistemology
   e. Philosophy of science

   At most two of the four courses may be graduate sections of undergraduate courses numbered 100 or higher.
2. Three courses numbered 100 or higher from outside Philosophy, chosen in consultation with an advisor. These courses should be from two of the following four areas:
   a. Psychology
   b. Linguistics
   c. Computer Science
   d. Education

   Remaining courses are chosen in consultation with and approved by an advisor.

Special Program in the Philosophy of Language

Admission is limited to students with substantial preparation in philosophy or linguistics. Those whose primary preparation has been in linguistics may be required to satisfy all or part of the undergraduate core requirements as described in the "General Program" subsection above. Those whose preparation is primarily in philosophy may be required to take additional courses in linguistics.

Course Requirements

1. Philosophy of language: two approved courses in the philosophy of language numbered 180 or higher.
2. Syntactic theory and generative grammar:

		Units
PHIL 384	Seminar in Metaphysics and Epistemology	4
LINGUIST 230A	Introduction to Semantics and Pragmatics	4

3. Logic: at least two approved courses numbered PHIL 151 Metalogic or higher.
4. An approved graduate-level course in mathematical linguistics or automata theory.

Doctor of Philosophy in Philosophy

Prospective graduate students should see the Office of Graduate Admissions (http://gradadmissions.stanford.edu) web site for information and application materials. Applicants should take the Graduate Record Examination by October of the year the application is submitted; in the 2020-21 admissions cycle the GRE is optional, due to the pandemic.

The University's basic requirements for the Ph.D. degree including candidacy, residence, dissertation, and examination are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

University candidacy requirements, published in the "Candidacy (p. 67)" section of this bulletin, apply to all Ph.D. students. Admission to a doctoral degree program is preliminary to, and distinct from, admission to candidacy. Admission to candidacy for the doctoral degree is a judgment by the faculty in the department or school of the student's potential to successfully complete the requirements of the degree program. Students are expected to complete department qualifying procedures and apply for candidacy at the beginning of the seventh academic quarter, normally the Autumn Quarter of the student's third year.

Admission to candidacy for the doctoral degree is granted by the major department following a student's successful completion of qualifying procedures as determined by the department. Departmental policy determines procedures for subsequent attempts to become advanced to candidacy in the event that the student does not successfully complete the procedures. Failure to advance to candidacy results in the dismissal of the student from the doctoral program; see the "Guidelines for Dismissal of Graduate Students for Academic Reasons (p. 70)" section of this bulletin.

The requirements detailed here are department requirements. These requirements are meant to balance structure and flexibility in allowing students, in consultation with their advisors (https://exploredegrees.stanford.edu/schoolofhumanitiesandsciences/philosophy/#graduateadvisingtext), to take a path through the program that gives them a rigorous and broad philosophical education, with room to focus on areas of particular interest, and with an eye to completing the degree with an excellent dissertation and a solid preparation for a career in academic philosophy.

Normally, all courses used to satisfy the distribution requirements for the Philosophy Ph.D. are Stanford courses taken as part of a student's graduate program. In special circumstances, a student may petition to use a very small number of graduate-level courses taken at other institutions to satisfy a distribution requirement. To be approved for this purpose, the student's work in such a graduate-level course would need to involve an appropriate subject matter and would need to be judged by the department to be at the level of an 'A' in a corresponding graduate-level course at Stanford.

Courses used to satisfy any course requirement in Philosophy (except Teaching Methods and the summer Dissertation Development Seminar) must be passed with a letter grade of 'B-' or better (no satisfactory/no credit), except in the case of a course/seminar used to satisfy the third-year course/seminar requirement and taken for only 2 units. Such a reduced-unit third-year course/seminar must be taken credit/no credit.

At the end of each year, the department reviews the progress of each student to determine whether the student is making satisfactory progress, and on that basis to make decisions about probationary status and termination from the program where appropriate.

Any student in one of the Ph.D. programs may apply for the M.A. when all University and department requirements have been met.

Proficiency Requirements

1. *First-year Ph.D. Proseminar*: a one quarter, topically focused seminar offered in Autumn Quarter, and required of all first-year students.

2. *Distribution requirements during the first six quarters*. Intended to ensure a broad and substantial exposure to major areas of philosophy while allowing for considerable freedom to explore.

    a. six courses, each taken for the full unit load for the course, distributed across three areas as follows:
        i. two courses in value theory including ethics, aesthetics, political philosophy, social philosophy, philosophy of law. At least one of the courses satisfying this distribution requirement must be in ethics or political philosophy.
        ii. Two courses in language, mind, and action. One course satisfying this requirement must be drawn from the language related courses, and one from mind and action related courses.
        iii. two courses in metaphysics and epistemology (including metaphysics, epistemology, philosophy of science). At least one of the courses satisfying this requirement must be drawn from either metaphysics or epistemology.
        iv. Instructors indicate which courses may satisfy particular requirements. If a course potentially satisfies more than one requirement the student may use it for only one of those area requirements; no units may be double-counted. Students must develop broad competencies in all these areas. Those without strong backgrounds in these areas would normally satisfy these distribution requirements by taking more basic courses rather than highly specialized and focused courses. Students should consult with their advisor in making these course decisions, and be prepared to explain these decisions when reviewed for candidacy; see requirement 6 below.
    b. Logic requirement: PHIL 150 Mathematical Logic or equivalent.
    c. History/logic requirement. One approved course each in ancient and modern philosophy, plus either another approved history of philosophy course or PHIL 151 Metalogic.
    d. Students should normally take at least 64 graduate level units at Stanford during their first six quarters (in many cases students would take more units than that) and of those total units, at least 49 units of course work are to be in the Philosophy department. These courses must be numbered above 110, but not including Teaching Methods (PHIL 239 Teaching Methods in Philosophy) or affiliated courses. Units of Individual Directed Reading are normally not to be counted toward this 49-unit requirement unless there is special permission from the student's advisor and the Director of Graduate Studies.
    e. Prior to candidacy, at least 3 units of work must be taken with each of four Stanford faculty members.
3. *Writing Requirement: Second Year Paper*

    The second year paper should demonstrate good scholarship and argumentative rigor, and be a polished piece of writing approximately 8000 words in length. The second year paper need not bear any specific relationship to the dissertation. It may be a version of a prospective dissertation chapter, but this is not required. The final version must be turned in on the last day of Summer Quarter of the second year. Extensions of this deadline require the consent of the instructor of the second year Writing Seminar and the Director of Graduate Studies and are only granted in exceptional cases (e.g., documented illness, family crisis). The final paper is read by a committee of two faculty members and it is an important consideration in the department's decision on the student's candidacy.

4. *Teaching Assistancy*

    A minimum of five quarters of teaching assistancy are required for the Ph.D. Normally one of these quarters is as a teaching assistant for the Philosophy Department's Writing in the Major course, PHIL 80 Mind, Matter, and Meaning. It is expected that students not teach in their first year and that they teach no more than two quarters in their second year. Students are required to take PHIL 239 Teaching Methods in Philosophy during Spring Quarter of their first year and during Autumn Quarter of their second year. Teaching is an important part of students' preparation to be professional philosophers.
5. *Review at the End of the Second Year for Advancement to Candidacy*

    The faculty's review of each student includes a review of the student's record, an assessment of the second year paper, and an assessment of the student's preparation for work in her/his intended area of specialization, as well as recommendations of additional preparation, if necessary.
6. *Candidacy*

    To continue in the Ph.D. program, each student must apply for candidacy at the beginning of the seventh academic quarter, normally the Autumn Quarter of the student's third year. Students may be approved for or denied candidacy by the end of that quarter by the department. In some cases, where there are only one or two outstanding deficiencies, the department may defer the candidacy decision and require the student to re-apply for candidacy in a subsequent quarter. In such cases, definite conditions for the candidacy re-application must be specified, and the student must work with the advisor and the DGS to meet those conditions in a timely fashion. A failure to maintain timely progress in satisfying the specified conditions constitutes grounds for withholding travel and discretionary funds and for a denial of advancement to candidacy.
7. *Writing Seminar*: In the Summer Quarter after the second year, students are required to attend the Writing Seminar. The Writing

Seminar is intended to help students complete their second year papers.

8. Upon completion of the summer writing seminar, students must sign up for independent study credit, PHIL 240 Individual Work for Graduate Students, with their respective advisors each quarter. A plan at the beginning, and a report at the end, of each quarter must be signed by both student and advisor and submitted to the graduate administrator for inclusion in the student's file. This is the process every quarter until the completion of the departmental oral.
9. In Autumn and Winter quarters of the third year, students register in and satisfactorily complete PHIL 301 Dissertation Development Proseminar. Students meet to present their work in progress and discuss their thesis project. Participation in these seminars is required.
10. During the third and fourth years in the program, a student should complete at least three graduate-level courses/seminars, at least two of them in philosophy (a course outside philosophy can be approved by the advisor), and at least two of them in the third year. The three seminars can be taken credit/no-credit for reduced (2) units. Courses required for candidacy are not counted toward satisfaction of this requirement. This light load of courses allows students to deepen their philosophical training while keeping time free for thesis research.
11. *Dissertation Work and Defense*

    The third and following years are devoted to dissertation work. The few requirements in this segment of the program are milestones to encourage students and advisors to ensure that the project is on track.
    a. *Dissertation Proposal*—By Spring Quarter of the third year, students should have selected a dissertation topic and committee. A proposal sketching the topic, status, and plan for the thesis project, as well as an annotated bibliography or literature review indicating familiarity with the relevant literature, must be received by the committee one week before the meeting on graduate student progress late in Spring Quarter. The dissertation proposal and the reading committee's report on it will constitute a substantial portion of the third year review.
    b. *Departmental Oral*—During Autumn Quarter of the fourth year, students take an oral examination based on at least 30 pages of written work, in addition to the proposal. The aim of the exam is to help the student arrive at an acceptable plan for the dissertation and to make sure that student, thesis topic, and advisors make a reasonable fit. It is an important chance for the student to clarify their goals and intentions with the entire committee present.
    c. *Fourth-Year Colloquium*—No later than Spring Quarter of the fourth year, students present a research paper in a 60-minute seminar open to the entire department. This paper should be on an aspect of the student's dissertation research. This is an opportunity for the student to make their work known to the wider department, and to explain their ideas to a general philosophical audience.
    d. *University Oral Exam*—Ph.D. students must submit a completed draft of the dissertation to the reading committee at least one month before the student expects to defend the thesis in the University oral exam. If the student is given consent to go forward, the University oral can take place approximately two weeks later. A portion of the exam consists of a student presentation based on the dissertation and is open to the public. A closed question period follows. If the draft is ready by Autumn Quarter of the fourth year, the student may request that the University oral count as the department oral.

Interdisciplinary Study

The department supports interdisciplinary study. Courses in Stanford's other departments and programs may be counted towards the degree, and course requirements in Philosophy are designed to allow students considerable freedom in taking such courses. Dissertation committees may include members from other departments. Where special needs arise, the department is committed to making it possible for students to obtain a philosophical education and to meet their interdisciplinary goals. Students are advised to consult their advisors and the department's student services office for assistance.

Interdepartmental Programs

Graduate Program in Cognitive Science

Philosophy participates with the departments of Computer Science, Linguistics, and Psychology in an interdisciplinary program in Cognitive Science. It is intended to provide an interdisciplinary education, as well as a deeper concentration in philosophy, and is open to doctoral students. Students who complete the requirements within Philosophy and the Cognitive Science requirements receive a special designation in Cognitive Science along with the Ph.D. in Philosophy. To receive this field designation, students must complete 30 units of approved courses, 18 of which must be taken in two disciplines outside of philosophy. The list of approved courses can be obtained from the Cognitive Science program located in the Department of Psychology.

Special Track in Philosophy and Symbolic Systems

Students interested in interdisciplinary work relating philosophy to artificial intelligence, cognitive science, computer science, linguistics, or logic may pursue a degree in this program.

Prerequisites—Admitted students should have covered the equivalent of the core of the undergraduate Symbolic Systems Program requirements as described in the "Symbolic Systems (p. 2155)" section of this bulletin, including courses in artificial intelligence (AI), cognitive science, linguistics, logic, and philosophy. The graduate program is designed with this background in mind. Students missing part of this background may need additional course work. In addition to the required course work below, the Ph.D. requirements are mostly the same as for the regular program, with the exceptions noted below.

Courses of Study—The program consists of three years of courses and two years of dissertation work. Students are required to take the following philosophy courses in the first two years:

1. Proseminar
2. Two courses in Language/Mind/Action
3. Two courses in Metaphysics/Epistemology/Science
4. Two courses in Value Theory
5. One course each in Ancient and Modern
   Among the eight courses required by 2-5, students in the program may omit two, in any two of the four categories. The two omitted courses may not come from the same category.
6. One advanced course in logic, at the level of Phil 151 or higher
7. Two graduate courses in cognitive psychology
8. Two graduate courses in computer science, one of which must be either CS 221 Artificial Intelligence: Principles and Techniques or a more advanced course in AI.
9. Two graduate courses in linguistics.
   From categories 7-9, at least one of these courses must significantly engage with experimental literature.
10. 64 graduate-level units, 49 of which are units in philosophy, during the first six quarters.
11. A second-year paper, which not need not be on a topic in symbolic systems, but could be on any philosophical topic.
    After the first 2 years, the requirements are mostly the same as for the standard track:
12. Three graduate-level seminars in the third and fourth year, at least two of which are taught in the Philosophy department, and at least two of which are in the third year. [All can be taken credit/no credit for reduced (2) units.]

13. Three advanced seminars in symbolic systems. Double counting: at most one of these could be a course satisfying one of 1-5; at most one could be a course satisfying one of 6-9; and at most one could be a course satisfying 11. At least one must not be counted for any other requirement. (In other words, at most two of these courses could count toward other requirements.) These may be completed any time before the fourth year.
14. Five quarters serving as a course TA, and taking the Teaching Methods in Philosophy (PHIL 239) course.
15. Dissertation Development Seminar in the summer after the second year.
16. The usual requirements for the dissertation (proposal, oral, 4th year talk, etc.).
17. The dissertation committee must include at least one member of the Department of Philosophy and one member of the Program in Symbolic Systems outside the Department of Philosophy.

Joint Program in Ancient Philosophy

This program is jointly administered by the Departments of Classics and Philosophy and is overseen by a joint committee composed of members of both departments. It provides students with the training, specialist skills, and knowledge needed for research and teaching in ancient philosophy while producing scholars who are fully trained as either philosophers with a strong specialization in ancient languages and philology, or classicists with a concentration in philosophy.

Students are admitted to the program by either department. Graduate students admitted by the Philosophy department receive their Ph.D. from the Philosophy department; those admitted by the Classics department receive their Ph.D. from the Classics department. For Philosophy graduate students, this program provides training in classical languages, literature, culture, and history. For Classics graduate students, this program provides training in the history of philosophy and in contemporary philosophy.

Each student in the program is advised by a committee consisting of one professor in each department.

Requirements for Philosophy Graduate Students: These are the same as the proficiency requirements for the Ph.D. in Philosophy.

One year of Greek is a requirement for admission to the program. If students have had a year of Latin, they are required to take 3 courses in second- or third-year Greek or Latin, at least one of which must be in Latin. If they have not had a year of Latin, they are then required to complete a year of Latin, and take two courses in second- or third-year Greek or Latin.

Students are also required to take at least three courses in ancient philosophy at the 200 level or above, one of which must be in the Classics department and two of which must be in the Philosophy department.

Ph.D. Subplan in History and Philosophy of Science

Graduate students in the Philosophy Ph.D. program may pursue a Ph.D. subplan in History and Philosophy of Science. The subplan is declared in Axess and subplan designations appear on the official transcript, but are not printed on the diploma.
Students must fulfill Departmental degree requirements and the following requirements:
1. Attendance at the HPS colloquium series.
2. Philosophy of Science courses:

		Units
Select one of the following:		
PHIL 263	Significant Figures in Philosophy of Science: Einstein	4
PHIL 264	Central Topics in the Philosophy of Science: Theory and Evidence	4
PHIL 264A	Central Topics in Philosophy of Science: Causation	4
PHIL 265	Philosophy of Physics: Space and Time	4
PHIL 265C	Philosophy of Physics: Probability and Relativity	4
PHIL 266	Probability: Ten Great Ideas About Chance	4
PHIL 267A	Philosophy of Biology	4
PHIL 267B	Philosophy, Biology, and Behavior	4

3. One elective seminar in the history of science.
4. One elective seminar (in addition to the course satisfying requirement 2) in philosophy of science.

Ph.D. Minor in Philosophy

To obtain a Ph.D. minor in Philosophy, students must follow these procedures:

1. Consult with the Director of Graduate Study to establish eligibility, and select a suitable advisor (https://exploredegrees.stanford.edu/schoolofhumanitiesandsciences/philosophy/#graduateadvisingtext).
2. Give to the graduate administrator a signed copy of the program of study (designed with the advisor) which offers:
   a. 30 units of courses in the Department of Philosophy with a letter grade of 'B-' or better in each course. No more than 3 units of directed reading may be counted in the 30-unit requirement.
   b. At least one course or seminar numbered over 99 to be taken in each of these six areas:
      i. Logic
      ii. Philosophy of science
      iii. Ethics, value theory, and moral and political philosophy
      iv. Metaphysics and epistemology
      v. Language, mind and action
      vi. History of philosophy
   c. Two additional courses numbered over 199 to be taken in one of those (b) six areas.
3. A faculty member from the Department of Philosophy (usually the student's advisor) serves on the student's doctoral oral examination committee and may request that up to one third of this examination be devoted to the minor subject.
4. Paperwork for the minor must be submitted to the department office before beginning the program.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Department of Philosophy counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards

satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Other Undergraduate Policies

If a student has difficulty completing an undergraduate degree requirement due to the COVID-19 pandemic, (e.g., a study abroad requirement, a laboratory research requirement), the student should consult with the Student Services Officer to identify academic options to fulfill degree requirements.

Graduate Degree Requirements

Grading

The Department of Philosophy counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B' or better level.

Other Graduate Policies

If a student has difficulty completing a graduate degree requirement due to the COVID-19 pandemic, (e.g., a study abroad requirement, a laboratory research requirement), the student should consult with the Student Services Officer to identify academic options to fulfill degree requirements.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

The Philosophy department is committed to providing academic advising in support of graduate student scholarly and professional development. Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, navigating degree requirements, exploring academic and professional opportunities, and preparing for their post-degree careers. When most effective, this advising relationship involves collaborative and sustained engagement by both the advisor and the advisee. An important part of the advisee-advisor relationship is that students learn to advocate for themselves; this includes discussing expectations for the advisor-advisee relationship with the advisor and revisiting these expectations periodically.

Master's Advising

Each first year Philosophy M.A. student is assigned an advisor on the basis of the student's interests. Entering students should meet with their advisors to discuss the selection of courses. Changes of advisors are always possible; they are initiated by a request of the graduate student to the M.A. Director and require the agreement of the proposed new advisor.

The department expects that M.A. advisors meet with their advisees regularly and at least once during the academic year. Such meetings may either be in-person or via the Internet (Skype, Zoom, etc.) and may be scheduled in-person or by email. Students typically initiate such meetings although faculty, when appropriate, try to get in touch with students who do not stay in regular contact.

M.A. advisors direct students towards the successful completion of the degree in good time. The Director of Graduate Studies and the M.A. Director monitor the student's progress and may initiate meetings when appropriate. Any graduate student can always seek the advice of the M.A. Director or the Director of Graduate Studies on general issues pertaining to the graduate program.

Academic progress and student completion of program requirements and milestones are monitored by the program director and staff, and are discussed by faculty at an annual meeting devoted to assessing graduate student progress. A detailed description of the program's requirements, milestones, and advising expectations is found in the Stanford Bulletin (p. 1869). Additionally, the program adheres to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/) (VPGE) and in the (GAP) (http://exploredegrees.stanford.edu/schoolofhumanitiesandsciences/philosophy/Graduate Academic Policies https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/).

Graduate students are active contributors to the advising relationship. They should proactively seek academic and professional guidance and take responsibility for informing themselves of policies and degree requirements.

As a best practice, advising expectations should be periodically discussed and reviewed to promote mutual understanding.

Doctoral Advising

Each first year Philosophy Ph.D. student is assigned an advisor on the basis of the student's stated interests. Entering students should meet with their Ph.D. advisors to discuss the selection of courses. Changes of advisors are always possible; they are initiated by a request of the graduate student to the Director of Graduate Studies (DGS) and require the agreement of the proposed new advisor. Students may, for instance, change advisors as their research focus takes shape. Ph.D. advisors direct students towards the successful completion of the degree in good time. In the first years of the program, this means successfully reaching candidacy (https://exploredegrees.stanford.edu/graduatedegrees/#doctoraltext). The DGS also monitors the student's progress and may initiate meetings when appropriate. Any graduate student can always seek the advice of the Director of Graduate Studies on general issues pertaining to the graduate program.

The department expects that Ph.D. advisors, during the student's first two years, meet with their advisees at least once per quarter during the academic year. Such meetings may either be in-person or via the Internet (Skype, Zoom, etc.) and may be scheduled in-person or by email. Students typically initiate such meetings although faculty, when appropriate, try to get in touch with students who do not stay in regular contact. Academic progress and student completion of program requirements and milestones are monitored by the Ph.D. advisor, the DGS, and staff, and are discussed by faculty at an annual meeting devoted to assessing graduate student progress. A detailed description of the program's requirements, milestones, and advising expectations is found on the Stanford Bulletin (p. 1870). Additionally, the program adheres to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/) (VPGE) and in the Graduate Academic Policies (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/) (GAP).

A required pre-dissertation seminar in the summer after the second year helps students make the transition to forming a dissertation committee and starting to work on their dissertation. The University's requirements for the composition of the dissertation committee may be found in the "Doctoral (p. 67)" section of this bulletin. Dissertation development seminars are available to graduate students in their third year and beyond. At this point in the program, students often transition from the Ph.D. advisor to a dissertation advisor.

Students and their dissertation advisors are expected to regularly establish mutually agreed upon expectations for turning in written work. Dissertation advisors are expected to meet quarterly with their advisees. Submitted work is to be discussed or commented upon without undue delay. During each year that the student teaches in the department, a student's teaching experience and preparation for academic teaching is to be discussed during at least one meeting with their dissertation advisors.

Dissertation advisors direct the student towards the successful completion of the degree in good time. The DGS monitors the student's progress and initiates meetings when appropriate. The DGS and the placement committee cooperate to make the student aware of opportunities for professional development both inside and outside academics.

Advising and mentoring relationships are not limited to members of the dissertation committee, and all faculty (especially those on the student's dissertation committee) contribute when they can. When a faculty member joins a Ph.D. dissertation committee, the faculty member and the student should meet and work out mutually agreed upon expectations about how often they meet and when written work is to be turned in. Such work is to be read and commented on within a reasonable period of time. Any graduate student can always seek the advice of the Director of Graduate Studies on general issues pertaining to the graduate program.

Graduate students are active contributors to the advising relationship. They should proactively seek academic and professional guidance and take responsibility for informing themselves of policies and degree requirements for the Philosophy Ph.D. program.

As a best practice, advising expectations should be periodically discussed and reviewed to promote mutual understanding.

Dissertation advisors, members of the dissertation committee, and the advisee are expected to maintain professionalism and integrity throughout the course of their work together.

Emeriti (Professors): Dagfinn Føllesdal, John Perry, Thomas Wasow, Allen Wood, Rega Wood, Denis Phillips (Courtesy Professor)

Chair: Krista Lawlor

Director of Graduate Studies: Chris Bobonich

Director of Undergraduate Studies: Ray Briggs

Honors Director and Undergraduate Outreach Coordinator: Ray Briggs

Faculty Adviser for Joint Major with Computer Science: Ray Briggs

Professors: R. Lanier Anderson, Chris Bobonich, Michael Bratman, Ray Briggs, Alan Code, Graciela De Pierris, John Etchemendy, Michael Friedman, Krista Lawlor, Helen Longino, Thomas Ryckman (Teaching), Debra Satz, Brian Skyrms (Spring), Kenneth Taylor (deceased December 2, 2019), Johan van Benthem (Spring)

Associate Professors: Mark Crimmins, David Hills (Teaching), Nadeem Hussain (on leave)

Assistant Professors: Juliana Bidadanure, Rosa Cao, Jorah Dannenberg, Thomas Icard, Barry Maguire, Anna-Sara Malmgren, Antonia Peacocke, Wendy Salkin, Jared Warren

Courtesy Professors: Eamonn Callan, Reviel Netz, Josiah Ober, Rob Reich, Thomas Sheehan

Visiting Professors: John Broome (Winter), David Estlund (Autumn), Mikkel Gerken (Winter), Terence Irwin (Winter), Kendall Walton (Spring)

Visiting Assistant Professor: Gabrielle Jackson

Lecturers: John Holliday, Alison McConwell, Rhodes Pinto, Monica Solomon

Cognate Courses

The following courses have substantial philosophical content. However, in the absence of special permission these courses cannot generally be used to satisfy requirements for the Philosophy major or graduate degrees in Philosophy.

		Units
CLASSICS 181	Classical Seminar: Origins of Political Thought	4-5
EDUC 217	Free Speech, Academic Freedom, and Democracy	3
ETHICSOC 136R	Introduction to Global Justice	4
ETHICSOC 185M	Contemporary Moral Problems	4-5
GLOBAL 139	History of Philosophy from Al-Kindi to Averroes	3-5
MATH 161	Set Theory	3
RELIGST 181	Heidegger and Mysticism	4
RELIGST 269	Plotinus and Augustine	3-5

Courses

PHIL 1. Introduction to Philosophy. 4 Units.
Is there one truth or many? Does science tell us everything there is to know? Can our minds be purely physical? Do we have free will? Is faith rational? Should we always be rational? What is the meaning of life? Are there moral truths? What are truth, reality, rationality, and knowledge? How can such questions be answered? Intensive introduction to theories and techniques in philosophy from various contemporary traditions. Once a week discussions will occur during scheduled meeting time (~50 minutes).

PHIL 1X. intro to philosophical methodology. 4 Units.
.

PHIL 2. Introduction to Moral Philosophy. 5 Units.
What should I do with my life? What kind of person should I be? How should we treat others? What makes actions right or wrong? What is good and what is bad? What should we value? How should we organize society? Is there any reason to be moral? Is morality relative or subjective? How, if at all, can such questions be answered? Intensive introduction to theories and techniques in contemporary moral philosophy.
Same as: ETHICSOC 20

PHIL 3N. Randomness: Computational and Philosophical Approaches. 3 Units.
Is it ever reasonable to make a decision randomly? For example, would you ever let an important choice depend on the flip of a coin? Can randomness help us answer difficult questions more accurately or more efficiently? What is randomness anyway? Can an object be random? Are there genuinely random processes in the world, and if so, how can we tell? In this seminar, we will explore these questions through the lenses of philosophy and computation. By the end of the quarter students should have an appreciation of the many roles that randomness plays in both humanities and sciences, as well as a grasp of some of the key analytical tools used to study the concept. The course will be self-contained, and no prior experience with randomness/probability is necessary.
Same as: CS 57N

PHIL 4N. Knowing Nothing. 3 Units.
Our beliefs are subject to multiple sources of error: a traveler's perception of an oasis in the desert may turn out to be a mirage; the key witness in a trial criminal may turn out to be lying; or a fluke in the data may mislead a research team into believing a false hypothesis; or a miscalculating math student may end up with the wrong answer. Philosophers often characterize knowledge as belief that is safe from error--but is knowledge possible? This course uses the philosophical arguments and thought experiments to assess the question of how much we can hope to know.

PHIL 5N. The Art of Living. 4 Units.
Whether we realize it or not, all of us are forced to make a fundamental choice: by deciding what is most valuable to us, we decide how we are going to live our life. We may opt for a life of reason and knowledge; one of faith and discipline; one of nature and freedom; one of community and altruism; or one of originality and style.We may even choose to live our lives as though they were works of art. In every case, hard work is required: our lives are not just given to us, but need to be made. To live well is, in fact, to practice an art of living. Where, however, do such ideals come from? How do we adopt and defend them? What is required to put them into practice? What do we do when they come into conflict with one another? And what role do great works of art play in all this? "The Art of Living" will explore the various ways in which it is possible to live well and beautifully, what it takes to implement them, and what happens when they come under pressure from inside and out.

PHIL 7N. Philosophy and Science Fiction. 3 Units.
What if things had been otherwise? What if things are someday, somewhere, very different than they are here and now? Science fiction and other genre fiction gives us the opportunity to explore worlds that stretch our conceptions of reality, of what it is to have a mind, to be human, and to communicate with one another. This course examines central questions in philosophy through the lens of speculative fiction. Can there be freedom in a deterministic world? How could language and communication evolve? What is a mind, and what is the nature of experience? How can we know what the world is like? We¿ll read classical and contemporary papers in philosophy alongside short stories, novels, and movies that play the role of thought experiments in illuminating philosophical issues.

PHIL 8N. Free Will and Responsibility. 4 Units.
In what sense are we, or might we be free agents? Is our freedom compatible with our being fully a part of the same natural, causal order that includes other physical and biological systems? What assumptions about freedom do we make when we hold people accountable morally and/or legally? When we hold people accountable, and so responsible, can we also see them as part of the natural, causal order? Or is there a deep incompatibility between these two ways of understanding ourselves? What assumptions about our freedom do we make when we deliberate about what to do? Are these assumptions in conflict with seeing ourselves as part of the natural, causal order?nWe will explore these and related questions primarily by way of careful study of recent and contemporary philosophical research on these matters.

PHIL 10N. Bounded Rationality. 3 Units.
This course takes a philosophical approach to a cutting edge debate in psychology. Readings include texts in contemporary cognitive science as well as in philosophy of mind.

PHIL 11N. Skepticism. 3 Units.
Preference to freshmen. Historical and contemporary philosophical perspectives on the limits of human knowledge of a mind-independent world and causal laws of nature. The nature and possibility of a priori knowledge. Skepticism regarding religious beliefs.

PHIL 12N. Concepts and concept possession. 3 Units.
Our thoughts are made up of concepts. If I didn't have the concept of a caterpillar or of love or of a prime number, I couldn't think about caterpillars, love, or prime numbers, respectively. And if I couldn't think about those things then I couldn't talk or sing or make jokes about them, believe or remember anything about them, reason about them, hope or desire or fear anything to do with them¿and so on. But what are concepts? What does it take to have one? And how do we get to do that: what's involved in the acquisition of a concept? Are some concepts innate? To what extent can empirical psychology help improve our understanding of concepts? How are concepts related to natural language? What counts as concept change? And how is it possible for concepts to 'reach out' and be about aspects of the world (e.g., about caterpillars, love or prime numbers)?nnIn this seminar we will explore these and related questions through extensive discussions, reading and writing. There will be a lot of emphasis on active class participation. The reading will include texts in contemporary cognitive science as well as in philosophy of mind.

PHIL 13. Humanities Core: Great Books, Big Ideas -- Europe, Modern. 3 Units.
This three-quarter sequence asks big questions of major texts in the European and American tradition. What is a good life? How should society be organized? Who belongs? How should honor, love, sin, and similar abstractions govern our actions? What duty do we owe to the past and future? This third and final quarter focuses on the modern period, from the rise of revolutionary ideas to the experiences of totalitarianism and decolonization in the twentieth century. Authors include Locke, Mary Shelley, Marx, Nietzsche, Freud, Weber, Primo Levi, and Frantz Fanon.
Same as: DLCL 13, FRENCH 13, HISTORY 239C, HUMCORE 13

PHIL 13N. Justice across Borders. 3 Units.
Most people are not your fellow citizens. (Over 95% of human beings, for example, are not Americans.) What do you owe to them as a matter of justice? What do they owe to you? nShould you save a foreigner's life instead of buying luxuries for yourself? Should you boycott 'fast fashion' produced by exploited workers abroad? Should universities divest from fossil fuels? How can a country like the United States justify forcefully preventing anyone from crossing its borders? Is anything absolutely prohibited to win a war? When examining such issues, we need to start with facts¿facts about poverty, inequality, climate change, immigration, etc. After surveying the basic facts, we will use philosophical readings to focus and deepen our discussions of what justice requires across borders. Some of the topics we discuss will be chosen on the basis of students' interests.

PHIL 14N. Belief and the Will. 3 Units.
Preference to freshmen. Is there anything wrong with believing something without evidence? Is it possible? The nature and ethics of belief, and belief's relation to evidence and truth. How much control do believers have over their belief?.

PHIL 15N. Freedom, Community, and Morality. 3 Units.
Preference to freshmen. Does the freedom of the individual conflict with the demands of human community and morality? Or, as some philosophers have maintained, does the freedom of the individual find its highest expression in a moral community of other human beings? Readings include Camus, Mill, Rousseau, and Kant.

PHIL 20N. Philosophy of Artificial Intelligence. 3 Units.
Is it really possible for an artificial system to achieve genuine intelligence: thoughts, consciousness, emotions? What would that mean? How could we know if it had been achieved? Is there a chance that we ourselves are artificial intelligences? Would artificial intelligences, under certain conditions, actually be persons? If so, how would that affect how they ought to be treated and what ought to be expected of them? Emerging technologies with impressive capacities already seem to function in ways we do not fully understand. What are the opportunities and dangers that this presents? How should the promises and hazards of these technologies be managed?nnPhilosophers have studied questions much like these for millennia, in scholarly debates that have increased in fervor with advances in psychology, neuroscience, and computer science. The philosophy of mind provides tools to carefully address whether genuine artificial intelligence and artificial personhood are possible. Epistemology (the philosophy of knowledge) helps us ponder how we might be able to know. Ethics provides concepts and theories to explore how all of this might bear on what ought to be done. We will read philosophical writings in these areas as well as writings explicitly addressing the questions about artificial intelligence, hoping for a deep and clear understanding of the difficult philosophical challenges the topic presents.nnNo background in any of this is presupposed, and you will emerge from the class having made a good start learning about computational technologies as well as a number of fields of philosophical thinking. It will also be a good opportunity to develop your skills in discussing and writing critically about complex issues.

PHIL 20S. Introduction to Moral Philosophy. 3 Units.
Moral philosophy is the area of philosophy concerned with how we ought to live our lives. This includes questions such as: what makes an action right or wrong? what makes for a virtuous versus a vicious character? and what sort of obligations, if any, do we have to other people or animals? Our aim is to understand how influential philosophers (including Plato, Aristotle, Mill, Hume, and Kant) have answered these questions and how they have justified their positions. We will also focus on developing student skills in argument and rigorous academic writing.

PHIL 21N. Ethics of Sports. 3 Units.
This seminar will be focused on the ethical challenges that are encountered in sport. We will focus on the moral and political issues that affect the world of sport and which athletes, coaches, sports commentators and fans are faced with. For instance, we will ask questions such as: what is a fair game (the ethics of effort, merit, success)? Is it ethical to train people to use violence (the ethics of martial arts)? Are divisions by gender categories justified and what should we think of gender testing? Is the use of animals in sport ever justified? Which forms of performance enhancements are acceptable in sport (the ethics of drug use and enhancements through technologies)? Should we ban sports that damage the players¿ health? Does society owe social support to people who hurt themselves while practicing extreme sports? nnThe class will be structured around small group discussions and exercises as well as brief lectures to introduce key moral and political concepts (such as fairness, equality, freedom, justice, exploitation, etc.). I will also bring guests speakers who are involved in a sport activity at Stanford or who have worked on sports as part of their academic careers. By the end of the seminar, students will have a good understanding of the various ethical challenges that surround the world of sport. They will be able to critically discuss sport activities, norms, modes of assessments and policies (on campus and beyond). They will also be prepared to apply the critical ethical thinking that they will have deployed onto other topics than sports. They will have been introduced to the normative approach to social issues, which consists in asking how things should be rather than describing how things are. They will be prepared to take more advanced classes in ethics, political theory, as well as moral and political philosophy.
Same as: ETHICSOC 121N

PHIL 21S. Classical Greek Philosophy. 3 Units.
This course introduces students to the ancient Greek philosophical tradition through the three great philosophers of the classical period: Socrates, Plato, and Aristotle. No prerequisites.

PHIL 22Q. Being Reasonable. 3 Units.
In everyday life, we ask each other to be reasonable, and we fault unreasonable behavior in ourselves and others. Moreover, the Anglo-American legal system makes extensive use of the ¿reasonable person standard¿ in everything from negligence to administrative law. What is it to be a reasonable person? What do we mean by ¿reasonable¿? This course will look at applications of the concept, and attempts by philosophers and legal theorists to understand what reasonableness is. We¿ll also look at criticisms of the use of the concept by feminist and critical legal theorists.nnCourse expectations: Philosophy involves lots of independence of mind, and you spend a lot of time reading and then writing, in order to sort out what you think. It also involves lots of time spent with others, discussing ideas and arguments. Our class will divide into time you spend reading and writing reactions to your reading (budget about 5 hours per week), and then hours spent together, in a free-ranging question and answer session, and a more formal, focused discussion of the reading (about 2 hours per week). You¿ll be working on a final short paper throughout the quarter. You should have a reliable internet connection. We¿ll talk via Zoom and use Canvas for shared reading reactions. First preference to Sophomores; second preference to Freshman. Enrollment Cap 10. No prior Philosophy courses needed.

PHIL 23A. The Cognitive Science of Mathematics. 2 Units.
Mathematics has two features which, taken together, are quite puzzling: (i) itsnobjects (numbers, functions, derivatives, manifolds, and the like) are very unlike everyday concrete material objects, yet (ii) it seems to be the source of our most certain knowledge. In this course, we will examine the role in which findings from empirical theories of mathematical cognition can help address and possibly dissolve this puzzle. The course will be broken up into three units: Philosophical Foundations, Numerical Cognition, and Metaphor and Higher Mathematical Thought.

PHIL 23S. Philosophy as Freedom. 3 Units.
Philosophizing, if done correctly, can be life-changing: new ideas can change the way we think about, look at, interact, engage and deal with the world around us. New ideas can bring out problems that we could not even see as problems before; they can change our conception of how and why we are to live the lives in the way we think we should; they can change our relations with other individuals who either share or do not share the ideas that we have newly come to acquire. The aim of this course is a philosophical exploration of some of the ideas that have shaped and are currently shaping our world today, and what that means for our evolving understanding of freedom, to be "purely at home with ourselves.".

PHIL 24G. Introduction to Animal Ethics. 2 Units.
In this introductory course we will engage in an interdisciplinary discussion about the theoretical and applied aspects of animal rights and the ethical treatment of animals. This course will be of interest to a wide range of students: philosophers, political scientists, ecologists, environmental scientists, and biologists. Throughout the course we will focus on the following questions: Do non-human animals have moral status and do we have moral obligations toward them? If so, what grounds the moral status of animals? Are some animals `persons¿? Do we have the right to eat and farm animals, use them in scientific and cosmetic experiments, display them in zoos and circuses, and keep them as pets? Under what circumstances would these actions be permissible, if at all? Was animal domestication a mistake? Basic familiarity with ethical theory (such as covered by PHIL2) is recommended.
Same as: ETHICSOC 124G

PHIL 27S. Human Nature. 3 Units.
In this course we'll investigate what makes us human. We'll ask ourselves such questions as: "What is rationality, and to what extent are we distinctively rational?"; "What is happiness, and is it attainable for us, given our nature?"; "What is the relation between human nature and our other identities, for instance gender?"; and "Can human nature change?" We'll pause to consider whether and how the facts we unearth in our investigation matter for ethical theory: How might our duties change in light of what we find out about human nature through descriptive metaphysics and the natural sciences? Might there instead be moral pressure to adopt a particular conception of our humanity? Readings will be culled primarily from the philosophical canon, though will also incorporate work in evolutionary biology and the cognitive and social sciences. No prior study in philosophy is presupposed.

PHIL 28S. Introduction to Modern Philosophy. 3 Units.
This course is an introduction to modern philosophy which focuses on foundational texts from the early modern period by Descartes, Leibniz and Hume. These thinkers strive to answer questions about the nature of the material world and our knowledge of it which are at the center of the development of modern science as we know it. At the same time, they struggle with a broader set of questions concerning the nature and existence of the soul, freedom of the will, and God. Texts include: Rene Descartes, Mediations on First Philosophy, G.W. Leibniz, Discourse on Metaphysics, New System of Nature, and assorted short essays and letters, David Hume, An Enquiry Concerning Human Understanding.

PHIL 29S. Philosophy and Emerging Technologies. 3 Units.
This course is an investigation into the philosophical questions raised by emerging technologies such as genetic engineering, self-driving cars, Mars colonization, and interactive art. For each unit, we will first familiarize ourselves with a specific emerging technology, and then look at classic philosophical readings in related topics. We will consider both how these philosophical discussions can help us think about the emerging technology and how the emerging technology might challenge our philosophical preconceptions. Through this course students will become sensitive to the various philosophical issues which new technologies raise, and learn how to apply existing philosophical theories and concepts to new topics and problems. No background in philosophy or familiarity with emerging technologies is required.

PHIL 30. Democracy Matters. 1 Unit.
Should the U.S. close its border to immigrants? What are the ramifications of income inequality? How has COVID-19 changed life as we know it? Why are Americans so politically polarized? How can we address racial injustice? As the 2020 election approaches, faculty members from across Stanford will explore and examine some of the biggest challenges facing society today. Each week will be dedicated to a different topic, ranging from health care and the economy to racial injustice and challenges to democracy. Faculty with expertise in philosophy, economics, law, political science, psychology, medicine, history, and more will come together for lively conversations about the issues not only shaping this election season but also the nation and world at large. There will also be a Q&A following the initial discussion. Attendance and supplemental course readings are the only requirements for the course.
Same as: ECON 4, POLISCI 42, PUBLPOL 4

PHIL 36. Dangerous Ideas. 1 Unit.
Ideas matter. Concepts such as revolution, tradition, and hell have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like immigration, universal basic income, and youth play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these "dangerous" ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.
Same as: ARTHIST 36, COMPLIT 36A, EALC 36, ENGLISH 71, ETHICSOC 36X, FRENCH 36, HISTORY 3D, MUSIC 36H, POLISCI 70, RELIGST 36X, SLAVIC 36

PHIL 39S. Introduction to Ethics. 3 Units.
Construed broadly, ethics encompasses questions about moral truth, objectivity, and relativity; questions about what reasons we have to persist in acting morally; and questions about morality's substance or content. Some examples: Are moral claims mere matters of opinion? Is morality relative? If there are objective moral facts, what are they like, and how can we know them? Can we argue an avowed amoralist into caring about morality? If so, on what basis? What is morality telling us to do, anyway? In this course, we will make a preliminary investigation of these questions and of some important historical and contemporary attempts to answer them. We will also look at some possible sources for skepticism about morality: What if we are, in the end, wholly selfish animals? What if the correct account of the origins of our moral beliefs ends up undermining them? Does the role of luck in our lives undercut our basic notion of ourselves as responsible for our actions? More generally, is moral enterprise hopeless if nature's course is settled in advance?.

PHIL 40S. Introduction to the Philosophy of Science. 3 Units.
This course provides an introduction to some of the major philosophical questions about science. The first part of the course focuses on the role of values in a variety of sciences, especially in the environmental, biomedical and social sciences that have close connections with public policy. Question examined will include: Should values be involved in accepting or rejecting scientific hypotheses? Are certain scientific categories value laden? Are there scientific topics that should be deprioritized or not pursued at all in a society? How should scientists communicate socially important but uncertain information to the policy makers and the public? The second part of the course focuses on the scientific method and how it contributes to the success and progress of science. We will examine three different accounts of the scientific method, accounts that lead to different conceptions of the nature and growth of scientific knowledge: The hypothetical-deductive view; Thomas Kuhn's account of normal science and scientific revolutions; and finally, an account of theory testing by George Smith, a leading scholar on Isaac Newton. Throughout the course, we will examine the philosophical ideas in the light of concrete cases in the history and practice of science. This course is designed to help students develop critical thinking skills, to communicate effectively through speaking and writing, and to construct well-reasoned arguments. Students of any discipline are welcome to attend, and no particular background is presupposed.

PHIL 46S. Modern Political Philosophy: Origins of the U.S. Constitution. 3 Units.
In this course, we consider the political philosophy that culminated in the founding of the U.S. Constitution. We will consider, among other questions:n- What assumptions about human nature were made by thinkers in this tradition?n- What are rights and where do they come from?n- Why do we form government and what is the common good preserved or promoted by government?n- What is required to preserve our political institutions?n- What is the role of law in civil society?n- To what extent does the political success of the U.S. require virtue?nIn this discussion based seminar, we will read Machiavelli, Descartes, Hobbes, Locke, Rousseau, Lincoln, and the American Founders.

PHIL 47S. Introduction to Modern Philosophy: Skepticism and Scientific Rationalism. 3 Units.
Focusing on Descartes, Newton, and Leibniz, the course investigates foundational debates in metaphysics and epistemology of modern philosophy. We closely scrutinize Descartes¿ Meditations, which involves radical skepticism of the external world and subsequent proofs that I exist, that God exists, that material bodies exist, and that I am really distinct from my body. Next, we study Newton¿s criticisms of Descartes¿ physical theories of motion and space. We attempt a definition of Newton¿s important concept of `absolute space¿ and observe its role in his proof of universal gravity. Finally, we turn to Leibniz to raise significant philosophical issues with Newtonian spacetime and Cartesian physics. Though our focus is the seventeenth century, we will end with connections to contemporary debates in philosophy of physics.

PHIL 48S. Introduction to Chinese Philosophy: Confucianism and its Critics. 3 Units.
The class will be an introduction to classical Chinese philosophy, mostly focusing on Confucianism and its critics (Mohism, Daoism, and Buddhism). No prerequisites.

PHIL 49. Survey of Formal Methods. 4 Units.
Survey of important formal methods used in philosophy. The course covers the basics of propositional and elementary predicate logic, probability and decision theory, game theory, and statistics, highlighting philosophical issues and applications. Specific topics include the languages of propositional and predicate logic and their interpretations, rationality arguments for the probability axioms, Nash equilibrium and dominance reasoning, and the meaning of statistical significance tests. Assessment is through a combination of problems designed to solidify competence with the mathematical tools and short-answer questions designed to test conceptual understanding.

PHIL 50S. Introduction to Formal Methods in Contemporary Philosophy. 3 Units.
This course will serve as a first introduction to the formal tools and techniques of contemporary philosophy, including probability and formal logic. Traditionally, philosophy is an attempt to systematically tackle foundational problems related to value, inquiry, mind and reality. Contemporary philosophy continuesthis tradition of critical thinking with modern subject matter (often engaging with natural, social and mathematical science) and modern rigorous methods, including the methods of set theory, probability theory and formal logic. The aim of this course is to introduce such methods, along with various core philosophical distinctions and motivations. The focus will be on basic conceptual underpinnings and skills, not technical details. The material covered is also useful preparation for certain topics in mathematics, computer science, linguistics, economics and statistics. No previous philosophical or mathematical training is presupposed, though an appreciation of precise thinking is an advantage.

PHIL 60. Introduction to Philosophy of Science. 5 Units.
This course introduces students to tools for the philosophical analysis of science. We will cover issues in observation, experiment, and reasoning, questions about the aims of science, scientific change, and the relations between science and values.
Same as: HPS 60

PHIL 61. Philosophy and the Scientific Revolution. 5 Units.
Galileo's defense of the Copernican world-system that initiated the scientific revolution of the 17th century, led to conflict between science and religion, and influenced the development of modern philosophy. Readings focus on Galileo and Descartes.
Same as: HPS 61

PHIL 70. Introduction to political philosophy. 4 Units.
.

PHIL 71H. Introduction to Aesthetics. 4 Units.
Aesthetics encompasses a seemingly special and particularly rewarding way of perceiving the world. Appreciating the beauty of a sunset, feeling moved by a piece of music, becoming absorbed in the composition of an artwork: these are all aesthetic matters, and they are all matters that lie at the heart of this course. We will begin by exploring core debates on aesthetic experience, aesthetic properties, and aesthetic value. But we will also venture into considerations of aesthetics in our everyday lives, aesthetic taste and our personalities, aesthetics and grief, aesthetics and gender, and aesthetics and race. By the end of the quarter, you will have a strong foundation in understanding this rich aspect of life we call aesthetics.

PHIL 72. Contemporary Moral Problems. 4-5 Units.
This course is an introduction to contemporary ethical thought with a focus on the morality of harming others and saving others from harm. It aims to develop students' ability to think carefully and rationally about moral issues, to acquaint them with modern moral theory, and to encourage them to develop their own considered positions about important real-world issues. In the first part of the course, we will explore fundamental topics in the ethics of harm. Among other questions, we will ask: How extensive are one's moral duties to improve the lives of the less fortunate? When is it permissible to inflict harm on others for the sake of the greater good? Does the moral permissibility of a person's action depend on her intentions? Can a person be harmed by being brought into existence? In the second part of the course, we will turn to practical questions. Some of these will be familiar; for example: Is abortion morally permissible? What obligations do we have to protect the planet for the sake of future generations? Other questions we will ask are newer and less well-trodden. These will include: How does the availability of new technology, in particular artificial intelligence, change the moral landscape of the ethics of war? What moral principles should govern the programming and operation of autonomous vehicles?.
Same as: ETHICSOC 185M, POLISCI 134P

PHIL 74A. Ethics in a Human Life. 4 Units.
Ethical questions pervade a human life from before a person is conceived until after she dies, and at every point in between. This course raises a series of ethical questions, following along the path of a person's life - questions that arise before, during, and after she lives it. We will explore distinctive questions that a life presents at each of several familiar stages: prior to birth, childhood, adulthood, death, and even beyond. We will consider how some philosophers have tried to answer these questions, and we will think about how answering them might help us form a better understanding of the ethical shape of a human life as a whole.
Same as: ETHICSOC 174, HUMBIO 174A

PHIL 75W. Freedom and Responsibility. 4 Units.
On the one hand we think of ourselves as free, and our practices of holding one another responsible seem to depend on it. On the other we think of nature as law-governed and of ourselves as subject to these laws. Is there a tension here? If so, what must give? In this course we will examine a number of proposed answers to these questions, canvassing compatibilist, libertarian, and hard determinist theories of free will. We will also devote a number of sessions to the theory of responsibility. Readings will be drawn primarily from the latter half of the twentieth-century analytic tradition. No prior background in philosophy presupposed.

PHIL 76. Introduction to Global Justice. 4 Units.
This course explores the normative demands and definitions of justice that transcend the nation-state and its borders, through the lenses of political justice, economic justice, and human rights. What are our duties (if any) towards those who live in other countries? Should we be held morally responsible for their suffering? What if we have contributed to it? Should we be asked to remedy it? At what cost? These are some of the questions driving the course. Although rooted in political theory and philosophy, the course will examine contemporary problems that have been addressed by other scholarly disciplines, public debates, and popular media, such as immigration and open borders, climate change refugees, and the morality of global capitalism (from exploitative labor to blood diamonds). As such, readings will combine canonical pieces of political theory and philosophy with readings from other scholarly disciplines, newspaper articles, and popular media.
Same as: ETHICSOC 136R, INTNLREL 136R, POLISCI 136R, POLISCI 336

PHIL 77. Introduction to Philosophy of Religion. 4 Units.
.

PHIL 80. Mind, Matter, and Meaning. 5 Units.
Intensive study of central topics in metaphysics, epistemology, philosophy of language and mind in preparation for advanced courses in philosophy. Emphasis on development of analytical writing skills. nPrerequisite: one prior course in Philosophy, not including SYMSYS1/ PHIL99. Note: all courses labelled PHIL in the Bulletin (with the exception of PHIL99) count for this requirement. For the purposes of this requirement, Thinking Matters courses (labelled THINK) taught by a Philosophy faculty person also count as a course in Philosophy.

PHIL 81. Philosophy and Literature. 3-5 Units.
What, if anything, does reading literature do for our lives? What can literature offer that other forms of writing cannot? Can fictions teach us anything? Can they make people more moral? Why do we take pleasure in tragic stories? This course introduces students to major problems at the intersection of philosophy and literature. It addresses key questions about the value of literature, philosophical puzzles about the nature of fiction and literary language, and ways that philosophy and literature interact. Readings span literature, film, and philosophical theories of art. Authors may include Sophocles, Dickinson, Toni Morrison, Proust, Woolf, Walton, Nietzsche, and Sartre. Students master close reading techniques and philosophical analysis, and write papers combining the two. This is the required gateway course for the Philosophy and Literature major tracks. Majors should register in their home department.
Same as: CLASSICS 42, COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, ILAC 181, ITALIAN 181, SLAVIC 181

PHIL 82. Ethics, Public Policy, and Technological Change. 5 Units.
Examination of recent developments in computing technology and platforms through the lenses of philosophy, public policy, social science, and engineering. Course is organized around four main units: algorithmic decision-making and bias; data privacy and civil liberties; artificial intelligence and autonomous systems; and the power of private computing platforms. Each unit considers the promise, perils, rights, and responsibilities at play in technological developments. Prerequisite: CS106A.
Same as: COMM 180, CS 182, ETHICSOC 182, POLISCI 182, PUBLPOL 182

PHIL 82T. Philosophy of Cognitive Science. 4 Units.
Does all human cognition occur in the brain? In what sense do we direct our attention to the things that we pay attention to? Such questions are among those asked by researchers working in the interdisciplinary field of cognitive science. In this course we will discuss ways in which philosophy participates in this interdisciplinary project by considering aspects of research on, for example, attention, theory of mind, embodied cognition, and metal representation.

PHIL 85. Topics in Philosophy of Medicine. 4 Units.
In this course, we will address major issues in philosophy and medicine. Some topics will be well-known within the practice of medicine: informed consent, advanced directives, medical trials. Other topics will be more familiar to philosophers: the concept of health, self-deception, social construction of disability, visualizations of illness. We will do our best to interpolate these discourses, by combining readings in medical ethics with philosophical essays.

PHIL 87. Personal Identity. 4 Units.
.

PHIL 90R. Introduction to Feminist Philosophy. 4 Units.
If feminism is a political practice aimed at ending patriarchy, what is the point of feminist philosophy? This course provides an introduction to feminist philosophy by exploring how important theoretical questions around sex and gender bear on practical ethical and political debates. The first part of the course will examine some of the broader theoretical questions in feminist philosophy, including: the metaphysics of gender, the demands of intersectionality, and feminist critiques of capitalism and liberalism. Questions will include: How should we understand the category `woman¿? How does gender intersect with other axes of oppression? Is capitalism inherently patriarchal? The second part of the course will address more applied topics of ethical and political debate, such as: objectification, pornography, consent, markets in women¿s sexual and reproductive labor, and the institution of marriage.
Same as: ETHICSOC 173, FEMGEN 173R

PHIL 99. Minds and Machines. 4 Units.
(Formerly SYMSYS 100). An overview of the interdisciplinary study of cognition, information, communication, and language, with an emphasis on foundational issues: What are minds? What is computation? What are rationality and intelligence? Can we predict human behavior? Can computers be truly intelligent? How do people and technology interact, and how might they do so in the future? Lectures focus on how the methods of philosophy, mathematics, empirical research, and computational modeling are used to study minds and machines. Students must take this course before being approved to declare Symbolic Systems as a major. All students interested in studying Symbolic Systems are urged to take this course early in their student careers. The course material and presentation will be at an introductory level, without prerequisites. If you have any questions about the course, please email symsys1staff@gmail.com.
Same as: CS 24, LINGUIST 35, PSYCH 35, SYMSYS 1, SYMSYS 200

PHIL 100. Greek Philosophy. 4 Units.
We shall cover the major developments in Greek philosophical thought, focusing on Plato, Aristotle, and the Hellenistic schools (the Epicureans, the Stoics, and the Skeptics). Topics include epistemology, metaphysics, psychology, ethics and political theory. No prereqs, not repeatable.
Same as: CLASSICS 40

PHIL 101. Introduction to Medieval Philosophy. 4 Units.
This course is an introduction to medieval moral philosophy, broadly construed. In addition to doctrines that we would nowadays readily think of as falling within the domain of ethics, we will be looking at closely related topics that might today be thought to belong more properly to metaphysics, the philosophy of religion, or the philosophy of human nature.
Same as: PHIL 201

PHIL 101A. History of Philosophy from Al-Kindi to Averroes. 3-5 Units.
The rise of Islam saw a flourishing of philosophical and scientific activity across Islamic civilizations from Central Asia to Spain. Between the 7th to 13th centuries, many of the major philosophers in the history of philosophy lived in the Muslim world and wrote in Arabic. They saw themselves, just as later philosophers in medieval Europe, as working in part in the same tradition as Plato and Aristotle. This course surveys this important chapter in the history of philosophy, examining the key philosophical problems, analyses, arguments and ideas developed by philosophers such as Al-Kindi, Al-Razi, Al-Farabi, Avicenna, Al-Ghazali and Averroes, as well as their views on the role and aims of philosophy itself. We will look closely at their writings (in English translation) on philosophical topics in mind, metaphysics, epistemology, ethics, and politics.
Same as: GLOBAL 139

PHIL 102. Modern Philosophy, Descartes to Kant. 4 Units.
Major figures in early modern philosophy in epistemology, metaphysics, and philosophy of mind. Writings by Descartes, Leibniz, Hume, and Kant.

PHIL 102M. Fichte. 1-2 Unit.
This three-day intensive mini-course will introduce the moral and political thought of Johann Gottlieb Fichte, the founder of the German idealist movement. The topics to be discussed are: Fichte's theory of subjectivity and transcendental idealism; Fichte's defense of radical freedom of the will; Fichte's transcendental deduction of other selves; the relation of right between rational beings and the foundations of political philosophy; Fichte's deduction of the moral law from the absolute freedom of the rational being; the application of the moral law through conscience. No previous acquaintance with Fichte's philosophy will be presupposed.
Same as: PHIL 202M

PHIL 103. 19th-Century Philosophy. 4 Units.
Focus is on ethics and the philosophy of history. Works include Mill's *Utilitarianism*, Hegel's *The Philosophy of World History*, Marx's *Economic and Philosophic Manuscripts*, Kierkegaard's *The Sickness Unto Death*, and Nietzsche's *On the Genealogy of Morals*.

PHIL 104. Philosophy of Religion. 4 Units.
Key issues in the philosophy of religion. Topics include the relationship between faith and reason, the concept of God, proofs of God's existence, the meaning of religious language, arguments for and against divine command theory in ethics and the role of religious belief in a liberal society.

PHIL 105C. Beauty in Ancient Greek Philosophy. 4 Units.
Beauty occupies a peculiarly central place in ancient Greek philosophical thought, figuring prominently in Plato's and Aristotle's ethics, epistemology, and metaphysics. The ancient conception of beauty is also in various ways at odds with our modern conception: far from being "in the eye of the beholder", ancient philosophers thought of beauty as a paradigm of objectivity, and closely aligned with moral goodness. Why this discrepancy between the ancient and modern conceptions of beauty? And what might the centrality of beauty in ancient thought reveal about ancient ethics, epistemology, and metaphysics? This course is an investigation into these questions, by means of a close reading of the major ancient texts in which beauty appears. Some background in ancient Greek philosophy and/or contemporary aesthetics is preferred, but not required.
Same as: PHIL 205C

PHIL 106. Ancient Greek Skepticism. 4 Units.
The ancient Pyrrhonian skeptics who think that for any claim there is no more reason to assert it than deny it and that a life without any beliefs is the best route to happiness. Some ancient opponents of the Pyrrhonian skeptics and some relations between ancient and modern skepticism.
Same as: PHIL 206

PHIL 107. Plato's Early Dialogues. 4 Units.
We shall read some of the most important and difficult of Plato¿s `early¿ dialogues: the Charmides, parts of the Euthydemus, the Gorgias, the Hippias Minor, the Meno, and the Protagoras. Topics include: the nature of pleasure and its role in the good life, good luck and the good life, self-knowledge, the relation between knowledge and virtue, whether virtue can be taught, learning and recollection, rhetoric, the relations among the virtues, Socratic ignorance, and the Socratic method of the elenchus.
Same as: PHIL 207

PHIL 107A. The Greeks on Irrationality. 2-4 Units.
In this course, we shall examine the views of some central Greek philosophers (Plato, Aristotle, the Epicureans, and the Stoics) on the irrational and non-rational aspects of human life. What makes something irrational and what roles (negative and perhaps positive as well) does the irrational play in our lives? We shall examine their views on anger, fear, madness, love, pleasure and pain, sexual desire and so on. We shall also consider more briefly some depictions of these psychic items in ancient Greek literature.
Same as: PHIL 207A

PHIL 107B. Plato's Later Metaphysics and Epistemology. 4 Units.
A close reading of Plato's Theatetus and Parmenides, his two mature dialogues on the topics of knowledge and reality. We will consider various definitions of knowledge, metaphysical problems about the objects of knowledge, and a proposed method for examining and resolving such problems. Some background in ancient Greek philosophy and/or contemporary metaphysics and epistemology is preferred, but not required. Prerequisite: Phil 80.
Same as: PHIL 207B

PHIL 107C. Plato's Timaeus. 4 Units.
In this course, we will explore the Timaeus, Plato's account of the nature and creation of the universe. This work, from Plato's late period, with its highly notable postulations of the Demiurge and the receptacle, received the place of prominence in the ancient reception of Plato and contains a number of challenges in interpretation for contemporary scholars of Plato. We will carefully examine the work and its contributions to Platonic metaphysics, physics, psychology, teleology, cosmology, and theology. In so doing, we will also consider questions of how we are to understand it as a likely story, its role within the Platonic corpus, and its engagement with pre-existing traditions of Greek natural philosophy.
Same as: PHIL 207C

PHIL 108. Aristotle's Metaphysics Book Alpha. 4 Units.
An introduction both to Aristotle's own metaphysics and to his treatment of his predecessors on causality, included the early Ionian cosmologists, atomism, Pythagoreans, Heraclitus, Parmenides, Empedocles, Anaxagoras and Plato. Prerequisite: one course in ancient Greek philosophy.
Same as: PHIL 208

PHIL 108A. Aristotelian Logic. 2-4 Units.
A careful examination of Aristotle's syllogistic, with special emphasis on the interpretation of his modal syllogistic. This course will serve both as an introduction to ancient term logic and to the difference between sentential modal operators and modal modifiers to the copula. Topics will include the analysis of syllogisms into figures and moods, the reduction of 2nd and 3rd figure syllogisms to the first, the consistency of the modal syllogistic, models for the syllogistic, and de re versus de dicto modalities. For students with at least some introductory background in logic.
Same as: PHIL 208A

PHIL 108B. Aristotle's Physics Book One. 4 Units.
A chapter by chapter analysis of Aristotle's introductory discussions of physical theory. Topics to be considered include Aristotle's treatment of Eleatic monism, the role of opposites in pre-Socratic physics, the role of matter in physics, and an analysis of the elements of changing objects into form, privation and a subject.
Same as: PHIL 208B

PHIL 109. Topics in Ancient Philosophy: Plato and Aristotle on Art and Rhetoric. 4 Units.
Plato's and Aristotle's views on the nature of art and rhetoric and their connections with the emotions, reason and the good life. Readings include Plato's Gorgias, Ion and parts of the Republic and the Laws and Aristotle's Poetics and Rhetoric.
Same as: PHIL 209

PHIL 109A. Special Topics in Ancient Philosophy: Aristotle's Metaphysics Zeta. 4 Units.
.
Same as: PHIL 209A

PHIL 109B. Greek philosophers read their ancestors: Intro to the ancient reception of Presocratic philosophy. 4 Units.
The first Greek philosophers are known to us only through fragments of their original works, generally few in number and transmitted by later authors, as well as through a set of testimonies covering a thousand years and more. Thus it is crucial, in order to understand archaic thought, to get a sense of how they were read by those to whom we owe their transmission. What was their aim, their method, their presuppositions or prejudices?nn The course will employ this perspective to examine authors such as Plato, Aristotle, Theophrastus, Diogenes Laertius, Simplicius ¿ among others. We shall also reflect, on the basis of the paradigmatic case of the Presocratics, on some of the more general problems raised by literary and philosophical approaches to the notion of reception.
Same as: PHIL 209B

PHIL 109C. Aristotle's cosmology and theology. 4 Units.
PHIL 109C/209C now meets in Raubitschek Room, Green Library Room 351. Undergrads please sign up for 109C; grads sign up for 209C.
Same as: PHIL 209C

PHIL 110. Plato's Republic. 4 Units.
We shall examine this complex and fascinating dialogue in detail, comparing it with other relevant Platonic texts, focusing on its ethics, epistemology, metaphysics, and political philosophy. We shall examine the connections that Plato sees between these different areas of philosophy, and consider some of the strengths and weaknesses of his overall argument.
Same as: PHIL 210

PHIL 110C. The Stoics on Freedom and Determinism. 4 Units.
We will investigate ancient Stoic conceptions of causality and freedom, their arguments for causal determinism, and ancient attaches on and defenses of compatibilism.
Same as: PHIL 210C

PHIL 111. Aristotle's Posterior Analytics. 4 Units.
.
Same as: PHIL 211

PHIL 112. Causality in Ancient Greek Philosophy. 4 Units.
.
Same as: PHIL 212

PHIL 112A. Aristotle's metaphysics. 4 Units.
.
Same as: PHIL 212A

PHIL 113. Hellenistic Philosophy. 4 Units.
Epicureans, skeptics, and stoics on epistemology, ethics, metaphysics, and psychology.
Same as: PHIL 213

PHIL 113A. Porphyry's Introduction to Logic. 4 Units.
The main text will be the Isagoge.
Same as: PHIL 213A

PHIL 114A. Ancient Philosophical Methodologies. 4 Units.
In this course, we shall examine the philosophical methodologies that Plato, Aristotle, and the Hellenistics use and advocate. In Plato, we shall consider the elenchus and dialectic, in Aristotle dialectic and science. For the Stoics and Epicureans, we shall focus on the methodological differences that come to light in their epistemological disagreements and in their ethical and metaethical disagreements. For the skeptics, we shall consider whether they have a philosophical methodology at all.
Same as: PHIL 214A

PHIL 115. PreSocratics. 4 Units.
Exploration of the Greek philosophical inquiry undertaken in the roughly two hundred years before Socrates. This Presocratic period saw vibrant and varied treatment of a wide range of areas, including physics, metaphysics, epistemology, cosmology, theology, biology, and ethics. We will proceed chronologically through the major Presocratic philosophers and schools, carefully examining the fragmentary evidence on each and discussing the interpretation of their doctrines from this evidence. Focus will be on the Presocratics in their own right, though their influence upon later thought, especially Plato and Aristotle, will also receive considerable attention. Consideration of how the ideas of the Presocratics were transmitted and manipulated in the ancient tradition, as well as of the nature and development of Western philosophy itself.
Same as: PHIL 215

PHIL 116. Aquinas. 4 Units.
This course is an introduction to the metaphysical thought of St. Thomas Aquinas (1225 - 1274), one of the most important and influential philosopher-theologians of the High Middle Ages. Readings will be drawn primarily from the "Summa theologiae.".
Same as: PHIL 216

PHIL 117. Descartes. 4 Units.
(Formerly 121/221.) Descartes's philosophical writings on rules for the direction of the mind, method, innate ideas and ideas of the senses, mind, God, eternal truths, and the material world.
Same as: PHIL 217

PHIL 117D. Aristotle's De Anima. 4 Units.
.
Same as: PHIL 217D

PHIL 118. British Empiricism, 1660s-1730s. 4 Units.
Focus is on the big three British Empiricists and their developments of thought based on the foundational role that they give to sensory perception or experience as the source of knowledge. Topics may include the theory of ideas, idealism, personal identity, human agency, moral motivation, causation, and induction. Readings predominantly from Locke, Berkeley, and Hume.

PHIL 118A. Origins of Empiricism: Gassendi, Locke, and Berkeley. 4 Units.
Particular light is shed on both the strengths and weaknesses of empiricism by studying it as it first arose during the 17th century revolution in philosophy and the sciences initiated by Descartes. Three philosophers of that period helped to advance empiricism: Pierre Gassendi (1592-1655), John Locke (1632-1704), and George Berkeley (1685-1753). A brief introduction to Descartes is followed by Gassendi's reaction to Descartes and his influence on Locke; Locke's theory of ideas, mind, language, reality, and natural philosophy expounded in his An Essay concerning Human Understanding (Fourth Edition, 1689); and Berkeley's later reaction to Locke.
Same as: PHIL 218A

PHIL 118P. Early Modern Ethics. 4 Units.
The early modern period in philosophy saw the introduction and development of many of the most powerful and lasting ideas in the history of ethical thought. This course provides an introduction to some of these ideas. Figures to be discussed will likely include Locke, Hume, Hutcheson, Montaigne, Mandeville, Hobbes, Leibniz, and Kant.

PHIL 119. Rationalists. 4 Units.
Developments in 17th-century continental philosophy. Descartes's views on mind, necessity, and knowledge. Spinoza and Leibniz emphazing their own doctrines and their criticism of their predecessors. Prerequisite: 102.
Same as: PHIL 219

PHIL 120. Leibniz. 4 Units.
A polymath, Leibniz invented the calculus independently of Newton and made major contributions to virtually every science, including logic and computer science. In this course, we investigate Leibniz's philosophical system and its metaphysics: that God created the best of all possible worlds; that humans freely choose actions that are nevertheless pre-established; that space and time are idealizations and `imaginary'; and that true, fundamental reality consists of minds.
Same as: PHIL 220

PHIL 120W. Richard Rufus on Aristotle's Metaphysics: Ontology, Unity, Universals, & Individuation. 1-2 Unit.
Mini-Course taught by Rega Wood in association with Santiago Melo Arias & Professors Alan Code & Calvin Normore. Code, Wood, & Melo Arias have spent the last 6 months intensively studying Richard Rufus of Cornwall's commentary on Aristotle's Metaphysics Zeta, Eta, & Theta. This June we will present Rufus' views on ontology, unity, & universals. There will be 6 two hour sessions on June, 4,5, & 6 (Thurs - Saturday), 10-12 noon , 2-4 pm. Readings will be taken chiefly from Melo Arias' new translations of Rufus' circa 1238 commentary; other readings, from Aristotle and Averroes. We will consider the difference between the treatment of definition, essence and being in logic and in metaphysics, the sense in which accidents have definitions, the unity of genus and differentia in the ndefinitions of substances, the unity of form and proximate matter in hylomorphic compounds, and the unity of the parts of the rational soul. In this context we will discuss the formal distinction pioneered by Rufus as a description of differences in formal predication consistent with real sameness.Richard Rufus was the nfirst Western professor to lecture on Aristotle's metaphysics in Medieval Europe.
Same as: PHIL 220W

PHIL 121. History of Political Philosophy. 4 Units.
Nation-states issue legal commands, and wield overwhelming power to coercively enforce them. On one hand, this allows states to protect people from each other. On the other hand, what protects people from the state, even if is democratic, when it facilitates domination and oppression of some citizens by others? In this course we are introduced to authors grappling with these issues in the evolving canon of Western political philosophy from ancient Greece to the 20th century. This takes us through questions about obligation, the state, consent, rights, democracy, property, free speech, socialism, gender, race. Authors whose arguments we will study and scrutinize include Plato, Hobbes, Locke, Rousseau, Marx, Mill, Wollstonecraft, Douglass, and Rawls, along with critics and commentators.
Same as: ETHICSOC 121, PHIL 221

PHIL 122. Hume. 4 Units.
(Formerly 120/220; graduate students enroll in 222.) Hume's theoretical philosophy, in particular, skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self.
Same as: PHIL 222

PHIL 123. Introduction to Chinese Philosophy. 4 Units.
.
Same as: PHIL 223

PHIL 124. Topics in Early Modern Philosophy. 4 Units.
Philosophical views of the highly influential rationalist philosophers Benedict (or Baruch) Spinoza (1632-1677) and G. W. Leibniz (1646-1716). Topics to be treated include: the nature of God and the question of his providential care for human beings, the concept of substance and its extension, the ontological relation of finite beings to God, the mental and its relation to the corporeal, and the nature of human freedom.

PHIL 125. Kant's First Critique. 4 Units.
(Graduate students register for 225.) The founding work of Kant's critical philosophy emphasizing his contributions to metaphysics and epistemology. His attempts to limit metaphysics to the objects of experience. Prerequisite: course dealing with systematic issues in metaphysics or epistemology, or with the history of modern philosophy.
Same as: PHIL 225

PHIL 126B. Kant's Ethical Theory. 2-4 Units.
(Graduate students register for 226B.) Kant's moral philosophy based primarily on the *Groundwork of Metaphysics of Morals, Critique of Practical Reason,* and *The Metaphysics of Morals.*.
Same as: PHIL 226B

PHIL 127. Kant's Foundations of Morality, 2nd Critique. 4 Units.
(Graduate students enroll in 227.) A study of Kant's ethical thought, focusing on The Groundwork of the Metaphysics of Morals, The Critique of Practical Reason, and The Metaphysics of Morals. Prerequisite: Phil. 2, Phil. 170, or equivalent (consult the instructor). Designed for undergraduate department majors and graduate students.
Same as: PHIL 227

PHIL 127A. Kant's Value Theory. 4 Units.
(Graduate students register for 227A.) The role of autonomy, principled rational self-governance, in Kant's account of the norms to which human beings are answerable as moral agents, citizens, empirical inquirers, and religious believers. Relations between moral values (goodness, rightness) and aesthetic values (beauty, sublimity).
Same as: PHIL 227A

PHIL 127B. Kant's Anthropology and Philosophy of History. 4 Units.
Kant's conception of anthropology or human nature, based on his philosophy of history, which influenced and anticipated 18th- and 19th-century philosophers of history such as Herder, Fichte, Hegel, and Marx. Texts include *Idea for a Universal History, Conjectural Beginning of Human History,* and *Anthropology from a Pragmatic Point of View.* Topics include: Kant's pragmatic approach to the study of human nature; the difficulty of human self knowledge; the role of regulative and teleological principles in studying human history; and Kant's theory of race.
Same as: PHIL 227B

PHIL 127M. Richard Rufus of Cornwall. 1-2 Unit.
Metaphysics and Epistemology, readings from Rufus' newly translated Contra Averroem & Speculum animae. In these works, Rufus solves a problem for Aristotelian epistemology that was to bedevil later scolastics such as Thomas Aquinas. He also states for the first time a theory of individuation by form that was subsequently adopted by Duns Scotus. Though Scotus like Rufus preferred to speak of individual forms, the theory itself is often identified by a term very seldom used by Scotus, `haeceitas' or thisness. Taughtly jointly by Rega Wood and Calvin Normore.
Same as: PHIL 227M

PHIL 127P. Kant's Practical Philosophy. 4 Units.
For Kant, human agency is best understood in light of the fact that humans issue laws to themselves. His practical philosophy thus centers on the idea of autonomy--free, principled, rational self-governance. In this course, we'll consider his prolonged effort to work through this novel, powerful, and extremely influential idea.

PHIL 128. Fichte's Ethics. 4 Units.
(Graduate students register for 228.) The founder of the German Idealist movement who adopted but revised Kant's project of transcendental philosophy basing it on the principle of awareness of free self-activity. The awareness of other selves and of ethical relations to them as a necessary condition for self-awareness. His writings from 1793-98 emphasizing the place of intersubjectivity in his theory of experience.
Same as: PHIL 228

PHIL 130. Hegel. 4 Units.
(Formerly 122/222; graduate students register for 230.) Introduction to Hegel's philosophy, emphasizing his moral and political philosophy, through study of his last major work (1821). May be repeated for credit. Prerequisite: course in the history of modern philosophy.
Same as: PHIL 230

PHIL 131W. Kant's Theory of Law and Justice. 1-2 Unit.
This course will look at Kant's theory of right or law (Recht) and its implications for morality and politics. The topics we will discuss are: the difference between right and ethics in Kant¿s metaphysics of morals; the relation of law to property and morality; the moral obligations of politicians as holders of rightful authority; and the standards of right as they apply to international relations and war.
Same as: PHIL 231W

PHIL 132. Phenomenology: Merleau-Ponty. 4 Units.
(Graduate students register for 232.) French philosopher Maurice Merleau-Ponty wrote that we are neither angels nor machines but living beings. In contrast to both a first person introspective analysis and the third person scientific approach, Merleau-Ponty aimed to describe the basic invariant structures of human life by using the phenomenological method. The result was a new concept of experience that is essentially embodied. In this class, you will learn about the phenomenological method and read Merleau-Ponty's now classic text Phenomenology of Perception. Prerequisite: one prior course in Philosophy, or permission of instructor.
Same as: PHIL 232

PHIL 132W. Mini Course: Topics in Kant's Ethics. 1-2 Unit.
This mini-course will deal with several selected topics relating to Kant's ethics: (1) Kant's formulas of the moral law, their meaning and their relation to one another; (2) Kant's concept of imperfect (wide, meritorious) duties and its role in his ethical theory; (3) the place of feeling, emotion, desire and inclination, their relation to our empirical nature and to human reason, in Kant's moral psychology; and (4) the place of duties regarding animals and other non-human beings in Kant's ethical theory. There will be six sessions, each two hours in length. Either the instructor or one of the guest lecturers will be in charge of each session, which will consist in part of a presentation by the person in charge and partly of discussion. Instructor: Allen Wood (Indiana University/Stanford University); guest lecturers: Barbara Herman (UCLA), Janelle DeWitt (Indiana University). Course meets Monday, Tuesday, Wednesday, June 6, 7, 8, 2016. May be repeated for credit.
Same as: PHIL 232W

PHIL 133S. Heidegger and Mysticism. 4 Units.
A close reading of Heidegger's *Being and Time* in light of the new paradigm for reading his work, as well as a study of his long-standing interest in mysticism and the question of the divine.
Same as: RELIGST 181

PHIL 133T. Atheism: Hegel to Heidegger. 5 Units.
The radical changes in ideas of God between Hegel and Heidegger, arguing that their questions about theism and atheism are still pertinent today. Texts from Hegel, Feuerbach, Marx, Nietzsche, and Heidegger: on God, history, and the social dimensions of human nature. N.B.: Class size limited. Apply early at tsheehan@stanford.edu.
Same as: RELIGST 183

PHIL 134. Phenomenology: Husserl. 4 Units.
(Graduate students register for 234.) Neuroscience, psychology, linguistics, artificial intelligence, and other related fields face fundamental obstacles when they turn to the study of the mind. Can there be a rigorous science of us? German philosopher Edmund Husserl (1859-1938), founder of phenomenology, devised a method intended to disclose the basic structures of minds. In this class, we will read one of Husserl's major later works, Cartesian Meditations, as well as companion essays from both his time and ours. A guiding question for us will be how phenomenology is applied outside of philosophy, specifically, how has it influenced discussions of the mind in the sciences? Prerequisite: one prior course in philosophy, or permission of instructor.
Same as: PHIL 234

PHIL 134A. Phenomenology: Animals. 4 Units.
.
Same as: PHIL 234A

PHIL 135. Existentialism. 4 Units.
Focus is on the existentialist preoccupation with human freedom. What constitutes authentic individuality? What is one's relation to the divine? How can one live a meaningful life? What is the significance of death? A rethinking of the traditional problem of freedom and determinism in readings from Rousseau, Kierkegaard, and Nietzsche, and the extension of these ideas by Sartre, Beauvoir, and Camus, including their social and political consequences in light of 20th-century fascism and feminism.
Same as: PHIL 235

PHIL 135X. Citizenship. 5 Units.
This class begins from the core definition of citizenship as membership in a political community and explores the many debates about what that membership means. Who is (or ought to be) a citizen? Who gets to decide? What responsibilities come with citizenship? Is being a citizen analogous to being a friend, a family member, a business partner? How can citizenship be gained, and can it ever be lost? These debates figure in the earliest recorded political philosophy but also animate contemporary political debates. This class uses ancient, medieval, and modern texts to examine these questions and different answers given over time. We¿Äôll pay particular attention to understandings of democratic citizenship but look at non-democratic citizenship as well. Students will develop and defend their own views on these questions, using the class texts as foundations. No experience with political philosophy is required or expected, and students can expect to learn or hone the skills (writing / reading / analysis) of political philosophy.
Same as: ETHICSOC 135, POLISCI 135

PHIL 136. History of Analytic Philosophy. 4 Units.
(Formerly 147/247; graduate students register for 236.) Theories of knowledge in Frege, Carnap, and Quine. Emphasis is on conceptions of analyticity and treatment of logic and mathematics. Prerequisite: 50 and one course numbered 150-165 or 181-90.
Same as: PHIL 236

PHIL 137. Wittgenstein. 4 Units.
(Graduate students register for 237.) An exploration of Wittgenstein's changing views about meaning, mind, knowledge, and the nature of philosophical perplexity and philosophical insight, focusing on the Tractatus Logico-Philosophicus and Philosophical Investigations.
Same as: PHIL 237

PHIL 137X. Wittgenstein. 4 Units.
An exploration of Wittgenstein's changing views about meaning, mind, knowledge, and the nature of philosophical perplexity and philosophical insight, focusing on the Tractatus Logico-Philosophicus and Philosophical Investigations. By permission of instructor only.

PHIL 138. Recent European Philosophy: Between Nature and History. 4 Units.
A critical introduction to the novel understandings of time, language, and cultural power developed by 20th-century continental thinkers, with close attention to work by Heidegger, Saussure, Benjamin, and Foucault.
Same as: PHIL 238

PHIL 142. Race, Justice, and Integration. 3 Units.
Recent philosophical research on injustice, race, and the ideal of racial integration.
Same as: AFRICAAM 241, EDUC 241, PHIL 242

PHIL 143. Quine. 4 Units.
(Formerly 183/283; graduate students register for 243.) The philosophy of Quine: meaning and communication; analyticity, modality, reference, and ontology; theory and evidence; naturalism; mind and the mental.
Same as: PHIL 243

PHIL 150. Mathematical Logic. 4 Units.
An introduction to the concepts and techniques used in mathematical logic, focusing on propositional, modal, and predicate logic. Highlights connections with philosophy, mathematics, computer science, linguistics, and neighboring fields.
Same as: PHIL 250

PHIL 150E. Logic in Action: A New Introduction to Logic. 4 Units.
A new introduction to logic, covering propositional, modal, and first-order logic, with special attention to major applications in describing information and information-driven action. Highlights connections with philosophy, mathematics, computer science, linguistics, and neighboring fields. Based on the open source course 'Logic in Action,' available online at http://www.logicinaction.org/.nFulfills the undergraduate philosophy logic requirement.

PHIL 150X. Mathematical Logic. 2 Units.
Equivalent to the second half of 150. Students attend the first meeting of 150 and rejoin the class on October 30. Prerequisite: CS 103A or X, or PHIL 50.

PHIL 151. Metalogic. 4 Units.
(Formerly 160A.) The syntax and semantics of sentential and first-order logic. Concepts of model theory. Gödel's completeness theorem and its consequences: the Löwenheim-Skolem theorem and the compactness theorem. Prerequisite: 150 or consent of instructor.
Same as: PHIL 251

PHIL 151A. Recursion Theory. 4 Units.
Computable functions, Turing degrees, generalized computability and definability. "What does it mean for a function from the natural numbers to themselves to be computable?" and "How can noncomputable functions be classified into a hierarchy based on their level of noncomputability?". Theory of relative computability, reducibility notions and degree structures. Prerequisite is PHIL 150, or PHIL 151 or CS 103.
Same as: PHIL 251A

PHIL 152. Computability and Logic. 4 Units.
Approaches to effective computation: recursive functions, register machines, and Turing machines. Proof of their equivalence, discussion of Church's thesis. Elementary recursion theory. These techniques used to prove Gödel's incompleteness theorem for arithmetic, whose technical and philosophical repercussions are surveyed. Prerequisite: 151.
Same as: PHIL 252

PHIL 153L. Computing Machines and Intelligence. 4 Units.
In this course we will explore the central question of what intelligence is by adopting artificial intelligence research as a point of reference. Starting with ideas proposed by Alan Turing in his 1950 paper, we will see what the contemporary interpretations are for those questions, and learn what new questions new technologies have brought. Among the subtopics are: Is it possible for a computer to think? What is thought? Are we computers? Could machines feel emotions or be conscious? Can AI die? Is there a relation between AI and decidability? What is the relationship between AI and Neuroscience Research? nThis course is intended for students of different majors interested in learning how the researchers in AI understand today the concept of intelligent machine, and examine what are the philosophical problems associated with the concept of artificial intelligence.
Same as: PHIL 253L

PHIL 154. Modal Logic. 4 Units.
(Graduate students register for 254.) Syntax and semantics of modal logic and its basic theory: including expressive power, axiomatic completeness, correspondence, and complexity. Applications to topics in philosophy, computer science, mathematics, linguistics, and game theory. Prerequisite: 150 or preferably 151.
Same as: PHIL 254

PHIL 155. Topics in Mathematical Logic: Non-Classical Logic. 4 Units.
This year's topic is Non-Classical Logic. May be repeated for credit.
Same as: PHIL 255

PHIL 156A. Modal Logics - A Modern Perspective. 4 Units.
Modal logic encompasses a rich variety of systems that have been used within philosophy to study such diverse topics as necessity and possibility, knowledge, time, action, and deontology. In recent years modal logic has also found applications outside of philosophy, in mathematics (the study of topology and formal provability) and in computational theory (including knowledge representation and software verification). This course will offer a modern approach to modal logic, covering the classical themes as well as cutting edge approaches and topics, such as hybrid logics and dynamic logics.
Same as: PHIL 256A

PHIL 157. Topics in Philosophy of Logic. 3 Units.
(Graduate students register for 257.) Disputed foundational issues in logic; the question of what the subject matter and boundaries of logic are, such as whether what is called second-order logic should be counted as logic. What is the proper notion of logical consequence? May be repeated for credit. Pre- or corequisite: 151, or consent of instructor.
Same as: PHIL 257

PHIL 158. Topics in Logic: Ten Problems in Deontic Logic. 2 Units.
As witnessed by the handbook of deontic logic and normative systems, the area of deontic logic is in flux. Traditional questions and logical methods of deontic logic are being supplemented by new questions and new techniques. This tutorial gives an introduction to the current discussion in deontic logic. In what sense are obligations different from norms? Jorgensen's dilemma, from preference based modal logic to the modern approach. How to reason about dilemmas, contrary-to-duty and defeasible norms? Distinguishing various kinds of defeasibility. How to relate various kinds of permissive and constitutive norms? Permissions as exceptions and prioritized norms. How do norms relate to other modalities like beliefs, desires, and intentions How do norms change? What is the role of time, action and games in deontic reasoning? For each problem, we discuss traditional as well as new research questions. We see the new questions as good questions for current research, in the sense that they point to modern theories and applications. We are especially interested in new questions that make older traditional questions obsolete in the sense that they are now addressed from a modern perspective, or in a more general setting. This mini-course wil from the week of 15 April through the week of 13 May.
Same as: PHIL 258

PHIL 159. Non-Classical Logic. 4 Units.
This course introduces non-classical extensions and alternatives to classical logic, and the philosophical debates surrounding them. Topics include modal logic (the logic of possibility and necessity), intuitionistic and many-valued logics (in which sentences may be neither true nor false, or both true and false), and relevant logic (which tries to refine the classical concept of entailment to capture the idea that the premises of arguments should be relevant to their conclusions). nnnStudents will learn tableau-style proof theories and Kripke frame semantics for a variety of non-classical logics, and will discuss adjacent philosophical issues, including the nature of necessity and possibility, the metaphysics of ordinary objects and fictional characters, the nature of truth, and the relationship between the world and the logical theories used to describe it.
Same as: PHIL 259

PHIL 160A. Newtonian Revolution. 4 Units.
(Graduate students register for 260A.) 17th-century efforts in science including by Kepler, Galileo, Descartes, and Huygens, that formed the background for and posed the problems addressed in Newton¿s *Principia*.
Same as: PHIL 260A

PHIL 160B. Newtonian Revolution. 4 Units.
(Graduate students register for 260B.) Newton¿s *Principia* in its historical context, emphasizing how it produced a revolution in the conduct of empirical research and in standards of evidence in science.
Same as: PHIL 260B

PHIL 162. Philosophy of Mathematics. 4 Units.
Prerequisite: PHIL150 or consent of instructor.
Same as: PHIL 262

PHIL 163. Significant Figures in Philosophy of Science: Einstein. 4 Units.
(Graduate students register for 263.)nThe influences of Hertz, Boltzmann, Mach and Planck on the development of Einstein's philosophical views regarding the scope and limits of physical theory. The distinction between principle theories and constructive theories from Poincaré and Lorentz, to Einstein. The impact of special and general relativity on logical empiricism. How Einstein's views changed in response to two core challenges, the advent of quantum mechanics and his three-decades long failure to extend general relativity to a "theory of the total field". We conclude by considering the lasting impact of Einstein's philosophical views, and whether they can be assimilated to contemporary currents in philosophy of science.nnPREREQUISITES: No detailed knowledge of physics or mathematics is presumed. Some background in philosophy, natural science or mathematics will be helpful. Students will benefit from possession of a modicum of mathematical maturity (roughly equivalent to a familiarity with elementary single-variable calculus or the metatheory of first-order logic).
Same as: PHIL 263

PHIL 164. Central Topics in the Philosophy of Science: Theory and Evidence. 4 Units.
(Graduate students register for 264.) Is reductionism opposed to emergence? Are they compatible? If so, how or in what sense? We consider methodological, epistemological, logical and metaphysical dimensions of contemporary discussions of reductionism and emergence in physics, in the ¿sciences of complexity¿, and in philosophy of mind.
Same as: PHIL 264

PHIL 164A. Central Topics in Philosophy of Science: Causation. 4 Units.
(Graduate Students register for 264A.) Establishing causes in science, engineering, and medicine versus establishing them in Anglo-American law, considered in the context of Hume and Mill on causation. May be repeated for credit.
Same as: PHIL 264A

PHIL 165. Philosophy of Physics: Space and Time. 4 Units.
Graduate students register for 265.nnPREREQUISITES: No detailed knowledge of quantum physics or advanced mathematics is presumed. Some background in philosophy, natural science or mathematics will be helpful. Students will benefit from possession of a modicum of mathematical maturity (roughly equivalent to a familiarity with elementary single-variable calculus or the metatheory of first-order logic).
Same as: PHIL 265

PHIL 166. Probability: Ten Great Ideas About Chance. 4 Units.
Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.
Same as: PHIL 266, STATS 167, STATS 267

PHIL 166A. Foundations of Quantum Mechanics. 4 Units.
This seminar will concentrate on a variety of probability questions that arise in quantum mechanics, including some from recent experiments. Negative probabilities and nonmonotonic upper probabilities will be emphasized.
Same as: PHIL 266A

PHIL 167A. Philosophy of Biology. 4 Units.
(Graduate students register for 267A.) Evolutionary theory and in particular, on characterizing natural selection and how it operates. We examine debates about fitness, whether selection is a cause or force, the levels at which selection operates, and whether cultural evolution is a Darwinian process. Prerequisites: one PHIL course and either one BIO course or Human Biology core; or equivalent with consent of instructor.
Same as: PHIL 267A

PHIL 167B. Philosophy, Biology, and Behavior. 4 Units.
(Graduate Students register for 267B) Philosophical study of key theoretical ideas in biology as deployed in the study of behavior. Topics to include genetic, neurobiological, ecological approaches to behavior; the classification and measurement of behaviors: reductionism, determinism, interactionism. Prerequisites: one PHIL course and either one BIO course or Human Biology core; or equivalent with consent of instructor.
Same as: PHIL 267B

PHIL 167C. Associative Theories of Mind and Brain. 4 Units.
After a historical survey of associative theories from Hume to William James, current versions will be analyzed including the important early ideas of Karl Lashley. Emphasis will be on the computational power of associative networks and their realization in the brain.
Same as: PHIL 267C

PHIL 167D. Philosophy of Neuroscience. 4 Units.
How can we explain the mind? With approaches ranging from computational models to cellular-level characterizations of neural responses to the characterization of behavior, neuroscience aims to explain how we see, think, decide, and even feel. While these approaches have been highly successful in answering some kinds of questions, they have resulted in surprisingly little progress in others. We'll look at the relationships between the neuroscientific enterprise, philosophical investigations of the nature of the mind, and our everyday experiences as creatures with minds. Prerequisite: PHIL 80.n(Not open to freshmen.).
Same as: PHIL 267D, SYMSYS 167D

PHIL 167E. Topics in Philosophy of Neuroscience. 4 Units.
.
Same as: PHIL 267E

PHIL 167M. Evolutionary Contingency. 4 Units.
This course explores evolutionary contingency¿the role of dependency relations and chance in the history of life. Topics to be explored will include some work by Stephen Jay Gould in addition to philosophical debates concerning modal and process-based approaches to chance in evolution. Our investigation of contingency will be set against background issues concerning evolutionary convergences, inevitability, panselectionism, (in)determinism, and the usefulness of narrative explanations in this context.
Same as: PHIL 267M

PHIL 168M. Biological Individuality. 4 Units.
Our intuitions about the nature of organisms and of individuals are challenged by numerous puzzle cases in recent biological science. The nature of individuals is of long-standing interest in philosophy (as well as in different branches of the sciences). However, ideas of biological individuality have been challenged by developments in a variety of subfields of biology, and related areas including, for example, evolutionary biology, developmental biology, microbiology, and immunology. These challenges invite us to present a traditional philosophical thread discussion with new and exciting puzzles. In this course, we will read and discuss papers and book excerpts from both historical and contemporary authors working on biological individuality, which is often spearheaded by the use of case studies. The course will begin with a select history of how the particular problem(s) of biological individuality developed. Having established a shared understanding of the range of questions and perspectives available, students will gain a common language to communicate about this topic with those working in other fields. A background in biology is not necessary to take this course, and we will only visit traditional philosophical conceptions of individuality insofar as they are illuminating for the cases and readings we cover. Students are welcome from the humanities and sciences alike with the opportunity to come together over a philosophical topic that has consequences both within philosophy and beyond.
Same as: PHIL 268M

PHIL 169. Evolution of the Social Contract. 4 Units.
Explore naturalizing the social contract. Classroom presentations and term papers.nTexts: Binmore - Natural Justicen Skyrms - Evolution of the Social Contract.
Same as: PHIL 269

PHIL 169M. Topics in 18th Century Natural Philosophy: Virtues and Technology. 4 Units.
This course will be an introduction to the eighteenth-century history of ideas and philosophy, dealing primarily with questions encountered in natural philosophy: nWhat is the proper method of natural philosophy? What role do hypotheses play in physical theorizing? nWhat is the nature of space, time, matter and force? nWhat are the metaphysical and methodological frameworks of the Newtonian project of universal gravitation? nWhat kinds of intelligibility does mathematics bring to natural philosophy?nThis course is focused on questions, problems, and developments in the mathematical and exact sciences and experimental physics, and only briefly touches subjects in chemistry, natural history, physiology and moral sciences. Topic for 2020-21: Virtues and Technology.
Same as: PHIL 269M

PHIL 170. Ethical Theory. 4 Units.
This course explores some major topics/themes in ethical theory from the middle of the 20th century through the present. We'll read philosophy by John Rawls, Thomas Nagel, Bernard Williams, Christine Korsgaard, G.E.M. Anscombe, Philipa Foot, and others. Substantial background in moral philosophy will be assumed. Students should have completed Philosophy 2 (or its equivalent ¿ if you have questions, please contact the instructor).
Same as: ETHICSOC 170, PHIL 270

PHIL 170B. Metaphor. 4 Units.
In metaphor we think and talk about two things at once: two different subject matters are mingled to rich and unpredictable effect. A close critical study of the main modern accounts of metaphor's nature and interest, drawing on the work of writers, linguists, philosophers, and literary critics. Attention to how understanding, appreciation, and pleasure connect with one another in the experience of metaphor. Consideration of the possibility that metaphor or something very like it occurs in nonverbal media: gesture, dance, painting, music.
Same as: PHIL 270B

PHIL 170D. Trust and Trustworthiness. 4 Units.
An exploration of the place of interpersonal trust in ethical thought. What is it to trust another person? How is trusting related to, though different from, other attitudes we sometimes bear towards others (e.g. justified beliefs we form about others and their conduct; ethically significant expectations we have of others, etc.)? What is involved in acquiring/possessing the virtue of trustworthiness? How should trust (and trustworthiness) figure in our thinking about important ethical activities, for example promising, friendship, or the practice of politics?.
Same as: PHIL 270D

PHIL 171. Justice. 4-5 Units.
In this course, we explore three sets of questions relating to justice and the meaning of a just society: (1) Liberty: What is liberty, and why is it important? Which liberties must a just society protect? (2) Equality: What is equality, and why is it important? What sorts of equality should a just society ensure? (3) Reconciliation: Are liberty and equality in conflict? If so, how should we respond to the conflict between them? We approach these topics by examining competing theories of justice including utilitarianism, libertarianism/classical liberalism, and egalitarian liberalism. The class also serves as an introduction to how to do political philosophy, and students approaching these topics for the first time are welcome. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 103.
Same as: ETHICSOC 171, POLISCI 103, POLISCI 336S, PUBLPOL 103C

PHIL 171P. 20th Century Political Theory: Liberalism and its Critics. 5 Units.
In this course, students learn and engage with the debates that have animated political theory since the early 20th century. What is the proper relationship between the individual, the community, and the state? Are liberty and equality in conflict, and, if so, which should take priority? What does justice mean in a large and diverse modern society? The subtitle of the course, borrowed from a book by Michael Sandel, is "Liberalism and its Critics" because the questions we discuss in this class center on the meaning of, and alternatives to, the liberal idea that the basic goal of society should be the protection of individual rights. Readings include selections from works by John Rawls, Hannah Arendt, Robert Nozick, Michael Sandel, Iris Marion Young, and Martha Nussbaum. No prior experience with political theory is necessary.
Same as: ETHICSOC 130, POLISCI 130

PHIL 172. History of Modern Moral Philosophy. 4 Units.
prerequisites: Phil 2 and Phil 80. Grads enroll in 272.
Same as: ETHICSOC 172, PHIL 272

PHIL 172B. Recent Ethical Theory: Moral Obligation. 4 Units.
Some moral obligations are "relational," "directional," or "bipolar" in structure: in promising you to act in a certain way, for example, I incur an obligation to you to so act and you acquire a corresponding claim or right against me that I so act. This entails that if I violate my obligation to you, I will not merely be doing something that is morally wrong, but will be wronging you in particular. What does explain this? Do all moral obligations have this structure? We will discuss how different moral theories (consequentialist, deontological, contractualist) try to account for such obligations. Readings include Adams, Anscombe, Darwall, Feinberg, Hart, Parfit, Raz, Scanlon, Skorupski, Thompson, Thomson, Wallace, and Wolf.
Same as: PHIL 272B

PHIL 172C. The Ethics of Care. 4 Units.
Since the 1970s, a number of feminists, socialists, and virtue theorists have directed their attention to the importance of care in practical philosophy. In this class, we will focus on the ambition to employ the notion of care in systematic political ethics. We will address the relationship between care and integrity, care and community, care and justice, and the role of care in thinking about the ethics of economics. Students will be evaluated on the basis of three essays. There will be no final exam. All readings will be available online; no books required.
Same as: ETHICSOC 172C

PHIL 172D. Bernard Williams. 4 Units.
An exploration of some central themes from the work of Bernard Williams. Particular attention will be paid to his discussion of the character and identity of the self, his sustained critique of morality and moral philosophy. We will also read several of Williams¿ interlocutors, including Nagel, Parfit, Korsgaard, and Herman.
Same as: PHIL 272D

PHIL 172N. Prudence and Morality. 4 Units.
We sometimes think we should do something just because it will benefit us in the future, even though we don¿t particularly feel like doing it now (e.g. we exercise, go to the dentist for a check-up, or set aside money for retirement). And we sometimes think we should do something for the sake of another person, even when it is inconvenient, costly, or unpleasant (e.g. we stop to help a stranded motorist, donate to charity, or tell someone an embarrassing truth rather than a face-saving lie). When we do the former, we act prudently. When we do the latter, we act morally. This course explores the debate among philosophers about the source of our reasons for acting prudently and morally. Some argue that our reasons to be prudent and moral stem directly from the fact that we are rational ¿ that it is contrary to reason to ignore our own future interests, or the interests of other people. Others disagree, arguing that the source of these reasons must lie elsewhere. Course readings will include work by Thomas Nagel, Bernard Williams, Christine Korsgaard, Derek Parfit, Philippa Foot, and others.
Same as: PHIL 272N

PHIL 172V. Virtue Ethics. 4 Units.
In recent years virtue ethics has emerged as a challenger to Kantian and utilitarian moral theories. In this course, we shall examine some of the leading contemporary virtue theorists and their critics. We shall consider how to define the virtues, the relation between virtue and right action and action guidance, the relation between virtue and happiness and criticisms made of virtue theory based on contemporary psychology. Authors to be read include GEM Anscombe, Julia Annas, John Doris, Philippa Foot, Gilbert Harman, Tom Hurka, Rosalind Hursthouse, Michael Slote, Christine Swanton and Bernard Williams.
Same as: PHIL 272V

PHIL 173B. Metaethics. 4 Units.
This is an intensive, undergraduate-only introduction to, and survey of, contemporary metaethics. Can moral and ethical values be justified or is it just a matter of opinion? Is there a difference between facts and values? Are there any moral truths? Does it matter if there are not? Focus is not on which things or actions are valuable or morally right, but what is value or rightness itself. Prerequisites: 80, 181 and one ethics course.

PHIL 173W. Aesthetics. 4 Units.
This course will investigate a cluster of varied but related philosophical issues concerning the arts - music, painting, literature, poetry, photography, theater, film, etc.- issues most of which are, at the same time, problems in philosophy of mind or language, value theory, or epistemology. We will address questions like the following (though probably not all of them): What, if anything, is distinctive about art and aesthetic experience?, What is aesthetic value, and how do aesthetic values relate to and interact with moral values and values of other kinds?, What is fiction and why are people interested in it?, In what ways are works of art expressive of feelings or emotions? What similarities and differences are there in the expressive qualities of music, literature, painting, poetry? How might we learn from works of art of one or another kind, and how might they work to change people's perspectives or attitudes?, In what ways do artworks serve as vehicles of communication? Are the values of works of art fundamentally different from those of beautiful natural objects? Along the way, we will bump into more specific questions such as: Why and in what ways is photography more (or less) 'realistic' than painting and drawing, or more or less revealing of reality? Does (instrumental) music have cognitive or semantic content? Is music representational in anything like the ways literature and figurative painting are?, Do all literary works have narrators? Is there ever (or always?) anything like narrators in paintings, films, music? Prerequisite: One course in philosophy, or permission of the instructor.
Same as: PHIL 273W

PHIL 174. Freedom and the Practical Standpoint. 4 Units.
(Graduate students register for 274.) Confronted with the question of how to act, people think of themselves as freely determining their own conduct. Natural science poses a challenge to this by explaining all events, including human actions, in terms of causal processes. Are people justified in thinking of themselves as free? Major philosophical approaches to this question: incompatibilism, compatibilism, and the two-standpoint view.
Same as: PHIL 274

PHIL 174B. Universal Basic Income: the philosophy behind the proposal. 3 Units.
Universal basic income (or UBI) is a regular cash allowance given to all members of a community without means test, regardless of personal desert, and with no strings attached. Once a utopian proposal, the policy is now discussed and piloted throughout the world. The growth of income and wealth inequalities, the precariousness of labor, and the persistence of abject poverty have all been important drivers of renewed interest in UBI in the United States. But it is without a doubt the fear that automation may displace workers from the labor market at unprecedented rates that explains the revival of the policy in recent years, including by many in or around Silicon Valley. Among the various objections to the proposal, one concerns its moral adequacy: Isn't it fundamentally unjust to give cash to all indiscriminately rather than to those who need it and deserve it? Over the years, a variety of scholars have defended the policy on moral grounds, arguing that UBI is a tool of equality, liberal freedom, republican freedom, gender equity, or racial equity. Many others have attacked UBI on those very same grounds, making the case that alternative policy proposals like the job guarantee, means-tested benefits, conditional benefits, or reparations should be preferred. Students will learn a great deal about political theory and ethics in general but always through the specific angle of the policy proposal, and they will become experts on the philosophy, politics and economics of UBI. The seminar is open to undergraduate and graduate students in all departments. There are no pre-requisites.
Same as: ETHICSOC 174B, ETHICSOC 274B, PHIL 274B, POLISCI 134E, POLISCI 338

PHIL 174C. On What Is Intolerable. 4 Units.
Moral and political philosophy often focuses on ideals we should aspire to and principles we should follow. Yet individuals and societies almost invariably fall short of these ideals and principles. Unless you are a fundamentalist or a relentless perfectionist, you tolerate these failures. That is, you tolerate them to a point. This point will be the topic of our course: how badly may we fail? How far short of the ideal is too far? We will be concerned with that which is not merely bad, unjustified, wrong, or unjust, but which is intolerably so. Examples include: intolerable injustice, rotten compromises, unconscionable contracts, dirty hands, unjust wars, personal failures, grief, desperation, betrayal, and humiliation. Just as important, we will ask: how should we respond to the intolerable? Should intolerably unjust political institutions be met with disobedience, or perhaps rebellion? When we emerge from grief to continue with our lives, do we thereby accept our loss as tolerable? Can we ever forgive without forgetting the severity of the wrong done to us and the harm we suffered? We will draw on thinkers such as Kierkegaard, Nietzsche, Du Bois, and Baldwin, as well as contemporary moral and political philosophers, such as John Rawls, Thomas Nagel, Bernard Williams, Alexander Nehamas, Jonathan Lear, and others.
Same as: PHIL 274C

PHIL 174D. Moral Luck. 4 Units.
We draw a fundamental distinction between what a person voluntarily does, and what is beyond her control. Such a distinction seems central to how we think about what it is to justify our actions (whether to ourselves or to one another), as well as to our practice of holding one another morally responsible for what we do. Yet under pressure, this distinction can appear to collapse ¿ we find that we cannot successfully disentangle what a person controls from what she does not when she acts. This course examines this problem in depth, and considers how we might respond in the face of it: Is it really a problem? If so, does it threaten our moral practices? How should it influence the way in which we make choices, or the way we understand those choices once we¿ve made them?.
Same as: PHIL 274D

PHIL 174E. Egalitarianism: A course on the history and theory of egalitarianism and anti-egalitarianism. 4 Units.
Egalitarianism is a conception of justice that takes the value of equality to be of primary political and moral importance. There are many different ways to be an egalitarian - it all depends on what we take to be the currency of egalitarian justice. Are we trying to equalize basic rights and liberties, or resources, opportunities, positions, status, respect, welfare, or capabilities? Is equality really what we should try to achieve in a just society? Or should we just make sure everyone has enough? Why do egalitarians think that such society would still be unjust; and how do they proceed to argue for equality?nnThis class will introduce students to egalitarian and anti-egalitarian thought by looking both at the history of egalitarian thinking and at contemporary accounts in defense of equality. It will provide an in depth introduction to the concepts that are used when inequalities are discussed by philosophers, economists, scientists and politicians. The class will attest of the varieties of approaches and perspectives to equality. For instance, we will learn from the 19th century debate on racial inequalities to understand how anti-egalitarian discourses are constructed; we will look into Rousseau's conception of social equality in the Second Discourse and the Social Contract; and we will engage with contemporary egalitarian theories by studying Rawlsian and post-Rawlsian forms of egalitarianism.
Same as: ETHICSOC 174E, PHIL 274E, POLISCI 138E

PHIL 174L. Betrayal and Loyalty, Treason and Trust. 2 Units.
The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.
Same as: ETHICSOC 174L, ETHICSOC 274L, PHIL 274L

PHIL 175. Philosophy of Law. 4 Units.
This course will explore foundational issues about the nature of law and its relation to morality, and about legal responsibility and criminal punishment. Prerequisite: graduate student standing in philosophy or, for others, prior course work in philosophy that includes Philosophy 80.
Same as: ETHICSOC 175B, PHIL 275

PHIL 175A. Ethics and Politics of Public Service. 3-5 Units.
Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.
Same as: CSRE 178, ETHICSOC 133, PHIL 275A, POLISCI 133, PUBLPOL 103D, URBANST 122

PHIL 175B. Philosophy of Public Policy. 4 Units.
From healthcare to voting reforms, social protection and educational policies, public policies are underpinned by moral values. When we debate those policies, we typically appeal to values like justice, fairness, equality, freedom, privacy, and safety. A proper understanding of those values, what they mean, how they may conflict, and how they can be weighed against each other is essential to developing a competent and critical eye on our complex political world. We will ask questions such as: Is compulsory voting justified? Should children have the right to vote? Is affirmative action just? What is wrong with racial profiling? What are the duties of citizens of affluent countries towards migrants? Do we have a right to privacy? Is giving cash to all unconditionally fair? This class will introduce students to a number of methods and frameworks coming out of ethics and political philosophy and will give students a lot of time to practice ethically informed debates on public policies. At the end of this class, students should have the skills to critically examine a wide range of diverse policy proposals from the perspective of ethics, moral and political philosophy. There are no prerequisites. Undergraduates and graduates from all departments are welcome to attend.
Same as: ETHICSOC 175X, PHIL 275B, POLISCI 135E, POLISCI 235E, PUBLPOL 177

PHIL 175D. Capitalism and Virtue. 4 Units.
This class addresses the ethics of production and consumption. We start by introducing the basic concepts for studying the ethics of market participation ¿ property rights, prices, efficiency, means of production, etc, as well as some more theoretical issues: invisible hand explanations, Hayek¿s knowledge problem, the basic welfare theorems. Then we will address questions such as the following: Does market participate encourage vice? Virtue? Alienation? Exploitation? How should we think about virtue if profit-maximising behavour is in everyone¿s interest? How should we weigh the promotion of vice against the promotion of benefits? Should there be `social spheres¿ that are isolated from market transactions? What is the broader relationship between the ethics of markets and distributive justice?.
Same as: PHIL 275D

PHIL 175M. Two Ethical Theories and Being a Person. 4 Units.
The distinction between the ethics of being a person and the ethics of rules as opposed to the distinction between Kantian ethics and utilitarianism or consequentialism consequentialism. Comparison of these two types of ethics with respect to their relationship to agency and being a good person. Relations between Western ethics and those of other continents.
Same as: PHIL 275M

PHIL 175P. Philosophy of Law and Conceptions of Agency. 4 Units.
In this course we will explore the connections between recent work in philosophy of law and philosophy of action. Current philosophy of law draws on philosophy of action. One example is the work of Scott Shapiro, who interprets legal activity as a form of social planning that enables citizens to coordinate their activities as agents. We will consider what normative requirements are necessary to make citizens self-legislating autonomous agents. Are formal requirements like consistency and coherence sufficient, or does law have to meet substantial normative and moral requirements? We will also discuss whether the deficiency of ¿evil legal systems¿ can be explained in terms of agency. Can distorted legal system provide agents a coherent form of self-understanding? We will explore these questions through readings by Scott Shapiro, Ronald Dworkin, Lon F. Fuller, David Dyzenhaus, Kristen Rundle, Michael Bratman, David Velleman, and Christine Korsgaard.
Same as: PHIL 275P

PHIL 175W. Philosophy of Law: Protest, Punishment, and Racial Justice. 4 Units.
In this course, we will examine some of the central questions in philosophy of law, including: What is law? What gives law its authority? Must we obey the law? If so, when and why? How should we understand and respond to unjust laws? When is civil disobedience morally permissible? Is civil disobedience ever morally required?nWhat is punishment for? What are prisons for? What is the case for reparations?.
Same as: CSRE 175W, ETHICSOC 175W, PHIL 275W

PHIL 176. Political Philosophy: The Social Contract Tradition. 4 Units.
(Graduate students register for 276.) What makes political institutions legitimate? What makes them just? When do citizens have a right to revolt against those who rule over them? Which of our fellow citizens must we tolerate?Surprisingly, the answers given by some of the most prominent modern philosophers turn on the idea of a social contract. We will focus on the work of Hobbes, Locke, Rousseau, and Rawls.
Same as: ETHICSOC 176, PHIL 276, POLISCI 137A, POLISCI 337A

PHIL 176A. Classical Seminar: Origins of Political Thought. 3-5 Units.
Political philosophy in classical antiquity, centered on reading canonical works of Thucydides, Plato, Aristotle against other texts and against the political and historical background. Topics include: interdependence, legitimacy, justice; political obligation, citizenship, and leadership; origins and development of democracy; law, civic strife, and constitutional change.
Same as: CLASSICS 181, CLASSICS 381, ETHICSOC 130A, PHIL 276A, POLISCI 230A, POLISCI 330A

PHIL 176B. The Economic Individual in the Behavioral Sciences. 4 Units.
(Graduate students register for 276B.).
Same as: PHIL 276B

PHIL 176P. Democratic Theory. 5 Units.
Most people agree that democracy is a good thing, but do we agree on what democracy is? This course will examine the concept of democracy in political philosophy. We will address the following questions: What reason(s), if any, do we have for valuing democracy? What does it mean to treat people as political equals? When does a group of individuals constitute "a people," and how can a people make genuinely collective decisions? Can democracy really be compatible with social inequality? With an entrenched constitution? With representation?.
Same as: ETHICSOC 234, POLISCI 234

PHIL 177B. EMOTIONS: MORALITY AND LAW. 2 Units.
If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Paul¿s contrast between law and love, or Nietzsche¿s idea that resentment is what feeds morality, will be discussed alongside other intriguing topics.
Same as: ETHICSOC 202, ETHICSOC 302, PHIL 277B

PHIL 177C. Ethics of Climate Change. 4 Units.
Climate change is an ethical failure. When we cause greenhouse gas to be emitted for our own benefit, the gas spreads around the world and does harm everywhere. Many of those who are harmed emit very little greenhouse gas themselves. When some people harm others for their own benefit, something is morally wrong. Specifically, there is an injustice. One of the ethical problems raised by climate change is how to rectify this injustice. Climate change also raises a different range of ethical questions, which may be classified as questions of value. For example, in making decisions, how should the distant future be valued in comparison with the present and how should we take account of the great loss of human life that climate change will cause? This course investigates the issues of justice and the issues of value. It considers the moral demands that climate change puts both on private individuals and on public institutions. Because the effects of climate change are so widespread and so complex, the methods of economics can be useful in putting ethical principles into effect. The course will therefore assess some of these methods.
Same as: PHIL 277C

PHIL 177W. Human Rights. 4 Units.
In this course we will think critically about human rights by evaluating complex moral situations and weighing powerful but opposed arguments. In our discussions we will explore a variety of alleged human rights and ask: Which of these is really a human right? What could the justification of human rights be? If some right is a real human right, what exactly does it require of us and others? Are there really any human rights at all, or are human rights just another means for Western societies to impose their way of life on the rest of the world? What is a human right? Case studies will include the death penalty, democratic participation, gay rights and duties of corporations to respect human rights.
Same as: PHIL 277W

PHIL 178. Ethics in Society Honors Seminar. 4 Units.
For students planning honors in Ethics in Society. Methods of research. Students present issues of public and personal morality; topics chosen with advice of instructor.
Same as: ETHICSOC 190

PHIL 178M. Introduction to Environmental Ethics. 4-5 Units.
How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism.
Same as: ETHICSOC 178M, ETHICSOC 278M, PHIL 278M, POLISCI 134L

PHIL 179A. Feminist and Queer Theories and Methods Across the Disciplines. 2-5 Units.
(Graduate Students register for PHIL 279A or FEMGEN 203) This course is an opportunity to explore the difference feminist and queer perspectives make in creative arts, humanities, and social science research.nPrerequisites: Feminist Studies 101 or equivalent with consent of instructor.nNOTE: This course must be taken for a letter grade and a minimum of 3 units to be eligible for WAYS credit. The 2 unit option is for graduate students only.
Same as: FEMGEN 103, FEMGEN 203, PHIL 279A

PHIL 179S. Moral Psychology, Reasons for Action, and Moral Theory. 4 Units.
What sorts of considerations does an ethical agent take to be good reasons for action? Work in moral psychology to illuminate the theory of practical reasons, and the theory of practical reasons to test the prospects for systematic moral theory. Can any systematic moral theory be reconciled with the moral psychology of ordinary, morally respectable agents? Reading include Bernard Williams, Rosalind Hursthouse, Peter Railton, T.M. Scanlon, and Barbara Herman.
Same as: PHIL 279S

PHIL 179W. Du Bois and Democracy. 4 Units.
In this course, we will work together to develop a detailed and comprehensive understanding of the political philosophy of W. E. B. Du Bois, giving special attention to the development of his democratic theory. We will do so by reading a number of key texts by Du Bois as well as contemporary scholarship from philosophy and cognate fields.
Same as: CSRE 179W, ETHICSOC 179W, PHIL 279W

PHIL 180. Metaphysics. 4 Units.
This is an undergraduate only class. Intensive introduction to core topics in contemporary metaphysics. What is the fundamental structure of reality? Is it objective? How can there be truths about what is possible or necessary, if only the actual exists? Do we have free will? What is it for an event to be determined by its causes? Is the only thing that exists the current instance of time? Is the world purely physical? Does science answer all of these questions? Prerequisites: 1, 80 and background in logic.

PHIL 180A. Realism, Anti-Realism, Irrealism, Quasi-Realism. 4 Units.
Realism and its opponents as options across a variety of different domains: natural science, mathematics, ethics, and aesthetics. Clarify the various conceptions that fall under these terms and outline the reasons for and against adopting realism for the various domains. Highlight the general issues involved. Prerequisites: 80, 181.
Same as: PHIL 280A

PHIL 181. Philosophy of Language. 4 Units.
The study of conceptual questions about language as a focus of contemporary philosophy for its inherent interest and because philosophers see questions about language as behind perennial questions in other areas of philosophy including epistemology, philosophy of science, metaphysics, and ethics. Key concepts and debates about the notions of meaning, truth, reference, and language use, with relations to psycholinguistics and formal semantics. Readings from philosophers such as Frege, Russell, Wittgenstein, Grice, and Kripke. Prerequisites: 80 and background in logic.
Same as: PHIL 281

PHIL 181B. Topics in Philosophy of Language. 4 Units.
This course builds on the material of 181/281, focusing on debates and developments in the pragmatics of conversation, the semantics/pragmatics distinction, the contextuality of meaning, the nature of truth and its connection to meaning, and the workings of particular linguistic constructions of special philosophical relevance. Students who have not taken 181/281 should seek the instructor's advice as to whether they have sufficient background.
Same as: PHIL 281B

PHIL 182. Advanced Philosophy of Language. 4 Units.
.
Same as: PHIL 282

PHIL 182A. Naturalizing Representation. 4 Units.
Notions of meaning and representation are ubiquitous in how we conceive of our mental lives. Intentionality is one of the marks of the mental -- but it's not clear how these semantic notions can fit into our understanding of the natural world. nIn this class we'll discuss attempts to naturalize semantic notions, for example by appeal to informational or functional concepts. We'll read works by Dretske, Millikan, Skyrms, and others in evaluating this project.nPrerequisite: PHIL 80 or consent of instructor.
Same as: PHIL 282A

PHIL 182B. Naturalizing Content. 4 Units.
Meaning is mysterious. Right now you are looking at funny marks on a screen. Somehow, these marks are conveying to you information about a class that will be offered at Stanford during the winter quarter 2020. But how is this happening? These marks surely have no natural connection to the future class. They aren't like the footprints of a tiger, for example. Additionally, thousands of times a day, you manage to gain information about all manner of subjects by hearing strange sounds that have no natural connection to the subject matter. The sounds aren't like the bark of a dog, for example. You also manage to think about things that aren't in front of you, as when you think of a Hippo wearing a fedora. Yet activity in your brain has no natural connection to Hippos in fedoras (we presume). This class will investigate how it is that sounds, marks, and mental states manage to have semantic content. In other words, we will discuss attempts to solve the mystery of meaning, in all of its forms.nThe class is open to all graduate students in philosophy. Undergraduates who have not taken Phil 80 and at least one upper level philosophy class must receive permission to enroll.
Same as: PHIL 282B

PHIL 182H. Truth. 4 Units.
Philosophical debates about the place in human lives and the value to human beings of truth and its pursuit. The nature and significance of truth-involving virtues such as accuracy, sincerity, and candor. Prerequisite Phil 80 or permission of the instructor.
Same as: PHIL 282H

PHIL 183. Self-knowledge and Metacognition. 4 Units.
The course will be divided into two parts. In the first, we will survey the dominant models of how we come to know our own mental states. Among the issues we will explore will be our ways of discovering and coming to terms with "implicit" attitudes (e.g. biases), and the role of expression (e.g. verbal expression) in coming to know such attitudes. In the second part of the course, we will investigate the broader set of capacities by which we monitor and regulate our own cognitive processes, while paying special attention to the role of feelings (e.g. of knowing, fluency, fit) in the exercise of these capacities.
Same as: PHIL 283

PHIL 184. Topics in Epistemology. 4 Units.
.
Same as: PHIL 284

PHIL 184B. Formal Epistemology. 4 Units.
Grads enroll in 284B. Prerequisite: PHIL 80.
Same as: PHIL 284B

PHIL 184M. Topics in the Theory of Justification. 4 Units.
graduate seminar. Prerequisite: PHIL 80.
Same as: PHIL 284M

PHIL 185. Special Topics in Epistemology: Testimony in science and everyday life. 4 Units.
Much of what we know, we know by relying on the testimony of other individuals, groups, traditional news media or social media. The course explores varieties of testimonial knowledge which arise from relaxed everyday testimony ('the coffee machine is broken') and from scientific expert testimony ('Venus is larger than Mars'). The course also touches on issues concerning testimonial injustice ¿ the type of injustice that occurs when someone is wronged in their capacity as a testifier ¿ for example, when their testimony is unjustly devaluated. Finally, we will consider whether philosophical theorizing about testimony may shed light on obstacles for science communication about divisive issues such as vaccines, climate science etc.nnThus, the course is organized around three interrelated themes. 1: Foundational questions, 2: Testimonial injustice and 3: Scientific testimony. Overall, then, the course connects foundational work in epistemology and philosophy of science to some pertinent ethical and political problems.
Same as: PHIL 285

PHIL 185B. Philosophy of Perception. 4 Units.
The nature of perceptual experience and the role it plays in securing empirical knowledge. Focus will be on what is sometimes called "the problem of perception": the question of how perception could provide us with direct awareness of the surrounding environment given the possibility of illusions or hallucinations. Topics, include the relationship between perception and belief, the nature of perceptual phenomenology, whether or not perceptual experiences are representational states, and the philosophical relevance of empirical research on perception.
Same as: PHIL 285B

PHIL 185W. Metaontology. 4 Units.
Do existence questions have (determinate) answers? How should ontological commitment be understood? This class will discuss these and other questions in the metatheory of ontology. Specific topics will include: naturalness, metaphysical structure, grounding, and quantifier variance. Some familiarity with standard metaphysical and ontological debates will be assumed.
Same as: PHIL 285W

PHIL 186. Philosophy of Mind. 4 Units.
(Graduate students register for 286.) This is an advanced introduction to core topics in the philosophy of mind. Prerequisite: PHIL 80.
Same as: PHIL 286

PHIL 186A. Self-fashioning. 3 Units.
This undergraduate and graduate seminar will examine philosophical and psychological literature relevant to self-fashioning. Meetings will be discussion oriented, and each meeting will focus on a different question of theoretical and applied significance. Prerequisite: consent of instructor. May be repeat for credit.
Same as: PHIL 286A, PSYCH 172

PHIL 186B. Inner Sense. 4 Units.
Often the label "inner" is used to describe aspects of ourselves we believe are not immediately observable to another. Thoughts, feelings, sensations; these all happen on the "inside," whereas speech, mannerisms, and actions are "outward" expressions. But how useful is this way of thinking? And what does it assume about what is "inner" versus what is "outer"? How reliable are the various internal mechanisms that allow us to know ourselves? Do we have a special kind of direct access to our own inner lives? And what can we know about the inner lives of others? Readings from philosophy of mind and cognitive science.

PHIL 186M. Ontology of the Mental. 4 Units.
.
Same as: PHIL 286M

PHIL 187. Philosophy of Action. 4 Units.
This course will explore foundational issues about individual agency, explanation of action, reasons and causes, agency in the natural world, practical rationality, interpretation, teleological explanation, intention and intentional action, agency and time, intention and belief, knowledge of one's own actions, identification and hierarchy, and shared agency. Prerequisite: graduate student standing in philosophy or, for others, prior course work in philosophy that includes Philosophy 80.
Same as: PHIL 287

PHIL 188. Personal Identity. 4 Units.
Do you persist through time the way that a skyscraper persists through space, by having different parts at different locations? Or are you ¿wholly present¿ at every moment of your life, in something more like the way that an elevator is present in each place as it travels up to the top floor? What criteria determine whether you now are the very same person as some unique person located at some time in the past? Is the continuity of your memories or other mental states sufficient for your survival? Can you survive the loss or destruction of your body? Do you really exist for more than just the present moment? How do different answers to these questions bear on your moral, personal, and professional obligations? What kinds of considerations could possibly help us to answer these questions? This course explores these and related issues. Readings include a mix of introductory survey, historical, and contemporary material.
Same as: PHIL 288

PHIL 188W. Paradoxes. 4 Units.
Paradoxes arise when unacceptable or contradictory conclusions are generated by apparently unobjectionable reasoning. Consider the sentence: "This sentence is not true." Is the sentence true or not? If it is true, then what it says is the case, but it says that it is not true. On the other hand, if it is not true, then since it says it is not true, what it says is the case. So if the sentence is true it is not true, and if it is not true it is true. This is a version of the Liar Paradox. In this class we'll discuss the liar and other paradoxes, including the paradoxes of set theory, the Sorites Paradox, and several other well-known paradoxes. Familiarity with mathematical logic will be assumed by many of the class readings.
Same as: PHIL 288W

PHIL 189. Examples of Free Will. 4 Units.
Examples drawn from three domains: choice, computation, and conflict of norms. Conceptually, a distinction is made between examples that are predictable and those that are not, but skepticism about making a sharp distinction between determinism and indeterminism is defended.
Same as: PHIL 289

PHIL 189G. Fine-Tuning Arguments for God's Existence. 4 Units.
We will carefully assess contemporary "fine-tuning" arguments for the existence of God. Some argue that life only exists because certain fundamental characteristics of the universe are set precisely in the way needed for life; small variations would have resulted in no life. Thus the universe seems to be "fine-tuned" for life. This apparent fine-tuning is used to defend the existence of a "fine-tuner", namely, God. Prerequisites: PHIL 80 and a basic high-school level understanding of probability.

PHIL 189R. Philosophy of Religion. 4 Units.
.

PHIL 193C. Film & Philosophy. 3 Units.
Issues of authenticity, morality, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include Blade Runner (Scott), Do The Right Thing (Lee), The Seventh Seal (Bergman), Fight Club (Fincher), La Jetée (Marker), Memento (Nolan), and Eternal Sunshine of the Spotless Mind (Kaufman). Taught in English.
Same as: COMPLIT 154A, ENGLISH 154F, FRENCH 154, ITALIAN 154, PHIL 293C

PHIL 193D. Dante and Aristotle. 5 Units.
Students will read all of Dante¿s *Commedia* alongside works by Aristotle and various ancient and medieval philosophers. Our aim will be to understand the way an Aristotelian worldview informs the *Commedia*. For instance, what is the role of pleasure in the ethical life? What is the highest good of the human being? All readings will be in translation.

PHIL 193E. Film & Philosophy CE. 3 Units.
Issues of authenticity, morality, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include Blade Runner (Scott), Do The Right Thing (Lee), The Seventh Seal (Bergman), Fight Club (Fincher), La Jetée (Marker), Memento (Nolan), and Eternal Sunshine of the Spotless Mind (Kaufman). Taught in English. Satisfies the WAY CE.
Same as: FRENCH 154E, ITALIAN 154E, PHIL 293E

PHIL 193H. The Art of the Movies: Story, Drama, and Image. 4 Units.
A philosophical study of how movies coordinate and transform elements they borrow from older arts of literary narrative, live theater, and graphic illustration. Examples from the career of Alfred Hitchcock.

PHIL 193W. Nietzsche, Doestoevsky, and Sartre. 4 Units.
Literary works in which philosophical ideas and issues are put forward, such as prose poems, novels, and plays. Ideas and issues and the dramatic or narrative structures through which they are presented. Texts include: Nietzsche, *Thus Spoke Zarathustra;* Dostoevsky, *The Brothers Karamazov;* and Sartre, *Nausea* and *No Exit.*.

PHIL 194A. Rationality Over Time. 4 Units.
Our beliefs and intentions seem to be subject to norms of rationality that enjoin consistency and coherence at a given time. Are there also norms of rationality that concern the relations among and changes in our beliefs and intentions over time? What might such norms of rationality over time be, how might we defend them (or argue that they are not defensible), how are they related to norms of rationality at a time, and how does our approach to these rationality norms affect our overall understanding of the kind of thinkers and actors we are? Our focus will be primarily on potential norms of practical rationality concerning intention, but we will also consider potential norms of theoretical rationality concerning belief. We will proceed by studying contemporary work on these issues, including Richard Holton's Willing, Wanting, Waiting.

PHIL 194B. Reason and Passion. 4 Units.
An influential strand of the Western philosophical tradition maintains that human beings are composites of two motivational sources: reason and passion (sometimes called 'feeling,' or 'emotion'). What are the philosophical reasons for positing this division? If there is such a division, how are we to conceive of passion? In what ways is it like and/or unlike reason? In what ways does it interact and/or fail to interact with reason? And how are both sources related to the self as a whole? We will explore these questions by drawing on both classical and contemporary readings.

PHIL 194C. Time and Free Will. 4 Units.
Classic and contemporary reading on free will, with special attention to the consequence argument for incompatibilism, and issues involving causation and time.

PHIL 194D. Capstone Seminar: Artificial Intelligence. 4 Units.
.

PHIL 194E. Ethical Antitheory. 4 Units.
.

PHIL 194F. Capstone seminar: Beauty and Other Forms of Value. 4 Units.
The nature and importance of beauty and our susceptibility to beauty, our capacity to discern it and enjoy it and prize it, as discussed by philosophers, artists, and critics from various traditions and historical periods. Relations between beauty and ethical values (such as moral goodness) and cognitive values (such as truth). Capstone seminar for undergrad majors.

PHIL 194G. Philosophical Issues in Language. 4 Units.
.

PHIL 194H. Capstone Seminar on Justification and Consciousness. 4 Units.
In this seminar we¿ll discuss some central notions of epistemology ¿ in particular: justification, evidence and rationality ¿ and how they connect with the notions of consciousness and reflection. Capstone seminar for the major.

PHIL 194J. Capstone Seminar: Nietzsche. 4 Units.
Undergraduate capstone seminar; preference to philosophy majors and seniors; not appropriate for graduate students. Close study of Nietzsche¿s later works, emphasizing The Gay Science, Beyond Good and Evil, and On the Genealogy of Morality. Focus is on Nietzsche¿s philosophical projects and core doctrines (e.g., will to power, eternal recurrence, perspectivism), as well as broad issues about the role of science, morality, art, and illusion in life. Some attention to Nietzsche¿s literary strategies.

PHIL 194K. Slurs and Derogation: Semantic, Pragmatic and Ethical Perspectives. 4 Units.
Do slurring words differ in semantic character from their so-called neutral counterparts? If so how do we explain the difference in meaning between a slur and its neutral counterpart. Or is slurring better explained by appeal to the resources of pragmatics, speech act theory or sociolinguistics? What is the source of the offensiveness of a slur? How can mere words subordinate and marginalize? We attempt to answer these and other questions about slurs and derogatory language. nA previous course in either the philosophy of language or linguistic semantics or pragmatics is strongly recommended, though students without such background who are willing to do additional reading to fill in gaps in their knowledge are also welcome.

PHIL 194L. Montaigne. 4 Units.
Preference to Philosophy seniors. Philosophical and literary aspects of Montaigne's *Essays* including the nature of the self and self-fashioning, skepticism, fideism, and the nature of Montaigne's philosophical project. Montaigne's development of the essay as a literary genre.

PHIL 194M. Capstone Seminar: Consequences for Ethics. 4 Units.
Should you always do whatever would have the best consequences? Plausibly, if everything else is equal, and the first of your two options will do more good than the second, then you should take the first one. But this principle faces a number of interesting challenges. Studying these challenges will yield insight into the nature of morality. The course is structured around three units. In the first unit we will study the structure of consequentialist ethical views. We will read the work of old dead masters and exciting new theorists. In the second unit we address questions arising from collective action, such as the following: do you have any reason to vote, or recycle, or protest, if your actions by themselves are guaranteed not to make much difference? We will address a related dispute in the philosophy of activism. The third unit addresses the relationship between actions and character. We¿ll address questions such as the following: what¿s so great about abandoning one¿s friends and family to attend to the greater good? Is it a problem if the best moral theory tells us not to follow it? By the end of all this, you will improve your understanding of ethics generally, as well as applications of related principles in economics, political theory, and public policy.

PHIL 194N. Philosophical Issues in Cognitive Science. 4 Units.
Philosophers generally do not perform systematic empirical observations or construct computational models. But philosophy remains important to cognitive science because it deals with fundamental issues that underlie the experimental and computational approach to mind. Abstract questions such as the nature of representation and computation. Relation of mind and body and methodological questions such as the nature of explanations found in cognitive science. Normative questions about how people should think as well as with descriptive ones about how they do. In addition to the theoretical goal of understanding human thinking, cognitive science can have the practical goal of improving it, which requires normative reflection on what we want thinking to be. Philosophy of mind does not have a distinct method, but should share with the best theoretical work in other fields a concern with empirical results.

PHIL 194P. The Meaning of Life. 4 Units.
What makes life meaningful? It's a question that pulls on many, if not most, people, particularly in light of our current global situation; and in this course, we will give this question rigorous consideration. We'll explore matters of identity, authenticity, accomplishment, social connection, love, attention, religion, and happiness. But first, we'll examine whether meaningfulness is a subjective or objective affair. Our readings will primarily be in philosophy, but we will supplement with research in psychology and literary texts.

PHIL 194R. Epistemic Paradoxes. 4 Units.
Paradoxes that arise from concepts of knowledge and rational belief, such as the skeptical paradox, the preface paradox, and Moore¿s paradox. Can one lose knowledge without forgetting anything? Can one change one's mind in a reasonable way without gaining new evidence?.

PHIL 194S. Skepticism. 4 Units.
Modern arguments for skepticism are hard to combat, but also curiously inert in ordinary life. We will look at a variety of contemporary attempts to come to terms with skepticism about the external world, each of which seeks to exploit the curious inertness of skeptical hypotheses.

PHIL 194T. Practical Reason. 4 Units.
Contemporary research on practical reason, practical rationality, and reasons for action. Enrollment limited to 12. Priority given to undergraduate Philosophy majors.

PHIL 194W. Capstone Seminar: Imagination in Fiction and Philosophy. 4 Units.
This course is about imagination in fiction and philosophy. One core set of questions will have to do with our use of the imagination in fiction. Are there limits to the way in which fiction can engage the imagination? If so, are these limits different from general limits on the imagination? Another set of questions is about the nature of imagination and its importance to philosophy. What is imagination? Can it produce knowledge? How is imagination engaged in fictional thought experiments? Readings will include: selections from contemporary analytic philosophy; a few pieces of literary theory; and both contemporary and historical fiction. Students are expected to have general facility with challenging philosophical texts and fiction in English. Knowledge of modal logic will be helpful but not required. Prerequisites: at least one course in the Philosophy department. Course is not repeatable for credit. This is a capstone seminar for philosophy majors and students pursuing the Philosophy & Literature concentration. Other students are welcome to enroll, but preference will be given to students in these groups.

PHIL 194Y. Capstone seminar: Common Sense Philosophy. 4 Units.
.

PHIL 194Z. Capstone: Living a Meaningful Literary Life. 4 Units.
What makes life meaningful? It's a question that pulls on many, if not most, people; and in this course, we will give it rigorous consideration, with a slight twist. Our guiding question will be what makes for a meaningful literary life. In other words, what roll can literature¿its creation, consumption, and contemplation¿play in living a meaningful life? We will consider matters of narrative, identity, self, social connection, empathy, perception, and attention. But first, we'll lay some groundwork with the question of what makes for a meaningful life in general.

PHIL 195A. Unity of Science. 4-5 Units.
Primarily for seniors.

PHIL 195B. Donor Seminar: Practical Reasoning. 4 Units.
Primarily for seniors. Relationships among action, deliberation, reasons, and rationality. On what basis do people decide what to do? What norms or rules structure reasoning? What constitutes rationality?.

PHIL 196. Tutorial, Senior Year. 5 Units.
(Staff).

PHIL 197. Individual Work, Undergraduate. 1-15 Unit.
May be repeated for credit.

PHIL 197C. Curricular Practical Training. 1 Unit.
(Graduate students enroll in 297C) Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. Course may be repeated for credit.

PHIL 198. The Dualist. 1 Unit.
The Dualist brings together people who are passionate about exploring deep philosophical and life questions. As we face these challenging times, The Dualist hopes to continue exploring questions about race, class, and justice through remote discussions. We will focus on building an online community through an online bookclub style of conversations, plus end-of-quarter virtual celebrations (with surprises!). We welcome students from all backgrounds, regardless of your experience with philosophy. If you are interested in joining, contact the instructor to be put on an email list, we are still finalizing the meeting time and the reading list. May be repeated.

PHIL 199. Seminar for Prospective Honors Students. 2 Units.
Open to juniors intending to do honors in philosophy. Methods of research in philosophy. Topics and strategies for completing honors project. May be repeated for credit.

PHIL 201. Introduction to Medieval Philosophy. 4 Units.
This course is an introduction to medieval moral philosophy, broadly construed. In addition to doctrines that we would nowadays readily think of as falling within the domain of ethics, we will be looking at closely related topics that might today be thought to belong more properly to metaphysics, the philosophy of religion, or the philosophy of human nature.
Same as: PHIL 101

PHIL 201B. John Duns Scotus: Politics, Metaphysics & Philosophy of Mind. 1-2 Unit.
Life and an introduction to the difficulties of medieval biography. Franciscanism and Scotus' view on property and ownership. Proofs for the existence of God. Philosophy of mind. Metaphysics in general. Universals, Common natures, Formal Distinction, and Individuation. Formal distinction, individual forms and the precedents for Scotus' view in Richard Rufus.

PHIL 202M. Fichte. 1-2 Unit.
This three-day intensive mini-course will introduce the moral and political thought of Johann Gottlieb Fichte, the founder of the German idealist movement. The topics to be discussed are: Fichte's theory of subjectivity and transcendental idealism; Fichte's defense of radical freedom of the will; Fichte's transcendental deduction of other selves; the relation of right between rational beings and the foundations of political philosophy; Fichte's deduction of the moral law from the absolute freedom of the rational being; the application of the moral law through conscience. No previous acquaintance with Fichte's philosophy will be presupposed.
Same as: PHIL 102M

PHIL 205C. Beauty in Ancient Greek Philosophy. 4 Units.
Beauty occupies a peculiarly central place in ancient Greek philosophical thought, figuring prominently in Plato's and Aristotle's ethics, epistemology, and metaphysics. The ancient conception of beauty is also in various ways at odds with our modern conception: far from being "in the eye of the beholder", ancient philosophers thought of beauty as a paradigm of objectivity, and closely aligned with moral goodness. Why this discrepancy between the ancient and modern conceptions of beauty? And what might the centrality of beauty in ancient thought reveal about ancient ethics, epistemology, and metaphysics? This course is an investigation into these questions, by means of a close reading of the major ancient texts in which beauty appears. Some background in ancient Greek philosophy and/or contemporary aesthetics is preferred, but not required.
Same as: PHIL 105C

PHIL 205R. JUST AND UNJUST WARS. 2 Units.
War is violent, but also a means by which political communities pursue collective interests. When, in light of these features, is the recourse to armed force justified? Pacifists argue that because war is so violent it is never justified, and that there is no such thing as a just war. Realists, in contrast, argue that war is simply a fact of life and not a proper subject for moral judgment, any more than we would judge an attack by a pack of wolves in moral terms. In between is just war theory, which claims that some wars, but not all, are morally justified. We will explore these theories, and will consider how just war theory comports with international law rules governing recourse to force. We will also explore justice in war, that is, the moral and legal rules governing the conduct of war, such as the requirement to avoid targeting non-combatants. Finally, we will consider how war should be terminated; what should be the nature of justified peace? We will critically evaluate the application of just war theory in the context of contemporary security problems, including: (1) transnational conflicts between states and nonstate groups and the so-called "war on terrorism"; (2) civil wars; (3) demands for military intervention to halt humanitarian atrocities taking place in another state. Same as LAW 751.
Same as: ETHICSOC 205R, ETHICSOC 305R, PHIL 305R

PHIL 206. Ancient Greek Skepticism. 4 Units.
The ancient Pyrrhonian skeptics who think that for any claim there is no more reason to assert it than deny it and that a life without any beliefs is the best route to happiness. Some ancient opponents of the Pyrrhonian skeptics and some relations between ancient and modern skepticism.
Same as: PHIL 106

PHIL 207. Plato's Early Dialogues. 4 Units.
We shall read some of the most important and difficult of Plato¿s `early¿ dialogues: the Charmides, parts of the Euthydemus, the Gorgias, the Hippias Minor, the Meno, and the Protagoras. Topics include: the nature of pleasure and its role in the good life, good luck and the good life, self-knowledge, the relation between knowledge and virtue, whether virtue can be taught, learning and recollection, rhetoric, the relations among the virtues, Socratic ignorance, and the Socratic method of the elenchus.
Same as: PHIL 107

PHIL 207A. The Greeks on Irrationality. 2-4 Units.
In this course, we shall examine the views of some central Greek philosophers (Plato, Aristotle, the Epicureans, and the Stoics) on the irrational and non-rational aspects of human life. What makes something irrational and what roles (negative and perhaps positive as well) does the irrational play in our lives? We shall examine their views on anger, fear, madness, love, pleasure and pain, sexual desire and so on. We shall also consider more briefly some depictions of these psychic items in ancient Greek literature.
Same as: PHIL 107A

PHIL 207B. Plato's Later Metaphysics and Epistemology. 4 Units.
A close reading of Plato's Theatetus and Parmenides, his two mature dialogues on the topics of knowledge and reality. We will consider various definitions of knowledge, metaphysical problems about the objects of knowledge, and a proposed method for examining and resolving such problems. Some background in ancient Greek philosophy and/or contemporary metaphysics and epistemology is preferred, but not required. Prerequisite: Phil 80.
Same as: PHIL 107B

PHIL 207C. Plato's Timaeus. 4 Units.
In this course, we will explore the Timaeus, Plato's account of the nature and creation of the universe. This work, from Plato's late period, with its highly notable postulations of the Demiurge and the receptacle, received the place of prominence in the ancient reception of Plato and contains a number of challenges in interpretation for contemporary scholars of Plato. We will carefully examine the work and its contributions to Platonic metaphysics, physics, psychology, teleology, cosmology, and theology. In so doing, we will also consider questions of how we are to understand it as a likely story, its role within the Platonic corpus, and its engagement with pre-existing traditions of Greek natural philosophy.
Same as: PHIL 107C

PHIL 208. Aristotle's Metaphysics Book Alpha. 4 Units.
An introduction both to Aristotle's own metaphysics and to his treatment of his predecessors on causality, included the early Ionian cosmologists, atomism, Pythagoreans, Heraclitus, Parmenides, Empedocles, Anaxagoras and Plato. Prerequisite: one course in ancient Greek philosophy.
Same as: PHIL 108

PHIL 208A. Aristotelian Logic. 2-4 Units.
A careful examination of Aristotle's syllogistic, with special emphasis on the interpretation of his modal syllogistic. This course will serve both as an introduction to ancient term logic and to the difference between sentential modal operators and modal modifiers to the copula. Topics will include the analysis of syllogisms into figures and moods, the reduction of 2nd and 3rd figure syllogisms to the first, the consistency of the modal syllogistic, models for the syllogistic, and de re versus de dicto modalities. For students with at least some introductory background in logic.
Same as: PHIL 108A

PHIL 208B. Aristotle's Physics Book One. 4 Units.
A chapter by chapter analysis of Aristotle's introductory discussions of physical theory. Topics to be considered include Aristotle's treatment of Eleatic monism, the role of opposites in pre-Socratic physics, the role of matter in physics, and an analysis of the elements of changing objects into form, privation and a subject.
Same as: PHIL 108B

PHIL 209. Topics in Ancient Philosophy: Plato and Aristotle on Art and Rhetoric. 4 Units.
Plato's and Aristotle's views on the nature of art and rhetoric and their connections with the emotions, reason and the good life. Readings include Plato's Gorgias, Ion and parts of the Republic and the Laws and Aristotle's Poetics and Rhetoric.
Same as: PHIL 109

PHIL 209A. Special Topics in Ancient Philosophy: Aristotle's Metaphysics Zeta. 4 Units.
.
Same as: PHIL 109A

PHIL 209B. Greek philosophers read their ancestors: Intro to the ancient reception of Presocratic philosophy. 4 Units.
The first Greek philosophers are known to us only through fragments of their original works, generally few in number and transmitted by later authors, as well as through a set of testimonies covering a thousand years and more. Thus it is crucial, in order to understand archaic thought, to get a sense of how they were read by those to whom we owe their transmission. What was their aim, their method, their presuppositions or prejudices?nn The course will employ this perspective to examine authors such as Plato, Aristotle, Theophrastus, Diogenes Laertius, Simplicius ¿ among others. We shall also reflect, on the basis of the paradigmatic case of the Presocratics, on some of the more general problems raised by literary and philosophical approaches to the notion of reception.
Same as: PHIL 109B

PHIL 209C. Aristotle's cosmology and theology. 4 Units.
PHIL 109C/209C now meets in Raubitschek Room, Green Library Room 351. Undergrads please sign up for 109C; grads sign up for 209C.
Same as: PHIL 109C

PHIL 210. Plato's Republic. 4 Units.
We shall examine this complex and fascinating dialogue in detail, comparing it with other relevant Platonic texts, focusing on its ethics, epistemology, metaphysics, and political philosophy. We shall examine the connections that Plato sees between these different areas of philosophy, and consider some of the strengths and weaknesses of his overall argument.
Same as: PHIL 110

PHIL 210C. The Stoics on Freedom and Determinism. 4 Units.
We will investigate ancient Stoic conceptions of causality and freedom, their arguments for causal determinism, and ancient attaches on and defenses of compatibilism.
Same as: PHIL 110C

PHIL 211. Aristotle's Posterior Analytics. 4 Units.
.
Same as: PHIL 111

PHIL 212. Causality in Ancient Greek Philosophy. 4 Units.
.
Same as: PHIL 112

PHIL 212A. Aristotle's metaphysics. 4 Units.
.
Same as: PHIL 112A

PHIL 213. Hellenistic Philosophy. 4 Units.
Epicureans, skeptics, and stoics on epistemology, ethics, metaphysics, and psychology.
Same as: PHIL 113

PHIL 213A. Porphyry's Introduction to Logic. 4 Units.
The main text will be the Isagoge.
Same as: PHIL 113A

PHIL 214A. Ancient Philosophical Methodologies. 4 Units.
In this course, we shall examine the philosophical methodologies that Plato, Aristotle, and the Hellenistics use and advocate. In Plato, we shall consider the elenchus and dialectic, in Aristotle dialectic and science. For the Stoics and Epicureans, we shall focus on the methodological differences that come to light in their epistemological disagreements and in their ethical and metaethical disagreements. For the skeptics, we shall consider whether they have a philosophical methodology at all.
Same as: PHIL 114A

PHIL 215. PreSocratics. 4 Units.
Exploration of the Greek philosophical inquiry undertaken in the roughly two hundred years before Socrates. This Presocratic period saw vibrant and varied treatment of a wide range of areas, including physics, metaphysics, epistemology, cosmology, theology, biology, and ethics. We will proceed chronologically through the major Presocratic philosophers and schools, carefully examining the fragmentary evidence on each and discussing the interpretation of their doctrines from this evidence. Focus will be on the Presocratics in their own right, though their influence upon later thought, especially Plato and Aristotle, will also receive considerable attention. Consideration of how the ideas of the Presocratics were transmitted and manipulated in the ancient tradition, as well as of the nature and development of Western philosophy itself.
Same as: PHIL 115

PHIL 216. Aquinas. 4 Units.
This course is an introduction to the metaphysical thought of St. Thomas Aquinas (1225 - 1274), one of the most important and influential philosopher-theologians of the High Middle Ages. Readings will be drawn primarily from the "Summa theologiae.".
Same as: PHIL 116

PHIL 217. Descartes. 4 Units.
(Formerly 121/221.) Descartes's philosophical writings on rules for the direction of the mind, method, innate ideas and ideas of the senses, mind, God, eternal truths, and the material world.
Same as: PHIL 117

PHIL 217D. Aristotle's De Anima. 4 Units.
.
Same as: PHIL 117D

PHIL 218A. Origins of Empiricism: Gassendi, Locke, and Berkeley. 4 Units.
Particular light is shed on both the strengths and weaknesses of empiricism by studying it as it first arose during the 17th century revolution in philosophy and the sciences initiated by Descartes. Three philosophers of that period helped to advance empiricism: Pierre Gassendi (1592-1655), John Locke (1632-1704), and George Berkeley (1685-1753). A brief introduction to Descartes is followed by Gassendi's reaction to Descartes and his influence on Locke; Locke's theory of ideas, mind, language, reality, and natural philosophy expounded in his An Essay concerning Human Understanding (Fourth Edition, 1689); and Berkeley's later reaction to Locke.
Same as: PHIL 118A

PHIL 219. Rationalists. 4 Units.
Developments in 17th-century continental philosophy. Descartes's views on mind, necessity, and knowledge. Spinoza and Leibniz emphazing their own doctrines and their criticism of their predecessors. Prerequisite: 102.
Same as: PHIL 119

PHIL 220. Leibniz. 4 Units.
A polymath, Leibniz invented the calculus independently of Newton and made major contributions to virtually every science, including logic and computer science. In this course, we investigate Leibniz's philosophical system and its metaphysics: that God created the best of all possible worlds; that humans freely choose actions that are nevertheless pre-established; that space and time are idealizations and `imaginary'; and that true, fundamental reality consists of minds.
Same as: PHIL 120

PHIL 220W. Richard Rufus on Aristotle's Metaphysics: Ontology, Unity, Universals, & Individuation. 1-2 Unit.
Mini-Course taught by Rega Wood in association with Santiago Melo Arias & Professors Alan Code & Calvin Normore. Code, Wood, & Melo Arias have spent the last 6 months intensively studying Richard Rufus of Cornwall's commentary on Aristotle's Metaphysics Zeta, Eta, & Theta. This June we will present Rufus' views on ontology, unity, & universals. There will be 6 two hour sessions on June, 4,5, & 6 (Thurs - Saturday), 10-12 noon , 2-4 pm. Readings will be taken chiefly from Melo Arias' new translations of Rufus' circa 1238 commentary; other readings, from Aristotle and Averroes. We will consider the difference between the treatment of definition, essence and being in logic and in metaphysics, the sense in which accidents have definitions, the unity of genus and differentia in the ndefinitions of substances, the unity of form and proximate matter in hylomorphic compounds, and the unity of the parts of the rational soul. In this context we will discuss the formal distinction pioneered by Rufus as a description of differences in formal predication consistent with real sameness.Richard Rufus was the nfirst Western professor to lecture on Aristotle's metaphysics in Medieval Europe.
Same as: PHIL 120W

PHIL 221. History of Political Philosophy. 4 Units.
Nation-states issue legal commands, and wield overwhelming power to coercively enforce them. On one hand, this allows states to protect people from each other. On the other hand, what protects people from the state, even if is democratic, when it facilitates domination and oppression of some citizens by others? In this course we are introduced to authors grappling with these issues in the evolving canon of Western political philosophy from ancient Greece to the 20th century. This takes us through questions about obligation, the state, consent, rights, democracy, property, free speech, socialism, gender, race. Authors whose arguments we will study and scrutinize include Plato, Hobbes, Locke, Rousseau, Marx, Mill, Wollstonecraft, Douglass, and Rawls, along with critics and commentators.
Same as: ETHICSOC 121, PHIL 121

PHIL 222. Hume. 4 Units.
(Formerly 120/220; graduate students enroll in 222.) Hume's theoretical philosophy, in particular, skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self.
Same as: PHIL 122

PHIL 223. Introduction to Chinese Philosophy. 4 Units.
.
Same as: PHIL 123

PHIL 224. Kant's Philosophy of Physical Science. 2-4 Units.
Kant's *Metaphysical Foundations of Natural Science* (1786), published between the first (1781) and second (1787) editions of the *Critique of Pure Reason,* in the scientific and philosophical context provided by Newtonian natural philosophy and the Leibnizean tradition. The place of this work in the development of Kant's thought. Prerequisite: acquaintance with either Kant's theoretical philosophy or the contemporaneous scientific context, principally Newton, Leibniz, and Euler.

PHIL 224A. Mathematics in Kant's Philosophy. 4 Units.
Recent work in Kant's philosophy of mathematics, examined with a view to the role of mathematics, both pure and applied, within Kant's theory of experience. Particular attention to the Transcendental Deduction and the Categories of Quantity. Prerequisite: prior acquaintance with Kant's theoretical philosophy and the Critique of Pure Reason.

PHIL 225. Kant's First Critique. 4 Units.
(Graduate students register for 225.) The founding work of Kant's critical philosophy emphasizing his contributions to metaphysics and epistemology. His attempts to limit metaphysics to the objects of experience. Prerequisite: course dealing with systematic issues in metaphysics or epistemology, or with the history of modern philosophy.
Same as: PHIL 125

PHIL 226B. Kant's Ethical Theory. 2-4 Units.
(Graduate students register for 226B.) Kant's moral philosophy based primarily on the *Groundwork of Metaphysics of Morals, Critique of Practical Reason,* and *The Metaphysics of Morals.*.
Same as: PHIL 126B

PHIL 227. Kant's Foundations of Morality, 2nd Critique. 4 Units.
(Graduate students enroll in 227.) A study of Kant's ethical thought, focusing on The Groundwork of the Metaphysics of Morals, The Critique of Practical Reason, and The Metaphysics of Morals. Prerequisite: Phil. 2, Phil. 170, or equivalent (consult the instructor). Designed for undergraduate department majors and graduate students.
Same as: PHIL 127

PHIL 227A. Kant's Value Theory. 4 Units.
(Graduate students register for 227A.) The role of autonomy, principled rational self-governance, in Kant's account of the norms to which human beings are answerable as moral agents, citizens, empirical inquirers, and religious believers. Relations between moral values (goodness, rightness) and aesthetic values (beauty, sublimity).
Same as: PHIL 127A

PHIL 227B. Kant's Anthropology and Philosophy of History. 4 Units.
Kant's conception of anthropology or human nature, based on his philosophy of history, which influenced and anticipated 18th- and 19th-century philosophers of history such as Herder, Fichte, Hegel, and Marx. Texts include *Idea for a Universal History, Conjectural Beginning of Human History,* and *Anthropology from a Pragmatic Point of View.* Topics include: Kant's pragmatic approach to the study of human nature; the difficulty of human self knowledge; the role of regulative and teleological principles in studying human history; and Kant's theory of race.
Same as: PHIL 127B

PHIL 227C. Rousseau and Kant. 1-2 Unit.
Kant considered Rousseau ¿the Newton of the moral world.¿ A portrait of Rousseau was reportedly the only decoration in Kant¿s study, and it was Kant¿s reading of Émile, or On Education and On the Social Contract in the early 1760s which, more than anything else, first awakened Kant¿s interest in moral philosophy. In a three-day intensive mini-course, we will explore the relation between Rousseau¿s philosophy and Kant¿s on such topics as the standards of right and virtue, human equality, the relation of reason and feeling in human nature, and the philosophy of history.

PHIL 227M. Richard Rufus of Cornwall. 1-2 Unit.
Metaphysics and Epistemology, readings from Rufus' newly translated Contra Averroem & Speculum animae. In these works, Rufus solves a problem for Aristotelian epistemology that was to bedevil later scolastics such as Thomas Aquinas. He also states for the first time a theory of individuation by form that was subsequently adopted by Duns Scotus. Though Scotus like Rufus preferred to speak of individual forms, the theory itself is often identified by a term very seldom used by Scotus, `haeceitas' or thisness. Taughtly jointly by Rega Wood and Calvin Normore.
Same as: PHIL 127M

PHIL 227W. Introducing Ockham & His Razor: Mind & Metaphysics, Logic, Epistemology, & Ethics. 1-2 Unit.
Three day mini course on topics in Medieval Philosophy. This year's topic is "Introducing Ockham & His Razor: Mind & Metaphysics, Logic, Epistemology, & Ethics." Course runs June 2-4, 2017. Guest lectures by Peter King (Toronto), Elizabeth Karger (CNRS, Paris).n We begin with a general introduction to Ockham's place in the history of philosophy from Democritus to Descartes. Then we turn to Ockham's logic and his most popular work, the Summa logicae. In this connection we will discuss Ockham's distinction between absolute and connotative terms and his theory of supposition, a theory that corresponds roughly to modern reference theory. n On day two we take up Ockham's Epistemology, the distinction he drew between intuitive & abstractive cognition, his approach to problems of certainty and judgment, and his response to skeptical worries. In this connection we will discuss the razor in its application of sensible species. That afternoon our topic will be nominalist metaphysics & the razor as Ockham deploys the principle of parsimony to justify his denial of common natures and his rejection of some of the Aristotelian categories, such as motion and relation. More generally we see an approach to physics with minimal reliance on metaphysics.n Day three begins with philosophy of mind. Here we will see Ockham refusing to posit faculties of will and intellect distinct from the intellective soul itself, while admitting a distinction between the sensitive and intellective souls. The course will close with a discussion of Ockham's ethics and politics. In ethics we will consider the ground of the good and the connection of the virtues; in politics we will focus on property rights, a major source of controversy within the church.n Undergraduates are welcome to take the course, but must have the instructor's permission.

PHIL 228. Fichte's Ethics. 4 Units.
(Graduate students register for 228.) The founder of the German Idealist movement who adopted but revised Kant's project of transcendental philosophy basing it on the principle of awareness of free self-activity. The awareness of other selves and of ethical relations to them as a necessary condition for self-awareness. His writings from 1793-98 emphasizing the place of intersubjectivity in his theory of experience.
Same as: PHIL 128

PHIL 229. Plotinus and Augustine. 3-5 Units.
Professor's permission required to register. A reading course focused on the influence of Plotinus Enneads on Augustine's Confessions, early dialogues, and sections on reason and memory in the De trinitate. Proficiency in Greek and Latin will be helpful but is not required. Professor's prior permission required, interested students should contact the professor about course schedule: tsheehan@stanford.edu . Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: PHIL 329, RELIGST 269, RELIGST 369

PHIL 230. Hegel. 4 Units.
(Formerly 122/222; graduate students register for 230.) Introduction to Hegel's philosophy, emphasizing his moral and political philosophy, through study of his last major work (1821). May be repeated for credit. Prerequisite: course in the history of modern philosophy.
Same as: PHIL 130

PHIL 231W. Kant's Theory of Law and Justice. 1-2 Unit.
This course will look at Kant's theory of right or law (Recht) and its implications for morality and politics. The topics we will discuss are: the difference between right and ethics in Kant¿s metaphysics of morals; the relation of law to property and morality; the moral obligations of politicians as holders of rightful authority; and the standards of right as they apply to international relations and war.
Same as: PHIL 131W

PHIL 232. Phenomenology: Merleau-Ponty. 4 Units.
(Graduate students register for 232.) French philosopher Maurice Merleau-Ponty wrote that we are neither angels nor machines but living beings. In contrast to both a first person introspective analysis and the third person scientific approach, Merleau-Ponty aimed to describe the basic invariant structures of human life by using the phenomenological method. The result was a new concept of experience that is essentially embodied. In this class, you will learn about the phenomenological method and read Merleau-Ponty's now classic text Phenomenology of Perception. Prerequisite: one prior course in Philosophy, or permission of instructor.
Same as: PHIL 132

PHIL 232W. Mini Course: Topics in Kant's Ethics. 1-2 Unit.
This mini-course will deal with several selected topics relating to Kant's ethics: (1) Kant's formulas of the moral law, their meaning and their relation to one another; (2) Kant's concept of imperfect (wide, meritorious) duties and its role in his ethical theory; (3) the place of feeling, emotion, desire and inclination, their relation to our empirical nature and to human reason, in Kant's moral psychology; and (4) the place of duties regarding animals and other non-human beings in Kant's ethical theory. There will be six sessions, each two hours in length. Either the instructor or one of the guest lecturers will be in charge of each session, which will consist in part of a presentation by the person in charge and partly of discussion. Instructor: Allen Wood (Indiana University/Stanford University); guest lecturers: Barbara Herman (UCLA), Janelle DeWitt (Indiana University). Course meets Monday, Tuesday, Wednesday, June 6, 7, 8, 2016. May be repeated for credit.
Same as: PHIL 132W

PHIL 233. Husserl. 4 Units.
Husserl's phenomenology. Main themes in his philosophy and their interconnections, including consciousness, perception, intersubjectivity, lifeworld, ethics, mathematics and the sciences, and time and space. Works in English translation.

PHIL 234. Phenomenology: Husserl. 4 Units.
(Graduate students register for 234.) Neuroscience, psychology, linguistics, artificial intelligence, and other related fields face fundamental obstacles when they turn to the study of the mind. Can there be a rigorous science of us? German philosopher Edmund Husserl (1859-1938), founder of phenomenology, devised a method intended to disclose the basic structures of minds. In this class, we will read one of Husserl's major later works, Cartesian Meditations, as well as companion essays from both his time and ours. A guiding question for us will be how phenomenology is applied outside of philosophy, specifically, how has it influenced discussions of the mind in the sciences? Prerequisite: one prior course in philosophy, or permission of instructor.
Same as: PHIL 134

PHIL 234A. Phenomenology: Animals. 4 Units.
.
Same as: PHIL 134A

PHIL 234B. The Later Heidegger: Art, Poetry, Language. 3 Units.
Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from "On the Origin of the Work of Art" and Elucidations of Holderlin's Poetry.
Same as: RELIGST 277, RELIGST 377

PHIL 235. Existentialism. 4 Units.
Focus is on the existentialist preoccupation with human freedom. What constitutes authentic individuality? What is one's relation to the divine? How can one live a meaningful life? What is the significance of death? A rethinking of the traditional problem of freedom and determinism in readings from Rousseau, Kierkegaard, and Nietzsche, and the extension of these ideas by Sartre, Beauvoir, and Camus, including their social and political consequences in light of 20th-century fascism and feminism.
Same as: PHIL 135

PHIL 236. History of Analytic Philosophy. 4 Units.
(Formerly 147/247; graduate students register for 236.) Theories of knowledge in Frege, Carnap, and Quine. Emphasis is on conceptions of analyticity and treatment of logic and mathematics. Prerequisite: 50 and one course numbered 150-165 or 181-90.
Same as: PHIL 136

PHIL 237. Wittgenstein. 4 Units.
(Graduate students register for 237.) An exploration of Wittgenstein's changing views about meaning, mind, knowledge, and the nature of philosophical perplexity and philosophical insight, focusing on the Tractatus Logico-Philosophicus and Philosophical Investigations.
Same as: PHIL 137

PHIL 238. Recent European Philosophy: Between Nature and History. 4 Units.
A critical introduction to the novel understandings of time, language, and cultural power developed by 20th-century continental thinkers, with close attention to work by Heidegger, Saussure, Benjamin, and Foucault.
Same as: PHIL 138

PHIL 239. Teaching Methods in Philosophy. 1-4 Unit.
For Ph.D. students in their first or second year who are or are about to be teaching assistants for the department. May be repeated for credit.

PHIL 240. Individual Work for Graduate Students. 1-15 Unit.
May be repeated for credit.

PHIL 241. Second Year Paper Development Seminar. 1-4 Unit.
Required of second-year Philosophy Ph.D. students; restricted to Stanford Philosophy Ph.D. students. Prerequisite: consent of instructor. This seminar will focus on helping students complete their second year paper.

PHIL 242. Race, Justice, and Integration. 3 Units.
Recent philosophical research on injustice, race, and the ideal of racial integration.
Same as: AFRICAAM 241, EDUC 241, PHIL 142

PHIL 243. Quine. 4 Units.
(Formerly 183/283; graduate students register for 243.) The philosophy of Quine: meaning and communication; analyticity, modality, reference, and ontology; theory and evidence; naturalism; mind and the mental.
Same as: PHIL 143

PHIL 248. Medieval Latin Paleography. 3-5 Units.
The history of medieval scripts and medieval abbreviation. Dating and placing Latin European medieval manuscripts. Editing medieval texts in philosophy, psychology, physics, and theology. Class project: an early 13th century encyclopedia (with entries citing both Plato and Aristotle). Intellectually exciting, easy to read (textualis script).

