The courses offered by the Department of Anthropology are designed to: provide undergraduates with instruction in anthropology; provide undergraduate majors in Anthropology with a program of work leading to the bachelor's degree; and prepare graduate candidates for advanced degrees in Anthropology. Anthropology is devoted to the study of human beings and human societies as they exist across time and space. It is distinct from other social sciences in that it gives central attention to the full time span of human history, and to the full range of human societies and cultures, including those located in historically marginalized parts of the world. It is therefore especially attuned to questions of social, cultural, and biological diversity, to issues of power, identity, and inequality, and to understanding the dynamic processes of social, historical, ecological, and biological change over time. Education in Anthropology provides excellent preparation for living in a multicultural and globally-interconnected world, and helps to equip students for careers in fields including law, medicine, business, public service, research, ecological sustainability, and resource management. Students may pursue degrees in Anthropology at the bachelor's, master's, and doctoral levels.

The Department of Anthropology offers a wide range of approaches to the topics and area studies within the field, including archaeology, ecology, environmental anthropology, evolution, linguistics, medical anthropology, political economy, science and technology studies, and sociocultural anthropology. Methodologies for the study of micro- and macro-social processes are taught through the use of qualitative and quantitative approaches. The department provides students with excellent training in theory and methods to enable them to pursue graduate study in any of the above mentioned subfields of Anthropology.

Undergraduate Programs in Anthropology

- Bachelor of Arts (B.A.)
- Anthropology Minor

In addition to gaining an excellent foundation for graduate research and study, students majoring in Anthropology can pursue careers in government, international business, international development agencies, international education, law, mass media, nonprofit organizations, and public policy.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the degree program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. develop confidence and expertise in oral and written communication and persuasive argumentation
2. identify and engage analytical, conceptual, and real-world problems and make appropriate inferences
3. understand and critically evaluate core knowledge within Anthropology and allied disciplines
4. learn the methods and significance of ethnography as a research approach and method
5. appreciate the relevance of anthropological research to social, political, and economic debates

Graduate Programs in Anthropology

Graduate training in Anthropology at Stanford is designed for students who seek the Doctoral (Ph.D.) degree, and for students who seek the Master of Arts (M.A.) degree only.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Anthropology and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses in the primary field, as well as related areas, and through experience with independent work, area specialization and field research.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Anthropology. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Anthropology and to interpret and present the results of such research.

Field School and Research Opportunities in Anthropology

Students majoring in Anthropology are encouraged to develop field research projects under the supervision of a department faculty member. The department offers research grants to support individually-designed and other summer field research in Anthropology. The department research grants may be used to support field research as a supplement to other field research grants such as the UAR research grants. The department also offers opportunities to participate in faculty-led research projects.

The department's summer research opportunities, include: Franz Boas summer scholars programs and Michelle Z. Rosaldo Summer Field Research Grant program. *Note*: Required courses for the Franz Boas summer scholars program and the Michelle Z. Rosaldo grant program include:

		Units
ANTHRO 93	Prefield Research Seminar	5
or ANTHRO 93B	Prefield Research Seminar: Non-Majors	
ANTHRO 94	Postfield Research Seminar	5

For more information about research opportunities and deadlines, see the department's web site.

Bachelor of Arts in Anthropology

The Department of Anthropology offers a Bachelor of Arts in Anthropology. Eligible students may also pursue a Bachelor of Arts with Honors. (p. 950) The department also offers a minor in Anthropology (p. 950).

Undergraduate training in the Department of Anthropology is designed for students who seek the Bachelor of Arts (B.A.) degree, only. Students may declare a major in Anthropology and earn the B.A. degree by completing the requirements below. The department also offers a minor in Anthropology. The Anthropology B.A. degree program usually requires at least five quarters of enrollment. Students interested in majoring in Anthropology should apply in Axess for the major by the time junior status is achieved at 85 units. Students are encouraged to work closely with a faculty advisor to develop a coherent plan of study.

To declare a major in Anthropology, apply in Axess for the B.A. in Anthropology and contact the department's undergraduate student services officer to prepare the Major Form and Checklist (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthropology_major_form.pdf) and to request a faculty

advisor assignment. Meet with the assigned faculty advisor for approval of the department Major Form and Checklist (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthropology_major_form.pdf) and submit the required forms to the undergraduate student services officer.

Degree Requirements

The B.A. degree in Anthropology may be earned by fulfilling the following requirements:

1. A faculty advisor appointed in the department. A faculty advisor will be assigned by the Undergraduate Committee based on the students chosen emphasis. Undergraduate Anthropology (ANTHRO) majors should plan to meet with their faculty advisor at least once each quarter.
2. A program of 65 units, passed with an overall minimum grade point average of 'C':
   - of the 65 units, 50 units must be in courses with the ANTHRO subject code. 15 may be approved from related areas of study, overseas studies, and/or transfer units.
     - *Note:* any related, overseas studies, or transfer units must be approved by the faculty advisor and by petition to the Undergraduate Committee: submit a faculty advisor approved Undergraduate Program/Course Petition form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_petition_form.pdf) to the undergraduate student services officer for final review by the Undergraduate Committee.
   - of the 65 units, at least 20 units with a minimum grade of 'C' must be in courses with the ANTHRO subject code numbered 100 or above and taught by Anthropology faculty.
   - no more than 10 units of directed reading-style course work may be counted towards the 50 units required for the major in the ANTHRO subject code.
   - no more than 10 units may be taken for a satisfactory/no credit grade: 5 units in ANTHRO courses, and 5 in related or transfer units.
3. A minimum grade of 'B' in the ANTHRO Theory course (ANTHRO 90B Theory of Cultural and Social Anthropology). This should be taken within a year of declaring the major or before the end of the junior year.
4. A minimum grade of 'B' in the ANTHRO Writing in the Major (WIM) course. This can be fulfilled by completing the ANTHRO Theory course (ANTHRO 90B Theory of Cultural and Social Anthropology), and should be taken within a year of declaring the Major or before the end of the junior year.
5. A minimum grade of 'B' in the ANTHRO Methods course (ANTHRO 91 Method and Evidence in Anthropology). This should be taken within a year of declaring the major or before the end of the junior year.
6. Students must enroll in the senior Capstone course, (ANTHRO 193 Anthropology Capstone: Contemporary Debates in Anthropology) during their senior year.
7. An approved plan of study which includes an emphasis chosen from the list below. Students must complete a minimum of 20 units in their chosen emphasis of which 10 units must be numbered 100 or above.
   - Cultural and Social Anthropology
   - Environmental Anthropology
   - Medical Anthropology
   - Self-Designed Emphasis (with faculty advisor and undergraduate committee approval by submitting Undergraduate Program/Course Petition form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_petition_form.pdf), only)
8. Competence in a foreign language beyond the first-year level. Such competence is usually demonstrated by completing a 5 unit course at the second-year level with a minimum grade of 'B-'.
   - Students must submit the Language Committee Petition form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrograduatelanguagecommitteepetition_0.pdf)to fulfill the requirement. The requirement may also be met by special examination administered through the Language Center.
     - Up to 5 units from a second-year language course can count towards the "Related ANTHRO" category of the major requirements.
9. At least five quarters of enrollment in the major. Each candidate for the B.A. in Anthropology should declare a major by the first day of the second quarter of the third year of study.

Advising

Advising is an important component of the Anthropology major. Students are encouraged to work closely with their major advisor throughout their pursuit of the B.A. degree. Advising milestones for the major include the following:

1. In the quarter in which the major is declared, students meet with their assigned faculty advisor, create a rigorous plan of study based on topical breadth, obtain advisor approval of an Anthropology emphasis as part of the plan of study, and obtain the major advisor's signature on the Major Form and Checklist (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthropology_major_form.pdf).
2. Undergraduate Anthropology majors should plan to meet with their major faculty advisor at least once each quarter before the final study list deadline. Any revisions to the initial checklist must be approved by the faculty advisor.
3. Undergraduate Anthropology majors must submit an updated and approved Major Form and Checklist (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthropology_major_form.pdf) to the undergraduate student services officer in the quarter before graduating.

Required Courses

1. Writing in the Major course

Undergraduate majors can fulfill the Writing in the major course requirement for the B.A. in Anthropology by taking the ANTHRO theory course, ANTHRO 90B Theory of Cultural and Social Anthropology.

2. Theory course

The following course fulfills the ANTHRO undergraduate major theory course requirement for all emphases:

		Units
ANTHRO 90B	Theory of Cultural and Social Anthropology	5

3. Methods course

The following course fulfills the ANTHRO undergraduate major methods course requirement for all emphases:

		Units
ANTHRO 91	Method and Evidence in Anthropology	5

4. Capstone Course

The following course fulfills the ANTHRO undergraduate major capstone course requirement for all emphases:

		Units
ANTHRO 193	Anthropology Capstone: Contemporary Debates in Anthropology	5

Department Courses

Students should complete a minimum of 20 units from the courses listed below within their chosen emphases; 10 of these units must be numbered 100, or above. Departmental courses may fulfill the requirements for more than one emphasis. For

example: with approval, an Archaeology course may fulfill a course needed to meet a course requirement in the Medical Anthropology emphasis. Undergraduates may also petition to the undergraduate committee for a self-designed emphasis in the Anthropology major by submitting the Undergraduate Program/Course Petition Form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_petition_form.pdf).

		Units
Cultural & Society Anthropology Courses		
ANTHRO 1	Introduction to Cultural and Social Anthropology	5
ANTHRO 39	Sense of Place	3
ANTHRO 34	Animals and Us	5
ANTHRO 42	Megacities	5
ANTHRO 90B	Theory of Cultural and Social Anthropology	5
ANTHRO 91	Method and Evidence in Anthropology	5
ANTHRO 106	Incas and their Ancestors: Peruvian Archaeology	3-5
ANTHRO 126	Urban Culture in Global Perspective	5
Medical Anthropology Courses		
ANTHRO 82	Medical Anthropology	5
ANTHRO 138	Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise	5
ANTHRO 154	Anthropology of Drugs: Experience, Capitalism, Modernity	5
ANTHRO 175	Human Skeletal Anatomy	5
ANTHRO 176	Cultures, Minds, and Medicine	1
ANTHRO 182N	Smoke and Mirrors in Global Health	3
ANTHRO 186	Culture and Madness: Anthropological and Psychiatric Approaches to Mental Illness	5
Environmental Anthropology Courses		
ANTHRO 166	Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness	3-5
Senior Courses		
ANTHRO 95B	Independent Study for Honors or Senior Paper Writing	1-5
ANTHRO 193	Anthropology Capstone: Contemporary Debates in Anthropology	5
Senior Paper/Honors & Research Courses		
ANTHRO 92A	Undergraduate Research Proposal Writing Workshop	2-3
ANTHRO 92B	Undergraduate Research Proposal Writing Workshop	2-3
ANTHRO 93	Prefield Research Seminar	5
ANTHRO 93B	Prefield Research Seminar: Non-Majors	5
ANTHRO 94	Postfield Research Seminar	5
ANTHRO 95	Research in Anthropology	1-10
ANTHRO 96	Directed Individual Study	1-10
ANTHRO 97	Internship in Anthropology	1-10

Emphasis Courses

The following course listing includes courses taught by the Anthropology faculty in Archaeology. These courses may be considered towards the published emphasis requirements in the Anthropology bachelors degree with the following emphases in the Anthropology major: cultural and social, environmental, medical, and self-designed.

Archaeology Courses

		Units
ANTHRO 3	Introduction to Archaeology	3-5
ANTHRO 34	Animals and Us	5
ANTHRO 91A	Archaeological Methods	5
ANTHRO 98B	(No longer offered)	3-5
ANTHRO 106	Incas and their Ancestors: Peruvian Archaeology	3-5
ANTHRO 108E	(No longer offered)	3
ANTHRO 113B	(No longer offered)	5
ANTHRO 115	The Social life of Human Bones	3-5
ANTHRO 118	(No longer offered)	4
ANTHRO 119	Zooarchaeology: An Introduction to Faunal Remains	5
ANTHRO 134	(No longer offered)	5

Plan of Study (example)

Please see the example Plan of Study grid below designed for an Anthropology major beginning junior year (from 85 units). This sample course schedule details the courses needed to satisfy the requirements for the Culture & Society emphasis.

Junior	Units			
	Autumn	Winter	Spring	
Method and Evidence in Anthropology (ANTHRO 91)	5			
Undergraduate Research Proposal Writing Workshop (ANTHRO 92A)	2-3			
(ANTHRO 178A) (No longer offered)	5			
Megacities (ANTHRO 42)	5			
Undergraduate Research Proposal Writing Workshop (ANTHRO 92B)			2-3	
Introduction to Cultural and Social Anthropology (ANTHRO 1)			5	
Theory of Cultural and Social Anthropology (ANTHRO 90B)			5	
(ANTHRO 15) (No longer offered)			3	
Prefield Research Seminar (ANTHRO 93)				5
(ANTHRO 98F) (No longer offered)				1-3
(ANTHRO 136) (No longer offered)				5
Medical Anthropology (ANTHRO 82)				5
Year Total:	17-18	15-16		16-18

Senior	Units			
	Autumn	Winter	Spring	
Urban Culture in Global Perspective (ANTHRO 126)	5			
Senior and Master's Paper Writing Workshop (ANTHRO 199)	1-2			
Postfield Research Seminar (ANTHRO 94)	5			
Anthropology Capstone: Contemporary Debates in Anthropology (ANTHRO 193)	5			
(ANTHRO 152) (No longer offered)			5	
(ANTHRO 139) (No longer offered)			5	
Senior and Master's Paper Writing Workshop (ANTHRO 199)			1-2	
Independent Study for Honors or Senior Paper Writing (ANTHRO 95B)				1-5
(ANTHRO 149) (No longer offered)				5
Year Total:	16-17	11-12		6-10
Total Units in Sequence:				81-91

Course selections may vary depending on the students chosen emphasis. The number of units needed to satisfy the Anthropology major requirements may also vary depending on the student's current undergraduate status and units accomplished previously before declaration of the Anthropology major.

Research Courses

Courses listed are recommended for students writing a research paper in the major.

		Units
ANTHRO 92A	Undergraduate Research Proposal Writing Workshop	2-3
ANTHRO 93B	Prefield Research Seminar: Non-Majors	5
ANTHRO 93	Prefield Research Seminar	5
ANTHRO 94	Postfield Research Seminar	5
ANTHRO 95	Research in Anthropology	1-10
ANTHRO 199	Senior and Master's Paper Writing Workshop	1-2
Total Units		19-30

Senior Courses

		Units
ANTHRO 95B	Independent Study for Honors or Senior Paper Writing	1-5
ANTHRO 193	Anthropology Capstone: Contemporary Debates in Anthropology	5

Senior Paper

The senior paper program in Anthropology provides majors with the opportunity to conduct original research under the guidance of an Anthropology faculty member. All Anthropology majors are encouraged to write a senior paper. Interested Anthropology majors of junior standing may apply to the senior paper program by submitting a Senior Paper Application (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_senior_paper_application_form.doc_.pdf), (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/2017-2018_senior_paper_application_form.doc_.pdf) including a research topic/title of the proposed senior paper project, a two page abstract/proposal, and a letter of reference from their faculty advisor to the undergraduate student services officer on or by February 15 in the junior year. Enrollment in ANTHRO 95 Research in Anthropology is recommended during Autumn and Winter quarters of the senior year. Students must enroll in ANTHRO 95B Independent Study for Honors or Senior Paper Writing in the final quarter of the undergraduate degree program before graduating. The senior paper is submitted in the final quarter before graduation. For more information, see the undergraduate student services officer.

Honors Program

The honors program in Anthropology provides eligible Anthropology majors with an opportunity to conduct original ethnographic, field, laboratory, or library-based research under the guidance of an Anthropology faculty member. All Anthropology majors are urged to consider applying to the Honors Program in Anthropology. Interested Anthropology majors of junior standing may apply for admission to the honors program by applying first in Axess, submitting an Honors Program Application and Checklist (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthropology_honors_application_and_checklist.pdf), including a research topic/title of the proposed honors project, a two page abstract/proposal, a transcript, and a letter of reference from the faculty or honors advisor, to the undergraduate student services officer on or by February 15 in the junior year.

Department majors are eligible to apply for honors candidacy with a 3.4 GPA in the major, a 3.0 GPA in overall course work, and with no more than one incomplete listed on the transcript at the time of application. Students interested in the honors program are encouraged to apply for Summer Quarter research funding through the Department of Anthropology, Undergraduate Advising and Research, and area studies centers. In most cases, honors students apply for such funding early in the junior year. This process requires advanced planning as the Spring Quarter research deadline falls before the honors application due date.

Students must enroll in ANTHRO 95B Independent Study for Honors or Senior Paper Writing in the final quarter of the undergraduate degree program and earn a grade of 'B+' or better to graduate with honors. Students must submit a penultimate draft of their honors thesis to the honors advisor (first reader) and second reader by the last day of Spring Quarter examination period. Students must submit the final draft of their honors thesis to their honors advisor (first reader) and second reader, electronically or printed, no later than May 5 of Spring Quarter of senior year. The Honors advisor and the second reader must review and approve the final draft submission to confirm satisfactory completion of the honors paper and approved honors status. A final copy of the honors paper must be submitted to the undergraduate student services officer no later than the published Spring Quarter course withdrawal deadline. If ineligible for honors status, students must withdraw their request to graduate with honors via Axess. For more information, see the undergraduate student services officer.

Minor in Anthropology

To declare a minor in Anthropology, apply in Axess and contact the department's undergraduate student services officer to prepare the Minor Form and Checklist (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthropology_minor_form.docx_.pdf) and request a faculty advisor assignment. Also, meet with the assigned faculty advisor for approval of the department Major Form and Checklist (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthropology_minor_form.docx_.pdf) and submit the required forms to the undergraduate student services officer. Students must apply in Axess for the undergraduate minor in Anthropology by the last day of the quarter at least two quarters before degree conferral.

Requirements for the minor in Anthropology include the following:

1. A faculty advisor appointed in the Department of Anthropology.
2. A program of 30 units, with a minimum grade of 'C':
   - Of the 30 units, a minimum of 10 units must be taken from the chosen ANTHRO emphasis.
   - Of the 30 units, a minimum of 15 units must be ANTHRO courses numbered 100 or above.
   - Of the 30 units, 10 units may be approved from related areas of study, overseas studies, and transfer units.
     - *Note:* any related, overseas studies, or transfer units must be approved by the faculty advisor and by petition to the Undergraduate Committee: submit a faculty advisor approved Undergraduate Program/Course Petition form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_petition_form.pdf) to the undergraduate student services officer for final review by the Undergraduate Committee.
   - No more than 5 units of directed reading-style course work may be counted towards the minor and may only be included among the 10 related units permitted for the minor.
   - No more than 5 units may be taken for a satisfactory/no credit grade.
3. A course of study chosen from an Anthropology emphasis listed below and approved by the faculty advisor:
   - Cultural and Social Anthropology
   - Environmental Anthropology
   - Medical Anthropology
   - Self-designed Emphasis (with faculty advisor and undergraduate committee approval, only)

4. At least two quarters of enrollment in the minor. Each candidate for the minor in Anthropology should declare by the last day of the quarter at least two quarters before the quarter of degree conferral.

Advising milestones for the minor include the following:

1. In the quarter in which the minor is declared, the student must meet with his or her assigned advisor, create a rigorous course of study based on topical breadth, and obtain advisor approval for the checklist.
2. Any revisions to the initial checklist must be approved by the faculty advisor.
3. Undergraduate Anthropology minors must submit an updated minor checklist and planning form to the undergraduate student services officer in the quarter before graduating.

Coterminal Master's Degrees in Anthropology

Graduate enrollment at Stanford University for three consecutive quarters of full tuition for at least 45 units is usually required of all candidates for the coterminal M.A. degree. Coterminal M.A. students must matriculate in the M.A. graduate program for a minimum of two quarters (excluding the Summer Quarter) with Anthropology faculty advising and supervision.

M.A. students in Anthropology must take a minimum of 45 units of Anthropology course work beyond the undergraduate degree with an overall minimum grade point average of 3.0. Coterminal M.A. students may transfer units from the two quarters previous to the graduate admit quarter. For the master's degree, all courses must be at or above the 100 level, and at least 23 of the required 45 units must be taken at either the ANTHRO 200- or 300-level.

The M.A. program usually requires more than one year of study. However, full-time students entering the program with appropriate background should complete the M.A. degree program within three consecutive quarters after the student's first quarter of master's-level enrollment.

The University allows no transfer units into the master's program. To provide a meaningful master's program within one year, advance planning of course work with a faculty advisor is required. Requirements for the coterminal M.A. program must be completed within three years.

It is recommended by this department that a student who accepts an offer of admission to the Anthropology coterminal master's program, defer their undergraduate bachelor's conferral until the graduate M.A degree requirements have been completed. The student can then request to graduate in both the bachelor's and master's degrees simultaneously. Students are advised to consult the undergraduate student services officer.

Admission to the Coterminal Master's Degree Program

The deadline for graduate applications to the coterminal M.A. degree program in Anthropology is December 1, 2020. Stanford University undergraduate majors are eligible to apply for the coterminal M.A. degree program if they have a 3.4 GPA in their department major, a 3.0 GPA in overall course work, and have no more than one incomplete listed on the transcript at the time of application. Successful applicants to the M.A. program may enter only in the following Autumn Quarter. However, the department may consider a request for early deferral of admission in the Spring Quarter by petition. Coterminal M.A. degree applicants are not required to submit their Graduate Record Examination scores.

Applicants must submit the following:

1. Online Application for Admission to Coterminal Master's Program
2. Preliminary Program Proposal, Coterminal Degree Program
3. Coterminal Course Approval form
4. Two Letters of Recommendation. Letters of recommendation must be accompanied by signed Recommendation Form.
5. All relevant transcripts
6. A 2-3 page, singled-spaced Statement of Purpose
   a. For further information on how to write a personal statement please contact your faculty recommenders. You may also contact current graduate students in Anthropology.
   b. For tips on writing Statement of Purpose and Personal Statement Essays, see available resources at the Hume Center for Writing and Speaking (https://undergrad.stanford.edu/tutoring-support/hume-center/).
7. Writing Sample in English: A 10-12 page paper giving evidence of both writing ability and the capacity for research, analysis, and original thought at the graduate level, and demonstrating the ability to use theory in relation to evidence. If your writing sample is longer than 10-12 pages, please indicate which 10-12 pages should be reviewed by the admissions committee.

See the department's web site for additional information.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken two quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Degree Options

Students may pursue one of two possible department tracks in the coterminal Anthropology M.A. degree program. The tracks are:

- Archaeology
- Culture and Society

The tracks are not declarable in Axess.

Master of Arts in Anthropology

University requirements for the terminal M.A. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

The Department of Anthropology offers the terminal M.A. degree to the following:

1. Graduate applicants who apply from outside the University for admission to the terminal M.A. program in Anthropology.

2. Stanford graduate students, taking advanced degrees in other departments or schools at Stanford, who are admitted to the terminal M.A. program in Anthropology.
3. Anthropology Ph.D. students at Stanford University who fulfill the M.A. degree requirements on the way to the Ph.D. degree.

Graduate applicants who apply from outside the University and whose ultimate goal is the Ph.D. degree should apply directly to the Ph.D. degree program. Applicants who are offered admission to the terminal Masters degree program may not transfer to the Ph.D. degree program; they must reapply on the same basis as other Ph.D. applicants and in competition with the Ph.D. applicants.

Current graduate applicants who are taking an advanced degree in other departments or schools at Stanford apply for admission to the M.A. in Anthropology (on the way to another graduate degree program) by submitting the Intention to Apply to the Anthropology M.A. for current Stanford Graduate Students form (https://anthropology.stanford.edu/department/forms-and-documents/graduate-forms-and-references/) and the University Registrar's Graduate Authorization Petition (submitted via Axess) by December 1, 2020. If approved, an applicant usually matriculates in the M.A. beginning in the following Spring Quarter, or in the following Autumn Quarter.

Anthropology Ph.D. students choosing to take the M.A. in Anthropology on the way to the Ph.D. are governed by separate requirements described in the Anthropology Ph.D. Guide (https://anthropology.stanford.edu/department/forms-and-documents/graduate-forms-and-references/).

Graduate enrollment at Stanford University for three consecutive quarters of full tuition for at least 45 units is required of all candidates for the terminal master's degree. M.A. students in Anthropology must take a minimum of 45 units of course work with an overall minimum grade point average of 3.0. For the Masters degree, all courses must be at or above the 100 level, and, at least 23 of the required 45 units must be taken at either the ANTHRO 200 or 300-level.

The M.A. program may require more than one year of study. However, full-time students entering the program with appropriate background should complete the M.A. degree program within three consecutive calendar quarters after the student's first quarter of master's-level enrollment. The University allows no transfer units into the master's program. To provide a meaningful master's program within one year, advance planning of course work with a faculty advisor is required. Requirements for the terminal master's program must be completed within three years.

For further information about the Department's M.A. degree program requirements, please consult the Department webpages.

Admission to the Master's Degree Program

The deadline for graduate applications to the M.A. degree program in Anthropology is December 1, 2020. Successful applicants to the M.A. program may enter only in the following Autumn Quarter. Additional terminal M.A. degree program application procedures are required by the Department. The GRE test scores are not required by the department for admission to the MA degree program in Anthropology. Please consult the Department webpages.

No financial support is available to students enrolled for the M.A. degree.

Degree Requirements

Requirements for the coterminal and terminal master's degree program include the following:

1. A faculty advisor appointed in the Department of Anthropology.
2. A program of 45 units, taken at the 100 level or higher with a minimum grade of 'B'. *Note:* At least 23 of the 45 units must be taken at the 200/300 level.
   - of the 45 units, no more than 15 units may be approved from related areas of study or overseas studies.
   - of the 45 units, no more than 10 units of directed reading-style course work may be counted towards the degree.
   - of the 45 units, no more than 5 units may be taken for a satisfactory/no credit grade.
3. A minimum grade of 'B' in one graduate-level ANTHRO Theory course from the chosen track. Please note that ANTHRO theory courses are usually considered as department review courses.
4. A minimum grade of 'B' in one graduate-level ANTHRO Methods course from the chosen track. Please note that ANTHRO methods courses are not considered as department review courses. [Student's seeking to fulfill the Department's requirement for methods training may petition the graduate committee for an alternate way (i.e. other course or training) to fulfill the Department methods requirement].
5. A minimum grade of 'B' in four ANTHRO Review courses from the chosen track, listed at the 200-level or higher, taught by Anthropology faculty, and taken as a five unit course.
6. A self-designed plan of study chosen from one of the following Anthropology tracks; the tracks are not declarable in Axess.:
   - Archaeology
   - Culture and Society
7. Submission of an approved First-year Ph.D., Ph.D. Minor, or M.A. plan of study form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_firstyearphdphdminorormaplanofstudyform2020.pdf) and an approved First-year Ph.D., Ph.D. Minor, or M.A. graduate report of degree progress form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_firstyearphdphdminorormareportofdegreeprogressform.pdf), inclusive of a field research, laboratory research or library-based paper proposal, by the last day of the first quarter of the Master's degree program.
8. Submission of an approved Program proposal for a Masters degree form (https://stanford.app.box.com/v/progpropma/) by the last day of the first quarter of the Master's degree program.
9. Presentation of the Master's research project at the Department's Master's (Honors) paper presentation event in Spring Quarter, optional.
10. Submission of the Master's paper reviewed by two faculty members (advisor and reader). For the Culture and Society track, the paper can be a field research or library-based research paper. For the Archaeology track, the paper can also be a laboratory research paper. For both Tracks, Masters students are required to enroll in the directed reading-style course ANTHRO 441 Master's Project in the final quarter of the M.A. degree program, and earn a grade of 'B', or better.