PHIL 249. Evidence and Evolution. 3-5 Units.
The logic behind the science. The concept of evidence and how it is used in science with regards to testing claims in evolutionary biology and using tools from probability theory, Bayesian, likelihoodist, and frequentist ideas. Questions about evidence that arise in connection with evolutionary theory. Creationism and intelligent design. Questions that arise in connection with testing hypotheses about adaptation and natural selection and hypotheses about phylogenetic relationships.
Same as: PHIL 349

PHIL 250. Mathematical Logic. 4 Units.
An introduction to the concepts and techniques used in mathematical logic, focusing on propositional, modal, and predicate logic. Highlights connections with philosophy, mathematics, computer science, linguistics, and neighboring fields.
Same as: PHIL 150

PHIL 251. Metalogic. 4 Units.
(Formerly 160A.) The syntax and semantics of sentential and first-order logic. Concepts of model theory. Gödel's completeness theorem and its consequences: the Löwenheim-Skolem theorem and the compactness theorem. Prerequisite: 150 or consent of instructor.
Same as: PHIL 151

PHIL 251A. Recursion Theory. 4 Units.
Computable functions, Turing degrees, generalized computability and definability. "What does it mean for a function from the natural numbers to themselves to be computable?" and "How can noncomputable functions be classified into a hierarchy based on their level of noncomputability?". Theory of relative computability, reducibility notions and degree structures. Prerequisite is PHIL 150, or PHIL 151 or CS 103.
Same as: PHIL 151A

PHIL 252. Computability and Logic. 4 Units.
Approaches to effective computation: recursive functions, register machines, and Turing machines. Proof of their equivalence, discussion of Church's thesis. Elementary recursion theory. These techniques used to prove Gödel's incompleteness theorem for arithmetic, whose technical and philosophical repercussions are surveyed. Prerequisite: 151.
Same as: PHIL 152

PHIL 253L. Computing Machines and Intelligence. 4 Units.
In this course we will explore the central question of what intelligence is by adopting artificial intelligence research as a point of reference. Starting with ideas proposed by Alan Turing in his 1950 paper, we will see what the contemporary interpretations are for those questions, and learn what new questions new technologies have brought. Among the subtopics are: Is it possible for a computer to think? What is thought? Are we computers? Could machines feel emotions or be conscious? Can AI die? Is there a relation between AI and decidability? What is the relationship between AI and Neuroscience Research? nThis course is intended for students of different majors interested in learning how the researchers in AI understand today the concept of intelligent machine, and examine what are the philosophical problems associated with the concept of artificial intelligence.
Same as: PHIL 153L

PHIL 254. Modal Logic. 4 Units.
(Graduate students register for 254.) Syntax and semantics of modal logic and its basic theory: including expressive power, axiomatic completeness, correspondence, and complexity. Applications to topics in philosophy, computer science, mathematics, linguistics, and game theory. Prerequisite: 150 or preferably 151.
Same as: PHIL 154

PHIL 255. Topics in Mathematical Logic: Non-Classical Logic. 4 Units.
This year's topic is Non-Classical Logic. May be repeated for credit.
Same as: PHIL 155

PHIL 256A. Modal Logics - A Modern Perspective. 4 Units.
Modal logic encompasses a rich variety of systems that have been used within philosophy to study such diverse topics as necessity and possibility, knowledge, time, action, and deontology. In recent years modal logic has also found applications outside of philosophy, in mathematics (the study of topology and formal provability) and in computational theory (including knowledge representation and software verification). This course will offer a modern approach to modal logic, covering the classical themes as well as cutting edge approaches and topics, such as hybrid logics and dynamic logics.
Same as: PHIL 156A

PHIL 257. Topics in Philosophy of Logic. 3 Units.
(Graduate students register for 257.) Disputed foundational issues in logic; the question of what the subject matter and boundaries of logic are, such as whether what is called second-order logic should be counted as logic. What is the proper notion of logical consequence? May be repeated for credit. Pre- or corequisite: 151, or consent of instructor.
Same as: PHIL 157

PHIL 258. Topics in Logic: Ten Problems in Deontic Logic. 2 Units.
As witnessed by the handbook of deontic logic and normative systems, the area of deontic logic is in flux. Traditional questions and logical methods of deontic logic are being supplemented by new questions and new techniques. This tutorial gives an introduction to the current discussion in deontic logic. In what sense are obligations different from norms? Jorgensen's dilemma, from preference based modal logic to the modern approach. How to reason about dilemmas, contrary-to-duty and defeasible norms? Distinguishing various kinds of defeasibility. How to relate various kinds of permissive and constitutive norms? Permissions as exceptions and prioritized norms. How do norms relate to other modalities like beliefs, desires, and intentions How do norms change? What is the role of time, action and games in deontic reasoning? For each problem, we discuss traditional as well as new research questions. We see the new questions as good questions for current research, in the sense that they point to modern theories and applications. We are especially interested in new questions that make older traditional questions obsolete in the sense that they are now addressed from a modern perspective, or in a more general setting. This mini-course wil from the week of 15 April through the week of 13 May.
Same as: PHIL 158

PHIL 259. Non-Classical Logic. 4 Units.
This course introduces non-classical extensions and alternatives to classical logic, and the philosophical debates surrounding them. Topics include modal logic (the logic of possibility and necessity), intuitionistic and many-valued logics (in which sentences may be neither true nor false, or both true and false), and relevant logic (which tries to refine the classical concept of entailment to capture the idea that the premises of arguments should be relevant to their conclusions). nnnStudents will learn tableau-style proof theories and Kripke frame semantics for a variety of non-classical logics, and will discuss adjacent philosophical issues, including the nature of necessity and possibility, the metaphysics of ordinary objects and fictional characters, the nature of truth, and the relationship between the world and the logical theories used to describe it.
Same as: PHIL 159

PHIL 260A. Newtonian Revolution. 4 Units.
(Graduate students register for 260A.) 17th-century efforts in science including by Kepler, Galileo, Descartes, and Huygens, that formed the background for and posed the problems addressed in Newton¿s *Principia*.
Same as: PHIL 160A

PHIL 260B. Newtonian Revolution. 4 Units.
(Graduate students register for 260B.) Newton¿s *Principia* in its historical context, emphasizing how it produced a revolution in the conduct of empirical research and in standards of evidence in science.
Same as: PHIL 160B

PHIL 262. Philosophy of Mathematics. 4 Units.
Prerequisite: PHIL150 or consent of instructor.
Same as: PHIL 162

PHIL 263. Significant Figures in Philosophy of Science: Einstein. 4 Units.
(Graduate students register for 263.)nThe influences of Hertz, Boltzmann, Mach and Planck on the development of Einstein's philosophical views regarding the scope and limits of physical theory. The distinction between principle theories and constructive theories from Poincaré and Lorentz, to Einstein. The impact of special and general relativity on logical empiricism. How Einstein's views changed in response to two core challenges, the advent of quantum mechanics and his three-decades long failure to extend general relativity to a "theory of the total field". We conclude by considering the lasting impact of Einstein's philosophical views, and whether they can be assimilated to contemporary currents in philosophy of science.nnPREREQUISITES: No detailed knowledge of physics or mathematics is presumed. Some background in philosophy, natural science or mathematics will be helpful. Students will benefit from possession of a modicum of mathematical maturity (roughly equivalent to a familiarity with elementary single-variable calculus or the metatheory of first-order logic).
Same as: PHIL 163

PHIL 264. Central Topics in the Philosophy of Science: Theory and Evidence. 4 Units.
(Graduate students register for 264.) Is reductionism opposed to emergence? Are they compatible? If so, how or in what sense? We consider methodological, epistemological, logical and metaphysical dimensions of contemporary discussions of reductionism and emergence in physics, in the ¿sciences of complexity¿, and in philosophy of mind.
Same as: PHIL 164

PHIL 264A. Central Topics in Philosophy of Science: Causation. 4 Units.
(Graduate Students register for 264A.) Establishing causes in science, engineering, and medicine versus establishing them in Anglo-American law, considered in the context of Hume and Mill on causation. May be repeated for credit.
Same as: PHIL 164A

PHIL 265. Philosophy of Physics: Space and Time. 4 Units.
Graduate students register for 265.nnPREREQUISITES: No detailed knowledge of quantum physics or advanced mathematics is presumed. Some background in philosophy, natural science or mathematics will be helpful. Students will benefit from possession of a modicum of mathematical maturity (roughly equivalent to a familiarity with elementary single-variable calculus or the metatheory of first-order logic).
Same as: PHIL 165

PHIL 265C. Philosophy of Physics: Probability and Relativity. 4 Units.
Conceptual puzzles in formulating probability concepts to be invariant in the sense of the Lorentz transformation of special relativity. Problems arise in both classical and quantum physics.

PHIL 266. Probability: Ten Great Ideas About Chance. 4 Units.
Foundational approaches to thinking about chance in matters such as gambling, the law, and everyday affairs. Topics include: chance and decisions; the mathematics of chance; frequencies, symmetry, and chance; Bayes great idea; chance and psychology; misuses of chance; and harnessing chance. Emphasis is on the philosophical underpinnings and problems. Prerequisite: exposure to probability or a first course in statistics at the level of STATS 60 or 116.
Same as: PHIL 166, STATS 167, STATS 267

PHIL 266A. Foundations of Quantum Mechanics. 4 Units.
This seminar will concentrate on a variety of probability questions that arise in quantum mechanics, including some from recent experiments. Negative probabilities and nonmonotonic upper probabilities will be emphasized.
Same as: PHIL 166A

PHIL 267A. Philosophy of Biology. 4 Units.
(Graduate students register for 267A.) Evolutionary theory and in particular, on characterizing natural selection and how it operates. We examine debates about fitness, whether selection is a cause or force, the levels at which selection operates, and whether cultural evolution is a Darwinian process. Prerequisites: one PHIL course and either one BIO course or Human Biology core; or equivalent with consent of instructor.
Same as: PHIL 167A

PHIL 267B. Philosophy, Biology, and Behavior. 4 Units.
(Graduate Students register for 267B) Philosophical study of key theoretical ideas in biology as deployed in the study of behavior. Topics to include genetic, neurobiological, ecological approaches to behavior; the classification and measurement of behaviors: reductionism, determinism, interactionism. Prerequisites: one PHIL course and either one BIO course or Human Biology core; or equivalent with consent of instructor.
Same as: PHIL 167B

PHIL 267C. Associative Theories of Mind and Brain. 4 Units.
After a historical survey of associative theories from Hume to William James, current versions will be analyzed including the important early ideas of Karl Lashley. Emphasis will be on the computational power of associative networks and their realization in the brain.
Same as: PHIL 167C

PHIL 267D. Philosophy of Neuroscience. 4 Units.
How can we explain the mind? With approaches ranging from computational models to cellular-level characterizations of neural responses to the characterization of behavior, neuroscience aims to explain how we see, think, decide, and even feel. While these approaches have been highly successful in answering some kinds of questions, they have resulted in surprisingly little progress in others. We'll look at the relationships between the neuroscientific enterprise, philosophical investigations of the nature of the mind, and our everyday experiences as creatures with minds. Prerequisite: PHIL 80.n(Not open to freshmen.).
Same as: PHIL 167D, SYMSYS 167D

PHIL 267E. Topics in Philosophy of Neuroscience. 4 Units.
.
Same as: PHIL 167E

PHIL 267M. Evolutionary Contingency. 4 Units.
This course explores evolutionary contingency¿the role of dependency relations and chance in the history of life. Topics to be explored will include some work by Stephen Jay Gould in addition to philosophical debates concerning modal and process-based approaches to chance in evolution. Our investigation of contingency will be set against background issues concerning evolutionary convergences, inevitability, panselectionism, (in)determinism, and the usefulness of narrative explanations in this context.
Same as: PHIL 167M

PHIL 268M. Biological Individuality. 4 Units.
Our intuitions about the nature of organisms and of individuals are challenged by numerous puzzle cases in recent biological science. The nature of individuals is of long-standing interest in philosophy (as well as in different branches of the sciences). However, ideas of biological individuality have been challenged by developments in a variety of subfields of biology, and related areas including, for example, evolutionary biology, developmental biology, microbiology, and immunology. These challenges invite us to present a traditional philosophical thread discussion with new and exciting puzzles. In this course, we will read and discuss papers and book excerpts from both historical and contemporary authors working on biological individuality, which is often spearheaded by the use of case studies. The course will begin with a select history of how the particular problem(s) of biological individuality developed. Having established a shared understanding of the range of questions and perspectives available, students will gain a common language to communicate about this topic with those working in other fields. A background in biology is not necessary to take this course, and we will only visit traditional philosophical conceptions of individuality insofar as they are illuminating for the cases and readings we cover. Students are welcome from the humanities and sciences alike with the opportunity to come together over a philosophical topic that has consequences both within philosophy and beyond.
Same as: PHIL 168M

PHIL 269. Evolution of the Social Contract. 4 Units.
Explore naturalizing the social contract. Classroom presentations and term papers.nTexts: Binmore - Natural Justicen Skyrms - Evolution of the Social Contract.
Same as: PHIL 169

PHIL 269M. Topics in 18th Century Natural Philosophy: Virtues and Technology. 4 Units.
This course will be an introduction to the eighteenth-century history of ideas and philosophy, dealing primarily with questions encountered in natural philosophy: nWhat is the proper method of natural philosophy? What role do hypotheses play in physical theorizing? nWhat is the nature of space, time, matter and force? nWhat are the metaphysical and methodological frameworks of the Newtonian project of universal gravitation? nWhat kinds of intelligibility does mathematics bring to natural philosophy?nThis course is focused on questions, problems, and developments in the mathematical and exact sciences and experimental physics, and only briefly touches subjects in chemistry, natural history, physiology and moral sciences. Topic for 2020-21: Virtues and Technology.
Same as: PHIL 169M

PHIL 270. Ethical Theory. 4 Units.
This course explores some major topics/themes in ethical theory from the middle of the 20th century through the present. We'll read philosophy by John Rawls, Thomas Nagel, Bernard Williams, Christine Korsgaard, G.E.M. Anscombe, Philipa Foot, and others. Substantial background in moral philosophy will be assumed. Students should have completed Philosophy 2 (or its equivalent ¿ if you have questions, please contact the instructor).
Same as: ETHICSOC 170, PHIL 170

PHIL 270B. Metaphor. 4 Units.
In metaphor we think and talk about two things at once: two different subject matters are mingled to rich and unpredictable effect. A close critical study of the main modern accounts of metaphor's nature and interest, drawing on the work of writers, linguists, philosophers, and literary critics. Attention to how understanding, appreciation, and pleasure connect with one another in the experience of metaphor. Consideration of the possibility that metaphor or something very like it occurs in nonverbal media: gesture, dance, painting, music.
Same as: PHIL 170B

PHIL 270D. Trust and Trustworthiness. 4 Units.
An exploration of the place of interpersonal trust in ethical thought. What is it to trust another person? How is trusting related to, though different from, other attitudes we sometimes bear towards others (e.g. justified beliefs we form about others and their conduct; ethically significant expectations we have of others, etc.)? What is involved in acquiring/possessing the virtue of trustworthiness? How should trust (and trustworthiness) figure in our thinking about important ethical activities, for example promising, friendship, or the practice of politics?.
Same as: PHIL 170D

PHIL 270E. Sexual Ethics. 4 Units.
What is sex? What are the implications of different conceptions of sex for sexual ethics? Are there any distinctively sexual ethical principles or virtues or are principles and virtues that govern the sexual domain specific instances of principles and virtues that govern human activity more generally? Readings will range from historical to contemporary sources.

PHIL 271T. History of Ethics: Central Questions in Modern Ethical Theory. 2-3 Units.
Hobbes marks the beginning of a period of intensive discussion and debate among moral philosophers writing (mainly) in English. His successors argue about questions that are still among the primary questions in ethical theory: n1. The nature of moral judgments: metaphysical questions. nWhen we say, and sometimes claim to know, that an action is right, or a person is good, what sort of judgment is this? We often say they are true or false, but are we entitled to say so? If they are true, what sort of fact about the objective world makes them true? If no fact about the objective world makes them true, then what makes them true? n2. Moral knowledge: epistemological questions. nIf we sometimes know that a moral judgment is true or false, how do we know? Can we rely on anything analogous to perception (a moral sense)? What is the role of reason in moral judgments?n3. The practical function of moral judgments. nMoral judgments are practical, in so far as we make them with the intention of guiding our own action, when we try to make our mind up about the right thing to do, or of guiding other people's action, when we offer advice or criticism. Moreover, they engage our feelings, emotions, affections, and sentiments, not simply our rational capacities. What difference should this function of moral judgments make to our answers to the previous two questions? n4. The content of morality: normative questions. n(1) Can we derive the whole content of morality from enlightened self-interest? Are the principles underlying rational prudence the only ones we need if we are to understand morality? n(2) Can we derive morality from benevolence, understanding moral principles as simply the product of this sentiment? (3) Can we take moral principles to be various ways of promoting utility - the maximum happiness of all those affected by an action? n5. The justification of morality. nWhy should we care about morality? We might appeal to (1) self-interest; (2) sentiments, especially sympathy; (3) rational principles. nWe will discuss (1) The modification and elaboration of Hobbes's account of morality by Hume. n(2) The alternative to Hobbes that is developed by Butler, Price, and Reid. n(3) Kant's response to this debate among his predecessors.n(4) Sidgwick's attempt to reconcile elements of these different views.nThis course begins on January 28, and ends on March 13. May be repeated for credit. 2 unit option available only to PhD students beyond the second year. Undergraduates wishing to take this course must have taken a previous Philosophy course and have the permission of the instructor.

PHIL 272. History of Modern Moral Philosophy. 4 Units.
prerequisites: Phil 2 and Phil 80. Grads enroll in 272.
Same as: ETHICSOC 172, PHIL 172

PHIL 272B. Recent Ethical Theory: Moral Obligation. 4 Units.
Some moral obligations are "relational," "directional," or "bipolar" in structure: in promising you to act in a certain way, for example, I incur an obligation to you to so act and you acquire a corresponding claim or right against me that I so act. This entails that if I violate my obligation to you, I will not merely be doing something that is morally wrong, but will be wronging you in particular. What does explain this? Do all moral obligations have this structure? We will discuss how different moral theories (consequentialist, deontological, contractualist) try to account for such obligations. Readings include Adams, Anscombe, Darwall, Feinberg, Hart, Parfit, Raz, Scanlon, Skorupski, Thompson, Thomson, Wallace, and Wolf.
Same as: PHIL 172B

PHIL 272D. Bernard Williams. 4 Units.
An exploration of some central themes from the work of Bernard Williams. Particular attention will be paid to his discussion of the character and identity of the self, his sustained critique of morality and moral philosophy. We will also read several of Williams¿ interlocutors, including Nagel, Parfit, Korsgaard, and Herman.
Same as: PHIL 172D

PHIL 272N. Prudence and Morality. 4 Units.
We sometimes think we should do something just because it will benefit us in the future, even though we don¿t particularly feel like doing it now (e.g. we exercise, go to the dentist for a check-up, or set aside money for retirement). And we sometimes think we should do something for the sake of another person, even when it is inconvenient, costly, or unpleasant (e.g. we stop to help a stranded motorist, donate to charity, or tell someone an embarrassing truth rather than a face-saving lie). When we do the former, we act prudently. When we do the latter, we act morally. This course explores the debate among philosophers about the source of our reasons for acting prudently and morally. Some argue that our reasons to be prudent and moral stem directly from the fact that we are rational ¿ that it is contrary to reason to ignore our own future interests, or the interests of other people. Others disagree, arguing that the source of these reasons must lie elsewhere. Course readings will include work by Thomas Nagel, Bernard Williams, Christine Korsgaard, Derek Parfit, Philippa Foot, and others.
Same as: PHIL 172N

PHIL 272V. Virtue Ethics. 4 Units.
In recent years virtue ethics has emerged as a challenger to Kantian and utilitarian moral theories. In this course, we shall examine some of the leading contemporary virtue theorists and their critics. We shall consider how to define the virtues, the relation between virtue and right action and action guidance, the relation between virtue and happiness and criticisms made of virtue theory based on contemporary psychology. Authors to be read include GEM Anscombe, Julia Annas, John Doris, Philippa Foot, Gilbert Harman, Tom Hurka, Rosalind Hursthouse, Michael Slote, Christine Swanton and Bernard Williams.
Same as: PHIL 172V

PHIL 273B. Metaethics. 2-4 Units.
This is a graduate student only introduction to contemporary metaethics. Can moral and ethical values be justified or is it just a matter of opinion? Is there a difference between facts and values? Are there any moral truths? Does it matter if there are not? Focus is not on which things or actions are valuable or morally right, but what is value or rightness itself. Prerequisites: graduate standing and PHIL 281, and an ethics course.

PHIL 273W. Aesthetics. 4 Units.
This course will investigate a cluster of varied but related philosophical issues concerning the arts - music, painting, literature, poetry, photography, theater, film, etc.- issues most of which are, at the same time, problems in philosophy of mind or language, value theory, or epistemology. We will address questions like the following (though probably not all of them): What, if anything, is distinctive about art and aesthetic experience?, What is aesthetic value, and how do aesthetic values relate to and interact with moral values and values of other kinds?, What is fiction and why are people interested in it?, In what ways are works of art expressive of feelings or emotions? What similarities and differences are there in the expressive qualities of music, literature, painting, poetry? How might we learn from works of art of one or another kind, and how might they work to change people's perspectives or attitudes?, In what ways do artworks serve as vehicles of communication? Are the values of works of art fundamentally different from those of beautiful natural objects? Along the way, we will bump into more specific questions such as: Why and in what ways is photography more (or less) 'realistic' than painting and drawing, or more or less revealing of reality? Does (instrumental) music have cognitive or semantic content? Is music representational in anything like the ways literature and figurative painting are?, Do all literary works have narrators? Is there ever (or always?) anything like narrators in paintings, films, music? Prerequisite: One course in philosophy, or permission of the instructor.
Same as: PHIL 173W

PHIL 274. Freedom and the Practical Standpoint. 4 Units.
(Graduate students register for 274.) Confronted with the question of how to act, people think of themselves as freely determining their own conduct. Natural science poses a challenge to this by explaining all events, including human actions, in terms of causal processes. Are people justified in thinking of themselves as free? Major philosophical approaches to this question: incompatibilism, compatibilism, and the two-standpoint view.
Same as: PHIL 174

PHIL 274B. Universal Basic Income: the philosophy behind the proposal. 3 Units.
Universal basic income (or UBI) is a regular cash allowance given to all members of a community without means test, regardless of personal desert, and with no strings attached. Once a utopian proposal, the policy is now discussed and piloted throughout the world. The growth of income and wealth inequalities, the precariousness of labor, and the persistence of abject poverty have all been important drivers of renewed interest in UBI in the United States. But it is without a doubt the fear that automation may displace workers from the labor market at unprecedented rates that explains the revival of the policy in recent years, including by many in or around Silicon Valley. Among the various objections to the proposal, one concerns its moral adequacy: Isn't it fundamentally unjust to give cash to all indiscriminately rather than to those who need it and deserve it? Over the years, a variety of scholars have defended the policy on moral grounds, arguing that UBI is a tool of equality, liberal freedom, republican freedom, gender equity, or racial equity. Many others have attacked UBI on those very same grounds, making the case that alternative policy proposals like the job guarantee, means-tested benefits, conditional benefits, or reparations should be preferred. Students will learn a great deal about political theory and ethics in general but always through the specific angle of the policy proposal, and they will become experts on the philosophy, politics and economics of UBI. The seminar is open to undergraduate and graduate students in all departments. There are no pre-requisites.
Same as: ETHICSOC 174B, ETHICSOC 274B, PHIL 174B, POLISCI 134E, POLISCI 338

PHIL 274C. On What Is Intolerable. 4 Units.
Moral and political philosophy often focuses on ideals we should aspire to and principles we should follow. Yet individuals and societies almost invariably fall short of these ideals and principles. Unless you are a fundamentalist or a relentless perfectionist, you tolerate these failures. That is, you tolerate them to a point. This point will be the topic of our course: how badly may we fail? How far short of the ideal is too far? We will be concerned with that which is not merely bad, unjustified, wrong, or unjust, but which is intolerably so. Examples include: intolerable injustice, rotten compromises, unconscionable contracts, dirty hands, unjust wars, personal failures, grief, desperation, betrayal, and humiliation. Just as important, we will ask: how should we respond to the intolerable? Should intolerably unjust political institutions be met with disobedience, or perhaps rebellion? When we emerge from grief to continue with our lives, do we thereby accept our loss as tolerable? Can we ever forgive without forgetting the severity of the wrong done to us and the harm we suffered? We will draw on thinkers such as Kierkegaard, Nietzsche, Du Bois, and Baldwin, as well as contemporary moral and political philosophers, such as John Rawls, Thomas Nagel, Bernard Williams, Alexander Nehamas, Jonathan Lear, and others.
Same as: PHIL 174C

PHIL 274D. Moral Luck. 4 Units.
We draw a fundamental distinction between what a person voluntarily does, and what is beyond her control. Such a distinction seems central to how we think about what it is to justify our actions (whether to ourselves or to one another), as well as to our practice of holding one another morally responsible for what we do. Yet under pressure, this distinction can appear to collapse ¿ we find that we cannot successfully disentangle what a person controls from what she does not when she acts. This course examines this problem in depth, and considers how we might respond in the face of it: Is it really a problem? If so, does it threaten our moral practices? How should it influence the way in which we make choices, or the way we understand those choices once we¿ve made them?.
Same as: PHIL 174D

PHIL 274E. Egalitarianism: A course on the history and theory of egalitarianism and anti-egalitarianism. 4 Units.
Egalitarianism is a conception of justice that takes the value of equality to be of primary political and moral importance. There are many different ways to be an egalitarian - it all depends on what we take to be the currency of egalitarian justice. Are we trying to equalize basic rights and liberties, or resources, opportunities, positions, status, respect, welfare, or capabilities? Is equality really what we should try to achieve in a just society? Or should we just make sure everyone has enough? Why do egalitarians think that such society would still be unjust; and how do they proceed to argue for equality?nnThis class will introduce students to egalitarian and anti-egalitarian thought by looking both at the history of egalitarian thinking and at contemporary accounts in defense of equality. It will provide an in depth introduction to the concepts that are used when inequalities are discussed by philosophers, economists, scientists and politicians. The class will attest of the varieties of approaches and perspectives to equality. For instance, we will learn from the 19th century debate on racial inequalities to understand how anti-egalitarian discourses are constructed; we will look into Rousseau's conception of social equality in the Second Discourse and the Social Contract; and we will engage with contemporary egalitarian theories by studying Rawlsian and post-Rawlsian forms of egalitarianism.
Same as: ETHICSOC 174E, PHIL 174E, POLISCI 138E

PHIL 274L. Betrayal and Loyalty, Treason and Trust. 2 Units.
The main topic of the seminar is Betrayal: its meaning as well as its moral, legal and political implications. We shall discuss various notions of betrayal: Political (military) betrayal such as treason, Religious betrayal with Judas as its emblem, but also apostasy (converting one's religion) which is regarded both as a basic human right and also as an act of betrayal, social betrayal - betraying class solidarity as well as Ideological betrayal - betraying a cause. On top of political betrayal we shall deal with personal betrayal, especially in the form of infidelity and in the form of financial betrayal of the kind performed by Madoff. The contrasting notions to betrayal, especially loyalty and trust, will get special consideration so as to shed light or cast shadow, as the case may be, on the idea of betrayal. The seminar will focus not only on the normative aspect of betrayal - moral or legal, but also on the psychological motivations for betraying others. The seminar will revolve around glaring historical examples of betrayal but also use informed fictional novels, plays and movies from Shakespeare and Pinter, to John Le Carre. SAME AS LAW 520.
Same as: ETHICSOC 174L, ETHICSOC 274L, PHIL 174L

PHIL 275. Philosophy of Law. 4 Units.
This course will explore foundational issues about the nature of law and its relation to morality, and about legal responsibility and criminal punishment. Prerequisite: graduate student standing in philosophy or, for others, prior course work in philosophy that includes Philosophy 80.
Same as: ETHICSOC 175B, PHIL 175

PHIL 275A. Ethics and Politics of Public Service. 3-5 Units.
Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.
Same as: CSRE 178, ETHICSOC 133, PHIL 175A, POLISCI 133, PUBLPOL 103D, URBANST 122

PHIL 275B. Philosophy of Public Policy. 4 Units.
From healthcare to voting reforms, social protection and educational policies, public policies are underpinned by moral values. When we debate those policies, we typically appeal to values like justice, fairness, equality, freedom, privacy, and safety. A proper understanding of those values, what they mean, how they may conflict, and how they can be weighed against each other is essential to developing a competent and critical eye on our complex political world. We will ask questions such as: Is compulsory voting justified? Should children have the right to vote? Is affirmative action just? What is wrong with racial profiling? What are the duties of citizens of affluent countries towards migrants? Do we have a right to privacy? Is giving cash to all unconditionally fair? This class will introduce students to a number of methods and frameworks coming out of ethics and political philosophy and will give students a lot of time to practice ethically informed debates on public policies. At the end of this class, students should have the skills to critically examine a wide range of diverse policy proposals from the perspective of ethics, moral and political philosophy. There are no prerequisites. Undergraduates and graduates from all departments are welcome to attend.
Same as: ETHICSOC 175X, PHIL 175B, POLISCI 135E, POLISCI 235E, PUBLPOL 177

PHIL 275D. Capitalism and Virtue. 4 Units.
This class addresses the ethics of production and consumption. We start by introducing the basic concepts for studying the ethics of market participation ¿ property rights, prices, efficiency, means of production, etc, as well as some more theoretical issues: invisible hand explanations, Hayek¿s knowledge problem, the basic welfare theorems. Then we will address questions such as the following: Does market participate encourage vice? Virtue? Alienation? Exploitation? How should we think about virtue if profit-maximising behavour is in everyone¿s interest? How should we weigh the promotion of vice against the promotion of benefits? Should there be `social spheres¿ that are isolated from market transactions? What is the broader relationship between the ethics of markets and distributive justice?.
Same as: PHIL 175D

PHIL 275M. Two Ethical Theories and Being a Person. 4 Units.
The distinction between the ethics of being a person and the ethics of rules as opposed to the distinction between Kantian ethics and utilitarianism or consequentialism consequentialism. Comparison of these two types of ethics with respect to their relationship to agency and being a good person. Relations between Western ethics and those of other continents.
Same as: PHIL 175M

PHIL 275P. Philosophy of Law and Conceptions of Agency. 4 Units.
In this course we will explore the connections between recent work in philosophy of law and philosophy of action. Current philosophy of law draws on philosophy of action. One example is the work of Scott Shapiro, who interprets legal activity as a form of social planning that enables citizens to coordinate their activities as agents. We will consider what normative requirements are necessary to make citizens self-legislating autonomous agents. Are formal requirements like consistency and coherence sufficient, or does law have to meet substantial normative and moral requirements? We will also discuss whether the deficiency of ¿evil legal systems¿ can be explained in terms of agency. Can distorted legal system provide agents a coherent form of self-understanding? We will explore these questions through readings by Scott Shapiro, Ronald Dworkin, Lon F. Fuller, David Dyzenhaus, Kristen Rundle, Michael Bratman, David Velleman, and Christine Korsgaard.
Same as: PHIL 175P

PHIL 275W. Philosophy of Law: Protest, Punishment, and Racial Justice. 4 Units.
In this course, we will examine some of the central questions in philosophy of law, including: What is law? What gives law its authority? Must we obey the law? If so, when and why? How should we understand and respond to unjust laws? When is civil disobedience morally permissible? Is civil disobedience ever morally required?nWhat is punishment for? What are prisons for? What is the case for reparations?.
Same as: CSRE 175W, ETHICSOC 175W, PHIL 175W

PHIL 276. Political Philosophy: The Social Contract Tradition. 4 Units.
(Graduate students register for 276.) What makes political institutions legitimate? What makes them just? When do citizens have a right to revolt against those who rule over them? Which of our fellow citizens must we tolerate?Surprisingly, the answers given by some of the most prominent modern philosophers turn on the idea of a social contract. We will focus on the work of Hobbes, Locke, Rousseau, and Rawls.
Same as: ETHICSOC 176, PHIL 176, POLISCI 137A, POLISCI 337A

PHIL 276A. Classical Seminar: Origins of Political Thought. 3-5 Units.
Political philosophy in classical antiquity, centered on reading canonical works of Thucydides, Plato, Aristotle against other texts and against the political and historical background. Topics include: interdependence, legitimacy, justice; political obligation, citizenship, and leadership; origins and development of democracy; law, civic strife, and constitutional change.
Same as: CLASSICS 181, CLASSICS 381, ETHICSOC 130A, PHIL 176A, POLISCI 230A, POLISCI 330A

PHIL 276B. The Economic Individual in the Behavioral Sciences. 4 Units.
(Graduate students register for 276B.).
Same as: PHIL 176B

PHIL 276D. Origins of Political Thought. 3-5 Units.
Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change. This course is open to PhD students only. Non-PhD students should enroll in POLISCI 230A/330A (also listed as CLASSICS 181/381, PHIL 176A/276A) Classical Seminar: Origins of Political Thought.
Same as: CLASSICS 390, POLISCI 430

PHIL 277B. EMOTIONS: MORALITY AND LAW. 2 Units.
If emotions are the stuff of life, some emotions are the stuff of our moral and legal life. Emotions such as: guilt, shame, revenge, indignation, resentment, disgust, envy, jealousy and humiliation, along with forgiveness, compassion, pity, mercy and patriotism, play a central role in our moral and legal life. The course is about these emotions, their meaning and role in morality and law. Issues such as the relationship between punishment and revenge, or between envy and equality, or St. Paul¿s contrast between law and love, or Nietzsche¿s idea that resentment is what feeds morality, will be discussed alongside other intriguing topics.
Same as: ETHICSOC 202, ETHICSOC 302, PHIL 177B

PHIL 277C. Ethics of Climate Change. 4 Units.
Climate change is an ethical failure. When we cause greenhouse gas to be emitted for our own benefit, the gas spreads around the world and does harm everywhere. Many of those who are harmed emit very little greenhouse gas themselves. When some people harm others for their own benefit, something is morally wrong. Specifically, there is an injustice. One of the ethical problems raised by climate change is how to rectify this injustice. Climate change also raises a different range of ethical questions, which may be classified as questions of value. For example, in making decisions, how should the distant future be valued in comparison with the present and how should we take account of the great loss of human life that climate change will cause? This course investigates the issues of justice and the issues of value. It considers the moral demands that climate change puts both on private individuals and on public institutions. Because the effects of climate change are so widespread and so complex, the methods of economics can be useful in putting ethical principles into effect. The course will therefore assess some of these methods.
Same as: PHIL 177C

PHIL 277W. Human Rights. 4 Units.
In this course we will think critically about human rights by evaluating complex moral situations and weighing powerful but opposed arguments. In our discussions we will explore a variety of alleged human rights and ask: Which of these is really a human right? What could the justification of human rights be? If some right is a real human right, what exactly does it require of us and others? Are there really any human rights at all, or are human rights just another means for Western societies to impose their way of life on the rest of the world? What is a human right? Case studies will include the death penalty, democratic participation, gay rights and duties of corporations to respect human rights.
Same as: PHIL 177W

PHIL 278C. Free Speech, Academic Freedom, and Democracy. 3 Units.
The course examines connected ideas of free speech, academic freedom, and democratic legitimacy that are still widely shared by many of us but have been subject to skeptical pressures both outside and inside the academy in recent years. The course explores the principled basis of these ideas, how well they might (or might not) be defended against skeptical challenge, and how they might be applied in particular controversies about the rights of students, instructors, and researchers.
Same as: EDUC 217, ETHICSOC 217X

PHIL 278M. Introduction to Environmental Ethics. 4-5 Units.
How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism.
Same as: ETHICSOC 178M, ETHICSOC 278M, PHIL 178M, POLISCI 134L

PHIL 279A. Feminist and Queer Theories and Methods Across the Disciplines. 2-5 Units.
(Graduate Students register for PHIL 279A or FEMGEN 203) This course is an opportunity to explore the difference feminist and queer perspectives make in creative arts, humanities, and social science research.nPrerequisites: Feminist Studies 101 or equivalent with consent of instructor.nNOTE: This course must be taken for a letter grade and a minimum of 3 units to be eligible for WAYS credit. The 2 unit option is for graduate students only.
Same as: FEMGEN 103, FEMGEN 203, PHIL 179A

PHIL 279S. Moral Psychology, Reasons for Action, and Moral Theory. 4 Units.
What sorts of considerations does an ethical agent take to be good reasons for action? Work in moral psychology to illuminate the theory of practical reasons, and the theory of practical reasons to test the prospects for systematic moral theory. Can any systematic moral theory be reconciled with the moral psychology of ordinary, morally respectable agents? Reading include Bernard Williams, Rosalind Hursthouse, Peter Railton, T.M. Scanlon, and Barbara Herman.
Same as: PHIL 179S

PHIL 279W. Du Bois and Democracy. 4 Units.
In this course, we will work together to develop a detailed and comprehensive understanding of the political philosophy of W. E. B. Du Bois, giving special attention to the development of his democratic theory. We will do so by reading a number of key texts by Du Bois as well as contemporary scholarship from philosophy and cognate fields.
Same as: CSRE 179W, ETHICSOC 179W, PHIL 179W

PHIL 280A. Realism, Anti-Realism, Irrealism, Quasi-Realism. 4 Units.
Realism and its opponents as options across a variety of different domains: natural science, mathematics, ethics, and aesthetics. Clarify the various conceptions that fall under these terms and outline the reasons for and against adopting realism for the various domains. Highlight the general issues involved. Prerequisites: 80, 181.
Same as: PHIL 180A

PHIL 281. Philosophy of Language. 4 Units.
The study of conceptual questions about language as a focus of contemporary philosophy for its inherent interest and because philosophers see questions about language as behind perennial questions in other areas of philosophy including epistemology, philosophy of science, metaphysics, and ethics. Key concepts and debates about the notions of meaning, truth, reference, and language use, with relations to psycholinguistics and formal semantics. Readings from philosophers such as Frege, Russell, Wittgenstein, Grice, and Kripke. Prerequisites: 80 and background in logic.
Same as: PHIL 181

PHIL 281B. Topics in Philosophy of Language. 4 Units.
This course builds on the material of 181/281, focusing on debates and developments in the pragmatics of conversation, the semantics/pragmatics distinction, the contextuality of meaning, the nature of truth and its connection to meaning, and the workings of particular linguistic constructions of special philosophical relevance. Students who have not taken 181/281 should seek the instructor's advice as to whether they have sufficient background.
Same as: PHIL 181B

PHIL 282. Advanced Philosophy of Language. 4 Units.
.
Same as: PHIL 182

PHIL 282A. Naturalizing Representation. 4 Units.
Notions of meaning and representation are ubiquitous in how we conceive of our mental lives. Intentionality is one of the marks of the mental -- but it's not clear how these semantic notions can fit into our understanding of the natural world. nIn this class we'll discuss attempts to naturalize semantic notions, for example by appeal to informational or functional concepts. We'll read works by Dretske, Millikan, Skyrms, and others in evaluating this project.nPrerequisite: PHIL 80 or consent of instructor.
Same as: PHIL 182A

PHIL 282B. Naturalizing Content. 4 Units.
Meaning is mysterious. Right now you are looking at funny marks on a screen. Somehow, these marks are conveying to you information about a class that will be offered at Stanford during the winter quarter 2020. But how is this happening? These marks surely have no natural connection to the future class. They aren't like the footprints of a tiger, for example. Additionally, thousands of times a day, you manage to gain information about all manner of subjects by hearing strange sounds that have no natural connection to the subject matter. The sounds aren't like the bark of a dog, for example. You also manage to think about things that aren't in front of you, as when you think of a Hippo wearing a fedora. Yet activity in your brain has no natural connection to Hippos in fedoras (we presume). This class will investigate how it is that sounds, marks, and mental states manage to have semantic content. In other words, we will discuss attempts to solve the mystery of meaning, in all of its forms.nThe class is open to all graduate students in philosophy. Undergraduates who have not taken Phil 80 and at least one upper level philosophy class must receive permission to enroll.
Same as: PHIL 182B

PHIL 282H. Truth. 4 Units.
Philosophical debates about the place in human lives and the value to human beings of truth and its pursuit. The nature and significance of truth-involving virtues such as accuracy, sincerity, and candor. Prerequisite Phil 80 or permission of the instructor.
Same as: PHIL 182H

PHIL 283. Self-knowledge and Metacognition. 4 Units.
The course will be divided into two parts. In the first, we will survey the dominant models of how we come to know our own mental states. Among the issues we will explore will be our ways of discovering and coming to terms with "implicit" attitudes (e.g. biases), and the role of expression (e.g. verbal expression) in coming to know such attitudes. In the second part of the course, we will investigate the broader set of capacities by which we monitor and regulate our own cognitive processes, while paying special attention to the role of feelings (e.g. of knowing, fluency, fit) in the exercise of these capacities.
Same as: PHIL 183

PHIL 284. Topics in Epistemology. 4 Units.
.
Same as: PHIL 184

PHIL 284B. Formal Epistemology. 4 Units.
Grads enroll in 284B. Prerequisite: PHIL 80.
Same as: PHIL 184B

PHIL 284M. Topics in the Theory of Justification. 4 Units.
graduate seminar. Prerequisite: PHIL 80.
Same as: PHIL 184M

PHIL 285. Special Topics in Epistemology: Testimony in science and everyday life. 4 Units.
Much of what we know, we know by relying on the testimony of other individuals, groups, traditional news media or social media. The course explores varieties of testimonial knowledge which arise from relaxed everyday testimony ('the coffee machine is broken') and from scientific expert testimony ('Venus is larger than Mars'). The course also touches on issues concerning testimonial injustice ¿ the type of injustice that occurs when someone is wronged in their capacity as a testifier ¿ for example, when their testimony is unjustly devaluated. Finally, we will consider whether philosophical theorizing about testimony may shed light on obstacles for science communication about divisive issues such as vaccines, climate science etc.nnThus, the course is organized around three interrelated themes. 1: Foundational questions, 2: Testimonial injustice and 3: Scientific testimony. Overall, then, the course connects foundational work in epistemology and philosophy of science to some pertinent ethical and political problems.
Same as: PHIL 185

PHIL 285B. Philosophy of Perception. 4 Units.
The nature of perceptual experience and the role it plays in securing empirical knowledge. Focus will be on what is sometimes called "the problem of perception": the question of how perception could provide us with direct awareness of the surrounding environment given the possibility of illusions or hallucinations. Topics, include the relationship between perception and belief, the nature of perceptual phenomenology, whether or not perceptual experiences are representational states, and the philosophical relevance of empirical research on perception.
Same as: PHIL 185B

PHIL 285W. Metaontology. 4 Units.
Do existence questions have (determinate) answers? How should ontological commitment be understood? This class will discuss these and other questions in the metatheory of ontology. Specific topics will include: naturalness, metaphysical structure, grounding, and quantifier variance. Some familiarity with standard metaphysical and ontological debates will be assumed.
Same as: PHIL 185W

PHIL 286. Philosophy of Mind. 4 Units.
(Graduate students register for 286.) This is an advanced introduction to core topics in the philosophy of mind. Prerequisite: PHIL 80.
Same as: PHIL 186

PHIL 286A. Self-fashioning. 3 Units.
This undergraduate and graduate seminar will examine philosophical and psychological literature relevant to self-fashioning. Meetings will be discussion oriented, and each meeting will focus on a different question of theoretical and applied significance. Prerequisite: consent of instructor. May be repeat for credit.
Same as: PHIL 186A, PSYCH 172

PHIL 286M. Ontology of the Mental. 4 Units.
.
Same as: PHIL 186M

PHIL 287. Philosophy of Action. 4 Units.
This course will explore foundational issues about individual agency, explanation of action, reasons and causes, agency in the natural world, practical rationality, interpretation, teleological explanation, intention and intentional action, agency and time, intention and belief, knowledge of one's own actions, identification and hierarchy, and shared agency. Prerequisite: graduate student standing in philosophy or, for others, prior course work in philosophy that includes Philosophy 80.
Same as: PHIL 187

PHIL 288. Personal Identity. 4 Units.
Do you persist through time the way that a skyscraper persists through space, by having different parts at different locations? Or are you ¿wholly present¿ at every moment of your life, in something more like the way that an elevator is present in each place as it travels up to the top floor? What criteria determine whether you now are the very same person as some unique person located at some time in the past? Is the continuity of your memories or other mental states sufficient for your survival? Can you survive the loss or destruction of your body? Do you really exist for more than just the present moment? How do different answers to these questions bear on your moral, personal, and professional obligations? What kinds of considerations could possibly help us to answer these questions? This course explores these and related issues. Readings include a mix of introductory survey, historical, and contemporary material.
Same as: PHIL 188

PHIL 288W. Paradoxes. 4 Units.
Paradoxes arise when unacceptable or contradictory conclusions are generated by apparently unobjectionable reasoning. Consider the sentence: "This sentence is not true." Is the sentence true or not? If it is true, then what it says is the case, but it says that it is not true. On the other hand, if it is not true, then since it says it is not true, what it says is the case. So if the sentence is true it is not true, and if it is not true it is true. This is a version of the Liar Paradox. In this class we'll discuss the liar and other paradoxes, including the paradoxes of set theory, the Sorites Paradox, and several other well-known paradoxes. Familiarity with mathematical logic will be assumed by many of the class readings.
Same as: PHIL 188W

PHIL 289. Examples of Free Will. 4 Units.
Examples drawn from three domains: choice, computation, and conflict of norms. Conceptually, a distinction is made between examples that are predictable and those that are not, but skepticism about making a sharp distinction between determinism and indeterminism is defended.
Same as: PHIL 189

PHIL 293C. Film & Philosophy. 3 Units.
Issues of authenticity, morality, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include Blade Runner (Scott), Do The Right Thing (Lee), The Seventh Seal (Bergman), Fight Club (Fincher), La Jetée (Marker), Memento (Nolan), and Eternal Sunshine of the Spotless Mind (Kaufman). Taught in English.
Same as: COMPLIT 154A, ENGLISH 154F, FRENCH 154, ITALIAN 154, PHIL 193C

PHIL 293E. Film & Philosophy CE. 3 Units.
Issues of authenticity, morality, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include Blade Runner (Scott), Do The Right Thing (Lee), The Seventh Seal (Bergman), Fight Club (Fincher), La Jetée (Marker), Memento (Nolan), and Eternal Sunshine of the Spotless Mind (Kaufman). Taught in English. Satisfies the WAY CE.
Same as: FRENCH 154E, ITALIAN 154E, PHIL 193E

PHIL 297C. Curricular Practical Training. 1 Unit.
(Undergraduate students enroll in 197C) Students engage in internship work and integrate that work into their academic program. Following internship work, students complete a research report outlining work activity. Meets the requirements for curricular practical training for students on F-1 visas. Student is responsible for arranging own internship/employment and faculty sponsorship. Register under faculty sponsor's section number. Course may be repeated for credit.

PHIL 298. Research Methods. 1 Unit.
Research Methods will introduce incoming students to Stanford¿s many libraries and library resources. Throughout the quarter, students will have regular research tasks on campus, structured with the aim of familiarizing students with our libraries, librarians and resource specialists. For first year Philosophy PhDs only, department permission required.

PHIL 300. Proseminar. 4 Units.
Topically focused seminar. Required of all first year Philosophy PhD students. This seminar is limited to first-year Ph.D. students in Philosophy. We will focus on some major work over roughly the past 60 years on inter-related issues about practical reason, responsibility, agency, and sociality.

PHIL 301. Dissertation Development Proseminar. 2-4 Units.
A required seminar for third year philosophy PhD students, designed to extend and consolidate work done in the dissertation development seminar the previous summer.

PHIL 302P. Plato's Laws X. 2-4 Units.
Grad seminar. Close reading and analysis of Book 10 of Plato's Laws. In this book, Plato's political thought intersects with his philosophic theology (and therein also with his physics and metaphysics) as he considers the appropriate handling of god(s) by the polis and argues against atheism, deism, and conventional propitiatory theism. 2 unit option only for Philosophy PhDs beyond the second year.

PHIL 305. Aristotle's Nicomachean Ethics. 2-4 Units.
In this seminar, we shall study one of the classic works of ethical philosophy, Aristotle's Nicomachean Ethics. Topics include: eudaimonism, the nature of the virtues, responsibility, practical reason, pleasure, akrasia, friendship, and contemplation. 2 unit option is for PhD students only.

PHIL 305R. JUST AND UNJUST WARS. 2 Units.
War is violent, but also a means by which political communities pursue collective interests. When, in light of these features, is the recourse to armed force justified? Pacifists argue that because war is so violent it is never justified, and that there is no such thing as a just war. Realists, in contrast, argue that war is simply a fact of life and not a proper subject for moral judgment, any more than we would judge an attack by a pack of wolves in moral terms. In between is just war theory, which claims that some wars, but not all, are morally justified. We will explore these theories, and will consider how just war theory comports with international law rules governing recourse to force. We will also explore justice in war, that is, the moral and legal rules governing the conduct of war, such as the requirement to avoid targeting non-combatants. Finally, we will consider how war should be terminated; what should be the nature of justified peace? We will critically evaluate the application of just war theory in the context of contemporary security problems, including: (1) transnational conflicts between states and nonstate groups and the so-called "war on terrorism"; (2) civil wars; (3) demands for military intervention to halt humanitarian atrocities taking place in another state. Same as LAW 751.
Same as: ETHICSOC 205R, ETHICSOC 305R, PHIL 205R

PHIL 306C. Plato on Eros and Beauty. 3-5 Units.
We read Plato's Symposium and Phaedrus; topics: love, beauty, language (oral and written). Graduate seminar, but open to seniors.
Same as: CLASSICS 336

PHIL 308. Aristotle's Politics. 4 Units.
The seminar will be a critical examination of Aristotle¿s political philosophy and we shall focus on his Politics as our primary text. We¿ll supplement this with some other texts by Aristotle that are relevant and explore the most important connections between Aristotle¿s political philosophy and his ethics.

PHIL 308B. Aristotle on his Predecessors. 2-4 Units.
An introduction both to Aristotle's own metaphysics and to his treatment of his predecessors on causality, included the early Ionian cosmologists, atomism, Pythagoreans, Heraclitus, Parmenides, Empedocles, Anaxagoras and Plato. Prerequisite: one course in ancient Greek philosophy.

PHIL 309. Hume's Psychology and Political Theory. 3-5 Units.
This seminar will concentrate on Humes' political ideas, which to a large extent have been neglected, both by philosophers and political scientists. We will read passages from three important works of Hume, as listed above, together with the lively support of a strong view concerning the importance of Hume's ideas about politics. The requirement for the course will be a paper on a subject relevant to the main topic, and mutually agreed to. The first six sessions of the seminar will be held jointly by live video with Professor Russell Hardin of NYU and his students. By the end of the sixth session, NYU¿s Spring Term will have ended. We will decide at that point how many more joint sessions to have, and how much time should be devoted to individual consultation about the paper to be written.

PHIL 309C. Aristotle's Metaphysics Zeta and its Medieval Reception: Definition. 4 Units.
Grad seminar on the medieval reception of Book Zeta of Aristotle's Metaphysics.

PHIL 310. Plato's Phaedo. 4 Units.
A close reading of Plato's Phaedo, with a special emphasis on its metaphysical aspects, such as its discussions of Forms, causation, and coming-to-be. Also to be investigated: the nature and immortality of the soul, the correct attitude to have toward one's death, the theory of recollection, the method of hypothesis, and the respective roles of argument and myth.

PHIL 311. Plato's Philebus and Timaeus. 4 Units.
We shall carefully examine two Platonic dialogues, the Philebus and the Timaeus. We shall focus on the dialogues' ethics, metaphysics, and psychology.

PHIL 312. Aristotle's Psychology. 4 Units.
De Anima and parts of *Parva Naturalia*..

PHIL 313T. Aristotle's Moral Theory. 2-3 Units.
The aim of this seminar is philosophical; we want to discuss the basis, the structure, the merits, and the defects of Aristotle's moral theory. But we intend to draw on all of the three major ethical treatises in the Aristotelian Corpus: the Nicomachean Ethics, Eudemian Ethics, and Magna Moralia. We will also discuss parts of the Protrepticus. Topics include: the composition of the good; the argument from the human function to the human good; virtues of character and intellect; voluntary action and responsibility; pleasure and the good: friendship and the good of others; the place of contemplation in the ultimate good. This course begins on January 28, and ends on March 13. 2 unit option available only to PhD students beyond the second year. Undergraduates wishing to take this course must have taken Philosophy 100 or a more advanced Philosophy course in ancient philosophy and have the permission of the instructors.

PHIL 313W. Aristotle on Virtues. 2-4 Units.
Graduate seminar. 2 unit option only for Phil PhDs beyond the second year.

PHIL 314. Practical Reasoning in Plato and Aristotle. 2-4 Units.
It is often said that the greatest difference between Plato's ethics and those of Aristotle is that the latter thinks that practical and theoretical reason are distinct, but the former does not. We shall read some of both Plato and Aristotle and ask whether the above claim is true and then consider what the implications the differences between their views of practical reason have for the rest of their ethics.

PHIL 315. Aristotle's Protrepticus and its Background. 2-4 Units.
In this seminar, we shall read Aristotle's Protrepticus. This is an early work of Aristotle that attempts to turn the reader to a philosophic life and it is by far the least read of his works on ethics. It was only recovered in the 19th century and only in the past 15 years or so do we have a reliable text. Thus studies of it are very much underdeveloped. We shall also read as background some other protreptic works by Plato and the rhetorician Isocrates. 2 unit option is only for Philosophy PhD students beyond the second year.
Same as: CLASSICS 346

PHIL 316P. Aristotle's On the Motion of Animals. 2-4 Units.
A seminar based around a close reading and analysis of Aristotle's De Motu Animalium. This short text, on how animals bring about action (motion), is something of a treasure-trove of various interesting details and complications concerning Aristotle's philosophy of action, psychology, physics, and metaphysics. It is also heterogenous or interdisciplinary in its discussions, which will lead us to consider questions of method in Aristotle. We additionally have the treat of seeing what we make of a brand new (summer 2020) major edition from the Symposium Aristotelicum series.The 2 unit option is only for Philosophy PhD students beyond the second year; all others take for 4 units.

PHIL 317. Topics in Plato: Plato on Practical Rationality. 2-4 Units.
.

PHIL 318. Aristotle and the Object of Mathematical Reasoning. 4 Units.
The concept of definition plays a central role in Aristotle's treatment of both philosophical and scientific inquiry, as well as explanation. A definition is an account of what something is, and some definitions are used to guide causal inquiry whereas others function as explanatory starting points. In this course we will examine texts from his logic, natural science and metaphysics in order to see what the different kinds of definition are, how they obtained, and how they are capture the nature or essence of a definable object. Particular attention will be given to the role of matter in the definition of the form of a natural substance, state, process or activity. For instance, what role does a specification of physiological processes play in the definitions of emotions such as anger? No knowledge of Greek is required. May be repeat for credit.
Same as: CLASSICS 315

PHIL 319. Aristotle on Substance. 2-4 Units.
Aristotle's views about substance and the nature and possibility of metaphysics. Focus is on *Categories* and *Metaphysics* Book Zeta.n2 unit option only for Phil PhDs beyond the second year.

PHIL 320. Aristotle on the problems of metaphysics. 2-4 Units.
The main text will be Metaphysics Beta. 2 unit option only for Philosophy PhD students beyond the second year.

PHIL 321. Leibniz's Metaphysics. 2-4 Units.
Leibniz's metaphysical views during his so-called "mature period" (early 1680s to 1716). Topics will include Leibniz's conception of substance, his alleged idealism, his doctrine of possible worlds and his doctrine of pre-established harmony. Reading of the Discourse on Metaphysics (1686) and the correspondence with Arnauld (1686-1690).

PHIL 322. Hume. 2-4 Units.
Hume's theoretical philosophy emphasizing skepticism and naturalism, the theory of ideas and belief, space and time, causation and necessity, induction and laws of nature, miracles, a priori reasoning, the external world, and the identity of the self. 2 unit option only for Philosophy PhD students beyond the relevant PhD distribution requirements. Prerequisites: Undergraduates wishing to take this course must have previously taken History of Modern Philosophy or the equivalent, and may only enroll with permission from the instructor.

PHIL 323. Kant's Criticism of Metaphysics. 4 Units.
Motivations and strategies of Kant's criticisms of traditional metaphysics in the *Critique of Pure Reason.* Leibnizian and Wolffian versions of the concept containment theory of truth and the Wolffian ideal of a conceptual system of metaphysical knowledge. Kant's analytic/synthetic distinction, focusing on its place in the rejection of metaphysics and in arguments about the ideas of reason in the transcendental dialectic. Prerequisite: course on the first *Critique,* or consent of instructor.

PHIL 324. Kant's System of Nature and Freedom. 4 Units.
The aim is to acquire a sense of how the two main parts of Kant's philosophy, theoretical and practical, fit together. These two parts, according to the Critique of the Power of Judgment, concern the realm of nature and the realm of freedom respectively. We shall study parts of all three Critiques, along with appropriate supplementary materials. Prior acquaintance with both Kant's theoretical and his practical philosophy is presupposed.

PHIL 325. Kant's Third Critique. 2-4 Units.
2 unit option only for Philosophy PhD students beyond the second year.

PHIL 326. Kant's Transcendental Deduction. 4 Units.
.

PHIL 327. Scientific Philosophy: From Kant to Kuhn and Beyond. 2-4 Units.
Examines the development of scientific philosophy from Kant, through the Naturphilosophie of Schelling and Hegel, to the neo-Kantian scientific tradition initiated by Hermann von Helmholtz and the neo-Kantian history and philosophy of science of Ernst Cassirer and Thomas Kuhn. Proposes a post-Kuhnian approach to the history and philosophy of science in light of these developments.

PHIL 329. Plotinus and Augustine. 3-5 Units.
Professor's permission required to register. A reading course focused on the influence of Plotinus Enneads on Augustine's Confessions, early dialogues, and sections on reason and memory in the De trinitate. Proficiency in Greek and Latin will be helpful but is not required. Professor's prior permission required, interested students should contact the professor about course schedule: tsheehan@stanford.edu . Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: PHIL 229, RELIGST 269, RELIGST 369

PHIL 331. Happiness and Value in Ancient Greek Philosophy. 2-4 Units.
Grad seminar. 2 unit option only for Philosophy PhD students beyond the second year.

PHIL 332. Nietzsche. 2-4 Units.
Preference to doctoral students. Nietzsche's later works emphasizing *The Gay Science, Beyond Good and Evil,* and *On the Genealogy of Morals.* The shape of Nietzsche's philosophical and literary projects, and his core doctrines such as eternal recurrence, will to power, and perspectivism. Problems such as the proper regulation of belief, and the roles of science, morality, art, and illusion in life.

PHIL 333. Philosophy, Literature, and the Arts Core Seminar. 2-4 Units.
This course serves as the Core Seminar for the PhD Minor in Philosophy, Literature, and the Arts. It introduces students to a wide range of topics at the intersection of philosophy with literary and arts criticism. The seminar is intended for graduate students. It is suitable for theoretically ambitious students of literature and the arts, philosophers with interests in value theory, aesthetics, and topics in language and mind, and other students with strong interest in the psychological importance of engagement with the arts. May be repeated for credit. In this year¿s installment, we focus on how artistic kinds or genres help set the terms on which individual works are experienced, understood, and valued, with special attention to lyric poetry and music.
Same as: DLCL 333, ENGLISH 333, MUSIC 332

PHIL 334. Habermas. 3-5 Units.
Does Habermas have a distinctive account of normativity and normative judgements?.

PHIL 335. Topics in Aesthetics. 4 Units.
Much of the seminar will focus on notions of abstraction in the arts (and related notions of formalism) in painting, music, poetry, etc. What is it for a work to be abstract, or more or less abstract than other works? How is abstraction important, and how is it related to aesthetic value and to values of other kinds? I understand abstraction to consist in the absence or limitation of one or another kind of aboutness: representation in any of several senses, semantic properties, pragmatic implications, meanings of one sort or another, etc. There are many of different kinds of aboutness, and so many corresponding varieties of abstraction. Readings will be by an assortment of philosophers, critics, music theorists, art historians etc., probably including Clive Bell, Roger Fry, Ernst Gombrich, Clement Greenberg, Eduard Hanslick, Eileen John, Peter Kivy, Peter Lamarque, Suzanne Langer, Alexander Nehamas, Roger Scruton, Richard Wollheim. I will try out some of my own recent work-in-progress. The course will be organized as a seminar. Students will work on projects, term papers, and present drafts to the group, so we can help one another. They will also be asked to give short informal presentations on readings to be discussed. The topics we cover after the first several meetings will depend partly on what projects students choose, as well as our interests. There are lots of great possibilities, including, of course, exploring various kinds of aboutness. Grades will be based on the term papers and participation in the seminar. This course is intended for graduate students. Qualified undergraduates are welcome, but instructor permission is required.

PHIL 337. Virtue and Reason in Plato. 4 Units.
We shall consider questions about the nature of virtue and the role of reason in ethics and ethical psychology in Plato. Questions to be considered include: the nature of virtue, the value of non-rational virtues, the unity of the virtues, the relation between virtue and happiness, the problem of akrasia, Plato¿s theories of goodness, and individual and political decisionmaking. We shall focus on the relevant parts of the Gorgias, the Laws, the Meno, the Phaedo, the Protagoras, the Republic, the Philebus, and the Statesman.

PHIL 339. Marx. 2-4 Units.
This course examines the works of a thinker who radically transformed the ways that we think about modern society. Marx saw fundamental problems with capitalist societies, including: un-freedom, alienation, inequality, and bureaucratization. He developed a theory to account for these problems. Our task will be to read his works critically and to evaluate their contributions to our understanding the relationship between politics, social structure, knowledge and human agency. We will also be especially interested in comparing his view with alternative diagnoses of the problems of modern capitalist societies, especially those of Max Weber and John Rawls.
Same as: POLISCI 333S

PHIL 340. Time and Free Will. 3-5 Units.
Free will and the consequence argument of Peter van Inwagen and others. Focus is on the principle that one cannot change the past and the problem of backtracking conditionals, and less on the problem raised by determinismon. Hypotheses less drastic than determinism support backtrackers; given the backtracker, would someone¿s not having done something require that he change the past? Issues related to time, change, the phenomenology of agency, and McTaggart's argument about the reality of time.

PHIL 344. Narrative Knowing. 1-2 Unit.
Philosophers and historians have been debating the status of narrative explanation for well over 50 years. Until quite recently, a supposed dichotomy between natural science and history has shaped the discussion. Beginning from the origins, history, and limitations of the dichotomy, this seminar will explore how claims for narrative understanding and explanation have come to occupy an increasingly important role in the natural sciences as well as the social sciences. Some classic contributors are Hempel, Danto, Mink, Kuhn, White, Ricouer, Geertz, and Ginzburg. Current authors include Roth, Rheinberger, Kitcher, Beatty, Morgan, and (yes) Wise.
Same as: HISTORY 344

PHIL 347. Aristotle's Logic. 3-5 Units.
In this seminar we read through Aristotle's Prior Analytics, paying close attention to the relation between Aristotle's logic to Greek mathematics, and to its place within Aristotle's overall philosophy. Knowledge of Greek is not required. Open to advanced undergraduate students.
Same as: CLASSICS 197

PHIL 348. Evolution of Signalling. 2-4 Units.
Explores evolutionary (and learning) dynamics applied to nsimple models of signaling, emergence of information and inference. Classroom presentations and term papers.nText: Skyrms - SIGNALS: EVOLUTION,LEARNING and INFORMATIONnand selected articles.

PHIL 349. Evidence and Evolution. 3-5 Units.
The logic behind the science. The concept of evidence and how it is used in science with regards to testing claims in evolutionary biology and using tools from probability theory, Bayesian, likelihoodist, and frequentist ideas. Questions about evidence that arise in connection with evolutionary theory. Creationism and intelligent design. Questions that arise in connection with testing hypotheses about adaptation and natural selection and hypotheses about phylogenetic relationships.
Same as: PHIL 249

PHIL 350. What makes a good explanation? Psychological and philosophical perspectives. 4 Units.
Explanation is a topic of longstanding interest in philosophy and psychology, and has recently attracted renewed attention due to novel challenges in interpreting and interacting with relatively opaque AI systems. In this graduate seminar, we will study the science and engineering of explanations, combining perspectives from philosophy, psychology, AI, and the legal sciences. We will ask questions like: When do we ask for explanations? What makes a good explanation? How can we build machines that can understand and explain? This interdisciplinary seminar is co-taught by Thomas Icard (Philosophy) and Tobias Gerstenberg (Psychology). We will meet twice a week (Tuesdays and Thursdays 10:30am-11:50am) to discuss research articles from a range of disciplines. Students are expected to write responses based on their readings, lead the discussion on one of the papers, and actively participate in the discussion otherwise. As a final project, students will outline a novel study on explanation that makes an empirical, modeling, or theoretical contribution. Participation is restricted to a maximum of 12 graduate students (by application). The course website, with information about application, can be found here: phil350.stanford.edu.
Same as: PSYCH 293

PHIL 350A. Model Theory. 3 Units.
Back-and-forth arguments with applications to completeness, quantifier-elimination and omega-categoricity. Elementary extensions and the monster model. Preservation theorems. Interpolation and definability theorems. Imaginaries. Prerequisite: Phil151A or consent of the instructor.

PHIL 351. Representation Theorems. 4 Units.
Representation theorems show that beliefs which obey certain qualitative constraints have the structure of probabilities, while preferences which obey certain qualitative constraints have the structure of expected-utility maximization. In this course, we prove several representation theorems in detail, and discuss the philosophic controversies surrounding them: how to justify the qualitative constraints, the difference between normative and descriptive interpretations, and what the formal relation of representability amounts to in real terms.

PHIL 351A. Recursion Theory. 3 Units.
Theory of recursive functions and recursively enumerable sets. Register machines, Turing machines, and alternative approaches. Gödel's incompleteness theorems. Recursively unsolvable problems in mathematics and logic. Introduction to higher recursion theory. The theory of combinators and the lambda calculus. Prerequisites: 151, 152, and 161, or equivalents.

PHIL 351B. Proof Mining. 1-3 Unit.
Uses of proof theory in analysis and number theory. Proof mining: extraction of bounds from non-effective proofs. May be repeated for credit. Prerequisite: 151,152 or equivalents, and a calculus course.

PHIL 351C. Formal Methods in Ethics. 2-4 Units.
Grad seminar. 2 unit option for PhD students only.

PHIL 351D. Measurement Theory. 2-4 Units.
What does it mean to assign numbers to beliefs (as Bayesian probability theorists do), desires (as economists and philosophers who discuss utilities do), or perceptions (as researchers in psychometrics often do)? What is the relationship between the numbers and the underlying reality they purport to measure? Measurement theory helps answer these questions using representation theorems, which link structural features of numerical scales (such as probabilities, utilities, or degrees of loudness) to structural features of relations (such as comparative belief, preference, or judgments that one sound is louder than another).nThis course will introduce students to measurement theory, and its applications in psychophysics and decision theory. n2 unit option only for Philosophy PhD students who are past their second year.nPrerequisites: Undergraduates wishing to take this course must have previously taken PHIL150, and may only enroll with permission from the instructor.

PHIL 353. Seminar on Philosophy of Logic and Mathematics. 4 Units.
This class will be a discussion of inferentialism and conventionalism in logic and mathematics. To structure discussion, we'll work through the manuscript of Shadows of Syntax, my forthcoming book on these topics, in addition to classic readings from Carnap, Quine, and other luminaries.".
Same as: Conventionalism

PHIL 353B. Proof Theory B. 2-3 Units.
Consistency ordinal as a measure of the strength of a mathematical theory. The open problem of describing the ordinal of mathematical analysis (second order arithmetic). Present state of the problem and approaches to a solution. Prerequisites: Phil 151,152 or equivalents.

PHIL 353C. Functional Interpretations. 4 Units.
Finite-type arithmetic. Gödel's functional interpretation and Kreisel's modified realizability. Systems based on classical logic. Spector's extension by bar-recursive functionals. Kohlenbach's monotone interpretation and the bounded functional interpretation. The elimination of weak Kônig's lemma. Uniform boundedness. A look at Tao's hard/soft analysis distinction.

PHIL 354. Topics in Logic. 1-3 Unit.
Complexity of propositional calculi. P=NP problem. Exponential lower bounds for resolution and for intuitionistic derivations. Problem of saving proofs. Complexity of derivations in arithmetic. Inventor's paradox. Synthesis of inductive invariants. Prerequisites: Phil 151,152 or equivalents.

PHIL 355. Logic and Social Choice. 4 Units.
Topics in the intersection of social choice theory and formal logic. Voting paradoxes, impossibility theorems and strategic manipulation, logical modeling of voting procedures, preference versus judgment aggregation, role of language in social choice, and metatheory of social choice. May be repeated for credit. Prerequisite: 151 or consent of instructor.

PHIL 356. Applications of Modal Logic. 3 Units.
Applications of modal logic to knowledge and belief, and actions and norms. Models of belief revision to develop a dynamic doxastic logic. A workable modeling of events and actions to build a dynamic deontic logic on that foundation. (Staff).

PHIL 356C. Logic and Artificial Intelligence. 2-4 Units.
This is a course at the intersection of philosophical logic and artificial intelligence. After reviewing recent work in AI that has leveraged ideas from logic, we will slow down and study in more detail various components of high-level intelligence and the tools that have been designed to capture those components. Specific areas will include: reasoning about belief and action, causality and counterfactuals, legal and normative reasoning, natural language inference, and Turing-complete logical formalisms including (probabilistic) logic programming and lambda calculus. Our main concern will be understanding the logical tools themselves, including their formal properties and how they relate to other tools such as probability and statistics. At the end, students should expect to have learned a lot more about logic, and also to have a sense for how logic has been and can be used in AI applications. Prerequisites: A background in logic, at least at the level of Phil 151, will be expected. In case a student is willing to put in the extra work to catch up, it may be possible to take the course with background equivalent to Phil 150 or CS 157. A background in AI, at the level of CS 221, would also be very helpful and will at times be expected. 2 unit option only for PhD students past the second year. Course website: http://web.stanford.edu/class/cs257/. Same as: CS 257

PHIL 357. Research Seminar on Logic and Cognition. 2-4 Units.
How might cognitive modeling and logical theory be of mutual benefit? What kinds of interesting logical questions arise from the study of cognition? And what kinds of tools from logic and theory of computation might be useful in modeling cognitive phenomena? Through student presentations of current research (original or from the contemporary literature) we will explore these questions. Precise topics will depend largely on student interest, but may include models of: causal reasoning, quantification, probabilistic computation and computable probability theory, erotetic theory of reasoning, moral cognition, and other topics at this intersection. 2 unit option only for Philosophy PhD students beyond the second year.

PHIL 359. Topics in Logic, Information and Agency. 2-4 Units.
Logical analysis of information, interaction and games, with topics connecting philosophy, computer science, game theory, and other fields. The focus is on current research at these interfaces. Prerequisite: 151, 154/254, or equivalent background. May be repeated for credit.

PHIL 360. Grad Seminar: Philosophy of Neuroscience. 2-4 Units.
Assumptions underlying the scientific study of how our brains work have implications for the kinds of results that neuroscience can - and cannot - deliver. We will look at the interplay between two approaches within neuroscience - mechanistic explanation and computational explanation, with a focus on neural coding and representation. Pre-reqs TBD. Repeatable for credit. 2 unit option only for Philosophy PhD students beyond the second year.

PHIL 361. Social Dimensions of Scientific Knowledge. 4 Units.
Study of philosophical issues raised by the social character of scientific research and the relation of scientific inquiry to its broader social, economic, and cultural context: values in/of science, science and policy, distribution of cognitive labor, trust in science, models of knowledge.

PHIL 362. Grad Seminar on Philosophy of Science. 4 Units.
.

PHIL 363A. Seminar in History and Philosophy of Science: Democratic Science¿of the Climate, Races, H2O. 4 Units.
Is the Earth's climate real? Does it exist beyond experimental data, computer simulation, and scientists' writings? This seminar considers philosophical, historical, and anthropological perspectives on the reality of scientific entities. It asks how these metaphysical questions are connected to our democratic societies and our position as scholars. We will ask whether Homo sapiens is sub-divided into races and ethnicities in the manner of a census form. And how genetics should interact with our social understanding of human diversity. Further, can the answers to these questions stand alone as isolated academic questions, or must they be tied together with our political philosophy and social norms? If democratic pluralism leads to metaphysical pluralism, what becomes of long-discarded scientific entities, such as phlogiston? Some argue that pluralism upsets our most basic scientific facts, like: water is H2O. nnThis graduate seminar examines these scientific entities - the climate, races, phlogiston - from perspectives in Philosophy, Anthropology, and History of Science. The course topics illustrate recent trends toward metaphysics in the humanistic study of science. Students will develop their ability to compare positions and arguments between disciplines. Class time will emphasize inter-disciplinary discussion. The major writing assignment is an essay with multiple drafts. This is designed to prepare students for writing and revising dissertation chapters and peer-reviewed articles. Activities may include a film screening and visit to a scientific laboratory. Students from all programs are welcome. (Advanced undergraduates by permission.).

PHIL 364M. Mathematics in Practice. 4 Units.
What does "good" mathematics look like? Certainly, it should be correct, but mathematicians are often far more demanding. For example, they want their work to be deep, explanatory, fitting or even beautiful. This simple observation from mathematical practice raises philosophical questions: What do these terms mean? Why is work that exhibits these properties valuable? Are there design principles we can follow to help ensure our mathematics has these qualities? Throughout this course we will explore these questions by seeing what mathematicians and philosophers have had to say and by examining both modern and historical case studies.

PHIL 365. Seminar in Philosophy of Physics. 2-4 Units.
2 unit option for PhD students only.

PHIL 366. Evolution and Communication. 4 Units.
Topics include information bottlenecks, signaling networks, information processing, invention of new signals, teamwork, evolution of complex signals, teamwork. Sources include signaling games invented by David Lewis and generalizations thereof, using evolutionary and learning dynamics.

PHIL 368. Philosophy of Biology: Learning and Evolution. 2-4 Units.
Graduate seminar. 2 unit option for Philosophy PhDs beyond the second year only.

PHIL 368A. Topics in Neuroscience. 2-4 Units.
2 unit option for Philosophy PhD students beyond the second year. May be repeated for credit.

PHIL 370A. Grad Seminar in Ethics. 4 Units.
Conceptions of the self in practical philosophy. Graduate seminar exploring topics at the intersection of personal identity, agency, and morality. Specific topics and authors to be determined.

PHIL 370W. Consequentialism. 2-4 Units.
Grad seminar. 2 unit option only for Philosophy PhDs beyond the second year.

PHIL 371D. Inequality: Economic and Philosophical Perspectives. 5 Units.
The nature of and problem of inequality is central to both economics and philosophy. Economists study the causes of inequality, design tools to measure it and track it over time, and examine its consequences. Philosophers are centrally concerned with the justification of inequality and the reasons why various types of inequality are or are not objectionable.nIn this class we bring both of these approaches together. Our class explores the different meanings of and measurements for understanding inequality, our best understandings of how much inequality there is, its causes, its consequences, and whether we ought to reduce it, and if so, how. nThis is an interdisciplinary graduate seminar. We propose some familiarity with basic ideas in economics and basic ideas in contemporary political philosophy; we will explain and learn about more complex ideas as we proceed. The class will be capped at 20 students.
Same as: ETHICSOC 371R, POLISCI 431L

PHIL 371E. New Themes in Democratic Theory. 4 Units.
After a tradition of skepticism about democracy, and then a period mostly in the 20th century of virtually unquestioned approval of it, normative democratic theory recently is showing (collectively) more ambivalence. After an introduction to the period in which ¿deliberative democracy¿ was the most influential paradigm, we will look closely at developments beginning with the ¿epistemic¿ variant of that approach (Estlund, Landemore), an ensuing reaction on epistemic grounds against democracy (Brennan, Mulligan), and then two new approaches that are influential: the case for (and against) choosing ¿representatives¿ by lottery rather than voting (Guerrero, Saunders), and the idea that the model for democratic equality is nothing like majoritarianism or agents who act on behalf of constituents but the idea of a social and institutional world in which no class or category of citizens is generally above the others, increasingly called ¿relational equality¿ (Pettit, Anderson, Scheffler, Kolodny).

PHIL 371W. Representation: Race, Law, and Politics. 2-4 Units.
Graduate seminar. In this course, we will work together to develop a detailed and comprehensive understanding of the concept(s) of political representation. We will do so by examining a number of historical and contemporary theories of political representation developed within philosophy and cognate fields. 2 unit option only for Phil PhDs beyond the second year.
Same as: CSRE 371

PHIL 372. Topics in Kantian Ethics. 4 Units.
Selected topics in ethics, considering both Kant's texts and recent writings by Kant interpreters and moral philosophers in the Kantian tradition. Among the topics covered will be: Practical reason, personal relationships, duties to oneself, evil, right and politics, lying, constructivism in ethics.

PHIL 372E. Graduate Seminar on Moral Psychology. 3-5 Units.
Recent philosophical works on desire, intention, the motivation of action, valuing, and reasons for action. Readings: Williams, Korsgaard, Smith, Blackburn, Velleman, Stampe, Frankfurt.

PHIL 372M. Ending Wars: A Just Peace or Just a Peace. 2 Units.
Much of just war theory focuses on the justifications for resorting to armed force and the conduct of hostilities. But what are the ethical and legal principles that govern ending wars and making peace? This course will explore the theory of "just peace," including such problems as when a party to war may demand the unconditional surrender of its adversary and what kinds of compromises are ethically permissible in order to end ¿ or to avoid ¿ armed conflict. We will also consider the terms and practices the winning party in war may impose on the loser, such as reparations and occupation (particularly transformative occupation). In addition, we will examine the topic of transitional justice, including issues related to amnesty, forgiveness, criminal and other forms of accountability, and reconciliation. Elements used in grading: Class Participation, Written Assignments, Final Exam.
Same as: ETHICSOC 372R

PHIL 372P. Korsgaard and her Critics. 2-4 Units.
Christine Korsgaard has developed an unusually complex and comprehensive theory of morality, according to which moral authority has it's source in our authority over ourselves simply as human agents. Her view purports to be humanist without falling into relativism, subjectivism, or voluntarism. Our aim is to understand an evaluate Korsgaard's theory, which Derek Parfit has characterized as combining "Kantian, Humean, and existentialist ideas in unexpected, platitude-denying ways." Readings include Korsgaard's own works as well as selected critiques. Graduate level seminar aimed primarily at philosophy students.

PHIL 372R. Political Realism. 3-5 Units.
This seminar will explore various articulations of political realism in their historical contexts. Realism is generally taken to be a pragmatic approach to a political world marked by the competition for material interests and the struggle for power. Yet beyond a shared critique of idealism and an insistence on the priority and autonomy of the political, realists tend to have very different normative visions and political projects. We will consider the works of several political realists from the history of political and international relations thought, including: Thucydides, Machiavelli, Hobbes, Carr, Niebuhr, and Morgenthau.
Same as: POLISCI 435R

PHIL 373. Moral Motivation. 2-4 Units.
Grad seminar on ethical topic. May be repeated for credit. 2 unit option for PhD students beyond the second year only.

PHIL 373M. Ethical Foundations of Socialism. 2-4 Units.
A number of important issues in the ethical foundations of socialism have been overlooked by mainstream ethical theory. This is doubly regrettable, since both socialist theory and mainstream ethical theory might be improved by their integration. In this seminar, we will attempt to pair works in contemporary ethical theory with works in post-Marxian theory in an attempt to make some substantive progress. Possible topics include: alienation, reification, and objectification for consequentialists, feminists, and market ethicists; social ontology and the values of community and solidarity; ideology and the individuation of options and reasons; exclusionary reasons, the right/wrong reasons distinction, 'role ethics,' and actions in market contexts; exchange, reciprocity, and the obligations of friendship. May be repeated for credit. 2 unit option only for Philosophy PhD students who are beyond the second year.

PHIL 374. Caring and Practical Reasoning. 4 Units.
What is it to care about something; how is caring related to desiring, emotions, and having policies; what is the relationship between caring and the will; why do people care about things; can attention to caring help explain the phenomenon of silencing reasons? Readings from contemporary literature, including Frankfurt, Watson, Bratman, Scanlon, Williams, Helm, and Kolodny. May be repeated for credit.

PHIL 374F. Science, Religion, and Democracy. 3-5 Units.
How should conflicts between citizens with science-based and religion-based beliefs be handled in modern liberal democracies? Are religion-based beliefs as suitable for discussion within the public sphere as science-based beliefs? Are there still important conflicts between science and religion, e.g., Darwinian evolution versus creationism or intelligent design? How have philosophy and recent theology been engaged with such conflicts and how should they be engaged now? What are the political ramifications? This is a graduate-level seminar; undergraduates must obtain permission of the instructors.
Same as: ETHICSOC 374R, RELIGST 374F

PHIL 375. Ethics, Economics and the Market. 4 Units.
Economic analysis inevitably raises moral questions. Getting clear on those moral questions, and the competing answers to them, can help improve both economic analysis and our understanding of the values involved in alternative social policies. This course focuses on a central economic institution: the market. How have the benefits and costs of using markets been understood? For example, it is often claimed that markets are good for welfare, but how is welfare to be understood? What is the connection between markets and different values such as equality and autonomy? What, if anything is wrong with markets in everything? Are there moral considerations that allow us to, distinguish different markets? This course examines competing answers to these questions, drawing on historical and contemporary literature. Readings include Adam Smith, JS Mill, Karl Marx, Michael Walzer, Dan Hausman and Michael McPherson and Debra Satz among others. For graduate students only.
Same as: ETHICSOC 303R, POLISCI 434A

PHIL 375G. Seminar on Emotion. 3 Units.
This undergraduate and graduate seminar will examine ancient Greek philosophical and contemporary psychological literatures relevant to emotion. Questions to be investigated include: What is the nature of emotions? What is the appropriate place in our lives for emotions? How should we manage our emotions? Do the emotions threaten the integrity of the agent? Meetings will be discussion oriented. Prerequisite: consent of instructor.
Same as: PSYCH 160, PSYCH 260

PHIL 375J. Jurisprudence. 3 Units.
This course examines the diverse ways in which the philosophy of law bears on the practice of law. Our subject is thus a set of philosophical concepts, particularly legal positivism and natural law, but the approach is not purely conceptual. Rather, we will examine both the philosophical concepts in the abstract and how those philosophical concepts are reflected or actualized in the craft of legal argumentation, in the intellectual history of law, and in contemporary questions of politics and government. Above all, we will ask which conception of law best contributes to legal justice. The course consists in three units. Unit I is about theories of the nature of law, focusing on legal positivism and natural law. Unit II is about theories of particular departments of law, focusing on tort law and criminal law. Unit III takes a philosophical perspective on being a lawyer, focusing on questions of what principles define lawyers' role in society and what ideals give the life of a lawyer meaning. Grading is based on class participation, two in-class moot court presentations, and, based on individual student preference, either a final exam (a one-day take-home essay with a word limit) or a final research paper. Cross-listed with the Law School (LAW 5806).

PHIL 375K. Criminal Procedure: Theoretical Foundations. 2-3 Units.
This course examines the theoretical foundations of criminal procedure-political, historical, and, above all, philosophical. What are the ideas at work in the American system of criminal procedure? How, historically, did the system develop, and why does it presently function as it does? Is the system broken and, if so, what principles should orient us in fixing it? This theoretical inquiry has a practical point. Procedure plays a major role in the present crisis of American criminal justice. By examining criminal procedure's theoretical foundations, this course aims to develop competing "big picture," synthetic perspectives on the criminal justice crisis as a whole. Thus, for students interested in criminal justice reform, this course will equip you to take a philosophically richer view of the underlying policy issues. For students thinking about a career in criminal law, this course will equip you to engage in large-scale thinking about how criminal procedure should change, rather than just working within the doctrinal and institutional structures that exist at present. For students interested in legal academia, this course will develop your ability to read sophisticated theoretical material, to write in the same vein, and to relate theoretical ideas to policy prescriptions. Elements used in grading: Class participation and, based on individual student preference, either a final reflection paper (2 units) or a final research paper with instructor permission. Students electing the final research paper option can take the course for either 2 or 3 units, depending on paper length. Cross-listed with the Law School (LAW 2019).

PHIL 375V. Graduate Seminar: Voting. 2-4 Units.
Graduate Seminar. 2 unit option only for Philosophy PhD students beyond the second year.

PHIL 376. Agency and Personal Identity. 4 Units.
How philosophical theories of agency interact with philosophical accounts of personal identity. Readings include David Velleman and Harry Frankfurt.

PHIL 376A. Shared Agency and Organized Institutions. 2-4 Units.
Our human lives involve remarkable forms of practical organization: diachronic organization of individual intentional activity; small-scale social organization of shared intentional action; and the organization of complex, organized institutions. A philosophically illuminating theory of human action should help us understand these multiple forms of human practical organization and their inter-relations. This graduate seminar primarily focuses on the role of shared intention and shared agency in organized institutions. The main focus will be a book manuscript on which I am working: Shared and Institutional Agency: Toward a Planning Theory of Human Practical Organization. In this book I seek to extend the foundational role of our capacity for planning agency first to shared agency and then thereby to human organized institutions. To do this I draw on the idea from H.L.A. Hart that our organized institutions are rule-governed, and that to understand this we need a theory of social rules. We will work through this manuscript, together with a wide range of related work by others, including work by H.L.A. Hart, Margaret Gilbert, Scott Shapiro, Philip Pettit, John Searle, Geoffrey Brennan, Cristina Bicchieri, Donald Davidson, and Harry Frankfurt.nnEnrollment limited to graduate students in Philosophy, others by permission of instructor. 2 unit option available only to Philosophy PhD students beyond the second year.

PHIL 376B. Institutions and Practical Reason. 2-4 Units.
We live our lives in a thicket of institutions: small-scale, such as friendships and marriages, large-scale, such as massive economic and political systems, and everything in between. These institutions yield standards by which individual conduct in pertinent contexts can be assessed; these standards can themselves be ethically evaluated. Individuals must organize their commitments to these standards and evaluations in some kind of ethically responsible way. These issues have been discussed on rather different terms in normative ethics, political theory, normative theory, action theory, and social metaphysics. Our goal will be to bring these different literatures to bear on a general inquiry into the ethics of institutional participation. Topics may include: recent work on reasoning; rule worship; exclusionary and silencing reasons; the putative distinctness of political normativity; incentives and the 'ethos of justice'; the ethics of exchange; social structures and practices; and institutionalised relational values. nnLimited to graduate students in Philosophy and to others by permission of the instructor. 2 unit option available only to PhD students beyond the second year.

PHIL 376C. Tragic Form and Political Theory. 5 Units.
Tragic form and political theory have in common a profound interest in the conflictual foundation of human society. This course explores how the two intellectual approaches define the actors of conflict, its causes, and its possible (or impossible) resolution.

PHIL 377. Social Agency. 2-4 Units.
Humans are agents who live in a social world. Philosophical reflection on human agency needs to include reflection both on the agency of individual human agents and on forms of social agency that involve multiple individuals. This seminar will focus on aspects of the latter.nnWhat is it for multiple individuals to think and to act together -- to engage in shared intentional/shared cooperative activity? to deliberate together? to engage in what some have called team reasoning? What kinds of social agency are characteristic of larger social organizations or groups? What would it be for larger groups themselves to be agents, ones who have their own distinctive intentions on the basis of which they act? What is the relation between these larger forms of social agency and small-scale shared cooperative activity? In all these cases how do we best understand what we are talking about when we speak of what we intend or believe and of what we are doing? Readings to be drawn from recent work of Michael Bratman, Margaret Gilbert, Christian List, Kirk Ludwig, Philip Pettit, John Searle, Scott Shapiro, and others, as well as classic work of H.L.A. Hart.nnPrerequisite: graduate standing in Philosophy or permission of instructor. 2 unit option for PhD students only; all others must enroll for 4 units.
Same as: POLISCI 333

PHIL 377A. Planning, Time, and Rationality. 2-4 Units.
Intentions seem subject to basic rationality norms, including norms of consistency, means-end coherence, and (perhaps) stability over time. Such norms seem central to the planning agency in which intentions are normally embedded. But what is the nature and status of such norms? Why are they if indeed they are norms of rationality? What is the big deal about such consistency, coherence, stability? Is appeal to such norms an unjustified myth? What is the relation between such norms and theoretical norms of consistency, coherence, and (perhaps) stability of belief? Are there defensible norms not only of rationality at a time but also of rationality over time? What is the relation between such norms and agency? What is the relation between such norms and self-governance at a time/self-governance over time? Readings from Bratman, Broome, Brunero, Ferrero, Gold, Holton, Kolodny, Korsgaard, Millgram, Nefsky, Paul, Raffman, Raz, Tenenbaum, Setiya, Velleman, Wallace. Repeatable for credit. Prerequisite: graduate standing in Philosophy or permission of instructor. 2 unit option only for Philosophy PhD students beyond the second year; all others must enroll for 4 units.

PHIL 377B. Normativity, Rationality, and Reasoning. 1-2 Unit.
This 4-week mini course in February 2020 will explore the nature and interconnections of normativity, rationality and reasoning. It particularly concentrates on practical rationality and practical reasoning. Broome's book "Rationality Through Reasoning" will be a guide to the course. First meeting is February 10, last meeting is March 2.

PHIL 378. Amartya Sen's capability theory. 2-4 Units.
Amartya Sen's pioneering work attempts to open up economics to missing informational and evaluative dimensions. This seminar will explore Sen's "capability approach" and its implications for the study of economics, gender, and justice. It will look at different ways that the capability approach has been developed, in particular, by Martha Nussbaum, but also by other political philosophers.
Same as: POLISCI 436R

PHIL 378A. Special Topics in Political Philosophy. 4 Units.
.

PHIL 378B. Unequal Relationships. 2-4 Units.
Over the past three decades, a relational egalitarian conception of equality has emerged in political philosophy. Proponents of the view argue that the point of equality is to establish communities where people are able to stand and relate as equals. This entails building societies free from a variety of modes of relating that are thought to be detrimental to our status as moral equals. The list of those inegalitarian relationships is long and includes oppression, domination, exploitation, marginalization, objectification, demonization, infantilization, and stigmatization. The relational approach to equality departs from the more distributive conceptions of equality that were offered in the 70s and after. The theories of justice proposed in response are still comparatively underdeveloped and need further elaboration, but they all concur in rejecting both the overly distributive paradigm and the preoccupation with individual responsibility central to most other egalitarian accounts. This graduate seminar will introduce students to the rich literature on equality in contemporary political philosophy, with a special focus on identifying and scrutinizing unequal relationships. Each week will be centered on a specific type of such unequal relationship, trying to understand how it operates, what social function it serves, and what makes it specifically harmful or wrongful to groups and individuals. Although there are no formal pre-requisites, this class is primarily designed for students considering writing a thesis in political or moral theory as well as for students in other disciplines who want to advance their understanding of equality as a moral value. Seniors in philosophy and political science with a substantial training in political theory will also be considered and should email the PI to communicate their interest. 2 unit option only for Phil PhDs beyond the second year.
Same as: ETHICSOC 378B, POLISCI 338B

PHIL 378W. Owning the Earth. 4 Units.
(Why) do Americans have the right to control the land and resources of the United States? Or should we think that all humans have an equal right to the earth? Should we allocate responsibilities to act on climate change based on equal ownership of the atmosphere? Does a national people living on an island that will disappear because of climate change have a right to a new state elsewhere? Can an individual rightfully own a distant planet? Why are resource-rich states at higher risk for authoritarianism, civil conflict and corruption¿and can this `resource curse¿ be lifted? This course will draw on philosophy, political science and law to ask who has¿and should have¿control over the earth and its resources.

PHIL 379. Graduate Seminar in Metaethics. 2-4 Units.
This is a graduate research seminar in metaethics. We will be investigating current issues in the metaethical literature. PHIL 273B, the graduate introduction to metaethics, (or an equivalent) is a required pre-requisite. The course can be retaken for credit.

PHIL 380. Core Seminar in Metaphysics and Epistemology. 4 Units.
Limited to first- and second-year students in the Philosophy Ph.D. program.

PHIL 381. Graduate Seminar in Metaphysics: Recent Work on Ground. 4 Units.
Metaphysicians have done an enormous amount of work on grounding over the past ten years or so. In this seminar, we will survey this new literature, focusing on the 'pure logic of ground' and the 'impure logic of ground'. Kit Fine's "A Guide to Ground" (which is easy to find through Google) is a useful introduction to the topic.

PHIL 382. Seminar on Reference. 4 Units.
Philosophical issues concerning the relationship between linguistic expressions and the objects to which they refer. Is it possible to get one unified theory of reference for different kinds of referring expressions such as proper names, pronouns, demonstratives, and other kinds of indexicals? Unsolved problems and desiderata for a theory of reference?.

PHIL 382A. Practical knowledge. 2-4 Units.
When you do something intentionally, you have a special kind of knowledge of what you are doing. Anscombe called this practical knowledge. She argued that it is non-observational and non-inferential, and that it plays a role in making your action intentional at all. Was Anscombe right? What kind of knowledge do you have of your action when you are acting intentionally? We will consider various interpretations of Anscombe's view on practical knowledge, and various competitors. This class is open to all philosophy graduate students, and to other students only with instructor permission. The 2 unit option is only allowed for Philosophy PhD students who are beyond the second year.

PHIL 383. Advanced Topics in Epistemology. 2-4 Units.
May be repeated for credit. 2 unit option is only for Phil PhD students beyond the second year.

PHIL 383B. What's an Inference?. 2-4 Units.
Fundamental issues in epistemology, philosophy of mind and language: issues relating to the notion (or rather, notions) of an inference. What's inferential justification? What's an inferential reasoning process? What are inference rules, and what distinguishes a good rule of inference from a bad rule? Subtopics to be discussed include: the problem of mental causation, the distinction between personal and sub-personal levels of explanation, preservation of content and warrant, the epistemic support relation, and time permitting the nature of perceptual justification.

PHIL 384. Seminar in Metaphysics and Epistemology. 4 Units.
2015-16 topic: Logical Consequence.nMay be repeated for credit.

PHIL 384J. Grad Seminar. 2-4 Units.
This class is open to graduate students in philosophy, all others need explicit permission. 2 unit option is for 3rd year Philosophy PhDs only.

PHIL 384P. Mental Action and Its Pathologies. 2-4 Units.
In this graduate seminar, we will examine the nature of mental action. What is mental action? What kinds of mental actions can we perform intentionally? Is there such a thing as paralysis of mental action? Are delusions of thought insertion pathologies of mental action? nnThis is a seminar mainly for graduate students in philosophy, but readings will include many sources from the cognitive sciences. Students taking the course for credit will be required to do a presentation and write a research paper. 2 unit option only for Philosophy PhDs beyond the second year.

PHIL 384W. The Liar Paradox. 2-4 Units.
This is a graduate seminar on the liar and related paradoxes. We will go over recent approaches, starting with Kripke's 1975 approach. Work on the liar by Field, McGee, Priest, and others will be discussed. We will cover both technical and philosophical issues related to the liar. This class is open to graduate students in philosophy, all others need explicit permission. 2 unit option is for 3rd year Philosophy PhDs only.

PHIL 385B. Topics in Metaphysics and Epistemology: Situations and Attitudes. 2-4 Units.
2 unit option for PhD students only. May be repeated for credit.

PHIL 385C. Topics in Philosophy of Language: The Frege-Russell Problems. 2-4 Units.
Explore various approaches to the difficulties for semantic theories raised by the behavior of propositional attitude sentences. How, if Superman and Clark are the same person, can Lois have different beliefs about them? "Classic" treatments of the issues including Frege, Russell, Quine, Davidson, and Kripke. Contemporary debates about the most promising approaches, including "naive Russellianism" and "unarticulated constituent" accounts.

PHIL 385D. Advanced Topics in Philosophy of Language. 2-4 Units.
Course may be repeat for credit. 2 unit option for PhD students only.

PHIL 385M. Metaphysics and Semantics. 2-4 Units.
2 unit option only for Phil PhDs beyond the second year.

PHIL 385N. Transfeminism. 2-4 Units.
This graduate seminar explores the metaphysics, ethics, and epistemology of transness, using sources from the 1970s to the present, primarily focused on the US, the UK, and Canada. Among the questions we¿ll investigate are: How can we theorize about gender in a way that acknowledges the breadth and diversity of embodied human experience? How should we understand trans femininity, trans masculinity, and genderqueerness? What is the relationship between a person¿s internal sense of their own gender, and the gendered expectations of the broader society where they live?2 unit option only for Phil PhDs beyond the second year.
Same as: FEMGEN 385N

PHIL 385R. Metaphysics of Reference. 2-4 Units.
This seminar is an investigation of the nature of reference in both private thought and public talk. Just what is it for some bits of either our shared public language or our inner thoughts to refer to or stand for bits of the world? In virtue of what does the relation of reference obtain between some bit of the world and some bit of either outer language or inner thought? What about apparent reference to putatively non-existent objects, like Santa Claus or Sherlock Holmes? We appear to think and talk about objects that do not exist. But there are no such objects. So just how do we manage to think and talk about them? Or consider abstract objects, like numbers, that are thought by some to exist outside the spatial-temporal order. We appear to think and talk about such objects as well. But it is a mystery how, if at all, the reach of our thought could possibly extend beyond even the bounds of space and time. Though we will canvass a a number of different answers to this questions, proposed by a variety of philosophers, my main goal will be to develop and defend a view that I call two-factor referentialism. Readings will be drawn from a number of sources, including several chapters of my book in progress Referring to the World.

PHIL 386. Truth as the aim of belief and inquiry. 2-4 Units.
This is a graduate seminar in epistemology and mind. 2 unit option for Philosophy PhD students beyond the second year only. May be repeated for credit.

PHIL 386B. Husserl and Adam Smith. 4 Units.
Readings from Husserl and others in the phenomenological tradition, and recent work on intentionality and consciousness by philosophers and cognitive scientists.

PHIL 386C. Subjectivity. 4 Units.
Continuation of 386B.

PHIL 386D. Personal Identity. 4 Units.
Focus on personal identity as a case study in metaphysical indeterminacy. The classic puzzles of PI can be construed as arguments that it can be indeterminate whether person A is identical to person B, and indeed, whether person A exists. Can such cases of indeterminacy be plausibly interpreted as semantic (or epistemic), or do they support the possibility of worldly or "ontic" indeterminacy? Is ontic indeterminacy even coherent? How might it be modeled? Parallel questions arise in the metaphysics of ordinary material objects, of course; but it's not obvious that their answers should also run parallel. And even if they do, focusing on PI lends the questions some real urgency. How should I feel about the interests of a past or future person who's only indeterminately me? Should I fear a future in which I merely indeterminately exist? Maybe outright death is preferable to being literally liminal. Seminar. Graduate work in core philosophy a prerequisite.

PHIL 386E. About Being. 4 Units.
A pop-up course on Burgess' eponymous book project, which deals with the metaphysics of linguistic representation in the service of developing a methodology for adjudicating ontological disputes. Keywords: linguistic turn, Plato's beard, problem of intentionality, grounding, deflationism, metaontology, etc. Readings will be a mix of chapter drafts and recent, relevant work by other people, including Rayo, Sider, Manley & Hawthorne; with a couple classics by Quine and Stalnaker thrown in for good measure.

PHIL 387. Intention and Normative Judgment. 2-4 Units.
Prominent views in both metaethics and the philosophy of action hold that there are distinctively practical states of mind that nonetheless play many of the roles traditionally associated with belief. Some action theorists hold that intention is a kind of practical attitude subject to rational requirements such as requirements of consistency and coherence. Metaethical noncognitivists hold that normative judgments are distinctively practical¿perhaps even a species of intention¿and face the well-known Frege-Geach problem because of that commitment. We will consider what metaethicists can learn from debates about intention in the philosophy of action, and what philosophers of action can learn from debates about metaethical non-cognitivism.

PHIL 387B. Plan Rationality. 4 Units.
This seminar will explore foundational issues about practical rationality as they arise in the context of agency in which planning plays a basic role. We will consider issues both about rationality at a time and about rationality over time.nOpen to graduate students in Philosophy and to others by permission.

PHIL 387C. Consistency and Coherence. 2-4 Units.
Some philosophers think that attitudes like belief and intention are subject to consistency and coherence requirements. Are there such general purpose cogency requirements on attitudes? If so, what is their nature and strength? What grounds these requirements; for instance, does the point or purpose of a belief or an intention ground consistency and coherence requirements on that attitude? How are such requirements on belief related to requirements on intention? How does the answer to such questions bear on understanding of the interrelations between theoretical and practical rationality?.

PHIL 387D. Rationality over Time. 2-4 Units.
.

PHIL 387F. Grad Seminar. 2-4 Units.
An introduction to truthmaker semantics, recently developed by Fine and others, and considering some of the applications to natural and formal languages.nThere will be a focus both on presenting the semantics in rigorous fashion and showing, in detail, how it might be applied in a number of different areas. Grad seminar with Kit Fine. 2 unit option for PhD students only.

PHIL 387S. Practical Reasons and Practical Reasoning. 4 Units.
Attempts to develop alternatives to Humean, instrumentalist conceptions of practical reasoning, and alternatives to Humean, non-cognitivist views of practical reasons. Readings include Aurel Kolnai, Bernard Williams, David Wiggins, Joseph Raz, Michael Bratman, Elijah Millgram, and T.M. Scanlon.

PHIL 388. Topics in Normativity. 2-4 Units.
Topics in Normativity. Normative Consciousness. May be repeated for credit. 2 unit option for PhD students only.

PHIL 389. Advanced Topics in Epistemology. 2-5 Units.
Advanced topics in epistemology. Pre-requisite Phil 284. May be repeated for credit.

PHIL 391. Seminar on Logic & Formal Philosophy. 2-4 Units.
Research seminar for graduate students working in logic and formal philosophy. Presentations on contemporary topics by seminar participants and outside visitors. Maybe be repeated for credit.
Same as: MATH 391

PHIL 450. Thesis. 1-15 Unit.
(Staff).

PHIL 500. Advanced Dissertation Seminar. 1 Unit.
Presentation of dissertation work in progress by seminar participants. May be repeated for credit.

PHIL 801. TGR Project. 0 Units.
.

PHIL 802. TGR Dissertation. 0 Units.
(Staff).

PHYSICS

Courses offered by the Department of Physics are listed under the subject code PHYSICS on the Stanford Bulletin's ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PHYSICS&filter-catalognumber-PHYSICS=on).

Mission of the Undergraduate Program in Physics

The mission of the undergraduate program in Physics is to provide students with a strong foundation in both classical and modern physics. The goal of the program is to develop both quantitative problem solving skills and the ability to conceive experiments and analyze and interpret data. These abilities are acquired through both course work and opportunities to conduct independent research. The program prepares students for careers in fields that benefit from quantitative and analytical thinking, including physics, engineering, teaching, medicine, law, science writing, and science policy, in government or the private sector. In some cases, the path to this career will be through an advanced degree in physics or a professional program.

Learning Outcomes (Undergraduate)

Students develop an understanding of the fundamental laws that govern the universe, and a strong foundation of mathematical, analytical, laboratory, and written communication skills. They will also be presented with opportunities for learning through research. Upon completion of the Physics degree, students should have acquired the following knowledge and skills:

1. a thorough quantitative and conceptual understanding of the core areas of physics, including mechanics, electricity and magnetism, thermodynamics, statistical physics, and quantum mechanics, at a level compatible with admission to graduate programs in physics at peer institutions.
2. the ability to analyze and interpret quantitative results, both in the core areas of physics and in complex problems that cross multiple core areas.
3. the ability to apply the principles of physics to solve new and unfamiliar problems. This ability is often described as "thinking like a physicist."
4. the ability to use contemporary experimental apparatus and analysis tools to acquire, analyze and interpret scientific data.
5. the ability to communicate scientific results effectively in written papers and presentations or posters.

Course Work

The course work is designed to provide students with a sound foundation in both classical and modern physics. Students who wish to specialize in astronomy, astrophysics, or space science should also consult the "Astronomy Program (p. 1083)" section of this bulletin.

Three introductory series of courses include labs in which undergraduates carry out individual experiments. The Intermediate and Advanced Physics Laboratories offer facilities for increasingly complex individual work, including the conception, design, and fabrication of laboratory equipment. Undergraduates are also encouraged to participate in research; most can do this through the senior thesis and/or the summer research program.

The study of physics is undertaken by three principal groups of undergraduates: those including physics as part of a general education; those preparing for careers in professional fields that require a knowledge of physics, such as medicine or engineering; and those preparing for careers in physics or related fields, including teaching and research in colleges and universities, research in federally funded laboratories and industry, and jobs in technical areas. Physics courses numbered below 100 are intended to serve all three of these groups. The courses numbered above 100 mainly meet the needs of the third group, but also of some students majoring in other branches of science and engineering.

Entry-Level Sequences in Physics

The Department of Physics offers three year-long, entry-level physics sequences, the PHYSICS 20, 40, and 60 series. The first of these (the 20 series) is non-calculus-based, and is intended primarily for those who are majoring in biology. Students with AP Physics credit, particularly those who are considering research careers, may wish to consider taking the PHYSICS 40 series, rather than using AP placement. These introductory courses provide a depth and emphasis on problem solving that has significant value in biological research, given today's considerable physics-based technology.

For those intending to major in engineering or the physical sciences, or simply wanting a stronger background in physics, the department offers the PHYSICS 40 and 60 series. Either of these satisfies the entry-level physics requirements of any Stanford major. The 60 series is intended for those who have already taken a Physics course at the level of the 40 series, or at least have a strong background in mechanics, some background in electricity and magnetism, and a strong background in calculus.

The PHYSICS 40 series begins with PHYSICS 41 Mechanics offered Autumn and Spring Quarter, PHYSICS 43 Electricity and Magnetism offered Winter and Summer Quarter, and PHYSICS 45 Light and Heat in Autumn Quarter. While it is recommended that most students begin the sequence with PHYSICS 41 in Autumn Quarter, those who have had strong physics preparation in high school (such as a score of at least 4 on the Physics AP C exam) may start the sequence with PHYSICS 45 in Autumn Quarter.

PHYSICS 41E and PHYSICS 43A are optional 1 unit companion courses to PHYSICS 41 and PHYSICS 43 respectively. They provide additional problem solving for students with less preparation in math and physics.

The Physics Tutoring Center offers help to students in the Entry-Level courses. It is staffed Monday through Friday.

Entry-Level Course List

One course from the following is recommended for the humanities or social science student who wishes to become familiar with the methodology and content of modern physics:

		Units
PHYSICS 15	Stars and Planets in a Habitable Universe	3
PHYSICS 16	The Origin and Development of the Cosmos	3
PHYSICS 17	Black Holes and Extreme Astrophysics	3
PHYSICS 19	How Things Work: An Introduction to Physics (not offered 2020-21)	3

The 20 series (below) is recommended for general students and for students preparing for medicine or biology:

		Units
PHYSICS 21	Mechanics, Fluids, and Heat	4
PHYSICS 22	Mechanics, Fluids, and Heat Laboratory	1
PHYSICS 23	Electricity, Magnetism, and Optics	4
PHYSICS 24	Electricity, Magnetism, and Optics Laboratory	1
PHYSICS 25	Modern Physics	4
PHYSICS 26	Modern Physics Laboratory	1

The 40 series (below) is for students majoring in engineering, chemistry, earth sciences, mathematics, or physics:

		Units
PHYSICS 41	Mechanics	4
PHYSICS 42	Classical Mechanics Laboratory	1
PHYSICS 43	Electricity and Magnetism	4
PHYSICS 44	Electricity and Magnetism Lab	1
PHYSICS 45	Light and Heat	4
PHYSICS 46	Light and Heat Laboratory	1

The 60 series (below), or advanced freshman series, is for students who have had strong preparation in physics and calculus in high school. Students who have had the appropriate background and wish to major in physics should take this introductory series:

		Units
PHYSICS 61	Mechanics and Special Relativity	4
PHYSICS 62	Mechanics Laboratory	1
PHYSICS 63	Electricity, Magnetism, and Waves	4
PHYSICS 64	Electricity, Magnetism and Waves Laboratory	1
PHYSICS 65	Quantum and Thermal Physics	4
PHYSICS 67	Introduction to Laboratory Physics	1

Physics Placement Diagnostic

All students who would like to enroll in either PHYSICS 45 Light and Heat or PHYSICS 61 Mechanics and Special Relativity must take the Placement Diagnostic if they have never taken an Introductory Physics course at Stanford (i.e., not taken at least one of the following courses: PHYSICS 21, 23, 25, 41, 41A/E, 43, 45, 61, 63, 65).

All frosh must take the Placement Diagnostic to enroll in PHYSICS 41 Mechanics.

For more information, see the department's Physics Placement Diagnostic (https://physics.stanford.edu/academics/undergraduate-students/placement-diagnostic/) page.

Graduate Programs in Physics

Graduate students find opportunities for research in many areas of Physics. Faculty advisers are drawn from many departments, including, but not limited to Physics, Particle Physics and Astrophysics at SLAC, Photon Science at SLAC, Materials Science and Engineering, Electrical Engineering, and Biology.

The number of graduate students admitted to the Department of Physics is strictly limited. Students should submit applications by Tuesday, December 15, 2020 at 11:59 p.m. Pacific Time for matriculation the following Autumn Quarter. Graduate students may normally enter the department only at the beginning of Autumn Quarter.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in physics and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis using the tools of Physics. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of physics and to interpret and present the results of such research.

Fellowships and Assistantships

The Department of Physics makes an effort to support all its graduate students through fellowships, teaching assistantships, research assistantships, or a combination of sources. More detailed information is provided with the offer of admission.

Laboratories and Institutes

The Russell H. Varian Laboratory of Physics, the Physics and Astrophysics Building, the W. W. Hansen Experimental Physics Laboratory (HEPL), the E. L. Ginzton Laboratory, the Center for Nanoscale Science and Engineering and the Geballe Laboratory for Advanced Materials (GLAM) together house a range of physics activities from general courses through advanced research. Ginzton Lab houses research on optical systems, including quantum electronics, metrology, optical communication and development of advanced lasers. GLAM houses research on novel and nanopatterned materials, from high-temperature superconductors and magnets to organic semiconductors, subwavelength photon waveguides, and quantum dots. GLAM also supports the materials community on campus with a range of characterization tools: it is the site for the Stanford Nanocharacterization Lab (SNL) and the NSF-sponsored Center for Probing the Nanoscale (CPN). The SLAC National Accelerator Laboratory is just a few miles from the Varian Laboratory. SLAC is a national laboratory funded by the Offices of Basic Energy Sciences and High Energy Physics of the Department of Energy. Scientists at SLAC conduct research in photon science, accelerator physics, particle physics, astrophysics and cosmology. The laboratory hosts a two-mile-long linear accelerator that can accelerate electrons and positrons. The Stanford Synchrotron Radiation Light Source (SSRL) uses intense x-ray beams produced with a storage ring on the SLAC site. The Linac Coherent Light Source (LCLS), completed in 2009, is the world's first x-ray free-electron laser and has opened new avenues of research in ultra-fast photon science.

The Kavli Institute for Particle Astrophysics and Cosmology (KIPAC), formed jointly with the SLAC National Accelerator Laboratory, provides a focus for theoretical, computational, observational, and instrumental research programs. A wide range of research areas in particle astrophysics and cosmology are investigated by students, postdocs, research staff and faculty. The two major projects with which KIPAC is heavily involved are the Fermi Gamma-Ray Space Telescope (FGST) and the Large Synoptic Survey Telescope (LSST). KIPAC members also participate fully in the Cryogenic Dark Matter Search (CDMS), the Solar Dynamics Observatory (SDO), the EXO-200 double beta decay experiment, the Dark Energy Survey (DES), the NuSTAR and Astro-H X-ray satellites, and several cosmic microwave background experiments (BICEP, KECK, QUIET and POLAR-1).

The Ginzton Laboratory, HEPL, GLAM, KIPAC, SLAC, and SSRL are listed in the "Centers, Laboratories, and Institutes (p. 2512)" section of this bulletin. Students may also be interested in research and facilities at two other independent labs: the Center for Integrated Systems, focused on electronics and nanofabrication; and the Clark Center, an interdisciplinary biology, medicine, and bioengineering laboratory.

The Stanford Institute for Theoretical Physics is devoted to the investigation of the basic structure of matter (particle theory, string theory, M-theory, quantum cosmology, condensed matter physics).

Physics Course Numbering System

Course numbers beyond 99 are numbered in accordance with a three-digit code. The first digit indicates the approximate level of the course:

Digit	Description
100	intermediate and advanced undergraduate courses
200	first-year graduate courses
300	more advanced courses
400	research, special, or current topics

The second digit indicates the general subject matter.

Digit	Description
00	laboratory
10,20,30	general courses
40	nuclear physics, nuclear energy, energy
50	elementary particle physics
60	astrophysics, cosmology, gravitation
70	condensed matter physics
80	optics and atomic physics
90	miscellaneous courses

Bachelor of Science in Physics

Physics is concerned with a rigorous, mathematical understanding of the fundamental laws that govern our universe and everything in it. The Physics major provides students with a foundational understanding of the pillars of modern physics: mechanics, electromagnetic theory, quantum mechanics, and statistical mechanics. The major is designed around a range of tracks that allow students the flexibility to explore a particular interest in more depth, including but not limited to astrophysics, biophysics, computational physics, education, geophysics, and quantum information science.

Physics majors have gone on to pursue careers in basic or applied research, teaching, and policy, as well as many parts of the private sector as engineers, consultants, and founders of startups. Others have combined the Physics major with a minor or major in the humanities and pursued careers in the arts.

Physics majors often pursue advanced degrees, including coterminal master's degrees in EE, CS, Applied & Engineering Physics, Statistics and other fields, and Ph.D. programs in physics or other fields. Students who are specifically interested in preparing for a Ph.D. program in physics should see "Suggestions for students interested in pursuing a Ph.D. program in Physics or closely related fields (p. 1922)" below.

Suggested Preparation for the Major

Prospective Physics majors are advised to take PHYSICS 59 Frontiers of Physics Research in their freshman or sophomore year.

How to Declare the Major in Physics

All prospective physics majors should take the Physics Placement Diagnostic web site (https://physics.stanford.edu/academics/undergraduate-students/placement-diagnostic/) to get sound advice on which introductory physics sequence will be sufficiently challenging without being overwhelming, and where to begin in that sequence. Prospective majors, especially those who are beginning the major during sophomore year, can contact the undergraduate program coordinator(elva@stanford.edu) to arrange an advising appointment. Students who have had previous college-level courses should make an advising appointment for placement and possible transfer credit. For additional information on Advanced Placement, see the Registrar's web site (http://studentaffairs.stanford.edu/registrar/students/ap/).

Degree Requirements

All courses for the Physics major must be taken for a letter grade, and a grade of 'C-' or better must be received for all units applied toward the major. The only exceptions for which a grade of S or CR is acceptable are PHYSICS 42, 44, 46, 62, 64, 67, and one and only one of the following courses: PHYSICS 41, 43, 45, 61, 63, 65.

Each Physics major takes a set of required courses common to all tracks, followed by an additional six courses in one of eight defined tracks or, in rare cases, an individually designed track.

See these sample four-year plans (https://docs.google.com/spreadsheets/d/1KIjKj8-EMStYKC3YqPvgdfsnwCq-ybSpF-XwFAcHf-4/edit/#gid=1959434091) that illustrate how to complete the required courses for all tracks for different starting points in the math and physics sequences.

Course Requirements

		Units
Introductory Sequence		**16-20**
Complete either the 40 Series or the 60 Series [1]		
40 Series (19-20 units):		
PHYSICS 41	Mechanics	
PHYSICS 42	Classical Mechanics Laboratory	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 44	Electricity and Magnetism Lab	
or PHYSICS 67	Introduction to Laboratory Physics	
PHYSICS 45	Light and Heat	
PHYSICS 46	Light and Heat Laboratory	
PHYSICS 70	Foundations of Modern Physics	
60 Series (16 units):		
PHYSICS 61	Mechanics and Special Relativity	
PHYSICS 62	Mechanics Laboratory	
PHYSICS 63	Electricity, Magnetism, and Waves	
PHYSICS 64	Electricity, Magnetism and Waves Laboratory	
PHYSICS 65	Quantum and Thermal Physics	
PHYSICS 67	Introduction to Laboratory Physics	
Required Math Courses		**21-24**
Complete MATH 50 or 60CM Series:		
50-Series		
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications	
MATH 52	Integral Calculus of Several Variables	
MATH 53	Ordinary Differential Equations with Linear Algebra	
60CM-Series		
MATH 61CM	Modern Mathematics: Continuous Methods	
MATH 62CM	Modern Mathematics: Continuous Methods	
MATH 63CM	Modern Mathematics: Continuous Methods	
Complete one course from:		
PHYSICS 111	Partial Differential Equations of Mathematical Physics	
MATH 131P	Partial Differential Equations	
MATH 173	Theory of Partial Differential Equations [2]	
Intermediate Physics Sequence		
PHYSICS 120	Intermediate Electricity and Magnetism I	4
PHYSICS 121	Intermediate Electricity and Magnetism II	4
PHYSICS 130	Quantum Mechanics I	4

PHYSICS 170	Thermodynamics, Kinetic Theory, and Statistical Mechanics I	4
Writing In the Major (WIM)		
PHYSICS 191	Scientific Communication in Physics [3]	
Physics Track		
Select one of the tracks defined below and complete six courses for the selected track. Physics, math and practicum elective course options for each track are listed here.		24
Physics Elective Options		
Any Physics (PHYSICS) or Applied Physics (APPPHYS) course of 3 or more units, numbered 100 and above not including PHYSICS 190, 198, 199, 201, 205, 240, 241, 290, 291, 293, 294, and APPPHYS 100, APPPHYS 290, APPPHYS 291, APPPHYS 390, or any APPPHYS course numbered 400 or higher)		
Math Elective Options		
Any Math (MATH) course 101 and above (not 197), 3 units or more. Or any of the following		
PHYSICS 112	Mathematical Methods for Physics	
CS 109	Introduction to Probability for Computer Scientists	
STATS 116	Theory of Probability	
EE 261	The Fourier Transform and Its Applications	
Practicum Course Options		
PHYSICS 100	Introduction to Observational Astrophysics	
PHYSICS 104	Electronics and Introduction to Experimental Methods	
PHYSICS 105	Intermediate Physics Laboratory I: Analog Electronics (Course not offered this year)	
PHYSICS 106	Experimental Methods in Quantum Physics	
PHYSICS 107	Intermediate Physics Laboratory II: Experimental Techniques and Data Analysis (Course not offered this year)	
PHYSICS 108	Advanced Physics Laboratory: Project (Course not offered this year)	
PHYSICS 113	Computational Physics	
PHYSICS 166	Statistical Methods in Experimental Physics	
Total Units		77-84

[1] Although not generally recommended, students with sufficient lab preparation who do not take all three required introductory lab courses may substitute an extra advanced lab course (PHYSICS 100, 104, 105, 106, 107, or 108) for all three required introductory labs. Note that in this case, taking any of the introductory labs does not in any way reduce the requirement of taking an extra advanced lab. In general, only an extra advanced lab, not any other courses, may substitute for the intro labs. A student must apply to make this substitution using the usual course substitution form.

[2] In years when MATH 173 Theory of Partial Differential Equations is not offered, MATH 220 Partial Differential Equations of Applied Mathematics is a recommended alternative.

[3] PHYSICS 107 Intermediate Physics Laboratory II: Experimental Techniques and Data Analysis qualifies for WIM if taken in 2019-20 or earlier.

Tracks

In addition to the courses listed above (required for all tracks), Physics majors must complete six additional courses as defined for one of the following tracks. A course taken to satisfy the general requirements above cannot also count for a track requirement. Any course taken to satisfy a track requirement must be at least 3 units. Tracks are not declarable in Axess; they do not appear on the transcript nor on the diploma.

A letter grade of 'C-' or higher is required for all courses in each Physics track; therefore, any course in another department that does not offer a letter grade cannot count towards the requirement for a Physics track, even if the course is listed as an option for a track.

Click on the name of the track to see detailed requirements:

Core Track

Recommended starting point for students considering applying to Ph.D. programs in physics; see below for further advice (p. 1922).

		Units
Required		
PHYSICS 110	Advanced Mechanics	3-4
PHYSICS 131	Quantum Mechanics II	4
PHYSICS 171	Thermodynamics, Kinetic Theory, and Statistical Mechanics II	4
Complete one practicum course		
Complete one Physics elective		
Complete one additional physics or math elective course		

Astrophysics

		Units
PHYSICS 100	Introduction to Observational Astrophysics	4
PHYSICS 110	Advanced Mechanics	3-4
PHYSICS 160	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 161	Introduction to Cosmology and Extragalactic Astrophysics	3
or PHYSICS 262	General Relativity	
PHYSICS 171	Thermodynamics, Kinetic Theory, and Statistical Mechanics II	4
Complete one course from:		3
PHYSICS 113	Computational Physics	
PHYSICS 166	Statistical Methods in Experimental Physics	
PHYSICS 262	General Relativity	

PHYSICS 160 and PHYSICS 161 are jointly taught to undergraduates and graduate students (PHYSICS 260 and PHYSICS 261 are for graduate students). Undergraduates must register for 160/161 not 260/261.

Biophysics

It is recommended that Physics majors interested in pursuing a career in biophysics consider a minor in Biology.

		Units
PHYSICS 110	Advanced Mechanics	3-4
or PHYSICS 131	Quantum Mechanics II	
PHYSICS 171	Thermodynamics, Kinetic Theory, and Statistical Mechanics II	4
Complete one course from:		
One Practicum Course		
APPPHYS 232	Advanced Imaging Lab in Biophysics	4
Complete three courses from:		
APPPHYS 205	Introduction to Biophysics	3-4
or BIO 126	Introduction to Biophysics	
APPPHYS 237	Quantitative Evolutionary Dynamics and Genomics	3

or BIO 251	Quantitative Evolutionary Dynamics and Genomics	
APPPHYS 293	Theoretical Neuroscience	3
or PSYCH 242	Theoretical Neuroscience	
APPPHYS 294	Cellular Biophysics	3
or BIO 294	Cellular Biophysics	
BIOE 42	Physical Biology	4
BIOE 101	Systems Biology	3
BIOE 102	Physical Biology of Macromolecules	4

Computational Physics and Data Science

		Units
PHYSICS 110	Advanced Mechanics	3-4
PHYSICS 113	Computational Physics	4
One Physics Elective Course		
Complete three courses from:		
PHYSICS 166	Statistical Methods in Experimental Physics	3
or STATS 116	Theory of Probability	
or CS 109	Introduction to Probability for Computer Scientists	
CS 129	Applied Machine Learning	3-4
CS 154	Introduction to the Theory of Computation	3-4
CS 161	Design and Analysis of Algorithms	3-5
CS 205L	Continuous Mathematical Methods with an Emphasis on Machine Learning	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 229	Machine Learning	3-4
CS 230	Deep Learning	3-4
STATS 200	Introduction to Statistical Inference	4
STATS 203	Introduction to Regression Models and Analysis of Variance	3
or STATS 270	A Course in Bayesian Statistics	
or STATS 271	Applied Bayesian Statistics	

Geophysics

		Units
PHYSICS 110	Advanced Mechanics	3-4
PHYSICS 131	Quantum Mechanics II	4
or PHYSICS 171	Thermodynamics, Kinetic Theory, and Statistical Mechanics II	
One Practicum Course		
Complete three courses from:		
GEOPHYS 110	Introduction to the Foundations of Contemporary Geophysics	3
GEOPHYS 120	Ice, Water, Fire	3-5
GEOPHYS 128	MODELING EARTH	3-4
GEOPHYS 130	Introductory Seismology	3
GEOPHYS 162		3-4
GEOPHYS 165	Ice Penetrating Radar	1-3
GEOPHYS 182	Reflection Seismology	3
GEOPHYS 184	Journey to the Center of the Earth	3
GEOPHYS 188	Basic Earth Imaging	2-3
GEOPHYS 227	Global Seismology	3
GEOPHYS 237	Evolution of Terrestrial Planets	3

Mathematical Physics

		Units
PHYSICS 110	Advanced Mechanics	3-4
One Practicum Course		
Two Math Elective Courses		
Two Physics or Math Elective Courses		

Physics Education

		Units
PHYSICS 110	Advanced Mechanics	3-4
PHYSICS 131	Quantum Mechanics II	4
or PHYSICS 171	Thermodynamics, Kinetic Theory, and Statistical Mechanics II	
One Practicum Course		
Complete three courses from:		
PHYSICS 295	Learning & Teaching of Science ((Recommended))	3
or EDUC 280	Learning & Teaching of Science	
EDUC 101	Introduction to Teaching and Learning	4
EDUC 398	Core Mechanics for Learning	3
EDUC 400A	Introduction to Statistical Methods in Education	3-4
EDUC 266	Educational Neuroscience	3
EDUC 332	Theory and Practice of Environmental Education	3
EDUC 357	Science and Environmental Education in Informal Contexts	3-4
EDUC 218	Topics in Cognition and Learning: Technology and Multitasking	3
EDUC 328	Topics in Learning and Technology: Core Mechanics for Learning	3
EDUC 391	Engineering Education and Online Learning	3

Quantum Science and Information

		Units
PHYSICS 131	Quantum Mechanics II	4
PHYSICS 134	Advanced Topics in Quantum Mechanics	3-4
PHYSICS 110	Advanced Mechanics	3-4
or PHYSICS 171	Thermodynamics, Kinetic Theory, and Statistical Mechanics II	
One Practicum Course		
Complete two courses from:		
APPPHYS 225	Probability and Quantum Mechanics	3
APPPHYS 228	Quantum Hardware	4
CS 154	Introduction to the Theory of Computation	3-4
CS 259Q/269Q	Quantum Computing	3
EE 276	Information Theory	3
or STATS 376A	Information Theory	

Individually Designed Track

In rare cases, a student may propose a new track. The proposed courses must have a theme (rather than being a disconnected set of courses), and they should either include physics content, benefit from a physics perspective, deepen the student's understanding of physics, or allow students to apply their physics knowledge more broadly. The proposal should be as specific as possible and include detailed rationale for the track. The proposed track must not be largely redundant with an existing track or major. The proposal should address feasibility

issues such as whether the proposed courses are offered with sufficient frequency.

Other Information

Senior Thesis

The department offers Physics majors the opportunity to complete a senior thesis. These are the guidelines:

1. Students must submit a Senior Thesis Application form once they identify a physics project, either theoretical or experimental, in consultation with individual faculty members. Proposal forms are available from the undergraduate coordinator and must be submitted by the week prior to the Thanksgiving break of the academic year in which the student plans to graduate.
2. Credit for the project is assigned by the adviser within the framework of PHYSICS 205 Senior Thesis Research. A minimum of 3 units of PHYSICS 205 Senior Thesis Research must be completed for a letter grade during the senior year. Work completed in the senior thesis program may not be used as a substitute for regular required courses for the Physics major.
3. A written report and a presentation of the work at its completion are required for the senior thesis. By mid-May, the senior thesis candidate is required to present the project at the department's Senior Thesis Presentation Program. This event is publicized and open to the general public. The expectation is that the student's adviser, second reader, and all other senior thesis candidates attend.

Honors Program

Physics majors are granted a Bachelor of Science in Physics with Honors if they satisfy these three requirements beyond the general Physics major requirements:

1. The student files for entry into the honors program by completing an Honors Program Application (available from the undergraduate coordinator) by the same deadline as the Senior Thesis Application. Eligibility is confirmed by the department.
2. The student completes a senior thesis by meeting the deadlines and requirements described above.
3. The student completes course work with an overall GPA of 3.30 or higher, and a GPA of 3.50 or higher in courses required for the Physics major.

Additional Information

Suggestions for students interested in pursuing a Ph.D. program in Physics or closely related fields

Research in physics is roughly divided into fields that include astrophysics, atomic, molecular and optical (AMO) physics, biophysics, condensed matter physics, and particle physics. Physics research at Stanford includes computational, experimental, observational, and theoretical work in these fields. It can be useful to consult with faculty in each of the research areas that you might be interested in pursuing in graduate school since recommendations for preparation often vary by field. See the Physics Research Areas webpage (https://physics.stanford.edu/research/research-areas/) to get started.

The above requirements are the minimum for the Physics major; they are intended to provide a foundation in math and physics that prepares students for the very wide range of careers pursued by Physics majors. However, if a student is considering pursuing a Ph.D. program in Physics, the department recommends that they complete more than the required Math and Physics courses in a track. In particular, they should take PHYSICS 110, 131, 134, and 171, which are necessary elements of undergraduate Physics in preparation for Ph.D. programs.

The department also recommends acquiring laboratory experience, e.g., courses such as PHYSICS 100, 104, 105, 106, 107, or 108, or research experience in an experimental laboratory. It also recommends completing additional Physics and Math courses based on the student's interests and the advice of faculty in their field(s) of interest. In addition, they should pursue research in physics, e.g., through the Undergraduate Summer Research program (https://physics.stanford.edu/academics/undergraduate-students/undergraduate-summer-research/) in the Physics department, or through research opportunities outside Stanford (https://physics.stanford.edu/academics/undergraduate-students/summer-research/research-opportunities-outside-stanford/).

The department strongly recommend that students consult with their Physics major advisor (and faculty in any research area in which they are interested) for recommendations on courses and research or internship opportunities, and attend the faculty-led group advising meetings held near the end of Autumn Quarter on applying for summer research, and in the Autumn and Spring quarters on thinking about advanced degrees.

Minor in Physics

The Physics minor allows the student to select a concentration in Physics or Astronomy. The Astronomy concentration has a technical and non-technical option.

How to Declare the Minor in Physics

The minor declaration deadline is three quarters before graduation, typically the beginning of Autumn Quarter if the student is graduating at the end of Spring Quarter.

Physics Concentration

Degree Requirements

All courses for the minor must be taken at Stanford University for a letter grade, and a grade of 'C-' or better must be received for all units applied toward the minor except as noted in the following paragraph.

Students who take the PHYSICS 20, 40, or 60 series at Stanford in support of their major may count those units towards the minor. Those who have fulfilled Physics requirements at the 20 or 40 level by enrollment at another accredited university, or through advanced placement credits, may count credits towards PHYSICS 21, PHYSICS 23, and PHYSICS 24, or PHYSICS 41/PHYSICS 42 and PHYSICS 43/PHYSICS 44.

PHYSICS 25/PHYSICS 26, or PHYSICS 45 /PHYSICS 46 for a minor in Physics or the technical minor concentration in Astronomy, must be taken at Stanford even if similar material has been covered elsewhere.

Course Requirements

		Units
An undergraduate minor in Physics requires a minimum of 25 units with the following course work:		
Select one of the following Series:		16-19
Series A (19 units)		
PHYSICS 41 & PHYSICS 42	Mechanics and Classical Mechanics Laboratory	
PHYSICS 43 & PHYSICS 44	Electricity and Magnetism and Electricity and Magnetism Lab [1]	
PHYSICS 45 & PHYSICS 46	Light and Heat and Light and Heat Laboratory	
PHYSICS 70	Foundations of Modern Physics	
Series B (16 units)		
PHYSICS 61 & PHYSICS 62	Mechanics and Special Relativity and Mechanics Laboratory	

PHYSICS 65 & PHYSICS 67	Quantum and Thermal Physics and Introduction to Laboratory Physics	
PHYSICS 63 & PHYSICS 64	Electricity, Magnetism, and Waves and Electricity, Magnetism and Waves Laboratory	
At least three PHYSICS courses numbered 100 or above from the following courses: PHYSICS 100, 105, 107, 108, 110, 111, 112, 113, 120, 121, 130, 131, 134, 152, 160, 161, 166, 170, 171, 172, 182, 199, 211, 212, 216, 220, 230, 231, 262.		9-12
Total Units		25-31

[1] PHYSICS 67 Introduction to Laboratory Physics may be substituted for PHYSICS 44 Electricity and Magnetism Lab.

Minor in Physics with Concentration in Astronomy

Students wishing to pursue advanced work in astrophysical sciences should major in Physics (p. 1919) and concentrate in astrophysics. However, students outside of Physics with a general interest in astronomy may organize their studies by completing one of the following Physics minor concentration programs.

Students who take the 20, 40, or 60 series at Stanford in support of their major may count those units towards the minor.

An undergraduate Physics minor with a concentration in Astronomy requires the following courses:

Non-Technical

For students whose majors do not require the PHYSICS 40 or 60 series:

		Units
PHYSICS 21	Mechanics, Fluids, and Heat	4
PHYSICS 23	Electricity, Magnetism, and Optics	4
PHYSICS 25 & PHYSICS 26	Modern Physics and Modern Physics Laboratory	5
PHYSICS 50	Astronomy Laboratory and Observational Astronomy	3-4
or PHYSICS 100	Introduction to Observational Astrophysics	
Select two of the following:		6
PHYSICS 15	Stars and Planets in a Habitable Universe	
PHYSICS 16	The Origin and Development of the Cosmos	
PHYSICS 17	Black Holes and Extreme Astrophysics	
Total Units		22-23

Technical

For students whose majors require the PHYSICS 40 or 60 series:

		Units
Select one of the following Series:		14-17
Series A		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45 & PHYSICS 46	Light and Heat and Light and Heat Laboratory	
PHYSICS 70	Foundations of Modern Physics	
Series B		
PHYSICS 61	Mechanics and Special Relativity	
PHYSICS 63	Electricity, Magnetism, and Waves	
PHYSICS 65	Quantum and Thermal Physics	
PHYSICS 67	Introduction to Laboratory Physics	
And take the following three courses:		
PHYSICS 100	Introduction to Observational Astrophysics	4
PHYSICS 160	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 161	Introduction to Cosmology and Extragalactic Astrophysics	3
Total Units		24-27

Students are also encouraged to take the electricity and magnetism/optics lab of the appropriate PHYSICS series , PHYSICS 24 , PHYSICS 44 or PHYSICS 64 for 1 additional unit.

Master of Science

The department does not offer a coterminal degree program, or a separate program for the M.S. degree, but this degree may be awarded for a portion of the Ph.D. degree work.

University requirements for the master's degree, discussed in the "Graduate Degrees (p. 65)" section of this bulletin, include completion of 45 units of unduplicated course work after the bachelor's degree. Course taken to fulfill the degree requirements below must be taken for a letter grade. Among the department requirements are a grade point average (GPA) of at least 3.0 (B) for the following required courses (or their equivalents):

		Units
PHYSICS 212	Statistical Mechanics	3
PHYSICS 220	Classical Electrodynamics	3
Plus one of the following courses:		
PHYSICS 230	Graduate Quantum Mechanics I	3
PHYSICS 231	Graduate Quantum Mechanics II	3
PHYSICS 234	Advanced Topics in Quantum Mechanics	3
PHYSICS 330	Quantum Field Theory I	3
PHYSICS 331	Quantum Field Theory II	3
PHYSICS 332	Quantum Field Theory III	3
Plus two 3 unit graduate level courses in Physics or Applied Physics.		6

Up to 6 of these required units may be waived on petition if a thesis is submitted.

Doctor of Philosophy in Physics

The University's basic requirements for the Ph.D. are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

The minimum department requirements for the Ph.D. degree in Physics consist of completing all courses listed below and at least one course from each of two subject areas outside the student's primary area of research (among biophysics, condensed matter, quantum optics and atomic physics, astrophysics and gravitation, and nuclear and particle physics). For this requirement students must choose from courses numbered above PHYSICS 234, excluding 290 and 294. All courses taken to fulfill the Physics Ph.D. degree requirements must be taken for a letter grade, except for PHYSICS 290 and PHYSICS 294 which are only offered for Satisfactory/No Credit.

The requirements in the following list may be fulfilled by passing the course at Stanford or passing an equivalent course elsewhere:

		Units
PHYSICS 212	Statistical Mechanics	3
PHYSICS 220	Classical Electrodynamics	3
PHYSICS 290	Research Activities at Stanford	1
PHYSICS 294	Teaching of Physics Seminar	1

Plus one of the following courses:

PHYSICS 230	Graduate Quantum Mechanics I	3
PHYSICS 231	Graduate Quantum Mechanics II	3
PHYSICS 234	Advanced Topics in Quantum Mechanics	3
PHYSICS 330	Quantum Field Theory I	3
PHYSICS 331	Quantum Field Theory II	3
PHYSICS 332	Quantum Field Theory III	3

A grade point average (GPA) of at least 3.0 (B) is required for courses taken toward the degree.

All Ph.D. candidates must have math proficiency equivalent to the following Stanford MATH courses:

		Units
MATH 106	Functions of a Complex Variable	3
MATH 113	Linear Algebra and Matrix Theory	3
MATH 116	Complex Analysis	3
PHYSICS 111	Partial Differential Equations of Mathematical Physics	4
PHYSICS 112	Mathematical Methods for Physics	4

Prior to making an application for candidacy, each student is required to pass a comprehensive oral qualifying examination. A thesis proposal must be submitted during the third year. In order to assess the direction and progress toward a thesis, an oral report and evaluation are required during the fourth year. After completion of the dissertation, each student must take the University oral examination (defense of dissertation).

Three quarters of teaching (including a demonstrated ability to teach) are a requirement for obtaining the Ph.D. in Physics.

Students interested in applied physics and biophysics research should also take note of the Ph.D. granted independently by the Department of Applied Physics and by the Biophysics Program. Students interested in astronomy, astrophysics, or space science should also consult the "Astronomy Course Program (p. 1083)" section of this bulletin.

Ph.D. Minor in Physics

Doctoral students seeking a minor in Physics must take at least six courses from the following list: 210, 211, 212, 216, 220, 230, 231, and 234 among the 20 required units. Courses must be taken for a letter grade. All prospective minors must obtain approval of their Physics course program from the Physics Graduate Study Committee at least one year before conferral of the Ph.D.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Department of Physics counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Course Requirements

Students who take PHYSICS 61 and PHYSICS 63 in Autumn and Winter quarters may take either PHYSICS 65 in Summer 2021 or EE 65 in Spring 2021 to complete the requirement of an introductory physics sequence for the Physics major.

For all undergraduates who entered Stanford in Autumn 2019, the requirement to take PHYSICS 44 or PHYSICS 67 for the Physics major is waived as these courses were not offered in Spring 2020. This does not change the other introductory lab requirements.

Graduate Degree Requirements

Grading

The Department of Physics counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B' or better level.

Other Graduate Policies

The Department of Physics will conduct doctoral candidacy reviews as scheduled in Spring Quarter 2020-21.

Qualifying exams will continue to be administered in Spring Quarter 2020-21. Students may request an extension by writing to the Director of Graduate Studies.

Graduate Advising Expectations

The Department of Physics is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Emeriti: (Professors) Sebastian Doniach, Alexander L. Fetter, William A. Little, Douglas D. Osheroff, H. Alan Schwettman, Robert V. Wagoner, John Dirk Walecka, Stanley G. Wojcicki, Mason R. Yearian; (Professors, Research) John A. Lipa, Todd I. Smith, John P. Turneaure; (Professor, Courtesy) Peter A. Sturrock (Applied Physics), Richard Taylor (SLAC National Accelerator Laboratory)

Chair: Shamit Kachru

Director of Undergraduate Studies: Peter Graham

Director of Graduate Studies: Sean Hartnoll

Professors: Tom Abel, Steven Allen, Roger Blandford, Phil Bucksbaum, Patricia Burchat, Blas Cabrera, Steven Chu, Sarah Church, Persis Drell, Savas G. Dimopoulos, David Goldhaber-Gordon, Giorgio Gratta, Patrick Hayden, Kent Irwin, Shamit Kachru, Steven Kahn, Renata E. Kallosh, Aharon Kapitulnik, Mark Kasevich, Steven A. Kivelson, Chao-Lin Kuo, Robert B. Laughlin, Andrei D. Linde, Bruce Macintosh, Kathryn Moler, Peter F. Michelson, Vahe Petrosian, Xiao-liang Qi, Roger W. Romani, Zhi-Xun Shen, Stephen Shenker, Eva Silverstein, Leonard Susskind, Risa Wechsler, Carl Wieman

Associate Professors: Peter Graham, Sean Hartnoll, Benjamin Lev, Hari Manoharan, Srinivas Raghu, Monika Schleier-Smith, Leonardo Senatore, Douglas Stanford (untenured)

Assistant Professors: Benjamin Feldman, Jason Hogan, Vedika Khemani, Lauren Tompkins

Professors (Research): Leo Hollberg, Phillip H. Scherrer

Courtesy Professors: Daniel Akerib, Rhiju Das, Craig Levin, Stephen Quake, Thomas Shutt, Richard N. Zare

Lecturers: Julien Devin, Chaya Nanavati, Rick Pam

Adjunct Professor: Adam Brown, Ralph DeVoe, Steve Yellin

Courses

PHYSICS 14N. Quantum Information: Visions and Emerging Technologies. 3 Units.
What sets quantum information apart from its classical counterpart is that it can be encoded non-locally, woven into correlations among multiple qubits in a phenomenon known as entanglement. We will discuss paradigms for harnessing entanglement to solve hitherto intractable computational problems or to push the precision of sensors to their fundamental quantum mechanical limits. We will also examine challenges that physicists and engineers are tackling in the laboratory today to enable the quantum technologies of the future.

PHYSICS 15. Stars and Planets in a Habitable Universe. 3 Units.
Is the Earth unique in our galaxy? Students learn how stars and our galaxy have evolved and how this produces planets and the conditions suitable for life. Discussion of the motion of the night sky and how telescopes collect and analyze light. The life-cycle of stars from birth to death, and the end products of that life cycle -- from dense stellar corpses to supernova explosions. Course covers recent discoveries of extrasolar planets -- those orbiting stars beyond our sun -- and the ultimate quest for other Earths. Intended to be accessible to non-science majors, material is explored quantitatively with problem sets using basic algebra and numerical estimates. Sky observing exercise and observatory field trips supplement the classroom work.

PHYSICS 16. The Origin and Development of the Cosmos. 3 Units.
How did the present Universe come to be? The last few decades have seen remarkable progress in understanding this age-old question. Course will cover the history of the Universe from its earliest moments to the present day, and the physical laws that govern its evolution. The early Universe including inflation and the creation of matter and the elements. Recent discoveries in our understanding of the makeup of the cosmos, including dark matter and dark energy. Evolution of galaxies, clusters, and quasars, and the Universe as a whole. Implications of dark matter and dark energy for the future evolution of the cosmos. Intended to be accessible to non-science majors, material is explored quantitatively with problem sets using basic algebra and numerical estimates.

PHYSICS 17. Black Holes and Extreme Astrophysics. 3 Units.
Black holes represent an extreme frontier of astrophysics. Course will explore the most fundamental and universal force -- gravity -- and how it controls the fate of astrophysical objects, leading in some cases to black holes. How we discover and determine the properties of black holes and their environment. How black holes and their event horizons are used to guide thinking about mysterious phenomena such as Hawking radiation, wormholes, and quantum entanglement. How black holes generate gravitational waves and powerful jets of particles and radiation. Other extreme objects such as pulsars. Relevant physics, including relativity, is introduced and treated at the algebraic level. No prior physics or calculus is required, although some deep thinking about space, time, and matter is important in working through assigned problems.

PHYSICS 18N. Frontiers in Theoretical Physics and Cosmology. 3 Units.
Preference to freshmen. The course will begin with a description of the current standard models of gravitation, cosmology, and elementary particle physics. We will then focus on frontiers of current understanding including investigations of very early universe cosmology, string theory, and the physics of black holes.

PHYSICS 19. How Things Work: An Introduction to Physics. 3 Units.
Introduction to the principles of physics through familiar objects and phenomena, including airplanes, cameras, computers, engines, refrigerators, lightning, radio, microwave ovens, and fluorescent lights. Estimates of real quantities from simple calculations. Prerequisite: high school algebra and trigonometry.

PHYSICS 21. Mechanics, Fluids, and Heat. 4 Units.
How are the motions of objects and the behavior of fluids and gases determined by the laws of physics? Students learn to describe the motion of objects (kinematics) and understand why objects move as they do (dynamics). Emphasis on how Newton's three laws of motion are applied to solids, liquids, and gases to describe diverse phenomena. Understanding many-particle systems requires connecting macroscopic properties (e.g., temperature and pressure) to microscopic dynamics (collisions of particles). Laws of thermodynamics provide understanding of real-world phenomena such as energy conversion. Everyday examples are analyzed using tools of algebra and trigonometry. Problem-solving skills are developed, including verifying that derived results satisfy criteria for correctness, such as dimensional consistency and expected behavior in limiting cases. Physical understanding fostered by peer interaction and interactive group problem solving. Prerequisite: high school algebra and trigonometry; calculus not required. Autumn 2020-21: Class will be taught remote synchronously in active learning format with much of the learning in smaller breakout rooms that will not be recorded. Please enroll in a section that you can attend regularly.

PHYSICS 21S. Mechanics and Heat. 5 Units.
How are the motions of objects and the behavior of fluids and gases determined by the laws of physics? Students learn to describe the motion of objects (kinematics) and understand why objects move as they do (dynamics). Emphasis on how Newton's three laws of motion are applied to solids, liquids, and gases to describe phenomena as diverse as spinning gymnasts, blood flow, and sound waves. Understanding many-particle systems requires connecting macroscopic properties (e.g., temperature and pressure) to microscopic dynamics (collisions of particles). Laws of thermodynamics provide understanding of real-world phenomena such as energy conversion and performance limits of heat engines. Everyday examples are analyzed using tools of algebra and trigonometry. Problem-solving skills are developed, including verifying that derived results satisfy criteria for correctness, such as dimensional consistency and expected behavior in limiting cases. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Prerequisite: high school algebra and trigonometry; calculus not required.

PHYSICS 22. Mechanics, Fluids, and Heat Laboratory. 1 Unit.
Guided hands-on exploration of concepts in classical mechanics, fluids, and thermodynamics with an emphasis on student predictions, observations and explanations. Pre- or corequisite: PHYSICS 21.nnIn this unusual pandemic year we have planned remote lab activity for you. These labs are a mix of online labs as well as hands-on exercises you can do at home, in a dorm or wherever you may be. The class will be structured with an online Zoom section, where you and others in your section will meet with a TA and go over your results, and do some group exercises. You can do the online materials with a virtual lab partner, we encourage you to get the benefit of someone to collaborate on your analysis and observations.nnWe will be sending every enrolled student a kit of hands-on lab materials, you will get more details the first week of class.

PHYSICS 23. Electricity, Magnetism, and Optics. 4 Units.
How are electric and magnetic fields generated by static and moving charges, and what are their applications? How is light related to electromagnetic waves? Students learn to represent and analyze electric and magnetic fields to understand electric circuits, motors, and generators. The wave nature of light is used to explain interference, diffraction, and polarization phenomena. Geometric optics is employed to understand how lenses and mirrors form images. These descriptions are combined to understand the workings and limitations of optical systems such as the eye, corrective vision, cameras, telescopes, and microscopes. Discussions based on the language of algebra and trigonometry. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Prerequisite: PHYSICS 21 or PHYSICS 21S.

PHYSICS 23S. Electricity and Optics. 5 Units.
How are electric and magnetic fields generated by static and moving charges, and what are their applications? How is light related to electromagnetic waves? Students learn to represent and analyze electric and magnetic fields to understand electric circuits, motors, and generators. The wave nature of light is used to explain interference, diffraction, and polarization phenomena. Geometric optics is employed to understand how lenses and mirrors form images. These descriptions are combined to understand the workings and limitations of optical systems such as the eye, corrective vision, cameras, telescopes, and microscopes. Discussions based on the language of algebra and trigonometry. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Prerequisite: PHYSICS 21 or PHYSICS 21S.

PHYSICS 24. Electricity, Magnetism, and Optics Laboratory. 1 Unit.
Guided hands-on exploration of concepts in electricity and magnetism, circuits and optics with an emphasis on student predictions, observations and explanations. Introduction to multimeters and oscilloscopes. Pre- or corequisite: PHYS 23.

PHYSICS 25. Modern Physics. 4 Units.
How do the discoveries since the dawn of the 20th century impact our understanding of 21st-century physics? This course introduces the foundations of modern physics: Einstein's theory of special relativity and quantum mechanics. Combining the language of physics with tools from algebra and trigonometry, students gain insights into how the universe works on both the smallest and largest scales. Topics may include atomic, molecular, and laser physics; semiconductors; elementary particles and the fundamental forces; nuclear physics (fission, fusion, and radioactivity); astrophysics and cosmology (the contents and evolution of the universe). Emphasis on applications of modern physics in everyday life, progress made in our understanding of the universe, and open questions that are the subject of active research. Physical understanding fostered by peer interaction and demonstrations in lecture, and interactive group problem solving in discussion sections. Prerequisite: PHYSICS 23 or PHYSICS 23S.

PHYSICS 26. Modern Physics Laboratory. 1 Unit.
Guided hands-on and simulation-based exploration of concepts in modern physics, including special relativity, quantum mechanics and nuclear physics with an emphasis on student predictions, observations and explanations. Pre- or corequisite: PHYSICS 25.

PHYSICS 40. Vector and Mathematical Analysis for Mechanics. 2 Units.
Physics 40 teaches fundamental math and physics concepts that are important for success in Physics 41+ and engineering statics/dynamics. This class has a strong emphasis on physics problem solving schema and vector and mathematical analysis for geometry, forces, and motion. Students master both geometric and algebraic representations of vectors, resolving vectors into components, vector addition/subtraction, dot-products, cross-products, and derivatives. Through systematic practice, students translate between various representations, e.g. sketches, descriptions of a physical system, equations, graphs, and real systems (from various physics and engineering disciplines). Vector equations are used to generate scalar equations, which are then solved using analytical or easy-to-use online tools. Physics 40 is an on-ramp to Physics 41 for students with little high school physics. The minimum corequisite is Math 20 (or equivalent). A permission number is required to enroll. Contact mitiguy@stanford.edu.

PHYSICS 41. Mechanics. 4 Units.
How are motions of objects in the physical world determined by laws of physics? Students learn to describe the motion of objects (kinematics) and then understand why motions have the form they do (dynamics). Emphasis on how the important physical principles in mechanics, such as conservation of momentum and energy for translational and rotational motion, follow from just three laws of nature: Newton's laws of motion. Distinction made between fundamental laws of nature and empirical rules that are useful approximations for more complex physics. Problems drawn from examples of mechanics in everyday life. Skills developed in verifying that derived results satisfy criteria for correctness, such as dimensional consistency and expected behavior in limiting cases. Discussions based on language of mathematics, particularly vector representations and operations, and calculus. Physical understanding fostered by peer interaction and demonstrations in lecture, and discussion sections based on interactive group problem solving. In order to register for this class all FROSH must complete the Physics Placement Diagnostic at https://physics.stanford.edu/academics/undergraduate-students/placement-diagnostic. Students who complete the Physics Placement Diagnostic by 3 PM (Pacific) on Friday will have their hold lifted over the weekend. Minimum prerequisites: High school physics and MATH 20 (or high school calculus if sufficiently rigorous). Minimum co-requisite: MATH 21 or equivalent. Since high school math classes vary widely, it is recommended that you take at least one math class at Stanford before or concurrently with taking Physics 41. In addition, it is recommended that you take Math 51 or CME 100 before taking the next course in the Physics 40 series, Physics 43.

PHYSICS 41E. Mechanics, Concepts, Calculations, and Context. 5 Units.
Physics 41E (Physics 41 Extended) is an 5-unit version of Physics 41 (4 units) for students with little or no high school physics or calculus. Course topics and mathematical complexity are identical to Physics 41, but the extra classroom time allows students to engage with concepts, develop problem solving skills, and become fluent in mathematical tools that include vector representations and operations, and calculus. The course will use problems drawn from everyday life to explore important physical principles in mechanics, such as Newton's Laws of motion, equations of kinematics, and conservation of energy and momentum. Prerequisite: Math 19 or equivalent; Co-requisite: Math 20 or equivalent. In order to register for this class students must EITHER have already taken an introductory Physics class (20, 40, or 60 sequence) or have taken the Physics Placement Diagnostic at https://physics.stanford.edu/academics/undergraduate-students/placement-diagnostic. Enrollment is via permission number which can be obtained by filling in the application at https://stanforduniversity.qualtrics.com/jfe/form/SV_2fNzeSIjoYtKiln.

PHYSICS 42. Classical Mechanics Laboratory. 1 Unit.
Hands-on exploration of concepts in classical mechanics: Newton's laws, conservation laws, rotational motion. Introduction to laboratory techniques, experimental equipment and data analysis. Pre- or corequisite: PHYSICS 41nnIn this unusual pandemic year we have planned remote lab activity for you. These labs are a mix of online labs as well as hands-on exercises you can do at home, in a dorm or wherever you may be. The class will be structured with an online Zoom section, where you and others in your section will meet with a TA and go over your results, and do some group exercises. You can do the online materials with a virtual lab partner, we encourage you to get the benefit of someone to collaborate on your analysis and observations.nnWe will be sending every enrolled student a kit of hands-on lab materials, you will get more details the first week of class.

PHYSICS 43. Electricity and Magnetism. 4 Units.
What is electricity? What is magnetism? How are they related? How do these phenomena manifest themselves in the physical world? The theory of electricity and magnetism, as codified by Maxwell's equations, underlies much of the observable universe. Students develop both conceptual and quantitative knowledge of this theory. Topics include: electrostatics; magnetostatics; simple AC and DC circuits involving capacitors, inductors, and resistors; integral form of Maxwell's equations; electromagnetic waves. Principles illustrated in the context of modern technologies. Broader scientific questions addressed include: How do physical theories evolve? What is the interplay between basic physical theories and associated technologies? Discussions based on the language of mathematics, particularly differential and integral calculus, and vectors. Physical understanding fostered by peer interaction and demonstrations in lecture, and discussion sections based on interactive group problem solving. Prerequisite: PHYSICS 41 or equivalent. MATH 21 or MATH 51 or CME 100 or equivalent. Recommended corequisite: MATH 52 or CME 102.

PHYSICS 43A. Electricity and Magnetism: Concepts, Calculations and Context. 1 Unit.
Additional assistance and applications for Physics 43. In-class problems in physics and engineering. Exercises in calculations of electric and magnetic forces and field to reinforce concepts and techniques; Calculations involving inductors, transformers, AC circuits, motors and generators. Highly recommended for students with limited or no high school physics or calculus. Corequisite: PHYSICS 43-34 or PHYSICS 43-35; Prerequisite: application at https://stanforduniversity.qualtrics.com/jfe/form/SV_da1PUm1scvnQ5IV .

PHYSICS 43N. Understanding Electromagnetic Phenomena. 1 Unit.
Preference to freshmen. Expands on the material presented in PHYSICS 43; applications of concepts in electricity and magnetism to everyday phenomena and to topics in current physics research. Corequisite: PHYSICS 43 or advanced placement.

PHYSICS 44. Electricity and Magnetism Lab. 1 Unit.
Hands-on exploration of concepts in electricity, magnetism, and circuits. Introduction to multimeters, function generators, oscilloscopes, and graphing techniques. Pre- or corequisite: PHYSICS 43.

PHYSICS 45. Light and Heat. 4 Units.
What is temperature? How do the elementary processes of mechanics, which are intrinsically reversible, result in phenomena that are clearly irreversible when applied to a very large number of particles, the ultimate example being life? In thermodynamics, students discover that the approach of classical mechanics is not sufficient to deal with the extremely large number of particles present in a macroscopic amount of gas. The paradigm of thermodynamics leads to a deeper understanding of real-world phenomena such as energy conversion and the performance limits of thermal engines. In optics, students see how a geometrical approach allows the design of optical systems based on reflection and refraction, while the wave nature of light leads to interference phenomena. The two approaches come together in understanding the diffraction limit of microscopes and telescopes. Discussions based on the language of mathematics, particularly calculus. Physical understanding fostered by peer interaction and demonstrations in lecture, and discussion sections based on interactive group problem solving. In order to register for this class students must EITHER have already taken an introductory Physics class (20, 40, or 60 sequence) or have taken the Physics Placement Diagnostic at https://physics.stanford.edu/academics/undergraduate-students/placement-diagnostic. Prerequisite: PHYSICS 41 or equivalent. MATH 21 or MATH 51 or CME 100 or equivalent.

PHYSICS 45N. Topics in Light and Heat. 1 Unit.
Preference to freshmen. Explores the quantum and classical properties of light from stars, lasers and other sources. Includes modern applications ranging from gravity wave interferometers to x-ray lasers.

PHYSICS 46. Light and Heat Laboratory. 1 Unit.
Hands-on exploration of concepts in geometrical optics, wave optics and thermodynamics. Pre- or corequisite: PHYSICS 45.nnIn this unusual pandemic year we have planned remote lab activity for you. These labs are a mix of online labs as well as hands-on exercises you can do at home, in a dorm or wherever you may be. The class will be structured with an online Zoom section, where you and others in your section will meet with a TA and go over your results, and do some group exercises. You can do the online materials with a virtual lab partner, we encourage you to get the benefit of someone to collaborate on your analysis and observations.nnWe will be sending every enrolled student a kit of hands-on lab materials, you will get more details the first week of class.

PHYSICS 50. Astronomy Laboratory and Observational Astronomy. 3 Units.
Introduction to observational astronomy emphasizing the use of optical telescopes. Observations of stars, nebulae, and galaxies in laboratory sessions with telescopes at the Stanford Student Observatory. Meets at the observatory one evening per week from dusk until well after dark, in addition to day-time lectures each week. No previous physics required. Limited enrollment.

PHYSICS 59. Frontiers of Physics Research. 1 Unit.
Recommended for prospective Physics or Engineering Physics majors or anyone with an interest in learning about the big questions and unknowns that physicists tackle in their research at Stanford. Weekly faculty presentations, in some cases followed by tours of experimental laboratories where the research is conducted.

PHYSICS 61. Mechanics and Special Relativity. 4 Units.
(First in a three-part advanced freshman physics series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) This course covers Einstein's special theory of relativity and Newtonian mechanics at a level appropriate for students with a strong high school mathematics and physics background, who are contemplating a major in Physics or Engineering Physics, or are interested in a rigorous treatment of physics. Postulates of special relativity, simultaneity, time dilation, length contraction, the Lorentz transformation, causality, and relativistic mechanics. Central forces, contact forces, linear restoring forces. Momentum transport, work, energy, collisions. Angular momentum, torque, moment of inertia in three dimensions. Damped and forced harmonic oscillators. Uses the language of vectors and multivariable calculus. In order to register for this class students must EITHER have already taken an introductory Physics class (20, 40, or 60 sequence) or have taken the Physics Placement Diagnostic at https://physics.stanford.edu/academics/undergraduate-students/placement-diagnostic. Recommended prerequisites: Mastery of mechanics at the level of AP Physics C and AP Calculus BC or equivalent. Corequisite: MATH 51 or MATH 61CM or MATH 61DM.

PHYSICS 62. Mechanics Laboratory. 1 Unit.
Introduction to laboratory techniques, experiment design, data collection and analysis simulations, and correlating observations with theory. Labs emphasize discovery with open-ended questions and hands-on exploration of concepts developed in PHYSICS 61 including Newton's laws, conservation laws, rotational motion. Pre-or corequisite PHYSICS 61nnIn this unusual pandemic year we have planned remote lab activity for you. These labs are a mix of online labs as well as hands-on exercises you can do at home, in a dorm or wherever you may be. The class will be structured with an online Zoom section, where you and others in your section will meet with a TA and go over your results, and do some group exercises. You can do the online materials with a virtual lab partner, we encourage you to get the benefit of someone to collaborate on your analysis and observations.nnWe will be sending every enrolled student a kit of hands-on lab materials, you will get more details the first week of class.

PHYSICS 63. Electricity, Magnetism, and Waves. 4 Units.
(Second in a three-part advanced freshman physics series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) This course covers the foundations of electricity and magnetism for students with a strong high school mathematics and physics background, who are contemplating a major in Physics or Engineering Physics, or are interested in a rigorous treatment of physics. Electricity, magnetism, and waves with some description of optics. Electrostatics and Gauss' law. Electric potential, electric field, conductors, image charges. Electric currents, DC circuits. Moving charges, magnetic field, Ampere's law. Solenoids, transformers, induction, AC circuits, resonance. Relativistic point of view for moving charges. Displacement current, Maxwell's equations. Electromagnetic waves, dielectrics. Diffraction, interference, refraction, reflection, polarization. Prerequisite: PHYSICS 61 and MATH 51 or MATH 61CM. Pre- or corequisite: MATH 52 or MATH 62CM.

PHYSICS 64. Electricity, Magnetism and Waves Laboratory. 1 Unit.
Introduction to multimeters, breadboards, function generators and oscilloscopes. Emphasis on student-developed design of experimental procedure and data analysis for topics covered in PHYSICS 63: electricity, magnetism, circuits, and optics. Pre- or corequisite: PHYSICS 63.

PHYSICS 65. Quantum and Thermal Physics. 4 Units.
(Third in a three-part advanced freshman physics series: PHYSICS 61, PHYSICS 63, PHYSICS 65.) This course introduces the foundations of quantum and thermodynamics for students with a strong high school mathematics and physics background, who are contemplating a major in Physics or Engineering Physics, or are interested in a rigorous treatment of physics. Topics related to quantum mechanics include: atoms, electrons, nuclei. Experimental evidence for physics that is not explained by classical mechanics and E&M. Quantization of light, Planck's constant. Photoelectric effect, Compton and Bragg scattering. Bohr model, atomic spectra. Matter waves, wave packets, interference. Fourier analysis and transforms, Heisenberg uncertainty relationships. Particle-in-a-box, simple harmonic oscillator, barrier penetration, tunneling. Topics related to thermodynamics: limitations of classical mechanics in describing systems with a very large number of particles. Ideal gas, equipartition, heat capacity, definition of temperature, entropy. Brief introduction to kinetic theory and statistical mechanics. Maxwell speed distribution, ideal gas in a box. Laws of thermodynamics. Cycles, heat engines, free energy.nPrerequisites: PHYSICS 61 & PHYSICS 63.

PHYSICS 67. Introduction to Laboratory Physics. 1 Unit.
Methods of experimental design, data collection and analysis, statistics, curve fitting and model validation used in experimental science. Study of common data analysis techniques drawn via example measurements from electronics, optics, heat, and modern physics. Lecture format only for AY2020/2021. Required for PHYSICS 60 series Physics and Engineering Physics majors; recommended for PHYSICS 40 series students who intend to major in Physics or Engineering Physics. Pre- or corequisite: PHYSICS 65 or PHYSICS 43.

PHYSICS 70. Foundations of Modern Physics. 4 Units.
Required for Physics or Engineering Physics majors who completed the PHYSICS 40 series. Introduction to special relativity: reference frames, Michelson-Morley experiment. Postulates of relativity, simultaneity, time dilation. Length contraction, the Lorentz transformation, causality. Doppler effect. Relativistic mechanics and mass, energy, momentum relations. Introduction to quantum physics: atoms, electrons, nuclei. Quantization of light, Planck constant. Photoelectric effect, Compton and Bragg scattering. Bohr model, atomic spectra. Matter waves, wave packets, interference. Fourier analysis and transforms, Heisenberg uncertainty relationships. Schrödinger equation, eigenfunctions and eigenvalues. Particle-in-a-box, simple harmonic oscillator, barrier penetration, tunneling, WKB and approximate solutions. Time-dependent and multi-dimensional solution concepts. Coulomb potential and hydrogen atom structure. Prerequisites: PHYSICS 41, PHYSICS 43. Pre or corequisite: PHYSICS 45. Recommended: prior or concurrent registration in MATH 53.

PHYSICS 81N. Science on the Back of the Envelope. 3 Units.
Understanding the complex world around us quantitatively, using order of magnitude estimates and dimensional analysis. Starting from a handful of fundamental constants of Nature, one can estimate complex quantities such as cosmological length and time scales, size of the atom, height of Mount Everest, speed of tsunami, energy density of fuels and climate effects. Through these examples students learn the art of deductive thinking, fundamental principles of science and the beautiful unity of nature.

PHYSICS 83N. Physics in the 21st Century. 3 Units.
Preference to freshmen. This course provides an in-depth examination of frontiers of physics research, including fundamental physics, cosmology, and physics of the future. Questions such as: What is the universe made of? What is the nature of space, time, and matter? What can we learn about the history of the universe and what does it tell us about its future? A large part of 20th century was defined by revolutions in physics ¿ everyday applications of electromagnetism, relativity, and quantum mechanics. What other revolutions can physics bring to human civilization in the 21st century? What is quantum computing? What can physics say about consciousness? What does it take to visit other parts of the solar system, or even other stars? nnWe will also learn to convey these complex topics in engaging and diverse terms to the general public through writing and reading assignments, oral presentations, and multimedia projects. No prior knowledge of physics is necessary; all voices are welcome to contribute to the discussion about these big ideas. Learning Goals: By the end of the quarter you will be able to explain the major questions that drive physics research to your friends and peers. You will understand how scientists study the impossibly small and impossibly large and be able to convey this knowledge in clear and concise terms.

PHYSICS 91SI. Practical Computing for Scientists. 2 Units.
Essential computing skills for researchers in the natural sciences. Helping students transition their computing skills from a classroom to a research environment. Topics include the Unix operating system, the Python programming language, and essential tools for data analysis, simulation, and optimization. More advanced topics as time allows. Prerequisite: CS106A or equivalent.

PHYSICS 93SI. Beyond the Laboratory: Physics, Identity, and Society. 1-2 Unit.
Beyond its laws and laboratories, what can physics teach us about society and ourselves? How do physicists¿ identities impact the types of scientific questions that are asked throughout history? And who do we call a physicist? This course seeks to address questions such as these, with an eye to understanding how physics relates to history, politics, and our own identities as young researchers. Students will develop a broader appreciation for where physics comes from, how it relates to themselves, and how they can shape its future. No prior knowledge of physics is necessary; all voices are welcome to contribute to the discussion about these big ideas. As an optional addendum to 93SI, students can participate in POISE (Physics Outreach through Inclusive Science Education), an intensive spring break program in which the themes discussed during the course will be explored in more depth. During POISE, students will develop short workshops for high school students that are geared towards making Physics interesting and accessible. In addition, we will take frequent off-campus trips to Bay Area national labs, museums, companies, the beach, camping sites, and more! Our intention is to create a retreat-style experience in which students can learn more about themselves and each other as Physicists, and put their knowledge to good use in the classroom. Those wishing to participate in the spring break component should apply here, https://goo.gl/forms/KAOA0aCjD7QxxVbW2, and expect to be enrolled in 2 units. Those who are interested in only the course component should apply here, https://goo.gl/forms/xlrsDP0V2ESkMnbS2, and expect to be enrolled in 1 unit.

PHYSICS 94SI. Diverse Perspectives in Physics. 1 Unit.
Have you ever wondered what it is like to be a professor, or what you could do with physics beyond academia? Do you want to hear about the life stories of people with diverse backgrounds who have studied or are studying physics? Professors and industry researchers possessing a diverse set of identities and backgrounds will share their journey in physics and their career trajectories, emphasizing their personal lives and experiences as undergraduates and graduate students. A Q&A session will follow. A free meal will be provided each session!.

PHYSICS 95Q. The Philosophies of Three Great Physicists. 3 Units.
Richard Feynman has famously said, Philosophy of science is about as useful to scientists as ornithology is to birds. A closer look at key moments in the history of physics, however, reveals a different picture. Contrary to the misconception that philosophy has nothing to offer to science in general, and physics in particular, watershed moments in the development of physics were inspired and motivated by deeply held philosophical principles. Similarly, important developments in physics have generated important and difficult philosophical questions. In this sophomore seminar we will explore three significant moments in the development of physics surrounding the works of Newton, Einstein, and Bohr. We will analyze the relationship between the prevailing philosophical views they espoused and the physics they produced. How did Newton come to the view of absolute and fixed space and time? What led Einstein to reject the notion of a fixed space and time and propose a relativistic, and even dynamic space-time? What is Bohr's influential doctrine of complementary, and why did several generations of physicists believe it to be an adequate philosophical response to quantum mechanics? We will see that the relationship between philosophy and physics is more similar to the relationship between mathematics and physics where progress in one area is often preceded and followed by progress in the second.

PHYSICS 96N. Harmony and the Universe. 3 Units.
Harmony is a multifaceted concept that has profoundly connects music, mathematics, physics, philosophy, physiology, and psychology. We will explore the evolution of our understanding of harmony and its immediate application in the function of musical instruments, and employ it as a nexus to understand its role in revolutionary scientific advances in gravity, relativity, quantum mechanics, and cosmology. In these explorations, we will examine some of the fundamental mathematical tools which provide us our current understanding of harmony. We will also see how the some concepts surrounding harmony are in tension, if not conflict, and how some great thinkers have followed them down down blind alleys and dead ends. The aim of the course is to show the enormous consequences of harmony in the evolution of our understanding of the universe, and how science itself progresses in fits, starts, and setbacks as old ideas intermingle with new developments. We will also see how objective/quantitative aspects of harmony interact with subjective/qualitative considerations, and how cultural perspectives and prejudices can affect the progression of science.

PHYSICS 100. Introduction to Observational Astrophysics. 4 Units.
Designed for undergraduate physics majors but open to all students with a calculus-based physics background and some laboratory and coding experience. Students make and analyze observations using the telescopes at the Stanford Student Observatory. Topics covered include navigating the night sky, the physics of stars and galaxies, telescope instrumentation and operation, imaging and spectroscopic techniques, quantitative error analysis, and effective scientific communication. The course concludes with an independent project where student teams propose and execute an observational astronomy project of their choosing, using techniques learned in class to gather and analyze their data, and presenting their findings in the forms of professional-style oral presentations and research papers. Enrollment by permission. To get a permission number please complete form: http://web.stanford.edu/~elva/physics100prelim.fb If you have not heard from us by the beginning of class, please come to the first class session.

PHYSICS 104. Electronics and Introduction to Experimental Methods. 4 Units.
Introductory laboratory electronics, intended for Physics and Engineering Physics majors but open to all students with science or engineering interests in analog circuits, instrumentation and signal processing. The first part of the course is focused on hands-on exercises that build skills needed for measurements, including input/output impedance concepts, filters, amplifiers, sensors, and fundamentals of noise in physical systems. Lab exercises include DC circuits, RC and diode circuits, applications of operational amplifiers, optoelectronics, synchronous detection, and noise in measurements. The second portion of the class is an instrumentation design project, where essential instrumentation for a practical lab measurement is designed, constructed and applied for an experiment. Example measurements can include temperature measurement in a cryostat, resistivity measurement of a superconducting material, measurement of the 2-D position of an optical beam, development of a high impedance ion probe and clamp for neuroscience, or other projects of personal interest. The course focuses on practical techniques and insight from the lab exercises, with a goal to prepare undergraduates for laboratory research. No formal electronics experience is required beyond exposure to concepts from introductory Physics or Engineering courses (Ohm's law, charge conservation, physics of capacitors and inductors, etc.). Recommended prerequisite: Physics 43 and 44 or Physics 63 and 64, or Engineering 40A or 40M.

PHYSICS 105. Intermediate Physics Laboratory I: Analog Electronics. 4 Units.
Introductory laboratory electronics, designed for Physics and Engineering Physics majors but open to all students with science or engineering interests in analog circuits, instrumentation and signal processing. The course is focused on laboratory exercises that build skills needed for measurements, including sensors, amplification and filtering, and fundamentals of noise in physical systems. The hands-on lab exercises include DC circuits, RC and diode circuits, applications of operational amplifiers, non-linear circuits and optoelectronics. The class exercises build towards a lock-in amplifier contest where each lab section designs and builds a synchronous detection system to measure a weak optical signal, with opportunities to understand the limits of the design, build improvements and compare results with the other lab sections. The course focuses on practical techniques and insight from the lab exercises, with a goal to prepare undergraduates for laboratory research. No formal electronics experience is required beyond exposure to concepts from introductory Physics or Engineering courses (Ohm's law, charge conservation, physics of capacitors and inductors, etc.). Recommended prerequisite: Physics 43 or 63, or Engineering 40A or 40M.

PHYSICS 106. Experimental Methods in Quantum Physics. 4 Units.
Experimental physics lab course aimed at providing an understanding of and appreciation for experimental methods in physics, including the capabilities and limitations, both fundamental and technical. Students perform experiments that use optics, lasers, and electronics to measure fundamental constants of nature, perform measurements at the atomic level, and analyze results. Goals include developing an understanding of measurement precision and accuracy through concepts of spectral-analysis of coherent signals combined with noise. We explore the fundamental limits to measurement set by thermal noise at finite temperature, as well as optical shot-noise in photo-detection that sets the ¿standard quantum limit¿ in detecting light. Spectroscopy of light emitted from atoms reveals the quantum nature of atomic energy levels, and when combined with theoretical models provides information on atomic structure and fundamental constants of nature (e.g. the fine structure constant (¿¿) that characterizes the strength of all electro-magnetic interactions, and the ratio of the electron mass to the proton mass, me/mp. Experiments may include laser spectroscopy to determine the interatomic potential, effective spring constant, and binding energy of a diatomic molecule, or measure the speed of light. This course will provide hands-on experience with semiconductor diode lasers, basic optics, propagation and detection of optical beams, and related electronics and laboratory instrumentation.nFor lab notebooks the class uses an integrated online environment for data analysis, curve fitting, (system is based on Jupyter notebooks, Python, and document preparation). Prerequisites: PHYSICS 40 series and PHYSICS 70, or 60 series, PHYSICS 120, PHYSICS 130; some familiarity with basic electronics is helpful but not required. Very basic programming in Python is needed, but background with Matlab, Origin, or similar software should be sufficient to come up to speed for the data analysis.

PHYSICS 107. Intermediate Physics Laboratory II: Experimental Techniques and Data Analysis. 4 Units.
Experiments on lasers, Gaussian optics, and atom-light interaction, with emphasis on data and error analysis techniques. Students describe a subset of experiments in scientific paper format. Prerequisites: completion of PHYSICS 40 or PHYSICS 60 series, and PHYSICS 70 and PHYSICS 105. Recommended pre- or corequisites: PHYSICS 120 and 130. WIM.

PHYSICS 108. Advanced Physics Laboratory: Project. 5 Units.
Have you ever wanted to dream up a research question, then design, execute, and analyze an experiment to address it, together with a small group of your fellow students? This is an accelerated, guided experimental research experience, resembling real frontier research. Phenomena that have been studied include magnetization of ferromagnets, quantum hall effect in graphene, interference in superconducting circuits, loss in nanomechanical resonators, and superfluidity in helium. But most projects pursued (drawn from condensed matter and recently also particle physics) have never been done in the class before. Our equipment and apparatus for Physics 108 are very flexible, not standardized like in most other lab classes. We provide substantial resources to help your team. Often, with instructors' help, students obtain unique samples from Stanford research groups. Prerequisite: PHYSICS 105, or other experience in electronics. Suggested but less critical: Physics 130 (many phenomena you might study build on quantum mechanics) and Physics 107 (experience with data analysis and useful measurement tools: lock-in amplifier, spectrum analyzer.) We recommend taking this class in junior year if possible, as it can inform post-graduation decisions and can empower the professor to write a powerful letter of recommendation.

PHYSICS 110. Advanced Mechanics. 3-4 Units.
Lagrangian and Hamiltonian mechanics. Principle of least action, Euler-Lagrange equations. Small oscillations and beyond. Symmetries, canonical transformations, Hamilton-Jacobi theory, action-angle variables. Introduction to classical field theory. Selected other topics, including nonlinear dynamical systems, attractors, chaotic motion. Undergraduates register for Physics 110 (4 units). Graduates register for Physics 210 (3 units). Prerequisites: MATH 131P or PHYSICS 111, and PHYSICS 112 or MATH elective 104 or higher. Recommended prerequisite: PHYSICS 130.
Same as: PHYSICS 210

PHYSICS 111. Partial Differential Equations of Mathematical Physics. 4 Units.
This course is intended to introduce students to the basic techniques for solving partial differential equations that commonly occur in classical mechanics, electromagnetism, and quantum mechanics. Tools that will be developed include separation of variables, Fourier series and transforms, and Sturm-Liouville theory. Examples (including the heat equation, Laplace equation, and wave equation) will be drawn from different areas of physics. Through examples, students will gain a familiarity with some of the famous special functions arising in mathematical physics. Prerequisite: MATH 53 or 63. Completing PHYSICS 40 or 60 sequences helpful.

PHYSICS 112. Mathematical Methods for Physics. 4 Units.
The course will focus on nonlinear dynamics and chaos and its applications in physics and other areas of science. Topics will include first-order differential equations and bifurcations, phase plane analysis, limit cycles, chaos, iterated maps, period doubling, fractals, and strange attractors. Applications will be drawn from traditional areas of physics as well as fields like systems biology, evolutionary game theory, and sociophysics. This course can be repeated for credit. Prerequisites: MATH 53 or equivalent.

PHYSICS 113. Computational Physics. 4 Units.
Numerical methods for solving problems in mechanics, astrophysics, electromagnetism, quantum mechanics, and statistical mechanics. Methods include numerical integration; solutions of ordinary and partial differential equations; solutions of the diffusion equation, Laplace's equation and Poisson's equation with various methods; statistical methods including Monte Carlo techniques; matrix methods and eigenvalue problems. Short introduction to Python, which is used for class examples and active learning notebooks; independent class projects make up more than half of the grade and may be programmed in any language such as C, Python or Matlab. No Prerequisites but some previous programming experience is advisable.

PHYSICS 120. Intermediate Electricity and Magnetism I. 4 Units.
Vector analysis. Electrostatic fields, including boundary-value problems and multipole expansion. Dielectrics, static and variable magnetic fields, magnetic materials. Maxwell's equations. Prerequisites: PHYSICS 43 or PHYS 63; MATH 52 and MATH 53. Pre- or corequisite: PHYS 111, MATH 131P or MATH 173. Recommended corequisite: PHYS 112.

PHYSICS 121. Intermediate Electricity and Magnetism II. 4 Units.
Conservation laws and electromagnetic waves, Poynting's theorem, tensor formulation, potentials and fields. Plane wave problems (free space, conductors and dielectric materials, boundaries). Dipole and quadruple radiation. Special relativity and transformation between electric and magnetic fields. Prerequisites: PHYS 120 and PHYS 111 or MATH 131P or MATH 173; Recommended: PHYS 112.

PHYSICS 130. Quantum Mechanics I. 4 Units.
The origins of quantum mechanics and wave mechanics. Schrödinger equation and solutions for one-dimensional systems. Commutation relations. Generalized uncertainty principle. Time-energy uncertainty principle. Separation of variables and solutions for three-dimensional systems; application to hydrogen atom. Spherically symmetric potentials and angular momentum eigenstates. Spin angular momentum. Addition of angular momentum. Prerequisites: PHYSICS 65 or PHYSICS 70 and PHYSICS 111 or MATH 131P or MATH 173. MATH 173 can be taken concurrently. Pre- or corequisites: PHYSICS 120.

PHYSICS 131. Quantum Mechanics II. 4 Units.
Identical particles; Fermi and Bose statistics. Time-independent perturbation theory. Fine structure, the Zeeman effect and hyperfine splitting in the hydrogen atom. Time-dependent perturbation theory. Variational principle and WKB approximation. Prerequisite: PHYSICS 120, PHYSICS 130, PHYSICS 111 or MATH 131P, or MATH 173. Pre- or corequisite: PHYSICS 121.

PHYSICS 134. Advanced Topics in Quantum Mechanics. 3-4 Units.
Scattering theory, partial wave expansion, Born approximation. Additional topics may include nature of quantum measurement, EPR paradox, Bell's inequality, and topics in quantum information science; path integrals and applications; Berry's phase; structure of multi-electron atoms (Hartree-Fock); relativistic quantum mechanics (Dirac equation). Undergraduates register for PHYSICS 134 (4 units). Graduate students register for PHYSICS 234 (3 units). Prerequisite: PHYSICS 131.
Same as: PHYSICS 234

PHYSICS 152. Introduction to Particle Physics I. 3 Units.
Elementary particles and the fundamental forces. Quarks and leptons. The mediators of the electromagnetic, weak and strong interactions. Interaction of particles with matter; particle acceleration, and detection techniques. Symmetries and conservation laws. Bound states. Decay rates. Cross sections. Feynman diagrams. Introduction to Feynman integrals. The Dirac equation. Feynman rules for quantum electrodynamics and for chromodynamics. Undergraduates register for PHYSICS 152. Graduate students register for PHYSICS 252. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 130. Pre- or corequisite: PHYSICS 131.
Same as: PHYSICS 252

PHYSICS 153. Introduction to String Theory, Quantum Gravity, and Black Holes. 4 Units.
This course will begin with a basic introduction to the physics and mathematics of string theory and its relation to gravity. Following that we will study the quantum mechanics of black holes, and how string theory has impacted our understanding of these extreme gravitational objects. Prerequisites: 130 and 131.

PHYSICS 155. Accelerators and Beams: Tools of Discovery and Innovation. 3 Units.
Particle accelerators range in scale from sub-mm structures created using lithography on a silicon chip to the 27-km Large Hadron Collider in Switzerland based on superconducting magnets. Some accelerators generate beams that are only nanometers in size while others are used to make the brightest x-ray beams in the world. Accelerators are used for medicine, security, and industry as well as discovery science. A recent study shows that nearly 30% of the Nobel Prizes in Physics had a direct contribution from accelerators. This course will cover the fundamentals of particle beam acceleration and control. Topics will include radio-frequency acceleration, alternate gradient focusing, and collective effects where electromagnetic fields from the particle beam act back on the beam or on adjacent beams. Some experimental studies of beam physics may be performed at the SLAC National Accelerator Laboratory. Prerequisites: Special relativity at the level of Physics 61 or 70, or equivalent. Physics 120 and 121, or EE 142 and 242; Physics 121/EE 142 can be taken concurrently with class.

PHYSICS 160. Introduction to Stellar and Galactic Astrophysics. 3 Units.
Radiative processes. Observed characteristics of stars and the Milky Way galaxy. Physical processes in stars and matter under extreme conditions. Structure and evolution of stars from birth to death. White dwarfs, planetary nebulae, supernovae, neutron stars, pulsars, binary stars, x-ray stars, and black holes. Galactic structure, interstellar medium, molecular clouds, HI and HII regions, star formation, and element abundances. Undergraduates register for PHYSICS 160. Graduate students register for PHYSICS 260. Pre-requisite: Physics 120 or permission of instructor. Recommended: Some familiarity with plotting and basic numerical calculations.
Same as: PHYSICS 260

PHYSICS 161. Introduction to Cosmology and Extragalactic Astrophysics. 3 Units.
What do we know about the physical origins, content, and evolution of the Universe -- and how do we know it? Students learn how cosmological distances and times, and the geometry and expansion of space, are described and measured. Composition of the Universe. Origin of matter and the elements. Observational evidence for dark matter and dark energy. Thermal history of the Universe, from inflation to the present. Emergence of large-scale structure from quantum perturbations in the early Universe. Astrophysical tools used to learn about the Universe. Big open questions in cosmology. Undergraduates register for Physics 161. Graduates register for Physics 261. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 121 or equivalent.
Same as: PHYSICS 261

PHYSICS 166. Statistical Methods in Experimental Physics. 3 Units.
Statistical methods constitute a fundamental tool for the analysis and interpretation of experimental physics data. In this course, students will learn the foundations of statistical data analysis methods and how to apply them to the analysis of experimental data. Problem sets will include data-sets from real experiments and require the use of programming tools to extract physics results. Topics include probability and statistics, experimental uncertainties, parameter estimation, confidence limits, and hypothesis testing. Students will be required to complete a final project.
Same as: PHYSICS 266

PHYSICS 170. Thermodynamics, Kinetic Theory, and Statistical Mechanics I. 4 Units.
Basic probability and statistics for random processes such as random walks. The derivation of laws of thermodynamics from basic postulates; the determination of the relationship between atomic substructure and macroscopic behavior of matter. Temperature; equations of state, heat, internal energy, equipartition; entropy, Gibbs paradox; equilibrium and reversibility; heat engines; applications to various properties of matter; absolute zero and low-temperature phenomena. Distribution functions, fluctuations, the partition function for classical and quantum systems, irreversible processes. Pre- or corequisite: PHYSICS 130.

PHYSICS 171. Thermodynamics, Kinetic Theory, and Statistical Mechanics II. 4 Units.
Mean-field theory of phase transitions; critical exponents. Ferromagnetism, the Ising model. The renormalization group. Dynamics near equilibrium: Brownian motion, diffusion, Boltzmann equations. Other topics at discretion of instructor. Prerequisite: PHYSICS 170. Recommended pre- or corequisite: PHYSICS 130.

PHYSICS 172. Solid State Physics. 3 Units.
Introduction to the properties of solids. Crystal structures and bonding in materials. Momentum-space analysis and diffraction probes. Lattice dynamics, phonon theory and measurements, thermal properties. Electronic structure theory, classical and quantum; free, nearly-free, and tight-binding limits. Electron dynamics and basic transport properties; quantum oscillations. Properties and applications of semiconductors. Reduced-dimensional systems. Undergraduates should register for PHYSICS 172 and graduate students for APPPHYS 272. Prerequisites: PHYSICS 170 and PHYSICS 171, or equivalents.
Same as: APPPHYS 272

PHYSICS 182. Quantum Gases. 3 Units.
Introduction to the physics of quantum gases and their use in quantum simulation and computation. Topics in modern atomic physics and quantum optics will be covered, including laser cooling and trapping, ultracold collisions, optical lattices, ion traps, cavity QED, quantum phase transitions in quantum gases and lattices, BEC and quantum degenerate Fermi gases, 1D and 2D quantum gases, dipolar gases, and quantum nonequilibrium dynamics and phase transitions. Prerequisites: undergraduate quantum and statistical mechanics courses. Applied Physics 203 strongly recommended but not required.
Same as: APPPHYS 282, PHYSICS 282

PHYSICS 190. Independent Research and Study. 1-9 Unit.
Undergraduate research in experimental or theoretical physics under the supervision of a faculty member. Prerequisites: superior work as an undergraduate Physics major and consent of instructor.

PHYSICS 191. Scientific Communication in Physics. 3 Units.
Development and practice of effective scientific communication in physics, including scientific publications, research proposals, science writing for a general audience, and effective communication of data. The course will involve extensive writing, reviewing, and revision, including responding effectively to critiques. Satisfies the WIM requirement for Physics and Engineering Physics majors. Intended for juniors and seniors. Prerequisites: two years of college level physics (e.g., completion of Physics 121).

PHYSICS 198. Learning Assistant Training Seminar. 1 Unit.
Training seminar for undergraduate students selected for the Learning Assistant (LA) program. In this seminar LAs learn and practice pedagogical techniques they will apply in an active learning classroom. LAs practice instruction strategies in a collaborative small group setting, with regular reflection and feedback. In addition, LAs learn mentoring practices to help fellow undergraduates develop academic skills. The seminar meets 90 minutes weekly with additional readings and reflection outside of class.

PHYSICS 199. The Physics of Energy and Climate Change. 3 Units.
Topics include measurements of temperature and sea level changes in the climate record of the Earth, satellite atmospheric spectroscopy, satellite gravity geodesy measurements of changes in water aquifers and glaciers, and ocean changes. The difference between weather fluctuations changes and climate change, climate models and their uncertainties in the context of physical, chemical and biological feedback mechanisms to changes in greenhouse gases and solar insolation will be discussed. Energy efficiency, transmission and distribution of electricity, energy storage, and the physics of harnessing fossil, wind, solar, geothermal, fission and fusion will be covered, along with prospects of future technological developments in energy use and production. Prerequisite: Physics 40 or Physics 60 series.
Same as: PHYSICS 201

PHYSICS 201. The Physics of Energy and Climate Change. 3 Units.
Topics include measurements of temperature and sea level changes in the climate record of the Earth, satellite atmospheric spectroscopy, satellite gravity geodesy measurements of changes in water aquifers and glaciers, and ocean changes. The difference between weather fluctuations changes and climate change, climate models and their uncertainties in the context of physical, chemical and biological feedback mechanisms to changes in greenhouse gases and solar insolation will be discussed. Energy efficiency, transmission and distribution of electricity, energy storage, and the physics of harnessing fossil, wind, solar, geothermal, fission and fusion will be covered, along with prospects of future technological developments in energy use and production. Prerequisite: Physics 40 or Physics 60 series.
Same as: PHYSICS 199

PHYSICS 205. Senior Thesis Research. 1-12 Unit.
Long-term experimental or theoretical project and thesis in Physics under supervision of a faculty member. Planning of the thesis project is recommended to begin as early as middle of the junior year. Successful completion of a senior thesis requires a minimum of 3 units for a letter grade completed during the senior year, along with the other formal thesis and physics major requirements. Students doing research for credit prior to senior year should sign up for Physics 190. Prerequisites: superior work as an undergraduate Physics major and approval of the thesis application.

PHYSICS 210. Advanced Mechanics. 3-4 Units.
Lagrangian and Hamiltonian mechanics. Principle of least action, Euler-Lagrange equations. Small oscillations and beyond. Symmetries, canonical transformations, Hamilton-Jacobi theory, action-angle variables. Introduction to classical field theory. Selected other topics, including nonlinear dynamical systems, attractors, chaotic motion. Undergraduates register for Physics 110 (4 units). Graduates register for Physics 210 (3 units). Prerequisites: MATH 131P or PHYSICS 111, and PHYSICS 112 or MATH elective 104 or higher. Recommended prerequisite: PHYSICS 130.
Same as: PHYSICS 110

PHYSICS 211. Continuum Mechanics. 3 Units.
Elasticity, fluids, turbulence, waves, gas dynamics, shocks, and MHD plasmas. Examples from everyday phenomena, geophysics, and astrophysics.

PHYSICS 212. Statistical Mechanics. 3 Units.
Principles, ensembles, statistical equilibrium. Thermodynamic functions, ideal and near-ideal gases. Fluctuations. Mean-field description of phase-transitions and associated critical exponents. One-dimensional Ising model and other exact solutions. Renormalization and scaling relations. Prerequisites: PHYSICS 131, 171, or equivalents.

PHYSICS 216. Back of the Envelope Physics. 2 Units.
This course will deal with order of magnitude or approximate, low-tech approaches to estimating physical effects in various systems. One goal is to promote a synthesis of understanding of basic physics (including quantum mechanics, electromagnetism, and physics of fluids) through solving various classic problems. A special feature of the class this year will be a new format, where students will develop and present many of the lectures in close consultation with the faculty instructor. This is intended to both enhance learning, and to keep the interactive nature of instruction front and center in a quarter where lectures are delivered over zoom.

PHYSICS 220. Classical Electrodynamics. 3 Units.
Special relativity: The principles of relativity, Lorentz transformations, four vectors and tensors, relativistic mechanics and the principle of least action. Lagrangian formulation, charges in electromagnetic fields, gauge invariance, the electromagnetic field tensor, covariant equations of electrodynamics and mechanics, four-current and continuity equation. Noether's theorem and conservation laws, Poynting's theorem, stress-energy tensor. Constant electromagnetic fields: conductors and dielectrics, magnetic media, electric and magnetic forces, and energy. Electromagnetic waves: Plane and monochromatic waves, spectral resolution, polarization, electromagnetic properties of matter, dispersion relations, wave guides and cavities. Prerequisites: PHYSICS 121 and PHYSICS 210, or equivalent; MATH 106 or MATH 116, and MATH 132 or equivalent.

PHYSICS 223. Stochastic and Nonlinear Dynamics. 3 Units.
Theoretical analysis of dynamical processes: dynamical systems, stochastic processes, and spatiotemporal dynamics. Motivations and applications from biology and physics. Emphasis is on methods including qualitative approaches, asymptotics, and multiple scale analysis. Prerequisites: ordinary and partial differential equations, complex analysis, and probability or statistical physics.
Same as: APPPHYS 223, BIO 223, BIOE 213

PHYSICS 230. Graduate Quantum Mechanics I. 3 Units.
Fundamental concepts. Introduction to Hilbert spaces and Dirac's notation. Postulates applied to simple systems, including those with periodic structure. Symmetry operations and gauge transformation. The path integral formulation of quantum statistical mechanics. Problems related to measurement theory. The quantum theory of angular momenta and central potential problems. Prerequisite: PHYSICS 131 or equivalent.

PHYSICS 231. Graduate Quantum Mechanics II. 3 Units.
Basis for higher level courses on atomic solid state and particle physics. Problems related to measurement theory and introduction to quantum computing. Approximation methods for time-independent and time-dependent perturbations. Semiclassical and quantum theory of radiation, second quantization of radiation and matter fields. Systems of identical particles and many electron atoms and molecules. Prerequisite: PHYSICS 230.

PHYSICS 234. Advanced Topics in Quantum Mechanics. 3-4 Units.
Scattering theory, partial wave expansion, Born approximation. Additional topics may include nature of quantum measurement, EPR paradox, Bell's inequality, and topics in quantum information science; path integrals and applications; Berry's phase; structure of multi-electron atoms (Hartree-Fock); relativistic quantum mechanics (Dirac equation). Undergraduates register for PHYSICS 134 (4 units). Graduate students register for PHYSICS 234 (3 units). Prerequisite: PHYSICS 131.
Same as: PHYSICS 134

PHYSICS 240. Introduction to the Physics of Energy. 3 Units.
Energy as a consumable. Forms and interconvertability. World Joule budget. Equivalents in rivers, oil pipelines and nuclear weapons. Quantum mechanics of fire, batteries and fuel cells. Hydrocarbon and hydrogen synthesis. Fundamental limits to mechanical, electrical and magnetic strengths of materials. Flywheels, capacitors and high pressure tanks. Principles of AC and DC power transmission. Impossibility of pure electricity storage. Surge and peaking. Solar constant. Photovoltaic and thermal solar conversion. Physical limits on agriculture.

PHYSICS 241. Introduction to Nuclear Energy. 3 Units.
Radioactivity. Elementary nuclear processes. Energetics of fission and fusion. Cross-sections and resonances. Fissionable and fertile isotopes. Neutron budgets. Light water, heavy water and graphite reactors. World nuclear energy production. World reserves of uranium and thorium. Plutonium, reprocessing and proliferation. Half lives of fission decay products and actinides made by neutron capture. Nuclear waste. Three Mile Island and Chernobyl. Molten sodium breeders. Generation-IV reactors. Inertial confinement and magnetic fusion. Laser compression. Fast neutron production and fission-fusion hybrids. Prerequisities: Strong undergraduate background in elementary chemistry and physics. PHYSICS 240 and PHYSICS 252 recommended but not required. Interested undergraduates encouraged to enroll, with permission of instructor.

PHYSICS 252. Introduction to Particle Physics I. 3 Units.
Elementary particles and the fundamental forces. Quarks and leptons. The mediators of the electromagnetic, weak and strong interactions. Interaction of particles with matter; particle acceleration, and detection techniques. Symmetries and conservation laws. Bound states. Decay rates. Cross sections. Feynman diagrams. Introduction to Feynman integrals. The Dirac equation. Feynman rules for quantum electrodynamics and for chromodynamics. Undergraduates register for PHYSICS 152. Graduate students register for PHYSICS 252. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 130. Pre- or corequisite: PHYSICS 131.
Same as: PHYSICS 152

PHYSICS 260. Introduction to Stellar and Galactic Astrophysics. 3 Units.
Radiative processes. Observed characteristics of stars and the Milky Way galaxy. Physical processes in stars and matter under extreme conditions. Structure and evolution of stars from birth to death. White dwarfs, planetary nebulae, supernovae, neutron stars, pulsars, binary stars, x-ray stars, and black holes. Galactic structure, interstellar medium, molecular clouds, HI and HII regions, star formation, and element abundances. Undergraduates register for PHYSICS 160. Graduate students register for PHYSICS 260. Pre-requisite: Physics 120 or permission of instructor. Recommended: Some familiarity with plotting and basic numerical calculations.
Same as: PHYSICS 160

PHYSICS 261. Introduction to Cosmology and Extragalactic Astrophysics. 3 Units.
What do we know about the physical origins, content, and evolution of the Universe -- and how do we know it? Students learn how cosmological distances and times, and the geometry and expansion of space, are described and measured. Composition of the Universe. Origin of matter and the elements. Observational evidence for dark matter and dark energy. Thermal history of the Universe, from inflation to the present. Emergence of large-scale structure from quantum perturbations in the early Universe. Astrophysical tools used to learn about the Universe. Big open questions in cosmology. Undergraduates register for Physics 161. Graduates register for Physics 261. (Graduate students will be required to complete additional assignments in a format determined by the instructor.) Prerequisite: PHYSICS 121 or equivalent.
Same as: PHYSICS 161

PHYSICS 262. General Relativity. 3 Units.
Einstein's General Theory of Relativity is a basis for modern ideas of fundamental physics, including string theory, as well as for studies of cosmology and astrophysics. The course begins with an overview of special relativity, and the description of gravity as arising from curved space. From Riemannian geometry and the geodesic equations, to curvature, the energy-momentum tensor, and the Einstein field equations. Applications of General Relativity: topics may include experimental tests of General Relativity and the weak-field limit, black holes (Schwarzschild, charged Reissner-Nordstrom, and rotating Kerr black holes), gravitational waves (including detection methods), and an introduction to cosmology (including cosmic microwave background radiation, dark energy, and experimental probes). Prerequisite: PHYSICS 121 or equivalent including special relativity.

PHYSICS 266. Statistical Methods in Experimental Physics. 3 Units.
Statistical methods constitute a fundamental tool for the analysis and interpretation of experimental physics data. In this course, students will learn the foundations of statistical data analysis methods and how to apply them to the analysis of experimental data. Problem sets will include data-sets from real experiments and require the use of programming tools to extract physics results. Topics include probability and statistics, experimental uncertainties, parameter estimation, confidence limits, and hypothesis testing. Students will be required to complete a final project.
Same as: PHYSICS 166

PHYSICS 268. Physics with Neutrinos. 3 Units.
Relativistic fermions, Weyl and Dirac equations, Majorana masses. Electroweak theory, neutrino cross sections, neutrino refraction in matter, MSW effect. Three-flavor oscillations, charge-parity violation, searches for sterile neutrinos, modern long- and short-baseline oscillation experiments. Seesaw mechanism, models of neutrino masses, lepton flavor violation. Neutrinoless double beta decay. Cosmological constraints on neutrino properties. Advanced topics, such as collective oscillations in supernovae or ultrahigh energy neutrinos, offered as optional projects. The material in this course is largely complementary to PHYS 269, focusing on particle physics aspects of neutrinos. Prerequisites: PHYSICS 121, 131 and 171 or equivalent. PHYS 230-231, 269, 152 and 161 or equivalent are helpful, but not required.

PHYSICS 269. Neutrinos in Astrophysics and Cosmology. 3 Units.
Basic neutrino properties. Flavor evolution in vacuum and in matter. Oscillations of atmospheric, reactor and beam neutrinos. Measurements of solar neutrinos; physics of level-crossing and the resolution of the solar neutrino problem. Roles of neutrinos in stellar evolution; bounds from stellar cooling. Neutrinos and stellar collapse; energy transport, collective flavor oscillations, neutrino flavor in turbulent medium. Ultra-high-energy neutrinos. The cosmic neutrino background, its impact on the cosmic microwave background and structure formation; cosmological bounds on the neutrino sector. Prerequisites/corerequisites: PHYSICS 121, 131 and 171 or equivalent. PHYS 230-231, 152 and 161 or equivalent are helpful, but not required. May be repeat for credit.

PHYSICS 275. Electrons in Nanostructures. 3 Units.
The strange behavior of electrons in metals or semiconductors at length scales below 1 micron, smaller than familiar macroscopic objects but larger than atoms. Ballistic transport, Coulomb blockade, localization, quantum mechanical interference, persistent currents, graphene, topological insulators, 1D wires. After a few background lectures, students come to each class session prepared to discuss one or more classic review articles or recent experimental publications.nPrerequisite: undergraduate quantum mechanics and solid state physics preferred; physicists, engineers, chemists welcome.

PHYSICS 282. Quantum Gases. 3 Units.
Introduction to the physics of quantum gases and their use in quantum simulation and computation. Topics in modern atomic physics and quantum optics will be covered, including laser cooling and trapping, ultracold collisions, optical lattices, ion traps, cavity QED, quantum phase transitions in quantum gases and lattices, BEC and quantum degenerate Fermi gases, 1D and 2D quantum gases, dipolar gases, and quantum nonequilibrium dynamics and phase transitions. Prerequisites: undergraduate quantum and statistical mechanics courses. Applied Physics 203 strongly recommended but not required.
Same as: APPPHYS 282, PHYSICS 182

PHYSICS 290. Research Activities at Stanford. 1 Unit.
Required of first-year Physics graduate students; suggested for junior or senior Physics majors for 1 unit. Review of research activities in the department and elsewhere at Stanford at a level suitable for entering graduate students.

PHYSICS 291. Curricular Practical Training. 1-3 Unit.
Curricular practical training for students participating in an internship with a physics-related focus. Meets the requirements for curricular practical training for students on F-1 visas. Prior to the internship, students submit a concise description of the proposed project and work activities. After the internship, students submit a summary of the work completed and skills learned, including a reflection on the professional growth gained as a result of the internship. This course may be repeated for credit. Students are responsible for arranging their own internship/employment and faculty sponsorship. Register under faculty sponsor's section number.

PHYSICS 293. Literature of Physics. 1-15 Unit.
Study of the literature of any special topic. Preparation, presentation of reports. If taken under the supervision of a faculty member outside the department, approval of the Physics chair required. Prerequisites: 25 units of college physics, consent of instructor.

PHYSICS 294. Teaching of Physics Seminar. 1 Unit.
Weekly seminar/discussions on interactive techniques for teaching physics. Practicum which includes class observations, grading and student teaching in current courses. Required of all Teaching Assistants prior to first teaching assignment. Mandatory attendance at weekly in-class sessions during first 5 weeks of the quarter; mandatory successful completion of all practicum activities. Students who do not hold a US Passport must complete the International Teaching/Course Assistant Screening Exam and be cleared to TA before taking the class. Details: https://language.stanford.edu/programs/efs/languages/english-foreign-students/international-teachingcourse-assistant-screening. Enrollment in PHYSICS 294 is by permission.To get a permission number please complete form: https://stanforduniversity.qualtrics.com/jfe/form/SV_7VVM88d1iMTw8Xr. If you have not heard from us by the beginning of class, please come to the first class session.

PHYSICS 295. Learning & Teaching of Science. 3 Units.
This course will provide students with a basic knowledge of the relevant research in cognitive psychology and science education and the ability to apply that knowledge to enhance their ability to learn and teach science, particularly at the undergraduate level. Course will involve readings, discussion, and application of the ideas through creation of learning activities. It is suitable for advanced undergraduates and graduate students with some science background.
Same as: EDUC 280, ENGR 295, MED 270, VPTL 280

PHYSICS 301. Astrophysics Laboratory. 3 Units.
Designed for physics graduate students but open to all graduate students with a calculus-based physics background and some laboratory and coding experience. Students make and analyze observations using the telescopes at the Stanford Student Observatory. Topics covered include navigating the night sky, the physics of stars and galaxies, telescope instrumentation and operation, imaging and spectroscopic techniques, quantitative error analysis, and effective scientific communication. The course concludes with an independent project where student teams propose and execute an observational astronomy project of their choosing, using techniques learned in class to gather and analyze their data, and presenting their findings in the forms of professional-style oral presentations and research papers. Enrollment by permission. To get a permission number please complete form: http://web.stanford.edu/~elva/physics301prelim.fbn If you have not heard from us by the beginning of class, please come to the first class session.

PHYSICS 312. Basic Plasma Physics. 3 Units.
For the nonspecialist who needs a working knowledge of plasma physics for space science, astrophysics, fusion, or laser applications. Topics: orbit theory, the Boltzmann equation, fluid equations, magneto hydrodynamics (MHD) waves and instabilities, electromagnetic (EM) waves, the Vlasov theory of electrostatic (ES) waves and instabilities including Landau damping and quasilinear theory, the Fokker-Planck equation, and relaxation processes. Advanced topics in resistive instabilities and particle acceleration. Prerequisite: PHYSICS 220, or consent of instructor.

PHYSICS 321. Laser Spectroscopy. 3 Units.
Theoretical concepts and experimental techniques. Absorption, dispersion, Kramers-Kronig relations, line-shapes. Classical and laser linear spectroscopy. Semiclassical theory of laser atom interaction: time-dependent perturbation theory, density matrix, optical Bloch equations, coherent pulse propagation, multiphoton transitions. High-resolution nonlinear laser spectroscopy: saturation spectroscopy, polarization spectroscopy, two-photon and multiphoton spectroscopy, optical Ramsey spectroscopy. Phase conjugation. Four-wave mixing, harmonic generation. Coherent Raman spectroscopy, quantum beats, ultra-sensitive detection. Prerequisite: PHYSICS 230. Recommended: PHYSICS 231.

PHYSICS 330. Quantum Field Theory I. 3 Units.
Lorentz Invariance. S-Matrix. Quantization of scalar and Dirac fields. Feynman diagrams. Quantum electrodynamics. Elementary electrodynamic processes: Compton scattering; e+e- annihilation. Loop diagrams. Prerequisites: PHYSICS 130, PHYSICS 131, or equivalents AND a basic knowledge of Group Theory.

PHYSICS 331. Quantum Field Theory II. 3 Units.
Functional integral methods. Local gauge invariance and Yang-Mills fields. Asymptotic freedom. Spontaneous symmetry breaking and the Higgs mechanism. Unified models of weak and electromagnetic interactions. Prerequisite: PHYSICS 330.

PHYSICS 332. Quantum Field Theory III. 3 Units.
Theory of renormalization. The renormalization group and applications to the theory of phase transitions. Renormalization of Yang-Mills theories. Applications of the renormalization group of quantum chromodynamics. Perturbation theory anomalies. Applications to particle phenomenology. Prerequisite: PHYSICS 331.

PHYSICS 351. Standard Model of Particle Physics. 3 Units.
Symmetries, group theory, gauge invariance, Lagrangian of the Standard Model, flavor group, flavor-changing neutral currents, CKM quark mixing matrix, GIM mechanism, rare processes, neutrino masses, seesaw mechanism, QCD confinement and chiral symmetry breaking, instantons, strong CP problem, QCD axion. Prerequisite: PHYSICS 330.

PHYSICS 360. Modern Astrophysics. 3 Units.
Basic theory of production of radiation in stars, galaxies and diffuse interstellar and intergalactic media and and transfer of radiation throughout the universe. Magnetic fields, turbulence shocks and particle acceleration and transport around magnetospheres of planets to clusters of galaxies. Application to compact objects, pulsars and accretion in binary stars and super-massive black holes, supernova remnants, cosmic rays and active galactic nuclei Prerequisite: PHYSICS 260 or equivalent.

PHYSICS 361. Cosmology and Extragalactic Astrophysics. 3 Units.
Intended as a complement to Ph 362 and Ph 364.nGalaxies (including their nuclei), clusters, stars and backgrounds in the contemporary universe. Geometry, kinematics, dynamics, and physics of the universe at large. Evolution of the universe following the epoch of nucleosynthesis. Epochs of recombination, reionization and first galaxy formation. Fluid and kinetic description of the growth of structure with application to microwave background fluctuations and galaxy surveys. Gravitational lensing. The course will feature interleaved discussion of theory and observation. Undergraduate exposure to general relativity and cosmology at the level of Ph 262 and Ph 161 will be helpful but is not essential.

PHYSICS 362. The Early Universe. 3 Units.
Intended to complement PHYSICS 361, this course will cover the earlier period in cosmology up to and including nucleosynthesis. The focus will be on high energy, early universe physics. This includes topics such as inflation and reheating including generation of density perturbations and primordial gravitational waves, baryogenesis mechanisms, out of equilibrium particle production processes in the early universe e.g. both thermal and non-thermal production mechanisms for dark matter candidates such as WIMPs and axions, and production of the light nuclei and neutrinos. Techniques covered include for example out of equilibrium statistical mechanics such as the Boltzmann equation, and dynamics of scalar fields in the expanding universe. Other possible topics if time permits may include cosmological phase transitions and objects such as monopoles and primordial black holes. We will use quantum field theory, although it will hopefully be accessible for those without much background in that area. Suggested prerequisites: general relativity at the level of PHYSICS 262, some knowledge of cosmology and in particular the basics of FRW cosmology as in PHYSICS 361 for example, and some knowledge of quantum field theory e.g. at the level of PHYSICS 331 as a corequisite.

PHYSICS 364. Gravitational Radiation, Black Holes and Neutron Stars. 3 Units.
General relativistic theory of spinning black holes and neutron stars including accretion, jets and tidal capture. Direct and indirect observation of relativistic effects in active galactic nuclei and stellar sources. Linear theory of the generation and propagation of (non-primordial) gravitational radiation. Detection of gravitational waves by Michelson interferometers, pulsars and atom interferometers. Nonlinear emission by binary black holes. Nuclear equation of state and nucleosynthetic implications of neutron star binaries. Pre-requisite: Ph 262 or equivalent.

PHYSICS 366. Statistical Methods in Astrophysics. 3 Units.
Foundations of principled inference from data, primarily in the Bayesian framework, organized around applications in astrophysics and cosmology. Topics include probabilistic modeling of data, parameter constraints and model comparison, numerical methods including Markov Chain Monte Carlo, and connections to frequentist and machine learning frameworks. Hands-on experience with real data through in-class tutorials, problem sets and a final project. Prerequisite: programming in Python or a similar language at the level of CS 106A. Recommended but not required: probability at the level of STATS 116 or PHYSICS 166/266.

PHYSICS 367. Special Topics in Astrophysics: Structure Formation and nGalaxy Formation. 2 Units.
How does structure form in the Universe, and how do galaxies form within that structure?nTopics will include the dependence of structure formation on cosmological parameters and the nature of dark matter, the key astrophysical processes involved in galaxy formation, and the connection between matter and galaxies. Current outstanding problems in structure formation and galaxy formation and the modern techniques used to address them will be highlighted. Course will include reading current literature and hands on computational problems. Recommended prerequisite: PHYSICS 261 or equivalent.

PHYSICS 368. Computational Cosmology and Astrophysics. 2 Units.
Create virtual Universes and understand our own using your computer. Techniques for studying the dynamics of dark matter and gas as it assembles over cosmic time to form the structure in the Universe. The use of modern computer codes on supercomputers to combine modeling of gravitation, gas dynamics, radiation processes, magnetohydrodynamics, and other relevant physical processes to make detailed predictions about the evolution of the Universe. Practical exercises to explore how cosmic microwave background observations are sensitive to cosmological parameters, how key numerical algorithms work, how different cosmological observations can be combined to constrain what the Universe is made of and how it changed over time. Additional current topics in computational cosmology depending on student interest. Hands-on activities based on open-source software in C++ and Python. Pre- or corequisites: PHYSICS 361. Recommended prerequisite: PHYSICS 366.

PHYSICS 372. Condensed Matter Theory I. 3 Units.
Fermi liquid theory, many-body perturbation theory, response function, functional integrals, interaction of electrons with impurities. Prerequisite: APPPHYS 273 or equivalent.

PHYSICS 373. Condensed Matter Theory II. 3 Units.
Superfluidity and superconductivity. Quantum magnetism. Prerequisite: PHYSICS 372.

PHYSICS 450. Advanced Theoretical Physics I: Random Matrices in Physics. 3 Units.
This course will survey some of the basic ideas and techniques in the theory of random matrices. These will be interspersed with discussions of some of the physical applications of these ideas including: energy spectra of quantum chaotic systems and the Eigenstate Thermalization Hypothesis; entanglement entropies; and aspects of 2D quantum gravity.

PHYSICS 451. Advanced Theoretical Physics II: Quantum Information Theory, Complexity, Gravity and Black Holes. 3 Units.
This course will cover the developing intersection between quantum information theory and the quantum theory of gravity. We will focus on the central roles of entanglement and computational complexity in black hole physics. Prerequisites: Basic knowledge of quantum mechanics, quantum field theory, and general relativity.

PHYSICS 455. Introductory Seminar on Recent Developments in Theoretical Physics. 1 Unit.
This seminar is for first-year graduate students interested in theoretical physics. It is driven by introductory-level student talks and focuses on recent foundational developments across the field. Typical areas of interest include cosmology, particle physics, string theory, quantum gravity, and condensed matter.

PHYSICS 470. Topics in Modern Condensed Matter Theory I: Many Body Quantum Dynamics. 3 Units.
Many body quantum systems can display rich emergent dynamical phenomena far from thermal equilibrium, whose understanding represents an exciting frontier of research at the interface of condensed matter, statistical physics, high energy theory and quantum information. This course is intended to serve as an introduction to this active research area, assuming only a knowledge of quantum mechanics and statistical physics. Topics covered include: quantum thermalization, many-body localization, quantum entanglement and its dynamics, tensor network methods, dynamical quantum phases and phase transitions, and Floquet theory. Prerequisites: PHYSICS 113, PHYSICS 130, PHYSICS 131, PHYSICS 170, and PHYSICS 171.

PHYSICS 471. Topics in Modern Condensed Matter Theory II: Open Problems in the theory of metals & superconductor. 3 Units.
We will begin by reviewing a modern perspective on the theory of conventional (BCS s-wave) and unconventional (e.g. d-wave) superconductors. We will then discuss a variety of issues that are of current interest, but which are either incompletely understood or entirely open problems in the field. Depending upon the interests of the class and the whims of the instructor, topics to be covered may include: quantum superconductor to insulator and superconductor to metal transitions, emergence of superconductivity from a non-Fermi liquid normal state, exotic superconducting phases of matter, interplay between superconductivity and other broken symmetry states (issues of ¿intertwined orders¿), and superconductivity in paradigmatic models of highly correlated electron systems, including problems in which there is an interplay between strong electron-electron and electron-phonon interactions. We will also touch on theoretical ideas - all of them currently still being explored and hence controversial - concerning theories of unconventional metallic states - i.e. metallic states that cannot be well described in the context of a theory of weakly interacting quasiparticles. While the subject matter of this course is motivated by ongoing experimental studies in a variety of quantum materials and devices, the principle focus of the class will be on a coherent understanding of what is known and on crisply identifying what is not known.

PHYSICS 490. Research. 1-18 Unit.
Open only to Physics graduate students, with consent of instructor. Work is in experimental or theoretical problems in research, as distinguished from independent study of a non-research character in 190 and 293.

PHYSICS 491. Symmetry and Quantum Information. 2 Units.
This course gives an introduction to quantum information theory through the study of symmetries. We start with Bell's and Tsirelson's inequalities, which bound the strength of classical and quantum correlations, and discuss their relation to algebraic symmetries. Next, we exploit permutation symmetry to quantify the monogamy of entanglement and explain how to securely distribute a secret key. Lastly, we study quantum information in the limit of many copies and discuss a powerful technique for constructing universal quantum protocols, based on the Schur-Weyl duality between the unitary and symmetric groups. Applications include quantum data compression, state estimation, and entanglement distillation. Prerequisite: PHYSICS 230 or equivalent. All required group and representation theory will be introduced. This course runs for the first five weeks of the quarter.

PHYSICS 492. Topological Quantum Computation. 2 Units.
This course will be an introduction to topological quantum computation (TQC), which has recently emerged as an exciting approach to constructing fault-tolerant quantum computers. We start with a review of some basics of quantum computing, 2D topological phases of matter, Abelian/non-Abelian anyons, etc. Then we introduce the concept of TQC and study some examples such as the toric/surface code and Levin-Wen string-net model. We continue to talk about the mathematical theory of anyons including modular tensor categories, braid groups, 6j-symbols, Pentagon Equations. We study the issue of universality for different systems. Lastly, we show the equivalence of TQC with standard circuit model. Additional topics include complexity classes, Jones polynomials, topological field theories, etc. Prerequisite: Basic knowledge of quantum mechanics and condensed matter physics. Some knowledge of category theory and representation theory is useful but is not required. The course will run the first five weeks.

PHYSICS 801. TGR Project. 0 Units.
.

PHYSICS 802. TGR Dissertation. 0 Units.
.

POLITICAL SCIENCE

Courses offered by the Department of Political Science are listed under the subject code POLISCI on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=POLISCI&filter-catalognumber-POLISCI=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=POLISCI&filter-catalognumber-POLISCI=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=POLISCI&filter-catalognumber-POLISCI=on).

Mission of the Undergraduate Program in Political Science

The mission of the undergraduate program in Political Science is to provide students with a solid grasp of the American political system and other political systems within the context of global forces, international conflicts, social movements, ideological systems and diversity. Courses in the major are designed to help students gain competency in the study of political science; to introduce students to a variety of research methodologies and analytical frameworks; and to develop students' written and oral communication skills. Students in the program have excellent preparation for further study in graduate or professional schools as well as careers in government, business, and not-for-profit organizations.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an understanding of core knowledge within the discipline of Political Science
2. the ability to communicate ideas clearly and persuasively in writing
3. the ability to analyze a problem and draw correct inferences using qualitative and/or quantitative analysis
4. the ability to evaluate theory and critique research within the discipline of Political Science

Graduate Programs in Political Science

The Department of Political Science offers two types of advanced degrees:

- Doctor of Philosophy
- Master of Arts in Political Science which is open to current Stanford University doctoral or professional school (Schools of Law, Medicine, Business) students only.

The department does not have a terminal M.A. program for external applicants.

Learning Outcomes (Graduate)

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Political Science. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Political Science and to interpret and present the results of such research.

Pursued in combination with a doctoral degree, the master's program furthers students' knowledge and skills in Political Science. This is achieved through completion of courses in three subfields, and experience with independent work and specialization.

Bachelor of Arts in Political Science

The Department of Political Science offers a Bachelor of Arts in Political Science. Eligible students may also pursue a Bachelor of Arts with Honors (p. 1943). The department also offers a minor in Political Science (p. 1944).

How to Declare the Major

Students are encouraged to declare the major by the end of the sophomore year. Students must complete a declaration form, available on the Political Science website (https://politicalscience.stanford.edu/undergraduate-major/major/) and in the department office in Encina Hall West 100. The form must be signed by an advisor of the student's choosing who is a member of the Political Science faculty (https://politicalscience.stanford.edu/people/faculty/) or courtesy faculty (https://politicalscience.stanford.edu/people/other-instructors/). The advisor should not be a Political Science lecturer. Next, the student should submit the declaration form during a meeting with the Political Science undergraduate administrator and declare on Axess. For additional information, students may visit the Political Science website (https://politicalscience.stanford.edu/undergraduate-major/major/) or office or call (650) 723-1608.

Degree Requirements

Students majoring in Political Science must complete a minimum of 70 units:

		Units
Introductory Course		**5**
Preferably taken in freshman or sophomore year.		
POLISCI 1	The Science of Politics	5
Methods Course		**5**
Select one of the following:		
POLISCI 150A	Data Science for Politics	
STATS 60	Introduction to Statistical Methods: Precalculus	
STATS 101	Data Science 101	
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	
CS 106A	Programming Methodology	
Two Major Tracks		**40**
25 units in a primary track and 15 units in a secondary track. Each major must select two tracks from the list below on which to focus their studies.[1]		
1. Justice and Law		
2. International Relations		
3. Elections, Representation, and Governance		
4. Political Economy and Development		
5. Data Science		
Additional Coursework		**20**
Additional Political Science coursework, which may include no more than 5 units of directed reading.		
Writing in the Major (WIM) Course		
Demonstrate a capacity for sustained research and writing in the discipline by taking at least one Political Science Writing in the Major (WIM) course. This course may count toward the units taken to satisfy the Primary Track, Secondary Track, or Additional Coursework requirements. Select one of the courses listed below.		

POLISCI 103	Justice	
POLISCI 110C	America and the World Economy	
POLISCI 110D	War and Peace in American Foreign Policy	
POLISCI 120C	American Political Institutions in Uncertain Times	
POLISCI 121	Political Power in American Cities	
POLISCI 148	Chinese Politics	
POLISCI 236S	Theories and Practices of Civil Society, Philanthropy, and the Nonprofit Sector	
POLISCI 299A	Research Design [2]	
Seminar Course		
Students must take at least one 5-unit, 200-level or 300-level undergraduate seminar in Political Science. This course may count toward the units taken to satisfy the Primary Track, Secondary Track, or Additional Coursework requirements.		
Total Units		**70**

[1] The classes that count toward each track can be found below.

[2] POLISCI 299A only fulfills the WIM requirement for students who are writing an honors thesis in Political Science.

Undergraduate Tracks

The tracks for the Political Science undergraduate major and minor are:

- Justice and Law
- International Relations
- Elections, Representation, and Governance
- Political Economy and Development
- Data Science

Political Science majors must select a primary track and a secondary track on which to focus their studies. They must complete at least 25 units of coursework toward the primary track and 15 units toward the secondary track. For the major, up to one course for the primary track and up to one course for the secondary track may be a pre-approved non-Political Science (p.) course or a petitioned (https://politicalscience.stanford.edu/undergraduate-major/major/) course.

Political Science minors must complete 20 units in one track of their choosing. For the minor, all courses completed toward the track must be Political Science courses and 100-level or above.

These tracks are not declared in Axess and are not printed on the transcript or diploma.

The classes for each track are listed below.

Justice and Law

		Units
POLISCI 29N		3
POLISCI 31N	Political Freedom: Rights, Justice, and Democracy in the Western Tradition	3
POLISCI 31Q	Justice and Cities	3
POLISCI 102	Introduction to American Politics and Policy: The Good, The Bad, and The Ugly	4-5
POLISCI 103	Justice	4-5
POLISCI 114D	Democracy, Development, and the Rule of Law	5
POLISCI 122	Introduction to American Law	3-5
POLISCI 125P	The First Amendment: Freedom of Speech and Press	4-5
POLISCI 126P	Constitutional Law	3
POLISCI 127A	Finance, Corporations, and Society	4
POLISCI 128F		3
POLISCI 128S		5
POLISCI 130	20th Century Political Theory: Liberalism and its Critics	5
POLISCI 131L	Modern Political Thought: Machiavelli to Marx and Mill	5
POLISCI 132A	The Ethics of Elections	5
POLISCI 133	Ethics and Politics of Public Service	3-5
POLISCI 133Z	Ethics and Politics in Public Service	4
POLISCI 134	Ethics for Activists	5
POLISCI 134L	Introduction to Environmental Ethics	4-5
POLISCI 134P	Contemporary Moral Problems	4-5
POLISCI 135	Citizenship	5
POLISCI 135D	The Ethics of Democratic Citizenship	5
POLISCI 136R	Introduction to Global Justice	4
POLISCI 137A	Political Philosophy: The Social Contract Tradition	4
POLISCI 182	Ethics, Public Policy, and Technological Change	5
POLISCI 221A	American Political Development, 1865-present	3-5
POLISCI 222S		5
POLISCI 225C	Fixing US Politics: Political Reform in Principle and Practice	5
POLISCI 225L	Law and the New Political Economy	3-5
POLISCI 226	Race and Racism in American Politics	5
POLISCI 226A	The Changing Face of America	4-5
POLISCI 228C	Law and Politics of Bureaucracy	3-5
POLISCI 230A	Classical Seminar: Origins of Political Thought	3-5
POLISCI 231	High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests	3-5
POLISCI 232T	The Dialogue of Democracy	4-5
POLISCI 233	Justice and Cities	5
POLISCI 234	Democratic Theory	5
POLISCI 234P	Deliberative Democracy and its Critics	3-5
POLISCI 236	Theories and Practices of Civil Society, Philanthropy, and the Nonprofit Sector	5
POLISCI 236S	Theories and Practices of Civil Society, Philanthropy, and the Nonprofit Sector	5
POLISCI 238R	The Greeks and the Rational: Deliberation, Strategy, and Choice in Ancient Greek Political Thought	3-5
POLISCI 314D	Democracy, Development, and the Rule of Law	5
POLISCI 325L	Law and the New Political Economy	3-5
POLISCI 326	Race and Racism in American Politics	5
POLISCI 327C	Law of Democracy	3-5
POLISCI 330A	Classical Seminar: Origins of Political Thought	3-5
POLISCI 331	High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests	3-5
POLISCI 332T	The Dialogue of Democracy	4-5
POLISCI 334P	Deliberative Democracy and its Critics	3-5
POLISCI 336	Introduction to Global Justice	4
POLISCI 336S	Justice	4-5

POLISCI 337A	Political Philosophy: The Social Contract Tradition	4

International Relations

		Units
POLISCI 10N	International Organizations and the World Order	3
POLISCI 18N	Civil War and International Politics: Syria in Context	3
POLISCI 101	Introduction to International Relations	5
POLISCI 101Z	Introduction to International Relations	4
POLISCI 110C	America and the World Economy	5
POLISCI 110D	War and Peace in American Foreign Policy	3-5
POLISCI 110G	Governing the Global Economy	5
POLISCI 110X	America and the World Economy	5
POLISCI 110Y	War and Peace in American Foreign Policy	3-5
POLISCI 114D	Democracy, Development, and the Rule of Law	5
POLISCI 114S	International Security in a Changing World	5
POLISCI 118P	U.S. Relations with Iran	5
POLISCI 136R	Introduction to Global Justice	4
POLISCI 147	Comparative Democratic Development	5
POLISCI 149S	Islam, Iran, and the West	5
POLISCI 211N	Nuclear Politics	3-5
POLISCI 213A		5
POLISCI 213E	Introduction to European Studies	5
POLISCI 214R	Challenges and Dilemmas in American Foreign Policy	5

Additional Requirements and Policies

- Students may count up to 25 units of coursework from outside the Political Science Department toward the Political Science major. Pre-approved non-Political Science courses (p. 1942) are listed below and can be applied directly to the major. Courses from outside of the department that have not been pre-approved can be petitioned toward the major using a petition form, available on the Political Science website (https://politicalscience.stanford.edu/undergraduate-major/major/). Course petitions are reviewed and, if appropriate, approved by the Director of Undergraduate Studies. Petitions must be submitted to the undergraduate administrator within one quarter of course completion or within one quarter of declaring the major. Pre-approved and petitioned courses may be applied to the major in any combination of the following ways:
  a. Up to one pre-approved or petitioned course may count toward the primary track.
  b. Up to one pre-approved or petitioned course may count toward the secondary track.
  c. One pre-approved course may count toward the methods course requirement. STATS 60, STATS 101, ECON 102A, and CS 106A are courses from outside the Political Science Department and count toward the 25-unit limit. POLISCI 150A does not count toward the 25-unit limit.
  d. Pre-approved and petitioned courses may count toward the additional coursework requirement.
- BOSP and SIW courses are non-Political Science courses and count toward the 25-unit limit listed above. Some have been pre-approved (p. 1942) while others require a petition (available on the Political Science website (https://politicalscience.stanford.edu/undergraduate-major/major/)).
- Directed readings and Oxford tutorials require a petition (available on the Political Science website (https://politicalscience.stanford.edu/undergraduate-major/major/)) and may only be applied toward the additional coursework requirement. No more than 10 combined units of directed reading and Oxford tutorial units may count toward the required 70 units for the Political Science major.
- No more than two Stanford Introductory Seminar courses (p. 169) can be applied toward the 70 unit major requirement.
- All courses applied toward the major must be completed for a letter grade of 'C' or higher.
- Honors courses from outside of Political Science cannot count toward the major or the WIM requirement.

Double Counting Courses

- Students pursuing a double major (p. 32) may not double count any courses in the Political Science major aside from POLISCI 1 The Science of Politics and the methods course.
- Students pursuing a primary/secondary major (p. 32) may double count up to 30 units in the Political Science major.
- Students completing a minor in another department may not double count any courses in the Political Science major aside from POLISCI 1 The Science of Politics and the methods course.

Research Honors Program

The Political Science Research Honors Program leads to a Bachelor of Arts with Honors (B.A.H.) in Political Science. Students pursuing the B.A.H. are expected to complete the standard Political Science major as well as conduct research under the supervision of a faculty member, culminating in an honors thesis.

Application Process

To participate in the Research Honors Program in Political Science, students must apply and be accepted to the program during Winter Quarter of their junior year. A complete application includes:

- The Political Science Research Honors Program application form (https://politicalscience.stanford.edu/undergraduate-program/forms/), signed by their chosen honors advisor. The advisor must be a Political Science faculty member (https://politicalscience.stanford.edu/people/faculty/) or a courtesy faculty

member (https://politicalscience.stanford.edu/people/other-instructors/) (non-lecturer).
- An essay outlining the student's research interest.
- A letter of recommendation from a member of the Political Science faculty (https://politicalscience.stanford.edu/people/faculty/) or from a teaching assistant in a Political Science course. Letters of recommendation can be sent directly by email to Zach Brown (zachbrown@stanford.edu?subject=Research%20Honors%20Program%20Letter%20of%20Recommendation).
- A copy of the unofficial transcript.

Students are expected have research experience prior to applying to the honors program. The Political Science Summer Research College (SRC) program (https://politicalscience.stanford.edu/undergraduate-program/summer-research-college/) is one way to acquire this experience. SRC is a ten-week program in which students are paid to work with faculty on their ongoing research projects. The SRC application typically opens in Winter Quarter. Students may also pursue research with faculty during the academic year.

Prerequisites for Admission

- GPA of 3.5 or higher
- POLISCI 1 The Science of Politics
- POLISCI 150A Data Science for Politics; students may substitute CS 106A Programming Methodology, ECON 102A Introduction to Statistical Methods (Postcalculus) for Social Scientists, STATS 101 Data Science 101, or STATS 60 Introduction to Statistical Methods: Precalculus.
- Research experience

Research Honors Program Requirements

To graduate with honors in Political Science, students must:

1. Secure an honors advisor at the time of application to the research honors program. The honors advisor must be a Political Science faculty member (https://politicalscience.stanford.edu/people/faculty/) or a courtesy faculty member (https://politicalscience.stanford.edu/people/other-instructors/) (non-lecturer).
2. Complete POLISCI 299A Research Design in Spring Quarter of the junior year.
3. Complete POLISCI 299B Honors Thesis Seminar in Autumn Quarter of the senior year.
4. Complete POLISCI 299C Honors Thesis in Winter Quarter of the senior year and POLISCI 299D Honors Thesis in Spring Quarter of the senior year. Enroll in both of these with the honors thesis advisor.
5. Earn a grade of 'B' or higher in in POLISCI 299A Research Design and POLISCI 299B Honors Thesis Seminar. Students unable to meet these requirements may be removed from the program.
6. Submit a completed thesis, approved by the advisor, in Spring Quarter of the senior year. The thesis must receive a grade of 'B+' or higher. The thesis grade also serves as the grade for POLISCI 299C Honors Thesis and POLISCI 299D Honors Thesis

Up to 20 units of honors coursework may be applied toward the additional related coursework requirement for the major.

For grading policies during 2020-21, see the COVID-19 Policies (p. 1949) tab in this section of this bulletin.

Minor in Political Science

Students are encouraged to declare the minor by Autumn quarter of the senior year. Students must complete a declaration form, available on the Political Science website (https://politicalscience.stanford.edu/undergraduate-major/minor/) and in the department office in Encina Hall West 100. The student should submit the declaration form during a meeting with the Political Science undergraduate administrator and declare on Axess. For additional information, students may visit the Political Science website (https://politicalscience.stanford.edu/undergraduate-major/minor/) or office or call (650) 723-1608.

Degree Requirements

Students minoring in Political Science must complete a minimum of 30 units:

		Units
Introductory Course		**5**
Preferably taken in freshman or sophomore year.		
POLISCI 1	The Science of Politics	5
Minor Track		**20**
20 units in a track of the student's choosing. The five track options are listed below. All courses completed toward the track must be Political Science courses and 100-level or above. [1]		
1. Justice and Law		
2. International Relations		
3. Elections, Representation, and Governance		
4. Political Economy and Development		
5. Data Science		
Additional Coursework		**5**
Additional Political Science coursework, which may include no more than 5 units of directed reading and/or no more than 5 units of coursework from outside the Political Science Department (pre-approved or petitioned courses).		
Total Units		**30**

[1] The classes that count toward each track can be found on the Bachelor's tab (p. 1939).

Additional Requirements and Policies

- Students may count up to 5 units of coursework from outside the Political Science Department toward the Additional Coursework requirement only. Pre-approved non-Political Science courses (p. 1945) are listed below and can be applied directly to the minor. Courses from outside of the department that have not been pre-approved can be petitioned toward the minor using a petition form, available on the Political Science website (https://politicalscience.stanford.edu/undergraduate-major/minor/). Course petitions are reviewed and, if appropriate, approved by the Director of Undergraduate Studies. Petitions must be submitted to the undergraduate administrator within one quarter of course completion or within one quarter of declaring the minor.
- BOSP and SIW courses are non-Political Science courses and count toward the 5-unit limit listed above. Some have been pre-approved (p. 1945) while others require a petition (available on the Political Science website (https://politicalscience.stanford.edu/undergraduate-major/minor/)).
- Directed readings with a Political Science faculty member (https://politicalscience.stanford.edu/people/faculty/) and Oxford tutorials require a petition (available on the Political Science website (https://politicalscience.stanford.edu/undergraduate-major/minor/)) and may only be applied toward the additional coursework requirement.
- Stanford Introductory Seminar courses (p. 169) cannot be applied toward the minor.
- All courses applied toward the minor must be completed for a letter grade of 'C' or higher.

- Students may not double count any courses between their major and the Political Science minor aside from POLISCI 1 The Science of Politics.

Transfer Work

A maximum of 10 units of work completed outside Stanford may be given Political Science credit toward the minor for transfer students. All such cases must be individually reviewed and approved by the Director of Undergraduate Studies.

Master of Arts in Political Science

The Political Science department does not offer a terminal M.A. degree. An M.A. degree may only be pursued in combination with a doctoral degree from another department within Stanford University or with an advanced degree from one of Stanford University's professional schools (Schools of Law, Medicine, Business). Students interested in pursuing the M.A. should discuss the application requirements with the Student Services Manager in Political Science.

The department does not offer a coterminal master's degree.

Adding the M.A. Degree

While formal application to the M.A. program is not required, applicants from outside of the Political Science department must:

1. Complete the M.A. Course Plan (https://stanford.box.com/v/MAdegreerequirements/) and submit it to the Political Science Student Services Manager via email or in person in Room 100, Ground Floor of Encina Hall West. Please note that a SUNet ID is required to access this form.
2. Submit the Graduate Authorization Petition (https://registrar.stanford.edu/students/graduate-degree-progress/graduate-program-authorization-petition/) through Axess.
3. After all the requirements for the masters have been completed: submit the Master's Program Proposal (https://stanford.app.box.com/v/progpropma/) to the Political Science Student Services Manager via email or in person in Room 100, Ground Floor of Encina Hall West.
4. Apply to graduate (in Axess, before the quarterly deadline) in the quarter they wish to confer the degree. The degree is not conferred automatically.

For additional information, students may visit the Political Science office in Encina Hall West Room 100 or phone (650) 723-1318.

Degree Requirements

A master's program must satisfy these criteria:

1. Completion, at Stanford, of at least three quarters of residency as a graduate student and 45 units of credit.
2. At least two graduate seminars (10 units) in each of two fields and at least one graduate seminar (5 units) in a third field. These 25 units must be taken in graduate seminars (300 or 400 level) taught by regular Political Science faculty. Cross-listed classes taught by non-Political Science department faculty, workshops and directed readings do not count towards this requirement except with prior approval from the Director of Graduate Studies. The Political Science fields that students may choose from are: International Relations, Comparative Politics, American Politics, Political Theory and Political Methodology. Not more than 25 units of the 45-unit requirement may be taken in a single field.
3. The remaining 20 units must come from courses numbered above 100. Of those 20 units, a maximum of 10 units of classes taken from outside of the Political Science department may count towards the master's degree. Classes taken from outside the Political Science department must be highly relevant to the discipline and approved by the Director of Graduate Studies. A maximum of 10 units of directed reading coursework may count towards this requirement with the approval of the Director of Graduate Studies.
4. A grade point average (GPA) of 2.7 (B-) must be maintained for all classes taken to fulfill master's degree requirements. All courses must be taken for a letter grade.
5. No thesis is required.

The middle number of the course number generally indicates to which field the class belongs:

1 = International Relations
2 = American Politics
3 = Political Theory
4 = Comparative Politics
5 = Political Methodology

For example, POLISCI 440A is a Comparative Politics class and POLISCI 410A is an International Relations class.

Doctor of Philosophy in Political Science

The principal goal of the Stanford Ph.D. program in political science is the training of scholars. Most students who receive doctorates in the program do research and teach at colleges or universities. We offer courses and research opportunities in a wide variety of fields in the discipline, including American Politics, Comparative Politics, International Relations, Political Theory, and Political Methodology. The program is built around small seminars that analyze critically the literature of a field or focus on a research problem. These courses prepare students for the Ph.D. comprehensive exam requirement within a two-year period and for work on the doctoral dissertation.

The University's basic requirements for the Ph.D. degree are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

Admission to the Ph.D. Program

Admission to the Ph.D. program is highly competitive. The selection of Ph.D. students admitted to the Department of Political Science is based on an individualized, holistic review of each application, including (but not limited to) the applicant's academic record, the letters of recommendation, the scores on the General GRE (Graduate Record Examination), the statement of purpose, and the writing sample. About 12-15 students, chosen from a large pool of applicants, enter the program every year. These students are chosen on the basis of a strong academic background as evidenced by previous study, test results, writing sample, and letters of recommendation.

General GRE scores are required of all applicants. Scores from any GRE subject tests are not required. There are no exceptions to the GRE

requirement and no other exams (including the LSAT or GMAT) are accepted in lieu of the GRE.

Before starting the application process applicants should read the Admissions (https://politicalscience.stanford.edu/academics/graduate-programs/graduate-admissions/) section of the department website, especially the Frequently Asked Questions (https://politicalscience.stanford.edu/graduate-program/phd-admissions/faq-prospective-phd-students/). All questions regarding graduate admissions should be directed to the Political Science Student Services office.

Degree Requirements

For additional details about the Ph.D. program structure and requirements, please refer to the Ph.D. Program Guide (https://politicalscience.stanford.edu/academics/graduate-programs/resources-current-students/).

Programs of study leading to the Ph.D. degree are designed by the student, in consultation with advisers and the Director of Graduate Studies, to serve their particular interests as well as to achieve the general department requirements. A student is recommended to the University Committee on Graduate Studies to receive the Ph.D. degree in Political Science when the following program of study has been completed:

1. Statement of Purpose: By the beginning of the fourth quarter in residence, each Ph.D. student must submit a statement of purpose to the student's pre-candidacy mentors. This statement indicates the student's proposed fields of study, the courses taken and those planned to be taken to cover those fields, the student's plan for meeting language and/or skill requirements, plans for taking the comprehensive examination and writing the field paper, and, where possible, dissertation ideas or plans. This statement is discussed with, and must be approved by, the student's pre-candidacy mentors. In the Autumn Quarter following completion of their first year, students are reviewed at a regular meeting of the department faculty. The main purposes of this review are to advise and assist the student to realize their educational goals; to provide an opportunity for clarifying goals and for identifying ways to achieve them; and to facilitate assessment of progress toward the degree.
2. First Field: The candidate for the Ph.D. degree must demonstrate proficiency in a primary field. The fields are: American politics, comparative politics, international relations, methodology, and political theory. Students demonstrate proficiency by:
   a. passing four five-unit classes in that field with letter grades of A- or better. Each field offers a series of two or three core courses designed to familiarize students with the literature of that field. In addition, fields require that students take one or two elective courses covering a specific aspect of the field. Specific class requirements can be found on the field statements (https://politicalscience.stanford.edu/academics/graduate-programs/resources-current-students/), available on the Political Science department website.
   b. passing a written or oral comprehensive examination by the end of spring quarter of the second year, after completion of the core sequence of the first field. Political Theory requires an oral comprehensive exam; all other fields require a written exam.
3. Second Field: The candidate for the Ph.D. degree must demonstrate proficiency in a secondary field by completing three five-unit classes in that field with letter grades of A- or better. The fields are: American politics, comparative politics, international relations, methodology, and political theory. Specific class requirements can be found on the field statements (https://politicalscience.stanford.edu/academics/graduate-programs/resources-current-students/), available on the Political Science department website.
4. Third Field: The candidate for the Ph.D. degree must also complete a third field. The third field requirement is satisfied by taking two courses for at least three units each with a letter grade of 'B' or better. Students may choose to complete a third field in one of the fields within the Political Science department: American politics, comparative politics, international relations, methodology, or political theory. Specific class requirements for each field can be found on the field statements (https://politicalscience.stanford.edu/academics/graduate-programs/resources-current-students/), available on the Political Science department website. Alternately, students may design their own third field. Classes taken for a self-designed third field do not have to offered by the Political Science department. Self-designed third fields must be approved by two members of the Political Science department faculty. The third field cannot be satisfied by courses taken to fulfill requirements for first or second fields or by classes taken to fulfill other program requirements.
5. Political Theory Program Requirement: Every Ph.D. student must complete at least one five-unit class of graduate-level instruction in political theory. All courses used to fulfill the political theory requirement must be taken for a letter grade of 'B' or better. The classes that fulfill this requirement are listed on the Political Theory field statement (https://politicalscience.stanford.edu/academics/graduate-programs/resources-current-students/), available on the Political Science department website.
6. Quantitative Methods Program Requirement: Every Ph.D. student must take POLISCI 450A Political Methodology I: Regression and POLISCI 450B Political Methodology II: Causal Inference. Credit for equivalent classes is at the discretion of the political methodology field convener. All courses used to fulfill the quantitative methods requirement must be taken for a letter grade of 'B' or better unless the candidate has a first or second field in Quantitative Methodology in which case the minimum required grade is A-.
7. Research Design Program Requirement: Every Ph.D. student must take POLISCI 400C Research Design for a letter grade of B or better. If POLISCI 400C is not offered in a given year, students must consult with their pre-candidacy mentors to determine a suitable alternative and receive permission from the Director of Graduate Studies for the substitution.
8. Foundational Concepts Workshop: all first year Ph.D. students must complete POLISCI 480 Foundational Concepts in Political Science with a grade of S (Satisfactory).
9. Competence in a Language and/or Skill: The Ph.D. candidate is required to demonstrate competence in a language and/or skill that is likely to be relevant to the dissertation research. The level of competence needed for completion of the research is determined by the student's adviser. Previous instruction can be counted towards this requirement only if approved by the Director of Graduate Studies.
10. Second Year Research Paper ('field paper'): All Ph.D. students must submit a research paper approved by two faculty readers by the end of the second year, prior to advancing to candidacy. This paper must demonstrate the capacity to produce research at a level expected of students preparing to write a high-quality Ph.D. dissertation. The second-year research paper is given considerable weight as the faculty consider an application for candidacy. Students are advised to begin work on their second-year research papers in the summer between their first and second years in the program, to select two Political Science faculty readers early in fall quarter of their second year, and to submit a first draft to their readers by early winter quarter of their second year.
11. Advancement to candidacy: In accordance with University guidelines, Ph.D. students are expected to advance to candidacy by the end of their sixth quarter in the program (i.e., by the end of their Spring Quarter in their second year in the program). It is the department's practice that all students in their sixth quarter be considered for candidacy at a special meeting of the faculty (typically in Week 9 or 10 of Spring Quarter). All the requirements for advancing to candidacy listed in items 1-10 above must be completed by this meeting but advancement to candidacy is not automatic upon

completion of these requirements. Advancement to candidacy is an expression by the faculty of their confidence that the student can successfully complete the Ph.D. program, and in particular, complete a doctoral dissertation that is an original contribution to scholarship that exemplifies the highest standard of the discipline. Should a student not be advanced to candidacy by the end of the sixth quarter, the student is at risk of being dismissed from the Ph.D. program.

12. Dissertation Prospectus: By the end of the third year, a formal dissertation prospectus must be submitted to and approved by the student's prospectus committee and the Director of Graduate Studies. The dissertation prospectus must be approved by the end of the third year. Students must also make a dissertation prospectus presentation in spring quarter of the third year.
13. Teaching Requirement: A candidate for the Ph.D. in Political Science is required to complete three quarters of teaching in Political Science department classes for a minimum of three quarters. Most students are required to complete up to five quarters of teaching as part of their funding package.
14. Dissertation Reading Committee: The dissertation reading committee must be formed by the end of the fourth year.
15. Oral Examination: The candidate must pass the University oral examination on the area of the dissertation at a time suggested by the candidate's dissertation committee.
16. Dissertation: The candidate must complete a dissertation satisfactory to the dissertation reading committee.
17. Adequate Progress: Students who are not making adequate academic progress are at serious risk of dismissal from the Ph.D. program. In addition to the specific program requirements listed above, at each stage of the Ph.D. program, the department has the following minimum standards for adequate academic progress:
    - Except in rare circumstances, no more than two of the following on the transcript at any given time: incomplete ('I'); grade not reported ('GNR'); not passed or no credit ('NP' or NC'); or withdraw ('W').
    - Adequate grades in all courses taken each term ('B-' and below are regarded as inadequate).Grades of B- or below are reviewed by the faculty and the student may be required to revise and resubmit work associated with the course or retake the course. (While a B is the minimum required grade for all classes, all students must earn a minimum grade of A- for courses taken to fulfill first and second field requirements.)
    - Completion of the 135-unit residency requirement and advancement to TGR status by the end of the fourth year.
    - Student who have advanced to TGR status must earn a grade of N in POLISCI 802 in each quarter during the academic year. An 'N-' grade constitutes a warning. A second consecutive 'N-' normally causes the department to deny the student further registration until a written plan for the completion of the degree requirements has been submitted by the student and accepted by the department. Subsequent 'N-' grades are grounds for dismissal from the program.
    - Substantial progress toward completion of the dissertation in the fourth and fifth years.
    - Completion of the Ph.D. within five calendar years after attaining candidacy.

Written petitions for exemptions to requirements are considered by (as applicable) a student's adviser, the relevant field convener and the Director of Graduate Studies. Approval is contingent on special circumstances and is not routinely granted.

Ph.D. Minor in Political Science

University requirements for the Ph.D. Minor are described in the Graduate Degrees section of this Bulletin.

To request the Ph.D. Minor in Political Science, submit the University Application for Ph.D. minor form (https://stanford.app.box.com/v/app-phd-minor/) to the Political Science Student Services office for review. Once approved, the Political Science department adds the Ph.D. minor to the student's academic career.

Ph.D. Minor Requirements

1. Completion of at least two graduate seminars (10 units) in each of two fields. These 20 units must be taken in graduate seminars (300 or 400 level) taught by Political Science faculty. Cross-listed classes taught by non-Political Science department faculty, workshops and directed readings do not count towards this requirement except with prior approval from the Director of Graduate Studies. The Political Science fields that students may choose from are: International Relations, Comparative Politics, American Politics, Political Theory and Political Methodology. Not more than 10 units of the 20-unit requirement may be taken in a single field.
2. A grade point average (GPA) of 3.0 (B) must be maintained for all classes taken to fulfill Ph.D. minor requirements. All courses must be taken for a letter grade.
3. No thesis or comprehensive examinations are required.
4. The Political Science department does not require that a Political Science faculty member serve on the students reading or oral examination committee.

In general, the middle digit of the course number indicates to which field the class belongs:

1 = International Relations
2 = American Politics
3 = Political Theory
4 = Comparative Politics
5 = Political Methodology

For example, POLISCI 440A is a Comparative Politics class and POLISCI 410A is an International Relations class.

Joint Degree Program with the School of Law (J.D./Ph.D.)

The Department of Political Science and the School of Law offer a joint program leading to a J.D. degree combined with a Ph.D. in Political Science.

The J.D./Ph.D. degree program is designed for students who wish to prepare themselves for careers in areas relating to both law and political science.

Admission to the J.D./Ph.D. Program

Students interested in the joint degree program must apply and gain entrance separately to the School of Law and the Department of Political Science following the same admission timelines, processes and subject to the same admissions standards as non-joint degree applicants. As an additional step, students must secure permission from both academic units to pursue degrees in those units as part of a joint degree program. Interest in either joint degree program should be noted on the student's admission applications and may be considered by the admission committee of each program. Alternatively, an enrolled student in either the Law School or the Political Science department may apply for admission to the other program and for joint degree status in both academic units after commencing study in either program.

Joint degree students may elect to begin their course of study in either the School of Law or the Department of Political Science. Students are advised either to complete their first year of law school before beginning

the Ph.D. program or to begin their JD after advancing to candidacy in the Ph.D. program.

Degree Requirements

Students must be enrolled full time in the Law School for the first year of law school and must be enrolled full time in the Political Science department during the first year in the Ph.D. program. In the second year in the Ph.D. program, joint JD/Ph.D. students should expect to devote one or more additional quarters largely or exclusively to studies in the Political Science program in order to be eligible to advance to candidacy at the end of the second year. After completing the first year of law school and after advancement to candidacy in the Political Science Ph.D. program, enrollment may be in the graduate school or the Law School, and students may choose courses from either program regardless of where enrolled. In the absence of extraordinary circumstances, students are expected to be in residence at the Law School for at least seven quarters.

Students must satisfy all of the requirements for both the J.D. and the Ph.D. degrees as specified in ExploreDegrees, in the Ph.D. Program Guide and by the School of Law. Faculty advisers from each academic unit participate in the planning and supervising of the student's joint program. The sequencing and schedules for individual joint degree students may vary substantially depending on the student's background and interests, and on the guidance of faculty advisers from both academic units.

Students must complete 192 quarter units to complete both degrees. Up to 54 units of approved courses may be counted toward both degrees. Of that 54, no more than 31 total quarter units of courses that originate outside the Law School as well as some types of Stanford Law School classes (e.g. independent research, externships, directed research, directed writing, policy labs, senior thesis, research track, or moot court) may count toward the Law degree. Taking any of those types of Law classes will reduce the units that a student will be able to count from the Ph.D. towards the JD on a unit-for-unit basis.

Joint degree students are eligible for the same funding arrangements in both academic units, including scholarships and grants, as students who are not pursuing a joint degree.

For more information, see the Law School's Degrees and Joint Degrees (http://www.law.stanford.edu/program/degrees/) web site.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Department of Political Science counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

The Department of Political Science also counts all courses taken in Winter Quarter 2020 with a grade of 'CR' (credit) and Spring Quarter 2020 with a grade of 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Other Undergraduate Policies

If a student has difficulty completing an undergraduate degree requirement due to the COVID-19 pandemic, the student should consult with the Undergraduate Program Administrator to identify academic options to fulfill degree requirements.

Honors Grading Policy

During 2020-21, to graduate with honors in Political Science, students may elect to take honors courses (POLISCI 299A-D) with the following grading bases:

1. Letter Grade: Should students elect this option, a grade of B in POLISCI 299A and POLISCI 299B, and B+ on the thesis will be required to graduate with honors.
2. CR/NC: Should students elect this option, the instructors of POLISCI 299A and POLISCI 299B must certify that the coursework completed is of at least 'B' quality, and the thesis advisor must certify that the thesis is of at least 'B+' quality, kin order for the student to graduate with honors.

If a student's performance in POLISCI 299A and POLISCI 299B or on the thesis does not meet the standards for honors described above, up to 20 units of honors coursework may be applied toward the additional related coursework requirement for the major as long as the student earns at least a 'C' (if the letter grade option is chosen) or 'CR' (if the CR/NC option is chosen) but the student will not graduate with honors.

Graduate Degree Requirements

Grading

Graduate courses taken during 2020-21 will satisfy Ph.D. pre-candidacy requirements if either (1) the student takes the course CR/NC and receives a grade of CR, or (2) the student takes the course for a letter grade and earns a grade that meets our current program requirements.

A CR notation is given when a student's work would have received a C- or better.

Because it is important for students to have feedback on their work and for the department to continue to monitor academic progress, instructors will be encouraged to provide students taking a course CR/NC with written feedback on their work. Some instructors may also provide a grade on assignments (such as papers) to give students taking courses on a CR/NC basis the usual signal about the quality of the work.

Other Graduate Policies

Students who may require additional time to meet milestone deadlines should contact the Director of Graduate Studies.

Graduate Advising Expectations

Academic advising by department faculty is a critical component of graduate students' education. The Political Science department is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. Both the adviser and the advisee are expected to maintain professionalism and integrity.

As a best practice, students and advisers should periodically discuss advising expectations to ensure mutual understanding. Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility

for informing themselves of policies and degree requirements for their graduate program.

Additionally, the program adheres to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/) and in the "Graduate Advising (p. 80)" section of this bulletin. Academic advising by Stanford faculty is a critical component of all graduate students' education and additional resources can be found in the Policies and Best Practices for Advising Relationships at Stanford (http://stanford.box.com/shared/static/73oj7zqvy9h0fezqf310onbuunv91nyl.pdf) and the Guidelines for Faculty-Student Advising at Stanford (https://stanford.box.com/shared/static/mespm59bcanq03o4pppu7r4n9p4sb6t6.pdf).

Ph.D.

All incoming doctoral students are assigned two pre-candidacy mentors by the Director of Graduate Studies. These mentors are responsible for advising students until they advance to candidacy on key areas such as course selection, initial research projects, and early stage professional development opportunities. Students should meet with their pre-candidacy mentors at least once per quarter, although there is likely to be variation in meeting frequency by individual adviser and advisee.

In the third year, students will convene a prospectus committee who will meet them once each quarter to receive an update on overall progress and to provide feedback on the prospectus. In the fall, this committee will consist of at least two faculty members. By the spring quarter, the committee will have three faculty members, who will be expected to approve the final prospectus by the end of the year. While this prospectus committee may form the basis for a dissertation reading committee, students will be free to assemble a dissertation reading committee whose members differ from those of the prospectus committee.

By the end of the fourth year, students are required to appoint one primary dissertation adviser and are encouraged to identify two to three additional faculty who are likely to fill out the rest of their dissertation reading committee. They are required to formally identify their full reading committee by the end of their fourth year. The adviser and committee are selected by the student on the basis of expertise relevant to the dissertation project. Students should meet with their adviser and reading committee (once named) at least once per quarter, though there is likely to be variation in meeting frequency by individual adviser and advisee.

Faculty advisers should provide guidance in key areas such as selecting courses, designing and conducting research, developing teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

At least once per year, either formally or informally, students and advisers are expected to review the student's progress towards completion of their research and their degree. Such discussions may include other members of the student's dissertation committee, either together or individually.

Nearly all students have an adviser from among the primary faculty members of the department. In rare circumstances, the dissertation adviser may be a faculty member from another Stanford department. When the research adviser is from outside the department, the student must also identify a co-adviser from the department's primary faculty.

The Director of Graduate Studies is an additional advising resource for students, particularly in areas of degree progress, program requirements, and selecting research advisers. Academic progress and student completion of program requirements and milestones are monitored by the Director of Graduate Studies and student services staff and are discussed at meetings of the faculty twice per academic year.

Requirements and milestones, as well as more detailed descriptions of the program's expectations of advisers and students, are listed in the Ph.D. Program Guide (https://politicalscience.stanford.edu/academics/graduate-programs/resources-current-students/), found on the department website.

Master of Arts

The Political Science department does not offer a terminal M.A. degree. An M.A. degree may only be pursued in combination with a doctoral degree from another department within the University or with an advanced degree from one of the University's professional schools (i.e., Schools of Law, Medicine, Business).

The Director of Graduate Studies is available to provide guidance on course selection and course planning. It is the responsibility of the student to contact the Director of Graduate Studies to schedule a meeting to discuss advising expectations. This should happen when the student begins the M.A. degree program and annually as needed.

M.A. students should also discuss how the M.A. degree and Political Science coursework supports their primary doctoral degree with their doctoral program adviser.

Political Science Faculty

Emeriti: (Professors) David B. Abernethy, David W. Brady, Joshua Cohen, David Danielski, Charles Drekmeier, Richard R. Fagen, John A. Ferejohn, David J. Holloway, Terry L. Karl, John W. Lewis, John Manley, James March, Daniel Okimoto, Robert A. Packenham, Jack N. Rakove, Philippe Schmitter, Hans N. Weiler

Overseas Studies Courses in Political Science

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or

program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

		Units
OSPBER 77	"Ich bin ein Berliner" Lessons of Berlin for International Politics	4-5
OSPBER 79	Political Economy of Germany in Europe: an Historical-Comparative Perspective	4-5
OSPBER 82	Globalization and Germany	4-5
OSPBER 126X	A People's Union? Money, Markets, and Identity in the EU	4-5
OSPCPTWN 45	Transitional Justice and Transformation Debates in South Africa	4
OSPFLOR 78	The Impossible Experiment: Politics and Policies of the New European Union	5
OSPHONGK 22	China's Financial Reforms - Problems and Perspectives	4
OSPHONGK 23	China Under Mao	4
OSPHONGK 27	China and Regional Order	4
OSPHONGK 29	The Rise of China in the Global Context I: Diplomacy, Trade, and Soft Power	4
OSPPARIS 32	French History and Politics: Understanding the Present through the Past	5
OSPPARIS 122X	Europe and its Challenges Today	4
OSPSANTG 116X	Modernization and its Discontents: Chilean Politics at the Turn of the Century	5

Courses

POLISCI 1. The Science of Politics. 5 Units.
Why do countries go to war? How can we explain problems such as poverty, inequality, and pollution? What can be done to improve political representation in the United States and other countries? We will use scientific methods to answer these and other fundamental questions about politics.

POLISCI 10N. International Organizations and the World Order. 3 Units.
Since the end of World War II, there has been an explosion in the number, scope, and complexity of international organizations. International organizations such as the United Nations, North Atlantic Treaty Organization, and World Bank now play critical roles across a wide range of policy issues. Why have international organizations proliferated and expanded since the mid-20th century? How do these organizations shape the international system? Why do states sometimes conduct foreign policy through international organizations, while other times preferring traditional means? Why do some international organizations evolve over time, while others resist change? What are some of the pathologies and problems of contemporary international organizations? We will explore these questions by carefully examining the functions and operations of major international organizations. You will also complete a research project examining an international organization of your choice and present your findings in class.

POLISCI 11N. The Rwandan Genocide. 3 Units.
Preference to freshmen. In 1994, more than 800,000 Tutsi and moderate Hutu Rwandans were killed in the most rapid genocide in history. What could bring humans to carry out such violence? Could it have been prevented? Why did no major power intervene to stop the killing? Should the U.N. be held accountable? What were the consequences for Central Africa? How have international actors respond to the challenges of reconstructing Rwanda? What happened to the perpetrators? Sources include scholarly and journalistic accounts.

POLISCI 13N. Identity Politics 101. 3 Units.
How do we understand the political choices citizens make? Why do Black and White Americans disagree so vehemently about racially-charged incidents like officer-involved shootings? What explains disagreements over policies like welfare and immigration? How do we understand ethnic conflict, both in the United States and around the world? What explains our commitments to salient social groups? Under what conditions should we expect group members to join in solidarity with one another? When does solidarity break down? And what helps us make sense of this strange time we find ourselves in? Identity does that--or at least it does a lot of it. But what is an identity? What are the conditions under which identities becomenpoliticized? How do identities work to structure attitudes and affect behavior? Over the course of the quarter, we will read a series of scholarly papers from across academic disciplines that provide some answers to these important questions.nStudents will be expected to engage the readings carefully and to participate in classroom discussions. Assignments will include reaction papers and a final presentation. By the end of our time together, I hope to convince you that all politics is identity politics, and that identity--in all of its complexity--is a thing worth thinking rigorously about. All students are encouraged to join, as we will benefit from the diversity of experiences and backgrounds that each of us brings to thenclassroom.

POLISCI 18N. Civil War and International Politics: Syria in Context. 3 Units.
How and why do civil wars start, drag on, and end? What does focus of post-Cold War U.S. foreign policy on countries torn apart by civil war tell us about contemporary international relations? We consider these and related questions, with the conflict in Syria as our main case study.

POLISCI 19N. State-Building. 3 Units.
Is it possible for the US to create consolidated democracies? Should we just give up? There are three candidate theories that explain how we get consolidated democracies: modernization theory; institutional capacity; rational choice institutionalism. Which is best? Which provides the best guidance for policy? What can we learn from Germany, Japan, Afghanistan and others?.

POLISCI 20N. The American Electorate in the Trump Era. 3 Units.
This seminar will introduce students to the methods social scientists use to analyze public opinion, voting and elections, with primary emphasis on the 2016 elections and the upcoming 2020 elections. Students will utilize major databases such as the American National Elections Studies (ANES) and the General Social Survey (GSS), as well as ongoing national panels. The seminar emphasizes analysis - not ideology, activism or personal catharsis. How are Americans in various demographic categories voting today and why? What is the relative importance of voter characteristics and identities, policy issues, the records and personal qualities of the candidates, the campaign itself, the performance of the Obama and Trump Administration, and myriad other factors?.

POLISCI 20Q. Democracy in Crisis: Learning from the Past. 3 Units.
This Sophomore Seminar will focus on U.S. democracy and will use a series of case studies of major events in our national history to explore what happened and why to American democracy at key pressure points. This historical exploration should shed light on how the current challenges facing American democracy might best be handled. (Cardinal Course certified by the Haas Center).
Same as: EDUC 122Q, HISTORY 52Q

POLISCI 22SI. Issues in American Politics and Public Policy. 1 Unit.
This course, administered in conjunction with Stanford in Government, will explore prominent contemporary issues in American politics and public policy. It will consist of eight guest lectures by Stanford professors, visiting scholars, and practitioners on salient public policy topics, and student-led discussion in non-lecture weeks. Grading will be on a satisfactory/no-credit basis, and to receive credit a student must attend at least eight of the ten total class sessions.

POLISCI 23Q. Analyzing the 2016 Elections. 3 Units.
the seminar will normally meet for two hours, but after three seminars there will be lab sessions to acquaint students with basic quantitative methods and major social science databases. After every election the commentariat promulgates a story line to explain the results. Typically later analysis shows the media story line to be wrong (eg. "values voters" in 2004). Participants in this seminar will analyze the results of the 2016 elections. The seminar is about ANALYSIS, not ideology. Some familiarity with quantitative methods is a prerequisite.

POLISCI 24Q. Law and Order. 3 Units.
Preference to sophomores. The role of law in promoting social order. What is the rule of law? How does it differ from the rule of men? What institutions best support the rule of law? Is a state needed to ensure that laws are enforced? Should victims be allowed to avenge wrongs? What is the relationship between justice and mercy?.

POLISCI 24SC. Conservatism and Liberalism in American Politics and Policy. 2 Units.
What influence do political ideologies have in American politics and government? In this course, students will study liberal and conservative ideology in American politics and public policy from the mid-20th century onward. The course begins with an examination of ideology in the American public and then considers ideology among political activists and elected officials, focusing on members of Congress and the president. The course will also cover the ideological polarization of political elites and its impact on the policy-making process. In the final part of the course, through a series of policy case studies, students will also evaluate how well certain public policies have met the ideological goals of their liberal and conservative sponsors. The course will included several lunches and dinners with guest speakers.

POLISCI 25N. The US Congress in Historical and Comparative Perspective. 3 Units.
This course traces the development of legislatures from their medieval European origins to the present, with primary emphasis on the case of the U.S. Congress. Students will learn about the early role played by assemblies in placing limits on royal power, especially via the power of the purse. About half the course will then turn to a more detailed consideration of the U.S. Congress's contemporary performance, analyzing how that performance is affected by procedural legacies from the past that affect most democratic legislatures worldwide.

POLISCI 27N. Thinking Like a Social Scientist. 3 Units.
Preference to freshman. This seminar will consider how politics and government can be studied systematically: the compound term Political SCIENCE is not an oxymoron. The seminar will introduce core concepts and explore a variety of methodological approaches. Problems of inference from evidence will be a major concern. Classic and contemporary research studies will be the basis of discussion throughout.

POLISCI 28N. The Changing Nature of Racial Identity in American Politics. 3 Units.
Almost one-third of Americans now identify with a racial/ethnic minority group. This seminar examines the relationship between racial identity, group consciousness, and public opinion. Topics include the role of government institutions in shaping identification, challenges in defining and measuring race, attitudes towards race-based policies, and the development of political solidarity within racial groups. Particular attention will be paid to the construction of political identities among the growing mixed-race population.

POLISCI 30SI. Digital Security and Civil Society. 2 Units.
This class will instruct students in the political economy of software and digital infrastructure as they relate to civil society in democracies. We will consider the role of privacy, anonymity, free expression and free association in democracies and examine the digital tools and practices that enable these freedoms. The class consists of three interwoven themes:n1) The role of civil society in democracies n2) The political economy of digital tools and their influence on societyn3) Individual and collective digital security.

POLISCI 31N. Political Freedom: Rights, Justice, and Democracy in the Western Tradition. 3 Units.
Freedom is one of our core values. Most people can agree that freedom is a good thing. Yet there is far less agreement about how to understand the concept itself and what kinds of political arrangements are best suited to protect and enhance freedom. Is freedom about being left alone? Undertaking action with others? Participating in governance? Does freedom require a limited state? An active and interventionist government? A robustly participatory political system? How is freedom connected to other political values, like justice and equality? This seminar will consider and evaluate some of the most controversial and challenging answers that have been given to these questions by canonical thinkers like John Locke, John Stuart Mill, and Karl Marx, as well as by more contemporary political and legal thinkers like Jeremy Waldron and Cass Sunstein. We will also examine how questions about the nature of freedom play out on college campuses and in the courts.

POLISCI 31Q. Justice and Cities. 3 Units.
Cities have most often been where struggles for social justice happen, where injustice is most glaring and where new or renewed visions of just communities are developed and tested. What makes a city just or unjust? How have people tried to make cities more just? Why have these efforts succeeded or failed? Each of our sessions will focus on questions like these and include a case study of a particular city, largely with a focus on the United States, including very local cases like San Francisco, Palo Alto and East Palo Alto. The central goal of this class is for you to gain an understanding of the roles of urban design and urban policies in making cities just or unjust places. You will critically engage with some of the debates on cities and justice and gain experience connecting theoretical debates about justice and democracy to empirical data and contemporary work on city design, planning, and policies through readings, our class discussions, and a sustained research project looking a particular city in depth.

POLISCI 33N. How We Decide: Social Choice in the Age of Algorithms. 4 Units.
The digital revolution arrived with the promise of improving human life, including through its ability to transform the way in which we make social decisions. But one of the most common critiques today is that unstructured interactions in social media and online platforms have actually set us back by spreading fake news, amplifying polarization, and failing to aggregate our diverse views and opinions into collective choices that move our society forward. nnHow should social decisions be made in the age of algorithms? We will approach this question through the lens of social choice theory, and connect this theory from economics and political science to the potential design of algorithms that aggregate our diverse preferences and information. We will review various systems of preference and information aggregation in small groups as well as large societies, including voting systems, bargaining protocols, and methods of deliberation. We will also describe decision making problems that arise in modern applications, such as distributed systems like blockchains and Wikipedia, as well as applications of topical interest such as the assignment of children to schools, the design of congressional districts, and the direct involvement of communities in participatory budgeting. nnA key objective of the class will be to get students to think about how social choice theory can be applied to real-life problems through the design of algorithms. There are no prerequisites, but students should come prepared to use high school level mathematics and deductive reasoning.
Same as: MS&E 33N

POLISCI 40SI. Rejecting Tyranny: Civil Resistance in Times of Crisis. 1 Unit.
Donald Trump's rise to power was anything but conventional. Although divisive among both Democrats and Republicans, he was still popular enough in the eyes of the electorate to become the leader of the free world. Is he a hero? Is he a dictator? Or something different altogether? As Trump often elicits comparisons to famous and infamous leaders of the past such as Hitler, Mussolini, and FDR, as well as right wing nationalists leaders in the present day such as Duterte and Le Pen, this class will examine the extent to which Trump's behavior resembles these authority figures and what our society should do to respond. Learning will be facilitated through discussion sections and guest professors from various Stanford departments including History, Political Science, and the Hoover Institution. Views from all sides of the political spectrum are welcome. Note: this class does not begin until the Tuesday of the second week of Spring quarter (Apr 11). Enrollment will be decided on the first day of class.

POLISCI 42. Democracy Matters. 1 Unit.
Should the U.S. close its border to immigrants? What are the ramifications of income inequality? How has COVID-19 changed life as we know it? Why are Americans so politically polarized? How can we address racial injustice? As the 2020 election approaches, faculty members from across Stanford will explore and examine some of the biggest challenges facing society today. Each week will be dedicated to a different topic, ranging from health care and the economy to racial injustice and challenges to democracy. Faculty with expertise in philosophy, economics, law, political science, psychology, medicine, history, and more will come together for lively conversations about the issues not only shaping this election season but also the nation and world at large. There will also be a Q&A following the initial discussion. Attendance and supplemental course readings are the only requirements for the course.
Same as: ECON 4, PHIL 30, PUBLPOL 4

POLISCI 42Q. The Rwandan Genocide. 5 Units.
Between April and July of 1994 more than 800,000 Rwandans, mostly Tutsi but also moderate Hutus, were killed in the most rapid genocide the world has ever known. The percentage of Rwandans killed in a single day of the genocide was ten times greater than the percentage of Americans killed in the entire Vietnam war. What could bring humans to plan and carry out such an orgy of violence? Could it have been prevented? Why did the United States or any other major power not intervene to stop the killing? To what extent should the United Nations be held accountable for the failure to end the genocide? What were the consequences of the genocide for the region of Central Africa? How did international actors respond to the challenges of reconstructing Rwanda after the killings? What has happened to the perpetrators of the genocide? This course surveys scholarly and journalistic accounts of the genocide to seek answers to these questions.nnThis seminar will be residence based in Crothers, but will be open to Crothers residents and non-residents.

POLISCI 45N. Civil War Narratives. 3 Units.
Preference to freshmen. Focus is on a new statistics-based theory to account for the susceptibility of countries to civil war. How to write a theory-based historical narrative. Students write and present an original historical narrative focusing on how well the theory explains a particular history and on the importance of factors that are absent from the theory in explaining civil war onsets.

POLISCI 46N. Contemporary African Politics. 3 Units.
Africa has lagged behind the rest of the developing world in terms of three consequential outcomes: economic development, the establishment of social order through effective governance, and the consolidation of democracy. This course seeks to identify the historical and political sources accounting for this lag, to provide extensive case study and statistical material to understand what sustains it, and to examine recent examples of success pointing to a more hopeful future. Students will be asked to develop expertise on one or two African countries and report regularly to fellow students on the progress (or lack thereof) of their countries on each outcome and the reasons for it.

POLISCI 52K. Technology and the 2020 Election. 1 Unit.
The 2020 U.S. Presidential Election season will be historic. A global pandemic, mass protests against police violence and enduring racism, an upended economy, a divisive incumbent President, and a polarized America are a potent combination for surprises. One thing is certain, however: the digital tools and platforms born in Silicon Valley will play an enormously important role in the campaign. Topics include: the technologies of the voting booth and reporting results; online filter bubbles, echo chambers, and effects on polarization; amplification and content moderation of political candidates; online political advertising and microtargeting; manipulation, misinformation, and disinformation; the U.S. in comparative perspective; and policy approaches. This course will attempt, with the help of expert guests, to draw lessons about the legitimate and illegitimate uses of technology in the 2020 election and to take stock of the health of American democracy. We also explore questions about a tech policy agenda in a Trump or Biden administration. We will meet once per week, on Wednesday evenings, with examinations of the most important digital technologies at stake in the election and for the country.

POLISCI 57E. State of the Union 2014. 1 Unit.
This course will examine major themes that contribute to the health, or disease, of the US body politic. Challenges and opportunities abound: we live in an age of rising inequality, dazzling technological innovation, economic volatility, geopolitical uncertainty, and the accumulating impact of climate change. These conditions confront our political leaders and us as citizens of a democracy plagued by dysfunction. What are the implications for the body politic? Led by Rob Reich (Political Science, Stanford), David Kennedy (History, Stanford), and James Steyer (CEO, Common Sense Media), the course will bring together distinguished analysts of American politics. Together, we will examine the following topics: inequality; energy and the environment; media and technology; the economy; and the 2014 midterm elections. The course is designed for the entire Stanford community: jointly offered for undergraduate and graduate students at Stanford (through listings in Political Science and History) and for community members through the Continuing Studies Program. For students, the course is available for 1 credit. This course may not be taken for a Letter Grade.
Same as: HISTORY 57E

POLISCI 70. Dangerous Ideas. 1 Unit.
Ideas matter. Concepts such as revolution, tradition, and hell have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like immigration, universal basic income, and youth play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these "dangerous" ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.
Same as: ARTHIST 36, COMPLIT 36A, EALC 36, ENGLISH 71, ETHICSOC 36X, FRENCH 36, HISTORY 3D, MUSIC 36H, PHIL 36, RELIGST 36X, SLAVIC 36

POLISCI 71. Current Issues in European Security. 1 Unit.
Russia's annexation of Crimea in Spring 2014 posed not only a threat to post-World War II Europe formed around the norm of national sovereignty, but possibly also the very real threat that Russia had awakened from its 20 years of peacefulness to once again impose its will on Eastern Europe. Is Europe again under threat from the East? In Current Issues in European Security, students will attend public events organized by Stanford's Europe Center and Freeman Spogli Institute for International Studies. These events -- talks by political leaders and scholars from the U.S. and Europe -- will engage and encourage students to understand the deepening crises in Ukraine, conflict in the Baltics, and European security as a whole. Students will leave the course with a better understanding of the multi-faceted dilemmas policy makers face, historical background, and possible paths forward for global decision makers. In addition to attending the events, students will write a final memo recommending a course of action for US policy makers. Events will typically be scheduled from 12 noon to 1:30 p.m. but may be held at other times. There will be approximately six events in spring quarter, and students may also be required to attend one or two separate discussion sessions.

POLISCI 72. Policy, Politics and the 2020 Elections: What 2020 Means for Future Campaigns and Elections. 2 Units.
(Same as LAW 7057). This course looks back at the 2020 election campaign and tries to discern lessons and takeaways for future campaigns and elections. It will provide students with a behind-the-scenes understanding of how campaigns work. Each week, we will explore a different topic related to high-profile campaigns -- policy formation, communications, grassroots strategy, digital outreach, campaign finance -- and feature prominent guest speakers who have served and will serve in senior roles on both Democratic and Republican campaigns, including the Trump and Biden teams.
Same as: COMM 153A, COMM 253A, PUBLPOL 146, PUBLPOL 246

POLISCI 73. Energy Policy in California and the West. 1 Unit.
This seminar provides an in-depth analysis of the role of California state agencies and Western energy organizations in driving energy policy development, technology innovation, and market structures, in California, the West and internationally. The course covers three areas: 1) roles and responsibilities of key state agencies and Western energy organizations; 2) current and evolving energy and climate policies; and 3) development of the 21st century electricity system in California and the West. The seminar will also provide students a guideline of what to expect in professional working environment.
Same as: CEE 263G, ENERGY 73, PUBLPOL 73

POLISCI 74. Pathways to Public Service. 1 Unit.
This one-unit lecture series explores potential careers in public service, including roles in government as well as in many other organizations¿such as nonprofits, foundations, corporations, and arts organizations¿that help shape public policy and civic life. Each week, a guest speaker will introduce students to his or her organization and role, describe some of the key intellectual issues and current policy challenges, discuss career paths and skills crucial for the job, and help students reflect on possible connections between this work and their studies at Stanford. In an interactive concluding session, students will participate in a career assessment activity, reflect on possible next steps, and learn about other opportunities to explore public service at Stanford. This course is open to all students, including not only those studying political science or public policy, but also the arts, humanities, sciences, and engineering. It is co-sponsored by the School of Humanities and Sciences and Stanford in Government (SIG).
Same as: PUBLPOL 75

POLISCI 75. The 2018 Midterm Election: Making Your Voice Heard. 2-3 Units.
Elections are critical to determining the direction of this country, but how do you get involved in ways beyond voting? How do campaigns work on a practical level? How can students make a difference in the upcoming midterm elections? This class offers an opportunity to gain knowledge of and firsthand experience in an American elections. Course credit is based on classroom time, reading time and time spent on volunteer work. Students in this course will be required to participate in some way in the upcoming US Midterm election. This could mean undertaking one or more activities such as training for and serving as a poll worker, working for groups that are registering voters, or volunteering for a campaign. Students are responsible for finding their election-related opportunity, but they may contact Stephanie Burbank about options and contact information. Once you determine what activity you will be volunteering for, please fill out this form: http://web.stanford.edu/~sburbank/PS75.fb. If you have any questions, please reach out to the instructor.

POLISCI 76. Protagonists in Policy. 1 Unit.
Interested in learning from activists, academics, and politicians about the different ways you can be an agent of change and affect public policy? This course presents a lecture/discussion series in which students will have the opportunity to engage with influential speakers to discover and learn more about timely topics relating to policy, government, and international affairs. Speakers will be selected in cooperation with the Policy Dinners Committee, a branch of Stanford in Government.
Same as: INTNLREL 76

POLISCI 96X. Mobilizing Democracy: Campaigns, Elections, and Voting. 1 Unit.
Alternative Spring Break: America is often thought of as the archetypal democracy. While most democracies have surprisingly short lifespans, America has persisted for 238 years. However, in the 21st century, we have grounds to question the quality of our democracy. Turnout of the Voting Age Population hovers around 50 percent and today, we are seeing increasing legal challenges to voting rights. In the backdrop of these statistics, there is an entire industry devoted to campaigns. In the 2012 presidential race alone, almost $2.5 billion was poured into the campaign-industrial complex. Given that this cycle is a presidential election year, those amounts are expected to be surpassed. As a consequence, many questions arise: How do politicians engage voters in elections at the various levels of government? Where do they spend their money and why? In the age of big data, how accurately can elections be predicted? How do we maximize participation in elections?.

POLISCI 97X. Bridging the Civil-Military Divide: Military Service as Public Service in the 21st Century. 1 Unit.
Alternative Spring Break: Today, fewer than 0.5 percent of Americans serve in the military, as compared to roughly 12 percent during the second World War. This has led to a widening gap in knowledge about the military, its members and the functions they perform, as well as its basic structure and tradition of service. This course is intended to introduce students to the notion of military service as public service and explore how misperceptions on both sides affect the civil-military divide. We will explore military service from the life of an enlisted soldier deployed to Afghanistan, to an officer working at the Pentagon on broad national security strategy. How does society conceive of a soldier, a sailor, an airman, a marine? How do Americans perceive military service and what role do service members play in our society?.

POLISCI 101. Introduction to International Relations. 5 Units.
The course provides an introduction to major factors shaping contemporary international politics, including: the origins and nature of nationalism; explanations for war; nuclear weapons; international implications of the rise of China; civil war and international peacekeeping since the end of the Cold War; international institutions and how they facilitate interstate cooperation; and the politics of international "public bads" such as climate change and global pandemics.

POLISCI 101Z. Introduction to International Relations. 4 Units.
Approaches to the study of conflict and cooperation in world affairs. Applications to war, terrorism, trade policy, the environment, and world poverty. Debates about the ethics of war and the global distribution of wealth.
Same as: INTNLREL 101Z

POLISCI 102. Introduction to American Politics and Policy: The Good, The Bad, and The Ugly. 4-5 Units.
This is a course about American politics, which means this is a course about individuals, identities, and institutions. How do Americans come to think andnreason about politics? What is the role that identities play in affecting the political judgments that individuals make? How do our political institutionsnrespond to the demands of a diverse public that disagrees about issues related to race and justice, income and wealth inequality, climate change, gunncontrol, reproductive rights, the power of the executive, and the role that government ought to play in the lives of the governed? And how do we makensense of this seemingly peculiar contemporary moment in American politics? These are not easy questions, but they are ones for which political sciencenprovides a useful foundation to guide our inquiry. The objective of this course is to introduce students to various concepts and theoretical frameworks thatnhelp us understand the messiness and complexity of American politics. In addition to classroom lectures and discussion sections, students will benrequired to apply concepts and theoretical frameworks to contemporary issues in American politics. Undergraduate Public Policy students are required to enroll in this class for 5 units.
Same as: AMSTUD 123X, PUBLPOL 101, PUBLPOL 201

POLISCI 103. Justice. 4-5 Units.
In this course, we explore three sets of questions relating to justice and the meaning of a just society: (1) Liberty: What is liberty, and why is it important? Which liberties must a just society protect? (2) Equality: What is equality, and why is it important? What sorts of equality should a just society ensure? (3) Reconciliation: Are liberty and equality in conflict? If so, how should we respond to the conflict between them? We approach these topics by examining competing theories of justice including utilitarianism, libertarianism/classical liberalism, and egalitarian liberalism. The class also serves as an introduction to how to do political philosophy, and students approaching these topics for the first time are welcome. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 103.
Same as: ETHICSOC 171, PHIL 171, POLISCI 336S, PUBLPOL 103C

POLISCI 104. Introduction to Comparative Politics. 5 Units.
Why are some countries prone to civil war and violence, while others remain peaceful? Why do some countries maintain democratic systems, while others do not? Why are some countries more prosperous than others? This course will provide an overview of the most basic questions in the comparative study of political systems, and will introduce the analytical tools that can help us answer them.

POLISCI 109Z. Research in Political Science and International Relations. 6 Units.
Students will assist faculty with research projects. They will also attend workshops/seminars and complete written assignments that demonstrate their knowledge of research design, data analysis, and software. Students must apply through Summer Session and may not enroll without permission of the instructors.

POLISCI 110C. America and the World Economy. 5 Units.
Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade politics and policies; the effects of the globalization of business on future US prosperity. Political Science majors taking this course for WIM credit should enroll in POLISCI 110C.
Same as: INTNLREL 110C, POLISCI 110X

POLISCI 110D. War and Peace in American Foreign Policy. 3-5 Units.
The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 110D for 5 units. International Relations majors taking this course should enroll in INTNLREL 110D for 5 units. SCPD students should enroll for 3 units.
Same as: AMSTUD 110D, INTNLREL 110D, POLISCI 110Y

POLISCI 110G. Governing the Global Economy. 5 Units.
Who governs the world economy? Why do countries succeed or fail to cooperate in setting their economic policies? When and how do international institutions help countries cooperate? When and why do countries adopt good and bad economic policies? How does the international economy affect domestic politics? This course examines how domestic and international politics determine how the global economy is governed. We will study the politics of monetary, trade, international investment, energy, environmental, and foreign aid policies to answer these questions. The course will approach each topic by examining alternative theoretical approaches and evaluate these theories using historical and contemporary evidence. There will be an emphasis on applying concepts through the analysis of case studies.

POLISCI 110X. America and the World Economy. 5 Units.
Examination of contemporary US foreign economic policy. Areas studied: the changing role of the dollar; mechanism of international monetary management; recent crises in world markets including those in Europe and Asia; role of IMF, World Bank and WTO in stabilizing world economy; trade politics and policies; the effects of the globalization of business on future US prosperity. Political Science majors taking this course for WIM credit should enroll in POLISCI 110C.
Same as: INTNLREL 110C, POLISCI 110C

POLISCI 110Y. War and Peace in American Foreign Policy. 3-5 Units.
The causes of war in American foreign policy. Issues: international and domestic sources of war and peace; war and the American political system; war, intervention, and peace making in the post-Cold War period. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 110D for 5 units. International Relations majors taking this course should enroll in INTNLREL 110D for 5 units. SCPD students should enroll for 3 units.
Same as: AMSTUD 110D, INTNLREL 110D, POLISCI 110D

POLISCI 114D. Democracy, Development, and the Rule of Law. 3-5 Units.
This course explores the different dimensions of development - economic, social, and political - as well as the way that modern institutions (the state, market systems, the rule of law, and democratic accountability) developed and interacted with other factors across different societies around the world. The class will feature additional special guest lectures by Francis Fukuyama, Larry Diamond, Michael McFaul, Anna Grzymala-Busse, and other faculty and researchers affiliated with the Center on Democracy, Development, and the Rule of Law. Undergraduate students should enroll in this course for 5 units. Graduate students should enroll for 3.
Same as: INTLPOL 230, INTNLREL 114D, POLISCI 314D

POLISCI 114S. International Security in a Changing World. 5 Units.
This class examines the most pressing international security problems facing the world today: nuclear crises, non-proliferation, insurgencies and civil wars, terrorism, and climate change. Alternative perspectives - from political science, history, and STS (Science, Technology, and Society) studies - are used to analyze these problems. The class includes an award-winning two-day international negotiation simulation.

POLISCI 118P. U.S. Relations with Iran. 5 Units.
The evolution of relations between the U.S. and Iran. The years after WW II when the U.S. became more involved in Iran. Relations after the victory of the Islamic republic. The current state of affairs and the prospects for the future. Emphasis is on original documents of U.S. diplomacy (White House, State Department, and the U.S. Embassy in Iran). Research paper.

POLISCI 120B. Campaigns, Voting, Media, and Elections. 4-5 Units.
This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players -- candidates, parties, journalists, and voters -- in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process.
Same as: COMM 162, COMM 262

POLISCI 120C. American Political Institutions in Uncertain Times. 5 Units.
This course examines how the rules that govern elections and the policy process determine political outcomes. It explores the historical forces that have shaped American political institutions, contemporary challenges to governing, and prospects for change. Topics covered include partisan polarization and legislative gridlock, the politicization of the courts, electoral institutions and voting rights, the expansion of presidential power, campaign finance and lobbying, representational biases among elected officials, and the role of political institutions in maintaining the rule of law. Throughout, emphasis will be placed on the strategic interactions between Congress, the presidency, and the courts and the importance of informal norms and political culture. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 120C.
Same as: PUBLPOL 124

POLISCI 120R. What's Wrong with American Government? An Institutional Approach. 5 Units.
How politicians, once elected, work together to govern America. The roles of the President, Congress, and Courts in making and enforcing laws. Focus is on the impact of constitutional rules on the incentives of each branch, and on how they influence law.

POLISCI 120Z. What's Wrong with American Government? An Institutional Approach. 4 Units.
How politicians, once elected, work together to govern America. The roles of the President, Congress, and Courts in making and enforcing laws. Focus is on the impact of constitutional rules on the incentives of each branch, and on how they influence law.

POLISCI 121. Political Power in American Cities. 5 Units.
The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 121.
Same as: AMSTUD 121Z, PUBLPOL 133, URBANST 111

POLISCI 121L. Racial-Ethnic Politics in US. 5 Units.
Why is contemporary American politics so sharply divided along racial and party lines? Are undocumented immigrants really more likely to commit crimes than U.S. citizens? What makes a political ad "racist?" The U.S. population will be majority-minority by 2050; what does this mean for future electoral outcomes? We will tackle such questions in this course, which examines various issues surrounding the development of political solidarity within racial groups; the politics of immigration, acculturation, and identification; and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. Prior coursework in Economics or Statistics strongly recommended.
Same as: CSRE 121L, PUBLPOL 121L

POLISCI 121Z. Political Power in American Cities. 4 Units.
The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances.

POLISCI 122. Introduction to American Law. 3-5 Units.
For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general.
Same as: AMSTUD 179, PUBLPOL 302A

POLISCI 124A. The American West. 5 Units.
The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.
Same as: AMSTUD 124A, ARTHIST 152, ENGLISH 124, HISTORY 151

POLISCI 124L. The Psychology of Communication About Politics in America. 4-5 Units.
Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.
Same as: COMM 164, COMM 264, POLISCI 324L, PSYCH 170

POLISCI 124R. The Federal System: Judicial Politics and Constitutional Law. 5 Units.
Does the constitution matter? And if so, how exactly does it shape our daily lives? In this course, we will examine the impact of structural features, such as the separation of powers and federalism. While these features often seem boring and unimportant, they are not. As we will see, arguments over structure were at the heart of the debates over slavery, the incarceration of the Japanese during WWII, the drug war and gay marriage. Prerequisites: 2 or equivalent, and sophomore standing. Fulfills Writing in the Major requirement for PoliSci majors.

POLISCI 124S. Civil Liberties: Judicial Politics and Constitutional Law. 5 Units.
The role and participation of courts, primarily the U.S. Supreme Court, in public policy making and the political system. Judicial activity in civil liberty areas (religious liberty, free expression, race and sex discrimination, political participation, and rights of persons accused of crime). Prerequisites: 2 or equivalent, and sophomore standing.

POLISCI 125M. Latino Social Movements. 5 Units.
Social movements are cooperative attempts to change the world. This course reviews historically significant and contemporary political and social movements in Latino communities in the U.S., including the movements of the 1960s and events of the modern era such as the Spring 2006 marches and student walkouts, the 2010 resistance to Arizona¿s SB1070, and ongoing efforts in 2017 related to detention and deportation policies.
Same as: CHILATST 181

POLISCI 125P. The First Amendment: Freedom of Speech and Press. 4-5 Units.
The First Amendment: Freedom of Speech and Press (7084): Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. This course is crosslisted in the university and undergraduates are eligible to take it. Elements used in grading: Law students will be evaluated based on class participation and a final exam. Non-law students will be evaluated on class participation, a midterm and final exam, and nonlaw students will participate in a moot court on a hypothetical case. Non-law students will also have an additional one hour discussion section each week led by a teaching assistant. Cross-listed with Communication (COMM 151, COMM 251) and Political Science (POLISCI 125P). nnnClass time will be 11:10-12:40 on Mondays and Wednesdays.
Same as: COMM 151, COMM 251, ETHICSOC 151

POLISCI 125S. Chicano/Latino Politics. 5 Units.
The political position of Latinos and Latinas in the U.S.. Focus is on Mexican Americans, with attention to Cuban Americans, Puerto Ricans, and other groups. The history of each group in the American polity; their political circumstances with respect to the electoral process, the policy process, and government; the extent to which the demographic category Latino is meaningful; and group identity and solidarity among Americans of Latin American ancestry. Topics include immigration, education, affirmative action, language policy, and environmental justice.
Same as: CHILATST 125S

POLISCI 126P. Constitutional Law. 3 Units.
This course covers Supreme Court case law concerning governmental powers, equal protection, and certain fundamental rights. The course investigates the constitutional foundation for democratic participation in the United States, covering topics such as the Fourteenth Amendment's protections against discrimination on grounds of race, gender, and other classifications, as well as the individual rights to voting and intimate association, and an introduction to First Amendment rights of free speech and press. Students will be evaluated on class participation, a midterm moot court with both a written and oral component, and a take-home final exam. Lectures will be twice per week and a discussion section once per week.
Same as: COMM 152, COMM 252

POLISCI 127A. Finance, Corporations, and Society. 4 Units.
Both "free market capitalism" and democracy are in crisis around the world. This interdisciplinary course will help you understand the issues by exploring the interactions between the financial system, corporations, governments, and broader society. Topics include basic financial decisions of individuals and corporations, consumer finance (including mortgages, student loans, insurance and savings), financial markets and firms, corporations and their governance, the role of disclosures and regulations, political economy and government institutions, and the role of the media. We will discuss current events and policy debates regularly throughout the course. The approach will be rigorous and analytical but not overly mathematical. Visitors with relevant experience will enrich the discussion.
Same as: ECON 143, INTLPOL 227, PUBLPOL 143

POLISCI 127P. Economic Inequality and Political Dysfunction. 5 Units.
This course will examine how two of the defining features of contemporary U.S. politics, economic inequality and political polarization, relate to each other and to Congressional gridlock. The reading list will focus on several books recently authored by preeminent political scientists on this important topic. The course will cover a range of topics, including the disparity in political representation of the preferences of the affluent over those of the poor, the origins of Congressional polarization, the influence of money in politics, budgetary politics, immigration policy, and electoral and institutional barriers to reform.

POLISCI 130. 20th Century Political Theory: Liberalism and its Critics. 5 Units.
In this course, students learn and engage with the debates that have animated political theory since the early 20th century. What is the proper relationship between the individual, the community, and the state? Are liberty and equality in conflict, and, if so, which should take priority? What does justice mean in a large and diverse modern society? The subtitle of the course, borrowed from a book by Michael Sandel, is "Liberalism and its Critics" because the questions we discuss in this class center on the meaning of, and alternatives to, the liberal idea that the basic goal of society should be the protection of individual rights. Readings include selections from works by John Rawls, Hannah Arendt, Robert Nozick, Michael Sandel, Iris Marion Young, and Martha Nussbaum. No prior experience with political theory is necessary.
Same as: ETHICSOC 130, PHIL 171P

POLISCI 131L. Modern Political Thought: Machiavelli to Marx and Mill. 5 Units.
This course offers an introduction to the history of Western political thought from the late fifteenth through the nineteenth centuries. We will consider the development of ideas like individual rights, government by consent, and the protection of private property. We will also explore the ways in which these ideas continue to animate contemporary political debates. Thinkers covered will include: Niccolò Machiavelli, Thomas Hobbes, John Locke, Jean-Jacques Rousseau, Edmund Burke, John Stuart Mill, and Karl Marx.
Same as: ETHICSOC 131S

POLISCI 132A. The Ethics of Elections. 5 Units.
Do you have a duty to vote? Should immigrants be allowed to vote? Should we make voting mandatory? How (if at all) should we regulate campaign finance? Should we even have elections at all? In this course, we will explore these and other ethical questions related to electoral participation and the design of electoral institutions. We will evaluate arguments from political philosophers, political scientists, and politicians to better understand how electoral systems promote important democratic values and how this affects citizens' and political leaders' ethical obligations. We will focus, in particular, on issues in electoral design that have been relevant in recent US elections (e.g. gerrymandering), though many of the ethical issues we will discuss in this course will be relevant in any electoral democracy.
Same as: ETHICSOC 134R

POLISCI 133. Ethics and Politics of Public Service. 3-5 Units.
Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.
Same as: CSRE 178, ETHICSOC 133, PHIL 175A, PHIL 275A, PUBLPOL 103D, URBANST 122

POLISCI 133Z. Ethics and Politics in Public Service. 4 Units.
This course examines ethical and political questions that arise in doing public service work, whether volunteering, service learning, humanitarian endeavors overseas, or public service professions such as medicine and teaching. What motives do people have to engage in public service work? Are self-interested motives troublesome? What is the connection between service work and justice? Should the government or schools require citizens or students to perform service work? Is mandatory service an oxymoron?.
Same as: CSRE 133P, PUBLPOL 103Z, URBANST 122Z

POLISCI 134. Ethics for Activists. 5 Units.
Activists devote sustained effort and attention toward achieving particular goals of social and political change. Do we have an ethical obligation to be activists? And how should those who do choose to be activists (for whatever reason) understand the ethics of that role? Questions discussed in this course may include: When is civil disobedience appropriate, and what does it entail? Should activists feel constrained by obligations of fairness, honesty, or civility toward those with whom we disagree? Are there special ethical considerations in activism on behalf of those who cannot advocate for themselves? What is solidarity and what does it require of us? Students in this course will develop skills in analyzing, evaluating, and constructing logical arguments about ethical concerns related to activism, but class discussions will also address the potential limitations of logical argument in ethical and political reasoning.
Same as: ETHICSOC 134

POLISCI 134E. Universal Basic Income: the philosophy behind the proposal. 3 Units.
Universal basic income (or UBI) is a regular cash allowance given to all members of a community without means test, regardless of personal desert, and with no strings attached. Once a utopian proposal, the policy is now discussed and piloted throughout the world. The growth of income and wealth inequalities, the precariousness of labor, and the persistence of abject poverty have all been important drivers of renewed interest in UBI in the United States. But it is without a doubt the fear that automation may displace workers from the labor market at unprecedented rates that explains the revival of the policy in recent years, including by many in or around Silicon Valley. Among the various objections to the proposal, one concerns its moral adequacy: Isn't it fundamentally unjust to give cash to all indiscriminately rather than to those who need it and deserve it? Over the years, a variety of scholars have defended the policy on moral grounds, arguing that UBI is a tool of equality, liberal freedom, republican freedom, gender equity, or racial equity. Many others have attacked UBI on those very same grounds, making the case that alternative policy proposals like the job guarantee, means-tested benefits, conditional benefits, or reparations should be preferred. Students will learn a great deal about political theory and ethics in general but always through the specific angle of the policy proposal, and they will become experts on the philosophy, politics and economics of UBI. The seminar is open to undergraduate and graduate students in all departments. There are no pre-requisites.
Same as: ETHICSOC 174B, ETHICSOC 274B, PHIL 174B, PHIL 274B, POLISCI 338

POLISCI 134L. Introduction to Environmental Ethics. 4-5 Units.
How should human beings relate to the natural world? Do we have moral obligations toward non-human animals and other parts of nature? And what do we owe to other human beings, including future generations, with respect to the environment? The first part of this course will examine such questions in light of some of our current ethical theories: considering what those theories suggest regarding the extent and nature of our environmental obligations; and also whether reflection on such obligations can prove informative about the adequacy of our ethical theories. In the second part of the course, we will use the tools that we have acquired to tackle various ethical questions that confront us in our dealings with the natural world, looking at subjects such as: animal rights; conservation; economic approaches to the environment; access to and control over natural resources; environmental justice and pollution; climate change; technology and the environment; and environmental activism.
Same as: ETHICSOC 178M, ETHICSOC 278M, PHIL 178M, PHIL 278M

POLISCI 134P. Contemporary Moral Problems. 4-5 Units.
This course is an introduction to contemporary ethical thought with a focus on the morality of harming others and saving others from harm. It aims to develop students' ability to think carefully and rationally about moral issues, to acquaint them with modern moral theory, and to encourage them to develop their own considered positions about important real-world issues. In the first part of the course, we will explore fundamental topics in the ethics of harm. Among other questions, we will ask: How extensive are one's moral duties to improve the lives of the less fortunate? When is it permissible to inflict harm on others for the sake of the greater good? Does the moral permissibility of a person's action depend on her intentions? Can a person be harmed by being brought into existence? In the second part of the course, we will turn to practical questions. Some of these will be familiar; for example: Is abortion morally permissible? What obligations do we have to protect the planet for the sake of future generations? Other questions we will ask are newer and less well-trodden. These will include: How does the availability of new technology, in particular artificial intelligence, change the moral landscape of the ethics of war? What moral principles should govern the programming and operation of autonomous vehicles?.
Same as: ETHICSOC 185M, PHIL 72

POLISCI 135. Citizenship. 5 Units.
This class begins from the core definition of citizenship as membership in a political community and explores the many debates about what that membership means. Who is (or ought to be) a citizen? Who gets to decide? What responsibilities come with citizenship? Is being a citizen analogous to being a friend, a family member, a business partner? How can citizenship be gained, and can it ever be lost? These debates figure in the earliest recorded political philosophy but also animate contemporary political debates. This class uses ancient, medieval, and modern texts to examine these questions and different answers given over time. We¿Äôll pay particular attention to understandings of democratic citizenship but look at non-democratic citizenship as well. Students will develop and defend their own views on these questions, using the class texts as foundations. No experience with political philosophy is required or expected, and students can expect to learn or hone the skills (writing / reading / analysis) of political philosophy.
Same as: ETHICSOC 135, PHIL 135X

POLISCI 135D. The Ethics of Democratic Citizenship. 5 Units.
We usually think about democratic citizenship in terms of rights and opportunities, but are these benefits of democracy accompanied by special obligations? Do citizens of a democracy have an obligation to take an interest in politics and to actively influence political decision making? How should citizens respond when a democracy¿s laws become especially burdensome? Do citizens of a democracy have a special obligation to obey the law? In this course, we will read classical and contemporary political philosophy including Plato's Crito and King's "Letter from a Birmingham Jail" to explore how political thinkers have understood and argued for the ethics of citizenship. Students in this course will draw on these materials to construct their own arguments, and to identify and assess implicit appeals to the ethics of citizenship in popular culture and contemporary public discourse, from The Simpsons to President Obama's speeches.
Same as: ETHICSOC 135R

POLISCI 135E. Philosophy of Public Policy. 4 Units.
From healthcare to voting reforms, social protection and educational policies, public policies are underpinned by moral values. When we debate those policies, we typically appeal to values like justice, fairness, equality, freedom, privacy, and safety. A proper understanding of those values, what they mean, how they may conflict, and how they can be weighed against each other is essential to developing a competent and critical eye on our complex political world. We will ask questions such as: Is compulsory voting justified? Should children have the right to vote? Is affirmative action just? What is wrong with racial profiling? What are the duties of citizens of affluent countries towards migrants? Do we have a right to privacy? Is giving cash to all unconditionally fair? This class will introduce students to a number of methods and frameworks coming out of ethics and political philosophy and will give students a lot of time to practice ethically informed debates on public policies. At the end of this class, students should have the skills to critically examine a wide range of diverse policy proposals from the perspective of ethics, moral and political philosophy. There are no prerequisites. Undergraduates and graduates from all departments are welcome to attend.
Same as: ETHICSOC 175X, PHIL 175B, PHIL 275B, POLISCI 235E, PUBLPOL 177

POLISCI 136R. Introduction to Global Justice. 4 Units.
This course explores the normative demands and definitions of justice that transcend the nation-state and its borders, through the lenses of political justice, economic justice, and human rights. What are our duties (if any) towards those who live in other countries? Should we be held morally responsible for their suffering? What if we have contributed to it? Should we be asked to remedy it? At what cost? These are some of the questions driving the course. Although rooted in political theory and philosophy, the course will examine contemporary problems that have been addressed by other scholarly disciplines, public debates, and popular media, such as immigration and open borders, climate change refugees, and the morality of global capitalism (from exploitative labor to blood diamonds). As such, readings will combine canonical pieces of political theory and philosophy with readings from other scholarly disciplines, newspaper articles, and popular media.
Same as: ETHICSOC 136R, INTNLREL 136R, PHIL 76, POLISCI 336

POLISCI 137A. Political Philosophy: The Social Contract Tradition. 4 Units.
(Graduate students register for 276.) What makes political institutions legitimate? What makes them just? When do citizens have a right to revolt against those who rule over them? Which of our fellow citizens must we tolerate?Surprisingly, the answers given by some of the most prominent modern philosophers turn on the idea of a social contract. We will focus on the work of Hobbes, Locke, Rousseau, and Rawls.
Same as: ETHICSOC 176, PHIL 176, PHIL 276, POLISCI 337A

POLISCI 138E. Egalitarianism: A course on the history and theory of egalitarianism and anti-egalitarianism. 4 Units.
Egalitarianism is a conception of justice that takes the value of equality to be of primary political and moral importance. There are many different ways to be an egalitarian - it all depends on what we take to be the currency of egalitarian justice. Are we trying to equalize basic rights and liberties, or resources, opportunities, positions, status, respect, welfare, or capabilities? Is equality really what we should try to achieve in a just society? Or should we just make sure everyone has enough? Why do egalitarians think that such society would still be unjust; and how do they proceed to argue for equality?nnThis class will introduce students to egalitarian and anti-egalitarian thought by looking both at the history of egalitarian thinking and at contemporary accounts in defense of equality. It will provide an in depth introduction to the concepts that are used when inequalities are discussed by philosophers, economists, scientists and politicians. The class will attest of the varieties of approaches and perspectives to equality. For instance, we will learn from the 19th century debate on racial inequalities to understand how anti-egalitarian discourses are constructed; we will look into Rousseau's conception of social equality in the Second Discourse and the Social Contract; and we will engage with contemporary egalitarian theories by studying Rawlsian and post-Rawlsian forms of egalitarianism.
Same as: ETHICSOC 174E, PHIL 174E, PHIL 274E

POLISCI 140P. Populism and the Erosion of Democracy. 5 Units.
What is populism, and how much of a threat to democracy is it? How different is it from fascism or other anti-liberal movements? This course explores the conditions for the rise of populism, evaluates how much of a danger it poses, and examines the different forms it takes.
Same as: REES 240P

POLISCI 141A. Immigration and Multiculturalism. 5 Units.
What are the economic effects of immigration? Do immigrants assimilate into local culture? What drives native attitudes towards immigrants? Is diversity bad for local economies and societies and which policies work for managing diversity and multiculturalism? We will address these and similar questions by synthesizing the conclusions of a number of empirical studies on immigration and multiculturalism. The emphasis of the course is on the use of research design and statistical techniques that allow us to move beyond correlations and towards causal assessments of the effects of immigration and immigration policy.
Same as: CSRE 141S

POLISCI 143S. Comparative Corruption. 3 Units.
Causes, effects, and solutions to various forms of corruption in business and politics in both developing regions (e.g. Asia, E. Europe) and developed ones (the US and the EU).
Same as: SOC 113

POLISCI 146A. African Politics. 4-5 Units.
Africa has lagged the rest of the developing world in terms of economic development, the establishment of social order, and the consolidation of democracy. This course seeks to identify the historical and political sources accounting for this lag, and to provide extensive case study and statistical material to understand what sustains it, and how it might be overcome.
Same as: AFRICAAM 146A

POLISCI 147. Comparative Democratic Development. 5 Units.
Social, cultural, political, economic, and international factors affecting the development and consolidation of democracy in historical and comparative perspective. Individual country experiences with democracy, democratization, and regime performance. Emphasis is on global third wave of democratization beginning in the mid-1970s, the recent global recession of democracy (including the rise of illiberal populist parties and movements), and the contemporary challenges and prospects for democratic change.
Same as: SOC 112

POLISCI 147B. Gender, Identity, and Politics. 5 Units.
Identity, whether national, religious, racial, ethnic, gender, sexual, or otherwise, can importantly shape how people experience the political world. Why do some identities become politically salient and how does identity shape politics? This course takes the core questions of comparative politics - democratization, development, social movements, civil society, conflict, etc. - and examines them through the lens of identity, particularly gender identity. We will do so by drawing on evidence and cases from across the globe.

POLISCI 147P. The Politics of Inequality. 5 Units.
This course is about the distribution of power in contemporary democratic societies, and especially in the US: who governs? Is there a ``power elite,'' whose preferences dominate public policy making? Or, does policy reflect a wide range of interests? What is the relationship between income and power? What are the political consequences of increasing income inequality? How do income differences across racial and ethnic groups affect the quality of their representation? What are effective remedies for unequal influence? Finally, which institutions move democratic practice furthest towards full democratic equality? This course will address these questions, focusing first on local distributions of power, and then considering the implications of inequality in state and national politics. nStudents will have the opportunity to study income inequality using income and labor force surveys in a mid-term assignment. Then, in a final paper, students will conduct an empirical examination of the implications of income inequality for American democracy.
Same as: PUBLPOL 247, SOC 178

POLISCI 148. Chinese Politics. 3-5 Units.
China, one of the few remaining communist states in the world, has not only survived, but has become a global political actor of consequence with the fastest growing economy in the world. What explains China's authoritarian resilience? Why has the CCP thrived while other communist regimes have failed? How has the Chinese Communist Party managed to develop markets and yet keep itself in power? What avenues are there for political participation? How does censorship work in the information and 'connected' age of social media? What are the prospects for political change? How resilient is the part in the fave of technological and economic change? Materials will include readings, lectures, and selected films. This course has no prerequisites. (Graduate students register for 348.).
Same as: POLISCI 348

POLISCI 149S. Islam, Iran, and the West. 5 Units.
Changes in relative power and vitality of each side. The relationship in the Middle Ages revolved around power and domination, and since the Renaissance around modernity. Focus is on Muslims of the Middle East.

POLISCI 149T. Middle Eastern Politics. 5 Units.
Topics in contemporary Middle Eastern politics including institutional sources of underdevelopment, political Islam, electoral authoritarianism, and the political economy of oil.

POLISCI 150A. Data Science for Politics. 5 Units.
Data science is quickly changing the way we understand and and engage in the political process. In this course we will develop fundamental techniques of data science and apply them to large political datasets on elections, campaign finance, lobbying, and more. The objective is to give students the skills to carry out cutting edge quantitative political studies in both academia and the private sector. Students with technical backgrounds looking to study politics quantitatively are encouraged to enroll.
Same as: POLISCI 355A

POLISCI 150B. Machine Learning for Social Scientists. 5 Units.
Machine learning - the use of algorithms to classify, predict, sort, learn and discover from data - has exploded in use across academic fields, industry, government, and the non-profit sector. This course provides an introduction to machine learning for social scientists. We will introduce state of the art machine learning tools, show how to use those tools in the programming language R, and demonstrate why a social science focus is essential to effectively apply machine learning techniques in social, political, and policy contexts. Applications of the methods will include forecasting social phenomena, evaluating the use of algorithms in public policy, and the analysis of social media and text data. Prerequisite: POLISCI 150A/355A.
Same as: POLISCI 355B

POLISCI 150C. Causal Inference for Social Science. 5 Units.
Causal inference methods have revolutionized the way we use data, statistics, and research design to move from correlation to causation and rigorously learn about the impact of some potential cause (e.g., a new policy or intervention) on some outcome (e.g., election results, levels of violence, poverty). This course provides an introduction that teaches students the toolkit of modern causal inference methods as they are now widely used across academic fields, government, industry, and non-profits. Topics include experiments, matching, regression, sensitivity analysis, difference-in-differences, panel methods, instrumental variable estimation, and regression discontinuity designs. We will illustrate and apply the methods with examples drawn from various fields including policy evaluation, political science, public health, economics, business, and sociology. Prerequisite: POLISCI 150A.
Same as: POLISCI 355C

POLISCI 151. Tackling Big Questions Using Social Data Science. 5 Units.
Big data can help us provide answers to fundamental social questions, from poverty and social mobility, to climate change, migration, and the spread of disease. But making sense of data requires more than just statistical techniques: it calls for models of how humans behave and interact with each other. Social data science combines the analysis of big data with social science theory. We will take a project-oriented, many models-many methods approach: for each topic or question of general interest, we will first introduce simple formal models from across the social sciences to guide our thinking. Then we will collect and analyze the relevant data, applying data science techniques such as machine learning and causal inference. Prerequisites are Econ 102A and 102B.
Same as: ECON 151

POLISCI 152. Introduction to Game Theoretic Methods in Political Science. 3-5 Units.
Concepts and tools of non-cooperative game theory developed using political science questions and applications. Formal treatment of Hobbes' theory of the state and major criticisms of it; examples from international politics. Primarily for graduate students; undergraduates admitted with consent of instructor.
Same as: POLISCI 352

POLISCI 153. Thinking Strategically. 5 Units.
This course provides an introduction to strategic reasoning. We discuss ideas such as the commitment problem, credibility in signaling, cheap talk, moral hazard and adverse selection. Concepts are developed through games played in class, and applied to politics, business and everyday life.
Same as: POLISCI 354

POLISCI 153Z. Thinking Strategically. 4 Units.
This course provides an introduction to strategic reasoning. We discuss ideas such as the commitment problem, credibility in signaling, cheap talk, moral hazard and adverse selection. Concepts are developed through games played in class, and applied to politics, business and everyday life.

POLISCI 182. Ethics, Public Policy, and Technological Change. 5 Units.
Examination of recent developments in computing technology and platforms through the lenses of philosophy, public policy, social science, and engineering. Course is organized around four main units: algorithmic decision-making and bias; data privacy and civil liberties; artificial intelligence and autonomous systems; and the power of private computing platforms. Each unit considers the promise, perils, rights, and responsibilities at play in technological developments. Prerequisite: CS106A.
Same as: COMM 180, CS 182, ETHICSOC 182, PHIL 82, PUBLPOL 182

POLISCI 209. Curricular Practical Training. 1 Unit.
Qualified Political Science students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. Meets the requirements for Curricular Practical Training for students on F-1 visas. The student is responsible for arranging their own internship/employment and gaining faculty sponsorship. Prior to enrolling, students must complete a petition form available on the Political Science website (politicalscience.stanford.edu/undergraduate-program/forms). The petition is due no later the end of week one of the quarter in which the student intends to enroll. If the CPT is for Summer, the petition form is due by May 31. An offer letter will need to be submitted along with the petition. At the completion of the CPT quarter, a final report must be submitted to the faculty sponsor documenting the work done and its relevance to Political Science. This course be repeated for credit up to 3 times but will not count toward the Political Science major or minor requirements.

POLISCI 209Z. Research in Political Science and International Relations. 6 Units.
Students will assist faculty with research projects. They will also attend workshops/seminars and complete written assignments that demonstrate their knowledge of research design, data analysis, and software. Students must apply through Summer Session and may not enroll without permission of the instructors.

POLISCI 211N. Nuclear Politics. 3-5 Units.
Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, nonetheless refrain from doing so? What are the consequences of new states deploying nuclear weapons? Do arms control treaties and the laws of armed conflict influence nuclear proliferation and nuclear war plans? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? We will first critically examine the political science, legal, and historical literature on these key questions. Students will then design and execute small research projects to address questions that have been inadequately addressed in the existing literature.
Same as: POLISCI 311N

POLISCI 212C. Civil War and International Politics: Syria in Context. 5 Units.
The Syrian civil war is both a humanitarian disaster and a focal point for a set of interlocking regional and international political struggles. This course uses the Syrian case as an entry for exploring broader questions, such as why do civil wars begin, how do they end, and what are the international politics of civil war. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 212C.
Same as: POLISCI 212X

POLISCI 212X. Civil War and International Politics: Syria in Context. 5 Units.
The Syrian civil war is both a humanitarian disaster and a focal point for a set of interlocking regional and international political struggles. This course uses the Syrian case as an entry for exploring broader questions, such as why do civil wars begin, how do they end, and what are the international politics of civil war. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 212C.
Same as: POLISCI 212C

POLISCI 213. US-Russia Relations After the Cold War. 2 Units.
A quarter century ago, the Soviet Union collapsed and the Cold War ended. At the time, Russian leaders aspired to build democratic and market institutions at home. They also wanted to join the West. American presidents Democrat and Republican encouraged these domestic and international changes. Today, U.S.-Russia relations are once again confrontational, reminiscent of relations during the Cold War. This course seeks to analyze shifts in U.S.-Russia relations, with special attention given to the U.S.-Russia relationship during Obama¿s presidency. Readings will include academic articles and a book manuscript by Professor McFaul on Obama's reset policy. Open to students with previous coursework involving Russia.
Same as: POLISCI 313, REES 213

POLISCI 213C. Understanding Russia: Its Power and Purpose in a New Global Order. 5 Units.
Russia presents a puzzle for theories of socio-economic development and modernization and their relationship to state power in international politics. The collapse of the Soviet Union in 1991 brought into being the new Russia (or Russian Federation) as its successor in international politics. Russia suffered one of the worst recessions and experienced 25 years of halting reform. Despite these issues, Russia is again a central player in international affairs. Course analyzes motivations behind contemporary Russian foreign policy by reviewing its domestic and economic underpinnings. Examination of concept of state power in international politics to assess Russia's capabilities to influence other states' policies, and under what conditions its leaders use these resources. Is contemporary Russia strong or weak? What are the resources and constraints its projection of power beyond its borders? What are the determinants of state power in international politics in the twenty-first century? Includes lectures, readings, class discussions, films and documentaries.
Same as: INTLPOL 231B, REES 231B

POLISCI 213E. Introduction to European Studies. 5 Units.
This course offers an introduction to major topics in the study of historical and contemporary Europe. We focus on European politics, economics and culture. First, we study what makes Europe special, and how its distinct identity has been influenced by its history. Next, we analyze Europe's politics. We study parliamentary government and proportional representation electoral systems, and how they affect policy. Subsequently, we examine the challenges the European economy faces. We further study the European Union and transatlantic relations.
Same as: INTNLREL 122

POLISCI 213R. Political Economy of Financial Crisis. 5 Units.
Political responses to domestic and international financial crises. Monetary and fiscal policy. The role of interest groups. International cooperation and the role of the IMF.
Same as: POLISCI 313R

POLISCI 214R. Challenges and Dilemmas in American Foreign Policy. 5 Units.
This seminar will examine the complexities and trade offs involved in foreign policy decision-making at the end of the twentieth century and the dawn of the post-9/11 era. Students will analyze dilemmas confronting policymakers through case studies including post-conflict reconstruction and state-building, nuclear proliferation, democratization and peace negotiation. The seminar will conclude with a 48-hour crisis simulation. For advanced undergraduates and graduate students. Application for enrollment required. Applications will be available for pick up in Political Science Department (Encina West 100) starting late-October.
Same as: POLISCI 314R

POLISCI 215. Explaining Ethnic Violence. 5 Units.
What is ethnic violence and why does it occur? Should elite machinations, the psychology of crowds, or historical hatreds be blamed? Case studies and theoretical work on the sources and nature of ethnic violence. Counts as Writing in the Major for PoliSci majors.

POLISCI 215A. Special Topics: State-Society Relations in the Contemporary Arab World-Key Concepts and Debates. 5 Units.
(Formerly IPS 215) This course looks at key concepts pertaining to state-society relations in the Arab world as they have evolved in regional intellectual and political debates since the 1990s. Citizenship, minority rights, freedom of expression, freedom of association, the rule of law, government accountability, independence of the judiciary, civil-military relations, and democratic transition will be among the concepts discussed.
Same as: INTLPOL 215

POLISCI 215F. Nuclear Weapons and International Politics. 5 Units.
Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, refrain from doing so? What are the strategic consequences of new states deploying nuclear weapons? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? We will study the political science and history literature on these topics. Research paper required.
Same as: POLISCI 315F

POLISCI 216. State Building. 5 Units.
How and when can external actors (others states, aid agencies, NGOs?) promote institutional change in weak and badly governed states?.

POLISCI 217A. American Foreign Policy: Interests, Values, and Process. 5 Units.
(Formerly IPS 242) This seminar will examine the tension in American foreign policy between pursuing U.S. security and economic interests and promoting American values abroad. The course will retrace the theoretical and ideological debates about values versus interests, with a particular focus on realism versus liberalism. The course will examine the evolution of these debates over time, starting with the French revolution, but with special attention given to the Cold War, American foreign policy after September 11th, and the Obama administration. The course also will examine how these contending theories and ideologies are mediated through the U.S. bureaucracy that shapes the making of foreign policy. ** NOTE: The enrollment of the class is by application only. Please provide a one page double-spaced document outlining previous associated coursework and why you want to enroll in the seminar to Anna Coll (acoll@stanford.edu) by February 22nd. Any questions related to this course can be directed to Anna Coll.
Same as: GLOBAL 220, INTLPOL 242

POLISCI 218S. Political Economy of International Trade and Investment. 5 Units.
How domestic and international politics influence the economic relations between countries. Why do governments promote or oppose globalization? Why do countries cooperate economically in some situations but not others? Why do countries adopt bad economic policies? Focus on the politics of international trade and investment. Course approaches each topic by examining alternative theoretical approaches and evaluate these theories using historical and contemporary evidence from many geographical regions around the world. Prerequisites: ECON 1A, ECON 1B, and a statistics course.
Same as: INTNLREL 118S

POLISCI 218X. Shaping the Future of the Bay Area. 3-5 Units.
The complex urban problems affecting quality of life in the Bay Area, from housing affordability and transportation congestion to economic vitality and social justice, are already perceived by many to be intractable, and will likely be exacerbated by climate change and other emerging environmental and technological forces. Changing urban systems to improve the equity, resilience and sustainability of communities will require new collaborative methods of assessment, goal setting, and problem solving across governments, markets, and communities. It will also require academic institutions to develop new models of co-production of knowledge across research, education, and practice. This XYZ course series is designed to immerse students in co-production for social change. The course sequence covers scientific research and ethical reasoning, skillsets in data-driven and qualitative analysis, and practical experience working with local partners on urban challenges that can empower students to drive responsible systems change in their future careers. The Autumn (X) course is specifically focused on concepts and skills, and completion is a prerequisite for participation in the Winter (Y) and/or Spring (Z) practicum quarters, which engage teams in real-world projects with Bay Area local governments or community groups. X is composed of four modules: (A) participation in two weekly classes which prominently feature experts in research and practice related to urban systems; (B) reading and writing assignments designed to deepen thinking on class topics; (C) fundamental data analysis skills, particularly focused on Excel and ArcGIS, taught in lab sessions through basic exercises; (D) advanced data analysis skills, particularly focused on geocomputation in R, taught through longer and more intensive assignments. X can be taken for 3 units (ABC), 4 units (ACD), or 5 units (ABCD). Open to undergraduate and graduate students in any major. For more information, visit http://bay.stanford.edu.
Same as: CEE 118X, CEE 218X, ESS 118X, ESS 218X, GEOLSCI 118X, GEOLSCI 218X, GEOPHYS 118X, GEOPHYS 218X, PUBLPOL 118X, PUBLPOL 218X

POLISCI 218Y. Shaping the Future of the Bay Area. 3-5 Units.
Students are placed in small interdisciplinary teams (engineers and non-engineers, undergraduate and graduate level) to work on complex design, engineering, and policy problems presented by external partners in a real urban setting. Multiple projects are offered and may span both Winter and Spring quarters; students are welcome to participate in one or both quarters. Students are expected to interact professionally with government and community stakeholders, conduct independent team work outside of class sessions, and submit deliverables over a series of milestones. Prerequisite: the Autumn (X) skills course or approval of instructors. For information about the projects and application process, visit http://bay.stanford.edu.
Same as: CEE 118Y, CEE 218Y, ESS 118Y, ESS 218Y, GEOLSCI 118Y, GEOLSCI 218Y, GEOPHYS 118Y, GEOPHYS 218Y, PUBLPOL 118Y, PUBLPOL 218Y

POLISCI 218Z. Shaping the Future of the Bay Area. 3-5 Units.
Students are placed in small interdisciplinary teams (engineers and non-engineers, undergraduate and graduate level) to work on complex design, engineering, and policy problems presented by external partners in a real urban setting. Multiple projects are offered and may span both Winter and Spring quarters; students are welcome to participate in one or both quarters. Students are expected to interact professionally with government and community stakeholders, conduct independent team work outside of class sessions, and submit deliverables over a series of milestones. POLISCI 219. Directed Reading and Research in International Relations. 1-10 Unit.
For undergraduates. Directed reading in Political Science with a focus on international relations. To be considered for enrollment, interested students must complete the directed reading petition form available on the Political Science website before the end of week 1 of the quarter in which they'd like to enroll. May be repeated for credit.

POLISCI 220. Urban Policy Research Lab. 5 Units.
This collaborative reading and research seminar considers the numerous ways that governments conduct social policy by shaping and remaking geographic places. Representative topics include: housing aid programs, exclusionary zoning, controls on internal migration and place of residence, and cars' role in cities. Students will contribute to faculty field research on the consequences of these policies for economic, social, and political outcomes. Prerequisites: None.
Same as: PUBLPOL 225, URBANST 170

POLISCI 220C. The Politics of the Administrative State. 3-5 Units.
Most studies of democratic government are about elected leaders, campaigns and elections, legislatures, and public opinion. But these aspects of government are, in some sense, the tail that wags the dog. To understand what government actually does and with what effects, we need to understand the dog itself. The fact is, the vast bulk of government consists of the countless departments and agencies - and the unelected experts, professionals, and functionaries within them - that execute public policy, fill out its details, determine its impacts and effectiveness, and make government a (good or bad) reality for ordinary citizens. This is the dog: the "administrative state." And it is the essence of modern government. No democracy can function without it. A hundred years ago, when the American administrative state was on the rise - propelled first by Progressivism, then the New Deal - scholars argued that there should be a separation of politics and administration: elected officials would make policy in the political process, administrators would carry it out expertly and nonpolitically. But that was a pipe dream. The administrative state is thoroughly - and inevitably - bound up in democratic politics, and an integral part of it. Politicians try to control agencies for their own ends. Special interest groups try to capture them. Political appointees try to invade them. Members of Congress want money and programs for their own states and districts. And agencies are powerful actors in their own right, seeking money, autonomy, and policy impact. The US, moreover, is hardly unique. In every nation, the administrative state is a target of political pressure and influence, infused by politics, and capable of its own exertions of power. The purpose of this class is to understand the politics of the administrative state. Our focus will mainly be on the US, but we will also look at other nations for comparative perspective. In the end, students will have a far more complete understanding of democratic government than the usual focus on electoral politics can possibly provide.
Same as: POLISCI 320C

POLISCI 220R. The Presidency. 3-5 Units.
This course provides students with a comprehensive perspective on the American presidency and covers a range of topics: elections, policy making, control of the bureaucracy, unilateral action, war-making, and much more. But throughout, the goal is to understand why presidents behave as they do, and why the presidency as an institution has developed as it has, with special attention to the dynamics of the American political system and how they condition incentives, opportunities, and power.
Same as: POLISCI 320R

POLISCI 221A. American Political Development, 1865-present. 3-5 Units.
In this reading-intensive course, we will conduct a wide-ranging survey of major transformations in the American political system in the post-Civil War period. Our inquiries about these transformations will focus on the origins of the modern administrative state, the interactive role of the state and social movements, and changes in the party system. We¿ll examine these developments not only to understand institutional change, but to learn how changing institutions have shaped the behavior of the American electorate.
Same as: POLISCI 421R

POLISCI 222. The Political Psychology of Intolerance. 5 Units.
This seminar explores the political psychology of intolerance. It focuses on two problems in particular race in America and the challenge of Muslim inclusion in Western Europe. It concentrates on primary research. The readings consist of both classic and contemporary (including on-going) studies of prejudice and politics.
Same as: CSRE 222

POLISCI 223A. Public Opinion and American Democracy. 5 Units.
This course focuses on the public mood and politics in America today. It accordingly examines, among other things, the coherence (or lack of it) of public opinion; the partisan sorting of the electorate; and the ideological and affective polarization of mass politics. It also examines contemporary critiques of representation and citizenship in liberal democracies.

POLISCI 223B. Money, Power, and Politics in the New Gilded Age. 5 Units.
During the past two generations, democracy has coincided with massive increases in economic inequality in the U.S. and many other advanced democracies. The course will explore normative and practical issues concerning democracy and equality and examine why democratic institutions have failed to counteract rising inequality. Topics will include the influence of money in politics, disparity in political representation of the preferences of the affluent over those of the poor, the implications of political gridlock, and electoral and institutional barriers to reform.

POLISCI 225C. Fixing US Politics: Political Reform in Principle and Practice. 5 Units.
Americans have been trying to perfect their system of government since its founding. Despite some notable achievements, there is a pervasive sense of frustration with political reform. This course will examine the goals and political consequences of American political regulation. Topics will vary by year to some degree but examples include campaign finance, lobbying, term limits, conflict of interest regulation, direct democracy, citizen commissions and assemblies, vote administration problems, transparency, and open meeting laws.

POLISCI 225L. Law and the New Political Economy. 3-5 Units.
(Same as LAW 7515) In this seminar, we consider key legal topics through the lens of political economy - that is, is the interplay among economics, law, and politics. This perspective has had a powerful and growing impact on how scholars and judges view the nature and scope of law and politics in the modern regulatory state. We look at a range of topics from this perspective, including: constitutional law, statutory interpretation, administrative law and regulation, and jurisprudence - all with an eye toward better understanding the dynamic interaction among law, politics, and social change. There are no prerequisites for this seminar. The final assignment will be a substantial research paper.
Same as: POLISCI 325L

POLISCI 226. Race and Racism in American Politics. 5 Units.
Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.
Same as: AMSTUD 226, CSRE 226, POLISCI 326

POLISCI 226A. The Changing Face of America. 4-5 Units.
This upper-division seminar will explore some of the most significant issues related to educational access and equity facing American society in the 21st century. Designed for students with significant leadership potential who have already studied these topics in lecture format, this seminar will focus on in-depth analysis of the impact of race on educational access and a variety of educational reform initiatives. Please submit a brief statement with "EDUC 108" in the subject line that details your reasons for applying and what leadership skills, experience, and perspectives you would contribute to the course to: Ginny Smith (gsmith@law.stanford.edu) and Wilson Tong (wtong@commonsense.org). The deadline is rolling.
Same as: CSRE 108X, EDUC 108

POLISCI 226T. The Politics of Education. 3-5 Units.
America's public schools are government agencies, and virtually everything about them is subject to political authority--and thus to decision through the political process. This seminar is an effort to understand the politics of education and its impacts on the nation's schools. Our focus is on the modern era of reform, with special attention to the most prominent efforts to bring about fundamental change through accountability (including No Child Left Behind), school choice (charter schools, vouchers), pay for performance, and more and more to the politics of blocking that has made genuine reform so difficult to achieve.
Same as: POLISCI 326T

POLISCI 227B. Environmental Governance and Climate Resilience. 3 Units.
Adaptation to climate change will not only require new infrastructure and policies, but it will also challenge our local, state and national governments to collaborate across jurisdictional lines in ways that include many different types of private and nonprofit organizations and individual actors. The course explores what it means for communities to be resilient and how they can reach that goal in an equitable and effective way. Using wildfires in California as a case study, the course assesses specific strategies, such as controlled burns and building codes, and a range of planning and policy measures that can be used to enhance climate resilience. In addition, it considers how climate change and development of forested exurban areas (among other factors) have influenced the size and severity of wildfires. The course also examines the obstacles communities face in selecting and implementing adaptation measures (e.g., resource constraints, incentives to develop in forested areas, inadequate policy enforcement, and weak inter-agency coordination). Officials from various Bay Area organizations contribute to aspects of the course; and students will present final papers to local government offcials. Limited enrollment. Students will be asked to prepare application essays on the first day of class. Course is intended for seniors and graduate students.
Same as: CEE 265F, PUBLPOL 265F

POLISCI 227C. Money in Politics. 3-5 Units.
This course will cover campaign finance, lobbying, and interest group politics.
Same as: POLISCI 427C

POLISCI 228C. Law and Politics of Bureaucracy. 3-5 Units.
Same as Law 7096. Modern government is bureaucratic government. In the words of Justice Jackson, the rise of the administrative state is likely "the most significant legal trend of the last century and perhaps more values today are affected by [agency] decisions than by those of all the courts." This seminar will survey the major ways in which law and political science have grappled with bureaucratic governance. How do we understand the rise of the administrative state? Why are bureaucracies designed the way they are? How do bureaucracies work in the face of legal and political constraints? And what avenues are there for meaningful regulatory reform? The class is cross-listed in Political Science and the Law School and course enrollment will be by consent of instructor. Students will be responsible for writing short reflection papers and a research paper.
Same as: POLISCI 428C

POLISCI 229. Directed Reading and Research in American Politics. 1-10 Unit.
For undergraduates. Directed reading in Political Science with a focus on American politics. To be considered for enrollment, interested students must complete the directed reading petition form available on the Political Science website before the end of week 1 of the quarter in which they'd like to enroll. May be repeated for credit.

POLISCI 230A. Classical Seminar: Origins of Political Thought. 3-5 Units.
Political philosophy in classical antiquity, centered on reading canonical works of Thucydides, Plato, Aristotle against other texts and against the political and historical background. Topics include: interdependence, legitimacy, justice; political obligation, citizenship, and leadership; origins and development of democracy; law, civic strife, and constitutional change.
Same as: CLASSICS 181, CLASSICS 381, ETHICSOC 130A, PHIL 176A, PHIL 276A, POLISCI 330A

POLISCI 231. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests. 3-5 Units.
Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era.
Same as: CLASSICS 382, POLISCI 331

POLISCI 231Z. Topics in Democratic Theory. 5 Units.
Democratic rule is rule of the people. But what does that mean? This course explores democracy¿s roots in ancient Athens to its modern incarnation. The course aims to familiarize students with the various strands of democratic theory as well as the way democratic theory responds to hot political issues such as immigration and freedom of speech. The goal of the course is to equip students to think critically about democracy in the modern world and the different interpretation democratic rule can have. The questions we will investigate include: What does democracy require? What is the relationship between democracy and human rights or social justice? Can democracy justify border control? What restrictions, if any, does democracy place on hate speech? What is the role of courts in a democracy? The course provides tools to answer these questions by surveying different approaches to democracy in contemporary literature, as well surveying the history of democratic theory from ancient Athenian democracy to the modern age, with a look to the future of democracy in a globalized era.

POLISCI 232T. The Dialogue of Democracy. 4-5 Units.
All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized.
Same as: AMSTUD 137, COMM 137W, COMM 237, POLISCI 332T

POLISCI 233. Justice and Cities. 5 Units.
Cities have most often been where struggles for social justice happen, where injustice is most glaring and where new visions of just communities are developed and tested. This class brings political theories of justice and democracy together with historical and contemporary empirical work on city design, planning, and policies to ask the following questions: What makes a city just or unjust? How have people tried to make cities more just? What has made these efforts succeed or fail? Each session will include a case study of a particular city, largely with a focus on the United States. Students will develop research projects examining a city of their choice through the lens of a particular aspect of justice and injustice.
Same as: URBANST 134

POLISCI 233F. Science, technology and society and the humanities in the face of the looming disaster. 3-5 Units.
How STS and the Humanities can together help think out the looming catastrophes that put the future of humankind in jeopardy.
Same as: FRENCH 228, ITALIAN 228

POLISCI 234. Democratic Theory. 5 Units.
Most people agree that democracy is a good thing, but do we agree on what democracy is? This course will examine the concept of democracy in political philosophy. We will address the following questions: What reason(s), if any, do we have for valuing democracy? What does it mean to treat people as political equals? When does a group of individuals constitute "a people," and how can a people make genuinely collective decisions? Can democracy really be compatible with social inequality? With an entrenched constitution? With representation?.
Same as: ETHICSOC 234, PHIL 176P

POLISCI 234N. The Concept of Society from Marx to Zuckerberg. 5 Units.
What is society and what does it mean to be a member of one? This course examines these questions by looking at three different periods within the history of modern political thought in which the concept of society was debated and transformed. In the first section of the course, we will explore the emergence of "civil society" within bourgeois political thought, and the relationship of this concept to notions of property, the state, commerce, and colonial encounter. In the second section of the course, we will turn to twentieth-century debates concerning mass society and issues such asncommunication, identity, democracy, and global governance. In the final section of the course, we will focus on contemporary reconfigurations of the idea of society within technological, digital, and ecological spaces and communities.

POLISCI 234P. Deliberative Democracy and its Critics. 3-5 Units.
This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.
Same as: AMSTUD 135, COMM 135, COMM 235, COMM 335, ETHICSOC 135F, POLISCI 334P

POLISCI 235E. Philosophy of Public Policy. 4 Units.
From healthcare to voting reforms, social protection and educational policies, public policies are underpinned by moral values. When we debate those policies, we typically appeal to values like justice, fairness, equality, freedom, privacy, and safety. A proper understanding of those values, what they mean, how they may conflict, and how they can be weighed against each other is essential to developing a competent and critical eye on our complex political world. We will ask questions such as: Is compulsory voting justified? Should children have the right to vote? Is affirmative action just? What is wrong with racial profiling? What are the duties of citizens of affluent countries towards migrants? Do we have a right to privacy? Is giving cash to all unconditionally fair? This class will introduce students to a number of methods and frameworks coming out of ethics and political philosophy and will give students a lot of time to practice ethically informed debates on public policies. At the end of this class, students should have the skills to critically examine a wide range of diverse policy proposals from the perspective of ethics, moral and political philosophy. There are no prerequisites. Undergraduates and graduates from all departments are welcome to attend.
Same as: ETHICSOC 175X, PHIL 175B, PHIL 275B, POLISCI 135E, PUBLPOL 177

POLISCI 235N. Topics in Comparative Political Theory. 5 Units.
Comparative Political Theory (CPT) has emerged as one of the most important fields in political theory. Scholars working on CPT generally agree that "mainstream" political theorizing, which is dominated by modern Western way of thinking, fails to recognize the unique contributions of non-Western intellectual traditions, and is insufficient in coping with new and pressing issues in a globalized world. To study political theory from a comparative perspective, they argue, is to learn from non-Western classics and thinkers and bring non-Western political experiences to the forefront of normativenpolitical reflections. This course is an introduction to comparative political theory as a field and an exploration of several non-Western traditions and their perspectives on politics. Instead of surveying the canons in each religion or civilization, such as foundational texts in Buddhism, Catholicism, Confucianism, Hinduism, Islam, and Judaism, we will try to understand non-Western perspectives by examining key political issues in contemporary political theory and world politics, including but not limited to human rights, democracy, political legitimacy, law, toleration, and world order. Attention is given to how non-Western thinkers conceive of modernity and the West and how they reinterpret their respective traditions to answer the challenges fromnliberalism and democracy. We will see that non-Western societies are active and dynamic arenas of political debate, rather than passive receivers of Western political ideas.

POLISCI 236. Theories and Practices of Civil Society, Philanthropy, and the Nonprofit Sector. 5 Units.
What is the basis of private action for public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in civil society and modern democracy? In the "Philanthropy Lab" component of this course, students will award $100,000 in grants to local nonprofits. Students will explore how nonprofit organizations operate domestically and globally as well as the historical development and modern structure of civil society and philanthropy. Readings in political philosophy, history, political sociology, and public policy. Political Science majors who are taking this course to fulfill the WIM requirement should enroll in POLISCI 236S.
Same as: ETHICSOC 232T, POLISCI 236S

POLISCI 236S. Theories and Practices of Civil Society, Philanthropy, and the Nonprofit Sector. 5 Units.
What is the basis of private action for public good? How are charitable dollars distributed and what role do nonprofit organizations and philanthropic dollars play in civil society and modern democracy? In the "Philanthropy Lab" component of this course, students will award $100,000 in grants to local nonprofits. Students will explore how nonprofit organizations operate domestically and globally as well as the historical development and modern structure of civil society and philanthropy. Readings in political philosophy, history, political sociology, and public policy. Political Science majors who are taking this course to fulfill the WIM requirement should enroll in POLISCI 236S.
Same as: ETHICSOC 232T, POLISCI 236

POLISCI 237S. Civil Society and Democracy in Comparative Perspective. 5 Units.
A cross-national approach to the study of civil societies and their role in democracy. The concept of civil society--historical, normative, and empirical. Is civil society a universal or culturally relative concept? Does civil society provide a supportive platform for democracy or defend a protected realm of private action against the state? How are the norms of individual rights, the common good, and tolerance balanced in diverse civil societies? Results of theoretical exploration applied to student-conducted empirical research projects on civil societies in eight countries. Summary comparative discussions. Prerequisite: a course on civil society or political theory. Students will conduct original research in teams of two on the selected nations. Enrollment limited to 18. Enrollment preference given to students who have taken PoliSci 236S/EthicSoc 232T.
Same as: ETHICSOC 237

POLISCI 238C. Governing the 21st Century World. 5 Units.
How is our world governed, and by whom? How are decisions made on the most important issues of our time, including climate change, global inequality, and protection of human rights? A traditional answer to these questions is that only official governments have the power to govern -to set and enforce rules on these and other issues. In contrast, this class explores the emerging roles ofnnon-state actors, including NGOs, for-profit corporations, informal social movements, and international institutions, in governing our world and making decisions on these and other key issues. We will also study the ways that the governance by non-state actors challenges our ideas of democracy, legitimacy, and justice. The class thus seeks to bring together perspectives and tools from both empirical social science and political theory in order to better understand this important phenomenon.

POLISCI 238R. The Greeks and the Rational: Deliberation, Strategy, and Choice in Ancient Greek Political Thought. 3-5 Units.
The course explores the role of practical reasoning (instrumental rationality) in the ethical-political works of e.g. Plato and Aristotle, in the historical-political projects of e.g. Herodotus and Thucydides, and in the design of classical Greek institutions. We ask to what degree ancient Greeks shared intuitions concerning the rationality of choice with contemporary decision and game theorists. The Greek tradition recognized the limits of expected utility maximization in predicting or explaining the actual behavior of individuals, groups, and states, and sought to explain divergences from predicted rational behavior. Greek social theorists may, therefore, also have shared some of the intuitions of contemporary behavioral economists. Topics will include individual rationality, rationality of groups and states, the origins of social order, emergence and persistence of monarchical and democratic regimes, conflict and cooperation in interstate relations, competition and cooperation in exchange. Examining the Greek tradition of thought on practical reasoning has some implications for we might think about deliberation and bargaining in contemporary democratic-political, interpersonal-ethical, and interstate contexts. PREREQUISITES: Students in the course are expected to have a background in EITHER classical studies (literature, history, or philosophy), OR Greek political thought (Origins of Political Thought or equivalent) OR in formal/positive political theory. Registration for undergraduates is with permission of instructor (email jober@stanford.edu).
Same as: CLASSICS 395, POLISCI 438R

POLISCI 239. Directed Reading and Research in Political Theory. 1-10 Unit.
For undergraduates. Directed reading in Political Science with a focus on political theory. To be considered for enrollment, interested students must complete the directed reading petition form available on the Political Science website before the end of week 1 of the quarter in which they'd like to enroll. May be repeated for credit.

POLISCI 240A. Democratic Politics. 3-5 Units.
This course examines the relationship between democratic ideals and contemporary democratic politics.
Same as: POLISCI 340A

POLISCI 240T. Democracy, Promotion, and American Foreign Policy. 5 Units.
Theoretical and intellectual debates about democracy promotion with focus on realism versus liberalism. The evolution of these debates with attention to the Cold War, the 90s, and American foreign policy after 9/11. Tools for and bureaucratic struggles over how to promote democracy. Contemporary case studies.