Required Courses

		Units
Archaeology Track, Required Theory (Review) Course		
ANTHRO 303	Introduction to Archaeological Theory	5
Culture and Society Track, Required Theory (Review) Courses		
ANTHRO 301	History of Anthropological Theory, Culture and Society	5
-or-		
ANTHRO 301A	Foundations of Social Theory	5
-or-		
ANTHRO 300	Reading Theory Through Ethnography	5

		Units
Archaeology Track, Required Methods Course		
ANTHRO 307	Archaeological Methods	5
Culture and Society Track, Required Methods Course		
ANTHRO 306	Anthropological Research Methods	5
or comparable approved course at the 200 level or greater		

		Units
Required Course (All Tracks)		
ANTHRO 441	Master's Project	1-5

Recommended Courses

For both tracks, attendance at the Departmental colloquium each quarter is recommended for all Master's students. Students may enroll in the following course for additional units.

		Units
ANTHRO 444	Anthropology Colloquium	1
ANTHRO 445	Anthropology Brown Bag Series	1

Doctor of Philosophy in Anthropology

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

Admission

The deadline for graduate application to the Ph.D. degree program is December 1, 2020. Successful applicants for the Ph.D. program may enter only in Autumn Quarter. It is the Department of Anthropology's policy not to defer graduate admission. The GRE test scores are not required by the department for admission to the Ph.D. degree program in Anthropology. Additional department application requirements and procedures are required. Please consult the department Graduate Admissions webpage (https://anthropology.stanford.edu/graduate-program/graduate-admission/).

Financial Support

The Department of Anthropology endeavors to provide additional financial support (through fellowships, and teaching and research assistantships) to all students who maintain satisfactory degree progress in years one through five of the Ph.D. program. San Francisco Bay Area residency during the Autumn, Winter, and Spring Quarters in academic cohort years one through five is required for eligibility to receive department funding. For a statement on residency in the 2020-2021 academic year and COVID19, please see the Department COVID-19 Policies (p. 957) section of the Bulletin. Beginning in the 2020-2021 academic year, Ph.D. students are eligible to receive 4 quarters of University funding support during the Autumn, Winter, Spring and Summer Quarters in cohort year one through five of the Ph.D. degree program. Funding is given based on the department evaluation of individual student time to degree progress.

Degree Progress

First-year students who have not obtained a graduate degree previous to entering the Ph.D. program and who have not obtained extramural funding previous to entering the Ph.D. program, are required to submit one extramural funding application to a funding agency (i.e. NSF GRFP, or other similar funding support) supporting graduate doctoral training (for example, funding support for graduate training during the first three years of the Ph.D. degree program) by the first day of finals week in the Autumn Quarter of the first year. First-year students who have graduate work or a graduate degree previous to entering the Ph.D. or who are foreign national students may be ineligible to submit a funding application for graduate training. In this circumstance, first-year students are required to draft a funding proposal equivalent to the NSF GRFP for submission to the first-year faculty mentor by the first day of finals week in the Autumn Quarter of the first year.

Ph.D. students may apply to the Department for Exceptional pre-dissertation Summer Quarter research funding support in cohort years one through three. These funds can be approved for research in addition to the standard Summer Quarter funding support. Exceptional Summer Quarter research funding can be requested by submitting the Application for Summer Quarter Funding Support in the First, Second, or Third Year of the Ph.D form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthroapplicationforsummerquarterfundingsupport1.pdf).

To confirm eligibility for the standard Summer Quarter funding in the First year, Ph.D. students submit the First-year Ph.D., Ph.D. minor, or M.A. Report of Degree Progress (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_firstyearphdphdminorormareportofdegreeprogressform.pdf) form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_firstyearphdphdminorormareportofdegreeprogressform.pdf), inclusive of an approved pre-dissertation research proposal, on or by May 15 in the Spring Quarter of the first year confirming eligibility for standard Summer Quarter funding support.

To confirm eligibility for the standard Summer Quarter funding in the Second year, Ph.D. students submit the Second Year Ph.D. Report of Degree Progress and Evaluation of Candidacy form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrosecondyeardegree_progressandcandidacyeligibilityform.pdf), inclusive of an approved pre-dissertation research proposal, confirmation of the teaching plan and/or one full time quarterly teaching assistant assignment, and advancement to candidacy by the end of spring quarter in the second year.

To confirm eligibility for standard Summer Quarter funding in the Third year, Ph.D. students submit the Third Year Ph.D. Report of Qualifying Examination Status and Associated Oral Component Meeting Status form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrothirdyearphdreportqualifyingexaminationstatus_0.pdf) and the Third Year Ph.D. Dissertation Proposal Meeting form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrodissertationproposal.pdf), inclusive of successful completion of the department qualifying examinations and the oral component meeting, and approval of the dissertation proposal by the dissertation reading committee.

To confirm eligibility for standard Summer Quarter funding in the Fourth year, Ph.D. students submit the Fourth-year graduate report of degree progress form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrofourthyeardegreeprogressform.pdf) on or by May 15th in the Spring Quarter of the fourth year detailing information on completion of dissertation research and confirmation of Bay Area residency. For a statement on residency in the 2020-2021 academic year and COVID19, please see the Department COVID-19 Policies (p. 957) section of the Bulletin.

To confirm eligibility for standard Summer Quarter funding in the Fifth year, Ph.D. students submit the Fifth-year Dissertation Writer's Report on Time to Degree Completion form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrodissertationwritersreportontimetodegreecompletionform.pdf) on or by May 15th in the Spring Quarter of the fifth year detailing information on dissertation writing, grant application, confirmation of Bay Area residency. For a statement on residency in the 2020-2021 academic year and COVID19, please see the Department COVID-19 Policies (p. 957) section of the Bulletin.

A department offer of Sixth-year teaching affiliateship is dependent on the availability of funds and circulation of a call for teaching affiliates in the fifth year of the Ph.D. Assignments may be given at the discretion

of the curriculum committee. Confirmation of Bay Area residency is required. For a statement on residency in the 2020-2021 academic year and COVID19, please see the Department COVID-19 Policies (p. 957) section of the Bulletin.

Program

The Ph.D. in Anthropology allows the student to develop a flexible program reflecting special research interests, under the supervision of a faculty committee, chosen by the student. Students are encouraged to plan for completion of all work for the Ph.D. in five years. Matriculation in the Ph.D. is full-time only. In order to be eligible for department and intramural support, students must reside locally through the Autumn, Winter and Spring Quarters of academic years one through five. For a statement on residency in the 2020-2021 academic year and COVID19, please see the Department COVID-19 Policies (p. 957) section of the Bulletin. The University oral examination may be scheduled in the fifth year or beyond depending upon a student's time to degree completion. Ph.D. students in Anthropology must complete a minimum of 135 quarter units with a minimum grade point average (GPA) of 3.0 (B). The maximum allowable number of transfer units is 45.

Degree Options

Students may pursue one of two different tracks in the Anthropology Ph.D. degree program. The tracks are not declarable in Axess and do not appear on the transcript or the diploma. The tracks are:

- Archaeology
- Culture and Society

Degree Requirements

For students who matriculate beginning 2020-2021, the requirements for the doctoral degree program include the following:

1. Students must submit the First-year Ph.D., Ph.D. minor, or M.A. plan of study (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_firstyearphdphdminorormaplanofstudyform.pdf) form detailing intended course enrollment, milestone accomplishment, and teaching assistant assignment to be completed at the beginning of each year in the Ph.D. program . The First-year Ph.D., Ph.D. minor, or M.A. plan of study (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_firstyearphdphdminorormaplanofstudyform.pdf) form should be submitted by the first day of Autumn Quarter. This form also confirms the student's chosen track in Archaeology or in Culture and Society.
2. Students must pass six graduate level ANTHRO subject code department review courses, with a minimum grade of 'B+', appropriate for the student's chosen track, within the first two years of the degree program. For a statement on grading in the 2020-2021 academic year and COVID19, please see the Department COVID-19 Policies (p. 957) section of the Bulletin. Department review courses are usually those seminar-style courses, usually given at the 300-level, and taught by tenure-line Anthropology faculty who are appointed in the department.
3. In the first year of the program:
   a. pass with a minimum grade of 'B+' the theory course(s) as required for the chosen track in Archaeology or Culture and Society:

		Units
Archaeology Track, Required Theory (Review) Course		
ANTHRO 303	Introduction to Archaeological Theory	5
Culture and Society Track, Required Theory (Review) Courses		
ANTHRO 300	Reading Theory Through Ethnography	5
ANTHRO 301	History of Anthropological Theory, Culture and Society	5
ANTHRO 301A	Foundations of Social Theory	5

   b. pass with a minimum grade of 'B+' one or more methods courses as required for the chosen track in Archaeology:

		Units
Archaeology Track, Required Methods Course		
ANTHRO 307	Archaeological Methods	5

(may be taken in either the first or second year of the PhD program)

   c. complete at least 50 units by the end of Spring Quarter in the first year (i.e. suggested enrollment minimum of 16-18 units enrolled in each quarter during the Autumn, Winter, and Spring Quarters; and, 3 units enrolled, only, in the Summer Quarter).
   d. as scheduled by the Department, attend the Department ethics workshop for review of ethics in Anthropology. Confirm attendance and participation in the department review of ethics workshop on or by May 15th in Spring Quarter of the first year.
   e. enroll in ANTHRO 310G Introduction to Graduate Studies during Autumn Quarter (all tracks).
   f. Culture and Society track students, only, enroll in ANTHRO 311G Introduction to Culture and Society Graduate Studies in Anthropology during Winter and Spring quarters for 1-2 units (no more than 5 units total over two quarters).
   g. attend the Department colloquial series each quarter (required). Enrollment in ANTHRO 444 Anthropology Colloquium is optional.
   h. attend the Department brown bag series each quarter (strongly encouraged). Enrollment in ANTHRO 445 Anthropology Brown Bag Series is optional.
   i. submit the First-year Ph.D., Ph.D. minor, or M.A. graduate report of degree progress (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_firstyearphdphdminorormareportofdegreeprogressform.pdf) form inclusive of the research proposal by May 15th in Spring Quarter of the first year. Receive final approval for the pre-dissertation research proposal by the first day of finals week in Spring Quarter.
   j. submit at least one extramural funding application within the first year (deadlines are usually early Autumn Quarter and advanced planning is required). If ineligible to submit an extramural funding proposal due to previous graduate work, nationality, or other, submit a draft proposal in the style of a National Science Foundation (NSF) Graduate Research Fellowship Program (GRFP) to the faculty adviser.
   k. complete the appropriate CITI tutorial for non-medical human subjects, and, either submit a non-medical human subjects protocol, based on the pre-dissertation research proposal, to the Institutional Review Board before departing for Summer Quarter field research in the first year, or confirm approval for exempt status. Alternatively, a notice of determination may be confirmed with the Institutional Review Board for a pilot study proposal that does not require protocol submission.
   l. complete the appropriate CITI tutorial for Responsible Conduct of Research on or by May 15 in Spring Quarter.
   m. Optional: upon completion of the above requirements, and with recommendation from the faculty advisor and department chair, request the Master's degree 'on the way to the Ph.D.' by the first day of finals week in Spring Quarter, or during any other registered quarter following this time, if desired. To initiate this request for the Masters degree, submit the Graduate Authorization Petition (https://registrar.stanford.edu/students/graduate-degree-progress/graduate-program-authorization-petition/) form via Axess and submit the Program Proposal for a Masters degree

(https://stanford.app.box.com/v/progpropma/) form to the student service officer.

n. In the second year:
   i. pass with a minimum grade of 'B+' the methods course(s) appropriate for the chosen track in Archaeology or Culture and Society:

		Units
Archaeology Track, Required Methods Course		
ANTHRO 307	Archaeological Methods	5
Culture and Society Track, Required Methods Course		
ANTHRO 306	Anthropological Research Methods	5

   ii. pass with a minimum grade of 'B+' the proposal writing course appropriate for the chosen track in Archaeology or Culture and Society:

		Units
Archaeology Track, Required Proposal Writing Course		
ANTHRO 308A	Proposal Writing Seminar in Archaeology	5
Culture and Society Track, Required Proposal Writing Course		
ANTHRO 308	Proposal Writing Seminar in Cultural and Social Anthropology	5

   iii. for both tracks, submit the pre-dissertation proposal by the first day of finals week in Spring Quarter. Receive approval for the draft proposal of the second year summer pre-dissertation research before departing for field research.
   iv. complete at least 45 units of course work in the second year and a total of at least 45 units overall including the Summer Quarter (i.e. suggested enrollment minimum of 16-18 units enrolled in each quarter during the Autumn, Winter, and Spring Quarters; and, 3 units enrolled, only, in the Summer Quarter). Students must have completed a total of 95 units overall by the end of the second year.
   v. pass with a minimum grade of 'B+' any remaining ANTHRO subject code review courses to complete the six review course requirement. For a statement on grading in the 2020-2021 academic year and COVID19, please see the Department COVID-19 Policies (p. 957) section of the Bulletin.
   vi. as scheduled by the Department, attend the teaching assistant training workshop (usually scheduled during or after the week before the first day of Autumn Quarter).
   vii. complete one quarterly teaching assistant assignment in the second year.
   viii. submit the Second-year graduate report of degree progress and candidacy eligibility (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrosecondyeardegree_progressandcandidacyeligibilityform.pdf) form, with the final draft of the research proposal, in Spring Quarter. The date for submission of the final draft of the research proposal in Spring quarter will be determined by the faculty instructor for the required proposal writing course for either the Archaeology track or the Culture and Society track.
   ix. by the first day of finals week in Winter Quarter, confirm the qualifying examination committee adviser for each examination committee (i.e. one committee for AREA and one committee for TOPIC) by submitting an email message to the faculty adviser confirming this information.
   x. by the first day of finals week in Winter Quarter, submit the Language Committee Petition (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrograduatelanguagecommitteepetition.pdf) form representing satisfactory completion of the department's graduate language requirement for oral and reading proficiency of a language necessary for successful scholarship in a chosen the field of study.
   xi. by the first day of finals week in the Winter quarter, submit the Application for Candidacy for the Doctoral Degree (in Anthropology) (https://stanford.app.box.com/v/appcanddoct/) form. Advancement to candidacy is based on faculty review and approval of the pre-dissertation research proposal, demonstrating the ability to conduct independent research, analysis and interpretation, as well on degree progress. The candidacy form should be submitted no later than May 15th in Spring Quarter of the second year. The date for submission of the final draft of the research proposal in Spring quarter will be determined by the faculty instructor for the required proposal writing course for either Archaeology and for Culture and Society. Failure to advance to candidacy may result in the dismissal of the student from the Ph.D. degree program.
   xii. In order to qualify for department application for exceptional research funding in the Summer Quarter of the second year, students are required to submit at least two intramural, pre-dissertation research funding proposals for second year Summer Quarter research funding support.

4. In the third year, complete the following:
   a. by the last day of the third week of Autumn Quarter, confirm the committee reader for each of the qualifying examination committees (i.e. one committee for AREA and one committee for TOPIC) by submitting the Third-year Report of Qualifying Examination and Associated Oral Component Meeting Status (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrothirdyearphdreportqualifyingexaminationstatus.pdf) form.
   b. Submit three dissertation research funding proposals to the faculty adviser for approval by the first day of finals week in the Autumn quarter. Submit an approved extramural funding proposal to at least three funding agencies by the end of the Summer Quarter in the third year.
   c. by the first day of finals week in Autumn Quarter, submit the Third-year Dissertation Proposal Meeting (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrodissertationproposal.pdf) form confirming the committee.
   d. During Winter or Spring Quarters in the third year, enroll in and pass the following directed reading-style courses: ANTHRO 401A Qualifying Examination: Topic and ANTHRO 401B Qualifying Examination: Area, under the section of the ANTHRO faculty adviser for each. Enrollment for each course should be made in the quarter in which the qualifying examination has been scheduled.

		Units
ANTHRO 401A	Qualifying Examination: Topic	1-5
ANTHRO 401B	Qualifying Examination: Area	1-5

1. a. by the last day of third week in Winter Quarter, submit the updated Third-year Report of Qualifying Examination and Associated Oral Component Meeting Status (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrothirdyearphdreportqualifyingexaminationstatus.pdf) form reaffirming the committee members, and confirming the exam dates, preliminary qualifying bibliographies, and the proposed question set for each examination.
   b. by the last day of finals week in Winter Quarter, complete the qualifying examinations for area and for topic (two separate examinations to be scheduled one week apart), inclusive of the final bibliographies.

c. by the last day of the second week in Spring Quarter, submit a draft of the dissertation proposal to the dissertation reading committee.
d. by the last day of the second week in Spring Quarter, confirm a scheduled meeting with the qualifying examination committee/dissertation reading committee members for the oral component of the qualifying examinations and for review and approval of the dissertation proposal.
e. on or by May 15th in Spring quarter, meet with the qualifying examination/dissertation reading committee members to review the dissertation proposal, inclusive of the oral component of the qualifying examinations.
f. by the first day of finals week in Spring Quarter, submit the Third-year dissertation proposal meeting and approval (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrodissertationproposal.pdf) form.
g. before departing for field research, receive approval for the non-medical human subjects protocol from the Institutional Review Board.
h. meet with faculty adviser and dissertation reading committee members to review comments for the dissertation proposal and complete a pre-field check out meeting with the student services officer before departing for field research in the Summer Quarter.
i. In order to qualify for standard Summer Quarter funding, full-time research, based on the approved dissertation research proposal, should start no later than the final study list deadline in the Summer Quarter of the third year.

2. In the fourth year, complete the following requirements:
   a. if necessary, successfully complete a third of three possible attempts to re-write/re-take the qualifying examinations for area and topic no later than the last day of Autumn Quarter in fourth year, following the Spring quarter of the third year.
   b. by the final study list deadline in the Autumn, Winter and Spring Quarters, submit a Fourth-year Graduate Report of Degree Progress (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrofourthyeardegreeprogressform.pdf) form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrofourthyeardegreeprogressform.pdf).
   c. to establish eligibility for fifth-year funding support and by the first day of Summer Quarter, students completing approved dissertation research must submit a Fourth-year graduate report of degree progress (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrofourthyeardegreeprogressform.pdf) form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrofourthyeardegreeprogressform.pdf).
   d. submit one or more funding proposals to support the Summer Quarter of the fourth year (strongly encouraged).
3. In the fifth year, complete the following requirements:
   a. during the fifth year and after returning from approved dissertation research, confirm Bay Area residency to be eligible for fifth year dissertation writing funds. Eligibility for Department support is based on dissertation writing seminar attendance as well as on Bay Area residency (the Bay Area is defined as Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, or Sonoma counties).
   b. as scheduled by the Department, attend the teaching assistant training workshop (usually scheduled during or after the week before the first day of Autumn Quarter).
   c. Although, students are encouraged to complete three or more teaching assistant assignments, at the minimum, students should have completed the second of two teaching assistant assignments by the end of the Fifth year, if not completed earlier.
   d. Culture and Society Track students, only, attend a minimum of four of five class meetings during Autumn, Winter, Spring Quarters in the fifth year of ANTHRO 400 Cultural and Social Dissertation Writers Seminar (required of Culture and Society track, only; and, recommended for the Archaeology track). In each quarter and for both tracks, chapter drafts of the dissertation must be handed in to the dissertation reading committee for review.
   e. submit the Fifth-year Dissertation Writer's Report of Time to Degree Completion (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrodissertationwritersreportontimetodegreecompletionform.pdf) form by the last day of finals week in the Spring Quarter.
   f. fifth year students who have not secured funding support from the beginning of the Autumn Quarter of the Sixth year through the end of Summer Quarter in the Sixth year, should submit one or more funding proposals for dissertation writing funding support.
4. In either the fifth year or in the sixth plus year and beyond, complete the following requirements:
   a. submit a draft of the dissertation by the last day of the first week of the quarter preceding the quarter in which the University oral examination (dissertation defense) will be scheduled; and, in which the dissertation is to be submitted in partial fulfillment of degree milestone requirements. Obtain approval for final draft status of the dissertation using the Fifth-year Dissertation Defense Checklist and Final Draft Approval (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrodissertationdefenseapprovalandchecklistform.pdf) form.
   b. confirm all requirements for the degree will be completed before candidacy expires. The initial period of Candidacy is given for five calendar years. All requests for extension must be filed by the student before the conclusion of the program's time limit, using the Application for Extension of Candidacy or Master's Program (https://stanford.app.box.com/appcandextens/) form (https://stanford.app.box.com/appcandextens/)
   c. at least four weeks prior to a proposed date for the University oral examination, submit the University Oral Examination form (https://stanford.app.box.com/v/doc-orals/) and a final draft of the dissertation to the student services officer.
   d. pass the University oral examination, including an oral presentation, held at the beginning of the oral examination period (approximately 30 minutes for the public presentation with a 15 minute public discussion period), and preceded by closed session with the oral examination committee members, only. Once the University oral examination has been passed, submission of the final draft of the dissertation to the University Registrar and the subsequent conferral of the doctoral degree in Anthropology may take place.

Required Courses

Archaeology Track

		Units
ANTHRO 303	Introduction to Archaeological Theory	5
ANTHRO 307	Archaeological Methods	5
ANTHRO 310G	Introduction to Graduate Studies	2
ANTHRO 308A	Proposal Writing Seminar in Archaeology	5
Total Units		17

Culture and Society Track

		Units
ANTHRO 300	Reading Theory Through Ethnography	5
ANTHRO 301	History of Anthropological Theory, Culture and Society	5
ANTHRO 301A	Foundations of Social Theory	5
ANTHRO 306	Anthropological Research Methods	5
ANTHRO 308	Proposal Writing Seminar in Cultural and Social Anthropology	5
ANTHRO 310G	Introduction to Graduate Studies	2

ANTHRO 311G	Introduction to Culture and Society Graduate Studies in Anthropology	2
Total Units		29

Recommended Courses

For both tracks, quarterly attendance (during the Autumn, Winter, and Spring Quarters) in the Department of Anthropology colloquium is recommended for all graduate students and required for all current first-year and second-year cohort Ph.D. students. Students may enroll in the following course for additional units.

		Units
ANTHRO 444	Anthropology Colloquium	1
ANTHRO 445	Anthropology Brown Bag Series	1

Ph.D. Minor in Anthropology

University requirements for the Ph.D. Minor are described in the Graduate Degrees section of this Bulletin.

To request the Ph.D. Minor in Anthropology, apply using the Request for Ph.D. minor in Anthropology (https://anthropology.stanford.edu/department/forms-and-documents/graduate-forms-and-references/) form at least three quarters before terminal graduate registration status is confirmed with the following materials: the University Application for Ph.D. Minor (https://stanford.app.box.com/v/app-phd-minor/) form (https://stanford.app.box.com/v/app-phd-minor/), an approved (pre)dissertation proposal, confirmation of qualifying status in the Ph.D. degree home Department, confirmation of Doctoral candidacy in the Ph.D. degree home Department, proposed dates for the University oral examination and the dissertation defense, and a recommendation for consideration of the Anthropology Ph.D. minor request written by the Ph.D. minor Anthropology advisor. Once approved, a HelpSU ticket to the University Registrar requesting the addition of the Ph.D. minor to the student's academic career will be submitted by the Anthropology Ph.D. minor student services officer.

The requirements for a Ph.D. Minor in Anthropology include the following:

1. Complete 30 units of ANTHRO subject code courses at the 300 level. The courses dedicated to the Ph.D. minor must be successfully completed with a minimum (GPA) of 3.0 (B). Directed Individual Study units are not approved for the Ph.D. minor in Anthropology.
2. Request a faculty member within the Department of Anthropology who provides written consent to serve as the advisor for the Ph.D. minor and serve on the student's oral examination and dissertation reading committees.
3. With the faculty advisor, determine a coherent plan and submit the First-year Ph.D., Ph.D. minor, or M.A. Student Plan of Study (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_firstyearphdphdminorormaplanofstudyform.pdf) form (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthro_firstyearphdphdminorormaplanofstudyform.pdf).
4. Pass with a minimum grade of 'B+' three Department of Anthropology theory courses, and one Department of Anthropology graduate course in geographical or theoretical area, for a total of four Department review courses.

For additional information regarding the Ph.D. minor in Anthropology, consult the department webpages.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Department of Anthropology counts courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade, with the exception of the following degree course requirements:

- ANTHRO 95B Independent Study for Honors or Senior Paper Writing. The work completed must be equivalent to a grade of 'B+' or better. If the work produced is not above the 'B+' level but is sufficient to earn a grade of 'CR' the student would receive the units of credit but will not receive honors.
- ANTHRO 90B Theory of Cultural and Social Anthropology and ANTHRO 91 Method and Evidence in Anthropology. The work completed must be equivalent to a grade of 'B' or better. If the work produced is not above the 'B' level but is sufficient to earn a grade of 'CR' the student would receive the units of credit but will not full the degree requirement.

Courses taken in which the student received a grade of 'CR' or 'S' will not be applied towards undergraduate major limits on 'CR/NC' units.

Other Undergraduate Policies

If a student has difficulty completing an undergraduate degree requirement due to the COVID-19 pandemic, (e.g., study abroad requirement, a laboratory research requirement), the student should consult with the Director of Undergraduate Studies or the Student Services Officer to identify academic options to fulfill degree requirements.

Graduate Degree Requirements

Grading

The Department of Anthropology counts all courses taken in the academic year 2020-21 with a letter grade of ‘CR’ (Credit) or ‘S’ (Satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade based on the information below.

The department has adopted new grading policies for academic year 2020-21. All Anthropology graduate students, like all other Stanford students, may choose to take any course for 'CR' (credit) rather than a grade. In addition, when it comes to required 300-level departmental review courses, a local policy has been established for doctoral students who opt to take departmental review courses for 'CR' rather than a letter grade:

1. Faculty will communicate to students who opt for the 'CR/NC' grading basis at the start of any departmental review course that a key evaluative threshold will be whether they complete work comparable to what in a regular year would be 'B+' or above in quality.
2. Faculty teaching a review course will generate a brief text at the end of the quarter evaluating the work of any of our doctoral students enrolled in that class for 'CR'.

3. Students taking a review course on a CR/NC grading basis may take an Incomplete for the course if by the end of the quarter they are not on track to clear the threshold outlined in (1) above.

Other Graduate Policies

If a student has difficulty completing a graduate degree requirement due to the COVID-19 pandemic (e.g., language and area studies, field research), the student should consult with the Director of Graduate Studies or the Student Services Officer to identify academic options to fulfill degree requirements.

Although San Francisco Bay Area residency is usually required for cohort years one through five (defined as Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano, or Sonoma counties) during Autumn, Winter, and Spring quarters, this requirement has been suspended during the Autumn Quarter 2020 and until further notice is given regarding the residency requirement in a future quarter due to COVID-19.

Graduate Advising Expectations

The Department of Anthropology is committed to providing academic advising supporting graduate student scholarly and professional development. When most effective, this advising entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity. The department strongly encourages Ph.D. students to work with a variety of faculty throughout their degree program at Stanford. This expectation begins with entering Ph.D. students as they are encouraged to meet with a number of faculty including those who work outside of a Ph.D. student's area of geographic/topical foci. This 'big tent' style of advising includes a wide variety of faculty members, both within the department and outside of the department.