POLISCI 241A. Political Economy of Development. 5 Units.
This course is an upper-level undergraduate seminar providing an introduction to the political economy of development. We explore many of the key academic debates surrounding how nations develop politically and economically. Course topics will include: theories of state development, the role of institutions, inequality and societal divisions, the impact of natural resources, the consequences of corruption, and the effect of globalization on the world's poor. The course emphasizes teaching students how to read the literature critically.

POLISCI 241S. Spatial Approaches to Social Science. 5 Units.
This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.
Same as: ANTHRO 130D, ANTHRO 230D, URBANST 124

POLISCI 241T. Political Economy of Gender. 5 Units.
This course provides an introduction to the political economy of gender. The course first explores the key areas of debate on women's representation. Why are womennunderrepresented in formal political institutions? How do political institutions affect women's representation? What are the effects of women's representation? Also, the course examines the quality of female politicians, women's voting behavior and political preferences, and public opinion on gender issues. No prior knowledge is required.

POLISCI 242. Foreign Policy Decision Making in Comparative Perspective. 3 Units.
This seminar will examine how countries and multilateral organizations make decisions about foreign and international policy. The hypothesis to be explored in the course is that individuals, bureaucracies, and interest groups shape foreign policy decisions. That hypothesis will be tested against other more structural explanations of how countries behave in the international system. After a brief review of the academic literature in the first part of the course, the seminar will focus on several cases studies of foreign policy decision-making by the United States, China, Russia, Iran, and North Korea, as well as the United Nations and NATO. This seminar is intended for masters students and fourth-year undergraduates. NOTE: Please send a one-page document to Bronte Kass, bkass@stanford.edu, by March 9th with the following information: full name, class year, major, contact email, which version of the course you want to enroll in (e.g., POLISCI or INTLPOL). In the document, please also outline previous associated coursework and/or relevant experience and your interest in enrolling in the seminar. Application results will be announced on March 20th. Any questions related to this course or office hours with Professor McFaul should be directed to Mahlorei Bruce-Apalis at mahlorei@stanford.edu.
Same as: INTLPOL 232, POLISCI 342

POLISCI 242G. Political Mobilization and Democratic Breakthroughs. 3-5 Units.
Mass political mobilization occurs in both democracies and autocracies. Sometimes political protests, demonstrations, and acts of nonviolence civic resistance undermine autocracies, produce democratic breakthroughs, or generate democratic reforms. Other times, they do not. This course explores why, first examining the original causes of mobilization, and then understanding why some movements succeed and others fail. The first sessions of the course will review theories of revolution, social movements, and democratization. The remainder of the course will do deep dives into case studies, sometime with guest lecturers and participants from these historical moments. Cases to be discussed will likely include the U.S. civil rights movement (1960s), Iran (1978 and 2009), Chile (1988), Eastern Europe (1989), China/Hong Kong (1989, 2011, 2019), USSR/Russia (1991 & 2011), South Africa (1990s), Serbia (2000), Egypt and Arab Spring (2011), Ukraine (2004 and 2013), and Black Lives Matter (2000s).
Same as: INTLPOL 218, POLISCI 342G

POLISCI 243A. Inequality. 5 Units.
What is economic inequality? What forms does it take? How do we measure it? What are its political, social, and economic causes and consequences? Why are some people and some societies more or less concerned about inequality? What normative frameworks help us think about when and why inequality is good or bad? This seminar course will engage these questions though hands-on data laboratory work in which students are taught to use data along with normative and positive theories to answer these questions. POLSCI 1 and a statistics course are recommended prerequisites.

POLISCI 244. An Introduction to Political Development. 5 Units.
Political development concerns the evolution of three categories of institutions: (1) the state itself; (2) the rule of law; and (3) accountable government. Focus on many of the major theories of political development, beginning with some classic social theorists and continuing up through the present.

POLISCI 244A. Authoritarian Politics. 3-5 Units.
This course offers a thematic approach to the study of authoritarian politics. We will cover the major areas of political science research on authoritarian politics and governance while simultaneously building empirical knowledge about the politics of particular authoritarian regimes. The course will also discuss transitions to democracy as well as authoritarian political tendencies within democratic contexts.
Same as: POLISCI 444A

POLISCI 244U. Political Culture. 3-5 Units.
The implications of social norms, preferences and beliefs for political and economic behavior and societal outcomes.
Same as: POLISCI 344U

POLISCI 245C. The Logics of Violence: Rebels, Criminal Groups and the State. 3-5 Units.
This course explore the logics of violence. The course offers an overview of the literature on civil wars as well as organized violence involving armed groups that do not seek formal state power, such as drug cartels, prison gangs, and paramilitaries. It also explores the many ways in which states engage in violence against their population through repression, torture, and murder.
Same as: POLISCI 445C

POLISCI 245R. Politics in Modern Iran. 5 Units.
Modern Iran has been a smithy for political movements, ideologies, and types of states. Movements include nationalism, constitutionalism, Marxism, Islamic fundamentalism, social democracy, Islamic liberalism, and fascism. Forms of government include Oriental despotism, authoritarianism, Islamic theocracy, and liberal democracy. These varieties have appeared in Iran in an iteration shaped by history, geography, proximity to oil and the Soviet Union, and the hegemony of Islamic culture.

POLISCI 246A. Paths to the Modern World: The West in Comparative Perspective. 3-5 Units.
How and why did Europe develop political institutions that encouraged economic growth and industrialization? And why have many other regions lagged in the creation of growth-promoting institutions? This course uses a comparative approach to understanding routes to the modern world - the historical experiences of Christian Europe, the Islamic world, and others. We will explore questions including: When do parliaments emerge? How do cities promote growth? What is the role of religion?.
Same as: POLISCI 446A

POLISCI 247A. Games Developing Nations Play. 3-5 Units.
If, as economists argue, development can make everyone in a society better off, why do leaders fail to pursue policies that promote development? The course uses game theoretic approaches from both economics and political science to address this question. Incentive problems are at the heart of explanations for development failure. Specifically, the course focuses on a series of questions central to the development problem: Why do developing countries have weak and often counterproductive political institutions? Why is violence (civil wars, ethnic conflict, military coups) so prevalent in the developing world, and how does it interact with development? Why do developing economies fail to generate high levels of income and wealth? We study how various kinds of development traps arise, preventing development for most countries. We also explain how some countries have overcome such traps. This approach emphasizes the importance of simultaneous economic and political development as two different facets of the same developmental process. No background in game theory is required.
Same as: ECON 162, POLISCI 347A

POLISCI 247G. Governance and Poverty. 5 Units.
Poverty relief requires active government involvement in the provision of public services such as drinking water, healthcare, sanitation, education, roads, electricity and public safety. Failure to deliver public services is a major impediment to the alleviation of poverty in the developing world. This course will use an interdisciplinary approach to examining these issues, bringing together readings from across the disciplines of political science, economics, law, medicine and education to increase understanding of the complex causal linkages between political institutions, the quality of governance, and the capacity of developing societies to meet basic human needs. Conceived in a broadly comparative international perspective, the course will examine cross-national and field-based research projects, with a particular focus on Latin America and Mexico.

POLISCI 248A. Politics and Institutions in Latin America. 3-5 Units.
The broad academic purpose of the course is to evaluate presidential democracies in Latin America and their impacts on the politics in this region. The goal is to give students an introduction to the main debates on political institutions in the Latin American region and help them identify issues for future research.
Same as: POLISCI 348A

POLISCI 248D. China in the Global Economy. 3-5 Units.
An examination of China in the global economy. Focus will be on China¿s Belt and Road Initiative (BRI). The goal of the course is to provide students an in-depth understanding of a key initiative of China¿s efforts to globalize. The approach examines how BRI has played out in practice and how it is changing. Specific questions addressed will include: What is the political and economic logic of BRI? Who are the key players? How much of this is controlled and coordinated by Beijing? How much by local authorities? What bureaucratic structures, if any, have been created to regulate this major initiative? Whose interests are being served with BRI? What are the challenges facing BRI? How have strategies evolved? How have international reactions affected China's globalization strategies? How has this affected US-China Relations? How does BRI affect domestic politics?.
Same as: POLISCI 348D

POLISCI 248S. Latin American Politics. 3-5 Units.
Fundamental transformations in Latin America in the last two decades: why most governments are now democratic or semidemocratic; and economic transformation as countries abandoned import substitution industrialization policies led by state intervention for neoliberal economic polices. The nature of this dual transformation.
Same as: POLISCI 348S

POLISCI 249. Directed Reading and Research in Comparative Politics. 1-10 Unit.
For undergraduates. Directed reading in Political Science with a focus on comparative politics. To be considered for enrollment, interested students must complete the directed reading petition form available on the Political Science website before the end of week 1 of the quarter in which they'd like to enroll. May be repeated for credit.

POLISCI 251A. Introduction to Machine Learning for Social Scientists. 4 Units.
This course introduces techniques to collect, analyze, and utilize large collections of data for social science inferences. The ultimate goal of the course is to familiarize students to modern machine learning techniques and provide the skills necessary to apply these methods widely. Students will leave the course equipped with a broad understanding of machine learning and on how to continue building new skills. This is an introductory course, so most the lectures and problem sets will be focused on the intuition and the mechanics behind machine learning concepts rather than the mathematical fundamentals. There are no formal prerequisites for the course, but calculus and introductory statistics are strongly recommended. Students are not expected to have any programming knowledge, and the course will be centered around bite-size assignments that will help build R coding and statistical skills from scratch.

POLISCI 259. Directed Reading and Research in Political Methodology. 1-10 Unit.
For undergraduates. Directed reading in Political Science with a focus on political methodology. To be considered for enrollment, interested students must complete the directed reading petition form available on the Political Science website before the end of week 1 of the quarter in which they'd like to enroll. May be repeated for credit.

POLISCI 299A. Research Design. 5 Units.
This course is designed to teach students how to design a research project. The course emphasizes the specification of testable hypotheses, the building of data sets, and the inferences from that may be drawn from that evidence. This course fulfills the WIM requirement for Political Science Research Honors students.

POLISCI 299B. Honors Thesis Seminar. 5 Units.
Restricted to Political Science Research Honors students who have completed POLISCI 299A.

POLISCI 299C. Honors Thesis. 1-5 Unit.
Students conduct independent research work towards a senior honors thesis. Restricted to Political Science Research Honors students who have completed POLISCI 299B.

POLISCI 299D. Honors Thesis. 1-5 Unit.
Students conduct independent research work towards a senior honors thesis. Restricted to Political Science Research Honors students who have completed POLISCI 299B.

POLISCI 309. Curricular Practical Training for PhD Students. 1 Unit.
Qualified Political Science students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. Meets the requirements for Curricular Practical Training for students on F-1 visas. The student is responsible for arranging their own internship/employment and gaining faculty sponsorship. At the completion of the CPT quarter, a final report must be submitted to the faculty sponsor documenting the work done and its relevance to Political Science. This course be repeated for credit up to 3 times.

POLISCI 311N. Nuclear Politics. 3-5 Units.
Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, nonetheless refrain from doing so? What are the consequences of new states deploying nuclear weapons? Do arms control treaties and the laws of armed conflict influence nuclear proliferation and nuclear war plans? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? We will first critically examine the political science, legal, and historical literature on these key questions. Students will then design and execute small research projects to address questions that have been inadequately addressed in the existing literature.
Same as: POLISCI 211N

POLISCI 313. US-Russia Relations After the Cold War. 2 Units.
A quarter century ago, the Soviet Union collapsed and the Cold War ended. At the time, Russian leaders aspired to build democratic and market institutions at home. They also wanted to join the West. American presidents Democrat and Republican encouraged these domestic and international changes. Today, U.S.-Russia relations are once again confrontational, reminiscent of relations during the Cold War. This course seeks to analyze shifts in U.S.-Russia relations, with special attention given to the U.S.-Russia relationship during Obama¿s presidency. Readings will include academic articles and a book manuscript by Professor McFaul on Obama's reset policy. Open to students with previous coursework involving Russia.
Same as: POLISCI 213, REES 213

POLISCI 313R. Political Economy of Financial Crisis. 5 Units.
Political responses to domestic and international financial crises. Monetary and fiscal policy. The role of interest groups. International cooperation and the role of the IMF.
Same as: POLISCI 213R

POLISCI 314D. Democracy, Development, and the Rule of Law. 3-5 Units.
This course explores the different dimensions of development - economic, social, and political - as well as the way that modern institutions (the state, market systems, the rule of law, and democratic accountability) developed and interacted with other factors across different societies around the world. The class will feature additional special guest lectures by Francis Fukuyama, Larry Diamond, Michael McFaul, Anna Grzymala-Busse, and other faculty and researchers affiliated with the Center on Democracy, Development, and the Rule of Law. Undergraduate students should enroll in this course for 5 units. Graduate students should enroll for 3.
Same as: INTLPOL 230, INTNLREL 114D, POLISCI 114D

POLISCI 314R. Challenges and Dilemmas in American Foreign Policy. 5 Units.
This seminar will examine the complexities and trade offs involved in foreign policy decision-making at the end of the twentieth century and the dawn of the post-9/11 era. Students will analyze dilemmas confronting policymakers through case studies including post-conflict reconstruction and state-building, nuclear proliferation, democratization and peace negotiation. The seminar will conclude with a 48-hour crisis simulation. For advanced undergraduates and graduate students. Application for enrollment required. Applications will be available for pick up in Political Science Department (Encina West 100) starting late-October.
Same as: POLISCI 214R

POLISCI 315F. Nuclear Weapons and International Politics. 5 Units.
Why do states develop nuclear weapons and why do some states, that have the technological capacity to build nuclear weapons, refrain from doing so? What are the strategic consequences of new states deploying nuclear weapons? What is the relationship between the spread of nuclear energy and the spread of nuclear weapons? We will study the political science and history literature on these topics. Research paper required.
Same as: POLISCI 215F

POLISCI 319. Directed Reading in International Relations. 1-10 Unit.
For PhD students. Directed reading in Political Science with a focus on international relations. May be repeated for credit.

POLISCI 320C. The Politics of the Administrative State. 3-5 Units.
Most studies of democratic government are about elected leaders, campaigns and elections, legislatures, and public opinion. But these aspects of government are, in some sense, the tail that wags the dog. To understand what government actually does and with what effects, we need to understand the dog itself. The fact is, the vast bulk of government consists of the countless departments and agencies - and the unelected experts, professionals, and functionaries within them - that execute public policy, fill out its details, determine its impacts and effectiveness, and make government a (good or bad) reality for ordinary citizens. This is the dog: the "administrative state." And it is the essence of modern government. No democracy can function without it. A hundred years ago, when the American administrative state was on the rise - propelled first by Progressivism, then the New Deal - scholars argued that there should be a separation of politics and administration: elected officials would make policy in the political process, administrators would carry it out expertly and nonpolitically. But that was a pipe dream. The administrative state is thoroughly - and inevitably - bound up in democratic politics, and an integral part of it. Politicians try to control agencies for their own ends. Special interest groups try to capture them. Political appointees try to invade them. Members of Congress want money and programs for their own states and districts. And agencies are powerful actors in their own right, seeking money, autonomy, and policy impact. The US, moreover, is hardly unique. In every nation, the administrative state is a target of political pressure and influence, infused by politics, and capable of its own exertions of power. The purpose of this class is to understand the politics of the administrative state. Our focus will mainly be on the US, but we will also look at other nations for comparative perspective. In the end, students will have a far more complete understanding of democratic government than the usual focus on electoral politics can possibly provide.
Same as: POLISCI 220C

POLISCI 320R. The Presidency. 3-5 Units.
This course provides students with a comprehensive perspective on the American presidency and covers a range of topics: elections, policy making, control of the bureaucracy, unilateral action, war-making, and much more. But throughout, the goal is to understand why presidents behave as they do, and why the presidency as an institution has developed as it has, with special attention to the dynamics of the American political system and how they condition incentives, opportunities, and power.
Same as: POLISCI 220R

POLISCI 322A. Advances in Political Psychology. 3-5 Units.
Among the topics: the comparative contributions of rational choice and political psychology; political information process; coordinating vs. inducing preferences; identities and values; and prejudice and politics.

POLISCI 323. Pivotal Moments in American Institutions and Public Law, 1781-Present. 5 Units.
(Same as Law 680) American lawyers and policymakers work today in a system of institutions that are strikingly unique in comparative and historical terms. With some exceptions, that system is characterized by relatively stable political and legal institutions, low levels of explicit corruption, high bureaucratic capacity in public organizations, and relatively open, impersonal access to political, policymaking, and legal institutions. Although these characteristics are now too often taken for granted, the process through which they emerged remains remarkably opaque. In the 1780s under the Articles of Confederation, the United States was a poor developing country on the fringe of the Atlantic community with limited capacity and a striking inability to provide basic public goods, such as security. One hundred years later, it well along the way to becoming the richest nation in the world. How did this transformation occur?nnnDrawing on judicial opinions, legal scholarship, political science, economics, and history, this course explores how institutions evolved to create such a system. It traces the problem of institutional development through several critical periods in the history of American public law, including the emergence of the Constitution, the events leading up to and following the Civil War, the Progressive era, World War II, 1964-75, and the emergence of the modern administrative state. Although the primarily focus is on the American experience, we place these developments in comparative context as well.

POLISCI 324L. The Psychology of Communication About Politics in America. 4-5 Units.
Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.
Same as: COMM 164, COMM 264, POLISCI 124L, PSYCH 170

POLISCI 325L. Law and the New Political Economy. 3-5 Units.
(Same as LAW 7515) In this seminar, we consider key legal topics through the lens of political economy - that is, is the interplay among economics, law, and politics. This perspective has had a powerful and growing impact on how scholars and judges view the nature and scope of law and politics in the modern regulatory state. We look at a range of topics from this perspective, including: constitutional law, statutory interpretation, administrative law and regulation, and jurisprudence - all with an eye toward better understanding the dynamic interaction among law, politics, and social change. There are no prerequisites for this seminar. The final assignment will be a substantial research paper.
Same as: POLISCI 225L

POLISCI 326. Race and Racism in American Politics. 5 Units.
Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.
Same as: AMSTUD 226, CSRE 226, POLISCI 226

POLISCI 326T. The Politics of Education. 3-5 Units.
America's public schools are government agencies, and virtually everything about them is subject to political authority–and thus to decision through the political process. This seminar is an effort to understand the politics of education and its impacts on the nation's schools. Our focus is on the modern era of reform, with special attention to the most prominent efforts to bring about fundamental change through accountability (including No Child Left Behind), school choice (charter schools, vouchers), pay for performance, and more and more to the politics of blocking that has made genuine reform so difficult to achieve.
Same as: POLISCI 226T

POLISCI 327. Minority Behavior and Representation. 5 Units.
Politics of minorities in the U.S. Topics include: historic and contemporary struggles of Latinos, African Americans, and gays and lesbians for political power and social acceptance; group-level public opinion and electoral behavior; scholarship on group influence in the policy making process and policy issues of importance; and the jurisprudence shaping minority political access and civil rights.

POLISCI 327C. Law of Democracy. 3-5 Units.
Combined with LAW 7036 (formerly Law 577). This course is intended to give students a basic understanding of the themes in the legal regulation of elections and politics. We will cover all the major Supreme Court cases on topics of voting rights, reapportionment/redistricting, ballot access, regulation of political parties, campaign finance, and the 2000 presidential election controversy. The course pays particular attention to competing political philosophies and empirical assumptions that underlie the Court's reasoning while still focusing on the cases as litigation tools used to serve political ends. Elements used in grading: Class participation and one day take home final exam. (POLISCI 327C; LAW 577).
Same as: COMM 361

POLISCI 329. Directed Reading and Research in American Politics. 1-10 Unit.
For PhD students. Directed reading in Political Science with a focus on American politics. May be repeated for credit.

POLISCI 330A. Classical Seminar: Origins of Political Thought. 3-5 Units.
Political philosophy in classical antiquity, centered on reading canonical works of Thucydides, Plato, Aristotle against other texts and against the political and historical background. Topics include: interdependence, legitimacy, justice; political obligation, citizenship, and leadership; origins and development of democracy; law, civic strife, and constitutional change.
Same as: CLASSICS 181, CLASSICS 381, ETHICSOC 130A, PHIL 176A, PHIL 276A, POLISCI 230A

POLISCI 331. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests. 3-5 Units.
Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era.
Same as: CLASSICS 382, POLISCI 231

POLISCI 332T. The Dialogue of Democracy. 4-5 Units.
All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized.
Same as: AMSTUD 137, COMM 137W, COMM 237, POLISCI 232T

POLISCI 333. Social Agency. 2-4 Units.
Humans are agents who live in a social world. Philosophical reflection on human agency needs to include reflection both on the agency of individual human agents and on forms of social agency that involve multiple individuals. This seminar will focus on aspects of the latter.nnWhat is it for multiple individuals to think and to act together -- to engage in shared intentional/shared cooperative activity? to deliberate together? to engage in what some have called team reasoning? What kinds of social agency are characteristic of larger social organizations or groups? What would it be for larger groups themselves to be agents, ones who have their own distinctive intentions on the basis of which they act? What is the relation between these larger forms of social agency and small-scale shared cooperative activity? In all these cases how do we best understand what we are talking about when we speak of what we intend or believe and of what we are doing? Readings to be drawn from recent work of Michael Bratman, Margaret Gilbert, Christian List, Kirk Ludwig, Philip Pettit, John Searle, Scott Shapiro, and others, as well as classic work of H.L.A. Hart.nnPrerequisite: graduate standing in Philosophy or permission of instructor. 2 unit option for PhD students only; all others must enroll for 4 units.
Same as: PHIL 377

POLISCI 333M. Research and Methods in Political Theory. 3-5 Units.
This seminar has two aims. First, we examine the methodological approaches of scholars working within political theory as well as those working at the intersection of political theory and empirical social science. Second, we discuss in an informal workshop setting the ongoing work of graduate students, considering how, if at all, the readings on methodology could inform this work.

POLISCI 333S. Marx. 2-4 Units.
This course examines the works of a thinker who radically transformed the ways that we think about modern society. Marx saw fundamental problems with capitalist societies, including: un-freedom, alienation, inequality, and bureaucratization. He developed a theory to account for these problems. Our task will be to read his works critically and to evaluate their contributions to our understanding the relationship between politics, social structure, knowledge and human agency. We will also be especially interested in comparing his view with alternative diagnoses of the problems of modern capitalist societies, especially those of Max Weber and John Rawls.
Same as: PHIL 339

POLISCI 334. Philanthropy and Civil Society. 1-3 Unit.
Cross-listed with Law (LAW 7071), Political Science (POLISCI 334) and Sociology (SOC 374). Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 3 units.
Same as: EDUC 374, SOC 374

POLISCI 334P. Deliberative Democracy and its Critics. 3-5 Units.
This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.
Same as: AMSTUD 135, COMM 135, COMM 235, COMM 335, ETHICSOC 135F, POLISCI 234P

POLISCI 335A. Adam Smith: From Moral Philosophy to Political Economy. 3-5 Units.
This course is designed for graduate students and advanced undergraduates interested in moral philosophy or modern political economy. The course blends two approaches to Adam Smith. We use political thought and intellectual history to introduce students to the intellectual roots of ¿classical Liberalism¿; asking: What are the moral psychological foundations of justice?, Does the free market make everyone, including the least advantaged, better off? How do we sustain a good society? We use social science to study Smith¿s integrated approach to human cooperation in three realms, society, politics, and markets; asking: ¿Why isn¿t the entire world developed? How did Europe develop out of feudalism? How does a community sustain moral behavior? The two perspectives allow us to discover that Smith has ideas on these subjects that expand today¿s frontiers of both positive and normative social science.

POLISCI 336. Introduction to Global Justice. 4 Units.
This course explores the normative demands and definitions of justice that transcend the nation-state and its borders, through the lenses of political justice, economic justice, and human rights. What are our duties (if any) towards those who live in other countries? Should we be held morally responsible for their suffering? What if we have contributed to it? Should we be asked to remedy it? At what cost? These are some of the questions driving the course. Although rooted in political theory and philosophy, the course will examine contemporary problems that have been addressed by other scholarly disciplines, public debates, and popular media, such as immigration and open borders, climate change refugees, and the morality of global capitalism (from exploitative labor to blood diamonds). As such, readings will combine canonical pieces of political theory and philosophy with readings from other scholarly disciplines, newspaper articles, and popular media.
Same as: ETHICSOC 136R, INTNLREL 136R, PHIL 76, POLISCI 136R

POLISCI 336S. Justice. 4-5 Units.
In this course, we explore three sets of questions relating to justice and the meaning of a just society: (1) Liberty: What is liberty, and why is it important? Which liberties must a just society protect? (2) Equality: What is equality, and why is it important? What sorts of equality should a just society ensure? (3) Reconciliation: Are liberty and equality in conflict? If so, how should we respond to the conflict between them? We approach these topics by examining competing theories of justice including utilitarianism, libertarianism/classical liberalism, and egalitarian liberalism. The class also serves as an introduction to how to do political philosophy, and students approaching these topics for the first time are welcome. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 103.
Same as: ETHICSOC 171, PHIL 171, POLISCI 103, PUBLPOL 103C

POLISCI 337A. Political Philosophy: The Social Contract Tradition. 4 Units.
(Graduate students register for 276.) What makes political institutions legitimate? What makes them just? When do citizens have a right to revolt against those who rule over them? Which of our fellow citizens must we tolerate?Surprisingly, the answers given by some of the most prominent modern philosophers turn on the idea of a social contract. We will focus on the work of Hobbes, Locke, Rousseau, and Rawls.
Same as: ETHICSOC 176, PHIL 176, PHIL 276, POLISCI 137A

POLISCI 337L. Ancient Greek Law and Justice. 3-5 Units.
The development and practice of law and legal procedure in the ancient Greek world, emphasizing the well documented case of classical Athens. Constitutional, criminal, and civil law, approached through analysis of actual laws and speeches by litigants in Athenian courtrooms. Review of a growing scholarship juxtaposing Greek law to other prominent legal traditions and exploring the role of law in Greek social relations, economics, and literature, and its relationship to Greek conceptions of justice.
Same as: CLASSICS 378

POLISCI 338. Universal Basic Income: the philosophy behind the proposal. 3 Units.
Universal basic income (or UBI) is a regular cash allowance given to all members of a community without means test, regardless of personal desert, and with no strings attached. Once a utopian proposal, the policy is now discussed and piloted throughout the world. The growth of income and wealth inequalities, the precariousness of labor, and the persistence of abject poverty have all been important drivers of renewed interest in UBI in the United States. But it is without a doubt the fear that automation may displace workers from the labor market at unprecedented rates that explains the revival of the policy in recent years, including by many in or around Silicon Valley. Among the various objections to the proposal, one concerns its moral adequacy: Isn't it fundamentally unjust to give cash to all indiscriminately rather than to those who need it and deserve it? Over the years, a variety of scholars have defended the policy on moral grounds, arguing that UBI is a tool of equality, liberal freedom, republican freedom, gender equity, or racial equity. Many others have attacked UBI on those very same grounds, making the case that alternative policy proposals like the job guarantee, means-tested benefits, conditional benefits, or reparations should be preferred. Students will learn a great deal about political theory and ethics in general but always through the specific angle of the policy proposal, and they will become experts on the philosophy, politics and economics of UBI. The seminar is open to undergraduate and graduate students in all departments. There are no pre-requisites.
Same as: ETHICSOC 174B, ETHICSOC 274B, PHIL 174B, PHIL 274B, POLISCI 134E

POLISCI 338B. Unequal Relationships. 2-4 Units.
Over the past three decades, a relational egalitarian conception of equality has emerged in political philosophy. Proponents of the view argue that the point of equality is to establish communities where people are able to stand and relate as equals. This entails building societies free from a variety of modes of relating that are thought to be detrimental to our status as moral equals. The list of those inegalitarian relationships is long and includes oppression, domination, exploitation, marginalization, objectification, demonization, infantilization, and stigmatization. The relational approach to equality departs from the more distributive conceptions of equality that were offered in the 70s and after. The theories of justice proposed in response are still comparatively underdeveloped and need further elaboration, but they all concur in rejecting both the overly distributive paradigm and the preoccupation with individual responsibility central to most other egalitarian accounts. This graduate seminar will introduce students to the rich literature on equality in contemporary political philosophy, with a special focus on identifying and scrutinizing unequal relationships. Each week will be centered on a specific type of such unequal relationship, trying to understand how it operates, what social function it serves, and what makes it specifically harmful or wrongful to groups and individuals. Although there are no formal pre-requisites, this class is primarily designed for students considering writing a thesis in political or moral theory as well as for students in other disciplines who want to advance their understanding of equality as a moral value. Seniors in philosophy and political science with a substantial training in political theory will also be considered and should email the PI to communicate their interest. 2 unit option only for Phil PhDs beyond the second year.
Same as: ETHICSOC 378B, PHIL 378B

POLISCI 338E. The Problem of Evil in Literature, Film, and Philosophy. 3-5 Units.
Conceptions of evil and its nature and source, distinctions between natural and moral evil, and what belongs to God versus to the human race have undergone transformations reflected in literature and film. Sources include Rousseau's response to the 1755 Lisbon earthquake; Hannah Arendt's interpretation of Auschwitz; Günther Anders' reading of Hiroshima; and current reflections on looming climatic and nuclear disasters. Readings from Rousseau, Kant, Dostoevsky, Arendt, Anders, Jonas, Camus, Ricoeur, Houellebeck, Girard. Films by Lang, Bergman, Losey, Hitchcock.
Same as: FRENCH 265

POLISCI 339. Directed Reading and Research in Political Theory. 1-5 Unit.
For PhD students. Directed reading in Political Science with a focus on political theory. May be repeated for credit.

POLISCI 340A. Democratic Politics. 3-5 Units.
This course examines the relationship between democratic ideals and contemporary democratic politics.
Same as: POLISCI 240A

POLISCI 342. Foreign Policy Decision Making in Comparative Perspective. 3 Units.
This seminar will examine how countries and multilateral organizations make decisions about foreign and international policy. The hypothesis to be explored in the course is that individuals, bureaucracies, and interest groups shape foreign policy decisions. That hypothesis will be tested against other more structural explanations of how countries behave in the international system. After a brief review of the academic literature in the first part of the course, the seminar will focus on several cases studies of foreign policy decision-making by the United States, China, Russia, Iran, and North Korea, as well as the United Nations and NATO. This seminar is intended for masters students and fourth-year undergraduates. NOTE: Please send a one-page document to Bronte Kass, bkass@stanford.edu, by March 9th with the following information: full name, class year, major, contact email, which version of the course you want to enroll in (e.g., POLISCI or INTLPOL). In the document, please also outline previous associated coursework and/or relevant experience and your interest in enrolling in the seminar. Application results will be announced on March 20th. Any questions related to this course or office hours with Professor McFaul should be directed to Mahlorei Bruce-Apalis at mahlorei@stanford.edu.
Same as: INTLPOL 232, POLISCI 242

POLISCI 342G. Political Mobilization and Democratic Breakthroughs. 3-5 Units.
Mass political mobilization occurs in both democracies and autocracies. Sometimes political protests, demonstrations, and acts of nonviolence civic resistance undermine autocracies, produce democratic breakthroughs, or generate democratic reforms. Other times, they do not. This course explores why, first examining the original causes of mobilization, and then understanding why some movements succeed and others fail. The first sessions of the course will review theories of revolution, social movements, and democratization. The remainder of the course will do deep dives into case studies, sometime with guest lecturers and participants from these historical moments. Cases to be discussed will likely include the U.S. civil rights movement (1960s), Iran (1978 and 2009), Chile (1988), Eastern Europe (1989), China/Hong Kong (1989, 2011, 2019), USSR/Russia (1991 & 2011), South Africa (1990s), Serbia (2000), Egypt and Arab Spring (2011), Ukraine (2004 and 2013), and Black Lives Matter (2000s).
Same as: INTLPOL 218, POLISCI 242G

POLISCI 343A. Field Methods. 3-5 Units.
Familiarizes students with a variety of field methods potentially applicable to ongoing research projects and dissertations. Topics include case selection, process tracing, participant observation, interviewing, archival research, survey design, labnexperiments, field experiments, and ethical concerns in the field. Students develop a field research strategy as a final project. Prerequisites: 440A,B,C.

POLISCI 343C. Public Opinion and Elections in the Populist Era. 5 Units.
Brexit, Donald Trump, the collapse of party systems in established democracies like France and Italy - these striking developments have a common thread: the disruption of politics as usual by insurgent "populist" movements and/or parties. The seminar will focus on Europe and the U.S. Students will have access to surveys of western democracies conducted by YouGov. Undergraduates interested in this course will need to request permission from the instructor to enroll.

POLISCI 344. Politics and Geography. 3-5 Units.
The role of geography in topics in political economy, including development, political representation, voting, redistribution, regional autonomy movements, fiscal competition, and federalism.

POLISCI 344U. Political Culture. 3-5 Units.
The implications of social norms, preferences and beliefs for political and economic behavior and societal outcomes.
Same as: POLISCI 244U

POLISCI 347A. Games Developing Nations Play. 3-5 Units.
If, as economists argue, development can make everyone in a society better off, why do leaders fail to pursue policies that promote development? The course uses game theoretic approaches from both economics and political science to address this question. Incentive problems are at the heart of explanations for development failure. Specifically, the course focuses on a series of questions central to the development problem: Why do developing countries have weak and often counterproductive political institutions? Why is violence (civil wars, ethnic conflict, military coups) so prevalent in the developing world, and how does it interact with development? Why do developing economies fail to generate high levels of income and wealth? We study how various kinds of development traps arise, preventing development for most countries. We also explain how some countries have overcome such traps. This approach emphasizes the importance of simultaneous economic and political development as two different facets of the same developmental process. No background in game theory is required.
Same as: ECON 162, POLISCI 247A

POLISCI 347G. Governance and Poverty. 3-5 Units.
Poverty relief requires active government involvement in the provision of public services such as drinking water, healthcare, sanitation, education, roads, electricity and public safety. Failure to deliver public services is a major impediment to the alleviation of poverty in the developing world. This course will use an interdisciplinary approach to examining these issues, bringing together readings from across the disciplines of political science, economics, law, medicine and education to increase understanding of the complex causal linkages between political institutions, the quality of governance, and the capacity of developing societies to meet basic human needs. Conceived in a broadly comparative international perspective, the course will examine cross-national and field-based research projects, with a particular focus on Latin America and Mexico.

POLISCI 348. Chinese Politics. 3-5 Units.
China, one of the few remaining communist states in the world, has not only survived, but has become a global political actor of consequence with the fastest growing economy in the world. What explains China's authoritarian resilience? Why has the CCP thrived while other communist regimes have failed? How has the Chinese Communist Party managed to develop markets and yet keep itself in power? What avenues are there for political participation? How does censorship work in the information and 'connected' age of social media? What are the prospects for political change? How resilient is the part in the fave of technological and economic change? Materials will include readings, lectures, and selected films. This course has no prerequisites. (Graduate students register for 348.).
Same as: POLISCI 148

POLISCI 348A. Politics and Institutions in Latin America. 3-5 Units.
The broad academic purpose of the course is to evaluate presidential democracies in Latin America and their impacts on the politics in this region. The goal is to give students an introduction to the main debates on political institutions in the Latin American region and help them identify issues for future research.
Same as: POLISCI 248A

POLISCI 348D. China in the Global Economy. 3-5 Units.
An examination of China in the global economy. Focus will be on China¿s Belt and Road Initiative (BRI). The goal of the course is to provide students an in-depth understanding of a key initiative of China¿s efforts to globalize. The approach examines how BRI has played out in practice and how it is changing. Specific questions addressed will include: What is the political and economic logic of BRI? Who are the key players? How much of this is controlled and coordinated by Beijing? How much by local authorities? What bureaucratic structures, if any, have been created to regulate this major initiative? Whose interests are being served with BRI? What are the challenges facing BRI? How have strategies evolved? How have international reactions affected China's globalization strategies? How has this affected US-China Relations? How does BRI affect domestic politics?.
Same as: POLISCI 248D

POLISCI 348S. Latin American Politics. 3-5 Units.
Fundamental transformations in Latin America in the last two decades: why most governments are now democratic or semidemocratic; and economic transformation as countries abandoned import substitution industrialization policies led by state intervention for neoliberal economic polices. The nature of this dual transformation.
Same as: POLISCI 248S

POLISCI 349. Directed Reading and Research in Comparative Politics. 1-10 Unit.
For PhD students. Directed reading in Political Science with a focus on comparative politics. May be repeated for credit.

POLISCI 351A. Foundations of Political Economy. 3 Units.
Introduction to political economy with an emphasis on formal models of collective choice, public institutions, and political competition. Topics include voting theory, social choice, institutional equilibria, agenda setting, interest group politics, bureaucratic behavior, and electoral competition.

POLISCI 351B. Economic Analysis of Political Institutions. 4 Units.
Applying techniques such as information economics, games of incomplete information, sequential bargaining theory, repeated games, and rational expectations of microeconomic analysis and game theory to political behavior and institutions. Applicatoins include agenda formation in legislatures, government formation in parliamentary systems, the implications of legislative structure, elections and information aggregation, lobbying, electoral competition and interest groups, the control of bureaucracies, interest group competition, and collective choice rules.

POLISCI 351C. Institutions and Bridge-Building in Political Economy. 4 Units.
This course critically surveys empirical applications of formal models of collective-choice institutions. It is explicitly grounded in philosophy of science (e.g., Popperian positivism and Kuhn's notions of paradigms and normal science). Initial sessions address the meanings and roles of the concept of institutions in social-science research. Historically important works of political science and/or economics are then considered within a framework called Components of Institutional Analysis (or CIA), which provides a fully general way of evaluating research that is jointly empirical and formal theoretical. The course concludes with contemporary instances of such bridge-building. The over-arching objectives are to elevate the explicitness and salience of desirable properties of research and to illustrate the inescapable tradeoffs among the stipulated criteria. nAlthough this is a core course in the GSB Political Economy PhD curriculum, its substantive foci may differ across years depending on the instructor. For Professor Krehbiel's sessions, the emphasis is on legislative behavior, organization, and lawmaking, and on inter-institutional strategic interaction (e,g, between executive, legislative, and judicial branches in various combinations). nStudents should have taken POLECON 680 and POLECON 681. Also listed as Political Science 351C.

POLISCI 352. Introduction to Game Theoretic Methods in Political Science. 3-5 Units.
Concepts and tools of non-cooperative game theory developed using political science questions and applications. Formal treatment of Hobbes' theory of the state and major criticisms of it; examples from international politics. Primarily for graduate students; undergraduates admitted with consent of instructor.
Same as: POLISCI 152

POLISCI 353A. Workshop in Political Methodology. 1-2 Unit.
Mathematical and statistical models and applications to political science. Guest speakers, faculty, and students present research papers. May be repeated for credit.

POLISCI 353B. Workshop in Political Methodology. 1-2 Unit.
Continuation of POLISCI 353A. Mathematical and statistical models and applications to political science. Guest speakers, faculty, and students present research papers. May be repeated for credit.

POLISCI 353C. Workshop in Political Methodology. 1-2 Unit.
Continuation of POLISCI 353B. Mathematical and statistical models and applications to political science. Guest speakers, faculty, and students present research papers. May be repeated for credit.

POLISCI 354. Thinking Strategically. 5 Units.
This course provides an introduction to strategic reasoning. We discuss ideas such as the commitment problem, credibility in signaling, cheap talk, moral hazard and adverse selection. Concepts are developed through games played in class, and applied to politics, business and everyday life.
Same as: POLISCI 153

POLISCI 355A. Data Science for Politics. 5 Units.
Data science is quickly changing the way we understand and and engage in the political process. In this course we will develop fundamental techniques of data science and apply them to large political datasets on elections, campaign finance, lobbying, and more. The objective is to give students the skills to carry out cutting edge quantitative political studies in both academia and the private sector. Students with technical backgrounds looking to study politics quantitatively are encouraged to enroll.
Same as: POLISCI 150A

POLISCI 355B. Machine Learning for Social Scientists. 5 Units.
Machine learning - the use of algorithms to classify, predict, sort, learn and discover from data - has exploded in use across academic fields, industry, government, and the non-profit sector. This course provides an introduction to machine learning for social scientists. We will introduce state of the art machine learning tools, show how to use those tools in the programming language R, and demonstrate why a social science focus is essential to effectively apply machine learning techniques in social, political, and policy contexts. Applications of the methods will include forecasting social phenomena, evaluating the use of algorithms in public policy, and the analysis of social media and text data. Prerequisite: POLISCI 150A/355A.
Same as: POLISCI 150B

POLISCI 355C. Causal Inference for Social Science. 5 Units.
Causal inference methods have revolutionized the way we use data, statistics, and research design to move from correlation to causation and rigorously learn about the impact of some potential cause (e.g., a new policy or intervention) on some outcome (e.g., election results, levels of violence, poverty). This course provides an introduction that teaches students the toolkit of modern causal inference methods as they are now widely used across academic fields, government, industry, and non-profits. Topics include experiments, matching, regression, sensitivity analysis, difference-in-differences, panel methods, instrumental variable estimation, and regression discontinuity designs. We will illustrate and apply the methods with examples drawn from various fields including policy evaluation, political science, public health, economics, business, and sociology. Prerequisite: POLISCI 150A.
Same as: POLISCI 150C

POLISCI 356A. Formal Theory I: Game Theory for Political Science. 3-5 Units.
An introduction to noncooperative game theory through applications in political science. Topics will include the Hotelling-Downs model, the probabilistic voting model, political bargaining models and political agency models, among others.

POLISCI 356B. Formal Theory II: Models of Politics. 3-5 Units.
A continuation of Formal Theory I covering advanced topics, including classical political economy, comparative institutions, theories of conflict and cooperation, dynamic political economy, and the new behavioral political economy.

POLISCI 357. Sampling and Surveys. 5 Units.
The importance of sample surveys as a source of social science data including public opinion, voting, welfare programs, health, employment, and consumer behavior. Survey design, sampling theory, and estimation. Nonresponse, self-selection, measurement error, and web survey methods. Prerequisite: 350B or equivalent.

POLISCI 358. Data-driven Politics. 3-5 Units.
Covers advanced computational and statistical methods for collecting and modeling large-scale data on politics. Topics will include automated and computer-assisted methods for collecting, disambiguating, and merging unstructured data (web-scraping, identity resolution, and record-linkage), database management (SQL, data architecture), data-reduction techniques for measuring the political preferences for large numbers of individuals, topic models applied to political text/speech, and social network analysis for mapping relationships and identifying influential actors.

POLISCI 359. Advanced Individual Study in Political Methodology. 1-10 Unit.
For PhD students. Directed reading in Political Science with a focus on political methodology. May be repeated for credit.

POLISCI 362. New Economics of Organization. 5 Units.
Survey of economic approaches to organization, emphasizing theory and application, with attention to politics.

POLISCI 400. Dissertation. 1-18 Unit.
Pre-TGR dissertation research. Open to Poli Sci PhD students who have advanced to candidacy.

POLISCI 400C. Research Design. 5 Units.
This course is a research design practicum. Students are required to propose a research question that speaks to a consequential political issue, and one which can be successfully addressed relying on disciplinary tools. Over the quarter, they will be guided through the elements of research design (narrative, theory, and statistics). The final product will be a project description of the form demanded by the National Science Foundation for its research proposals. Required of all Political Science PhD students. Those not in the Ph.D. program in political science must get consent from the instructor to enroll.

POLISCI 410A. International Relations Theory, Part I. 3-5 Units.
This course offers a PhD-level introductory overview of the field of international relations. The primary purpose is to understand and evaluate the main theories, arguments, claims, and conjectures made by scholars in the field so as to enable students to situate arguments in the conceptual structure and intellectual history of IR theory.

POLISCI 410B. International Relations Theory, Part II. 3-5 Units.
Second of a three-part graduate sequence. Security and armed conflict, both interstate and civil war. Nuclear weapons, terrorism, political economy of defense, and related topics. Prerequisite: POLISCI 410A.

POLISCI 410C. International Relations Theory, Part III. 3-5 Units.
Third of a three-part graduate sequence. History of international relations theory, current debates, and applications to problems of international security and political economy. Prerequisite: POLISCI 410A.

POLISCI 410D. Research in International Relations. 3-5 Units.
Part of the graduate sequence in international relations. Focus is on developing research papers and exploring active areas of research in the field. Prerequisites: POLISCI 410A and 410B. 410C should be taken before or concurrently.

POLISCI 411A. Workshop in International Relations. 1-2 Unit.
For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.

POLISCI 411B. Workshop in International Relations. 1-2 Unit.
For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.

POLISCI 411C. Workshop in International Relations. 1-2 Unit.
For graduate students. Contemporary work. Organized around presentation of research by students and outside scholars. May be repeated for credit.

POLISCI 412. The Politics and Economics of Modern Europe. 3-5 Units.
What are the implications of European integration for social and economic policy and outcomes? In this course, we will examine how EU membership has altered the democratic politics of Europe, with a special focus on policymaking during Europe's most recent financial crisis.

POLISCI 420A. American Political Institutions. 3-5 Units.
Theories of American politics, focusing on Congress, the presidency, the bureaucracy, and the courts.

POLISCI 420B. Topics in American Political Behavior. 3-5 Units.
For graduate students with background in American politics embarking on their own research. Current research in American politics, emphasizing political behavior and public opinion. Possible topics: uncertainty and ambivalence in political attitudes, heterogeneity in public opinion, the structure of American political ideology, political learning, the media as a determinant of public opinion, and links between public opinion and public policy.

POLISCI 420C. Discovery in American Politics. 5 Units.
What are the facts being generated in the study of American politics, and how are these discoveries being made? Emphasis on strengths and limitationsnof emerging methodologies and review of the substantive contributions they yield. Student-led replication of extant research and development of originalnresearch ideas a key component of the course. Prerequisites: POLISCI 420A, POLISCI 420B.

POLISCI 421K. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.
The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.
Same as: COMM 339, PSYCH 231

POLISCI 421R. American Political Development, 1865-present. 3-5 Units.
In this reading-intensive course, we will conduct a wide-ranging survey of major transformations in the American political system in the post-Civil War period. Our inquiries about these transformations will focus on the origins of the modern administrative state, the interactive role of the state and social movements, and changes in the party system. We¿ll examine these developments not only to understand institutional change, but to learn how changing institutions have shaped the behavior of the American electorate.
Same as: POLISCI 221A

POLISCI 422. Workshop in American Politics. 1-2 Unit.
Research seminar. Frontiers in mass political behavior. Course may be repeated for credit.

POLISCI 422F. Seminar on Electoral Change. 3-5 Units.
This seminar will examine contemporary American and European public opinion and elections using a variety of databases, several of which have become newly available to scholars this decade (eg. YouGov/Polimetrix, ongoing FSI-Hoover Comparative Surveys). Department faculty will present research and some visitors will appear. Students will be expected to complete a significant research paper.

POLISCI 423A. The Laboratory of the Study of American Values. 1-5 Unit.
Designed for graduate students who are writing dissertations about American public opinion. Students participate in all phases of the research process and include questions on nationally representative surveys. Enrollment requires permission of the instructors. See the Notes for additional information.

POLISCI 423B. The Laboratory of the Study of American Values II. 1-5 Unit.
Designed for graduate students who are writing dissertations about American public opinion. Students participate in all phases of the research process and include questions on nationally representative surveys. Enrollment is limited to members of the Laboratory for the Study of American Values.

POLISCI 423C. The Laboratory of the Study of American Values III. 1-5 Unit.
Designed for graduate students who are writing dissertations about American public opinion. Students participate in all phases of the research process and include questions on nationally representative surveys. Enrollment is limited to members of the Laboratory for the Study of American Values.

POLISCI 424A. Democratic Elections. 3-5 Units.
How do democratic elections work? Do elections make representatives accountable, and if so, under what conditions? What preferences do electorates reveal to us when they choose candidates for office, and how do candidates and representatives respond to these preferences? What external factors change the dynamics between candidates and electorates?n n In this class we will study the functioning of democratic elections, mainly in the context of legislative elections. Because this is an elections course, the unit of analysis will be the constituency or the candidate rather than the individual voter, as it might be in a behavior course. We want to understand how candidates make it to office¿i.e., the aggregated choices of many voters¿and how the prospect of reelection shapes their behavior in office.

POLISCI 424C. Party Polarization. 3-5 Units.
This seminar surveys the literature on party polarization in the U.S and other industrialized democracies, considers alternative conceptualizations of polarization, and what is known about the causes and consequences of polarization.

POLISCI 425. Political Communication. 3-5 Units.
An overview of research in political communication with particular reference to work on the impact of the mass media on public opinion and voting behavior. Limited to Ph.D. students.
Same as: COMM 360G

POLISCI 425S. Topics in Political Communication: Media Bias, Selective Exposure, and Political Polarization. 1-5 Unit.
This course surveys theories of media bias, biased processing of information, and the empirical challenges facing researchers attempting to link changes in the composition of audiences to attitudinal and behavioral outcomes. (Limited to PhD students).
Same as: COMM 362

POLISCI 426. Identity Politics. 3-5 Units.
Whether one considers the partisan and electoral choices citizens make or the judgements citizens render in response to officer-involved shootings or other salient social and political events, the centrality of identity in our politics is indisputable. But what is an identity? What are the conditions under which identities become politicized? How do identities work to structure attitudes and affect behavior? This course is all about identity and its intersection with politics. Taking an interdisciplinary and cross-subfield approach, this course seeks to bring students into conversation with scholarship that demonstrates the powerful ways that identities influence all aspects of the political. Though much of our time will be spent reading about race and racial identification in the context of American politics, students will be encouraged to think critically and creatively about identity as it relates to their own intellectual interests. In addition to being active and engaged seminar participants, students will be required to submit a final research paper that uses concepts, themes, and ideas from the course to explore a research question of their choosing.

POLISCI 426S. Theories of Racism in American Politics: A Critique. 0 Units.
.

POLISCI 427C. Money in Politics. 3-5 Units.
This course will cover campaign finance, lobbying, and interest group politics.
Same as: POLISCI 227C

POLISCI 427R. Race and Racism in American Politics. 5 Units.
Topics include the historical conceptualization of race; whether and how racial animus reveals itself and the forms it might take; its role in the creation and maintenance of economic stratification; its effect on contemporary U.S. partisan and electoral politics; and policy making consequences.

POLISCI 428. Political Economy and Political Behavior. 4 Units.
[Same as POLECON 677] This seminar will expose students to cutting-edge research in political behavior and political economy published in the leading political science (and other social science) journals. The aim is for students to learn the contemporary literature so that they can be producers of research. To that end, the required assignments in the class will be aimed at professional development: writing an original research note, writing a review, and delivering a scholarly presentation.

POLISCI 428C. Law and Politics of Bureaucracy. 3-5 Units.
Same as Law 7096. Modern government is bureaucratic government. In the words of Justice Jackson, the rise of the administrative state is likely "the most significant legal trend of the last century and perhaps more values today are affected by [agency] decisions than by those of all the courts." This seminar will survey the major ways in which law and political science have grappled with bureaucratic governance. How do we understand the rise of the administrative state? Why are bureaucracies designed the way they are? How do bureaucracies work in the face of legal and political constraints? And what avenues are there for meaningful regulatory reform? The class is cross-listed in Political Science and the Law School and course enrollment will be by consent of instructor. Students will be responsible for writing short reflection papers and a research paper.
Same as: POLISCI 228C

POLISCI 430. Origins of Political Thought. 3-5 Units.
Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change. This course is open to PhD students only. Non-PhD students should enroll in POLISCI 230A/330A (also listed as CLASSICS 181/381, PHIL 176A/276A) Classical Seminar: Origins of Political Thought.
Same as: CLASSICS 390, PHIL 276D

POLISCI 430A. Ancient Greek Economic Development. 4-5 Units.
(Formerly CLASSHIS 330A.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.
Same as: CLASSICS 384A

POLISCI 430B. Ancient Greek Economic Development. 1-5 Unit.
(Formerly CLASSHIS 330B.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.
Same as: CLASSICS 384B

POLISCI 431L. Inequality: Economic and Philosophical Perspectives. 5 Units.
The nature of and problem of inequality is central to both economics and philosophy. Economists study the causes of inequality, design tools to measure it and track it over time, and examine its consequences. Philosophers are centrally concerned with the justification of inequality and the reasons why various types of inequality are or are not objectionable.nIn this class we bring both of these approaches together. Our class explores the different meanings of and measurements for understanding inequality, our best understandings of how much inequality there is, its causes, its consequences, and whether we ought to reduce it, and if so, how. nThis is an interdisciplinary graduate seminar. We propose some familiarity with basic ideas in economics and basic ideas in contemporary political philosophy; we will explain and learn about more complex ideas as we proceed. The class will be capped at 20 students.
Same as: ETHICSOC 371R, PHIL 371D

POLISCI 432R. Selections in Modern Political Thought. 3-5 Units.
This graduate-level seminar explores selections from the canon of Western political thought from the late fifteenth through nineteenth centuries. Throughout the course, we will engage in close textual readings of individual thinkers and consider some of the larger questions raised by political modernity. This offering will focus on American political thought from the Puritan era through the turn of the 20th century. We will pay special attention to dissenting voices and to texts that address the settler empire, slavery, and the color line. Thinkers covered will include: John Winthrop, Thomas Jefferson, James Madison, Alexander Hamilton, "Brutus," William Apess, Henry David Thoreau, John C. Calhoun, David Walker, Abraham Lincoln, Frederick Douglass, and W.E.B. Du Bois.
Same as: ETHICSOC 432X

POLISCI 433. Workshop in Political Theory. 1-2 Unit.
For graduate students. Faculty, guest speakers, and graduate students conducting research in political theory present works-in-progress. May be repeated for credit.

POLISCI 434A. Ethics, Economics and the Market. 4 Units.
Economic analysis inevitably raises moral questions. Getting clear on those moral questions, and the competing answers to them, can help improve both economic analysis and our understanding of the values involved in alternative social policies. This course focuses on a central economic institution: the market. How have the benefits and costs of using markets been understood? For example, it is often claimed that markets are good for welfare, but how is welfare to be understood? What is the connection between markets and different values such as equality and autonomy? What, if anything is wrong with markets in everything? Are there moral considerations that allow us to, distinguish different markets? This course examines competing answers to these questions, drawing on historical and contemporary literature. Readings include Adam Smith, JS Mill, Karl Marx, Michael Walzer, Dan Hausman and Michael McPherson and Debra Satz among others. For graduate students only.
Same as: ETHICSOC 303R, PHIL 375

POLISCI 435R. Political Realism. 3-5 Units.
This seminar will explore various articulations of political realism in their historical contexts. Realism is generally taken to be a pragmatic approach to a political world marked by the competition for material interests and the struggle for power. Yet beyond a shared critique of idealism and an insistence on the priority and autonomy of the political, realists tend to have very different normative visions and political projects. We will consider the works of several political realists from the history of political and international relations thought, including: Thucydides, Machiavelli, Hobbes, Carr, Niebuhr, and Morgenthau.
Same as: PHIL 372R

POLISCI 436R. Amartya Sen's capability theory. 2-4 Units.
Amartya Sen's pioneering work attempts to open up economics to missing informational and evaluative dimensions. This seminar will explore Sen's "capability approach" and its implications for the study of economics, gender, and justice. It will look at different ways that the capability approach has been developed, in particular, by Martha Nussbaum, but also by other political philosophers.
Same as: PHIL 378

POLISCI 437. Autonomy. 5 Units.
.

POLISCI 437C. 20th Century and Contemporary Political Theory. 3-5 Units.
This course provides a survey of some of the major contributions to political thought in the past century. The course will place special emphasis on the development of theories of political authority and legitimacy in the context of the modern bureaucratic state, as well as the connection between authority and other key concepts in normative political authority: democracy, justice, and freedom.

POLISCI 438R. The Greeks and the Rational: Deliberation, Strategy, and Choice in Ancient Greek Political Thought. 3-5 Units.
The course explores the role of practical reasoning (instrumental rationality) in the ethical-political works of e.g. Plato and Aristotle, in the historical-political projects of e.g. Herodotus and Thucydides, and in the design of classical Greek institutions. We ask to what degree ancient Greeks shared intuitions concerning the rationality of choice with contemporary decision and game theorists. The Greek tradition recognized the limits of expected utility maximization in predicting or explaining the actual behavior of individuals, groups, and states, and sought to explain divergences from predicted rational behavior. Greek social theorists may, therefore, also have shared some of the intuitions of contemporary behavioral economists. Topics will include individual rationality, rationality of groups and states, the origins of social order, emergence and persistence of monarchical and democratic regimes, conflict and cooperation in interstate relations, competition and cooperation in exchange. Examining the Greek tradition of thought on practical reasoning has some implications for we might think about deliberation and bargaining in contemporary democratic-political, interpersonal-ethical, and interstate contexts. PREREQUISITES: Students in the course are expected to have a background in EITHER classical studies (literature, history, or philosophy), OR Greek political thought (Origins of Political Thought or equivalent) OR in formal/positive political theory. Registration for undergraduates is with permission of instructor (email jober@stanford.edu).
Same as: CLASSICS 395, POLISCI 238R

POLISCI 440A. Theories in Comparative Politics. 3-5 Units.
Theories addressing major concerns in the comparative field including identity, order, regime type, legitimacy, and governance.

POLISCI 440B. Comparative Political Economy. 3-5 Units.
Required of Political Science Ph.D. students with comparative politics as a first or second concentration; others by consent of the instructor. The origins of political and economic institutions and their impact on long run outcomes for growth and democracy. Emphasis is on the analysis of causal models, hypothesis testing, and the quality of evidence.

POLISCI 440C. Methods in Comparative Politics. 5 Units.
Current methodological standards in comparative politics. Students develop their own research design that meets these standards.

POLISCI 440D. Workshop in Comparative Politics. 1-2 Unit.
Faculty, guest speakers, and graduate students conducting research in comparative politics present work-in-progress. May be repeated for credit.

POLISCI 441L. Grad Seminar on Middle Eastern Politics. 3-5 Units.
Survey of major topics in the study of Middle Eastern politics including state formation, authoritarian resilience and political Islam.

POLISCI 443S. Political Economy of Reform in China. 3-5 Units.
Content, process, and problems of China¿s post-Mao reforms. Changes in property rights, markets, credit, and the role of the state in economic development. Comparative insights about reform in the Chinese communist system that distinguishes it from the experience of regimes in E. Europe and the former Soviet Union.

POLISCI 443T. Approaches to Chinese Politics. 3-5 Units.
Major secondary literature on Chinese politics, involving the evolution of theoretical concepts and social scientific approaches characterizing the field. Subjects include changes made to defining fundamental issues of Chinese political theory, and the implications of shifts in research methods and analytical tools. Prerequisite: basic knowledge of politics of post-1949 China.

POLISCI 444. Comparative Political Economy: Advanced Industrial Societies. 3-5 Units.
Political economy approaches to key policy outcomes including redistribution, the size of government, fiscal behavior, and pork-barrel politics. Theories related to institutions, interest groups, and geography, focusing on middle- and upper-income countries.

POLISCI 444A. Authoritarian Politics. 3-5 Units.
This course offers a thematic approach to the study of authoritarian politics. We will cover the major areas of political science research on authoritarian politics and governance while simultaneously building empirical knowledge about the politics of particular authoritarian regimes. The course will also discuss transitions to democracy as well as authoritarian political tendencies within democratic contexts.
Same as: POLISCI 244A

POLISCI 445C. The Logics of Violence: Rebels, Criminal Groups and the State. 3-5 Units.
This course explore the logics of violence. The course offers an overview of the literature on civil wars as well as organized violence involving armed groups that do not seek formal state power, such as drug cartels, prison gangs, and paramilitaries. It also explores the many ways in which states engage in violence against their population through repression, torture, and murder.
Same as: POLISCI 245C

POLISCI 446A. Paths to the Modern World: The West in Comparative Perspective. 3-5 Units.
How and why did Europe develop political institutions that encouraged economic growth and industrialization? And why have many other regions lagged in the creation of growth-promoting institutions? This course uses a comparative approach to understanding routes to the modern world - the historical experiences of Christian Europe, the Islamic world, and others. We will explore questions including: When do parliaments emerge? How do cities promote growth? What is the role of religion?.
Same as: POLISCI 246A

POLISCI 446E. Seminar on Political Economy Experiments. 3-5 Units.
This seminar introduces recent experimental work in political economy and comparative politics. Instead of surveying research in this area broadly, we will work through a number of recent working papers. Each week we will have a guest speaker in the class whose work will be discussed by a team of students. The students will replicate, extend, and comment on the weekly paper. The first objective of the seminar is to develop an understanding of different elements of a field experiment. To this end, we will untangle project parts related to implementation, data collection, analysis, and writing. A typical weekly meeting will include the following: discussion on framing and contribution to literature, replication of the study material, and potential extensions of the analysis. We will also go through survey instruments and any other material made available by authors. A second objective is to introduce students to writing pre-analysis plans for their own research. Each student will be expected to prepare a detailed pre-analysis plan for a proposed experiment or quasi-experiment, and will have the opportunity to workshop this plan with the class towards the end of the quarter.

POLISCI 447. Gender and Development. 3-5 Units.
Gender remains an identity that defines structures of opportunity and representation in markets, society, and importantly in politics. This course studies how gender conditions experiences in political, economic, and social institutions. This seminar will pay special attention to the ways that patterns and processes of development have shaped gender inequality and will draw largely on evidence from low and middle-income countries. Specifically, we will study questions such as: Why do women in much of the world remain relatively underrepresented in formal andninformal institutions? What social, cultural, economic, and institutional factors reduce such gender inequality? How does gender inclusion shape development patterns and political outcomes?.

POLISCI 448R. Workshop: China Social Science. 1 Unit.
For Ph.D. students in the social sciences and history. Research on contemporary society and politics in the People's Republic of China. May be repeated for credit. Prerequisite: consent of instructor.
Same as: SOC 368W

POLISCI 450A. Political Methodology I: Regression. 3-5 Units.
Introduction to statistical research in political science, with a focus on linear regression. Teaches students how to apply multiple regression models as used in much of political science research. Also covers elements of probability and sampling theory.

POLISCI 450B. Political Methodology II: Causal Inference. 3-5 Units.
Survey of statistical methods for causal inference in political science research. Covers a variety of causal inference designs, including experiments, matching, regression, panel methods, difference-in-differences, synthetic control methods, instrumental variables, regression discontinuity designs, quantile regression, and bounds. Prerequisite: POLISCI 450A.

POLISCI 450C. Political Methodology III: Model-Based Inference. 3-5 Units.
Provides a survey of statistical tools for model-based inference in political science. Topics include generalized linear models for various data types and their extensions, such as discrete choice models, survival outcome models, mixed effects and multilevel models. Prerequisites: POLISCI 450A and POLISCI 450B.

POLISCI 450D. Political Methodology IV: Advanced Topics. 3-5 Units.
Covers advanced statistical tools that are useful for empirical research in political science. Possible topics include missing data, survey sampling and experimental designs for field research, machine learning, text mining, clustering, Bayesian methods, spatial statistics, and web scraping. Prerequisites: POLISCI 450A, POLISCI 450B and POLISCI 450C.

POLISCI 450X. Programming for Political Scientists. 1 Unit.
This one-unit course is designed to complement our core methods sequence. In this biweekly course, students will be introduced to programming concepts, ideas, and tools that will assist them in completing homework faster and help them to produce better, more clear, and more easily replicated code.

POLISCI 451. Design and Analysis of Experiments. 3-5 Units.
Political scientists increasingly rely on experimental methods. This course covers the principles and logic of experimental design as applied to laboratory, field and survey experiments. We discuss the strengths and limitations of experiments in relation to observational methods. Design considerations include randomization, the construction of treatments, the use of deception, the ethical implications of deception, and new developments in subject recruitment. Turning to the analysis of experimental data, we describe the methods for estimating treatment effects, interactions, and more complex indirect effects stemming from either mediator or moderator variables. We also cover appropriate data analytic strategies for quasi-experimental designs including interrupted time series, matching and propensity scores.

POLISCI 452. Machine Learning with Application to Text as Data. 3-5 Units.
Machine Learning methods are increasingly useful for the social sciences. This course introduces a framework for using machine learning methods to make social science inferences, with a particular focus on text as data. The course will explain how machine learning methods can be used to facilitate discovery, measure quantities of interest, and to make causal inferences and predictions. We will introduce a variety of methods for representing texts as quantitative data and then we will introduce a wide array of commonly used methods. Prerequisites are POLISCI 450A, 450B, and 450C.

POLISCI 460A. Political Economy I. 3-5 Units.
Introduction to empirical and theoretical research in political economy. This course focuses on issues in democracies, while Political Economy II focuses on issues in non-democracies. Topics may include institutional foundations, social choice, electoral competition and candidate positioning, accountability, voter behavior, polarization, media and political communication, redistribution, special interests and lobbying, collective action, immigration, and populism. Prerequisite for Econ PhD students: ECON 202 and 270 or permission of instructors. Prerequisites for Political Science PhD students: POLISCI 450A, POLISCI 450B, and POLISCI 356A.
Same as: ECON 220

POLISCI 460B. Political Economy II. 3-5 Units.
Continuation of ECON 220 / POLISCI 460A. Preparation for advanced research in political economy. This quarter will focus on topics related to culture, institutions, political and economic development, historical evolution, nondemocratic politics, conflict and cooperation. We will cover both empirical and theoretical work. Prerequisite for Political Science PhDnstudents: POLISCI 356A.
Same as: ECON 221

POLISCI 462. How to Write and Publish a Quantitative Political Science Paper. 3-5 Units.
This course helps students to write a publishable research paper in political science. We will focus on how to specify an important research question, how to identify appropriate research methods to answer that question, how to present evidence effectively, and how to navigate the publication process. Students will be expected to produce a completed research paper of publishable quality by the end of the quarter.

POLISCI 464. Survey Design and Implementation. 3-5 Units.
Surveys are one of the most important sources of data for political scientists and their design and implementation is therefore a critical component of a political scientist's tool kit. This course provides an overview of the tools needed to design and implement survey research. In addition, this course will expose students to canonical and cutting-edge applications of survey research in the study of political behavior and public opinion. This course aims to interweave the methodological and the practical, preparing students to implement their own survey-based research projects while also engaging with the core political science research questions answered through survey research. The course will cover methodological issues such sources of bias, measurement theory and questionnaire design, sampling and non-response, and modes of data collection alongside practical issues such as field research and in-person data collection challenges, web-based data collection challenges, interviewer hiring, and data quality control measures. Over the quarter, students will develop a research design using survey research methods, including designing their own survey questionnaire and implementation plan.

POLISCI 474. Design and Analysis of Surveys. 1-5 Unit.
.

POLISCI 480. The Science of Politics: Foundational Concepts for Political Science Graduate Students. 2 Units.
This class is an introduction to the different ways that social scientists have proposed to understand politics. The emphasis is on understanding how the way a question is posed structures the way it can be answered, and how the way it can be answered structures the results that can be obtained.

POLISCI 482A. Political Science Departmental Workshop. 1-2 Unit.
The Political Science Departmental Workshop provides a forum for graduate students and faculty involved in political science research to engage with the core themes and questions of research across the discipline. Meetings will include presentations by Stanford graduate students and faculty of work "in progress" across all political science sub-disciplines. The aim of the workshop is for participants to gain a better understanding of the key questions that unite political scientists and learn about cutting-edge research.

POLISCI 482B. Political Science Guest Speaker Workshop. 1-2 Unit. The workshop brings in a distinguished speaker from outside the department each week, focusing on the sub-fields of international relations, comparative politics, American politics, and political methodology. The workshop will give participants a broad overview of cutting-edge theoretical and empirical research being carried out in political science and related fields. Visiting speakers will include both recent PhDs and senior scholars. Students will have the opportunity to follow up and have individual meetings with speakers working on related research topics.

POLISCI 801. TGR Project. 0 Units.

.

POLISCI 802. TGR Dissertation. 0 Units.

.

PSYCHOLOGY

Courses offered by the Department of Psychology are listed under the subject code PSYCH on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PSYCH&filter-catalognumber-PSYCH=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PSYCH&filter-catalognumber-PSYCH=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PSYCH&filter-catalognumber-PSYCH=on).

The department, housed in Jordan Hall, maintains many computer-equipped laboratories and the Stanford Center for Cognitive and Neurobiological Imaging (CNI). Bing Nursery School, located on campus at 850 Escondido Road, provides a laboratory for child observation, training in nursery school teaching, and research. It was constructed with funding from the National Science Foundation and a special grant from Mrs. Anna Bing Arnold and Dr. Peter Bing.

The department provides

- courses designed for the general student
- a major program leading to the degree of Bachelor of Arts, including options for honors and a specialization in one of four content area tracks
- an undergraduate minor program
- programs of graduate study and research leading to the degree of Doctor of Philosophy
- a Ph.D. minor

Applications are not accepted for the master's degree except as noted below.

Mission of the Undergraduate Program in Psychology

The mission of the undergraduate program in Psychology is to introduce students to the theories and empirical studies of human behavior. This includes the study of aging, achievement, child development, cognitive processes, conflict, culture, decision making, emotion, group behavior, health, identity, infancy, language, learning and memory, morality, motivation, personality, psychopathology, race, self, social perception, visual perception, and other related topics. The major provides students with knowledge and skills relevant to professional careers in technology, business, counseling, education, public policy, law, and medicine, as well as graduate studies in Psychology.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an understanding of core knowledge within the discipline of psychology including relevant theory and research.
2. the ability to analyze a problem correctly using discipline specific methodology.
3. the ability to draw sound inferences and conclusions from data.
4. the ability to write and communicate ideas clearly.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Psychology and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization. The master's program is available only to Ph.D. students in Psychology and, under special circumstances, students enrolled in other graduate programs offered through the University.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Psychology. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Psychology and to disseminate this knowledge.

Bachelor of Arts in Psychology

Major Requirements

Students declaring a major in Psychology must complete a minimum of 70 units of course work in Psychology, 60 of which must be taken in the Psychology department. The remaining 10 units can be taken outside of the Psychology department but must be approved by the student services office or faculty adviser. These courses should represent a coherent thematic focus. One way to achieve this focus is through a field of study. Courses taken to satisfy the 70-unit requirement must be taken for a grade of C- or better (except for courses offered only on a satisfactory/no credit basis). Majors must take PSYCH 1 Introduction to Psychology, and PSYCH 10 Introduction to Statistical Methods: Precalculus. Advanced placement (AP) credit may not be used toward the Psychology major requirements. Beyond these two required courses, students must complete at least five of the following eleven core Psychology courses, with a minimum of two from each area A and B:

		Units
Area A		
PSYCH 30	Introduction to Perception	4
PSYCH 35	Minds and Machines	4
PSYCH 45	Introduction to Learning and Memory	3
PSYCH 50	Introduction to Cognitive Neuroscience	4
Area B		
PSYCH 60	Introduction to Developmental Psychology	3
PSYCH 70	Self and Society: Introduction to Social Psychology	4
PSYCH 75	Introduction to Cultural Psychology	5
PSYCH 80	Introduction to Personality and Affective Science	3
PSYCH 90	INTRODUCTION TO CLINICAL PSYCHOLOGY: A NEUROSCIENCE PERSPECTIVE	3
PSYCH 95	Introduction to Abnormal Psychology	3

Students must take one Writing in the Major (WIM) course in Psychology, and should check the Stanford Bulletin yearly as these courses may change. The department also strongly recommends that all majors take at least one advanced seminar.

Students may count up to 10 units of research, independent study, and practica (including but not limited to PSYCH 194 Reading and Special Work, PSYCH 195 Special Laboratory Projects, PSYCH 281 Practicum in Teaching) toward the Psychology major. Students who are teaching assistants for a Psychology course or are enrolled in the senior honors program are allowed up to 15 units in independent study and research. Any units beyond the limit of 10 or 15 may be counted toward the 180 units required for graduation.

Students who are double majoring or completing a minor degree in another department may not overlap (double-count) courses, unless the overlapping courses constitute introductory skill requirements, such as

PSYCH 10 Introduction to Statistical Methods: Precalculus. Consult the student services office for further clarification.

Summer Quarter Psychology courses are not equivalent to courses given during the regular academic year and, while applicable toward the 70 units needed for the major, may not be used to fulfill core course requirements. Therefore, PSYCH 1, PSYCH 10, and the Area A and B courses cannot be taken during Summer Quarter to fulfill the major requirements. Additionally, a course taken during the Summer Quarter cannot be used to replace the grade of a non-Summer Quarter course, even if the title and units of the two courses are the same.

Beyond the Minimal Requirements

The following recommendations may be helpful to students who wish to plan a program that goes beyond the minimal requirements listed above:

1. Within the general major, the student may take advanced undergraduate or graduate courses (although some require the consent of the instructor), including seminars. The student may also take advantage of widespread opportunities for directed research, working closely with individual faculty and graduate students.
2. The student may apply to the senior honors program, described below.

The training obtained from the pursuit of any of these options is valuable not only for students considering graduate work in Psychology, but also for those thinking of professional careers outside of Psychology in fields such as technology, business, counseling, education, law, public policy or medicine.

Credit from Outside the Department

Psychology majors must complete at least 60 units of course work toward their major at Stanford within the Psychology department. Psychology majors may count no more than a total of 10 units credit from outside the department toward the major. Both majors and minors, under extenuating circumstances, may use one course from outside the department to fulfill core course requirements. Additional courses may be used to fulfill the 70-unit major requirement, but may not be counted as core courses. Please see the student services office for further clarification.

Petition for transfer of credit is rarely granted. In cases where petitioning is necessary, there are two types of credit from outside the department: external transfer credit for courses taken at institutions other than Stanford and credit for courses in other Stanford departments. A student must have already declared Psychology as a major or minor in order to submit a petition for transfer credit. Stanford credit for courses completed at other institutions must have been granted by the External Credit Evaluation section of the Registrar's Office; those units may be applied toward the 180 units required for graduation. To have credit from outside the department evaluated to fulfill requirements toward the Psychology major or minor, students must complete an Undergraduate Petition form, available from the student services office, and submit it with a course syllabus. Students requesting external transfer credit must also submit a copy of the signed transcript from the External Credit Evaluation section of the Registrar's Office showing the number of Stanford units granted for the course. The Psychology department then evaluates external credit courses and courses from other Stanford departments to determine if they can be applied toward Psychology major or minor requirements.

Specialization Tracks

The specialization tracks in Cognitive Sciences, Health and Development, Mind, Culture, and Society, and Neuroscience are retired as of 9/1/20. Students who had declared a track before 9/1/20 will be able to complete and graduate with the specialization track. Requirements for the specialization tracks can be found on the Psychology website.

Honors Program

The senior honors program is designed for exceptional Psychology majors who wish to pursue a year of intensive supervised independent research. Admission to the program is made at the end of the student's junior year on the basis of:

- excellent academic performance
- previous research experience
- two letters of recommendation by faculty and/or graduate students

Applications are available in April and are to be submitted to the department's student services office with a current transcript and recommendations prior to the student's senior year.

Students interested in the program should involve themselves in research as early as possible and should acquire a broad general background in Psychology, including statistics, and a deep background in their chosen area. Typically, students work in their honor thesis adviser's lab for at least one quarter. The honors program is particularly appropriate for students planning to go to graduate school in Psychology or in other social sciences, as well as in computer science, business, counseling education, law, public policy and medicine.

During Autumn Quarter of their senior year, honors program students participate in a weekly seminar and meet with their advisers to develop their experimental program and begin data collection. Winter and Spring Quarters are devoted to completing the research, analyzing the data, and writing the thesis, which is submitted mid-May. Students give oral presentations of their projects at the annual Honors Convention. This convention is attended by undergraduates, graduate students, and faculty.

Advising

Psychology supports a multiple mentorship model for advising majors. Within the department, students have the following advisers:

- Faculty major adviser
- Student services officer
- Peer advisers

Psychology Department advising is supplemented by support from Undergraduate Advising and Research Academic Advising Directors, the Residential Education dormitory staff, and many other potential advisers. We encourage our students to reach out to advisers from across the University to develop a robust support network.

Minor in Psychology

Declaration

Students who wish to declare a minor field of concentration in Psychology must do so no later than the deadline for their application to graduate.

Degree Requirements

Completion of a minimum of 35 units in Psychology is required for the minor, including PSYCH 1 Introduction to Psychology and PSYCH 10 Introduction to Statistical Methods: Precalculus, or a comparable statistics course. Advanced placement (AP) credit may not be used towards the Psychology minor.

The minor must include three of ten core courses with a minimum of one from each of two areas and elective Psychology courses of at least three units each, totaling 35 units:

		Units
Area A		
Select a minimum of one of the following:		
PSYCH 30	Introduction to Perception	
PSYCH 35	Minds and Machines	
PSYCH 45	Introduction to Learning and Memory	
PSYCH 50	Introduction to Cognitive Neuroscience	
Area B		
Select a minimum of one of the following:		
PSYCH 60	Introduction to Developmental Psychology	
PSYCH 70	Self and Society: Introduction to Social Psychology	
PSYCH 75	Introduction to Cultural Psychology	
PSYCH 80	Introduction to Personality and Affective Science	
PSYCH 90	INTRODUCTION TO CLINICAL PSYCHOLOGY: A NEUROSCIENCE PERSPECTIVE	
PSYCH 95	Introduction to Abnormal Psychology	
Elective Psychology Courses		

Independent study, research, and practica cannot be counted toward the minor. Summer Quarter Psychology courses are not applicable toward the 35 units needed for the minor.

All courses used to fulfill the requirements of the minor must be passed with a grade of 'C-' or better, except for courses offered only on a satisfactory/no credit basis.

Master of Arts in Psychology

Degree Eligibility

The Department of Psychology does not offer a terminal master's degree. Only currently enrolled Stanford doctoral students (Ph.D., M.D., or J.D.) are eligible to apply for the M.A. in Psychology.

Degree Requirements

- Completion of 45 units of graduate level Psychology courses
- A maximum of 18 units may be from lab courses, independent study, outside units, and practica (e.g., 222, 258, 269, 281, 297, 282, 290)
- Successful completion of the First Year Project (FYP) or equivalent master's thesis

Of the 45 units of Psychology courses, Master's students must complete 4 Core Courses and 2 Statistical Methods Courses as outlined below. These are the same Core Course and Quantitative Methods Course requirements that the Department sets for the Ph.D. students.

Core Course Requirement

Students are required to take four core courses, each course from a different area of the Psychology department: Affective Science, Cognitive Science, Developmental Psychology, Neuroscience, and Social Psychology, as listed below. All core courses must be taken for a letter grade, for 3 units, and passed with a grade of 'B-' or better.

Consistent with the program's goal of fostering breadth and engagement across all areas of the department, students are encouraged to take all five core courses spanning the five areas of the department. If a student takes five core courses, the units and grade of the fifth course are counted towards the student's advanced units.

		Units
PSYCH 202	Cognitive Neuroscience	3
PSYCH 205	Foundations of Cognition	3
PSYCH 211	Developmental Psychology	3
PSYCH 212	Classic and contemporary social psychology research	1-3
or PSYCH 215	Mind, Culture, and Society	
PSYCH 213	Affective Science	3

Students may be required by their advisors to take up to two additional graduate courses in their area of specialization. In these cases, the additional courses are counted towards the advanced units requirement as described below. Students should consult with their advisor about any additional requirements in their area of specialization.

Quantitative Methods Course Requirement

Students are required to take two of the following Quantitative Methods courses:

		Units
PSYCH 251	Experimental Methods	3
PSYCH 252	Statistical Methods for Behavioral and Social Sciences	5
PSYCH 253	Advanced Statistical Modeling	3

Quantitative methods courses must be taken for a letter grade and passed with a grade of 'B-' or better.

Policy and Process for Current Psychology Ph.D. students

Graduate students who are already enrolled in the Psychology Ph.D. program and who have completed (a) the first-year and second-year course requirements; and (b) at least 45 units of Psychology courses may apply for conferral of the M.A. degree. This application should be discussed with the Student Services Manager.

Students who are currently enrolled in a Stanford Ph.D. or professional program in another Department may be granted a Master of Arts in Psychology. In such cases, admission to the M.A. is considered by the faculty on a case-by-case basis. An admitted student must complete at least 45 units of Psychology courses and possibly other research or course requirements as determined by the faculty. Interested applicants should consult with the Student Services Manager, Emily Fay (ecfay@stanford.edu).

All applicants must satisfy University residency requirements for the degree and are responsible for consulting with their primary departments or the Financial Aid Office about the effects of the proposed program on their current funding.

Please note: The Department of Psychology does not offer terminal M.A. degrees for students who are not already pursuing another advanced degree at Stanford.

How to apply for the Psychology M.A.: Current Psychology Ph.D. Students

1. Fill out the application form and obtain your advisor's signature.
2. Submit the completed application form to the Psychology Student Services Manager, who will obtain the Department Chair's signature.
3. Submit a request for the Master's Degree via Axess. In the Student Center tab, select "Petitions and Forms."
4. Enter your payment and select "Apply to Graduate" in Axess (make sure to select the Master's, not Ph.D.).
5. Psychology's Student Services Office will approve your request in Axess.

Policy and Procedures for External Students Requesting to Pursue a Master of Arts in Psychology

Graduate students from other Stanford departments/graduate programs may choose to request the opportunity to pursue a Master's of Arts in Psychology. They are eligible if:

- They are Ph.D., JD, or MD students in another Stanford department/graduate program AND
- They have secured a Psychology faculty sponsor who agrees to serve as their Master's research advisor.

Requirements

The requirements for the M.A. are the same for internal (Psychology Ph.D. program) and external (non-Psychology Ph.D. program) students. However, for external students, the M.A. coursework and thesis must be in addition to the coursework and milestone documents they are using towards their primary Ph.D. In other words, a student may not use the same course to count towards the unit or content requirements of both degrees; the student must choose which courses count for which degree. Note that students are still bound to the Ph.D. course load cap of 10 units per quarter. Students may count the Psych M.A. course units towards the requirement to complete 135 units in residence for a Ph.D. (a University requirement), but not towards specific Department/program-level Ph.D. requirements.

If a student requests permission to waive a particular core or methods course requirement (e.g., PSYCH 252) due to overlapping course content with their Ph.D. coursework, the student must petition the Psychology Graduate Program Committee. If this petition is granted, the student must still complete 45 units of Psychology coursework, of which a maximum of 18 can be labs/practica/research units. Waiving a course requirement simply means the student replaces the waived course with a different psychology course.

An external student's Master's Thesis cannot overlap with any similar milestone documents that count towards their primary Ph.D. For an external student, a successful Master's Thesis is a report on a research project in Psychology that is done during the first two years of their Master's studies. Typically, the thesis is written in the format of a scientific paper including the following sections (i) an introduction describing the background and theoretical context, (ii) a methods section describing the experimental paradigm, (ii) results detailing experiment outcomes with the appropriate data analyses, statistical analyses, figures, and/or tables, (iv) discussion, and (v) references. Both the primary advisor in the Psychology department and a second reader (must be a Stanford Academic Council member) will read and give the student feedback on their Master's Thesis, and the student must pass a 1-hour thesis defense at which the work is presented to the advisor and reader.

Process

A successful external M.A. recipient goes through the following steps:

1. The potential student secures a Psychology faculty research mentor who supports the addition of the M.A.; have an initial meeting with the Student Services Manager to review the program and set expectations.
2. The potential student submits an application to the Student Services Manager. This application is composed of the following materials: Statement of Purpose, CV, Letter of support from primary advisor(s) in home department
3. The Student Service Manager collates the application and submits to the area faculty for review.
4. If the area faculty approve, the Student Services Manager confirms Department approval with the student and records the student's commitment to pursue a M.A. Note: the student does not formally add the Psych M.A. program plan in Axess at this time.
5. The student pursues the M.A. coursework and research under the consultation of the M.A. advisor. The Student Services Manager is available for logistical advising.
6. The student completes the coursework and submits a M.A. Thesis. The Thesis is submitted via email to the Psychology M.A. advisor and secondary reader, cc'ing the Psychology Student Services Manager.
7. The M.A. Thesis is defended in a presentation to the primary advisor and second reader, and the Thesis is reviewed and approved by both the primary advisor in the Psychology and the second reader.
8. The student submits the M.A. form, formally matriculates, and the M.A. degree is available in the system for the student to confer.

As with internal M.A. students, external M.A. students matriculate into the M.A. at the end of the program. This ensures that if a student opts not to complete the M.A., we do not need to process a formal withdrawal or dismissal from the M.A. program.

Funding

The Department does not provide funding for external M.A. students. If a faculty mentor wishes to engage an external M.A. student as an RA, the faculty must provide the funds.

Doctor of Philosophy in Psychology

There are no specific course requirements for admission to the doctoral program. Nevertheless, an applicant should have prior research experience, as well as the equivalent of a bachelor's degree. The Department of Psychology does not require the GRE for admission. The major focus of the doctoral program is on research training, and admission is highly selective.

General University requirements for the Ph.D. are described in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin.

In addition to fulfilling Stanford University requirements for the degree, the following departmental requirements are stipulated.

The Doctoral Training Program

A student typically concentrates in one of several areas within Psychology. Across all areas, the training program emphasizes the development of research competence, and students are encouraged to develop skills and attitudes that are appropriate to a career of continuing research productivity.

Two kinds of experience are necessary for this purpose. One is the learning of substantial amounts of theoretical, empirical, computational, and methods information. A number of courses and seminars are provided to assist in this learning, and students are expected to construct a program in consultation with their advisor(s) to obtain this knowledge in the most stimulating and economical fashion.

A second aspect of training is one that cannot be gained from the courses or seminars. This is first-hand knowledge of, and practical experience with, the methods of psychological investigation and study. Therefore, students are expected to spend half of their time on research and to take no more than 10 units of course work per quarter, beginning in the first quarter.

Students achieve competence in unique ways and at different rates. Students and advisors work together to plan a program leading to the objectives discussed above. For further information, contact the student services manager and refer to the Department Graduate Guide available on the Psychology Department web site (https://psychology.stanford.edu/academics/phd-program/).

Courses

Ideals

The Stanford Psychology Department values a shared appreciation of the full range of approaches and research questions spanned by the five areas of the department. The department seeks to train scientists who are well prepared to pursue careers that build on their training in any one of these areas and who can interact with researchers in other fields of Psychology. Therefore, students within each area of the department are expected to construct a program of study in consultation with their primary advisor that includes exposure to other areas in the department while also achieving sufficient depth within their own area of specialization to prepare them for their next career stage after graduating.

Requirements

Professional Seminar Requirement

During the first quarter of graduate study, students are required to take PSYCH 207 Professional Seminar for First-Year Ph.D. Graduate Students.

Core Course Requirement

Students are required to take four core courses, each course from a different area of the Psychology department: Affective Science, Cognitive Science, Developmental Psychology, Neuroscience, and Social Psychology, as listed below. All core courses must be taken for a letter grade, for 3 units, and passed with a grade of 'B-' or better. Students are expected to complete four core courses by the end of the third year.

Consistent with the program's goal of fostering breadth and engagement across all areas of the department, students are encouraged to take all five core courses spanning the five areas of the department. If a student takes five core courses, the units and grade of the fifth course are counted towards the student's advanced units.

		Units
PSYCH 202	Cognitive Neuroscience	3
PSYCH 205	Foundations of Cognition	3
PSYCH 211	Developmental Psychology	3
PSYCH 212	Classic and contemporary social psychology research	1-3
or PSYCH 215	Mind, Culture, and Society	
PSYCH 213	Affective Science	3

Students may be required by their advisors to take up to two additional graduate courses in their area of specialization. In these cases, the additional courses are counted towards the advanced units requirement as described below. Students should consult with their advisor about any additional requirements in their area of specialization.

Quantitative Methods Course Requirement

Students are required to take two of the following Quantitative Methods courses:

		Units
PSYCH 251	Experimental Methods	3
PSYCH 252	Statistical Methods for Behavioral and Social Sciences	5
PSYCH 253	Advanced Statistical Modeling	3

At least one of these courses must be taken in the first year, and both should be completed by the end of the second year. Quantitative methods courses must be taken for a letter grade and passed with a grade of 'B-' or better.

In the case that a student has already taken similar graduate-level coursework, with the consent of the advisor, the student may petition to substitute an alternative course for one of the two required courses; for example, to take 252 and 253 but not 251, or to take 251 and another upper-division statistics course. Petitions must be submitted to the department's student services office and approved by the department's Director of Graduate Studies (DGS).

Students who did not take an undergraduate course in statistics should take PSYCH 10 (STATS 60) in the earliest possible quarter within the first year; this is a prerequisite to any graduate statistics course.

Advanced Units or Ph.D. Minor Requirement

Students must complete 12 units of advanced graduate course work, referred to as advanced units (AU). Students earn AU by taking: (a) non-core graduate psychology courses; and/or, (b) graduate-level courses in other departments comparable in quality to graduate courses offered by the Psychology Department. If there is any question about comparability of courses, the student should consult the advisor, student services, and, in some cases, the graduate program committee chair before taking the course.

Courses taken for a letter grade must receive a grade of 'B-' or better to count towards the advanced units requirement. Students may request to count up to 3 units of undergraduate-level coursework towards the AU requirement. The advisor should support the request and the undergraduate course must be substantive and relevant to the student's graduate research. Requests to count undergraduate-level coursework must be submitted to the student services manager and may be adjudicated by the Director of Graduate Studies and/or the Graduate Program Committee.

A student may choose to complete a Ph.D. minor in another department in lieu of the advanced units requirement. Students who choose to pursue a minor should register this decision with the student services manager.

Advanced units and/or Ph.D. minors must be completed by the end of fourth year. It is the department's expectation that all decisions related to the AUs or the Ph.D. minor are made in close consultation with the student's advisor.

Research

Ideals

The goals of the graduate program in the Stanford Psychology Department are twofold. First, it aims to develop researchers who are expert scholars in the area of their dissertation. The program expect graduates to be fluent in theoretical foundations and debates, empirical findings, and methods of their respective fields. Second, it aims to guide and foster students' development of an original research program that significantly advances knowledge in their field of specialization. Therefore, the research requirements, implemented in a series of milestones, are intended to help students obtain the necessary research experience, receive expert and constructive feedback from their primary advisor(s) and their committee, and ensure successful completion of their dissertation research at the end of the program.

Requirements

Students are expected to spend at least half of their time engaged in research from the beginning of the first year of graduate study to the completion of the Ph.D., taking no more than 10 units of course work each quarter.

First Year Project (FYP)

At the end of their first year of graduate study, students must submit a written report of their first-year research activities, called the First Year Project (FYP). This report should resemble a journal article in their area. It is written in consultation with their advisor. The FYP proposal is due at the end of Autumn Quarter. The final FYP is due on June 1 of the first year. First-year students must also work with their advisor to identify a second FYP reader (another Psychology faculty member) by the end of October in Autumn Quarter of the first year. Both the advisor and the second FYP reader are expected to read the FYP and provide the student

with constructive feedback. It is recommended that students meet with their FYP readers in the summer of the first year to receive feedback.

Dissertation Reading Committee
Students are expected to form a research committee, which must include the dissertation reading committee, before initiating their dissertation research. The research committee includes the dissertation advisor and at least two additional faculty members, for a total of three members, at least two of whom should have primary appointments in the Psychology Department. For University guidelines for the composition of the dissertation reading committee, see the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin.

Students are required to form the committee and submit the Dissertation Reading Committee form to the student services manager by February 1 of third year.

Third Year Committee Meeting and Research Plan
Students are required to meet with their committee annually beginning in their third year. For the annual committee meetings, if a member of the student's regular committee is unavailable (e.g., on sabbatical), the student should recruit another member of the department faculty to attend instead.

In the third year, students are required to meet with their committee in Winter or Spring Quarter, no later than June 1. At least two weeks prior to this meeting, students must submit a 1-2 page research plan to the committee.

Research Plan
The third-year research plan, which is submitted to the committee, is a short (1-2 page) document containing a brief overview of the experiments that have been completed and the planned experiments. The research plan is due in Winter or Spring Quarter of the third year and no later than two weeks before the committee meeting.

Third-Year Committee Meeting
The goal of the third-year committee meeting is for students to present their planned research and preliminary data, as well as for the faculty to give students feedback on their research plan, feasibility, and progress. During the third-year committee meeting, students present and discuss with the committee:

- Background and hypothesis being tested
- Experiments and methods
- Preliminary results
- Potential outcomes as well as pitfalls

After the committee meeting, students should submit the research plan to the student services manager and report the date that the committee meeting took place.

Fourth-Year Committee Meeting and Research Plan
In the fourth year, students are required to meet with their committee in the Autumn or Winter Quarter. At least two weeks before the meeting, they must submit their Area Review and Research Roadmap (ARRR) to their committee.

Area Review and Research Roadmap (ARRR):
This document has two parts:

1. *Area Review:* A manuscript written in a format of a review paper that summarizes current theories, debates, and empirical work in the area of the dissertation, which ultimately leads to the open questions that will be answered in the dissertation. The goal of writing this document is to enable the students to organize and develop scholarly knowledge relevant to their dissertation research. This document could serve as the basis for the introduction to the dissertation and/or a basis for a review paper. The department expects that this section will be the bulk of the ARRR. It expects students to consult with their advisor on the scope of this document, and to receive feedback from their committee during the fourth-year meeting.
2. *Research Roadmap:* This section is short (1-2 pages) and contains a brief overview of the experiments that will be part of the dissertation. Given that this document is written during the fourth year, it is expected that some of the experiments have been completed, while others are planned/ongoing.

Fourth-Year Committee Meeting
The goal of the fourth-year committee meeting is for students to present their research progress and receive feedback from the committee members on the ARRR. The department expects the presentation to start with a review of the relevant work, but focus on the research progress. During the meeting, students present and discuss with the committee:

- Background and hypothesis being tests
- Experiments and methods
- Current Results
- Planned experiments towards dissertation completion

After the committee meeting, students should submit the ARRR to the student services manager and report the date that the committee meeting took place.

Note: students who were admitted prior to 2018-19 may choose to use the prior milestone documents (the Dissertation Proposal and Conceptual Analysis of Dissertation Area) instead of the ARRR. This decision should be registered with the student services manager. Refer to the Stanford Bulletin from your entering year for details about these prior requirements.

Fifth-Year Committee Meeting and Beyond
The department expects that students complete their Oral Exam by the end of the fifth year. Thus, typically the Oral Exam replaces the fifth-year committee meeting. However, if a student defers the Oral Exam, the student is expected to meet with his/her committee before June 1 of the fifth year to give an update on ongoing research progress and receive feedback. The same applies for sixth year, and so on. After each committee meeting, students should report to the student services manager the date on which the committee meeting took place.

Oral Examination
In the Department of Psychology, the Oral Examination takes the form of a dissertation defense. A 5-member committee is formed to review the oral examination. This committee includes the dissertation reading committee, an additional faculty member, and one oral examination committee chair from outside the Psychology department.

The oral examination consists of a 45-minute public presentation to the department of the completed dissertation research, followed by a 10-15 minute period of open questions and answers. Parents and friends are welcome to attend. Following the presentation, the student and the committee convene for a closed part of the oral exam in which each of the committee members asks the Ph.D. candidate questions regarding his/her Ph.D. research. After the closed session, the candidate leaves the room and the committee discusses the outcome of the exam and members anonymously vote whether the candidate passed the oral exam. The total duration of both parts of the oral examination should be less than 3 hours, per University policy.

Dissertation
Per University policy, the candidate must complete a dissertation satisfactory to the dissertation reading committee. Typically, the candidate will submit the dissertation to the reading committee 2 weeks prior to the oral examination. Minor revisions to formatting may be made after the oral examination. It is allowable by University policy to have a single additional writing quarter after the defense to finalize the

dissertation. The dissertation must be approved and signed by each member of the dissertation reading committee.

Students must complete their oral examination and submit their dissertation before their candidate status expires at the end of the 7th year (per University policy, candidacy status is granted at the end of year 2, and students have 5 years of candidacy in which to complete all requirements). See the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin for more information. The Department will review petitions for a longer candidacy period on a case-by-case basis.

Teaching Requirement

The department views experience in supervised teaching as an integral part of its graduate program. Regardless of the source of their financial support, all students spend are required to participate in at least 5 quarters of teaching experience during their graduate study.

Of these 5 teaching quarters, students are required to apply for 2 of the quarters providing teaching support to a service course, either 2 quarters of PSYCH 1 Introduction to Psychology or 2 quarters of a core statistics course: PSYCH 10 Introduction to Statistical Methods: Precalculus, PSYCH 251 Experimental Methods, PSYCH 252 Statistical Methods for Behavioral and Social Sciences, and/or PSYCH 253 Advanced Statistical Modeling. Students report if they prefer the PSYCH 1 path or the stats path (or neutral) in their first year.

		Units
PSYCH 1	Introduction to Psychology	5
PSYCH 10	Introduction to Statistical Methods: Precalculus	3-5
or PSYCH 251	Experimental Methods	
or PSYCH 252	Statistical Methods for Behavioral and Social Sciences	
or PSYCH 253	Advanced Statistical Modeling	

Students are prohibited from teaching during the first year of graduate study. Students typically progress from closely supervised teaching to more independent teaching. Some students may be invited to offer a supervised, but essentially independent, seminar during their final year of graduate study.

Individual Development Plan

The Department of Psychology is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, the advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

In order to meet these advising goals, each student is required to complete an annual Individual Development Plan (IDP) and have at least one meeting with the advisor during the academic year to discuss the IDP. The purpose of the annual IDP meeting is to provide an opportunity to discuss the big picture of the student's progress over the past year as well as goals for the future. To help the IDP, prior to the meeting the student completes a form that promotes self-reflection and self-evaluation, and helps structure the discussion topics with the advisor. During the IDP meeting the student brings his or her current CV and discuss with the advisor current progress and future goals. During the meeting the student and their advisor develops an action plan for the subsequent year; both keep a copy of this plan.

For details about the IDP forms and process, please visit the Psychology Department website's Ph.D. Program Requirements page (https://psychology.stanford.edu/academics/phd-program/phd-degree-requirements/#Individual%20Development%20Plan). The IDP meeting must take place before June 1 of each year. It is the student's responsibility to report when the meeting has occurred to the student services manager.

Student Evaluations

It is the department's policy for the full faculty to evaluate the progress of each graduate student at the end of Spring Quarter. Traditionally, this meeting is scheduled for the Thursday before Commencement, although this may vary slightly from year to year. The end-of-year evaluation is primarily based on three factors:

1. Quality of research
2. Performance in courses (especially required courses)
3. Recommendations of the advisor (including a commitment on the part of that advisor to continue in that role)

Students who are not making satisfactory progress may be dropped from the program within the policies set forth by the University Senate in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin.

Advancement to Candidacy

During this annual evaluation, second-year students are reviewed for advancement to candidacy. Per University policy, admission to candidacy for the doctoral degree is a judgment by the faculty in the department or school of the student's potential to successfully complete the requirements of the degree program. Further details about candidacy status can be found the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin. By the end of the second year, students are expected to have completed the First Year Project, the required statistics courses, and several other courses from either the Core Course or Advanced Units requirement in order for the faculty to make a clear evaluation of their potential for candidacy.

When students are advanced to candidacy, the student must submit the application for candidacy form (signed by the advisor) to the Student Services Manager by September 1.

Ph.D. Minor in Psychology

Candidates for the Ph.D. degree in other departments may elect to take a minor in Psychology. To obtain a minor, the student must complete 20 units of course work at the graduate level in the Department of Psychology. Crosslisted graduate courses can be used to satisfy this requirement. All courses counting toward the Ph.D. minor must be taken for a letter grade and passed with a grade of 'B-' or better. If the course is not offered for a letter grade, it cannot be counted towards the Ph.D. minor.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

Psychology counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Graduate Degree Requirements

Grading

The department recognizes that the pandemic and remote research and instruction have generated unprecedented challenges for its students. Therefore, the faculty voted to implement temporary changes to the graduate program requirements for 2020-21 to afford students greater flexibility to navigate these challenging times.

Under the 2020-21 academic year policy:

- Graduate students will be able to enroll and take all classes for letter grade, CR/NC, or S/NC.
- This grading policy extends to the core and quantitative courses that, under normal program guidelines, require a letter grade of 'B-' or higher.
- An 'S' grade, a 'CR' grade, or a letter grade of 'C-' or higher on all core and quantitative courses will be counted towards fulfilling degree requirements.

These policy changes are in line with our program's mission and values. The collective view of the faculty is that the goal of the core and quantitative courses is to provide students with foundational knowledge that is important for their careers. In response to the COVID-19 pandemic, the department would like to underscore the formative nature of these courses and the student's learning, and simply take away the worry about the grades. This indicates the trust the faculty put in its students, that they will do what you came to do, i.e., learn the material and develop the skills needed to be key contributors to science and society. The department also encourages students to discuss with faculty advisors whether they should adapt their course load and/or research plan as the pandemic may have affected their personal circumstances.

Graduate Advising Expectations

The Department of Psychology is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, the advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

Faculty advisors guide students in key areas, such as selecting courses, designing and conducting research, writing results of research studies as manuscripts for peer-reviewed journals, developing teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Individual Development Plan (IDP)

In order to meet the advising goals described above, each PhD student is required to complete an annual Individual Development Plan (IDP) and have at least one meeting with their advisor during the academic year to discuss the IDP. The purpose of the annual IDP meeting is to provide an opportunity to discuss the big picture of the student's progress over the past year as well as goals for the future. To help the IDP, prior to the meeting the student completes a form that promotes self-reflection and self-evaluation, and helps structure the discussion topics with the advisor. During the IDP meeting the student brings his or her current CV and discuss with the advisor current progress and future goals. During the meeting the student and their advisor develops an action plan for the subsequent year; both keep a copy of this plan.

For details about the IDP forms and process, please visit the Psychology Department website's PhD Program Requirements page (https://psychology.stanford.edu/academics/phd-program/phd-degree-requirements/#Individual%20Development%20Plan). The IDP meeting must take place before June 1 of each year. It is the student's responsibility to report when the meeting has occurred to the student services manager.

Emeriti: (Professors) Albert Bandura, Herbert H. Clark, Anne Fernald, John H. Flavell, Leonard M. Horowitz, Mark R. Lepper, Roger N. Shepard, Claude M. Steele, Ewart A. C. Thomas, Barbara Tversky, Philip G. Zimbardo

Chair: Anthony D. Wagner

Director of Graduate Studies: Kalanit Grill-Spector

Director of Undergraduate Studies: Jeanne Tsai

Professors: Laura L. Carstensen, Geoffrey Cohen, Carol Dweck, Jennifer L. Eberhardt, Ian H. Gotlib, Kalanit Grill-Spector, James J. Gross, Brian Knutson, Ellen M. Markman, Hazel R. Markus, James L. McClelland, Dale Miller, Benoit Monin, Russell A. Poldrack, Nilam Ram, Lee D. Ross, Jeanne L. Tsai, Anthony D. Wagner, Brian Wandell, Jeffrey J. Wine

Professor (Research): Anthony Norcia

Associate Professors: Michael C. Frank, Noah Goodman, Hyowon Gweon, Gregory M. Walton, Jamil Zaki

Associate Professor (Teaching): Catherine Heaney

Assistant Professors: Alia Crum, Justin Gardner, Steven Roberts, Daniel Yamins

Assistant Professor (Research): Johannes Eichstaedt

Lecturers: Parul Chandra, Todd Erickson, Amie Haas, Adrienne Lomangino, Jenna Valasek, Jennifer Winters, Beth Wise

Courtesy Professors: Gary H. Glover, Jon Krosnick, Fei-Fei Li, Tanya Luhrmann, Robert MacCoun, Bruce McCandliss, William T. Newsome, Robb Willer

Courses

PSYCH 1. Introduction to Psychology. 5 Units.
An introduction to the science of how people think, feel, and behave. We will explore such topics as intelligence, perception, memory, happiness, personality, culture, social influence, development, emotion, and mental illness. Students will learn about classic and cutting edge research, a range of methods, and discover how psychology informs our understanding of what it means to be human, addresses other fields, and offers solutions to important social problems. Psych 1 fulfills the SI Way, and, effective Autumn 2018, the SMA Way. For more information on PSYCH 1, visit http://psychone.stanford.edu.

PSYCH 4N. Predicting aggregate choice. 3 Units.
Preference to freshmen. Is prediction of group choice possible and how can it be done? This course is ideal for students that would like to extend predictions about individual choice to group choice, and who plan to apply this knowledge to future research.

PSYCH 7N. Learn to Intervene, Wisely. 3 Units.
One of the most exciting transformations in the social sciences in recent years is the finding that brief psychological exercises can improve important outcomes for months and years such as raising school achievement and reducing inequality, improving health, and reducing intergroup conflict. These interventions help individuals flourish and help our society live up to its ideals. They address critical psychological questions people have, like ¿Do people like me belong in this school?¿, ¿Can I learn math?¿, ¿Am I bad mom?¿, and ¿Can groups in conflict change?¿. In this seminar, we will learn about ¿psychologically wise¿ interventions; how they work; how they can cause lasting benefits; their intellectual lineage; how they can be used, adapted, and scaled to address contemporary problems; and challenges and mistakes that can arise in doing so. In addition to learning from classic and contemporary research, you will design your very own wise intervention and workshop others¿ efforts. Working with a community partner, you will explore a problem your partner faces, identify a specific psychological process you think contributes to this problem, and design an intervention to address this process to improve outcomes, which your partner could implement and evaluate. You will share your approach in a final report with both your seminar-mates and your community partner. When you have completed this seminar, you will more fully understand the psychological aspect of social problems and how this can be addressed through rigorous research.

PSYCH 8N. The New Longevity. 3 Units.
Life expectancy nearly doubled in the 20th century. Along with a decrease in fertility societies are also aging. These changes have ramifications for all of the fundamental structures that guide people through life, including work, education, and the nature of families, as well as health, social engagement, and fitness. This course focuses on the implications for young generations today that will likely live longer than any in human history.

PSYCH 9N. Reading the Brain: the Scientific, Ethical, and Legal Implications of Brain Imaging. 3 Units.
It's hard to pick up a newspaper without seeing a story that involves brain imaging, from research on psychological disorders to its use for lie detection or "neuromarketing". The methods are indeed very powerful, but many of the claims seen in the press are results of overly strong interpretations. In this course, you will learn to evaluate claims based on brain imaging research. We will also explore the deeper ethical and philosophical issues that arise from our ability to peer into our own brains in action. The course will start by discussing how to understand and interpret the findings of brain imaging research. We will discuss how new statistical methods provide the ability to accurately predict thoughts and behaviors from brain images. We will explore how this research has the potential to change our concepts of the self, personal responsibility and free will. We will also discuss the ethics of brain imaging, such as how the ability to detect thoughts relates to personal privacy and mental illness. Finally, we will discuss the legal implications of these techniques, such as their use in lie detection or as evidence against legal culpability.

PSYCH 10. Introduction to Statistical Methods: Precalculus. 5 Units.
Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages.
Same as: STATS 60, STATS 160

PSYCH 11N. Belonging in a Diverse Society. 3 Units.
One of the most important questions people ask themselves when they enter a new setting, whether a school, a workplace, or a country, is "Do I belong here?". How do people make sense of their belonging in a new setting? How and why do group identities, such as race-ethnicity, social-class background, gender, or national origin matter? What are the consequences of people's inferences about their belonging? And how can we create school and work settings in which people from diverse backgrounds can genuinely and authentically belong?.

PSYCH 12N. Self Theories. 3 Units.
Preference to freshmen. The impact of people's belief in a growing versus fixed self on their motivation and performance in school, business, sports, and relationships. How such theories develop and can be changed.

PSYCH 13N. Emotion Regulation. 3 Units.
This seminar provides a selective overview of the scientific study of emotion regulation. Topics include: theoretical foundations, cognitive consequences, developmental approaches, personality processes and individual differences, and clinical and treatment implications. Our focus is on interesting, experimentally tractable ideas. Meetings will be discussion based.

PSYCH 15N. Becoming Kinder. 3 Units.
Kindness - the ability to understand each other, the instinct to care for each other, and the desire to help each other - is among our most powerful natural resources. It supports cooperation, fosters relationships, improves health, and overwrites hatred. Kindness is also challenging, especially in the modern world. More than ever, individuals are isolated, anonymous, and independent: qualities that make it harder to truly see each other and easier to succumb to indifference and even cruelty. As technology mediates more of our interactions and tribal signifiers occupy more of our identity, kindness erodes. And yet we have options. A growing number of social scientists are now experimenting in re-building kindness, using everything from virtual reality to meditation to literature to old-fashioned friendship. Their efforts demonstrate that through directed effort, people can become kinder. nThis class will explore the nature of kindness, the challenges modernity has placed in front of it, and the many ways scientists and practitioners are stimulating kindness. Though drawing mainly from psychology, we will tour sociology, conflict resolution, technology, the humanities, and neuroscience as well. The class will also grapple with central questions about human nature -most importantly, to what extent can we change ourselves into the people we¿d like to become? Finally, we will meld science with personal narrative and exercises meant to not only explore kindness-building as a research concept, but as a part of our own lives.

PSYCH 16N. Amines and Affect. 3 Units.
Preference to freshmen. How serotonin, dopamine, and norepinephrine influence people's emotional lives. This course is ideal for students that would like to get deeper exposure to cutting edge concepts and methods at the intersection of psychology and biology, and who plan to apply their knowledge to future research.

PSYCH 20N. How Beliefs Create Reality. 3 Units.
This seminar will take an interdisciplinary approach to exploring how subjective aspects of the mind (e.g., thoughts, beliefs, and expectations) can fundamentally change objective reality. Over the course of the semester, students will be challenged to think critically about research from psychology, sociology, and medicine, which suggests that what we think, believe and expect plays a significant role in determining our physical health, performance and well-being. Students will explore research on how mindsets about nutrition, exercise, and stress can alter the body's response to those phenomena. Students will also uncover how social interactions with friends, family, colleagues and the media influence the perceived quality and impact of cultural products such as art, music, and fashion. And students will learn about the neurological and physiological underpinnings of the placebo effect, a powerful demonstration of expectation that produces real, healing changes in the body. Finally, students will have the opportunity to consider real world applications in disciplines including policy, business, medicine, academics, athletics and public health and consider the ethical implications of those applications. Throughout the class active participation and an open mind will be critical to success. The final weeks of class will be dedicated to student designed studies or interventions aimed to further explore the power of self-fulfilling prophecies, placebo effects, and the social-psychological creation of reality.

PSYCH 21N. How to Make a Racist. 3 Units.
How does a child, born without beliefs or expectations about race, grow up to be racist? To address this complicated question, this seminar will introduce you to some of the psychological theories on the development of racial stereotyping, prejudice, and discrimination. Together, these theories highlight how cognitive, social, and motivational factors contribute to racist thinking. We will engage thoughtfully and critically with each topic through reflection and discussion. Occasionally, I will supplement the discussion and class activities with a brief lecture, in order to highlight the central issues, concepts, and relevant findings. We will share our own experiences, perspectives, and insights, and together, we will explore how racist thinking takes root. Come to class with an open mind, a willingness to be vulnerable, and a desire to learn from and with your peers. Students with diverse opinions and perspectives are encouraged to enroll.
Same as: AFRICAAM 121N, CSRE 21N

PSYCH 24N. Neuroforecasting. 3 Units.
Preference to freshmen. This course explores whether brain activity can be used not only to predict the choices of individuals, but also of separate groups of individuals in the future (e.g., in markets). Questions include how neuroforecasting is possible, whether it can add value to other forecasting tools (e.g., traditional measures like behavioral choice and subjective ratings), and when it extends to different aggregate scenarios. The course is ideal for students that would like to extend neural predictions about individual choice to group choice, and who plan to apply this knowledge in future research.

PSYCH 30. Introduction to Perception. 4 Units.
Behavioral and neural aspects of perception focusing on visual and auditory perception. Topics include: scientific methods for studying perception, anatomy and physiology of the visual and auditiory systems, color vision, depth perception, motion perception, stereopsis, visual recognition, pitch and loudness perception, speech perception, and reorganization of the visual system in the blind.

PSYCH 30N. The Science of Diverse Communities. 3 Units.
This course is an exploration. Most generally, its aim is to identify distinguishing features of good diverse communities and articulate them well enough to offer principles or guidelines for how to design and manage such communities - all with a particular focus on educational communities like schools, universities, academic disciplines, etc., but with the hope that such principles might generalize to other kinds of organizations and the broader society. The readings range from those on the origins of human communities and social identities to those on intergroup trust building. They also aim to embed our discussions in the major diversity issues of the day, or example, what's in the news about campus life. nnnThus the course has a practical purpose: to develop testable ideas for improving the comfort level, fairness and goodness-for-all of identity diverse communities--especially in educational settings. nnnThe course also has a basic science purpose: to explore the psychological significance of community. Is there a psychological need for community? Is there something about a need for community that can't be reduced to other needs, for example, for a gender, racial or sexual-orientation identity? How strong is the need for community against other needs? What kinds of human groupings can satisfy it? In meeting this need, can membership in one community substitute for membership in others? What do people need from communities in order to thrive in them? Do strong diverse communities dampen intergroup biases? Can strong community loyalty mitigate identity tensions within communities? nnnSuch questions, the hope is, will help us develop a more systematic understanding of the challenges and opportunities inherent in diverse human communities.
Same as: CSRE 30N, EDUC 30N, SOC 179N

PSYCH 35. Minds and Machines. 4 Units.
(Formerly SYMSYS 100). An overview of the interdisciplinary study of cognition, information, communication, and language, with an emphasis on foundational issues: What are minds? What is computation? What are rationality and intelligence? Can we predict human behavior? Can computers be truly intelligent? How do people and technology interact, and how might they do so in the future? Lectures focus on how the methods of philosophy, mathematics, empirical research, and computational modeling are used to study minds and machines. Students must take this course before being approved to declare Symbolic Systems as a major. All students interested in studying Symbolic Systems are urged to take this course early in their student careers. The course material and presentation will be at an introductory level, without prerequisites. If you have any questions about the course, please email symsys1staff@gmail.com.
Same as: CS 24, LINGUIST 35, PHIL 99, SYMSYS 1, SYMSYS 200

PSYCH 45. Introduction to Learning and Memory. 3 Units.
The literature on learning and memory including cognitive and neural organization of memory, mechanisms of remembering and forgetting, and why people sometimes falsely remember events that never happened. Cognitive theory and behavioral evidence integrated with data from patient studies and functional brain imaging. Required prerequisite: PSYCH 1.

PSYCH 50. Introduction to Cognitive Neuroscience. 4 Units.
How does our brain give rise to our abilities to perceive, act and think? Survey of the basic facts, empirical evidence, theories and methods of study in cognitive neuroscience exploring how cognition is instantiated in neural activity. Representative topics include perceptual and motor processes, decision making, learning and memory, attention, reward processing, reinforcement learning, sensory inference and cognitive control.

PSYCH 50A. Practicum in Teaching: Intro to Cognitive Neuroscience. 3-4 Units.
TA training for Intro to Cognitive Neuroscience: preparing for sections, grading assignments, reviewing and answering questions in Canvas online forums and supporting office hours and review sections. Enrollment limited to teaching assistants for Psych 50: Intro to Cognitive Neuroscience. May be repeat for credit.

PSYCH 60. Introduction to Developmental Psychology. 3 Units.
Psychological development from birth to adulthood, emphasizing infancy and the early and middle childhood years. The nature of change during childhood and theories of development. Recommended: PSYCH 1.

PSYCH 60A. Introduction to Developmental Psychology Section. 2 Units.
Guided observation of children age 2-5 at Bing Nursery School. Corequisite: 60.

PSYCH 70. Self and Society: Introduction to Social Psychology. 4 Units.
Why do people behave the way they do? This is the fundamental question that drives social psychology. Through reading, lecture, and interactive discussion, students have the opportunity to explore and think critically about a variety of exciting issues including: what causes us to like, love, help, or hurt others; the effects of social influence and persuasion on individual thoughts, emotion, and behavior; and how the lessons of social psychology can be applied in contexts such as health, work, and relationships. The social forces studied in the class shape our behavior, though their operation cannot be seen directly. A central idea of this class is that awareness of these forces allows us to make choices in light of them, offering us more agency and wisdom in our everyday lives.
Same as: SOC 2

PSYCH 75. Introduction to Cultural Psychology. 5 Units.
The cultural sources of diversity in thinking, emotion, motivation, self, personality, morality, development, and psychopathology.

PSYCH 80. Introduction to Personality and Affective Science. 3 Units.
How do we measure personality and emotion? What parts of your personality and emotions are set at birth? What parts of your personality and emotions are shaped by your sociocultural context? Can your personality and emotions make you sick? Can you change your personality and emotions? These are questions we begin to address in this introductory course on personality and emotion. Prerequisite: Psych 1.

PSYCH 90. INTRODUCTION TO CLINICAL PSYCHOLOGY: A NEUROSCIENCE PERSPECTIVE. 3 Units.
This course will provide students with an overview of the field of clinical psychology, the various roles of clinical psychologists in research and practice, and implications of current research in neuroscience for clinical psychology. We will discuss the definition and history of clinical psychology as a profession, research methods used in clinical psychology, issues in diagnosis and classification of disorders, techniques used in the assessment of intellectual and personality functioning, various approaches to therapeutic intervention, and issues related to ethics, professionalism, and training in clinical psychology. Throughout this course we will review and integrate relevant research in the field of clinical neuroscience with our discussion and understanding of clinical psychology.

PSYCH 95. Introduction to Abnormal Psychology. 3 Units.
Theories of and approaches to understanding the phenomenology, etiology, and treatment of psychological disorders among adults and children. Research findings and diagnostic issues. Recommended: PSYCH 1.

PSYCH 101. Community Health Psychology. 4 Units.
Social ecological perspective on health emphasizing how individual health behavior is shaped by social forces. Topics include: biobehavioral factors in health; health behavior change; community health promotion; and psychological aspects of illness, patient care, and chronic disease management. Prerequisites: HUMBIO 3B or PSYCH 1 or equivalent.
Same as: HUMBIO 128

PSYCH 101S. Introduction to Neuroscience. 4 Units.
Introduction to structure and function of the nervous system. The course first surveys neuroscience research methods, physiology, and gross anatomy. We then study the brain systems which produce basic functions such as perception and motion, as well as complex processes like sleep, memory, and emotion. Finally, we examine these principles in cases of neurological and psychiatric disorders.

PSYCH 102. Longevity. 4 Units.
Interdisciplinary. Challenges to and solutions for the young from increased human life expectancy: health care, financial markets, families, work, and politics. Guest lectures from engineers, economists, geneticists, and physiologists.
Same as: HUMBIO 149L, NENS 202

PSYCH 102S. Introduction to Neuroscience. 3 Units.
Introduction to structure and function of the nervous system. The course first surveys neuroscience research methods, physiology, and gross anatomy. We then study the brain systems which produce basic functions such as perception and motion, as well as complex processes like sleep, memory, and emotion. Finally, we examine these principles in cases of neurological and psychiatric disorders.

PSYCH 103. Intergroup Communication. 3 Units.
In an increasingly globalized world, our ability to connect and engage with new audiences is directly correlated with our competence and success in any field How do our intergroup perceptions and reactions influence our skills as communicators? This course uses experiential activities and discussion sections to explore the role of social identity in effective communication. The objective of the course is to examine and challenge our explicit and implicit assumptions about various groups to enhance our ability to successfully communicate across the complex web of identity. NOTE: Please check the Notes section under each quarter to view the current enrollment survey.
Same as: CSRE 103

PSYCH 103F. Intergroup Communication Facilitation. 2 Units.
Are you interested in strengthening your skills as a facilitator or section leader? Interested in opening up dialogue around identity within your community or among friends? This course will provide you with facilitation tools and practice, but an equal part of the heart of this class will come from your own reflection on the particular strengths and challenges you may bring to facilitation and how to craft a personal style that works best for you. This reflection process is ongoing, for the instructors as well as the students.
Same as: CSRE 103F

PSYCH 104S. Affective Science. 3 Units.
This course will provide an introduction to a growing field known as affective science, which focuses on the study of emotion and other related phenomena (i.e., motivation, pain, etc.). We will explore core questions in affective science, including: 1) What is emotion and why is it useful? 2) How do emotions influence the way we perceive, attend to, and understand the world? 3) How do emotions become dysfunctional, and how can individuals control them? We will attempt to approach these questions from multiple perspectives, including i) neurobiological ii) behavioral, and iii) sociocultural perspectives.

PSYCH 105. Social Neuroscience. 4 Units.
Over the last 20 years, neuroscientists have become increasingly interested in studying topics that were previously the purview of social psychologists. In this seminar, we will survey neuroimaging research on topics such as self perception, person perception, empathy, and social influence. More broadly, we will consider the contributions that neuroscience can (and cannot) make to social psychological theory. Students will be responsible for leading discussions and producing one in-depth review or research paper at the end of the quarter.

PSYCH 105S. General Psychology. 3 Units.
In what ways does the scientific study of psychology increase our understanding of the thoughts, feelings, and behaviors we observe and experience in everyday life? What are the main areas of psychology and the different questions they seek to answer? This course will give you an introduction to the field of psychology and its many different areas. You will learn about the central methods, findings, and unanswered questions of these areas, as well as how to interpret and critically evaluate research findings.

PSYCH 107S. Introduction to Social Psychology. 3 Units.
A comprehensive overview of social psychology with in-depth lectures exploring the history of the field, reviewing major findings and highlighting areas of current research. Focus is on classic studies that have profoundly changed our understanding of human nature and social interaction, and, in turn, have triggered significant paradigm shifts within the field. Topics include: individuals and groups, conformity and obedience, attraction, intergroup relations, and judgment and decision-making.

PSYCH 108. Longevity through Film. 3 Units.
The media informs the understanding of life stages and shapes expectations about our futures. This course will explore the realities and fictions about life-span development through film. This course will revolve around selected films compared with the literature on life stages. Guest filmmakers, psychologists, sociologists and thought leaders will join the class to discuss human development.

PSYCH 108S. Introduction to Social Psychology. 3 Units.
This course aims to blend a comprehensive overview of social psychology with in-depth lectures exploring the history of the field, reviewing major findings and highlighting areas of current research. The course will focus on classic studies that have profoundly changed our understanding of human nature and social interaction, and, in turn, have triggered significant paradigm shifts within the field. Some of the topics covered in this class will include: individuals and groups, conformity and obedience, attraction, intergroup relations, and judgment and decision-making. The course, overall, will attempt to foster interest in social psychology as well as scientific curiosity in a fun, supportive and intellectually stimulating environment.

PSYCH 109. An introduction to computation and cognition. 4 Units.
How does the mind process information in order to choose good actions given the tangle of experience? The studies of computation and cognition synergise in diverse and powerful ways, from precise models of thinking to analysis of large behavioral data sets. In this course we will investigate questions of information representation and processing through a combination of lectures, hands-on (`flipped classroom') exercises, and extended homework assignments. We will explore method for psychological data analysis and three of the main computational approaches to modeling the mind: reinforcement learning, neural networks, and Bayesian inference. Using these tools we will explore human abilities such as reasoning and social cognition. Pre-requisites: Psych 1 and CS 106a (or consent of instructor).

PSYCH 109S. Introduction to Cognitive Neuroscience. 3 Units.
3)Introduction of the neurobiology of behavior including the biology of nervous system, the neural basis for perception, learning, memory, decision making and neurological disorders. Introduction to different research techniques that are prevalent in current neuroscience studies including fMRI, EEG, TMS and single unit recording.

PSYCH 110S. Introduction to Cultural Psychology. 3 Units.
In an increasingly globalized world, the ability to understand people from different cultural backgrounds, as well as understand how we are influenced by our own cultural contexts, is an essential skill. In this course, we will consider the many ways in which individuals shape, and are shaped by, institutions (e.g., education system; media; religion), social interactions (e.g., family; employers), and broad cultural ideas (e.g., democracy). Drawing from psychological research, we will analyze sociocultural sources of diversity in self, agency, cognition, emotion, motivation, development, and relationships. We will also analyze past and modern cultural products - including films, literature, music, and art - to better understand the transmission of culture. Each discussion will contribute to a better understanding of the hidden factors that guide daily experiences and the various opportunities and barriers to creating social change. The course will empower students to recognize and analyze the influence of culture on everyday functioning and apply that understanding to improving their own and other people's outcomes.

PSYCH 111S. Abnormal Psychology. 3 Units.
This course will provide an introduction to abnormal psychology. It will be targeted towards students who have had little or no exposure to coursework on mental disorders. The course will have three core aims: 1) Explore the nature of mental disorders, including the phenomenology, signs/symptoms, and causal factors underlying various forms of mental illness, 2) Explore conventional and novel treatments for various mental disorders, 3) Develop critical thinking skills in the theory and empirical research into mental disorders. The course will explore a wide range of mental disorders, including depression, anxiety, schizophrenia, addiction, eating disorders, and personality disorders.

PSYCH 113S. Developmental Psychology. 3 Units.
This class will introduce students to the basic principles of developmental psychology. As well as providing a more classic general overview, we will also look towards current methods and findings. Students will gain an appreciation of how developmental psychology as a science can be applied to their general understanding of children and the complicated process of growing into adults.

PSYCH 115S. Personality Psychology. 3 Units.
This course will focus on current empirical and theoretical approaches to personality. Lectures will be organized around the following questions central to personality research: How and why do people differ? How do we measure individual differences? Does personality change over time? How does personality interact with sociocultural factors to influence behavior? What makes people happy? What are the physical, mental, and social consequences of personalities?.

PSYCH 118F. Literature and the Brain. 3 Units.
Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer?.
Same as: COMPLIT 138, COMPLIT 238, ENGLISH 118, ENGLISH 218, FRENCH 118, FRENCH 218, PSYC 126

PSYCH 120. Cellular Neuroscience: Cell Signaling and Behavior. 4 Units.
Neural interactions underlying behavior. Prerequisites: PSYCH 1 or basic biology.
Same as: BIO 153

PSYCH 121. Ion Transport and Intracellular Messengers. 3 Units.
(Graduate students register for 228.) Ion channels, carriers, ion pumps, and their regulation by intracellular messengers in a variety of cell types. Recommended: 120, introductory course in biology or human biology.
Same as: PSYCH 228

PSYCH 123F. Navigating a Multicultural World: Practical recommendations for individuals, groups, & institutions. 4 Units.
The world is becoming increasing multicultural, as groups of different races, ethnicities, ages, genders, and socioeconomic classes are coming into closer and more frequent contact than ever before. With increased cultural contact comes the need to create spaces that are inclusive and culturally sensitive. In addition, individuals must learn to live, work, and communicate in a multicultural world. How can we leverage research from cultural psychology to promote the best possible individual, interpersonal, and institutional outcomes for all groups?nThis course will serve as an introduction on how to create multicultural worlds and individuals.nDrawing heavily on research, this course begins with a review of what culture is and how itninfluences individual thoughts, emotions, and behaviors. We then discuss multiculturalism (e.g.,nwhat is it, what are some costs and benefits) before addressing how to promote optimalnfunctioning in multicultural settings.
Same as: CSRE 123F

PSYCH 125S. Language andThought. 3 Units.
How are we able to produce and comprehend language in all its complexity? How does language processing interact with other parts of cognition? In this course, we will focus on several main themes: language production and comprehension, discourse, language acquisition, bilingualism, and linguistic relativity. We will explore these themes through lecture, demonstrations, analysis of empirical work, and student-led discussion. Special attention will also be given to the various experimental methods we use to conduct psycholinguistic and developmental research (e.g., self-paced reading, eye-tracking, cross-modal priming, and neural imaging).

PSYCH 132. Language and Thought. 3 Units.
Languages vary tremendously in how they allow us to express ourselves. In some languages, you have to say when an event happened (past, present, future, etc.), while in others it is obligatory to say how you know about the event (you saw it, you heard about it), or what genders its participants were. In addition, languages just feel different from one another - some feel poetic while others feel brutal. Some things just don't sound right in certain languages, and some translations are harder than others to pull off. But are these differences meaningful? Do differences across languages cause substantive changes in the cognition of their speakers? We'll read some of the burgeoning research literature on these questions and consider how they can be answered with new empirical tools.

PSYCH 134S. Psychology of Close Relationships. 3 Units.
The purpose of this course is to provide an overview of theory and research on the psychology of interpersonal relationships from a social psychological perspective, with a particular focus on friendships and romantic relationships. The goals for the course are: 1) To familiarize students with the variables important to the social psychological study of interpersonal relationships, 2) To review the major theoretical foundations and current research, not only from social psychology but also from other disciplines (e.g., communication, personality psychology), and 3) To give students practice in reading empirical journal articles, writing, and oral presentation. The course will examine some of the theories and research related to the psychology of interpersonal relationships. Some of the topics this course will cover include: theoretical perspectives, research methods, culture, attraction, attachment, social cognition, communication, interdependence, friendship, love, stressors in relationships, relationship maintenance, conflict, and dissolution.

PSYCH 135. The Psychology of Diverse Community. 3 Units.
This course is an exploration. Its aim is to identify distinguishing features of good diverse communities and articulate them well enough to offer principles or guidelines for how to design and mange such communities e.g. schools, universities, academic disciplines, etc.
Same as: CSRE 135P

PSYCH 135S. Sex and Sexual Assault on College Campuses. 3 Units.
Students on college campuses are disproportionately at risk of sexual assault. One in every five women and one in twenty men will be sexually assaulted during their time in college. In this course, we will use a cultural psychological lens to analyze the ways in which institutions, ideas, and individuals interact to affect both sex and sexual assault. We will tie together differing research opinions about how sexual misconduct is normalized and perpetuated on college campuses, and examine the roles of Greek life, hookup culture, and party culture. We will take an intersectional approach as we deconstruct gender roles, look at sex and consent in straight and LGBTQIA+ communities, and examine how power impacts sex. Additionally, we will explore the effects of current political and social movements such as #MeToo on campus culture. This course will combine lectures and in class discussions with weekly reflections, where students will have a chance to connect what they are learning in class to their own lived experiences. Students will leave this course with a framework for approaching, analyzing, and changing both campus culture and their own relationships.

PSYCH 136. The Psychology of Scarcity: Its Implications for Psychological Functioning and Education. 3 Units.
This course brings together several literatures on the psychological, neurological, behavioral and learning impact of scarcities, especially those of money (poverty) time and food. It will identify the known psychological hallmarks of these scarcities and explore their implications for psychological functioning, well-being and education--as well as, how they can be dealt with by individuals and in education.
Same as: CSRE 136U, PSYCH 236A

PSYCH 136S. Learning and Memory: Theory and Applications. 3 Units.
This course explores how our behavior in the present is guided by our past experiences, and how we can apply these principles to our own learning and to the broader world around us. We will explore the theory of learning and memory, including an introduction to multiple memory systems, the ways in which memory can succeed but also fail, and how memory integrity changes across the lifespan and across clinical populations. We will also explore applications of this theoretical content to the real world technologies and policies that touch our everyday lives, such as applications in brain training, advertising, the legal system, and the classroom.

PSYCH 137. Belonging in a Diverse Society. 3 Units.
One of the most important questions people ask themselves when they enter a new setting, whether a school, a workplace, or a country, is "Do I belong here?". How do people make sense of their belonging in a new setting? How and why do group identities, such as race-ethnicity, social-class background, gender, or national origin matter? What are the consequences of people¿s inferences about their belonging? And how can we create school and work settings in which people from diverse backgrounds can genuinely and authentically belong?.

PSYCH 138. Wise Interventions. 4 Units.
Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy.
Same as: PSYCH 238, PUBLPOL 238

PSYCH 138S. Motivation to Learn. 3 Units.
Why do some students delight at the thought of challenging tasks while others only care about getting the grade? Why do some seek out opportunities to learn in and out of school while others feel anxious just showing up to class? Why do our failures sometimes debilitate and other times invigorate? How do we turn our desires to achieve into concrete action? Where do these motivational processes come from and how might we use our understanding of motivation to improve educational systems? This course will address these and other fascinating questions as we consider theory and research on motivation, primarily as it applies to educational contexts. The course will be based largely around interactive discussions of primary source articles, with some lecture in order to provide you with important background information and a framework for discussing the readings.

PSYCH 139A. Bites and Insights. 1 Unit.
By its very nature psychology is interdisciplinary. This course will consist of student-led workshops for those who are interested in the role of psychology in today¿s society. Each week a different student will talk about an interest of theirs -- anything from Disney movies to memes -- and how it relates to psychology. Students are encouraged to be as creative as possible and take initiative! (Presented by the Stanford Undergraduate Psychology Association.).

PSYCH 139S. Psychology of Women. 3 Units.
Women comprise half of the human population, yet throughout much of history, the study of human thought and behavior has been largely male focused. In fact, some of the earliest psychological studies of women were conducted primarily to argue for the evolutionary supremacy of men. During the past fifty years, the field of psychology has made significant strides towards considering women and men equally worthy subjects of inquiry. In this course, we will discuss this growing body of research related to gender and the female experience. We will focus on six main themes: social and biological approaches to studying gender, evidence for gender similarities and differences, gender stereotypes and sexism, gender and language use, women in the workplace, and female sexuality. We will explore these themes through lectures, in class demonstrations, analysis of empirical work, and student led discussion.

PSYCH 140. Introduction to Psycholinguistics. 4 Units.
How do people do things with language? How do we go from perceiving the acoustic waves that reach our ears to understanding that someone just announced the winner of the presidential election? How do we go from a thought to spelling that thought out in a sentence? How do babies learn language from scratch? This course is a practical introduction to psycholinguistics -- the study of how humans learn, represent, comprehend, and produce language. The course aims to provide students with a solid understanding of both the research methodologies used in psycholinguistic research and many of the well-established findings in the field. Topics covered will include visual and auditory recognition of words, sentence comprehension, reading, discourse and inference, sentence production, language acquisition, language in the brain, and language disorders. Students will conduct a small but original research project and gain experience with reporting and critiquing psycholinguistic research.
Same as: LINGUIST 145, LINGUIST 245A

PSYCH 140S. Do I Belong Here? How to Use Social Psychology to Build Belonging. 3 Units.
This course will provide students with a theoretical and applied understanding of the challenges, barriers, and solutions for how to cultivate belonging in educational and professional contexts from a social psychological perspective. The course will pull from core findings in social psychology, sociology, and organizational behavior to scaffold the student's holistic understanding of belonging. We will then highlight research such as intergroup relations, attribution ambiguity, and mindsets that illustrates the antecedents and consequences of threats to belonging. Finally, the course will demonstrate how we can utilize 'wise interventions' in real-world settings to foster belonging by creating change at the individual, institutional, and policy level. The course, overall, will attempt to educate students about how people understand themselves, their situations, and how they understand themselves in those situations, and equip them with data-driven strategies to build and create more inclusive and diverse spaces.

PSYCH 141. Cognitive Development. 3 Units.
How do humans think, learn, and communicate? What are the developmental roots of these capacities, and what makes young children such remarkable learners? This course aims to offer an understanding of how human cognition - the ability to think, reason, and learn about the world - changes in the first few years of life. We will review and evaluate both classic findings and state-of-the-art research on cognitive development and understand the logic behind the scientific methods for studying cognition in young children. By the end of the course, students will gain a deeper understanding of the major theoretical accounts of intellectual growth as well as the key empirical findings that support (or refute) these accounts, understand the basic logic of scientific methods in cognitive development research, and be able to discuss implications of cognitive development research on real-world issues in education and social policy. PSYCH141 is an Area A course for 2019-2020. Prerequisites: PSYCH 1. Recommended: PSYCH 60.

PSYCH 141S. The Psychology of Health: Culture, Self, and Society. 3 Units.
What is health? How does someone become healthy or maintain good health? In the US, mainstream narratives about health tend to focus on individual choices and behavior. In this course, we take a broader focus, examining how individual health is shaped by social interactions (e.g., with family, friends, doctors), institutions (e.g., media, policy, advertising), and broad cultural ideas and values (e.g., personal responsibility, independence). Drawing from psychological research, we will examine topics at the intersection of self and society, including: the role of stress, stigma and blame in shaping health and wellbeing, cultural processes contributing to health disparities, attitudes about the proper role of government in shaping public health, and the erosion of trust in medical authority (e.g. anti-vaccination attitudes). We will also consider how race, gender, and socioeconomic status impact health outcomes. Throughout the course, we will analyze cultural products including advertisements, media stories, health PSAs, and government statements to better understand the transmission of cultural ideas of health. Finally, we will discuss various opportunities and barriers to creating social and cultural change regarding health. The course will empower students learn to recognize and analyze the influence of culture on everyday functioning and apply that understanding to improving their own and other people's health outcomes.

PSYCH 142A. Special Topics in Adolescent Mental Health. 4 Units.
Includes the study of aspects of common disorders seen in adolescent populations, such as prevalence, developmental course, gender differences, theoretical explanations, and therapeutic interventions. Topics will include mood/anxiety disorders, eating disorders, learning disabilities and ADHD, sexual risk behaviors, developmental disorders, substance abuse, and self-harm. Goals of this course include getting students to think critically about the unique mental health needs of adolescents, collaborating on devising ways to improve the way our society meets those needs, and strengthening writing and communication skills applicable to this area of inquiry. Enrollment limited to students with sophomore academic standing or above. Prerequisites: Human Biology Core or Biology Foundations or equivalent or consent of instructor.
Same as: HUMBIO 142M

PSYCH 145. Seminar on Infant Development. 1-2 Unit.
For students preparing honors research. Conceptual and methodological issues related to research on developmental psycholinguistics; training in experimental design; and collection, analysis, and interpretation of data.

PSYCH 145A. Monitoring the Crisis. 4-5 Units.
A course devoted to understanding how people are faring as the country's health and economic crisis unfolds. The premise of the course is that, as important and valuable as surveys are, it's a capital mistake to presume that we know what needs to be asked and that fixed-response answers adequately convey the depth of what's happening. We introduce a new type of qualitative method that allows for discovery by capturing the voices of the people, learn what they're thinking and fearing, and understand the decisions they're making. Students are trained in immersive interviewing by completing actual interviews, coding and analyzing their field notes, and then writing reports describing what's happening across the country. These reports will be designed to find out who's hurting, why they're hurting, and how we can better respond to the crisis. Students interested should submit the following application: https://docs.google.com/forms/d/e/1FAIpQLSfdOZsnpOCg4zTRbVny0ikxpZEd1AFEEJh3K9KjvINyfbWMGw/viewform.
Same as: PUBLPOL 141, SOC 141, SOC 241, URBANST 149

PSYCH 145S. Close Relationships. 3 Units.
Relationships are central to the human experience, and relationship science seeks to understand how our connections to others shape how we think, feel, and act. The purpose of this course is to explore the classic and current research and theory on close relationships in the field of psychology. Some of the topics we will explore are friendship, attraction, love, familial ties, conflict, social cognition, interdependency, sexuality, loss, and the sociocultural shaping of relationships. The course, in part, aims to create budding relationship scientists, who can turn their real-world interests and observations into testable hypotheses with the methods and tools of the field.

PSYCH 146. Observation of Children. 3 Units.
Learning about children through guided discussions and video analyses from Bing Nursery School. Together we will looking into children's interactions with the world around them within the contexts of their physical, cognitive, social, and emotional development. We will also be examining their experiences in relation to research and theory. Note: Students will enroll in discussion sections through Canvas during the first week of class.

PSYCH 146S. Brain, Mind, and Behavior. 3 Units.
How does the complexity of human behavior arise from the mind and brain? This course surveys approaches to linking these three concepts. We will introduce the brain with a hands-on neuroanatomy demo. We will explore how neurons manipulate signals to communicate, transforming our sensory experiences into rich internal representations, used to guide our attention, decision-making, and social interactions. We will immerse ourselves in the methods of cognitive neuroscientists, tinkering with models linking brain signals with behavior, learning how those signals are recorded (e.g. fMRI and EEG) and perturbed (e.g. TMS), and fine-tuning our ability to design psychological experiments. We will think about how these concepts apply in our own lives, while also learning to critically assess current research.

PSYCH 147. Development in Early Childhood. 3 Units.
For children playing is more than just fun; it is essential for children¿s growth and wellbeing. Play is so important to optimal child development that it has been recognized by the United Nations High Commission for Human Rights as a right of every child. This course explores this connection between different types of play and children¿s development in four arenas: social, emotional, cognitive, and physical. In order to promote optimal learning and growth in children, it is important to recognize that these cognitive, physical, social, and emotional systems are intertwined. In this course students will not only learn about play, but also examine their own play experiences and histories. Using readings, recordings of children at play, videos, presentations, and reflections we will delve into the experience of play for children and ourselves. The course is rooted in the play experiences and philosophy of Bing Nursery School, a laboratory school at Stanford. For over 50 years it has been engaging children in play-based learning experiences.

PSYCH 147S. Introduction to the Psychology of Emotion. 3 Units.
What are emotions? What purpose do they serve? How do we measure them? Can we control them? In this course, we will explore some of the most interesting questions in psychology: questions about emotion. Emotions shape our perceptions of the world, influence critical life decisions, and allow us to connect with others. This seminar will provide a selective review of the scientific study of emotion in Affective Science. The first unit of the course will focus on the theoretical foundations, the basic science of emotion, and methods for measuring emotions. In the second unit of the course, we will discuss topics at the intersection of motivation and emotion, such as decision-making and self-control. In the third unit, we will delve into the social function of emotions. In the fourth unit of the course, we will study the ways people succeed and fail at controlling their emotions. In the fifth unit, we will discuss a variety of additional topics such as how emotions change across the lifespan, how emotions can be harnessed to engineer behavior change, as well as emotions and artificial intelligence. My goal is that you will leave this course with a scientifically-informed understanding of your own and others' emotions as well as strategies for how to effectively use and manage your feelings in daily life.

PSYCH 148S. The Psychology of Bias: Stereotyping, Prejudice, and Discrimination. 3 Units.
From Black Lives Matter to mansplaining, issues of stereotyping, prejudice, and discrimination grab our attention and draw our concern. This course brings together research from social, cognitive, affective, developmental, cultural, and neural perspectives to examine the processes that reflect and perpetuate group biases. Along with these various research perspectives, we will consider perspectives of both privileged and disadvantaged group members. Where do stereotypes come from? Why is race so hard to talk about? Can we be biased without knowing it? How can we reduce prejudice and conflict? We will address these and other questions through lectures, class discussion, and group presentations.
Same as: CSRE 148P

PSYCH 149S. Vertical Neuroscience: How the Brain Enables Climbing. 3 Units.
Explores the brain mechanisms of physical action, including how the brain learns to create complex movements, the neural circuitry of the motor system, and how pain, fear, and adrenaline are closely tied to these systems. An emphasis is placed on real-life examples through weekly rock climbing courses that tie closely into the course content.

PSYCH 150. Race and Crime. 3 Units.
The goal of this course is to examine social psychological perspectives on race, crime, and punishment in the United States. Readings will be drawn not only from psychology, but also from sociology, criminology, economics, and legal studies. We will consider the manner in which social psychological variables may operate at various points in the crimina; justice system- from policing, to sentencing, to imprisonment, to re-entry. Conducted as a seminar. Students interested in participating should attend the first session and complete online application for permission at https://goo.gl/forms/CAut7RKX6MewBIuG3.
Same as: CSRE 150A, PSYCH 259

PSYCH 150B. Race and Crime Practicum. 2-4 Units.
This practicum is designed to build on the lessons learned in PSYCH 150 Race & Crime. In this community service learning course, students participate in community partnerships relevant to race and crime, as well as reflection to connect these experiences to research and course content. Interested students should complete an application for permission at: https://goo.gl/forms/CAut7RKX6MewBIuG3. Prerequisite: PSYCH 150 (taken concurrently or previously).
Same as: CSRE 150B

PSYCH 154. Judgment and Decision-Making. 3 Units.
Survey of research on how we make assessments and decisions particularly in situations involving uncertainty. Emphasis will be on instances where behavior deviates from optimality. Overview of recent works examining the neural basis of judgment and decision-making.

PSYCH 155. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.
How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section. In accordance with Stanford virtual learning policies implemented for the Spring Quarter, all community engagement activities for this section will be conducted virtually. Please sign up for section 2 #33285 with Kendra, A. if you are interested in participating in virtual community engagement.
Same as: CSRE 196C, ENGLISH 172D, SOC 146, TAPS 165

PSYCH 156. Communicating Neuroscience. 3 Units.
Understanding the structure and function of the brain is presently an international goal with Brain Initiatives in the United States, Europe, and Japan. Due to this global interest, knowledge about the brain is influencing all aspects of society. As such, accurate communication and translation of neuroscience findings are of utmost importance. This course will examine ways to translate and to communicate neuroscience research for public outreach, with a focus on the role of technology. Topics include: television, feature articles, blogs, documentaries, and online videos. Students will learn different ways to accurately translate and communicate neuroscience topics in the context of theoretical and methodological approaches and to apply these tools in an original way to generate a completed outreach piece by the end of the course.

PSYCH 160. Seminar on Emotion. 3 Units.
This undergraduate and graduate seminar will examine ancient Greek philosophical and contemporary psychological literatures relevant to emotion. Questions to be investigated include: What is the nature of emotions? What is the appropriate place in our lives for emotions? How should we manage our emotions? Do the emotions threaten the integrity of the agent? Meetings will be discussion oriented. Prerequisite: consent of instructor.
Same as: PHIL 375G, PSYCH 260

PSYCH 162. Brain Networks. 3 Units.
An essential aspect of the brain is its complex pattern of connectivity between neurons across different areas. This course will provide a comprehensive overview of the networks of the brain, analyzed from a range of standpoints from the microscopic to the macroscopic, with a particular focus on the organization of the human brain. Specific topics include brain anatomy, connectomics, structural and functional neuroimaging, graph theory and network science, dynamic models, and causal inference. The course will comprise a combination of lectures, paper discussions, and hands-on analysis exercises. The first session each week will be composed of lecture and background, and the second session will be focused on discussion and hands-on analyses, with students assigned to lead the discussion sessions. Prerequisites: Basic knowledge of neuroscience (equivalent to Psych 50A). A moderate level of programming experience will be required for hands-on exercises and problem sets. Primary exercises will be in Python.
Same as: PSYCH 267

PSYCH 164. Brain decoding. 3 Units.
Can we know what someone is thinking by examining their brain activity? Using knowledge of the human visual system and techniques from machine learning, recent work has shown impressive ability to decode what people are looking at from their brain activity as measured with functional imaging. The course will use a combination of lectures, primary literature readings, discussion and hands-on tutorials to understand this emerging technology from basic knowledge of the perceptual (primarily visual) and other cognitive systems (such as working memory) to tools and techniques used to decode brain activity.nPrerequisites: Either Psych 30 or Psych 50 or Consent of Instructor.

PSYCH 165. Identity and Academic Achievement. 3 Units.
How do social identities affect how people experience academic interactions? How can learning environments be better structured to support the success of all students? In this class, we will explore how a variety of identities such as race, gender, social class, and athletic participation can affect academic achievement, with the goal of identifying concrete strategies to make learning environments at Stanford and similar universities more inclusive. Readings will draw from psychology, sociology, education, and popular press. This class is a seminar format.
Same as: AFRICAAM 165, CSRE 165

PSYCH 168. Emotion Regulation. 3 Units.
(Graduate students register for 268.) The scientific study of emotion regulation. Topics: historical antecedents, conceptual foundations, autonomic and neural bases, individual differences, developmental and cultural aspects, implications for psychological and physical health. Focus is on experimentally tractable ideas.
Same as: PSYCH 268

PSYCH 169. Advanced Seminar on Memory. 3 Units.
Memory and human cognition. Memory is not a unitary faculty but consists of multiple systems that support learning and remembering, each with its own processing characteristics and neurobiological substrates. This advanced undergraduate seminar will consider recent discoveries about the cognitive and neural architectures of working, declarative, and nondeclarative memory. Required: 45.

PSYCH 170. The Psychology of Communication About Politics in America. 4-5 Units.
Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.
Same as: COMM 164, COMM 264, POLISCI 124L, POLISCI 324L

PSYCH 171. Research Seminar on Aging. 4 Units.
Two quarter practicum exposes students to multiple phases of research by participating in a laboratory focusing on social behavior in adulthood and old age. Review of current research; participation in ongoing data collection, analysis, and interpretation. Prerequisites: 1, research experience, and consent of instructor. May be repeated for credit.

PSYCH 172. Self-fashioning. 3 Units.
This undergraduate and graduate seminar will examine philosophical and psychological literature relevant to self-fashioning. Meetings will be discussion oriented, and each meeting will focus on a different question of theoretical and applied significance. Prerequisite: consent of instructor. May be repeat for credit.
Same as: PHIL 186A, PHIL 286A

PSYCH 175. Social Cognition and Learning in Early Childhood. 4 Units.
Social cognition - the ability to recognize others, understand their behaviors, and reason about their thoughts - is a critical component of what makes us human. What are the basic elements of social cognition, and what do children understand about other people's actions, thoughts, and feelings? How do these capacities help us understand the world, as learning unfolds in the first few years of life? This course will take a deeper look at the intersection of social cognition and cognitive development to better understand how children learn about the world.nnStudents will explore various topics on social cognition with an emphasis on (but not limited to) developmental perspectives, including face perception, action understanding, Theory of Mind, communication, and altruism, and think about how these abilities might be linked to the developmental changes in children's understanding of the world. The course will encourage students to think hard about the fundamental questions about the human mind and how it interacts with other minds, and the value of studying young children in addressing these questions. Students should expect to read, present, and discuss theoretical and empirical research articles and to develop original research proposals as a final project. nnStudents will have an opportunity to develop their proposals into a research project in PSYCH 187, a lab course offered every other year in Spring (next offer expected to be Spring 2018) as a sequel to this course. This course fulfills the WIM requirement. nnPrerequisites Psych 60 or Psych141, or see instructor.

PSYCH 176. Biology, Culture and Family in Early Development. 3-4 Units.
Early childhood is a time of both enormous promise and vulnerability. Parents differ widely in their practices and beliefs about their role in enabling children to avoid risk and to achieve their potential for a healthy and productive life in the particular physical, social and cultural contexts of the communities and societies in which they live. In this seminar we will evaluate evidence from the biological and social sciences showing how experiences in infancy have profound and enduring effects on early brain architecture, with consequences for later language, cognitive, and socio- emotional development in childhood and adulthood. We will also consider the challenges of designing more effective social policies and programs to provide support for families in diverse socioeconomic and cultural contexts, who all want to help their children thrive. A community-service learning option, working with children as a reading tutor, is included for students taking this class for 4-units. Enrollment is limited and consent of instructor is required. Please send a brief statement of your interests, goals, and academic preparation relevant to the themes of this class to Prof. Fernald (afernald@stanford.edu). Pre-requisites: Psych 01 and Psych 60, or Human Biology 3B.

PSYCH 178. New Methods for Old Questions: Linking Social Cognition and Social Cognitive Neuroscience. 3 Units.
Novel technology can fuel new discoveries and generate new questions for future research. For instance, looking-time methods for studying infants or response time (RT) measures in cognitive psychology have been enabled by the use of computers and video cameras. More recently, neuroimaging techniques (such as fMRI) have transformed the field by offering a more direct look into the working human brain. These methods are, in a way, 'old' and 'new' ways of studying what psychologists want to study - mental representations. nnWhat are the promises and challenges of using these methods to study human cognition and its development? What have we learned, where have we fallen short, and why? Most importantly, how can we make the most out of these new methods to bear on our understanding of social cognition and its development? After the first two weeks of lectures on basic methods, each week we will consider a topic that has been extensively studied in cognitive development literature. Topics will include: perception of agency, theory of mind, and morality; on each topic, we will compare two different ways of studying mental representations - the 'old' way (behavior) and the 'new' way (neural response) - to assess their relative benefits and shortcomings, and to discuss the promises and pitfalls for combining the two.nnThis course will be a combination of lectures, presentations, and discussions aimed primarily for upper-class undergraduate students or graduate students who do not have much background in neuroimaging methods, but interested in learning more about neuroimaging methods and think about how these methods can (and cannot) help address questions about social cognition and development. Prerequisite: Psych 60 or Psych141, or see instructor.

PSYCH 180. Advanced Seminar on Racial Bias and Structural Inequality. 4 Units.
How do we address racial bias and inequities? What role do our institutions play in creating, maintaining, and magnifying those inequities? What role do we play? In this course, we will examine racial bias and inequality in our neighborhoods, schools, workplaces, healthcare facilities, and criminal justice system. In every domain, we will focus our attention on the tools and interventions that can be used to mitigate bias and decrease racial disparities. This course will be conducted as a seminar. Limited enrollment.

PSYCH 180A. SPARQshop: Social Psychological Answers to Real-world Questions. 3 Units.
Undergraduate and graduate students will work in teams to design, build, test, and distribute online toolkits that help practitioners solve real-world problems by applying social science. Graduate students can build toolkits for their own research. Students will learn how to assess the needs of practitioner audiences; write text, design graphics, and program activities for these audiences; prepare, deliver, and produce a TED-style online video; design surveys in Qualtrics; and build and user-test the toolkit. Readings and class discussions will include modules on design thinking, storytelling, science writing, information design, and impact evaluation. For an example of a toolkit in progress, please visit spacereface.org. Permission of instructor required.
Same as: PSYCH 283A

PSYCH 182. Practicum in Teaching PSYCH 1. 5 Units.
Pedagogical training focused on teaching introductory psychology: creating engaging and inclusive lesson plans and activities, providing helpful feedback to students, responding to student feedback, and supporting student learning in 1:1 and small group interactions. Students create and iterate section activities, conduct and reflect on peer feedback, and produce a statement of teaching philosophy in their second quarter. Limited to current undergraduate PSYCH 1 Teaching Fellows. May be repeated for credit.

PSYCH 183. SPARQ Lab. 2-3 Units.
Join SPARQ (Social Psychological Answers to Real-world Questions) as a research assistant and help with projects addressing real-world issues.

PSYCH 185. Racial Inequality across the Lifespan. 3 Units.
Imagine two children, one Black and one White, born on the same day and in the same country. By adulthood, these two will likely have had two remarkably different social experiences (e.g., the Black child will have received less education, income, health, and years to live). Why? Students in this course will tackle this complicated question from a psychological perspective. Together, we will examine how thinking, feeling, and behaving in ways that perpetuate stereotypes, prejudice, and discrimination contribute to racial inequality across the lifespan. The course will be conducted as a seminar, such that much of what you learn will be through group discussions, activities, and readings. A critical component of this class will be to practice writing about psychological research and social issues for the general audience. That is, students will write weekly opinion pieces that address and explain a particular area of inequality to a non-scientific audience.
Same as: AFRICAAM 185, CSRE 185C

PSYCH 186. The Psychology of Racial Inequality. 3 Units.
Our topic is the psychology of racial inequality - thinking, feeling, and behaving in ways that contribute to racial stereotyping, prejudice, and discrimination, and how these processes in turn maintain and perpetuate inequality between racial groups. We will examine how these processes unfold at both the individual and the institutional levels. Throughout this course, you will familiarize yourself with the psychological perspectives, methods, and findings that help explain racial inequality, and we will explore ways to promote racial equality. The course will be conducted as a seminar, but most of what you learn will be through the readings and discussions. That is, this course is minimally didactic; the goal is to have you engage thoughtfully with the issues and readings spurred in part by sharing perspectives, confusions, and insights through writing and discussion. Each student will facilitate at least one class session by providing an introductory framework for the readings (~10-minute presentation with handouts that overviews the concepts, issues, and controversies). Together, we will broaden our knowledge base on the subject and explain, from a psychological perspective, the pervasiveness of racial inequality. Prerequisites: PSYCH 1 and PSYCH 10.
Same as: AFRICAAM 286, CSRE 186, PSYCH 286

PSYCH 187. Research Methods in Cognition & Development. 4 Units.
For centuries, scientists have studied the invisible aspects of the physical world---air, electrons, bosons---by conducting experiments and developing new methods to measure them. Psychological science is a field in which researchers use the scientific method to study how the mind works. The ways in which humans think, reason, and learn is not directly observable, so scientists need to figure out how to design experiments and develop new methods to measure and study these mental processes. Needless to say, the informativeness of an experiment critically depends on its design. But what makes an experiment informative? nHaving first-hand experience in the actual research process is a powerful way to gain a deeper understanding of the basics of experimental methods. In particular, studies with young children often require careful considerations of experimental confounds and noisy measurements, making them ideal (and challenging) test cases for acquiring the fundamentals of experimental design. This course is an advanced, lab-based research course designed to provide an immersive experience of how to investigate the developing mind. The course will take you all the way from the design and implementation of an experiment, to the analysis and communication of its results. nIn this course, students will design a replication/extension of prior work in cognitive development, and conduct studies with children (at Bing Nursery School) as well as adults (within laboratory settings or online). Students will be provided with a general experimental context and potential dependent measures, and will develop their own studies in teams. The course will involve some lectures but it will mostly be a bootcamp-style workshop where students and instructors work together. Evaluation will primarily be based on presentations and final paper, along with a few other smaller assignments. Students should expect to spend a significant amount of hours outside of the classroom to collect their data. Instructors will expect students to have a basic understanding of statistical analyses and be comfortable with basic programming in R as well as interacting with children.

PSYCH 189. Stanford Center on Longevity Practicum. 3 Units.
Student involvement in an interdisciplinary center aimed at changing the culture of human aging using science and technology. May be repeated for credit.

PSYCH 194. Reading and Special Work. 1-3 Unit.
Independent study. May be repeated for credit. Prerequisite: consent of instructor.

PSYCH 195. Special Laboratory Projects. 1-6 Unit.
Independent study. May be repeated for credit. Prerequisites: 1, 10, and consent of instructor.

PSYCH 195S. Special Laboratory Projects. 1-6 Unit.
Independent study. May be repeated for credit. Prerequisites: 1, 10, and consent of instructor.

PSYCH 196A. Neuroscience research. 1 Unit.
This course is for undergraduate students who are part of the Wu Tsai Neurosciences Institute's Neuroscience Undergraduate Research Opportunity (NeURO) fellowship program.

PSYCH 197. Advanced Research. 1-4 Unit.
Limited to students in senior honors program. Weekly research seminar, independent research project under the supervision of an appropriate faculty member. A detailed proposal is submitted at the end of Autumn Quarter. Research continues during Winter and Spring quarters as 198. A report demonstrating sufficient progress is required at the end of Winter Quarter.

PSYCH 198. Senior Honors Research. 1-4 Unit.
Limited to students in the senior honors program. Finishing the research and data analysis, written thesis, and presentation at the Senior Honors Convention. May be repeated for credit.

PSYCH 199. Individually Supervised Practicum. 1-5 Unit.
Satisfies INS requirements for curricular practical training (CPT). May be repeated for credit. Prerequisites: consent of adviser.

PSYCH 202. Cognitive Neuroscience. 3 Units.
Graduate core course. The anatomy and physiology of the brain. Methods: electrical stimulation of the brain, neuroimaging, neuropsychology, psychophysics, single-cell neurophysiology, theory and computation. Neuronal pathways and mechanisms of attention, consciousness, emotion, language, memory, motor control, and vision. Prerequisite: For psychology graduate students, or consent of instructor.

PSYCH 204. Computation and Cognition: The Probabilistic Approach. 3 Units.
This course will introduce the probabilistic approach to cognitive science, in which learning and reasoning are understood as inference in complex probabilistic models. Examples will be drawn from areas including concept learning, causal reasoning, social cognition, and language understanding. Formal modeling ideas and techniques will be discussed in concert with relevant empirical phenomena.
Same as: CS 428

PSYCH 204A. Human Neuroimaging Methods. 3 Units.
This course introduces the student to human neuroimaging using magnetic resonance scanners. The course is a mixture of lectures and hands-on software tutorials. The course begins by introducing basic MR principles. Then various MR measurement modalities are described, including several types of structural and functional imaging methods. Finally algorithms for analyzing and visualizing the various types of neuroimaging data are explained, including anatomical images, functional data, diffusion imaging (e.g., DTI) and magnetization transfer. Emphasis is on explaining software methods used for interpreting these types of data.

PSYCH 204B. Computational Neuroimaging. 1-3 Unit.
This course provides an in-depth survey and understanding of modern computational approaches to design and analyses of neuroimaging data. The course is a mixture of lectures and projects geared to give the student an understanding of the possibilities as well as limitations of ndifferent computational approaches. Topics include: signal and noise in MRI; general linear modeling; fMRI-adaptation; multivoxel pattern analyses; decoding and encoding algorithms; modeling population receptive fields. Required: Psych 204a; Recommended: Cognitive Neuroscience.

PSYCH 205. Foundations of Cognition. 3 Units.
Topics: attention, memory, language, similarity and analogy, categories and concepts, learning, reasoning, and decision making. Emphasis is on processes that underlie the capacity to think and how these are implemented in the brain and modeled computationally. The nature of mental representations, language and thought, modular versus general purpose design, learning versus nativism. Prerequisite: 207 or consent of instructor. nOpen to Psychology PhD students only.

PSYCH 206. Cortical Plasticity: Perception and Memory. 1-3 Unit.
Seminar. Topics related to cortical plasticity in perceptual and memory systems including neural bases of implicity memory, recognition memory, visual priming, and perceptual learning. Emphasis is on recent research with an interdisciplinary scope, including theory, behavioral findings, neural mechanisms, and computational models. May be repeated for credit. Recommended: 30, 45.

PSYCH 207. Professional Seminar for First-Year Ph.D. Graduate Students. 2-3 Units.
Required of and limited to first-year Ph.D. students in Psychology. Major issues in contemporary psychology with historical backgrounds.

PSYCH 209. Neural Network Models of Cognition. 4 Units.
Neural Network models of cognitive and developmental processes and the neural basis of these processes, including contemporary deep learning models. Students learn about fundamental computational principles and classical as well as contemporary applications and carry out exercises in the first six weeks, then undertake projects during the last four weeks of the quarter. Some background in computer programming, familiarity with differential equations, linear algebra, and probability theory, and one or more courses in cognition, cognitive development or ncognitive/systems neuroscience is required.

PSYCH 211. Developmental Psychology. 3 Units.
Prerequisite: 207 or consent of instructor.

PSYCH 212. Classic and contemporary social psychology research. 1-3 Unit.
Evolution of ideas from early experiments on group dynamics, attitude change, and cognitive dissonance to later work on behavioral and emotional attribution, and more contemporary work on strategies and shortcomings in judgment and decision-making and on implicit influences on attitudes and behavior. Other topics include social dilemmas, conflict and misunderstanding, positive psychology, and the application of social psychological principles and findings to ongoing social problems including social inequality, education, and the challenge of addressing climate change.

PSYCH 213. Affective Science. 3 Units.
This seminar is the core graduate course on affective science. We consider definitional issues, such as differences between emotion and mood, as well as issues related to the function of affect, such as the role affect plays in daily life. We review autonomic, neural, genetic, and expressive aspects of affective responding. Later in the course we discuss the role of affect in cognitive processing, specifically how affective states direct attention and influence memory, as well as the role of affect in decision making. We will also discuss emotion regulation and the strategic control of emotion; the cultural shaping of emotional experience and regulation; disorders of emotion; and developmental trajectories of experience and control from early to very late life. Meetings are discussion based. Attendance and active participation are required. Prerequisite: 207 or consent of instructor.

PSYCH 215. Mind, Culture, and Society. 3 Units.
Social psychology from the context of society and culture. The interdependence of psychological and sociocultural processes: how sociocultural factors shape psychological processes, and how psychological systems shape sociocultural systems. Theoretical developments to understand social issues, problems, and polity. Works of Baldwin, Mead, Asch, Lewin, Burner, and contemporary theory and empirical work on the interdependence of psychology and social context as constituted by gender, ethnicity, race, religion, and region of the country and the world. Prerequisite: 207 or consent of instructor.

PSYCH 216. Public Policy and Social Psychology: Implications and Applications. 4 Units.
Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior will be discussed with reference to a range of public policy issues including education, public health, income and wealth inequalities, policing and climate change, Specific topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; stereotyping and stereotype threat, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; also the general problem of producing individual and collective changes in norms and behavior.
Same as: INTLPOL 207B, PUBLPOL 305B

PSYCH 217. Topics and Methods Related to Culture and Emotion. 3-5 Units.
Preference to graduate students. How cultural factors shape emotion and other feeling states. Empirical and ethnographic literature, theories, and research on culture and emotion. Applications to clinical, educational, and occupational settings. Research in psychology, anthropology, and sociology. May be repeated for credit.

PSYCH 221. Image Systems Engineering. 1-3 Unit.
This course is an introduction to digital imaging technologies. We focus on the principles of key elements of digital systems components; we show how to use simulation to predict how these components will work together in a complete image system simulation. The early lectures introduce the software environment and describe options for the course project. The following topics are covered and software tools are introduced:n- Basic principles of optics (Snell's Law, diffraction, adaptive optics).n- Image sensor and pixel designsn- Color science, metrics, and calibrationn- Human spatial resolutionn- Image processing principlesn- Display technologiesnA special theme of this course is that it explains how imaging technologies accommodate the requirements of the human visual system. The course also explains how image systems simulations can be useful in neuroscience and industrial vision applications.nThe course consists of lectures, software tutorials, and a course project. Tutorials and projects include extensive software simulations of the imaging pipeline. Some background in mathematics (linear algebra) and programming (Matlab) is valuable.nPre-requisite: EE 261 or equivalent. Or permission of instructor required.
Same as: SYMSYS 195I

PSYCH 222. From Classic Experiments to Cutting Edge Neuroimaging: The Functional Neuroanatomy of Visual Cortex. 1-3 Unit.
We will discuss the fundamental organizational principles of the visual system starting by discussing classic papers in non-human primates and proceeding to discuss recent neuroimaging studies in humans. We will then examine how understanding these organizational principles has influenced mapping the functional organization of visual system. Finally, we will analyze neuroimaging datasets and examine how well one can evaluate and define visual areas in the human brains by understanding these principles.

PSYCH 223. Social Norms. 3 Units.
This course covers research and theory on the origins and function of social norms. Topics include the estimation of public opinion, the function of norms as ideals and standards of judgment, and the impact of norms on collective and individual behavior and norm intervention. In addition to acquainting students with the various forms and functions of social norms the course will provide students with experience in identifying and formulating tractable research questions. Priority for enrollment will be given to PhD students but advanced undergraduates may request permission for enrollment from the instructor.

PSYCH 224. Mapping the human visual system. 1-3 Unit.
The human visual system has more than two dozen topographic maps of the visual field. This course will explain principles of topographic maps in the visual system, mapping of visual areas using retinotopy, as well as modeling spatial and temporal computations in the visual system using population receptive fields. The class will combine reading and discussing papers that discovered these maps and computational principles with a lab component in which the students will analyze fMRI datasets that are used to map visual cortex.
Same as: NEPR 224

PSYCH 226. Models and Mechanisms of Memory. 1-3 Unit.
Current topics in memory as explored through computational models addressing experimental findings and physiological and behavioral investigations. Topics include: episodic and statistical learning; impact of prior knowledge on new learning; and the role of MTL structures in learning and memory. May be repeated for credit.

PSYCH 227. Seminar in Psycholinguistics: Advanced Topics. 2-4 Units.
Adaptation to speaker variability in language use has receivednincreasing attention in recent years from linguists and psychologistsnalike, who have recognized that, though long ignored, it poses a problemnfor static theories of language. The course will present a broad surveynof recent work in this area across levels of linguistic representation,nincluding phonetic, lexical, syntactic, prosodic, and semanto-pragmaticnadaptation. We will discuss the cognitive underpinnings of adaptationnand its relation to priming and learning, compare adaptation in varyingndomains, and consider the implications for theories of language andncommunication. The course will be organized primarily around discussionnof assigned readings. Students will develop a research proposal relevantnto issues in adaptation. May be repeated for credit. Prerequisite: LINGUIST 145 or background in any subfield of linguistics.
Same as: LINGUIST 247

PSYCH 228. Ion Transport and Intracellular Messengers. 3 Units.
(Graduate students register for 228.) Ion channels, carriers, ion pumps, and their regulation by intracellular messengers in a variety of cell types. Recommended: 120, introductory course in biology or human biology.
Same as: PSYCH 121

PSYCH 231. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.
The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.
Same as: COMM 339, POLISCI 421K

PSYCH 232. Brain and Decision. 3 Units.
This seminar explores how emerging findings at the interface of neuroscience, psychology, and economics combine to inform our understanding of how the brain makes decisions. Topics include neural processes related to reward, punishment, probability, risk, time, reflection, and social interaction, as well as theoretical implications and practical applications. We will briefly touch on the possibility of extending individual brain and behavioral data down to physiological and up to aggregate levels of analysis.nBecause the course involves interdisciplinary material, it takes the format of a research seminar with background discussions, and is targeted at graduate students and advanced undergraduates who aim to conduct related research. Goals include: (1) building familiarity with relevant neuroscience, psychology, and economics concepts; (2) increasing awareness of key relevant literature; and (3) preparation to conduct and advance innovative interdisciplinary research.