Entering first-year Ph.D. students are assigned a first-year Ph.D. faculty mentor. This faculty mentor serves as guide by evaluating the student's academic and research training, providing guidance developing a (pre)dissertation proposal, make referrals, writing letters of recommendation, and reminding students of their academic and administrative responsibilities. Entering master's students are assigned a primary faculty advisor.

At the end of the first year and no later than the end of the Autumn Quarter in the second year, Ph.D. students are expected to select a primary faculty advisor: someone who will thereafter serve as a guide and sounding board in numerous ways, such as when it comes to selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

In Autumn Quarter of the Third-year and in close consultation with the primary faculty advisor, Ph.D. students confirm faculty readers for the Qualifying Examination Committees. Beginning in the Winter Quarter of the Third-year and in close consultation with the primary faculty advisor, Ph.D. students confirm the Dissertation Reading Committee members.

Graduate students should be active contributors to advising relationships, proactively seeking academic and professional guidance and taking responsibility for informing themselves of academic policies and degree requirements for their graduate program. More on this is described in the Department's "Best Practice Reference for Academic Advising: Guidelines for Graduate Students and Faculty (https://anthropology.stanford.edu/sites/g/files/sbiybj9346/f/anthrobestpracticeguidelinesforgraduatestudentadvising.pdf)."

For a statement of University policy on professional conduct, see the "Guidelines for Addressing Graduate Student Professional Conduct (https://exploredegrees.stanford.edu/graduatedegrees/#degreeprogresstext)" section of this bulletin.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Faculty

Emeriti: (Professors) Harumi Befu, George A. Collier, Jane F. Collier, Carol Delaney, William H. Durham, Charles O. Frake, James L. Gibbs, Raymond McDermott, Jr., Renato I. Rosaldo, John W. Rick

Chair: Thomas B. Hansen

Director of Graduate Studies: Matthew Kohrman

Director of Undergraduate Studies: Miyako Inoue

Professors: Lisa Curran, James Ferguson, Thomas Blom Hansen, Ian Hodder, S. Lochlann Jain, Liisa Malkki, Richard G. Klein, Tanya Luhrmann, Sylvia J. Yanagisako

Associate Professors: Andrew Bauer, Paulla Ebron, Duana Fullwiley, Angela Garcia, Miyako Inoue, Matthew Kohrman, Krish Seetah, Kabir Tambar, Sharika Thiranagama, Barbara Voss

Assistant Professors: Serkan Yolocan

Courtesy Senior Lecturer: Michael V. Wilcox

Affiliated Faculty: Gabrielle Hecht, Li Liu, Richard White

Postdoctoral Fellows: Maira Hayat

Teaching Affiliates: Grace Alexandrino Ocana, Paul Christians, Elix Colon, Samuel Maull

Overseas Studies Courses in Anthropology

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

		Units
OSPCPTWN 36	The Archaeology of Southern African Hunter Gatherers	4
OSPCPTWN 78	Postcolonial Modernist Art Movements in Africa	3

OSPHONGK 23	China Under Mao	4
OSPHONGK 24	Urban China	4

OSPKYOTO 41	Queer Culture and Life in Japan	4
OSPOXFRD 93	Collecting the World	4-5

Courses

ANTHRO 1. Introduction to Cultural and Social Anthropology. 3-5 Units.
This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.
Same as: ANTHRO 201

ANTHRO 1S. Introduction to Cultural and Social Anthropology. 3-5 Units.
This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.
Same as: ANTHRO 101S

ANTHRO 3. Introduction to Archaeology. 3-5 Units.
Aims, methods, and data in the study of human society's development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each.
Same as: ARCHLGY 1

ANTHRO 12. Anthropology and Art. 5 Units.
Modernity. How the concept of art appears timeless and commonsensical in the West, and with what social consequences. Historicizing the emergence of art. Modernist uses of primitive, child art, asylum, and outsider art.

ANTHRO 16. Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America. 5 Units.
What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural collapse, and assimilation, the relationships between Native Americans and American society. Focus is on three themes leading to in-class moot court trials: colonial encounters and colonizing discourses; frontiers and boundaries; and sovereignty of self and nation. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popular culture.
Same as: ARCHLGY 16, NATIVEAM 16

ANTHRO 18. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years. 3-5 Units.
Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis.
Same as: ARCHLGY 12, EARTHSYS 21

ANTHRO 23B. Race and the War on Drugs: Long Roots and Other Futures. 3-5 Units.
Current discussions of the war on drugs reference Richard Nixon's 1971 declaration as a starting point. This class will encourage students instead to see the war on drugs beyond seemingly self-evident margins and imaginaries. In this course, we will explore the racialized and gendered history of coca and cocaine in the Americas, and follow the war on drugs as it targets different aspects of drug production and consumption within and beyond the borders of the United States. In examining how drugs and drug policies have been used as tools of discrimination and exploitation from colonialism through to present systems of mass incarceration, we will analyze racialization as it is constructed and experienced through time and imposed onto nations and bodies. Readings and discussion will emphasize Black and Latinx feminist theories, critical race theory, and decoloniality, drawing on anthropological and interdisciplinary scholarship while incorporating other forms of writing (prose, fiction, poetry) and media (graphic novels, visual art, film clips, documentaries). Students will learn to interrogate the longstanding racialized and gendered roots of the drug war and explore critical calls towards other futures.
Same as: CSRE 23

ANTHRO 27N. Ethnicity and Violence: Anthropological Perspectives. 3-5 Units.
Ethnicity is one of the most compelling and most modern ways in which people - in the midst of considerable global and local uncertainty - all across the world imagine and narrate themselves. This seminar will take an anthropological look at both the modernity and the compulsions of ethnic allegiance, and, why struggles over ethnic identity are so frequently violent. Our questions will be both historical; how, why and when did people come to think of themselves as possessing different ethnic identities - and contemporary; how are these identities lived, understood, narrated, and transformed and what is the consequence of such ethnicisation. nWe follow this through anthropological perspectives which ask persistently how people themselves locally narrate and act upon their experiences and histories. Through this we will approach some of the really big and yet everyday questions that many of us around the world face: how do we relate to ourselves and to those we define as others; and how do we live through and after profound violence? The seminar will take these larger questions through a global perspective focusing on cases from Rwanda and Burundi, India, Sri Lanka, Northern Ireland, Guatemala, and the countries of Former Yugoslavia among others. These cases cover a broad canvas of issues from questions of historicity, racial purity, cultural holism, and relations to the state, to contests over religious community, indigeneity, minority identities, globalization, gender, and generation.

ANTHRO 30N. Does Science Have Culture?. 3-5 Units.
In this course students will engage with the anthropology of science and medicine to explore the how cultural norms shape scientific understandings. Through a series of diverse global case studies, seminar participants will assess how historical conditions yield political possibilities that inflect discoveries. Lastly, students will probe how cultural understandings of nature, human difference and national esteem influence how scientific facts come to cohere as reflections of the societies in which they emerge.

ANTHRO 31Q. The Big Shift. 4 Units.
Is the middle class shrinking? How do people who live at the extremes of American society- the super rich, the working poor and those who live on the margins, imagine and experience "the good life"? How do we understand phenomena such as gang cultures, addiction and the realignment of white consciousness? This class uses the methods and modes of ethnographic study in an examination of American culture. Ethnographic materials range from an examination of the new American wealth boom of the last 20 years (Richistan by Robert Frank) to the extreme and deadlynworld of the invisible underclass of homeless addicts on the streets of San Francisco (Righteous Dopefiend by Phillipe Bourgois and Jeff Schonberg). The experiences of Hispanic immigrants and the struggle to escape gang life in Los Angeles are highlighted in the story of Homeboy Industries a job creation program initiated by a priest working in LA's most deadly neighborhoods (G-Dog and the Homeboys by Celeste Fremon). Finally in Searching for Whitopia: an improbable journeyninto the heart of White America, Rich Benjamin explores the creation on ethnic enclaves (whitopias) as fear over immigration and the shrinking white majority redefine race consciousnessnin the 21st century. Each of these narratives provides a window into the various ways in which Americans approach the subjects of wealth and the good life, poverty and the underclass, and thenconstruction of class, race, and gender in American society. Students will not be required to have any previous knowledge, just curiosity and an open mind.
Same as: CSRE 30Q

ANTHRO 32. Theories in Race and Ethnicity: A Comparative Perspective. 5 Units.
This undergraduate course employs an anthropological and historical perspective to introduce students to ideas and concepts of race and ethnicity that emerged primarily in Europe and the United States in the eighteenth and nineteenth centuries and that continue to shape contemporary racial attitudes, interactions, and inequalities. Ideas about race and ethnicity forged outside the U.S. and case studies from other nations are presented to broaden students' understanding and to overcome the limitations of an exclusive focus on the U.S. This course is geared to sophomores and juniors who have already taken at least one course on race and ethnicity, anthropology, African American Studies, Asian American Studies, Chicana/o Studies, Jewish Studies or Native American Studies.
Same as: CSRE 32

ANTHRO 34. Animals and Us. 5 Units.
The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts.n This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of `animals as social actors is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognized as a viable mechanism for understanding our cultural and economic past. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.
Same as: ARCHLGY 34

ANTHRO 39. Sense of Place. 3 Units.
This course examines the life of places as shaped by environmental events and projects aimed towards rural or urban development. Drawing methodological insights from anthropology, cultural geography and environmental studies, we examine the forces that generate place problems for humans and nonhumans. Each encounter with place and displacement sets up a particular issue for us to grapple with: How would we address issues created by natural disasters, the seizure of land through legal means that fall under eminent domain or gentrification projects? Through a critical dialogue with interdisciplinary fields that inform the readings, the seminar aims to bring theoretical and methodological insights to inform our practical suggestions for how to address placeness and displaceness at different scales.

ANTHRO 41. Genes and Identity. 4 Units.
In recent decades genes have increasingly become endowed with the cultural power to explain many aspects of human life: physical traits, diseases, behaviors, ancestral histories, and identity. In this course we will explore a deepening societal intrigue with genetic accounts of personal identity and political meaning. Students will engage with varied interdisciplinary sources that range from legal cases to scientific articles, medical ethics guidelines, films, and anthropological works (ethnographies). We will explore several case studies where the use of DNA markers (as proof of heritage, disease risk, or legal standing) has spawned cultural movements that are biosocial in nature. Throughout we will look at how new social movements are organized around gene-based definitions of personhood, health, and legal truth. Several examples include political analyses of citizenship and belonging. On this count we will discuss issues of African ancestry testing as evidence in slavery reparations cases, revisit debates on whether Black Freedman should be allowed into the Cherokee and Seminole Nations, and hear arguments on whether people with genetic links to Jewish groups should have a right of return to Israel. We will also examine the ways genetic knowledge may shape different health politics at the individual and societal level. On this count we will do close readings of how personal genomics testing companies operate, we will investigate how health disparities funding as well as orphan disease research take on new valences when re-framed in genetic terms, and we will see how new articulations of global health priorities are emerging through genetic research in places like Africa. Finally we will explore social implications of forensic uses of DNA. Here we will examine civil liberties concerns about genetic familial searching in forensic databases that disproportionately target specific minority groups as criminal suspects, and inquire into the use of DNA to generate digital mugshots of suspects that re-introduce genetic concepts of race.
Same as: AFRICAAM 41, CSRE 41A

ANTHRO 42. Megacities. 5 Units.
In this course we will examine the meaning, processes, and challenges of urbanization. Through a series of targeted readings across history and geography and through the study of varied means of representation (anthropology, literature, cartography, film, etc), the class will analyze the ways in which urban forms have come into being and created, met, and/or ignored challenges such as disease, water, transport, religious and class conflict, colonialism, labor, and trade. Students will read anthropology in conjunction with other disciplines (literature, urban planning, public health, architecture, and economics) to learn the ways in which ethnographies of immigration, urban poverty, class disparity, economic development and indicators, noise, and transportation substantively augment our understandings of how people live within globalization.
Same as: ARTHIST 242B, LIFE 142, URBANST 142

ANTHRO 60N. Digging for Answers: 5 Big Questions of Our Time. 3-5 Units.
The aim in this course is to explore the archaeological evidence for long-term change with regard to 5 major questions of our time: Where do we come from? Has inequality increased? Have we become more violent? Why do we have so much stuff? What is the relationship between humans and climate change? You will be introduced to recent publications for class debate, and will also be introduced to the ways in which archaeologists use evidence in order to explore the 5 themes. We will go to Stanford¿s archaeological collections so that you can have hands-on experience of artifacts and will be able to problem solve using data from the instructor¿s own excavations. We will also visit labs (archaeological and genomic for example), local museums and local archaeological excavations.
Same as: ARCHLGY 60N

ANTHRO 78A. Disruption and Diffusion: The Archaeology of Innovation. 3-5 Units.
This undergraduate seminar uses engagement with canonical archaeological topics and questions about the emergence of civilization to introduce students to critical perspectives on the nature of novelty, progress, and modernity. The first weeks of the course will be spent learning about archaeological hypotheses and debates on early human innovation (e.g. urban development, agriculture). Later weeks will focus on developing a robust theoretical framework through which to better understand and interrogate claims about the origin of innovation.
Same as: ARCHLGY 78

ANTHRO 80A. Heritage and Human Rights. 3-5 Units.
What does archaeology have to say about human rights? Is there a right to cultural heritage? How can archaeology and heritage help protect rights¿or encroach upon them? Themes we will address in this course include the archaeological investigation of human rights topics; the right to heritage; conflicts of different rights regimes in heritage contexts; and ethical considerations about rights during research and heritage management. These questions will take us to cases as diverse as forensic investigation of the disappeared in Argentina, the archaeology of homelessness in the U.K., the destruction of heritage as cultural genocide in Bosnia and the Middle East, and the rights of indigenous groups in Australia and the U.S. to control cultural heritage.
Same as: ARCHLGY 80

ANTHRO 82. Medical Anthropology. 5 Units.
Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science.
Same as: ANTHRO 282, HUMBIO 176A

ANTHRO 82P. The Literature of Psychosis. 3-5 Units.
One of the great gifts of literature is its ability to give us insight into the internal worlds of others. This is particularly true of that state clinicians call "psychosis." But psychosis is a complex concept. It can be terrifying and devastating for patients and families, and yet shares characteristics with other, less pathological states, such as mysticism and creativity. How then can we begin to make sense of it? In this course, we will examine the first-hand experience of psychosis. We will approach it from multiple perspectives, including clinical descriptions, works of art, and texts by writers ranging from Shakespeare, to the science fiction writer Philip K. Dick, to patients attempting to describe their experience. This class is not only for students thinking of careers in medicine, psychology or anthropology, but also readers and writers interested exploring extraordinary texts. There are no prerequisites necessary; all that is needed is a love of language and a curiosity about the secrets of other minds.
Same as: HUMBIO 162L, PSYC 82, PSYC 282

ANTHRO 89. Undergraduate Reading Group. 1-5 Unit.
Undergraduate student reading group on a thematic topic of interest.
Sections: All faculty.

ANTHRO 90B. Theory of Cultural and Social Anthropology. 5 Units.
Preference to Anthropology majors. Anthropological interpretations of other societies contain assumptions about Western societies. How underlying assumptions and implicit categories have influenced the presentation of data in major anthropological monographs. Emphasis is on Karl Marx, Emile Durkheim, Max Weber, and anthropological analyses of non-Western societies. Priority given to ANTHRO majors.

ANTHRO 91. Method and Evidence in Anthropology. 5 Units.
This course provides a broad introduction to various ways of designing anthropological questions and associated methods for collecting evidence and supporting arguments. We review the inherent links between how a question is framed, the types of evidence that can address the question, and way that data are collected. Research activities such as interviewing, participant observation, quantitative observation, archival investigation, ecological survey, linguistic methodology, tracking extended cases, and demographic methods are reviewed. Various faculty and specialists will be brought in to discuss how they use different types of evidence and methods for supporting arguments in anthropology.

ANTHRO 91A. Archaeological Methods. 5 Units.
Methodological issues related to the investigation of archaeological sites and objects. Aims and techniques of archaeologists including: location and excavation of sites; dating of places and objects; analysis of artifacts and technology and the study of ancient people, plants, and animals. How these methods are employed to answer the discipline's larger research questions.
Same as: ARCHLGY 102

ANTHRO 92A. Undergraduate Research Proposal Writing Workshop. 2-3 Units.
Practicum. Students develop independent research projects and write research proposals. How to formulate a research question; how to integrate theory and field site; and step-by-step proposal writing.

ANTHRO 92B. Undergraduate Research Proposal Writing Workshop. 2-3 Units.
Practicum. Students develop independent research projects and write research proposals. How to formulate a research question; how to integrate theory and field site; and step-by-step proposal writing.

ANTHRO 93. Prefield Research Seminar. 5 Units.
For Anthropology majors only; non-majors register for 93B. Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnohistory, and the use of documentary materials. Strategies of successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Prerequisites: two ANTHRO courses or consent of instructor.

ANTHRO 93B. Prefield Research Seminar: Non-Majors. 5 Units.
Preparation for anthropological field research in other societies and the U.S. Data collection techniques include participant observation, interviewing, surveys, sampling procedures, life histories, ethnohistory, and the use of documentary materials. Strategies for successful entry into the community, research ethics, interpersonal dynamics, and the reflexive aspects of fieldwork. Service Learning Course (certified by Haas Center).

ANTHRO 94. Postfield Research Seminar. 5 Units.
Goal is to produce an ethnographic report based on original field research gathered during summer fieldwork, emphasizing writing and revising as steps in analysis and composition. Students critique classmates' work and revise their own writing in light of others' comments. Ethical issues in fieldwork and ethnographic writing, setting research write-up concerns within broader contexts.

ANTHRO 95. Research in Anthropology. 1-10 Unit.
Independent research conducted under faculty supervision, normally taken junior or senior year in pursuit of a senior paper or an honors project. May be repeated for credit.

ANTHRO 95B. Independent Study for Honors or Senior Paper Writing. 1-5 Unit.
Required of Anthropology honors or senior paper candidates. Taken in the final quarter before handing in the final draft of the Honors or Senior Paper and graduating. This independent study supports work on the honors and senior papers for students with an approved honors or senior paper application in Anthropology. Prerequisite: consent of Anthropology faculty advisor.nnTerms: Aut, Win, Spr, Sum Units: 1-5nn(not repeatable for credit).

ANTHRO 96. Directed Individual Study. 1-10 Unit.
Prerequisite: consent of instructor.

ANTHRO 97. Internship in Anthropology. 1-10 Unit.
Opportunity for students to pursue their specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency. May be repeated for credit. Service Learning Course (certified by Haas Center).

ANTHRO 98C. Digital Methods in Anthropology. 3-5 Units.
The course provides an introduction to a broad range of digital tools and techniques for anthropological research. It is geared towards those interested in exploring such methodologies for their research and wanting to add hands-on experience with state-of-the-art digital tools to their skill set. Students will learn to work with some of the most common tools used to collect and manage digital data, and to perform various types of analysis and visualization.nUndergraduate students register for 3-5 Units, Graduate students can register for 3-5 units.
Same as: ANTHRO 298C

ANTHRO 100D. Chavin de Huantar Research |Seminar. 3-5 Units.
Archaeological analytical techniques appropriate for data recovered during archaeological fieldwork in Chavin de Huantar, Peru. Open to all interested students; fieldwork participants are expected to take the course. Students work on data from the previous field season to produce synthetic written reports, focusing on specific methodological issues.
Same as: ARCHLGY 100D

ANTHRO 101A. Archaeology as a Profession. 5 Units.
Academic, contract, government, field, laboratory, museum, and heritage aspects of the profession.
Same as: ARCHLGY 107A

ANTHRO 101S. Introduction to Cultural and Social Anthropology. 3-5 Units.
This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.
Same as: ANTHRO 1S

ANTHRO 103. The Archaeology of Climate. 3 Units.
This course reviews the long-term relationships between human societies and Earth's climatic systems. It provides a critical review of how archaeologists have approached climate change through various case studies and historical paradigms (e.g., societal `collapse,¿ resilience, historical ecology) and also addresses feedbacks between past human land use and global climate change, including current debates about the onset of the Anthropocene.
Same as: ARCHLGY 106

ANTHRO 106. Incas and their Ancestors: Peruvian Archaeology. 3-5 Units.
The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred.
Same as: ANTHRO 206A, ARCHLGY 102B

ANTHRO 107. Black Political Struggle Across the Americas. 3-5 Units.
This course orients students to the intersections between Anthropology and Black Studies through a survey of select ethnographic, historical, literary, and cinematographic materials based on Black political mobilizations across Latin America and the Caribbean. Organized by themes, the course pairs anthropological scholarship on Black political mobilizations against racialized violence and dispossession with critical Black Studies theoretical texts this scholarship is in conversation with. These pairings center what contemporary Black political struggle across the Americas teaches us about Black suffering, police terror, the problems of neoliberal multiculturalism, and the potential of transnational connections. Through case studies from Jamaica, Puerto Rico, Dominican Republic, Nicaragua, Colombia, and Brazil, we ask: How have understanding the conditions of life of Black communities in the Americas contributed to and/or challenged broader theorizations of the State, violence, rights, and recognition? How do contemporary mobilizations and political imaginations of Black communities push the modern nation-state into crisis through demands for Black life? And how do these struggles theorize the time and space of the conditions of Black life through transnational politics?.
Same as: AFRICAAM 137

ANTHRO 108B. Gender in the Arab and Middle Eastern City. 5 Units.
What are the components of gendered experience in the city, and how are these shaped by history and culture? How do meanings attributed to Islam and the Middle East obscure the specificity of women¿s and men¿s lives in Muslim-majority cities? This course explores gender norms and gendered experience in the major cities of Arab-majority countries, Iran and Turkey. Assigned historical and sociological readings contextualize feminism in these countries. Established and recent anthropological publications address modernity, mobility, reproduction, consumption, and social movements within urban contexts. Students will engage with some of the key figures shaping debates about gender, class, and Islam in countries of the region typically referenced as North Africa and the Middle East (MENA). They will also evaluate regional media addressing concerns about gender in light of the historical content of the course and related political concepts.
Same as: FEMGEN 108B, URBANST 108B

ANTHRO 109A. Archaeology of the Modern World. 3-5 Units.
Historical archaeology, also called the archaeology of the modern world, investigates the material culture and spatial history of the past five centures. As a discipline, historical archaeology has been characterized by (1) a methodological conjunction between history and archaeology; (2) a topical focus on the ¿three Cs¿: colonization, captivity, and capitalism ¿ forces which arguably are constitutive of the modern world; and (3) an epistemological priority to recovering the perspectives of ¿people without history.¿ Each of these three trends is widely debated yet they continue to profoundly shape the field. This seminar provides an in-depth examination of the emergence and development of this historical archaeology, with a focus on current issues in theory and method. For undergraduates, the prerequisite is Anthro 3 or consent of instructor.
Same as: ANTHRO 209A, ARCHLGY 109A

ANTHRO 110. Environmental Archaeology. 5 Units.
This course investigates the field of environmental archaeology. Its goals are twofold: 1) to critically consider the intellectual histories of environmental archaeology, and, 2) to survey the various techniques and methods by which archaeologists assess historical environmental conditions through material proxies. The course will include lab activities.
Same as: ANTHRO 210, ARCHLGY 110

ANTHRO 110B. Examining Ethnographies. 5 Units.
Eight or nine important ethnographies, including their construction, their impact, and their faults and virtues.
Same as: ANTHRO 210B

ANTHRO 111. Archaeology of Gender and Sexuality. 5 Units.
How archaeologists study sex, sexuality, and gender through the material remains left behind by past cultures and communities. Theoretical and methodological issues; case studies from prehistoric and historic archaeology.
Same as: ARCHLGY 129, FEMGEN 119

ANTHRO 111C. Muwekma: Landscape Archaeology and the Narratives of California Natives. 3-5 Units.
This course explores the unique history of San Francisco Bay Area tribes with particular attention to Muwekma Ohlone- the descendent community associated with the landscape surrounding and including Stanford University. The story of Muwekma provides a window into the history of California Indians from prehistory to Spanish exploration and colonization, the role of Missionaries and the controversial legacy of Junipero Serra, Indigenous rebellions throughout California, citizenship and land title during the 19th century, the historical role of anthropology and archaeology in shaping policy and recognition of Muwekma, and the fight for acknowledgement of Muwekma as a federally recognized tribe. We will visit local sites associated with this history and participate in field surveys of the landscape of Muwekma.
Same as: ARCHLGY 111B, NATIVEAM 111B

ANTHRO 112A. Archaeology of Human Rights. 5 Units.
This introductory seminar provides a critical vantage point about human rights discourse from an archaeological perspective. The seminar is organized around four main questions: (1) Is cultural heritage a human right? (2) What are archaeologists learning about how the material and temporal dimensions of power and resistance? (3) How is archaeological evidence being used in investigations of human rights violations? (4) Can research about the past shape the politics of the present? Topics to be discussed include archaeological research on mass internment, colonialism, enslavement and coerced labor, ethnic cleansing, homelessness, gender discrimination, indigenous rights, and environmental justice.
Same as: URBANST 147

ANTHRO 113. Culture and Epigenetics: Towards A Non-Darwinian Synthesis. 4-5 Units.
The course examines the impact of new research in epigenetics on our understanding of long-term cultural change. The course examines the various attempts that have been made over recent decades to find a synthesis between cultural and biological evolution. These approaches, often termed neo-Darwinian, include memes, dual inheritance theory, theories of cultural selection and transmission, niche construction theory and macro-evolutionary approaches. Research in all these areas will be examined, with particular reference to explanations for the origins of agriculture, but also including other transformations, and critiqued. New research in epigenetics offers an alternative non-Darwinian evolutionary perspective that avoids many of the problems and pitfalls in the neo-Darwinian approaches. Cultural evolution comes to be viewed as cumulative, directional and Lamarckian, since heritable epigenetic variation can underlie evolutionary change. Epigenetics opens the way for human cultural entanglements to become the drivers for evolutionary change, thus allowing the full range of social processes studied in the social and cultural sciences to take their place in the study and analysis of long-term change.
Same as: ANTHRO 213, ARCHLGY 113

ANTHRO 114. Rights and Ethics in Heritage. 5 Units.
Heritage is a human thing: made by people and mobilized for their own purposes, it has a range of effects on communities. This course focuses on the human dimension of heritage with special attention to questions of rights and ethics. Where can we locate the intersections of heritage and rights? How do communities and governing structures negotiate control over and participation in heritage, and with what impacts on people? Which ethical challenges arise and how have archaeologists, heritage managers, museums, legislators, community leaders, and others approached these issues?nnThe first half of this seminar course focuses on the theoretical and contextual basis for these discussions. We will address topics such as cultural ownership and participation as well as the global and governing contexts within which heritage is mobilized. Building on this, the second half examines cases in which different rights, needs, and goals come into conflict: museum practice, public memory, upheaval stemming from violence or disaster, and the ethics of the material world itself. Throughout, we will highlight heritage in relation to communities, rights, and responsibilities, all while thinking through ethical modes of heritage research and practice.
Same as: ANTHRO 214, ARCHLGY 114

ANTHRO 115. The Social life of Human Bones. 3-5 Units.
Skeletal remains serve a primary function of support and protection for the human body. However, beyond this, they have played a range of social roles once an individual is deceased. The processes associated with excarnation, interment, exhumation and reburial all speak to the place that the body, and its parts, play in our cultural as well as physical landscape.n This course builds on introductory courses in human skeletal anatomy by adding the social dynamics that govern the way humans treat other humans once they have died. It draws on anthropological, biological and archaeological research, with case studies spanning a broad chronological and spatial framework to provide students with an overview of social practice as it relates to the human body.
Same as: ANTHRO 215, ARCHLGY 115

ANTHRO 116. Data Analysis for Quantitative Research. 5 Units.
An introduction to numeric methods in Anthropology and related fields employing the Data Desk statistics package to test hypotheses and to explore data. Examples chosen from the instructor's research and other relevant projects. No statistical background is necessary, but a working knowledge of algebra is important. Topics covered include: Frequency Distributions; Measures of Central Tendency, Dispersion, and Variability; Probability and Probability Distributions; Statistical Inference, Comparisons of Sample Means and Standard Deviations; Analysis of Variance; Contingency Tables, Comparisons of Frequencies; Correlation and Regression; Principal Components Analysis; Discriminant Analysis; and Cluster Analysis. Grading based on take-home problem sets.
Same as: ANTHRO 216

ANTHRO 116B. Anthropology of the Environment. 5 Units.
This seminar interrogates the history of anthropology's approach to the environment, beginning with early functionalist, structuralist, and Marxist accounts of human-environment relationships. It builds towards more recent developments in the field, focusing on nonhuman and relational ontologies as well as current projects on the intersections of nature, capital, politics, and landscape histories. At the end of this class, students will be familiar with the intellectual histories of environmental anthropology and contemporary debates and tensions around questions of ethics, agency, environment, and historical causality.
Same as: ANTHRO 216B

ANTHRO 117C. Global Heritage: Conflict, Reconciliation, and Diplomacy. 3-5 Units.
Archaeological studies from the 1990s framed cultural heritage as a resource that created attachments to place and to the past as a means to buttress national and cultural identities. But heritage can no longer be viewed as simply a marker of a singular, national identity. As a global era ushers in new regimes of heritage management, heritage becomes embroiled in a multitude of interactions whether acting as a fulcrum of transnational governance or functioning at the crux of community empowered utilizations and initiatives.nnThis course will trace what happens to heritage as it has been drawn into a world of global interactions while also maintaining more local forms of attachment. The class will address three themes (conflict, reconciliation, and diplomacy), all of which result from the multi-scalar relations that emerge from heritage financing, management, and preservation in a transnational arena. While the class will discuss cases that include both tangible and intangible heritage, the focus of the course will center around tangible elements of the past, including heritage sites and archaeological artifacts. Combining readings from the field of international relations, archaeology, and heritage studies, the class will question if and how heritage can be used in local settings while also producing international exchanges.
Same as: ARCHLGY 105

ANTHRO 118C. Heritage Development in the Global South. 3-5 Units.
Heritage is a site of both promise and contestation in the Global South. These nations use it for a wide range of purposes: Peru¿s thriving tourism sector rests on a basis of heritage attractions, South Africa negotiates a post-apartheid identity through heritage, and India places increasing numbers of sites on the World Heritage List. Outlining different modes of heritage production and interpretation, this class investigates heritage regimes on scales ranging from local communities and national governance to international recognition. We will examine the role of heritage in building communities and identity; the place of heritage within economic development; the efforts of Global South countries to negotiate the legacies of colonialism and global inequality through managing their pasts; and the deployment of heritage as part of international power struggles within worldwide structures like UNESCO. Drawing on anthropology, heritage studies, and archaeology, students will gain a deeper understanding of how heritage is used by Global South countries to produce identity, support development, domesticate the past, and build the future.
Same as: ARCHLGY 116

ANTHRO 119. Zooarchaeology: An Introduction to Faunal Remains. 5 Units.
As regularly noted, whether historic or pre-historic, animal bones are often the most commonly occurring artefacts on archaeological sites. As bioarchaeological samples, they offer the archaeologist an insight into food culture, provisioning, trade and the social aspects of human-animal interactions. The course will be taught through both practical and lecture sessions: the `hands-on¿ component is an essential complement to the lectures. The lectures will offer grounding in the main methodological approaches developed, as well as provide case-studies to illustrate where and how the methods have been applied. The practical session will walk students through the skeletal anatomy of a range of species. It will guide students on the identification of different parts of the animal, how to age / sex individuals, as well as recognize taphonomic indicators and what these mean to reconstructing post-depositional modifications.
Same as: ANTHRO 219, ARCHLGY 119

ANTHRO 119B. Tech Ethics and Ethnography: the human in human-computer interaction. 3-5 Units.
Do machines have culture? How do engineers write themselves into their products? Can we better anticipate the unexpected and unwanted consequences of technologies?nnTaking as its point of departure the discipline of Human-Computer Interaction (HCI), which examines the design and use of computer technology, this course shifts the focus to the humans creating and utilizing the technology. It invites us to think about computer science and social science together and learn how ethnographic methods can be utilized for ethical thinking and design in technology. This course will combine rigorous theoretical thinking with hands-on in-the-field research. Students will devise and engage in their own ethnographic research projects. This course will be of interest to students from a wide range of disciplines, including: computer science, engineering, medicine, anthropology, sociology, and the humanities. Our aim is to have a truly interdisciplinary and open-ended discussion about one of the most pressing social issues of our time, while giving students skills-based training in qualitative methods.

ANTHRO 120. Bioethics and Ancient DNA. 3-5 Units.
The first ancient human genome was sequenced just 10 years ago. From a single genome in 2010 to what has been hailed as a `scientific revolution¿ today, the field of paleogenomics has expanded rapidly. 10 years on we will explore how the field is grappling with emerging issues related to ethical and responsible research, including sampling practices, collaborative community partnerships, and accessibility of research findings to the broader public. How have researchers successfully leveraged multiple voices, perspectives, and priorities engaged with ancient DNA to explore the human past? What are the possibilities of engagement beyond the practical and project-based level? How do these new alliances formed around paleogenomics inform the ethics of sampling, participation, and interpretation? In this course, we will thoughtfully and critically engage with aDNA research in the present to envision possible futures for the field.
Same as: ANTHRO 220, ARCHLGY 120A

ANTHRO 121B. Vital Infrastructures: The Foundations of Modern Life. 5 Units.
Infrastructure describes the material grids that exist beneath society, economy and culture: the foundation upon which everyday life rests and depends. While meant to remain invisible, out of sight and out of mind, diverse infrastructures have become lightning rods for political protest and demands for justice, rights, and a good life. From anti-dam activism in India, to campaigns for clean drinking water in South Africa, to transportation networks in urban Bolivia, and to the energy networks of the United States, infrastructure reveals the connections and disconnections of the globalized world. Taking an anthropological perspective, this course asks: why has infrastructure taken on vital importance to the modern nation-state? What do infrastructural histories reveal about the vital political ideals like freedom, development, equality, and nature? When does infrastructure take on a life of its own, undermining even the best laid plans? What happens when infrastructures fail? Through multi-disciplinary readings and exploratory assignments, this course challenges students see the world beneath their feet in new ways and to trace the material connections that define and sustain modern life itself.

ANTHRO 123B. Government of Water and Crisis: Corporations, States and the Environment. 3-5 Units.
As the Flint, Michigan water situation began to attract attention and condemnation, Michigan State Representative, Sheldon Neeley, describing the 200 troops on the ground and the Red Cross distributing water bottles, said that the Governor had ¿turned an American city into a Third World country [¿] it¿s terrible what he¿s done [¿] no fresh water. ¿ Then at the first Congressional hearing, the Chairman of the House Oversight & Government Reform Committee, Jason Chaffetz, said, ¿This is the United States of America ¿ this isn't supposed to happen here. We are not some Third World country.¿nnWhat is a `third world problem¿? And is the `water problem¿ the same across the world? This course examines how water is governed in a time that is increasingly seen as one of crisis. We will examine how crises are imagined, constructed, sought to be averted, and the governance regimes they give rise to. And how does water, whether as natural resource, public good, a human right, or commodity, determine the contours of such regimes? We will focus mostly on ethnographies, but also examine texts produced by government bodies and aid and environmental organizations, as well as case law. The course will show what anthropology can contribute to the conversation on state and corporate bureaucracies, and their relation with water.

ANTHRO 123C. "Third World Problems?" Environmental Anthropology and the Intersectionality of Justice. 3-4 Units.
As the Flint, Michigan water situation began to attract attention and condemnation, Michigan State Representative, Sheldon Neeley, describing the troops on the ground and the Red Cross distributing water bottles, said that the Governor had "turned an American city into a Third World country [...] it's terrible what he's done [...] no fresh water. Then, at a Congressional hearing, the Chairman of the House Oversight & Government Reform Committee said, "This is the United States of America - this isn't supposed to happen here. We are not some Third World country."nWhat is a "third world problem?" This introductory environmental anthropology course examines how such imaginaries materialize in development programmes and literature, and bespeak charged geopolitical and racial histories; and invites reflection on what futures for working in common they enable/constrain. We will examine how crises are imagined and constructed, and the governance regimes they give rise to. How does water - as natural resource, public good, human right, need, or commodity - determine the contours of such regimes? We will also study chronic, quieter environmental problems and the responses they (do not) generate. Working through a variety of writing genres - ethnographies, policy literature, and legal and corporate publicity material - will enable students to appreciate what anthropology can contribute to the conversation on environmental justice, and state and corporate bureaucracies and their mandates. The course draws on examples from a wide range of settings. The course is offered as an introduction to environmental anthropology and takes students through key themes - infrastructure, race, class, privatization, justice, violence - by focusing on water. It requires no background in anthropology.
Same as: CSRE 123C

ANTHRO 126. Urban Culture in Global Perspective. 5 Units.
Core course for Urban Studies majors. A majority of the world's population now live in urban areas and most of the rapid urbanization has taken place in mega-cities outside the Western world. This course explores urban cultures, identities, spatial practices and forms of urban power and imagination in Asia, Africa and Latin America.nParticipants will be introduced to a global history of urban development that demonstrates how the legacies of colonialism, modernization theory and global race thinking have shaped urban designs and urban life in most of the world. Students will also be introduced to interpretative and qualitative approaches to urban life that affords an understanding of important, if unquantifiable, vectors of urban life: stereotypes, fear, identity formations, utopia, social segregation and aspirations.
Same as: URBANST 114

ANTHRO 127C. Anthropology of Sport and the Body. 3-5 Units.
What is sport? Fun? Big money? A tool for freedom... or control? nnThis course will use the work of anthropology and critical studies to probe what exactly sport is, and how it shapes the body. We will begin by looking at various ways in which social theorists have proposed studying sport, and then use these theoretical frameworks to examine contemporary sport, from individual practice to global spectacle. We will probe the social nature of sport- how it molds bodies, makes players, enraptures audiences. We will ask questions like: Is sport good? What do the Olympics Games aim to achieve? Should NCAA players be paid? In doing so we will examine the underlying social and political assumptions that undergird what we have come to think of as sport today.nnAs we think through how contemporary theorists of our time have theorized sport, we too will use their tools to form our own analyses of sport as a social and political powerhouse.nnWe will look also at how sport has historically been used as a technique of both control and resistance across the world. We will read several anthropologists' work on sport across a variety of cultures, particularly as it relates to nineteenth century European colonialism.nnWe will conclude the course with a sustained discussion of the Olympic Games, using the tools we have studied to think through this massive spectacle of global import.nnThis course is ideally suited for anyone interested in how sport can be examined as a form of culture and social exchange and, more broadly, how theory can be used to break open contemporary culture.

ANTHRO 127D. HERITAGE POLITICS. 3-5 Units.
Heritage is a matter of the heart and not the brain, David Lowenthal once said. It does not seek to explore the past, but to domesticate it and enlist it for present causes. From the drafting of the first royal decrees on ancient monuments in the 17th century, political interests have had a hand in deciding which traditions, monuments and sites best represent and best serve the needs of the nation. The sum of these domestication efforts, the laws, institutions and practices established to protect and manage heritage, is what we call heritage governance. In this seminar you will learn about the politics of 21st century heritage governance at national and international level. Students will become familiar with key conventions and learn about the functioning of heritage institutions. We will also examine the hidden practices and current political developments that impact heritage governance: how UNESCO heritage sites become bargaining tools in international relations, how EU heritage policies are negotiated in the corridors of Brussels, and how the current re-nationalization of Western politics can affect what we come to know as our common past.
Same as: ARCHLGY 127, ARCHLGY 227

ANTHRO 128. Visual Studies. 5 Units.
Drawing on anthropology, art history, cultural studies, and other fields, this course explores how and why one might want to think critically about the politics of visuality, social imagination, the politics of making and consuming images and things, iconophonia and iconophilia, the classification of people and things into ¿artists¿ and ¿art¿, and cultural production more generally.

ANTHRO 129C. A Deep Dive Into the Indian Ocean: From Prehistory to the Modern Day. 5 Units.
The Indian Ocean has formed an enduring connection between three continents, countless small islands and a multitude of cultural and ethnic groups and has become the focus of increasing interest in this geographically vast and culturally diverse region. This course explores a range of topics and issues, from the nature and dynamics of colonization and cultural development as a way of understanding the human experience in this part of the world, to topics such as religion, disease, and heritage The course guides studies in the many ways in which research in the Indian Ocean has a direct impact on our ability to compare developments in the Atlantic and Pacific.
Same as: ANTHRO 229C

ANTHRO 130D. Spatial Approaches to Social Science. 5 Units.
This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.
Same as: ANTHRO 230D, POLISCI 241S, URBANST 124

ANTHRO 131A. The Use and Abuse of Prehistory. 3-5 Units.
To borrow Glyn Daniel¿s phrase, the ¿Idea of Prehistory,¿ invokes notions of deep time, human origins, and mysterious monuments. While the origins of prehistoric research in the 19th century were connected to the emerging sciences of geology, evolution, and archaeology, they were just as intertwined with nation-state building, colonialism, and race science. This course examines the development of prehistory through a thematic and critical lens. How have Western conceptualizations of time and writing affected the definition and study of prehistory? What are some of the colonial legacies in both research agendas and museum collections? Do new methods always provide new answers? What role has gender played in prehistoric interpretation? Drawing from case studies in the Mediterranean, the Americas, Europe, and Africa, we will explore various archaeological approaches to prehistory from the late 19th century to the present, as well as how the idea of prehistory itself has evolved, expanded, or been abandoned altogether.
Same as: ARCHLGY 131, CLASSICS 138

ANTHRO 132. Religion and Politics in the Muslim World. 5 Units.
This course provides an ethnographic examination of religion and politics in the Muslim world. What is the role of Islam in the political life of modern Muslim societies? Conversely, how do modern political powers shape and constrain the terms of religious life? This course takes an anthropological perspective on the study of Islam: our investigations will not focus on the origins of scriptures and doctrines but rather on the use of religious texts and signs in social context and on the political significance of ritual and bodily practices. A major aim of the course is provide students with analytical resources for thinking critically about the history and politics of modern Muslim societies, with a particular focus on issues of religious authority, gender and sexuality, and the politics of secularism.

ANTHRO 132C. Technology and Inequality. 4-5 Units.
In this advanced interdisciplinary seminar we will examine the ways that technologies aimed to make human lives better (healthier, freer, more connected, and informed) often also harbor the potential to exacerbate social inequalities. Drawing from readings in the social sciences on power and ethics, we will pay special attention to issues of wealth, race, ethnicity, sex, gender, globalization and humanitarianism.
Same as: CSRE 132C

ANTHRO 132D. Thinking Technology: Anthropological Perspectives. 3 Units.
What role does technology play in society, and vice-versa? This course considers the question from an anthropological perspective, pairing different conceptual models of social-technical relations (Social Constructivism, Actor-Network Theory, Cyborg Anthropology) with real world examples. Through such technologies as factory machines, trains, Bakelite, slot machines, computers, missiles, and PET scanners, students will gain insights both on how the social suffuses the mundane objects around us, and how technologies have radically redefined how we see the world.

ANTHRO 133. Masculinity: Technologies and Cultures of Gender. 4 Units.
What is masculinity? How are masculinities invested with power and meaning in cultural contexts? How is anthropological attention to them informed by and extending inquiry across the academy in spheres such as culture studies, political theory, gender studies, history, and science and technology studies? Limited enrollment.
Same as: ANTHRO 233, FEMGEN 133M

ANTHRO 134A. Whose Ghost in the Machine? Cultures, Politics and Morals of Artificial Intelligence. 3 Units.
This course seeks to divert attention away from bleak fantasies of an impending AI apocalypse that would be unleashed by ¿the blind and irresponsible advent of oppressively dehumanizing technology¿ and instead highlight the oppressive ¿human¿ elements that structure how AI is imagined, researched, designed, produced and utilized. The aim of the course is to analyze how culture at large influences the development of AI and how, or to what extent, AI reproduces political and moral structures of human societies.nnWhat makes us, and even Silicon Valley tycoons, become afraid of science-fictional fantasies of nonhuman villains to wipe the human race, while we easily shrug off rampant racism or sexism that is reproduced and reinforced by ¿algorithms of oppression¿? What kind of political and cultural elements influence the mostly invisible political economy of how AI, machine learning and deep learning is designed, produced and utilized as a commodity by some of the most powerful corporations in contemporary global economy? In short, how does human culture at large configure within the scientific and technological research into and development of non-human intelligence?nnAnthropology has a long history of researching about human-technology interaction and often joins forces with History of Science and Science and Technology Studies. In that spirit, we will cover a wide array of literature on the historical development of academic research on cognitive science, philosophy of mind, consciousness, machine learning, deep learning, cybernetics and robotics. However, the primary aim of the course is to offer a meta-perspective on the ¿cultural aspects¿ of how these topics have been studied and practiced by entrepreneurs, research scientists, engineers, philosophers and futurists, and not the disciplinary knowledge generated by research on these topics.nnApart from ethnographic and historic researches about how AI is studied and produced, we will utilize works by theoretical cultural critics, historians and philosophers, like Bruno Latour, Donna Haraway, Michel Foucault, as well as Gilbert Ryle, Daniel Dennett and David Chalmers. Furthermore, we will heavily rely on cultural images, fantasies and narratives about artificial intelligence in literature, arts and cinema. To that effect, we will watch a wide array of movies and will interactively analyze these cultural works in class, asking to what extent they represent actual research into and development of AI.

ANTHRO 135B. Waste Politics: Contesting Toxicity, Value, and Power. 3 Units.
Waste is increasingly central as an object and medium of political contestation in the contemporary world, from struggles over garbage, labor, and dignity in Senegal; to explosive remnants of war acting as rogue infrastructure in the Korean demilitarized zone. In response, waste has also become a productive concept in the environmental humanities and humanistic social sciences. In this course we will read a selection of foundational texts focused on waste, many of which draw on case studies from different parts of the world. The case of China will be emphasized, however, since China has emerged in the last few decades as a center not only of global industrial production, but also for processing the world¿s waste, contesting pollution, and fighting for environmental justice. By pairing key theoretical texts with texts dealing with waste-related issues in China and elsewhere, we will ultimately ask how contemporary global waste politics disrupts western understandings of waste, recycling, value, and more.
Same as: ANTHRO 235B, EARTHSYS 135B

ANTHRO 135C. Moving Worlds: Anthropology of Mobility and Travel. 5 Units.
This course looks at human mobility from an anthropological perspective. We will read texts that ethnographically explore the experiences of refugees, labor migrants, tourists and seafarers, among others. In particular, we will look at the intersection of physical mobility and social mobility, as people often move in order to improve their life, to increase safety or economic security, or to gain social capital. However, the mobility perspective has also been criticized for depoliticizing and celebrating movement without critical attention to its socio-political and economic context. While mobility as a term points to the ability to move, human migration is at least as often characterized by restrictions and obstacles to movement, such as borders. We will think critically about the deep inequalities that exist in terms of why and how people move, and who are able to mobilize resources to move.

ANTHRO 136B. White Identity Politics. 3-5 Units.
Pundits proclaim that the 2016 Presidential election marks the rise of white identity politics in the United States. Drawing from the field of whiteness studies and from contemporary writings that push whiteness studies in new directions, this upper-level seminar asks, does white identity politics exist? How is a concept like white identity to be understood in relation to white nationalism, white supremacy, white privilege, and whiteness? We will survey the field of whiteness studies, scholarship on the intersection of race, class, and geography, and writings on whiteness in the United States by contemporary public thinkers, to critically interrogate the terms used to describe whiteness and white identities. Students will consider the perils and possibilities of different political practices, including abolishing whiteness or coming to terms with white identity. What is the future of whiteness? n*Enrolled students will be contacted regarding the location of the course.
Same as: AFRICAAM 136B, CSRE 136

ANTHRO 137. The Politics of Humanitarianism. 5 Units.
What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issue generis a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical or political stakes or that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the ¿cause of humanity¿. In the early years of humanitarian intervention, political neutrality was a key principle; it has now come under ever greater analytical and political scrutiny. We will examine the reasons for the politicization and militarization of aid -- be it humanitarian aid in natural disasters or political crises; development programs in the impoverished south (¿the Third World¿), or peace-keeping. We will end with a critical exploration of the concept of human rights, humanity, and personhood. The overall methodological aim of the course is to demonstrate what insights an ethnographic approach to the politics, ethics, and aesthetics of humanitarianism can offer.
Same as: ANTHRO 237

ANTHRO 137A. Traditional Medicine in the Modern World. 3 Units.
This class considers "traditional medicine" in contemporary times. We will survey major systems of traditional medicine while considering their broader social, cultural, and political contexts. The class will study the symbolic uses of traditional medicine, the role of traditional medicines in early modern medical knowledge, the place of indigenous knowledge in bioprospecting, health-seeking behavior and medical pluralism, and the WHO's approach to traditional medicine and how it has affected government health policies. The class emphasizes a critical approach to the concepts of tradition and modernity, and an understanding of traditional medicine as a changing, flexible, and globalized category of healing.

ANTHRO 137D. Political Exhumations. Killing Sites Research in Comparative Perspective. 3-5 Units.
The course discusses the politics and practices of exhumation of individual and mass graves. The problem of exhumations will be considered as a distinct socio-political phenomenon characteristic of contemporary times and related to transitional justice. The course will offer analysis of case studies of political exhumations of victims of the Dirty War in Argentina, ethnic cleansing in former Yugoslavia, the Holocaust, communist violence in Poland, the Rwandan genocide, and the Spanish Civil War. The course will make use of new interpretations of genocide studies, research of mass graves, such as environmental and forensic approaches.
Same as: ARCHLGY 137, ARCHLGY 237, DLCL 237, REES 237

ANTHRO 138. Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise. 5 Units.
This course will explore historical as well as current market transformations of medical ethics in different global contexts. We will examine various aspects of the research enterprise, its knowledge-generating and life-saving goals, as well as the societal, cultural, and political influences that make medical research a site of brokering in need of oversight and emergent ethics.nThis seminar will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state, the media, and certain publics in shaping scientific research agendas. We will also examine how structural violence, poverty, global standing, and issues of citizenship also influence issues of consent and just science and medicine.
Same as: ANTHRO 238, CSRE 138

ANTHRO 139C. Anthropology of Global Health. 5 Units.
Global health has been the contested realm of theoretical debates and praxis in medical anthropology. Rationalities behind global health projects reflected the predominant mode of envisioning health in specific historical moments.nn· In this course, we will first assess the ways in which memories, materiality and institutions of the colonial past persist in the field of global health in Africa.nn· Secondly, we will explore how early medical anthropologists participated in international health projects in order to facilitate implementation of the Western biomedicine in developing countries by investigating cultural barriers under the post-war regime of international development in the efforts of controlling malaria and HIV/AIDS in Latin America. nn· Thirdly, we will examine achievements and limitations of subsequent critical medical anthropologists¿ shift of the focus of analysis on global health from culture to structure, larger political economic conditions that produced vast health inequalities around the world, including World Bank policies under the Cold War and neoliberal reforms that increased the prevalence of TB and other diseases in post-socialist contexts nn· Finally, we will question previous anthropological discourses on global health and propose potential insights by understanding moral imaginations of contemporary global health participants such as WHO or Gates Foundation and humanitarian medicine such as MSF, and continuities and discontinuities of colonial and developmental past in current global health movement.

ANTHRO 140C. Mobilizing Nature. 3 Units.
From Brazil's Landless Worker's Movement (MST) to Water Wars of Cochabamba to Standing Rock, these moments of protest have turned into movements. This seminar will examine how theoretical framings of movements have shifted from claims about political rights to environmental ones. We will address two overarching questions: How are notions of ethnicity, gender, and class constructed in relation to the environment? And how do people understand these relationships in such a way that motivates them to mobilize? Students will explore what kinds of ecological claims are being made, who is making, how, and who benefits from them. The objective is to ultimately understand how movements not only reflect, but also (re)shape political and social practices around the environment.

ANTHRO 142B. Anthropology of the Internet. 5 Units.
This course provides students with an introduction to anthropological approaches to the Internet as an object, and site, of study. Special attention is paid to the ways in which online media are changing the practices and materiality of politics. By reading recently published ethnographic analyses alongside classic anthropological and social theory texts students will come to a better understanding of the co-constitution of the Internet and contemporary social and political life.nnThough many Internet phenomena and websites are celebrated and discussed for their novelty, the questions and issues they present resonate with topics of longstanding anthropological concern. Each week of the course will be dedicated to bringing established anthropological frameworks to bear on a different aspect of the sociality and materiality of the net. How, for example, can anthropological theorizations of citizenship and publics help us make sense of ¿fake news¿ and ¿Twitter revolutions¿? How can Anderson¿s work on the role of the printing press in the emergence of the nation help us understand the ways in which blogs and online discussion boards facilitate transnational ¿imagined communities¿?.

ANTHRO 143. Title Social Change in Contemporary China: Modernity and the Middle Kingdom. 4-5 Units.
Over the last twenty years, residents of the People¿s Republic of China have experienced dramatic changes in nearly every facet of life. This undergraduate seminar introduces students to contemporary China through an examination of various types of social transformation. We will analyze how PRC residents of different backgrounds are confronting such processes as economic liberalization, migration, kinship transformation, sexual commodification, media proliferation, industrialization, and transnationalism? Priority is placed on reading, discussing and assessing research that uses qualitative methods and that situates political economy in dialogue with lived experience.
Same as: ANTHRO 243

ANTHRO 144. Art and the Repair of the Self. 3-5 Units.
Engaging the body/mind and its senses in the making of images and things has long been considered to have potentially great therapeutic significance. This course is a close examination of making as a form of therapy, as a form of communication, and, vitally, as a form of knowing. As such, it suggests new, analytically powerful possibilities for anthropological practice.
Same as: ANTHRO 244

ANTHRO 147B. World Heritage in Global Conflict. 5 Units.
Heritage is always political, it is typically said. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has over 1000 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally, but has found it¿s own history increasingly entwined with that of international politics and violence.
Same as: ANTHRO 247B, ARCHLGY 147B

ANTHRO 148. Health, Politics, and Culture of Modern China. 4-5 Units.
One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.
Same as: ANTHRO 248, CHINA 155A, CHINA 255A

ANTHRO 150. The Ordinary: The History of a Concept. 5 Units.
The ordinary has today acquired something like a cultic status in contemporary culture. `Ordinary¿ citizens are the touchstone and essence of political democracy; the holy grail of effective marketing, the byword for earthy ethical judgment. In social science, the ordinary has blended in with the `normal¿ and the statistical mean. In Anthropology, ordinary life has all but replaced `cultural practice¿ as the epistemic gold standard of evidence. But this was not always so, and the ordinary has many, varied and contradictory meanings across the world.nThis course will (a) trace the historical emergence of the ordinary as a central ideological and metaphysical concept in modern thought and practice; (b) trace how the ordinary and the everyday have acquired unprecedented authority in anthropology; (3) trace the varies meanings and connotations of `the ordinary¿ in different socio-historical contexts from Asia, Africa and Euro-America.nThe literature will consist of ethnographies, and works of philosophical and historical scholarship.
Same as: ANTHRO 250

ANTHRO 150B. Fire: Social and Ecological Contexts of Conflagration. 3 Units.
Over 1 million acres burned from California wildland fires in 2018, yet conservative estimates suggest that four times as many acres burned annually in California preceding European colonialism. In this course we will explore how climate, land management, urban development, and human social institutions contribute to contrasts in wild and prescribed (intentional anthropogenic) fire patterns worldwide. We will investigate the socio-ecological values and harms associated with different fire and land-use policies and practices, ranging from Indigenous and small-scale contexts, conservation projects, and large-scale fire suppression efforts.
Same as: EARTHSYS 150B

ANTHRO 151D. Art/Design/Craft. 3-5 Units.
Key texts from art theory, design theory, and recent work in craft theory will be set in conversation with anthropological understandings of cultural production and creative expression in order to explore why art, design, and craft have so long been differently valued. Examines why ¿art¿ is associated with ¿vision¿, intellect, and creative expression, while ¿craft¿ is associated with ¿mere¿ skill, manual labor, and domesticity. Contemporary social and political implications are explored.