PSYCH 233. Longevity Innovations. 1 Unit.
Longer lives are generating new opportunities for products and services that support them. The Stanford Center on Longevity works closely with business leaders and entrepreneurs who are envisioning emerging longevity markets. The course overviews the broad demographic changes underway and related challenges that longer lives present. Within this context, students are required to think critically about new needs and opportunities in the longevity economy.

PSYCH 234. UNDERSTANDING DEPRESSION. 3 Units.
In this course we will discuss current issues in the study of major depression, including the epidemiology and phenomenology of depression and other affective disorders, psychological and biological theories of depression, gender differences in depression, cognitive and social functioning of depressed persons, findings from neuroimaging studies of depression, depression in children, risk factors for depression, issues involving suicide, and implications of the NIMH RDoC initiative for the study of depression and other psychiatric diagnostic categories.

PSYCH 235. Motivation and Emotion. 3 Units.
This graduate seminar will explore social-cognitive perspectives on motivation and emotion. Meetings will be discussion based. Prerequisites: Psychology 207 and consent of instructor.

PSYCH 236A. The Psychology of Scarcity: Its Implications for Psychological Functioning and Education. 3 Units.
This course brings together several literatures on the psychological, neurological, behavioral and learning impact of scarcities, especially those of money (poverty) time and food. It will identify the known psychological hallmarks of these scarcities and explore their implications for psychological functioning, well-being and education--as well as, how they can be dealt with by individuals and in education.
Same as: CSRE 136U, PSYCH 136

PSYCH 238. Wise Interventions. 4 Units.
Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy.
Same as: PSYCH 138, PUBLPOL 238

PSYCH 240. What Changes?. 3 Units.
When children get older, they start to behave differently. What¿s changing? In other words, what specific mechanisms underlie different developmental correlations between age and behavioral competence. Of course, the answer (or more likely, answers plural) to this question will differ vastly from domain to domain, but are there generalizations that we can make about the ways that different factors affect behavior across domains - differences in developmental drivers for so-called ¿lower-level¿ tasks versus ¿higher-level¿ tasks, or age-related differences in the determinants of change during specific time periods? In this course, we¿ll try to get a handle on some of the extant proposals on these questions, and maybe offer some of our own.

PSYCH 240A. Curiosity in Artificial Intelligence. 3 Units.
How do we design artificial systems that learn as we do early in life -- as "scientists in the crib" who explore and experiment with our surroundings? How do we make AI "curious" so that it explores without explicit external feedback? Topics draw from cognitive science (intuitive physics and psychology, developmental differences), computational theory (active learning, optimal experiment design), and AI practice (self-supervised learning, deep reinforcement learning). Students present readings and complete both an introductory computational project (e.g. train a neural network on a self-supervised task) and a deeper-dive project in either cognitive science (e.g. design a novel human subject experiment) or AI (e.g. implement and test a curiosity variant in an RL environment). Prerequisites: python familiarity and practical data science (e.g. sklearn or R).
Same as: EDUC 234

PSYCH 241. Psychometrics and automated experiment design. 3 Units.
n this graduate seminar we will consider how modern computational techniques and old ideas in psychometrics combine to enable new approaches to experimentation. We will cover topics such as item response theory, optimal experiment design, adaptive experiments, and Bayesian optional stopping. We will read fairly technical papers and ask students to implement some of the algorithms we are studying.

PSYCH 242. Theoretical Neuroscience. 3 Units.
Survey of advances in the theory of neural networks, mainly (but not solely) focused on results of relevance to theoretical neuroscience.Synthesizing a variety of recent advances that potentially constitute the outlines of a theory for understanding when a given neural network architecture will work well on various classes of modern recognition and classification tasks, both from a representational expressivity and a learning efficiency point of view. Discussion of results in the neurally-plausible approximation of back propagation, theory of spiking neural networks, the relationship between network and task dimensionality, and network state coarse-graining. Exploration of estimation theory for various typical methods of mapping neural network models to neuroscience data, surveying and analyzing recent approaches from both sensory and motor areas in a variety of species. Prerequisites: calculus, linear algebra, and basic probability theory, or consent of instructor.
Same as: APPPHYS 293

PSYCH 243. General Development Seminar. 1-2 Unit.
May be repeated for credit. Prerequisite: consent of instructors. Restricted to Developmental graduate students.

PSYCH 244. Psychology of Aging. 1-3 Unit.
Theory and research in gerontology. Normal and abnormal changes that occur in biological, cognitive, and psychological aging. Emphasis is on the environmental factors that influence the aging process. Prerequisite: graduate standing in Psychology or consent of instructor.

PSYCH 245. New Map of Life. 2 Units.
This is an advanced graduate seminar focused on ways the ways that key life domains must change to accommodate century-long lives.

PSYCH 245A. Understanding Racial and Ethnic Identity Development. 3-5 Units.
This seminar will explore the impact and relative salience of racial/ethnic identity on select issues including: discrimination, social justice, mental health and academic performance. Theoretical perspectives on identity development will be reviewed, along with research on other social identity variables, such as social class, gender and regional identifications. New areas within this field such as the complexity of multiracial identity status and intersectional invisibility will also be discussed. Though the class will be rooted in psychology and psychological models of identity formation, no prior exposure to psychology is assumed and other disciplines-including cultural studies, feminist studies, and literature-will be incorporated into the course materials. Students will work with community partners to better understand the nuances of racial and ethnic identity development in different contexts. (Cardinal Course certified by the Haas Center).
Same as: AFRICAAM 245, CSRE 245, EDUC 245

PSYCH 246. Cognitive and Neuroscience Friday Seminar. 1 Unit.
Participant presentations. May be repeated for credit. Prerequisite: graduate standing in psychology or neuroscience program.

PSYCH 247. Topics in Natural and Artificial Intelligence. 3 Units.
We will read a selection of recent papers from psychology, computer science, and other fields. We will aim to understand: How human-like are state of the art artificial intelligence systems? Where can AI be better informed by recent advances in cognitive science? Which ideas from modern AI inspire new approaches to human intelligence? Specific topics will be announced prior to the beginning of term.

PSYCH 248. Advanced fMRI modeling and analysis. 3 Units.
This seminar will discuss the state of the art in methods for the modeling and analysis of functional magnetic resonance imaging data. Potential topics include connectivity modeling, causal modeling, multivariate pattern analysis, encoding models, and classification analysis. The seminar will include hands-on analysis exercises in addition to lectures.

PSYCH 248A. fMRI Analysis Bootcamp. 3 Units.
This course will provide a hands-on overview of methods for processing and analysis of functional magnetic resonance imaging data. Topics include preprocessing, statistical modeling, spatial normalization, statistical power analysis, multiple comparison correction, connectivity modeling, machine learning, and Bayesian modeling. The seminar will include hands-on analysis exercises in addition to lectures.

PSYCH 249. Large-Scale Neural Network Modeling for Neuroscience. 1-3 Unit.
Introduction to designing, building, and training large-scale neural networks for modeling brain and behavioral data, including: deep convolutional neural network models of sensory systems (vision, audition, somatosensation); variational and generative methods for neural interpretation; recurrent neural networks for dynamics, memory and attention; interactive agent-based deep reinforcement learning for cognitive modeling; and methods and metrics for comparing such models to real-world neural data. Attention will be given both to established methods as well as cutting-edge techniques. Students will learn conceptual bases for deep neural network models and will also implement learn to implement and train large-scale models in Tensorflow using GPUs. Requirements: Fluency in Unix shell and Python programming; familiarity with differential equations, linear algebra, and probability theory; priori experience with modern machine learning concepts (e.g. CS229) and basic neural network training tools (eg. CS230 and/or CS231n). Prior knowledge of basic cognitive science or neuroscience not required but helpful.
Same as: CS 375

PSYCH 249L. Workshop on Incremental Language Processing. 1 Unit.
Language is processed incrementally over time. This has consequences for language comprehension, production, acquisition, and change, all of which occur at different timescales. What is the role of time in language? The class will be based around visiting lectures by major researchers in this area, along with meetings to prepare for their visits by discussing key readings. May be repeated for credit.
Same as: LINGUIST 249L

PSYCH 250. High-level Vision: From Neurons to Deep Neural Networks. 1-3 Unit.
Interdisciplinary seminar focusing on understanding how computations in the brain enable rapid and efficient object perception. Covers topics from multiple perspectives drawing on recent research in Psychology, Neuroscience, and Computer Science. Emphasis on discussing recent empirical findings, methods and theoretical debates in the field.
Same as: CS 431

PSYCH 250A. High-level Vision: From Neurons to Deep Neural Networks. 1-2 Unit.
This advanced level seminar is an interdisciplinary course focusing on understanding how computations in the brain enable rapid and efficient object perception. The course will cover topics from multiple perspectives drawing on recent research in neuroscience, computer science and psychology. Emphasis will be placed on examining recent findings pertaining to computational theories of high-level vision, ongoing debates in the field, and discussion of recent empirical findings.

PSYCH 251. Experimental Methods. 3 Units.
Graduate laboratory class in experimental methods for psychology, with a focus on open science methods and best practices in behavioral research. Topics include experimental design, data collection, data management, data analysis, and the ethical conduct of research. The final project of the course is a replication experiment in which students collect new data following the procedures of a published paper. The course is designed for incoming graduate students in psychology, but is open to qualified students from other programs who have some working knowledge of the R statistical programming language. Requirement: Psych 10/Stats 60 or equivalent.
Same as: SYMSYS 195E

PSYCH 252. Statistical Methods for Behavioral and Social Sciences. 5 Units.
This course offers an introduction to advanced topics in statistics with the focus of understanding data in the behavioral and social sciences. It is a practical course in which learning statistical concepts and building models in R go hand in hand. The course is organized into three parts: In the first part, we will learn how to visualize, wrangle, and simulate data in R. In the second part, we will cover topics in frequentist statistics (such as multiple regression, logistic regression, and mixed effects models) using the general linear model as an organizing framework. We will learn how to compare models using simulation methods such as bootstrapping and cross-validation. In the third part, we will focus on Bayesian data analysis as an alternative framework for answering statistical questions. Please view course website: https://psych252.github.io/. Open to graduate students only. Requirement: Psych 10/Stats 60 or equivalent.

PSYCH 253. Advanced Statistical Modeling. 3 Units.
Introduction to high-dimensional data analysis and machine learning methods for use in the behavioral and neurosciences, including: supervised methods such as SVMs, linear and nonlinear regression and classifiers, and regularization techniques; statistical methods such as bootstrapping, signal detection, factor analysis, and reliability theory; metrics for model/data comparison such as representational similarity analysis; and unsupervised methods such as clustering. Students will learn how to both use existing statistical data analysis packages (such as scikit-learn) as well to build, optimize, and estimate their own custom models using an optimization framework (such as Tensorflow or Pytorch). Requirement: Psych 251. Familiarity with python programming and multivariable calculus and linear algebra (Math 51) highly recommended.

PSYCH 254. Affective Neuroscience. 3 Units.
Theory and research. Comparative and human research approaches map affective function to neuroanatomical and neurochemical substrates. Prerequisite: consent of instructor.

PSYCH 255. Seminar on Motivation. 3 Units.
Selective overview of the scientific study of motivation. Our focus is on interesting, experimentally tractable ideas. Meetings will be discussion based.

PSYCH 256. Race at Work. 3-5 Units.
In this practicum, students will examine how race works in a variety of institutional spaces by participating in community partnerships relevant to criminal justice, education, economic development, or health. Limited enrollment. Prerequisite for undergraduates: Psych 1, Psych 70, and one of the following: Psych 150, Psych 180, Psych 298, Psych 103, Psych 135, Psych 30N, or Psych 138.

PSYCH 258. Graduate Seminar in Social Psychology Research. 1-3 Unit.
For students who are already or are planning to become involved in research on social construal and the role that it plays in a variety of phenomena, notably the origin and escalation of conflict.

PSYCH 259. Race and Crime. 3 Units.
The goal of this course is to examine social psychological perspectives on race, crime, and punishment in the United States. Readings will be drawn not only from psychology, but also from sociology, criminology, economics, and legal studies. We will consider the manner in which social psychological variables may operate at various points in the crimina; justice system- from policing, to sentencing, to imprisonment, to re-entry. Conducted as a seminar. Students interested in participating should attend the first session and complete online application for permission at https://goo.gl/forms/CAut7RKX6MewBIuG3.
Same as: CSRE 150A, PSYCH 150

PSYCH 260. Seminar on Emotion. 3 Units.
This undergraduate and graduate seminar will examine ancient Greek philosophical and contemporary psychological literatures relevant to emotion. Questions to be investigated include: What is the nature of emotions? What is the appropriate place in our lives for emotions? How should we manage our emotions? Do the emotions threaten the integrity of the agent? Meetings will be discussion oriented. Prerequisite: consent of instructor.
Same as: PHIL 375G, PSYCH 160

PSYCH 262. Measurement and the Study of Change in Social Science Research. 1-5 Unit.
This course is a survey of methodological issues associated with the measurement of psychological constructs and processes of change. General areas to be covered include use of latent variable models (structural equation modeling), classical test theory, generalizability theory, principal component analysis, factor analysis, item response theory and how these models facilitate and/or constrain the study of change processes. Students will work through application/implementation of the models through hands-on analysis of simulated and empirical data, acquire experiences in the formulation of research questions and study designs that are appropriately tethered to the different theoretical perspectives invoked by the different models.

PSYCH 263. Cognitive Neuroscience: Vision. 3 Units.
Decision, categorization. Bayesian inference, working memory, attention, cognitive control, conscious perception and awareness. The neural basis for all of these cognitive functions have been extensively studied in the domain of vision. Why vision? Because a great deal of scientific inquiry has delineated both the behavioral and physiological aspects of basic sensory processing in vision. Because of this, cognitive neuroscience questions can be precisely formulated in the context of vision. As a result we have some of the best answers to the question of what neural mechanisms underlie cognitive functions in the domain of vision.
The course will combine lectures and in-depth discussions of primary literature to develop key concepts in the neuroscience of vision and how these concepts have been built on to understand the neural basis of higher cognition. Guest instructors will include Bill Newsome, Tirin Moore and Kalanit Grill-Spector.

PSYCH 264. Unleashing Personal Potential: Behavioral Science and Design Thinking Applied to Self. 2-4 Units.
This course facilitates the application of the methods, theories, and findings of behavioral science to students own lives and improvement projects. It does so by combining behavioral science with a design thinking approach. You will learn to identify your potential, navigate to achieve it, and stay resilient during the journey. Students will design their own action plans, define goals and prototype strategies to test them, in an iterative feedback cycle. Our course thus blends two intellectual streams that seldom intersect: behavioral science and design thinking.
Same as: EDUC 426

PSYCH 265. Social Psychology and Social Change. 2-3 Units.
The course is intended as an exploration of the major ideas, theories, and findings of social psychology and their applied status. Special attention will be given to historical issues, classic experiments, and seminal theories, and their implications for topics relevant to education. Contemporary research will also be discussed. Advanced undergraduates and graduate students from other disciplines are welcome, but priority for enrollment will be given to graduate students. In order to foster a vibrant, discussion-based class, enrollment will be capped at 20 students. Interested students should enroll in the class through simple enroll or axess. There will be an application process on the first day of class if there is overwhelming interest. Please contact the course TA, Isabelle Tay (isabelletay[at]stanford.edu), if you have any further questions.
Same as: EDUC 371

PSYCH 266. Current Debates in Learning and Memory. 1-3 Unit.
Memory is not a unitary faculty, but consists of multiple forms of learning and remembering. The cognitive and neural architectures of memory, focusing on the application of functional brain imaging (primarily fMRI and ERP). Psych 45 and Psych 169 required if undergraduate student.

PSYCH 267. Brain Networks. 3 Units.
An essential aspect of the brain is its complex pattern of connectivity between neurons across different areas. This course will provide a comprehensive overview of the networks of the brain, analyzed from a range of standpoints from the microscopic to the macroscopic, with a particular focus on the organization of the human brain. Specific topics include brain anatomy, connectomics, structural and functional neuroimaging, graph theory and network science, dynamic models, and causal inference. The course will comprise a combination of lectures, paper discussions, and hands-on analysis exercises. The first session each week will be composed of lecture and background, and the second session will be focused on discussion and hands-on analyses, with students assigned to lead the discussion sessions. Prerequisites: Basic knowledge of neuroscience (equivalent to Psych 50A). A moderate level of programming experience will be required for hands-on exercises and problem sets. Primary exercises will be in Python.
Same as: PSYCH 162

PSYCH 268. Emotion Regulation. 3 Units.
(Graduate students register for 268.) The scientific study of emotion regulation. Topics: historical antecedents, conceptual foundations, autonomic and neural bases, individual differences, developmental and cultural aspects, implications for psychological and physical health. Focus is on experimentally tractable ideas.
Same as: PSYCH 168

PSYCH 269. Graduate Seminar in Affective Science. 1 Unit.
May be repeated for credit. Prerequisite: graduate standing in Psychology.

PSYCH 270. The Self: Representations and Interventions. 3 Units.
We will examine research and theory on mental models of the self, others, and the social world; how these develop; and how interventions can alter or leverage these mental models to improve human functioning and outcomes.

PSYCH 271. Communicating Psychology. 3 Units.
A graduate seminar on writing and communication of psychological research, both for our colleagues and audiences outside the field.

PSYCH 272. Psychology and American Indian/Alaska Native Mental Health. 3-5 Units.
Western medicine's definition of health as the absence of sickness, disease, or pathology; Native American cultures' definition of health as the beauty of physical, spiritual, emotional, and social things, and sickness as something out of balance. Topics include: historical trauma; spirituality and healing; cultural identity; values and acculturation; and individual, school, and community-based interventions. Prerequisite: experience working with American Indian communities.
Same as: EDUC 340, NATIVEAM 240

PSYCH 273. Changing Mindsets and Contexts: How to Create Authentic, Lasting Improvement. 3 Units.
Many wise interventions offer people new beliefs but have not addressed the contexts in which those beliefs will be situated and implemented. This can limit the interventions¿ effectiveness. In this course, we will explore how combining mindset change with consideration of, or change to, the setting can enhance the authenticity of the intervention and the duration of its effects. Topics will include contextual boundary conditions on direct-to-student treatments, the nature of contextual ¿affordances, ¿ and the creation of contextual affordances.

PSYCH 274. Graduate Research Workshop on Psychological Interventions. 3 Units.
Psychological research has the potential to create novel interventions that promote the public good. This workshop will expose students to psychologically 'wise' intervention research and to support their efforts to conduct such interventions, especially in the context of education, broadly conceived, as well as other areas. The first part of the class will address classic interventions and important topics in intervention research, including effective delivery mechanisms, sensitive behavioral outcomes, the role of theory and psychological process, and considerations of the role of time and of mechanisms that can sustain treatment effects over time. In the second part of the class, students will present and receive feedback on their own ongoing and/or future intervention research. Prerequisite: Graduate standing in Psychology or Education, or consent of instructor.
Same as: EDUC 287

PSYCH 275. Graduate Research. 1-15 Unit.
Intermediate-level research undertaken with members of departmental faculty. Prerequisite: consent of instructor.nn (Staff).

PSYCH 276. Graduate Research. 1-15 Unit.
Intermediate-level research undertaken with psychology faculty. Prerequisite: consent of instructor.

PSYCH 277. What Is a Mindset and How Does it Work?. 3-4 Units.
What is a mindset and how does it work? This seminar will explore existing and ongoing research, ranging from research on mindsets about talent and personality to mindsets about disease, stress and aging. We will focus on key questions related to the advancement of mindset science and intervention, including: how is ¿mindset¿ defined and how is it distinct from related constructs? What are the mechanisms through which mindsets exert effects on physiology and behavior? How do mindsets speak to the issues of the interplay of nature and nurture, body and mind, cognitions and emotion? How do mindsets function at the group, organization or cultural level? How are mindsets effectively changed? What are the limits of mindsets? This seminar is offered to graduate students and others with the instructors¿ permission.

PSYCH 278. Social Cognitive Development: New Methods for Answering Old Questions. 1-2 Unit.
Novel technology can fuel new discoveries and generate new questions for future research, for instance, the use of video cameras has transformed the field of developmental psychology. More recently, the use of neuroimaging techniques (such as fMRI) to study the developing brain has been gaining lots of interest among developmental psychologists. What are the promises and challenges of using these neuroimaging methods to study cognitive development? This course will be a discussion-based seminar class (with some lectures from the instructor and from students) aimed for graduate students who are interested in learning more about how these methods can help address questions about cognitive development, with a particular focus on children's developing understanding of their social world.

PSYCH 280. Foundations and Contemporary Topics in Social-Educational Psychology. 2-4 Units.
At its core, social psychology is concerned with educational problems because it addresses the problem of how to change hearts and minds in lasting ways. This course explores the major ideas, theories, and findings of social psychology, their educational implications, and the insights they shed into how and when people change. There will be a focus on educational issues. Intersections with other disciplines, in particular social development and biology, will be addressed. Historical tensions and traditions, as well as classic studies and theories, will be covered. Graduate students from other disciplines, and advanced undergraduates, are welcome (class size permitting).
Same as: EDUC 307

PSYCH 281. Practicum in Teaching. 1-5 Unit.
Enrollment limited to teaching assistants in selected Psychology courses. May be repeated for credit.

PSYCH 282. Practicum in Teaching PSYCH 1. 1 Unit.
Pedagogical training focused on teaching introductory psychology: creating engaging and inclusive lesson plans and activities, providing helpful feedback to students, responding to student feedback, and supporting student learning in 1:1 and small group interactions. Second quarter focuses on designing and iterating section activities, giving and receiving peer feedback on teaching, and reflecting on teaching practices. Limited to current graduate PSYCH 1 Teaching Fellows. May be repeated for credit.

PSYCH 283A. SPARQshop: Social Psychological Answers to Real-world Questions. 3 Units.
Undergraduate and graduate students will work in teams to design, build, test, and distribute online toolkits that help practitioners solve real-world problems by applying social science. Graduate students can build toolkits for their own research. Students will learn how to assess the needs of practitioner audiences; write text, design graphics, and program activities for these audiences; prepare, deliver, and produce a TED-style online video; design surveys in Qualtrics; and build and user-test the toolkit. Readings and class discussions will include modules on design thinking, storytelling, science writing, information design, and impact evaluation. For an example of a toolkit in progress, please visit spacereface.org. Permission of instructor required.
Same as: PSYCH 180A

PSYCH 285. Graduate Seminar on Theory of Mind. 3 Units.
Theory of Mind ¿ the ability to reason and think about other minds ¿ has been a topic of extensive research and heated debates in the past few decades. The course will provide an in-depth overview of the major theories that have motivated empirical research. Students will read and discuss theoretical papers as well as empirical work that have supported or refuted these theories, and the latest research on Theory of Mind, from various disciplines including (but not limited to), cognitive development, comparative psychology, and cognitive neuroscience.

PSYCH 286. The Psychology of Racial Inequality. 3 Units.
Our topic is the psychology of racial inequality - thinking, feeling, and behaving in ways that contribute to racial stereotyping, prejudice, and discrimination, and how these processes in turn maintain and perpetuate inequality between racial groups. We will examine how these processes unfold at both the individual and the institutional levels. Throughout this course, you will familiarize yourself with the psychological perspectives, methods, and findings that help explain racial inequality, and we will explore ways to promote racial equality. The course will be conducted as a seminar, but most of what you learn will be through the readings and discussions. That is, this course is minimally didactic; the goal is to have you engage thoughtfully with the issues and readings spurred in part by sharing perspectives, confusions, and insights through writing and discussion. Each student will facilitate at least one class session by providing an introductory framework for the readings (~10-minute presentation with handouts that overviews the concepts, issues, and controversies). Together, we will broaden our knowledge base on the subject and explain, from a psychological perspective, the pervasiveness of racial inequality. Prerequisites: PSYCH 1 and PSYCH 10.
Same as: AFRICAAM 286, CSRE 186, PSYCH 186

PSYCH 287. Brain Machine Interfaces: Science, Technology, and Application. 1-3 Unit.
This course explores the current state of brain-machine interfaces: technologies that directly stimulate and/or record neural activity. Such interfaces are being used to treat nervous system disorders, including hearing, seeing, and motor dysfunction. We expect that the range of applications will expand over the next decade to other neurological conditions and to augmentation of function. The material we cover aims to explain some of the existing technology and to clarify its limitations and promise. The course organization is designed to develop new ideas and promote new collaborations for extending the reach of these technologies. The class will feature lecturers with expertise in brain-machine interfaces of various sorts or related technologies and methods, as well as directed readings and discussion about new work in the field. In the previous year lectures were given by: Brian Wandell, Daniel Palanker, Nikos Logothetis, John Oghalai, Stephen Baccus, Paul Nuyujukian, Dan Yoshor and Nick Melosh.
Same as: NSUR 287

PSYCH 288. Perspectives on Belonging. 3 Units.
How do people make sense of their relationship with a community or society and how does this affect their behavior and outcomes? We will examine classic and contemporary research and theory on what belonging is; how people draw inferences about their belonging in different contexts; cultural and social-group variation; and how belonging-related motivations affect diverse behaviors.

PSYCH 289. Advanced Longitudinal and Multivariate Methods in Social Science Research. 1-5 Unit.
This course offers a project-based orientation to methodological issues associated with the analysis of multivariate and/or longitudinal data in the social sciences. General areas to be covered include the manipulation/organization/description of the types of empirical data obtained in social science research, and the application/implementation of multivariate analysis techniques to those data. Students will, through hands-on analysis of their data, acquire experiences in the formulation of research questions and study designs that are appropriately tethered to a variety of advanced analytical methods. Limited to PhD students and consent of instructor.
Same as: COMM 365

PSYCH 290. Natural Language Processing & Text-Based Machine Learning in the Social Sciences. 4 Units.
Digital communications (including social media) are the largest data sets of our time, and most of it is text. Social scientists need to be able to digest small and big data sets alike, process it and extract psychological insight. This applied and project-focused course introduces students to a Python codebase developed to facilitate text analysis in the social sciences (see dlatk.wwbp.org -- knowledge of Python is helpful but not required). The goal is to practice these methods in guided tutorials and project-based work so that the students can apply them to their own research contexts and be prepared to write up the results for publication. The course will provide best practices, as well as access to and familiarity with a Linux-based server environment to process text, including the extraction of words and phrases, topics and psychological dictionaries. We will also practice the use of machine learning based on text data for psychological assessment, and the further statistical analysis of language variables in R. Familiarity with Python is helpful but not required. Basic familiarity with R is expected. The ability to wrangle data into a spreadsheet-like format is expected. A basic introduction to SQL will be given in the course. Familiarity with SSH and basic Linux is helpful but not required. Understanding of regression is expected.
Same as: SOC 281, SYMSYS 195T

PSYCH 291. Causal Cognition. 3 Units.
Causality is central to our understanding of the world and of each other. We think causally when we predict what will happen in the future, infer what happened in the past, and interpret other people's actions and emotions. Causality is intimately linked to explanation -- to answering questions about why something happened. In this discussion-based seminar class, we will first read foundational work in philosophy that introduces the main frameworks for thinking about causation. We will then read some work on formal and computational theories of causation that was inspired by these philosophical frameworks. Equipped with this background, we will study the psychology of causal learning, reasoning, and judgment. We will tackle questions such as: How can we learn about the causal structure of the world through observation and active intervention? What is the relationship between causal reasoning and mental simulation? Why do we select to talk about some causes over others when several causes led to an outcome? Toward the end of the course, we will discuss how what we have learned in psychology about causation may be useful for other fields of inquiry, such as legal science as well as machine learning and artificial intelligence.

PSYCH 292. Special Topics in Emotion Regulation. 1 Unit.
This seminar will consider special topics in emotion regulation. Admission is by invitation only.

PSYCH 293. What makes a good explanation? Psychological and philosophical perspectives. 4 Units.
Explanation is a topic of longstanding interest in philosophy and psychology, and has recently attracted renewed attention due to novel challenges in interpreting and interacting with relatively opaque AI systems. In this graduate seminar, we will study the science and engineering of explanations, combining perspectives from philosophy, psychology, AI, and the legal sciences. We will ask questions like: When do we ask for explanations? What makes a good explanation? How can we build machines that can understand and explain? This interdisciplinary seminar is co-taught by Thomas Icard (Philosophy) and Tobias Gerstenberg (Psychology). We will meet twice a week (Tuesdays and Thursdays 10:30am-11:50am) to discuss research articles from a range of disciplines. Students are expected to write responses based on their readings, lead the discussion on one of the papers, and actively participate in the discussion otherwise. As a final project, students will outline a novel study on explanation that makes an empirical, modeling, or theoretical contribution. Participation is restricted to a maximum of 12 graduate students (by application). The course website, with information about application, can be found here: phil350.stanford.edu.
Same as: PHIL 350

PSYCH 295. Seminar on the Science of Meditation. 3 Units.
What is meditation? What immediate and longer-term effects does this practice have on cognition? What are the mechanisms of these effects? In this small seminar we will try to gain insight into these questions by reading and discussing recent papers drawn from psychology and neuroscience. Emphasis will be placed on careful consideration of the evidence within papers and theoretical synthesis across papers. We will also use ancient and modern studies of meditation to reflect on possibilities for the scientific study subjective experience.May be repeat for credit.

PSYCH 298. Advanced Studies in Health Psychology. 3 Units.
This course provides an overview of the major concepts and questions in the field of health psychology. Through reading, lecture and interactive discussion, students have the opportunity to explore and think critically about a number of psychological and social influences in determining health including: emotions, beliefs, relationships, stress, motivation, behavior change, spirituality, culture, and social influence. Students will also discuss the role of important and current topics in the field of health psychology and medicine such as the changing role of the patient and provider relationship, health-care policy and the environment, placebo effects, wearable health devices, and the use of technology in medicine. Course is offered to graduate students and advanced undergraduates with permission from the instructor.

PSYCH 373. Research Seminar: Mind, Brain, and Computation. 1 Unit.
Faculty and student research presentations focusing on work linking cellular, systems, cognitive, behavioral, and computational neuroscience. Limited to affiliates of the Center for Mind, Brain and Computation. May be repeated for credit.

PSYCH 383. International Conflict Resolution. 2 Units.
(Formerly IPS 250) (Same as LAW 5009; formerly Law 656) This seminar examines the challenges of managing and resolving intractable political and violent intergroup and international conflicts. Employing an interdisciplinary approach drawing on social psychology, political science, game theory, and international law, the course identifies various tactical, psychological, and structural barriers that can impede the achievement of efficient solutions to conflicts. We will explore a conceptual framework for conflict management and resolution that draws not only on theoretical insights, but also builds on historical examples and practical experience in the realm of conflict resolution. This approach examines the need for the parties to conflicts to address the following questions in order to have prospects of creating peaceful relationships: (1) how can the parties to conflict develop a vision of a mutually bearable shared future; (2) how can parties develop trust in the enemy; (3) how can each side be persuaded, as part of a negotiated settlement, to accept losses that it will find very painful; and (4) how do we overcome the perceptions of injustice that each side are likely to have towards any compromise solution? We will consider both particular conflicts, such as the Israeli-Palestinian conflict and the South African transition to majority rule, as well as cross-cutting issues, such as the role international legal rules play in facilitating or impeding conflict resolution, the ways intragroup dynamics affect intergroup conflict resolution efforts, and the role of criminal accountability for atrocities following civil wars. Special Instructions: Section 01: Grades will be based on class participation, written assignments, and a final exam. Section 02: Up to five students, with consent of the instructor, will have the option to write an independent research paper for Research (R) credit in lieu of the written assignments and final exam for Section 01. After the term begins, students (max 5) accepted into the course can transfer from section (01) into section (02), which meets the R requirement, with consent of the instructor.
Same as: INTLPOL 250

PSYCH 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.
Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.
Same as: BIO 459, BIOC 459, BIOE 459, CHEM 459, CHEMENG 459

PSYCH 801. Master's TGR Project. 0 Units.
.

PSYCH 802. PhD TGR Dissertation. 0 Units.
.

PUBLIC POLICY

Courses offered by the Public Policy Program are listed under the subject code PUBLPOL on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PUBLPOL&filter-catalognumber-PUBLPOL=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PUBLPOL&filter-catalognumber-PUBLPOL=on) ExploreCourses website (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PUBLPOL&filter-catalognumber-PUBLPOL=on).

The Public Policy program offers a Bachelor of Arts, an honors program, a minor for undergraduates, a coterminal M.A. in Public Policy, a two-year professional Master of Public Policy (M.P.P.) degree, and a one-year non-professional Master of Arts in Public Policy (M.A.).

Admission to the M.P.P. and M.A. programs is restricted to current Stanford undergraduates and graduate students, Stanford alumni (who have graduated within the past 5 years), and external applicants seeking a joint graduate degree.

Mission of the Undergraduate Program in Public Policy

The mission of the undergraduate program in Public Policy is to provide students with the concepts and tools used in evaluating policy options and outcomes, and to prepare students for entry-level positions in organizations concerned with such analysis. The focus is chiefly on issues such as health, education, environmental, regulation, and science and technology policy, applicable anywhere in the world.

Courses in the major provide students with a background in economics and quantitative methods, political science, law, philosophy, ethics, organizational behavior, and social psychology. Economics and quantitative analyses are central to but not sufficient for modern public policy analysis; political science, law, philosophy, organizational behavior, and psychology are among other necessary disciplinary perspectives. Political science offers insights into the decision-making process and information needs of a democracy. Political philosophy and ethics form the foundations of public policy. Organizational behavior focuses on the decisions made outside the market environment in hierarchies, bureaucracies, and teams.

Seniors have a research capstone requirement consisting either of an honors thesis or participation in a team practicum project, conducting applied policy research for an outside client, typically a nonprofit or government agency. Students majoring in Public Policy are prepared for careers in a wide variety of fields, including elected or appointed public office; business, law, and governmental agencies; research institutes; or for further study in graduate programs.

Learning Outcomes (Undergraduate)

The Public Policy Program expects its undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the program. Students are expected to:

1. Demonstrate knowledge and understanding of public policy analytical tools.
2. Evaluate applied theoretical and empirical work in policy-relevant research.
3. Apply skills and knowledge acquired in the curriculum to analyze policy issues and make policy recommendations.
4. Communicate complex ideas clearly and persuasively in written and oral forms.
5. Demonstrate mastery of the above outcomes in the senior capstone project.

Mission of the Graduate Program in Public Policy

The mission of the graduate program in Public Policy is to provide students with the advanced skills necessary to assess the performance of alternative approaches to policy making and implementation, evaluate program effectiveness, understand the political constraints faced by policy-makers, and appreciate the conflicts in fundamental human values that often animate policy debate. After completing the graduate core curriculum, students apply these skills by focusing their studies in a two-quarter, 10-unit practicum for the M.P.P. degree or a 5-unit master's thesis for the M.A. degree. Each student in the M.P.P. program also completes at least one concentration tailored to the student's primary degree program or the student's interests and skills. Current concentrations include:

- Computational Public Policy
- Education Policy
- Health Care Policy
- International and National Security Policy
- Legal and Regulatory Intervention
- Political and Moral Philosophy
- Resources, Environment, and Energy Policy
- Science and Technology Policy
- Self-designed (requires detailed statement of study goals, relationship of each proposed course to those goals, and commitment by a supervising faculty member)
- Urban and Regional Policy

Graduate Degrees Offered

The graduate program in Public Policy offers two master's degrees:

- Master of Public Policy (M.P.P.), a two-year professional degree program; available to current Stanford students and Stanford alumni (who have graduated within the past five years)
- Master of Arts (M.A.), a one-year program, not intended as a professional degree; available to current Stanford students

Joint Degree Programs

The following joint degree programs, which permit students to complete requirements for two degrees with a reduced number of total residency units, are also offered:

- Juris Doctor with a Master of Public Policy (J.D./M.P.P.)
- Juris Doctor with an M.A. in Public Policy (J.D./M.A.)
- Doctor of Medicine with a Master of Public Policy (M.D./M.P.P.)
- Doctor of Philosophy in Economics, Education, Management Science and Engineering, Psychology, Sociology or Structural Biology with a Master of Public Policy (Ph.D./M.P.P.)
- Master of Business Administration with a Master of Public Policy (M.B.A./M.P.P.)
- Master of Arts in Education (Policy, Organization, and Leadership subplan) with a Master of Public Policy (M.A./M.P.P.)
- Master of Arts in International Policy with a Master of Public Policy (M.A./M.P.P.)
- Master of Science in Management Science and Engineering with a Master of Public Policy (M.S./M.P.P.)

Requirements for the joint degrees differ from the requirements of completing the two degrees separately. See the "Master's

Degrees in Public Policy (http://exploredegrees.stanford.edu/schoolofhumanitiesandsciences/publicpolicy/#masterstext)" section for more details.

University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this Bulletin.

Learning Outcomes (Graduate)

The purpose of the master's program is to develop knowledge and skills in public policy and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The M.P.P. or M.A. degree is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in public policy. Through completion of advanced course work and rigorous skills training, the graduate program prepares students to make original contributions to the knowledge of public policy and to interpret and present the results of such research.

Bachelor of Arts in Public Policy

The Public Policy undergraduate major develops the skills necessary for understanding the political constraints faced by policy makers, assessing the performance of alternative approaches to policy implementation, evaluating the effectiveness of policies, and appreciating the sharp conflicts in fundamental human values that often animate the policy debate.

There are four course elements to the major: preparatory, core, concentration, and senior capstone. Freshman and sophomore years are generally devoted to completing preparatory courses offered in economics, math, and psychology. After completing core courses primarily during the sophomore and junior years, students apply these skills by focusing their studies in one of several areas of concentration. The areas of concentration address a specific field of public policy, various types of institutions, or a deeper development of the tools of policy analysis. Seniors may complete the senior capstone either by participating in a practicum, a team policy research project for an outside client, and/or by writing an honors thesis.

Completion of the Bachelor of Arts degree in Public Policy requires a minimum of 77 units of course work.

Students must complete the Public Policy core, concentration, and the senior capstone requirement for a letter grade and with an overall grade point average of 2.3 (C+) or higher.

Public Policy students are encouraged to secure a faculty adviser within the first two quarters in the major, and must secure a faculty adviser no later than the end of Winter Quarter of the junior year. The director, student services staff, and peer advisers can assist by suggesting suitable faculty advisers. Advisers must be approved by the program director. The adviser need not be affiliated with the Public Policy program, but does need to be a member of Stanford's Academic Council.

The Public Policy program encourages students to attend the Bing Stanford in Washington Program (http://bsiw.stanford.edu/) and to participate in appropriate Stanford internship programs, especially those available through the Haas Center for Public Service (http://haas.stanford.edu/) and Stanford in Government (http://sig.stanford.edu/).

Preparatory Courses (34 units)

		Units
ECON 1	Principles of Economics	5
ECON 50	Economic Analysis I	5
Select one of the following:		5
PUBLPOL 51	Microeconomics for Policy	
or ECON 51	Economic Analysis II	
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	5
ECON 102B	Applied Econometrics	5
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications	5-6
or CME 100	Vector Calculus for Engineers	
or CME 100A	Vector Calculus for Engineers, ACE	
Select one of the following:		4
MS&E 180	Organizations: Theory and Management	4
or PSYCH 70	Self and Society: Introduction to Social Psychology	
or PSYCH 138	Wise Interventions	
or PUBLPOL 305B	Public Policy and Social Psychology: Implications and Applications	

At most 10 units of preparatory course work may be taken as credit/no credit. Between ECON 50 and ECON 51/ PUBLPOL 51, no more than 5 units can be taken for credit/no credit. Between ECON 102A and ECON 102B, no more than 5 units can be taken for credit/no credit.

Core Courses (23-25 units)

All core courses must be completed for a letter grade. Variable unit courses must be taken for 5 units.

		Units
PUBLPOL 101	Introduction to American Politics and Policy: The Good, The Bad, and The Ugly	5
PUBLPOL 104	Economic Policy Analysis	5
Select one of the following ethics courses:		5
PUBLPOL 103C	Justice	
PUBLPOL 103D	Ethics and Politics of Public Service	
PUBLPOL 134	Ethics on the Edge: Business, Non-Profit Organizations, Government, and Individuals (Students who take PUBLPOL 134 must also take PUBLPOL 103F Ethics of Truth in a Post-Truth World)	
Select one of the following WIM courses:		5
PUBLPOL 106	Law and Economics	
or PUBLPOL 154	Politics and Policy in California	
or PUBLPOL 156	Health Care Policy and Reform	
or PUBLPOL 200S	Senior Honors Seminar	
Select one of the following advanced empirical methods courses:		3-5
PUBLPOL 105	Empirical Methods in Public Policy (preferred course)	
or ECON 102C	Advanced Topics in Econometrics	
or PUBLPOL 303A	Applied Econometrics for Public Policy	
or STATS 202	Data Mining and Analysis	

Concentration (15 units)

Majors must complete at least 15 units of course work for a letter grade in an area of concentration. This post-core course work must be approved by the student's faculty adviser and the program director no later than the end of Spring Quarter of the junior year. Any subsequent changes made to a student's concentration must be approved by the student's faculty

adviser. Students select their concentration in Axess as a degree subplan. Subplans are printed on transcripts and diplomas. Areas of concentration include, but are not limited to:

- Advanced Policy Analysis
- Computational Policy Analysis
- Design of Public Institutions
- Development and Growth Policies
- Discrimination, Crime, and Poverty Policy
- Education Policy
- Health Care Policy
- International and National Security Policy
- Law and the Legal System
- Political and Moral Philosophy
- Resources, Environment, and Energy Policy
- Science and Technology Policy
- Urban and Regional Policy

Capstone Research Requirement

Seniors are required to demonstrate competency in applied policy research. This requirement is fulfilled either by participating in a practicum project in which small student teams analyze real world policy problems faced by a government or nonprofit organization and produce a report for use by the client *or* by writing an honors thesis. A seminar for honors students is offered Autumn Quarter (PUBLPOL 200H Senior Honors Seminar, 3 units). The Practicum is offered Autumn, Winter and Spring quarters (PUBLPOL 200A Senior Practicum; PUBLPOL 200B Senior Practicum; and PUBLPOL 200C Senior Practicum). The capstone research requirement must be completed for a letter grade.

Honors Program

The Public Policy Program offers students the opportunity to pursue honors work during the senior year. The honors thesis must address a policy issue and demonstrate mastery of relevant analytical tools.

Eligibility and Preparation

In order to be eligible to write an honors thesis, students must achieve a grade point average (GPA) of 3.5 or above in the Public Policy core courses and concentration courses taken by the time of application for the honors program. If accepted, the student must maintain a GPA of 3.5 in the course requirements for a B.A.H. in Public Policy (Public Policy core courses, concentration courses, PUBLPOL 200H Senior Honors Seminar and PUBLPOL 199 Senior Research). Please note that courses not taken at Stanford are not included in calculating the GPA.

Students who intend to pursue honors work should plan their academic schedules so that most of the core courses are completed before the beginning of the senior year, and all of the core and concentration courses are completed by the end of Winter Quarter of senior year. It is strongly encouraged that students pursuing honors work complete their advanced empirical methods course (PUBLPOL 105, ECON 102C, PUBLPOL 303D, or STATS 202) by the end of Spring Quarter of the junior year. All students pursuing honors are required to take PUBLPOL 200H Senior Honors Seminar during Autumn Quarter of their senior year. This scheduling gives students both the time and the necessary course background to complete their honors thesis during senior year. In addition, prospective honors students are encouraged to enroll in the PUBLPOL 197 Junior Honors Seminar and attend Bing Honors College. PUBLPOL 197 focuses on developing a research plan and learning the skills necessary to complete an honors thesis.

Application Process

A student must submit a completed application to the Public Policy Program office with a brief description of the thesis no later than the Wednesday of the third week of Autumn Quarter. Honors applications are found online (https://publicpolicy.stanford.edu/academics/undergraduate/forms/). Prior to submitting an application to the honors program, the student must meet with the director of the honors program and obtain the sponsorship of a faculty member who approves the thesis description and agrees to serve as a thesis adviser. Students intending to write a thesis involving more than one discipline may wish to have two advisers, at least one of whom is affiliated with the Public Policy Program. Staff, executive committee members, lecturers, and affiliated faculty in Public Policy are available to provide assistance in selecting a thesis topic and adviser. At least one of the faculty advisers must be a member of Stanford's Academic Council. A student's proposal must be approved by the thesis adviser and the director of the honors program.

Enrollment and Milestones

During senior year, the student must enroll in at least 8 but no more than 15 units of PUBLPOL 199 Senior Research. One of these units should be taken with the director of the honors program in Winter Quarter to account for a series of biweekly check ins. The rest should be taken with the thesis adviser. The student needs to contact the program office to have his or her thesis adviser listed as a 199 instructor. An 'N' grade is given by the adviser in quarters prior to Spring when the thesis is completed and presented. All PUBLPOL 199 units must receive a final grade of at least a 'B+' in order to graduate with honors. In addition, the student must maintain a GPA of 3.5 in the course requirements for a B.A.H. in Public Policy (Public Policy core courses, concentration courses, PUBLPOL 200H Senior Honors Seminar and PUBLPOL 199 Senior Research). Courses not taken at Stanford are not included in calculating the GPA in order to graduate with honors from the Public Policy Program.

		Units
Public Policy Core Courses		23-25
Concentration		15
PUBLPOL 200H	Senior Honors Seminar	3
PUBLPOL 199	Senior Research	8-15

A description of methodology is due by February 1, preliminary results by March 1, and a first draft of the thesis by the first day of classes in spring quarter, always with copies to the thesis adviser and the director of the honors program. The final version of the thesis must be submitted electronically to the thesis adviser, the director of the honors program and the Public Policy Program office. In order to be considered for University and department awards, the final thesis must be submitted no later than the second Wednesday in May. All other theses must be submitted by the last Friday in May. Each student will give an oral presentation of their thesis.

Graduation with honors requires that the thesis be approved by both the adviser and the honors program director. The role of the honors program director is to assure that the thesis addresses an issue of public policy and satisfies the program's standards of excellence. However, the grade for the honors thesis (PUBLPOL 199 Senior Research units) is determined by the adviser.

Minor in Public Policy

The Public Policy Program offers a minor that is intended to provide undergraduates in other majors with interdisciplinary training in applied social sciences.

Students who pursue the minor are required to take the courses listed below. Because University rules prohibit double-counting non-introductory courses, the requirements for a minor differ according to the student's major requirements. All students must take, without double counting, at lease six courses for three units each toward the minor. It is required that students review their course plans with a program

administrator. *Note:* Students are permitted to double-count ECON 1 Principles of Economics.

Public Policy students are never required to take a course that duplicates material they have already mastered. Students may, by petition, substitute a different course for a requirement whose material would be duplicative. This flexibility does not reduce the number of units required for the minor.

Students who pursue the minor must complete the Multiple Major/Minor Form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/MajMin_MultMaj.pdf) and have it reviewed by all applicable departments/programs the beginning of the quarter in which the degree is conferred.

Required Course Work

		Units
ECON 1	Principles of Economics	5
ECON 50	Economic Analysis I	5
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	5
ECON 102B	Applied Econometrics	5
PUBLPOL 104	Economic Policy Analysis	5
Select one or more of the following depending on major requirements:		5
PUBLPOL 101	Introduction to American Politics and Policy: The Good, The Bad, and The Ugly	
PUBLPOL 105	Empirical Methods in Public Policy	
or ECON 102C	Advanced Topics in Econometrics	
PUBLPOL 134	Ethics on the Edge: Business, Non-Profit Organizations, Government, and Individuals (Students who take PUBLPOL 134 must also take PUBLPOL 103F Ethics of Truth in a Post-Truth World)	3-5
or PUBLPOL 103C	Justice	
PUBLPOL 106	Law and Economics	
or PUBLPOL 154	Politics and Policy in California	
or PUBLPOL 156	Health Care Policy and Reform	

At most, 10 units of course work may be taken as credit/no credit. Between ECON 102A and ECON 102B, no more than 5 units can be taken for credit/no credit.

Students who satisfy major requirements by taking ECON 50 and an introductory course in statistics such as ECON 102A or STATS 60 complete these requirements instead:

- PUBLPOL 105 Empirical Methods in Public Policy or
- ECON 102C Advanced Topics in Econometrics

Coterminal M.A. in Public Policy

The coterminal M.A. in Public Policy is a degree program designed to impart the basic analytical tools of public policy analysis, or to permit Public Policy majors to specialize in an applied field of policy analysis. Most students complete their M.A. in a fifth year at Stanford; occasionally, students may be able to complete both their B.A. and coterminal M.A. in the fourth year.

Undergraduates with strong academic records may apply for admission upon completion of 120 units, but no later than the quarter prior to the expected completion of the undergraduate degree. The University requires that units for a given course may not be counted to meet the requirements of more than one degree; that is, no units may be double-counted. However, Public Policy students are never required to take a course which duplicates material they have already mastered. Students may, by petition, substitute a different course for a requirement whose material would be duplicative. This flexibility does not reduce the number of units required for the coterminal M.A.

The coterminal M.A. is also a gateway to the M.P.P. degree program. Stanford undergraduates may apply to the coterminal M.A. in Public Policy and then, after one quarter in the M.A. program, apply to the M.P.P. program by submitting an application. Students accepted into the M.P.P. program must confer their bachelor's degree, submit the Graduate Authorization Petition in Axess, withdraw from the M.A. degree program, and complete the requirements for the 90-unit M.P.P. degree. This does not reduce the total number of units required for the bachelor's or master's degree. Earning the B.A. and M.P.P. typically takes at least five years. Students considering this option should be familiar with the University's coterminal degree policies and procedures and should consult the director and staff of the Public Policy Program early in their planning. There is a $125 fee for submitting the Graduate Authorization Petition to change the M.A. to the M.P.P degree.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

All courses counting towards the master's degree not considered core requirements must be approved by petition by the Public Policy Program.

Degree Requirements

All applicants should have completed, or currently be enrolled in, the required preparatory course work prior to applying. These courses do not count towards the 45-unit M.A. requirement:

		Units
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications	5-6
or CME 100	Vector Calculus for Engineers	
or CME 100A	Vector Calculus for Engineers, ACE	
ECON 1	Principles of Economics	5
ECON 50	Economic Analysis I	5
ECON 51	Economic Analysis II	4-5
or ECON 52	Economic Analysis III	
or PUBLPOL 51	Microeconomics for Policy	

ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists (or equivalent)	5
ECON 102B	Applied Econometrics	5

To graduate with a coterminal M.A. in Public Policy, students must:

1. Follow one of three tracks (A, B, or C) through the program, as described below.
2. Take all courses applied to the coterminal master's degree for a letter grade (with the exception of PUBLPOL 311 Public Policy Colloquium which is only offered S/NC). For courses with variable units, coterminal students should, in their graduate career, enroll in the course for 4 units. Courses offered only for C/NC or other non-letter grade system may be applied upon approval of a petition to the program director. See the COVID-19 Policies (p. 2018) tab for details on grading policy for 2020-21.
3. Secure a faculty advisor by the end of the first quarter enrolled in the coterminal M.A. degree program. The director and student services staff can assist by suggesting suitable faculty advisors. The advisor need not be affiliated with the Public Policy Program, but does need to be a member of Stanford's Academic Council.
4. Achieve a cumulative grade point average (GPA) of 3.0 (B) or better for all courses taken towards the M.A.
5. Coterminal M.A. students who are admitted to the M.P.P. must transfer all applicable M.A. units to the M.P.P. degree.
6. Comply with all relevant University and program deadlines and policies.

Track A

Public Policy majors follow Track A, which consists of at least 45 units of course work, including:

1. 29 or more units in an area of concentration. The concentration is referred to as a degree subplan. Subplans are printed on the transcript and diploma and are elected via the Declaration or Change to a Field of Study form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/grad-subplan-change.pdf).
   Each concentration includes a set of gateway courses and a variety of electives. Gateway courses may vary year to year based on availability. Check the Master's Gateway and Electives tab to see the list of gateway courses. Students must present a coherent written study plan to support concentration course choices, designed in consultation with a faculty advisor and approved by the program director. At least one faculty advisor must be a member of the Academic Council.
   Current concentrations include:
   - Computational Public Policy
   - Education Policy
   - Health Care Policy
   - International and National Security Policy
   - Legal and Regulatory Intervention
   - Political and Moral Philosophy
   - Resources, Environment, and Energy Policy
   - Science and Technology Policy
   - Self-designed (requires detailed statement of study goals, relationship of each proposed course to those goals, and commitment by a supervising faculty member)
   - Urban and Regional Policy
2. Decision-Making Component - select one of the following courses:
   - LAW 7508 Problem Solving and Decision Making for Public Policy and Social Change
   - ECON 137 Decision Modeling and Information
   - GSBGEN 646 Behavioral Economics and the Psychology of Decision Making
   - OB 381 Conflict Management and Negotiation
3. All Public Policy graduate students are required to attend and enroll in three quarters of PUBLPOL 311 Public Policy Colloquium (3 units). Attendance and participation are mandatory.
4. Completion of PUBLPOL 309 Practicum or PUBLPOL 310 faculty-supervised internship or thesis (5-10 units).
5. All 45 units must be taken in upper division (100-level) courses, and at least 25 of those units must be at the graduate level (200-level and above).

Track B

Economics majors typically follow the requirements detailed below in Track C; however, some Economics majors take courses for their major that also satisfy the content requirements of the Public Policy coterminal M.A. The following Economics courses, if taken for the undergraduate degree, can be used to fulfill content requirements, but not unit requirements, for the Public Policy coterminal M.A. In place of these courses, students may take advanced policy skills courses, or an approved (by petition) policy-related elective.

		Units
ECON 150	Economic Policy Analysis (fulfills the PUBLPOL 204 or PUBLPOL 301B requirement)	4-5
ECON 154	Law and Economics (fulfills the PUBLPOL 206 or PUBLPOL 302B requirement)	4-5
ECON 102C	Advanced Topics in Econometrics (fulfills the ECON 102C, ECON 102D, PUBLPOL 205, PUBLPOL 303D, or STATS 202 requirement)	5

Track C

Students who are not pursuing a major in Public Policy or Economics follow Track C, which consists of at least 45 units of course work in the analysis of public policy.

1. The following core courses are required and count toward the required minimum 45 units:

		Units
PUBLPOL 201	Introduction to American Politics and Policy: The Good, The Bad, and The Ugly	4
or PUBLPOL 308	Political Analysis for Public Policymakers	
PUBLPOL 302B	Economic Analysis of Law (preferred course)	3-4
or PUBLPOL 206	Law and Economics	
PUBLPOL 301B	Economic Policy Analysis for Policymakers	4
or PUBLPOL 204	Economic Policy Analysis	
PUBLPOL 314	Justice in Public Policy	4
Select one of the following courses:		2-5
LAW 7508	Problem Solving and Decision Making for Public Policy and Social Change (preferred course)	
or ECON 137	Decision Modeling and Information	
or GSBGEN 646	Behavioral Economics and the Psychology of Decision Making	
or OB 381	Conflict Management and Negotiation	
Select one of the following courses:		4
MS&E 280	Organizational Behavior: Evidence in Action	
or PSYCH 138	Wise Interventions	

or PUBLPOL 30	Public Policy and Social Psychology: Implications and Applications	
Select one of the following advanced empirical methods courses:		3-5
PUBLPOL 205	Empirical Methods in Public Policy (preferred course)	
or ECON 102C	Advanced Topics in Econometrics	
or ECON 102D	Econometric Methods for Public Policy Analysis and Business Decision-Making	
or PUBLPOL 30	Applied Econometrics for Public Policy	
or STATS 202	Data Mining and Analysis	

2. Complete a concentration of at least 15 units, under the guidance of a faculty advisor and the Public Policy program director.
3. All Public Policy graduate students are required to attend and enroll in three quarters of PUBLPOL 311 Public Policy Colloquium (3 units total). Attendance and participation are mandatory.
4. Students must petition to count additional advanced policy skills courses (if needed) to meet the 45-unit degree requirement. All 45 units must be taken in upper division (100-level) courses and at least 25 of those units must be taken at the graduate level (200-level and above).

Coterminal M.A. students must select a faculty advisor by the end of their first quarter in the program. Students may refer to the Master's Gateway and Electives Courses tab, for a selection of pre-approved elective courses. Public Policy student services staff can verify scheduling of courses. At least one faculty advisor must be a member of the Academic Council.

Application and Admission

There are two coterminal degree application deadlines for the 2020-21 academic year: November 12, 2020 and January 28, 2021. Applicants may be contacted for an interview. A $125 fee is charged when adding the M.A. degree program in Axess. The GRE is not required.

To apply for admission to the Public Policy coterminal M.A. program, students should submit the following materials online by the appropriate deadline:

1. The Coterminal Online Application (https://applyweb.com/stanterm/).
2. Statement of purpose, 500 words maximum (indicate interest in M.P.P. degree, if applicable)
3. One-page resume
4. A preliminary program proposal
5. A current unofficial undergraduate transcript
6. Two confidential letters of recommendation from Stanford faculty members familiar with the student's academic work
7. Coterm Program Approval from undergraduate department

Financial Aid

The Public Policy Program does not provide financial assistance to coterminal students. For information on student loans and other sources of support, consult the Stanford Financial Aid Office (http://financialaid.stanford.edu/). Students who enter public service employment with local, state, or federal agencies; schools; or certain not-for-profit organizations may obtain forgiveness for educational loans, based on years of public service employment.

Master's Degrees in Public Policy

The program offers two master's degrees in Public Policy. The Master of Public Policy (M.P.P.) is a two-year professional degree, and the Master of Arts in Public Policy (M.A.) is a one-year non-professional degree.

At this time, eligibility for admission to the M.P.P. and M.A. programs is restricted to current Stanford undergraduate and graduate students, Stanford alumni (who have graduated within the past 5 years), and external applicants seeking a joint graduate degree. If you do not meet these criteria, you are not eligible for admission to the M.A. or the M.P.P. degree programs.

1. Public Policy Joint Degrees. Students enrolled in or applying to certain degree programs in the Schools of Business, Education, Engineering, Humanities and Sciences, Law, and Medicine are eligible to apply for Public Policy joint degrees. For further information, see the "Joint Degree Programs (p. 70)" section of this Bulletin and the University Registrar's site (http://studentaffairs.stanford.edu/registrar/students/jdp-information/). All Public Policy joint degree programs, with the exception of the J.D./M.A., require at least one year of study at Stanford beyond the requirements for the other joint or dual degree.
   - Juris Doctor and Master of Public Policy (J.D./M.P.P.)
   - Juris Doctor and Master of Arts of Public Policy (J.D./M.A.)
   - Doctor of Medicine and Master of Public Policy (M.D./M.P.P.)
   - Doctor of Philosophy in Education and Master of Public Policy (Ph.D./M.P.P.)
   - Doctor of Philosophy in Economics and Master of Public Policy (Ph.D./M.P.P.)
   - Doctor of Philosophy in Management Science & Engineering and Master of Public Policy (Ph.D./M.P.P.)
   - Doctor of Philosophy in Psychology and Master of Public Policy (Ph.D./M.P.P.)
   - Doctor of Philosophy in Sociology and Master of Public Policy (Ph.D./M.P.P.)
   - Doctor of Philosophy in Structural Biology and Master of Public Policy (Ph.D./M.P.P.)
   - Master of Business Administration and Master of Public Policy (M.B.A./M.P.P.)
   - Master of Arts in Education: Policy, Organization, and Leadership subplan and Master of Public Policy (M.A./M.P.P.)
   - Master of Arts in International Policy and Master of Public Policy (M.A./M.P.P.)
   - Master of Science in Management Science & Engineering and Master of Public Policy (M.S./M.P.P.)
2. Dual Degrees. Any other Stanford graduate student (i.e., not covered in '1' above), Stanford senior, or Stanford alumnus/a (who has graduated within the past 5 years) is eligible to apply for a Public Policy dual degree. Stanford graduate students may subsequently withdraw from their original degree programs, if desired.
   - Master of Public Policy (M.P.P.)
   - Master of Arts in Public Policy (M.A.)

Prerequisites

Graduate students in Public Policy are expected to be literate in mathematics and microeconomics at a level equivalent to MATH 51 Linear Algebra, Multivariable Calculus, and Modern Applications (or MATH 21 Calculus, plus Math Boot Camp) and ECON 50 Economic Analysis I before beginning the curriculum. A no-credit refresher Bootcamp (https://publicpolicy.stanford.edu/academics/graduate/graduate-resources/mpp-bootcamp/) for math and economics is offered in the two weeks preceding the start of Autumn Quarter. Attendance is strongly encouraged by all incoming students.

M.P.P. and M.A. Degree Requirements

1. All graduate degree candidates must submit a Master's Degree Program Proposal (https://stanford.app.box.com/v/progpropma/) to the Public Policy office by the end of Autumn Quarter and must

amend this proposal formally if plans for meeting the degree requirements change.

2. Public Policy students are never required to take a course which duplicates material they have already mastered. Students may petition a different course for a core requirement whose material would be duplicative. This flexibility does not reduce the unit requirements for any degree. If a student wishes to count a class he or she is currently enrolled in, petitions must be submitted, at the latest, by Friday of the first week of classes.
3. All Public Policy graduate students must secure a faculty advisor within the first quarter they are enrolled in the M.A. or M.P.P. degree program. The director and student services staff can assist by suggesting suitable faculty advisors. The advisor need not be affiliated with the Public Policy Program, but does need to be a member of Stanford's Academic Council.
4. M.P.P. degree students are not permitted to enroll in PUBLPOL 309 Practicum, without having completed the following core courses: PUBLPOL 301A Microeconomics for Policy, PUBLPOL 301B Economic Policy Analysis for Policymakers, ECON 102A Introduction to Statistical Methods (Postcalculus) for Social Scientists, PUBLPOL 303D Applied Econometrics for Public Policy, and PUBLPOL 306 Writing and Rhetoric for Policy Audiences.

Curriculum Requirements

		Units
PUBLPOL 301A	Microeconomics for Policy	4
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists (or equivalent)	5
PUBLPOL 301B	Economic Policy Analysis for Policymakers	4
PUBLPOL 303D	Applied Econometrics for Public Policy	4
Select one of the following courses:		2-5
LAW 7508	Problem Solving and Decision Making for Public Policy and Social Change (preferred course)	
or ECON 137	Decision Modeling and Information	
or GSBGEN 646	Behavioral Economics and the Psychology of Decision Making	
or OB 381	Conflict Management and Negotiation	
PUBLPOL 306	Writing and Rhetoric for Policy Audiences (requirement for M.P.P. students only. M.A students may take as an elective)	4
PUBLPOL 308	Political Analysis for Public Policymakers	4
PUBLPOL 314	Justice in Public Policy	4
PUBLPOL 302B	Economic Analysis of Law (preferred course)	3
or PUBLPOL 206	Law and Economics	

All core courses listed above must be taken for a letter grade (with the exception of PUBLPOL 311 Public Policy Colloquium which is only offered S/NC). Students must maintain a 3.0 (B) grade point average overall in courses applicable to the degree. See the COVID-19 Policies (p. 2018) tab for details on grading policy for 2020-21.

1. Core Curriculum (shown above)
2. At least two electives are taken during the first year. At least one must be from the Concentration Electives List (https://publicpolicy.stanford.edu/academics/graduate/concentrations/).
3. Colloquium: All Public Policy graduate students are required to attend and enroll in three quarters of PUBLPOL 311 Public Policy Colloquium (3 units) during their first year of the program. Attendance and participation are mandatory.
4. Practicum (M.P.P. and Track A coterminal M.A. students): Completion of the practicum course, PUBLPOL 309 Practicum (10 units, Autumn and Winter quarters), in which interdisciplinary student teams analyze real-world policy issues for outside clients.
5. Master's Thesis (non-coterminal M.A. students): Completion of a 5-unit master's thesis, written under the guidance of a Public Policy-affiliated faculty advisor who is a member of Academic Council or approved by the Program Director, on a topic approved in advance by the Program Director. Students give the program office the name of their thesis advisor and enroll in PUBLPOL 310A Master's Thesis Seminar (for 1 unit in the autumn) and PUBLPOL 310 Master of Arts Thesis units during quarter(s) of their choosing. The 4 remaining units may be spread over multiple quarters, and an 'N' (continuing course) grade is given during any quarters prior to degree conferral. The thesis must be submitted to the Public Policy program office in both electronic and printed form no later than the third Friday before the end of the quarter. The final grade for PUBLPOL 310 is determined by the thesis advisor.
6. Concentration (M.P.P. students only): Advanced course work in a specialized field, chosen from the approved list of concentration courses from the Master's Gateway and Elective Courses (https://exploredegrees.stanford.edu/schoolofhumanitiesandsciences/publicpolicy/#mastersgatewayandelectivecoursestext) tab (https://publicpolicy.stanford.edu/academics/graduate/concentrations/)with the prior approval of the student's faculty advisor and the program director. The Registrar refers to such a concentration as a degree subplan. Public Policy subplans are printed on the transcript and diploma and are elected by the student via the Declaration or Change to a Field of Study form (https://stanford.box.com/grad-subplan-change/).
   Current concentrations include:
   - Computational Public Policy
   - Education Policy
   - Health Care Policy
   - International and National Security Policy
   - Legal and Regulatory Intervention
   - Political and Moral Philosophy
   - Resources, Environment, and Energy Policy
   - Science and Technology Policy
   - Self-designed (requires detailed statement of study goals, relationship of each proposed course to those goals, and commitment by a supervising faculty member)
   - Urban and Regional Policy

Public Policy Joint Degree Requirements

1. A joint degree (p. 70) is regarded by the University as distinct from either of its component degrees, and requirements for the joint degree differ from the sum of the requirements for the individual degrees.
2. Up to a maximum of 45 units, or one year, of the University residency requirement can be credited toward both graduate degree programs (i.e., the joint degree requirements may contain up to 45 units less than the sum of each program separately). For example, a J.D./M.P.P. has a four-year residency requirement, one year less than the sum of the requirements for the separate degrees. This recognizes that there is a subject matter overlap between the fields comprising the joint degree.
3. The Public Policy Program strives to encourage an intellectual, professional, and social community among its students. For this reason, joint degree students are strongly encouraged to devote one year of full-time study at Stanford entirely to the Public Policy Program rather than spacing Public Policy courses throughout their graduate careers. For joint degree Ph.D. students, the core requirements of the M.P.P. should be completed over two contiguous

years of study, during which students may also be enrolled in courses from their Ph.D. program. Exceptions to this structure must be approved in advance by petition.

4. Joint degree students are expected to have and to consult regularly with an academic advisor. The advisor is generally a member of the faculty of both degree programs and must be a member of Academic Council. The program director and staff are available to make advisor recommendations.
5. In order to take advantage of the reduced residency requirement, joint M.P.P. students must define their area of concentration from among courses offered in their non-Public Policy program. Students wishing to concentrate in another field should apply for a dual, rather than a joint, M.P.P. degree.

Application and Admissions

Applications for graduate study in Public Policy are only accepted from:

1. Students currently enrolled in any Stanford graduate or undergraduate degree program
2. External applicants seeking a joint degree, or
3. Stanford alumni (who have graduated within the past 5 years).

External applicants for joint degrees must apply to the department or school offering the other graduate degree (i.e. ,Ph.D., M.D., M.A., M.S., M.B.A., or J.D.), indicating an interest in the joint degree program; applicants admitted to the other degree program are then evaluated for admission to the M.P.P. or M.A. program.

To be considered for matriculation beginning in the Autumn Quarter 2021-22, all application materials must be submitted no later than January 28, 2021. Admission notifications will be sent to applicants by April 1, 2021. Admitted students are required to respond to offers of admission by May 15, 2021.

Stanford Alumni and Current Stanford Seniors

Visit the Stanford Office of Graduate Admissions (http://studentaffairs.stanford.edu/gradadmissions/). The online application for the M.P.P. is available beginning in mid-September 2020. The application fee is $125. The program is unable to refund an application fee, so prospective applicants are advised to refer to eligibility requirements before submitting an application.

Only complete applications submitted by the deadline are reviewed. A complete application includes the following:

1. Application (http://studentaffairs.stanford.edu/gradadmissions/).
2. Official transcripts. Copies of student transcripts must bear the official seal of the institution and the signature of the registrar. Upload transcripts to the online application.
3. GRE, GMAT, LSAT or MCAT test scores.
4. Letters of recommendation: Three confidential letters of recommendation from a Stanford faculty member or an employer should be submitted electronically via the online application. See the Stanford Office of Graduate Admissions web site regarding letters of recommendation (https://gradadmissions.stanford.edu/applying/starting-your-application/required-application-documents/letters-recommendation/). At least two letters must be from Stanford faculty members.
5. Statement of purpose (not to exceed two pages; upload to the online application).
6. Resume or curriculum vitae (upload to the online application).

Stanford Current Graduate Students

1. Application for Current Stanford Graduate Students (https://publicpolicy.stanford.edu/academics/graduate/admissions/current-graduate-students/).
2. Two confidential letters of recommendation, one of which must be from a Stanford faculty member familiar with applicant's academic work.
3. Undergraduate and graduate transcripts.
4. GRE, GMAT, LSAT or MCAT test scores.
5. Statement of purpose, not to exceed two pages.
6. Resume or curriculum vitae.
7. Preliminary program proposal.
8. Prerequisite completion statement, demonstrating completion of required prerequisite course work in multivariate calculus and intermediate microeconomics.

Applicants may be interviewed. If admitted, students will submit a Graduate Authorization Petition (https://registrar.stanford.edu/students/graduate-degree-progress/graduate-program-authorization-petition/) through Axess. A $125 fee is charged when adding the M.A. or M.P.P. degree program in Axess.

Gateway and Elective Courses for Master's Programs

Computational Public Policy

		Units
Computational Public Policy Gateway Courses		
Take at least one of the following courses		
PUBLPOL 205	Empirical Methods in Public Policy (Take at least one of the following courses in Causal Inference.)	4-5
POLISCI 150C	Causal Inference for Social Science	5
STATS 209B	Applications of Causal Inference Methods	2
EDUC 430A	Experimental Research Design and Analysis	3-5
EDUC 430B	Causal Inference in Quantitative Educational and Social Science Research	3-5
MS&E 327	Topics in Causal Inference	3

Graduate Certificate in Policy Analysis

The Stanford Public Policy Program offers a graduate "Certificate in Policy Analysis" for current Stanford graduate students. This highly flexible 25-unit program is designed for students who are interested in policy but may not be able to complete a formal one or two-year policy degree. The program's coursework provides a solid background in economics and quantitative methods, political analysis, ethics, and writing for policy audiences.

These courses will equip students with a set of skills necessary to design and evaluate policies, conduct research, and advocate policy solutions. The certificate provides formal recognition for a coherent plan of policy studies. In addition to completing coursework, students will produce a final paper reflecting on the policy lessons from their time in the program. Upon completion of the program, a certificate is provided. Note that the certificate is not included on the diploma or transcript. Grading policy: students may take two courses for a non-letter grade, in addition to the one-unit required colloquium course. The remaining courses must be taken for a letter grade.

Program Learning Outcomes

- Master analytical tools for evaluating public policies and programs in terms of their absolute and comparative efficacy in achieving social objectives.
- Participate in policy and political discussion as citizens and as professionals in a variety of fields.
- Appreciate the complexity of large organizations as it relates to the implementation of public programs.
- Understand the conflicts in ethical and value commitments that pervade public policy issues.

How to Apply

The application to the Certificate in Policy Analysis is available here (http://web.stanford.edu/~uclady/certificate.fb) and can be submitted at any time. Upon submission, a member of the Public Policy program staff will contact the applicant to confirm the course plan and answer any

questions. The certificate is only available for currently enrolled graduate student.

Courses

		Units
Required Courses - 13 Units total		
PUBLPOL 301A	Microeconomics for Policy	4-5
PUBLPOL 303D	Applied Econometrics for Public Policy (or equivalent course)	4-5
PUBLPOL 301B	Economic Policy Analysis for Policymakers	4-5
or PUBLPOL 204	Economic Policy Analysis	
PUBLPOL 311	Public Policy Colloquium (one quarter)	1
Required Courses with Selection Options - 8 units total		
PUBLPOL 306	Writing and Rhetoric for Policy Audiences	4
or PUBLPOL 314	Justice in Public Policy	
PUBLPOL 308	Political Analysis for Public Policymakers	4
or PUBLPOL 353A	Science and Technology Policy	
Optional Course(s) - 4 units total		
PUBLPOL 206	Law and Economics	4-5
PUBLPOL 302B	Economic Analysis of Law	3
PUBLPOL 311	Public Policy Colloquium	1
LAW 7508	Problem Solving and Decision Making for Public Policy and Social Change	4

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate and Graduate Degree Requirements

Grading

The Public Policy program would like to be as flexible as possible with respect to grades during this unprecedented year, understanding that each student's situation is unique as it pertains to remote learning. The program supports the University's decision to allow students to choose CR/NC or a letter grade for their courses. This applies to both undergraduates and graduate students. While the program understands the need for flexibility, it suggests taht Public Policy students take their courses for a letter grade whenever possible.

Graduate Advising Expectations

The Program in Public Policy is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

All graduate students must submit a signed faculty adviser form by the end of their first quarter. The form is available on the Graduate Forms website (https://publicpolicy.stanford.edu/academics/graduate/forms/). The adviser need not be affiliated with the Public Policy Program, but does need to be a member of Stanford's Academic Council. The Director and student services staff can assist by providing individualized support in identifying a faculty adviser, if necessary.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program. Students are encouraged to communicate clearly and frequently with their adviser.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Director: Gregory L. Rosston (Stanford Institute for Economic Policy Research)

Director of Undergraduate and Graduate Studies: Gregory L. Rosston (Stanford Institute for Economic Policy Research)

Directors of Graduate Practicum Program: Joe Nation and Christine Pal Chee (Public Policy)

Director of Domestic Policy Studies and Lecturer: Lanhee J. Chen (Public Policy and Hoover Institution)

Director of Honors Program and Lecturer: Marcelo Clerici-Arias (Economics and Public Policy)

Executive Committee Chair: Mark Duggan (Economics, SIEPR)

Executive Committee: Laurence Baker (Medicine), Jonathan Bendor (Graduate School of Business), David Brady (Political Science, Hoover Institution, Graduate School of Business, SIEPR), Paul Brest (Law), Bruce Cain (Political Science, Bill Lane Center for the American West), Samuel Chiu (Management Science and Engineering), Thomas Dee (Graduate School of Education), Rebecca Diamond (Graduate School of Business), Judith Goldstein (Political Science), David Grusky (Sociology), Deborah Hensler (Law), Roger Noll (Economics, emeritus, SIEPR), Bruce Owen (Public Policy, emeritus, SIEPR), Gregory Rosston (SIEPR), Paul Oyer (Graduate School of Business), Debra Satz (Philosophy), John Shoven (SIEPR, Economics), Christine Min Wotipka (Graduate School of Education)

Affiliated Faculty: William Abrams (Human Biology), Donald Barr (Medicine), Jonathan Bendor (Graduate School of Business), Eric Bettinger (Education), Jayanta Bhattacharya (Medicine), Lisa Blaydes (Political Science), Adam Bonica (Political Science), Michael J. Boskin (Economics, Hoover Institution), Paul Brest (Law), Jeremy Bulow (Graduate School of Business), M. and Engineering), Daniel Ho (Law), Nicholas Hope (Stanford Center for International Development), Caroline Hoxby (Economics, Hoover Institution, SIEPR), Hakeem Jefferson (Political Science), Daniel Kessler (Law, Hoover Institution, Graduate School of Business), Pete Klenow (Economics), Stephen Krasner (Political Science, Freeman Spogli Institute for International Studies, Hoover Institution), Jon A. Krosnick (Communication, Political Science), Mark Lemley (Law), Thomas MaCurdy (Economics, Hoover Institution), David Magnus (Medicine), Milbrey McLaughlin (Education), Terry Moe (Political Science, Hoover Institution), A. Mitchell Polinsky (Law), Walter Powell (Education), Robert Reich (Political Science), Lee Ross (Psychology), Baba Shiv (Graduate School of Business), Ken Shotts (Graduate School of Business), Stephan Stedman (Freeman Spogli Institute for International Studies), Jeff Strnad (Law), Barton Thompson (Law, Woods Institute, Freeman Spogli Institute for International Studies), Michael Tomz (Political Science, SIEPR),Milana Trounce (Medicine), Michael Wald (Law), Greg Walton (Psychology), Barry Weingast (Political Science, Hoover Institution), John Weyant (Management Science and Engineering), Frank Wolak (Economics, Freeman Spogli Institute for International Studies), Cristobal Young (Sociology)

Lecturers: Newsha Ajami (Woods Institute), Tanya Beder (Law), Frank Benest (Public Policy), David Crane (Public Policy, SIEPR), Dennis Gale (Urban Studies), Russell Hancock (Public Policy), Preeti Hehmeyer (Public Policy, Bill Lane Center for the American West), Adrienne Jamieson (Bing Stanford in Washington), Lawrence Litvak (Public Policy, Urban Studies), Susan Liautaud (Public Policy), Eva Meyersson Milgrom (SIEPR, Sociology), Christine Pal Chee (Public Policy), Patrick Windham (Public Policy)

Overseas Studies Courses in Public Policy

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

OSPSANTG 119X	The Chilean Economy: History, International Relations, and Development Strategies	5

Courses

PUBLPOL 1. Introduction to Public Policy. 1 Unit.
Public Policy 1 is an introduction to the wide range of fields and methods used in Public Policy analysis including economics, political science, social psychology, justice, ethics and organizations. The course will have weekly speakers who will provide examples of policy analysis from a variety of perspectives. Attendance mandatory.

PUBLPOL 4. Democracy Matters. 1 Unit.
Should the U.S. close its border to immigrants? What are the ramifications of income inequality? How has COVID-19 changed life as we know it? Why are Americans so politically polarized? How can we address racial injustice? As the 2020 election approaches, faculty members from across Stanford will explore and examine some of the biggest challenges facing society today. Each week will be dedicated to a different topic, ranging from health care and the economy to racial injustice and challenges to democracy. Faculty with expertise in philosophy, economics, law, political science, psychology, medicine, history, and more will come together for lively conversations about the issues not only shaping this election season but also the nation and world at large. There will also be a Q&A following the initial discussion. Attendance and supplemental course readings are the only requirements for the course.
Same as: ECON 4, PHIL 30, POLISCI 42

PUBLPOL 14. Navigating Financial Crises: From Emerging Markets to COVID-19. 1 Unit.
What causes financial crises? What are the keys to anticipating, preventing, and managing disruptions in the global financial system? This course prepares students to navigate future episodes as policymakers, finance professionals, and citizens by going inside the practical decisions made in an unfolding crisis, from the U.S. government and IMF to the boardroom and trading floor. Students will learn warning signs of distress; market structures that govern crisis dynamics; strategic interactions among the key actors; and lessons learned for creating a more resilient system. Concepts will be applied to real-world experiences in emerging market crises, the U.S. housing and global financial crisis, the European sovereign crisis, and as well the extraordinary fiscal and central bank responses to the COVID-19 crisis.
Same as: ECON 14

PUBLPOL 19Q. Government by the Numbers. 3 Units.
Spending by federal, state, and local governments accounts for about one-third of U.S. GDP and governments employ more than one-in-seven workers in the U.S. For most U.S. residents, government is represented by a complicated web of federal, state, and local policies. There is an increasingly contentious debate about the proper role of the government and regarding the impact of specific government policies. This debate is rarely grounded in a common set of facts. In this seminar, we will explore how each level of government interacts with U.S. residents through government services, public programs, taxes, and regulations. We will examine financial results for different levels of government while considering the net effects of government intervention on the health and economic well-being of individuals and families. Particular attention will be paid to certain sectors (e.g. education, health care, etc.) and to certain groups (e.g. those in poverty, the elderly, etc.). Along the way we will accumulate a set of metrics to assess the performance of each level of government while highlighting the formidable challenges of such an exercise. Prerequisite: Econ 1.
Same as: ECON 19Q

PUBLPOL 51. Microeconomics for Policy. 4-5 Units.
Microeconomic concepts relevant to decision making. Topics include: competitive market clearing, price discrimination; general equilibrium; risk aversion and sharing, capital market theory, Nash equilibrium; welfare analysis; public choice; externalities and public goods; hidden information and market signaling; moral hazard and incentives; auction theory; game theory; oligopoly; reputation and credibility. Undergraduate Public Policy students may take PublPol 51 as a substitute for the Econ 51 major requirement. Economics majors still need to take Econ 51. Prerequisites: ECON 50 and MATH 51 or equiv.
Same as: INTLPOL 204A, PUBLPOL 301A

PUBLPOL 55N. Public Policy and Personal Finance. 3 Units.
The seminar will provide an introduction and discussion of the impact of public policy on personal finance. Voters regularly rate the economy as one of the most important factors shaping their political views and most of those opinions are focused on their individual bottom lines. In this course we will discuss the rationale for different public policies and how they affect personal financial situations. We will explore personal finance issues such as taxes, loans, charity, insurance, and pensions. Using the context of (hypothetical) personal finance positions, we will discuss the public policy implications of various proposals and how they affect different groups of people, for example: the implications of differential tax rates for different types of income, the promotion of home ownership in the U.S., and policies to care for our aging population. While economic policy will be the focus of much of the course, we will also examine some of the implications of social policies on personal finance as well. There will be weekly readings and several short policy-related writing assignments.
Same as: ECON 25N

PUBLPOL 63Q. Democratizing Ethics with Discrimination, Inequality, Injustice and Technology in Mind. 3 Units.
This seminar/practicum will invite students to ¿roll up our sleeves¿ and deliver concrete recommendations for making ethical decision-making accessible to ordinary citizens rather than just determined by corporate giants, law makers or academic experts. We will explore practical approaches to the following questions: How can we make ethical decision-making accessible to ordinary citizens in a complex world of technology, biology and even space exploration? How can we incentivize citizens to care about integrating ethics into their decision-making? How do we each have ethical power in society even where economic and technological control lie with tech giants and lodged in the brains of experts? What, if anything, is different about citizens¿ sense of moral responsibility in society today (and how has technology contributed to shifting views)? How can we develop an ethics barometer¿soliciting the views, and facilitating the influence of, ordinary citizens on key ethical questions outside of normal channels like voting and individual engagement with social media? The course will consider a number of cutting-edge topics from Covid-19 and gene editing and long-standing challenges such as racism. Highly interactive course. Very short papers and teamwork along the way in lieu of final paper or exam. 3 credits (option C/NC for students not wishing WAYS credit). Will be offered on-line Spring 2021.

PUBLPOL 73. Energy Policy in California and the West. 1 Unit.
This seminar provides an in-depth analysis of the role of California state agencies and Western energy organizations in driving energy policy development, technology innovation, and market structures, in California, the West and internationally. The course covers three areas: 1) roles and responsibilities of key state agencies and Western energy organizations; 2) current and evolving energy and climate policies; and 3) development of the 21st century electricity system in California and the West. The seminar will also provide students a guideline of what to expect in professional working environment.
Same as: CEE 263G, ENERGY 73, POLISCI 73

PUBLPOL 74. Public Service Internship Preparation. 1 Unit.
Are you prepared for your internship this summer? This workshop series will help you make the most of your internship experience by setting learning goals in advance; negotiating and communicating clear roles and expectations; preparing for a professional role in a non-profit, government, or community setting; and reflecting with successful interns and community partners on how to prepare sufficiently ahead of time. You will read, discuss, and hear from guest speakers, as well as develop a learning plan specific to your summer or academic year internship placement. This course is primarily designed for students who have already identified an internship for summer or a later quarter. You are welcome to attend any and all workshops, but must attend the entire series and do the assignments for 1 unit of credit.
Same as: EARTHSYS 9, EDUC 9, HUMBIO 9, URBANST 101

PUBLPOL 75. Pathways to Public Service. 1 Unit.
This one-unit lecture series explores potential careers in public service, including roles in government as well as in many other organizations¿such as nonprofits, foundations, corporations, and arts organizations¿that help shape public policy and civic life. Each week, a guest speaker will introduce students to his or her organization and role, describe some of the key intellectual issues and current policy challenges, discuss career paths and skills crucial for the job, and help students reflect on possible connections between this work and their studies at Stanford. In an interactive concluding session, students will participate in a career assessment activity, reflect on possible next steps, and learn about other opportunities to explore public service at Stanford. This course is open to all students, including not only those studying political science or public policy, but also the arts, humanities, sciences, and engineering. It is co-sponsored by the School of Humanities and Sciences and Stanford in Government (SIG).
Same as: POLISCI 74

PUBLPOL 78N. Economic Policies of the Presidential Candidates. 3 Units.
In nearly all polls, American voters rank the economy as one of their most important concerns. In the presidential election, much of the debate for voters will be on questions of economic policy. In this course, we will delve deeply into economic policy issues to understand options for government intervention and possible outcomes. We will combine economic analysis with political science methodology to understand efficient and implementable policy proposals.nnSpecific areas of interest will be taxation, budget, entitlement programs, economic regulation and competition policy, trade, demography, income inequality, and monetary policy. The course will incorporate other timely and salient policy issues as they arise during the course of the campaign. n nStudents will be expected to write a short paper and make an oral presentation to the class. A wide range of topics will be acceptable, including those directly related to campaign issues as well as other long-term economic issues facing the country.
Same as: ECON 78N

PUBLPOL 85. Environmentalism in California. 1 Unit.
Alternative Spring Break: With climate change posed to be one of the most pressing issues of the 21st Century, environmental preservation is emerging at a top priority. In addition to the federal government, state and local governments regulate the environment. In this course, we will learn about what environmental policy looks like in at the state level in California. Since the Golden State has an ambitious environmental preservation plan, there will be a lot of content. To make this class more manageable, we will be focusing on two areas specifically: water and energy. Finally, we will spend that last few weeks of the course learning about environmental justice, and specifically, how climate change impacts Indigenous communities in California and how the state is mitigating the impact. All major backgrounds are welcome.

PUBLPOL 100. Hoover Institution National Security Affairs Fellows Mentorship Program. 1 Unit.
This course is designed to give Stanford undergraduates an introduction to civil-military relations, leadership development, and operational aspects of American foreign policy. Admitted undergraduates will be mentored by a distinguished leader from the Army, Navy, Air Force, Marine Corps, Coast Guard, or State Department for the Fall, Winter and Spring quarters of the 2020-21 academic year. Participation in all three quarters is required. These military leaders and diplomats are part of the Hoover Institution¿s National Security Affairs Fellows program. The course will be held on Zoom and the scheduled class time will be used for group activities, lectures from the National Security Affairs Fellows on their experiences in the military and the State Department, small group meetings with mentees and mentors, and special sessions with senior American foreign policy leaders. At the end of each quarter, students write short reflection papers. No expertise in international affairs is necessary to apply and all majors are welcome. Selection is based on academic excellence, extracurricular leadership, and interest in international affairs. The program is directed by Dr. Amy Zegart. To apply, send a cover letter and resume to Taylor McLamb (twj@stanford.edu) by September 1, 2020.

PUBLPOL 101. Introduction to American Politics and Policy: The Good, The Bad, and The Ugly. 4-5 Units.
This is a course about American politics, which means this is a course about individuals, identities, and institutions. How do Americans come to think andnreason about politics? What is the role that identities play in affecting the political judgments that individuals make? How do our political institutionsnrespond to the demands of a diverse public that disagrees about issues related to race and justice, income and wealth inequality, climate change, gunncontrol, reproductive rights, the power of the executive, and the role that government ought to play in the lives of the governed? And how do we makensense of this seemingly peculiar contemporary moment in American politics? These are not easy questions, but they are ones for which political sciencenprovides a useful foundation to guide our inquiry. The objective of this course is to introduce students to various concepts and theoretical frameworks thatnhelp us understand the messiness and complexity of American politics. In addition to classroom lectures and discussion sections, students will benrequired to apply concepts and theoretical frameworks to contemporary issues in American politics. Undergraduate Public Policy students are required to enroll in this class for 5 units.
Same as: AMSTUD 123X, POLISCI 102, PUBLPOL 201

PUBLPOL 103C. Justice. 4-5 Units.
In this course, we explore three sets of questions relating to justice and the meaning of a just society: (1) Liberty: What is liberty, and why is it important? Which liberties must a just society protect? (2) Equality: What is equality, and why is it important? What sorts of equality should a just society ensure? (3) Reconciliation: Are liberty and equality in conflict? If so, how should we respond to the conflict between them? We approach these topics by examining competing theories of justice including utilitarianism, libertarianism/classical liberalism, and egalitarian liberalism. The class also serves as an introduction to how to do political philosophy, and students approaching these topics for the first time are welcome. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 103.
Same as: ETHICSOC 171, PHIL 171, POLISCI 103, POLISCI 336S

PUBLPOL 103D. Ethics and Politics of Public Service. 3-5 Units.
Ethical and political questions in public service work, including volunteering, service learning, humanitarian assistance, and public service professions such as medicine and teaching. Motives and outcomes in service work. Connections between service work and justice. Is mandatory service an oxymoron? History of public service in the U.S. Issues in crosscultural service work. Integration with the Haas Center for Public Service to connect service activities and public service aspirations with academic experiences at Stanford.
Same as: CSRE 178, ETHICSOC 133, PHIL 175A, PHIL 275A, POLISCI 133, URBANST 122

PUBLPOL 103E. Ethics on the Edge Public Policy Core Seminar. 2 Units.
This seminar-style course will explore additional foundational readings on organizational ethics (business, non-profit, and governmental organizations) and policy ethics. Themes will include, among others: AI and policy considerations; social media and policy considerations; race and police brutality incidents; national security (including cyber threats); the Iran nuclear agreement; non-profit organizations in the policy and US landscape; and various corporate matters. Organizing themes include, among others: ethics of leadership; ethics of persuasion and compromise; influence of bias in organizational and policy ethics; ethics of social movements; discrepancies between discourse and action; emotion and ethics; and interpreting and explaining ethics. In addition, the course will offer training in a wide variety of skills for effective communication of ethics for policy purposes (developing succinct arguments, presentations, website discourse, commenting in meetings and conferences, interviews, statement of personal views, interacting with the media and social media, and mapping complex ethical analysis). Most of the assignments allow students flexibility to explore topics of their choice. The objective is to engage actively and improve skills in a supportive environment. A short, analytically rigorous final paper in lieu of final exam. Attendance required. Grading will be based on short assignments, class participation, and the short final paper. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at susanl1@stanford.edu. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at susanl1@stanford.edu. This three-credit seminar accompanies PUBLPOL 134 Ethics on the Edge but can also be taken as a stand-alone course. *Please note the course is being offered for two units and therefore is ineligible for Ways credit in the 2019-20 academic year. Please note that this course will require one make-up evening session on a Monday, Tuesday or Wednesday in April in lieu of the final class session the first week of June, so the course ends before Memorial Day.
Same as: PUBLPOL 203E

PUBLPOL 103F. Ethics of Truth in a Post-Truth World. 2-3 Units.
This course will explore changing notions of truth in a world in which technology, global risks, and societal developments are blurring the boundaries of humanity and boring through traditional notions of nation states, institutions, and human identity. We will ask one over-arching question: does truth matter anymore? If so, why and how? If not, why not? Either way, how does truth relate to ethical decision-making by individuals and institutions and to an ethical society? How does truth relate to a life well lived? Six themes will organize our exploration of more specific topics: science and subjectivity; identity; memory; authenticity; religious truth; and truth and the law. Examples of topics to be explored include, among others: truth and technology (from deep fakes to home devices); white supremacy; DNA testing and the ¿identify as¿ movement, and identity; University history (Rhodes, Georgetown slavery, Yale Calhoun College...); the connections among truth, memory, and history; new questions in gender and racial identity; Chinese beautifying app Meitu and other social media "truth modifiers"; the sharing economy; the impact of AI and DNA testing sites on legal truth. Scotty McClennan will explore truth through major literary characters and the impact of religion on truth. We will consider how we determine and verify the truth; how we "do" truth; the role of truth in ethical decision-making; the importance of truth to effective ethical policy; and the relationship of the truth to a life well lived. An analytically rigorous short final paper in lieu of exam. This three-credit seminar may be taken as a stand-alone course or may accompany PUBLPOL 134 Ethics on the Edge to full the Public Policy major ethics requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at susanl1@stanford.edu. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at susanl1@stanford.edu. *Public Policy majors taking the course to complete the core requirements and students taking the course for Ways credit must obtain a letter grade. Other students may take the course for a letter grade or C/NC. To satisfy a Ways requirement, this course must be taken for at least 3 units. In AY 2020-21, a letter grade or `CR¿ grade satisfies the Ways requirement.
Same as: PUBLPOL 203F

PUBLPOL 103Z. Ethics and Politics in Public Service. 4 Units.
This course examines ethical and political questions that arise in doing public service work, whether volunteering, service learning, humanitarian endeavors overseas, or public service professions such as medicine and teaching. What motives do people have to engage in public service work? Are self-interested motives troublesome? What is the connection between service work and justice? Should the government or schools require citizens or students to perform service work? Is mandatory service an oxymoron?.
Same as: CSRE 133P, POLISCI 133Z, URBANST 122Z

PUBLPOL 104. Economic Policy Analysis. 4-5 Units.
The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50 and ECON 102B. Undergraduate Public Policy students are required to take this class for a letter grade and enroll in this class for five units.
Same as: ECON 150, PUBLPOL 204

PUBLPOL 105. Empirical Methods in Public Policy. 4-5 Units.
Methods of empirical analysis and applications in public policy. Emphasis on causal inference and program evaluation. Public policy applications include health, labor and saving. Assignments include hands-on data analysis, evaluation of existing literature, and a final research project. Objective is to obtain tools to 1) critically evaluate evidence used to make policy decisions and 2) perform empirical analysis to answer questions in public policy. Prerequisite: ECON 102B. Enrollment is limited to Public Policy students. Public Policy students must take the course for a letter grade.
Same as: PUBLPOL 205

PUBLPOL 106. Law and Economics. 4-5 Units.
This course explores the role of law in promoting social well-being (happiness). Law, among its other functions, can serve as a mechanism to harmonize private incentives with cooperative gains, to support an equitable division of those gains, and to deter "cheating" and dystopia. Law is thus essential to civilization. Economic analysis of law focuses on the welfare-enhancing incentive effects of law and its enforcement and on law's role in reducing the risks of cooperation, achieved by fixing expectations of what courts or the state will do in various futures. Specific topics include welfare economics, torts, property, contracts, regulation, process and antitrust. Requires a term paper applying economic analysis to a case, procedure, or law. Prerequisite: ECON 50.
Same as: ECON 154, PUBLPOL 206

PUBLPOL 107. Public Finance and Fiscal Policy. 5 Units.
What role should and does government play in the economy? What are the effects of government spending, borrowing, and taxation on efficiency, equity and economic stability and growth? The course covers economic, historical and statistical analyses and current policy debates in the U.S. and around the world. Policy topics: Fiscal crises, budget deficits, the national debt and intergenerational equity; tax systems and tax reform; social security and healthcare programs and reforms; transfers to the poor; public goods and externalities; fiscal federalism; public investment and cost-benefit analysis; and the political economy of government decision-making. Prerequisites: ECON 51 (Public Policy majors may take PUBLPOL 51 as a substitute for ECON 51), ECON 52 (can be taken concurrently).
Same as: ECON 141

PUBLPOL 109Q. Community Police Academy. 2 Units.
The Community Police Academy is a combination of classroom instruction and "hands-on" activities that examine life as a police officer. This class looks to clarify and expand the participant's knowledge of the responsibilities, decisions and constraints that face law enforcement officers today, while also providing some perspectives on the national conversation about the role of law enforcement in society. Students can elect to earn two units of credit by completing the readings, short assignments, and attending 4 discussion section meetings, or students may opt to take the course for no credits and only attend the activities. The class is a learning opportunity for all involved, an opportunity to build trust and develop partnerships between the Department of Public Safety and the Stanford Community. While this course is open to all students throughout the University, the units will not accrue to Law Degree Candidates for credit toward a degree in Law (JD, JSM, JSD, or LLM). Taught by Professor Laura Wilson. Prerequisites: Application and basic background check; minimum 18 years of age.

PUBLPOL 111. Leadership Challenges in Public Service. 4-5 Units.
This course will examine the responsibilities and challenges for those who occupy leadership roles in public service, broadly defined to include work in government, non-profit organizations, academia, and philanthropy, whether as a full- time career or part ¿time volunteer. Topics will include characteristics and styles of leadership, organizational dynamics, forms of influence, decision making, diversity, social change, and ethical responsibilities. Class sessions will include visitors who have occupied prominent leadership roles. Readings will include excerpts of relevant research, problems, exercises, and case studies. This course serves as a gateway for students participating in the Public Service Leadership Program, coordinated through the Haas Center. The class will be capped at 40 students.
Same as: ETHICSOC 95

PUBLPOL 113. America: Unequal. 4 Units.
It was never imagined "when the U.S. was founded" that the rich would be so rich and the poor so poor. It was never imagined "when the U.S. was founded" that opportunities to get ahead would depend so profoundly on one's family circumstances and other starting conditions. How could this have happened in the "land of opportunity?" What are the effects of such profound inequality? And what, if anything, should be done about it?.
Same as: CSRE 3P, SOC 3

PUBLPOL 115. Practical Training. 1-5 Unit.
Qualified Public Policy students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. Prior to enrolling students must get internship approved by the Public Policy Program. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. May be repeated for credit.

PUBLPOL 116. Climate Perspectives: Climate Science, Impacts, Policy, Negotiations, and Advocacy. 3 Units.
The course contains four main parts:Climate Science, Climate Impacts, Climate Policy, Climate Advocacy. Part I begins with a detailed introduction to climate science, including an assessment of arguments by climate science skeptics, and an examination of climate change models. Part II describes the impacts of climate change on the planet, human health, species and biodiversity, and it adds an economic perspective on the costs and benefits of responding now¿or later¿to climate change. Part II also include a discussion on climate change ethics, i.e., fairness and responsibility among individuals, nations, and generations. Part III focuses on climate policy, from the Kyoto Protocol to the Paris Accord. Part III also includes an introduction to how the public and officials have viewed climate change over time, and it explores factors that make widespread formal agreement difficult. Part IV looks forward to climate advocacy and what to expect from future of climate negotiations. Enrollment limited to students with sophomore academic standing or above. Prerequisite: Human Biology Core or Biology Foundations or consent of instructor (i.e. background in earth systems, economics, policy).
Same as: HUMBIO 116

PUBLPOL 118X. Shaping the Future of the Bay Area. 3-5 Units.
The complex urban problems affecting quality of life in the Bay Area, from housing affordability and transportation congestion to economic vitality and social justice, are already perceived by many to be intractable, and will likely be exacerbated by climate change and other emerging environmental and technological forces. Changing urban systems to improve the equity, resilience and sustainability of communities will require new collaborative methods of assessment, goal setting, and problem solving across governments, markets, and communities. It will also require academic institutions to develop new models of co-production of knowledge across research, education, and practice. This XYZ course series is designed to immerse students in co-production for social change. The course sequence covers scientific research and ethical reasoning, skillsets in data-driven and qualitative analysis, and practical experience working with local partners on urban challenges that can empower students to drive responsible systems change in their future careers. The Autumn (X) course is specifically focused on concepts and skills, and completion is a prerequisite for participation in the Winter (Y) and/or Spring (Z) practicum quarters, which engage teams in real-world projects with Bay Area local governments or community groups. X is composed of four modules: (A) participation in two weekly classes which prominently feature experts in research and practice related to urban systems; (B) reading and writing assignments designed to deepen thinking on class topics; (C) fundamental data analysis skills, particularly focused on Excel and ArcGIS, taught in lab sessions through basic exercises; (D) advanced data analysis skills, particularly focused on geocomputation in R, taught through longer and more intensive assignments. X can be taken for 3 units (ABC), 4 units (ACD), or 5 units (ABCD). Open to undergraduate and graduate students in any major. For more information, visit http://bay.stanford.edu.
Same as: CEE 118X, CEE 218X, ESS 118X, ESS 218X, GEOLSCI 118X, GEOLSCI 218X, GEOPHYS 118X, GEOPHYS 218X, POLISCI 218X, PUBLPOL 218X

PUBLPOL 118Y. Shaping the Future of the Bay Area. 3-5 Units.
Students are placed in small interdisciplinary teams (engineers and non-engineers, undergraduate and graduate level) to work on complex design, engineering, and policy problems presented by external partners in a real urban setting. Multiple projects are offered and may span both Winter and Spring quarters; students are welcome to participate in one or both quarters. Students are expected to interact professionally with government and community stakeholders, conduct independent team work outside of class sessions, and submit deliverables over a series of milestones. Prerequisite: the Autumn (X) skills course or approval of instructors. For information about the projects and application process, visit http://bay.stanford.edu.
Same as: CEE 118Y, CEE 218Y, ESS 118Y, ESS 218Y, GEOLSCI 118Y, GEOLSCI 218Y, GEOPHYS 118Y, GEOPHYS 218Y, POLISCI 218Y, PUBLPOL 218Y

PUBLPOL 121L. Racial-Ethnic Politics in US. 5 Units.
Why is contemporary American politics so sharply divided along racial and party lines? Are undocumented immigrants really more likely to commit crimes than U.S. citizens? What makes a political ad "racist?" The U.S. population will be majority-minority by 2050; what does this mean for future electoral outcomes? We will tackle such questions in this course, which examines various issues surrounding the development of political solidarity within racial groups; the politics of immigration, acculturation, and identification; and the influence of race on public opinion, political behavior, the media, and in the criminal justice system. Prior coursework in Economics or Statistics strongly recommended.
Same as: CSRE 121L, POLISCI 121L

PUBLPOL 122. BioSecurity and Pandemic Resilience. 4-5 Units.
Overview of the most pressing biosecurity issues facing the world today, with a special focus on the COVID-19 pandemic. Critical examination of ways of enhancing biosecurity and pandemic resilience to the current and future pandemics. Examination of how the US and the world is able to withstand a pandemic or a bioterrorism attack, how the medical/healthcare field, government, and technology sectors are involved in biosecurity and pandemic or bioterrorism preparedness and response and how they interface; the rise of synthetic biology with its promises and threats; global bio-surveillance; effectiveness of various containment and mitigation measures; hospital surge capacity; medical challenges; development, production, and distribution of countermeasures such as vaccines and drugs; supply chain challenges; public health and policy aspects of pandemic preparedness and response; administrative and engineering controls to enhance pandemic resilience; testing approaches and challenges; promising technologies for pandemic response and resilience, and other relevant topics. Guest lecturers have included former Secretary of State Condoleezza Rice, former Special Assistant on BioSecurity to Presidents Clinton and Bush Jr. Dr. Ken Bernard, Chief Medical Officer of the Homeland Security Department Dr. Alex Garza, eminent scientists, public health leaders, innovators and physicians in the field, and leaders of relevant technology companies. Open to medical, graduate, and undergraduate students. No prior background in biology necessary. Additional 1 unit for writing a research paper for 5 units total maximum.
Same as: BIOE 122, EMED 122, EMED 222, PUBLPOL 222

PUBLPOL 123. Thinking About War. 4-5 Units.
Introduction to the ideas, important writers, and policy decisions about warfare. Topics include: what causes wars, great strategists of warfare, whether nuclear weapons require different strategy than conventional war, fostering innovation, what creates stable peace, and what warfare feels like to those who fight it. Each class session is organized around a question; first half of each session will explore concepts, second half will apply them in a historical case or policy decision.
Same as: PUBLPOL 223

PUBLPOL 124. American Political Institutions in Uncertain Times. 5 Units.
This course examines how the rules that govern elections and the policy process determine political outcomes. It explores the historical forces that have shaped American political institutions, contemporary challenges to governing, and prospects for change. Topics covered include partisan polarization and legislative gridlock, the politicization of the courts, electoral institutions and voting rights, the expansion of presidential power, campaign finance and lobbying, representational biases among elected officials, and the role of political institutions in maintaining the rule of law. Throughout, emphasis will be placed on the strategic interactions between Congress, the presidency, and the courts and the importance of informal norms and political culture. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 120C.
Same as: POLISCI 120C

PUBLPOL 127. Health Care Leadership. 2-4 Units.
Healthcare Leadership class brings eminent healthcare leaders from a variety of sectors within healthcare to share their personal reflections and insights on effective leadership. Speakers discuss their personal core values, share lessons learned and their recipe for effective leadership in the healthcare field, including reflection on career and life choices. Speakers include CEOs of healthcare technology, pharmaceutical and other companies, leaders in public health, eminent leaders of hospitals, academia, biotechnology companies and other health care organizations. The class will also familiarize the students with the healthcare industry, as well as introduce concepts and skills relevant to healthcare leadership. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit. Students taking the course Mondays and Wednesdays should enroll for 4 units (exceptions for a 3 unit registration can be made with the consent of instructor to be still eligible for Ways credit). Students taking the course on Wednesdays only should register for 2 units.
Same as: EMED 127, EMED 227, PUBLPOL 227

PUBLPOL 129. Conversations on the Indian Economy. 1 Unit.
This course is intended to give students the opportunity to engage with Stanford faculty, across the University's different schools, who undertake research related to the modern Indian economy, including professors from the Humanities and Sciences, Engineering, GSB and schools of medicine, as well as from different research centers across the University. In addition, the course will feature conversations with several members of the Silicon Valley Community, as well as from India. The format is intended to promote discussion and debate, and to provide students an opportunity to learn about new developments and initiatives regarding India. Class meetings will be in the form of round-table interactions and exchanges.

PUBLPOL 130. Planning Calif: the Intersection of Climate, Land Use, Transportation & the Economy. 3 Units.
Cities and urban areas have always been transformed by major external changes like pandemics and public health crises. California is both in the midst of its greatest economic recession since the Great Depression and experiencing a pandemic that has the potential to reshape many aspects of life. Planning for cities and regions, however, is a long game that requires follow-through on decisions made sometimes over many decades. How do we balance the shocks to our assumptions from the current Covid world with the need to plan long-term for issues like affordable housing and equitable cities, and perhaps most fundamentally, prepare our cities and communities for the inevitability of climate change and climate impact? nnnnThis course takes an interdisciplinary view of the key contemporary planning topics in California. It does so from looking at the intersection of climate laws, land use changes, the need for housing, travel patterns and the availability of high quality jobs and employment. This course will give you an understanding of the roles of key levels of government, from the state to the region/metropolitan scale, to the city and county, down to the neighborhood and parcel level. it will give students insight into leading themes and issues of the day in California such as the future of downtowns, the role of high speed rail, the impact of telework, automation in the construction of housing, drawing from examples in San Jose and San Francisco, the Central Valley, the state legislature, Southern California. Within each of these topics we will look at the impact of decisions on equity as well as climate and the economy. nnnnThe instructors are Kristy Wang, formerly SPUR¿s Community Planning Policy Director, and Egon Terplan, Senior Advisor for Economic Development and Transportation in the California Governor¿s Office, formerly SPUR¿s Regional Planning Director. (Affiliations for identification purposes only).
Same as: CEE 136, CEE 236, PUBLPOL 230, URBANST 130

PUBLPOL 131. Introduction to Space Policy. 3 Units.
The last decade has seen dramatic developments and a rekindling of interest in space efforts. Silicon Valley has invested in a range of activities, including reusable launch services, constellations of communication and observation satellites, off-planet resource development, and even space tourism. Governments are restructuring their space-oriented military and regulatory agencies. Scientific missions continue to benefit from advances in technology, extending the reach and capabilities of robotic missions. Human missions will finally revisit deep space after decades spent solely in low earth orbit. nnThis course investigates the economic, policy, and engineering challenges to building a thriving private and public space industry. We begin with a review of historical space efforts, both public and private. We will investigate current efforts in detail, including budgeting, regulatory frameworks, and the key drivers of the renewed space activity. Externalities provide a core rationale for governmental policy action, including such topics as conflicts over spectrum used by space assets, stimulating innovation, orbital debris challenges, dual-use space technologies, and unclear or conflicting rights to develop space-based resources. Leaders from government and new space companies will occasionally participate in the class.nnStudents will be expected to participate in policy and case discussions, contribute several papers including a final project paper, and complete problem and policy analyses. Readings will include articles, policy papers, HBS cases, regulatory filings, and mission reviews.
Same as: AA 135

PUBLPOL 132. The Politics of Policy Making. 3 Units.
Public policymaking in the United States is part of a political process that can take years or even decades to play out. A familiarity with the politics of policymaking is key to understanding why some reform attempts are successful while others are not. This course will give students a behind-the-scenes look at how policy actually gets made. Students will gain exposure to the theory and literature behind policy formulation, and engage in debates over historical and contemporary efforts at reform.
Same as: PUBLPOL 232

PUBLPOL 133. Political Power in American Cities. 5 Units.
The major actors, institutions, processes, and policies of sub-state government in the U.S., emphasizing city general-purpose governments through a comparative examination of historical and contemporary politics. Issues related to federalism, representation, voting, race, poverty, housing, and finances. Political Science majors taking this course to fulfill the WIM requirement should enroll in POLISCI 121.
Same as: AMSTUD 121Z, POLISCI 121, URBANST 111

PUBLPOL 134. Ethics on the Edge: Business, Non-Profit Organizations, Government, and Individuals. 3 Units.
(PUBLPOL 134, PUBLPOL 234 - 3 credits, Ways - ER) (Same as LAW 7020) The objective of this course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding and the law can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government, non-profit, and academia. A framework for ethical decision-making underpins the course. There is significant space for personal reflection and forming your own views on a wide range of issues. Prominent guest speakers will attend certain sessions interactively. The relationships among ethics and technology, culture, leadership, law, and global risks (inequality, privacy, financial system meltdown, cyber-terrorism, climate change, etc.) will inform discussion. A broad range of international topics might include: designer genetics; civilian space travel (Elon Musk's Mars plans); social media (e.g. Facebook Cambridge Analytica, on-line sex trafficking, monopolies); new devices (e.g. Amazon Alexa in hotel rooms); free speech on University campuses; opioid addiction; AI (from racism to the work challenge and beyond); corporate and financial sector scandals (Theranos, Wells Fargo fraudulent account creation, Volkswagen emissions testing manipulation); new corporate challenges (e.g. Google selling drones to the military and Facebook¿s new Libra crypto currency); and non-profit sector ethics challenges (e.g. NGOs engagement with ISIS and sexual misconduct in humanitarian aid (Oxfam case)). Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities to earn participation credit beyond speaking in class). Strong emphasis on rigorous analysis, critical thinking and testing ideas in real-world contexts. Please note that this course will require one make-up evening session on a Wednesday or Thursday in lieu of the final class session the first week of June, and two one-hour extensions to Monday class sessions as a make-up for May 11, so the course will end before Memorial Day. Permission numbers are required for enrollment. Please email the Public Policy Program at annas7@stanford.edu to obtain a permission number. The course offers credit toward Public Policy core requirements (if taken in combination with PUBLPOL 103E or PUBLPOL 103F), and Science, Technology and Society majors and satisfies the undergraduate Ways of Thinking - Ethical Reasoning requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at susanl1@stanford.edu. *Students taking the course for Ways credit and Public Policy majors taking the course to complete the core requirements must obtain a letter grade. Other students may take the course for a letter grade or C/NC. Students seeking credit for other majors should consult their departments.
Same as: PUBLPOL 234

PUBLPOL 135. Regional Politics and Decision Making in Silicon Valley and the Greater Bay Area. 4 Units.
Dynamics of regional leadership and decision making in Silicon Valley, a complex region composed of 40 cities and four counties without any overarching framework for governance. Formal and informal institutions shaping outcomes in the region. Case studies include transportation, workforce development, housing and land use, and climate change.

PUBLPOL 136. The Sharing Economy. 3 Units.
The rapid growth of the sharing economy, sometimes also called the peer to peer economy, is made possible by the ubiquity of smart phones, inefficiency of ownership, and measures designed to create and measure trust among participants. The course will explore not only the rapid rise of certain companies but also the shadow side of commercialized relationships. We will examine the economics and development consequences of the sharing economy, primarily with an urban focus, along an emphasis on the design of platforms and markets, ownership, the nature of work, environmental degradation and inequality.
Same as: URBANST 136

PUBLPOL 137. Innovations in Microcredit and Development Finance. 3 Units.
The role of innovative financial institutions in supporting economic development, the alleviation of rural and urban poverty, and gender equity. Analysis of the strengths and limits of commercial banks, public development banks, credit unions, and microcredit organizations both in the U.S. and internationally. Readings include academic journal articles, formal case studies, evaluations, and annual reports. Priority to students who have taken any portion of the social innovation series: URBANST 131, 132, or 133. Recommended: ECON 1A or 1B.
Same as: URBANST 137

PUBLPOL 141. Monitoring the Crisis. 4-5 Units.
A course devoted to understanding how people are faring as the country's health and economic crisis unfolds. The premise of the course is that, as important and valuable as surveys are, it's a capital mistake to presume that we know what needs to be asked and that fixed-response answers adequately convey the depth of what's happening. We introduce a new type of qualitative method that allows for discovery by capturing the voices of the people, learn what they're thinking and fearing, and understand the decisions they're making. Students are trained in immersive interviewing by completing actual interviews, coding and analyzing their field notes, and then writing reports describing what's happening across the country. These reports will be designed to find out who's hurting, why they're hurting, and how we can better respond to the crisis. Students interested should submit the following application: https://docs.google.com/forms/d/e/1FAIpQLSfdOZsnpOCg4zTRbVny0ikxpZEd1AFEEJh3K9KjvINyfbWMGw/viewform.
Same as: PSYCH 145A, SOC 141, SOC 241, URBANST 149

PUBLPOL 143. Finance, Corporations, and Society. 4 Units.
Both "free market capitalism" and democracy are in crisis around the world. This interdisciplinary course will help you understand the issues by exploring the interactions between the financial system, corporations, governments, and broader society. Topics include basic financial decisions of individuals and corporations, consumer finance (including mortgages, student loans, insurance and savings), financial markets and firms, corporations and their governance, the role of disclosures and regulations, political economy and government institutions, and the role of the media. We will discuss current events and policy debates regularly throughout the course. The approach will be rigorous and analytical but not overly mathematical. Visitors with relevant experience will enrich the discussion.
Same as: ECON 143, INTLPOL 227, POLISCI 127A

PUBLPOL 146. Policy, Politics and the 2020 Elections: What 2020 Means for Future Campaigns and Elections. 2 Units.
(Same as LAW 7057). This course looks back at the 2020 election campaign and tries to discern lessons and takeaways for future campaigns and elections. It will provide students with a behind-the-scenes understanding of how campaigns work. Each week, we will explore a different topic related to high-profile campaigns -- policy formation, communications, grassroots strategy, digital outreach, campaign finance -- and feature prominent guest speakers who have served and will serve in senior roles on both Democratic and Republican campaigns, including the Trump and Biden teams.
Same as: COMM 153A, COMM 253A, POLISCI 72, PUBLPOL 246

PUBLPOL 147. Ending Poverty with Technology. 5 Units.
There are growing worries that new technologies may eliminate work, increase inequality, and create a large dependent class subsisting on transfers. But can technology instead be turned against itself and used to end poverty? This class explores the sources of domestic poverty and then examines how new technologies might be developed to eliminate poverty completely. We first survey existing poverty-reducing products and then attempt to imagine new products that might end poverty by equalizing access to information, reducing transaction costs, or equalizing access to training. In a follow-up class in the spring quarter, students who choose to continue will select the most promising ideas, continue to develop them, and begin the design task within Stanford¿s new Poverty and Technology Lab.
Same as: SOC 157

PUBLPOL 148. Ending Poverty with Technology: A Practicum.. 5 Units.
Will robots, automation, and technology eliminate work and create a large poverty-sticken dependent class? Or will they eliminate poverty, free us from the tyranny of work, and usher in a new society defined by leisure and creative pursuits? This two-quarter class is dedicated to exploring new theories about poverty while at the same time incubating applied technology solutions. The first quarter is devoted to examining the theory of technology-based solutions to poverty, and the second quarter is devoted to planning a viable technology-based product that will reduce poverty. This product may then be built in a follow-up Using Tech for Good (Computer Science 50) class in the first quarter of 2018 (but class participants are not required to take that follow-up class). The course is premised on the view that innovative solutions to poverty will be based on new conversations and an authentic collaboration between Silicon Valley and leaders from education, government, and low-income communities.
Same as: SOC 158

PUBLPOL 152. Negotiation. 3 Units.
Students learn to prepare for and conduct negotiations in a variety of arenas including getting a job, managing workplace conflict, negotiating transactions, and managing personal relationships. Interactive class. The internationally travelled instructor who has mediated cases in over 75 countries will require students to negotiate real life case studies and discuss their results in class. Application required before first day of class; students should enroll on Axess and complete the application on Canvas before March 20, 2020. Note: there is a class fee of $130 for access to case files and readings.
Same as: CEE 151, CEE 251, EARTH 251

PUBLPOL 154. Politics and Policy in California. 5 Units.
State politics and policy making, including the roles of the legislature, legislative leadership, governor, special interests, campaign finance, advocacy groups, ballot initiatives, state and federal laws, media, and research organizations. Case studies involving budgets, education, pensions, health care, political reform, environmental reforms, water, transportation and more. Evaluation of political actions, both inside and outside of government, that can affect California policy and social outcomes. Meetings with elected officials, policymakers, and advocates in class and during a day-long field trip to Sacramento.

PUBLPOL 156. Health Care Policy and Reform. 5 Units.
(HUMBIO students must enroll in HUMBIO 122A. Graduate students must enroll in PUBLPOL 156.) Focuses on U.S. health care policy. Includes comparisons with health care policy in other countries and detailed examinations of Medicare, Medicaid, private insurance, the Affordable Care Act (ACA), and proposed reforms. Examines health policy efforts at state, local, and local levels. The course includes sessions on effective memo writing as well as presentation and the politics of health policy and reform efforts. Enrollment limited to students with sophomore academic standing or above. Prerequisites: Human Biology Core.
Same as: HUMBIO 122A

PUBLPOL 159. Economic, Legal, and Political Analysis of Climate-Change Policy. 5 Units.
This course will advance students understanding of economic, legal, and political approaches to avoiding or managing the problem of global climate change. Theoretical contributions as well as empirical analyses will be considered. It will address economic issues, legal constraints, and political challenges associated with various emissions-reduction and adaptation strategies, and it will consider policy efforts at the local, national, and international levels. Specific topics include: interactions among overlapping climate policies, the strengths and weaknesses of alternative policy instruments, trade-offs among alternative policy objectives, and decision making under uncertainty. Prerequisites: Econ 50 or its equivalent.
Same as: EARTHSYS 159, ECON 159, ECON 209

PUBLPOL 166. The Politics of Epidemics. 4-5 Units.
When it comes to healthcare, whose bodies matter, who deserves care? How do scholars, activists, and patients confront and combat widespread healthcare disparities? This course explores prevailing epidemics of our moment (including HIV/AIDS, breast cancer, opioid addiction, and Lyme disease) in order to consider how infectious disease, moral panic, and national identity interplay across public health platforms, scientific research, and popular rhetoric. We will utilize intersectional frameworks to consider the histories, politics, and broader context of current epidemiological data and larger questions about doctor bias, the gender gap in pain, and cultural fears related to illness and the body. How do treatment, media coverage, policy, and access to care change according to population, location, and technology?.
Same as: FEMGEN 146

PUBLPOL 167. How To Be a Politician. 2 Units.
Do you want to run for political office one day? This course will give you a full toolkit for winning elections. It will help students think about their personal narrative, how to present themselves to the electorate, and the issues and messages that should underpin their future campaign. It will also provide students with a practical understanding of how to build a campaign apparatus, fundraise effectively, and develop a winning strategy. The class will be highly interactive giving each student the chance to hone their candidacy, and there will be opportunities to work on debate skills, speech giving, and media performance. We will look at campaigns from across the world, as well as invite politicians and political consultants to speak to us. This class is designed for any student who has dreamed of running for office: be it locally or becoming President.
Same as: PUBLPOL 267

PUBLPOL 168. Global Organizations: The Matrix of Change. 4 Units.
We learn how to apply analytical tools from the social sciences to organizations, and study how to design effective organizations and projects within and across institutional settings. A variety of organizations are included and how they deal with strategy changes and accountability. The theme for this year's class is on accountability of non-profit organizations such as Doctors Without Borders, The International Rescue Committee and The Red Cross. Recommended: FINANCE 377, MS&E 180, SOC 160, ECON 149, or MGTECON 330.
Same as: PUBLPOL 268, SOC 168, SOC 268

PUBLPOL 170. Bridging Policy and Tech Through Design. 3 Units.
This project-based course aims to bring together students from computer science and the social sciences to work with external partner organizations at the nexus of digital technology and public policy. Students will collaborate in interdisciplinary teams on a problem with a partner organization. Along with the guidance of faculty mentors and the teaching staff, students will engage in a project with outcomes ranging from policy memos and white papers to data visualizations and software. Possible projects suggested by partner organizations will be presented at an information session in early March. Following the infosession, a course application will open for teams to be selected before the start of Spring Quarter. Students may apply to a project with a partner organization or with a preformed team and their own idea to be reviewed for approval by the course staff. There will be one meeting per week for the full class and at least one weekly meeting with the project-based team mentors. Prerequisites: Appropriate preparation depends on the nature of the project proposed, and will be verified by the teaching staff based on your application.
Same as: CS 184

PUBLPOL 172. Children, Youth, and the Law. 3 Units.
How the legal rights of children and adolescents in America are defined, protected, and enforced through the legal process within the context of their developmental needs and competing societal interests. Topics: origins and definitions of children's rights; adoption; custody; the juvenile justice system; education; freedom of speech; and sex. The class is interactive, using hypotheticals for discussion and analysis. A and B alternate; students may take one or both. Upper division course with preference given to upperclassmen.
Same as: HUMBIO 172B

PUBLPOL 174. The Urban Economy. 4 Units.
Applies the principles of economic analysis to historical and contemporary urban and regional development issues and policies. Explores themes of urban economic geography, location decision-making by firms and individuals, urban land and housing markets, and local government finance. Critically evaluates historical and contemporary government policies regulating urban land use, housing, employment development, and transportation.
Same as: URBANST 173

PUBLPOL 177. Philosophy of Public Policy. 4 Units.
From healthcare to voting reforms, social protection and educational policies, public policies are underpinned by moral values. When we debate those policies, we typically appeal to values like justice, fairness, equality, freedom, privacy, and safety. A proper understanding of those values, what they mean, how they may conflict, and how they can be weighed against each other is essential to developing a competent and critical eye on our complex political world. We will ask questions such as: Is compulsory voting justified? Should children have the right to vote? Is affirmative action just? What is wrong with racial profiling? What are the duties of citizens of affluent countries towards migrants? Do we have a right to privacy? Is giving cash to all unconditionally fair? This class will introduce students to a number of methods and frameworks coming out of ethics and political philosophy and will give students a lot of time to practice ethically informed debates on public policies. At the end of this class, students should have the skills to critically examine a wide range of diverse policy proposals from the perspective of ethics, moral and political philosophy. There are no prerequisites. Undergraduates and graduates from all departments are welcome to attend.
Same as: ETHICSOC 175X, PHIL 175B, PHIL 275B, POLISCI 135E, POLISCI 235E

PUBLPOL 178. The Science and Practice of Effective Advocacy. 3-5 Units.
How can purposeful collective action change government policy, business practices and cultural norms? This course will teach students about the components of successful change campaigns and help develop the practical skills to carry out such efforts. The concepts taught will be relevant to both issue advocacy and electoral campaigns, and be evidence-based, drawing on lessons from social psychology, political science, communications, community organizing and social movements. The course will meet twice-a-week for 90 minutes, and class time will combine engaged learning exercises, discussions and lectures. There will be a midterm and final. Students will be able to take the course for 3 or 5 units. Students who take the course for 5 units will participate in an advocacy project with an outside organization during the quarter, attend a related section meeting and write reflections. For 5 unit students, the section meeting is on Tuesdays, from 3:00 to 4:00 p.m.
Same as: CSRE 178P, URBANST 178

PUBLPOL 182. Ethics, Public Policy, and Technological Change. 5 Units.
Examination of recent developments in computing technology and platforms through the lenses of philosophy, public policy, social science, and engineering. Course is organized around four main units: algorithmic decision-making and bias; data privacy and civil liberties; artificial intelligence and autonomous systems; and the power of private computing platforms. Each unit considers the promise, perils, rights, and responsibilities at play in technological developments. Prerequisite: CS106A.
Same as: COMM 180, CS 182, ETHICSOC 182, PHIL 82, POLISCI 182

PUBLPOL 190. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 3 Units.
This interdisciplinary seminar explores pressing questions relating to the protection, practice and repatriation of the cultural heritage of Indigenous peoples from North America and beyond. Using an innovative combination of in-class lectures and videos of interviews with renowned experts, including Indigenous leaders, scholars, artists and performers and museum professionals from around the world, this seminar will explore and problematize, among other subjects: the impact of colonialism, urbanization and other political, legal, economic, religious and cultural forces on understandings and definitions of "indigenous" and "cultural heritage"; the development of international law relating to Indigenous peoples¿ cultural rights; international, domestic, and tribal heritage protection and repatriation laws/initiatives including the 2007 United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), the 1990 US Native American Graves Protection and Repatriation Act (NAGPRA), and others; past and present Western museum practices and guidelines relating to display, preservation, provenance research and repatriation of indigenous cultural material; the meaning of repatriation to Indigenous peoples and other stakeholders; and resolving repatriation disputes, including by alternative dispute resolution (ADR) processes. While case studies will relate primarily to Indigenous peoples of North America, comparisons will be drawn with the situation of Indigenous peoples in other regions, such as Oceania and Russia. Each week students will brainstorm actionable ideas for amending/supplementing current frameworks in order to give force to the cultural rights enumerated in UNDRIP. The overall seminar experience will involve discussions of lectures and video content, assigned readings, quizzes, a class visit to the Cantor Center Native Americas collection, and visits to our classroom by experts. Elements used in grading: class participation, attendance and a final project (one-day take-home exam; or research paper or film project with instructor's consent).
Same as: ARTHIST 190A, ARTHIST 490A, PUBLPOL 290

PUBLPOL 197. Junior Honors Seminar. 5 Units.
For juniors (advanced sophomores will be considered) who expect to write an honors thesis in Economics or Public Policy. Weekly sessions go through the process of selecting a research question, finding relevant bibliography, writing a literature review, introduction, and study design, culminating in the write-up of an honors thesis proposal (prospectus) and the oral presentation of each student's research project. Students also interact with potential advisors, and outline a program of study for their senior year. To apply, complete the application at https://economics.stanford.edu/undergraduate/forms.
Same as: ECON 198

PUBLPOL 198. Directed Readings in Public Policy. 1-5 Unit.
.

PUBLPOL 199. Senior Research. 1-15 Unit.
May be repeated for credit.

PUBLPOL 200A. Senior Practicum. 5 Units.
Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

PUBLPOL 200B. Senior Practicum. 5 Units.
Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

PUBLPOL 200C. Senior Practicum. 5 Units.
Small student teams conduct policy analyses requested by government and nonprofit organizations. With guidance from the instructor and client organization, each team researches a real-world problem and devises implementable policy recommendations to help address it. The project culminates in a professional report and presentation to the client organization. Prerequisites: core courses in Public Policy or consent of instructor.

PUBLPOL 200H. Senior Honors Seminar. 3 Units.
Honors students conduct original research for their policy-related Honors thesis. The course is designed to help students make progress on their theses and improve their analytical, research, and communication skills. Instructor consent required.

PUBLPOL 201. Introduction to American Politics and Policy: The Good, The Bad, and The Ugly. 4-5 Units.
This is a course about American politics, which means this is a course about individuals, identities, and institutions. How do Americans come to think andnreason about politics? What is the role that identities play in affecting the political judgments that individuals make? How do our political institutionsnrespond to the demands of a diverse public that disagrees about issues related to race and justice, income and wealth inequality, climate change, gunncontrol, reproductive rights, the power of the executive, and the role that government ought to play in the lives of the governed? And how do we makensense of this seemingly peculiar contemporary moment in American politics? These are not easy questions, but they are ones for which political sciencenprovides a useful foundation to guide our inquiry. The objective of this course is to introduce students to various concepts and theoretical frameworks thatnhelp us understand the messiness and complexity of American politics. In addition to classroom lectures and discussion sections, students will benrequired to apply concepts and theoretical frameworks to contemporary issues in American politics. Undergraduate Public Policy students are required to enroll in this class for 5 units.
Same as: AMSTUD 123X, POLISCI 102, PUBLPOL 101

PUBLPOL 203E. Ethics on the Edge Public Policy Core Seminar. 2 Units.
This seminar-style course will explore additional foundational readings on organizational ethics (business, non-profit, and governmental organizations) and policy ethics. Themes will include, among others: AI and policy considerations; social media and policy considerations; race and police brutality incidents; national security (including cyber threats); the Iran nuclear agreement; non-profit organizations in the policy and US landscape; and various corporate matters. Organizing themes include, among others: ethics of leadership; ethics of persuasion and compromise; influence of bias in organizational and policy ethics; ethics of social movements; discrepancies between discourse and action; emotion and ethics; and interpreting and explaining ethics. In addition, the course will offer training in a wide variety of skills for effective communication of ethics for policy purposes (developing succinct arguments, presentations, website discourse, commenting in meetings and conferences, interviews, statement of personal views, interacting with the media and social media, and mapping complex ethical analysis). Most of the assignments allow students flexibility to explore topics of their choice. The objective is to engage actively and improve skills in a supportive environment. A short, analytically rigorous final paper in lieu of final exam. Attendance required. Grading will be based on short assignments, class participation, and the short final paper. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at susanl1@stanford.edu. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at susanl1@stanford.edu. This three-credit seminar accompanies PUBLPOL 134 Ethics on the Edge but can also be taken as a stand-alone course. *Please note the course is being offered for two units and therefore is ineligible for Ways credit in the 2019-20 academic year. Please note that this course will require one make-up evening session on a Monday, Tuesday or Wednesday in April in lieu of the final class session the first week of June, so the course ends before Memorial Day.
Same as: PUBLPOL 103E

PUBLPOL 203F. Ethics of Truth in a Post-Truth World. 2-3 Units.
This course will explore changing notions of truth in a world in which technology, global risks, and societal developments are blurring the boundaries of humanity and boring through traditional notions of nation states, institutions, and human identity. We will ask one over-arching question: does truth matter anymore? If so, why and how? If not, why not? Either way, how does truth relate to ethical decision-making by individuals and institutions and to an ethical society? How does truth relate to a life well lived? Six themes will organize our exploration of more specific topics: science and subjectivity; identity; memory; authenticity; religious truth; and truth and the law. Examples of topics to be explored include, among others: truth and technology (from deep fakes to home devices); white supremacy; DNA testing and the ¿identify as¿ movement, and identity; University history (Rhodes, Georgetown slavery, Yale Calhoun College...); the connections among truth, memory, and history; new questions in gender and racial identity; Chinese beautifying app Meitu and other social media "truth modifiers"; the sharing economy; the impact of AI and DNA testing sites on legal truth. Scotty McClennan will explore truth through major literary characters and the impact of religion on truth. We will consider how we determine and verify the truth; how we "do" truth; the role of truth in ethical decision-making; the importance of truth to effective ethical policy; and the relationship of the truth to a life well lived. An analytically rigorous short final paper in lieu of exam. This three-credit seminar may be taken as a stand-alone course or may accompany PUBLPOL 134 Ethics on the Edge to full the Public Policy major ethics requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at susanl1@stanford.edu. Students wishing to take the course who are unable to sign up within the enrollment limit should contact Dr. Susan Liautaud at susanl1@stanford.edu. *Public Policy majors taking the course to complete the core requirements and students taking the course for Ways credit must obtain a letter grade. Other students may take the course for a letter grade or C/NC. To satisfy a Ways requirement, this course must be taken for at least 3 units. In AY 2020-21, a letter grade or `CR¿ grade satisfies the Ways requirement.
Same as: PUBLPOL 103F

PUBLPOL 204. Economic Policy Analysis. 4-5 Units.
The relationship between microeconomic analysis and public policy making. How economic policy analysis is done and why political leaders regard it as useful but not definitive in making policy decisions. Economic rationales for policy interventions, methods of policy evaluation and the role of benefit-cost analysis, economic models of politics and their application to policy making, and the relationship of income distribution to policy choice. Theoretical foundations of policy making and analysis, and applications to program adoption and implementation. Prerequisites: ECON 50 and ECON 102B. Undergraduate Public Policy students are required to take this class for a letter grade and enroll in this class for five units.
Same as: ECON 150, PUBLPOL 104

PUBLPOL 205. Empirical Methods in Public Policy. 4-5 Units.
Methods of empirical analysis and applications in public policy. Emphasis on causal inference and program evaluation. Public policy applications include health, labor and saving. Assignments include hands-on data analysis, evaluation of existing literature, and a final research project. Objective is to obtain tools to 1) critically evaluate evidence used to make policy decisions and 2) perform empirical analysis to answer questions in public policy. Prerequisite: ECON 102B. Enrollment is limited to Public Policy students. Public Policy students must take the course for a letter grade.
Same as: PUBLPOL 105

PUBLPOL 206. Law and Economics. 4-5 Units.
This course explores the role of law in promoting social well-being (happiness). Law, among its other functions, can serve as a mechanism to harmonize private incentives with cooperative gains, to support an equitable division of those gains, and to deter "cheating" and dystopia. Law is thus essential to civilization. Economic analysis of law focuses on the welfare-enhancing incentive effects of law and its enforcement and on law's role in reducing the risks of cooperation, achieved by fixing expectations of what courts or the state will do in various futures. Specific topics include welfare economics, torts, property, contracts, regulation, process and antitrust. Requires a term paper applying economic analysis to a case, procedure, or law. Prerequisite: ECON 50.
Same as: ECON 154, PUBLPOL 106

PUBLPOL 209. What is Public about Public Lands - Who and How to Manage.. 3 Units.
The seminar will exam the origin and evolution of public lands from 1789 forward. Specifically, how the United States' concept of property has evolved and thus the management or caretaking of these lands has also changed. There are nearly 500 million acres of surface public lands (nearly ten times the size of New York) and over 750 million acres of subsurface public lands. The seminar will explore the writing of a "field book" for a unified management approach to the managing these lands.

PUBLPOL 217. The Future of Global Cooperation. 3-4 Units.
As threats to peace and security emerge, should states respond unilaterally, build ad hoc coalitions of the willing, or work through multilateral institutions? What are the benefits and risks of global cooperation? This seminar interrogates these questions by examining the role that international organizations play in responding to global threats in the modern era. The first section focuses on the advent of the modern global institutional architecture, considering its historical context, theoretical underpinnings, sources of legitimacy and power (or lack thereof), and the role of regional, subnational, and nongovernmental actors. The second section weighs the efficacy of global institutions in responding to transnational crises by delving into recent case studies, including the Syrian war, the Paris Climate Accord, the Iran Nuclear Deal, the 2014-2016 Ebola outbreak in West Africa, and the COVID-19 pandemic. The final section explores the future of the liberal world order and its institutions, and considers alternative models of global cooperation. Students should enroll for three units. Those who wish to receive an additional unit of credit must write a long policy memo. See syllabus for details. Enrollment is capped. Course is cross-listed with LAW 5039.
Same as: INTLPOL 217

PUBLPOL 218X. Shaping the Future of the Bay Area. 3-5 Units.
The complex urban problems affecting quality of life in the Bay Area, from housing affordability and transportation congestion to economic vitality and social justice, are already perceived by many to be intractable, and will likely be exacerbated by climate change and other emerging environmental and technological forces. Changing urban systems to improve the equity, resilience and sustainability of communities will require new collaborative methods of assessment, goal setting, and problem solving across governments, markets, and communities. It will also require academic institutions to develop new models of co-production of knowledge across research, education, and practice. This XYZ course series is designed to immerse students in co-production for social change. The course sequence covers scientific research and ethical reasoning, skillsets in data-driven and qualitative analysis, and practical experience working with local partners on urban challenges that can empower students to drive responsible systems change in their future careers. The Autumn (X) course is specifically focused on concepts and skills, and completion is a prerequisite for participation in the Winter (Y) and/or Spring (Z) practicum quarters, which engage teams in real-world projects with Bay Area local governments or community groups. X is composed of four modules: (A) participation in two weekly classes which prominently feature experts in research and practice related to urban systems; (B) reading and writing assignments designed to deepen thinking on class topics; (C) fundamental data analysis skills, particularly focused on Excel and ArcGIS, taught in lab sessions through basic exercises; (D) advanced data analysis skills, particularly focused on geocomputation in R, taught through longer and more intensive assignments. X can be taken for 3 units (ABC), 4 units (ACD), or 5 units (ABCD). Open to undergraduate and graduate students in any major. For more information, visit http://bay.stanford.edu.
Same as: CEE 118X, CEE 218X, ESS 118X, ESS 218X, GEOLSCI 118X, GEOLSCI 218X, GEOPHYS 118X, GEOPHYS 218X, POLISCI 218X, PUBLPOL 118X

PUBLPOL 218Y. Shaping the Future of the Bay Area. 3-5 Units.
Students are placed in small interdisciplinary teams (engineers and non-engineers, undergraduate and graduate level) to work on complex design, engineering, and policy problems presented by external partners in a real urban setting. Multiple projects are offered and may span both Winter and Spring quarters; students are welcome to participate in one or both quarters. Students are expected to interact professionally with government and community stakeholders, conduct independent team work outside of class sessions, and submit deliverables over a series of milestones. Prerequisite: the Autumn (X) skills course or approval of instructors. For information about the projects and application process, visit http://bay.stanford.edu.
Same as: CEE 118Y, CEE 218Y, ESS 118Y, ESS 218Y, GEOLSCI 118Y, GEOLSCI 218Y, GEOPHYS 118Y, GEOPHYS 218Y, POLISCI 218Y, PUBLPOL 118Y

PUBLPOL 222. BioSecurity and Pandemic Resilience. 4-5 Units.
Overview of the most pressing biosecurity issues facing the world today, with a special focus on the COVID-19 pandemic. Critical examination of ways of enhancing biosecurity and pandemic resilience to the current and future pandemics. Examination of how the US and the world is able to withstand a pandemic or a bioterrorism attack, how the medical/healthcare field, government, and technology sectors are involved in biosecurity and pandemic or bioterrorism preparedness and response and how they interface; the rise of synthetic biology with its promises and threats; global bio-surveillance; effectiveness of various containment and mitigation measures; hospital surge capacity; medical challenges; development, production, and distribution of countermeasures such as vaccines and drugs; supply chain challenges; public health and policy aspects of pandemic preparedness and response; administrative and engineering controls to enhance pandemic resilience; testing approaches and challenges; promising technologies for pandemic response and resilience, and other relevant topics. Guest lecturers have included former Secretary of State Condoleezza Rice, former Special Assistant on BioSecurity to Presidents Clinton and Bush Jr. Dr. Ken Bernard, Chief Medical Officer of the Homeland Security Department Dr. Alex Garza, eminent scientists, public health leaders, innovators and physicians in the field, and leaders of relevant technology companies. Open to medical, graduate, and undergraduate students. No prior background in biology necessary. Additional 1 unit for writing a research paper for 5 units total maximum.
Same as: BIOE 122, EMED 122, EMED 222, PUBLPOL 122

PUBLPOL 223. Thinking About War. 4-5 Units.
Introduction to the ideas, important writers, and policy decisions about warfare. Topics include: what causes wars, great strategists of warfare, whether nuclear weapons require different strategy than conventional war, fostering innovation, what creates stable peace, and what warfare feels like to those who fight it. Each class session is organized around a question; first half of each session will explore concepts, second half will apply them in a historical case or policy decision.
Same as: PUBLPOL 123

PUBLPOL 224. Social Entrepreneurship and Innovation Lab (SE Lab) - Human & Planetary Health. 3-4 Units.
Social Entrepreneurship and Innovation Lab (SE Lab) - Global & Planetary Health is a Collaboratory workshop for students/fellows to design and develop innovative social ventures addressing key challenges in health and the environment, especially in support of the UN Sustainable Development Goals (SDGs 2030). Your mandate in identifying problems and designing solutions is broad and flexible! SE Lab is open to students and fellows across Stanford and combines design thinking exercises, short lectures & case studies, workshops, small group teamwork, presentations, guest speakers, and faculty, practitioner and peer feedback to support you and your team in generating and developing ideas and projects that will change the world! Join SE Lab with an idea or simply the desire to join a team. Enrollment limited to 30.
Same as: HRP 224, MED 224

PUBLPOL 225. Urban Policy Research Lab. 5 Units.
This collaborative reading and research seminar considers the numerous ways that governments conduct social policy by shaping and remaking geographic places. Representative topics include: housing aid programs, exclusionary zoning, controls on internal migration and place of residence, and cars' role in cities. Students will contribute to faculty field research on the consequences of these policies for economic, social, and political outcomes. Prerequisites: None.
Same as: POLISCI 220, URBANST 170

PUBLPOL 227. Health Care Leadership. 2-4 Units.
Healthcare Leadership class brings eminent healthcare leaders from a variety of sectors within healthcare to share their personal reflections and insights on effective leadership. Speakers discuss their personal core values, share lessons learned and their recipe for effective leadership in the healthcare field, including reflection on career and life choices. Speakers include CEOs of healthcare technology, pharmaceutical and other companies, leaders in public health, eminent leaders of hospitals, academia, biotechnology companies and other health care organizations. The class will also familiarize the students with the healthcare industry, as well as introduce concepts and skills relevant to healthcare leadership. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit. Students taking the course Mondays and Wednesdays should enroll for 4 units (exceptions for a 3 unit registration can be made with the consent of instructor to be still eligible for Ways credit). Students taking the course on Wednesdays only should register for 2 units.
Same as: EMED 127, EMED 227, PUBLPOL 127

PUBLPOL 230. Planning Calif: the Intersection of Climate, Land Use, Transportation & the Economy. 3 Units.
Cities and urban areas have always been transformed by major external changes like pandemics and public health crises. California is both in the midst of its greatest economic recession since the Great Depression and experiencing a pandemic that has the potential to reshape many aspects of life. Planning for cities and regions, however, is a long game that requires follow-through on decisions made sometimes over many decades. How do we balance the shocks to our assumptions from the current Covid world with the need to plan long-term for issues like affordable housing and equitable cities, and perhaps most fundamentally, prepare our cities and communities for the inevitability of climate change and climate impact? nnnnThis course takes an interdisciplinary view of the key contemporary planning topics in California. It does so from looking at the intersection of climate laws, land use changes, the need for housing, travel patterns and the availability of high quality jobs and employment. This course will give you an understanding of the roles of key levels of government, from the state to the region/metropolitan scale, to the city and county, down to the neighborhood and parcel level. it will give students insight into leading themes and issues of the day in California such as the future of downtowns, the role of high speed rail, the impact of telework, automation in the construction of housing, drawing from examples in San Jose and San Francisco, the Central Valley, the state legislature, Southern California. Within each of these topics we will look at the impact of decisions on equity as well as climate and the economy. nnnnThe instructors are Kristy Wang, formerly SPUR¿s Community Planning Policy Director, and Egon Terplan, Senior Advisor for Economic Development and Transportation in the California Governor¿s Office, formerly SPUR¿s Regional Planning Director. (Affiliations for identification purposes only).
Same as: CEE 136, CEE 236, PUBLPOL 130, URBANST 130

PUBLPOL 231. Health Law: Finance and Insurance. 3 Units.
(SAME AS LAW 3001, MGTECON 331) This course provides the legal, institutional, and economic background necessary to understand the financing and production of health services in the U.S. We will discuss the Affordable Care Act , health insurance (Medicare and Medicaid, employer-sponsored insurance, the uninsured), the approval process and IP protection for pharmaceuticals, and antitrust policy. We may discuss obesity and wellness, regulation of fraud and abuse, and medical malpractice. The syllabus for this course can be found at https://syllabus.stanford.edu. Elements used in grading: Participation, attendance, class presentation, and final exam.
Same as: HRP 391

PUBLPOL 232. The Politics of Policy Making. 3 Units.
Public policymaking in the United States is part of a political process that can take years or even decades to play out. A familiarity with the politics of policymaking is key to understanding why some reform attempts are successful while others are not. This course will give students a behind-the-scenes look at how policy actually gets made. Students will gain exposure to the theory and literature behind policy formulation, and engage in debates over historical and contemporary efforts at reform.
Same as: PUBLPOL 132

PUBLPOL 234. Ethics on the Edge: Business, Non-Profit Organizations, Government, and Individuals. 3 Units.
(PUBLPOL 134, PUBLPOL 234 - 3 credits, Ways - ER) (Same as LAW 7020) The objective of this course is to explore the increasing ethical challenges in a world in which technology, global risks, and societal developments are accelerating faster than our understanding and the law can keep pace. We will unravel the factors contributing to the seemingly pervasive failure of ethics today among organizations and leaders across all sectors: business, government, non-profit, and academia. A framework for ethical decision-making underpins the course. There is significant space for personal reflection and forming your own views on a wide range of issues. Prominent guest speakers will attend certain sessions interactively. The relationships among ethics and technology, culture, leadership, law, and global risks (inequality, privacy, financial system meltdown, cyber-terrorism, climate change, etc.) will inform discussion. A broad range of international topics might include: designer genetics; civilian space travel (Elon Musk's Mars plans); social media (e.g. Facebook Cambridge Analytica, on-line sex trafficking, monopolies); new devices (e.g. Amazon Alexa in hotel rooms); free speech on University campuses; opioid addiction; AI (from racism to the work challenge and beyond); corporate and financial sector scandals (Theranos, Wells Fargo fraudulent account creation, Volkswagen emissions testing manipulation); new corporate challenges (e.g. Google selling drones to the military and Facebook¿s new Libra crypto currency); and non-profit sector ethics challenges (e.g. NGOs engagement with ISIS and sexual misconduct in humanitarian aid (Oxfam case)). Final project in lieu of exam on a topic of student's choice. Attendance required. Class participation important (with multiple opportunities to earn participation credit beyond speaking in class). Strong emphasis on rigorous analysis, critical thinking and testing ideas in real-world contexts. Please note that this course will require one make-up evening session on a Wednesday or Thursday in lieu of the final class session the first week of June, and two one-hour extensions to Monday class sessions as a make-up for May 11, so the course will end before Memorial Day. Permission numbers are required for enrollment. Please email the Public Policy Program at annas7@stanford.edu to obtain a permission number. The course offers credit toward Public Policy core requirements (if taken in combination with PUBLPOL 103E or PUBLPOL 103F), and Science, Technology and Society majors and satisfies the undergraduate Ways of Thinking - Ethical Reasoning requirement. The course is open to undergraduate and graduate students. Undergraduates will not be at a disadvantage. Everyone will be challenged. Distinguished Career Institute Fellows are welcome and should contact Dr. Susan Liautaud directly at susanl1@stanford.edu. *Students taking the course for Ways credit and Public Policy majors taking the course to complete the core requirements must obtain a letter grade. Other students may take the course for a letter grade or C/NC. Students seeking credit for other majors should consult their departments.
Same as: PUBLPOL 134

PUBLPOL 238. Wise Interventions. 4 Units.
Classic and contemporary psychological interventions; the role of psychological factors in social reforms for social problems involving healthcare, the workplace, education, intergroup, relations, and the law. Topics include theories of intervention, the role of laboratory research, evaluation, and social policy.
Same as: PSYCH 138, PSYCH 238

PUBLPOL 242. Design Thinking for Public Policy Innovators. 3 Units.
What happens when new technology is developed so quickly that society isn¿t sure if it poses an opportunity or a danger? How should we regulate it when there are real risks but also real potential for societal benefit¿both of which are hard to measure? These kinds of dilemmas are arising now in bioengineering, information technology, and beyond. The scientific and policy communities are trying to address these issues, but the clash of cultures between a fast-moving innovation mindset and a risk-averse safety and security mindset affects how this work progresses. In this experimental class, you will explore how design thinking can be used to reinvent a policy ecosystem by focusing on the challenge policymakers face in trying to establish new rules and/or standards that they hope a wide variety of constituent groups will accept and follow and will keep pace with future innovations. This is a new approach to a critical problem ¿ you must be willing to dig into unknown territory. If you¿re looking for a survey course in design methods, this class is not for you. Limited enrollment. Admission by application. See http://dschool.stanford.edu/classes.

PUBLPOL 246. Policy, Politics and the 2020 Elections: What 2020 Means for Future Campaigns and Elections. 2 Units.
(Same as LAW 7057). This course looks back at the 2020 election campaign and tries to discern lessons and takeaways for future campaigns and elections. It will provide students with a behind-the-scenes understanding of how campaigns work. Each week, we will explore a different topic related to high-profile campaigns -- policy formation, communications, grassroots strategy, digital outreach, campaign finance -- and feature prominent guest speakers who have served and will serve in senior roles on both Democratic and Republican campaigns, including the Trump and Biden teams.
Same as: COMM 153A, COMM 253A, POLISCI 72, PUBLPOL 146

PUBLPOL 247. The Politics of Inequality. 5 Units.
This course is about the distribution of power in contemporary democratic societies, and especially in the US: who governs? Is there a ``power elite,'' whose preferences dominate public policy making? Or, does policy reflect a wide range of interests? What is the relationship between income and power? What are the political consequences of increasing income inequality? How do income differences across racial and ethnic groups affect the quality of their representation? What are effective remedies for unequal influence? Finally, which institutions move democratic practice furthest towards full democratic equality? This course will address these questions, focusing first on local distributions of power, and then considering the implications of inequality in state and national politics. nStudents will have the opportunity to study income inequality using income and labor force surveys in a mid-term assignment. Then, in a final paper, students will conduct an empirical examination of the implications of income inequality for American democracy.
Same as: POLISCI 147P, SOC 178

PUBLPOL 265F. Environmental Governance and Climate Resilience. 3 Units.
Adaptation to climate change will not only require new infrastructure and policies, but it will also challenge our local, state and national governments to collaborate across jurisdictional lines in ways that include many different types of private and nonprofit organizations and individual actors. The course explores what it means for communities to be resilient and how they can reach that goal in an equitable and effective way. Using wildfires in California as a case study, the course assesses specific strategies, such as controlled burns and building codes, and a range of planning and policy measures that can be used to enhance climate resilience. In addition, it considers how climate change and development of forested exurban areas (among other factors) have influenced the size and severity of wildfires. The course also examines the obstacles communities face in selecting and implementing adaptation measures (e.g., resource constraints, incentives to develop in forested areas, inadequate policy enforcement, and weak inter-agency coordination). Officials from various Bay Area organizations contribute to aspects of the course; and students will present final papers to local government offcials. Limited enrollment. Students will be asked to prepare application essays on the first day of class. Course is intended for seniors and graduate students.
Same as: CEE 265F, POLISCI 227B

PUBLPOL 267. How To Be a Politician. 2 Units.
Do you want to run for political office one day? This course will give you a full toolkit for winning elections. It will help students think about their personal narrative, how to present themselves to the electorate, and the issues and messages that should underpin their future campaign. It will also provide students with a practical understanding of how to build a campaign apparatus, fundraise effectively, and develop a winning strategy. The class will be highly interactive giving each student the chance to hone their candidacy, and there will be opportunities to work on debate skills, speech giving, and media performance. We will look at campaigns from across the world, as well as invite politicians and political consultants to speak to us. This class is designed for any student who has dreamed of running for office: be it locally or becoming President.
Same as: PUBLPOL 167

PUBLPOL 268. Global Organizations: The Matrix of Change. 4 Units.
We learn how to apply analytical tools from the social sciences to organizations, and study how to design effective organizations and projects within and across institutional settings. A variety of organizations are included and how they deal with strategy changes and accountability. The theme for this year's class is on accountability of non-profit organizations such as Doctors Without Borders, The International Rescue Committee and The Red Cross. Recommended: FINANCE 377, MS&E 180, SOC 160, ECON 149, or MGTECON 330.
Same as: PUBLPOL 168, SOC 168, SOC 268

PUBLPOL 290. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 3 Units.
This interdisciplinary seminar explores pressing questions relating to the protection, practice and repatriation of the cultural heritage of Indigenous peoples from North America and beyond. Using an innovative combination of in-class lectures and videos of interviews with renowned experts, including Indigenous leaders, scholars, artists and performers and museum professionals from around the world, this seminar will explore and problematize, among other subjects: the impact of colonialism, urbanization and other political, legal, economic, religious and cultural forces on understandings and definitions of "indigenous" and "cultural heritage"; the development of international law relating to Indigenous peoples¿ cultural rights; international, domestic, and tribal heritage protection and repatriation laws/initiatives including the 2007 United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), the 1990 US Native American Graves Protection and Repatriation Act (NAGPRA), and others; past and present Western museum practices and guidelines relating to display, preservation, provenance research and repatriation of indigenous cultural material; the meaning of repatriation to Indigenous peoples and other stakeholders; and resolving repatriation disputes, including by alternative dispute resolution (ADR) processes. While case studies will relate primarily to Indigenous peoples of North America, comparisons will be drawn with the situation of Indigenous peoples in other regions, such as Oceania and Russia. Each week students will brainstorm actionable ideas for amending/supplementing current frameworks in order to give force to the cultural rights enumerated in UNDRIP. The overall seminar experience will involve discussions of lectures and video content, assigned readings, quizzes, a class visit to the Cantor Center Native Americas collection, and visits to our classroom by experts. Elements used in grading: class participation, attendance and a final project (one-day take-home exam; or research paper or film project with instructor's consent).
Same as: ARTHIST 190A, ARTHIST 490A, PUBLPOL 190

PUBLPOL 298. Directed Readings in Public Policy. 1-5 Unit.
.

PUBLPOL 301A. Microeconomics for Policy. 4-5 Units.
Microeconomic concepts relevant to decision making. Topics include: competitive market clearing, price discrimination; general equilibrium; risk aversion and sharing, capital market theory, Nash equilibrium; welfare analysis; public choice; externalities and public goods; hidden information and market signaling; moral hazard and incentives; auction theory; game theory; oligopoly; reputation and credibility. Undergraduate Public Policy students may take PublPol 51 as a substitute for the Econ 51 major requirement. Economics majors still need to take Econ 51. Prerequisites: ECON 50 and MATH 51 or equiv.
Same as: INTLPOL 204A, PUBLPOL 51

PUBLPOL 301B. Economic Policy Analysis for Policymakers. 4-5 Units.
This class provides economic and institutional background necessary to conduct policy analysis. We will examine the economic justification for government intervention and illustrate these concepts with applications drawn from different policy contexts. The goal of the course is to provide you with the conceptual foundations and the practical skills and experience you will need to be thoughtful consumers or producers of policy analysis. Prerequisites: ECON 102B or PUBLPOL 303D.
Same as: INTLPOL 204B

PUBLPOL 302A. Introduction to American Law. 3-5 Units.
For undergraduates. The structure of the American legal system including the courts; American legal culture; the legal profession and its social role; the scope and reach of the legal system; the background and impact of legal regulation; criminal justice; civil rights and civil liberties; and the relationship between the American legal system and American society in general.
Same as: AMSTUD 179, POLISCI 122

PUBLPOL 302B. Economic Analysis of Law. 3 Units.
(Same as LAW 7502.) This course will provide a broad overview of the scholarly field known as "law and economics." The focus will be on how legal rules and institutions can correct market failures. We will discuss the economic function of contracts and, when contracts fail or are not feasible, the role of legal remedies to resolve disputes. We will also discuss at some length the choice between encouraging private parties to initiate legal actions to correct externalities and governmental actors, such as regulatory authorities. Extensive attention will be given to the economics of litigation, and to how private incentives to bring lawsuits differs from the social value of litigation. The economic motive to commit crimes, and the optimal governmental response to crime, will be studied in depth. Specific topics within the preceding broad themes include: the Coase Theorem; the tradeoff between the certainty and severity of punishment; the choice between ex ante and ex post sanctions; negligence versus strict liability; property rules; remedies for breach of contract; and the American rule versus the English rule for allocating litigation costs. Because this course is taught jointly with Law 7502 in the Law School, it will not be mathematically oriented; there are no prerequisites to take the course.

PUBLPOL 303D. Applied Econometrics for Public Policy. 4-5 Units.
This course aims to present the theory and practice of empirical research in economics with particular emphasis on topics relating to public policy questions. We will start with the analysis of randomized experiments, then move to basic regression analysis and introduce the statistical software STATA. The course will put a substantial amount of effort on work with STATA in analyzing actual data sets, reproducing and criticizing results in scientific research and learning the actual practice of econometrics. We will focus on the identification of causal effects and the various econometric techniques available to learn about causality. While this is primarily a methodology module, most examples and applications will be drawn from the area of public policy. The final will be a 3-5 hour take-home exam. Prerequisite: Econ 102A.

PUBLPOL 305B. Public Policy and Social Psychology: Implications and Applications. 4 Units.
Theories, insights, and concerns of social psychology relevant to how people perceive issues, events, and each other, and links between beliefs and individual and collective behavior will be discussed with reference to a range of public policy issues including education, public health, income and wealth inequalities, policing and climate change, Specific topics include: situationist and subjectivist traditions of applied and theoretical social psychology; social comparison, dissonance, and attribution theories; stereotyping and stereotype threat, and sources of intergroup conflict and misunderstanding; challenges to universality assumptions regarding human motivation, emotion, and perception of self and others; also the general problem of producing individual and collective changes in norms and behavior.
Same as: INTLPOL 207B, PSYCH 216

PUBLPOL 306. Writing and Rhetoric for Policy Audiences. 4 Units.
This course offers hands-on learning of effective writing and presentation techniques for audiences that include policy makers, decision stakeholders, interest groups, the media, and the public. Class time will be spent learning lessons in rhetoric, analyzing multiple written genres (memo, op-ed, report, media communications), participating in peer review, and practicing presentation strategies (elevator pitch, press conference, media interview, board meeting, formal presentation). Course texts include sample memos, op-eds, and white papers, as well as rhetoric handouts and videos. Students will draft, revise, and submit writing for policy audiences in the compilation of a final portfolio. Students will also produce oral and multimedia arguments, individually and in teams. Students will be responsible for timely peer review and short presentations on course materials. Enrollment limited. Prerequisite: consent of instructor.

PUBLPOL 308. Political Analysis for Public Policymakers. 4 Units.
Policymakers in the United States, whether elected or unelected, operate in a governmental system where politics pervades nearly every element of their daily activity. This course provides students with both the theory and real-world examples they need to understand and evaluate the impact of politics, political institutions, and the political process on policymaking. Readings will include selections from the public policy, political science, legal, and economics literatures.

PUBLPOL 309. Practicum. 1-10 Unit.
Applied policy exercises in various fields. Multidisciplinary student teams apply skills to a contemporary problem in a major policy exercise with a public sector client such as a government agency. Problem analysis, interaction with the client and experts, and presentations. Emphasis is on effective written and oral communication to lay audiences of recommendations based on policy analysis.

PUBLPOL 309X. Public Policy Research Project. 1-10 Unit.
Supervised research internship. Individual students perform policy research for outside client, applying analytical skills from core curriculum. Requires permission of program director.

PUBLPOL 310. Master of Arts Thesis. 1-5 Unit.
Restricted to students writing a master's thesis in Public Policy. May be repeated for credit.

PUBLPOL 310A. Master's Thesis Seminar. 1 Unit.
For Public Policy MA students writing a thesis. Sessions go through the process of selecting a research question, finding relevant bibliography, writing a literature review, introduction, and study design. Each student works on their own project, with frequent writing submissions and oral presentations, receiving and providing timely feedback.

PUBLPOL 311. Public Policy Colloquium. 1 Unit.
Weekly colloquia speaker series required for M.P.P. and M.A. in Public Policy students. Themes vary each quarter. Open only to Public Policy graduate students; permission number required to enroll.

PUBLPOL 314. Justice in Public Policy. 4 Units.
How should we judge the fairness of social institutions? This is the basic question of justice, and it is a crucial topic for students of public policy. Justice, the philosopher John Rawls famously argued, is the "first virtue of social institutions ... laws and institutions no matter how efficient and well-arranged must be reformed or abolished if they are unjust." Justice is an ethical question about how we as moral beings ought to treat one another, but it is also a profoundly practical question. All human endeavors require large-scale coordination of our actions, which we achieve through laws and institutions. But law without justice is merely mass coercion, neither desirable nor sustainable. In this class we examine some of the most influential theories of fairness in social cooperation, including utilitarianism, social contract theory, liberalism, socialism, and libertarianism, and talk through how we can use these theories to analyze, evaluate, and (re)design public policy. Key questions include: Under what conditions is inequality of wealth and income problematic, and why? What are rights, and why do they matter? How should we balance the needs of individuals against the claims of groups? This class is also meant to provide students with the critical tools to identify and remedy injustices, and injustices based on race, class, and gender are central topics of the course. Other key topics include housing policy and residential segregation, inequality of healthcare access, the gender wage gap, proposals for universal basic income and reparations for slavery. No experience with political theory is required or assumed, and students will learn the skills of how to do political theory and how to incorporate it into policy work as part of the course.

PUBLPOL 315. Practical Training. 1-5 Unit.
Qualified Public Policy students obtain employment in a relevant research or industrial activity to enhance their professional experience consistent with their degree programs. Prior to enrolling students must get internship approved by the Public Policy Program. At the start of the quarter, students must submit a one page statement showing the relevance of the employment to the degree program along with an offer letter. At the end of the quarter, a three page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. May be repeated for credit.

PUBLPOL 316. Global Education Policy & Organization. 3-5 Units.
Education policy, politics, and development. Topics include: politics, interests, institutions, policy, and civil society; how schools and school systems operate as political systems; how policy making occurs in educational systems; and theories of development.
Same as: EDUC 306B

PUBLPOL 319. Legislation. 3 Units.
(Same as Law 7048) Lawyers work in a legal system largely defined by statutes, and constantly shaped by the application of legislative power. This course is about statutes and the legislative institutions that create them. It discusses some of the key laws governing access to legislative power and the procedures that culminate in the production of statutes in the legislature. The course is divided into two parts. The first part will focus on the acquisition of legislative power. Key topics include bribery laws, lobbying and indirect influence on legislative activity, and campaign finance regulations. The second part will focus on the exercise of legislative power. Through a number of public policy case studies, students will better understand the organization of the U.S. Congress, the ways in which power is exercised in that institution, and the intersection between politics, the law, and policymaking. Elements used in grading: Class participation and final exam.

PUBLPOL 321. Nonprofits, Philanthropy & Society. 3-4 Units.
Over the past several decades nonprofit organizations have become increasingly central entities in society, and with this growing status and importance their roles are increasingly complex.We consider the social, political and economic dynamics of philanthropy and the nonprofit sector, focusing mainly (but not exclusively) on the US. The class is best suited for graduate students looking for an advanced analytic understanding of the sector and those wishing to conduct research in the field; it is not intended to provide training in nonprofit management.
Same as: EDUC 321, SOC 321

PUBLPOL 353A. Science and Technology Policy. 4-5 Units.
U.S. policies for science, technology, and innovation; political institutions that create and carry out these policies; government programs that support scientific research and the development and use of new technologies; political controversies surrounding some science and technologies and the regulation of research and technology; international aspects of science and technology; the roles of scientists, engineers, and physicians in creating and implementing policy; and opportunities to do policy work in government and other organizations. Assignments: analyzing the politics of particular executive and legislative proposals, assessing options for trying to reach specific policy objectives, and preparing mock memos and testimony. This course is designed primarily for graduate students in science, engineering, and medicine who want to learn more about science and technology policy and how it is made. Public Policy 353A is a "gateway course" - an introduction - both for students pursuing a joint degree or co-terminal degree in Public Policy and for other graduate students interested in S&T policy or possible careers in the policy world. Junior and senior undergraduate students are also welcome to enroll.

PUBLPOL 364. The Future of Finance. 2 Units.
This 2-credit course will examine vast changes driven by innovation both from within traditional finance and from new ecosystems in fintech among others. Breathtaking advances in financial theory, big data, machine learning, artificial intelligence, computational capability, IoT, payment systems (e.g. blockchain, crypto currencies), new products (e.g. robo advising, digital lending, crowd funding, smart contracts), new trading processes (e.g. algorithmic trading, AI-driven sales & trading), and new markets (e.g. ETFs, zero-cost products), among others are changing not only how financial and non-financial firms conduct business but also how investors and supervisors view the players and the markets. nWe will discuss critical strategy, policy and legal issues, some resolved and others yet to be (e.g. failed business models, cyber challenges, financial warfare, fake news, bias problems, legal standing for cryptos). The course will feature perspectives from guest speakers including top finance executives and Silicon Valley entrepreneurs on up-to-the-minute challenges and opportunities in finance. nWe will discuss slowing global growth against the backdrop of ongoing intervention and wildcards in the capital markets of the U.S., Europe, Hong Kong, Singapore, China, India, Japan, the Middle East and Latin America. We will look forward at strategic opportunities and power players appearing and being dethroned in the markets to discuss who is likely to thrive ¿ and not survive ¿ in the new global financial landscape. nnPrerequisites: If you are an undergraduate wishing to take this course, apply by completing the course application and provide a brief bio here: https://forms.gle/9BGYr8brdYwPS8Cu8.
Same as: ECON 152, ECON 252

PUBLPOL 801. TGR Project. 0 Units.
Instructor and program consent required prior to enrollment.

RELIGIOUS STUDIES

Courses offered by the Department of Religious Studies are listed under the subject code RELIGST on the Stanford Bulletin's ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=RELIGST&filter-catalognumber-RELIGST=on).

Mission of the Department

The Department of Religious Studies brings a variety of disciplinary perspectives to bear on the phenomenon of religion for the purpose of understanding and interpreting the history, literature, thought, social structures, and practices of the religious traditions of the world. Comprised of a dozen regular faculty with particular strengths in the study of American Religions, Buddhism, Christianity, Hinduism, Islam, and Judaism, it enrolls about twenty graduate students (mostly doctoral) and roughly as many undergraduate majors, minors, and joint majors.

Religious Studies works closely with several related programs at Stanford: the Department of Philosophy, with which it offers a combined undergraduate major; the Ho Center for Buddhist Studies; the Taube Center for Jewish Studies; the Abbasi Program in Islamic Studies; the McCoy Center for Ethics in Society; the Center for Medieval and Early Modern Studies; and the Center for South Asia.

While some undergraduates continue their study of religion in a graduate or professional program, most pursue meaningful and successful careers in business, government, the nonprofit sector, and medicine. In this respect, Religious Studies is an ideal interdisciplinary major in the liberal arts. Graduates of the department's doctoral program generally pursue academic careers and are routinely placed in the best universities and colleges in the country and overseas.

Undergraduate Programs in Religious Studies

The department offers a Bachelor of Arts major, minor, and honors program in Religious Studies, and a combined major with the Philosophy Department in Philosophy and Religious Studies. Undergraduate courses in Religious Studies are designed to engage students existentially and to assist them in thinking about intellectual, ethical, and sociopolitical issues in the world's religions. The department's faculty seek to provide tools for understanding the complex encounters among religious ideas, practices, and communities, and the past and present cultures that have shaped and been shaped by religion. Courses therefore expose students to: leading concepts in the field of religious studies such as god(s), sacrifice, ritual, scripture, prophecy, and priesthood; approaches developed over the past century, including the anthropological, historical, psychological, philosophical, and phenomenological, that open religion to closer inspection and analysis; and major questions, themes, developments, features, and figures in the world's religious traditions. The department encourages and supports the acquisition of languages needed for engagement with sacred texts and interpretive traditions as well as study abroad at Stanford's overseas centers where religions can be observed and experienced in their contemporary contexts.

Major in Philosophy and Religious Studies

The departments of Philosophy and Religious Studies jointly nominate for the B.A. in Philosophy and Religious Studies those students who have completed a major in the two disciplines. See a description of this combined major under the "Bachelor's" tab of the "Religious Studies" section of this bulletin (p. 2036), in the "Philosophy" section of this bulletin (p. 1864), or in the guidelines available from the Director of Undergraduate Studies of either department.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to:

1. demonstrate familiarity with a variety of methods used analytically in the field of Religious Studies.
2. demonstrate proficiency in writing papers in the style of academic writing in the field of Religious Studies.
3. demonstrate the ability to engage peer scholars' research in constructive and critical ways, and communicate feedback effectively.
4. demonstrate individual expertise through oral presentation of one's advanced research to peers.
5. complete an advanced research project consistent with standards for papers in the field of Religious Studies.

Graduate Programs in Religious Studies

The graduate mission of the department is to provide students with an interdisciplinary setting of study within which to focus on their respective areas of specialization. The department offers an internal M.A. and a Ph.D. degree in Religious Studies. The master's program is restricted to current Stanford students.