ANTHRO 152A. Urban Poverty and Inequality in Contemporary China. 5 Units.
Experiences of poverty and inequality and their relationship to gender, space development, post-socialism, and globalization. How processes of class-making in China's cities are bound up with transformations in the country's sociopolitcal landscape.

ANTHRO 153. Asylum: Knowledge, Politics, and Population. 3-5 Units.
This course draws from ethnography, social theory, media and literature to examines the place of the asylum in the constitution of knowledge, politics, and populations. An ancient juridical concept, asylum has been used to describe a fundamental political right, medical and penal institutions, as well as emergent spaces of care and safety. As such, thus course invites students to think of critical issues associated with asylum, including: illness, trauma, violence, immigration, displacement, human rights, sanctuary, and testimony.
Same as: CSRE 153C

ANTHRO 154. Anthropology of Drugs: Experience, Capitalism, Modernity. 5 Units.
This course examines the significant role ¿drugs¿ play in shaping expressions of the self and social life; in the management populations, and in the production of markets and inequality. It engages these themes through cultural representations of drugs and drug use, analyses of scientific discourse, and social theory. Topics include: the social construction of the licit and illicit; the shifting boundaries of deviance, disease and pleasure; and the relationship between local markets and global wars.
Same as: ANTHRO 254B, CSRE 154

ANTHRO 154C. Animism, Gaia, and Alternative Approaches to the Environment. 3-5 Units.
Indigenous knowledges have been traditionally treated as a field of research for anthropologists and as mistaken epistemologies, i.e., un-scientific and irrational folklore. However, within the framework of environmental humanities, current interest in non-anthropocentric approaches and epistemic injustice, animism emerged as a critique of modern epistemology and an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge will be presented as a (potentially) decolonizing and liberating practice. This course may be of interest to anthropology, archaeology and literature students working in the fields of ecocriticism and the environmental humanities/social sciences, students interested in the Anthropocene, geologic/mineral, bio-, eco- and geosocial collectives, symbiotic life-forms and non-human agencies. The course is designed as a research seminar for students interested in theory of the humanities and social sciences and simultaneously helping students to develop their individual projects and thesis.
Same as: ANTHRO 254C, ARCHLGY 154, ARCHLGY 254, DLCL 254, REES 254

ANTHRO 155. Ideologies and Practices of Creativity. 3-5 Units.
'Creativity' has long been a charged cultural, political, and philosophical concept. It has been an intersectional structuring/disciplining concept in many areas of social life (art, craft professions, education, the creation of cultural capital and class formation, the naturalization of inequality under capitalism, colonialism, imperialism, etc.). The consequences of its deployment have been far-reaching.

ANTHRO 156. Japanese Anthropology. 5 Units.
This is an advanced reading seminar in the field of Japanses Anthropology. nIt will explore the historical development of the field and the contemporary issues and topics taken up by scholars of Japanese anthropology. Prior knowledge of Japanese language, history, and, society is required.
Same as: ANTHRO 256

ANTHRO 157. Japanese Popular Culture. 3 Units.
This seminar focuses on the intersection between politics and popular culture in contemporary Japan. It will survey a range of social and political implications of practices of popular culture. Topics include J-pop, manga, anime, and other popular visual cultures, as well as social media. Students will be introduced to theories of popular culture in general, and a variety of contemporary anthropological studies on Japanese popular culture in particular. Prior knowledge of cultural anthropology is required.
Same as: ANTHRO 257

ANTHRO 158. The Anthropology of Social Class. 5 Units.
Course introduces social theory concepts and paradigms for the understanding of class. It then extends and revises those concepts and paradigms by considering anthropological approaches in different cultural and historical settings that consider the entanglements of class with other social hierarchies, especially race, caste, and ideas of "civilization" and "development".
Same as: ANTHRO 258

ANTHRO 159C. Ecological Humanities. 3 Units.
What sort of topics, research questions, approaches, theories and concepts lead to an integration of various kinds of knowledges? Ecological Humanities provides a conceptual platform for a merger of humanities and social sciences with earth and life sciences, soil science and forensic sciences. The course will discuss such selected topics as the Anthropocene, geologic/mineral and exhumed subjects/personae, bio- and geosocial collectives, symbiotic life-forms, non-human agencies, and forensic landscapes as examples of this merger.
Same as: ANTHRO 259C, DLCL 259C, REES 259C

ANTHRO 166. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness. 3-5 Units.
Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses?.
Same as: ANTHRO 266

ANTHRO 166A. Semiotics for Ethnography. 3 Units.
This workshop-style seminar introduces students to core theories and concepts in linguistic and semiotic anthropology. Examining current theoretical innovations in this field of study, the course explores the multivalent relationships between language and political authority, discourse and technology, and speech and material infrastructures. Emphasis is placed on how semiotic approaches provide tools for ethnographic analysis, and students will learn how to use semiotic concepts for their own research projects.
Same as: ANTHRO 266A

ANTHRO 171. The Biology and Evolution of Language. 4-5 Units.
Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language itself, and the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites.
Same as: ANTHRO 271

ANTHRO 175. Human Skeletal Anatomy. 5 Units.
Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.
Same as: ANTHRO 275, BIO 174, BIO 274, HUMBIO 180

ANTHRO 176. Cultures, Minds, and Medicine. 1 Unit.
This workshop aims to bring together scholars from the social sciences, humanities, medicine and bio-science and technology to explore the ways that health and illness are made through complex social forces. We aim for informal, interactive sessions, full of debate and good will. Dates of meetings will be listed in the notes section in the time schedule.
Same as: ANTHRO 276

ANTHRO 178B. History of Medicine. 3-5 Units.
This seminar course will examine medical successes and failures to better understand the politics, economics, and sociality of medicine as a practice and a culture. Examples will be drawn from technical developments such as vaccines; methodological innovations such as randomized control trials; and the study of specific diseases such as yellow fever, cancer, hepatitis, and HIV/AIDS.

ANTHRO 179B. Culture of Disease: The Social History of Vaccines. 5 Units.
This course will detail the history and develop of vaccines, specifically examining critical issues such as personal choice v. public health, the use of experimental subjects, population-wide medical trials, and the use of animal tissues in vaccine development.

ANTHRO 181. Religion and Science in the Amazon and Elsewhere. 5 Units.
The conversion of native peoples to Christianity, especially Evangelical Christianity, is today a global phenomenon. This course looks to understand the reasons for religious conversion and its consequence in the everyday and ritual practices of Amazonians and their traditional practice of shamanism. We then turn to a question seldom addressed in the literature on conversion: the relationship between religion and science. We will explore the way conversion to Christianity produces changes in conceptions of the world and the person similar to those produced by access to scientific knowledge, which occurs primarily through schooling.
Same as: ANTHRO 281, RELIGST 270X, RELIGST 370X

ANTHRO 182N. Smoke and Mirrors in Global Health. 3 Units.
A few years ago, health experts began calling out tobacco as engendering a global health crisis, categorizing the cigarette as the world's greatest weapon of mass destruction. A "global health crisis"? What merits that title if not tobacco use? A hundred million people were killed by tobacco in the 20th century, and ten times that number ¿ a billion people ¿ are predicted to die prematurely from exposure to cigarette smoke over the next hundred years. How has tobacconcome to be labeled a global health crisis over the last decade and what has been the political response? From whence does activism and ongoing complacency regarding tobacco arise? How are they created in different cultural contexts?nnThis course aims to provide students conceptual tools to tackle two specific thought projects: (1) to understand how institutional actors compete to define a situation in the world today as a problem of global health, and (2) to understand the sociocultural means by which something highly dangerous to health such as the cigarette is made both politically contentious and inert. On both fronts, special attention will be given to the ways global health activism and complacency unfold in the U.S. and China.

ANTHRO 183A. Sex, Money, and Power: An Approach Through Feminist Anthropology. 3 Units.
What are the sexual politics of labor and capital? How is the global economy shaped by sex, love, and intimacy? This course will examine intimacy--gender, sexuality, kinship, and care-- as a lense for understanding and interrogating socio-political and economic systems from an anthropological perspective. By refusing the categorical separation of the private or domestic realm from the realm of politics, this course will critically interrogate the naturalization of particular intimate configurations (like the family, romantic couple, and domestic labor) in global contexts of colonialism, (neo)liberalism, and global capitalism. It will explore how domains of seemingly ¿private¿ sentiment and personal relations are connected to liberal and illiberal forms of power, inequality, exploitation and control, as well as to processes of incorporation, citizenship, and care. Finally, through selected ethnographic texts, this course will also look at the intimate as staging ground for social resistance, political refusal, economic ingenuity, and creativity.
Same as: FEMGEN 183A

ANTHRO 184A. Vital Curse: Oil As Culture. 3 Units.
Rapidly-evolving technology draws increasing amounts of petroleum from the ground, while wars and friendly agreements move it around the globe, all to occasionally-disastrous result. Pronounced environmental concerns such as fracking, pipelines, plastics, climate change are nearly synonymous with the petroleum industry. And yet, oil is integral to meeting basic human needs like food and water, and integral to meeting modern desires for mobility, energy, and consumer-products on demand. This class approaches the modern world¿s increasingly-reluctant reliance on oil¿from extraction to consumption with problems included¿as a complex cultural practice to be analyzed using anthropology, geography, and environmental studies.

ANTHRO 186. Culture and Madness: Anthropological and Psychiatric Approaches to Mental Illness. 3-5 Units.
Unusual mental phenomena have existed throughout history and across cultures. Taught by an anthropologist and psychiatrist, this course explores how different societies construct the notions of "madness": What are the boundaries between "normal" and "abnormal", reason and unreason, mind and body, diversity and disease? Optional: The course will be taught in conjunction with an optional two-unit discussion section.
Same as: ANTHRO 286, HUMBIO 146, PSYC 286

ANTHRO 186B. Culture and Madness: Anthropological and Psychiatric Approaches to Mental Illness. 3-5 Units.
Unusual mental phenomenon have existed throughout history and across cultures. Taught by an anthropologist and psychiatrist, this course explores how different societies construct the notions of "madness": What are the boundaries between "normal" and "abnormal", reason and unreason, mind and body, diversity and disease? The course will be taught in conjunction with a two unit engaged learning component which will place students in relevant settings.
Same as: ANTHRO 286B

ANTHRO 188. Matter and Mattering: Transdisciplinary Thinking about Things. 4-5 Units.
Things sit at the nexus of cross-cutting heterogeneous processes; tracing the entanglements of any prominent thing or class of things demands a transdisciplinary approach that recruits expertise from the natural sciences, social sciences and humanities. For example, carbon is a key factor in global warming for reasons that are as much socio-historical as bio-physical, and we could not begin to sketch the full significance of carbon without considering such diverse frames of reference. Our growing appreciation in the social sciences and humanities of the agency, polyvalence and catalytic role of things has given rise to The New Materialist and Post-Humanist movements, which in turn raise questions about intra-action and observational perspective that are echoed in the modern physical and life sciences. In this class we will explore these theoretical convergences in considering themes such as `things-in-themselves¿, networks and open systems, assemblages and entanglements. We will also examine specific examples such as oil, metal (guns), dams, viruses, electricity, mushrooms; each thing will be explored both in terms of its social and ethical entanglements and in terms of its material properties and affordances. There will also be hands-on encounters with objects in labs and a couple of local field trips. The key question throughout will be `why and how does matter matter in society today?.
Same as: ANTHRO 288, APPPHYS 188, ARCHLGY 188

ANTHRO 189X. Preparation for Senior Thesis. 2-3 Units.
This course is designed for juniors (majors, minors, and those seeking Interdisciplinary Honors in CSRE or FGSS) who intend to write a senior thesis in one of the CSRE Family of Programs or FGSS Interdisciplinary Honors. The course offers resources and strategies for putting together a significant and original senior thesis. Topics to be covered include: getting funding; finding an advisor; navigating the institutional review board; formulating an appropriate question; and finding the right data/medium/texts.
Same as: AFRICAAM 199X, CSRE 199, FEMGEN 199X

ANTHRO 193. Anthropology Capstone: Contemporary Debates in Anthropology. 5 Units.
Do you know what an anthropological perspective is? Can you describe some of the key assumptions and questions within the discipline? nA major in Anthropology is composed of many specialized courses in different tracks, different emphases and seemingly a never-ending multiplication of perspectives and ethnographies. However, Anthropology is also an ongoing intellectual conversation with foundational questions, some of longstanding and some new. These foundational questions have stimulated different responses and answers and thus have also led to constant renewal of the discipline in the midst of profound disagreement. In this Anthropology Capstone course students across tracks and emphases will address some of the critical debates that have been central to the discipline as it has developed. We will feature three debate questions in the class. Preparation for each debate will be through class discussion of critical readings as well as extra-mural reading and preparation with one¿s debating partners.

ANTHRO 196. Anthropology of Socialism. 3-5 Units.
This course offers an anthropological perspective on ideas and practices of socialism, past and present. It is concerned both with the anthropological study of ¿actually-existing socialism¿ and with both classical and contemporary conceptions of what socialism is, or could be.

ANTHRO 199. Senior and Master's Paper Writing Workshop. 1-2 Unit.
Techniques of interpreting data, organizing bibliographic materials, writing, editing and revising. Preparation of papers for conferences and publications in anthropology. Seniors register for 199; master's students register for 299.
Same as: ANTHRO 299

ANTHRO 201. Introduction to Cultural and Social Anthropology. 3-5 Units.
This course introduces basic anthropological concepts and presents the discipline's distinctive perspective on society and culture. The power of this perspective is illustrated by exploring vividly-written ethnographic cases that show how anthropological approaches illuminate contemporary social and political issues in a range of different cultural sites.
Same as: ANTHRO 1

ANTHRO 206A. Incas and their Ancestors: Peruvian Archaeology. 3-5 Units.
The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred.
Same as: ANTHRO 106, ARCHLGY 102B

ANTHRO 209A. Archaeology of the Modern World. 3-5 Units.
Historical archaeology, also called the archaeology of the modern world, investigates the material culture and spatial history of the past five centures. As a discipline, historical archaeology has been characterized by (1) a methodological conjunction between history and archaeology; (2) a topical focus on the ¿three Cs¿: colonization, captivity, and capitalism ¿ forces which arguably are constitutive of the modern world; and (3) an epistemological priority to recovering the perspectives of ¿people without history.¿ Each of these three trends is widely debated yet they continue to profoundly shape the field. This seminar provides an in-depth examination of the emergence and development of this historical archaeology, with a focus on current issues in theory and method. For undergraduates, the prerequisite is Anthro 3 or consent of instructor.
Same as: ANTHRO 109A, ARCHLGY 109A

ANTHRO 210. Environmental Archaeology. 5 Units.
This course investigates the field of environmental archaeology. Its goals are twofold: 1) to critically consider the intellectual histories of environmental archaeology, and, 2) to survey the various techniques and methods by which archaeologists assess historical environmental conditions through material proxies. The course will include lab activities.
Same as: ANTHRO 110, ARCHLGY 110

ANTHRO 210B. Examining Ethnographies. 5 Units.
Eight or nine important ethnographies, including their construction, their impact, and their faults and virtues.
Same as: ANTHRO 110B

ANTHRO 212B. Biology, Culture and Social Justice in Latin America: Perspectives from Forensic Anthropology. 5 Units.
This course will only take place in the first 5 weeks of the quarter.nnAs forensic anthropologists, we are routinely asked to make identifications of unknown human remains and provide courtroom testimony. Latin America has become a nexus for social justice work, as we respond to the humanitarian crisis along the U.S.-México Border. To improve identification methods of the undocumented dead, we must understand the diversity in Latinx people and adopt best scientific practices.
This course provides a cross-disciplinary, bio-cultural approach to Latin American variation and training in applied methods of forensic anthropology. Explore how tools of biological and cultural anthropology are used jointly in human rights investigation and social justice advancement. Discover the breadth of Latinx diversity and how historical, geographic, and socio-cultural factors shape this variation. Gain hands-on experience in case analysis, using skeletal, genetic, and recovery context information to estimate key parameters of identity. Use case studies to contextualize this work through an intersectional lens that attends to the living families and the applicable historical, geo-political and socio-cultural conditions.
Same as: CHILATST 212, CSRE 212

ANTHRO 213. Culture and Epigenetics: Towards A Non-Darwinian Synthesis. 4-5 Units.
The course examines the impact of new research in epigenetics on our understanding of long-term cultural change. The course examines the various attempts that have been made over recent decades to find a synthesis between cultural and biological evolution. These approaches, often termed neo-Darwinian, include memes, dual inheritance theory, theories of cultural selection and transmission, niche construction theory and macro-evolutionary approaches. Research in all these areas will be examined, with particular reference to explanations for the origins of agriculture, but also including other transformations, and critiqued. New research in epigenetics offers an alternative non-Darwinian evolutionary perspective that avoids many of the problems and pitfalls in the neo-Darwinian approaches. Cultural evolution comes to be viewed as cumulative, directional and Lamarckian, since heritable epigenetic variation can underlie evolutionary change. Epigenetics opens the way for human cultural entanglements to become the drivers for evolutionary change, thus allowing the full range of social processes studied in the social and cultural sciences to take their place in the study and analysis of long-term change.
Same as: ANTHRO 113, ARCHLGY 113

ANTHRO 214. Rights and Ethics in Heritage. 5 Units.
Heritage is a human thing: made by people and mobilized for their own purposes, it has a range of effects on communities. This course focuses on the human dimension of heritage with special attention to questions of rights and ethics. Where can we locate the intersections of heritage and rights? How do communities and governing structures negotiate control over and participation in heritage, and with what impacts on people? Which ethical challenges arise and how have archaeologists, heritage managers, museums, legislators, community leaders, and others approached these issues?nnThe first half of this seminar course focuses on the theoretical and contextual basis for these discussions. We will address topics such as cultural ownership and participation as well as the global and governing contexts within which heritage is mobilized. Building on this, the second half examines cases in which different rights, needs, and goals come into conflict: museum practice, public memory, upheaval stemming from violence or disaster, and the ethics of the material world itself. Throughout, we will highlight heritage in relation to communities, rights, and responsibilities, all while thinking through ethical modes of heritage research and practice.
Same as: ANTHRO 114, ARCHLGY 114

ANTHRO 215. The Social life of Human Bones. 3-5 Units.
Skeletal remains serve a primary function of support and protection for the human body. However, beyond this, they have played a range of social roles once an individual is deceased. The processes associated with excarnation, interment, exhumation and reburial all speak to the place that the body, and its parts, play in our cultural as well as physical landscape.n This course builds on introductory courses in human skeletal anatomy by adding the social dynamics that govern the way humans treat other humans once they have died. It draws on anthropological, biological and archaeological research, with case studies spanning a broad chronological and spatial framework to provide students with an overview of social practice as it relates to the human body.
Same as: ANTHRO 115, ARCHLGY 115

ANTHRO 216. Data Analysis for Quantitative Research. 5 Units.
An introduction to numeric methods in Anthropology and related fields employing the Data Desk statistics package to test hypotheses and to explore data. Examples chosen from the instructor's research and other relevant projects. No statistical background is necessary, but a working knowledge of algebra is important. Topics covered include: Frequency Distributions; Measures of Central Tendency, Dispersion, and Variability; Probability and Probability Distributions; Statistical Inference, Comparisons of Sample Means and Standard Deviations; Analysis of Variance; Contingency Tables, Comparisons of Frequencies; Correlation and Regression; Principal Components Analysis; Discriminant Analysis; and Cluster Analysis. Grading based on take-home problem sets.
Same as: ANTHRO 116

ANTHRO 216B. Anthropology of the Environment. 5 Units.
This seminar interrogates the history of anthropology's approach to the environment, beginning with early functionalist, structuralist, and Marxist accounts of human-environment relationships. It builds towards more recent developments in the field, focusing on nonhuman and relational ontologies as well as current projects on the intersections of nature, capital, politics, and landscape histories. At the end of this class, students will be familiar with the intellectual histories of environmental anthropology and contemporary debates and tensions around questions of ethics, agency, environment, and historical causality.
Same as: ANTHRO 116B

ANTHRO 217. Archaeologies of Religion: Belief, Ritual and Tradition. 3-5 Units.
Talking about religion and its place in modern life, inevitably appears to rest on evaluations of what religion was in the past. `Antiquated beliefs', `medieval hidebound ritual', `blind prejudice', `cultic devotion', and the constraints of tradition upon personal freedom --- such judgments abound and come readily to our minds and roll off our tongues. But what do we know of premodern religion?nIn this course we will learn more about religion, past and present, by engaging with different archaeological approaches to religion. We will start by reviewing key anthropological debates over what religion is and how (and why) it might be defined. We will pause to ask ourselves: Is religion principally immaterial or profoundly material? Is it a matter of private belief or public life? What can material remains teach us of `religion' in the past and about ourselves? We shall engage with the following debates: How has the origin of religion been understood? What is ritual and how is it studied archaeologically? How do these relate to belief? Based on these explorations we will ask: is it more valuable to try to define religion, to study its evolutionary, symbolic or performative aspects or to ask what it is that `religion' does?.

ANTHRO 219. Zooarchaeology: An Introduction to Faunal Remains. 5 Units.
As regularly noted, whether historic or pre-historic, animal bones are often the most commonly occurring artefacts on archaeological sites. As bioarchaeological samples, they offer the archaeologist an insight into food culture, provisioning, trade and the social aspects of human-animal interactions. The course will be taught through both practical and lecture sessions: the `hands-on¿ component is an essential complement to the lectures. The lectures will offer grounding in the main methodological approaches developed, as well as provide case-studies to illustrate where and how the methods have been applied. The practical session will walk students through the skeletal anatomy of a range of species. It will guide students on the identification of different parts of the animal, how to age / sex individuals, as well as recognize taphonomic indicators and what these mean to reconstructing post-depositional modifications.
Same as: ANTHRO 119, ARCHLGY 119

ANTHRO 220. Bioethics and Ancient DNA. 3-5 Units.
The first ancient human genome was sequenced just 10 years ago. From a single genome in 2010 to what has been hailed as a `scientific revolution¿ today, the field of paleogenomics has expanded rapidly. 10 years on we will explore how the field is grappling with emerging issues related to ethical and responsible research, including sampling practices, collaborative community partnerships, and accessibility of research findings to the broader public. How have researchers successfully leveraged multiple voices, perspectives, and priorities engaged with ancient DNA to explore the human past? What are the possibilities of engagement beyond the practical and project-based level? How do these new alliances formed around paleogenomics inform the ethics of sampling, participation, and interpretation? In this course, we will thoughtfully and critically engage with aDNA research in the present to envision possible futures for the field.
Same as: ANTHRO 120, ARCHLGY 120A

ANTHRO 223. Ethical Life with Strangers: Sociality and Civility. 5 Units.
How do we deal with strangers in different parts of the world. What is a stranger? And to whom? Many theorists suggest that dealing with anonymous strangers is central to norms of sociality and civility. For the thinker Georg Simmel, the stranger is less concerned with norms of civility, and more with the promise of urban life, a category ripe for marginalization but also an illustration of the possibilities of ambiguous and multi-faceted life with others that reckons not only with our connections with others but our secrets. Others suggest that questions of empathy and ethics are concerned with how ¿others¿ are imagined and interacted with. However, is social life an encounter with strangers in a simple sense? Surely what it is to be a friend, enemy or a stranger is socially and historically produced? Who are the same and who are the others? Is anybody an ¿other¿ by virtue of not being oneself? What is the public and what is the private in different places, in different interactions? What is the difference between distant others, and those who are others to each other whose histories are intertwined? This class examines these questions and the complex issues around how heterogenous individuals and communities live together, by emphasizing the historical stratifications of race, class, caste, gender that comprise the stakes in any-one meeting in any space, but especially in certain spaces. We will read ethnographies and histories that teach us the ways in which structures of power, colonialism and often as a corollary exclusion and fear structure how and who meets each other, AND, also emphasize the ways in which social life can be exhilarating, complex, violent, contingent and transformative.

ANTHRO 229C. A Deep Dive Into the Indian Ocean: From Prehistory to the Modern Day. 5 Units.
The Indian Ocean has formed an enduring connection between three continents, countless small islands and a multitude of cultural and ethnic groups and has become the focus of increasing interest in this geographically vast and culturally diverse region. This course explores a range of topics and issues, from the nature and dynamics of colonization and cultural development as a way of understanding the human experience in this part of the world, to topics such as religion, disease, and heritage The course guides studies in the many ways in which research in the Indian Ocean has a direct impact on our ability to compare developments in the Atlantic and Pacific.
Same as: ANTHRO 129C

ANTHRO 230D. Spatial Approaches to Social Science. 5 Units.
This multidisciplinary course combines different approaches to how GIS and spatial tools can be applied in social science research. We take a collaborative, project oriented approach to bring together technical expertise and substantive applications from several social science disciplines. The course aims to integrate tools, methods, and current debates in social science research and will enable students to engage in critical spatial research and a multidisciplinary dialogue around geographic space.
Same as: ANTHRO 130D, POLISCI 241S, URBANST 124

ANTHRO 233. Masculinity: Technologies and Cultures of Gender. 4 Units.
What is masculinity? How are masculinities invested with power and meaning in cultural contexts? How is anthropological attention to them informed by and extending inquiry across the academy in spheres such as culture studies, political theory, gender studies, history, and science and technology studies? Limited enrollment.
Same as: ANTHRO 133, FEMGEN 133M

ANTHRO 235B. Waste Politics: Contesting Toxicity, Value, and Power. 3 Units.
Waste is increasingly central as an object and medium of political contestation in the contemporary world, from struggles over garbage, labor, and dignity in Senegal; to explosive remnants of war acting as rogue infrastructure in the Korean demilitarized zone. In response, waste has also become a productive concept in the environmental humanities and humanistic social sciences. In this course we will read a selection of foundational texts focused on waste, many of which draw on case studies from different parts of the world. The case of China will be emphasized, however, since China has emerged in the last few decades as a center not only of global industrial production, but also for processing the world¿s waste, contesting pollution, and fighting for environmental justice. By pairing key theoretical texts with texts dealing with waste-related issues in China and elsewhere, we will ultimately ask how contemporary global waste politics disrupts western understandings of waste, recycling, value, and more.
Same as: ANTHRO 135B, EARTHSYS 135B

ANTHRO 237. The Politics of Humanitarianism. 5 Units.
What does it mean to want to help, to organize humanitarian aid, in times of crisis? At first glance, the impulse to help issue generis a good one. Helping is surely preferable to indifference and inaction. This does not mean that humanitarian interventions entail no ethical or political stakes or that they are beyond engaged critique. We need to critique precisely that which we value, and to ask some hard questions, among them these: What are the differences among humanitarianism, charity, and philanthropy? What of social obligations and solidarities? How does the neoliberal world order currently create structural inequalities that ensure the reproduction of poverty and violence? How does the current order of things resemble or differ from the colonial world order? This course examines the history of humanitarian sensibilities and the emergence of organized action in the ¿cause of humanity¿. In the early years of humanitarian intervention, political neutrality was a key principle; it has now come under ever greater analytical and political scrutiny. We will examine the reasons for the politicization and militarization of aid -- be it humanitarian aid in natural disasters or political crises; development programs in the impoverished south (¿the Third World¿), or peace-keeping. We will end with a critical exploration of the concept of human rights, humanity, and personhood. The overall methodological aim of the course is to demonstrate what insights an ethnographic approach to the politics, ethics, and aesthetics of humanitarianism can offer.
Same as: ANTHRO 137

ANTHRO 238. Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise. 5 Units.
This course will explore historical as well as current market transformations of medical ethics in different global contexts. We will examine various aspects of the research enterprise, its knowledge-generating and life-saving goals, as well as the societal, cultural, and political influences that make medical research a site of brokering in need of oversight and emergent ethics.nThis seminar will provide students with tools to explore and critically assess the various technical, social, and ethical positions of researchers, as well as the role of the state, the media, and certain publics in shaping scientific research agendas. We will also examine how structural violence, poverty, global standing, and issues of citizenship also influence issues of consent and just science and medicine.
Same as: ANTHRO 138, CSRE 138

ANTHRO 243. Title Social Change in Contemporary China: Modernity and the Middle Kingdom. 4-5 Units.
Over the last twenty years, residents of the People¿s Republic of China have experienced dramatic changes in nearly every facet of life. This undergraduate seminar introduces students to contemporary China through an examination of various types of social transformation. We will analyze how PRC residents of different backgrounds are confronting such processes as economic liberalization, migration, kinship transformation, sexual commodification, media proliferation, industrialization, and transnationalism? Priority is placed on reading, discussing and assessing research that uses qualitative methods and that situates political economy in dialogue with lived experience.
Same as: ANTHRO 143

ANTHRO 244. Art and the Repair of the Self. 3-5 Units.
Engaging the body/mind and its senses in the making of images and things has long been considered to have potentially great therapeutic significance. This course is a close examination of making as a form of therapy, as a form of communication, and, vitally, as a form of knowing. As such, it suggests new, analytically powerful possibilities for anthropological practice.
Same as: ANTHRO 144

ANTHRO 247B. World Heritage in Global Conflict. 5 Units.
Heritage is always political, it is typically said. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has over 1000 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally, but has found it¿s own history increasingly entwined with that of international politics and violence.
Same as: ANTHRO 147B, ARCHLGY 147B

ANTHRO 248. Health, Politics, and Culture of Modern China. 4-5 Units.
One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.
Same as: ANTHRO 148, CHINA 155A, CHINA 255A

ANTHRO 250. The Ordinary: The History of a Concept. 5 Units.
The ordinary has today acquired something like a cultic status in contemporary culture. `Ordinary¿ citizens are the touchstone and essence of political democracy; the holy grail of effective marketing, the byword for earthy ethical judgment. In social science, the ordinary has blended in with the `normal¿ and the statistical mean. In Anthropology, ordinary life has all but replaced `cultural practice¿ as the epistemic gold standard of evidence. But this was not always so, and the ordinary has many, varied and contradictory meanings across the world.nThis course will (a) trace the historical emergence of the ordinary as a central ideological and metaphysical concept in modern thought and practice; (b) trace how the ordinary and the everyday have acquired unprecedented authority in anthropology; (3) trace the varies meanings and connotations of `the ordinary¿ in different socio-historical contexts from Asia, Africa and Euro-America.nThe literature will consist of ethnographies, and works of philosophical and historical scholarship.
Same as: ANTHRO 150

ANTHRO 254B. Anthropology of Drugs: Experience, Capitalism, Modernity. 5 Units.
This course examines the significant role ¿drugs¿ play in shaping expressions of the self and social life; in the management populations, and in the production of markets and inequality. It engages these themes through cultural representations of drugs and drug use, analyses of scientific discourse, and social theory. Topics include: the social construction of the licit and illicit; the shifting boundaries of deviance, disease and pleasure; and the relationship between local markets and global wars.
Same as: ANTHRO 154, CSRE 154

ANTHRO 254C. Animism, Gaia, and Alternative Approaches to the Environment. 3-5 Units.
Indigenous knowledges have been traditionally treated as a field of research for anthropologists and as mistaken epistemologies, i.e., un-scientific and irrational folklore. However, within the framework of environmental humanities, current interest in non-anthropocentric approaches and epistemic injustice, animism emerged as a critique of modern epistemology and an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge will be presented as a (potentially) decolonizing and liberating practice. This course may be of interest to anthropology, archaeology and literature students working in the fields of ecocriticism and the environmental humanities/social sciences, students interested in the Anthropocene, geologic/mineral, bio-, eco- and geosocial collectives, symbiotic life-forms and non-human agencies. The course is designed as a research seminar for students interested in theory of the humanities and social sciences and simultaneously helping students to develop their individual projects and thesis.
Same as: ANTHRO 154C, ARCHLGY 154, ARCHLGY 254, DLCL 254, REES 254

ANTHRO 256. Japanese Anthropology. 5 Units.
This is an advanced reading seminar in the field of Japanses Anthropology. nIt will explore the historical development of the field and the contemporary issues and topics taken up by scholars of Japanese anthropology. Prior knowledge of Japanese language, history, and, society is required.
Same as: ANTHRO 156

ANTHRO 257. Japanese Popular Culture. 3 Units.
This seminar focuses on the intersection between politics and popular culture in contemporary Japan. It will survey a range of social and political implications of practices of popular culture. Topics include J-pop, manga, anime, and other popular visual cultures, as well as social media. Students will be introduced to theories of popular culture in general, and a variety of contemporary anthropological studies on Japanese popular culture in particular. Prior knowledge of cultural anthropology is required.
Same as: ANTHRO 157

ANTHRO 258. The Anthropology of Social Class. 5 Units.
Course introduces social theory concepts and paradigms for the understanding of class. It then extends and revises those concepts and paradigms by considering anthropological approaches in different cultural and historical settings that consider the entanglements of class with other social hierarchies, especially race, caste, and ideas of "civilization" and "development".
Same as: ANTHRO 158

ANTHRO 259C. Ecological Humanities. 3 Units.
What sort of topics, research questions, approaches, theories and concepts lead to an integration of various kinds of knowledges? Ecological Humanities provides a conceptual platform for a merger of humanities and social sciences with earth and life sciences, soil science and forensic sciences. The course will discuss such selected topics as the Anthropocene, geologic/mineral and exhumed subjects/personae, bio- and geosocial collectives, symbiotic life-forms, non-human agencies, and forensic landscapes as examples of this merger.
Same as: ANTHRO 159C, DLCL 259C, REES 259C

ANTHRO 266. Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness. 3-5 Units.
Seminar. The state, private sector, development agencies, and NGOs in development and conservation of tropical land use. Focus is on the socioeconomic and political drivers of resource extraction and agricultural production. Case studies used to examine the local-to-global context from many disciplines. Are maps and analyses used for gain, visibility, accountability, or contested terrain? How are power dynamics, land use history, state-private sector collusion, and neoliberal policies valued? What are the local and extra-local responses?.
Same as: ANTHRO 166

ANTHRO 266A. Semiotics for Ethnography. 3 Units.
This workshop-style seminar introduces students to core theories and concepts in linguistic and semiotic anthropology. Examining current theoretical innovations in this field of study, the course explores the multivalent relationships between language and political authority, discourse and technology, and speech and material infrastructures. Emphasis is placed on how semiotic approaches provide tools for ethnographic analysis, and students will learn how to use semiotic concepts for their own research projects.
Same as: ANTHRO 166A

ANTHRO 271. The Biology and Evolution of Language. 4-5 Units.
Lecture course surveying the biology, linguistic functions, and evolution of the organs of speech and speech centers in the brain, language in animals and humans, the evolution of language itself, and the roles of innateness vs. culture in language. Suitable both for general education and as preparation for further studies in anthropology, biology, linguistics, medicine, psychology, and speech & language therapy. Anthropology concentration: CS, EE. No prerequisites.
Same as: ANTHRO 171

ANTHRO 275. Human Skeletal Anatomy. 5 Units.
Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.
Same as: ANTHRO 175, BIO 174, BIO 274, HUMBIO 180

ANTHRO 276. Cultures, Minds, and Medicine. 1 Unit.
This workshop aims to bring together scholars from the social sciences, humanities, medicine and bio-science and technology to explore the ways that health and illness are made through complex social forces. We aim for informal, interactive sessions, full of debate and good will. Dates of meetings will be listed in the notes section in the time schedule.
Same as: ANTHRO 176

ANTHRO 281. Religion and Science in the Amazon and Elsewhere. 5 Units.
The conversion of native peoples to Christianity, especially Evangelical Christianity, is today a global phenomenon. This course looks to understand the reasons for religious conversion and its consequence in the everyday and ritual practices of Amazonians and their traditional practice of shamanism. We then turn to a question seldom addressed in the literature on conversion: the relationship between religion and science. We will explore the way conversion to Christianity produces changes in conceptions of the world and the person similar to those produced by access to scientific knowledge, which occurs primarily through schooling.
Same as: ANTHRO 181, RELIGST 270X, RELIGST 370X

ANTHRO 282. Medical Anthropology. 5 Units.
Emphasis is on how health, illness, and healing are understood, experienced, and constructed in social, cultural, and historical contexts. Topics: biopower and body politics, gender and reproductive technologies, illness experiences, medical diversity and social suffering, and the interface between medicine and science.
Same as: ANTHRO 82, HUMBIO 176A

ANTHRO 286. Culture and Madness: Anthropological and Psychiatric Approaches to Mental Illness. 3-5 Units.
Unusual mental phenomena have existed throughout history and across cultures. Taught by an anthropologist and psychiatrist, this course explores how different societies construct the notions of "madness": What are the boundaries between "normal" and "abnormal", reason and unreason, mind and body, diversity and disease? Optional: The course will be taught in conjunction with an optional two-unit discussion section.
Same as: ANTHRO 186, HUMBIO 146, PSYC 286

ANTHRO 286B. Culture and Madness: Anthropological and Psychiatric Approaches to Mental Illness. 3-5 Units.
Unusual mental phenomenon have existed throughout history and across cultures. Taught by an anthropologist and psychiatrist, this course explores how different societies construct the notions of "madness": What are the boundaries between "normal" and "abnormal", reason and unreason, mind and body, diversity and disease? The course will be taught in conjunction with a two unit engaged learning component which will place students in relevant settings.
Same as: ANTHRO 186B

ANTHRO 288. Matter and Mattering: Transdisciplinary Thinking about Things. 4-5 Units.
Things sit at the nexus of cross-cutting heterogeneous processes; tracing the entanglements of any prominent thing or class of things demands a transdisciplinary approach that recruits expertise from the natural sciences, social sciences and humanities. For example, carbon is a key factor in global warming for reasons that are as much socio-historical as bio-physical, and we could not begin to sketch the full significance of carbon without considering such diverse frames of reference. Our growing appreciation in the social sciences and humanities of the agency, polyvalence and catalytic role of things has given rise to The New Materialist and Post-Humanist movements, which in turn raise questions about intra-action and observational perspective that are echoed in the modern physical and life sciences. In this class we will explore these theoretical convergences in considering themes such as `things-in-themselves¿, networks and open systems, assemblages and entanglements. We will also examine specific examples such as oil, metal (guns), dams, viruses, electricity, mushrooms; each thing will be explored both in terms of its social and ethical entanglements and in terms of its material properties and affordances. There will also be hands-on encounters with objects in labs and a couple of local field trips. The key question throughout will be `why and how does matter matter in society today?.
Same as: ANTHRO 188, APPPHYS 188, ARCHLGY 188

ANTHRO 298C. Digital Methods in Anthropology. 3-5 Units.
The course provides an introduction to a broad range of digital tools and techniques for anthropological research. It is geared towards those interested in exploring such methodologies for their research and wanting to add hands-on experience with state-of-the-art digital tools to their skill set. Students will learn to work with some of the most common tools used to collect and manage digital data, and to perform various types of analysis and visualization.nUndergraduate students register for 3-5 Units, Graduate students can register for 3-5 units.
Same as: ANTHRO 98C

ANTHRO 299. Senior and Master's Paper Writing Workshop. 1-2 Unit.
Techniques of interpreting data, organizing bibliographic materials, writing, editing and revising. Preparation of papers for conferences and publications in anthropology. Seniors register for 199; master's students register for 299.
Same as: ANTHRO 199

ANTHRO 300. Reading Theory Through Ethnography. 5 Units.
Required of and restricted to first-year ANTHRO Ph.D. students. Focus is on contemporary ethnography and related cultural and social theories generated by texts. Topics include agency, resistance, and identity formation, and discourse analysis. Prerequisite: consent of instructor.

ANTHRO 301. History of Anthropological Theory, Culture and Society. 5 Units.
Required of Anthropology Ph.D. students. The history of cultural and social anthropology in relation to historical and national contexts and key theoretical and methodological issues as these inform contemporary theory and practices of the discipline. Enrollment limited to 15. Prerequisite: consent of instructor.

ANTHRO 301A. Foundations of Social Theory. 5 Units.
The purpose of this course is to introduce key themes in social theory - the social, the modern subject, reason, autonomy, civility, interests, exchange, morality, life, the senses - through a reading of classic texts from Descartes up to psychoanalysis and phenomenology. nnEach section has original texts, commentaries, and background readings that place these texts in their deeper historical setting. Many of these commentaries trace how practical theories of 'lower' or minor selves - the subject people of the colonies, slaves, and other - were integral to the very development of ideas of the modern, autonomous and reasonable self in the western world. Prerequisite, by instructor consent.

ANTHRO 302A. Technopolitics: Materiality, Power, Theory. 4-5 Units.
This graduate readings seminar provides a lively introduction to some of the major themes and issues in the field of Science and Technology Studies (STS). How do technologies and material assemblages perform power? How are their designs and uses shaped by social, cultural, and political dynamics? How do they shape those dynamics? The course draws on an interdisciplinary body of literature in humanities and social science, mixing theoretical material with more empirically oriented studies, and classics with new scholarship.
Same as: HISTORY 302

ANTHRO 303. Introduction to Archaeological Theory. 5 Units.
The history of archaeological thought emphasizing recent debates. Evolutionary theories, behavioral archaeology, processual and cognitive archaeology, and approaches termed feminist and post-processual archaeology in the context of wider debate in adjacent disciplines. The application and integration of theory on archaeological problems and issues. Prerequisite: consent of instructor.

ANTHRO 303E. Infrastructure & Power in the Global South. 4-5 Units.
In the last decade, the field of infrastructure studies has entered into conversation with area studies, post/colonial studies, and other scholarship on the "Global South." These intersections have produced dramatic new understandings of what "infrastructures" are, and how to analyze them as conduits of social and political power. This course offers a graduate-level introduction to this recent scholarship, drawing primarily on works from history, anthropology, geography, and architecture.
Same as: AFRICAST 303E, HISTORY 303E

ANTHRO 306. Anthropological Research Methods. 5 Units.
Required of ANTHRO Ph.D. students; open to all graduate students. Research methods and modes of evidence building in ethnographic research. Prerequisite: consent of instructor.

ANTHRO 307. Archaeological Methods. 5 Units.
Methodological aspects of field and laboratory practice from traditional archaeological methods to the latest interdisciplinary analytical techniques. The nature of archaeological data and inference; interpretive potential of these techniques. Prerequisite: consent of instructor.

ANTHRO 308. Proposal Writing Seminar in Cultural and Social Anthropology. 5 Units.
Required of second-year Ph.D. students in the culture and society track. The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment. Prerequisite: consent of instructor.

ANTHRO 308A. Proposal Writing Seminar in Archaeology. 5 Units.
Required of second-year Ph.D. students in the archaeology track. The conceptualization of dissertation research problems, the theories behind them, and the methods for exploring them. Participants draft a research prospectus suitable for a dissertation proposal and research grant applications. Limited enrollment. Prerequisite: consent of instructor.

ANTHRO 308B. Interdisciplinary Research Proposals: Effective Presentation, Skills, and Styles. 5 Units.
This seminar examines the diverse skills, methods, and styles required for the development and production of interdisciplinary dissertation and grant proposals. Topical focus centers primarily on proposals with both social science and natural science elements. Proposals may include a diverse suite of methods and analyses. Throughout this course, we critique examples, assess writing styles and presentation, evaluate budgets, assess data management plans, examine tables and figures, and discuss reviews and evaluations of research proposals. Students are expected to be either in the early stages of writing their dissertation proposal or preparing applications for grants and fellowships. Prerequisite: consent of instructor.

ANTHRO 310C. Intersections. 5 Units.
Themes of materiality and visuality, aesthetic and other forms of cultural production, and the meanings of creativity and convention. Ethnographic and archaeological material and case studies from worldwide cultural contexts. Prerequisite: consent of instructor.

ANTHRO 310G. Introduction to Graduate Studies. 2 Units.
Required graduate seminar. The history of anthropological theory and key theoretical and methodological issues of the discipline. Prerequisite: consent of instructor.

ANTHRO 311G. Introduction to Culture and Society Graduate Studies in Anthropology. 2 Units.
Required graduate seminar for CS track. The history of anthropological theory and key theoretical and methodological issues in cultural anthropology. Prerequistes: this course is open only to Ph.D. students in anthropology or by permission of the instructor.

ANTHRO 312. Time Travel: Pasts, Places, and Possibilities. 5 Units.
Is the past dead or alive? Where do we find it? What possibilities emerge when we encounter it? This course explores how people think and live with history in the present, how different places can harbor different times, and how movement between them can create the effect of time travel. By combining anthropological and historical approaches to time and temporality, students will learn how to build temporally capacious perspectives that transcend and unsettle commonplace divisions such as medieval-modern, colonial-postcolonial, and imperial-national.

ANTHRO 319. South Asia: History, People, Politics. 5 Units.
The South Asian subcontinent (comprising of India, Pakistan, Bangladesh, Nepal, Bhutan and Sri Lanka) is one of the most diverse and densely populated regions in the world and increasingly prominent in new global political and cultural economies. South Asia has also provided the inspiration for cutting edge theories about the colonial state, postcolonial studies, democracy, popular culture, and religious conflict. The course will provide an overview of major historical events and social trends in contemporary South Asia and focus on themes such as gender, religion, caste, migration and movement, new technologies, the urban and rural, the state, and new forms of consumption among others.Thus, the course will give students historically and theoretically informed perspectives on contemporary South Asia, as well as how to apply insights learned to larger debates within the political and social sciences. Prerequisite: consent of instructor.

ANTHRO 320A. Race, Ethnicity, and Language: Racial, Ethnic, and Linguistic Formations. 3-5 Units.
Language, as a cultural resource for shaping our identities, is central to the concepts of race and ethnicity. This seminar explores the linguistic construction of race and ethnicity across a wide variety of contexts and communities. We begin with an examination of the concepts of race and ethnicity and what it means to be "doing race," both as scholarship and as part of our everyday lives. Throughout the course, we will take a comparative perspective and highlight how different racial/ethnic formations (Asian, Black, Latino, Native American, White, etc.) participate in similar, yet different, ways of drawing racial and ethnic distinctions. The seminar will draw heavily on scholarship in (linguistic) anthropology, sociolinguistics and education. We will explore how we talk and don't talk about race, how we both position ourselves and are positioned by others, how the way we talk can have real consequences on the trajectory of our lives, and how, despite this, we all participate in maintaining racial and ethnic hierarchies and inequality more generally, particularly in schools. Same as: CSRE 389A, EDUC 389A, LINGUIST 253

ANTHRO 322. From Biopolitics to Necropolitics and Beyond. 5 Units.
This seminar examines scholarship produced and informed by Michel Foucault and Giorgio Agamben, particularly as relating to biopolitics, governmentality, subjectification, and death. Focus is given to how anthropology and related disciplines have been applying, challenging, and extending these areas of thought in order to address contemporary predicaments. Prerequisite: consent of instructor.

ANTHRO 323. Graduate Seminar in Economic Anthropology. 5 Units.
Classical and contemporary anthropological perspectives on topics such as money, markets and exchange; capitalist and non-capitalist modes of production; class and socio-economic differentiation; globalization and neoliberalism; and the social and cultural construction of the object, "the economy". Prerequisite: consent of instructor.

ANTHRO 324. Political Anthropology. 5 Units.
An anthropological approach to politics through bringing anthropological ways of thinking and modes of analysis to bear on key presuppositions of modern Western political thought. Ideas of rights, the individual, society, liberty, democracy, equality, and solidarity; ethnographic accounts used to identify the limits of conventional analytical approaches and to document the forms of politics that such approaches either ignore or misunderstand. Prerequisite: consent of instructor.

ANTHRO 326. Postcolonial and Indigenous Archaeologies. 5 Units.
The role of postcolonial and Indigenous archaeologies as emergeant disciplinary activities within contemporary society. Community based archaeologies; the roles of oral history, landscape, and memory; archaeology as political action; and history in archaeological projects. The emergence of Indigenous archaeology within N. America in relation to limitations imposed by processual or new archaeology; and NAGPRA, Kennewick, essentialism, and terminal narratives within this context. Prerequisite: consent of instructor.

ANTHRO 330A. The Archive: Form, Practice, Thought. 5 Units.
This seminar offers a wide-ranging exploration of the `archive.' Drawing from ethnography, social theory, philosophy, photography and literature, we will examine the archive's diverse material, narratological and structural dimensions, its epistemological, political and representational functions, processes of archivisation and recuperation, and related domains of experience, memory, absence and loss. Prerequisite: consent of instructor.

ANTHRO 331. Populism. 5 Units.
This course examines the concept of populism. Course readings include works in political theory and recent ethnographies. We will ask how these texts reframe core problems in anthropology, including the affective dimensions of social life, relations of friend and enemy, and theories of language and signification.

ANTHRO 332. Anthropology of Ethics. 5 Units.
Recent decades have witnessed what some scholars have termed an ethical turn in anthropology. This course explores the emergence of this field of study, asking the following questions: What has motivated a renewed anthropological interest in the subject of ethics? How has a focus on ethics enabled the development of new theoretical currents in the discipline? To what extent have anthropological studies of ethics provided new understandings of traditional topics, concerning social hierarchy, power relations, embodiment, and subject-formation?.

ANTHRO 337. VOICES. 5 Units.
This course takes an anthropological perspective on psychotic voices, voices of resistance (mad and sane), voices of authority, voices of spirit, the sense of communication from another seen or unseen. We end with the writer's voice and how students can cultivate their own voice. We read first person examples and a range of theory, including Bakhtin, Lacan, Willy Apollon, Piaget and Vygotsky, and Elyn Saks, Zora Neale Hurston, Zadie Smith and EB White. Texts may shift depending on student input.nPrerequisite: Instructor approval.

ANTHRO 338B. History and Memory. 5 Units.
How are history and memory important in the making of collective and public memory? This seminar draws together an interdisciplinary collection of readings with an aim to provide a foundation for seminar participants¿ projects, both historical and contemporary projects. We will explore critiques of the practice of gathering material, i.e., archival and oral histories as well as delve into experimental forms that combine improvisational approaches to history and critique in an effort to develop a methodological tool kit that allows for a push beyond established projects.

ANTHRO 339. Anthropology of Religion. 5 Units.
This course presents classic and contemporary work on the anthropology of religion: Durkheim Elementary Forms of the Religious Life; Levy-Bruhl; Primitive Mentality; Douglas Purity and Danger; Evans Pritchard Nuer Religion; and recent ethnographies/scholarly work by Robbins, Keane, Keller, Boyer, Barrett, and others. Prerequisite: consent of instructor. Same as: RELIGST 343X

ANTHRO 340A. Fit: The Anthropology of Sports, Medicine, and Debility. 5 Units.
Sport has long been a domain in which everyday people, medical professionals and political authorities have interfaced with the making of institutional definitions and social norms regarding fitness and debility. This course will challenge students to reflect on that interface through consideration of recent research findings within sociocultural anthropology and allied fields.

ANTHRO 341. Entitlement: Kinship, Property and Inheritance. 5 Units.
This graduate seminar explores anthropological approaches to property, kinship and inheritance. It approaches property and kinship as social relations among people and as such call for analyses of the dynamic and unstable processes through which they are constituted, reproduced, and changed over time. Rather than accept conventional distinctions between tangible and intangible property, private and public property, nature and commodities, this course scrutinizes the cultural and social processes through which these categories themselves are constructed and along with them relations of inequality, entitlement, and difference. It investigates the ways in which people (both individuals and communities) are constituted in relation to their claims on things. At a time when new forms and claims of property are increasingly asserted and challenged in a variety of contexts, an understanding of the different bases upon which property rights can be claimed and upon which they can be distinguished from other types of social obligation is a central component of anthropological analyses of the production of new inequalities and differentiations globally.

ANTHRO 342B. Cultural Heritage in Global Perspective. 5 Units.
This seminar will explore the ideas surrounding the theories, discourses, and practices surrounding cultural heritage. Heritage has become inscribed in the planning of urban and rural landscapes, designed as tourist destinations, and considered a universal good in global cosmopolitan society. But it would be well to ask: what kind of "culture" has been labeled as heritage? What kind of organizations, economics, and politics are necessary to sustain it? How are these put in place? By whom? For whom? How can we study this global phenomenon? Over the course of the quarter, students will engage with readings that discuss how cultural heritage is communicated to the public, the relationship between academic critique and pragmatic social engagement, and methodologies for research about heritage. nn Pre-requisite by instructor consent.

ANTHRO 345. New Visions in Medical Anthropology. 5 Units.
Recent experimental histories of the field. Emphasis is on how, working within anthropology's classic format, the ethnographic monograph, authors have innovatively responded to the challenges of representing amorphous, unspoken, and often violent relationships between the body and social change. The authors' expository techniques, and how they engage and extend theoretical debate. How to assess works within medical anthropology and its allied fields. Prerequisite: consent of instructor.

ANTHRO 345A. Race and Power: The Making of Human Difference in History, Biology and Capital. 5 Units.
This course examines how race is made. We will pay close attention to how people engage with material, economic, scientific, and cultural forces to articulate human group difference as a given, and even natural. In this seminar, we will look at the reality of race as a literally constructed phenomenon, where historical, colonial, bodily, market, penal, and humanitarian constituent elements both circulate and sediment racial understandings. To focus our readings and discussions we will divide this vast terrain into three units: race and the colonial encounter, race and biopower, and race in systems of capital accumulation.