Learning Outcomes (Graduate)

Master's Program: The purpose of the Master's program is to develop knowledge and skills in Religious Studies. For some students this will serve as preparation for applications to Ph.D. programs. For others it will serve as a further capstone experience for their undergraduate program of study. The goals are achieved through the completion of courses, in the primary field as well as related areas, and experience with independent work and specialization. For some it will involve an optional Master's thesis.

Doctoral Program: The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Religious Studies. Through completion of advanced coursework and rigorous skills training, the doctoral program prepares students to make original contributions to the field of Religious Studies and to interpret and present the results of such research through teaching and publication.

Bachelor of Arts in Religious Studies

Suggested Preparation for the Major

Students contemplating the major, the minor, or the Philosophy and Religious Studies major are invited to consult with the Director of Undergraduate Studies. The Undergraduate Student Services Associate in Building 70 can also field questions regarding the declaration procedure within the department.

Degree Requirements

The curriculum for majors is designed to lead students through a course of study which begins with laying foundations, then moves on to building expertise, and finally culminates in a capstone experience. The foundational courses aim to introduce students to the academic study of religion through the exploration of a particular religious tradition, issue, or methodology. Students build expertise in more advanced courses offering in-depth investigation of specific topics, such as mysticism, gender, or violence/nonviolence; of particular texts, historical periods, or figures of a given religious tradition; or of distinct approaches to the study of religion, such as the philosophy of religion, ritual studies, or ethnography. Students consolidate the knowledge and skills acquired in the major through an integrative capstone experience consisting of either

a senior essay or an honors thesis, completed in conjunction with three supporting capstone courses.

Students who have declared the major prior to Autumn 2019-20 may choose to follow the Degree Requirements listed in *either* the current Bulletin or the 2018-19 Bulletin (http://exploredegrees.stanford.edu/archive/2018-19/schoolofhumanitiesandsciences/religiousstudies/).

Required Courses

A Bachelor of Arts in Religious Studies requires 60 units of course work, distributed as follows:

1. Three courses (3-5 units each) from courses numbered RELIGST 1-99, only one of which may be an Introductory Seminar.
2. Six courses (4-5 units each) from courses numbered RELIGST 100-289, of which at least two must be at the 200-level.
3. Three integrative capstone courses as follows:

		Units
RELIGST 290	Majors' Seminar: Theories of Religion (Winter Quarter; junior year; fulfills WIM requirement)	5
RELIGST 297	Senior Essay/Honors Thesis Research	5-10
Senior Essay: 5 units, Winter Quarter, graded 'N' until submission		
Honors Thesis: 5-10 units, spread over Autumn and Winter Quarters, graded 'N' until submission		
RELIGST 298	Senior Colloquium (Spring Quarter only; grading option S/NC)	4

4. The remainder of the coursework needed to bring the total Religious Studies unit count to 60 to be chosen according to interest, in consultation with the student's advisor, and with an eye to the senior capstone requirement.

Additional Regulations

1. With the approval of the Director of Undergraduate Studies, up to two language courses relating to the student's program of study (such as Arabic, Hebrew, Greek, Chinese, Persian, or Japanese), but not counted towards the University language requirement, may be counted toward the major.
2. No more than ten units of the total 60 (excluding RELIGST 298) may be taken for the grade of 'S/NC' or 'CR/NC.'
3. Students must ensure that their total complement of Religious Studies courses is not focused on a single religious tradition.
4. Variations to the required distribution may be approved by the Director of Undergraduate Studies on an individual basis.
5. All units must be in RELIGST courses unless an exception is made by the Director of Undergraduate Studies.

Senior Essay

A 25-30 page essay on a topic chosen by the student and approved by the advisor upon receipt of a student's proposal by the end of the third quarter prior to expected graduation. The character and content of the essay, which is meant to allow the student to call into play knowledge and skills learned in the course of the major, may take several forms. For example, a student may return to a subject studied earlier but now pursued in more depth or from a new perspective, research a recent or new topic of interest in the field, or offer a carefully framed critical assessment of what has been learned in the major based on review of influential sources, theories, and methods of studying religion. The senior essay is read and graded by the student's advisor and one other member of the Religious Studies faculty.

Honors Thesis

A 40-80 page research paper on a topic chosen by the student and approved by the advisor upon receipt of a proposal in the fourth quarter prior to expected graduation. The paper, supported by mastery of primary and secondary scholarship, advances a well-reasoned, supportable thesis. Writers of honors theses must have a grade point average (GPA) of 3.5 in Religious Studies courses, and at least 3.2 overall, and are expected to have already demonstrated success in writing research papers. The honors thesis is read and graded by the student's advisor and one other member of the Religious Studies faculty. Theses earning a grade of 'B+' or above receive honors.

Philosophy and Religious Studies Combined Major

The undergraduate major in Philosophy and Religious Studies consists of 60 units of course work with approximately one third each in the philosophy core; the religious studies core; and additional coursework and a capstone requirement that completes the course of study.

No courses in either the philosophy or religious studies core may be taken satisfactory/no credit or credit/no credit.

In general, transfer units cannot be used to satisfy the core requirements. Transfer units and substitutions must be approved by the Director of Undergraduate Studies in the relevant department.

Students who have declared the combined major prior to Autumn 2019-20 may choose to follow the Degree Requirements listed in *either* the current Bulletin or the 2018-19 Bulletin (http://exploredegrees.stanford.edu/archive/2018-19/schoolofhumanitiesandsciences/religiousstudies/).

Core Requirements

1. Philosophy (PHIL) courses:
   a. Required course: PHIL 80 Mind, Matter, and Meaning (5 units).
   b. 16 units, including at least one Philosophy course from each of the following areas:
      i. Logic and philosophy of science: Students take either one from this list or an intermediate philosophy of science course numbered PHIL 160-169.

		Units
PHIL 49	Survey of Formal Methods	4
PHIL 60	Introduction to Philosophy of Science	5
PHIL 61	Philosophy and the Scientific Revolution	5
PHIL 150	Mathematical Logic	4
PHIL 151	Metalogic	4
PHIL 154	Modal Logic	4

      ii. Ethics and value theory: This requirement may be satisfied by PHIL 2 or any intermediate course devoted to central topics in moral and political philosophy numbered between PHIL 170-172 or 174-176.
      iii. Epistemology, metaphysics, and philosophy of language. This requirement may be satisfied by any intermediate course numbered between PHIL 180-189.
      iv. History of philosophy: Select one of

		Units
PHIL 100	Greek Philosophy	4
PHIL 101	Introduction to Medieval Philosophy	4

PHIL 102	Modern Philosophy, Descartes to Kant	4
PHIL 103	19th-Century Philosophy	4

c. All philosophy courses taken for a grade in fulfillment of requirements under 1.a. and 1.b. must be taken for a minimum of 3 units and completed with a grade of 'C-' or higher.

2. Religious Studies (RELIGST) courses:
   a. One foundational course numbered RELIGST 1-99 (3-4 units).
   b. Two courses numbered RELIGST 100-289 in religious thought, broadly construed, chosen in consultation with, and approved by, the Religious Studies Director of Undergraduate Studies (8-10 units).
   c. Required Course: RELIGST 290 Majors' Seminar: Theories of Religion (5 units; Winter Quarter; junior year; fulfills WIM requirement).
3. The remaining coursework (approximately 20 units) is to be chosen according to interest, in consultation with the student's advisor, and with an eye to the senior capstone requirement.
   a. No more than 5 of these additional units in either department may come from courses numbered below PHIL/RELIGST 100.
   b. No more than 10 units taken credit/no credit may count toward the major.
   c. Students should ensure that their total complement of RELIGST courses (i.e. core and elective taken together) is not focused on a single religious tradition.

Capstone Requirement

The capstone experience aims to foster the integration of capacities, knowledge, and skills acquired in the student's core and elective coursework. Combined majors fulfill this requirement by completing the capstone requirement for *either* the B.A. in Philosophy *or* the B.A. in Religious Studies. Students should discuss this choice with their advisor during their junior year and consult the capstone requirements for Philosophy and Religious Studies majors, respectively, in the Bulletin.

1. The capstone requirement in Philosophy is fulfilled by the successful completion of one of the PHIL 194 Capstone Seminars. The role of the PHIL Capstone Seminar is to provide students with an opportunity to synthesize their undergraduate educational careers and to demonstrate their capacity for independent and creative philosophical work.
   a. PHIL 194_ (4 units)
2. The capstone requirement in Religious Studies is fulfilled by the writing of either a senior essay or an honors thesis, which provides students with the opportunity to pursue independent research on a topic of interest under the direction of a Religious Studies faculty member. Two required courses support the successful completion of this senior project:

		Units
RELIGST 297	Senior Essay/Honors Thesis Research	5-10
	Senior Essay: 5 units, Winter Quarter, graded 'N' until submission	
	Honors Thesis: 5-10 units, spread over Autumn and Winter Quarters, graded 'N' until submission	
RELIGST 298	Senior Colloquium (Spring Quarter only; grading option S/NC)	4

Honors Program

Students pursuing a major in Philosophy and Religious Studies may also apply for honors by following the procedure for honors in either of the departments.

Minor in Religious Studies

A Religious Studies minor is a complement to many majors throughout the University. Students contemplating the minor are invited to consult with the Director of Undergraduate Studies. The Undergraduate Student Services Associate in Building 70 can also field questions regarding the declaration procedure within the department.

Degree Requirements

A minor in Religious Studies requires a minimum of 28 units. Students are encouraged to focus their program of study either on a religious tradition or on a theme that cuts across traditions. In consultation with their minor advisor, students may design the minor in Religious Studies to complement their major. The minor must be declared no later than the last day of the quarter, two quarters before degree conferral.

Students who have declared the minor prior to Autumn 2019-20 may choose to follow the Degree Requirements listed in *either* the current Bulletin or in the 2018-19 Bulletin (http://exploredegrees.stanford.edu/archive/2018-19/schoolofhumanitiesandsciences/religiousstudies/).

Required Courses for the Minor

1. Two courses (3-5 units each) from courses numbered RELIGST 1-99, only one of which may be an Introductory Seminar.
2. Three courses (4-5 units each) from courses numbered RELIGST 100-289, of which at least one must be at the 200-level.
3. The remainder of the coursework needed to bring the total Religious Studies unit count to 28 is to be chosen according to interest, in consultation with the student's minor advisor.

Additional Regulations

1. With the approval of the Director of Undergraduate Studies, one language course relating to the student's program of study (such as Arabic, Hebrew, Greek, Chinese, Persian, or Japanese), but not counted towards the University language requirement, may be counted towards the minor.
2. No courses may be taken for the grade of 'S/NC' or 'CR/NC.'
3. One course in directed reading (RELIGST 199 Individual Work) may be counted towards the minor.
4. Students must ensure that their total complement of Religious Studies courses is not focused on a single religious tradition.
5. Variations to the required distribution may be approved by the Director of Undergraduate Studies on an individual basis.
6. All units must be in Religious Studies courses unless an exception is made by the Director of Undergraduate Studies.

Master of Arts in Religious Studies

University requirements for the M.A. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

The department offers an M.A. program that serves two groups of Stanford students:

1. undergraduates looking to pursue a coterminal master's degree in Religious Studies
2. Ph.D. candidates in Religious Studies who wish to also obtain a master's degree while completing their doctoral requirements.

Degree Requirements

The following requirements are in addition to the University's basic requirements (p. 65).

The student completes at least 45 units of graduate work at Stanford beyond the B.A. degree, including RELIGST 290 Majors' Seminar: Theories

of Religion. Students who have taken this course as part of the B.A. need not take it again.

Residence may be completed by three quarters of full-time work or the equivalent.

The student's plan of courses is subject to approval by the Director of Graduate Studies (DGS). No field of specialization is expected, but students may focus work in particular areas. Advanced and graduate courses in other departments may be taken in consultation with the advisor. No thesis is required; a thesis, if elected, may count for as many as 9 units.

Each student demonstrates reading knowledge of at least one foreign language.

The department allows coterms to count courses as early as their first quarter of sophomore year toward their master's degree. Course transfers require department approval and cannot be processed after the bachelor's degree has been conferred. All University coterm policies apply.

Application and Admissions

At this time, eligibility for admission to the master's program is restricted to current Stanford undergraduates and graduate students.

Current Stanford Undergraduates

Religious Studies accepts coterm applications in Winter Quarter (due end of the second week of classes) for admission starting Spring Quarter. Only complete applications submitted by the deadline are reviewed. A complete application includes the following:

- A completed online coterminal program application (https://www.applyweb.com/stanterm/) . See the Registrar's site (https://registrar.stanford.edu/resources-and-help/student-forms/coterminal-forms/) for additional information.
- Two confidential letters of recommendation, one of which must be from a Stanford faculty member familiar with the applicant's academic work
- Statement of purpose, not to exceed two pages
- Undergraduate transcript(s)
- Preliminary program proposal

Current Stanford Graduate Students

- The completed application forms for current Stanford graduate students
- Two confidential letters of recommendation, one of which must be from a Stanford faculty member familiar with the applicant's academic work
- Undergraduate and graduate transcripts
- Statement of purpose, not to exceed two pages
- Preliminary program proposal

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Financial Aid

The Religious Studies department does not provide financial assistance to coterminal or master's students. For information on student loans and other sources of support, consult the Financial Aid Office (http://financialaid.stanford.edu/).

Doctor of Philosophy in Religious Studies

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 65)" section of this bulletin. The Ph.D. in Religious Studies signifies special knowledge of an interdisciplinary field of study and potential mastery of an area of specialization within it. The faculty of the department have established certain fields of study in which the department's strengths and those of other Stanford departments cohere. They are: Religion in East Asia; Religion in Europe and North America; Religion in Late Antiquity; and Religion in South Asia. Each of these areas of specialization follows a shared structure of study.

Degree Requirements

The following requirements are in addition to the University's basic requirements.

1. **Residence**
   Each student completes three years (nine quarters) of full-time study, or the equivalent, in graduate work beyond the B.A. degree, and a minimum of 135 units of graduate course work (excluding the dissertation).
2. **Required Courses**
   The 135 units of graduate course work must include the following:
   a.

		Units
RELIGST 304A	Theories and Methods	4
RELIGST 304B	Theories and Methods	4
RELIGST 391	Teaching Religious Studies	3

   b. Two courses in an area outside the student's field.
   c. The remainder of the course work is individually designed, in consultation with the student's advisor.
3. **Languages**
   Each student demonstrates a reading knowledge of two foreign languages, including French or German. One of these language requirements should be fulfilled by the time of advancing to candidacy at the end of the second year. Competence in the second language must be demonstrated at the time of the qualifying examination. Each student also demonstrates reading knowledge of other ancient or modern languages necessary for the field of study, area of specialization, and dissertation topic.
4. **Candidacy**
   At the end of each academic year, the department's faculty recommend second-year students for candidacy on the basis of all relevant information, and especially on the student's candidacy dossier. This includes the approved declaration of an area of

specialization, certification for one foreign language, and two substantial papers written for courses during the previous two years. Students are required to take RELIGST 304A Theories and Methods, RELIGST 304B Theories and Methods, and RELIGST 391 Teaching Religious Studies prior to candidacy.

5. **Paper-in-Field**
   During the third year, under the supervision of their advisors, students prepare a paper suitable for submission to an academic journal in their field. The paper is read and approved by at least two faculty members in the department. Students are encouraged to register for RELIGST 392 Paper in the Field while working on the paper.
6. **Teaching Internship**
   At least one teaching internship under the supervision of faculty members is undertaken at a time negotiated with the Director of Graduate Studies (DGS). Students receive academic credit for the required internship, which is considered part of their academic training and not as employment.
7. **Qualifying Examination**
   To qualify for writing a dissertation, the student must pass a comprehensive examination in the chosen field and the area of specialization, typically during the first quarter of their fourth year. The student must complete the second language requirement before taking the qualifying examination. The qualifying examination is normally conducted by a committee of at least three Academic Council members of the department, one of whom is the advisor. One faculty member may be from outside the department with permission of the DGS.
8. **Dissertation**
   The dissertation contributes to the humanistic study of religion and is written under the direction of the candidate's dissertation advisor and at least two other members of the Academic Council. The University Oral examination is a defense of a completed draft of the dissertation.
   a. *Dissertation Committee*—The dissertation committee is formed after successful completion of the qualifying examinations. It is normally composed of the dissertation advisor and at least two Academic Council members of the Religious Studies department. One non-departmental faculty member may serve as a reader when approved by the DGS.
   b. *Dissertation Proposal*—Candidates submit their dissertation proposal in consultation with their advisors. It is read and approved by the three members of the dissertation committee.
9. **University Oral Examination**
   This examination, required by the University of Ph.D. students, is a defense of a completed draft of the dissertation. The composition of the examination committee is set by University regulation: five or more faculty, normally all of whom are members of the Academic Council, one of whom must be outside the department to serve as chair of the committee. Normally, the examining committee includes all members of the dissertation committee. A majority of those voting must be Academic Council faculty from within the department.

Ph.D. Minor in Religious Studies

Candidates for the Ph.D. in other departments may select a Ph.D. minor in Religious Studies.

Degree Requirements

The minor requires at least 24 units in Religious Studies at the 200 level or above. These 24 units should include at least one of the following courses:

		Units
RELIGST 304A	Theories and Methods	4
RELIGST 304B	Theories and Methods	4

Optional Courses for the Minor

Other courses should be chosen in consultation with the DGS and the student's primary graduate advisor.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Department of Religious Studies counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Other Undergraduate Policies

If a student has difficulty completing an undergraduate degree requirement due to the COVID-19 pandemic, (e.g., a study abroad requirement, a laboratory research requirement), the student should consult with the Director of Undergraduate Studies to identify academic options to fulfill degree requirements.

Graduate Degree Requirements

Grading

The Department of Religious Studies counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B' or better level.

Other Graduate Policies

If a student has difficulty completing a graduate degree requirement due to the COVID-19 pandemic, (e.g., a study abroad requirement, a laboratory research requirement), the student should consult with the Director of Graduate Studies to identify academic options to fulfill degree requirements.

Graduate Advising Expectations

The Department of Religious Studies is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy,

navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Overseas Studies Courses in Religious Studies

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

		Units
OSPKYOTO 13	Contemporary Religion in Japan's Ancient Capital: Sustaining and Recasting Tradition	3-4
OSPKYOTO 58	A Journey into the Buddhist Visual Arts of Japan	4
OSPMADRD 74	Islam in Spain and Europe: 1300 Years of Contact	4
OSPMADRD 75	Sefarad: The Jewish Community in Spain	4

Courses

RELIGST 1. Religion Around the Globe. 4 Units.
This course surveys major religious traditions of the world. Through examination of a variety of materials, including scriptures and other spiritual writings, religious objects and artifacts, and modern documentary and film, we explore Buddhism, Christianity, Hinduism, Islam, Judaism, and Daoism as rich historical and living traditions.

RELIGST 2. Is Stanford a Religion?. 4 Units.
This course seeks to introduce students to the study of religion by posing a two-part question: What is a religion, and does Stanford qualify as one? Scientific, pragmatic, seemingly secular, Stanford may not seem at all similar to religions like Christianity, Judaism or Buddhism, but a deeper look reveals that it has many of the qualities of religion--origin stories, rituals and ceremonies, sacred spaces and times, visions of the future, even some spirits. By learning some of the theories and methods of the field of religious studies, students will gain a better understanding not just of Stanford culture but of what motivates people to be religious, the roles religion plays in people's lives, and the similarities and differences between religious and secular culture.

RELIGST 3. The Religious Life of Things. 3-5 Units.
Temples, prayer beads, icons, robes, books, relics, candles and incense, scarves and hats, sacred food and holy water; objects of all sorts play a prominent role in all religions, evoking a wide range of emotional responses, from reverence, solace and even ecstasy, to fear, hostility and violence. What is it about these things that makes them so powerful? Is it beliefs and doctrines that inspire particular attitudes towards certain objects, or is it the other way around? Many see a tension or even contradiction between religion and material pursuits and argue that the true religious life is a life without things. But is such a life even possible? This course adopts a comparative approach, drawing on a variety of traditions to examine the place of images, food, clothing, ritual objects, architecture and relics in religious thought and practice. Materials for the course include scholarship, scripture, images and at least one museum visit.

RELIGST 4. What Didn't Make It into the Bible. 4 Units.
Over two billion people alive today consider the Bible to be sacred scripture. But how did the books that made it into the bible get there in the first place? Who decided what was to be part of the bible and what wasn't? How would history look differently if a given book didn't make the final cut and another one did? Hundreds of ancient Jewish and Christian texts are not included in the Bible. "What Didn't Make It in the Bible" focuses on these excluded writings. We will explore the Dead Sea Scrolls, Gnostic gospels, hear of a five-year-old Jesus throwing temper tantrums while killing (and later resurrecting) his classmates, peruse ancient romance novels, explore the adventures of fallen angels who sired giants (and taught humans about cosmetics), tour heaven and hell, encounter the garden of Eden story told from the perspective of the snake, and learn how the world will end. The course assumes no prior knowledge of Judaism, Christianity, the bible, or ancient history. It is designed for students who are part of faith traditions that consider the bible to be sacred, as well as those who are not. The only prerequisite is an interest in exploring books, groups, and ideas that eventually lost the battles of history and to keep asking the question "why." In critically examining these ancient narratives and the communities that wrote them, you will investigate how religions canonize a scriptural tradition, better appreciate the diversity of early Judaism and Christianity, understand the historical context of these religions, and explore the politics behind what did and did not make it into the bible.
Same as: CLASSICS 9N, JEWISHST 4

RELIGST 6N. Religion in Anime and Manga. 3 Units.
Religious themes and topoi are ubiquitous in Japanese anime and manga. In this course, we will examine how religions are represented in these new media and study the role of religions in contemporary Japan. By doing this, students will also learn fundamental concepts of Buddhism and Shinto.

RELIGST 7N. Religion, Ecology, and Environmental Ethics. 3 Units.
The world today is in the midst of a major ecological crisis that is manifested in extreme weather events, loss of biodiversity, depletion of fisheries, pollution of air, water, and soil, prolonged draughts, and mass extinction of species. Since the 1970s world religions grappled with the religious significance of the environmental crisis, examining their own scriptures, rituals and ethics in order to articulate religious responses to the ecological crisis. This course explores how certain religions--Judaism, Christianity, Islam, Buddhism and Hinduism--have addressed the ecological crisis for the past fifty years. Preserving the distinctiveness of each religious tradition, this seminar examines: the issue of religion as the cause of the environmental crisis; the resources for ecological responses within each tradition; the emergence of new religious ecologies and ecological theologies; the contribution of world religions to environmental ethics; and the degree to which the environmental crisis has functioned--and will function--as the basis of inter-faith collaboration. We will work to develop a shared vocabulary in environmental humanities, and special attention will be given to the contribution of religion to animal studies, ecofeminism, religion and the science of ecology, and the interplay between faith, scholarship and activism.

RELIGST 8N. Gardens and Sacred Space in Japan. 3 Units.
This seminar will explore gardens and sacred spaces in Japan. We will study the development of Japanese garden design from the earliest records to contemporary Japan. We will especially focus on the religious, aesthetic, and social dimensions of gardens and sacred spaces. This seminar features a field trip to a Japanese garden in the area, in order to study how Japanese garden design was adapted in North America.

RELIGST 11N. The Meaning of Life: Philosophical, Aesthetic, and Religious Perspectives. 3 Units.
What is involved in making personal/existential sense of one's own life? We study artworks and texts by Manet, T.S. Eliot, Plato, Plotinus, Augustine, Marx, Nietzsche, and Heidegger, as well as Ingmar Bergman's classic film, "The Seventh Seal.".

RELIGST 12N. Perspectives on the Good Life. 3-4 Units.
The question is how to approach and evaluate different perspectives on the good life, especially when those perspectives are beautifully, and elusively, presented to us as texts. We will consider both classic and modern writers, from the West and from China; some are explicitly religious, some explicitly secular; some literary, some philosophical. Most of the class will revolve around our talk with each other, interpreting and questioning relatively short texts. The works we will read - by Dante, Dickenson, Zhuangzi, Shklar, and others - are not intended to be representative of traditions, of eras, or of disciplines. They do, however, present a range of viewpoint and of style that will help frame and re-frame our views on the good life. They will illustrate and question the role that great texts can play in a modern 'art of living.' Perhaps most important, they will develop and reward the skills of careful reading, attentive listening, and thoughtful discussion. (Note: preparation and participation in discussion are the primary course requirement. Enrollment at 3 units requires a short final paper; a more substantial paper is required for the 4-unit option.

RELIGST 13N. The Fourth "R": Religion and American Schools. 4 Units.
In this seminar, we will engage with historical, legal, and sociological texts, in order to trace the complicated relationship between church and state as it has played out in and around questions of education. Deciding what belongs in schools, what does not, whose interests are served in the process, and what the Constitution will allow are just some of the questions that will guide us. Through close readings of text and critical writing, we will develop alternative narratives about church-state issues that can make sense of everything from prayer in schools to civic education. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.
Same as: AMSTUD 117N, EDUC 117N

RELIGST 14N. Demons, Death, and the Damned: The 'Other' and the Otherwordly in America. 3 Units.
This course will examine how beliefs about the "other world" actually shape and are shaped by Americans' this-worldly actions and interactions (i.e. in the demonization of the "other," whether defined religiously, racially, ethnically, or in gendered terms). Students will ask how ideas about demons and death, heaven and hell have reflected the concerns, values, and identities of Americans over time. Students will learn how to read primary sources against secondary literature.

RELIGST 17N. Love, Power, and Justice: Ethics in Christian Perspective. 3 Units.
From its inception, the Christian faith has, like all religions, implied an ethos as well as a worldview, a morality and way of life as well as a system of beliefs, an ethics as well as a metaphysics. Throughout history, Christian thinkers have offered reasoned accounts of the moral values, principles, and virtues that ought to animate the adherents of what eventually became the world's largest religion. We will explore a variety of controversial issues, theological orientations, and types of ethical reasoning in the Christian tradition, treating the latter as one 'comprehensive doctrine' (John Rawls) among many; a normative framework (actually a variety of contested religious premises, moral teachings, and philosophical arguments) formally on par with the religious ethics of other major faiths as well as with the various secular moral theories typically discussed in the modern university. We will learn to interpret, reconstruct, criticize, and think intelligently about the coherence and persuasiveness of moral arguments offered by a diverse handful of this religious tradition's best thinkers and critics, past and present.

RELIGST 18N. Religion and Politics: Comparing Europe to the U.S.. 3-4 Units.
Interdisciplinary and comparative. Historical, political, sociological, and religious studies approaches. The relationship between religion and politics as understood in the U.S. and Europe. How this relationship has become tense both because of the rise of Islam as a public religion in Europe and the rising influence of religious groups in public culture. Different understandings and definitions of the separation of church and state in Western democratic cultures, and differing notions of the public sphere. Case studies to investigate the nature of public conflicts, what issues lead to conflict, and why. Why has the head covering of Muslim women become politicized in Europe? What are the arguments surrounding the Cordoba House, known as the Ground Zero Mosque, and how does this conflict compare to controversies about recent constructions of mosques in Europe? Resources include media, documentaries, and scholarly literature.
Same as: JEWISHST 18N

RELIGST 19N. Everyone Eats: Food, Religion and Culture. 3 Units.
Food is one of the most essential aspects of the human experience. The decisions and choices we make about food define who we have been, who we are now, and who we want to become. In this seminar we will study how food habits have shaped religious traditions, and vice versa, how religious traditions have shaped food ways. Some traditions are centered around food regiments such as the dietary laws, derived from biblical law that shapes Jewish and Christian tradition very differently. Indeed, many religious and ethical thinkers, as well as anthropologists, have interpreted the meanings of the dietary laws very differently. Further, in many religious traditions the killing of animals and consumption of meat is deeply fraught. We will explore the history of food practices and their contemporary impact; the connections between food, religion, and identity; the meanings that religious thinkers and anthropologists have attributed to food habits; as well as the creative translations of religious traditions into contemporary food ethics by various social movements and groups, predominantly in the U.S.
Same as: CSRE 19N, JEWISHST 19N

RELIGST 19X. Zen: A Way of Life Through Meditation and Cooking. 1 Unit.
This class is being offered in collaboration with the Stanford Program in Kyoto, Bing Overseas Studies Program.
Fundamental to Zen Buddhism is the meditative practice of zazen ("seated meditation"). In recent decades, zazen-inspired meditative practices have proliferated far from Japan and movements such "mindfulness" have become popular in parts of the US. However, there are a number of conceptual differences between Japanese zazen and some of these newer practices. Zazen in Japan is not a tool for relaxation, nor a means for personal gain or betterment. Instead, its goal is to clarify the self - and thereby to enable the practitioner to live a vivid and full life. The core of Zen teaching is achieved not through study of texts but through practice and experience. In this condensed, practicum course students will learn by focusing on two of the most important aspects of Buddhist monastic life: zazen meditation, and cooking.

Instructor: Rev. Daiko Matsuyama
Dates: October 19-23 6:00AM-7:00AM PDT and (1 wrap up session-date TBD)
Students will be required to purchase household materials for this course (approximately USD $25.)
The course is offered remotely (online) and enrollment is limited to 15 undergraduate students. A permission code will be given to admitted students to register in the class.
Interested students can apply by going to this Google form link: https://forms.gle/YcAdR59wqzuPNax56.

RELIGST 24S. Witches, Witchcraft, and Witch-Hunting in Early America. 3 Units.
The early modern era witnessed a dramatic surge in the religious and legal persecution of women and men suspected of and executed for witchcraft. While witch-hunting was a global phenomenon, this class shall focus on the early American religious experience. This course will explore the history of witchcraft in early America, with particular focus on Puritan New England. This class will challenge students to consider what was witchcraft? Why did people believe in it, and how did it give meaning to their worlds? What functions did witchcraft have in society? Who were most vulnerable to accusations? What best explains the phenomenon of witch-hunting? Because this class takes a historical approach to the religious world of early America, much of the coursework will center on interpreting and analyzing primary sources related to witchcraft (e.g. sermons, diaries, letters, trial notes) and engaging with secondary sources by witchcraft experts. Our focus shall be both macro and micro, studying small single episodes, as well as large-scale events, such as the Salem Witch Trials of 1692.

RELIGST 26S. Contemporary Islam & Muslims in America. 3 Units.
In this course, we will explore contemporary Islam and Muslims in a post-9/11 and Trump-era America. Following some brief grounding history in Week 1, we will use ethnographic studies and digital media content to understand the American Muslim experience in the 21st century. Each week, we will also address how the lived experience of American Muslims interacts with theoretical and normative conceptions of Islam, and whether these interactions eventually create a distinctive American Islam. Topics covered include: racial & gender dynamics, ideological debates, institutions, social media wars, politics, and specific communities as case studies. Together we will develop a critical perspective on the American Muslim experience, particularly as a case of how one diverse religious community negotiates religion in a complex sociopolitical setting.

RELIGST 36X. Dangerous Ideas. 1 Unit.
Ideas matter. Concepts such as revolution, tradition, and hell have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like immigration, universal basic income, and youth play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these "dangerous" ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.
Same as: ARTHIST 36, COMPLIT 36A, EALC 36, ENGLISH 71, ETHICSOC 36X, FRENCH 36, HISTORY 3D, MUSIC 36H, PHIL 36, POLISCI 70, SLAVIC 36

RELIGST 50. Exploring Buddhism. 4 Units.
A comprehensive historical survey of the Buddhist tradition, from its beginnings to the 21st century, covering principal teachings and practices, institutional and social forms, and artistic and iconographical expressions. (Formerly RELIGST 14.).

RELIGST 51. Exploring Buddhism in Tibet and the Himalayas. 4 Units.
From elaborate sand mandalas, masked dances, and entrancing ritual music to meditating yogis, robed monks, and the Dalai Lama himself, Tibetan forms of Buddhist traditions have for decades been an integral part of our modern globalized world. This course introduces the history, institutions, doctrines, and practices of Buddhism in Tibet and the broader Himalayan region.

RELIGST 53. Exploring Jewish Spirituality. 4 Units.
It was once accepted as fact that Judaism is, at its core, a rational religion devoid of any authentic mystical tradition. But the past century of scholarship has reversed this claim, demonstrating that the spiritual life has been integral to Judaism's vital heart since ancient times. This yearning for a direct immediate experience of God's Presence, a longing to grasp the mysteries of the human soul and know the inner dynamics of the Divine realm, has taken on many different forms across the centuries.
This course will introduce students to the major texts--from theological treatises to poems and incantations--and core ideas of Jewish mysticism and spirituality, tracking their development from the Hebrew Bible to the dawn of modernity. Close attention will be paid to the historical context of these sources, and we will also engage with broader methodological approaches--from phenomenology to philology--regarding the academic study of religion and the comparative consideration of mysticism in particular.
This course assumes no prior background of Judaism or any other religious traditions. All readings will be made available in English. Students are, however, invited to challenge themselves with the "optional/advanced" readings of sources both primary and secondary. Pending interest, students with facility in the original languages (Hebrew or Aramaic) will be given the opportunity to do so.
Same as: JEWISHST 53

RELIGST 55. Exploring Zen Buddhism. 4 Units.
This course is an introduction to Chan/Zen Buddhism. We will study the historical and doctrinal development of this tradition in China and Japan and examine various facets of Zen, such as the philosophy, practices, rituals, culture, and institution. For this aim, we will read and discuss classical Zen texts in translation and important secondary literature. This class will further feature a visit of a Zen teacher, who will give an introduction to sitting meditation.

RELIGST 56. Exploring Chinese Religions. 4 Units.
An overview of major themes and historical developments in 5000 years of Chinese religion from early evidence of religious belief in Neolithic burial sites to religion in China today. In this course, we will try as much as possible to appreciate Chinese religion from the Chinese perspective, paying particular attention to original texts in translation in an attempt to discern the logic of Chinese religion and the role it has played in the course of Chinese history. To a greater extent perhaps than any other civilization, the Chinese have left behind a continuous body of written documents and other artifacts relating to religion stretching over thousands of years, providing a wealth of material for studying the place of religion in history and society. We will cover a range of traditions, from Buddhism and Daoism to Falun Gong, practices such as divination, fengshui and ancestor worship, and historical events from the formation of the first Chinese empire to the fall of the Qing dynasty and the Cultural Revolution. Each class will include a short lecture and discussion. Together we will read a variety of philosophical, literary, and historical pieces in translation, supplemented by ethnographic videos, archaeology and maps.

RELIGST 61. Exploring Islam. 4 Units.
This course introduces some of the most important features of the Islamic religious tradition. It explores the different ways in which Muslims have interpreted and practiced their religion. The main subjects of discussion --- including the life of the Prophet Muhammad, the Qur'an, law, ritual, mysticism, theology, politics, and art --- will be considered with reference to their proper historical contexts. Some of the topics covered include abortion, gender, rebellion and violence, and the visual vocabulary of paintings. Students will be exposed to important theories and methods in the academic study of religion. No prior knowledge is required.

RELIGST 65. Exploring Global Christianity. 4 Units.
Explore the world¿s largest religion as a multicultural, global faith, with attention to Christianity¿s origins, spread and impact around the world up to the present. Special attention to recent shifting demographics leading to declining numbers in mainline Christian denominations in North America and Europe and the rapid expansion of Christianity in Africa, Asia, and South America; the explosion of international Pentecostalism and other new Christianities; Christianity, global politics, and the global economy; Christian-Muslim relations and conflicts.

RELIGST 81. Exploring Indian Religions. 4 Units.
This course provides an overview of Indian religious traditions, including Hinduism, Buddhism, Jainism, Islam, and Sikhism. We will spend approximately half the course on Hindu thought and traditions from the Vedic period until the present day, emphasizing the diverse forms of this religion in different times and places. The second half of the course will be devoted to religions that emerged in South Asia (e.g., Jainism) and those that came to find a home and particular forms of expression on the subcontinent (e.g., Islam). Throughout students will read selections from a range of theological texts, epics, and literature that have permeated many aspects of daily religious life in India. We will also emphasize ritual activities, visual experiences in temples, and networks of pilgrimage places that dot the subcontinent. We will often pair primary sources (in translation) with later interpretations and impacts of those texts in modern South Asia. We will also survey the modern incarnations of particular Indian religious traditions throughout South Asia and the diaspora. By the conclusion of this course, students will be conversant with the texts, beliefs, and practices of the major Indian religions in their cultural and historical contexts and also have a working knowledge of basic categories important for the study of religion more broadly.

RELIGST 82. Exploring Christianity. 4 Units.
Historical and contemporary Christianity from four viewpoints: ritual and prayer; sacred texts and creeds; ethics and life; and community governance.

RELIGST 86. Exploring the New Testament. 4 Units.
To explore the historical context of the earliest Christians, students will read most of the New Testament as well as many documents that didn't make the final cut. Non-Christian texts, Roman art, and surviving archeological remains will better situate Christianity within the ancient world. Students will read from the Dead Sea Scrolls, explore Gnostic gospels, hear of a five-year-old Jesus throwing divine temper tantrums while killing (and later resurrecting) his classmates, peruse an ancient marriage guide, and engage with recent scholarship in archeology, literary criticism, and history.
Same as: CLASSICS 43, JEWISHST 86

RELIGST 91. Exploring American Religious History. 4 Units.
This course will trace how contemporary beliefs and practices connect to historical trends in the American religious landscape.
Same as: AMSTUD 91, CSRE 91, HISTORY 260K

RELIGST 105. Religion and War in America. 4 Units.
Scholars have devoted much attention to wars in American history, but have not agreed as to whether religion was a major cause or simply a cover for political, economic, and other motives. We will compare interpretations that leave religion out, with those that take it into account. We will also look at the impact of war on the religious lives of ordinary Americans. We will examine both secondary as well as primary sources, beginning with King Philip's War in the 17th century, and ending with the "War on Terror" in the present day.
Same as: AMSTUD 105R, CSRE 105, HISTORY 254D, HISTORY 354D

RELIGST 114. Yoga: Ancient and Modern. 4 Units.
In both Western popular culture and the Indian political arena, Yoga has become emblematic of the cultural heritage of India. But how did the phenomenon that is global postural yoga, with its secular wellness ethos and athleticism, come into existence? And how does it relate to the contemplative and ascetic disciplines that were practiced in the premodern Indian past? This course explores the early history of yoga through its philosophy and esoteric practices, concluding with a look at the ramifications of yoga in contemporary culture and politics. Participating in a yoga class is recommended. 2 units of independent study (S-NC) are offered for those who participate in a weekly yoga class and write short reflections on the experience.

RELIGST 115X. Europe in the Middle Ages, 300-1500. 3-5 Units.
(HISTORY 15D is 3 units; HISTORY 115D is 5 units.) This course provides an introduction to Medieval Europe from the fall of Rome to the Renaissance. While the framework of the course is chronological, we'll concentrate particularly on the structure of medieval society. Rural and urban life, kingship and papal government, wars and plagues provide the context for our examination of the lives of medieval people, what they believed, and how they interacted with other, both within Christendom and beyond it. This course may count as DLCL 123, a course requirement for the Medieval Studies Minor.
Same as: HISTORY 15D, HISTORY 115D

RELIGST 116. Buddhist Philosophy. 4 Units.
What do Buddhists mean when they argue that there is "no self?" What about their claim that everything is "empty?" Is their theory of karma a type of "fatalism" (that everything is just a matter of predetermined fate)? Does Buddhism really teach that we are all connected with one another? This course aims to answer these questions, and many others related to Buddhist philosophy. We will begin by exploring the central philosophical arguments attributed to the historical Buddha, and study the major philosophical traditions of Buddhism and the debates between them over the issues of metaphysics (what is really real?), ethics (what should we do?), and epistemology (what and how do we know?). We will also learn about the problems and significance of the modern interpretations of Buddhist philosophy. Through these discussions, we will attempt to critically appreciate both the universality and the particularity of the Buddhist ways of thinking.

RELIGST 117. Christianity, Race, and Gender in 21st-century America. 4 Units.
As the largest religion practiced in the United States, Christianity not only shapes the private lives of a large number of Americans but also plays an important role in public discourse, policies, and debates. This course investigates Christianity's place on the shifting religious landscape in America, with special attention to present-day movements for racial and gender justice in the era of Black Lives Matter and #MeToo. Students explore reasons for declining numbers of Christians in the United States, the polarization of Christian conservatives and religious "nones," and Christian constructions of social relations. How do Christian beliefs and practices shape attitudes about race and gender roles? How is contemporary Christianity acting as a force for as well as a barrier to social justice? This course assumes no background in the study of religion, race, or gender and is open to practitioners of all faiths or none.
Same as: AMSTUD 117R

RELIGST 118. Freedom Fighters, Terrorists, and Social Justice Warriors: Protest and Decolonization in South Asia. 3 Units.
The South Asian region comprises the contemporary nations of India, Pakistan, Bangladesh, Sri Lanka, Nepal, Bhutan, and the Maldives. Racially, linguistically, politically, religiously, and in every way diverse, this region has also experienced the challenge of European colonialism, the effects of global climate change, the impact of rapid industrialization and urbanization, and internal conflicts within and between nations. It is also a creatively and intellectually vibrant region in which principles of non-violent resistance, award winning arts and literature, stunning natural environments, and scientific discovery are integral and celebrated. How have South Asians engaged the rapid social change of the twentieth century with decolonization and regional conflicts? What artistic and literary formations emerged from and drove the freedom movements against colonial rule and the nation forming projects that ensued? How have globalization and internal debates about national identities shaped contemporary South Asian societies?.
Same as: HUMCORE 134

RELIGST 119. Religion and Conflict. 4 Units.
What is the relationship between religion and conflict? Can religious movements, ideologies, and actors cause conflicts or make them better or worse? This course looks at theories of religion and conflict, religious approaches to conflict resolution or peacebuilding, and examines case studies of conflicts involving religion.

RELIGST 123. The Hindu Epics and the Ethics of Dharma. 4 Units.
The two great Hindu Epics, the Mahabharata and Ramayana, offer a sustained reflection on the nature of virtuous living in the face of insoluble ethical dilemmas. Their treatment of the concept of dharma, understood simultaneously as ethical action and the universal order that upholds the cosmos, lies at the heart of both Gandhian non-violent resistance and communalist interreligious conflict. This course will focus on a reading of selections from the Epics in English translation, supplemented with a consideration of how the texts have been interpreted in South Asian literary history and contemporary politics and public life in India.
Same as: CLASSICS 125

RELIGST 124. Sufi Islam. 4 Units.
The complex of Islamic intellectual and social perspectives subsumed under the term Sufism. Sufi mystical philosophies and historical and social evolution. Major examples include: Qushayrî, Râbi'a, Junayd, Hallâj, Sulamî, Ibn al-'Arabî, Rûmî, Nizâm al-Dîn Awliyâ'. Social and political roles of Sufi saints and communities. Readings include original prose and poetry in translation, secondary discussions, and ethnography.

RELIGST 125. The Bible and its Interpreters. 4 Units.
Introduction to major stories, figures, and themes of the Christian Bible and their retellings in theological writing, art, literature, film, and music throughout the ages.

RELIGST 126. Protestant Reformation. 3-5 Units.
The emergence of Protestant Christianity in 16th-century Europe. Analysis of writings by evangelical reformers (Luther, Calvin, Zwingli, Sattler, Hubmeier, Müntzer) and study of reform movements (Lutheran, Reformed, Anabaptist, Spiritualist) in their medieval context and as expressions of new and influential visions of Christian belief, life, social order.
Same as: HISTORY 126B

RELIGST 128. Women and Gender in Early Judaism and Christianity. 4 Units.
Beginning with the Hebrew Bible and New Testament, we will explore female figures in early Jewish and Christian literatures, such as Eve, Ruth, Mary, and Junia. Based on this, we will probe the prescriptions for female comportment in early Judaism and Christianity placing these literary prescriptions in conversation with material evidence related to women, such as for example the Babatha archive. We will analyze the politics of patriarchy in ancient discourse, and examine, among other topics, efforts by Christian clergy to silence female prophets in the second and third centuries CE. The bulk of the course will be devoted to the formative years of both Judaism and Christianity in Late Antiquity. This course assumes no prior knowledge of Judaism, Christianity, the Bible, or ancient history. It is designed for students who are part of faith traditions that consider the Bible to be sacred, as well as those who are not. Ancient readings in this course will be supplemented by modern scholarship in classics, early Christian studies, gender studies, queer studies, and the history of sexuality.
Same as: JEWISHST 128

RELIGST 129. Milk and Honey, Wine and Blood: Food, Justice, and Ethnic Identity in Jewish Culture. 4 Units.
This course examines Jewish culture and the food practices and traditions that have shaped and continue to shape it. Students learn to prepare a variety of meals while studying about the historical and literary traditions associated with them, such as the dietary `laws¿ and the long history of their interpretation, as well as the cultivation of eating as devotional practice in Jewish mystical traditions. We will explore how regional foods the world over contribute to the formation of distinct Jewish ethnic identities, and how these traditions shape contemporary Jewish food ethics. The course includes guest visits by professional chefs and food writers, and field trips to a local winery.
Same as: JEWISHST 129A

RELIGST 130. Sex and Gender in Judaism and Christianity. 3 Units.
What role do Jewish and Christian traditions play in shaping understandings of gender differences? Is gender always imagined as dual, male and female? This course explores the variety of ways in which Jewish and Christian traditions - often in conversation with and against each other - have shaped gender identities and sexual politics. We will explore the central role that issues around marriage and reproduction played in this conversation. Perhaps surprisingly, early Jews and Christian also espoused deep interest in writing about 'eunuchs' and 'androgynes,' as they thought about Jewish and Christian ways of being a man or a woman. We will examine the variety of these early conversations, and the contemporary Jewish and Christian discussions of feminist, queer, trans- and intersex based on them.
Same as: FEMGEN 130, JEWISHST 120

RELIGST 132D. Early Christian Gospels. 4 Units.
An exploration of Christian gospels of the first and second century. Emphasis on the variety of images and interpretations of Jesus and the good news, the broader Hellenistic and Jewish contexts of the gospels, the processes of developing and transmitting gospels, and the creation of the canon. Readings include the Gospel of John, the Gospel of Mark, the Gospel of Thomas, the Gospel of Mary and other canonical and non-canonical gospels.
Same as: CLASSICS 145

RELIGST 133. Muslims, Jews, and Christians: Conflict, Coexistence, and Collaboration. 4 Units.
Relationships between Muslims, Jews, and Christians today are informed by a multitude of complex and often painful histories. These faith traditions emerged out of deep and sustained engagement with one another sharing theological and ethical principles, and revering many of the same figures and there have been many periods of rich and productive interaction. Yet there have also been areas of dissension and conflict, and periods when theological, social, or political disagreement devolved into violence and oppression. In recent times (especially following the Holocaust and the establishment of the modern State of Israel), religious, political, and intellectual leaders of Muslim, Jewish, and Christian communities, in the U.S. and around the world, have recognized the need to forge deeper and more meaningful relationships with one another. Knowledge and understanding of the perspectives that different communities and individuals bring to bear on their entangled past, present, and future are a critical part of efforts to resolve intransigent conflicts and advance mutual interests. This course explores some of the most significant moments of interaction through literature and art, polemic and dialogue that have shaped engagements between Muslims, Jews, and Christians throughout history, and examines both prospects and pitfalls for engagement in the present and future.
Same as: JEWISHST 123

RELIGST 139. Religion along the Silk Road. 4 Units.
From roughly the year 1 to the year 1000, a vibrant trade route stretched across Central Asia, linking Europe, India and East Asia. Along this route, merchants bought and sold the silk that gave the route its name, along with paper, ceramics, spices, precious stones and any number of other commodities. Together with these trade goods, merchants, missionaries, farmers and artisans who participated in this vast commercial network, exchanged ideas, scriptures, practices and beliefs, including those associated with major religious traditions; Buddhism, Zoroastrianism, Christianity, Judaism, Manichaeism and Islam followed the same routes as silk and spice. In this course we will examine the spread of all of these religions across the Silk Road, what happened when they interacted, and what this tells us about the relation between commerce, trade and geography in the pre-modern world.

RELIGST 140. RELIGION AND ETHICS: The Limits of Dialogue. 3 Units.
How do religious traditions address ethical problems? Although ¿the good¿ seems like a universal goal, religious traditions force us to consider non-universal ways of defining it. From marriage to genetic engineering, from abortion to organ donation, issues of community, faith, and practice continue to complicate our ethical thinking. Exploration of case-studies and concepts, with readings from Kant, Foucault, Butler and others, as well as Jewish and Christian interpretations of the Bible.

RELIGST 144. John Calvin and Christian Faith. 5 Units.
Close reading and analysis of Calvin's *Institutes of the Christian Religion* as a classic expression of Christian belief.

RELIGST 147. Building Heaven and Hell. 4 Units.
How did early Jews and Christians imagine space? How did they construct heaven and hell through their written texts? Can we take their written images of the earthly and heavenly Jerusalem and her temple, such as those found in Ezekiel, the Book of Revelation and the Apocalypse of Paul and transform them into three-dimensional space? We are going to try! We will meet in the architecture studio and literally build these images from foam board and hot glue. A number of themes will emerge through the course: the interpretive move in rendering a once real space as a literary icon, the relationship between text and imagined space, the connection between space and ritual, the development of apocalyptic visions, and the centrality of Jerusalem in Jewish and Christian thought.

RELIGST 149. Finding Utopia: Mysticism, Free Love, and New Religions of the Nineteenth-Century. 4 Units.
This class explores radical experiments in 19th-century religious utopias. Ranging from the occult to free love to anarchism, we will encounter diaries from a polyamorous commune, seance accounts of astral travel, a journal from a "Sister of the New Life" striving to create a neighborhood modeled off the fairies that she thought inhabited her body, and theological treatises insisting that spiritual progress could only be achieved scientifically. Sources such as these will help us investigate the connection between religious innovation and concepts that continue to influence us today.

RELIGST 150. Texts that Changed the World from the Ancient Middle East. 3-5 Units.
This course traces the story of the cradle of human civilization. We will begin with the earliest human stories, the Gilgamesh Epic and biblical literature, and follow the path of the development of law, religion, philosophy and literature in the ancient Mediterranean or Middle Eastern world, to the emergence of Jewish and Christian thinking. We will pose questions about how this past continues to inform our present: What stories, myths, and ideas remain foundational to us? How did the stories and myths shape civilizations and form larger communities? How did the earliest stories conceive of human life and the divine? What are the ideas about the order of nature, and the place of human life within that order? How is the relationship between the individual and society constituted? This course is part of the Humanities Core: https://humanitiescore.stanford.edu/.
Same as: COMPLIT 31, HUMCORE 111, JEWISHST 150

RELIGST 151. Religious Poetry of India. 4 Units.
India has a rich literature of devotional and mystical poetry composed by "poet-saints" in common vernacular languagesa, This passionate and contemplative poetry flourished between the 6th and 18th centuries, inspiring religious and social movements that are still vibrant today. It also lives as music, remaining popular and powerful in the form of songs in many styles. We will study this material through the lenses of poetry, religion, performance, and politics.

RELIGST 152. Buddhism and the Family. 4 Units.
What do we owe our parents? This course centers how Buddhist authors in Cambodia and Vietnam have wrestled with questions of debt and gratitude in the family. We will begin with the Indian and Chinese antecedents that shaped ideals of filial piety in the region of Southeast Asia formerly known as "Indochina." The core of our readings and discussions will engage classical Khmer and Vietnamese literature in translation, including the verse novels "A Child Called Dream" and "The Tale of Kieu." The course will close with Asian American celebrations and critiques of filial piety. Our aim throughout the quarter will be to complicate contemporary views on familial debts by charting a specific religious and literary history in Southeast Asia.

RELIGST 154. Buddhism and Science: A Critical Introduction to the Encounter. 4 Units.
Buddhism has figured in the Western imagination as a "rational religion," a "philosophy" that is mostly compatible with science. While the notion of Buddhism as "scientific" is both controversial and open to exaggeration, in the last few decades, this positive image has helped to facilitate direct encounters between Buddhism and science in multiple settings--dialogues between scientists and Buddhist scholars on key topics such as mindfulness, collaborative presentations and workshops at academic conferences, scientific research on contemplative practices, and so forth. This course explores the many facets of the encounter between Buddhism and science. It aims to do so through discussion and debate of relevant scientific papers, traditional Buddhist literature, science and technology studies (STS), and anthropological literature. Topics to be addressed include, among others, the encounter between Buddhism and psychology; the study of Buddhist contemplative practices in the laboratory; the Mindfulness-Based Stress Reduction program and the "Mindful Revolution"; the creation of a Buddhist "science of happiness"; Buddhism and technology; and Buddhism, science, and the idea of secularism.

RELIGST 156X. Sounds of Islam. 3 Units.
This course explores diverse intersections of sound and Islam in religious and secular contexts throughout the world. From studying Islamic philosophies about the art of listening to interrogating Muslim hip hop, we examine how sonic practices simultaneously reflect and shape different Muslim identities globally. Issues of nationalism, war and trauma, class, race and ethnicity, gender and sexualities, colonialism, social in/justice, and migration will remain central to our exploration of spirituality, secularism, piety, and religiosity for the individuals and communities making or listening to sounds of Islam.
Same as: MUSIC 186E

RELIGST 158. Spiritualism and the Occult. 4 Units.
How can the living communicate with the dead? From Leland Jr.'s ghost to his uncle, T.W. Stanford, millions of people in the nineteenth century practiced technologies of spirit communication from spirit photography to animated seance tables. Through close readings of stories, novels, such as Romance of Two Worlds in which the heroine astrally travels through outer space, seance accounts, and scientific treatises, including Waisbrooker¿s theory that the way to enlightenment is through having the right type of sex, this class explores their mystical culture and how it blurred the line between seen and unseen in an effort to expand the real.

RELIGST 162X. Spirituality and Nonviolent Urban and Social Transformation. 3 Units.
A life of engagement in social transformation is often built on a foundation of spiritual and religious commitments. Case studies of nonviolent social change agents including Rosa Parks in the civil rights movement, César Chávez in the labor movement, and WIlliam Sloane Coffin in the peace movement; the religious and spiritual underpinnings of their commitments. Theory and principles of nonviolence. Films and readings. Service learning component includes placements in organizations engaged in social transformation. Service Learning Course (certified by Haas Center).
Same as: CSRE 162A, URBANST 126

RELIGST 165. Modern Jewish Mysticism: Devotion in a Secular Age. 4 Units.
The twentieth-century was a time of tremendous upheaval and unspeakable tragedy for the Jewish communities of Europe. But the past hundred years were also a period of great renewal for Jewish spirituality, a renaissance that has continued into the present day. Beginning with the writings of the Safed Renaissance, the Sabbateanism, and the Hasidic masters, our course will focus on key thinkers in the 19th and 20th centuries, including: Hillel Zeitlin, Martin Buber, Abraham Isaac Kook, Abraham Joshua Heschel, and Arthur Green. Drawing upon essays, homilies, and poems, we will examine the ways in which their works re-cast and reinterpret the Jewish tradition in answer to the singular questions and challenges modernity. We will mark the development of their thinking against the two World Wars, the Holocaust, and the complex and multi-faceted processes of secularization. We will also consider the theological project of modern Jewish mystics in dialogue with modern Jewish philosophers (such as Hermann Cohen, Franz Rosenzweig, and Emmanuel Levinas) as well as modern philosophers and scholars informed by Christianity (from William James to Charles Taylor). This course argues that the processes of sacralization, of reclaiming a life of mystical devotion, are best understood as a unique response to Jewish modernity rather than a retreat to past modalities of religion. In seeking to prove this point, we will explore writers whose work emerged in and engaged with different social and cultural domains. We will investigate their writings with an eye to issues such as power and identity, and will draw upon their works in charting the intersection of mysticism, literature, language and experience. Throughout our readings, we will keep our eye on the sustained impact of feminism on Jewish mysticism in the second half of the twentieth century. This course is structured as a seminar, and our class discussions will be rooted in the primary sources. It assumes no prior background of Judaism or any other religious traditions. All readings will be made available in English.
Same as: JEWISHST 125

RELIGST 166. The Divine Feminine in India. 4 Units.
What happens when God is a woman? Is the Goddess a feminist? The Goddess, in her numerous incarnations, is foundational to much of Indian religiosity, whether Hindu, Buddhist, or even Jain¿and in turn, without her story, much of the theology and practice of these religions remains incomprehensible. This course examines the principal expressions of the theology and ritual worship of the Goddess in Indian history, from the Vedas to the Hindu Epics, to Indian philosophy, tantric ritual practice and modern global and new age movements in order to understand how the gendering of divinity affects theological speculation, religious experience, and embodied religious identity.
Same as: FEMGEN 166

RELIGST 168. Philosophy of Religion. 3 Units.
Course traces efforts within the Western tradition from Boethius through Anselm, Aquinas, Descartes, Hume, Kant, and Kierkegaard to Camus to establish a rational foundation for theist belief and its consistency or coherence with everyday experience. We will deal extensively with the criticisms that that effort has cast up and then turn to investigate issues that extraordinary or mystical experience raises. We will incorporate a look at Buddhist traditions as well as those in the west to gain insight into these questions. And finally, we will look at the ethics of belief, at our responsibility toward our commitments, and some of the varying positions available to us.

RELIGST 169. Sacred Words: Jewish Thought and the Question of Language. 4 Units.
Jews have long been referred as the people of the book, but they might better be referred to as the people of the word. Drawing upon texts from the Hebrew Bible to the works of modern Hebrew writers like of Hayyim Nahman Bialik and Amoz Oz, this seminar will chart the development of Jewish thinking on language over the past two millennia. We will explore issues such as: the idea of canonization; oral versus written language; the nature and possibility of translation; the origins of language; notions of negative theology; mystical approaches to the word; the rebirth of Hebrew as a spoken and cultural language; and the limits of language after the Holocaust. This course will also bring Jewish thought into dialogue with contemporary philosophical reflections on issues of language. Modern explorations of language will prove an interesting way of deepening our understanding of the Jewish thinkers on one hand, and enriching contemporary intellectual discourse on the other.
Same as: JEWISHST 129

RELIGST 170A. Biblical Hebrew, First Quarter. 2 Units.
Establish a basic familiarity with the grammar and vocabulary of Biblical Hebrew and will begin developing a facility with the language. Students that are enrolled in this course must also enroll in Beginning Hebrew. This course requires no prior knowledge of Hebrew and will begin with learning the alphabet. By the end of the year, students will be able to translate basic biblical texts, will be familiar with common lexica and reference grammars, and will have sufficient foundational knowledge to enable them to continue expanding their knowledge either in a subsequent course or own their own.
Same as: JEWISHST 107A

RELIGST 170C. Reading in Biblical Hebrew. 4 Units.
Third of a three quarter sequence. Readings and translation of biblical narratives emphasizing grammar and literary techniques. Prerequisite: AMELANG 170B.

RELIGST 170D. Readings in Talmudic Literature. 1 Unit.
Readings of Talmudic texts. Some knowledge of Hebrew is preferred, but not necessary. The goal of the ongoing workshop is to provide Stanford students with the opportunity to engage in regular Talmud study, and to be introduced to a variety of approaches to studying Talmudic texts and thought.
Same as: JEWISHST 127D, JEWISHST 227D

RELIGST 170E. Readings in Talmudic Literature Advanced. 1 Unit.
Readings of the talmudic texts. Knowledge of Hebrew is required. The ongoing seminar is designed to study the making of the talmudic sugya (unit of discourse), along with classic commentaries. Students will consider some of the recent developments in the academic study of Talmudic literature, introduced by the instructor. The goal of the ongoing seminar is to provide Stanford students and faculty with the opportunity to engage in regular Talmud study, and to be introduced to a variety of approaches to studying Talmudic texts. Meeting time and location TBA. May be repeated for credit.
Same as: JEWISHST 127E, JEWISHST 227E

RELIGST 171A. Biblical Greek. 3-5 Units.
This is a one term intensive class in Biblical Greek. After quickly learning the basics of the language, we will then dive right into readings from the New Testament and the Septuagint, which is the ancient Greek translation of the Hebrew Bible. No previous knowledge of Greek required. If demand is high for a second term, an additional quarter will be offered in the Spring.
Same as: CLASSICS 6G, JEWISHST 5

RELIGST 171X. Intensive Biblical Greek. 8 Units.
Equivalent to two quarters of Biblical Greek (CLASSICS 6G, 7G). Students will learn the core of New Testament Greek with the goal of learning to accurately translate and read the New Testament. Students will read one-third of the Gospel of John during the course and will be well-prepared to read the Greek New Testament independently after the course. Focus on knowledge of key vocabulary and grammar needed to read the Greek Bible with ease. No previous knowledge of Greek required. Course does not fulfill the Stanford language requirement.
Same as: JEWISHST 5G

RELIGST 173. What is Enlightenment? Religion in the Age of Reason. 4 Units.
Many contemporary attitudes towards religion were forged in 17th- and 18th-century Europe in the midst of heated debates over the meaning and value of Christianity in a world 'come of age': Liberal calls for justice, toleration, and pluralism in matters religious; secular suspicions about religious superstition, fanaticism, and ideology; skepticism regarding the solubility of ultimate questions of meaning and metaphysics. Seminal readings on religion from Descartes, Pascal, Leibniz, Voltaire, Hume, Mendelssohn and Kant.

RELIGST 173X. Latin 400-1700 CE. 3-5 Units.
Readings in later Latin, drawing on the vast bodies of texts from the late antique, medieval and early modern periods. Each week students will prepare selections in advance of class meetings; class time will be devoted to translation and discussion. Students taking this course will gain exposure to a wide range of later Latin texts; hone translation skills; and develop an awareness of the grammatical and stylistic features of post-classical Latin. The course is aimed both at classical Latinists seeking to broaden their reading experience and at medievalists and early modernists seeking to consolidate their Latin language skills. May be repeat for credit.nnPrior experience in Latin is required, preferably CLASSICS 11L. Equivalent accepted. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies. Does not fulfill the language requirement in Classical Studies track.
Same as: CLASSICS 6L, CLASSICS 208L

RELIGST 174. Religious Existentialism-Kierkegaard. 4 Units.
Existentialism is often understood to be a secular or anti-religious philosophy of life, a substitute for Christian ethics in a post-theistic world come of age. Yet this twentieth-century philosophical movement owes many of its concerns and much of its vocabulary to the hyper-Protestant Danish thinker Soren Kierkegaard, and much of the best Christian and Jewish thought in the 20th-century (Bultmann, Buber, Tillich) adopted existentialism as the ¿best philosophy¿ for making sense of these traditions in a secular age. This course will examine the origins of existentialist thought in the writings of Kierkegaard and its appropriation by a handful of influential 20th- century religious thinkers.

RELIGST 180. Gender Relations in Islam. 4 Units.
This course investigates the ways in which gender identities and relationships between men and women have been articulated, constructed, and refashioned throughout the Muslim world. Starting with problematizing the fixed notions of gender and sexuality, we map the attitudes toward these notions through visiting a diverse array of sources from the Qur¿an, Sunna, and legal documents to historical and anthropological case studies, literature, and film from South East Asia to Europe and North America. We examine the notions of femininity and masculinity in the Qur¿an, family laws, and attitudes toward homosexuality and transgendered populations. We read examples of ambiguous use of language with regards to gender and sexuality in Persian poetry and mystical traditions. We study the dynamic relationship between Islam and Feminism in the Muslim world. Finally, we witness the implications of these attitudes in our case studies and stories, from a divorce court in Iran to a wedding in Sudan.
Same as: FEMGEN 180

RELIGST 181. Heidegger and Mysticism. 4 Units.
A close reading of Heidegger's *Being and Time* in light of the new paradigm for reading his work, as well as a study of his long-standing interest in mysticism and the question of the divine.
Same as: PHIL 133S

RELIGST 183. Atheism: Hegel to Heidegger. 5 Units.
The radical changes in ideas of God between Hegel and Heidegger, arguing that their questions about theism and atheism are still pertinent today. Texts from Hegel, Feuerbach, Marx, Nietzsche, and Heidegger. on God, history, and the social dimensions of human nature. N.B.: Class size limited. Apply early at tsheehan@stanford.edu.
Same as: PHIL 133T

RELIGST 199. Individual Work. 1-15 Unit.
Prerequisite: consent of instructor and department. May be repeated for credit.

RELIGST 202A. Monsters, Ghosts and Other Fantastic Beings: The Supernatural and the Mysterious in Japanese Culture. 4 Units.
Examine the development of strange and fantastic creatures in Japan. Mysterious creatures in folklore, literature, art, manga and movies. Through them see how the concept of the strange or mysterious have evolved and how they inform Japanese modernity.
Same as: RELIGST 302A

RELIGST 203. Myth, Place, and Ritual in the Study of Religion. 3-5 Units.
Sources include: ethnographic texts and theoretical writings; the approaches of Charles Long, Jonathan Z. Smith, Victor Turner, Michael D. Jackson, and Wendy Doniger; and lived experiences as recounted in Judith Sherman's *Say the Name: A Survivor's Tale in Prose and Poetry,* Jackson's *At Home in the World,* Marie Cardinal's *The Words to Say It,* and John Phillip Santos¿ *Places Left Unfinished at the Time of Creation*.
Same as: RELIGST 303

RELIGST 204. Paleography of Medieval and Early Modern Manuscripts. 3-5 Units.
Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.
Same as: CLASSICS 215, DLCL 209, HISTORY 309G

RELIGST 205. Religious Poetry. 4 Units.
Religious poetry drawn from the Islamic, Christian, Confucian and Daoist traditions. Limited enrollment or consent of the instructor required.

RELIGST 210. Translating Religion. 3-5 Units.
What happens to Buddhism when the Buddha speaks Chinese? Is the Qur'an still the Qur'an in English? What did Martin Luther do for the German language? We try to answer these and other such questions in this course, which explores the translation of sacred scripture and other religious texts from the earliest times to the present day. Taking a global perspective, and looking at Buddhism, Christianity, Hinduism, Islam and Judaism, the course is designed to introduce students to the theory and practice of translation and get them thinking about its broader cultural, aesthetic and political significance. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: RELIGST 310

RELIGST 211. Economic Justice. 3-5 Units.
This seminar brings philosophical, humanistic, and religious analyses to bear on current issues of economic justice in the United States. The first part of the seminar studies general background issues (history of U.S. economics, philosophies of money, labor, private property, human dignity, etc.). In the second part, student study groups present their research on specific, agreed-upon topics, e.g., economic ideologies (neoliberalism, democratic socialism, etc.), models of economic justice, income and wealth distribution, etc. The goal is to move from analysis through criticism to concrete applications.

RELIGST 212. Zhuangzi. 5 Units.
The *Zhuangzi* (Chuang Tzu) in its original setting and as understood by its spiritual progeny. Limited enrollment; consent of instructor required.

RELIGST 216. Japanese Buddhism. 4 Units.
Focus on the religious lives of lay people in medieval Japan, as evidenced in collections of Buddhist stories (setsuwashu), narrative picture scrolls (emaki), and related historical materials. All readings are in English, but the instructor will also work with students interested in reading the original Japanese.

RELIGST 217. The Lotus Sutra in Japanese Buddhism. 3-5 Units.
This seminar explores the influence of the Lotus Sutra, one of the most important Mahayana scriptures, in Japan. We will study how different Japanese Buddhist schools have interpreted this sutra and analyze a wide range of religious practices, art works, and literature associated with this text. All readings will be in English. Prerequisites: Solid foundation in either Buddhist studies or East Asian Studies. You must have taken at least one other course in Buddhist Studies. NOTE: Undergraduates must enroll for 5 units; graduate students can enroll for 3-5 units.
Same as: RELIGST 317

RELIGST 217X. Minorities In Medieval Europe. 5 Units.
This course examines attitudes towards outsider groups within medieval society and the treatment of these groups by medieval Christians. Heretics, Jews, Muslims, homosexuals, prostitutes and usurers occupied ambivalent and at time dangerous positions within a society that increasingly defined itself as Christian. Differences in the treatment of these various 'outcast' groups, their depiction in art, their legal segregation, and their presumed association with demonic activity are addressed through discussion, and readings from primary and secondary source material.
Same as: HISTORY 217S

RELIGST 218. Islam, Race and Revolution: A Pan-American Approach. 3-5 Units.
Taking a pan-American approach to the study of religious traditions, this upper-level course traces the history of the critical intersection between race, religion and revolution among Muslims from the turn of the nineteenth century until the present day. Moving from the Atlantic Revolutions of the late eighteenth and early nineteenth centuries, to the United States, to the decolonizing Third World, and then finally to the contemporary Middle East, this class will emphasize that Islam and race together have been used by many groups in order to challenge existing power structures, agitate for change, and more than occasionally, transform the social, cultural and governmental structures comprising their worlds. Moreover, although this class is concentrated upon religious formations in the Americas, students will explore global events throughout the Muslim world in order to examine how global politics contribute to religious formations, solidarities and identities. At the conclusion of this course, students will be expected to write a 10-15 page research paper, and a topic will be chosen in consultation with the instructor. Students will also be expected to write weekly reflection papers, which will serve to facilitate class discussion. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: AMSTUD 218, CSRE 218, RELIGST 318

RELIGST 221. The Talmud: Research Methods and Tools. 3-5 Units.
This seminar introduces students to the academic study of the Talmud and related classical rabbinic texts from late antiquity. Students will engage the major philological and historical questions concerning the making of the Talmud, along with textual tools to help them decode the texts. Prerequisite: Hebrew.
Same as: RELIGST 321

RELIGST 221B. What is Talmud?. 5 Units.
In what sense can Talmud be studied as literature? Which voices can be identified? Concepts of author, editor, or redactor. The basic textual units of Talmud: sugya, chapter, and tractate. The sugya as literary genre. The aesthetic of talmudic dialectics.nnPrerequisite: reading Hebrew with some understanding of biblical Hebrew.
Same as: RELIGST 321B

RELIGST 221C. Aramaic Texts. 1-5 Unit.
Readings in Aramaic/Syriac with special focus on grammar and syntax of ancient texts.
Same as: JEWISHST 221C, JEWISHST 321C, RELIGST 321C

RELIGST 221D. Readings in Syriac Literature. 2-5 Units.
In recent years, there has been growing interest in the works of Syriac speaking Christians in antiquity and beyond. This course offers an introduction to the Syriac language, including its script, vocabulary and grammar, and a chance to read from a selection of foundational Syriac Christian texts.
Same as: JEWISHST 221D, JEWISHST 321D, RELIGST 321D

RELIGST 222B. Sufism Seminar. 3-5 Units.
Sufism through original texts and specialized scholarship. Prerequisite: ability to read at least one major language of Islamic religious literature (Arabic, Persian, Turkish, Urdu).
Same as: RELIGST 322B

RELIGST 223. Advanced Readings in Jewish Mysticism. 1-2 Unit.
This seminar allows students and faculty to explore foundational concepts of Jewish mystical literature through immersion in primary sources. Together we will examine these texts from a wide range of philosophical, historical and theological perspectives, seeking to decode their historical importance and understand their contemporary significance. Ability to read sources in Hebrew is strongly recommended, and permission of the instructor is required. May be repeated for credit.

RELIGST 224. Classical Islamic Texts. 3 Units.
The course is based on readings in primary Arabic sources in the key fields of pre-modern Islamic scholarship. The list of readings and topics will depend on the interests of the students. In addition to focusing on the language, contents, and context of the texts covered, the course introduces genre-specific historical research methods. The reading selections may be derived from Qur¿anic interpretation (tafsir), the hadith literature, adab, biographical dictionaries, fiqh, ta'rikh, kalam, or Sufism. Reading knowledge of Arabic is required.
Same as: RELIGST 324

RELIGST 226. The Bible in Medieval and Early Modern Europe. 3-5 Units.
This seminar investigates the central role of the Christian Bible in European religion, culture, and society from ca. 1000-1700 CE. In the medieval and early modern periods, the Bible not only shaped religious attitudes, practices, and institutions, but also exercised profound influence over learning and education, politics, law, social relations, art, literature, and music. Students will obtain an overview of the role of the scripture as both a religious text and a cultural artifact, exploring the history of biblical interpretation in commentaries and sermons; textual criticism, study of biblical languages, and the translation of scripture; manufacturing of Bibles in manuscript and in print; the commercial dimensions of Bible production; illustrated Bibles, biblical maps, and biblically-inspired artwork; religious uses of scripture in monastic houses, public worship, and domestic settings; biblical foundations for political and legal traditions. Students will also have the opportunity to suggest topics consonant with their own fields of interest and use the seminar to workshop on-going projects related to the Bible in this period. All of the readings will be in English, though students with the ability to read German, French, Spanish, Italian, Latin, Greek, or Hebrew will be encouraged to pursue projects that utilize their linguistic skills. Students in residence will have the opportunity to utilize materials in Special Collections; abundant digital resources will be available to students not on campus. Prerequisite: Permission of the instructor. Send an email to pitkin@stanford.edu explaining your interests and background. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: RELIGST 326

RELIGST 227. The Qur'an. 5 Units.
Early history, themes, structure, chronology, and premodern interpretation. Relative chronology of passages.
Same as: RELIGST 327

RELIGST 230X. Religion, Radicalization and Media in Africa since 1945. 4-5 Units.
What are the paths to religious radicalization, and what role have media- new and old- played in these conversion journeys? We examine how Pentecostal Christians and Reformist Muslims in countries such as South Africa, Nigeria, Sudan, and Ethiopia have used multiple media forms- newspapers, cell phones, TV, radio, and the internet- to gain new converts, contest the authority of colonial and post-colonial states, construct transnational communities, and position themselves as key political players.
Same as: AFRICAST 248, AFRICAST 348, HISTORY 248, HISTORY 348, RELIGST 330X

RELIGST 231. European Reformations. 3-5 Units.
Readings in and discussion of theological and social aspects of sixteenth century reformations: Luther, Radical Reform, Calvin, and Council of Trent, missionary expansion, religious conflict, creative and artistic expressions. Texts include primary sources and secondary scholarly essays and monographs.
Same as: HISTORY 231G, HISTORY 331G, RELIGST 331

RELIGST 231X. Learning Religion: How People Acquire Religious Commitments. 4 Units.
This course will examine how people learn religion outside of school, and in conversation with popular cultural texts and practices. Taking a broad social-constructivist approach to the variety of ways people learn, this course will explore how people assemble ideas about faith, identity, community, and practice, and how those ideas inform individual, communal and global notions of religion. Much of this work takes place in formal educational environments including missionary and parochial schools, Muslim madrasas or Jewish yeshivot. However, even more takes place outside of school, as people develop skills and strategies in conversation with broader social trends. This course takes an interdisciplinary approach to questions that lie at the intersection of religion, popular culture, and education. May be repeat for credit.
Same as: AMSTUD 231X, EDUC 231, JEWISHST 291X

RELIGST 232. Buddhist Meditation: Ancient and Modern. 3-5 Units.
An exploration of the theory and practice of Buddhist meditation from the time of the Buddha to the modern mindfulness boom, with attention to the wide range of techniques developed and their diverse interpretation. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: RELIGST 332

RELIGST 234. Islam and Material Culture. 3-5 Units.
Material objects are essential elements of Islamic cultures and practices. This course examines Islamic art, sculpture, architecture, devotional objects, and clothing, as well as basic concepts in studying religion and material culture.
Same as: RELIGST 334

RELIGST 234X. Church, State, & Schools: Issues in Education & Religion. 4 Units.
This course will examine interactions between religion and education, focusing on both formal and experiential sites in which people and communities explore, articulate, encounter, and perform religious ideologies and identities. The class will focus on different religious traditions and their encounters the institutions and structures of education in American culture, both in the United States and as it manifests in American culture transnationally.
Same as: AMSTUD 293, EDUC 293

RELIGST 239. Luther and the Reform of Western Christianity. 3-5 Units.
Luther's theology, ethics, biblical interpretation, and social reforms and their significance for the remaking of Western Christianity. Readings include Luther's own writings and secondary sources about Luther and his world.
Same as: RELIGST 339

RELIGST 245. Religion, Reason, and Romanticism. 5 Units.
The late 18th-century European cultural shift from rationalist to romantic modes of thought and sensibility. Debates about religion as catalysts for the new *Zeitgeist.* Readings include: the Jewish metaphysician, Mendelssohn; the dramatist, Lessing; the philosopher of language and history, Herder; the critical idealist, Kant; and the transcendental idealist, Fichte.

RELIGST 246. Constructing Race and Religion in America. 4-5 Units.
This seminar focuses on the interrelationships between social constructions of race and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources and at the historical development of ideas and practices over time.
Same as: AFRICAAM 236, AMSTUD 246, CSRE 246, HISTORY 256G, HISTORY 356G, RELIGST 346

RELIGST 250. Classics of Indian Buddhism. 4 Units.
Texts in English translation includING discourses (sutras), philosophical treatises, commentaries, didactic epistles, hymns, biographies, and narratives.

RELIGST 252. Hearts and Diamonds: The Lives of Buddhist Sacred Texts. 4 Units.
An exploration of two key Mahayana Buddhist scriptures (the Heart & Diamond Sutras) and their histories, looking at what they say and how they have been used, from the first millennium to the present day.

RELIGST 253. Recent Research on Japanese Buddhism. 3-5 Units.
Readings in recent English-language scholarship on Japanese Buddhism. nUndergraduates must enroll for 5 units; graduate students can enroll for 3-5 units. Prerequisite: Solid foundation in either Buddhist studies or East Asian Studies (5 units for 253, 3-5 units for 353) May be repeat for credit.
Same as: RELIGST 353

RELIGST 254. Recent Contributions to Buddhist Studies. 3-5 Units.
This reading intensive course will examine nine areas in recent work in Buddhist studies, including ethnography, archaeology, monasticism, the study of "experience," and gender. May be repeated for credit.
Same as: RELIGST 354

RELIGST 255. Religion and Power in the Making of Modern South Asia. 3-5 Units.
This course examines the diverse ways that religious traditions have been involved in the brokering of power in South Asia from the late seventeenth century to the present day. We will examine the intersection of religion and power in different arenas, including historical memory, religious festivals, language politics, and violent actions. At the core of our inquiry is how religion is invoked in political contexts (and vice-versa), public displays of religiosity, and the complex dynamics of religion and the state. Among other issues, we will particularly engage with questions of religious identity, knowledge, and violence. Undergraduates must enroll in RELIGST 255 for 5 units. Graduate students must enroll RELIGST 355 for 3-5 units. HISTORY297F must be taken for 4-5 units.
Same as: HISTORY 297F, RELIGST 355

RELIGST 256. Readings in Buddhist Tantra: Wheel of Time. 3-5 Units.
The emergence of tantric scriptures in medieval India marked a major turning point in the development of religious thought and practice throughout Asia. These scriptures introduced myths, rituals, contemplative techniques, and artistic expressions that transformed the religious traditions of India¿from Hinduism to Jainism and Buddhism. Tantric forms of worship subsequently shaped the religious traditions of Southeast Asia, China, Korea, Japan, Tibet, Mongolia, and everywhere else Indian religions spread. This seminar examines the history of Buddhist tantra through English translation of one of the most popular collections of tantric literature in the history of Buddhism: the Wheel of Time. The Wheel of Time blends models of the cosmos, time, embodiment, and aesthetics with rich contemplative and ritual techniques. Since its origin, the Wheel of Time and its associated body of texts and practices has become immensely popular throughout the Tibetan Buddhist world. The influence of the Wheel of Time continues to this day, as the current Dalai Lama frequently offers the Wheel of Time initiation as a blessing for world peace, and scholars and practitioners continue to study its literature and practice its contemplative techniques. Undergraduates are expected to have at least one prior course in Buddhism or the consent of the instructor. Undergraduates register for 256 for 5 units. Graduate students register for 356 for 3-5 units.
Same as: RELIGST 356

RELIGST 258. Readings in Japanese Buddhist Texts. 3-5 Units.
In this course, we will read premodern Japanese Buddhist texts.
Prerequisite: Chinese and/or Japanese.
Same as: RELIGST 358

RELIGST 261A. Belief. 5 Units.
The post-Chritain (or post-modern) age has given rise to new forms of faith, ranging from secular humanism and cultural atheism to rediscovery of the transcendent in the cosmos and quantum mechanics. However, unlike the era of "Christendom," belief is no longer necessarily hinged to faith. This course explores the origins of this phenomenon in Thomas Aquinas, and then newer philosophical approaches to understanding belief, ranging from Charles Taylor and Talal Asad and their theories of the secular, to Catherine Bell and the role of practice in believing. Finally, we turn to the work of three contemporary theorists of religious belief: Gianni Vattimo, Jean-Luc Marion, and Richard Kearney, who endeavor to cast believing outside established theological categories, yet still speak of "god.".
Same as: in a post-Christian Age

RELIGST 262. Sex and the Early Church. 4 Units.
Sex and the Early Church examines the ways first- through sixth-century Christians addressed questions regarding human sexuality. We will pay particular attention to the relationship between sexuality and issues of gender, culture, power, and resistance. We will read a Roman gynecological manual, an ancient dating guide, the world's first harlequin romance novels, ancient pornography, early Christian martyrdom accounts, stories of female and male saints, instructions for how to best battle demons, visionary accounts, and monastic rules. These will be supplemented by modern scholarship in classics, early Christian studies, gender studies, queer studies, and the history of sexuality. The purpose of our exploration is not simply to better understand ancient views of gender and sexuality. Rather, this investigation of a society whose sexual system often seems so surprising aims to denaturalize many of our own assumptions concerning gender and sexuality. In the process, we will also examine the ways these first centuries of what eventually became the world's largest religious tradition has profoundly affected the sexual norms of our own time. The seminar assumes no prior knowledge of Judaism, Christianity, the bible, or ancient history.
Same as: CLASSICS 262, FEMGEN 262, RELIGST 362

RELIGST 264. Hindu Tantra. 4 Units.
What is Tantra? Tantric forms of ritual and philosophy have been integral to the practice of Hinduism for most of its history. Tantra has provided initiates with a spiritual technology for embodying the divine and transcending the cycle of rebirth; on a social and political level, Tantra has mediated the institutions of Hindu kingship and appealed to a diverse population of initiates. This course covers a number of influential and well-documented Hindu tantric traditions, exploring several prominent features of Tantric religion as they develop historically, including: tantric ritual practice (core technologies of the subtle body, mantras, ma, alas, etc., along with the more notorious elements of sex and transgression), theology and philosophical speculation, as well as Tantra's relationship to the outside world and state power.
Same as: RELIGST 364

RELIGST 269. Plotinus and Augustine. 3-5 Units.
Professor's permission required to register. A reading course focused on the influence of Plotinus Enneads on Augustine's Confessions, early dialogues, and sections on reason and memory in the De trinitate. Proficiency in Greek and Latin will be helpful but is not required. Professor's prior permission required, interested students should contact the professor about course schedule: tsheehan@stanford.edu . Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: PHIL 229, PHIL 329, RELIGST 369

RELIGST 270. Comparative Religious Ethics. 4 Units.
The difference that the word religious makes in religious ethics and how it affects issues of genre. Theoretical analyses with examples from W. and E. Asia. Prerequisite: consent of instructor.
Same as: RELIGST 370

RELIGST 270X. Religion and Science in the Amazon and Elsewhere. 5 Units.
The conversion of native peoples to Christianity, especially Evangelical Christianity, is today a global phenomenon. This course looks to understand the reasons for religious conversion and its consequence in the everyday and ritual practices of Amazonians and their traditional practice of shamanism. We then turn to a question seldom addressed in the literature on conversion: the relationship between religion and science. We will explore the way conversion to Christianity produces changes in conceptions of the world and the person similar to those produced by access to scientific knowledge, which occurs primarily through schooling.
Same as: ANTHRO 181, ANTHRO 281, RELIGST 370X

RELIGST 271A. Dante's Spiritual Vision. 4-5 Units.
Poetry, ethics, and theology in Dante's Divine Comedy. Supplementary readings from classical authors such as St. Thomas Aquinas, and from modern writers, such as Jorge Borges. Fulfills capstone seminar requirement for the Philosophy and Literature tracks. Students may take 271A without taking 271B. Consent of the instructor required.

RELIGST 271B. Dante's Spiritual Vision. 4-5 Units.
Poetry, ethics, and theology in Dante's Divine Comedy. Supplementary readings from classical authors such as St. Thomas, and from modern writers, such as Jorge Borges. Fulfills capstone seminar requirement for the Philosophy and Literature tracks. Prerequisite: 271A.

RELIGST 273. Historicism and Its Problems: Ernst Troeltsch, the Study of Religion, and the Crisis of Historicism. 3-5 Units.
Examination of the early twentieth-century historian of religion, philosopher of culture, sociologist of religion, Christian theologian, and philosopher of history, Ernst Troeltsch, within the context of the late nineteenth-century "crisis of historicism," i.e., the historicization and relativization of religious, ethical, social, and political norms. Attention to seminal theorists of history (Herder, Kant, Ranke, Hegel, Nietzsche) in the post-Enlightenment German intellectual tradition and the attempts of Christian and Jewish thinkers in the Weimar era (Barth, Gogarten, Rosenzweig, L. Strauss) to "overcome" the crisis wrought by a radically historical approach to human culture.
Same as: RELIGST 373

RELIGST 274. From Kant to Kierkegaard. 3-5 Units.
(Graduate students register for 374. Undergrads register for 274 for 5 units.) The philosophy of religion emerged from the European Enlightenment as a new genre of reflection on religion distinct from both dogmatic theology and rationalist dreams of a "natural" religion of reason. Neither beholden to pre-critical tradition, nor dismissive of what Thomas Nagel has termed "the religious attitude," this new, ostensibly secular, genre of religious thought sought to rethink the meaning of Christianity at a time of immense philosophical ferment. The main currents of religious thought in Germany from Kant's critical philosophy to Kierkegaard's revolt against Hegelianism. Emphasis on the theories of religion, the epistemological status of religious discourse, the role of history (especially the figure of Jesus), and the problem of alienation/reconciliation in seminal modern thinkers: Kant, Schleiermacher, Hegel, and Kierkegaard.
Same as: RELIGST 374

RELIGST 275. Kierkegaard. 3-5 Units.
(Graduate students register for 375.) Close reading of Kierkegaard's magnum opus, *Concluding Unscientific Postscript to Philosophical Fragments*, in its early 19th-century context.
Same as: RELIGST 375

RELIGST 277. The Later Heidegger: Art, Poetry, Language. 3 Units.
Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from "On the Origin of the Work of Art" and Elucidations of Holderlin's Poetry.
Same as: PHIL 234B, RELIGST 377

RELIGST 278. Religion and James Joyce's Ulysses. 3-5 Units.
Through a close reading of the novel and with the help of the vast secondary literature the course analyzes the significant roles that religion, specifically Catholicism and Judaism, plays in Joyce's modernist masterpiece--from Stephen Dedalus' sophisticated knowledge and bitter rejection of Irish Catholicism, through Leopold Bloom's ambivalent rapport with Judaism, to Molly Bloom's climatic celebration of a feminist liturgy of nature. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: RELIGST 378

RELIGST 279. After God: Why religion at all?. 4 Units.
God is dead, but where does religion come from? The end of the quest for God in twentieth century philosophy. Robert Bellah's Religion in Human Evolution plus seminal works of Heidegger, including Being and Time, 'What Is Metaphysics?' 'Nietzsche's Saying `God is Dead.' 'N.B.: Class size limited. Apply early at tsheehan@stanford.edu.
Same as: RELIGST 379

RELIGST 279X. American Jewish History: Learning to be Jewish in America. 2-4 Units.
This course will be a seminar in American Jewish History through the lens of education. It will address both the relationship between Jews and American educational systems, as well as the history of Jewish education in America. Plotting the course along these two axes will provide a productive matrix for a focused examination of the American Jewish experience. History students must take course for at least 3 units.
Same as: AMSTUD 279X, EDUC 279, HISTORY 288D, JEWISHST 297X

RELIGST 280. Schleiermacher: Reconstructing Religion. 3-5 Units.
Idealist philosopher, Moravian pietist, early German Romantic, co-founder of the University of Berlin, head preacher at Trinity Church, translator of Plato's works, Hegel's opponent, pioneer in modern hermeneutics, father of modern theology. Schleiermacher's controversial reconception of religion and theology in its philosophical context.
Same as: RELIGST 380

RELIGST 281. Asian Religions in America; Asian American Religions. 4 Units.
This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.
Same as: AMSTUD 281, ASNAMST 281, RELIGST 381

RELIGST 283. Religion and Literature. 4 Units.
A wide-ranging exploration of religious themes in literary works. Readings will include prose and poetry stemming from various world regions, time periods, and religious traditions.

RELIGST 283A. Modern Notions of 'The Holy'. 3-5 Units.
This course explores the question, "What may we call 'holy' in the modern era?" by focusing on key writers and thinkers, who in various ways, and in different times raised this question: Friedrich Hölderlin, Hermann Cohen, Franz Kafka, Martin Heidegger, Martin Buber, Franz Rosenzweig, Else Lasker-Schüler, Walter Benjamin, Ernst Bloch, Hannah Arendt, Margarete Susman, Nelly Sachs, Paul Celan, and Judith Butler.nnThis course will be synchronous-conducted, but will also use an innovative, Stanford-developed, on-line platform called Poetic Thinking. Poetic Thinking allows students to share both their scholarly and creative work with each other. Based on the newest technology and beautifully designed, it will greatly enhance their course experience.
Same as: COMPLIT 283A, COMPLIT 383A, GERMAN 283A, GERMAN 383A, RELIGST 383A

RELIGST 286. Goodness and the Literary Imagination. 5 Units.
In her Ingersoll lecture at Harvard Divinity School, Toni Morrison probed the issue of literary presentations of goodness. We will begin with that very rich lecture, and a collection of essays by scholars of religion and religious leaders exploring that lecture in the context of Morrison's own work. We'll then discuss a novel by Morrison, James Baldwin's The Fire Next Time, at least one story by Flannery O'Connor, and related (short) works of literature and commentary. The inquiry will involve both conceptual and literary analysis, all of it focused on the character and presentation of goodness. (Limited enrollment, consent of instructor required.).

RELIGST 290. Majors' Seminar: Theories of Religion. 5 Units.
Required of all majors and combined majors. The study of religion reflects upon itself. Representative modern and contemporary attempts to "theorize," and thereby understand, the phenomena of religion in anthropology, psychology, sociology, cultural studies, and philosophy. WIM.

RELIGST 297. Senior Essay/Honors Thesis Research. 3-5 Units.
Guided by faculty adviser. May be repeated for credit. Prerequisite: consent of instructor and department.

RELIGST 298. Senior Colloquium. 4 Units.
For Religious Studies majors writing the senior essay or honors thesis. Students present work in progress, and read and respond to others. Approaches to research and writing in the humanities.

RELIGST 302. Islamic Studies Proseminar. 1-5 Unit.
Research methods and materials for the study of Islam. May be repeated for credit.

RELIGST 302A. Monsters, Ghosts and Other Fantastic Beings: The Supernatural and the Mysterious in Japanese Culture. 4 Units.
Examine the development of strange and fantastic creatures in Japan. Mysterious creatures in folklore, literature, art, manga and movies. Through them see how the concept of the strange or mysterious have evolved and how they inform Japanese modernity.
Same as: RELIGST 202A

RELIGST 303. Myth, Place, and Ritual in the Study of Religion. 3-5 Units.
Sources include: ethnographic texts and theoretical writings; the approaches of Charles Long, Jonathan Z. Smith, Victor Turner, Michael D. Jackson, and Wendy Doniger; and lived experiences as recounted in Judith Sherman's *Say the Name: A Survivor's Tale in Prose and Poetry,* Jackson's *At Home in the World,* Marie Cardinal's *The Words to Say It,* and John Phillip Santos*¿ Places Left Unfinished at the Time of Creation*.
Same as: RELIGST 203

RELIGST 304A. Theories and Methods. 4 Units.
Required of graduate students in Religious Studies. Approaches to the study of religion. Prerequisite: consent of instructor. May be repeated for credit.

RELIGST 304B. Theories and Methods. 4 Units.
Required of graduate students in Religious Studies. Approaches to the study of religion. Prerequisite: consent of instructor. May be repeat for credit.

RELIGST 308. Medieval Japanese Buddhism. 3-5 Units.
Japanese religion and culture, including Buddhism, Shinto, popular religion, and new religions, through the medium of film.

RELIGST 308C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.
Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.nnNOTE: This course is only offered on the graduate level and undergraduates would be admitted by request (sending a letter expressing interest to the instructor and specifying what other courses in music or art history has prepared them to tackle this subject) and special permission only.
Same as: ARTHIST 408C, MUSIC 408C, REES 408C

RELIGST 310. Translating Religion. 3-5 Units.
What happens to Buddhism when the Buddha speaks Chinese? Is the Qur'an still the Qur'an in English? What did Martin Luther do for the German language? We try to answer these and other such questions in this course, which explores the translation of sacred scripture and other religious texts from the earliest times to the present day. Taking a global perspective, and looking at Buddhism, Christianity, Hinduism, Islam and Judaism, the course is designed to introduce students to the theory and practice of translation and get them thinking about its broader cultural, aesthetic and political significance. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: RELIGST 210

RELIGST 312. Buddhist Studies Proseminar. 1-5 Unit.
Research methods and materials for the study of Buddhism. May be repeated for credit. Prerequisite: reading knowledge of Chinese or Japanese.

RELIGST 313X. The Education of American Jews. 4 Units.
This course will take an interdisciplinary approach to the question of how American Jews negotiate the desire to retain a unique ethnic sensibility without excluding themselves from American culture more broadly. Students will examine the various ways in which people debate, deliberate, and determine what it means to be an "American Jew". This includes an investigation of how American Jewish relationships to formal and informal educational encounters through school, popular culture, religious ritual, and politics.
Same as: EDUC 313, JEWISHST 393X

RELIGST 314. Seminar in Buddhist Historiography. 3-5 Units.
The focus of this course is on approaches to the past from within Buddhist traditions rather than modern academic writing on Buddhist history. We will briefly examine research on religious conceptions of the past in other religions before turning to the full range of Buddhist historiography, including writings from India, Ceylon, China, Tibet and Japan. The first half of the class will be dedicated to reading and discussing scholarship as well as some primary sources in translation. In the second half of the course, students will develop projects based on their interests, culminating in presentations and a research paper.

RELIGST 315A. Chinese Buddhism. 3-5 Units.
This year the seminar will focus on the twentieth century, perhaps the most vibrant and certainly the most tumultuous period in two thousand years of Chinese Buddhist history. After the collapse of the Qing dynasty in 1911, leading Buddhists proposed a series of radical reforms to the sangha in a frantic effort to adapt to the modern era. External changes forced creative Buddhist responses to imperialism, democratic government, communism, revolution, war and famine. By the end of the Cultural Revolution in the 1970s, it seemed as if reform had come too late, the persecution had been too brutal and too thorough, for Buddhist institutions and ideas to ever play a significant role in China again. But from the 1980s on, Buddhist rituals and practices resurfaced, at first through Buddhist organizations in Taiwan and then, increasingly, on the Mainland. By the end of the century, Buddhist leaders were posed to play a more prominent role than they had for a hundred years. In this course, we will focus on biographies and autobiographies by and about monks, nuns, laymen and laywomen in an attempt to work out from individuals to the wider trends that shaped Chinese Buddhism in the twentieth century. There is now enough material in English for a seminar on the subject, but students who can read Chinese will be encouraged to draw on the growing body of relevant material in Chinese as well.

RELIGST 316. Tantric Buddhism. 4 Units.
This course explores many of the key issues in the study of tantric Buddhism, including aspects of its historical development, ritual ideology, visual and material culture, notions of identity and embodiment, and variations across different times and cultures. Focusing on the traditions of India, Nepal, and Tibet, students will read primary texts in translation, debate secondary literature, view artworks in museum galleries, and develop final projects based on their research interests. Course readings are in English.

RELIGST 317. The Lotus Sutra in Japanese Buddhism. 3-5 Units.
This seminar explores the influence of the Lotus Sutra, one of the most important Mahayana scriptures, in Japan. We will study how different Japanese Buddhist schools have interpreted this sutra and analyze a wide range of religious practices, art works, and literature associated with this text. All readings will be in English. Prerequisites: Solid foundation in either Buddhist studies or East Asian Studies. You must have taken at least one other course in Buddhist Studies. NOTE: Undergraduates must enroll for 5 units; graduate students can enroll for 3-5 units.
Same as: RELIGST 217

RELIGST 318. Islam, Race and Revolution: A Pan-American Approach. 3-5 Units.
Taking a pan-American approach to the study of religious traditions, this upper-level course traces the history of the critical intersection between race, religion and revolution among Muslims from the turn of the nineteenth century until the present day. Moving from the Atlantic Revolutions of the late eighteenth and early nineteenth centuries, to the United States, to the decolonizing Third World, and then finally to the contemporary Middle East, this class will emphasize that Islam and race together have been used by many groups in order to challenge existing power structures, agitate for change, and more than occasionally, transform the social, cultural and governmental structures comprising their worlds. Moreover, although this class is concentrated upon religious formations in the Americas, students will explore global events throughout the Muslim world in order to examine how global politics contribute to religious formations, solidarities and identities. At the conclusion of this course, students will be expected to write a 10-15 page research paper, and a topic will be chosen in consultation with the instructor. Students will also be expected to write weekly reflection papers, which will serve to facilitate class discussion. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: AMSTUD 218, CSRE 218, RELIGST 218

RELIGST 319. Readings in Hindu Texts. 3-5 Units.
Readings in Hindu texts in Sanskrit. Texts will be selected based on student interest. Prerequisite: Sanskrit.

RELIGST 320. Religion and Literature. 4 Units.
grad seminar in religion and literature-description to follow.

RELIGST 321. The Talmud: Research Methods and Tools. 3-5 Units.
This seminar introduces students to the academic study of the Talmud and related classical rabbinic texts from late antiquity. Students will engage the major philological and historical questions concerning the making of the Talmud, along with textual tools to help them decode the texts. Prerequisite: Hebrew.
Same as: RELIGST 221

RELIGST 321B. What is Talmud?. 5 Units.
In what sense can Talmud be studied as literature? Which voices can be identified? Concepts of author, editor, or redactor. The basic textual units of Talmud: sugya, chapter, and tractate. The sugya as literary genre. The aesthetic of talmudic dialectics.nnPrerequisite: reading Hebrew with some understanding of biblical Hebrew.
Same as: RELIGST 221B

RELIGST 321C. Aramaic Texts. 1-5 Unit.
Readings in Aramaic/Syriac with special focus on grammar and syntax of ancient texts.
Same as: JEWISHST 221C, JEWISHST 321C, RELIGST 221C

RELIGST 321D. Readings in Syriac Literature. 2-5 Units.
In recent years, there has been growing interest in the works of Syriac speaking Christians in antiquity and beyond. This course offers an introduction to the Syriac language, including its script, vocabulary and grammar, and a chance to read from a selection of foundational Syriac Christian texts.
Same as: JEWISHST 221D, JEWISHST 321D, RELIGST 221D

RELIGST 322B. Sufism Seminar. 3-5 Units.
Sufism through original texts and specialized scholarship. Prerequisite: ability to read at least one major language of Islamic religious literature (Arabic, Persian, Turkish, Urdu).
Same as: RELIGST 222B

RELIGST 324. Classical Islamic Texts. 3 Units.
The course is based on readings in primary Arabic sources in the key fields of pre-modern Islamic scholarship. The list of readings and topics will depend on the interests of the students. In addition to focusing on the language, contents, and context of the texts covered, the course introduces genre-specific historical research methods. The reading selections may be derived from Qur¿anic interpretation (tafsir), the hadith literature, adab, biographical dictionaries, fiqh, ta'rikh, kalam, or Sufism. Reading knowledge of Arabic is required.
Same as: RELIGST 224

RELIGST 325. Syriac Christianity. 3-5 Units.
In the first millennium, Christianity thrived throughout the Middle East. Because Roman Catholic and Protestant churches later declared many of these Christians to be heretics, their stories have often been excluded from the history of Christianity. This course challenges the assumption of Christianity as a "Western" religion and asks how our understanding of global Christianity changes when we include the history and perspective of Eastern Christians writing in the Aramaic dialect of Syriac. We will read in English translation such sources as the tale of a transvestite nun, a letter allegedly written by Jesus, ancient Christian hymns, the story of a demon-possessed monastery, and the first Christian writings on Islam. Although primarily designed for Ph.D. candidates who have interests in late antiquity or the middle ages, this seminar is also appropriate for graduate students working in other time periods; it does not assume previous background in Syriac or in Syriac Christianity.

RELIGST 326. The Bible in Medieval and Early Modern Europe. 3-5 Units.
This seminar investigates the central role of the Christian Bible in European religion, culture, and society from ca. 1000-1700 CE. In the medieval and early modern periods, the Bible not only shaped religious attitudes, practices, and institutions, but also exercised profound influence over learning and education, politics, law, social relations, art, literature, and music. Students will obtain an overview of the role of the scripture as both a religious text and a cultural artifact, exploring the history of biblical interpretation in commentaries and sermons; textual criticism, study of biblical languages, and the translation of scripture; manufacturing of Bibles in manuscript and in print; the commercial dimensions of Bible production; illustrated Bibles, biblical maps, and biblically-inspired artwork; religious uses of scripture in monastic houses, public worship, and domestic settings; biblical foundations for political and legal traditions. Students will also have the opportunity to suggest topics consonant with their own fields of interest and use the seminar to workshop on-going projects related to the Bible in this period. All of the readings will be in English, though students with the ability to read German, French, Spanish, Italian, Latin, Greek, or Hebrew will be encouraged to pursue projects that utilize their linguistic skills. Students in residence will have the opportunity to utilize materials in Special Collections; abundant digital resources will be available to students not on campus. Prerequisite: Permission of the instructor. Send an email to pitkin@stanford.edu explaining your interests and background. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: RELIGST 226

RELIGST 327. The Qur'an. 5 Units.
Early history, themes, structure, chronology, and premodern interpretation. Relative chronology of passages.
Same as: RELIGST 227

RELIGST 329X. Advanced Paleography. 5 Units.
This course will train students in the transcription and editing of original Medieval and Early Modern textual materials from c. 1000 to 1600, written principally in Latin and English (but other European languages are possible, too). Students will hone their archival skills, learning how to describe, read and present a range of manuscripts and single-leaf documents, before turning their hand to critical interpretation and editing. Students, who must already have experience of working with early archival materials, will focus on the full publication of one individual fragment or document as formal assessment.
Same as: CLASSICS 216, HISTORY 315

RELIGST 330X. Religion, Radicalization and Media in Africa since 1945. 4-5 Units.
What are the paths to religious radicalization, and what role have media- new and old- played in these conversion journeys? We examine how Pentecostal Christians and Reformist Muslims in countries such as South Africa, Nigeria, Sudan, and Ethiopia have used multiple media forms- newspapers, cell phones, TV, radio, and the internet- to gain new converts, contest the authority of colonial and post-colonial states, construct transnational communities, and position themselves as key political players.
Same as: AFRICAST 248, AFRICAST 348, HISTORY 248, HISTORY 348, RELIGST 230X

RELIGST 331. European Reformations. 3-5 Units.
Readings in and discussion of theological and social aspects of sixteenth century reformations: Luther, Radical Reform, Calvin, and Council of Trent, missionary expansion, religious conflict, creative and artistic expressions. Texts include primary sources and secondary scholarly essays and monographs.
Same as: HISTORY 231G, HISTORY 331G, RELIGST 231

RELIGST 332. Buddhist Meditation: Ancient and Modern. 3-5 Units.
An exploration of the theory and practice of Buddhist meditation from the time of the Buddha to the modern mindfulness boom, with attention to the wide range of techniques developed and their diverse interpretation. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: RELIGST 232

RELIGST 333. Comparative Mysticism. 5 Units.
This graduate seminar will explore the mystical writings of the major religious traditions represented in our department: Judaism, Christianity, Islam, Buddhism and Hinduism. It will address major issues in the study of mysticism, exposing students to a wide variety of religious thinkers and literary traditions, while simultaneously interrogating the usefulness of the concept of "mysticism" as a framework in the study of religion. We will consider various paradigms of method (comparative, constructivist, essentialist), and examine the texts with an eye to historical and social context together with the intellectual traditions that they represent. Preserving the distinctiveness of each religious tradition, the class will be structured as a series of five units around these traditions, but our eyes will be continuously trained upon shared topics or themes, including: language; gender; notions of sainthood; scripture and exegesis; autobiography and writing; mysticism and philosophy; poetry and translation; mysticism and social formation; the interface of law, devotion, and spirit; science and mysticism; perceptions of inter-religious influence; mysticism and the modern/ post-modern world. Advanced reading knowledge of at least one language of primary-source scholarship in one of the above traditions is required.

RELIGST 333X. Workshop in Religion and Education. 1 Unit.
This 1-unit workshop will explore the intersection of religion and education across a variety of learning environments and demographics. It invites an ongoing conversation of the relationships between schools, congregations, religious bodies, learners, seekers, philanthropy, and public education. Advanced students and visiting scholars will have an opportunity to present their work for discussion. May be repeat for credit.
Same as: EDUC 412

RELIGST 334. Islam and Material Culture. 3-5 Units.
Material objects are essential elements of Islamic cultures and practices. This course examines Islamic art, sculpture, architecture, devotional objects, and clothing, as well as basic concepts in studying religion and material culture.
Same as: RELIGST 234

RELIGST 336X. Interfaith Dialogue on Campus: Religion, Diversity, and Higher Education. 2-5 Units.
How are we to talk across religious and spiritual differences? What is the purpose of such dialogues? What do we hope to gain from them? How do such dialogues take shape on college campuses, and what do they indicate about how students cultivate spiritual, political, and civic commitments? This course will explore these questions and others through seminar discussions, fieldwork, and writing that will examine the concepts, assumptions, and principles that shape how we think about interfaith dialogue.
Same as: AMSTUD 236, CSRE 136A, EDUC 436

RELIGST 338. Seminar in Spiritualism and the Occult. 3-5 Units.
T.W. Stanford, Leland Jr.'s uncle, left money for founding psychic studies at Stanford. The Stanford's were like millions of people in the nineteenth century who described themselves as spiritualist. Far from being the rejection of science, this movement saw itself and often was seen by others as the forefront of scientific inquiry. Its practitioners often drew a thin line between physics and metaphysics.nnOur class will examine spirit photographs, explore novels and treatises, and handle artifacts that T.W. Stanford used to communicate across the astral plane. In addition to reading primary and scholarly sources, this course will also provide the opportunity for archival research and several field trips to area sites of occult interest.

RELIGST 339. Luther and the Reform of Western Christianity. 3-5 Units.
Luther's theology, ethics, biblical interpretation, and social reforms and their significance for the remaking of Western Christianity. Readings include Luther's own writings and secondary sources about Luther and his world.
Same as: RELIGST 239

RELIGST 340. Contemporary Religious Reflection. 3-5 Units.
Focus is on normative and prescriptive proposals by recent and contemporary philosophers and theologians, as opposed to the domination of Religious Studies by textual, historical, cultural, and other largely descriptive and interpretive approaches. Do such normative and prescriptive proposals belong in the academy? Has Religious Studies exorcised its theological nimbus only to find contemporary religious reflection reappearing elsewhere in the university?.

RELIGST 343X. Anthropology of Religion. 5 Units.
This course presents classic and contemporary work on the anthropology of religion: Durkheim Elementary Forms of the Religious Life; Levy-Bruhl; Primitive Mentality; Douglas Purity and Danger; Evans Pritchard Nuer Religion; and recent ethnographies/scholarly work by Robbins, Keane, Keller, Boyer, Barrett, and others. Prerequisite: consent of instructor.
Same as: ANTHRO 339

RELIGST 344. Feminist Theory and the Study of Religion. 3-5 Units.
This seminar aims to put feminist theory and religious studies into conversation with each other in order to explore the resulting intersections. It will examine new directions in current scholarship. What does it mean to apply a gender studies lens to the study of religion? How do feminist conceptions of embodiment reinforce and/or context religious conceptions of the body? What are the implications of the "return of religion" currently invoked in feminist discourses? We will read works by Judith Butler, Luce Irigaray, Rosi Braidotti, Donna Haraway, Saba Mahmood, Shawn Copeland, a.o. Other thematic choices may be determined by interest of graduate students enrolled in the course.

RELIGST 345. Readings in Late Ancient Christianity. 1-5 Unit.
Topics in the study of Christianity for doctoral students. Recent scholarship and approaches to research.

RELIGST 346. Constructing Race and Religion in America. 4-5 Units.
This seminar focuses on the interrelationships between social constructions of race and social interpretations of religion in America. How have assumptions about race shaped religious worldviews? How have religious beliefs shaped racial attitudes? How have ideas about religion and race contributed to notions of what it means to be "American"? We will look at primary and secondary sources and at the historical development of ideas and practices over time.
Same as: AFRICAAM 236, AMSTUD 246, CSRE 246, HISTORY 256G, HISTORY 356G, RELIGST 246

RELIGST 347. Chinese Buddhist Texts. 3-5 Units.
Chinese Buddhist texts from the Han Dynasty onwards, including sutra translations, prefaces, colophons, story collections and biographies. Prerequisite: reading competence in Chinese.

RELIGST 349. Religion and Madness. 3-5 Units.
Seminar for graduate students in Anthropology and Religious Studies. Full course description TBA.

RELIGST 350. Readings in Tibetan Literature. 3-5 Units.
Introduction to Tibetan literature through reading texts in Tibetan. Prerequisite: intermediate level facility in classical Tibetan.

RELIGST 351. Readings in Indian Buddhist Texts. 3-5 Units.
Introduction to Buddhist literature through reading original texts in Sanskrit. Prerequisite: Sanskrit.

RELIGST 353. Recent Research on Japanese Buddhism. 3-5 Units.
Readings in recent English-language scholarship on Japanese Buddhism. nUndergraduates must enroll for 5 units; graduate students can enroll for 3-5 units. Prerequisite: Solid foundation in either Buddhist studies or East Asian Studies (5 units for 253, 3-5 units for 353) May be repeat for credit.
Same as: RELIGST 253

RELIGST 354. Recent Contributions to Buddhist Studies. 3-5 Units.
This reading intensive course will examine nine areas in recent work in Buddhist studies, including ethnography, archaeology, monasticism, the study of "experience," and gender. May be repeated for credit.
Same as: RELIGST 254

RELIGST 355. Religion and Power in the Making of Modern South Asia. 3-5 Units.
This course examines the diverse ways that religious traditions have been involved in the brokering of power in South Asia from the late seventeenth century to the present day. We will examine the intersection of religion and power in different arenas, including historical memory, religious festivals, language politics, and violent actions. At the core of our inquiry is how religion is invoked in political contexts (and vice-versa), public displays of religiosity, and the complex dynamics of religion and the state. Among other issues, we will particularly engage with questions of religious identity, knowledge, and violence. Undergraduates must enroll in RELIGST 255 for 5 units. Graduate students must enroll RELIGST 355 for 3-5 units. HISTORY297F must be taken for 4-5 units.
Same as: HISTORY 297F, RELIGST 255

RELIGST 356. Readings in Buddhist Tantra: Wheel of Time. 3-5 Units.
The emergence of tantric scriptures in medieval India marked a major turning point in the development of religious thought and practice throughout Asia. These scriptures introduced myths, rituals, contemplative techniques, and artistic expressions that transformed the religious traditions of India¿from Hinduism to Jainism and Buddhism. Tantric forms of worship subsequently shaped the religious traditions of Southeast Asia, China, Korea, Japan, Tibet, Mongolia, and everywhere else Indian religions spread. This seminar examines the history of Buddhist tantra through English translation of one of the most popular collections of tantric literature in the history of Buddhism: the Wheel of Time. The Wheel of Time blends models of the cosmos, time, embodiment, and aesthetics with rich contemplative and ritual techniques. Since its origin, the Wheel of Time and its associated body of texts and practices has become immensely popular throughout the Tibetan Buddhist world. The influence of the Wheel of Time continues to this day, as the current Dalai Lama frequently offers the Wheel of Time initiation as a blessing for world peace, and scholars and practitioners continue to study its literature and practice its contemplative techniques. Undergraduates are expected to have at least one prior course in Buddhism or the consent of the instructor. Undergraduates register for 256 for 5 units. Graduate students register for 356 for 3-5 units.
Same as: RELIGST 256

RELIGST 358. Readings in Japanese Buddhist Texts. 3-5 Units.
In this course, we will read premodern Japanese Buddhist texts.
Prerequisite: Chinese and/or Japanese.
Same as: RELIGST 258

RELIGST 359. Readings in Buddhist Studies. 3-5 Units.
.

RELIGST 359A. American Religions in a Global Context: Proseminar. 1 Unit.
This 1-unit proseminar is open to graduate students interested in American Religions in a Global Context. We will meet once a month to discuss student and faculty work-in-progress and important books in the field. Enrollment in the proseminar is required for students pursuing the Graduate Certificate in American Religions.

RELIGST 362. Sex and the Early Church. 4 Units.
Sex and the Early Church examines the ways first- through sixth-century Christians addressed questions regarding human sexuality. We will pay particular attention to the relationship between sexuality and issues of gender, culture, power, and resistance. We will read a Roman gynecological manual, an ancient dating guide, the world's first harlequin romance novels, ancient pornography, early Christian martyrdom accounts, stories of female and male saints, instructions for how to best battle demons, visionary accounts, and monastic rules. These will be supplemented by modern scholarship in classics, early Christian studies, gender studies, queer studies, and the history of sexuality. The purpose of our exploration is not simply to better understand ancient views of gender and sexuality. Rather, this investigation of a society whose sexual system often seems so surprising aims to denaturalize many of our own assumptions concerning gender and sexuality. In the process, we will also examine the ways these first centuries of what eventually became the world's largest religious tradition has profoundly affected the sexual norms of our own time. The seminar assumes no prior knowledge of Judaism, Christianity, the bible, or ancient history.
Same as: CLASSICS 262, FEMGEN 262, RELIGST 262

RELIGST 364. Hindu Tantra. 4 Units.
What is Tantra? Tantric forms of ritual and philosophy have been integral to the practice of Hinduism for most of its history. Tantra has provided initiates with a spiritual technology for embodying the divine and transcending the cycle of rebirth; on a social and political level, Tantra has mediated the institutions of Hindu kingship and appealed to a diverse population of initiates. This course covers a number of influential and well-documented Hindu tantric traditions, exploring several prominent features of Tantric religion as they develop historically, including: tantric ritual practice (core technologies of the subtle body, mantras, ma, alas, etc., along with the more notorious elements of sex and transgression), theology and philosophical speculation, as well as Tantra's relationship to the outside world and state power.
Same as: RELIGST 264

RELIGST 367. Seminar in Religion and Material Culture. 3-5 Units.
The first part of the course will examine approaches to the role of material culture in religion, including scholarship on icons, sacred space, clothing and food. In the second part of the course, students will develop research projects in their area of specialization.

RELIGST 369. Plotinus and Augustine. 3-5 Units.
Professor's permission required to register. A reading course focused on the influence of Plotinus Enneads on Augustine's Confessions, early dialogues, and sections on reason and memory in the De trinitate. Proficiency in Greek and Latin will be helpful but is not required. Professor's prior permission required, interested students should contact the professor about course schedule: tsheehan@stanford.edu . Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: PHIL 229, PHIL 329, RELIGST 269

RELIGST 370. Comparative Religious Ethics. 4 Units.
The difference that the word religious makes in religious ethics and how it affects issues of genre. Theoretical analyses with examples from W. and E. Asia. Prerequisite: consent of instructor.
Same as: RELIGST 270

RELIGST 370X. Religion and Science in the Amazon and Elsewhere. 5 Units.
The conversion of native peoples to Christianity, especially Evangelical Christianity, is today a global phenomenon. This course looks to understand the reasons for religious conversion and its consequence in the everyday and ritual practices of Amazonians and their traditional practice of shamanism. We then turn to a question seldom addressed in the literature on conversion: the relationship between religion and science. We will explore the way conversion to Christianity produces changes in conceptions of the world and the person similar to those produced by access to scientific knowledge, which occurs primarily through schooling.
Same as: ANTHRO 181, ANTHRO 281, RELIGST 270X

RELIGST 371. Writing Religious History. 5 Units.
This course offers graduate students a sustained opportunity to think about the craft of writing religious history. We will work together on issues ranging from structuring sentences, to revising an article, to conceptualizing a dissertation. Students will be encouraged to establish a daily writing habit and to formulate clear and searchable research strategies. Readings will include exemplars of different kinds of writing in the field. Students will write and workshop several brief (3-5 page) papers applying different approaches. The final project will be a revision of an article-length paper.

RELIGST 373. Historicism and Its Problems: Ernst Troeltsch, the Study of Religion, and the Crisis of Historicism. 3-5 Units.
Examination of the early twentieth-century historian of religion, philosopher of culture, sociologist of religion, Christian theologian, and philosopher of history, Ernst Troeltsch, within the context of the late nineteenth-century "crisis of historicism," i.e., the historicization and relativization of religious, ethical, social, and political norms. Attention to seminal theorists of history (Herder, Kant, Ranke, Hegel, Nietzsche) in the post-Enlightenment German intellectual tradition and the attempts of Christian and Jewish thinkers in the Weimar era (Barth, Gogarten, Rosenzweig, L. Strauss) to "overcome" the crisis wrought by a radically historical approach to human culture.
Same as: RELIGST 273

RELIGST 374. From Kant to Kierkegaard. 3-5 Units.
(Graduate students register for 374. Undergrads register for 274 for 5 units.) The philosophy of religion emerged from the European Enlightenment as a new genre of reflection on religion distinct from both dogmatic theology and rationalist dreams of a "natural" religion of reason. Neither beholden to pre-critical tradition, nor dismissive of what Thomas Nagel has termed "the religious attitude," this new, ostensibly secular, genre of religious thought sought to rethink the meaning of Christianity at a time of immense philosophical ferment. The main currents of religious thought in Germany from Kant's critical philosophy to Kierkegaard's revolt against Hegelianism. Emphasis on the theories of religion, the epistemological status of religious discourse, the role of history (especially the figure of Jesus), and the problem of alienation/reconciliation in seminal modern thinkers: Kant, Schleiermacher, Hegel, and Kierkegaard.
Same as: RELIGST 274

RELIGST 374F. Science, Religion, and Democracy. 3-5 Units.
How should conflicts between citizens with science-based and religion-based beliefs be handled in modern liberal democracies? Are religion-based beliefs as suitable for discussion within the public sphere as science-based beliefs? Are there still important conflicts between science and religion, e.g., Darwinian evolution versus creationism or intelligent design? How have philosophy and recent theology been engaged with such conflicts and how should they be engaged now? What are the political ramifications? This is a graduate-level seminar; undergraduates must obtain permission of the instructors.
Same as: ETHICSOC 374R, PHIL 374F

RELIGST 375. Kierkegaard. 3-5 Units.
(Graduate students register for 375.) Close reading of Kierkegaard's magnum opus, *Concluding Unscientific Postscript to Philosophical Fragments*, in its early 19th-century context.
Same as: RELIGST 275

RELIGST 377. The Later Heidegger: Art, Poetry, Language. 3 Units.
Lectures and seminar discussions of the problematic of the later Heidegger (1930 - 1976) in the light of his entire project. Readings from "On the Origin of the Work of Art" and Elucidations of Holderlin's Poetry.
Same as: PHIL 234B, RELIGST 277

RELIGST 378. Religion and James Joyce's Ulysses. 3-5 Units.
Through a close reading of the novel and with the help of the vast secondary literature the course analyzes the significant roles that religion, specifically Catholicism and Judaism, plays in Joyce's modernist masterpiece--from Stephen Dedalus' sophisticated knowledge and bitter rejection of Irish Catholicism, through Leopold Bloom's ambivalent rapport with Judaism, to Molly Bloom's climatic celebration of a feminist liturgy of nature. Undergraduates register for 200-level for 5 units. Graduate students register for 300-level for 3-5 units.
Same as: RELIGST 278

RELIGST 379. After God: Why religion at all?. 4 Units.
God is dead, but where does religion come from? The end of the quest for God in twentieth century philosophy. Robert Bellah's Religion in Human Evolution plus seminal works of Heidegger, including Being and Time, 'What Is Metaphysics?' 'Nietzsche's Saying `God is Dead.' 'N.B.: Class size limited. Apply early at tsheehan@stanford.edu.
Same as: RELIGST 279

RELIGST 380. Schleiermacher: Reconstructing Religion. 3-5 Units.
Idealist philosopher, Moravian pietist, early German Romantic, co-founder of the University of Berlin, head preacher at Trinity Church, translator of Plato's works, Hegel's opponent, pioneer in modern hermeneutics, father of modern theology. Schleiermacher's controversial reconception of religion and theology in its philosophical context.
Same as: RELIGST 280

RELIGST 381. Asian Religions in America; Asian American Religions. 4 Units.
This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.
Same as: AMSTUD 281, ASNAMST 281, RELIGST 281

RELIGST 383A. Modern Notions of 'The Holy'. 3-5 Units.
This course explores the question, "What may we call 'holy' in the modern era?" by focusing on key writers and thinkers, who in various ways, and in different times raised this question: Friedrich Hölderlin, Hermann Cohen, Franz Kafka, Martin Heidegger, Martin Buber, Franz Rosenzweig, Else Lasker-Schüler, Walter Benjamin, Ernst Bloch, Hannah Arendt, Margarete Susman, Nelly Sachs, Paul Celan, and Judith Butler.nnThis course will be synchronous-conducted, but will also use an innovative, Stanford-developed, on-line platform called Poetic Thinking. Poetic Thinking allows students to share both their scholarly and creative work with each other. Based on the newest technology and beautifully designed, it will greatly enhance their course experience.
Same as: COMPLIT 283A, COMPLIT 383A, GERMAN 283A, GERMAN 383A, RELIGST 283A

RELIGST 384. Research in Christian Studies. 1-15 Unit.
Independent study in Christianity. May be repeated for credit.
Prerequisite: consent of instructor.

RELIGST 385. Research in Buddhist Studies. 1-15 Unit.
Independent study in Buddhism. May be repeated for credit. Prerequisite: consent of instructor.

RELIGST 387. Research in Jewish Studies. 1-15 Unit.
Independent study in Jewish Studies. May be repeated for credit. Prerequisite: consent of instructor.

RELIGST 388. Research in Modern Religious Thought, Ethics, and Philosophy. 1-15 Unit.
Independent study in Modern Religious Thought, Ethics, and Philosophy. May be repeated for credit. Prerequisite: consent of instructor.

RELIGST 389. Individual Work for Graduate Students. 1-15 Unit.
May be repeated for credit. Prerequisite: consent of instructor.

RELIGST 390. Teaching Internship. 3-5 Units.
Required supervised internship for PhDs.

RELIGST 391. Teaching Religious Studies. 3 Units.
This seminar will help prepare you for your role as a university teacher both at a practical and a theoretical level. We will focus on how to best obtain (and keep) a new academic position. We will thus often work together on ¿nuts and bolts¿ issues such as syllabus design, engaging lectures, lively seminar discussions, positive classroom dynamics, and producing a strong teaching portfolio. We will also explore recent developments in pedagogical theory, cognitive science, and educational psychology that have bearing on effective university level teaching. These will be situated within the specific demands of the religious studies classroom and supplemented by guest speakers who will help us explore how institutional context affects the ways one teaches.

RELIGST 392. Paper in the Field. 1-15 Unit.
Prerequisite: consent of graduate director. May be repeated for credit.

RELIGST 395. Master of Arts Thesis. 2-9 Units.
.

RELIGST 399. Readings in Theories and Methods. 1-5 Unit.
Directed readings in secondary literature for Religious Studies doctoral students. May be repeated for credit.

RELIGST 801. TGR Project. 0 Units.
(Staff).

RELIGST 802. TGR Dissertation. 0 Units.
.

RUSSIAN, EAST EUROPEAN AND EURASIAN STUDIES

Courses offered by the Center for Russian, East European and Eurasian Studies are listed under the subject code REES on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=REES&filter-catalognumber-REES=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=REES&filter-catalognumber-REES=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=REES&filter-catalognumber-REES=on).

The Center for Russian, East European and Eurasian Studies (CREEES) coordinates the University's teaching, research, and extracurricular activities related to Russia, Eastern Europe, Central Asia, and the Caucasus and administers a one-year interdisciplinary M.A. graduate degree program. Information on the center's degree programs and other activities is available at the CREEES (http://CREEES.stanford.edu) web site. CREEES and its degree programs are directed by the CREEES Steering Committee, composed of faculty members associated with the Center. The program draws on the strengths of nationally recognized area faculty and research affiliates and significant library and archival collections at Stanford. The Center is a U.S. Department of Education Title VI National Resource Center for Russia, East Europe, and Eurasia.

Undergraduate Programs in Russian, East European and Eurasian Studies

Students interested in a minor should consult the Director of Undergraduate Studies in the Department of Slavic Languages and Literatures which offers the following relevant minors:

- Russian, East European and Eurasian Studies
- Russian Language
- Russian Language, Literature and Culture
- Russian Culture

Slavic Theme House

Slavianskii Dom (SlavDom), at 650 Mayfield Avenue, is an undergraduate residence which houses 50 students and offers a wide variety of opportunities to expand knowledge, understanding and appreciation of Russia and the nations of East Europe, the Caucasus and Central Asia.

Overseas Studies Programs

Undergraduates interested in the study of languages, history, culture and social organization of the countries of Russia, Eurasia and East Europe may apply to study at the Stanford centers in Istanbul and Berlin. Information about these programs is available at the Bing Overseas Studies Program (http://bosp.stanford.edu) at web site.

Graduate Programs in Russian, East European and Eurasian Studies

The center offers an M.A. in Russian, East European and Eurasian Studies, a coterminal M.A. in Russian, East European and Eurasian Studies, and a joint M.A./J.D. in conjunction with the Stanford Law School.

Learning Outcomes (Graduate)

The purpose of the master's program and the joint M.A./J.D. program is to further develop knowledge and skills in Russian, East European and Eurasian Studies and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

Financial Aid

CREEES offers a number of full- and partial-tuition scholarships to incoming CREEES M.A. students. These awards are made for one year of full-time study on the basis of merit. All applicants to the CREEES M.A. program automatically are considered for a tuition award, and successful applicants are notified of their aid awards simultaneously with their admissions offers.

Doctoral Progams

Since the University does not offer a Ph.D. in Russian, East European and Eurasian Studies, students wishing to pursue a REEES-related doctoral program must apply to one of the departments offering a Ph.D. with an emphasis on Russia, Eurasia, or Eastern Europe, such as the departments of History, Anthropology, Political Science, or Slavic Languages and Literatures.

Undergraduate Minor in Russian, East European, and Eurasian Studies

Students interested in a minor should consult the "Minors in Slavic Languages and Literatures (p. 2086)" section of this bulletin which describes the following relevant minors:

- Russian, East European, and Eurasian Studies
- Russian Language
- Russian Language, Literature, and Culture
- Russian Culture

Master of Arts in Russian, East European and Eurasian Studies

CREEES offers a one-year interdisciplinary master's degree program in Russian, East European and Eurasian Studies for students with a strong prior language and area studies background.

The program structure allows students the flexibility to pursue their particular academic interests, while providing intellectual cohesion through a required core curriculum that addresses historical and contemporary processes of change in the Russian Federation, Eastern Europe, the Caucasus, and Central Asia.

The core curriculum consists of three courses (one each quarter), the REES 200 Current Issues in Russian, East European, and Eurasian Studies seminar series in Autumn and Winter quarters, and REES 300 MA Capstone Seminar in Spring Quarter. The program may be taken separately or coterminally with a bachelor's degree program.

The interdisciplinary M.A. program typically serves three types of students:

1. Those who intend to apply to a Ph.D. program involving Russian, East European and Eurasian studies and who need to enhance their academic skills and credentials
2. Those who intend to pursue careers and/or advanced degrees in such fields as journalism, education, business, government, law, or medicine, and who wish to establish competence in Russian, East European and Eurasian studies.
3. Those who are mid-career professionals and/or students interested in gaining competence or continuing their interest in and wish to gain competence in Russian, East European and Eurasian studies.

Admission

Applicants apply electronically; see the Office of Graduate Admissions (http://gradadmissions.stanford.edu) web site for a link to the electronic application and general information regarding graduate admission. In addition, prospective applicants may consult with the CREEES associate director regarding the application process.

To qualify for admission to the program, the following apply:

1. Applicants must have earned a B.A. or B.S. degree, or the equivalent.
2. At least three years of college-level language study in Russian, an East European or Central Asian language is preferred. Candidates with fewer years of area language study will be considered.
3. A one-page statement of purpose that explains how the program would advance the applicant's academic or career goals.
4. Applicants must include the following additional materials in their online application: a writing sample of 20 pages or less in English on an academic topic in Russian, East European, or Eurasian studies and a resume of college-level courses taken that are relevant to Russian, East European & Eurasian Studies, including language courses, with self-reported final grades. These additional materials may be uploaded as "Additional Materials" in a single file along with the application.
5. Applicants must send official transcripts from all post-secondary institutions attended to CREEES.
6. The Graduate Record Examination (GRE) is not required.
7. Applicants whose native language is not English and do not possess a U.S. bachelor's degree are expected to take the Test of English as a Foreign Language (TOEFL) and have the results sent to Graduate Admissions, Office of the University Registrar.

The deadline for submission of applications for admission and for financial aid is January 12, 2021. Admission is normally granted for Autumn quarter, but requests for exceptions are considered.

The successful applicant generally demonstrates the following strengths: requisite foreign language study, significant course work in Russian, East European and Eurasian studies in multiple disciplines, outstanding grades in previous academic work, strong analytical writing skills, high GRE scores (particularly verbal and analytical writing), study or work experience in the region, strong letters of recommendation from faculty members in the Russian, East European, and Eurasian Studies field (one letter may be from a language instructor), and a persuasive statement of purpose explaining how the program would advance the applicant's academic and career goals.

Degree Requirements

Candidates for the M.A. degree must meet University requirements for an M.A. degree as described in the "Graduate Degrees (p. 65)" section of this bulletin.

The M.A. program in REEES can ordinarily be completed in one academic year by a well-prepared student; longer periods of study are permitted.

Requirements to complete the interdisciplinary M.A. degree are principally ones of distribution, with the exception of three required core courses and a core seminar, as described below. Each student, with the advice of the CREEES associate director, selects courses according to the student's interests, needs, and goals.

All students in the M.A. REEES program must complete a minimum of 48 academic credit units within the following guidelines.

1. *Core Courses*: Students must complete 3 designated core courses, for 5 units each, during the 2020-21 academic year.
2. *Core Seminar Series:* REES 200 Current Issues in Russian, East European, and Eurasian Studies is required of all students in the M.A. program in Autumn and Winter quarters (2 units total). The goal of this seminar series is to survey current methodological and substantive issues in Russian, East European and Eurasian studies, acquaint students with Stanford resources and faculty, and present professional development and career options.
3. *Interdisciplinary Course Work:* All courses (other than language courses and approved activity courses) must be taken on the graduate level (200-level or higher). Courses in Russian, East European and Eurasian studies must be completed and distributed among at least three disciplines. All course work applied to the 48-unit minimum must deal primarily with Russian, Eurasian, or East European studies.
4. *Language Study:* Students in the program are encouraged to study Russian, an East European or Central Asian language, or a language from the Caucasus. Credit towards the 48-unit minimum (maximum 4 units per quarter, 12 units total) is allowed for advanced language work.
5. Course work qualifying for the 48-unit minimum must have a letter grade of 'B' or higher. ('B-' does not count for degree credit, nor does 'CR'). Students may apply a maximum of three units of course work with a final grade of 'S' to the 48-unit minimum. 'S' units counting towards the 48-unit minimum must be approved by the CREEES associate director.
6. All courses counting towards the 48-unit minimum must be approved by the CREEES associate director, who ensures that planned course work satisfies requirements towards the degree. The CREEES director and steering committee determine the requirements. The list of pre-approved courses for the current academic year appears below. Students can petition to have courses that do not appear on this list counted towards the degree.
7. *Capstone Requirement*: Students must complete a capstone project (research paper and/or research presentation) in consultation with a faculty adviser, the CREEES director and associate director. Students enroll in REES 300 MA Capstone Seminar for 1 unit in Spring Quarter.

Pre-Approved Courses

The courses that have been approved to satisfy the M.A. interdisciplinary course work requirement appear on the "Approved Courses (p. 2062)" tab of this CREES section of this bulletin. Note that not all of the courses may be offered in the current academic year. For a list of courses being offered in the current academic year, see the Courses page (https://creees.stanford.edu/courses/) of the CREEES website and filter for "MA Pre-approved Courses" for the current academic year.

This list of courses may be updated as relevant courses are offered. Courses not appearing on this list may be counted towards the M.A. through a petition process in consultation with the CREEES associate director.

Coterminal Master's Program in Russian, East European, and Eurasian Studies

To qualify for a coterminal M.A. degree in Russian, East European, and Eurasian Studies, besides completing University requirements for the B.A. degree, a student must:

1. Submit the Coterminal Online Application (https://applyweb.com/stanterm/) for admission to the program by the CREEES M.A. admission deadline .
2. Include in the application a proposal which outlines, by quarter, the schedule of courses the student plans to complete toward the M.A. degree. The student should seek the advice of the CREEES associate director in drafting this schedule. The application also should include:
   a. a current Stanford transcript
   b. a one-page statement of purpose
   c. three letters of recommendation from Stanford faculty (one may be from a language instructor)

d. a writing sample of 20 pages or less in English on an academic topic in Russian, East European, or Eurasian Studies

3. Applicants must have a grade point average (GPA) of at least 3.0 (B)
4. Complete 15 full-time quarters or the equivalent, or three quarters in full-time residence after completing 180 units; and complete, in addition to the 180 units required for the bachelor's degree, a minimum of 48 units for the master's degree.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Joint Degree Program in Russian, East European, and Eurasian Studies

The joint degree program in Russian, East European, and Eurasian Studies and Law allows students to pursue the M.A. degree in REES concurrently with the Doctor of Jurisprudence (J.D.) degree, with a significant number of courses that may apply to both degrees. It is designed to train students interested in a career in teaching, research, or the practice of law related to REES legal affairs. Students must apply separately to the REES M.A. program and to the Stanford School of Law and be accepted by both. Completing this combined course of study requires approximately four academic years, depending on the student's background and level of language training. For more information, see the Joint Degree Programs (p. 70) section of this bulletin and the Stanford Law School (http://www.law.stanford.edu/)'s website. Students who have been accepted by both programs should consult with the departments to determine which courses can be double-counted.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

In accommodation of these new policies, the Center for Russian, East European and Eurasian Studies has decided to accept 'CR' (credit) or 'S' (satisfactory) grades for elective and language courses taken during the 2020-21 academic year towards the meeting of degree requirements; normally these courses require a grade of 'B' or higher). However, the three designated core courses must be taken for a letter grade, and a grade of 'B' or higher must be attained, in order for the courses to count towards the M.A. degree.

Graduate Advising Expectations

The Center for Russian, East European and Eurasian Studies is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Approved Content Courses

The courses that have been approved to satisfy the M.A. interdisciplinary course work requirement appear in the table below. Note that not all of the courses listed below are offered in the current academic year. For a list of courses being offered in the current academic year, visit the Courses page (https://creees.stanford.edu/courses/) of the CREEES website and filter for "MA Pre-approved Courses" for the current academic year.

This list of courses may be updated as relevant courses are offered. Courses not appearing on this list may be counted towards the M.A. through a petition process in consultation with the CREEES associate director.

		Units
ARTHIST 208	Hagia Sophia	5
ARTHIST 405	Art, Ekphrasis, and Music in Byzantium and Islam	5
FILMSTUD 345	Politics and Aesthetics in East European Cinema	4
HISTORY 302F	Surveillance States and Societies	4-5
HISTORY 302G	Peoples, Armies and Governments of the Second World War	4-5
HISTORY 307E	Totalitarianism	4-5
HISTORY 310	The History of Occupation, 1914-2010	4-5

HISTORY 321A	State, Society and Nation in Modern Russian Historiography	4-5
HISTORY 322A	Crime and Punishment in Early Modern Europe and Russia	4-5
HISTORY 324C	Genocide and Humanitarian Intervention	3
HISTORY 325E	From Vladimir to Putin: Key Themes in Russian History	4-5
HISTORY 326E	Famine in the Modern World	3
HISTORY 327B	The Business of Socialism: Economic Life in Cold War Eastern Europe and the Soviet Union	4-5
HISTORY 328	Circles of Hell: Poland in World War II	5
HISTORY 384	The Ottoman Empire: Conquest, Coexistence, and Coffee	4-5
HISTORY 424B	The Soviet Civilization, Part 2	4-5
JEWISHST 348	Writing Between Languages: The Case of Eastern European Jewish Literature	1-5
LINGUIST 272A	Structure of Slavic	2-4
MS&E 293	Technology and National Security: Past, Present, and Future	3-4
POLISCI 215F	Nuclear Weapons and International Politics	5
POLISCI 217A	American Foreign Policy: Interests, Values, and Process	5
REES 200	Current Issues in Russian, East European, and Eurasian Studies	1-2
REES 204	Cities of Empire: An Urban Journey through Eastern Europe and the Mediterranean	3-5
REES 210	Readings in Russian Realism	3-5
REES 213	US-Russia Relations After the Cold War	2
REES 224A	The Soviet Civilization	4-5
REES 225E	From Vladimir to Putin: Key Themes in Russian History	4-5
REES 227	All Quiet on the Eastern Front? East Europe and Russia in the First World War	3-5
REES 231B	Understanding Russia: Its Power and Purpose in a New Global Order	5
REES 237	Political Exhumations. Killing Sites Research in Comparative Perspective	3-5
REES 240P	Populism and the Erosion of Democracy	5
REES 254	Animism, Gaia, and Alternative Approaches to the Environment	3-5
REES 259C	Ecological Humanities	3
REES 260	History and Politics of Russian Language	3-4
REES 301B	History and Politics in Russian and Eastern European Cinema	5
REES 304G	War and Society	4-5
REES 326	The Russian Revolution: Politics, Society, Culture	3-5
REES 327	All Quiet on the Eastern Front? East Europe and Russia in the First World War	3-5
REES 348	Slavic Literature and Culture since the Death of Stalin	3-5
REES 408C	Architecture, Acoustics and Ritual in Byzantium	1-3
REES 409	Theories of the Image: Byzantium, Islam and the Latin West	5
SLAVIC 221	Ukraine at a Crossroads	3-5
SLAVIC 226	Bakhtin and his Legacy	3-5
SLAVIC 230	18th Century Russian Literature	3-4
SLAVIC 231	Tarkovsky	3-5
SLAVIC 325	Readings in Russian Realism	3-5
SLAVIC 327	Boris Pasternak and the Poetry of the Russian Avant-garde	3-4
SLAVIC 329	Russian Versification: History and Theory	3-4
SLAVIC 345	Survey of Russian Literature: The Age of Experiment	3-5
SLAVIC 346	The Great Russian Novel: Tolstoy and Dostoevsky	3-5
SLAVIC 347	Modern Russian Literature and Culture: The Age of War and Revolution	3-5
SLAVIC 356	Vladimir Nabokov: Displacement and the Liberated Eye	3-5
SLAVIC 360	Cultural Hybridity in Central-Eastern Europe	2-5
SLAVIC 370	Pushkin	3-5
SLAVIC 379	Literature from Medieval Rus' and Early Modern Russia	3-5
SLAVIC 387	Classical Russian Poetry	3-5
SLAVIC 388	20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky	3-4
SLAVIC 395	Russian and East European Theater	3-5
SLAVIC 398	Writing Between Languages: The Case of Eastern European Jewish Literature	1-5

Director of the Center: Amir Weiner

Associate Director: Jovana Knezevic

Director of Graduate Studies: Amir Weiner

Affiliated Faculty and Staff:

Anthropology: Ewa Domanska (visiting)

Art and Art History: Srdan Keca, Pavle Levi, Karla Oeler, Bissera Pentcheva

Comparative Literature: Burcu Karahan

Education, School of: Martin Carnoy

Engineering, School of: Margaret Brandeau, Siegfried Hecker, William Perry (emeritus)

English: Nancy Ruttenburg

Freeman Spogli Institute for International Studies: Coit Blacker, Christophe Crombez, Gail Lapidus (emerita), Kathryn Stoner

Graduate School of Business: Ilya Strebulaev

History: Robert Crews, Terence Emmons (emeritus), David Holloway (emeritus), Katherine Jolluck, Nancy Kollmann, Norman Naimark, Aron Rodrigue, Amir Weiner, Ali Yaycioglu, Steven Zipperstein

Linguistics: Boris Harizanov, Vera Gribanov

Medicine, School of: Grant Miller, Douglas Owens

Political Science: Anna Grzymala-Busse, David Holloway (emeritus), David Laitin, Michael McFaul

Psychology: Lera Boroditsky

Slavic Languages and Literatures: Lazar Fleishman, Gregory Freidin (emeritus), Monika Greenleaf, Yuliya Ilchuk, Gabriella Safran, Richard Schupbach (emeritus), Nariman Skakov

Sociology: Nancy Tuma (emerita),

Stanford Libraries: Zachary Baker (emeritus), Liisi Esse, John Eilts, Margarita Nafpaktitis, Karen Rondestvedt (emerita), Wojciech Zalewski (emeritus)

Theater and Performance Studies: Branislav Jakovljevic

Courses

REES 85B. Jews in the Contemporary World: The American Jewish Present & Past in Popular Culture, Film, & TV. 3 Units.
(HISTORY 85B is 3 units; HISTORY 185B is 5 units.) Who are American Jews as depicted in popular media-- film, television, etc.-- since the Second World War? How are their religion, politics, mores, and practices represented and what ways, if at all, do such portraits reflect historical trends among Jews and society in general? What can be learned from film or tv about Jewish identity, notions of Jewish power and powerlessness, communal cohesiveness and assimilation, sexuality and the wages of intermarriage or race?.
Same as: CSRE 85B, HISTORY 85B, JEWISHST 85B

REES 100. Current Issues in Russian, East European, and Eurasian Studies. 1-2 Unit.
Enrollment limited to REEES students. Scholars present analyses of methodologies, challenges, and current issues in the study of Russia, E. Europe, and Eurasia.
Same as: REES 200

REES 128. Literature of the former Yugoslavia. 3-5 Units.
What do Slavoj Zizek, Novak Djokovic, Marina Abramovic, Melania Trump, Emir Kusturica, and the captain of the Croatian national football team have in common? All were born in a country that no longer exists, the Socialist Federal Republic of Yugoslavia (1945-1992). This course will introduce masterpieces of Yugoslav literature and film, examining the social and political complexities of a multicultural society that collapsed into civil war (i.e. Bosnia, Kosovo) in the 1990s. In English with material available in Serbo-Croatian and Slovenian.
Same as: COMPLIT 128, SLAVIC 128

REES 145D. Jewish American Literature and Film. 5 Units.
From its inception, Jewish-American literature has taken as its subject as well as its context the idea of Jewishness itself. Jewish culture is a diasporic one, and for this reason the concept of Jewishness differs from country to country and across time. What stays remarkably similar, though, is Jewish self-perception and relatedly Jewish literary style. This is as true for the first-generation immigrant writers like Isaac Bashevis Singer and Anzia Yezierska who came to the United States from abroad as it is for their second-generation children born in the United States, and the children of those children. In this course, we will consider the difficulties of displacement for the emigrant generation and their efforts to sustain their cultural integrity in the multicultural American environment. We'll also examine the often comic revolt of their American-born children and grandchildren against their (grand-)parents nostalgia and failure to assimilate. Only by considering these transnational roots can one understand the particularity of the Jewish-American novel in relation to mainstream and minority American literatures. In investigating the link between American Jewish writers and their literary progenitors, we will draw largely but not exclusively from Russia and the countries of Eastern Europe.
Same as: AMSTUD 145D, ENGLISH 145D, JEWISHST 155D

REES 185B. Jews in the Contemporary World: The American Jewish Present & Past in Popular Culture, Film, & TV. 4-5 Units.
(HISTORY 185B is 5 units; HISTORY 85B IS 3 units.) Who are American Jews as depicted in popular media -- film, television, etc. -- since the Second World War? How are their religion, politics, mores, and practices represented and what ways, if at all, do such portraits reflect historical trends among Jews and society in general? What can be learned from film or tv about Jewish identity, notions of Jewish power and powerlessness, communal cohesiveness and assimilation, sexuality and the wages of intermarriage or race?.
Same as: CSRE 185B, HISTORY 185B, HISTORY 385C, JEWISHST 185B, SLAVIC 183

REES 200. Current Issues in Russian, East European, and Eurasian Studies. 1-2 Unit.
Enrollment limited to REEES students. Scholars present analyses of methodologies, challenges, and current issues in the study of Russia, E. Europe, and Eurasia.
Same as: REES 100

REES 204. Cities of Empire: An Urban Journey through Eastern Europe and the Mediterranean. 3-5 Units.
This course explores the cities of the Habsburg, Ottoman and Russian empires in the dynamic and turbulent period of their greatest transformation from the 19th century through the Two World Wars. Through the reading of urban biographies of Venice and Trieste, Vienna, Budapest, Cracow, Lviv, Sarajevo, Belgrade, Salonica, and Odessa, we consider broad historical trends of political, economic, and social modernization, urbanization, identity formation, imperialism, cosmopolitanism, and orientalism. As vibrant centers of coexistence and economic exchange, social and cultural borderlands, and sites of transgression, these cities provide an ideal lens through which to examine these themes in the context of transition from imperial to post-imperial space.
Same as: HISTORY 223E, HISTORY 323E, REES 304

REES 205. The Business of Socialism: Economic Life in Cold War Eastern Europe. 5 Units.
This colloquium investigates the processes of buying, making, and selling goods and services in Cold War Eastern Europe and the Soviet Union. We will familiarize ourselves with a variety of approaches to writing the history of economic life and discuss to what extent they are applicable to state socialist systems. Our focus will not be on theories of socialism but on empirically grounded studies that allow for insights into how the system operated in practice and interacted with capitalism. We will, among others, explore the following questions: What was the role of the state in the economies east and west of the Iron Curtain? Are socialism and capitalism two incompatible systems? How did women experience and shape economic life after the Second World War? What had a greater impact on the economies of the region: Cold War politics or globalization?.
Same as: HISTORY 227B

REES 208. Constitutional Cultures in Transition: Constitutional Identities and Values in the Post-Soviet Space. 3-5 Units.
This course examines post-Soviet constitutional cultures and identities (with a focus on Armenia, Moldova and Ukraine). It explores the role of constitutional identity in post-Soviet transformation, regional integration and `Europeanization processes; analyzes constitutional values in post-Soviet countries; discusses why there is a disharmony between declared values and constitutional reality; and explores the role of the judiciary in the formation and preservation of constitutional identity.
Same as: REES 308

REES 210. Readings in Russian Realism. 3-5 Units.
For graduate students or upper-level undergraduates. What did Realism mean for late imperial Russian writers? What has it meant for twentieth-century literary theory? As we seek to answer these questions, we read Tolstoy, Dostoevsky, Turgenev, and Chekhov, alongside their brilliant but less often taught contemporaries such as Goncharov, Saltykov-Shchedrin, Leskov, Garshin, Korolenko, Gorky, Andreev, and Bunin. Taught in English; readings in Russian. Prerequisite: Three years of Russian.
Same as: SLAVIC 325

REES 213. US-Russia Relations After the Cold War. 2 Units.
A quarter century ago, the Soviet Union collapsed and the Cold War ended. At the time, Russian leaders aspired to build democratic and market institutions at home. They also wanted to join the West. American presidents Democrat and Republican encouraged these domestic and international changes. Today, U.S.-Russia relations are once again confrontational, reminiscent of relations during the Cold War. This course seeks to analyze shifts in U.S.-Russia relations, with special attention given to the U.S.-Russia relationship during Obama¿s presidency. Readings will include academic articles and a book manuscript by Professor McFaul on Obama's reset policy. Open to students with previous coursework involving Russia.
Same as: POLISCI 213, POLISCI 313

REES 224A. The Soviet Civilization. 4-5 Units.
(History 224A is an undergraduate course offered for 5 units; History 424A is a graduate course offered for 4-5 units.) Socialist visions and practices of the organization of society and messianic politics; Soviet mass state violence; culture, living and work spaces. Primary and secondary sources. Research paper or historiographical essay.
Same as: HISTORY 224A, HISTORY 424A

REES 225E. From Vladimir to Putin: Key Themes in Russian History. 4-5 Units.
Formative issues in Russian history from Muscovy to the present: autocracy and totalitarianism; tsars, emperors, and party secretaries; multi-ethnicity and nationalism; serfdom, peasantry; rebellions and revolutions, dissent and opposition; law and legality; public and private spheres; religion and atheism; patterns of collapse. Class format will be discussion of one to two assigned books or major articles per class.
Same as: HISTORY 225E, HISTORY 325E

REES 227. All Quiet on the Eastern Front? East Europe and Russia in the First World War. 3-5 Units.
Until recently history has been comparatively quiet about the experience of World War I in the east. Far from being a peripheral theater of war, however, the experiences of war on the Eastern Front were central to shaping the 20th century. Not only was the first shot of the war fired in the east, it was also the site of the most dramatic political revolution. Using scholarly texts, literature and film, this course combines political, military, cultural and social approaches to introduce the causes, conduct and consequences of World War I with a focus on the experiences of soldiers and civilians on the Eastern Front. Topics include: the war of movement, occupation, extreme violence against civilians, the Armenian genocide, population exchanges, the Russian Revolution and civil war, and the disintegration of empires and rise of nation-states.
Same as: HISTORY 227D, HISTORY 327D, REES 327

REES 231B. Understanding Russia: Its Power and Purpose in a New Global Order. 5 Units.
Russia presents a puzzle for theories of socio-economic development and modernization and their relationship to state power in international politics. The collapse of the Soviet Union in 1991 brought into being the new Russia (or Russian Federation) as its successor in international politics. Russia suffered one of the worst recessions and experienced 25 years of halting reform. Despite these issues, Russia is again a central player in international affairs. Course analyzes motivations behind contemporary Russian foreign policy by reviewing its domestic and economic underpinnings. Examination of concept of state power in international politics to assess Russia's capabilities to influence other states' policies, and under what conditions its leaders use these resources. Is contemporary Russia strong or weak? What are the resources and constraints its projection of power beyond its borders? What are the determinants of state power in international politics in the twenty-first century? Includes lectures, readings, class discussions, films and documentaries.
Same as: INTLPOL 231B, POLISCI 213C

REES 237. Political Exhumations. Killing Sites Research in Comparative Perspective. 3-5 Units.
The course discusses the politics and practices of exhumation of individual and mass graves. The problem of exhumations will be considered as a distinct socio-political phenomenon characteristic of contemporary times and related to transitional justice. The course will offer analysis of case studies of political exhumations of victims of the Dirty War in Argentina, ethnic cleansing in former Yugoslavia, the Holocaust, communist violence in Poland, the Rwandan genocide, and the Spanish Civil War. The course will make use of new interpretations of genocide studies, research of mass graves, such as environmental and forensic approaches.
Same as: ANTHRO 137D, ARCHLGY 137, ARCHLGY 237, DLCL 237

REES 240P. Populism and the Erosion of Democracy. 5 Units.
What is populism, and how much of a threat to democracy is it? How different is it from fascism or other anti-liberal movements? This course explores the conditions for the rise of populism, evaluates how much of a danger it poses, and examines the different forms it takes.
Same as: POLISCI 140P

REES 254. Animism, Gaia, and Alternative Approaches to the Environment. 3-5 Units.
Indigenous knowledges have been traditionally treated as a field of research for anthropologists and as mistaken epistemologies, i.e., un-scientific and irrational folklore. However, within the framework of environmental humanities, current interest in non-anthropocentric approaches and epistemic injustice, animism emerged as a critique of modern epistemology and an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge will be presented as a (potentially) decolonizing and liberating practice. This course may be of interest to anthropology, archaeology and literature students working in the fields of ecocriticism and the environmental humanities/social sciences, students interested in the Anthropocene, geologic/mineral, bio-, eco- and geosocial collectives, symbiotic life-forms and non-human agencies. The course is designed as a research seminar for students interested in theory of the humanities and social sciences and simultaneously helping students to develop their individual projects and thesis.
Same as: ANTHRO 154C, ANTHRO 254C, ARCHLGY 154, ARCHLGY 254, DLCL 254

REES 259C. Ecological Humanities. 3 Units.
What sort of topics, research questions, approaches, theories and concepts lead to an integration of various kinds of knowledges? Ecological Humanities provides a conceptual platform for a merger of humanities and social sciences with earth and life sciences, soil science and forensic sciences. The course will discuss such selected topics as the Anthropocene, geologic/mineral and exhumed subjects/personae, bio- and geosocial collectives, symbiotic life-forms, non-human agencies, and forensic landscapes as examples of this merger.
Same as: ANTHRO 159C, ANTHRO 259C, DLCL 259C

REES 260. History and Politics of Russian Language. 3-4 Units.
How did standard Russian develop? Who determines how the language is spoken and written? How does Russian interact with other languages of the region (such as Ukrainian and Yiddish)? This class examines the development of the standard literary Russian language, focusing on the 19th century, the Soviet period, and post-Soviet language politics. Taught in English, reading in Russian.

REES 299. Directed Reading. 1-12 Unit.
.

REES 300. MA Capstone Seminar. 1-3 Unit.
Required for and limited to REEES MA candidates. Colloquia with CREEES Director and Associate Director to assist with refinement of research topic, advisor support, literature review, research, and thesis writing.

REES 301B. History and Politics in Russian and Eastern European Cinema. 5 Units.
From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica. Permission of instructor required prior to the first day of classes.
Same as: FILMSTUD 245B, FILMSTUD 445B

REES 304. Cities of Empire: An Urban Journey through Eastern Europe and the Mediterranean. 3-5 Units.
This course explores the cities of the Habsburg, Ottoman and Russian empires in the dynamic and turbulent period of their greatest transformation from the 19th century through the Two World Wars. Through the reading of urban biographies of Venice and Trieste, Vienna, Budapest, Cracow, Lviv, Sarajevo, Belgrade, Salonica, and Odessa, we consider broad historical trends of political, economic, and social modernization, urbanization, identity formation, imperialism, cosmopolitanism, and orientalism. As vibrant centers of coexistence and economic exchange, social and cultural borderlands, and sites of transgression, these cities provide an ideal lens through which to examine these themes in the context of transition from imperial to post-imperial space.
Same as: HISTORY 223E, HISTORY 323E, REES 204

REES 304G. War and Society. 4-5 Units.
(History 204G is an undergraduate course offered for 5 units; History 304G is a graduate course offered for 4-5 units.) How Western societies and cultures have responded to modern warfare. The relationship between its destructive capacity and effects on those who produce, are subject to, and must come to terms with its aftermath. Literary representations of WW I; destructive psychological effects of modern warfare including those who take pleasure in killing; changes in relations between the genders; consequences of genocidal ideology and racial prejudice; the theory of just war and its practical implementation; how wars end and commemorated.
Same as: HISTORY 204G, HISTORY 304G

REES 308. Constitutional Cultures in Transition: Constitutional Identities and Values in the Post-Soviet Space. 3-5 Units.
This course examines post-Soviet constitutional cultures and identities (with a focus on Armenia, Moldova and Ukraine). It explores the role of constitutional identity in post-Soviet transformation, regional integration and `Europeanization processes; analyzes constitutional values in post-Soviet countries; discusses why there is a disharmony between declared values and constitutional reality; and explores the role of the judiciary in the formation and preservation of constitutional identity.
Same as: REES 208

REES 326. The Russian Revolution: Politics, Society, Culture. 3-5 Units.
The centennial of the Russian Revolution of 1917 serves as the occasion for this course, which surveys the political, social, and cultural upheavals that transformed Russia under the last Tsars and the first Soviet commissars. The course will be offered in conjunction with the exhibition "The Crown under the Hammer: Russia, Romanovs & Revolution," jointly sponsored by the Hoover Institution and the Cantor Arts Center at Stanford and opening at both venues on October 18, 2017. Several class sessions will be held at the Hoover Institution, where students will be invited to examine archival documents, rare books and periodicals, and the visual arts, including propaganda posters, photographs, motion picture film, and paintings in the collections of the Hoover Institution Library & Archives. One class session will be held at the Cantor Arts Center. The course is open to undergraduate and graduate students.

REES 327. All Quiet on the Eastern Front? East Europe and Russia in the First World War. 3-5 Units.
Until recently history has been comparatively quiet about the experience of World War I in the east. Far from being a peripheral theater of war, however, the experiences of war on the Eastern Front were central to shaping the 20th century. Not only was the first shot of the war fired in the east, it was also the site of the most dramatic political revolution. Using scholarly texts, literature and film, this course combines political, military, cultural and social approaches to introduce the causes, conduct and consequences of World War I with a focus on the experiences of soldiers and civilians on the Eastern Front. Topics include: the war of movement, occupation, extreme violence against civilians, the Armenian genocide, population exchanges, the Russian Revolution and civil war, and the disintegration of empires and rise of nation-states.
Same as: HISTORY 227D, HISTORY 327D, REES 227

REES 348. Slavic Literature and Culture since the Death of Stalin. 3-5 Units.
The course offers a survey of Soviet and post-Soviet literary texts and films created by Russian, Ukrainian and Belarusian artists and marginalized or repressed by the Soviet regime. The first part of the course will focus on the topics of opposition and dissent, generational conflict, modernization, Soviet everyday life, gender, citizenship and national identity, state-published and samizdat literature, "village" and "cosmopolitan" culture, etc. The second part of it will be devoted to the postmodernist aesthetics and ideology in the dismantlement of totalitarian society, as well in the process of shaping post-Soviet identities. The reading materials range from the fictional, poetic, and publicistic works written by Noble-prize (Solzhenitsyn, Brodsky, Alexievich) and other major writers of the period to the drama, film, and popular culture.
Same as: SLAVIC 148, SLAVIC 348

REES 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.
Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.nnNOTE: This course is only offered on the graduate level and undergraduates would be admitted by request (sending a letter expressing interest to the instructor and specifying what other courses in music or art history has prepared them to tackle this subject) and special permission only.
Same as: ARTHIST 408C, MUSIC 408C, RELIGST 308C

REES 409. Theories of the Image: Byzantium, Islam and the Latin West. 5 Units.
This seminar explores the role of images in the three major powers of the medieval Mediterranean: the Umayyads, the Carolingians, and the Byzantines. For each the definition of an image- sura, imago, or eikon respectively-became an important means of establishing religious identity and a fault-line between distinct cultural traditions. This course troubles the identification of image with figural representation and presents instead a performative paradigm where chant or recitation are treated as images. As such, students will be able to see the connections between medieval image theory and contemporary art practices such as installation.
Same as: ARTHIST 209C, ARTHIST 409, CLASSICS 158, CLASSICS 258

REES 801. TGR Project. 0 Units.
.

SCIENCE, TECHNOLOGY, AND SOCIETY

Courses offered by the Program in Science, Technology, and Society are listed under the subject code STS on the ExploreCourses web site (https://explorecourses.stanford.edu/search/?q=STS&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-departmentcode-STS=on&filter-catalognumber-STS=on&filter-coursestatus-Active=on&filter-catalognumber-STS=on).

Mission of the Undergraduate Program in Science, Technology, and Society

The Program in Science, Technology, and Society (STS) aims to provide students with an interdisciplinary framework through which to understand the complex interactions of science, technology and the social world. To major in STS, students work through a common core of courses drawn from the social sciences, the humanities, the natural and physical sciences and engineering. Students pursue coursework in one of seven specialized areas:

- Catastrophic Risks and Solutions
- Communication and Media
- Innovation and Organization
- Life Sciences and Health
- Politics and Policy
- Social Dynamics of Data and Information
- Self-Designed Concentration

Students may also undertake research in affiliated laboratories and through the honors program for course units. All students complete a capstone project, either by taking one of the senior capstone courses (STS 200) or by applying for and completing an STS honors thesis. Students are encouraged to pursue mastery in at least one field from within the humanities or social sciences and at least one field from within the sciences or engineering. Majors may declare either a B.A. or a B.S. degree (see the specific requirements for each degree).

The Program's affiliated faculty represent over a dozen departments, including Anthropology, Communication, Computer Science, Education, Electrical Engineering, History, Law, Management Science and Engineering, Political Science and Sociology. By learning to bring such a rich collection of disciplinary approaches to bear on questions of science and technology, students graduate uniquely equipped to succeed in professions that demand fluency with both technical and social frameworks. Recent graduates of STS have entered top-ranked Ph.D. and MBA programs and forged successful careers in a variety of fields, including business, engineering, law, public service, medicine and academia.

Learning Outcomes (Undergraduate)

The Program expects undergraduate majors to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the Program in Science, Technology, and Society. Students are expected to demonstrate:

1. A knowledge of core theories and methods in the interdisciplinary field of STS.
2. An ability to deploy these theories and methods to analyze interactions between science, technology and society in particular historical and cultural contexts.
3. An ability to critically evaluate empirical evidence and theoretical claims in STS-related debates.
4. An ability to communicate clearly and persuasively about STS issues to a general audience in multiple media including oral presentation and writing.

Advising and Course Selection

The Program in Science, Technology, and Society offers an advising process that includes faculty, staff and peer advisers. Prospective majors must first meet with a peer adviser and then with the Program's Student Services Officer to determine which degree they will pursue (the B.A. or B.S.) and how they will fulfill the Program's basic requirements. When they are ready to declare, they meet with the Program's Student Services Officer to submit their degree plan and then the Associate Director reviews the coursework for intellectual coherence. Majors are then assigned to a faculty adviser who serves as an intellectual mentor and helps them identify the core questions driving their interest in the field. The Program also sponsors a wide variety of events designed to help students meet their colleagues and Program alumni, discover research and internship opportunities, and make their way toward the career of their choice.

STS Core

The program offers a Bachelor of Arts and Bachelor of Science in Science, Technology, and Society. Both degree programs require that the student complete the STS Core.

		Units
With a grade of 'C' or higher in each course, complete 8 courses satisfying the following requirements:		
A. Gateway Requirement		
STS 1	The Public Life of Science and Technology	4
B. Disciplinary Requirement [Note 1 & 2]		
Six courses; one of these courses must be a STS WIM course and at least one of these courses must be a STS Global course.		
1. Social Sciences and Humanities Courses (complete 4 courses) [Note 3 & 4]		13-20
ANTHRO 41	Genes and Identity	
ANTHRO 82	Medical Anthropology	
ANTHRO 93B	Prefield Research Seminar: Non-Majors	
ANTHRO 126	Urban Culture in Global Perspective	
ANTHRO 132C	Technology and Inequality	
ANTHRO 138	Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise	
ANTHRO 186	Culture and Madness: Anthropological and Psychiatric Approaches to Mental Illness	
CLASSICS 151	Ten Things: An Archaeology of Design	
COMM 120W	The Rise of Digital Culture	
COMM 137W	The Dialogue of Democracy	
COMM 142W	Media Economics	
COMM 177SW	Specialized Writing and Reporting: Sports Journalism	
COMM 184	Race and Media	
COMM 186W	Media, Technology, and the Body	
COMPLIT 207	Why is Climate Change Un-believable? Interdisciplinary Approaches to Environmental Action	
CSRE 230	Law, Order, & Algorithms	
ECON 106	World Food Economy	
EDUC 120	Sociology of Science	
EDUC 151	The Future of Information	

EDUC 320	Sociology of Science	
ENGLISH 184C	Data and Knowledge in the Humanities	
FRENCH 365	The Problem of Evil in Philosophy, Literature, and Film	
HISTORY 44Q	Gendered Innovations in Science, Medicine, Engineering, and Environment	
HISTORY 79C	The Ethical Challenges of the Climate Catastrophe	
HISTORY 140	World History of Science	
HISTORY 140A	The Scientific Revolution	
HISTORY 144	Sex, Gender, and Intersectional Analysis in Science, Medicine, Engineering, and Environment	
HISTORY 179C	The Ethical Challenges of the Climate Catastrophe	
HISTORY 203C	History of Ignorance	
HISTORY 234P	The Age of Plague: Medicine and Society, 1300-1750	
HISTORY 235D	When Worlds Collide: The Trial of Galileo	
MS&E 130	Information Networks and Services	
MS&E 330	Law, Order, & Algorithms	
PHIL 167A	Philosophy of Biology	
POLISCI 114S	International Security in a Changing World	
POLISCI 233F	Science, technology and society and the humanities in the face of the looming disaster	
RELIGST 3	The Religious Life of Things	
SOC 114	Economic Sociology	
STS 151	The Future of Information	
STS 166	Knowledge and Information Infrastructures	
STS 181	Techno-metabolism: Technology, Society, and the Anthropocene	
STS 191W	Doing STS: Introduction to Research	
2. Engineering and Science Courses (complete 2 courses)		6-10
BIOE 122	BioSecurity and Pandemic Resilience	
BIOE 131	Ethics in Bioengineering	
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions	
CEE 70	Environmental Science and Technology	
CEE 118X	Shaping the Future of the Bay Area	
CEE 118Y	Shaping the Future of the Bay Area	
CEE 118Z	Shaping the Future of the Bay Area	
CS 181W	Computers, Ethics, and Public Policy	
CS 182W	Ethics, Public Policy, and Technological Change	
CSRE 230	Law, Order, & Algorithms	
EARTH 2	Climate and Society	
EARTHSYS 112	Human Society and Environmental Change	
EARTHSYS 177C	Specialized Writing and Reporting: Health and Science Journalism	
EARTHSYS 227	Decision Science for Environmental Threats	
ENGR 60	Engineering Economics and Sustainability	
MS&E 193	Technology and National Security: Past, Present, and Future	
C. Senior Requirement		**4-10**

All students must complete a capstone project, either by taking one of the senior capstone courses (STS 200) or by applying for and completing an STS honors thesis (STS 299).

STS 200N	Funkentelechy: Technologies, Social Justice and Black Vernacular Cultures	5
STS 200Q	Sociology of Science	3-4
STS 200U	The Age of Plague: Medicine and Society, 1300-1750	5
STS 299	Advanced Individual Work	1-5
Total Units		41-63

[1]WIM courses: BIOE 131, COMM 120W, COMM 137W, CS 181W, EARTHSYS 177C, HISTORY 140A STS 191W

[2]Global courses: ANTHRO 41, ANTHRO 82, ANTHRO 126, ANTHRO 132C, ANTHRO 138, COMPLIT 207, ECON 106, ENGLISH 184C, HISTORY 140, HISTORY 44Q, HISTORY 144, HISTORY 234P, CEE 64, POLISCI 114S, POLISCI 233F

[3]May only take HISTORY 140A or HISTORY 232F (not offered 20-21).

[4]May only take HISTORY 144 or HISTORY 44Q.

Concentration Areas

In addition to the Core requirements common to all STS students, a minimum of 50 units, at least twelve courses, are required from among those designated on the appropriate Concentration Area course list (available in the Concentration Areas tab (p. 2070) and on the STS web site). All courses must be taken for a letter grade if offered and may not be double-counted with core course work. Students may count no more than two course petitions outside the list of approved Concentration Area courses toward their STS degree plan. Thematic concentrations are organized around an STS-related area or topic:

1. Catastrophic Risks and Solutions
2. Communication and Media
3. Innovation and Organization
4. Life Sciences and Health
5. Politics and Policy
6. Self-Designed Concentration
7. Social Dynamics of Data and Information

A student pursuing a Bachelor of Arts degree must take at least 8 classes from the Socio-Cultural Course menu, including at least 3 designated as Concentration Core and at least 4 classes from the Technical Course menus.

A student pursuing a Bachelor of Science degree must take at least 8 classes from the Technical Course menu, and at least 4 classes from the Socio-Cultural Course menus, including at least 3 designated as Concentration Core.

Students in both degree programs are encouraged to pursue sequences of courses that build on one another to increase the coherence of their program and give depth to their skill set and knowledge related to STS.

Alternatively, subject to program approval, a student may choose to design a self-designed concentration. Students interested in designing their own concentration must work with the associate director and have their proposal approved at least 2 quarters prior to your graduating quarter. A proposal (5 to 10 pages) should (a) describe your intellectual objectives in detail, (b) explain why a self-designed concentration is the optimal way to pursue these objectives (as opposed to the five STS concentrations or other majors at Stanford), and (c) list at least 12 courses and 50 units that comprise the plan of study. Students with a

self-designed concentration must fulfill the same core requirements as other STS students. More information can be found on the STS website (https://sts.stanford.edu/major-sts/thematic-concentrations/).

Each student's Concentration Area, certified or self-designed, requires the approval of the STS Associate Director.