ANTHRO 347B. World Heritage in Global Conflict. 5 Units.
Heritage is always political, it is typically said. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has over 1000 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally, but has found it¿s own history increasingly entwined with that of international politics and violence.

ANTHRO 348A. Health, Politics, and Culture of Modern China. 5 Units.
One of the most generative regions for medical anthropology inquiry in recent years has been Asia. This seminar is designed to introduce upper division undergraduates and graduate students to the methodological hurdles, representational challenges, and intellectual rewards of investigating the intersections of health, politics, and culture in contemporary China.

ANTHRO 348B. Bodies, Technologies, and Natures in Africa. 4-5 Units.
This interdisciplinary course explores how modern African histories, bodies, and natures have been entangled with technological activities. Viewing Africans as experts and innovators, we consider how technologies have mediated, represented, or performed power in African societies. Topics include infrastructure, extraction, medicine, weapons, communications, sanitation, and more. Themes woven through the course include citizenship, mobility, labor, bricolage, in/formal economies, and technopolitical geographies, among others. Readings draw from history, anthropology, geography, and social/cultural theory.
Same as: AFRICAST 249, HISTORY 349

ANTHRO 349. Anthropology of Capitalism. 5 Units.
This advanced graduate seminar explores capitalism as an historically-situated and culturally-mediated articulation of practices rather than as an economic system or social structure governed by an internal logic. It draws on poststructural theories of culture, society and subjectivity to investigate the processes through which diverse capitalist practices are produced. Prerequisite: Graduate standing in Anthropology or permission of the instructor. Previous graduate level coursework in cultural anthropology, social theory or cultural studies is required. No auditing is permitted. Enrollment limited to 12.

ANTHRO 350A. Writing as Intervention: Science, Medicine, and Ethics in Today's World. 5 Units.
In this course we will explore contemporary issues of culture and power rooted in science, medicine, technology and futurist proposals to better the human condition with technological fixes. We will investigate anthropological and ethnographic-based theories and methods to propose alternative ethical solutions. These readings will be rooted in examining global stratification, economic metrics of progress, and the routinization of human degradation ranging from norms around sexual power, labor exploits, privacy infringements, data sharing, and automation.nnThe course will be structured as a writing workshop with frequent, short writing assignments to be shared with others in the course. The workshop format will facilitate the course goal of each student producing at least one publishable op-ed, article or other product of intervention at the end of the quarter.

ANTHRO 351D. Ideologies and Practices of Creativity. 5 Units.
The still-robust Romantic conception of creativity as the attribute of a specific, 'gifted', individual continues to have extraordinary social and political power as an ideological apparatus that shapes and disciplines conduct, aspirations, and subjectivities. This course is a critical anthropological exploration of the following questions: How and why has a deep, naturalized individualism long been foundational to both ideals and practices of creativity? How is it raced and gendered? How have people been rethinking relational, collaborative creative practice?.

ANTHRO 356A. The Universal and the Vernacular. The Global Life of Concepts and Social Forms. 5 Units.
Mapping and understanding vernacular concepts and terminologies has always been central to the anthropological quest to understand societies from `a native point of view'. This has often been accompanied by a critique of universalist and Euro-centric assumptions in the social sciences and in social theory. As a result, the convention has become to treat the `universal¿ (ideas, frames, institutions) as external, often imposed by colonial powers, while the `vernacular¿ conventionally is seen as local and authentic, and the proper site of anthropology.nThis course seeks to rethink this spatial and historical distinction between the universal and the vernacular. Instead we ask: how, and when, do concepts, or practices, become embedded in a vernacular world? Reversely, instead of assuming that universals all originate in Euro-America, we ask: how do concepts and practices become both global and universal? We will trace how impactful ideologies, social forms and institutions have travelled in time to become perceived as elements of vernacular cultures. nDrawing on ethnographic and historical examples across the world, each week will trace the universal and vernacular lives of important concepts such as: `tradition¿, `the individual¿, `community¿, `the people¿; `humanity¿, `dignity¿; `equality¿, `sacrifice¿, `cosmopolitanism¿, `civility¿.

ANTHRO 360A. Archival Research for Social Science: A Practicuum. 5 Units.
Since the 1980s, the necessity of historicizing cultural and social formations has become established as integral to anthropological research. Every ethnography and dissertation has historical sections, derived primarily from secondary sources, commentaries within other ethnographies and published historical work. Most students attempt to conduct archival research in local or national archives alongside ethnographic fieldwork, most often in an ad hoc manner, collecting and analyzing archival material on a trial and error basis. This class is conceived as a practicum that addresses students who need to and want to do archival research as part of their anthropological and sociological fieldwork, but find themselves at a loss for how to think about, begin, and, do archival work.nnThe base layer of the class is methodological and practical: students will be engaged in the practical activities of becoming acquainted with archives, developing archival research questions, learning techniques of recording, coding, and thinking historically. The second layer will be conceptual. Students will be reading and discussing concepts of the archive, reading and analyzing different styles of historical ethnographies, and thinking about how to organize and conceptualize cultural categories historically.nnStudents will be asked to conduct archival research at the archives available at Stanford Libraries and the Hoover Institution archives and write a research paper based on this archival work. We will have weekly meetings divided into two sessions. The first half will discuss set readings and intellectual concern. In the second half, we will discuss methodological concerns, problems encountered in the archives and bounce ideas off each other. We will also have regular guest speakers who will give talks and answer questions, intellectual and methodological about archival research.

ANTHRO 361. Life and Death in Contemporary Latin America: An Anthropological Inquiry. 5 Units.
This seminar explores life and death in contemporary Latin America. We will address anthropological understanding of the role of colonialism, migration, violence, urbanization, democratic transition and neoliberalism as they configure the experience of, and threshold between, vital and deadly processes. nnThis is not a standard survey course, covering the region as a whole however. Instead, we will critically engage several recent ethnographies that explore, for example: the politics and practices of memory; border thinking and living; the political economy of death and desire; state violence and social movements; the relationship between the laboring city and body. We will supplement ethnographies with contemporary Latin American critical theory, film, and literary texts. Prerequisite: consent of instructor.

ANTHRO 362. Visual Activism and Social Justice. 5 Units.
Anthropology and the academy more generally have long valued text, language, and cognition more highly than the image, visuality, and the imagination. Yet, contemporary political movements and strategies for social justice and transformation vividly demonstrate why effective social research needs to study both.

ANTHRO 363. Queer Anthropology. 2 Units.
Feminist and queer theory have profoundly rethought epistemologies as well as methodologies. This graduate seminar will explore the relationship between feminist and queer theory and the new directions proposed by queer anthropology in socio-cultural anthropology and archaeology. In addition, the seminar will discuss the challenges that looking at queer studies from anthropology and archaeology can bring from questions of race, global inequalities, misrecognitions as well as specific historical and cultural genealogies which offer more than simply adding diversity to questions already raised within queer studies. Students will acquire both conceptual and methodological skills. nThis year-long graduate seminar adopts a workshop-like format over the entire 2018-2019 academic year. We will meet for eleven (three hour) meetings over three quarters (4 meetings in Autumn, 3 meetings in Winter, and 4 meetings in Spring. Students are required to enroll in all three quarters. Pre-requisite: instructor consent.

ANTHRO 364A. EcoGroup: Problems in Ecological and Evolutionary Anthropology. 2-5 Units.
Seminar; restricted to graduate students. Topics vary with instructor. How to ask appropriate questions, how to derive research hypotheses from theory, how to design methodologies for testing hypotheses, and how to present results by reading and critiquing key contemporary papers in the field. Ph.D. students enrolling in this course to fulfill the department review course requirement must enroll in 5 units. Graduate students enrolling in this course to participate in a topical forum may enroll in 2 units. Course may be repeated for 2 units. Prerequisites: by consent of instructor.

ANTHRO 365A. Emancipation: Theories and Experiences. 5 Units.
Concepts of emancipation have been treated in a wide variety of historical, political, regional and social perspectives. In the US, emancipation and post emancipation societies are primarily understood around histories of enslavement. In the class, while taking inspiration and also covering work on enslavement and emancipation, we will endeavor to discuss theories, ideas and experiences that have been understood as potentially emancipatory from a globally and historically wide-ranging set of ideas. Issues of race, caste, class and gender are axiomatic themes within the class.nEmancipation has frequently been understood as an emancipation from oppression and an impetus towards a form of freedom or new order. While theoretically this is formally understood and discussed, often with historical examples that use experiences to illustrate failures or successes, in this class we will try to understand the texture of practices as the primary means by which ideas about emancipation circulate, imagined, are discussed, are disappointed and so on. We will try and see what an anthropological and historically textured discussion can bring to theoretical discussions of emancipation. We will examine theoretical, historical, sociological and anthropological writings on emancipation, freedom, enslavement and servitude, political mobilization and revolution. Fundamentally this course tries to get students to think globally about multiple and different systems of persisting and enduring oppression and inequality through an emphasis on political thought, political imaginations and concrete political organizations and movements. Prerequisite: consent of instructor.

ANTHRO 366. Material Semiotics. 5 Units.
This seminar will focus on the emerging body of literature on the materiality of the production, circulation, and mediation of paperwork as constituitive of modern forms of governance. We will discuss specific genres of paperworks¿notes, memos, files, documents, as well as archives and other mnemonic technologies¿both as cultural practices and reflexive objects, and examine how they produce modern social epistemologies of accountability, evidence, the fact, and truth in the fields of law, business, and public administration, as well as in civil society generally. Readings will include works by Max Weber, Bruno Latour, Jacques Derrida, Michel Foucault, Cornelia Vismann, Ann Stoler, and others. Prerequisite: graduate standing or consent of instructor.

ANTHRO 366W. Semiotics for Ethnography. 1 Unit.
This workshop-style seminar will introduce students to a range of semiotic and linguistic anthropological approaches and tools for ethnographic analysis. A group of (linguistic) anthropologists from other universities will be invited to offer workshops, through which students will learn 1. how to teach semiotics in anthropology courses and 2. how to use semiotic concepts for their own research projects.
Same as: EDUC 366W

ANTHRO 367. The Anthropology of Science: Global Politics and Laboratory Life. 5 Units.
Science and technology are important cultural products that often dramatically reorganize various aspects of human life. In this course we will explore how recent innovations in the life sciences and biomedicine may reconfigure crucial elements of social institutions, lend new structures to identity politics, and often change the way we interact with and conceive of nature. We will examine these issues in various global settings to explore how everyday politics shape politics of life in different locales.

ANTHRO 368A. Time and Temporality. 5 Units.
This course explores the social and political organization of time. Anthropology has long been critical of the narratives of progress that are embedded in concepts of modern politics, such as development, citizenship, secularism, and sovereignty. How do social actors respond to the perceived failures of such narratives? How do they re-articulate historical pasts to political futures in the aftermath of modernization? In this course we will read studies that examine lived experiences of the passing of time. How is memory linked to anticipation? How is consciousness of the past structured by expectations of a future to come? We will pay particular attention to the material aspects of these temporal relations, including their social, economic, and infrastructural conditions. Drawing from current debates in anthropology, queer theory, and post-colonial studies, we will critically interrogate theories of ruination, crisis, hope, and utopia.

ANTHRO 371. Living and Dying in the Contemporary World. 5 Units.
This seminar explores how biological, political and social conditions transform and conjoin experiences of living and dying in the world today. Engaging contemporary ethnographies and social theory, we will examine how life and death, the natural and the social, the individual and the collective, are braided together in ways that challenge conclusions about what constitutes care, community, health, rights, and violence, among other issues. We will also reflect on whether and how the braiding together of these domains leaves room for the recognition of their singularity. Thus, an abiding question for this seminar is the relation of history to the present. Prerequisite: consent of instructor.

ANTHRO 372. Urban Ecologies. 5 Units.
At the intersections of urbanism and environmental studies, political ecology, postcolonial theory and the new materialism, new fields are in formation. This seminar explores scholarship that connects cities with countrysides rough questions of resources and infrastructures. We will consider questions id inequality access and community as well as unexpected urban ecologies.

ANTHRO 373. Things: An Archaeology of the Relationships Between Humans and Things. 5 Units.
This course examines a variety of approaches that claim to explore the relationships between humans and things. Some of the approaches include Marx and material culture studies; Heidegger; cognitive and phenomenological; Actor Network Theory. But there is a need also to examine behavioral and ecological and Darwinian approaches. Many of these approaches do not adequately deal with the physicality of things as objects and there is a need to seek a way to incorporate such aspects of things into social theory. Prerequisite: graduate standing or consent of instructor.

ANTHRO 374. Archaeology of Colonialism/Postcolonialisms. 5 Units.
Advanced graduate seminar focused on the archaeology of colonial and postcolonial contexts, both prehistoric and historic. Emphasis on intersections between archaeological research and and subaltern, postcolonial, and transnational feminist/queer theory. Prerequisite: consent of instructor.

ANTHRO 376. Archaeology: The Emergence of a Discipline. 5 Units.
This course explores the key thinkers and practitioners who have founded the discipline of archaeology. Reaching back into the nineteenth century, the course examines in depth the key figures, their preoccupations and projects that shaped the way that archaeology grew through the 20th and into the 21st century. Global in scope, the emphasis will be on field projects and practical problems that stimulated the intellectual development of archaeology as an independent discipline closely tied to geology, history, anthropology, and the natural sciences. Prerequisite: consent of instructor.

ANTHRO 378. Dynamics of Coupled Human-Natural Systems. 5 Units.
This is a graduate research seminar on the interdisciplinary approach to the study of the dynamics of what is known as "coupled human-natural systems." We will take a critical perspective on such systems, asking to what extent the idea of coupling of discrete subsystems is intellectually profitable and what defines a "human" vs. a "natural" system? We will explore concepts such as coupling, nonlinearity, threshold behavior, feedback, complexity, resilience, and catastrophes. Case studies will be drawn from the literature on human ecology, population dynamics, disease ecology, and social dynamics. Emphasis will be on developing a working knowledge of mathematical and computational models of coupled systems embedded within a rigorous empirical framework of biosocial data collection.

ANTHRO 378A. History of Vaccines. 5 Units.
This graduate seminar will examine the history of vaccine development focusing on technical, political, zoonotic, and ethical issues. Readings will be drawn from history, anthropology, literature, and biology. Prerequisite: consent of instructor.

ANTHRO 378B. Culture, Mind and Emotion : Anthropological and Psychological Approaches. 3-5 Units.
How does culture shape the experience of thinking and feeling, the way humans relate to the world and to others? This graduate level course, taught by a psychologist who studies emotion (Jeanne Tsai) and an anthropologist who studies mind (Tanya Marie Luhrmann), explores the way that living in social worlds deeply shapes what seem to be basic processes. We explore what we know about the cultural variations in emotional experience, and about the effect of different representations of minds. We also what can be learned about the way culture shapes experience through different methods.

ANTHRO 379. Empathy Lab. 5 Units.
This lab-based class examines the ways in which various disciplines and art forms conceive of, and tell stories about, the experiences and stories of others. With permission of instructor.

ANTHRO 381. Archaeology of Violence. 5 Units.
This advanced graduate seminar reflects on archaeological research on violence in relation to readings in philosophy, political anthropology, cultural studies, and gender and ethnic studies. While some forensic approaches are discussed, the emphasis is more on structural and collective violence and the role of violence in the formation of the archaeological record.

ANTHRO 382J. Disasters in Middle Eastern History. 4-5 Units.
(History 282J is an undergraduate course offered for 5 units; History 382J is a graduate course offered for 4-5 units.) This course explores the history of disasters in the Middle East from the early modern period to the mid-20th-century. We will trace the evolving meanings of disasters and misfortunes by focusing on critical moments -- plagues, fires, earthquakes, wars -- to examine how people have responded to these events, labeled them, and devised strategies to live with or forget them. The course readings follow the evolution of policies and norms together with the articulation of new forms of knowledge and expertise in the wake of catastrophe. Additionally, particular attention will be paid to how modern conceptions of disaster relate to older understandings of apocalypse, as well as to various strands of "disaster reformism," when rethinking tragedy and time helped assert radical agendas for reforming political, economic, social, communal, racial, and gender relations while remodeling social science and intellectual life. The course focuses on various trajectories of disaster thinking in Arabic, Turkish, Greek, Armenian, and Hebrew.
Same as: HISTORY 382J

ANTHRO 385. Captivity. 3 Units.
The premise for this course is that anthropology, as well as other domains of social inquiry, have unacknowledged and unredeemed debts to captivity as structure, experience, and event, from the penal colony to the slave plantation. This course is an attempt to begin to think about those debts through readings in anthropology, history, and philosophy. By instructor consent.

ANTHRO 391. Subjectivity. 5 Units.
This seminar considers subjectivity as a central category of social, cultural, psychological, historical and political analysis. Through a critical and collaborative examination of ethnographic works and psychoanalytic theory, we will identify the processes by which subjectivities are produced, explore subjectivity as a locus of social change, and examine how emerging subjectivities remake social worlds. Some of the questions this seminar will pose include: what is the relation between subjectivity and subjection? How to account for the effects of the social in terms of subject formation without succumbing to social determinism? What else is the subject other than the outcome of a complex constellation of discursive, material, institutional, and historical factors?.

ANTHRO 398B. Race, Ethnicity, and Language: Writing Race, Ethnicity, and Language in Ethnography. 3-4 Units.
This methods seminar focuses on developing ethnographic strategies for representing race, ethnicity, and language in writing without reproducing the stereotypes surrounding these categories and practices. In addition to reading various ethnographies, students conduct their own ethnographic research to test out the authors' contrasting approaches to data collection, analysis, and representation. The goal is for students to develop a rich ethnographic toolkit that will allow them to effectively represent the (re)production and (trans)formation of racial, ethnic, and linguistic phenomena.
Same as: EDUC 389B, LINGUIST 254

ANTHRO 400. Cultural and Social Dissertation Writers Seminar. 1-3 Unit.
Required of fifth-year Ph.D. students returning from dissertation field research and in the process of writing dissertations and preparing for professional employment. Prerequisite: consent of instructor.

ANTHRO 401A. Qualifying Examination: Topic. 1-5 Unit.
Required of second- and third-year Ph.D. students writing the qualifying paper or the qualifying written examination. May be repeat for credit.

ANTHRO 401B. Qualifying Examination: Area. 1-5 Unit.
Required of second- and third-year Ph.D. students writing the qualifying paper or the qualifying written examination. May be repeated for credit one time.

ANTHRO 402D. Materialities of Power, Part I. 4-5 Units.
How is power made material? And how do material things--objects, commodities, technologies, and infrastructures --reflect, change, consolidate, or distribute power? This research seminar is aimed at PhD students in history, anthropology, and STS who are working on such questions. All geographic specialties welcome. A small amount of common reading will launch the course, whose main goal is to guide students towards producing a research paper draft that's close to submission-ready for a journal. Along the way, we'll also address practical topics, including how to pick and submit to a journal, how to present a paper, and more.
Same as: HISTORY 403A

ANTHRO 402F. Materialities of Power, Part II. 4-5 Units.
How is power made material? And how do material things --objects, commodities, technologies, and infrastructures--reflect, change, consolidate, or distribute power? This research seminar is aimed at PhD students in history, anthropology, and STS who are working on such questions. All geographic specialties welcome. A small amount of common reading will launch the course, whose main goal is to guide students towards producing a research paper draft that's close to submission-ready for a journal. Along the way, we'll also address practical topics, including how to pick and submit to a journal, how to present a paper, and more.
Same as: HISTORY 403B

ANTHRO 403. Independent Study for Masters Paper Writing. 1-5 Unit.
Required of Anthropology Master's candidates. Taken in the final quarter before handing in the final draft of the Master's Paper and graduating. This independent study supports work on the Master's papers for student admitted to the coterminal or terminal Masters degree programs in Anthropology. Prerequisite: consent of Masters paper advisor.

ANTHRO 440. Graduate Teaching. 1-5 Unit.
Supervised experience teaching in Anthropology.

ANTHRO 441. Master's Project. 1-5 Unit.
Supervised work for terminal and coterminal master's students writing the master's project in the final quarter of the degree program.

ANTHRO 442. Reading Group. 1-3 Unit.
Graduate student reading group on a thematic topic of interest.nIntended for first or second-year cohort PhD students.nSections: Liisa Malkki, Sylvia Yanagisako, Thomas Hansen, Paulla Ebron, andnMiyako Inoue.

ANTHRO 444. Anthropology Colloquium. 1 Unit.
Department Colloquia Lecture Series. Lectures presented on a variety of anthropological topics. Colloquium is intended for the Department of Anthropology's under graduate majors and graduate students. May be repeated for credit.

ANTHRO 445. Anthropology Brown Bag Series. 1 Unit.
Current topics and trends in cultural/social anthropology, archaeology, and environmental and ecological anthropology. Enrollment in this noon-time series is restricted to the Department of Anthropology Master¿s students and First and Second-year PhD students.

ANTHRO 450. Research Apprenticeship. 1-15 Unit.
Supervised work on a research project with an individual faculty member. May be repeated for credit.

ANTHRO 451. Directed Individual Study. 1-15 Unit.
Supervised work for a qualifying paper, examination, or project with an individual faculty member.

ANTHRO 452. Graduate Internship. 1-10 Unit.
Provides graduate students with the opportunity to pursue their area of specialization in an institutional setting such as a laboratory, clinic, research institute, or government agency.

ANTHRO 801. TGR Project. 0 Units.
.

ANTHRO 802. TGR Dissertation. 0 Units.
.

APPLIED PHYSICS

Courses offered by the Department of Applied Physics are listed under the subject code APPPHYS on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=APPPHYS&filter-catalognumber-APPPHYS=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=APPPHYS&filter-catalognumber-APPPHYS=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=APPPHYS&filter-catalognumber-APPPHYS=on).

The Department of Applied Physics offers qualified students with backgrounds in physics or engineering the opportunity to do graduate course work and research in the physics relevant to technical applications and natural phenomena. These areas include accelerator physics, biophysics, condensed matter physics, nanostructured materials, quantum electronics and photonics, quantum optics and quantum information, space science and astrophysics, synchrotron radiation and applications.

Student research is supervised by the faculty members and also by various members of other departments such as Biology, Chemistry, Electrical Engineering, Materials Science and Engineering, Physics, the SLAC National Accelerator Laboratory, and faculty of the Medical School who are engaged in related research fields.

Research activities are carried out in laboratories including the Geballe Laboratory for Advanced Materials (GLAM), the Edward L. Ginzton Laboratory (GINZTON), the Hansen Experimental Physics Laboratory (HEPL), the SLAC National Accelerator Laboratory, the Center for Probing the Nanoscale, and the Stanford Institute for Materials and Energy Science (SIMES).

The number of graduate students admitted to Applied Physics is limited. Applications to the Master of Science and Ph.D. programs should be received by December 15, 2020. M.S. and PhD. students normally enter the department the following Autumn Quarter. Joint applicants for the Knight-Hennessy Scholars Program (http://knight-hennessy.stanford.edu/) must submit their Knight-Hennessy Scholars application by October 14, 2020 by 1:00pm Pacific Time and Applied Physics application by December 15, 2020. The general and subject GREs are optional for both the Ph.D. and master's programs. Applicants may submit scores, but they are not required.

Graduate Programs in Applied Physics

The Department of Applied Physics offers three types of advanced degrees:

- the Doctor of Philosophy
- the coterminal Master of Science in Applied and Engineering Physics
- the Master of Science in Applied Physics, either as a terminal degree or an en route degree to the Ph.D. for students already enrolled in the Applied Physics Ph.D. program.

Admission requirements for graduate work in the Master of Science and Ph.D. programs in Applied Physics include a bachelor's degree in Physics or an equivalent engineering degree. Students entering the program from an engineering curriculum should expect to spend at least an additional quarter of study acquiring the background to meet the requirements for the M.S. and Ph.D. degrees in Applied Physics.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Applied Physics and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Applied Physics. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Applied Physics and to interpret and present the results of such research.

The department offers an M.S. in Applied Physics as well as a coterminal M.S. in Applied Physics available, upon application and acceptance, to Stanford undergraduates. Both programs are described below.

Master of Science in Applied Physics

The University's basic requirements for the master's degree are discussed in the "Graduate Degrees (p. 65)" section of this bulletin. The minimum requirements for the degree are 45 units, of which at least 39 units must be graduate-level courses in applied physics, engineering, mathematics, and physics. The deadline for 2021-22 admissions is December 15, 2020. The required program consists of the following:

		Units
Advanced Mechanics		**3**
Select one of the following:		
PHYSICS 210	Advanced Mechanics	
PHYSICS 211	Continuum Mechanics	
Electrodynamics		**3**
Select one of the following:		
APPPHYS 201	Electrons and Photons	
PHYSICS 220	Classical Electrodynamics	
Quantum Mechanics		**6**
Select two of the following:		
APPPHYS 203	Atoms, Fields and Photons	
APPPHYS 204	Quantum Materials	
EE 222	Applied Quantum Mechanics I	
EE 223	Applied Quantum Mechanics II	
PHYSICS 230	Graduate Quantum Mechanics I	
PHYSICS 231	Graduate Quantum Mechanics II	
PHYSICS 234	Advanced Topics in Quantum Mechanics	
PHYSICS 330	Quantum Field Theory I	
PHYSICS 331	Quantum Field Theory II	
PHYSICS 332	Quantum Field Theory III	
Directed Studies		
APPPHYS 290	Directed Studies in Applied Physics	
1-unit Seminar Courses		
Examples of suitable courses include		
EE 222	Applied Quantum Mechanics I	3
EE 223	Applied Quantum Mechanics II	3
EE 236A	Modern Optics	3
EE 236C	Lasers	3
EE 332	Laser Dynamics	3
EE 346	Introduction to Nonlinear Optics	3
PHYSICS 372	Condensed Matter Theory I	3
PHYSICS 373	Condensed Matter Theory II	3

1. Courses in Physics and Mathematics to overcome deficiencies, if any, in undergraduate preparation.
2. Basic graduate courses (letter grade required):
   - 33 units of additional advanced courses in science and/or engineering. May be any combination of APPPHYS 290 Directed Studies in Applied Physics, any 1-unit course, and regular courses. At least 18 of these 33 units must be taken for a letter grade. 15 of these 18 units must be at the 200-level or above. Only 6 units below the 200-level are permitted without approval by the Applied Physics Graduate Study Committee.
3. A final overall grade point average (GPA) of 3.0 (B) is required for courses used to fulfill degree requirements.

There are no department nor University examinations. There is no thesis component. If a student is admitted to the M.S. program only, but later wishes to change to the Ph.D. program, the student must re-apply through the admissions portal.

Coterminal Master of Science in Applied and Engineering Physics

Stanford undergraduates, regardless of undergraduate major, who are interested in a M.S. degree at the intersection of applied physics and engineering may choose to apply for the coterminal Master of Science program in Applied and Engineering Physics. The program is designed to be completed in the fifth year at Stanford. Students with accelerated undergraduate programs may be able to complete their B.S. and coterminal M.S. in four years.