Concentration Area Course Lists

Catastrophic Risks and Solutions

Thematic concentration in Catastrophic Risks and Solutions:

		Units
Socio-Cultural Courses		
AMSTUD 106A	A.I.: Artificial Intelligence in Fiction	
ANTHRO 154C	Animism, Gaia, and Alternative Approaches to the Environment	
BIOE 122	BioSecurity and Pandemic Resilience	
BIOE 131	Ethics in Bioengineering	
CEE 64	Air Pollution and Global Warming: History, Science, and Solutions	
CEE 107A	Understanding Energy	
CEE 176B	100% Clean, Renewable Energy and Storage for Everything	
CEE 265E	Adaptation to Sea Level Rise and Extreme Weather Events	
CEE 265F	Environmental Governance and Climate Resilience	
CLASSICS 382	High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests	
COMPLIT 207	Why is Climate Change Un-believable? Interdisciplinary Approaches to Environmental Action	
COMPLIT 371	Critical Theory and Ecology: A Cross-Cultural Perspective	
CSRE 125E	Shades of Green: Redesigning and Rethinking the Environmental Justice Movements	
CSRE 226D	The Holocaust: Insights from New Research	
DESINST 245	Redesigning Post-Disaster Finance	
EARTHSYS 102	Fundamentals of Renewable Power	
EARTHSYS 112	Human Society and Environmental Change	
EARTHSYS 160	Sustainable Cities	
EARTHSYS 177C	Specialized Writing and Reporting: Health and Science Journalism	
EARTHSYS 180	Principles and Practices of Sustainable Agriculture	
EARTHSYS 185	Feeding Nine Billion	
EARTHSYS 227	Decision Science for Environmental Threats	
ECON 17N	Energy, the Environment, and the Economy	
ECON 106	World Food Economy	
ECON 155	Environmental Economics and Policy	
ENVRES 222	Climate Law and Policy	
ETHICSOC 136R	Introduction to Global Justice	
FRENCH 365	The Problem of Evil in Philosophy, Literature, and Film	
HISTORY 179C	The Ethical Challenges of the Climate Catastrophe	
HISTORY 203C	History of Ignorance	
HISTORY 234P	The Age of Plague: Medicine and Society, 1300-1750	
HUMBIO 153	Parasites and Pestilence: Infectious Public Health Challenges	
INTLPOL 200	The Social & Economic Impact of Artificial Intelligence	
INTLPOL 217	The Future of Global Cooperation	
INTLPOL 240	Contemporary Issues in International Security	
INTLPOL 259A	Research Seminar on Cybersecurity: Automotive Safety, Security, and Privacy	
INTNLREL 135A	International Environmental Law and Policy: Oceans and Climate Change	
INTNLREL 145	Genocide and Humanitarian Intervention	
LAW 807B	Policy Practicum: What we can do to Mitigate Climate Warming	
LAW 2504	Environmental Law and Policy	
LAW 2513	Climate: Politics, Finance, and Infrastructure	
LAW 2515	Environmental Justice	
MED 224	Social Entrepreneurship and Innovation Lab (SE Lab) - Human & Planetary Health	
MS&E 92Q	International Environmental Policy	
MS&E 193	Technology and National Security: Past, Present, and Future	
MS&E 330	Law, Order, & Algorithms	
NATIVEAM 162	Tribal Economic Development and Sustainability	
OSPPARIS 91	The Future of Globalization: Economics, Politics and the Environment	
POLISCI 114S	International Security in a Changing World	
POLISCI 227B	Environmental Governance and Climate Resilience	
PUBLPOL 116	Climate Perspectives: Climate Science, Impacts, Policy, Negotiations, and Advocacy	
PUBLPOL 166	The Politics of Epidemics	
PWR 2STA	Writing & Rhetoric 2: Ethics and AI	
STS 1	The Public Life of Science and Technology	
STS 51A	Race in Science	
STS 51B	Race in Technology	
STS 51C	Race in Medicine	
STS 190	Environment and Society	
STS 191W	Doing STS: Introduction to Research	
STS 200T	Racial Justice in the Nuclear Age	
THINK 65	Preventing Human Extinction	
Technical Courses		
BIO 138	Ecosystem Services: Frontiers in the Science of Valuing Nature	
CEE 70	Environmental Science and Technology	
CEE 118X	Shaping the Future of the Bay Area	
CEE 118Y	Shaping the Future of the Bay Area	
CEE 118Z	Shaping the Future of the Bay Area	
CEE 166B	Water Resources and Hazards	
CEE 263C	Weather and Storms	
CEE 274D	Pathogens and Disinfection	
CEE 278A	Air Pollution Fundamentals	
CEE 287	Earthquake Resistant Design and Construction	

CEE 288	Introduction to Performance Based Earthquake Engineering
CEE 296	Regional Seismic Risk Analysis and Risk Management
CEE 297M	Managing Critical Infrastructure
COMPMED 123	Immunology of Infectious Disease
CS 21SI	AI for Social Good
CS 81SI	AI Interpretability and Fairness
CS 155	Computer and Network Security
CS 221	Artificial Intelligence: Principles and Techniques
CS 224N	Natural Language Processing with Deep Learning
CS 224W	Machine Learning with Graphs
CS 229	Machine Learning
CS 230	Deep Learning
CS 231N	Convolutional Neural Networks for Visual Recognition
CS 236	Deep Generative Models
CS 255	Introduction to Cryptography
CS 273B	Deep Learning in Genomics and Biomedicine
CS 335	Fair, Accountable, and Transparent (FAccT) Deep Learning
CS 372	Artificial Intelligence for Disease Diagnosis and Information Recommendations
CS 421	Designing AI to Cultivate Human Well-Being
DESINST 240	Designing Machine Learning: A Multidisciplinary Approach
EARTH 2	Climate and Society
EARTHSYS 101	Energy and the Environment
EARTHSYS 111	Biology and Global Change
EARTHSYS 114	Global Change and Emerging Infectious Disease
EASTASN 217	Health and Healthcare Systems in East Asia
ENERGY 101	Energy and the Environment
ENERGY 104	Sustainable Energy for 9 Billion
ESS 102	Scientific Basis of Climate Change
ESS 305	Climate Change: An Earth Systems Perspective
GEOLSCI 6	Data Science for Geoscience
GEOPHYS 90	Earthquakes and Volcanoes
GEOPHYS 201	Frontiers of Geophysical Research at Stanford
GEOPHYS 220	Ice, Water, Fire
INDE 263	Microbiology and Infectious Diseases I
MATSCI 144	Thermodynamic Evaluation of Green Energy Technologies
MATSCI 156	Solar Cells, Fuel Cells, and Batteries: Materials for the Energy Solution
MS&E 243	Energy and Environmental Policy Analysis
MS&E 394	Advanced Methods in Modeling for Climate and Energy Policy
PHYSICS 201	The Physics of Energy and Climate Change
STATS 101	Data Science 101
SUST 261	Art and Science of Decision Making

Communication and Media

Thematic concentration in Communication and Media:

		Units
Socio-Cultural Courses		
AFRICAAM 194	Topics in Writing & Rhetoric: Contemporary Black Rhetorics: Black Twitter and Black Digital Cultures	
AMSTUD 96	Signal to Noise: The Sounds of American Culture	
AMSTUD 133	Technology and American Visual Culture	
AMSTUD 143X	Starstuff: Space and the American Imagination	
ANTHRO 132C	Technology and Inequality	
ARTHIST 164A	Technology and the Visual Imagination	
ARTHIST 245	Art, Business & the Law	
ARTSTUDI 173E	Cell Phone Photography	
ARTSTUDI 174B	Creativity in the Age of Facebook: Making Art for and from Networks	
ARTSTUDI 236	Future Media, Media Archaeologies	
COMM 106	Communication Research Methods	
COMM 108	Media Processes and Effects	
COMM 120W	The Rise of Digital Culture	
COMM 124	Truth, Trust, and Tech	
COMM 137W	The Dialogue of Democracy	
COMM 142W	Media Economics	
COMM 154	The Politics of Algorithms	
COMM 166	Virtual People	
COMM 172	Media Psychology	
COMM 184	Race and Media	
COMM 186W	Media, Technology, and the Body	
COMM 230A	Digital Civil Society	
COMM 230B	Digital Civil Society	
COMM 230C	Digital Civil Society	
COMM 286	Media, Technology, and the Body	
CS 181	Computers, Ethics, and Public Policy	
CS 182	Ethics, Public Policy, and Technological Change	
EARTHSYS 177C	Specialized Writing and Reporting: Health and Science Journalism	
EDUC 120	Sociology of Science	
EDUC 226	Curating Experience: Representation in and beyond Museums	
EDUC 320	Sociology of Science	
ENGLISH 184C	Data and Knowledge in the Humanities	
ENGR 145	Technology Entrepreneurship	
FILMSTUD 6	Introduction to Media	
HISTORY 151	The American West	
HISTORY 204D	Advanced Topics in Agnotology	
HISTORY 235D	When Worlds Collide: The Trial of Galileo	
INTLPOL 221	Politics of Data: Algorithmic Culture, Big Data, and Information Waste	
MS&E 180	Organizations: Theory and Management	
OSPFLOR 16	Silicon Valley: The Modern Day Rebirth of Renaissance Florence	
OSPFLOR 48	Sharing Beauty in Florence: Collectors, Collections and the Shaping of the Western Museum Tradition	

OSPFLOR 49	On-Screen Battles: Filmic Portrayals of Fascism and World War II
OSPFLOR 67	The Celluloid Gaze: Gender, Identity and Sexuality in Cinema
OSPOXFRD 63	Digital Technology in the UK
OSPPARIS 30	The Avant Garde in France through Literature, Art, and Theater
PSYCH 30	Introduction to Perception
PSYCH 75	Introduction to Cultural Psychology

Interdisciplinary Honors in Science, Technology, and Society

The Program in Science, Technology, and Society (STS) offers an opportunity for undergraduates to graduate with Interdisciplinary Honors in STS. The STS honors program is open to STS majors as well as students from other majors.

Students accepted into the program carry out an original honors project, working with a faculty adviser. For STS majors, this project also fulfills the requirements for a capstone course and a sociocultural concentration course. An STS honors thesis tackles a significant problem or question related to the intersection of science, technology, and society. Students draw research methods from one or more of the disciplines that shape STS, such as history, sociology, communication, anthropology, environmental science, computer programming/modeling, engineering, economics, political science, and art history, while also capitalizing on unique analytical perspectives of STS as an intellectual field. STS interdisciplinary honors signals expertise in a given area, organizational skills, and intellectual rigor, and students have used it as a springboard for graduate studies and for careers in fields such as information technology, entrepreneurship, finance, public policy, media, education, law, medicine, and the nonprofit sector. Past honors projects are on file in the STS office library, as well as the digital repository.

Admission

Students are encouraged to apply to the STS honors program during the Spring Quarter of their junior year. Late application is considered up to the add/drop deadline of the Autumn Quarter of their senior year.

For Majors in Science, Technology, and Society

In preparation for applying to the honors program in STS, students should:

1. Select an area of research interest in STS, prepare related research questions, and identify potential faculty advisers for an honors thesis based on those questions.
2. Attend one or more of the quarterly STS workshops offered for prospective honors students, and/or take STS 191W Introduction to Research in STS (offered Winter Quarter) or an alternative course on research methods approved by the STS honors program director, and/or speak with the STS honors program director.
3. Submit a research statement and an honors program application, following the parameters set out at STS Honors Program (https://sts.stanford.edu/major-sts/honors-program/) web site.

For Majors in Other Departments and Programs

In addition to the requirements for STS majors, applicants from other departments should:

1. Meet with the honors program director as early as possible to ensure that they have sufficient background in relevant analytical and methodological approaches.
2. Satisfy one of the following:
   - Complete STS 1 (http://exploredegrees.stanford.edu/search/?P=STS%201), The Public Life of Science and Technology, and either two courses approved as sociocultural foundational courses in STS, or two alternative courses approved by the STS honors program director as relevant to the proposed honors research in STS; or
   - Complete three courses approved by the STS honors program director as relevant to the proposed honors research in STS.

Interdisciplinary Honors Requirements

To graduate with Interdisciplinary Honors in STS, seniors in the honors program need to meet the following criteria:

1. Enroll in STS 299 with an honors faculty adviser to oversee the thesis for a minimum of 10 units total, with up to 5 units per quarter, over Autumn, Winter and Spring quarters. Students who choose to obtain Permit for Services Only (PSO) status during their final quarter may do so with the consent of the STS honors program director but they must still have enrolled in a minimum of 10 units of STS 299 during previous quarters.
2. Enroll in STS 298, a required monthly workshops for current STS honors students.
3. Complete a thesis judged worthy of an honors program by the faculty adviser and STS adviser.
4. Have an overall Stanford GPA of 3.4 at the end of Winter Quarter, senior year, or demonstrated academic competence.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Program in Science, Technology, and Society counts all courses taken in the academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

STS Affiliated Faculty

Director: Paul N Edwards

Associate Director: Kyoko Sato

Executive Board: Paul N Edwards (STS and CISAC), Paula Findlen (History), Mark Granovetter (Sociology), Stephen Luby (Global Health), Rob Reich (Center for Ethics in Society), Gabrielle Hecht (History), Pamela Hinds (Management Science and Engineering), Michael Lepech (Civil and Environmental Engineering), Scott Sagan (Political Science), Fred Turner (Communication)

Affiliated Faculty and Staff: Jeremy Bailenson (Communication), Adam Banks (Graduate School of Education), Thomas Byers (Management Science and Engineering), Angèle Christin (Communication), Jean-Pierre Dupuy (French), Paul N. Edwards (STS and CISAC), Paula Findlen (History), Duana Fullwiley (Anthropology), Mark Granovetter, (Sociology), Hank Greely (Law), Ann Grimes (Communication), James T. Hamilton (Communication), Gabrielle Hecht (History) Pamela Hinds (Management Science and Engineering), Hector Hoyos (Iberian and Latin American Cultures), Miyako Inoue (Anthropology), Sarah Lochlann Jain (Anthropology), Robert Laughlin (Physics), Pamela Lee (Art and Art History), Michael Lepech (Civil and Environmental Engineering), Helen Longino (Philosophy), Henry Lowood (Stanford University Libraries), Thomas Mullaney (History), Brad Osgood (Electrical Engineering), Walter Powell (Education), Robert Proctor (History), Jessica Riskin (History), Scott Sagan (Political Science), Kyoko Sato (STS), Londa Schiebinger (History), Michael Shanks (Classics, Anthropology), Mitchell Stevens (Education), Fred Turner (Communication), John Willinsky (Education), Xiaochang Li (Communication), Aileen Robinson (Theater & Performance Studies), Daniel McFarland (Education)

Emeriti: James Adams (Management Science and Engineering, Mechanical Engineering), Barton Bernstein (History), Martin Hellman (Electrical Engineering), Robert McGinn (Management Science and Engineering), Eric Roberts (Computer Science), Walter Vincenti (Aeronautics and Astronautics), Gavin Wright (American Economic History)

Overseas Studies Courses in Science, Technology, and Society

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

Courses

STS 1. The Public Life of Science and Technology. 4 Units.
The course focuses on key social, cultural, and values issues raised by contemporary scientific and technological developments. The STS interdisciplinary lens helps students develop and apply skills in three areas: (a) Historical analysis of contemporary global affairs (e.g., spread of technologies; responses to climate change); (b) Bioethical reasoning around health issues (e.g., disease management; privacy rights); and (c) The sociological study of knowledge (e.g., intellectual property, science publishing). A discussion section is required. Discussion sections meet once per week immediately after lecture. International time zone students are encouraged to fill out the following Google Form: https://tinyurl.com/STS1-Timezone.
Same as: CSRE 1T

STS 51A. Race in Science. 1 Unit.
What are the roles of race and racism in science, technology, and medicine? 3-course sequence; each quarter can be taken independently. Fall quarter focuses on science. What is the science of race and racism? How does race affect scientific work? Weekly guest speakers will address such issues as the psychology and anthropology of race and racism; how race, language, and culture affect education; race in environmental science and environmental justice; the science of reducing police violence; and the role of race in genomic research. Talks will take a variety of forms, from panel discussions to interviews and lectures. Weekly assignments: read a related article and participate in an online discussion.
Same as: AFRICAAM 51A, CEE 151A, COMM 51A, CSRE 51A, HUMBIO 71A

STS 51B. Race in Technology. 1 Unit.
What are the roles of race and racism in science, technology, and medicine? 3-course sequence; each quarter can be taken independently. Winter quarter focuses on technology. How do race and racism affect the design and social impact of technology, broadly defined? Can new or different technology help to reduce racial bias? Invited speakers will address the role of race in such issues as energy infrastructure, nuclear arms control, algorithmic accountability, machine learning, artificial intelligence, and synthetic biology. Talks will take a variety of forms, ranging from panel discussions to interviews and lectures. Weekly assignments: read a related article and participate in an online discussion.
Same as: AFRICAAM 51B, BIOE 91B, CEE 151B, COMM 51B, CSRE 51B, HUMBIO 71B

STS 51C. Race in Medicine. 1 Unit.
What are the roles of race and racism in science, technology, and medicine? 3-course sequence; each quarter can be taken independently. Spring quarter focuses on medicine. How do race and racism affect medical research and medical care? What accounts for health disparities among racial groups? What are the history, ethics, legal, and social issues surrounding racialized medical experiments and treatments? Invited speakers will address these and other issues. Talks will take a variety of forms: conversations, interviews, panels, and others. Weekly assignments: read a related article and participate in an online discussion.
Same as: AFRICAAM 51C, BIOE 91C, CEE 151C, CSRE 51C, HUMBIO 71C

STS 123. Making of a Nuclear World: History, Politics, and Culture. 4 Units.
Nuclear technology has shaped our world through its various applications (e.g., weapons, energy production, medicine) and accidents and disasters (e.g., Chernobyl, Three Mile Island, Fukushima). This course will examine the development of nuclear technology and its consequences to politics and culture at the global, national, regional and local levels from interdisciplinary perspectives. Some of the key questions addressed are: How did different countries and communities experience and respond to the 1945 bombings of Hiroshima and Nagasaki? How did such experiences affect the later development of the technology in different national contexts? How have nuclear tests and disasters change the ways in which risks are understood and managed globally and locally? What kinds of political activism, international arrangements, and cultural tropes and imageries emerged in response to nuclear technology? We explore these questions through key works and recent studies in history, anthropology, sociology, and science and technology studies, as well as through films and literature.

STS 151. The Future of Information. 4 Units.
As information has a fascinating history (see HISTORY 5A), so it possesses a promising if concerning future. Through lecture, demonstration, online modules, and in-class web-work, this course will provide students with advanced strategies in (a) identifying sources and tools for advancing the quest for information; (b) assessing elements of trust, authority, and chicanery in the provision of information; (c) recognizing the economic and legal structures shaping information sources, services, and rights; and (d) discovering who is behind what information. With a focus on the info-worlds of journalism, learning, governance, students will acquire and practice the forensic skills and web savvy of fact-checkers and investigative reporters, activists and scholars. Here's a class set to determine the future course of information. The class will be a hybrid course, combining in-class delivery of materials, with a number of classes involving students taking online modules (at their convenience) that are designed to teach information literacy skills.
Same as: EDUC 151

STS 166. Knowledge and Information Infrastructures. 3-4 Units.
This course introduces historical, theoretical, and comparative perspectives on knowledge and information systems from the medieval world to the present. Cases include libraries, meteorology, climate science, the Internet, the World Wide Web, and social science data systems. It theorizes how infrastructures form, how they change, and how they shape (and are shaped by) social systems. The course ends with challenges to modern knowledge infrastructures, such as crowdsourcing, citizen science, and alternative and bogus knowledge.
Same as: HISTORY 242D

STS 177. The Cultural Politics of Food and Eating: Technology, History, and Justice. 4-5 Units.
This course will examine our everyday food practices as a site of politics where culture, technology, history, and issues of ethics and justice intersect. Through a survey of academic, journalistic, and artistic works on food and eating, the course will explore a set of key analytical frameworks and conceptual tools in STS, such as the politics of technology, classification and identity, the reproduction of inequality, and nature/culture boundaries. The topics covered include: the industrialization of agriculture; globalization and local foodways; food justice and ethics; new technologies in food practices (e.g., biotechnology, delivery apps); health and diet trends; and food and global challenges (e.g., climate change, COVID-19). Through food as a window, the course intends to achieve two broad intellectual goals. First, students will explore various theoretical and methodological approaches in STS and related fields (e.g., anthropology, history, sociology). Second, student will develop a set of basic skills and tools for their own critical thinking and empirical research, and design and conduct independent research on a topic related to food.

STS 181. Techno-metabolism: Technology, Society, and the Anthropocene. 3-4 Units.
In the Anthropocene epoch, humanity has become a geological force. As the sum of all technological systems and their human components, the technosphere metabolizes energy, materials, and information. Techno-metabolism's waste products- greenhouse gases, microplastics, nuclear waste, etc. - are transforming the biosphere and the geosphere, with radically different effects on disparate peoples and places. Scientists, historians, and others have proposed new ways to conceptualize techno-metabolism in order to reduce energy requirements and material waste. Meanwhile, "data exhaust" - the "waste" data generated by individual activity, from web searches to Facebook and Instagram - is increasingly "recycled" to detect patterns, trends, and individual preferences. In this project-centered course, students will seek creative ways to visualize, understand, and change the interplay of energy, materials, information, and waste. Assignments include reading logs and a term-long group project.

STS 190. Environment and Society. 4 Units.
Humans have long shaped and reshaped the natural world with science and technology. Once a menacing presence to conquer or an infinite reserve for resources, nature is now understood to require constant protection from damage and loss. Global challenges such as climate change have been further forcing us to reconsider our fundamental ideas not only about nature, but also about ethics and justice. This course will examine humanity's varied relationships with the environment, with a focus on the role of science and technology. Topics include: industrialization and modernism, diversity in environmentalism, environmental justice and inequalities, climate politics, global-local tensions, nuclear technology, the Anthropocene debate, and COVID-19 and the environment. Students will explore theoretical and methodological approaches in STS and related fields in social sciences, and conduct original research that engages with environmental issues of their choice. Enrollment limited to juniors and seniors, or with consent of instructor.

STS 191. Doing STS: Introduction to Research. 4 Units.
This seminar introduces key analytical approaches and methodologies in STS, as well as basic tools for designing and conducting original research in STS. Students survey a series of influential studies in STS; identify productive questions of their own interest; and explore how to pursue them through strong research design. By completing smaller writing assignments throughout the quarter, you will produce a fully developed research proposal as final assignment. This final proposal can serve as an honors prospectus for students who seek to participate in the STS honors program. First week attendance mandatory.

STS 191W. Doing STS: Introduction to Research. 4 Units.
This seminar introduces key analytical approaches and methodologies in STS, as well as basic tools for designing and conducting original research in STS. Students survey a series of influential studies in STS; identify productive questions of their own interest; and explore how to pursue them through strong research design. By completing smaller writing assignments throughout the quarter, you will produce a fully developed research proposal as final assignment. This final proposal can serve as an honors prospectus for students who seek to participate in the STS honors program. First week attendance mandatory.

STS 198. Independent Research. 1-5 Unit.
Independent research. Student develops own project with supervision by an STS faculty affiliate. Students must email Prof. Edwards with brief project description and name of faculty supervisor. May be repeated for credit.

STS 199. Independent Study. 1-5 Unit.
Every unit of credit is understood to represent three hours of work per week per term and is to be agreed upon between the student and the faculty member. Instructor consent required. Please contact the department for a permission number.

STS 199A. Curricular Practical Training. 1 Unit.
Students obtain internship in a relevant research or industrial activity to enhance their professional experience consistent with their degree program and area of concentration. Prior to enrolling students must get internship approved by the STS Program Director. At the end of the quarter, a one-page final report must be supplied documenting work done and relevance to degree program. Meets the requirements for Curricular Practical Training for students on F-1 visas. Student is responsible for arranging own internship. Limited to declared STS majors only. Course may be repeated twice. Instructor consent required. Please contact the department for a permission number.

STS 199J. Editing a Science Technology and Society Journal. 1-2 Unit.
The Science Technology and Society (STS) Program has a student journal, Intersect, that has been publishing STS student papers for a number of years. This course involves learning about how to serve as an editor of a peer-reviewed journal, while serving as one of the listed editors of Intersect. Entirely operated online, the journal uses a work-flow management to help with the submission process, peer-review, editing, and publication. Student editors learn by being involved in the publishing process, from soliciting manuscripts to publishing the journal's annual issue, while working in consultation with the instructor. Students will also learn about current practices and institutional frameworks around open access and digital publishing.

STS 200A. Food and Society: Politics, Culture and Technology. 5 Units.
This course will examine how politics, culture, and technology intersect in our food practices. Through a survey of academic, journalistic, and artistic works on food and eating, the course will explore a set of key analytical frameworks and conceptual tools in STS, such as the politics of technology, classification and identity, and nature/culture boundaries. The topics covered include: the industrialization of agriculture; technology and the modes of eating (e.g., the rise of restaurants); food taboos; globalization and local foodways; food and environmentalism; and new technologies in production (e.g., genetically modified food). Through food as a window, the course intends to achieve two broad intellectual goals. First, students will explore various theoretical and methodological approaches in STS. In particular, they will pay particular attention to the ways in which politics, culture, and technology intersect in food practices. Second, student will develop a set of basic skills and tools for their own critical thinking and empirical research, and design and conduct independent research on a topic related to food. First class attendance mandatory. STS majors must have Senior status to enroll in this Senior Capstone course.

STS 200F. Sociology of Innovation and Invention. 5 Units.
This course examines the social, cultural, and economic factors that foster novelty. We will study a wide array of historical contexts, from the Renaissance to the present day, in which clusters of related innovations transformed the way things are done. We ask when do such innovations cascade out and produce social inventions that, for good and bad, create profound changes in how things are done, leading to new forms of organizations and new categories of people. Seminar/lecture format, reading intensive, final term paper. Prerequisite: admission to the course is restricted to declared STS seniors and is by application only. Email Emily Van Poetsch (emilyvp@stanford.edu) for an application. Applications must be submitted by 5pm on November 1st.

STS 200L. Critique of Technology. 3-5 Units.
Informed citizens living in today's world, and especially in Silicon Valley, should be able to formulate their own articulate positions about the role of technology in culture. The course gives students the tools to do so. Against the trend towards the thoughtless celebration of all things technological, we will engage in critique in the two senses of the term: as careful study of the cultural implications of technology and as balanced, argumentative criticism. Can technology make life more meaningful, society more fair, people smarter, and the world smaller? We will pay special attention to the insights that literature, and other arts, can offer for reframing digital culture. Selections by Latin American fiction writers (Cortázar, Zambra), philosophers and thinkers (Heidegger and Beller), as well as recent popular works of social commentary, such as You are not a Gadget, The Shallows, 24/7, and Present Shock. Taught in English.

STS 200M. Tobacco and Health in World History. 4-5 Units.
Cigarettes are the world's leading cause of death--but how did we come into this world, where 6 trillion cigarettes are smoked every year? Here we explore the political, cultural, and technological origins of the cigarette and cigarette epidemic, using the tobacco industry's 80 million pages of secret documents. Topics include the history of cigarette advertising and cigarette design, the role of the tobacco industry in fomenting climate change denial, and questions raised by the testimony of experts in court.

STS 200N. Funkentelechy: Technologies, Social Justice and Black Vernacular Cultures. 5 Units.
From texts to techne, from artifacts to discourses on science and technology, this course is an examination of how Black people in this society have engaged with the mutually consitutive relationships that endure between humans and technologies. We will focus on these engagements in vernacular cultural spaces, from storytelling traditions to music and move to ways academic and aesthetic movements have imagined these relationships. Finally, we will consider the implications for work with technologies in both school and community contexts for work in the pursuit of social and racial justice.
Same as: AFRICAAM 200N, EDUC 314

STS 200P. Leonardo's World: Science, Technology and Art. 4-5 Units.
Leonardo da Vinci is emblematic of creativity and innovation. His art is iconic, his inventions legendary. His understanding of nature, the human body, and machines made him a scientist and engineer as well as an artist. This class explores the historical Leonardo, exploring his interests and accomplishments as a product of the society of Renaissance Italy. Why did this world produce a Leonardo? Students will contribute to a library exhibit for the 500th anniversary of Leonardo's death in May 2019. This is an STS capstone seminar intended primarily for STS majors.

STS 200Q. Sociology of Science. 3-4 Units.
The sociology of science concerns the social structures and practices by which human beings interpret, use and create intellectual innovations. In particular we will explore the claim that scientific facts are socially constructed and ask whether such a characterization has limits. Course readings will concern the formation and decline of various thought communities, intellectual social movements, scientific disciplines, and broader research paradigms. A special focus will be placed on interdisciplinarity as we explore whether the collision of fields can result in new scientific advances. This course is suitable to advanced undergraduates and doctoral students.
Same as: EDUC 120, EDUC 320, SOC 330

STS 200T. Racial Justice in the Nuclear Age. 5 Units.
This upper-level course explores the history of radioactive contamination in the Bay Area and elsewhere. We'll examine the legacy of atomic bomb testing in our region and the current political implications of that legacy. We'll then explore the colonial and postcolonial dimensions of the nuclear age and the long-term contamination it has produced. Case studies vary yearly; they include uranium mining in Africa, nuclear testing in the Pacific, and accidents at Chernobyl and Fukushima. At least one field trip!.
Same as: HISTORY 203F

STS 200U. The Age of Plague: Medicine and Society, 1300-1750. 5 Units.
(Undergraduates, enroll in 234P. Graduates, enroll in 334P) The arrival of plague in Eurasia in 1347-51 affected many late medieval and early modern societies. It transformed their understanding of disease, raised questions about the efficacy of medical knowledge, and inspired new notions of public health. This class explores the history of medicine in the medieval Islamic and European worlds. Changing ideas about the body, the roles of different healers and religion in healing, the growth of hospitals and universities, and the evolution of medical theory and practice will be discussed. How did medicine and society change in the age of plague?.
Same as: HISTORY 234P

STS 298. STS Honors Meeting. 1 Unit.
This is a required monthly meeting for STS Honors students.

STS 299. Advanced Individual Work. 1-5 Unit.
For students in the STS Honors program. Every unit of credit is understood to represent three hours of work per week per term and is to be agreed upon between the student and the faculty member. May be repeated for credit.

SLAVIC LANGUAGES AND LITERATURES

Courses offered by the Department of Slavic Languages and Literatures are listed on the Stanford Bulletin's ExploreCourses web site (https://explorecourses.stanford.edu/) under the subject codes SLAVIC (Slavic Studies) (https://explorecourses.stanford.edu/search/?q=SLAVIC&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-SLAVIC=on), and SLAVLANG (Slavic Language) (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=SLAVLANG&filter-catalognumber-SLAVLANG=on). (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=SLAVLIT&filter-catalognumber-SLAVLIT=on)

The department supports coordinated study of Russian language, literature, literary and cultural history, theory, and criticism. The department's programs may also be combined with the programs in Russian, East European and Eurasian Studies, Jewish Studies, Film Studies, Drama, International Relations, Stanford's Overseas Studies, the Special Languages Program, and other programs. The department is a part of the Division of Literatures, Cultures, and Languages (p. 1298).

A full undergraduate program provides a choice of several tracks leading to a B.A. (with a major or a minor) or to a B.A. with Honors. The department offers a full graduate program leading to an M.A. in Russian and a Ph.D. in Slavic Languages and Literatures. Stanford undergraduates are eligible to apply to the department for a coterminal B.A./M.A. degree. Students in the department's Ph.D. program are required to choose among minor programs in other national literatures, linguistics, Russian, East European, and Eurasian Studies, Jewish Studies, art and music history, theater, or film studies; or they may design their own minor or choose the related field option.

The department runs a colloquium series, which brings distinguished speakers to Stanford; organizes international conferences and symposia; and since 1987 maintains a continuing publication series, Stanford Slavic Studies. Along with the Center for Russian, East European and Eurasian Studies, the department offers qualified undergraduates summer grants (on a competitive basis) for intensive Russian language instruction in accredited programs in Russia and the U.S.

Improving cultural understanding is a critical part of the department's mission, and the department offers a full range of courses at all levels devoted to Russian literature, music and visual arts that do not require specialized knowledge, as well as advanced research seminars for graduate students. The Slavic theme house, Slavianskii Dom, serves as an undergraduate residence for many students in the program and hosts program-related activities. The undergraduate program has attracted students seeking careers in journalism, business, international relations, law, medicine, and human rights, as well as academia. Russian is still the lingua franca over the vast territory of the former Soviet Union, and a good command of this language offers a gateway to Eurasia's diverse cultures, ethnicities, economies, and religions.

Stanford students of Russian, East European and Eurasian Studies benefit from unmatched faculty resources. Green Library and the Hoover Institution libraries and archives hold world-renowned Russian and East European collections, which undergraduates and graduate students use in their research. Department students master a difficult language and a rich and challenging literature, and are rewarded by gaining entry into a unique, powerful, and diverse civilization that defined major trends in the past century and plays an increasingly significant role in the world today.

Mission of the Undergraduate Program in Slavic Languages and Literatures

The mission of the undergraduate program in Slavic Language and Literatures is to expose students to a variety of perspectives on Slavic, especially Russian language, history, culture, literature, and philosophical thought. The program offers three tracks. Courses in the Russian Language and Literature track focus on the linguistic and philological study of literature, as well as the history of Russian literature. The Russian Studies track guides students through a comprehensive interdisciplinary study of Russian literature and culture in historic context. The Russian and Philosophy track provides students with a background in the Russian language and literary tradition with emphasis on philosophical thought.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

- oral proficiency in Russian or another Slavic language beyond the interpersonal level with presentational language abilities.
- writing proficiency in Russian or another Slavic language beyond the interpersonal level with presentational language abilities.
- close reading skills of authentic texts in Russian or another Slavic language.
- the ability to develop effective and nuanced lines of interpretation.

Slavic Theme House

Slavianskii Dom, at 650 Mayfield Avenue, is an undergraduate residence that offers opportunities for students to expand their knowledge, understanding, and appreciation of Russia, Eastern Europe, and Eurasia. Assignment is made through the regular undergraduate housing draw.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Slavic Languages and Literatures and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Slavic Languages and Literatures. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Slavic Languages and Literatures and to interpret and present the results of their research.

Bachelor of Arts in Slavic Languages and Literatures

Declaring the Major

Students declare the Slavic Languages and Literatures major and the major tracks (subplans) in Russian Language and Literature or Russian Studies in Axess. The major tracks (subplans) appear on the transcript, but not on the diploma, which displays the major Slavic Languages and Literatures. The major option in Russian and Philosophy is not declared on Axess and does not appear on the transcript or the diploma.

After declaring the major, students meet with the Chair of Undergraduate Studies to discuss appropriate courses and options within the major,

and plan a course of study. The major is administered through the DLCL undergraduate student services office in Pigott Hall, Room 128.

Russian Language and Literature Subplan

The Russian Language and Literature field of study is designed for those students who wish to gain command of the Russian language and to study the nation's literary tradition. Emphasis is placed on the linguistic and philological study of literature, as well as the history of Russian literature and related media in the broader context of Russian culture. This major also welcomes students with an interest in Russian and Slavic linguistics.

Majors who concentrate in Russian Language and Literature must earn a grade point average (GPA) of 2.0 (C) or better in order to receive credit toward the major.

Prerequisites

Completion of first year Russian, or the equivalent, as determined by the Language Center placement examination.

Degree Requirements

Completion of a minimum of 56 units according to the following distribution:

Writing in the Major

Undergraduates are required by the University to pass at least one writing-intensive course in their field of concentration in order to graduate. Majors in any Slavic track may satisfy the writing requirement in 2020-21 by taking and passing SLAVIC 145 Survey of Russian Literature: The Age of Experiment for 5 units and a letter grade.

Russian Language

A minimum of three courses from:

		Units
SLAVLANG 111	Third-Year Russian, First Quarter	4
SLAVLANG 112	Third-Year Russian, Second Quarter	4
SLAVLANG 113	Third-Year Russian, Third Quarter	4
SLAVLANG 177	Fourth-Year Russian, First Quarter	3
SLAVLANG 178	Fourth-Year Russian, Second Quarter	3
SLAVLANG 179	Fourth-Year Russian, Third Quarter	3
SLAVLANG 181	Fifth-Year Russian, First Quarter	3
SLAVLANG 182	Fifth-Year Russian, Second Quarter	3
SLAVLANG 183	Fifth-Year Russian, Third Quarter	3

Russian Literature

12 units from the Russian Literature major core classes, defined as follows:

		Units
SLAVIC 145	Survey of Russian Literature: The Age of Experiment	3-5
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky	3-5

And choose at least one course from SLAVIC 147, 148, or 188:

		Units
SLAVIC 147	Modern Russian Literature and Culture: The Age of War and Revolution	3-5
SLAVIC 187	Classical Russian Poetry	3-5
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin (not offered 2020-21)	3-5

Electives

Students must complete the unit requirement with electives. These courses are chosen in consultation with the department's chair of undergraduate studies. With department consent, work in related academic fields may be applied toward the degree requirements. Students who have completed a Thinking Matters or PWR course instructed by Slavic faculty, with a grade of 'B' or better, may count up to 5 units towards elective courses required for the major, and students who have completed the SLE sequence may count up to 10 units.

Capstone

Students must designate a 300-level course taken in their junior or senior year as a capstone course or complete a substantial (20-30 page) independent writing project, advised by a Slavic Faculty member, before graduation. Skills in writing, textual analysis, and discussion are evaluated by the Chair of Undergraduate Studies based on work submitted for the capstone course.

Language Assessment

All Slavic Languages and Literature majors must complete an oral and written language assessment two quarters prior to their graduation. Appointments are made through the Stanford Language Center (https://language.stanford.edu/).

Russian Studies Subplan

The Russian Studies track is for students who want to obtain command of the Russian language and to pursue a broad, interdisciplinary study of Russian literature and culture in historical context. Emphasis is on the relation of the Russian literary tradition to other arts, including film, as well as the disciplines that have enriched the historical understanding of Russian literature: history, anthropology, art history, political science, and sociology. Majors in the Russian Studies must earn a GPA of 2.0 (C) or better in order to receive credit toward the major.

Prerequisites

Completion of first year Russian, or the equivalent, as determined by the Language Center placement examination.

Degree Requirements

Completion of a minimum of 56 units according to the following distribution.

Writing in the Major

Undergraduates are required by the University to pass at least one writing-intensive course in their field of concentration in order to graduate. Majors in any Slavic track may satisfy the writing requirement in 2020-21 by taking and passing SLAVIC 145 Survey of Russian Literature: The Age of Experiment for 5 units and a letter grade.

Russian Language

A minimum of three courses from:

		Units
SLAVLANG 111	Third-Year Russian, First Quarter	4
SLAVLANG 112	Third-Year Russian, Second Quarter	4
SLAVLANG 113	Third-Year Russian, Third Quarter	4
SLAVLANG 177	Fourth-Year Russian, First Quarter	3
SLAVLANG 178	Fourth-Year Russian, Second Quarter	3
SLAVLANG 179	Fourth-Year Russian, Third Quarter	3
SLAVLANG 181	Fifth-Year Russian, First Quarter	3

SLAVLANG 182	Fifth-Year Russian, Second Quarter	3
SLAVLANG 183	Fifth-Year Russian, Third Quarter	3

19th-Century Russian Literature and History

A minimum of 8 units chosen from the following or the equivalent; students must take one course from Slavic and one course from History.

		Units
SLAVIC 145	Survey of Russian Literature: The Age of Experiment	3-5
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky (to fulfill WIM, take for 5 units and letter grade)	3-5
One History course approved by the Chair of Undergraduate Studies		3-5

20th-Century Russian Literature and History

A minimum of 8 units chosen from the following or the equivalent; students must take SLAVIC 147 (not offered 2019-20) or SLAVIC 148 and one course from History.

		Units
SLAVIC 147	Modern Russian Literature and Culture: The Age of War and Revolution	3-5
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin (not offered 2020-21)	3-5
One HISTORY course approved by the Chair of Undergraduate Studies.		3-5

Electives

Students must take the additional units of course work in Russian language, literature, history, or other fields, chosen in consultation with the Chair of Undergraduate Studies. Students who have completed Thinking Matters or PWR courses instructed by Slavic faculty, with a grade of 'B' or better may count these 5 units towards elective courses required for the major, and students who have completed the SLE sequence may count up to ten units.

Capstone

Students must designate a 300-level course taken in their junior or senior year as a capstone course or complete a substantial (20-30 page) work of independent writing. Before graduation, skills in writing, textual analysis, and discussion are evaluated by the Chair of Undergraduate Studies based on work submitted for the capstone course.

Language Assessment

All Slavic Languages and Literature majors must complete an oral and written language assessment two quarters prior to their graduation. This is coordinated with the Chair of Undergraduate Studies and the undergraduate student services officer.

Russian and Philosophy Subplan

The Russian and Philosophy option offers students the opportunity to gain a command of the Russian language and literary tradition, while gaining a background in philosophical thought, broadly construed. Students interested in this option should review the Philosophy and Literature web site (http://philit.stanford.edu/).

Substitutions and transfer credit are not normally permitted for the PHIL 170 series class or the PHIL 180 series class, and are never permitted for PHIL 80, SLAVIC 181, or the capstone seminar.

Majors who concentrate in Russian and Philosophy must earn a grade point average (GPA) of 2.0 (C) or better in order to receive credit toward the major. A student who has completed the SLE sequence (all three quarters) may count up to 10 units towards this major. The SLE units can replace one history of philosophy course and one upper-division Russian course.

Prerequisites

Completion of first year Russian, or the equivalent, as determined by the Language Center placement examination.

Degree Requirements

Completion of a minimum of 67 units according to the following distribution:

Russian Language

A minimum of three courses from:

		Units
SLAVLANG 111	Third-Year Russian, First Quarter	4
SLAVLANG 112	Third-Year Russian, Second Quarter	4
SLAVLANG 113	Third-Year Russian, Third Quarter	4
SLAVLANG 177	Fourth-Year Russian, First Quarter	3
SLAVLANG 178	Fourth-Year Russian, Second Quarter	3
SLAVLANG 179	Fourth-Year Russian, Third Quarter	3
SLAVLANG 181	Fifth-Year Russian, First Quarter	3
SLAVLANG 182	Fifth-Year Russian, Second Quarter	3
SLAVLANG 183	Fifth-Year Russian, Third Quarter	3

Russian Literature

A minimum of 16 units of Russian literature, including SLAVIC 145, 146, and 147, or 148.

		Units
SLAVIC 145	Survey of Russian Literature: The Age of Experiment	3-5
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky (to fulfill WIM, take for 5 units and letter grade)	3-5
SLAVIC 147	Modern Russian Literature and Culture: The Age of War and Revolution	3-5
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin (not offered 2020-21)	3-5
SLAVIC 187	Classical Russian Poetry	3-5

Electives

At least 12 units of electives in Russian language and literature, chosen in consultation with the Chair of Undergraduate Studies.

Philosophy and Literature Gateway Course

		Units
SLAVIC 181	Philosophy and Literature	3-5

Philosophy Writing in the Major

		Units
PHIL 80	Mind, Matter, and Meaning (WIM) (prerequisite: introductory philosophy course)	5

Philosophy Core

12 units from the following:

	Units
A course in the PHIL 170 series (value theory)	4
A course in the PHIL 180 series (theories of the mind, language, action)	4
A course in the PHIL 100-139 series (history of philosophy)	4

Related Course

An upper-division course of special relevance to philosophy and literature.

		Units
COMPLIT 283A	Modern Notions of 'The Holy'	3-5
GERMAN 222	Myth and Modernity	3-5

Language Assessment

All Slavic Languages and Literature majors must complete an oral and written language assessment two quarters prior to their graduation. Assessments are scheduled through the Stanford Language Center (https://language.stanford.edu/).

Capstone Seminar

One capstone seminar must be taken in the student's senior year.

		Units
PHIL 194W	Capstone Seminar: Imagination in Fiction and Philosophy	4
PHIL 194Z	Capstone: Living a Meaningful Literary Life	4
COMPLIT 283A	Modern Notions of 'The Holy'	3-5
GERMAN 125	Nietzsche: Life as Performance	3-5

Honors Program

Students majoring in any DLCL department (i.e., Comparative Literature, French and Italian, German Studies, Iberian and Latin American Cultures, and Slavic Languages and Literatures) who have an overall grade point average (GPA) of 3.3 or above and who maintain a 3.5 (GPA) in their major courses, are eligible to participate in the DLCL's honors program.

Declaring Honors

Prospective honors students must choose a senior thesis adviser from among their home department's regular faculty in their junior year by May 1. During Spring Quarter of the junior year, a student interested in the honors program should consult with the Chair of Undergraduate Studies of their home department to submit a thesis proposal (2-5 pages), DLCL Honors application, and an outline of planned course work for their senior year. When their applications are approved by their home department, students will request honors through Axess.

Honors theses vary considerably in length as a function of their topic, historical scope, and methodology. They may make use of previous work developed in seminars and courses, but display an enhanced comparative or theoretical scope. Quality rather than quantity is the key criterion. Honors theses range from 40 to 90 pages not including bibliography and notes.

Honors students are encouraged to participate in the DLCL program hosted by Bing Honors College. This DLCL Honors College is designed to help students develop their projects and is offered at the end of the summer before senior year. Applications must be submitted through the Bing program. For more information, view the Bing Honors (https://undergrad.stanford.edu/programs/bhc/) web site.

Program Requirements

A minimum of 10 units total, described below, and a completed thesis is required. Honors essays are due to the thesis adviser no later than 5:00 p.m. on May 15, of the terminal year. If an essay is found deserving of a grade of 'A-' or better by the thesis adviser, honors are granted at the time of graduation.

1. Spring Quarter of the junior year (optional): DLCL 189C Honors Thesis Seminar, 2-4 units S/NC, under the primary thesis adviser. Drafting or revision of the thesis proposal. The proposal is reviewed by the Chair of Undergraduate Studies and the Director of the department and will be approved or returned for submission.
2. Autumn Quarter of the senior year (required): DLCL 189A Honors Thesis Seminar, 4 units S/NC, taught by a DLCL appointed faculty member. Course focuses on researching and writing the honors thesis.
3. Winter Quarter of the senior year (required): DLCL 189B Honors Thesis Seminar, 2-4 units S/NC, under the primary thesis adviser. Focus is on writing under guidance of primary adviser.
4. Spring Quarter of the senior year (option; mandatory if not taken during junior year): DLCL 189C Honors Thesis Seminar, 2-4 units S/NC, under the primary thesis adviser. Honors essays are due to the thesis adviser and student services officer no later than 5:00 p.m. on May 15 of the terminal year.
5. Spring Quarter of the senior year (required) DLCL 199 Honors Thesis Oral Presentation, 1 unit S/NC. Enroll with primary thesis adviser.

The honors thesis in the DLCL embodies Stanford's excellence in course work and research. It is simultaneously one element of the student's intellectual legacy and part of the University's official history. The faculty considers the honors thesis to be far more than a final paper; rather, it is the product of solid research that contributes to conversations taking place within a larger scholarly community and representative of the intellectual vitality of the discipline. For all of these reasons, DLCL honors theses will be visible to future scholars researching similar questions through full online access through the Stanford Digital Repository (https://library.stanford.edu/research/stanford-digital-repository/) (SDR) and may be used as course materials for future Stanford honors preparatory courses. For similar purposes, a printed copy may also be kept in DLCL spaces. Students who wish to limit the availability or formats in which the thesis may be shared may do so by filling out the appropriate form with the DLCL student affairs officer.

Minors in Slavic Languages and Literatures

The Department of Slavic Languages and Literatures offers three minor subplans:

- Russian Language
- Russian Language, Literature, and Culture
- Russian, East European and Eurasian Studies

The minors are designed for students who, while pursuing a major in another program, seek a comprehensive introduction to Russian culture through Russian language courses, a combination of minimal proficiency in Russian and courses in the history of Russian culture, or a multidisciplinary introduction to Russian, East European, and Eurasian studies. Students who have chosen one of the minor programs in Russian may use 5 units from a Thinking Matters or PWR course taught by a Slavic faculty member towards their electives with permission from their adviser. Up to 5 units may count from SLE towards all Slavic Languages and Literatures minors.

Russian Language Subplan

Prerequisites

Completion of second year Russian, or the equivalent, as determined by the results of the Language Center placement examination.

Requirements

A minimum of 6 courses of 3 units or more for a total of 24 units of Russian language and literature courses according to the following distribution:

1. At least three Russian language courses chosen from the below:

		Units
SLAVLANG 111	Third-Year Russian, First Quarter	4
SLAVLANG 112	Third-Year Russian, Second Quarter	4
SLAVLANG 113	Third-Year Russian, Third Quarter	4
SLAVLANG 177	Fourth-Year Russian, First Quarter	3
SLAVLANG 179	Fourth-Year Russian, Third Quarter	3
SLAVLANG 178	Fourth-Year Russian, Second Quarter	3
SLAVLANG 181	Fifth-Year Russian, First Quarter	3
SLAVLANG 182	Fifth-Year Russian, Second Quarter	3
SLAVLANG 183	Fifth-Year Russian, Third Quarter	3

2. The remaining units should be chosen from Slavic Department courses. Consult the Chair for Undergraduate Studies for recommendations. Options include:

		Units
SLAVIC 145	Survey of Russian Literature: The Age of Experiment	3-5
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky	3-5

3. Or, with the approval of the department's Chair of Undergraduate Studies, courses in history, politics, linguistics, or other relevant programs.

Russian Language, Literature, and Culture Subplan

Prerequisites

Completion of first year Russian, or the equivalent, as determined by the results of the Language Center placement examination.

Requirements

A minimum of 6 courses at 3 units or more and total 28 units, including:

- a minimum of 12 units of courses on literature and culture, including:

		Units
SLAVIC 145	Survey of Russian Literature: The Age of Experiment	3-5
SLAVIC 146	The Great Russian Novel: Tolstoy and Dostoevsky	3-5
SLAVIC 147	Modern Russian Literature and Culture: The Age of War and Revolution	3-5
SLAVIC 148	Slavic Literature and Culture since the Death of Stalin (not offered 2020-21)	3-5

- Remaining units should be chosen from courses offered by the Slavic Department, or, with the approval of the chair of Undergraduate Studies, relevant courses in other departments.

Minor in Russian, East European, and Eurasian Studies

The minor in Russian, East European and Eurasian Studies offers students the opportunity to choose courses offered by the Center for Russian, East European and Eurasian Studies (subject code REES) in various departments for their minor.

Requirements

A minimum of 6 courses at 3 units or more and total 28 units according to the following distribution:

1. Two core courses: one on Russia and one on Eastern Europe or Eurasia, to be chosen by the student from an annual list of qualifying courses issued by CREEES for their M.A. students.
2. At least four additional REES courses, totaling at least 20 units.
3. The student's core and additional courses must include 9 units of course work in the Slavic Department, either literature courses or Russian language in the third year or above. Courses must be distributed among at least three disciplines, such as Slavic, History, Political Science, Anthropology, Art and Art History, Economics, Religious Studies, and Sociology. The Slavic Chair of Undergraduate Studies determines which courses qualify for the minor.
4. A capstone experience in CREEES, including, but not limited to, one of the following:
   a. a departmental seminar course for advanced undergraduates.
   b. directed reading and research with a Stanford faculty member or a CREEES-approved resident or visiting scholar.
   c. participation in the Stanford Overseas Studies Program in Berlin.

Foreign Language

The Slavic/REES minor has no language requirement, but students are strongly encouraged to attain working competence in Russian or another relevant language. Courses at the third-year level or above in Russian or another language of Central Asia, the Caucasus, or Eastern Europe may be counted towards the Slavic/REES minor, up to a maximum of 3 units per academic quarter, 9 units total.

Additional Information

Courses taken at Stanford overseas campuses may count towards the REES minor, with the approval of the Slavic Chair of Undergraduate Studies; at least three courses for the minor must be taken in residence at Stanford.

Students interested in pursuing the Slavic/REES minor should consult the Slavic Chair of Undergraduate Studies.

Minor in Modern Languages

The Division of Literatures, Cultures, and Languages offers an undergraduate minor in Modern Languages that permits students to demonstrate strength in two distinct modern languages and their literatures. See the “Division of Literatures, Cultures, and Languages (p. 1299)” section of this bulletin for further details about this minor and its requirements.

Coterminal Master's Program in Slavic Languages and Literatures

The department allows a limited number of undergraduates to work for the coterminal M.A. degree in Slavic Languages and Literatures with a concentration in Russian. In addition to University requirements for the B.A. degree, the student must:

1. Submit an application for admission by January 31 of the senior year. Applicants must meet the same general standards as those seeking admission to an M.A. program. Applicants must submit: an application for admission; a written statement of purpose; a transcript; and three letters of recommendation, at least two of which should be from members of the Department of Slavic Languages and Literatures faculty.

2. Meet all requirements for both the B.A. and M.A. degrees. Applicants must complete 15 full-time quarters (or the equivalent), or three full-time quarters after completing 180 units, for a total of 225 units. During the senior year they may, with the consent of the instructors, register for as many as two graduate courses. In the final year of study, they must complete at least three graduate-level courses.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Master of Arts in Slavic Languages and Literatures

The Department of Slavic Languages and Literatures offers a Master of Arts degree only to students concurrently enrolled in other Stanford degree programs.

University requirements for the M.A. degree are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

Admission

The requirements for admission to the master's degree program in Russian are:

1. A B.A. (or its equivalent) from an accredited college or university.
2. A command of the Russian language sufficient to permit the student to do satisfactory graduate work.
3. A familiarity with Russian literature sufficient to permit the student to perform adequately in courses at the graduate level.

The applicant's previous academic training in Russian language and literature normally serves as an indication of competence. Accordingly, the department does not ordinarily consider applications from students who have not had at least three years of college Russian and some undergraduate training in Russian literature of the 19th and 20th centuries. Before registering for the first quarter's work in the department, entering graduate students are required to take placement examinations in Russian. Students who fail to perform satisfactorily on such examinations must register for remedial courses in the areas in which they are deficient. Course work in third-year Russian and below carries no credit toward the M.A. degree.

Course Requirements

Candidates for the M.A. should plan course work that ensures adequate preparation for the M.A. final examination at the end of the third quarter of work. Course work should be planned in consultation with the graduate adviser, whose approval of the overall course load is required.

Candidates for the M.A. must complete a program of 45 units, of which 36 units must be selected from courses given by the department.

The Qualifying Paper

The Qualifying paper represents a complete article-length research paper (6,000-9,000 words). The Qualifying paper must be submitted to the thesis adviser no later than the eighth week of the final quarter of registration.

Final Examination

A final examination may substitute for the Qualifying paper requirement. The final examination requires a student to demonstrate in a written examination:

1. command of the phonology, morphology, syntax, and lexicology of contemporary standard Russian sufficient to teach beginning and intermediate courses at the college level
2. an ability to read contemporary Standard Russian sufficiently to assist students studying contemporary Russian poetry or literary prose
3. sufficient familiarity with Russian literature of either the 19th or 20th century to successfully handle survey courses dealing with the chosen period of specialization.

The examination should be taken at the end of the final quarter of required course work.

Doctor of Philosophy in Slavic Languages and Literatures

University requirements for the Ph.D. are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

Students enrolled in the Ph.D. program in Slavic Languages and Literatures are expected to fulfill the following requirements while meeting the program's deadlines in the course of their progress toward the degree:

1. Course Work, Breadth Requirements, and Overall Scheduling

In consultation with the Director of Graduate Studies, students are expected to take 18 units of credit each quarter of their first year and may be required to enroll in independent study units during summer. In the second year and until reaching TGR status, students are required to enroll in 10 units during Autumn, Winter, and Spring and may be required to enroll in independent study units during summer. They are expected to reach 135 units and attain TGR status in the Spring of their fourth year. All courses counted towards the 135-unit requirement for the Ph.D. must be at the graduate level. Excess course work can be taken at the undergraduate level but may not be used towards the Ph.D. requirements. Students should take all courses for letter grades, when the option is available. Entering graduate students must enroll in DLCL 369 (https://exploredegrees.stanford.edu/search/?P=DLCL%20369) Introduction to the Profession of Literary Studies. For the Ph.D. degree, students are free to select course work to suit their individual program of study. However, candidates must do so in consultation with their adviser (Director of Graduate Studies or principal dissertation adviser) and are held responsible for all of the areas covered by the general examinations regardless of whether they have registered for the department's offerings in a given field. For this reason, it is strongly recommended that before

taking Ph.D. examinations, students complete seminar-level work directly related to the following broad areas:

1. Russian poetry
2. the Russian novel
3. 20th-century Russian literature
4. 19th-century Russian literature (the Age of Pushkin and after)
5. 18th-century Russian literature (the early 1700's to the Age of Pushkin)
6. medieval Russian literature
7. a monograph course on a major Russian author
8. theory of literature relevant to the major field

The candidate must have demonstrated commitment to graduate studies by completing a minimum of 21 content courses (not counting Summer Quarter) with a grade point average (GPA) of 3.3 or better in order to complete the requirements of the degree program. These must include 14 seminars in the Slavic Languages and Literatures Department. Unless they have taken such courses elsewhere, students are expected to take the departmental course on medieval literature, 18th-century literature, and Old Church Slavonic.

2. Minor or Related Fields

During the course of study, students must develop substantial expertise in a field contiguous to the area of specialization. A candidate may elect to present a full minor or, in consultation with the graduate adviser, develop a special program in a related field, preferably no later than the second quarter of enrollment.

1. *Related Field*—A student is required to complete a sequence of basic courses in a chosen discipline outside the department of Slavic Languages and Literatures. The choice of patterns is one of the following:
   a. a sequence of three courses in another literature, selected in consultation with the adviser, or
   b. three basic courses in comparative literature chosen in consultation with the Director of Graduate Studies (DGS), or
   c. a sequence of three courses in another department selected in consultation with the DGS.
2. *Minor*—Students electing a minor fulfill the Ph.D. minor requirements established by that department. Students considering minors should consult with their adviser, the DGS, the Director of Slavic Languages and Literatures, and the Chair of the minor department.

3. Admission to Candidacy

Admission to candidacy is an important decision grounded in an overall assessment of a student's ability to successfully complete the Ph.D. program. Per University policy, students are expected to complete department qualifying procedures and apply for candidacy by the end of the second year in residence. In reviewing a student for admission to candidacy, the faculty considers a student's academic progress including but not limited to: advanced language proficiency, course work, performance on the Qualifying paper, and successful completion of teaching and research assistantships. Additionally, a student must have completed at least one class with each of four Slavic Languages and Literatures department faculty members prior to consideration for candidacy. In addition to successful completion of department prerequisites, a student is only admitted to candidacy if the faculty makes the judgment that the student has the potential to successfully complete the requirements of the degree program. Candidacy is determined by faculty vote. Failure to advance to candidacy results in dismissal of the student from the doctoral program. Candidacy is valid for five years and students are required to maintain active candidacy through conferral of the doctoral degree. All requirements for the degree must be completed before candidacy expires. The Department of Slavic Languages and Literatures conducts regular reviews of each student's academic performance, both prior to and following successful admission to candidacy. Failure to make satisfactory progress to degree may result in dismissal from the doctoral program. Additional information about University candidacy policy is available in the Bulletin (p. 67) and GAP (http://gap.stanford.edu/4-6.html).

4. Qualifying Paper

The candidate must submit a complete draft of a qualifying paper approved by the thesis adviser. The qualifying paper represents a complete article-length research paper (6,000-9,000 words). The deadline for the qualifying paper approval is the eighth week of the sixth quarter of registration. Failure to meet these requirements results in termination of enrollment from the Ph.D. program. Following such termination, the student who has fulfilled all of the M.A. requirements may be given the opportunity to take the M.A. written examination in the history of Russian literature. If successful, the student is then awarded the terminal M.A. degree. In exceptional cases, the written examination requirement may be waived at the discretion of the Chair of Graduate Studies and the Chair of the department.

5. Proficiency Test

Administered to all entering graduate students, this test determines whether the student's knowledge of Russian language and literature falls below the department's standard (Advanced Low on the OPI test). Students who fail are required to complete appropriate courses in the first year of graduate study. Courses required to meet the language proficiency are not counted towards the Course Work requirement of the Ph.D. degree.

6. Foreign Languages

A candidate must demonstrate reading knowledge of French or German, plus another language useful for the student's area of concentration, by passing written examinations, or receiving a grade of 'A-' or better in a qualifying class with consent of the DGS. The reading examination in one of these languages must be passed by the end of the first year of study. The reading examination in the second language must be passed by the end of the second year of study.

7. Examinations

1. Comprehensive Exam: A candidate must pass the departmental general qualifying examinations. The comprehensive exam covers the history of Russian literature from the medieval period through the twenty-first century and is divided into six chronological sections. Two of these are taken early in the Autumn quarter of year 2 and the remainder are taken in the Autumn quarter of year 3 (preferably a day or two before the beginning of academic instruction). For students who are not native speakers of Russian, the section of the comprehensive exam is taken orally in Russian.

2. Departmental Qualifying Exam: The hour-long departmental oral qualifying examination follows no later than four weeks after completion of the comprehensive exams. The oral examination committee consists of four faculty members and may include one member representing the student's minor or related field; the rest must be drawn from among the Slavic Languages and Literatures faculty. The student makes a 20-minute presentation, following an academic conference format, and based possibly on the student's qualifying paper. Each examiner questions the student on the presentation and related topics in the history of Russian literature and the minor related field.

3. University Oral Exam: Following the departmental examinations, a candidate must pass a University oral examination, consisting of a defense of a doctoral dissertation prospectus and covering content relevant to the area of study, rationale for the proposed investigation, and strategy to be employed in the dissertation research. The prospectus defense is expected to be scheduled no later than the

beginning of the Autumn quarter of year 4. Note: Ph.D. examinations are scheduled by the graduate student in consultation with the CGS.

8. Teaching

1. Students are required to complete five quarters of teaching within the funding period, including three quarters of Russian language and at least one quarter as a teaching assistant of literature for a faculty member, usually in the survey courses in translation SLAVIC 145, 146, 147, and 148:
2. Students are required to take in preparation for teaching: DLCL 301 The Learning and Teaching of Second Languages.

9. Yearly Review

The faculty must provide students with timely and constructive feedback on their progress toward the Ph.D. In order to evaluate students' progress and to identify potential problem areas, the department's faculty reviews the academic progress of each student at the end of the academic year. The yearly reviews are primarily intended to identify developing problems that could impede progress. In most cases, students are simply given constructive feedback, but if more serious concerns warrant, a student may be placed on probation with specific guidelines for addressing the problems detected. Possible outcomes of the yearly review include:

1. continuation of the student in good standing
2. placing the student on probation, with specific guidelines for the period on probation and the steps to be taken in order to be returned to good standing.
    a. For students on probation at this point (or at any other subsequent points), possible outcomes of a review include:
        i. restoration to good standing
        ii. continued probation, again with guidelines for necessary remedial steps
        iii. termination from the program. Students leaving the program at the end of the first or second year are usually allowed to complete the requirements to receive an M.A. degree, if this does not involve additional residency or financial support.

10. Continuation

Continuation in the Ph.D. program is contingent on fulfilling the following criteria: for first-year students, a high quality of performance in course work (decided by department evaluation); for second-year students, satisfactory academic progress and approval of the Qualifying paper as described above. The principal conditions for continued registration of a graduate student are the timely and satisfactory completion of the University, department, and program requirements for the degree, and fulfillment of minimum progress requirements. Failure to meet these requirements results in corrective measures, which may include a written warning, academic probation, and/or release from the program.

Ph.D. Minor in Slavic Languages and Literatures

The department offers a Ph.D. Minor in Slavic Languages and Literatures. The requirement for the Ph.D. minor is completion of 25 units of graduate course work in Slavic Literature and Culture classes. Interested students should consult the Chair of Graduate Studies to create a plan of study.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Slavic Department counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Required Courses Policy

In academic year 2020-21, as Stanford operates on a four quarter system, students may opt not to be enrolled in one of the four quarters of the year. Students may therefore be unable to take a Slavic Studies course required by a major or minor program (SLAVIC 145, 146, 147, 187). In these cases, the Chair of Undergraduate studies will suggest appropriate substitute classes and approve one of them.

Graduate Degree Requirements

Grading

Doctoral students in the department must take required courses for a letter grade and are expected to earn a grade of 'B' or better in each required course. In other courses, doctoral students are expected to earn a grade of 'B' or better in each course taken for a letter grade in AY 2020-21 that will count towards their degree requirement. Any grade of 'B-' or below is considered to be less than satisfactory. Grades of 'B' or below are reviewed by faculty: while the grade will stand, the student may be required to revise and resubmit the work associated with that course. For courses taken for CR/NC, instructors will be asked to submit written assessment to the student and the department of what would be the equivalent letter grade to allow for review of satisfactory academic achievement by the DGS and department.

Graduate Advising Expectations

The Department of Slavic Languages and Literatures is committed to providing academic advising in support of graduate student scholarly and professional development. The overall goal of advising, both in the DLCL and the department, is to help graduate students make academic and career choices wisely, and think ahead, in order to craft a long-term plan for their graduate student career and beyond. When most effective, the advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity. Advising is both an academically invaluable form for the transmission of expertise, as well as a key aspect of creating a strong departmental and Stanford community.

Faculty Advisors

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

- Upon enrolling, students plan their work under the direction of the Chair of Graduate Studies or a faculty member designated by the program. When the student selects a more specialized advisor, the transition should involve oral or written communication between both advisors and the student concerning the student's progress, goals, and expectations. It is possible for doctoral students to choose two main advisors at the dissertation stage, provided all agree this is academically sound.
- Faculty advisors should meet with assigned students to discuss their selection of courses and to plan from a broader, longer-term perspective, including discussion of Program milestones and a basic timeline; an overview of Department and DLCL offerings beyond courses; student goals and interests and DLCL or Stanford programs that may be relevant; and (for doctoral students) how to transfer previous graduate coursework.
- Faculty advisors and graduate students should meet at least once per quarter to assess the advisee's course of study, performance over the past quarter, and plans for the next quarter, as well as longer term plans. If a student has two advisors, the student should meet at least once per quarter with each advisor and at least once per year with both advisors at the same time.
- For doctoral students, faculty should help their advisees plan for exams, research grant applications, develop research projects, and plan ahead for both the academic job market and the job search beyond academia.
- Faculty advisors should provide feedback about the student's progress to the department during the Annual Review process. For more information about the Annual Review, see the Graduate Handbook.

Graduate Students

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

- Upon enrolling, students plan their work under the direction of the Chair of Graduate Studies or a faculty member designated by the program. As the student develops a field of expertise, the student will choose a program advisor to replace the Chair of Graduate Studies role. The transition should involve oral or written communication between both advisors and the student concerning the student's progress, goals, and expectations.
- Graduate students and faculty advisors and should meet at least once per quarter to assess the advisee's course of study, performance over the past quarter, and plans for the next quarter, as well as longer term plans. If a student has two advisors, the student should meet at least once per quarter with each advisor and at least once per year with both advisors at the same time.
- Students should consult with their advisors on all academic matters, including coursework, conference presentations and publications, research travel, and teaching plans.
- Students should provide a thorough self-evaluation each year for the annual review. For more information about the Annual Review, see the Graduate Handbook.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Faculty in Slavic Languages and Literatures

Overseas Studies Courses in Slavic Languages and Literatures

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

Slavic Languages & Literatures Courses

SLAVIC 15N. "My Life Had Stood - A Loaded Gun": Dostoevsky, Dickinson, and the Question of Freedom.. 3-5 Units.
As far apart as Dickinson and Dostoevsky are in terms of national contexts, gendered possibilities of life, and their choice of minimalist or maximalist forms, their experiences of constriction and freedom bore significant similarities. Dostoevsky penned his vow to love life on the day that he was manacled as a political prisoner and marched off to thirteen years of forced labor and exile in Siberia. He exploded back on the Petersburg literary scene in the early 1860's with three block-busters, Notes from the Underground, Memoirs from the House of the Dead, and Crime and Punishment, establishing himself forever as Russia's most controversial explorer of the violence of human thought. In these same years Emily Dickinson was sequestering herself in her family's Amherst house for the remainder of her life, yet she announced her rebel's credo in these enigmatic lines: "My Life Had Stood, a Loaded Gun - until the Day..." In this class we will explore the idea that Emily Dickinson and Fyodor Dostoevsky may be seen as original shifters of modern literary art and philosophy. We will unpack the agonizing relationship of freedom, action, and language that both authors explore. Classes will be organized around presentations, debates in pairs, the exploration of "scandalous scenes," and finally a symposium in which students will present and contribute to each other's paper projects. There are no prerequisites for this course apart from a desire to read poems and novels closely and in tandem.

SLAVIC 36. Dangerous Ideas. 1 Unit.
Ideas matter. Concepts such as revolution, tradition, and hell have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like immigration, universal basic income, and youth play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these "dangerous" ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.
Same as: ARTHIST 36, COMPLIT 36A, EALC 36, ENGLISH 71, ETHICSOC 36X, FRENCH 36, HISTORY 3D, MUSIC 36H, PHIL 36, POLISCI 70, RELIGST 36X

SLAVIC 70N. Socialism vs. Capitalism: Russian and American Writers' Responses. 3-4 Units.
The turn of the 20th century was marked with turbulent political events and heated discussions about the future of Russian and American societies. Many writers and intellectuals responded to the burning issues of social justice, inequality, egalitarianism, and exploitation associated with capitalism and socialism. Through close reading, critical thinking, and analytical writing, we will engage in the critical discussions of class struggle, individual interest versus collective values, race, and social equality, and identify points of convergence and divergence between the two systems. To what extent was the opposition between capitalism and socialism fueled by the artistic vision of the great Russian and American writers? What was these thinkers' ideal of society and what impact did it have on shaping emerging socialism? Readings for the class include the fundamental works of Fyodor Dostoevsky, Leo Tolstoy, Jack London, W.E.B. Du Bois and Sholem Aleichem. The course will culminate in a digital mapping project visualizing intellectual connections between ideas and writers.

SLAVIC 77Q. Russia's Weird Classic: Nikolai Gogol. 3-4 Units.
Preference to sophomores. An investigation of the works and life of Nikolai Gogol, the most eccentric of Russian authors and the founder of what is dubbed Fantastic Realism. Our investigation will be based on close reading of works written in various genres and created in various stages of Gogol's literary career. Taught in English.

SLAVIC 116. Literature and the Dream of Agriculture in Russia and Beyond. 3-5 Units.
Why do city people think if they started farming, they could heal themselves and their society? How do writers make agriculture seem exciting, or farms seem beautiful? While agriculture is ancient and world-wide, literature and political movements that posited it as a way for urbanites to be happier and more virtuous and societies to reach utopia thrived especially in the 19th-century Russian Empire. These movements influenced Soviet Communism, nationalisms (including Zionism), and American communes in the 1970s. In this class, we read fiction, poetry, memoirs, and essays about city people's embrace of farming. We compare the Eastern European case to the United States in the 20th century and we look at 21st-century back-to-the-land writing and films. This class is offered in partnership with the Stanford Farm, where we will spend a few days working (assuming pandemic restrictions permit).

SLAVIC 118N. Other People's Words: Folklore and Literature. 4 Units.
What happens when you collect and use other people's words? This class considers folklore and literature based on it, focusing on the theme of objects that come to life and threaten their makers or owners. We read Russian fairy tales and Nikolai Gogol's stories, the Golem legend and Ovid's and Shaw's Pygmalion, and Svetlana Aleksievich's Voices from Chernobyl, a collection of the words of survivors who reflect on life after a human invention has destroyed many of its keepers. We read essays by Jacob Grimm, Roman Jakobson, Vladimir Propp, Lenore Keeshig-Tobias, and others, to understand what folklore can mean and how the oral and the recorded word can interact. Students collect living folklore from a group of their choosing and analyze it using the theories we study in class (or other theories, if you want); wherever you are, you will tailor your research to the communities to which you have access. This course fulfills the second-level Writing and Rhetoric Requirement (WRITE 2) and emphasizes oral and multimedia presentation. You will develop skills to produce shorter and longer prerecorded presentations.

SLAVIC 121. Ukraine at a Crossroads. 3-5 Units.
Literally meaning "borderland," Ukraine has embodied in-betweenness in all possible ways. What is the mission of Ukraine in Europe and in Eurasia? How can Ukraine become an agent of democracy, stability, and unity? What does Ukraine's case of multiple identities and loyalties offer to our understanding of the global crisis of national identity? In this course, we will consider the historical permeability of Ukraine's territorial, cultural, and ethnic borders as an opportunity to explore the multiple dimensions of its relations with its neighbors. In addition to studying historical, literary, and cinematic texts, we discuss nationalism, global capitalism, memory politics, and propaganda in order to understand post-Euromaidan society. All required texts are in English. No knowledge of Ukrainian is required. NOTE: To satisfy a WAYS requirement, this course must be taken for at least 3 units. In AY 2020-21, a `CR¿ grade will satisfy the WAYS requirement.
Same as: SLAVIC 221

SLAVIC 128. Literature of the former Yugoslavia. 3-5 Units.
What do Slavoj Zizek, Novak Djokovic, Marina Abramovic, Melania Trump, Emir Kusturica, and the captain of the Croatian national football team have in common? All were born in a country that no longer exists, the Socialist Federal Republic of Yugoslavia (1945-1992). This course will introduce masterpieces of Yugoslav literature and film, examining the social and political complexities of a multicultural society that collapsed into civil war (i.e. Bosnia, Kosovo) in the 1990s. In English with material available in Serbo-Croatian and Slovenian.
Same as: COMPLIT 128, REES 128

SLAVIC 129. Russian Versification: History and Theory. 3-4 Units.
A survey of metric forms, rhyming principles and stanzaic patterns in the Russian poetry of the 18th - 21st centuries. Taught in Russian. Prerequisite: Two years of Russian.
Same as: SLAVIC 329

SLAVIC 145. Survey of Russian Literature: The Age of Experiment. 3-5 Units.
This course discusses the transition from predominantly poetic to predominantly prosaic creativity in the Russian literature of the first half of the 19th century Russian literature and the birth of the great Russian novel. It covers three major Russian writers -- Alexander Pushkin, Mikhail Lermontov and Nikolai Gogol -- and examines the changes in the Russian literary scene affected by their work. An emphasis is placed on close reading of literary texts and analysis of literary techniques employed in them. This course meets the Slavic Department Writing-in-the-Major (WIM) requirement. Taught in English.
Same as: SLAVIC 345

SLAVIC 146. The Great Russian Novel: Tolstoy and Dostoevsky. 3-5 Units.
The two giant novels we will read and discuss closely were above all urgent actions taken in the heat of present crisis. War and Peace (1865-1869), Leo Tolstoy's epic family saga of Russia's historic resistance to Napoleon and the modern "will-to-power," and The Brothers Karamazov (1878-1880), Dostoevsky's tragicomic investigation into the roots of familial perversion, crimes of individual thought and collective performance, fascinate us with the striking contrasts of their novels' aesthetic responses and innovations. The final focus of the course will be on several of Anton Chekhov's short stories that re-play the themes of the Russian novel with compressed indirectness, pushing the great realist novel's dominance firmly into "history.".
Same as: SLAVIC 346

SLAVIC 147. Modern Russian Literature and Culture: The Age of War and Revolution. 3-5 Units.
The Age of Revolution: Readings in Russian Modernist Prose of the 1920-30s: What makes Russian modernist prose special? Or is there anything special about Russian modernist prose? This course aims to answer these questions through close readings of works by Babel, Mandelstam, Zoshchenko, Platonov, Olesha and Bulgakov. Aesthetic issues such as hero, plot, and narrative devices will be addressed with the aid of contemporaneous literary theory (Shklovsky, Tynianov, Eikhenbaum, Bakhtin). Novels and theory will be read in English. NOTE: This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.
Same as: SLAVIC 347

SLAVIC 148. Slavic Literature and Culture since the Death of Stalin. 3-5 Units.
The course offers a survey of Soviet and post-Soviet literary texts and films created by Russian, Ukrainian and Belarusian artists and marginalized or repressed by the Soviet regime. The first part of the course will focus on the topics of opposition and dissent, generational conflict, modernization, Soviet everyday life, gender, citizenship and national identity, state-published and samizdat literature, "village" and "cosmopolitan" culture, etc. The second part of it will be devoted to the postmodernist aesthetics and ideology in the dismantlement of totalitarian society, as well in the process of shaping post-Soviet identities. The reading materials range from the fictional, poetic, and publicistic works written by Noble-prize (Solzhenitsyn, Brodsky, Alexievich) and other major writers of the period to the drama, film, and popular culture.
Same as: REES 348, SLAVIC 348

SLAVIC 155. St. Petersburg: Imagining a City, Building a City. 1-2 Unit.
St. Petersburg, the world's most beautiful city, was designed to display an 18th-century autocrat's power and to foster ties between Russia and the West - on the tsar's terms. It went through devastating floods and a deadly siege; it birthed the "Petersburg myth," poems and prose that explore the force of the state and the individual's ability to resist. This class addresses the struggle between the authorities and the inhabitants; the treacherous natural environment; the city as a node in national and international networks of communication; the development of urban transportation networks; and the supply of goods. NOTE: *This course is required of students attending the overseas seminar to St. Petersburg in September 2018.*Class times to be determined upon the availability of all enrolled students. Please contact instructor(s) via email if you have any questions.
Same as: URBANST 156

SLAVIC 156. Vladimir Nabokov: Displacement and the Liberated Eye. 3-5 Units.
How did the triumphant author of "the great American novel" Lolita evolve from the young author writing at white heat for the tiny sad Russian emigration in Berlin? We will read his short stories and the novels The Luzhin Defense, Invitation to a Beheading, Lolita, Lolita the film, and Pale Fire, to see how Nabokov generated his sinister-playful forms as a buoyant answer to the "hypermodern" visual and film culture of pre-WWII Berlin, and then to America's all-pervading postwar "normalcy" in his pathological comic masterpieces Lolita and Pale Fire. Buy texts in translation at the Bookstore; Slavic grad students will supplement with reading and extra sessions in original Russian.
Same as: COMPLIT 115, COMPLIT 315, SLAVIC 356

SLAVIC 160. Cultural Hybridity in Central-Eastern Europe. 2-5 Units.
Historically shaped by shifting borders and mixing of various cultures and languages, identities in-between have been in abundance in Central-Eastern Europe. This course offers a comprehensive study of the oeuvre of several major Central-European authors of modernity: the Ukrainian-Russian Nikolai Gogol (1809-1852), the Czech-German-Jewish Franz Kafka (1883-1924), the Austrian-Galician-Jewish Leopold von Sacher-Masoch (1836-1895), the Ukrainian-Galician Olha Kobylyans¿ka (1863-1942), the Russian-German Lou Andreas-Salomé (1861-1937), the Jewish-Polish-Galician Bruno Schulz (1892-1942), and the Polish-Argentinean Witold Gombrowicz (1904-1969). Performing their selves in two or more cultures, these writers were engaged in identity games and produced hybrid texts with which they intervened into the major culture as others. In the course, we will apply post-structuralist and post-colonial concepts such as minor language, heterotopia, in-betweenness, mimicry, indeterminacy, exile, displacement, and transnationalism to the study of the writers oeuvres. We will also master the sociolinguistic analysis of such multi-lingual phenomena as self-translation, code-switching, and calquing and examine various versions of the same text to uncover the palimpsest of hybrid identities.
Same as: COMPLIT 231B, SLAVIC 360

SLAVIC 179. Literature from Medieval Rus' and Early Modern Russia. 3-5 Units.
This course traces the history of Russian literature before the eighteenth century. It is divided into two sections. The first section examines literature from Kyivan Rus' (up to the thirteenth century), the medieval conglomerate to which Belarus, Russia and Ukraine all trace their cultural heritage. The second section examines old Russian literature specifically, from the fourteenth to seventeenth centuries. We pay close attention to the development of literary genres, moral/religious and aesthetic features and their relationship, and the beginnings of Russian belles lettres. Our approach to the texts will be two-fold. On the one hand, we will spend some time situating the sources within their historical contexts. On the other hand, we will explore the interpretive possibilities of premodern literature using formal analysis and critical theory. Knowledge of an East Slavic language is required.
Same as: SLAVIC 379

SLAVIC 181. Philosophy and Literature. 3-5 Units.
What, if anything, does reading literature do for our lives? What can literature offer that other forms of writing cannot? Can fictions teach us anything? Can they make people more moral? Why do we take pleasure in tragic stories? This course introduces students to major problems at the intersection of philosophy and literature. It addresses key questions about the value of literature, philosophical puzzles about the nature of fiction and literary language, and ways that philosophy and literature interact. Readings span literature, film, and philosophical theories of art. Authors may include Sophocles, Dickinson, Toni Morrison, Proust, Woolf, Walton, Nietzsche, and Sartre. Students master close reading techniques and philosophical analysis, and write papers combining the two. This is the required gateway course for the Philosophy and Literature major tracks. Majors should register in their home department.

SLAVIC 183. Jews in the Contemporary World: The American Jewish Present & Past in Popular Culture, Film, & TV. 4-5 Units.
(HISTORY 185B is 5 units; HISTORY 85B IS 3 units.) Who are American Jews as depicted in popular media -- film, television, etc. -- since the Second World War? How are their religion, politics, mores, and practices represented and what ways, if at all, do such portraits reflect historical trends among Jews and society in general? What can be learned from film or tv about Jewish identity, notions of Jewish power and powerlessness, communal cohesiveness and assimilation, sexuality and the wages of intermarriage or race?.
Same as: CSRE 185B, HISTORY 185B, HISTORY 385C, JEWISHST 185B, REES 185B

SLAVIC 187. Classical Russian Poetry. 3-5 Units.
A survey of Russian poetry from Lomonosov to Vladinmir Solov'ev. Close reading of lyrical poems. Prerequisite: 3rd Year Russian Language.
Same as: SLAVIC 387

SLAVIC 188. 20th century Russian Poetry: From Aleksandr Blok to Joseph Brodsky. 3-4 Units.
Developments in and 20th-century Russian poetry including symbolism, acmeism, futurism, and literature of the absurd. Emphasis is on close readings of individual poems. Taught in Russian.
Same as: SLAVIC 388

SLAVIC 195. Russian and East European Theater. 3-5 Units.
Evolution of modernist Russian/Eur. dramaturgy, theatrical practices, landmark productions from Chekhov-Meyerhold-Grotowski to present; re-performance of classics; techniques of embodiment. Taught in English.
Same as: SLAVIC 395

SLAVIC 196. Readings in Yiddish Literature 1. 2-4 Units.
Yiddish literature, at a second-year language level. Readings chosen based on student interest; contact instructor with questions.
Same as: SLAVIC 396

SLAVIC 197. Readings in Yiddish Literature 2. 2-4 Units.
Yiddish literature, at a second-year language level. Continuation of SLAVIC 196. Readings chosen based on student interest; contact instructor with questions.
Same as: SLAVIC 397

SLAVIC 198. Writing Between Languages: The Case of Eastern European Jewish Literature. 1-5 Unit.
Eastern European Jews spoke and read Hebrew, Yiddish, and their co-territorial languages (Russian, Polish, etc.). In the modern period they developed secular literatures in all of them, and their writing reflected their own multilinguality and evolving language ideologies. We focus on major literary and sociolinguistic texts. Reading and discussion in English; students should have some reading knowledge of at least one relevant language as well. ***This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit***.
Same as: JEWISHST 148, JEWISHST 348, SLAVIC 398

SLAVIC 199. Individual Work for Undergraduates. 1-5 Unit.
Open to Russian majors or students working on special projects. May be repeated for credit. Prerequisite: consent of instructor.

SLAVIC 221. Ukraine at a Crossroads. 3-5 Units.
Literally meaning "borderland," Ukraine has embodied in-betweenness in all possible ways. What is the mission of Ukraine in Europe and in Eurasia? How can Ukraine become an agent of democracy, stability, and unity? What does Ukraine's case of multiple identities and loyalties offer to our understanding of the global crisis of national identity? In this course, we will consider the historical permeability of Ukraine's territorial, cultural, and ethnic borders as an opportunity to explore the multiple dimensions of its relations with its neighbors. In addition to studying historical, literary, and cinematic texts, we discuss nationalism, global capitalism, memory politics, and propaganda in order to understand post-Euromaidan society. All required texts are in English. No knowledge of Ukrainian is required. NOTE: To satisfy a WAYS requirement, this course must be taken for at least 3 units. In AY 2020-21, a `CR¿ grade will satisfy the WAYS requirement.
Same as: SLAVIC 121

SLAVIC 222. Andrei Platonov's "Chevengur": Text and Contexts. 3-5 Units.
'The power of devastation [Platonov's texts] inflict upon their subject matter exceeds by far any demands of social criticism and should be measured in units that have very little to do with literature as such,' wrote Joseph Brodsky. The graduate course examines Andrei Platonov's ultimate novel "Chevengur" together with political and cultural discourses that framed its production. Primary and secondary readings are in Russian.

SLAVIC 225. Communist and Capitalist Fantasies: Science Fiction in the Soviet Union and the United States. 3-5 Units.
What can science fiction tell us about life and art in the 20th century, in the Soviet Union and the United States? Speculative fiction (including sci-fi, fantasy, utopia, dystopia) combines irony and idealism, belief in science and skepticism about it. It appealed to people living under communism and capitalism. The course will relate fiction to the specific culture and politics in both countries, while also drawing transnational connections. We ask why writers and readers, filmmakers and viewers loved this art so much, despite living in what seemed to be very different places. Soviet and Eastern-European writers and filmmakers will include Mikhail Bulgakov, Stanis¿aw Lem, and Andrei Tarkovsky. The Americans may include Kurt Vonnegut, Philip K. Dick, Isaac Asimov, and Octavia Butler. Additional readings in Marx, Lenin, and H.G. Wells.

SLAVIC 226. Bakhtin and his Legacy. 3-5 Units.
"Quests for my own word are in fact quests for a word that is not my own, a word that is more than myself," writes Mikhail Bakhtin towards the end of his life. It was this ceaseless pursuit of another word that allowed Bakhtin, one of the most distinguished literary critics of the twentieth century, to author several influential literary theory concepts, many of which deal with the ideas of multiplicity, diversity and unfinalizability. The seminar explores these core concepts through close reading of key texts in English and investigates their reverberations in the writings of other thinkers such as Kristeva, de Man and Derrida.

SLAVIC 230. 18th Century Russian Literature. 3-4 Units.
For graduate students and upper-level undergraduates. Russian literature of the long 18th century, from the late 1600s to 1800. Readings in the Baroque, Neoclassicism and Sentimentalism. Major works are examined in their literary and historical context and also in relation to the principal subcultures of the period, including the court, academy, church and Old Believer diaspora.

SLAVIC 231. Tarkovsky. 3-5 Units.
The relatively slim body of work produced by the great Russian director Andrei Tarkovsky helped redefine the possibilities of the art of cinema. Older and younger generations of directors continue to be inspired by his trademark long shot, unconventional narrative techniques, everence for landscape and nature, and by general spatio-temporal discontinuity. The course provides a systematic examination of the director's complete oeuvre (seven feature films and his works for radio and opera) along with his main theoretical treatise Sculpting in Time.

SLAVIC 325. Readings in Russian Realism. 3-5 Units.
For graduate students or upper-level undergraduates. What did Realism mean for late imperial Russian writers? What has it meant for twentieth-century literary theory? As we seek to answer these questions, we read Tolstoy, Dostoevsky, Turgenev, and Chekhov, alongside their brilliant but less often taught contemporaries such as Goncharov, Saltykov-Shchedrin, Leskov, Garshin, Korolenko, Gorky, Andreev, and Bunin. Taught in English; readings in Russian. Prerequisite: Three years of Russian.
Same as: REES 210

SLAVIC 327. Boris Pasternak and the Poetry of the Russian Avant-garde. 3-4 Units.
An emphasis is made on close reading of the poetry of Boris Pasternak, Marina Tsvetaeva and Vladimir Mayakovsky. Taught in Russian. Prerequisite: 3rd Year Russian Language.

SLAVIC 329. Russian Versification: History and Theory. 3-4 Units.
A survey of metric forms, rhyming principles and stanzaic patterns in the Russian poetry of the 18th - 21st centuries. Taught in Russian. Prerequisite: Two years of Russian.
Same as: SLAVIC 129

SLAVIC 345. Survey of Russian Literature: The Age of Experiment. 3-5 Units.
This course discusses the transition from predominantly poetic to predominantly prosaic creativity in the Russian literature of the first half of the 19th century Russian literature and the birth of the great Russian novel. It covers three major Russian writers -- Alexander Pushkin, Mikhail Lermontov and Nikolai Gogol -- and examines the changes in the Russian literary scene affected by their work. An emphasis is placed on close reading of literary texts and analysis of literary techniques employed in them. This course meets the Slavic Department Writing-in-the-Major (WIM) requirement. Taught in English.
Same as: SLAVIC 145

SLAVIC 346. The Great Russian Novel: Tolstoy and Dostoevsky. 3-5 Units.
The two giant novels we will read and discuss closely were above all urgent actions taken in the heat of present crisis. War and Peace (1865-1869), Leo Tolstoy's epic family saga of Russia's historic resistance to Napoleon and the modern "will-to-power," and The Brothers Karamazov (1878-1880), Dostoevsky's tragicomic investigation into the roots of familial perversion, crimes of individual thought and collective performance, fascinate us with the striking contrasts of their novels' aesthetic responses and innovations. The final focus of the course will be on several of Anton Chekhov's short stories that re-play the themes of the Russian novel with compressed indirectness, pushing the great realist novel's dominance firmly into "history.".
Same as: SLAVIC 146

SLAVIC 347. Modern Russian Literature and Culture: The Age of War and Revolution. 3-5 Units.
The Age of Revolution: Readings in Russian Modernist Prose of the 1920-30s: What makes Russian modernist prose special? Or is there anything special about Russian modernist prose? This course aims to answer these questions through close readings of works by Babel, Mandelstam, Zoshchenko, Platonov, Olesha and Bulgakov. Aesthetic issues such as hero, plot, and narrative devices will be addressed with the aid of contemporaneous literary theory (Shklovsky, Tynianov, Eikhenbaum, Bakhtin). Novels and theory will be read in English. NOTE: This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.
Same as: SLAVIC 147

SLAVIC 348. Slavic Literature and Culture since the Death of Stalin. 3-5 Units.
The course offers a survey of Soviet and post-Soviet literary texts and films created by Russian, Ukrainian and Belarusian artists and marginalized or repressed by the Soviet regime. The first part of the course will focus on the topics of opposition and dissent, generational conflict, modernization, Soviet everyday life, gender, citizenship and national identity, state-published and samizdat literature, "village" and "cosmopolitan" culture, etc. The second part of it will be devoted to the postmodernist aesthetics and ideology in the dismantlement of totalitarian society, as well in the process of shaping post-Soviet identities. Slavic Language Courses

SLAVLANG 1. First-Year Russian, First Quarter. 5 Units.
A beginning Russian course. Proficiency based communicative approach. Introduction to essential vocabulary and grammar, Russian culture and the Russian view of reality.

SLAVLANG 1A. Accelerated First-Year Russian, Part 1. 5 Units.
First quarter of the two-quarter accelerated sequence. For students with little or no prior experience studying Russian. Students acquire beginning proficiency in Russian at an accelerated pace through intensive studying of basic Russian grammar and functional vocabulary. The course emphasis is put on practice in speaking, reading, and writing Russian with special insight into Russian culture. Completion of 2A fulfills the University Language Requirement.

SLAVLANG 2. First-Year Russian, Second Quarter. 5 Units.
Continuation of SLAVLANG 1.A beginning Russian course.Proficiency based communicative approach. Introduction to essential vocabulary and grammar, Russian culture and the Russian view of reality.Active practice in speaking, reading and writing Russian. Prerequisite: Placement Test or SLAVLANG 1.

SLAVLANG 2A. Accelerated First-Year Russian, part 2. 5 Units.
Continuation of Slavlang 1A. Continuation of SLAVLANG1A. Completes the first-year sequence in two rather than three quarters. Students develop basic level proficiency in Russian at an accelerated pace through intensive studying of essential Russian grammar, functional vocabulary and active language practice. Speaking, reading and writing skills in Russian are developed through diverse materials in appropriate cultural contexts. The course fulfills the University foreign language requirement. Prerequisite: Slavlang 1A or placement Test.

SLAVLANG 3. First-Year Russian, Third Quarter. 5 Units.
Continuation of SLAVLANG 2.A beginning Russian course. Proficiency based communicative approach. Introduction to essential vocabulary and grammar, Russian culture and the Russian view of reality.Active practice in speaking, reading and writing Russian. The course fulfills the University foreign language requirement. Prerequisite: Placement Test or SLAVLANG 2.

SLAVLANG 5. Russian for Heritage Speakers, First Quarter. 2 Units.
Self-paced.Emphasis on reading and writing skills in Russian. Developing communication in formal and informal settings. Does not fulfill the University foreign language requirement. Prerequisite: placement test.

SLAVLANG 6. Russian for Heritage Speakers, Second Quarter. 2 Units.
Self-paced.Emphasis on reading and writing skills in Russian. Developing communication in formal and informal settings. Does not fulfill the University foreign language requirement.Does not fulfill the University foreign language requirement. Prerequisite: SLAVLANG 5 or placement test.

SLAVLANG 7. Russian for Heritage Speakers, Third Quarter. 2 Units.
Self-paced.Emphasis on reading and writing skills in Russian. Developing communication in formal and informal settings. Does not fulfill the University foreign language requirement. Prerequisite: SLAVLANG 6 or placement test.

SLAVLANG 10. Old Church Slavonic. 2 Units.
The first written language of the Slavic people. Grammar. Primarily a skills course, with attention to the historical context of Old Church Slavic.

SLAVLANG 51. Second-Year Russian, First Quarter. 5 Units.
Developing Russian language communicative proficiency from beginning to intermediate level. The course is based on active practice of speaking, writing reading and listening skills in a variety of situations through multiple texts and cultural materials. Intensive grammar review and vocabulary build up. Prerequisite: Placement Test, SLAVLANG 3.

SLAVLANG 52. Second-Year Russian, Second Quarter. 5 Units.
Continuation of 51. Developing Russian language communicative proficiency from beginning to intermediate level. The course is based on active practice of speaking, writing reading and listening skills in a variety of situations through multiple texts and cultural materials. Intensive grammar review and vocabulary build up. Prerequisite: placement test or 51.

SLAVLANG 53. Second-Year Russian, Third Quarter. 5 Units.
Continuation of 52. Developing Russian language communicative proficiency from beginning to intermediate level. The course is based on active practice of speaking, writing reading and listening skills in a variety of situations through multiple texts and cultural materials. Intensive grammar review and vocabulary build up.Increased level of self-confidence and fluency Prerequisite: placement test or 52.

SLAVLANG 55. Intermediate Russian Conversation. 2 Units.
Russian conversation practice at intermediate level. Based on developing Russian speaking skills through multiple situations and a variety of contexts.May be repeated twice for credit. Prerequisite: SLAVLANG3 or equivalent placement.

SLAVLANG 60A. Beginning Russian Conversation. 1 Unit.
.

SLAVLANG 60B. Intermediate Russian Conversation. 1 Unit.
.

SLAVLANG 60C. Advanced Russian Conversation. 1 Unit.
.

SLAVLANG 60F. Perspectives on Slavic Culture and History through Film. 1 Unit.
.

SLAVLANG 60G. Slavic History. 1 Unit.
This course examines the history of the World War II and contemporary Russia's memory of it. World War II has been arguably the most important struggle in Russia's history and memory. In this course, we will study the history of the war and how that history is told in Russia today. We will approach the war chronologically and thematically. We will ask how this war impacted the Soviet project, the mentality of Russians, and contemporary Russia's polices.

SLAVLANG 60H. Culture and Politics of Russian Athleticism through the lens of Sochi 2014. 1 Unit.
.

SLAVLANG 60T. Teaching Slavic Conversation. 1 Unit.
.

SLAVLANG 70. Reading in Russian. 2 Units.
The course is designed to develop reading competence in Russian. This is not a traditional language course that takes an integrated four-skill approach. The goal of the course is to reach proficiency of advanced level in reading Russian authentic materials pertinent to history and culture. The emphasis is on vocabulary building, reading comprehension, and translation. Intermediate level of Russian is required. Placement test or consent of Instructor.

SLAVLANG 99. Language Specials. 1-5 Unit.
Prerequisite: consent of instructor.

SLAVLANG 111. Third-Year Russian, First Quarter. 4 Units.
A snapshot of Russian life. Reading comprehension, conversational competence, grammatical accuracy, and cultural sophistication. Prerequisite: Placement Test or SLAVLANG53. Prerequisite: Placement Test or SLAVLANG 53.

SLAVLANG 112. Third-Year Russian, Second Quarter. 4 Units.
Continuation of SLAVLANG 111. A snapshot of Russian life. Reading comprehension, conversational competence, grammatical accuracy, and cultural sophistication. Prerequisite: Placement Test or SLAVLANG 111.

SLAVLANG 113. Third-Year Russian, Third Quarter. 4 Units.
Continuation of SLAVLANG 112. A snapshot of Russian life. Reading comprehension, conversational competence, grammatical accuracy, and cultural sophistication. Prerequisite: Placement Test or SLAVLANG 112.

SLAVLANG 177. Fourth-Year Russian, First Quarter. 3 Units.
Continuation of SLAVLANG 113. Culture, history, and current events. Films, classical and contemporary writers, newspaper articles, documentaries, radio and TV programs, and music. Review and fine-tuning of grammar and idiomatic usage. Prerequisite: Placement Ttest, SLAVLANG 113.

SLAVLANG 178. Fourth-Year Russian, Second Quarter. 3 Units.
Continuation of SLAVLANG 177. Culture, history, and current events. Films, classical and contemporary writers, newspaper articles, documentaries, radio and TV programs, and music. Review and fine-tuning of grammar and idiomatic usage. Prerequisite: Placement Test, SLAVLANG 177.

SLAVLANG 179. Fourth-Year Russian, Third Quarter. 3 Units.
Continuation of SLAVLANG 178. Culture, history, and current events. Films, classical and contemporary writers, newspaper articles, documentaries, radio and TV programs, and music. Review and fine-tuning of grammar and idiomatic usage. Prerequisite: Placement Test, SLAVLANG 178.

SLAVLANG 181. Fifth-Year Russian, First Quarter. 3 Units.
Language proficiency maintenance; appropriate for majors and non-majors with significant language experience. Discussions, oral presentations, and writing essays on contemporary Russia. Prerequisite: Placement Test, or SLAVLANG 179.

SLAVLANG 182. Fifth-Year Russian, Second Quarter. 3 Units.
Continuation of SLAVLANG181. Language proficiency maintenance; appropriate for majors and non-majors with significant language experience. Discussions, oral presentations, and writing essays on contemporary Russia. Prerequisite: Placement Test or SLAVLANG 181.

SLAVLANG 183. Fifth-Year Russian, Third Quarter. 3 Units.
Continuation of SLAVLANG 182. Language proficiency maintenance; appropriate for majors and non-majors with significant language experience. Discussions, oral presentations, and writing essays on contemporary Russia. Prerequisite: Placement Test or SLAVLANG 182.

SLAVLANG 184A. Russian Reading Conversation and Composition. 2 Units.
Proficiency in reading, spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.

SLAVLANG 184B. Russian Advanced Conversation and Composition. 2-3 Units.
Proficiency in spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.

SLAVLANG 184C. Russian Advanced Conversation and Composition. 2-3 Units.
Proficiency in spoken and written Russian through literary and non-literary texts, movies, and contemporary media. Emphasis is on debate, oral presentations, and essay writing.

SLAVLANG 199. Individual Work. 1-5 Unit.
Prerequisite: consent of instructor.

SLAVLANG 220. Russian for Slavic PhD Students. 1-3 Unit.
For DLCL graduate students who will teach Russian language and literature. Course objective is to improve spoken Russian on literary and pedagogical topics. Prerequisite: consent of instructor. May be repeated for credit.

SLAVLANG 299. Independent Study. 1-5 Unit.
.

SLAVLANG 394. Graduate Studies in Russian Conversation. 1-3 Unit.
.

SLAVLANG 395. Graduate Studies in Russian. 1-5 Unit.
Prerequisite: consent of instructor. (Staff).

SOCIOLOGY

Courses offered by the Department of Sociology are listed under the subject code SOC on the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=SOC&filter-catalognumber-SOC=on) web site.

Sociology seeks to understand all aspects of human social behavior, including the behavior of individuals as well as the social dynamics of small groups, large organizations, communities, institutions, and entire societies. Sociologists are typically motivated both by the desire to better understand the principles of social life and by the conviction that understanding these principles may aid in the formulation of enlightened and effective social policy. Sociology provides an intellectual background for students considering careers in the professions or business. Students may pursue degrees in sociology at the bachelor's, master's, or doctoral levels. The department organizes its courses by areas of study to assist students in tailoring their education and research to their academic interests and career goals.

Mission of the Undergraduate Program in Sociology

The mission of the undergraduate program in Sociology is to provide students with the skills necessary to understand and address social problems and inequalities in global, institutional, and interpersonal social relations. At its core, the curriculum in the major is rooted in social theory and the scientific method. Sociology majors are given opportunities to develop a broad understanding of core sociological theories and the methodological skills used to evaluate human behavior and social organizations. Sociology provides an intellectual background for students considering careers in business, social services, public policy, government service, international nongovernmental organizations, foundations, or academia.

The Sociology major consists of a core curriculum plus elective courses intended to provide breadth of exposure to the variety of areas encompassed by sociology.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an understanding of core knowledge within the discipline of sociology.
2. the ability to communicate ideas clearly and persuasively in writing.
3. the ability to analyze a problem and draw correct inferences using qualitative and/or quantitative analysis.
4. the ability to evaluate theory and critique research within the discipline of sociology.

Graduate Programs in Sociology

The Department of Sociology offers three types of advanced degrees:

- the Doctor of Philosophy
- the coterminal Master of Arts in Sociology which is restricted to currently enrolled Stanford undergraduates
- the Master of Arts in Sociology which is available to Stanford students who are currently enrolled in other advanced degree programs.

The department does not have a terminal M.A. program for external applicants.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Sociology and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Sociology. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Sociology and to interpret and present the results of such research.

Areas of Study

The Department of Sociology specializes in four general areas of study, allowing students to tailor their education and research to their academic interests and career goals. The five areas of study supported by the department are:

Organizations, Business, and the Economy

Focus is on the arrangements which societies construct for the provision of material goods or services. A formal organization which provides goods or services for profit and sells them through a market is called a business, and the economic system is capitalism. Social needs are also met through government and not-for-profit organizations, such as garden clubs, hospitals, prisons, and the Red Cross; some private and social needs are met outside of organizations, such as health care provided by family members and exchange of favors among friends. Courses stress the factors that determine whether needs that people define are met through markets or non-market allocation, through organizations, or by other means. They also investigate the environmental and technical factors that shape organization structure, the determinants of how efficiently organizations operate, and the interpersonal processes that shape individual behavior within organizations. Careers related to this field include management and administration in business or public settings, management consulting and analysis, and legal studies related to corporations, organizations, and business.

Social Movements, Comparative Politics, and Social Change

Focus is on the emergence, reproduction, and change of political systems and institutions, especially on why and how different political systems and social movements appear in different times and places, and how differences in political regimes and economic systems influence attempts to change these systems. The origins and significance of national and transnational social movements, transition to democracy, including revolution, nationalism, and other forms of collective action, in creating and sustaining these changes analyzed across countries and over time. Careers that are relevant to this field include law, public policy, government service, nonprofit and international nongovernmental organizations, business organizations (especially those with international interests), consulting, and managerial jobs.

Social Psychology and Interpersonal Processes

Focus is on the social organization of individual identity, beliefs, and behavior, and upon social structures and processes which emerge in and define interpersonal interactions. Processes studied include social acceptance and competition for prestige and status, the generation of power differences, the development of intimacy bonds, the formation of expectation states which govern performance in task oriented groups, and social pressures to constrain deviance. Foundation courses emphasize the effect of social processes on individual behavior and the analysis of group processes. This field provides training for careers with a significant interpersonal component, including advertising and marketing,

business, education, law, management, medicine and health, or social work.

Social Inequality

Focus is on forms of social inequality, including fields such as: the shape and nature of social inequalities; competition for power; allocation of privilege; production and reproduction of social cleavages; and consequences of class, race, and gender for outcomes such as attitudes, political behavior, and life styles. Many courses emphasize changes in the structure of social inequalities over time, and the processes which produce similarities or differences in stratification across nations. Topics include educational inequality, employment history, gender differences, income distributions, poverty, race, and ethnic relations, social mobility, and status attainment. Careers related to this field include administration, advertising, education, foreign service, journalism, industrial relations, law, management consulting, market research, public policy, and social service.

Race, Gender, Immigration, Identity and Policy

Focus is on population diversity, primarily in the United States, and on how identity is formed and maintained. Classes in this subject area address segregation, integration, and assimilation. What does it mean to cross from one group to another? How has the law treated racial minorities, sexual minorities, and immigrants differently over time? Careers related to this field include social work, teaching, research, law, management, and population studies which can be applied to any industry.

Joint Programs in Sociology with the School of Law

The School of Law and Department of Sociology conduct joint programs leading to either a combined J.D. degree with an M.A. degree in Sociology or to a combined J.D. degree with a Ph.D. in Sociology.

Law students interested in pursuing an M.A. in Sociology apply for admission to the Department of Sociology during the first year of Law school. Once admitted to the Department of Sociology, the student must complete standard departmental master's degree requirements as specified in this bulletin. Applications for the joint J.D./M.A. degree program must be approved by both the department and the Law school. Faculty advisers from each program participate in the planning and supervising of the student's academic program.

The J.D./Ph.D. degree program is designed for students who wish to prepare themselves for research or teaching careers in areas relating to both legal and sociological concerns. Students interested in the joint degree program must be admitted to both the School of Law and the Department of Sociology. Interest in the joint degree program must be noted on each of the student's applications. Alternatively, an enrolled student in either the Law School or the Sociology department may apply to the other program, preferably during their first year of study. Students participating in the joint degree program are not eligible to transfer and receive credit for a masters, or other degree, towards the Sociology Ph.D..

Upon admission, students are assigned a joint program faculty adviser who assists the student in planning an appropriate program and ensuring that all requirements for both degrees are satisfied. The faculty adviser serves in this capacity during the student's course of study regardless of whether the student is enrolled in the School of Law or the Sociology department.

J.D./Ph.D. students may elect to begin their course of study in either the School of Law or the Department of Sociology. Students must be enrolled full-time in the Law school for the first year of Law school, and must enroll full time in the graduate school for the first year of the Sociology program. After that time, enrollment may be in the graduate school or the Law school, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. and the Ph.D. degrees. Up to 54 quarter units of approved course work may be counted towards both degrees, but no more than 31 quarter units of courses that originate outside the Law school may count towards the Law degree. The Law degree may be conferred upon completion of applicable Law school requirements; it is not necessary to have both degrees conferred simultaneously. Students participating in the joint degree program are not eligible to transfer and receive credit for a master's or other degree towards the Ph.D. Students must complete the equivalent of 183 quarter units to complete both degrees. Tuition and financial aid arrangements normally are through the school in which the student is currently enrolled.

The Law degree may be conferred upon completion of applicable Law school requirements; it is not necessary to have both degrees conferred simultaneously.

For more information, see the Sociology (https://sociology.stanford.edu/academics/phd-programs/jdphd/) web site, and the Law School web site on the J.D./Ph.D. (https://www.law.stanford.edu/degrees/joint-degrees/law-and-sociology/)

Bachelor of Arts in Sociology

There are two pathways to a Sociology B.A. degree:

- the Sociology Bachelor's degree, or
- the Sociology Bachelor's degree with the Data Science, Markets, and Management subplan

The following requirements are for the Sociology bachelor's degree. See the Sociology Bachelor's degree with the Data Science, Markets, and Management subplan (p. 2101) for degree requirements for that option.

Declaring the Major in Sociology

To declare a major in Sociology, students should declare the B.A. in Axess, then download the major declaration form from the department website (https://sociology.stanford.edu/academics/explore-ba-sociology/how-declare/). Fill out and electronically sign the declaration form, and email the completed form to the Student Services Specialist.

Major Requirements

A 3.0 GPA is required to enter the Sociology major. The B.A. in Sociology requires 60 units of coursework. Grades of 'S' or 'CR' are allowable. When students take classes for a letter grade, a grade of at least 'C' should be earned or the student should obtain a written exception.

Unit values for courses can vary from year to year. If you have any questions, contact the Undergraduate Student Services Specialist in Sociology.

Students are encouraged to complete some coursework at the 200-level. Sociology majors are encouraged to participate in directed research or undertake independent research with Sociology faculty. See the department website for additional information.

Requirements

Units required for the Sociology B.A. are:

	Units
Sociology Core Courses (4 courses)	17
Sociology Foundation Courses (3 courses)	12
Social Science Electives (Units sufficient to bring the total # of units to 60--usually 4-6 courses)	27
Methodology, Quantitative or Qualitative (1 course)	4
Total Units	60

Core Courses Required for the Major

The following core courses are required of all Sociology majors.

		Units
SOC 1	Introduction to Sociology	4-5
or SOC 170	Classics of Modern Social Theory	
SOC 180A	Foundations of Social Research	4
SOC 180B	Introduction to Data Analysis	4
SOC 202	Junior Seminar: Preparation for Research	5
or SOC 204	Capstone Research Seminar	
Total Units		17-18

- Students considering honors are encouraged to enroll in SOC 202 Junior Seminar: Preparation for Research in their junior year, in order to have a research plan in place in the summer before senior year.

Foundation Courses Required for the Major

Sociology majors must complete 3 foundation courses; one course in three different areas for a total of three courses. For further information about Sociology areas of study, see the department website.

Foundation courses, classified by area of study, are as follows:

Organizations, Business, and the Economy

		Units
SOC 114	Economic Sociology	4
SOC 160	Formal Organizations	4
SOC 162	The Social Regulation of Markets	3

Social Movements, Comparative Politics, and Social Change

		Units
SOC 118	Social Movements and Collective Action	4
SOC 119	Understanding Large-Scale Societal Change: The Case of the 1960s	5
SOC 130	Education and Society	4-5
SOC 156A	The Changing American City	4
SOC 176	The Social Life of Neighborhoods	3-5

Social Psychology and Interpersonal Processes

		Units
SOC 2	Self and Society: Introduction to Social Psychology	4
SOC 8	Sport, Competition, and Society	4
SOC 120	Interpersonal Relations	4
SOC 121	The Individual in Social Structure: Foundations in Sociological Social Psychology	5
SOC 127	Bargaining, Power, and Influence in Social Interaction	5

Social Stratification and Inequality

		Units
SOC 135	Poverty, Inequality, and Social Policy in the United States	3
SOC 140	Introduction to Social Stratification	3
SOC 141	Monitoring the Crisis	5
SOC 144	Inequality and the Workplace	5
SOC 149	The Urban Underclass	4
SOC 152	The Social Determinants of Health	4
SOC 179A	Crime and Punishment in America	4-5

Race, Gender, Immigration, Identity, and Policy

		Units
SOC 142	Sociology of Gender	3
SOC 145	Race and Ethnic Relations in the USA	4
SOC 147	Race and Ethnicity Around the World	4
SOC 150	Race and Political Sociology	3
SOC 155	The Changing American Family	4
SOC 189	Race and Immigration	4-5

Social Science Elective Courses

Social Science electives are required for the major, sufficient to bring the total number of units in the Sociology major to 60. You may take all elective courses in Sociology if you wish. Students may choose their elective courses according to personal interest. Non-Sociology courses must be approved by the Director of Undergraduate Studies. A maximum of 10 units taken in other Social Science departments (Anthropology, Communication, Economics, Political Science, Psychology) may be counted towards the 60 units required for the Sociology B.A.

Methods Requirement

Sociology majors are required to take at least one methodology course, either quantitative or qualitative, to supplement the core and foundation courses within Sociology. Quantitative classes in data analysis, programming, computer science, statistics, mathematics, are all suitable for this requirement, as are qualitative methods classes such as field research methods.

Bachelor of Arts in Sociology with Data Science, Markets, and Management Subplan

There are two pathways to a Sociology B.A. degree:

- the Sociology Bachelor's degree, or
- the Sociology Bachelor's degree with the Data Science, Markets, and Management subplan

The following requirements are for the Sociology bachelor's degree with the Data Science, Markets, and Management subplan. See the Sociology Bachelor's degree tab (p. 2100) for degree requirements for that option.

Declaring the Major in Sociology with Data Science, Markets, and Management Subplan

To declare a major in Sociology, students should declare the B.A. in Axess with the Data Science, Markets, and Management subplan, then download the major declaration form from the department web site (https://sociology.stanford.edu/academics/explore-ba-sociology/how-declare/). Fill out and electronically sign the declaration form, and email the completed form to the Student Services Specialist.

The subplan prints on the diploma and transcript.

Major Requirements

A 3.0 GPA is required to enter the Sociology major. The B.A. in Sociology requires 60 units of coursework. Grades of 'S' or 'CR' are allowable. When students take classes for a letter grade, a grade of at least 'C' should be earned or the student should obtain a written exception.

Unit values for courses can vary from year to year. If you have any questions, contact the Undergraduate Student Services Specialist in Sociology.

Students are encouraged to complete some coursework at the 200-level. Sociology majors are encouraged to participate in directed research

or undertake independent research with Sociology faculty. See the department website for additional information.

Requirements

Students in the Data Science, Markets, and Management subplan must take the following courses; substitutions may be made only with consent of the Director of Undergraduate Studies.

Core Requirements

The core requirements include one class in each of: experimental methods, computer programming, analysis of big data, data analysis and regression, network analysis, and a Writing in the Major class, as follows:

		Units
SOC 2	Self and Society: Introduction to Social Psychology	4
or SOC 120	Interpersonal Relations	
CS 105	Introduction to Computers (all CS requirements can be substituted for by higher level CS or programming classes)	3-5
or CS 106A	Programming Methodology	
or CS 106B	Programming Abstractions	
or CS 106X	Programming Abstractions	
MS&E 231	Introduction to Computational Social Science	3-4
or SOC 278	Introduction to Computational Social Science	
or SOC 10	Introduction to Computational Social Science	
SOC 180B	Introduction to Data Analysis	4
SOC 126	Introduction to Social Networks	3-5
or SOC 31N	Social Networks	
or SOC 224B	Relational Sociology	
or CS 224W	Machine Learning with Graphs	
or ECON 291	Social and Economic Networks	
or MS&E 135	Networks	
SOC 202	Junior Seminar: Preparation for Research	5
or SOC 204	Capstone Research Seminar	

Foundation Sociology Courses on Economics, Organizations, Business, Labor Markets, and the Economy

Choose any two of the following courses:

		Units
SOC 3	America: Unequal	4
SOC 18N	Ethics, Morality, and Markets	3
SOC 114	Economic Sociology	4
SOC 117A	China Under Mao	5
SOC 130	Education and Society	4-5
SOC 140	Introduction to Social Stratification	3
SOC 162	The Social Regulation of Markets	3
SOC 167A	Asia-Pacific Transformation	4

Electives

In addition to the Core classes and the Foundation classes, the Data Science, Markets and Management subplan requires 7 additional courses, as follows:

	Units
Four additional Sociology (SOC) courses	16
Two additional Computer Science, Math, Statistics, or Quantitative Social Science Courses	8
One additional Sociology or Social Science elective	4

Honors Program

Sociology majors who wish to complete an independent scholarly project under the direction of a faculty member are encouraged to apply for admission to the department's honors program. Admission to the program requires a grade point average (GPA) of 3.5 or higher in courses taken within the major, and an overall GPA of 3.3 (B+) or higher in all undergraduate coursework. Applicants are required to identify a Sociology faculty member to advise on the research and writing of the essay. With the approval of the Director of Undergraduate Studies, students may work with faculty advisers in other departments.

Students are encouraged to begin planning their honors thesis in their junior year. SOC 202 (http://exploredegrees.stanford.edu/search/?P=SOC%20202), the Junior Seminar Sociology Writing In the Major course, is strongly recommended for students intending to pursue an honors thesis. Students pursuing honors should take the Sociology methods sequence, SOC 180A and SOC 180B (or approved substitutes) as early in the process as they can. Students begin designing their honors project in connection with this seminar and in consultation with the seminar leader.

To apply for the honors program, students should complete the honors application, obtain an adviser's approval and signature, and submit the application with a brief description of the proposed project and a copy of the student's unofficial undergraduate transcript, to the Director of Undergraduate Studies. Prospective candidates are asked to submit an honors application as soon as possible in their junior or senior year, ideally no later than the end of the fourth quarter prior to graduation (typically Spring Quarter of the junior year). Honors students may earn up to 12 independent study units for work leading to completion of the required honors thesis, excluding units associated with the Capstone Research Seminar.

If the student is admitted to the program, students will be directed to declare the B.A.H. in Axess and drop the general B.A. Completion of honors in Sociology requires:

1. Application and acceptance into the Sociology honors program
2. Completion of all requirements of the Sociology major or Sociology major with subplan
3. Completion of an honors thesis with a grade of 'A-' or higher
4. Participation in the Sociology Honors Colloquium in the Spring Quarter prior to graduation.

If honors program requirements are not met, students must drop the B.A.H. degree program in Axess and declare the B.A. before applying to graduate.

Minor in Sociology

There are two pathways to a Sociology minor:

- the traditional Sociology minor, or
- the Sociology minor subplan in Poverty, Inequality and Policy

The following requirements are for the traditional minor in Sociology. See the Poverty, Inequality and Policy tab (p.) for those requirements.

Students must complete a minimum of 24 units in Sociology (or 6 classes, whichever is greater) for the minor. Grades of 'S' or 'CR' are allowable. When students take classes for a letter grade, a grade of at least 'C' should be earned or the student should obtain a written exception. Students who wish to declare a minor in Sociology must do so no later than the deadline for their application to graduate. Related coursework from other departments may fulfill a minor requirement. All course substitutions must be approved by the Sociology Director of Undergraduate Studies.

Course requirements for a minor in Sociology are as follows:

		Units
SOC 1	Introduction to Sociology	4-5
or SOC 170	Classics of Modern Social Theory	
SOC 2	Self and Society: Introduction to Social Psychology	4
or SOC 180A	Foundations of Social Research	
or SOC 180B	Introduction to Data Analysis	
Two foundation courses: see foundation courses required for the major above		
Two additional Sociology courses		

Minor in Sociology, Poverty, Inequality and Policy Subplan

There are two pathways to a Sociology minor:

- the traditional Sociology minor (p. 2102), or
- the Sociology minor subplan in Poverty, Inequality and Policy

The following requirements are for the Poverty, Inequality and Policy subplan. See the Sociology Minor tab (p. 2102) for those requirements.

Overview

This minor provides students with the interdisciplinary tools needed to understand and contribute to the science of poverty and inequality. The coursework, which is drawn from sociology, economics, public policy, education, history, psychology, and political science, provides state-of-the-art training in the types and forms of poverty and inequality, the causes and consequences of poverty and inequality, and the many programs and interventions to reduce poverty and inequality. It provides opportunities to train in big data analysis, algorithms and predictive models, and qualitative and ethnographic methods. It also provides opportunities to participate in individual and group research projects and to join teams that are building poverty-reducing products, apps, and interventions. It is an excellent foundation for students considering careers in business, public policy, medicine, public health, government service, the law, nongovernmental organizations, foundations, or academia

Course Requirements

The minor requires 24 units. Grades of 'S' or 'CR' are allowable. When students take classes for a letter grade, a grade of at least 'C' should be earned or the student should obtain a written exception. All course substitutions must be approved by the Sociology Director of Undergraduate Studies.

The following requirements are for the Poverty, Inequality, and Policy minor subplan.

		Units
Core		
Take two core courses		
SOC 3	America: Unequal	4
SOC 180A	Foundations of Social Research	4
or SOC 180B	Introduction to Data Analysis	
or ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	
Breadth		
Choose at least two courses from at least two of the following areas of concentration		8
Education		
EDUC 232	Culture, Learning, and Poverty	
SOC 130/ EDUC 120C	Education and Society	
EDUC 347	The Economics of Higher Education	
SOC 129X/ AFRICAAM 112/ CSRE 112X/ EDUC 112	Urban Education	
Gender		
SOC 153/ AFRICAAM 141X/ CSRE 141X/ FEMGEN 141	Activism and Intersectionality	
SOC 134D	Sex, Courtship, and Marriage in America	
SOC/FEMGEN 142	Sociology of Gender	
SOC/FEMGEN 155	The Changing American Family	
Health and Well-Being		
SOC 152	The Social Determinants of Health	
Inequality and Mobility		
ECON 22N	Causes and Consequences of the Rise in Inequality	
SOC 14N	Inequality in American Society	
SOC 135	Poverty, Inequality, and Social Policy in the United States	
Labor Markets		
ECON 145	Labor Economics	
ECON 147	The Economics of Labor Markets	
SOC 114	Economic Sociology	
Poverty and the Safety Net		
SOC 157 & SOC 158	Ending Poverty with Technology and Ending Poverty with Technology: A Practicum. (or PUBLPOL 147/148)	
ECON 19Q	Government by the Numbers	
SOC 149/ CSRE 149A/ URBANST 112	The Urban Underclass	
ECON 11N	Understanding the Welfare System	
SOC 156A	The Changing American City	
Race, Ethnicity, and Immigration		
SOC 146/ CSRE 196C/ ENGLISH 172D/ PSYCH 155/ TAPS 165	Introduction to Comparative Studies in Race and Ethnicity	
ANTHRO 31Q	The Big Shift	4
PSYCH 286	The Psychology of Racial Inequality	
SOC/CSRE 45Q	Understanding Race and Ethnicity in American Society	
SOC/CSRE 20N	What counts as "race," and why?	
Electives		
Choose two electives. Although all pre-approved courses are listed here, students may petition for approval of other courses related to inequality, poverty, and mobility. Students may also elect to take additional concentration courses in any of the concentration areas above.		8
LAW 2515	Environmental Justice	3
EDUC 197	Gender and Education in Global and Comparative Perspectives	3-4
FEMGEN 297	Gender and Education in Global and Comparative Perspectives	3-4

SOC 134	Gender and Education in Global and Comparative Perspectives	3-4
EDUC 173	Gender and Higher Education: National and International Perspectives	3-4
SOC 173	Gender and Higher Education: National and International Perspectives	3-4
CSRE 141	Gentrification	5
URBANST 141	Gentrification	5
POLISCI 338	Universal Basic Income: the philosophy behind the proposal	3
POLISCI 220	Urban Policy Research Lab	5
PUBLPOL 225	Urban Policy Research Lab	5
URBANST 170	Urban Policy Research Lab	5
PUBLPOL 154	Politics and Policy in California	5
PUBLPOL 101	Introduction to American Politics and Policy: The Good, The Bad, and The Ugly	4-5
ECON 241	Public Economics I	2-5
SOC 109	Race and Immigration in the US : Boundaries and Mobility	4
LAW 2010	Sentencing, Corrections, and Criminal Justice Policy	3
CSRE 156	The Changing American City	4
URBANST 156A	The Changing American City	4
SOC 156A	The Changing American City	4
PHIL 174B	Universal Basic Income: the philosophy behind the proposal	3

Optional Research Apprenticeship (up to five units)

Students may opt to replace one elective with a research apprenticeship with faculty in an ongoing research project. The Center on Poverty and Inequality also offers opportunities for students interested in participating in larger team projects. Prior arrangement required.

Coterminal Master of Arts in Sociology

Stanford undergraduates, regardless of undergraduate major, who wish to pursue an M.A. in Sociology may apply for the coterminal master's program. The coterminal M.A. in Sociology is a flexible, self-designed program. It is possible for students to complete their B.A. and Sociology coterminal M.A. in the fourth year; historically, most students have completed a Sociology M.A. during their fifth year at Stanford.

Application and Admission

Undergraduates must be admitted to the program and enrolled as a graduate student for at least one quarter prior to their B.A. conferral. A cumulative GPA of at least 3.5 in previous undergraduate work is required for admission. The GRE is not required for a Sociology master's program application. It is highly recommended that applicants have completed at least one Sociology course at the 100 level with a grade of 'B' or better.

The department accepts applications once a year; the application deadline is February 5, 2021 for Spring Quarter enrollment. There are no exceptions to this deadline. All application materials are submitted online.

The department does not fund coterminal M.A. students. To learn more about graduate financial assistance, please visit the Stanford Financial Aid Office (https://financialaid.stanford.edu/aid/special/co_term.html).

To apply for admission to the Sociology coterminal M.A. program, students must submit the following:

1. The Application for Admission to Coterminal Master's Program (https://applyweb.com/stanterm/) available online in mid-September;
2. Statement of purpose: limited to 2 pages double-spaced. Applicants should outline reasons for pursuing the M.A. in Sociology, including career aspirations or plans for additional advanced degrees, and other aspects of their academic experiences that may aid the admissions committee in evaluating their motivation for graduate study. Students seeking a research-intensive experience also should describe their specific research interests and plans to complete
3. Preliminary Program Proposal for Master's Degree: this form should be uploaded to the online application. At least 45 units of coursework relevant to the degree program must be specified. Example proposals for the 2019-20 academic year appear below;
4. Undergraduate Coterm Application Approval form (https://stanford.app.box.com/v/ug-coterm-application-approval/): downloaded from the Registrar's Office website and uploaded to the online application;
5. Current unofficial undergraduate transcript;
6. Two letters of recommendation from Stanford faculty familiar with the student's academic work. Additional letters from teaching assistants, employers, or other individuals are accepted as supplemental materials but are not required.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Program Requirements

Coterminal M.A. students are required to take 45 units of course work during their graduate career. All units for the coterminal M.A. must be taken at or above the 100 level; advanced-level course work is encouraged and at least 50 percent must be courses designated primarily for graduate students (typically at the 200 level or above).

Students who wish to take courses outside the department must seek approval in advance; coterminal master's students are limited to 5 units from outside of the department and outside courses must be taken in other Social Science departments. Up to 5 units can be taken as an independent study or directed reading (SOC 290 Coterminal MA individual study) with a faculty member appointed in Sociology but no more than 12 units of coursework across the 290 series (including SOC 291, SOC 292) can be counted toward the degree.

Students may transfer relevant units from their undergraduate career; to be eligible for transfer, courses must have been taken in the three quarters preceding the student's first graduate quarter. See

the Registrar's Office for additional information on course transfer policies. All units applied to the coterminal master's degree must be taken for a letter grade, and an overall grade point average (GPA) of 3.0 (B) or better is required for the degree.

All coterminal students are required to take SOC 270 Classics of Modern Social Theory and SOC 280A Foundations of Social Research. These introductory theory and methods courses are an important component of graduate training in the social sciences. Enrollment in SOC 202 Junior Seminar: Preparation for Research, SOC 204 Capstone Research Seminar, and SOC 280B Introduction to Data Analysis is strongly encouraged. Together, these courses provide skills for research opportunities within the department and in academic or professional careers.

The Department of Sociology is able to provide a research-intensive curriculum to a limited number of coterminal Master's students each year. It is highly recommended that students interested in a research-focused experience have completed SOC 180A/280A and SOC 202, or be enrolled, at the time of application to the coterminal Master's program. Applicants should indicate interest in their statement of purpose and describe their specific research question or topic. Upon acceptance, research-track students will work with the Sociology Coterm Director to develop an individualized program, which may include engaging in a research apprenticeship with faculty and/or completing an original research project.

Coterm Advising: Coterminal M.A. students should meet with the Sociology Coterm Director upon acceptance to discuss their planned coursework and receive approval for their program proposal. Program proposals, which outline the courses to be completed for the master's degree, must be submitted before the start of the student's second graduate quarter.

The Department of Sociology is committed to providing academic advising in support of the scholarly and professional development of all coterminal Master's students. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. The Sociology Coterm Director guides students in key areas such as selecting courses, designing and conducting research, and exploring academic opportunities and professional pathways. The Sociology student services office is also available to assist coterminal students in navigating policies and degree requirements. Students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for knowing and adhering to University and Departmental policies, standards, and requirements for coterminal students

For University coterminal degree program rules and University application forms, see the Coterminal Degrees section (http://exploredegrees.stanford.edu/cotermdegrees/) of this bulletin. For additional information regarding the Sociology coterminal M.A. and how to apply, see the Department of Sociology (https://sociology.stanford.edu/academics/masters-degree-programs/coterminal-masters-program/) web site.

Sample Program Proposals

Standard Coterminal Master's Coursework (2020-21)

		Units

Master of Arts in Sociology for Current Stanford Graduate Students

The M.A. degree in Sociology is available to current Ph.D. candidates in Sociology and to students in advanced degree programs (Ph.D., J.D., M.D.) from other Stanford departments and schools.

For the M.A. degree, students must complete a minimum of 45 units of Sociology coursework with a grade point average (GPA) of 3.0 (B) or better. Of these units, 30 units must be taken in courses taught by faculty appointed in the Sociology department. Students may petition to use the remaining 15 units as flex units for courses not offered by faculty appointed in Sociology, but that are highly relevant to the discipline. Of these flex units, 5 can be taken as an independent study or directed reading with a member of the faculty appointed in Sociology. All flex units applied to courses not taught by faculty appointed in Sociology must be approved by the Director of Graduate Studies. All courses must be taken for a letter grade when possible. Workshops and colloquia do not count towards the M.A.

Students who wish to engage in more in-depth study on a specific topic may do so by focusing on coursework within an area of study, such as Poverty and Inequality, Social Psychology, Organizations and the Economy, or Race, Ethnicity, and Immigration.

A thesis is not required, but many students work closely with a Sociology faculty advisor to develop a publishable paper.

There is no teaching requirement for the M.A. in Sociology.

University regulations pertaining to the M.A. are listed in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin.

Although formal application to the M.A. program is not required, applicants from outside of the Sociology department must submit:

1. Graduate Authorization Petition form, available electronically through Axess (https://axess.stanford.edu/);
2. Program Proposal for an M.A. form available for download from the registrar's office website, submitted to Sociology Graduate Student Services Manager;
3. Short statement of purpose; 1 page double-spaced, submitted to Sociology Graduate Student Services Manager.

Sociology Ph.D.s may receive their M.A. in their second or third year of graduate study. Interested students from other degree programs should visit the Sociology d (https://sociology.stanford.edu/academics/coterminal-masters-program/master-arts-sociology-current-stanford-graduate-students/)epartment (https://sociology.stanford.edu/

academics/coterminal-masters-program/master-arts-sociology-current-stanford-graduate-students/) (https://sociology.stanford.edu/academics/coterminal-masters-program/master-arts-sociology-current-stanford-graduate-students/)web site.

Doctor of Philosophy in Sociology

The Ph.D. program in the Department of Sociology at Stanford offers rigorous training in sociological knowledge and research methods, and prepares students to embark on successful professional careers in sociology. The program prides itself on world-renowned faculty, cutting-edge research programs, and close interactions between faculty and students.

The following program requirements apply to students who entered the Ph.D program in 2010-11 or later; students admitted prior to 2010 should consult the department or the Bulletin from their year of admission (http://exploredegrees.stanford.edu/archive/#text) for requirements specific to their cohort.

Students must complete the following department requirements for the Ph.D. degree in Sociology:

1. Students must enroll in SOC 305 Graduate Proseminar in Autumn and Winter quarters of the first year. The course provides an introduction and orientation to the field of sociology, and to the department and faculty. One unit of credit is given for this course; grading is on a satisfactory/no credit basis.
2. Students must complete 6 quarters of SOC 396 Sociology Colloquium by the end of their third year of study. The Sociology Colloquium is a semimonthly seminar held throughout the academic year, in which distinguished scholars lecture about their cutting-edge research findings. Students must enroll for credit and it is required for all first and second year Sociology students.
3. Students are required to complete 45 units of course work in Sociology in the first academic year, then 15 units of Sociology course work in the second academic year. Course work excludes workshop, independent study, and directed reading units.
4. *Theory:* Students are required to take two courses in sociological theory. The first course in macro-sociological theory (SOC 370A SOCIOLOGICAL THEORY), and the second course in research design (SOC 372 Theoretical Analysis and Research Design or SOC 670 Designing Social Research) to be taken in the first year of the program.
5. *Methodology:* Students are required to complete a series of courses in methodology as well as one methods elective. Students with little background in statistics are encouraged to take an undergraduate statistics course in their first quarter of the program. The required methods sequence, to be taken in order, is listed below.
6. *Survey Courses:* Students must complete four broad survey courses to demonstrate command of a range of sociological literature. Each year the department specifies which courses meet this requirement. A list of courses that generally fulfill this requirement is listed below. Students should consult with their advisor to ensure that the combination of courses selected to meet this requirement exhibits sufficient breadth. This requirement is normally completed by the end of the second year of residency and must be met by the end of the third year of residency. The most current list of approved survey courses is available on the department website.
7. *Workshops:* Beginning in year two, doctoral students are required to enroll in at least one workshop each quarter. First year students may attend workshops but are not required to enroll. Sociology workshops are offered for 1-2 units on a credit/non-credit basis only and attendance is required to receive course credit. The Director of Graduate Studies may approve a student's petition to attend a workshop when enrollment is prohibited by unit constraints; such attendance is not noted on the transcript. A list of approved workshops that fulfill this requirement is listed in the requirements section below and also on the department website.
8. *Qualifying Exam #1:* The first comprehensive examination is designed to ensure that students enter their second year with a firm reading knowledge of two substantive subfields, which students choose. Students write two essays in response to questions provided by the examining committee. The essays are due exactly one week after students receive the questions. Students choose one of two questions to write on for each subfield. Examinations are offered in the subject areas below, based on comprehensive readings lists that are available at the beginning of each academic year. Each subject area has one faculty point person or group leader. Group leaders are responsible for assembling essay questions and agree to meet with students as requested.

Exam subject areas for 2020 -21 are:

- Economic Sociology
- Gender
- Historical and Comparative Sociology
- Organizations
- Political Sociology
- Population, Family, Demography, and Marriage
- Race, Ethnicity, and Immigration
- Social Inequality
- Social Movements
- Social Psychology and Microsociology

Students may work together to read and discuss the materials on the comprehensive reading lists (and in fact they are encouraged to do so). They may consult with faculty members as they study for the exams. However, once the examination questions are released, all such collaboration and consultation should stop, and students should work independently on their essays.

9. *Qualifying Exam #2*: The second qualifying examination provides students with a more focused engagement in a specialized subfield or research area, and tests the student's ability to work and think independently. Exam #2 is due by June 1 of the second year in residence. A two-person committee that includes the primary advisor evaluates the paper. Although the committee is usually comprised of two regular faculty members in the department, emeritus and other faculty outside the department may serve as a committee member with prior approval. Committees and a brief proposal are recorded on the second year qualifying paper form, which the student should complete and submit to the graduate student services manager by December 1 of the second year. Second year students are required to enroll in SOC 385A Research Practicum 1 and SOC 385B Research Practicum II (both workshops assist in developing the front end of the research paper). Exams are read and graded by both committee members. The grades are an important component of the decision to advance a student to candidacy. Students must submit a one-page proposal to the reading committee and receive its approval by December 1 of the second year. The proposal includes a brief statement of the problem; a preliminary research design; a data source and proof of reasonable access to it; and a short reading list. Students submit the proposal along with second year qualifying paper form to the graduate student services manager. Students should produce a paper that makes an original contribution to sociological knowledge and that is ultimately publishable. That generally means writing a paper that includes data analysis; a full and focused analytic discussion of relevant theory and research; and frame the findings as a contribution to the literature. Students may also produce a paper with a primarily theoretical contribution so long as the prospects for eventual publication are clear to the committee. The paper should contain no more than 8,000 words of text. This paper may not also be employed to meet the Third Year Paper requirement, even in revised form.

10. *Third Year Paper:* In preparation for a career of writing scholarly papers, each student must complete a research paper in the third year of residency. This third-year paper may be on any sociological topic, and may address theoretical, empirical, or methodological issues. The paper is expected to reflect original work and be of publishable quality. Students select a committee of at least two Sociology faculty members to serve as third year paper readers. To ensure that students are making adequate progress on their paper, students are required to provide a first draft of the paper to readers by April 1. The final deadline for paper submission is June 1. The committee provides a review that speaks to (1) whether the paper is publishable and whether the student should therefore invest in attempting to publish it, and (2) what types of revisions, insofar as the paper is publishable, that the student should be pursuing to ready the paper for publication. These comments are shared with the Director of Graduate Studies, and copies of the paper and faculty comments will go in the student file.

11. *TA requirement:* Students must complete three quarters of teaching assistantship in departmental courses, or in other courses by approval. Students working as either a teaching assistant (TA) under the supervision of a faculty member or as a teaching fellow (TF) fulfills this requirement. Students are required to take SOC 300, Workshop: Teaching Development, in Spring Quarter of the first year. In addition, students are encouraged to take advantage of department and University teacher training programs. Students for whom English is a second language are expected to acquire sufficient facility in English to be an effective teacher. It is recommended that students complete their teaching requirements early in their graduate program; the requirement must be completed by the end of the fourth year of residency.

12. RA requirement: As partial preparation for becoming an accomplished researcher, each student must complete three quarters of research assistantship, working under the supervision of one or more faculty members, including regular, emeritus, and affiliated faculty. The experience may involve paid (or unpaid) work as a Research Assistant (RA). With the approval of the Director of Graduate Studies, research experience may be acquired by involvement in research projects outside the department. It is recommended that students complete their research requirements early in their graduate program; the requirement must be completed by the end of the fourth year of residency.

13. Students are required to present at least two papers at either major professional meetings (e.g., ASA), department workshops, or a combination of the two in their first five years of graduate study. The department provides students with a travel and research fund for the duration of their graduate career to assist with the costs associated with travel.

14. *Dissertation Prospectus and Prospectus Defense:* In order to demonstrate the ability to conduct independent scholarly work, each student must prepare and successfully defend the dissertation prospectus by the end of May during the fourth year in residence. Students should have their dissertation committee selected by the end of their third year in the program.

15. Doctoral Dissertation and Defense: Each student must complete and defend a doctoral dissertation. At the choice of the student (and in consultation with his/her advisor), the dissertation requirement may be met either by (1) submitting a book-length document, or (2) submitting three independent papers. The papers may address the same topic, but should be written as stand-alone, single-authored papers in standard journal format (i.e., AJS or ASR). None of these papers may overlap substantially with one another, and none of them may be co-authored. (The main criterion in judging substantial overlap is whether any standard journal, such as AJS, would regard the papers as too similar to publish both.) The dissertation must be submitted to all committee members at least 30 days in advance of the defense date. The dissertation defense serves as the Oral Examination required by the University. Assessment of satisfactory completion is determined by the student's doctoral committee members. All students are invited to present their dissertation findings at an informal department colloquium.

The faculty are responsible for providing students with timely and constructive feedback on their progress towards the Ph.D. In order to evaluate student progress and to identify potential problem areas, the department's faculty reviews the academic progress of each first-year student at the beginning of Winter and Spring quarters and again at the end of the academic year. The first two reviews are primarily intended to identify developing problems that could impede progress. In most cases, students are simply given constructive feedback, but if there are more serious concerns, a student may be placed on probation with specific guidelines for addressing the problems detected. The review at the end of the academic year is more thorough; each student's performance during the first year is reviewed and discussed. Possible outcomes of the spring review include: (1) continuation of the student in good standing, or (2) placing the student on probation, with specific guidelines for the period of probation and the steps to be taken in order to be returned to good standing. For students on probation at this point (or at any other subsequent points), possible outcomes of a review include: (1) restoration to good standing; (2) continued probation, again with guidelines for necessary remedial steps; or (3) termination from the program. Students leaving the program at the end of the first year are usually allowed to complete the requirements to receive an M.A. degree, if this does not involve additional residence or financial support. All students are given feedback from their advisors at the end of their first year of graduate work, helping them to identify areas of strengths and potential weakness.

At the end of the second year of residency, students who are performing well are advanced to candidacy. This step implies that the student has demonstrated the relevant qualities required for successful completion of the Ph.D. Future evaluations are based on the satisfactory completion of specific remaining department and University requirements. Students who are not advanced to candidacy will normally be terminated from the program and awarded an M.A. degree. In some cases, the department may require that a student complete outstanding work or complete unmet requirements before admission to candidacy. The University requires that all students must be admitted to candidacy by the beginning of the third year in residence in order to continue in the Ph.D. program. Therefore all requirements stipulated by the department must be met before registration for the fall quarter of the student's third year.

At any point during the degree program, evidence that a student is performing at a less than satisfactory level may be cause for a formal academic review of that student.

Degree Requirements

Survey Courses

Students must complete four courses from an approved list. This list is updated and circulated to students at the start of each academic year. *Note:* class offerings rotate; not all approved survey courses are offered every year. The following courses typically fulfill the survey course requirement:

		Units
SOC 308	Social Demography	4-5
SOC 310	Political Sociology	4-5
SOC 314	Economic Sociology	4-5
SOC 316	Historical and Comparative Sociology	4-5
SOC 318	Social Movements and Collective Action	4-5
SOC 320	Foundations of Social Psychology	4-5
SOC 323	Sociology of the Family	4-5
SOC 339	Gender Meanings and Processes	5
SOC 340	Social Stratification	4-5

SOC 342B	Gender and Social Structure	5
SOC 349	Race, Space, and Stratification	4
SOC 350	Sociology of Race	4-5
SOC 357	Immigration and Assimilation	3-5
SOC 358	Sociology of Immigration	5
SOC 362	Organization and Environment	3
SOC 363A	Seminar on Organizational Theory	5
SOC 366A	Organizational Ecology	3
SOC 376	Perspectives on Organization and Environment: Social Movement Organizations and Environments	3

Research Methods

Required methodology courses are listed below.

		Units
SOC 381	Sociological Methodology I: Introduction	5
SOC 382	Sociological Methodology II: Principles of Regression Analysis	4-5
SOC 383	Sociological Methodology III: Models for Discrete Outcomes	5

Theory

		Units
SOC 370A	SOCIOLOGICAL THEORY	5
SOC 372	Theoretical Analysis and Research Design	3-5
or OB 670	Designing Social Research	

Workshops

		Units
SOC 311A	Workshop: Comparative Studies of Educational and Political Systems	1-5
SOC 315W	Workshop: Economic Sociology and Organizations	1-2
SOC 317W	Computational Sociology	1-2
SOC 325W	Workshop: Graduate Family	1-2
SOC 341W	Workshop: Inequality	1-2
SOC 350W	Workshop: Migration, Ethnicity, Race and Nation	1-3
SOC 368W	Workshop: China Social Science	1
SOC 375W	Workshop: Politics, Morality, and Hierarchy	1-2
SOC 380W	Workshop: Qualitative and Fieldwork Methods	1-3

Ph.D. Minor in Sociology

Sociology offers a minor for currently enrolled doctoral students in other Stanford departments and schools. Students must complete a minimum of 30 graduate-level units with a grade point average (GPA) of 3.0 (B) or better. All 30 units for the minor must be in courses taught by faculty appointed in the Sociology department. Students must enroll in the SOC course offerings (not cross-listed sections). There are two exceptions: five (5) of these units may be taken as an independent study or directed reading with a member of the sociology faculty; another five (5) units may be taken in a statistics or methods course taught in another department. All units must be taken for a letter grade. Workshops and colloquium do not count towards the Ph.D. minor. The program must be approved by a Sociology advisor and filed with the Sociology student services office. While there is not a formal application process, candidates must submit a short statement of purpose (2 pages), and a completed Application for Ph.D. Minor form (http://studentaffairs.stanford.edu/sites/default/files/registrar/files/app_phd_minor.pdf) to the Sociology student services office. The Application for Ph.D. Minor form must have all Sociology or other courses to be applied to the minor listed, including course number, units, and final grades.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Sociology Department will allow either letter grades or grades of 'CR' or 'S' to count towards Sociology BA and Sociology minor requirements. When students take classes for a letter grade, a grade of at least 'C' should be earned or the student should obtain a written exception.

Coterminal MA Degree Requirements

Grading

Sociology Coterminal MA students may count classes taken for 'CR' or 'S' toward their MA degree, and should continue to maintain a 'B' average, or better in courses that will count toward the Sociology MA degree that are taken for a letter grade.

Doctoral Degree Requirements

Grading

The Sociology Department has not changed its policy concerning letter grades for Sociology doctoral students. Students should take required courses for a letter grade and earn a grade of ‘B+’, or better in each course for academic year 2020-21.

For courses that do not satisfy specific degree requirements in the graduate program (i.e. courses unrelated to degree requirements, non-required, directed reading and research, non-SOC subject code courses, language courses…), students may count these courses, taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory), towards the overall units required and in satisfaction of graduate degree.

Other Graduate Policies

If a student has difficulty completing a graduate degree requirement due to the COVID-19 pandemic, (e.g., qualifying exam(s), prospectus defense), the student should consult with the Director of Graduate Studies or the Student Services Manager to identify academic options to fulfill degree requirements.

Graduate Advising Expectations

The Department of Sociology is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the

advisor and the advisee are expected to maintain professionalism and integrity.

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Emeriti: (Professors) Joseph Berger, Michael T. Hannan, Douglas McAdam, John W. Meyer, Susan Olzak, Cecilia Ridgeway, W. Richard Scott, Nancy B. Tuma

Chair: Michael Rosenfeld

Director of Graduate Studies: Shelley Correll

Director of Coterminal Masters: Aliya Saperstein

Director of Undergraduate Studies: Jeremy Freese

Professors: Karen Cook, Shelley Correll, Jeremy Freese, Mark Granovetter, David Grusky, Tomás Jiménez, Michael Rosenfeld, Gi-Wook Shin, C. Matthew Snipp, Florencia Torche, Kiyoteru Tsutsui, Andrew Walder, Robb Willer, Xueguang Zhou

Associate Professors: Aliya Saperstein, Forrest Stuart

Assistant Professors: Asad L. Asad, Matthew Clair, Mark Hoffman, Jackelyn Hwang, Michelle Jackson, Barbara Kiviat

Adjunct Professors: Glenn Carroll, Michele Landis Dauber, Larry Diamond, Daniel McFarland, Walter Powell, Francisco Ramirez, Hayagreeva Rao, Sean Reardon, Jesper Sørensen, Sarah Soule, Mitchell Stevens

Adjunct Associate Professors: Patricia Bromley, Amir Goldberg, Adina Sterling, Mitchell Stevens, Christine Min Wotipka

Adjunct Assistant Professors: Angèle Christin, Benjamin Domingue, Sharad Goel, Jennifer Pan

Lecturers: Eva Myersson Milgrom

Adjunct Consulting Professor: Ruth Cronkite

Overseas Studies Courses in Sociology

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

		Units
OSPBER 66	Theory from the Bleachers: Reading German Sports and Culture	3
OSPFLOR 46	Images of Evil in Criminal Justice	5
OSPMADRD 61	Society and Cultural Change: The Case of Spain	4
OSPOXFRD 117W	Gender and Social Change in Modern Britain	4-5

Courses

SOC 1. Introduction to Sociology. 5 Units.
This course to get students to think like a sociologist; to use core concepts and theories from the field of sociology to make sense of the most pressing issues of our time: race and ethnicity; gender and sexuality; family; education; social class and economic inequality; social connectedness; social movements; and immigration. The course will draw heavily on the research and writing of Stanford¿s own sociologist.

SOC 2. Self and Society: Introduction to Social Psychology. 4 Units.
Why do people behave the way they do? This is the fundamental question that drives social psychology. Through reading, lecture, and interactive discussion, students have the opportunity to explore and think critically about a variety of exciting issues including: what causes us to like, love, help, or hurt others; the effects of social influence and persuasion on individual thoughts, emotion, and behavior; and how the lessons of social psychology can be applied in contexts such as health, work, and relationships. The social forces studied in the class shape our behavior, though their operation cannot be seen directly. A central idea of this class is that awareness of these forces allows us to make choices in light of them, offering us more agency and wisdom in our everyday lives.
Same as: PSYCH 70

SOC 3. America: Unequal. 4 Units.
It was never imagined "when the U.S. was founded" that the rich would be so rich and the poor so poor. It was never imagined "when the U.S. was founded" that opportunities to get ahead would depend so profoundly on one's family circumstances and other starting conditions. How could this have happened in the "land of opportunity?" What are the effects of such profound inequality? And what, if anything, should be done about it?.
Same as: CSRE 3P, PUBLPOL 113

SOC 4. The Sociology of Music. 3-5 Units.
This course examines music¿its production, its consumption, and it contested role in society¿from a distinctly sociological lens. Why do we prefer certain songs, artists, and musical genres over others? How do we ¿use¿ music to signal group membership and create social categories like class, race, ethnicity, and gender? How does music perpetuate, but also challenge, broader inequalities? Why do some songs become hits? What effects are technology and digital media having on the ways we experience and think about music? Course readings and lectures will explore the various answers to these questions by introducing students to key sociological concepts and ideas. Class time will be spent moving between core theories, listening sessions, discussion of current musical events, and an interrogation of students¿ own musical experiences. Students will undertake a number of short research and writing assignments that call on them to make sociological sense of music in their own lives, in the lives of others, and in society at large.
Same as: AFRICAAM 4, CSRE 4

SOC 8. Sport, Competition, and Society. 4 Units.
This course uses the tools of social science to help understand debates and puzzles from contemporary sports, and in doing so shows how sports and other contests provide many telling examples of enduring social dynamics and larger social trends. We also consider how sport serves as the entry point for many larger debates about the morality and ethics raised by ongoing social change.

SOC 9N. 2020 Election, Understanding the National, Participating in the Local. 3 Units.
In this class we will read the literature on voting and elections. We will cover some literature on voting rights in the US. The class will have a field component, as students will not only be obligated to register to vote (if they are eligible), but also go out into the field, in groups, to register voters and talk to them about some local issue or candidate. Learn to understand the election system through participation! Each student will pick a local issue or candidate, and then the students will go out, in teams, to canvass around that local issue or candidate and learn about what their fellow citizens have to say about their chosen issue. Students will present a post-mortem about their chosen candidate or issue after the November elections are over.

SOC 10. Introduction to Computational Social Science. 4 Units.
The large-scale digitization of social life is providing new opportunities and research directions for social scientists. In this course, we will discuss how social scientists, and sociologists in particular, are using advances in computational techniques to further our knowledge of society. Some of the topics we will survey include online experiments, massive online social networks, large-scale text analysis, and geographical information systems. Students will learn principles of research design in addition to fundamental programming and data analysis techniques. By the end of the course they should be able to produce computational social science research of their own.

SOC 14N. Inequality in American Society. 4 Units.
An overview of the major forms of inequality in American society, their causes and consequences. Special attention will devoted to to public policy associated with inequality.

SOC 15N. The Transformation of Socialist Societies. 3 Units.
Preference to freshmen. The impact of societal organization on the lives of ordinary people in socialist societies and in the new societies arising through the processes of political, economic, and social transformation. Do the concepts of democratization and marketization suffice to characterize ongoing changes? Enrollment limited to 16.

SOC 18N. Ethics, Morality, and Markets. 3 Units.
Markets are inescapably entangled with questions of right and wrong. What counts as a fair price or a fair wage? Should people be able to sell their organs? Do companies have a responsibility to make sure algorithmic decisions don't perpetuate racism and misogyny? Even when market exchange seems coldly rational, it still embodies normative ideas about the right ways to value objects and people and to determine who gets what. In this seminar, we will study markets as social institutions permeated with moral meaning. We will explore how powerful actors work to institutionalize certain understandings of good and bad; unpack how particular moral visions materially benefit some groups of people more so than others; examine the ways people draw on notions of fairness to justify and contest the market's distribution of resources and opportunities; and consider who has agency to build markets according to different normative ideals. Most course readings are empirical research, so we will also critically discuss how social scientists use data and methods to build evidence about the way the world works.

SOC 19N. The Immigrant Experience in Everyday Life. 3 Units.
The seminar introduces students to major themes connected to the immigrant experience, including identity, education, assimilation, transnationalism, political membership, and intergroup relations. There will also be some attention given to research methodology. The seminar addresses these themes through reading ethnographies that document the everyday experience of immigrants and immigrant communities, broadly defined, in the United States. The course readings primarily come from more contemporary ethnographic research, but it will also include a sampling of ethnographies that examine the experience of previous waves of immigrants. Student participation will include in-class discussions of readings, short written responses to readings, and a final paper in which students draw on original ethnographic research that they conduct during the quarter. By the end of the quarter, students will be able to identify the social, political, and economic forces that shape the immigrant experience. More importantly, students will understand HOW these forces enter the immigrant experience in everyday life.

SOC 20N. What counts as "race," and why?. 4 Units.
Preference to freshmen. Seminar discussion of how various institutions in U.S. society employ racial categories, and how race is studied and conceptualized across disciplines. Course introduces perspectives from demography, history, law, genetics, sociology, psychology, and medicine. Students will read original social science research, learn to collect and analyze data from in-depth interviews, and use library resources to conduct legal/archival case studies.
Same as: CSRE 20N

SOC 21Q. Decoding our Emotions: Culture, Emotion, and Social Interaction. 3 Units.
Are emotions the same across cultures and societies? Are women really more emotional than men? Where and how do we draw the line between ¿normal¿ expressions of grief and diagnosable symptoms of depression? What role do fear and anger play in American politics? Although most of us think that feelings are deeply personal and private experiences - comprised of physiological and psychological elements - sociologists argue that they are heavily influenced by social factors. In this seminar, we¿ll explore the social side of emotion¿including how they are socially learned, shaped, regulated, controlled, and distributed in the population as well as the consequences of emotion culture, emotion norms, emotion management, emotional labor, and emotional deviance for individuals, social groups, and society.nnnAmerican society - and its corresponding landscape of norms, behaviors, and beliefs relating to emotion - will serve as a starting point for our analysis; however, throughout the course we will seek to place America¿s emotion culture in comparative and historical perspective. Students will read a broad range of texts and articles on the social shaping of emotion. Some of the readings will focus on specific emotions - including grief, anger, happiness, fear, and love - while others will focus on various aspects of emotion - including the commercialization of emotion and the role of emotion in politics and social movements. We will also consider how emotions are gendered and racialized across cultures. By the end of the quarter, you will have a better understanding of how our emotional lives are shaped by the historical, cultural, and social contexts in which we find ourselves.

SOC 22N. The Roots of Social Protest. 3 Units.
Preference to freshmen. The conditions under which social protest occurs and the emergence, success, and viability of contemporary social movements. Examples include women's civil rights, ecology, and antiwar and anti-globilization movements in the U.S. and elsewhere. Sociological theories to explain the timing, location, and causes of mobilization; how researchers evaluate these theories. Comparison of tactics, trajectories, and outcomes.

SOC 24N. Themes in Political and Historical Sociology: The Political Party. 4 Units.
This class focuses on the political party and on the different scholarly perspectives from which it has been studied. We will study these perspectives analytically¿to find the main elements that characterize them¿and historically¿to understand how the party has operated in different contexts and how scholarly interpretations have changed in time. The emphasis on the party requires a contextualization of two processes that have shaped the functioning of the institutions of the state in the last decades¿one operating below the state and the other operating abovenFrom below the state, the fragmentation of interests has been challenging the traditional identities that used to be embedded in the party. From above, international economic processes have been undermining the role of the state, and thus of the party, as the main vehicle for bringing grievances into the political arena. Thus, part of the agenda of the party is dominated by the activities of organized social movements that only partially follow traditional cleavages (class, status, race, ethnicity, urban/rural), while another part is dominated by multinational firms and banks that only partially represent national interests. Yet, to the extent that the institutions of the state remain relevant, the political party remains a powerful and significant actor of Modern democracies. The fundamental question of this class is to understand the way in which the party continues to shape the functioning of the state.n We will approach this question analytically and historically. Analytically, we will read through various definitions of what a party is. The aim is not to arrive at a ¿correct¿ definition of the party (there is not such a thing!) but to sharpen the differences between the several approaches. Historically, we will study the party in action with the goal of understanding the perspective from which the party was portrayed. Together, in this double exercise you will learn the tools of the trade, so to speak, of political sociology.

SOC 31N. Social Networks. 3 Units.
This Introductory Seminar reviews the history of social network studies, investigates how networks have changed over the past hundred years and asks how new technologies will impact them. We will draw from scholarly publications, popular culture and personal experience as ways to approach this central aspect of the human experience.

SOC 45Q. Understanding Race and Ethnicity in American Society. 4 Units.
Preference to sophomores. Historical overview of race in America, race and violence, race and socioeconomic well-being, and the future of race relations in America. Enrollment limited to 16.
Same as: CSRE 45Q

SOC 46N. Race, Ethnic, and National Identities: Imagined Communities. 3 Units.
Preference to freshmen. How new identities are created and legitimated. What does it mean to try on a different identity? National groups and ethnic groups are so large that one individual can know only an infinitesimal fraction of other group members. What explains the seeming coherence of groups? If identities are a product of the imagination, why are people willing to fight and die for them? Enrollment limited to 16.

SOC 97SI. Homeless Services in Silicon Valley. 2 Units.
Community engaged learning through applied academics encourages students tonidentify themselves as agents of social change, to use the experience of service tonaddress injustice in communities and to explore solutions to complex humanitariannissues locally. This quarter long course allows students to engage with the nonprofitnsector and partner organizations in a unique culture outside of the traditional classroom setting. We place participants at local organizations to do a quarter-long mentored project, supplemented with group reflection sessions. Through these meaningful, hands-on experiences, we hope to engage the Stanford student body in the issue of homelessness, specifically as faced by service providers.

SOC 100ASB. Pre-field Course for Alternative Spring Break. 1 Unit.
Limited to students participating in the Alternative Spring Break program. See http://asb.stanford.edu for more information.

SOC 100D. Organizational Theory. 3 Units.
Schools, prisons, hospitals, universities, restaurants, nations, sports teams - organizations are all around. They employ us, feed us, and provide us with sources of identity. This course is an introduction to the basic concepts and classic theories about organizations. What defines an organization? How should organizations structure themselves to accomplish their goals? When is it most desirable for an organizations merge with another? Lectures and readings will explore such questions, and contemporary examples in the media will bring them to life.

SOC 100SI. Student Initiated Course. 1 Unit.
.

SOC 101D. Interpersonal Relations. 3 Units.
This course examines what happens when people interact together and how that interaction affects the nature of their thoughts, relationships, and behaviors. We will take a look at research from sociology and psychology to explore a diverse set of issues including conformity, stereotypes, and cognitive biases. At times we will look at deeply individual topics like cognition and happiness and at other times we will look at more macro-level issues like how we are affected by our social networks. However, throughout the whole class we will be looking at the dynamic and complex relationship between the individual and the social world.

SOC 102. Between Nation-Building and Liberalization: The Welfare State in Israel. 3 Units.
According to one commentator, the political economy of Israel is characterized by embedded illiberalism. In the context of a national and territorial conflict, the Israeli state fostered comprehensive nation-building projects (such as immigration absorption), via employment and social protection schemes. This course surveys the distinctive development of the Israeli welfare state in comparative perspective, and analyzes its particular politics and outcomes in the form of inclusion but also exclusion of different populations from full citizenship. The course will follow a chronological path from the pre-state crystallization of national welfare institutions to the current neo-liberalization trend that seems to undermine collectivist projects and advance the re-commodification of citizenship. Throughout the course we will discuss issues such as: the role of labor and nationalism in the design of social policy, the production of national, ethnic and gender inequality, and the dynamics of change and continuity following heightened liberalization and internationalization since the 1980s. The course exposes students to key issues of the sociology of the welfare state with particular emphasis on the development and role of the state in a deeply conflicted society, using the Israeli experience. At the conclusion of the course students are expected to understand how welfare state institutions reflect but also reproduce societal schisms and conflicts, and be familiar with central aspects of Israeli politics past and present.
Same as: JEWISHST 132

SOC 102A. Social Inequality in Israel. 3 Units.
Like the US, Israel is a nation of immigrants. Israel additionally shares with the US vast economic, ethnic/racial and gender gaps, which are shaped and are being shaped by the demographic diversity characterizing its society. The course will provide a comparative framework for analyzing social inequality in Israel. We will start by reviewing essential concepts and theories in the study of social stratification. We will then review the main cleavages characterizing Israeli society, while comparing them to gaps in other advances societies and particularly the US. We will focus on class, gender and ethnicity as the main distinctions and will examine their implications for differences in life chances in several domains across the life course. We will conclude with a discussion of possible scenarios for change, which are relevant to both Israel and the US. Throughout the course, we will study critical thinking techniques and will use them for analyzing issues that are central for the analysis of social inequality in Israel and elsewhere.
Same as: CSRE 132A, JEWISHST 132A

SOC 102D. Social Movements in the 21st Century: Innovations in Structures and Strategies. 4 Units.
The study of social movements is well developed in sociology, but has largely focused on movements that occurred prior to widespread use of cell phones, the Internet and social media. These technologies have allowed not just new mobilization strategies, but also new tactics and organizational structures. Recognizing the power of new technologies to change the way we interact and organize is integral to understanding the future of social movements as well as more routine organizational structures and interpersonal interactions.

SOC 103. Sociology of Citizenship. 3 Units.
Not only a legal status, citizenship forms a major concern for political sociologists interested in questions of membership, exclusion, redistribution, and struggles over the boundaries of collective identity. Citizenship is in essence membership in a political community that entails rights and duties, and structures a tripartite relationship between the individual, community and state. The institutions of citizenship include formal and bureaucratic rules of eligibility ¿ but also informal institutions such as identity and belonging. Throughout the course, students are exposed to key issues of the sociology of citizenship such as the historically different paths of men, women, minority groups and immigrants into citizenship, the contested development of rights and duties, the regulation of population, as well as insurgency and collective attempts to rearticulate the terms of the ¿contract¿ with the state. Israel, the USA, France and Germany are used as empirical illustrations. At the conclusion of the course students will know how to utilize the analytic framework of citizenship in order to analyze a wide range of political phenomena in contemporary societies.
Same as: JEWISHST 133

SOC 103A. WELFARE, WORK AND POVERTY.. 3 Units.
Early theorists of the welfare state described it as a reaction to the emergence of needs and interests of specific social groups during processes of economic development and change. Later theorists countered that the welfare state does not merely react to social cleavages during times of economic change but rather works to actively shape them, in line with worldviews or the interests of dominant group members. Adopting the latter approach, the goal of this course is to provide the tools and knowledge necessary for a critical evaluation of the social services provided to Israeli citizens and their impact on social and economic inequalities. The course will survey various approaches to the understanding of the goals of the welfare state. A comparative and historical account of the development of the welfare state will be presented, while highlighting recent developments, such as the increase in poverty rates and the aging of the population. During the course, we will examine the diverse needs that are served by the welfare state, as well as major dilemmas associated with the provision of services. Throughout the course, we will study critical thinking techniques and will use them for analyzing issues that are central for the development of social policies in Israel and the US.
Same as: CSRE 133J, JEWISHST 133A

SOC 103D. Can Women (and Men) Have it All? Gender and Work in the 21st Century. 3 Units.
This course will cover the current understanding of gender inequality in modern workplaces¿its sources, operationalizations, and consequences. Drawing from gender theories about topics like the motherhood penalty, unconscious bias in interactions, occupational segregation, work-life conflict, sexual harassment, and the backlash against women leaders, this course will explore the fundamental question: why do women continue to suffer in the workplace relative to men? The course will also examine the parallel question: what obstructs men from becoming more involved in the home? As families become less and less ¿traditional, ¿ reflecting increasing diversity in.

SOC 104D. U.S. Attitudes to Crime and Policing. 3 Units.
This course examines how social groups, laws, and popular media impact Americans¿ attitudes towards criminal behaviors. It draws on sociological and psychological research, enabling students to appreciate but also critique academic research. Among the topics covered are social influence, laws, and media bias. Students will conduct a research project on a topic of their choosing and present their findings to the class at the end of the quarter.

SOC 105. The Sociology of Emotions. 3 Units.
Although most of us think that feelings are deeply personal and private experiences, this seminar explores the social side of emotion¿including how they are socially learned, shaped, regulated, and distributed in the population as well as the consequences of emotion culture, emotion norms, emotional labor, and emotional deviance for individuals and society. We will consider specific emotions ¿ including jealousy, fear, sympathy, and happiness ¿ as well as more general patterns ¿ including the commercialization of emotion and the role of emotions in politics.

SOC 105D. Sociology of Health and Illness. 3 Units.
This course examines the social causes and context of health, illness, and health care in the United States. Who stays healthy and who gets sick? How do individuals experience and make sense of illness? How docontextual factors (including socioeconomic status, race/ethnicity, culture, social networks, and hospital quality) shape health and health care? What constitutes quality medical care and who gets it? To what degree do the spaces we inhabit and the relationships we form shape our health? What avenues exist for improving health care and reducing health disparities?In examining these questions, we will consider how social scientists, epidemiologists, public health experts, and physicians address them in research and in the field. Reflecting both qualitative and quantitative approaches, we will draw on literatures in social science, public health, and medicine. nnBy the end of the course, students will: 1) have insight into the various ways of defining and measuring health, including mortality, morbidity, physical functioning, and quality of life; 2) understand how a person¿s socio-demographic characteristics influence his or her health, including his or her ability to access resources vital to maintaining health and receiving treatment; 3) understand how researchersemploy theory and make causal inferences based on observational and experimental data; 4) comprehendhow patients and practitioners understand health and illness and their roles in the health care process; and 5) understand the role of medical care in the distribution of health outcomes across the population.

SOC 105VP. Contested markets in the Brazilian Amazon Rainforest. 2-3 Units.
Strategies of environmental movements to contain domestic and foreign corporations that are viewed as major perpetrators of rainforest devastation and the socio-economic degradation of this vast region. Topics: Origins, roles and inter-relations among corporations (zero deforestation agreements in soybean agriculture and cattle ranching), the development of environmental law and the efficacy of government and NGO movements¿ strategies, and whether this emerging economy shapes social classes, groups, tribes, family life to further embed inequality and immobility. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.
Same as: EARTHSYS 205VP, SOC 205VP

SOC 107. China After Mao. 5 Units.
China's post-1976 recovery from the late Mao era; its reorientation toward an open market-oriented economy; the consequences of this new model and runaway economic growth for standards of living, social life, inequality, and local governance; the political conflicts that have accompanied these changes.
Same as: SOC 207

SOC 107E. Education and Inequality: Big Data for Large-Scale Problems. 3-5 Units.
In this course, students will use data from the Stanford Education Data Archive (SEDA) to study the patterns, causes, consequences, and remedies of educational inequality in the US. SEDA is based on 200 million test score records, administrative data, and census data from every public school, school district, and community in the US. The course will include lectures, discussion, and small group research projects using SEDA and other data.
Same as: EDUC 107, EDUC 207, SOC 205

SOC 108. Political & Historical Sociology. 5 Units.
The differences between historical and sociological analysis of past events. The difference between constructing sociological explanations and describing past events. Topics include: the rise of Christianity, the mafia in a Sicilian village, the trade network of the East India Company.
Same as: SOC 208

SOC 109. Race and Immigration in the US : Boundaries and Mobility. 4 Units.
Drawing from theories and research in race/ethnicity, social psychology, inequality, and demography, and focusing on the U.S., this course examines how racial hierarchies affect immigrants¿ socioeconomic mobility and ethnic identities, and how immigrants and their descendants contribute to the reconstruction of racial and ethnic boundaries. Topics include: theories of international migration and assimilation; immigration and the labor market; racial and ethnic identities; immigrants and interracial relations; second-generation mobility and identities; transnationalism.

SOC 109D. Education and Society. 3 Units.
This course will draw on a range of sociological theories and approaches to explore the relationship between education and society. In particular, the course will focus on themes related to the role of education in social stratification, linkages between education and the economy, polity, and culture, and the organizational contexts of schooling. More specifically, topics within these themes include: dominant sociological theories (functional, conflict, and institutional) of the functions and roles of education in society, education and its relationship to different forms of capital (human, social and cultural), educational inequalities in achievement and attainment by race, class, and gender, the role of tracking and high stakes examinations in different education systemsaround the world, and the role of globalization in shaping educational goals and policy. The content of the course will focus not only on schooling in the United States, but will draw on cross-national and historical comparisons in order to illuminate the distinctive features of different education systems and provide a broad overview of the relationship between education and society.

SOC 111. State and Society in Korea. 4 Units.
20th-century Korea from a comparative historical perspective. Colonialism, nationalism, development, state-society relations, democratization, and globalization with reference to the Korean experience.
Same as: INTNLREL 143, SOC 211

SOC 111D. Social-Psychology and Economics: The trouble with how economists think you think. 5 Units.
This course will compare and contrast explanations for human behavior; specifically, those derived from economic theory with those from social-psychological research. Rationality, decision-making, happiness, motivation, the persistence of inequality, and evaluation of outputs will be examined. It will also investigate the shortcomings of estimating individual preferences without taking into account macro-level phenomenon, such as hierarchy and justice. For students who lack familiarity with economics, the course will also cover basic economic theory as necessary. The use of economic versus social-psychological theory in determining appropriate public policy will also be explored.

SOC 112. Comparative Democratic Development. 5 Units.
Social, cultural, political, economic, and international factors affecting the development and consolidation of democracy in historical and comparative perspective. Individual country experiences with democracy, democratization, and regime performance. Emphasis is on global third wave of democratization beginning in the mid-1970s, the recent global recession of democracy (including the rise of illiberal populist parties and movements), and the contemporary challenges and prospects for democratic change.
Same as: POLISCI 147

SOC 113. Comparative Corruption. 3 Units.
Causes, effects, and solutions to various forms of corruption in business and politics in both developing regions (e.g. Asia, E. Europe) and developed ones (the US and the EU).
Same as: POLISCI 143S

SOC 113D. Sociology of Sport. 5 Units.
This course is designed to examine sports from a sociological perspective and to develop a greater understanding of the impact of sports on societies and individuals. We will analyze sports and sporting cultures using several theoretical frameworks such as functionalism, conflict theory, critical theory, feminist theory, and an internationalist perspective. This course will address questions such as: What role do sports have in society? How can we understand the importance societies place on sports? How are social inequalities replicated or challenged through sports? How do sports influence individuals and the construction of a social reality?.

SOC 114. Economic Sociology. 4 Units.
(Graduate students register for 214.) The sociological approach to production, distribution, consumption, and markets, emphasizing the impact of norms, power, social structure, and institutions on the economy. Comparison of classic and contemporary approaches to the economy among the social science disciplines. Topics: consumption, labor markets, organization of professions such as law and medicine, the economic role of informal networks, industrial organization, including the structure and history of the computer and popular music industries, business alliances, capitalism in non-Western societies, and the transition from state socialism in E. Europe and China.
Same as: SOC 214

SOC 114D. Sociology of the Great Recession. 5 Units.
The Great Recession (2007-2009), one of the most socially significant events of our time. This course will cover the economic, social, cultural, and political consequences of the recession. We will address its impact on: inequality; job prospects for college graduates; trust in the government; the 2012 presidential election; marriage; child birth; and immigration. We examine the rise of protest movements during the recession period, such as Occupy Wall Street and the Tea Party, and explore the idea of "class warfare". Class will feature several guest speakers and will focus on developing a general understanding of trends emerging in these events.

SOC 115. Topics in Economic Sociology. 5 Units.
How does a corporation¿s practice of religion affect your employment? How do your personal data become a corporation's private property? How does corporate behavior reinforce the marginalization of certain populations? The answers to these questions have varied as society's conceptualization of corporations evolved from simple, legal fiction to rights and responsibilities similar to those of humans. In this seminar, we critically examine relationships between corporations and citizens, and analyze the idea of corporation as citizen. Through careful reading, discussion, reflection, and writing, you will understand how corporations are socially constructed and in turn regulate social behavior. We will empower each other to thoughtfully question and possibly change our relationships with these major actors in economic sociology.

SOC 115D. Can Law Fix Race? Race, Law, and Contemporary American Society. 5 Units.
In this Age of Obama, why are we still talking about legal remedies to racial inequality? This course will explore this question from an interdisciplinary perspective, focusing on perspectives from law and social science. Students will read both actual Supreme Court opinions as well as foundational works in the sociology of race and law. Through readings and discussion, students will leave this course with 1) a background in the historical role of the law in relation to race; 2) an understanding in how law¿s role in the maintenance of racial inequality has evolved; and 3) an ability to articulate their own views on why we are and whether we should be still talking about race, using both theory and empirical evidence to support their views. Specifically, students will be able to answer this question: ¿Is it appropriate for law to attempt to remedy racial inequality?¿.

SOC 116. Chinese Organizations and Management. 5 Units.
Seminar for advanced undergraduates and all graduate students.
Same as: SOC 216

SOC 116D. The Sociological Complexities of Human Trafficking. 5 Units.
Human trafficking is more than a crime and a human rights violation; it reveals the complex interactions of social norms, policies, and actions. In this course, we will consider norms of sexuality and morality in relation to sex trafficking and consenting sex workers, politics and labor policy in relation to labor trafficking and day workers, and political consumerism as a form of collective action in relation to fair trade. Specific topics include the impact of legalized prostitution on human trafficking, the effects of the annual US-released Trafficking In Persons report on international migrant labor laws, and the question of whether or not fair trade is fair. This seminar will provide students opportunities to think critically about society and to collaborate as researchers and activists on the issue of human trafficking.

SOC 117A. China Under Mao. 5 Units.
(Graduate students register for 217A.) The transformation of Chinese society from the 1949 revolution to the eve of China's reforms in 1978: creation of a socialist economy, reorganization of rural society and urban workplaces, emergence of new inequalities of power and opportunity, and new forms of social conflict during Mao's Cultural Revolution of 1966-69 and its aftermath.
Same as: SOC 217A

SOC 117D. Recognizing Inequality. 3 Units.
Over the last few years social and economic inequality has become a major topic in the media and public policy. Gaps and inequalities between groups exist across a range of arenas including education, wages and promotions, housing and cultural consumption. In this course we'll bring these big ideas down to the individual level--investigating and analyzing manifestations of inequality in our everyday lives, considering why these inequalities exist and developing strategies to alleviate them. This seminar will call upon students' imagination and analytical savvy to tackle pressing societal problems by considering the dynamics of their own lives. In the process, students will develop skills that can be applied in fields as diverse as public policy, health care, non-profit work and entrepreneurship.

SOC 118. Social Movements and Collective Action. 4 Units.
Why social movements arise, who participates in them, the obstacles they face, the tactics they choose, and how to gauge movement success or failure. Theory and empirical research. Application of concepts and methods to social movements such as civil rights, environmental justice, antiglobalization, and anti-war.
Same as: SOC 218

SOC 118D. Ice Cream Sales Don't Cause Shark Attacks: Debunking Pseudoscience and Conducting Good Research. 3 Units.
Conducting good research requires careful design and analysis, but much of the research we consume from media and political outlets often presents spurious correlations as causal relationships. What do we need to do and why to rule out spuriousness? The focus will be on using our intuition about what information we would need to properly answer questions about social life. We will find that apparently complicated statistical tests are simply following the same logic necessary to reach conclusions about social science's most interesting questions.

SOC 119. Understanding Large-Scale Societal Change: The Case of the 1960s. 5 Units.
The demographic, economic, political, and cultural roots of social change in the 60s; its legacy in the present U.S.
Same as: SOC 219

SOC 119D. The Power of Social Networks in Everyday Life. 3 Units.
Why do some people have better ideas than others? Why are some more likely to be bullied in school, get a job, or catch a disease? Why do some innovations, apps, rumors, or revolutions spread like a wildfire, while others never get off the ground? Why are Facebook, Twitter, Instagram or Spotify so good at recommending people, news, pictures, or songs we might know or like? What do a power outage, the collapse of the Roman Empire, a human stroke, and the Financial Crisis of 2008 have in common? What explains the success of Silicon Valley? And why are there only six (or less) people between us and any other human on this planet? While these questions may seem totally unrelated to each other on first glance, they can all be explored with the help of a single, yet powerful framework: social network analysis. In this class, you will learn to see the world as a web of relations: not only are people, ideas/concepts and things all increasingly connected to each other; the pattern of these relations can tell us a great deal about many phenomena in our social world that defy traditional explanations. At the end of this class, you will not only see networks everywhere; you will have taken a big step toward connecting some of the dots in (y)our world: this is the power of thinking in relations.

SOC 119VP. Introduction to Social Demography: A Comparative Approach (Israel & US). 3 Units.
In this class we will learn about Israel's unique demographic structure and we will compare it to the US and other countries. Reading materials include general theories as well as research published in scholarly journals. In the first half of this class we will review basic demographic concepts (mortality, fertility and migration), and we will apply them to the Israeli context, with comparisons between different social groups in Israel and with comparison to the US. We will also review basic demographic theories (theories of population change) and apply them to different countries. nnIn the second half of the class we will focus on demography of the family. We will ask how fertility, marriage and divorce differ for different population groups in Israel and the US, and we will tie family processes to current theories of gender and family change. We will also learn how demographic processes may be related to the reproduction of poverty, and inequality.
Same as: JEWISHST 130VP

SOC 120. Interpersonal Relations. 4 Units.
(Graduate students register for 220.) Forming ties, developing norms, status, conformity, deviance, social exchange, power, and coalition formation; important traditions of research have developed from the basic theories of these processes. Emphasis is on understanding basic theories and drawing out their implications for change in a broad range of situations, families, work groups, and friendship groups.
Same as: SOC 220

SOC 120D. From ICE Detention to #MeToo: Sociology of Law and Social Inequality. 3-5 Units.
What does mass incarceration have in common with ICE detention? What role do little-known legal doctrines from the previous century play in making courts inaccessible to survivors of sexual assault and trans people fighting discrimination? In this class we will answer those questions by examining how the seemingly objective nature of the law makes it a potent social tool to promote the interests of the powerful at the expense of the powerless while appearing neutral. This obfuscating power of the law has long been used to reinforce and perpetuate forms of social inequality. In this class we will analyze a few notable examples of such usage of the law and their role as pillars of current social inequality: We will examine how the high burden of proof courts have placed on complainants claiming gender discrimination has blocked most targets of such discrimination from seeking legal remedy; We will examine how redlining and mass incarceration have resulted in the current rates of racial inequality; and how immigration law has resulted in a seemingly objective yet deeply racist system of detention by ICE.

SOC 120VP. Poverty and Inequality in Israel and the US: A Comparative Approach. 3 Units.
Poverty rates in Israel are high and have been relatively stable in recent decades, with about one fifth of all households (and a third of all children) living below the poverty line. In this class we will learn about poverty and inequality in Israel and we will compare with the US and other countries.nnIn the first few weeks of this class we will review basic theories of poverty and inequality and we will discuss how theories regarding poverty have changed over the years, from the "culture of poverty" to theories of welfare state regimes. We will also learn about various ways of measuring poverty, material hardship, and inequality, and we will review the methods and data used.nnIn the remaining weeks of the class we will turn to substantive topics such as gender, immigration, ethnicity/nationality, welfare policy, age, and health. Within each topic we will survey the debates within contemporary scholarship and we will compare Israel and the US. Examination of these issues will introduce students to some of the challenges that Israeli society faces today.
Same as: CSRE 120P, JEWISHST 131VP

SOC 121. The Individual in Social Structure: Foundations in Sociological Social Psychology. 5 Units.
Dynamics of the relationship between the individual and social structure, the relationship between the individual and immediate social context, and relationships between individuals. Focus is on the dominant theoretical perspectives in sociological social psychology: social structure and personality, structural social psychology, and symbolic interactionism.

SOC 121VP. Family and Society: A Comparative Approach (Israel & the US). 3 Units.
Families are changing: Non-marital partnerships such as cohabitation are becoming more common, marriage is delayed and fertility is declining. In this class we will learn about how families are changing in Israel and we will compare with the US and other countries. Reading materials include general theories as well as research published in scholarly journals. nnAfter reviewing general theories and major scholarly debates concerning issues of family change, we will turn to specific family processes and compare Israel, the US and other countries. We will ask how family transitions may differ for different population groups and at different stages of the life course, and we will tie family processes to current theories of gender. nnWe will cover a wide range of topics, from marriage and marital dissolution to cohabitation, LAT and remarriage. We will also discuss changes in women's labor force participation and how it bears on fertility, parenthood and household division of labor. Within each substantive topic we will survey the debates within contemporary scholarship and we will compare Israel and the US.
Same as: JEWISHST 132VP, SOC 221VP

SOC 122D. Free Speech and Inclusion on Campus. 3 Units.
How do we balance norms of inclusion and respect with norms of free speech? This seminar course utilizes readings from sociology, political science, and legal/ethical reasoning to elucidate the larger structures and ideals that are at stake in the debates over what kind of speech is tolerable, or more normatively speaking, desirable, at colleges and universities. The expected learning outcomes are: a greater understanding of the free speech's role in American society and democracy, how America's position on free speech compares to other countries, and how speech restriction and liberties can reveal larger patterns in social structure and agency. Finally, key skills students will develop are learning how to identify common ethical frameworks that academic and popular authors use and how to analyze the origins of and changes in social institutions and social structures.
Same as: AMSTUD 122D

SOC 123. Sex and Love in Modern U.S. Society. 3 Units.
Social influences on private intimate relations involving romantic love and sexuality. Topics include the sexual revolution, contraception, dating, hook-ups, cohabitation, sexual orientation, and changing cultural meanings of marriage, gender, and romantic love.
Same as: FEMGEN 123, SOC 223

SOC 124. Gender and Technology. 3 Units.
Gender and Technology historicizes the process through which technical skills and modern-day American computing technologies have been imbued with masculinist associations. We explore how social processes link technical expertise to gendered domains, and how ideas about gender are shaped in turn by the resulting technologies. Students explore how American gender roles from the 19th century to the present¿as they intersect with race, class, and sexuality¿are constructed with and through technologies in order to better understand the masculinist defaults of the tech industry in the Silicon Valley.

SOC 124D. The Intuition of Social Research. 3 Units.
Understanding the intuition behind key statistics in social science research. The focus will be on reverse-engineering statistical tests by starting with asking what information we would need to answer questions about social life. From here, we will find that apparently complicated statistical tests are simply following the same logic necessary to reach conclusions about social life. Nearly all statistical tests start from the foundations of probability sampling, mean group differences, and variability. With these foundational concepts, students will understand the intuition behind (and similarity between) standard t-tests and the mechanics of multivariate regressions. By focusing on providing students with a firm grasp of the basic foundations of statistics, students will be better prepared to understand the purpose and logic of more complex statistical tests, which serve to answer social science¿s most interesting questions.

SOC 124VP. Social Inequalities and Poverty in Latin America with focus on Brazil. 3-5 Units.
The central goal of this course is to promote an academic debate and knowledge exchange about social inequalities and poverty in Latin America, with an emphasis on Brazil, analyzing their impact on the scope of politics, the design of social policies and the interests of society. It is based on an analysis of Angus Deaton's work (Nobel Prize in Economics, 2015), that develops an economic-historical study and points out the great economic and social transformations that affect the process of evolution of social and health inequalities. Thus, what is proposed here is an analysis of the mutation of inequalities throughout the history of humanity. Deaton's relevant contribution is his approach to the process of overcoming inequalities and poverty over the last three centuries. His work demonstrates that, although the advances in terms of economic growth and quality of life have been extraordinary, there are inequalities between different regions and countries around the world. From this contextualization, the aim of this course is to discuss a contemporary approach to social development centered on the ideas of Amartya Sen (Nobel Prize in Economics, 1998), with a focus on capabilities. Sen's innovative perspective establishes that development should be centered on individuals¿ freedom of choice.
Same as: SOC 224VP

SOC 125. Sociology of Religion. 5 Units.
The social patterns of religious belief and practice, and the classical and contemporary theoretical approaches to understanding these patterns. Topics: churches, sects and cults, sources of religious pluralism, relationships between religion and aspects of social structures including the economy, class structure, ethnicity, social networks, and the state.

SOC 125D. Sociology of Learning. 3 Units.
Learn how to learn. We spend considerable time learning in school, yet we devote comparatively little time to investigating the learning process. This course uses a variety of learning situations to interrogate how we learn, understand how our social environment shapes the process, and refine our own unique learning styles. We employ project-based, experiential methods to enhance the exploration of core sociological concepts that affect learning, such as status, authority, and norms. Emphasis is placed on the social construction of specific contexts for learning such as school, work, and even the artist¿s studio. Students develop learning skills that are transferable to other classes and non-school contexts.

SOC 126. Introduction to Social Networks. 4 Units.
(Graduate students register for 226.) Theory, methods, and research. Concepts such as density, homogeneity, and centrality; applications to substantive areas. The impact of social network structure on individuals and groups in areas such as communities, neighborhoods, families, work life, and innovations.
Same as: SOC 226

SOC 126D. Wellbeing and Society. 3-4 Units.
All societies have had some notion of what makes for a good life. The scientific study of wellbeing, however, is relatively new. As our capacity to collect data about people grows, our understanding of who is well and who is not is also rapidly evolving. Today, we understand wellbeing as having many dimensions, encompassing happiness, purpose, pleasure, health, income, social connection, and inclusion. What determines how individuals fare in these domains of life? How can we improve our collective and individual wellbeing? In this course, we will learn how our ability to pursue wellbeing is shaped by social factors, such as inequality, social networks, culture, government, and markets. We will draw on empirical research and case studies in sociology, psychology, anthropology, and economics. This course largely focuses on the US, but we will also discuss research from other countries in order to develop an appreciation for the role of social context in shaping wellbeing. Class discussions and assignments will focus on applying insights from academic scholarship to understand current social problems, including the COVID-19 epidemic and its consequences for society.

SOC 127. Bargaining, Power, and Influence in Social Interaction. 5 Units.
(Graduate students register for 227.) Research and theoretical work on bargaining, social influence, and issues of power and justice in social settings such as teams, work groups, and organizations. Theoretical approaches to the exercise of power and influence in social groups and related issues in social interaction such as the promotion of cooperation, effects of competition and conflict, negotiation, and intergroup relations. Enrollment limited to 40.
Same as: SOC 227

SOC 127D. Gender At Work: Understanding Gender Inequality in the Workplace. 3 Units.
Recent events have directed attention to the vastly different workplace experiences individuals encounter based on their gender. But just how does gender structure employment outcomes and experiences? This course will examine the ways in which gender comes to be embedded in organizations and conceptions of work and skill, as well as how gender interacts with other identities, like race, class, and sexuality, to create inequality in the workplace. We will discuss the role of discrimination, bias, and harassment as well as occupational segregation and devaluation in producing unequal outcomes among people of diverse genders. By the end of this course, students will be able to think critically about how gender impacts labor market outcomes as well as develop their own ideas for spaces for further research as well as intervention.

SOC 128. Introduction to Social Network Analysis. 5 Units.
(Graduate students register for SOC 228.) Theory and methods of network analysis in sociology (with an emphasis on social movements), anthropology, history, social psychology, economics, political science, and public health. Prerequisite: basic mathematics.
Same as: SOC 228

SOC 129X. Urban Education. 3-5 Units.
(Graduate students register for EDUC 212 or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.
Same as: AFRICAAM 112, CSRE 112X, EDUC 112, EDUC 212, SOC 229X

SOC 130. Education and Society. 4-5 Units.
The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.
Same as: EDUC 120C, EDUC 220C, SOC 230

SOC 132J. Sociology of Jewishness. 3-5 Units.
Examines the place of the Jewish people in society throughout various locales and historical periods to understand how interactions among Jews and with other groups have shaped Jewish identities. Topics include modernism, the Holocaust, Israel/nationhood, race/ethnicity, intermarriage, and assimilation. Uses theoretical, empirical, and historical material from multiple social scientific fields of study and explores the study of Judaism from several major sociological lenses.
Same as: CSRE 132J, JEWISHST 132D

SOC 133. Law and Wikinomics: The Economic and Social Organization of the Legal Profession. 1-5 Unit.
(Graduate and Law students enroll in 333.) Seminar. Emphasis is on the labor market for large-firm lawyers, including the market for entry-level lawyers, attorney retention and promotion practices, lateral hiring of partners, and increased use of forms of employment such as the non-equity form of partnership. Race and gender discrimination and occupational segregation; market-based pressure tactics for organizational reform. Students groups collect and analyze data about the profession and its markets. Multimedia tools for analysis and for producing workplace reforms. May be repeated for credit. Prerequisite: consent of instructor.
Same as: SOC 333

SOC 133A. Building and Leading Inclusive Organizations. 3 Units.
This course takes a problem-solving focus. Our main goal is to learn to design research-based interventions to improve diversity, equity and inclusion outcomes in organizations. U.S. society has become increasingly more diverse, and yet our organizations do not reflect that diversity. Further, even successful efforts to improve diversity are often not accompanied by a plan to create truly inclusive organizations that support a diverse workforce or student body. We will begin by comparing explanations for the lack of diversity and inclusion in modern organizations. We will then examine research that illustrates the cost to individuals and organizations for failing to leverage the diverse talent in our society. Guest speakers will share their challenges and successes in increasing diversity, equity, and inclusion (DEI) in the organizations where they work. Then, it will be your turn. Working in teams you will design your own research-based intervention to promote DEI at the organizational, team, and individual level and present your intervention to the class. Along the way, you will also learn effective strategies for navigating non-inclusive organizations and for being an effective change agent in your own environment.
Same as: SOC 233A

SOC 133D. Globalization and Social Change. 4 Units.
How do we make sense of a world that is becoming increasingly interconnected, and where social problems like climate change, democratization, human rights, and economic stability are increasingly global in their scope? How have international institutions attempted to regulate these processes and maintain social order? Why have recent social and political movements in an increasing number of countries targeted globalization as a source of their society¿s problems? In this course, we will explore how globalization is as an economic, political, and cultural process that shapes major social problems in today¿s world. To do so, we will draw on a range of theories and interdisciplinary research in economics, political science, and sociology.

SOC 134. Gender and Education in Global and Comparative Perspectives. 3-4 Units.
This course introduces students to theories and perspectives from the social sciences relevant to an understanding of the role of education in relation to structures of gender differentiation, hierarchy, and power. It familiarizes students with and enables them to critically evaluate research on the status of children, adolescents, and young adults around the world and their participation patterns in various sectors of society, particularly in education. Students have the opportunity to gain research skills by designing research proposals or to develop action plans on topics of their choosing related to gender and education from global and/or comparative perspectives.
Same as: EDUC 197, FEMGEN 297

SOC 134D. Sex, Courtship, and Marriage in America. 3 Units.
How people meet, who they date, and when they settle down have all changed dramatically in recent decades. This course will provide students with a thorough overview of demographic, sociological, and historical perspectives on sex, relationships, and family in the United States. Students will become familiar with the empirical patterns and trends, political and cultural debates, and policy issues concerning historical and modern romantic and sexual relationships, as well as the major theories and research methods used in the sociological study of relationships. Throughout the course, we will explore how changes in modern relationships may affect broader patterns of social inequality and family structure. Additionally, we will examine how the mate selection process intersects with various aspects of gender, sexuality, class, race, and technology.
Same as: FEMGEN 134D

SOC 135. Poverty, Inequality, and Social Policy in the United States. 3-4 Units.
Over the last three decades, inequality in America has increased substantially. Why has this happened, and what can be done about it? The course will begin by surveying the basic features of poverty, inequality, and economic mobility in the 21st century. From here we will discuss issues related to discrimination, education and schools, criminal justice, and the changing nature of the family as forces that shape inequality. We will also focus on the main social policy options for addressing inequality in the United States, including income support for the poor, taxing higher incomes, efforts to encourage philanthropy, and other institutional reforms.
Same as: SOC 235

SOC 135D. Law and Inequality. 3 Units.
How does social welfare policy contribute to social (in)justice? Why does discrimination based on race face heightened scrutiny in court compared to gender? Does inequality cause crime? This course explores the intersection between sociology and the law with a focus on inequality. We will address the question: how does the law create and respond to inequality between people and groups? We will learn some legal doctrine throughout but we will prioritize examining a sociological theory of law and justice. This course takes an interdisciplinary approach using a variety of materials including judicial opinions, scholarly papers, and newspaper articles.

SOC 136. Sociology of Law. 4 Units.
(Graduate students register for 236) This course explores major issues and debates in the sociology of law. Topics include historical perspectives on the origins of law; rationality and legal sanctions; normative decision making and morality; cognitive decision making; crime and deviance, with particular attention to the problem of mass incarceration; the "law in action" versus the "law on the books;" organizational responses to law, particularly in the context of sexual harassment and discrimination in education and employment; the roles of lawyers, judges, and juries; and law and social change with particular emphasis on the American civil rights movement. Special Instructions: Students are expected to attend a weekly TA-led discussion section in addition to lecture. Sections will be scheduled after the start of term at times when all students can attend. Paper requirements are flexible. Cross listed with the Law School (LAW 7511). See "Special Instructions" in course description above. Elements Used in Grading: Class participation, paper proposal, three short papers and a final paper (see syllabus for details).
Same as: SOC 236

SOC 136A. Law and Society. 5 Units.
Law and social inequality. Major sociological perspectives on where the law comes from, what law and justice systems do, and how they work.
Same as: SOC 236A

SOC 136B. Advanced Topics in Sociology of Law. 5 Units.
(Same as LAW 538.) Historical perspectives on the origins of law, rationality and legal sanctions, law on the books versus the law in action, crime and deviance, school desegregation, privitization of prisons, American civil rights, file sharing, jury decision making, the role of lawyers and judges, and cynicism about the American legal system.
Same as: SOC 236B

SOC 137. Global Inequality. 4 Units.
Absolute world poverty has declined considerably in the last twenty years, but elites have gained disproportionately from the growth of the global economy, leading to serious concerns about inequality in several countries, as well as in global policy circles. This discussion-based seminar explores how global capitalism affects worldwide inequality. Topics include the evolution, causes, and structure of global inequality, the links between inequality and human development, and potential solutions to global inequality.

SOC 139. American Indians in Contemporary Society. 4 Units.
(Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history.
Same as: NATIVEAM 139, SOC 239

SOC 140. Introduction to Social Stratification. 3 Units.
(Graduate students register for 240.) The main classical and modern explanations of the causes of social, economic, and political inequality. Issues include: power; processes that create and maintain inequality; the central axes of inequality in contemporary societies (race, ethnicity, class, and gender); the consequences of inequality for individuals and groups; and how social policy can mitigate and exacerbate inequality. Cases include technologically simple groups, the Indian caste system, and the modern U.S.
Same as: SOC 240

SOC 141. Monitoring the Crisis. 4-5 Units.
A course devoted to understanding how people are faring as the country's health and economic crisis unfolds. The premise of the course is that, as important and valuable as surveys are, it's a capital mistake to presume that we know what needs to be asked and that fixed-response answers adequately convey the depth of what's happening. We introduce a new type of qualitative method that allows for discovery by capturing the voices of the people, learn what they're thinking and fearing, and understand the decisions they're making. Students are trained in immersive interviewing by completing actual interviews, coding and analyzing their field notes, and then writing reports describing what's happening across the country. These reports will be designed to find out who's hurting, why they're hurting, and how we can better respond to the crisis. Students interested should submit the following application: https://docs.google.com/forms/d/e/1FAIpQLSfdOZsnpOCg4zTRbVny0ikxpZEd1AFEEJh3K9KjvINyfbWMGw/viewform.
Same as: PSYCH 145A, PUBLPOL 141, SOC 241, URBANST 149

SOC 141P. Public Interest Tech: Case Studies. 1 Unit.
What does public interest technology look like in practice? Each week, a guest speaker will present a case study of their work to improve government and public systems through innovative methods, data-driven efforts, emerging technology, and human-centered design. Students will reflect on the practicalities, ethics, and best practices of public interest technology work.
Same as: SOC 241P

SOC 142. Sociology of Gender. 3 Units.
The aim of this course is to provide students with an understanding of the sociological conceptualization of gender. Through the sociological lens, gender is not an individual attribute or a role, but rather a system of social practices that constructs two different categories of people men and women and organizes social interaction and inequality around this difference. First we will explore what ¿gender¿ is according to sociologists and the current state of gender inequality in the labor market, at home, and at school. We will then investigate how gender structures our everyday lives through the individual, interactional, and institutional levels. Finally, we will discuss avenues for reducing gender inequality. Throughout the course, we will prioritize reading, evaluating, and questioning sociological theory and research on gender.".
Same as: FEMGEN 142, FEMGEN 242, SOC 242

SOC 143. Sociology of the Middle Class. 4 Units.
This class focuses on understanding of how social research is conducted, and gaining the ability to evaluate the quality ofnempirical research. The course will focus on the process of designing a research project, including: formulating research questions, developing hypotheses, developing valid and reliable measures, deciding on the types of data needed, making decisions on sampling, choosing research design and data collection methods, the challenges of making causal inferences, and criteria for evaluating the quality of social research.

SOC 144. Inequality and the Workplace. 5 Units.
How characteristics of workplaces, such as hiring practices, workforce diversity, organizational policies and legal mandates, produce variation in inequality. Examines the sources, extent, and consequences of workplace inequality across gender, racial and ethnic lines. Topics include earnings, social status, geographical location, and opportunities for people in the workforce.
Same as: SOC 244

SOC 145. Race and Ethnic Relations in the USA. 4 Units.
(Graduate students register for 245.) Race and ethnic relations in the U.S. and elsewhere. The processes that render ethnic and racial boundary markers, such as skin color, language, and culture, salient in interaction situations. Why only some groups become targets of ethnic attacks. The social dynamics of ethnic hostility and ethnic/racial protest movements.
Same as: CSRE 145, SOC 245

SOC 146. Introduction to Comparative Studies in Race and Ethnicity. 5 Units.
How different disciplines approach topics and issues central to the study of ethnic and race relations in the U.S. and elsewhere. Lectures by senior faculty affiliated with CSRE. Discussions led by CSRE teaching fellows. Includes an optional Haas Center for Public Service certified Community Engaged Learning section. In accordance with Stanford virtual learning policies implemented for the Spring Quarter, all community engagement activities for this section will be conducted virtually. Please sign up for section 2 #33285 with Kendra, A. if you are interested in participating in virtual community engagement.
Same as: CSRE 196C, ENGLISH 172D, PSYCH 155, TAPS 165

SOC 147. Race and Ethnicity Around the World. 4 Units.
(Graduate students register for 247.) How have the definitions, categories, and consequences of race and ethnicity differed across time and place? This course offers a historical and sociological survey of racialized divisions around the globe. Case studies include: affirmative action policies, policies of segregation and ghettoization, countries with genocidal pasts, invisible minorities, and countries that refuse to count their citizens by race at all.
Same as: CSRE 147A, SOC 247

SOC 149. The Urban Underclass. 4 Units.
(Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor.
Same as: CSRE 149A, SOC 249, URBANST 112

SOC 150. Race and Political Sociology. 3 Units.
How race informs the theories and research within political sociology. The state's role in creation and maintenance of racial categories, the ways in which racial identity motivates political actors, how race is used to legitimate policy decisions, comparisons across racial groups. Emphasis on understanding the ways race operates in the political arena.
Same as: CSRE 150, SOC 250

SOC 151. From the Cradle to the Grave: How Demographic Processes Shape the Social World. 4-5 Units.
(Graduate students register for 251 and 5 units. Undergraduates register for 151 and 4 units.) Comparative analysis of historical, contemporary, and anticipated demographic change. Draws on case studies from around the world to explore the relationship between social structure and population dynamics. Introduces demographic measures, concepts and theory. Course combines lecture and seminar-style discussion.
Same as: SOC 251

SOC 152. The Social Determinants of Health. 4 Units.
Our social and physical environments are widely recognized as playing a central role in shaping patterns of health and disease within and across populations. Across disciplines, a key question has been: How does the social environment ¿gets under the skin to influence health? In this course, we will explore how social scientists, epidemiologists, public health experts, and physicians tackle this question. Reflecting both qualitative and quantitative approaches, we will draw on literatures in social science, public health, and medicine to understand the processes through which our environments shape health outcomes. We will examine a number of key social determinants of health, wellness and illness. These determinants include socioeconomic status, gender. race/ethnicity, religious affiliation, neighborhoods, environments, social relationships, and health care. We will also discuss a host of mechanisms through which these factors are hypothesized to influence health, such as stress, lifestyle, and access to health resources. An overall theme will be how contextual factors that adversely affect health are inequitably distributed and thereby fuel health disparities. Through all of this, we will assess the promise of public policy, planning and research for generating more equitable health outcomes across society.
Same as: SOC 252

SOC 153. Activism and Intersectionality. 3-4 Units.
How are contemporary U.S. social movements shaped by the intersections of race, class, gender, and sexuality? This course explores the emergence, dynamics, tactics, and targets of social movements. Readings include empirical and theoretical social movement texts, including deep dives into Black, White, and Chicana feminisms; the KKK; and queer/LGBT movements. We will explore how social movement emergence and persistence is related to participants¿ identities and experiences with inequality; how the dynamics, targets, and tactics of mobilized participants are shaped by race, class, gender, and/or sexuality; and how social movement scholars have addressed the intersectional nature of inequality, identity, and community.
Same as: AFRICAAM 141X, CSRE 141X, FEMGEN 141

SOC 154. The Politics of Algorithms. 4-5 Units.
Algorithms have become central actors in today's digital world. In areas as diverse as social media, journalism, education, healthcare, and policing, computing technologies increasingly mediate communication processes. This course will provide an introduction to the social and cultural forces shaping the construction, institutionalization, and uses of algorithms. In so doing, we will explore how algorithms relate to political issues of modernization, power, and inequality. Readings will range from social scientific analyses to media coverage of ongoing controversies relating to Big Data. Students will leave the course with a better appreciation of the broader challenges associated with researching, building, and using algorithms.
Same as: COMM 154, COMM 254, CSRE 154T, SOC 254C

SOC 155. The Changing American Family. 4 Units.
Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change.
Same as: FEMGEN 155, FEMGEN 255, SOC 255

SOC 156A. The Changing American City. 4 Units.
After decades of decline, U.S. cities today are undergoing major transformations. Young professionals are flocking to cities instead of fleeing to the suburbs. Massive increases in immigration have transformed the racial and ethnic diversity of cities and their neighborhoods. Public housing projects that once defined the inner city are disappearing, and crime rates have fallen dramatically. Do these changes signal the end of residential segregation and urban inequality? Who do these changes benefit? This course will explore these issues and strategies to address them through readings and discussion, analyzing a changing neighborhood in a major city in the Bay Area in groups (which will include at least one site visit), and studying a changing neighborhood or city of their choice for their final project. The course does not have pre-requisites.
Same as: CSRE 156, SOC 256A, URBANST 156A

SOC 157. Ending Poverty with Technology. 5 Units.
There are growing worries that new technologies may eliminate work, increase inequality, and create a large dependent class subsisting on transfers. But can technology instead be turned against itself and used to end poverty? This class explores the sources of domestic poverty and then examines how new technologies might be developed to eliminate poverty completely. We first survey existing poverty-reducing products and then attempt to imagine new products that might end poverty by equalizing access to information, reducing transaction costs, or equalizing access to training. In a follow-up class in the spring quarter, students who choose to continue will select the most promising ideas, continue to develop them, and begin the design task within Stanford¿s new Poverty and Technology Lab.
Same as: PUBLPOL 147

SOC 158. Ending Poverty with Technology: A Practicum.. 5 Units.
Will robots, automation, and technology eliminate work and create a large poverty-sticken dependent class? Or will they eliminate poverty, free us from the tyranny of work, and usher in a new society defined by leisure and creative pursuits? This two-quarter class is dedicated to exploring new theories about poverty while at the same time incubating applied technology solutions. The first quarter is devoted to examining the theory of technology-based solutions to poverty, and the second quarter is devoted to planning a viable technology-based product that will reduce poverty. This product may then be built in a follow-up Using Tech for Good (Computer Science 50) class in the first quarter of 2018 (but class participants are not required to take that follow-up class). The course is premised on the view that innovative solutions to poverty will be based on new conversations and an authentic collaboration between Silicon Valley and leaders from education, government, and low-income communities.
Same as: PUBLPOL 148

SOC 159. Social and Cultural Dimensions of Global Indigeneity. 4 Units.
This course will expose students to the rise of a world-wide indigenous identity, common themes embraced by indigenous people, and common challenges these groups confront when dealing with the larger social environment that surrounds them. Topics to be covered include tribal sovereignty, rights, and recognition; language preservation; the maintenance of cultural integrity and ethnic authenticity; cultural production and the commodification of indigenous culture; literary traditions; indigenous social movements; natural resources and land disputes; and the disadvantaged social position that these groups typically occupy.
Same as: SOC 259

SOC 160. Formal Organizations. 4 Units.
(Graduate students register for 260.) The roles of formal organizations in production processes, market transactions, and social movements; and as sources of income and ladders of mobility. Relationships of modern organizations to environments and internal structures and processes. Concepts, models, and tools for analyzing organizational phenomena in contemporary societies. Sources include the literature and case studies.
Same as: SOC 260

SOC 161. The Social Science of Entrepreneurship. 4 Units.
(Graduate students register for 261.) Who is likely to become an entrepreneur and where is entrepreneurship likely to occur? Classic and contemporary theory and research. Interaction with expert practitioners in creating entrepreneurial opportunities including venture and corporate capitalists. The role of culture, markets, hierarchies, and networks. Market creation and change, and factors that affect success of new organizations. Field projects on entrepreneurial environments such as technology licensing offices, entrepreneurial development organizations, venture capital firms, and corporate venturing groups.
Same as: SOC 261

SOC 162. The Social Regulation of Markets. 3 Units.
Social and political forces that shape market outcomes. The emergence and creation of markets, how markets go wrong, and the roles of government and society in structuring market exchange. Applied topics include development, inequality, globalization, and economic meltdown. Preference to Sociology majors and Sociology coterm students.
Same as: SOC 262

SOC 163. Foundations of Organizational Theory. 5 Units.
Foundational material in organizational theory literature.
Same as: SOC 263

SOC 164. Immigration and the Changing United States. 4 Units.
The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration.
Same as: CHILATST 164, CSRE 164, SOC 264

SOC 165. Seminar on the Everday Lives of Immigrants. 5 Units.
Everyday experience of immigrants and the immigrant second generation through the ethnographic lens. Ethnographies that focus on the immigrant experience. Limited enrollment.
Same as: SOC 265

SOC 166. Mexicans, Mexican Americans, and Chicanos in American Society. 5 Units.
Contemporary sociological issues affecting Mexican-origin people in the U.S. Topics include: the immigrant experience, immigration policy, identity, socioeconomic integration, internal diversity, and theories of incorporation.
Same as: CHILATST 166, SOC 266

SOC 167A. Asia-Pacific Transformation. 4 Units.
Post-WW II transformation in the Asia-Pacific region, with focus on the ascent of Japan, the development of newly industrialized capitalist countries (S. Korea and Taiwan), the emergence of socialist states (China and N. Korea), and the changing relationship between the U.S. and these countries.
Same as: INTLPOL 244D, SOC 267A

SOC 167VP. Justice + Poverty Innovation:Create new solutions for people to navigate housing, medical, & debt. 4 Units.
How can emerging technologies and human-centered design be used to help people going through problems with housing, medical care, and debt? In this class, we will work with local partners to develop new tech and design prototypes to address poverty-related problems. We will explore new digital solutions, as well as how to use emerging technologies like AI and blockchain. At the same time, we will explore policy and legal reforms that could address root causes of the problems.nStudents will work in small, interdisciplinary teams with partners organizations in law, medicine, and policy. They will do design research in the field, propose new solutions and test them, and develop new initiatives that will be piloted. The goal is to incubate promising, feasible public interest technology and design projects.nThe class will be run in parallel to similar classes in Mexico, Guatemala, and Colombia. Students will have the chance to learn about similar innovation efforts in other countries, and will be challenged to think about how their own projects could be replicated and scaled.

SOC 168. Global Organizations: The Matrix of Change. 4 Units.
We learn how to apply analytical tools from the social sciences to organizations, and study how to design effective organizations and projects within and across institutional settings. A variety of organizations are included and how they deal with strategy changes and accountability. The theme for this year's class is on accountability of non-profit organizations such as Doctors Without Borders, The International Rescue Committee and The Red Cross. Recommended: FINANCE 377, MS&E 180, SOC 160, ECON 149, or MGTECON 330.
Same as: PUBLPOL 168, PUBLPOL 268, SOC 268

SOC 169. Introduction to Intersectionality. 4 Units.
"Intersectionality" is so popular, it's almost impossible to avoid: it was added to the Merriam-Webster dictionary in 2017, it was painted on signs at the Women's Marches, and it guides modern day social movement organizers. But what does intersectionality mean? What can intersectionality offer And what does it mean for research and social movements to be truly intersectional? The aim of this course is to provide students with an understanding of the concept of intersectionality. First, we will delve into the works (chiefly from Black feminist scholars) that provide the foundation for today's concept of intersectionality. We will then explore, compare, and critique sociological research that applies (or fails to apply) an intersectional lens to its objects of study. Finally, we will investigate the use of intersectionality in social movements and outside academia. Throughout the course, we will prioritize reading, evaluating, and questioning sociological theory and research.
Same as: AFRICAAM 169B, FEMGEN 169

SOC 170. Classics of Modern Social Theory. 4 Units.
(Graduate students register for 270). Sociologists seek to understand how society works, specifically: how social life is organized, changed, and maintained. Sociological theory provides hypotheses for explaining social life. All empirical research in sociology is enriched by, and has some basis in, sociological theories. This course introduces students to the earliest sociological theories and the thinkers who developed them. Specifically, we will discuss the work of W.E.B. Du Bois, Emile Durkheim, Max Weber, and Karl Marx. We will compare and contrast how they thought about important modern-day social realities such as capitalism, racism, crime, religion, and social cohesion. We will consider how these early theories and thinkers influence the way sociologists think about and study the social world today.
Same as: SOC 270

SOC 172. Computational Social Science. 4-5 Units.
This course introduces students to computational social science from a sociological perspective, grounding popular computational methods such as text mining and network analysis in sociological theory. While the course is open to graduate and advanced undergraduate students from any discipline, the materials will be primarily sourced from sociology. Students with no prior computer science experience will find this course a menu of potential methodologies for future research, while students with some programming experience or with a pre-existing research question can use this course to advance their research projects. By framing these methods in sociological theory, students will gain a more critical understanding of why scientists select these methods and how computational methods impact society.

SOC 173. Gender and Higher Education: National and International Perspectives. 3-4 Units.
This course examines the ways in which higher education structures and policies interact with gender, gender identity, and other characteristics in the United States, around the world, and over time. Attention is paid to how changes in those structures and policies relate to access to, experiences in, and outcomes of higher education by gender. Students can expect to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and feminist scholarship and pedagogy.
Same as: EDUC 173, EDUC 273, FEMGEN 173, SOC 273

SOC 176. The Social Life of Neighborhoods. 3-5 Units.
How do neighborhoods come to be? How and why do they change? What is the role of power, money, race, immigration, segregation, culture, government, and other forces? In this course, students will interrogate these questions using literatures from sociology, geography, and political science, along with archival, observational, interview, and cartographic (GIS) methods. Students will work in small groups to create content (e.g., images, audio, and video) for a self-guided ¿neighborhood tour,¿ which will be added to a mobile app and/or website.
Same as: AFRICAAM 76B, CSRE 176B, SOC 276, URBANST 179

SOC 177. The Sociology of Popular Culture. 3 Units.
Why do some songs become popular, but not others? Why are music genres that were wildly popular in the 1950s no longer popular today? Trends and fads and can be found nearly everywhere in our daily lives movie tropes, skirt lengths, styles of shoes, internet memes, hot stock-picks all of these go in and out of fashion. But, why should they? Did something change? And if so¿what? This course seeks to understand how and why things become (un)popular. The course begins with early 20th century theories on the massification and commodification of culture and traces development of this literature over time. Topics covered include propaganda, social influence, and significant responses to questions such as: What constitutes high/low culture? Does popular culture manifest--"from the bottom-up", for the people by the people--or is popular culture dictated--"from the top down", by elites and commercial interests? To what extent do social networks (and the status and power of the people within them) influence these relationships? How is popular culture received, interpreted, and used? Today, the media landscape looks significantly different than it did in the early 20th century, and in the final portion of the course we will consider the extent to which new technologies, media platforms, hyper-focused advertising, and cluster-based similarity algorithms have impacted the way we think about and answer these questions. In the final portion of the course, we will critically examine active and ongoing debates in the literature related to this question and produce a final paper that contributes to the discussion. No final exam.

SOC 177D. Economic Elites in the 21st Century. 3-5 Units.
Elites have gained disproportionately from the growth of the global economy over the past two decades, leading to serious concerns about inequality and to protests against the 1% in several countries. This course addresses the role of economic elites in the world economy and their relationship to global inequality. Topics include the evolution and consequences of global inequality, the composition of economic elites in various countries, and economic elites¿ impact on politics, education, culture, and the economy in the US and abroad. We also discuss potential solutions to global inequality.
Same as: SOC 277D

SOC 178. The Politics of Inequality. 5 Units.
This course is about the distribution of power in contemporary democratic societies, and especially in the US: who governs? Is there a ``power elite,'' whose preferences dominate public policy making? Or, does policy reflect a wide range of interests? What is the relationship between income and power? What are the political consequences of increasing income inequality? How do income differences across racial and ethnic groups affect the quality of their representation? What are effective remedies for unequal influence? Finally, which institutions move democratic practice furthest towards full democratic equality? This course will address these questions, focusing first on local distributions of power, and then considering the implications of inequality in state and national politics. nStudents will have the opportunity to study income inequality using income and labor force surveys in a mid-term assignment. Then, in a final paper, students will conduct an empirical examination of the implications of income inequality for American democracy.
Same as: POLISCI 147P, PUBLPOL 247

SOC 179A. Crime and Punishment in America. 4-5 Units.
This course provides a comprehensive introduction to the way crime has been defined and punished in the United States. Recent social movements such as the Movement for Black Lives have drawn attention to the problem of mass incarceration and officer-involved shootings of people of color. These movements have underscored the centrality of the criminal justice system in defining citizenship, race, and democracy in America. How did our country get here? This course provides a social scientific perspective on America¿s past and present approach to crime and punishment. Readings and discussions focus on racism in policing, court processing, and incarceration; the social construction of crime and violence; punishment among the privileged; the collateral consequences of punishment in poor communities of color; and normative debates about social justice, racial justice, and reforming the criminal justice system. Students will learn to gather their own knowledge and contribute to normative debates through a field report assignment and an op-ed writing assignment.
Same as: AFRICAAM 179A, CSRE 179A, SOC 279A

SOC 179N. The Science of Diverse Communities. 3 Units.
This course is an exploration. Most generally, its aim is to identify distinguishing features of good diverse communities and articulate them well enough to offer principles or guidelines for how to design and manage such communities - all with a particular focus on educational communities like schools, universities, academic disciplines, etc., but with the hope that such principles might generalize to other kinds of organizations and the broader society. The readings range from those on the origins of human communities and social identities to those on intergroup trust building. They also aim to embed our discussions in the major diversity issues of the day, or example, what's in the news about campus life. nnnThus the course has a practical purpose: to develop testable ideas for improving the comfort level, fairness and goodness-for-all of identity diverse communities--especially in educational settings. nnnThe course also has a basic science purpose: to explore the psychological significance of community. Is there a psychological need for community? Is there something about a need for community that can't be reduced to other needs, for example, for a gender, racial or sexual-orientation identity? How strong is the need for community against other needs? What kinds of human groupings can satisfy it? In meeting this need, can membership in one community substitute for membership in others? What do people need from communities in order to thrive in them? Do strong diverse communities dampen intergroup biases? Can strong community loyalty mitigate identity tensions within communities? nnnSuch questions, the hope is, will help us develop a more systematic understanding of the challenges and opportunities inherent in diverse human communities.
Same as: CSRE 30N, EDUC 30N, PSYCH 30N

SOC 180A. Foundations of Social Research. 4 Units.
Formulating a research question, developing hypotheses, probability and non-probability sampling, developing valid and reliable measures, qualitative and quantitative data, choosing research design and data collection methods, challenges of making causal inference, and criteria for evaluating the quality of social research. Emphasis is on how social research is done, rather than application of different methods. Limited enrollment; preference to Sociology and Urban Studies majors, and Sociology coterms.
Same as: CSRE 180A, SOC 280A

SOC 180B. Introduction to Data Analysis. 4 Units.
Preference to Sociology majors and minors. Enrollment for non-sociologists will open two weeks after winter enrollment begins. Methods for analyzing and evaluating quantitative data in sociological research. Students will be taught how to run and interpret multivariate regressions, how to test hypotheses, and how to read and critique published data analyses.
Same as: CSRE 180B, SOC 280B

SOC 181B. Sociological Methods: Statistics. 5 Units.
(Graduate students register for 281B.) Statistical methods of relevance to sociology: contingency tables, correlation, and regression.
Same as: SOC 281B

SOC 183D. Addictions, Self, and Society. 3 Units.
From your daily cup(s) of coffee to the ¿War on Drugs,¿ drugs touch the lives of most people. Yet, how societies deal with drug use and abuse change throughout time. In this course, we will look at drug use and abuse through a sociological lens, exploring how micro (personal), meso (interactional), and macro (structural) level forces underpin the meanings, experiences, and policies associated with drug use and abuse in the United States. Beyond this, we will examine how these forces contribute to persistent systems of inequality among different groups. This will not serve as a ¿how to¿ course, but one in which you will be asked to critically examine the role of drugs and their effects on society. By the end of this course, students should be able to:.

SOC 184D. Policing in Society: From Precincts to Playgrounds. 3 Units.
This course examines the social underpinnings of historical and modern-day policing. We will analyze trends in policing practices in the US through time, and ask how ¿ and to what effect ¿ police have become enmeshed in the social fabric of American life. Students will be exposed to some of the methods social scientists use to investigate society¿s most pressing issues as we examine the intersections of policing with other institutions (e.g. education, technology, and health) through both popular journalism and rigorous academic research.

SOC 185D. Gender and Politics. 3 Units.
Despite gains in recent years, women remain dramatically underrepresented in virtually all realms of the American political system. In this course, students will become familiar with the empirical patterns and trends, social and cultural debates, and policy issues concerning the role of gender in American politics. We will examine the gender gap in voting patterns and mass political participation, as well as strategies for increasing women¿s representation. Students will come to understand the effects of women¿s lack of parity, including policy attitudes, processes, and outcomes. Furthermore, we will explore gender inequality in politics through an intersectional lens of race, class, age, education, and sexuality.

SOC 188. One in Five: The Law, Politics, and Policy of Campus Sexual Assault. 3-5 Units.
TRIGGER WARNING: Over the past several years the issue of campus sexual assault and harassment has exploded into the public discourse. Multiple studies have reinforced the finding that between 20-25% of college women (and a similar proportion of students identifying as transgender and gender-nonconforming, as well as approximately 10% of male students) experience sexual assault carried out through force or while the victim was incapacitated during their time in college. Fraternities have been found to be associated with an increased risk of female sexual assault on campus. Vulnerable students and those from marginalized groups are often found to be at increased risk. This is also a significant problem in k12 education. Sexual harassment rates are even higher. Survivors have come forward across the country with harrowing stories of assault followed by what they describe as an insensitive or indifferent response from college administrators. These survivors have launched one of the most successful, and surprising, social movements in recent memory. As a result, the federal government under President Obama stepped up its civil rights enforcement in this area, with over 300 colleges and universities under investigation for allegedly mishandling student sexual assault complaints as of the end of that administration. At the same time, the Obama administration¿s heightened response led to a series of high-profile lawsuits by accused students who assert that they were falsely accused or subjected to mishandled investigations that lacked sufficient due process protections. The one thing that survivors and accused students appear to agree on is that colleges are not handling these matters appropriately and appeared to be more concerned with protection the institutional brand than with stopping rape or protecting student rights. Colleges have meanwhile complained of being whipsawed between survivors, accused students, interest groups, and enforcement authorities. In an about-face that many found shocking, the Trump Administration rescinded all of the Obama-era guidance on the subject of sexual harassment and has promulgated new proposed regulations that would offer significantly greater protection to accused students and to institutions and commensurately less protection to survivors. An increasingly partisan Congress has been unable to pass legislation addressing the issue.This course focuses on the legal, policy, and political issues surrounding sexual assault and harassment on college campuses. Each week we will read, dissect, compare and critique a set of readings that include social science, history, literature, legal, policy, journalism, and narrative explorations of the topic of campus sexual assault. We will explore the history of gender-based violence and the efforts to implement legal protections for survivors in the educational context. We will also study the basic legal frameworks governing campus assault, focusing on the relevant federal laws such as Title IX and the Clery Act. We will critically explore the ways that responses to this violence have varied by the race, class, gender identity, sexual orientation, and other characteristics of parties and institutions. We will hear from guest speakers who are actively involved in shaping policy and advocating in this area, including lawyers, activists, journalists, and policymakers. This year we will also host special guest speaker Chanel Miller, author of the bestselling memoir Know My Name. The subject matter of this course is sensitive, and students are expected to treat the material with maturity. Much of the reading and subject matter may be upsetting and/or triggering for students who identify as survivors. There is no therapeutic component for this course, although supportive campus resources and Title IX staff are available for those who need them.Elements used in grading: Grades will be based on class attendance, class participation, and a research paper or project and class presentation Enrollment is by INSTRUCTOR PERMISSION. Access the consent form here feminist.stanford.edu/academics/undergraduate-program/forms or email etsurkov@stanford.edu to request a form via email. Applications will be reviewed on a rolling basis until the class is full. Demand for the class is high and participation is capped at 18. The class usually fills quickly, so make sure to apply early. Cross-listed with the Law School (LAW 7065 and with Sociology (SOC 188).
Same as: FEMGEN 143

SOC 189. Race and Immigration. 4-5 Units.
In the contemporary United States, supposedly race-neutral immigration laws have racially-unequal consequences. Immigrants from Mexico, Central America, and the Middle East are central to ongoing debates about who's includable, and who's excludable, from American society. These present-day dynamics mirror the historical forms of exclusion imposed on immigrants from places as diverse as China, Eastern Europe, Ireland, Italy, Japan, and much of Africa. These groups' varied experiences of exclusion underscore the long-time encoding of race into U.S. immigration policy and practice. Readings and discussions center on how immigration law has become racialized in its construction and in its enforcement over the last 150 years.
Same as: AFRICAAM 190, CSRE 189, SOC 289

SOC 190. Undergraduate Individual Study. 1-5 Unit.
Prior arrangement required.

SOC 191. Undergraduate Directed Research. 1-5 Unit.
Work on a project of student's choice under supervision of a faculty member. Prior arrangement required.

SOC 192. Undergraduate Research Apprenticeship. 1-5 Unit.
Work in an apprentice-like relationship with faculty on an on-going research project. Prior arrangement required.

SOC 193. Undergraduate Teaching Apprenticeship. 1-5 Unit.
Prior arrangement required.

SOC 194. Computational Undergraduate Research. 1-5 Unit.
Computational sociology research working with faculty on an on-going technical research project. Applications for position reviewed on a rolling basis.

SOC 196. Senior Thesis. 1-15 Unit.
Work on an honors thesis project under faculty supervision (see description of honors program). Must be arranged early in the year of graduation or before.

SOC 200. Junior/Senior Seminar for Majors. 4 Units.
For Sociology majors. Capstone course in which sociological problems are framed, linked to theories, and answers pursued through research designs. Independent research. How to formulate a research question; how to integrate theory and methods. Prerequisites: SOC 170, 180B.

SOC 201. Preparation for Senior Project. 5 Units.
First part of capstone experience for Urban Studies majors pursuing an internship-based research project or honors thesis. Assignments culminate in a research proposal, which may be submitted for funding. Students also identify and prepare for a related internship, normally to begin in Spring Quarter in URBANST 201B or in Summer. Research proposed in the final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research. Service Learning Course (certified by Haas Center).
Same as: URBANST 201

SOC 202. Junior Seminar: Preparation for Research. 5 Units.
Required of all juniors in Sociology who plan to write an honors thesis. Students write a research prospectus and grant proposal, which may be submitted for funding. Research proposal in final assignment may be carried out in Spring or Summer Quarter; consent required for Autumn Quarter research.

SOC 204. Capstone Research Seminar. 5 Units.
This course focuses on the sociological research and writing process and fulfills the Writing In the Major (WIM) requirement for Sociology majors. Students will write a substantial paper based on the research project developed in 202 or a project developed during the course. Students in the honors program or co-terms in the research track may incorporate their paper into their thesis. Sociology majors who are seniors may take Soc 204 as their sole WIM class, as a substitute for Soc 200, with no prerequisites required. The class is designed to support students as they complete an original research project during the quarter or a piece of a larger honors or master¿s thesis.

SOC 205. Education and Inequality: Big Data for Large-Scale Problems. 3-5 Units.
In this course, students will use data from the Stanford Education Data Archive (SEDA) to study the patterns, causes, consequences, and remedies of educational inequality in the US. SEDA is based on 200 million test score records, administrative data, and census data from every public school, school district, and community in the US. The course will include lectures, discussion, and small group research projects using SEDA and other data.
Same as: EDUC 107, EDUC 207, SOC 107E

SOC 205VP. Contested markets in the Brazilian Amazon Rainforest. 2-3 Units.
Strategies of environmental movements to contain domestic and foreign corporations that are viewed as major perpetrators of rainforest devastation and the socio-economic degradation of this vast region. Topics: Origins, roles and inter-relations among corporations (zero deforestation agreements in soybean agriculture and cattle ranching), the development of environmental law and the efficacy of government and NGO movements¿ strategies, and whether this emerging economy shapes social classes, groups, tribes, family life to further embed inequality and immobility. This course must be taken for a minimum of 3 units and a letter grade to be eligible for Ways credit.
Same as: EARTHSYS 205VP, SOC 105VP

SOC 207. China After Mao. 5 Units.
China's post-1976 recovery from the late Mao era; its reorientation toward an open market-oriented economy; the consequences of this new model and runaway economic growth for standards of living, social life, inequality, and local governance; the political conflicts that have accompanied these changes.
Same as: SOC 107

SOC 208. Political & Historical Sociology. 5 Units.
The differences between historical and sociological analysis of past events. The difference between constructing sociological explanations and describing past events. Topics include: the rise of Christianity, the mafia in a Sicilian village, the trade network of the East India Company.
Same as: SOC 108

SOC 211. State and Society in Korea. 4 Units.
20th-century Korea from a comparative historical perspective. Colonialism, nationalism, development, state-society relations, democratization, and globalization with reference to the Korean experience.
Same as: INTNLREL 143, SOC 111

SOC 214. Economic Sociology. 4 Units.
(Graduate students register for 214.) The sociological approach to production, distribution, consumption, and markets, emphasizing the impact of norms, power, social structure, and institutions on the economy. Comparison of classic and contemporary approaches to the economy among the social science disciplines. Topics: consumption, labor markets, organization of professions such as law and medicine, the economic role of informal networks, industrial organization, including the structure and history of the computer and popular music industries, business alliances, capitalism in non-Western societies, and the transition from state socialism in E. Europe and China.
Same as: SOC 114

SOC 216. Chinese Organizations and Management. 5 Units.
Seminar for advanced undergraduates and all graduate students.
Same as: SOC 116

SOC 217A. China Under Mao. 5 Units.
(Graduate students register for 217A.) The transformation of Chinese society from the 1949 revolution to the eve of China's reforms in 1978: creation of a socialist economy, reorganization of rural society and urban workplaces, emergence of new inequalities of power and opportunity, and new forms of social conflict during Mao's Cultural Revolution of 1966-69 and its aftermath.
Same as: SOC 117A

SOC 217B. Chinese Politics and Society. 3-5 Units.
(Doctoral students register for 317B.) This seminar surveys the major turning points that have shaped China's evolution since 1949. The topics covered include the Great Leap Forward, the Cultural Revolution, the political and economic turning point of the early 1980s, the political crisis of 1989, the restructuring of the state sector since the 1990s, and the patterns of protest that have accompanied the rapid social changes over the past three decades. We will conclude the course with current debates about China's future.
Same as: HISTORY 293F, HISTORY 393F, SOC 317B

SOC 218. Social Movements and Collective Action. 4 Units.
Why social movements arise, who participates in them, the obstacles they face, the tactics they choose, and how to gauge movement success or failure. Theory and empirical research. Application of concepts and methods to social movements such as civil rights, environmental justice, antiglobalization, and anti-war.
Same as: SOC 118

SOC 219. Understanding Large-Scale Societal Change: The Case of the 1960s. 5 Units.
The demographic, economic, political, and cultural roots of social change in the 60s; its legacy in the present U.S.
Same as: SOC 119

SOC 220. Interpersonal Relations. 4 Units.
(Graduate students register for 220.) Forming ties, developing norms, status, conformity, deviance, social exchange, power, and coalition formation; important traditions of research have developed from the basic theories of these processes. Emphasis is on understanding basic theories and drawing out their implications for change in a broad range of situations, families, work groups, and friendship groups.
Same as: SOC 120

SOC 221VP. Family and Society: A Comparative Approach (Israel & the US). 3 Units.
Families are changing: Non-marital partnerships such as cohabitation are becoming more common, marriage is delayed and fertility is declining. In this class we will learn about how families are changing in Israel and we will compare with the US and other countries. Reading materials include general theories as well as research published in scholarly journals. nnAfter reviewing general theories and major scholarly debates concerning issues of family change, we will turn to specific family processes and compare Israel, the US and other countries. We will ask how family transitions may differ for different population groups and at different stages of the life course, and we will tie family processes to current theories of gender. nnWe will cover a wide range of topics, from marriage and marital dissolution to cohabitation, LAT and remarriage. We will also discuss changes in women's labor force participation and how it bears on fertility, parenthood and household division of labor. Within each substantive topic we will survey the debates within contemporary scholarship and we will compare Israel and the US.
Same as: JEWISHST 132VP, SOC 121VP

SOC 223. Sex and Love in Modern U.S. Society. 3 Units.
Social influences on private intimate relations involving romantic love and sexuality. Topics include the sexual revolution, contraception, dating, hook-ups, cohabitation, sexual orientation, and changing cultural meanings of marriage, gender, and romantic love.
Same as: FEMGEN 123, SOC 123

SOC 224B. Relational Sociology. 4 Units.
Conversations, social relationships and social networks are the core features of social life. In this course we explore how conversations, relationships, and social networks not only have their own unique and independent characteristics, but how they shape one another and come to characterize many of the settings we enter and live in. As such, students will be introduced to theories and research methodologies concerning social interaction, social relationships, and social networks, as well as descriptions of how these research strands interrelate to form a larger relational sociology that can be employed to characterize a variety of social phenomenon. This course is suitable to advanced undergraduates and doctoral students.
Same as: EDUC 312

SOC 224VP. Social Inequalities and Poverty in Latin America with focus on Brazil. 3-5 Units.
The central goal of this course is to promote an academic debate and knowledge exchange about social inequalities and poverty in Latin America, with an emphasis on Brazil, analyzing their impact on the scope of politics, the design of social policies and the interests of society. It is based on an analysis of Angus Deaton's work (Nobel Prize in Economics, 2015), that develops an economic-historical study and points out the great economic and social transformations that affect the process of evolution of social and health inequalities. Thus, what is proposed here is an analysis of the mutation of inequalities throughout the history of humanity. Deaton's relevant contribution is his approach to the process of overcoming inequalities and poverty over the last three centuries. His work demonstrates that, although the advances in terms of economic growth and quality of life have been extraordinary, there are inequalities between different regions and countries around the world. From this contextualization, the aim of this course is to discuss a contemporary approach to social development centered on the ideas of Amartya Sen (Nobel Prize in Economics, 1998), with a focus on capabilities. Sen's innovative perspective establishes that development should be centered on individuals¿ freedom of choice.
Same as: SOC 124VP

SOC 226. Introduction to Social Networks. 4 Units.
(Graduate students register for 226.) Theory, methods, and research. Concepts such as density, homogeneity, and centrality; applications to substantive areas. The impact of social network structure on individuals and groups in areas such as communities, neighborhoods, families, work life, and innovations.
Same as: SOC 126

SOC 227. Bargaining, Power, and Influence in Social Interaction. 5 Units.
(Graduate students register for 227.) Research and theoretical work on bargaining, social influence, and issues of power and justice in social settings such as teams, work groups, and organizations. Theoretical approaches to the exercise of power and influence in social groups and related issues in social interaction such as the promotion of cooperation, effects of competition and conflict, negotiation, and intergroup relations. Enrollment limited to 40.
Same as: SOC 127

SOC 228. Introduction to Social Network Analysis. 5 Units.
(Graduate students register for SOC 228.) Theory and methods of network analysis in sociology (with an emphasis on social movements), anthropology, history, social psychology, economics, political science, and public health. Prerequisite: basic mathematics.
Same as: SOC 128

SOC 229X. Urban Education. 3-5 Units.
(Graduate students register for EDUC 212 or SOC 229X). Combination of social science and historical perspectives trace the major developments, contexts, tensions, challenges, and policy issues of urban education.
Same as: AFRICAAM 112, CSRE 112X, EDUC 112, EDUC 212, SOC 129X

SOC 230. Education and Society. 4-5 Units.
The effects of schools and schooling on individuals, the stratification system, and society. Education as socializing individuals and as legitimizing social institutions. The social and individual factors affecting the expansion of schooling, individual educational attainment, and the organizational structure of schooling.
Same as: EDUC 120C, EDUC 220C, SOC 130

SOC 231. World, Societal, and Educational Change: Comparative Perspectives. 4-5 Units.
Theoretical perspectives and empirical studies on the structural and cultural sources of educational expansion and differentiation, and on the cultural and structural consequences of educational institutionalization. Research topics: education and nation building; education, mobility, and equality; education, international organizations, and world culture.
Same as: EDUC 136, EDUC 306D

SOC 232. Genetics and Society. 3 Units.
This course will focus on social science engagement with developments in genetic research, focusing on two key issues. First, social scientists are trying to figure out how genetic data can be used to help them better understand phenomena they have been long endeavoring to understand. Second, social scientists try to improve understanding of how social environments moderate, amplify, or attenuate genetic influences on outcomes.
Same as: EDUC 373

SOC 233A. Building and Leading Inclusive Organizations. 3 Units.
This course takes a problem-solving focus. Our main goal is to learn to design research-based interventions to improve diversity, equity and inclusion outcomes in organizations. U.S. society has become increasingly more diverse, and yet our organizations do not reflect that diversity. Further, even successful efforts to improve diversity are often not accompanied by a plan to create truly inclusive organizations that support a diverse workforce or student body. We will begin by comparing explanations for the lack of diversity and inclusion in modern organizations. We will then examine research that illustrates the cost to individuals and organizations for failing to leverage the diverse talent in our society. Guest speakers will share their challenges and successes in increasing diversity, equity, and inclusion (DEI) in the organizations where they work. Then, it will be your turn. Working in teams you will design your own research-based intervention to promote DEI at the organizational, team, and individual level and present your intervention to the class. Along the way, you will also learn effective strategies for navigating non-inclusive organizations and for being an effective change agent in your own environment.
Same as: SOC 133A

SOC 234. Research Seminar on Access to Justice. 1-5 Unit.
The functions and dysfunctions of modern legal systems. Topics include: official statements of the U.S. and the EU about the rights of parties to civil disputes; the roles of lawyers as gatekeepers and facilitators; the filtering process by which injuries and experiences become the basis for legal claims; access to and use of courts; the balance of power and advantage between individual persons and organizations in disputes. Prerequisite: advanced undergraduate or graduate standing, or consent of instructor.
Same as: SOC 334

SOC 235. Poverty, Inequality, and Social Policy in the United States. 3-4 Units.
Over the last three decades, inequality in America has increased substantially. Why has this happened, and what can be done about it? The course will begin by surveying the basic features of poverty, inequality, and economic mobility in the 21st century. From here we will discuss issues related to discrimination, education and schools, criminal justice, and the changing nature of the family as forces that shape inequality. We will also focus on the main social policy options for addressing inequality in the United States, including income support for the poor, taxing higher incomes, efforts to encourage philanthropy, and other institutional reforms.
Same as: SOC 135

SOC 236. Sociology of Law. 4 Units.
(Graduate students register for 236) This course explores major issues and debates in the sociology of law. Topics include historical perspectives on the origins of law; rationality and legal sanctions; normative decision making and morality; cognitive decision making; crime and deviance, with particular attention to the problem of mass incarceration; the "law in action" versus the "law on the books;" organizational responses to law, particularly in the context of sexual harassment and discrimination in education and employment; the roles of lawyers, judges, and juries; and law and social change with particular emphasis on the American civil rights movement. Special Instructions: Students are expected to attend a weekly TA-led discussion section in addition to lecture. Sections will be scheduled after the start of term at times when all students can attend. Paper requirements are flexible. Cross listed with the Law School (LAW 7511). See "Special Instructions" in course description above. Elements Used in Grading: Class participation, paper proposal, three short papers and a final paper (see syllabus for details).
Same as: SOC 136

SOC 236A. Law and Society. 5 Units.
Law and social inequality. Major sociological perspectives on where the law comes from, what law and justice systems do, and how they work.
Same as: SOC 136A

SOC 236B. Advanced Topics in Sociology of Law. 5 Units.
(Same as LAW 538.) Historical perspectives on the origins of law, rationality and legal sanctions, law on the books versus the law in action, crime and deviance, school desegregation, privitization of prisons, American civil rights, file sharing, jury decision making, the role of lawyers and judges, and cynicism about the American legal system.
Same as: SOC 136B

SOC 238. Market Oriented Policies in Education. 3-4 Units.
Introducing market dynamics in education remains a highly controversial policy issue. In this course we will discuss the main ideas supporting the market approach in education and the key arguments against these policies; we will also review some of the evidence concerning the effects of market policies in education such as privatization, vouchers, and school choice; and finally, we will study several issues related to market oriented reforms, such as performance accountability, school segregation, and peer effects in education.
Same as: EDUC 238

SOC 239. American Indians in Contemporary Society. 4 Units.
(Graduate students register for 239.) The social position of American Indians in contemporary American society, 1890 to the present. The demographic resurgence of American Indians, changes in social and economic status, ethnic identification and political mobilization, and institutions such as tribal governments and the Bureau of Indian Affairs. Recommended: 138 or a course in American history.
Same as: NATIVEAM 139, SOC 139

SOC 240. Introduction to Social Stratification. 3 Units.
(Graduate students register for 240.) The main classical and modern explanations of the causes of social, economic, and political inequality. Issues include: power; processes that create and maintain inequality; the central axes of inequality in contemporary societies (race, ethnicity, class, and gender); the consequences of inequality for individuals and groups; and how social policy can mitigate and exacerbate inequality. Cases include technologically simple groups, the Indian caste system, and the modern U.S.
Same as: SOC 140

SOC 240W. CPI Seminar. 1-2 Unit.
A workshop devoted to presenting ongoing research on poverty and inequality in the United States. Open to all students interested in (a) building a better infrastructure for monitoring poverty and inequality, (b) building cutting-edge models of the causes and consequences of poverty and inequality, and (b) building better policy to reduce poverty and inequality. Required for all National Poverty Fellows funded by the Stanford Center on Poverty and Inequality. May be repeat for credit starting 8/1/2016.
Same as: SOC 340W

SOC 241. Monitoring the Crisis. 4-5 Units.
A course devoted to understanding how people are faring as the country's health and economic crisis unfolds. The premise of the course is that, as important and valuable as surveys are, it's a capital mistake to presume that we know what needs to be asked and that fixed-response answers adequately convey the depth of what's happening. We introduce a new type of qualitative method that allows for discovery by capturing the voices of the people, learn what they're thinking and fearing, and understand the decisions they're making. Students are trained in immersive interviewing by completing actual interviews, coding and analyzing their field notes, and then writing reports describing what's happening across the country. These reports will be designed to find out who's hurting, why they're hurting, and how we can better respond to the crisis. Students interested should submit the following application: https://docs.google.com/forms/d/e/1FAIpQLSfdOZsnpOCg4zTRbVny0ikxpZEd1AFEEJh3K9KjvINyfbWMGw/viewform.
Same as: PSYCH 145A, PUBLPOL 141, SOC 141, URBANST 149

SOC 241P. Public Interest Tech: Case Studies. 1 Unit.
What does public interest technology look like in practice? Each week, a guest speaker will present a case study of their work to improve government and public systems through innovative methods, data-driven efforts, emerging technology, and human-centered design. Students will reflect on the practicalities, ethics, and best practices of public interest technology work.
Same as: SOC 141P

SOC 242. Sociology of Gender. 3 Units.
The aim of this course is to provide students with an understanding of the sociological conceptualization of gender. Through the sociological lens, gender is not an individual attribute or a role, but rather a system of social practices that constructs two different categories of people men and women and organizes social interaction and inequality around this difference. First we will explore what ¿gender¿ is according to sociologists and the current state of gender inequality in the labor market, at home, and at school. We will then investigate how gender structures our everyday lives through the individual, interactional, and institutional levels. Finally, we will discuss avenues for reducing gender inequality. Throughout the course, we will prioritize reading, evaluating, and questioning sociological theory and research on gender.".
Same as: FEMGEN 142, FEMGEN 242, SOC 142

SOC 244. Inequality and the Workplace. 5 Units.
How characteristics of workplaces, such as hiring practices, workforce diversity, organizational policies and legal mandates, produce variation in inequality. Examines the sources, extent, and consequences of workplace inequality across gender, racial and ethnic lines. Topics include earnings, social status, geographical location, and opportunities for people in the workforce.
Same as: SOC 144

SOC 245. Race and Ethnic Relations in the USA. 4 Units.
(Graduate students register for 245.) Race and ethnic relations in the U.S. and elsewhere. The processes that render ethnic and racial boundary markers, such as skin color, language, and culture, salient in interaction situations. Why only some groups become targets of ethnic attacks. The social dynamics of ethnic hostility and ethnic/racial protest movements.
Same as: CSRE 145, SOC 145

SOC 246A. Ethnographies of Race, Crime, and Justice. 4-5 Units.
This course provides graduate students with a survey introduction to influential ethnographic and interview-based sociological research on race, crime, and justice. Recent social movements such as the Movement for Black Lives have drawn attention to the problem of mass criminalization in the U.S. These movements have underscored the centrality of the criminal legal system in defining race in America. Each week, students will read ethnographic books and journal articles on the role of race and racism in different dimensions of the criminal legal process from policing to court processing to incarceration written in the early twentieth century to the present. In addition to gaining foundational knowledge on the key debates within the sociological and criminological literature, students will also gain important insight into the most rigorous qualitative social science methods for studying these topics, and how these methods have changed over time.
Same as: SOC 346A

SOC 247. Race and Ethnicity Around the World. 4 Units.
(Graduate students register for 247.) How have the definitions, categories, and consequences of race and ethnicity differed across time and place? This course offers a historical and sociological survey of racialized divisions around the globe. Case studies include: affirmative action policies, policies of segregation and ghettoization, countries with genocidal pasts, invisible minorities, and countries that refuse to count their citizens by race at all.
Same as: CSRE 147A, SOC 147

SOC 249. The Urban Underclass. 4 Units.
(Graduate students register for 249.) Recent research and theory on the urban underclass, including evidence on the concentration of African Americans in urban ghettos, and the debate surrounding the causes of poverty in urban settings. Ethnic/racial conflict, residential segregation, and changes in the family structure of the urban poor.
Same as: CSRE 149A, SOC 149, URBANST 112

SOC 250. Race and Political Sociology. 3 Units.
How race informs the theories and research within political sociology. The state's role in creation and maintenance of racial categories, the ways in which racial identity motivates political actors, how race is used to legitimate policy decisions, comparisons across racial groups. Emphasis on understanding the ways race operates in the political arena.
Same as: CSRE 150, SOC 150

SOC 251. From the Cradle to the Grave: How Demographic Processes Shape the Social World. 4-5 Units.
(Graduate students register for 251 and 5 units. Undergraduates register for 151 and 4 units.) Comparative analysis of historical, contemporary, and anticipated demographic change. Draws on case studies from around the world to explore the relationship between social structure and population dynamics. Introduces demographic measures, concepts and theory. Course combines lecture and seminar-style discussion.
Same as: SOC 151

SOC 252. The Social Determinants of Health. 4 Units.
Our social and physical environments are widely recognized as playing a central role in shaping patterns of health and disease within and across populations. Across disciplines, a key question has been: How does the social environment ¿gets under the skin to influence health? In this course, we will explore how social scientists, epidemiologists, public health experts, and physicians tackle this question. Reflecting both qualitative and quantitative approaches, we will draw on literatures in social science, public health, and medicine to understand the processes through which our environments shape health outcomes. We will examine a number of key social determinants of health, wellness and illness. These determinants include socioeconomic status, gender. race/ethnicity, religious affiliation, neighborhoods, environments, social relationships, and health care. We will also discuss a host of mechanisms through which these factors are hypothesized to influence health, such as stress, lifestyle, and access to health resources. An overall theme will be how contextual factors that adversely affect health are inequitably distributed and thereby fuel health disparities. Through all of this, we will assess the promise of public policy, planning and research for generating more equitable health outcomes across society.
Same as: SOC 152

SOC 254. Welfare State. 4-5 Units.
This seminar introduces students to the key literature, questions, and debates about the modern welfare state. Emergence, growth, and purported demise of the welfare state. American welfare state in comparative perspective. Social and political factors affecting state development including political parties, labor markets, gender, demographic change, and immigration.
Same as: SOC 354

SOC 254C. The Politics of Algorithms. 4-5 Units.
Algorithms have become central actors in today's digital world. In areas as diverse as social media, journalism, education, healthcare, and policing, computing technologies increasingly mediate communication processes. This course will provide an introduction to the social and cultural forces shaping the construction, institutionalization, and uses of algorithms. In so doing, we will explore how algorithms relate to political issues of modernization, power, and inequality. Readings will range from social scientific analyses to media coverage of ongoing controversies relating to Big Data. Students will leave the course with a better appreciation of the broader challenges associated with researching, building, and using algorithms.
Same as: COMM 154, COMM 254, CSRE 154T, SOC 154

SOC 255. The Changing American Family. 4 Units.
Family change from historical, social, demographic, and legal perspectives. Extramarital cohabitation, divorce, later marriage, interracial marriage, and same-sex cohabitation. The emergence of same-sex marriage as a political issue. Are recent changes in the American family really as dramatic as they seem? Theories about what causes family systems to change.
Same as: FEMGEN 155, FEMGEN 255, SOC 155

SOC 256A. The Changing American City. 4 Units.
After decades of decline, U.S. cities today are undergoing major transformations. Young professionals are flocking to cities instead of fleeing to the suburbs. Massive increases in immigration have transformed the racial and ethnic diversity of cities and their neighborhoods. Public housing projects that once defined the inner city are disappearing, and crime rates have fallen dramatically. Do these changes signal the end of residential segregation and urban inequality? Who do these changes benefit? This course will explore these issues and strategies to address them through readings and discussion, analyzing a changing neighborhood in a major city in the Bay Area in groups (which will include at least one site visit), and studying a changing neighborhood or city of their choice for their final project. The course does not have pre-requisites.
Same as: CSRE 156, SOC 156A, URBANST 156A

SOC 258B. Causal Inference in Quantitative Educational and Social Science Research. 3-5 Units.
This course surveys quantitative methods to make causal inferences in the absence of randomized experiment including the use of natural and quasi-experiments, instrumental variables, regression discontinuity, fixed effects estimators, and difference-in-differences. We emphasize the proper interpretation of these research designs and critical engagement with their key assumptions for applied researchers. Prerequisites: Prior training in multivariate regression (e.g., ECON 102B or the permission of the instructor).
Same as: EDUC 430B

SOC 258C. Using Data to Describe the World: Descriptive Social Science Research Techniques. 3-5 Units.
This course focuses on the skills needed to conduct theoretically-informed and policy-relevant descriptive social science. Students read recent examples of rigorous descriptive quantitative research that exemplifies the use of data to describe important phenomena related to educational and social inequality. The course will help develop skills necessary to conceptualize, operationalize, and communicate descriptive research, including techniques related to measurement and measurement error, data harmonization, data reduction, and visualization. Students develop a descriptive project during the course. Prerequisite: satisfactory completion of a course in multivariate regression.
Same as: EDUC 430C

SOC 259. Social and Cultural Dimensions of Global Indigeneity. 4 Units.
This course will expose students to the rise of a world-wide indigenous identity, common themes embraced by indigenous people, and common challenges these groups confront when dealing with the larger social environment that surrounds them. Topics to be covered include tribal sovereignty, rights, and recognition; language preservation; the maintenance of cultural integrity and ethnic authenticity; cultural production and the commodification of indigenous culture; literary traditions; indigenous social movements; natural resources and land disputes; and the disadvantaged social position that these groups typically occupy.
Same as: SOC 159

SOC 260. Formal Organizations. 4 Units.
(Graduate students register for 260.) The roles of formal organizations in production processes, market transactions, and social movements; and as sources of income and ladders of mobility. Relationships of modern organizations to environments and internal structures and processes. Concepts, models, and tools for analyzing organizational phenomena in contemporary societies. Sources include the literature and case studies.
Same as: SOC 160

SOC 261. The Social Science of Entrepreneurship. 4 Units.
(Graduate students register for 261.) Who is likely to become an entrepreneur and where is entrepreneurship likely to occur? Classic and contemporary theory and research. Interaction with expert practitioners in creating entrepreneurial opportunities including venture and corporate capitalists. The role of culture, markets, hierarchies, and networks. Market creation and change, and factors that affect success of new organizations. Field projects on entrepreneurial environments such as technology licensing offices, entrepreneurial development organizations, venture capital firms, and corporate venturing groups.
Same as: SOC 161

SOC 262. The Social Regulation of Markets. 3 Units.
Social and political forces that shape market outcomes. The emergence and creation of markets, how markets go wrong, and the roles of government and society in structuring market exchange. Applied topics include development, inequality, globalization, and economic meltdown. Preference to Sociology majors and Sociology coterm students.
Same as: SOC 162

SOC 263. Foundations of Organizational Theory. 5 Units.
Foundational material in organizational theory literature.
Same as: SOC 163

SOC 264. Immigration and the Changing United States. 4 Units.
The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration.
Same as: CHILATST 164, CSRE 164, SOC 164

SOC 265. Seminar on the Everday Lives of Immigrants. 5 Units.
Everyday experience of immigrants and the immigrant second generation through the ethnographic lens. Ethnographies that focus on the immigrant experience. Limited enrollment.
Same as: SOC 165

SOC 266. Mexicans, Mexican Americans, and Chicanos in American Society. 5 Units.
Contemporary sociological issues affecting Mexican-origin people in the U.S. Topics include: the immigrant experience, immigration policy, identity, socioeconomic integration, internal diversity, and theories of incorporation.
Same as: CHILATST 166, SOC 166

SOC 267A. Asia-Pacific Transformation. 4 Units.
Post-WW II transformation in the Asia-Pacific region, with focus on the ascent of Japan, the development of newly industrialized capitalist countries (S. Korea and Taiwan), the emergence of socialist states (China and N. Korea), and the changing relationship between the U.S. and these countries.
Same as: INTLPOL 244D, SOC 167A

SOC 268. Global Organizations: The Matrix of Change. 4 Units.
We learn how to apply analytical tools from the social sciences to organizations, and study how to design effective organizations and projects within and across institutional settings. A variety of organizations are included and how they deal with strategy changes and accountability. The theme for this year's class is on accountability of non-profit organizations such as Doctors Without Borders, The International Rescue Committee and The Red Cross. Recommended: FINANCE 377, MS&E 180, SOC 160, ECON 149, or MGTECON 330.
Same as: PUBLPOL 168, PUBLPOL 268, SOC 168

SOC 270. Classics of Modern Social Theory. 4 Units.
(Graduate students register for 270). Sociologists seek to understand how society works, specifically: how social life is organized, changed, and maintained. Sociological theory provides hypotheses for explaining social life. All empirical research in sociology is enriched by, and has some basis in, sociological theories. This course introduces students to the earliest sociological theories and the thinkers who developed them. Specifically, we will discuss the work of W.E.B. Du Bois, Emile Durkheim, Max Weber, and Karl Marx. We will compare and contrast how they thought about important modern-day social realities such as capitalism, racism, crime, religion, and social cohesion. We will consider how these early theories and thinkers influence the way sociologists think about and study the social world today.
Same as: SOC 170

SOC 273. Gender and Higher Education: National and International Perspectives. 3-4 Units.
This course examines the ways in which higher education structures and policies interact with gender, gender identity, and other characteristics in the United States, around the world, and over time. Attention is paid to how changes in those structures and policies relate to access to, experiences in, and outcomes of higher education by gender. Students can expect to gain an understanding of theories and perspectives from the social sciences relevant to an understanding of the role of higher education in relation to structures of gender differentiation and hierarchy. Topics include undergraduate and graduate education; identity and sexuality; gender and science; gender and faculty; and feminist scholarship and pedagogy.
Same as: EDUC 173, EDUC 273, FEMGEN 173, SOC 173

SOC 276. The Social Life of Neighborhoods. 3-5 Units.
How do neighborhoods come to be? How and why do they change? What is the role of power, money, race, immigration, segregation, culture, government, and other forces? In this course, students will interrogate these questions using literatures from sociology, geography, and political science, along with archival, observational, interview, and cartographic (GIS) methods. Students will work in small groups to create content (e.g., images, audio, and video) for a self-guided ¿neighborhood tour,¿ which will be added to a mobile app and/or website.
Same as: AFRICAAM 76B, CSRE 176B, SOC 176, URBANST 179

SOC 277D. Economic Elites in the 21st Century. 3-5 Units.
Elites have gained disproportionately from the growth of the global economy over the past two decades, leading to serious concerns about inequality and to protests against the 1% in several countries. This course addresses the role of economic elites in the world economy and their relationship to global inequality. Topics include the evolution and consequences of global inequality, the composition of economic elites in various countries, and economic elites¿ impact on politics, education, culture, and the economy in the US and abroad. We also discuss potential solutions to global inequality.
Same as: SOC 177D

SOC 278. Introduction to Computational Social Science. 3 Units.
With a vast amount of data now collected on our online and offline actions -- from what we buy, to where we travel, to who we interact with -- we have an unprecedented opportunity to study complex social systems. This opportunity, however, comes with scientific, engineering, and ethical challenges. In this hands-on course, we develop ideas from computer science and statistics to address problems in sociology, economics, political science, and beyond. We cover techniques for collecting and parsing data, methods for large-scale machine learning, and principles for effectively communicating results. To see how these techniques are applied in practice, we discuss recent research findings in a variety of areas. Prerequisites: introductory course in applied statistics, and experience coding in R, Python, or another high-level language.
Same as: MS&E 231

SOC 279. Law, Order, & Algorithms. 3 Units.
Human decision making is increasingly being displaced by predictive algorithms. Judges sentence defendants based on statistical risk scores; regulators take enforcement actions based on predicted violations; advertisers target materials based on demographic attributes; and employers evaluate applicants and employees based on machine-learned models. One concern with the rise of such algorithmic decision making is that it may replicate or exacerbate human bias. This course surveys the legal and ethical principles for assessing the equity of algorithms, describes statistical techniques for designing fair systems, and considers how anti-discrimination law and the design of algorithms may need to evolve to account for machine bias. Concepts will be developed in part through guided in-class coding exercises. Admission is by consent of instructor and is limited to 20 students. To enroll in the class, please complete the course application by March 20, available at: https://5harad.com/mse330/. Grading is based on response papers, class participation, and a final project. Prerequisite: CS 106A or equivalent knowledge of coding.
Same as: CS 209, CSRE 230, MS&E 330

SOC 279A. Crime and Punishment in America. 4-5 Units.
This course provides a comprehensive introduction to the way crime has been defined and punished in the United States. Recent social movements such as the Movement for Black Lives have drawn attention to the problem of mass incarceration and officer-involved shootings of people of color. These movements have underscored the centrality of the criminal justice system in defining citizenship, race, and democracy in America. How did our country get here? This course provides a social scientific perspective on America¿s past and present approach to crime and punishment. Readings and discussions focus on racism in policing, court processing, and incarceration; the social construction of crime and violence; punishment among the privileged; the collateral consequences of punishment in poor communities of color; and normative debates about social justice, racial justice, and reforming the criminal justice system. Students will learn to gather their own knowledge and contribute to normative debates through a field report assignment and an op-ed writing assignment.
Same as: AFRICAAM 179A, CSRE 179A, SOC 179A

SOC 280A. Foundations of Social Research. 4 Units.
Formulating a research question, developing hypotheses, probability and non-probability sampling, developing valid and reliable measures, qualitative and quantitative data, choosing research design and data collection methods, challenges of making causal inference, and criteria for evaluating the quality of social research. Emphasis is on how social research is done, rather than application of different methods. Limited enrollment; preference to Sociology and Urban Studies majors, and Sociology coterms.
Same as: CSRE 180A, SOC 180A

SOC 280B. Introduction to Data Analysis. 4 Units.
Preference to Sociology majors and minors. Enrollment for non-sociologists will open two weeks after winter enrollment begins. Methods for analyzing and evaluating quantitative data in sociological research. Students will be taught how to run and interpret multivariate regressions, how to test hypotheses, and how to read and critique published data analyses.
Same as: CSRE 180B, SOC 180B

SOC 281. Natural Language Processing & Text-Based Machine Learning in the Social Sciences. 4 Units.
Digital communications (including social media) are the largest data sets of our time, and most of it is text. Social scientists need to be able to digest small and big data sets alike, process it and extract psychological insight. This applied and project-focused course introduces students to a Python codebase developed to facilitate text analysis in the social sciences (see dlatk.wwbp.org -- knowledge of Python is helpful but not required). The goal is to practice these methods in guided tutorials and project-based work so that the students can apply them to their own research contexts and be prepared to write up the results for publication. The course will provide best practices, as well as access to and familiarity with a Linux-based server environment to process text, including the extraction of words and phrases, topics and psychological dictionaries. We will also practice the use of machine learning based on text data for psychological assessment, and the further statistical analysis of language variables in R. Familiarity with Python is helpful but not required. Basic familiarity with R is expected. The ability to wrangle data into a spreadsheet-like format is expected. A basic introduction to SQL will be given in the course. Familiarity with SSH and basic Linux is helpful but not required. Understanding of regression is expected.
Same as: PSYCH 290, SYMSYS 195T

SOC 281B. Sociological Methods: Statistics. 5 Units.
(Graduate students register for 281B.) Statistical methods of relevance to sociology: contingency tables, correlation, and regression.
Same as: SOC 181B

SOC 289. Race and Immigration. 4-5 Units.
In the contemporary United States, supposedly race-neutral immigration laws have racially-unequal consequences. Immigrants from Mexico, Central America, and the Middle East are central to ongoing debates about who's includable, and who's excludable, from American society. These present-day dynamics mirror the historical forms of exclusion imposed on immigrants from places as diverse as China, Eastern Europe, Ireland, Italy, Japan, and much of Africa. These groups' varied experiences of exclusion underscore the long-time encoding of race into U.S. immigration policy and practice. Readings and discussions center on how immigration law has become racialized in its construction and in its enforcement over the last 150 years.
Same as: AFRICAAM 190, CSRE 189, SOC 189

SOC 290. Coterminal MA individual study. 1-5 Unit.
Prior arrangement required.

SOC 291. Coterminal MA directed research. 1-5 Unit.
Work on a project of student's choice under supervision of a faculty member. Prior arrangement required.

SOC 292. Coterminal MA research apprenticeship. 1-5 Unit.
Work in an apprentice-like relationship with faculty on an on-going research project. Prior arrangement required.

SOC 297. Globalization and Higher Education. 3-4 Units.
This course examines the expansion, impact, and organization of higher education across the world. This course engages students with sociological theory and comparative research on global and national sources of influence on higher education developments, e.g. admissions criteria, curricular content, governance structure.. At the end of the course students should be able to compare and contrast developments across countries.
Same as: EDUC 349

SOC 298. The Social Psychology of Contemporary American Politics. 4 Units.
Where do individuals' political attitudes and behaviors come from, and how can they be changed? In this class we will read and discuss cutting-edge research from social psychology, sociology, and political science on topics such as polarization, persuasion, elitism, social activism, and racial resentment. A central idea of the class is that social and psychological factors powerfully influence political views, and research in this area can help to understand our often confusing political landscape. Additionally, understanding the causal architecture of political attitudes and behavior is essential for taking effective political action, especially in this time of deep and growing political divides. Enrollment is permission by instructor only: please email: willer@stanford.edu.
Same as: SOC 398

SOC 300. Workshop: The Art and Joy of Teaching. 2 Units.
Note: for first-year Sociology Doctoral Students only. This class will prepare you to teach Stanford students in your role as a TA or instructor. It rests on the idea that teaching is both an art to learn and cultivate, and a source of great joy and personal meaning during your graduate career and beyond. The course¿s main goal is to help you become an effective instructor in your day-to-day teaching, covering skills such as how to deliver a powerful lecture, lead an engaging discussion section, build an inclusive classroom, describe your personal pedagogy to others, juggle teaching logistics and competing demands, and make the best use of technology and campus resources. You will also discover that teaching is, above all, a deeply personal process that should take into account the different backgrounds, stories, and learning styles of both students and instructors to enable students to flourish academically and personally. Throughout this class, we will explore different philosophies and ways of teaching so that you can cultivate and employ your own, personalized pedagogy. It is my hope that you will use this course as a springboard to embark on your own teaching journey. With a growth mindset and the right tools in our hands, we can begin to both transform and be transformed by our students: this is the art and joy of teaching.

SOC 301. Play and Games. 3-4 Units.
Social life would be unimaginable without play and games. Students will be introduced to social theories of play and games; the history of games and their variation; readings concerned with how play and games affect interaction and socialization; how race and gender are enacted in and through play and games; how play and games relate to creativity and innovation; and how games can be designed for engrossment and the accomplishment of various tasks and learning goals. Course intended mainly for doctoral students, though master¿s and undergraduate students are welcome. This is a new course, so please expect collaboration with instructor and other students to shape the course content.
Same as: EDUC 414

SOC 302. Introduction to Data Science. 3-5 Units.
Social scientists can benefit greatly from utilizing new data sources like electronic administration records or digital communications, but they require tools and techniques to make sense of their scope and complexity. This course offers the opportunity to understand and apply popular data science techniques regarding data visualization, data reduction and data analysis.
Same as: EDUC 143, EDUC 423

SOC 302A. Introduction to Data Science I: Data Processing. 3-4 Units.
Quantitative data require considerable work before they are ready to be analyzed: they are often messy, incomplete and potentially biased. This course is designed to help you thoughtfully collect, manage, clean and represent data so it can offer substantive information researchers can act upon. In our weekly sessions you will take a critical and reflective approach to these tasks and learn the technical skills needed to get your data into shape. Education and social science datasets will be our focus.
Same as: EDUC 423A

SOC 302B. Introduction to Data Science II: Machine learning. 3-4 Units.
This course centers on the question of how you can use various data science techniques to understand social phenomena. Applied to education and social science topics, the course will introduce you to supervised and unsupervised machine learning algorithms, new data, and provide you the skills to thoughtfully evaluate and assess machine learning performance and implications.
Same as: EDUC 423B

SOC 304. Experimental Methods in the Social Sciences. 4 Units.
This course will introduce students to the logic, design, and implementation of experiments for social science research. We will begin by developing an understanding of how experimental research designs can address some of the central threats to causal identification, such as selection and omitted variables bias. Students will then engage with scholarship that has utilized experimental research designs to produce theoretical insights about topics ranging from social stratification to the dynamics of cultural markets to political mobilization. This course will also cover techniques for analyzing experimental data, strategies for dealing with noncompliance, and combining experiments with other methods of inquiry. The course will culminate with students developing an experimental research design proposal related to their own scholarly interests. While a basic understanding of statistics is necessary for this course, the emphasis will be on research design.

SOC 305. Graduate Proseminar. 1 Unit.
For first-year Sociology doctoral students only, Introduction and orientation to the field of Sociology. May be repeat for credit.

SOC 308. Social Demography. 4-5 Units.
For graduate students and advanced undergraduates. Topics: models of fertility behavior, migration models, stable population theory, life table analysis, data sources, and measurement problems. How population behavior affects social processes, and how social processes influence population dynamics. Recommended: sociological research methods; basic regression analysis and log linear models.

SOC 309. Nations and Nationalism. 3-5 Units.
The nation as a form of collective identity in the modern era. Major works in the study of nations and nationalism from comparative perspectives with focus on Europe and E. Asia.

SOC 310. Political Sociology. 4-5 Units.
Theory and research on the relationship between social structure and politics. Social foundations of political order, the generation and transformation of ideologies and political identities, social origins of revolutionary movements, and social consequences of political revolution. Prerequisite: doctoral student.

SOC 311A. Workshop: Comparative Studies of Educational and Political Systems. 1-5 Unit.
Analysis of quantitative and longitudinal data on national educational systems and political structures. May be repeated for credit. Prerequisite: consent of instructor.
Same as: EDUC 387

SOC 312G. Careers and Organizations. 3 Units.
The careers of individuals are shaped by their movement within and between organizations, whether those be established employers or entrepreneurial ventures. Conversely, organizations of all sizes are shaped by the flows of individuals through them as individuals construct careers by pursuing different opportunities. This course will examine sociological and economic theory and research on this mutually constitutive relationship. Possible topics include inequality and attainment processes, internal labor markets, mobility dynamics, individual and organizational learning, ecological influences, gender and racial segregation, discrimination, and entrepreneurship as a career process.

SOC 312W. Workshop: Political Sociology, Social Movements, and Collective Action. 1-2 Unit.
Faculty and student presentations of ongoing research on topics including: social movement and organizations, and the relationship between them; democracy movements; legislative and policy outcomes; and collective action tactics, strategies, and trajectories. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.

SOC 314. Economic Sociology. 4-5 Units.
Classical and contemporary literature covering the sociological approach to markets and the economy, and comparing it to other disciplines. Topics: consumption, labor, professions, industrial organization, and the varieties of capitalism; historical and comparative perspectives on market and non-market provision of goods and services, and on transitions among economic systems. The relative impact of culture, institutions, norms, social networks, technology, and material conditions. Prerequisite: doctoral student status or consent of instructor. Please note: Lecture and discussion section are both required.

SOC 315W. Workshop: Economic Sociology and Organizations. 1-2 Unit.
Theory, methods, and research in the sociology of the economy and of formal organizations, through presentations of ongoing work by students, faculty, and guest speakers, and discussion of recent literature and controversies. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.

SOC 316. Historical and Comparative Sociology. 4-5 Units.
Theory and research on macro-historical changes of sociological significance such as the rise of capitalism, the causes and consequences of revolutions, and the formation of the modern nation state and global world system. Methodological issues in historical and comparative sociology.

SOC 317B. Chinese Politics and Society. 3-5 Units.
(Doctoral students register for 317B.) This seminar surveys the major turning points that have shaped China's evolution since 1949. The topics covered include the Great Leap Forward, the Cultural Revolution, the political and economic turning point of the early 1980s, the political crisis of 1989, the restructuring of the state sector since the 1990s, and the patterns of protest that have accompanied the rapid social changes over the past three decades. We will conclude the course with current debates about China's future.
Same as: HISTORY 293F, HISTORY 393F, SOC 217B

SOC 317W. Computational Sociology. 1-2 Unit.
Yearlong workshop where doctoral students are encouraged to collaborate with peers and faculty who share an interest in employing computational techniques in the pursuit of researching social network dynamics, text analysis, histories, and theories of action that help explain social phenomena. Students present their own research and provide helpful feedback on others' work. Presentations may concern dissertation proposals, grants, article submissions, book proposals, datasets, methodologies and other texts. Repeatable for credit.
Same as: EDUC 317

SOC 318. Social Movements and Collective Action. 4-5 Units.
Topics: causes, dynamics, and outcomes of social movements; organizational dimensions of collective action; and causes and consequences of individual activism.

SOC 319. Ethnographic Methods. 1-5 Unit.
This course offers an introduction to the practice and politics of ethnographic fieldwork. It provides a "how to" of ethnographic research, in which students will conduct an ethnographic project of their own, complemented by weekly readings and discussions. In the process, we will discuss the theory and epistemology of fieldwork, along with the practicalities and politics of fieldwork in different domains. We will examine different stages of ethnographic research (entering the field, conducting and recording fieldwork, exiting the field and writing it up), different methods (observations, interviews, "going along"), as well as distinct styles of ethnographic work (virtual ethnography, organizational ethnography, narrative ethnography, etc.). The course will serve as a participative workshop for students to exchange field notes, share practical advice, and consolidate their research interests. Prerequisite: Must be Communication student, or obtain approval from instructor.
Same as: COMM 314

SOC 320. Foundations of Social Psychology. 4-5 Units.
Major theoretical perspectives, and their assumptions and problems, in interpersonal processes and social psychology. Techniques of investigation and methodological issues. Perspectives: symbolic interaction, social structure and personality, and cognitive and group processes.

SOC 321. Nonprofits, Philanthropy & Society. 3-4 Units.
Over the past several decades nonprofit organizations have become increasingly central entities in society, and with this growing status and importance their roles are increasingly complex.We consider the social, political and economic dynamics of philanthropy and the nonprofit sector, focusing mainly (but not exclusively) on the US. The class is best suited for graduate students looking for an advanced analytic understanding of the sector and those wishing to conduct research in the field; it is not intended to provide training in nonprofit management.
Same as: EDUC 321, PUBLPOL 321

SOC 321W. Workshop: Social Psychology and Gender. 1-2 Unit.
Advanced graduate student workshop in social psychology. Current theories and research agendas, recent publications, and presentations of ongoing research by faculty and students. May be repeated for credit. Prerequisite: consent of instructor.

SOC 323. Sociology of the Family. 4-5 Units.
Sociological research on changing family forms. Topics include courtship, marriage, fertility, divorce, conflict, relationship skills and satisfaction, gender patterns, power relations within the family, and class and race differences in patterns. Enrollment limited to graduate students.

SOC 324. Social Networks. 3-5 Units.
How the study of social networks contributes to sociological research. Application of core concepts to patterns of relations among actors, including connectivity and clusters, duality of categories and networks, centrality and power, balance and transitivity, structural equivalence, and blockmodels. Friendship and kinship networks, diffusion of ideas and infectious diseases, brokerage in markets and organizations, and patronage and political influence in historical contexts.

SOC 325W. Workshop: Graduate Family. 1-2 Unit.
PhD students will present their own work weekly, and read and critique the research-in-progress of their peers on issues of family, household structure, interpersonal relationships, marriage, demography, survey data, demographic methods, statistical methods, and related fields. May be repeat for credit starting 8/1/2016.

SOC 326. New Media and Journalism. 1-5 Unit.
New media technologies are transforming how people create and consume information. In this course, we study journalism as an organized field of practice to examine what digital technologies change -- and what they don't change -- about production, diffusion, and reception of news around the globe. The course will cover topics such as changing professional boundaries in a networked environment; the decentralization of news production with social media platforms; the changes in editorial judgement related to automation; the construction of algorithmic audiences; and the promises and challenges associated with data journalism. Moving beyond simplistic analyses of the internet as a universal explanation for all changes in journalism, this course explores how new technologies interact with existing practices, representations, and institutions.
Same as: COMM 350

SOC 327. Frontiers of Social Psychology. 1-5 Unit.
Advanced topics, current developments, theory, and empirical research. Possible topics include social identity processes, status beliefs and processes, social exchange, affect and social cohesion, legitimacy, social difference and inequality, norms, and social dilemmas.

SOC 328. The Sociology of Work and Employment. 4 Units.
Work and employment have the ability to promote economic security as well as reinforce poverty, provide meaning as well as induce alienation, generate collaboration as well as reproduce difference. Indeed, work and employment are central components of the human experience and structure significant portions of our lives. This course introduces students to current theoretical and empirical issues in sociological scholarship on work and employment. The substantive topics covered in this course will include job search and finding work, the hiring process, changing employment relations, job loss and unemployment, racial and gender stratification at work, unpaid labor and care work, as well as work and family intersections. Theoretical and methodological innovation in recent scholarship will be highlighted throughout the course. The course will culminate with students developing a proposal for a research project designed to address a significant gap in existing scholarship on work and employment.

SOC 330. Sociology of Science. 3-4 Units.
The sociology of science concerns the social structures and practices by which human beings interpret, use and create intellectual innovations. In particular we will explore the claim that scientific facts are socially constructed and ask whether such a characterization has limits. Course readings will concern the formation and decline of various thought communities, intellectual social movements, scientific disciplines, and broader research paradigms. A special focus will be placed on interdisciplinarity as we explore whether the collision of fields can result in new scientific advances. This course is suitable to advanced undergraduates and doctoral students.
Same as: EDUC 120, EDUC 320, STS 200Q

SOC 331. The Conduct of Qualitative Inquiry. 3-4 Units.
Two quarter sequence for doctoral students to engage in research that anticipates, is a pilot study for, or feeds into their dissertations. Prior approval for dissertation study not required. Students engage in common research processes including: developing interview questions; interviewing; coding, analyzing, and interpreting data; theorizing; and writing up results. Participant observation as needed. Preference to students who intend to enroll in 327C.
Same as: EDUC 327A

SOC 332. Sociology of Education. 3-5 Units.
Seminar. Key sociological theories and empirical studies of of the relationship between education and other major social institutions, focusing on drivers of educational change, the organizational infrastructures of education, and the implication of education in processes of social stratification. Targeted to doctoral students.
Same as: EDUC 310

SOC 333. Law and Wikinomics: The Economic and Social Organization of the Legal Profession. 1-5 Unit.
(Graduate and Law students enroll in 333.) Seminar. Emphasis is on the labor market for large-firm lawyers, including the market for entry-level lawyers, attorney retention and promotion practices, lateral hiring of partners, and increased use of forms of employment such as the non-equity form of partnership. Race and gender discrimination and occupational segregation; market-based pressure tactics for organizational reform. Students groups collect and analyze data about the profession and its markets. Multimedia tools for analysis and for producing workplace reforms. May be repeated for credit. Prerequisite: consent of instructor.
Same as: SOC 133

SOC 334. Research Seminar on Access to Justice. 1-5 Unit.
The functions and dysfunctions of modern legal systems. Topics include: official statements of the U.S. and the EU about the rights of parties to civil disputes; the roles of lawyers as gatekeepers and facilitators; the filtering process by which injuries and experiences become the basis for legal claims; access to and use of courts; the balance of power and advantage between individual persons and organizations in disputes. Prerequisite: advanced undergraduate or graduate standing, or consent of instructor.
Same as: SOC 234

SOC 336. Sociology of Law. 3-5 Units.
Sociological examination of law as a mechanism of social regulation and as a field of knowledge. Explores classical and contemporary theoretical and empirical contributions to the sociology of law. Law and social control, law and social change, social reality of the law, the profession and practice of law, legal mobilization, and the influence of race, gender, and social status in legal decisions and processes.

SOC 338W. Workshop: Sociology of Law. 1-5 Unit.
(Same as LAW 581.) Required for joint degree J.D./Ph.D. students in Sociology in the first three years of program; open to Ph.D. students in Sociology and related disciplines. Empirical, sociological study of law and legal institutions. Topics such as the relation of law to inequality and stratification, social movements, organizations and institutions, political sociology and state development, and the social construction of disputes and dispute resolution processes. Research presentations. Career development issues. May be repeated for credit.

SOC 339. Gender Meanings and Processes. 5 Units.
Current theories and research on the social processes, such as socialization, status processes, stereotyping, and cognition, that produce gender difference and inequality. Intersections of gender with race, class, and bodies. Applications to workplaces, schools, families, and intimate relationships. Prerequisite: consent of instructor required.

SOC 340. Social Stratification. 4-5 Units.
Classical and contemporary approaches to the unequal distribution of goods, status, and power. Modern analytic models of the effects of social contact, cultural capital, family background, and luck in producing inequality. The role of education in stratification. The causes and consequences of inequality by race and gender. The structure of social classes, status groupings, and prestige hierarchies in various societies. Labor markets and their role in inequality. The implications of inequality for individual lifestyles. The rise of the new class, the underclass, and other emerging forms of stratification. Prerequisite: Ph.D. student or consent of instructor.

SOC 340W. CPI Seminar. 1-2 Unit.
A workshop devoted to presenting ongoing research on poverty and inequality in the United States. Open to all students interested in (a) building a better infrastructure for monitoring poverty and inequality, (b) building cutting-edge models of the causes and consequences of poverty and inequality, and (b) building better policy to reduce poverty and inequality. Required for all National Poverty Fellows funded by the Stanford Center on Poverty and Inequality. May be repeat for credit starting 8/1/2016.
Same as: SOC 240W

SOC 341W. Workshop: Inequality. 1-2 Unit.
Causes, consequences, and structure of inequality; how inequality results from and shapes social classes, occupations, professions, and other aspects of the economy. Research presentations by students, faculty, and guest speakers. Discussion of controversies, theories, and recent writings. May be repeated for credit. Restricted to Sociology doctoral students; others by consent of instructor.

SOC 342B. Gender and Social Structure. 5 Units.
The role of gender in structuring contemporary life. Social forces affecting gender at the psychological, interactional, and structural levels. Gender inequality in labor markets, education, the household, and other institutions. Theories and research literature.

SOC 343W. Gender and Gender Inequality Workshop. 1-3 Unit.
This workshop is intended for PhD students whose graduate research is centered on gender and/or gender inequalities. Students will take turns presenting their research and get feedback from other students and faculty.

SOC 344. Intersectionality: Theory, Methods & Research. 4 Units.
In this seminar, we will trace intersectionality from its activist origins outside of academia to its practice in contemporary social science research (and back). We will consider the range of approaches and interpretations that have emerged over the past 30 years, since Kimberlé Crenshaw coined the term to critique anti-discrimination litigation, and do so with an eye toward application: how to best incorporate the insights of intersectionality into original social science research, across a variety of topics and methods.

SOC 344A. Culture and Markets. 4 Units.
In this course, we seek to understand economic markets as cultural institutions. Far from natural or inevitable entities, markets are social constructions that rely upon¿and reproduce¿particular shared understandings about how the world is and should be. In this course, we consider the cognitive, expressive, and normative aspects of culture in order to analyze the existence of markets, the forms they take, and the justifications for the effects they have. We begin by exploring the cultural constitution of market goods and actors. How do some, but not other, objects come to be exchanged via the market, and why do companies and consumers look and act the way they do? We then dig deeper into the key cultural forms and processes that enable and constrain economic phenomena. In what ways do classification, quantification, narrative, metaphor, and so on give rise to the market as we experience it, and who has the power to shape the way these processes take hold? Next, we delve into two special cases: money, which some hold to be impervious to social considerations, and cultural objects, which some hold to be impervious to market logic. Both turn out to be much more complicated. In the final part of course, we explore the cultural aspects of organizations and economic policymaking. The course readings are largely empirical research, so we will also critically discuss how sociologists use data and methods to build evidence.

SOC 346. Workshop: Ethnography. 1-2 Unit.
Restricted to doctoral students. Student research employing ethnographic methods. May be repeated for credit. Prerequisite: consent of instructor.

SOC 346A. Ethnographies of Race, Crime, and Justice. 4-5 Units.
This course provides graduate students with a survey introduction to influential ethnographic and interview-based sociological research on race, crime, and justice. Recent social movements such as the Movement for Black Lives have drawn attention to the problem of mass criminalization in the U.S. These movements have underscored the centrality of the criminal legal system in defining race in America. Each week, students will read ethnographic books and journal articles on the role of race and racism in different dimensions of the criminal legal process from policing to court processing to incarceration written in the early twentieth century to the present. In addition to gaining foundational knowledge on the key debates within the sociological and criminological literature, students will also gain important insight into the most rigorous qualitative social science methods for studying these topics, and how these methods have changed over time.
Same as: SOC 246A

SOC 348. Advanced Topics in the Sociology of Gender. 3-5 Units.
Seminar for graduate students who have research projects in progress that focus on questions about gender and society. Research projects can be at any stage from the initial development to the final writing up of results. Focus is on questions posed by the research projects of the seminar participants. Readings include relevant background to each other's questions and present their own work in progress. A final paper reports the progress on the seminar member's research project. May be repeat for credit.

SOC 349. Race, Space, and Stratification. 4 Units.
Racial and ethnic stratification has been a defining yet shifting feature of U.S. society, and such inequalities shape and are shaped by the ecological structure of places. This course is a survey course for doctoral students covering sociological scholarship at the intersection of racial stratification and urban sociology. The class will include foundational readings and discussions on urban sociological theories, urban decline and suburbanization, segregation, poverty, neighborhood effects, crime and disorder, gentrification, and immigration. The course will also include discussion of new and innovative data sources and methods for research in this area throughout the quarter. Students will develop or continue a research project designed to contribute to scholarship on racial stratification and urban sociology.

SOC 350. Sociology of Race. 4 Units.
In this seminar, we focus our sociological lens on the concept of race itself. We will explore theoretical and conceptual debates about race and ethnicity, the history of counting by race in surveys and official statistics, as well as critiques of how race is operationalized in both quantitative and qualitative studies. By the end of the course, students will be prepared to conduct their own theoretically and methodologically rigorous research that advances knowledge about race and racial inequality. Prerequisite: Sociology graduate student; otherwise, please email instructor for consent to enroll.

SOC 350W. Workshop: Migration, Ethnicity, Race and Nation. 1-3 Unit.
Weekly research workshop with a focus on ongoing research by faculty and graduate student participants, new theory and research, and recent publications. Workshop participants will present their own work, and read and critique the research-in-progress of their peers. May be repeated for credit. Prerequisite: Sociology doctoral student or consent of instructor.

SOC 351. Counterfactuals and Causal Inference in the Social Sciences. 3-5 Units.
Questions about causal effects and processes are critical in the social sciences, and range from macro-level concerns such as Does capitalism cause democracy? to micro-level ones such as Does educational attainment increase individual earnings / health /civic participation?. This course trains students in quantitative approaches designed to address causal questions with observational and quasi-experimental data, including propensity score methods, fixed and random effects, instrumental variables, and regression discontinuity, among others. The underlying intuition, statistical formulation, and implementation of each approach will be discussed. The course will also examine topics relevant for researches addressing causal questions such as sensitivity analysis, mediation analysis, and integration of quantitative and qualitative approaches. Prerequisites: Soc 381 and Soc 382 or equivalent. Undergraduate students should request instructor's permission.

SOC 354. Welfare State. 4-5 Units.
This seminar introduces students to the key literature, questions, and debates about the modern welfare state. Emergence, growth, and purported demise of the welfare state. American welfare state in comparative perspective. Social and political factors affecting state development including political parties, labor markets, gender, demographic change, and immigration.
Same as: SOC 254

SOC 356. Strategy and Organizations. 3 Units.
Why are some organizations more competitive than others? This is one of the defining questions of the interdisciplinary research field known as strategic management. In this seminar, we will survey the field of strategic management as seen through the lens of organization theory, touching on the four main theoretical approaches that have developed there.nnMost work in strategic management pays little attention to particular theoretical perspectives, and is organized more by the topic - the phenomenon being studied - such as market exit, growth, performance, mergers and acquisitions, innovation, and the like. I have catalogued the research in strategic management both according to theoretical perspective and topic, and that structure is developed in this course. Our goal is to help you to identify theoretical perspectives as you try to understand the strategy field.

SOC 357. Immigration and Assimilation. 3-5 Units.
Major theoretical debates and empirical applications in the study of immigrant assimilation. Topics include racial and ethnic identity, socioeconomic integration, political participation, and national identity. Companion to SOC 358.

SOC 358. Sociology of Immigration. 5 Units.
Topics vary each quarter but may include: theories and processes of migration and immigrant incorporation; historical and contemporary perspectives on race, ethnicity, and immigration; immigration law and policy; transnationalism; nations and nationalism.

SOC 359. Organizations and Uncertainty. 3-5 Units.
Organizations and environments characterized by institutional uncertainty. Beliefs at the roots of shared routines and institutional myths are absent. Institutionalists and neo-institutionalists, organizations facing uncertain institutional environments.

SOC 361. Social Psychology of Organizations. 3 Units.
This seminar focuses on social psychological theories and research relevant to organizational behavior. It reviews the current research topics in micro-organizational behavior, linking these to foundations in cognitive and social psychology and sociology. Topics include models of attribution, decision making, emotion, coordination, influence and persuasion, and the psychology of power and culture. Prerequisites: Enrollment in a PhD program. graduate-level social psychology course.

SOC 361W. Workshop: Networks and Organizations. 1-3 Unit.
For students doing advanced research. Group comments and criticism on dissertation projects at any phase of completion, including data problems, empirical and theoretical challenges, presentation refinement, and job market presentations. Collaboration, debate, and shaping research ideas. Prerequisite: courses in organizational theory or social network analysis.
Same as: EDUC 361

SOC 362. Organization and Environment. 3 Units.
This seminar considers the leading sociological approaches to analyzing relations of organizations and environments, with a special emphasis on dynamics. Attention is given to theoretical formulations, research designs, and results of empirical studies. Prerequisite: Enrollment in a PhD program.

SOC 363A. Seminar on Organizational Theory. 5 Units.
The social science literature on organizations assessed through consideration of the major theoretical traditions and lines of research predominant in the field. For PhD students only.
Same as: EDUC 375A, MS&E 389

SOC 363B. Seminar on Organizations: Institutional Analysis. 3-5 Units.
Seminar. Key lines of inquiry on organizational change, emphasizing network, institutional, and evolutionary arguments.
Same as: EDUC 375B

SOC 366A. Organizational Ecology. 3 Units.
This seminar examines theoretical and methodological issues in the study of the ecology of organizations. Particular attention is given to the dynamics that characterize the interface between organizational populations and their audiences.
Same as: OB 601

SOC 367. Institutional Analysis of Organizations. 3-5 Units.
Reading and research on the nature, origins, and effects of the modern institutional system. Emphasis is on the effects of institutional systems on organizational structure.

SOC 367A. Graduate Seminar on Organizations and Networks. 3-5 Units.
This graduate seminar surveys recent developments in research activities at the intersection of organizations and networks. The goals of the seminar are to examine ongoing research activities, related theoretical ideas and research design, and to identify unresolved intellectual problems for future research. Topics include: (1) networks within organizational hierarchy; (2) inter-organizational networks such as strategic alliance and knowledge diffusion; (3) models of hierarchical networks.

SOC 368W. Workshop: China Social Science. 1 Unit.
For Ph.D. students in the social sciences and history. Research on contemporary society and politics in the People's Republic of China. May be repeated for credit. Prerequisite: consent of instructor.
Same as: POLISCI 448R

SOC 369. Social Network Methods. 3-5 Units.
Introduction to social network theory, methods, and research applications in sociology. Network concepts of interactionist (balance, cohesion, centrality) and structuralist (structural equivalence, roles, duality) traditions are defined and applied to topics in small groups, social movements, organizations, communities. Students apply these techniques to data on schools and classrooms.
Same as: EDUC 316

SOC 370A. SOCIOLOGICAL THEORY. 5 Units.
Restricted to Sociology doctoral students with preference to first year students.The traditions of structural analysis derived from the work of Marx, Weber, and related thinkers. Antecedent ideas in foundational works are traced through contemporary theory and research on political conflict, social stratification, formal organization, and the economy.

SOC 370B. Social Interaction and Group Process. 3-5 Units.
Theoretical strategies for the study of interaction, group, and network processes, including rational choice and exchange theory, the theory of action, symbolic interactionism, formal sociology, and social phenomenology. Antecedent ideas in foundational works and contemporary programs of theoretical research.

SOC 372. Theoretical Analysis and Research Design. 3-5 Units.
Restricted to Sociology Doctoral students only and required for Ph.D. in Sociology. This seminar is designed to deepen students¿ understanding of the epistemological foundations of social science, the construction and analysis of theories, and the design of empirical research.

SOC 374. Philanthropy and Civil Society. 1-3 Unit.
Cross-listed with Law (LAW 7071), Political Science (POLISCI 334) and Sociology (SOC 374). Associated with the Center for Philanthropy and Civil Society (PACS). Year-long workshop for doctoral students and advanced undergraduates writing senior theses on the nature of civil society or philanthropy. Focus is on pursuit of progressive research and writing contributing to the current scholarly knowledge of the nonprofit sector and philanthropy. Accomplished in a large part through peer review. Readings include recent scholarship in aforementioned fields. May be repeated for credit for a maximum of 3 units.
Same as: EDUC 374, POLISCI 334

SOC 375W. Workshop: Politics, Morality, and Hierarchy. 1-2 Unit.
Advanced research workshop with a focus on new theory and research, recent publications, and current research by faculty and graduate student participants. Topics of relevant research include, but are not restricted to, morality, cooperation, solidarity, politics, status, and power. May be repeated for credit.

SOC 376. Perspectives on Organization and Environment: Social Movement Organizations and Environments. 3 Units.
This course examines the interaction between organizations and their environments. It is given every year by a different faculty member. What follows is the description of the course for the academic year 2012-13: This research seminar explores recent theory and research on social movement organizations and their environments. We'll consider the way in which organizational theories help us to explain social movement phenomena, and the way in which social movement theories help us to explain organizational phenomena.

SOC 376A. Ethnographic and Fieldwork Methods. 4-5 Units.
This graduate level seminar is the first of an intensive two-quarter-long course in ethnographic and fieldwork methods. Students will receive hands-on training in the epistemology, theory, methods, and politics of fieldwork. This begins by learning how to critically engage ethnographic and qualitative books and articles. Next, students will become acquainted with field research techniques and issues through a number of class exercises. Students will learn the dynamics of gaining access, building rapport, writing field notes, crafting memos, and executing various modes of analyses. Finally, students will begin conducting their own fieldwork research in a field site of their choosing. Students should plan to spend at least five hours per week in the field, write and submit formal field notes, and craft a final paper that analyzes their fieldwork data. Class session will be divided in two parts. First, students will discuss the readings and topics of the week. The remainder of the class will be devoted to discussing research experiences and/or analyzing fellow students' field notes. Students should anticipate producing an article or chapter length research paper by the end of the second quarter of the class.nnPriority given to Graduate students.

SOC 376B. Ethnographic and Fieldwork Methods. 3-5 Units.
This graduate level seminar is the first of an intensive two-quarter-long course in ethnographic and fieldwork methods. Students will receive hands-on training in the epistemology, theory, methods, and politics of fieldwork. This begins by learning how to critically engage ethnographic and qualitative books and articles. Next, students will become acquainted with field research techniques and issues through a number of class exercises. Students will learn the dynamics of gaining access, building rapport, writing field notes, crafting memos, and executing various modes of analyses. Finally, students will begin conducting their own fieldwork research in a field site of their choosing. Students should plan to spend at least five hours per week in the field, write and submit formal field notes, and craft a final paper that analyzes their fieldwork data. Class session will be divided in two parts. First, students will discuss the readings and topics of the week. The remainder of the class will be devoted to discussing research experiences and/or analyzing fellow students¿ field notes. Students should anticipate producing an article or chapter length research paper by the end of the second quarter of the class.nnPriority given to Graduate students¿.

SOC 378. Seminar on Institutional Theory and World Society. 1-5 Unit.
Sociological analyses of the rise and impact of the expanded modern world order, with its internationalized organizations and globalized discourse. Consequences for national and local society: education, political organization, economic structure, the environment, and science. The centrality of the individual and the rationalized organization as legitimated actors.

SOC 379. Methods for Network Analysis. 4-5 Units.
In this course, we learn how to collect and analyze social network data. We begin by learning the fundamentals of graph theory and replicating well-known network studies. In the process, we cover classic network methods from centrality to block-modeling. We then move to the frontiers of network analysis. Topics include visualization, modeling and simulation, dynamic network analysis, network experiments, semantic network analysis, and analyzing social networks at scale. Sources and ways of collecting network data will be discussed and students will apply methods they learn to data of their own.

SOC 380. Qualitative Methods. 3-5 Units.
Priority to Sociology doctoral students. Emphasis is on observational and interview-based research. Limited enrollment.

SOC 380W. Workshop: Qualitative and Fieldwork Methods. 1-3 Unit.
Presentations and discussion of ongoing ethnographic, interview-based, and other fieldwork research by faculty and students . May be repeated for credit. Prerequisite: Sociology doctoral student or consent of instructor.

SOC 381. Sociological Methodology I: Introduction. 5 Units.
Enrollment limited to first-year Sociology doctoral students. Other students by instructor permission only. n This course provides a conceptual and applied introduction to quantitative social sciences methodology, including measurement, sampling and descriptive statistics, statistical inference, ANOVA, factor analysis, and ordinary least squares regression. Students will be introduced to both the methodological logic and techniques of statistical data analysis. The course will present the purpose, goals, and mathematical assumptions behind techniques of statistical analysis and will discuss applications to analyzing data and interpreting results. In addition to the lecture time, SOC381 includes a weekly lab section to learn statistical software and conduct applied research.n*Students enrolling in Soc381 are strongly encouraged to take a 1-week Math/Statistics refresher course from September 16 to September 20. Please contact the instructor at torche@stanford.edu for details.

SOC 382. Sociological Methodology II: Principles of Regression Analysis. 4-5 Units.
Preference to Sociology doctoral students. Other students by instructor permission only. Required for Ph.D. in Sociology. Enrollment limited to first-year Sociology doctoral students. Rigorous treatment of linear regression models, model assumptions, and various remedies for when these assumptions are violated. Introduction to panel data analysis. Enrollment limited to 15. Prerequisites: 381.

SOC 383. Sociological Methodology III: Models for Discrete Outcomes. 5 Units.
Required for Ph.D. in Sociology; other students by instructor permission only. enrollment limited to first-year Sociology doctoral students. The rationale for and interpretation of static and dynamic models for the analysis of discrete variables. Prerequisites: 381 and 382, or equivalents.

SOC 384. New Models and Methods in the Social Sciences. 3-5 Units.
Two-week intensive introduction to new statistical approaches. Emphasis is on applications. Topics may include network models, multilevel models, latent class models, mixed methods, new qualitative methods, growth models, geostatistical tools, survey-based experiments, new methods for estimating causal effects, web-based surveys, advanced discrete choice models, and diffusion models.

SOC 385A. Research Practicum 1. 2 Units.
Workshop on research methods and writing research papers for second year Sociology doctoral students. Ongoing student research, methodological problems, writing challenges, and possible solutions. Required for second year paper.

SOC 385B. Research Practicum II. 2 Units.
Workshop on research methods and writing research papers for second year Sociology doctoral students. Ongoing student research, methodological problems, writing challenges, and possible solutions. Required for second year paper.

SOC 388. Log-Linear Models. 3-5 Units.
Analysis of categorical data with log-linear and negative binomial models. Measures of fit and hypothesis testing.

SOC 389. Mixed Method Research Design and Analysis. 3-5 Units.
Research designs that incorporate qualitative and quantitative analyses in a single project. The tension between thinking case-wise and variable-wise; how the focus on relationships between variables that is the hallmark of the quantitative approach can be brought into qualitative work.

SOC 390. Graduate Individual Study. 1-5 Unit.
May be repeated for credit. Appropriate for in-person instruction.

SOC 391. Graduate Directed Research. 1-5 Unit.
May be repeated for credit. Appropriate for in-person instruction.

SOC 392. Curricular Practical Training. 1-5 Unit.
CPT course required for international students completing degree requirements. Appropriate for in-person instruction.

SOC 393. Teaching Apprenticeship. 1-15 Unit.

.

SOC 396. Sociology Colloquium. 1 Unit.

The Sociology Colloquium is a semimonthly seminar held throughout the academic year, in which distinguished scholars present their cutting-edge research findings. Enrollment for credit, and regular attendance, is required for all first and second year Sociology doctoral students.

SOC 398. The Social Psychology of Contemporary American Politics. 4 Units.

Where do individuals' political attitudes and behaviors come from, and how can they be changed? In this class we will read and discuss cutting-edge research from social psychology, sociology, and political science on topics such as polarization, persuasion, elitism, social activism, and racial resentment. A central idea of the class is that social and psychological factors powerfully influence political views, and research in this area can help to understand our often confusing political landscape. Additionally, understanding the causal architecture of political attitudes and behavior is essential for taking effective political action, especially in this time of deep and growing political divides. Enrollment is permission by instructor only: please email: willer@stanford.edu.

Same as: SOC 298

SOC 635. Social Movements and Organziations. 4 Units.

This research seminar is intended for students seeking to learn more about how collective action underpins institutional change in organizations and industries, and how the success of collective action, in turn, hinges on organizational structures and processes to recruit and mobilize individuals. The purpose of this course is to provide you a roadmap for you to roam the terrain of movements and organizations, and be prepared to generate original research ideas that extend inquiry in your chosen area of research.

SOC 670. Designing Social Research. 4 Units.

This is a course in the design of social research, with a particular emphasis on research field (i.e., non-laboratory) settings. As such, the course is a forum for discussing and developing an understanding of the different strategies social theorists employ to explain social processes, develop theories, and make these theories as believable as possible. In general, these issues will be discussed in the context of sociological research on organizations, but this will not be the exclusive focus of the course. A range of topics will be covered, for example: formulating and motivating research questions; varieties of explanation; experimental and quasi-experimental methods, including natural experiments; counterfactual models; conceptualization and measurement; sampling and case selection; qualitative and quantitative approaches. This course is particularly oriented toward developing an appreciation of the tradeoffs of different approaches. It is well suited to Ph.D. students working on qualifying papers and dissertation proposals.

SOC 802. TGR Dissertation. 0 Units.

.

STATISTICS

Courses offered by the Department of Statistics are listed under the subject code STATS on the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=STATS&filter-catalognumber-STATS=on) web site.

The department's goals are to acquaint students with the role played in science and technology by probabilistic and statistical ideas and methods, to provide instruction in the theory and application of techniques that have been found to be commonly useful, and to train research workers in probability and statistics. There are courses for general students as well as those who plan careers in statistics in business, government, industry, and teaching.

The department has long recognized the relation of statistical theory to applications. It has fostered this by encouraging a liaison with other departments in the form of joint and courtesy faculty appointments, as well as membership in various interdisciplinary programs: Biomedical Data Science, Bio-X, Center for Computational, Evolutionary and Human Genomics, Computer Science, Economics, Education, Electrical Engineering, Environmental Earth System Science, Genetics, Mathematics, Mathematical and Computational Finance, and Medicine. The research activities of the department reflect an interest in applied and theoretical statistics and probability. There are workshops in biology/medicine and in environmental factors in health.

In addition to courses for Statistics students, the department offers a number of service courses designed for students in other departments. These tend to emphasize the application of statistical techniques rather than their theoretical development.

The department has always drawn visitors from other countries and universities, and as a result there are a wide range of seminars offered by both the visitors and the department's own faculty.

Undergraduate Programs in Statistics

The department offers a minor in Statistics and in Data Science (https://statistics.stanford.edu/academics/undergraduate-programs/). Program details can be found under the Minor section.

Undergraduates Interested in Statistics

Students wishing to build a concentration in probability and statistics are encouraged to consider declaring a major in Mathematical and Computational Science (https://mcs.stanford.edu/). This interdisciplinary program is administered in the Department of Statistics and provides core training in computing, mathematics, operations research, and statistics, with opportunities for further elective work and specialization. See the "Mathematical and Computational Science" section of this bulletin.

Graduate Programs in Statistics

University requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Statistics and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Statistics. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Statistics and to interpret and present the results of such research.

The Department of Statistics offers two minor programs for undergraduates, a minor in Data Science (p. 2137) and a minor in Statistics (p. 2138). To declare either minor for a degree program, visit the Statistics website (https://statistics.stanford.edu/academic-programs/undergraduate-programs/) and submit the appropriate form to the department.

Minor in Data Science

The undergraduate Data Science minor has been designed for majors in the humanities and social sciences who want to gain practical knowledge of statistical data analytic methods as it relates to their field of interest. The minor:

- provides students with the knowledge of exploratory and confirmatory data analyses of diverse data types such as text, numbers, images, graphs, trees, and binary input)
- strengthens social research by teaching students how to correctly apply data analysis tools and the techniques of data visualization to convey their conclusions.

No previous programming or statistical background is assumed.

Learning Outcomes

Students are expected to:

1. be able to connect data to underlying phenomena and to think critically about conclusions drawn from data analysis.
2. be knowledgeable about programming abstractions so that they can later design their own computational inferential procedures

All courses for the minor must be taken for a letter grade, with the exception of the Data Mining requirement.

Seven courses are required, 22 units minimum. An overall 2.75 grade point average (GPA) is required for courses fulfilling the minor.

Requirements

Linear Algebra

		Units
One of the following:		
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications	5
CME 100	Vector Calculus for Engineers	5

Programming

		Units
CS 106A	Programming Methodology	3-5

Programming in *R*

		Units
One of the following:		
THINK 3		4
STATS 32	Introduction to R for Undergraduates	1
STATS 48N	Riding the Data Wave	3
STATS 195	Introduction to R	1
Or other course that teaches proficiency in R programming.		

Data Science

		Units
STATS 101	Data Science 101	5
STATS 191	Introduction to Applied Statistics	3
CS 102		
MS&E 226	Fundamentals of Data Science: Prediction, Inference, Causality	3

Statistics

		Units
One of the following:		
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	5
PHIL 166	Probability: Ten Great Ideas About Chance	4
STATS 48N	Riding the Data Wave	3
STATS 141	Biostatistics	5
STATS 191	Introduction to Applied Statistics	3
STATS 211	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	3

Data Mining and Analysis

STATS 202	Data Mining and Analysis (may be taken CR/NC)	3
STATS 216	Introduction to Statistical Learning	3

Elective Course

		Units
One course fulfilling Data Science methodology from cognate field of interest. Suggested courses:		
CS 224W	Machine Learning with Graphs	3-4
ECON 291	Social and Economic Networks	3-5
ENGLISH 184E	Literary Text Mining	5
LINGUIST 275	Probability and Statistics for linguists	2-4
MS&E 135	Networks	3
PHIL 166	Probability: Ten Great Ideas About Chance	4
POLISCI 150B	Machine Learning for Social Scientists	5
POLISCI 450A	Political Methodology I: Regression	5
PSYCH 109	An introduction to computation and cognition	4
PUBLPOL 105	Empirical Methods in Public Policy	4-5
SOC 126	Introduction to Social Networks	4
SOC 180A	Foundations of Social Research	4
or SOC 180B	Introduction to Data Analysis	

*STATS 191 cannot count for both requirements.

return to top (p. 2137)

Minor in Statistics

The undergraduate minor in Statistics is designed to complement major degree programs primarily in the social and natural sciences. Students with an undergraduate Statistics minor should find broadened possibilities for employment. The Statistics minor provides valuable preparation for professional degree studies in postgraduate academic programs.

The minor consists of a minimum of six courses with a total of at least 19 units. There are two required courses (8 units) and four qualifying or elective courses (12 or more units). All courses for the minor must be taken for a letter grade. An overall 2.75 grade point average (GPA) is required for courses fulfilling the minor.

Required Courses

		Units
Both:		
STATS 116	Theory of Probability	4
STATS 200	Introduction to Statistical Inference	4

Qualifying Courses

At most, one of these two courses may be counted toward the six course requirement for the minor.

		Units
Choose one from the following:		
MATH 52	Integral Calculus of Several Variables	5
STATS 191	Introduction to Applied Statistics	3

Three Elective Courses

At least one of the elective courses should be a STATS 200-level course. The remaining two elective courses may also be 200-level courses. Alternatively, one or two elective courses may be approved courses in other departments. Special topics courses and seminars for undergraduates are offered from time to time by the department, and these may be counted toward the course requirement. Students may not count any Statistics courses below the 100 level toward the minor.

Examples of elective course sequences are:

		Units
Data Analysis and Applied Statistics		
STATS 202	Data Mining and Analysis	3
STATS 203	Introduction to Regression Models and Analysis of Variance	3
Statistical Methodology		
STATS 205	Introduction to Nonparametric Statistics	3
STATS 206	Applied Multivariate Analysis	3
STATS 207	Introduction to Time Series Analysis	3
Economic Optimization		
STATS 206	Applied Multivariate Analysis	3
ECON 160	Game Theory and Economic Applications	5
Psychology Modeling and Experiments		
STATS 206	Applied Multivariate Analysis	3
Signal Processing		
STATS 207	Introduction to Time Series Analysis	3
EE 264	Digital Signal Processing	3
EE 279	Introduction to Digital Communication	3
Genetic and Ecologic Modeling		
STATS 217	Introduction to Stochastic Processes I	3
BIO 283	Theoretical Population Genetics	3
Probability and Applications		
STATS 217	Introduction to Stochastic Processes I	3
STATS 218	Introduction to Stochastic Processes II	3
Mathematical Finances		
STATS 240	Statistical Methods in Finance	3
STATS 243	Risk Analytics and Management in Finance and Insurance	3
STATS 250	Mathematical Finance	3

return to top (p. 2137)

Master of Science in Statistics

The University's basic requirements for the M.S. degree are discussed in the "Graduate Degrees" (p. 65) section of this bulletin. The following are specific departmental requirements.

The M.S. in Statistics and the M.S. in Statistics, Data Science track, are intended as terminal degree programs and do not lead to the Ph.D. program in Statistics. Students interested in pursuing doctoral study in Statistics should apply directly to the Ph.D. program.

Admission

Prospective applicants should consult the Graduate Admissions (https://gradadmissions.stanford.edu/) and the Statistics Department admissions webpages (https://statistics.stanford.edu/admissions/graduate-application-information-and-instructions/) for complete information on admission requirements and deadlines.

Recommended preparatory courses include advanced undergraduate level courses in linear algebra, statistics/probability and proficiency in programming.

Stanford students interested in the Data Science track (subplan) in Statistics must apply as external candidates. Visit Graduate Admissions (https://gradadmissions.stanford.edu/) to start an application.

Coterminal Master's Program

Stanford undergraduates who want to apply for the coterminal master's degree in Statistics must submit a complete application to the department by the deadline published on the department's coterminal admissions webpage. (https://statistics.stanford.edu/admissions/ms/statistics-coterm-eligibility/)

Applications are accepted twice a year in autumn and winter quarters for winter and spring quarter start, respectively. The general GRE is not required of coterminal applicants.

Students pursuing the Statistics coterminal master's degree must follow the same curriculum requirements stated in the Requirements for the Master of Science in Statistics section.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Master of Science in Statistics

Curriculum and Degree Requirements

The department requires that a master's student take 45 units of work from offerings in the Department of Statistics (http://explorecourses.stanford.edu/search/?view=catalog&filter-coursestatus-Active=on&page=0&catalog=&academicYear=&q=STATS&collapse=) or from authorized courses in other departments. With the advice of the master's program advisors, each student selects his or her own set of electives.

All requirements for a master's degree, including the coterminal master's degree, must be completed within three years after the student's first term of enrollment in the master's program. Ordinarily, four or five quarters are needed to complete all requirements. Honors Cooperative students must finish within five years.

Units for a given course may not be counted to meet the requirements of more than one degree, with the exception that up to 45 units of a Stanford M.A. or M.S. degree may be applied to the residency requirement for the Ph.D., D.M.A. or Engineer degrees. See the "Residency Policy for Graduate Students (p. 72)" section of this Bulletin for University rules.

As defined in the general graduate student requirements, students must maintain a grade point average (GPA) of 3.0 (or better) for courses used to fulfill degree requirements and classes must be taken at the 200 level or higher.

Master's Degree Program Proposal

The Statistics Master's Degree Program Proposal form (https://statistics.stanford.edu/academic-programs/graduate-programs/ms-program-forms/) must be signed and approved by the department's student services administrator before submission to the student's program advisor. This form is due no later than the end of the first quarter of enrollment in the program.

A revised program proposal must be submitted if degree plans change.

There is no thesis requirement.

For further information about the Statistics master's degree program requirements, see the program's webpage (https://statistics.stanford.edu/academics/ms-statistics/).

1. Statistics Core Courses (must complete all four courses):

		Units
Probability		
STATS 116	Theory of Probability [1]	4
Applied Statistics		
STATS 203	Introduction to Regression Models and Analysis of Variance	3
or STATS 305A	Applied Statistics I	
or STATS 191	Introduction to Applied Statistics	
Theoretical Statistics		
STATS 200	Introduction to Statistical Inference	3-4
or STATS 300A	Theory of Statistics I	
or STATS 370	A Course in Bayesian Statistics	
Stochastic Processes		
STATS 217	Introduction to Stochastic Processes I [1,2]	3
or STATS 218	Introduction to Stochastic Processes II	

or STATS 219	Stochastic Processes	
or STATS 318	Modern Markov Chains	

Students with prior background may replace each course with a more advanced course from the same area, or a more advanced course offered by the department, with consent of the adviser. All must be taken for a letter grade.

2. Statistics Depth:

Five additional Statistics courses must be taken from graduate offerings in the department (at or above the 200-level). During the 2020-21 academic year, three of five courses must be taken for a letter grade (with the exception of courses that may only be offered satisfactory(S)/credit (CR) only).

The following courses that may only be used to fulfill elective credit [3]: STATS 260A Workshop in Biostatistics series, STATS 299 Independent Study, STATS 298 Industrial Research for Statisticians, and STATS 390 Consulting Workshop (see list of electives below).

		Units
Courses which may be offered by the department:		
STATS 202	Data Mining and Analysis	3
STATS 203	Introduction to Regression Models and Analysis of Variance (STATS 203V)	3
STATS 204	Sampling	3
STATS 205	Introduction to Nonparametric Statistics	3
STATS 206	Applied Multivariate Analysis	3
STATS 207	Introduction to Time Series Analysis	3
STATS 208	Bootstrap, Cross-Validation, and Sample Re-use	3
STATS 209A	Topics in Causal Inference	3
STATS 211	Meta-research: Appraising Research Findings, Bias, and Meta-analysis	3
STATS 215	Statistical Models in Biology	3
STATS 216	Introduction to Statistical Learning	3
STATS 222	Statistical Methods for Longitudinal Research	2-3
STATS 229	Machine Learning	3-4
or CS 229	Machine Learning	
STATS 237	Investment Portfolios, Derivative Securities, and Risk Measures	3
STATS 240	Statistical Methods in Finance	3
STATS 241	Data-driven Financial Econometrics	3
STATS 244	Quantitative Trading: Algorithms, Data, and Optimization	2-4
STATS 245	Data, Models and Applications to Healthcare Analytics	3
STATS 250	Mathematical Finance	3
STATS 263	Design of Experiments	3
STATS 266	Advanced Statistical Methods for Observational Studies	2-3
STATS 270	A Course in Bayesian Statistics	3
or STATS 370	A Course in Bayesian Statistics	
STATS 271	Applied Bayesian Statistics	3
or STATS 371	Applied Bayesian Statistics	
STATS 285	Massive Computational Experiments, Painlessly	2
STATS 290	Computing for Data Science	3
STATS 300A	Theory of Statistics I	3
or STATS 300B	Theory of Statistics II	
or STATS 300C	Theory of Statistics III	
STATS 305A	Applied Statistics I	3
or STATS 305B	Applied Statistics II: Generalized Linear Models, Survival Analysis, and Exponential Families	
or STATS 305C	Applied Statistics III	
STATS 310A	Theory of Probability I	3
or STATS 310B	Theory of Probability II	
or STATS 310C	Theory of Probability III	
STATS 311	Information Theory and Statistics	3
or EE 377	Information Theory and Statistics	
STATS 314A	Advanced Statistical Theory	3
STATS 315A	Modern Applied Statistics: Learning	3
STATS 315B	Modern Applied Statistics: Data Mining	3
STATS 317	Stochastic Processes	3
STATS 318	Modern Markov Chains	3
STATS 319	Literature of Statistics	1
STATS 322	Function Estimation in White Noise	3
STATS 325	Multivariate Analysis and Random Matrices in Statistics	3
STATS 334	Mathematics and Statistics of Gambling	3
STATS 359	Topics in Mathematical Physics	3
or MATH 273	Topics in Mathematical Physics	
STATS 361	Causal Inference ((NEW))	3
STATS 364	Theory and Applications of Selective Inference ((NEW))	3
STATS 363	Design of Experiments	3
STATS 366	Modern Statistics for Modern Biology	3
STATS 374	Large Deviations Theory	3
or MATH 234	Large Deviations Theory	
STATS 368	Empirical Process Theory and its Applications	3
STATS 369	Methods from Statistical Physics	3
STATS 376A	Information Theory	3
STATS 376B	Topics in Information Theory and Its Applications	3
or EE 376B	Topics in Information Theory and Its Applications	
STATS 385	Analyses of Deep Learning	1

3. Linear Algebra Requirement:

		Units
Must be taken for a letter grade, with the exception of courses offered satisfactory/no credit only.		
Select one of the following:		
MATH 104	Applied Matrix Theory	3
MATH 113	Linear Algebra and Matrix Theory	3
MATH 115	Functions of a Real Variable	3
MATH 171	Fundamental Concepts of Analysis	3
CME 302	Numerical Linear Algebra	3
CME 364A	Convex Optimization I	3
or CME 364B	Convex Optimization II	

Substitution of more advanced courses in Mathematics, that provide similar skills, may be made with consent of the adviser.

4. Programming Requirement:

		Units
2020-21: May be taken for a letter grade or CR.		
Select one of the following:		
CS 106A	Programming Methodology	3
CS 106B	Programming Abstractions	3

CS 106X	Programming Abstractions	3
CS 107	Computer Organization and Systems	3-5
CME 108	Introduction to Scientific Computing	3
Substitution more advanced courses in Computer Science (140 - 181), that provide similar skills, may be made with consent of the adviser.		

5. Breadth/Elective Courses:

Courses that provide breadth to the degree may be chosen as elective units to complete the degree requirements. List of suggested of courses available from the program's webpage (https://statistics.stanford.edu/academics/statistics-ms-electives/). Other graduate courses (200 or above) may be authorized by the advisor if they provide skills relevant to degree requirements or deal primarily with an application of statistics or probability and do not significantly overlap (repeat) courses in the student's program.

There is sufficient flexibility to accommodate students with interests in applications to business, computing, economics, engineering, health, operations research, and biological and social sciences.

Courses that fulfill elective units may be taken concerning 'CR' (credit) or 'S' (satisfactory).

Students may enroll in up to 6 units of the following workfshops and training seminars to fulfill elective coursework: [3]

STATS 242	NeuroTech Training Seminar	1
STATS 260A	Workshop in Biostatistics	1-2
STATS 260B	Workshop in Biostatistics	1-2
STATS 260C	Workshop in Biostatistics	1-2
STATS 298	Industrial Research for Statisticians	1
STATS 299	Independent Study	1-5
STATS 390	Consulting Workshop	1

Courses below 200 level are not acceptable with the following exceptions; however, students are strongly advised to avoid redundancy in coursework:

		Units
STATS 191	Introduction to Applied Statistics	3
MATH 115	Functions of a Real Variable	3
MATH 171	Fundamental Concepts of Analysis	3
CS 106A	Programming Methodology	3-5
CS 106B	Programming Abstractions	3-5
CS 106X	Programming Abstractions	3-5
CS 140	Operating Systems and Systems Programming	3-4
CS 142	Web Applications	3
CS 143	Compilers	3-4
CS 144	Introduction to Computer Networking	3-4
CS 145	Data Management and Data Systems	3-4
CS 147	Introduction to Human-Computer Interaction Design	3-5
CS 148	Introduction to Computer Graphics and Imaging	3-4
CS 149	Parallel Computing	3-4
CS 154	Introduction to the Theory of Computation	3-4
CS 155	Computer and Network Security	3
CS 157	Computational Logic	3
CS 161	Design and Analysis of Algorithms	3-5
CS 170	Stanford Laptop Orchestra: Composition, Coding, and Performance	1-5
CS 181	Computers, Ethics, and Public Policy [4]	4
And at most, one of these courses ay be counted as an elective. [4]		
MATH 104	Applied Matrix Theory	3
MATH 113	Linear Algebra and Matrix Theory	3
STATS 116	Theory of Probability	4

1. Students who replace STATS 116 with STATS 217 must take a second course in Stochastic Processes or Probability.
2. Enrollment in STATS 116 after successful completion of STATS 217, 218, and/or 219, may not be used to fulfill degree requirements, including as an elective.
3. Students admitted to the Statistics M.S. program prior to academic year 2018-19 fulfill the requirements in effect at the time of their admission.
4. Enrollment in a course that provides redundant coursework cannot be used to fulfill the M.S. degree requirements.

Master of Science in Statistics, Data Science Track

The Data Science track[5] develops strong mathematical, statistical, and computational and programming skills through the general master's core and programming requirements. In addition, it provides a fundamental data science education through general and focused electives requirement from courses in data sciences and related areas. Course choices are limited to predefined courses from the data sciences and related courses group. The final requirement is a practical component to be completed through capstone project, data science clinic, or other courses that have strong hands-on or practical component, such as statistical consulting.

Admission

Prospective applicants should consult the Graduate Admissions (https://studentaffairs.stanford.edu/gradadmissions/) and the Statistics Department admissions webpages (https://statistics.stanford.edu/admissions/graduate-application-information-and-instructions/) for complete information on admission requirements and deadlines.

Applicants apply to the Master of Science degree program in Statistics and subsequently declare their preference for the Data Science track (subplan) within the graduate application ("Department Specialization" option).

Prerequisites

Recommended preparatory courses include advanced undergraduate level courses in linear algebra and probability, and introductory courses in stochastic processes, numerical methods and proficiency in programming (Basic usage of the Python and C/C++ programming languages).

Curriculum and Degree Requirements

As defined in the general graduate student requirements, students must maintain a grade point average (GPA) of 3.0 or better and classes must be taken at the 200 level or higher. Students must complete 45 units of required coursework in Data Science.

Master's Degree Program Proposal

The Statistics (Data Science) Master's Degree Program Proposal form (https://statistics.stanford.edu/academic-programs/graduate-programs/ms-program-forms/) must be signed and approved by the department's student services administrator before submission to the student's program advisor. This form is due no later than the end of the first quarter of enrollment in the program.

A revised program proposal must be submitted if degree plans change.

There is no thesis requirement.

The Data Science track (subplan) is printed on the student transcript and diploma.

Mathematical and Statistical Foundations (15 units)

Students must demonstrate foundational knowledge in the field by completing the following courses. Courses in this area must be taken for letter grades.

		Units
STATS 200	Introduction to Statistical Inference	3
or STATS 300A	Theory of Statistics I	
STATS 203	Introduction to Regression Models and Analysis of Variance	3
or STATS 305A	Applied Statistics I	
STATS 315A	Modern Applied Statistics: Learning	3
or STATS/CS 229	Machine Learning	
CME 302	Numerical Linear Algebra	3
CME 308	Stochastic Methods in Engineering	3

Experimentation (3 units)

Experimental method and causal considerations are fundamental to data science. The course chosen from this area must be taken for letter grades.

		Units
STATS 263	Design of Experiments	3
ECON 271	Intermediate Econometrics II	3-5
MS&E 327	Topics in Causal Inference	3

Software Development & Scientific Computing (6 - 9 units)

To ensure that students have a strong foundation in programming, 3 units of scientific software development (CME212) is required.

Software Development: (3 units)

Minimum of 3 units in scientific computing. (Additional 3 units for those who need to take CME211.)

ICME offers a placement test Summer Quarter. Students who pass this placement test are not required to take CME 211. Courses in this area must be taken for letter grades.

		Units
CME 212	Advanced Software Development for Scientists and Engineers (prerequisite: CME 211)	3
Programming proficiency at the level of CME 211 is a hard prerequisite for CME 212. can be waived with placement exam (summer).		

Scientific Computing Foundations and Methods (minimum 3 units)

		Units
CME 213	Introduction to parallel computing using MPI, openMP, and CUDA	3
CME 305	Discrete Mathematics and Algorithms	3
CME 307	Optimization	3
CME 323	Distributed Algorithms and Optimization	3
CME 364A	Convex Optimization I	3
CS 246	Mining Massive Data Sets	3-4
Students may take 6 units as CR/S in Scientific Computing or Machine Learning for the 2020-21 academic year.		

Machine Learning Methods and Applications (6 - 9 units)

Ordinarily, courses in machine learning should be taken for letter grades. Students may take two courses as 'CR' (credit) or 'S' (satisfactory) for academic year 2020-21.

		Units
STATS 315B	Modern Applied Statistics: Data Mining	3
CS 221	Artificial Intelligence: Principles and Techniques	3-4
CS 224N	Natural Language Processing with Deep Learning	3-4
CS 230	Deep Learning	3-4
CS 231N	Convolutional Neural Networks for Visual Recognition	3-4
CS 234	Reinforcement Learning	3
CS 236	Deep Generative Models	3
Students may take 6 units as CR/S in Scientific Computing or Machine Learning for the 2020-21 academic year.		

Practical Component (3 units)

A Capstone project, supervised by a faculty member and approved by the student's advisor. The capstone project should ideally build on the work done in the student's coursework. Students should submit a one-page proposal, supported by the faculty member and sent to the student's Data Science advisor for approval (at least one quarter prior to start of project).

Students are required to take 3 units of practical component that may include any combination of:

		Units
CME 217	Analytics Accelerator (Real-world project-based research; Application required; Autumn quarter commitment, winter quarter optional.)	3
ENGR 150	Data Challenge Lab (https://datalab.stanford.edu/challenge-lab)	3-5
ENGR 350	Data Impact Lab (https://datalab.stanford.edu/impact-lab)	1-6
STATS 299	Independent Study	1-5
or CME 291	Master's Research	
STATS 390	Consulting Workshop (repeatable)	1

Electives (6 - 9 units)

Courses in data science, machine learning, statistics, advanced programming or practical components, chosen in consultation with the student's course advisor.

Doctor of Philosophy in Statistics

The department looks for students who wish to prepare for research careers in statistics or probability, either applied or theoretical. Advanced undergraduate or master's level work in mathematics and statistics provides a good background for the doctoral program. Quantitatively oriented students with degrees in other scientific fields are also encouraged to apply for admission. The program normally takes five years to complete.

Program Summary

		Units
First-year core program		
STATS 300A	Theory of Statistics I	3
STATS 300B	Theory of Statistics II	3

STATS 300C	Theory of Statistics III	3
STATS 305A	Applied Statistics I	3
STATS 305B	Applied Statistics II: Generalized Linear Models, Survival Analysis, and Exponential Families	3
STATS 305C	Applied Statistics III	3
STATS 310A	Theory of Probability I	3
STATS 310B	Theory of Probability II	3
STATS 310C	Theory of Probability III	3
STATS 302	Qualifying Exams Workshop	5-10

- Pass two of three parts of the qualifying examinations (end of first year); breadth requirement (second, third and fourth year); successfully complete the dissertation proposal meeting (early spring quarter of third year); pass the University oral examination (fourth or fifth year); dissertation (fifth year).
- In addition, students are required to complete a 'depth' requirement consisting of a minimum of three courses (nine units) of advanced topics courses offered by the department. Courses for the depth and breadth (see below) requirements must equal a combined minimum of 24 units. Recommended advanced topics courses include the following:

		Units
STATS 311	Information Theory and Statistics	3
STATS 314A	Advanced Statistical Theory	3
STATS 315A	Modern Applied Statistics: Learning	3
STATS 315B	Modern Applied Statistics: Data Mining	3
STATS 317	Stochastic Processes	3
STATS 318	Modern Markov Chains	3
STATS 322	Function Estimation in White Noise	3
STATS 325	Multivariate Analysis and Random Matrices in Statistics	3
STATS 350	Topics in Probability Theory	3
STATS 359	Topics in Mathematical Physics	3
STATS 362	Topic: Monte Carlo	3
STATS 367	Statistical Models in Genetics	3
STATS 370	A Course in Bayesian Statistics	3
EE 364A	Convex Optimization I	3
EE 364B	Convex Optimization II	3

- Take STATS 390 Consulting Workshop at least twice in years two and three.
- Take STATS 319 Literature of Statistics once per year after passing the Qualifying Exam until the year after passing the dissertation proposal meeting.

First-Year Core Courses

- STATS 300A Theory of Statistics I, STATS 300B Theory of Statistics II and STATS 300C Theory of Statistics III systematically survey the ideas of estimation and of hypothesis testing for parametric and nonparametric models involving small and large samples.
- STATS 305A Applied Statistics I is concerned with linear regression and the analysis of variance.
- STATS 305B Applied Statistics II: Generalized Linear Models, Survival Analysis, and Exponential Families and STATS 305C Applied Statistics III survey a large number of modeling techniques, related to but going beyond the linear models of STATS 305A Applied Statistics I.
- STATS 310A Theory of Probability I, STATS 310B Theory of Probability II, and STATS 310C Theory of Probability III are measure-theoretic courses in probability theory, beginning with basic concepts of the law of large numbers and martingale theory.

Students who do not have enough mathematics background can take STATS 310 A,B,C after their first year but need to have their first-year program approved by the Director of Graduate Studies.

Qualifying Examinations

These are intended to test the student's level of knowledge when the first-year program, common to all students, has been completed. There are separate examinations in the three core subjects of statistical theory and methods, applied statistics, and probability theory, and all are typically taken during the summer between the student's first and second years. Students are expected to show acceptable performance in two examinations. Letter grades are not given. After passing the qualifying exams students file for Ph.D. candidacy, a University milestone.

Breadth Requirement

Students are required to take a minimum of three courses (nine units) outside of the department and are advised to choose an area of concentration in a specific scientific field of statistical applications approved by their Ph.D. program adviser. Courses for the depth and breadth requirements must equal a combined minimum of 24 units.

Popular areas include: Computational Biology and Statistical Genomics, Machine Learning, Applied Probability, Earth Science Statistics, and Social and Behavioral Sciences.

Dissertation Reading Committee, Dissertation Proposal Meeting and University Oral Examinations

The dissertation reading committee consists of the student's adviser plus two faculty readers, all of whom are responsible for reading and approving the full dissertation.

The dissertation proposal meeting is intended to demonstrate students' depth in some areas of statistics, and to examine the general plan for their research. It also confirms that students have chosen a Ph.D. faculty adviser and have started to work with that adviser on a research topic. In the meeting, the student will give a 60-minute presentation and discuss their ideas for completing a Ph.D. thesis, with a committee typically consisting of the members of the dissertation reading committee. The meeting must be successfully completed by early spring quarter of the third year. "Successful completion" means that the general research plan is sound and has a reasonable chance of success. If the student does not pass, the meeting must be repeated. Repeated failure by the end of Year 3 can lead to a loss of financial support.

The oral examination/dissertation defense is scheduled when the student has finished their dissertation and is in the process of completing their final draft. The oral exam consists of a 60-minute presentation on the dissertation topic, followed by a question and answer period attended only by members of the examining committee. The questions relate both to the student's presentation and also explore the student's familiarity with broader statistical topics related to the thesis research. The oral examination is normally completed within the last few months of the student's Ph.D. period. The examining committee usually consists of at least five members: four examiners including the three members of the Dissertation Reading Committee, plus an outside chair who serves as an impartial representative of the academic standards of the University. Four out of five passing votes are required and no grades are given. Nearly all students can expect to pass this examination, although it is common for specific recommendations to be made regarding completion of the written dissertation.

For further information on University oral examinations and committees, see the Graduate Academic Policies and Procedures (GAP) Handbook,

section 4.7 (http://gap.stanford.edu/4-7.html) or the "University Oral Examination (p. 67)" section of this bulletin.

Doctoral and Research Advisers

From the student's arrival until the selection of a research adviser, the student's academic progress is monitored by the department's Director of Graduate Studies. Each student should meet at least once a quarter with the Doctoral Adviser to discuss their academic plans and their progress towards choosing a dissertation adviser. See Graduate Advising Expectations section for more information.

Financial Support

Students accepted to the Ph.D. program are offered financial support. All tuition expenses are paid and there is a fixed monthly stipend determined to be sufficient to pay living expenses. Financial support can be continued for five years, department resources permitting, for students in good standing. The resources for student financial support derive from funds made available for student teaching and research assistantships. Students receive both a teaching and research assignment each quarter which, together, do not exceed 20 hours. Students are encouraged to apply for outside scholarships, fellowships, and other forms of financial support.

Ph.D. Minor in Statistics

Students must complete a total of 30 units for the Ph.D. minor. 20 units must be from Statistics courses numbered 300 and above and taken for a letter grade (minimum grade of B for each course). The remaining 10 units can be from Statistics courses numbered 200 and above, and may be taken for a letter grade or credit. Students may not include more than one unit of Stats 390, Consulting Workshop, towards the 30 units. The selection of courses must be approved by the Statistics Department and the *Application for the Ph.D. Minor* form must be approved by both the student's Ph.D. department and the Statistics department.

For further information about the Statistics Ph.D. degree program requirements, see the department web site (https://statistics.stanford.edu/academics/doctoral-program/).

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Statistics department counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate minor requirements that otherwise require a letter grade.

Graduate Degree Requirements

Grading

The Statistics department’s M.S. program has modified its policy concerning 'CR' (credit) or 'S' (satisfactory) grades in degree requirements requiring a letter grade for academic year 2020-21 as follows: Letter grade is required of the core statistics courses (4), three of the five (5) statistics depth courses and linear algebra requirement. The programming requirement may be taken 'CR' (credit) or 'S' (satisfactory).

The Statistics department’s M.S. program in Data Science has modified its policy concerning 'CR' (credit) or 'S' (satisfactory) grades in degree requirements requiring a letter grade for academic year 2020-21 as follows: Students may take two courses as 'CR' (credit) or 'S' (satisfactory) in Machine Learning and/or Scientific Computing Foundations (up to 6 units).

The Statistics department’s Ph.D. program counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of Ph.D. degree requirements that otherwise require a letter grade, though first year Statistics Ph.D. students are strongly encouraged to take the first year required courses for a letter grade.

Graduate Advising Expectations

The Department of Statistics is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

M.S. in Statistics and Data Science

Master’s students are assigned an academic adviser for the duration of their tenure in the program. The adviser serves as a key resource for the purposes of course placement and approval of elective coursework as it relates to fulfilling degree requirements. Since the majority of MS students choose employment in the field of industry (tech/programming), the program adviser may provide assistance with regards to internships and general professional opportunities. Those planning to apply to doctoral programs are also able to receive feedback on research opportunities.

Ph.D. in Statistics

First and second year students are advised on course selection and other academic matters by the Director of Graduate Studies who is available by appointment to consult with students about any graduate student related matter, including degree progress. The DGS also leads cohort-specific workshops addressing topics such as qualifying exams, adviser selection, oral exams and post-graduation placement.

By the final study list deadline of Spring Quarter of the second year students are expected to have selected a research adviser who later

serves as their principal dissertation adviser. The dissertation adviser must be a member of the Academic Council, and may be from outside the department. Students may also opt to have two co-advisers rather than one principal adviser, which may include one from outside the department.

The adviser-student mentorship takes many different forms, including, but not limited to programmatic consultation and degree progress, and support and collaboration relating to research, conferences, publications, and academic and professional opportunities.

It is the responsibility of the student to meet with their adviser at least once per quarter during the academic year to discuss academic standing and graduate degree progress. In addition, the Director of Graduate Studies is always available to Ph.D. students for consultation.

Program requirements and milestones, as well as more detailed descriptions of the program's expectations of advisers and students, are listed in the Stats Ph.D. Handbook, available on the department website. (https://statistics.sites.stanford.edu/stats-phd-handbook-2018-19/)

Faculty

Emeriti: (Professors) Jerome H. Friedman, Paul Switzer

Chair: Art Owen

Director of Graduate Studies: Joseph P. Romano

Director of Undergraduate Studies: Guenther Walther

Professors: Emmanuel Candès, Sourav Chatterjee, Amir Dembo, Persi Diaconis, David L. Donoho, Bradley Efron, Trevor J. Hastie, Susan P. Holmes, Iain M. Johnstone, Tze L. Lai, Andrea Montanari, Art Owen, Joseph P. Romano, Chiara Sabatti, David O. Siegmund, Jonathan Taylor, Robert J. Tibshirani, Guenther Walther, Wing H. Wong

Assistant Professors: Guillaume Basse, John Duchi, Scott Linderman, Tengyu Ma, Julia Palacios, Dominik Rothenhäusler, Tselil Schramm

Courtesy Professors: John Ioannidis, Hua Tang

Courtesy Associate Professors: David Rogosa, Lu Tian

Courtesy Assistant Professors: Mike Baiocchi, Percy Shuo Liang, Stefan Wager

Stein Fellows: Paromita Dubey, Vishesh Jain

Courses

STATS 32. Introduction to R for Undergraduates. 1 Unit.
This short course runs for weeks one through five of the quarter. It is recommended for undergraduate students who want to use R in the humanities or social sciences and for students who want to learn the basics of R programming. The goal of the short course is to familiarize students with R's tools for data analysis. Lectures will be interactive with a focus on learning by example, and assignments will be application-driven. No prior programming experience is needed. Topics covered include basic data structures, File I/O, data transformation and visualization, simple statistical tests, etc, and some useful packages in R. Prerequisite: undergraduate student. Priority given to non-engineering students. Laptops necessary for use in class.

STATS 48N. Riding the Data Wave. 3 Units.
Imagine collecting a bit of your saliva and sending it in to one of the personalized genomics company: for very little money you will get back information about hundreds of thousands of variable sites in your genome. Records of exposure to a variety of chemicals in the areas you have lived are only a few clicks away on the web; as are thousands of studies and informal reports on the effects of different diets, to which you can compare your own. What does this all mean for you? Never before in history humans have recorded so much information about themselves and the world that surrounds them. Nor has this data been so readily available to the lay person. Expression as "data deluge" are used to describe such wealth as well as the loss of proper bearings that it often generates. How to summarize all this information in a useful way? How to boil down millions of numbers to just a meaningful few? How to convey the gist of the story in a picture without misleading oversimplifications? To answer these questions we need to consider the use of the data, appreciate the diversity that they represent, and understand how people instinctively interpret numbers and pictures. During each week, we will consider a different data set to be summarized with a different goal. We will review analysis of similar problems carried out in the past and explore if and how the same tools can be useful today. We will pay attention to contemporary media (newspapers, blogs, etc.) to identify settings similar to the ones we are examining and critique the displays and summaries there documented. Taking an experimental approach, we will evaluate the effectiveness of different data summaries in conveying the desired information by testing them on subsets of the enrolled students.
Same as: BIODS 48N

STATS 60. Introduction to Statistical Methods: Precalculus. 5 Units.
Techniques for organizing data, computing, and interpreting measures of central tendency, variability, and association. Estimation, confidence intervals, tests of hypotheses, t-tests, correlation, and regression. Possible topics: analysis of variance and chi-square tests, computer statistical packages.
Same as: PSYCH 10, STATS 160

STATS 100. Mathematics of Sports. 3 Units.
This course will teach you how statistics and probability can be applied in sports, in order to evaluate team and individual performance, build optimal in-game strategies and ensure fairness between participants. Topics will include examples drawn from multiple sports such as basketball, baseball, soccer, football and tennis. The course is intended to focus on data-based applications, and will involve computations in R with real data sets via tutorial sessions and homework assignments. Prereqs: No statistical or programming background is assumed, but introductory courses, e.g, Stats 60,101 or 116, are recommended. A prior knowledge of Linear Algebra (e.g., Math 51) and basic probability is strongly recommended.

STATS 101. Data Science 101. 5 Units.
https://statweb.stanford.edu/~tibs/stat101.html This course will provide a hands-on introduction to statistics and data science. Students will engage with the fundamental ideas in inferential and computational thinking. Each week, we will explore a core topic comprising three lectures and two labs (a module), in which students will manipulate real-world data and learn about statistical and computational tools. Students will engage in statistical computing and visualization with current data analytic software (Jupyter, R). The objectives of this course are to have students (1) be able to connect data to underlying phenomena and to think critically about conclusions drawn from data analysis, and (2) be knowledgeable about programming abstractions so that they can later design their own computational inferential procedures. No programming or statistical background is assumed. Freshmen and sophomores interested in data science, computing and statistics are encouraged to attend. Open to graduates as well.

STATS 110. Statistical Methods in Engineering and the Physical Sciences. 5 Units.
Introduction to statistics for engineers and physical scientists. Topics: descriptive statistics, probability, interval estimation, tests of hypotheses, nonparametric methods, linear regression, analysis of variance, elementary experimental design. Prerequisite: one year of calculus.

STATS 116. Theory of Probability. 4 Units.
Probability spaces as models for phenomena with statistical regularity. Discrete spaces (binomial, hypergeometric, Poisson). Continuous spaces (normal, exponential) and densities. Random variables, expectation, independence, conditional probability. Introduction to the laws of large numbers and central limit theorem. Prerequisites: MATH 52 and familiarity with infinite series, or equivalent.

STATS 141. Biostatistics. 5 Units.
Introductory statistical methods for biological data: describing data (numerical and graphical summaries); introduction to probability; and statistical inference (hypothesis tests and confidence intervals). Intermediate statistical methods: comparing groups (analysis of variance); analyzing associations (linear and logistic regression); and methods for categorical data (contingency tables and odds ratio). Course content integrated with statistical computing in R.
Same as: BIO 141

STATS 155. Modern Statistics for Modern Biology. 3 Units.