Application and Admission

Undergraduates must be admitted to the program and enrolled as a graduate student for at least one quarter prior to B.S. conferral. Applications are due on the last day of class of the Spring Quarter (June 10, 2020) for Autumn 2020 matriculation and at least four weeks before the last day of class in the previous quarter for Winter or Spring matriculation (October 20, 2020 for Winter matriculation, February 19, 2021 for Spring matriculation, and June 4, 2021 for Autumn 2021 matriculation). All application materials must be submitted directly to the Applied Physics department office by the deadlines. To apply for admission to the Applied and Engineering Physics coterminal M.S. program, students must submit the coterminal application which consists of the following:

- Application for Admission to Coterminal Master's Program (https://registrar.stanford.edu/students/coterminal-degree-programs/applying-coterm/)
- Statement of Purpose
- Unofficial Transcript
- Two Letters of Recommendation from members of the Stanford faculty

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Program Requirements

Coterminal M.S. students are required to take 45 units of course work during their graduate career. Of these 45 units, the following are required.

		Units
Four Breadth Courses (required)		
APPPHYS 201	Electrons and Photons	4
APPPHYS 203	Atoms, Fields and Photons	4
APPPHYS 204	Quantum Materials	4
APPPHYS 205	Introduction to Biophysics	4
Three Engineering Depth Courses		**9**
At least one must be at the 300 level and the other courses must be at the 200 level or above to provide depth in one area. To be approved by the Applied Physics academic adviser.		
One Laboratory or Methods Course		**3-4**
APPPHYS 207	Laboratory Electronics	
APPPHYS 208	Laboratory Electronics	
APPPHYS 215	Numerical Methods for Physicists and Engineers	
APPPHYS 217	Estimation and Control Methods for Applied Physics (by arrangement with the instructor)	
APPPHYS 232	Advanced Imaging Lab in Biophysics	
EE 234	Photonics Laboratory	
EE 251	High-Frequency Circuit Design Laboratory	
EE 312	Integrated Circuit Fabrication Laboratory	
ENGR 341	Micro/Nano Systems Design and Fabrication	
ENGR 342	MEMS Laboratory II	
MATSCI 322	Transmission Electron Microscopy Laboratory	
MATSCI 331	Atom-based computational methods for materials	
Seminar [1]		**3**
Examples of suitable seminars include:		
APPPHYS 470	Condensed Matter Seminar	
APPPHYS 483	Optics and Electronics Seminar	
BIOPHYS 250	Seminar in Biophysics	
EE 380	Colloquium on Computer Systems	
MATSCI 230	Materials Science Colloquium	
Approved Technical Electives [2]		**6-12**
6 units minimum that brings up the total units to 45		
Total Units		**45**

[1] The seminar requirement can be fulfilled by either (i) taking one formal seminar course for credit each term, and/or (ii) enrolling in APPPHYS 290 and attending a minimum of eight informal talks or formal research seminars during each of the three terms. Students enrolling in APPPHYS 290 must submit with their final M.S. program proposal a list of the eight talks/seminars with a paragraph describing the content, signed by their academic adviser.

[2] These include APPPHYS, CS, CME, EE, ME, BIOE, MATSCI, PHYSICS courses (see http://www.stanford.edu/dept/app-physics/cgi-bin/academic-programs/) as well as those courses that are formally approved by the Applied Physics Graduate Studies Committee through petition.

Any request for a course transfer from the undergraduate career is subject to approval of the undergraduate and graduate departments.

Doctor of Philosophy in Applied Physics

The University's basic requirements for the Ph.D. including residency, dissertation, and examinations are discussed in the "Graduate Degrees (p. 65)" section of this bulletin. The deadline for the 2021-22 admissions is December 15, 2020. Joint applicants for the Knight-Hennessy Scholars Program (http://knight-hennessy.stanford.edu/) must submit their Knight-Hennessy Scholars application by October 14, 2020 by 1:00pm Pacific Time and Applied Physics application by December 15, 2020. The program leading to a Ph.D. in Applied Physics consists of course work, research, qualifying for Ph.D. candidacy, a research progress report, a University oral examination, and a dissertation as follows:

1. *Course Work:*

		Units
Statistical Physics		**3-4**
Select one of the following: [1]		
APPPHYS 217	Estimation and Control Methods for Applied Physics (by arrangement with the instructor)	
APPPHYS 223	Stochastic and Nonlinear Dynamics	
PHYSICS 212	Statistical Mechanics	
Electrodynamics [1]		**3-4**
Select one of the following: [1]		
APPPHYS 201	Electrons and Photons	
PHYSICS 220	Classical Electrodynamics	
Quantum Mechanics		**3**
Select one of the following: [1]		
APPPHYS 203	Atoms, Fields and Photons	
APPPHYS 204	Quantum Materials	
EE 222	Applied Quantum Mechanics I	
EE 223	Applied Quantum Mechanics II	
PHYSICS 230	Graduate Quantum Mechanics I	
PHYSICS 231	Graduate Quantum Mechanics II	
PHYSICS 234	Advanced Topics in Quantum Mechanics	
PHYSICS 330	Quantum Field Theory I	
PHYSICS 331	Quantum Field Theory II	
PHYSICS 332	Quantum Field Theory III	
Laboratory		**3-4**
Select one of the following: [2]		
APPPHYS 207	Laboratory Electronics	
APPPHYS 208	Laboratory Electronics	
APPPHYS 232	Advanced Imaging Lab in Biophysics	
BIOE 370	Microfluidic Device Laboratory	
EE 234	Photonics Laboratory	
EE 235	Analytical Methods in Biotechnology	
EE 312	Integrated Circuit Fabrication Laboratory	
MATSCI 171	Energy Materials Laboratory	
MATSCI 172	X-Ray Diffraction Laboratory	
MATSCI 173	Mechanical Behavior Laboratory	
PHYSICS 301	Astrophysics Laboratory	

[1] Additional courses to fulfill this requirement are being reviewed by the department curriculum committee and will be added here when they have been approved.

[2] Students who took APPPHYS 304 or APPPHYS 305 in previous years may also count these courses towards this requirement.

   a. Courses in Physics and Mathematics to overcome deficiencies, if any, in undergraduate preparation.
   b. *Basic graduate courses:* These requirements may be totally or partly satisfied with equivalent courses taken elsewhere, pending the approval of the graduate study committee. Letter grades required for all courses.
   c. 18 units of additional advanced courses in science and/or engineering. At least one course in each of two areas other than those of the student's research specialization is required. Only 3 units at the 300 or above level may be taken on a satisfactory/no credit basis. Units from APPPHYS 290, APPPHYS 390, and any 1-unit courses do not count towards this requirement. Examples of suitable courses include:

		Units
EE 222	Applied Quantum Mechanics I	3
EE 223	Applied Quantum Mechanics II	3
EE 236A	Modern Optics	3
EE 236C	Lasers	3
EE 332	Laser Dynamics	3
EE 346	Introduction to Nonlinear Optics	3
PHYSICS 372	Condensed Matter Theory I	3
PHYSICS 373	Condensed Matter Theory II	3

   d. Additional units of courses as needed to meet the minimum residency requirement of 135. Directed study and research units as well as 1-unit seminar courses can be included.
   e. A final average overall grade point average (GPA) of 3.0 (B) is required for courses used to fulfill degree requirements.
   f. Students are normally expected to complete the specified course requirements by the end of their third year of graduate study.
2. *Research:* may be conducted in a science/engineering field under the supervision of a member of the Applied Physics faculty or appropriate faculty from other departments. If the primary adviser is from a department other than Applied Physics, the student must appoint a co-adviser from the Applied Physics department.
3. *Ph.D. Candidacy:* satisfactory progress in academic and research work, together with passing the Ph.D. candidacy qualifying examination, qualifies the student to apply for Ph.D. candidacy, and must be completed before the third year of graduate registration. The examination consists of a seminar on a suitable subject delivered by the student before a committee consisting of the chair (who is from the graduate studies committee), a faculty member from outside the department chosen by the student, and the third member is from the AP faculty (courtesy appointment is okay).
4. *Research Progress Report:* normally before the end of the Winter Quarter of the fourth year of enrollment in graduate study at Stanford, the student arranges to give an oral research progress report, which could be last up to two hours.

5. *University Ph.D. Oral Examination*: consists of a public seminar in defense of the dissertation, followed by private questioning of the candidate by the University examining committee.
6. *Dissertation:* must be approved and signed by the Ph.D. reading committee.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The Department of Applied Physics counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B' or better level.

Graduate Advising Expectations

The Department of Applied Physics is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

In addition, the Faculty Candidacy Chair, Professor Philip Bucksbaum, is available for consultation during the academic year by email and during office hours. The Applied Physics student services office is also an important part of the advising team. Staff in the office inform students and advisors about University and department requirements, procedures, and opportunities, and maintain the official records of advising assignments and approvals.

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Master of Science Advising

At the start of graduate study, each student is assigned a master's program advisor: a member of our faculty who provides guidance in course selection, course planning, and in exploring short and long term academic opportunities and professional pathways. The program advisor serves as the first resource for consultation and advice about a student's academic program. Usually, the same faculty member serves as program advisor for the duration of master's study. In rare instances, a formal advisor change request may be considered. See the Applied Physics student services office for additional information on this process.

Ph.D. Advising

Academic advisors are assigned to incoming first year students by the graduate study committee based on their interest of studies. Faculty academic advisors guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways. Each individual program, designed by the student in consultation with the academic advisor, should represent a strong and cohesive program reflecting the student's major field of interest. Based on the research interest, students and research advisors mutually agree to work on the research together and establish a collaborative relationship. When the research advisor is from outside the Applied Physics department, the student must also identify a co-advisor from departmental primary faculty to provide guidance on departmental requirements and opportunities.

Emeriti: (Professors) Malcolm R. Beasley, Arthur Bienenstock, Sebastian Doniach, Alexander L. Fetter, Theodore H. Geballe, Stephen E. Harris, Walter A. Harrison, Peter A. Sturrock, Yoshihisa Yamamoto; (Professors, Research) Helmut Wiedemann, Herman Winick; (Courtesy) Douglas D. Osheroff

Chair: Martin M. Fejer

Chair of Graduate Studies Committee: Philip H. Bucksbaum

Professors: Steven M. Block, Philip H. Bucksbaum, Robert L. Byer, Martin M. Fejer, Daniel S. Fisher, Ian R. Fisher, Tony F. Heinz, Harold Y. Hwang, Aharon Kapitulnik, Mark A. Kasevich, Young S. Lee, Hideo Mabuchi, Kathryn A. Moler, Vahé Petrosian, Stephen R. Quake, Zhi-Xun Shen, Yuri Suzuki

Associate Professors: Benjamin L. Lev, David A. Reis, Mark J. Schnitzer

Assistant Professors: Surya Ganguli, Amir H. Safavi-Naeini, Benjamin Good

Professor (Research): Michel J-F. Digonnet

Courtesy Professors: Mark L. Brongersma, Bruce M. Clemens, Shanhui Fan, David Goldhaber-Gordon, James S. Harris, Lambertus Hesselink, David A. B. Miller, W. E. Moerner, Jelena Vuckovic

Courtesy Associate Professors: Willliam J. Greenleaf, Zhirong Huang, Andrew J. Spakowitz

Adjunct Professors: Thomas M. Baer, Raymond G. Beausoleil, John D. Fox, Richard M. Martin

Courses

APPPHYS 61. Science as a Creative Process. 4 Units.
What is the process of science, and why does creativity matter? We'll delve deeply into the applicability of science in addressing a vast range of real-world problems. This course is designed to teach the scientific method as it's actually practiced by working scientists. It will cover how to ask a well-posed question, how to design a good experiment, how to collect and interpret quantitative data, how to recover from error, and how to communicate findings. Facts matter! Course topics will include experimental design, statistics and statistical significance, formulating appropriate controls, modeling, peer review, and more. The course will incorporate a significant hands-on component featuring device fabrication, testing, and measurement. Among other "Dorm Science" activities, we'll be distributing Arduino microcontroller kits and electronic sensors, then use these items, along with other materials, to complete a variety of group and individual projects outside the classroom. The final course assignment will be to develop and write a scientific grant proposal to test a student-selected myth or scientific controversy. Although helpful, no prior experience with electronics or computer programming is required. Recommended for freshmen.
Same as: BIO 61

APPPHYS 77N. Functional Materials and Devices. 3 Units.
Preference to freshmen. Exploration via case studies how functional materials have been developed and incorporated into modern devices. Particular emphasis is on magnetic and dielectric materials and devices. Recommended: high school physics course including electricity and magnetism.

APPPHYS 79N. Energy Options for the 21st Century. 3 Units.
Preference to frosh. Choices for meeting the future energy needs of the U.S. and the world. Basic physics of energy sources, technologies that might be employed, and related public policy issues. Trade-offs and societal impacts of different energy sources. Policy options for making rational choices for a sustainable world energy economy.

APPPHYS 100. The Questions of Clay: Craft, Creativity and Scientific Process. 5 Units.
Students will create individual studio portfolios of ceramic work and pursue technical investigations of clay properties and the firing process using modern scientific equipment. Emphasis on development of creative process; parallels between science and traditional craft; integration of creative expression with scientific method and analysis. Prior ceramics experience desirable but not necessary. Limited enrollment. Prerequisites: any level of background in physics, Instructor permission.
Same as: ARTSINST 100

APPPHYS 100B. The Questions of Cloth: Weaving, Pattern Complexity and Structures of Fabric. 4 Units.
Students will learn to weave on a table loom while examining textile structures from historic, artistic and scientific perspectives. Emphasis on analyzing patterns and structures generated by weaving, with elementary introductions to information-scientific notions of algorithmic complexity, image compression, and source coding. This class is primarily intended for non-STEM majors with little or no prior experience in working with textiles. Limited enrollment. Prerequisites: Instructor permission.
Same as: ARTSINST 100B

APPPHYS 100Q. INDIGO. 3 Units.
Preference to sophomores. Indigo as a plant, biomolecule, dye, ancient craft material, and organic semiconductor; the interest of natural dyes for both biomimetic engineering and indigenous artistic practices. Students will plant and tend an indigo crop, harvest and process indigo leaves for dyestuffs, and dye textiles using an organic vat process. Lectures, readings and discussions will focus on the biochemistry and physics of indigo dye, traditional indigo textile arts, environmental impacts of industrial-scale indigo dyeing of denim, roles of indigo in upcycling, craft-washing, and the aesthetics of indigo in western and non-western cultural frames.

APPPHYS 188. Matter and Mattering: Transdisciplinary Thinking about Things. 4-5 Units.
Things sit at the nexus of cross-cutting heterogeneous processes; tracing the entanglements of any prominent thing or class of things demands a transdisciplinary approach that recruits expertise from the natural sciences, social sciences and humanities. For example, carbon is a key factor in global warming for reasons that are as much socio-historical as bio-physical, and we could not begin to sketch the full significance of carbon without considering such diverse frames of reference. Our growing appreciation in the social sciences and humanities of the agency, polyvalence and catalytic role of things has given rise to The New Materialist and Post-Humanist movements, which in turn raise questions about intra-action and observational perspective that are echoed in the modern physical and life sciences. In this class we will explore these theoretical convergences in considering themes such as `things-in-themselves¿, networks and open systems, assemblages and entanglements. We will also examine specific examples such as oil, metal (guns), dams, viruses, electricity, mushrooms; each thing will be explored both in terms of its social and ethical entanglements and in terms of its material properties and affordances. There will also be hands-on encounters with objects in labs and a couple of local field trips. The key question throughout will be `why and how does matter matter in society today?.
Same as: ANTHRO 188, ANTHRO 288, ARCHLGY 188

APPPHYS 189. Physical Analysis of Artworks. 3 Units.
Students explore the use of Stanford Nano Shared Facilities (SNSF) for physical analysis of material samples of interest for art conservation, technical art history and archaeology. Weekly SNSF demonstrations will be supplemented by lectures on intellectual context by Stanford faculty/staff and conservators from the Fine Arts Museums of San Francisco (FAMSF). Students will complete the SNSF training sequence for electron microscopy and undertake analysis projects derived from ongoing conservation efforts at FAMSF.".

APPPHYS 201. Electrons and Photons. 4 Units.
Applied Physics Core course appropriate for graduate students and advanced undergraduate students with prior knowledge of elementary quantum mechanics, electricity and magnetism, and special relativity. Interaction of electrons with intense electromagnetic fields from microwaves to x- ray, including electron accelerators, x-ray lasers and synchrotron light sources, attosecond laser-atom interactions, and x-ray matter interactions. Mechanisms of radiation, free-electron lasing, and advanced techniques for generating ultrashort brilliant pulses. Characterization of electronic properties of advanced materials, prospects for single-molecule structure determination using x-ray lasers, and imaging attosecond molecular dynamics.
Same as: PHOTON 201

APPPHYS 203. Atoms, Fields and Photons. 4 Units.
Applied Physics Core course appropriate for graduate students and advanced undergraduate students with prior knowledge of elementary quantum mechanics, electricity and magnetism, and ordinary differential equations. Structure of single- and multi-electron atoms and molecules, and cold collisions. Phenomenology and quantitative modeling of atoms in strong fields, with modern applications. Introduction to quantum optical theory of atom-photon interactions, including quantum trajectory theory, mechanical effects of light on atoms, and fundamentals of laser spectroscopy and coherent control.

APPPHYS 204. Quantum Materials. 4 Units.
Applied Physics Core course appropriate for graduate students and advanced undergraduate students with prior knowledge of elementary quantum mechanics. Introduction to materials and topics of current interest. Topics include superconductivity, magnetism, charge and spin density waves, frustration, classical and quantum phase transitions, multiferroics, and interfaces. Prerequisite: elementary course in quantum mechanics.

APPPHYS 205. Introduction to Biophysics. 3-4 Units.
Core course appropriate for advanced undergraduate students and graduate students with prior knowledge of calculus and a college physics course. Introduction to how physical principles offer insights into modern biology, with regard to the structural, dynamical, and functional organization of biological systems. Topics include the roles of free energy, diffusion, electromotive forces, non-equilibrium dynamics, and information in fundamental biological processes.
Same as: BIO 126, BIO 226

APPPHYS 207. Laboratory Electronics. 4 Units.
Lecture/lab emphasizing analog and digital electronics for lab research. RC and diode circuits. Transistors. Feedback and operational amplifiers. Active filters and circuits. Pulsed circuits, voltage regulators, and power circuits. Precision circuits, low-noise measurement, and noise reduction techniques. Circuit simulation tools. Analog signal processing techniques and modulation/demodulation. Principles of synchronous detection and applications of lock-in amplifiers. Common laboratory measurements and techniques illustrated via topical applications. Prerequisites: undergraduate device and circuit exposure.

APPPHYS 208. Laboratory Electronics. 4 Units.
Lecture/lab emphasizing analog and digital electronics for lab research. Continuation of APPPHYS 207 with emphasis on applications of digital techniques. Combinatorial and synchronous digital circuits. Design using programmable logic. Analog/digital conversion. Microprocessors and real time programming, concepts and methods of digital signal processing techniques. Current lab interface protocols. Techniques commonly used for lab measurements. Development of student lab projects during the last three weeks. Prerequisites: undergraduate device and circuit exposure. Recommended: previous enrollment in APPPHYS 207.

APPPHYS 215. Numerical Methods for Physicists and Engineers. 4 Units.
Fundamentals of numerical methods applied to physical systems. Derivatives and integrals; interpolation; quadrature; FFT; singular value decomposition; optimization; linear and nonlinear least squares fitting; error estimation; deterministic and stochastic differential equations; Monte Carlo methods. Lectures will be accompanied by guided project work enabling each student to make rapid progress on a project of relevance to their interests.

APPPHYS 217. Estimation and Control Methods for Applied Physics. 4 Units.
Recursive filtering, parameter estimation, and feedback control methods based on linear and nonlinear state-space modeling. Topics in: dynamical systems theory; practical overview of stochastic differential equations; model reduction; and tradeoffs among performance, complexity, and robustness. Numerical implementations in MATLAB. Contemporary applications in systems biology and quantum precision measurement. Prerequisites: linear algebra and ordinary differential equations.

APPPHYS 219. Solid State Physics Problems in Energy Technology. 3 Units.
Technology issues for a secure energy future; role of solid state physics in energy technologies. Topics include the physics principles behind future technologies related to solar energy and solar cells, solid state lighting, superconductivity, solid state fuel cells and batteries, electrical energy storage, materials under extreme condition, nanomaterials.

APPPHYS 222. Principles of X-ray Scattering. 4 Units.
Provides a fundamental understanding of x-ray scattering and diffraction. Combines pedagogy with modern experimental methods for obtaining atomic-scale structural information on synchrotron and free-electon laser-based facilities. Topics include Fourier transforms, reciprocal space; scattering in the first Born approximation, comparison of x-ray, neutron and electron interactions with matter, kinematic theory of diffraction; dynamical theory of diffraction from perfect crystals, crystal optics, diffuse scattering from imperfect crystals, inelastic x-ray scattering in time and space, x-ray photon correlation spectroscopy. Laboratory experiments at the Stanford Synchrotron Radiation Lightsource.
Same as: PHOTON 222

APPPHYS 223. Stochastic and Nonlinear Dynamics. 3 Units.
Theoretical analysis of dynamical processes: dynamical systems, stochastic processes, and spatiotemporal dynamics. Motivations and applications from biology and physics. Emphasis is on methods including qualitative approaches, asymptotics, and multiple scale analysis. Prerequisites: ordinary and partial differential equations, complex analysis, and probability or statistical physics.
Same as: BIO 223, BIOE 213, PHYSICS 223

APPPHYS 225. Probability and Quantum Mechanics. 3 Units.
Structure of quantum theory emphasizing states, measurements, and probabilistic modeling. Generalized quantum measurement theory; parallels between classical and quantum probability; conditional expectation in the Schrödinger and Heisenberg pictures; covariance with respect to symmetry groups; reference frames and super-selection rules. Classical versus quantum correlations; nonlocal aspects of quantum probability; axiomatic approaches to interpretation. Prerequisites: undergraduate quantum mechanics, linear algebra, and basic probability and statistics.

APPPHYS 228. Quantum Hardware. 4 Units.
Review of the basics of quantum information. Quantum optics: photon counting, detection, and amplification. Quantum noise in parametric processes. Quantum sensing: standard quantum limits, squeezed light, and spin squeezing. Gaussian quantum information. Quantum theory of electric circuits, electromagnetic components, and nanomechanical devices. Integrated quantum systems: superconductivity and Josephson qubits, measurement-based quantum computing with photons, spin qubits, topological systems. Prerequisites: PHYSICS 134/234 and APPPHYS 203.

APPPHYS 232. Advanced Imaging Lab in Biophysics. 4 Units.
Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, basic cell biology, and consent of instructor.
Same as: BIO 132, BIO 232, BIOPHYS 232, GENE 232

APPPHYS 236. Biology by the Numbers. 3 Units.
For PhD students and advanced undergraduates. Students will develop skills in quantitative reasoning over a wide range of biological problems. Topics: biological size scales ranging from proteins to ecosystems; biological times time scales ranging from enzymatic catalysis and DNA replication to evolution; biological energy, motion and force from molecular to organismic scales; mechanisms of environmental sensing ranging from bacterial chemotaxis to vision.
Same as: BIOC 236

APPPHYS 237. Quantitative Evolutionary Dynamics and Genomics. 3 Units.
The genomics revolution has fueled a renewed push to model evolutionary processes in quantitative terms. This course will provide an introduction to quantitative evolutionary modeling through the lens of statistical physics. Topics will range from the foundations of theoretical population genetics to experimental evolution of laboratory microbes. Course work will involve a mixture of pencil-and-paper math, writing basic computer simulations, and downloading and manipulating DNA sequence data from published datasets. This course is intended for upper level physics and math students with no biology background, as well as biology students who are comfortable with differential equations and probability.
Same as: BIO 251

APPPHYS 270. Magnetism and Long Range Order in Solids. 3 Units.
Cooperative effects in solids. Topics include the origin of magnetism in solids, crystal electric field effects and anisotropy, exchange, phase transitions and long-range order, ferromagnetism, antiferromagnetism, metamagnetism, density waves and superconductivity. Emphasis is on archetypal materials. Prerequisite: PHYSICS 172 or MATSCI 209, or equivalent introductory condensed matter physics course.

APPPHYS 272. Solid State Physics. 3 Units.
Introduction to the properties of solids. Crystal structures and bonding in materials. Momentum-space analysis and diffraction probes. Lattice dynamics, phonon theory and measurements, thermal properties. Electronic structure theory, classical and quantum; free, nearly-free, and tight-binding limits. Electron dynamics and basic transport properties; quantum oscillations. Properties and applications of semiconductors. Reduced-dimensional systems. Undergraduates should register for PHYSICS 172 and graduate students for APPPHYS 272. Prerequisites: PHYSICS 170 and PHYSICS 171, or equivalents.
Same as: PHYSICS 172

APPPHYS 273. Solid State Physics II. 3 Units.
Introduction to the many-body aspects of crystalline solids. Second quantization of phonons, anharmonic effects, polaritons, and scattering theory. Second quantization of Fermi fields. Electrons in the Hartree-Fock and random phase approximation; electron screening and plasmons. Magnetic exchange interactions. Electron-phonon interaction in ionic/covalent semiconductors and metals; effective attractive electron-electron interactions, Cooper pairing, and BCS description of the superconducting state. Prerequisite: APPPHYS 272 or PHYSICS 172.

APPPHYS 280. Phenomenology of Superconductors. 3 Units.
Phenomenology of superconductivity viewed as a macroscopic quantum phenomenon. Topics include the superconducting pair wave function, London and Ginzburg-Landau theories, the Josephson effect, type I type II superconductivity, and the response of superconductors to currents, magnetic fields, and RF electromagnetic radiation. Introduction to thermal fluctuation effects in superconductors and quantum superconductivity.

APPPHYS 282. Quantum Gases. 3 Units.
Introduction to the physics of quantum gases and their use in quantum simulation and computation. Topics in modern atomic physics and quantum optics will be covered, including laser cooling and trapping, ultracold collisions, optical lattices, ion traps, cavity QED, quantum phase transitions in quantum gases and lattices, BEC and quantum degenerate Fermi gases, 1D and 2D quantum gases, dipolar gases, and quantum nonequilibrium dynamics and phase transitions. Prerequisites: undergraduate quantum and statistical mechanics courses. Applied Physics 203 strongly recommended but not required.
Same as: PHYSICS 182, PHYSICS 282

APPPHYS 290. Directed Studies in Applied Physics. 1-15 Unit.
Special studies under the direction of a faculty member for which academic credit may properly be allowed. May include lab work or directed reading.

APPPHYS 291. Practical Training. 1-3 Unit.
Opportunity for practical training in industrial labs. Arranged by student with research adviser's approval. Summary of activities required.

APPPHYS 293. Theoretical Neuroscience. 3 Units.
Survey of advances in the theory of neural networks, mainly (but not solely) focused on results of relevance to theoretical neuroscience.Synthesizing a variety of recent advances that potentially constitute the outlines of a theory for understanding when a given neural network architecture will work well on various classes of modern recognition and classification tasks, both from a representational expressivity and a learning efficiency point of view. Discussion of results in the neurally-plausible approximation of back propagation, theory of spiking neural networks, the relationship between network and task dimensionality, and network state coarse-graining. Exploration of estimation theory for various typical methods of mapping neural network models to neuroscience data, surveying and analyzing recent approaches from both sensory and motor areas in a variety of species. Prerequisites: calculus, linear algebra, and basic probability theory, or consent of instructor.
Same as: PSYCH 242

APPPHYS 294. Cellular Biophysics. 3 Units.
Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.
Same as: BIO 294, BIOPHYS 294

APPPHYS 302. Experimental Techniques in Condensed Matter Physics. 3 Units.
Cryogenics; low signal measurements and noise analysis; data collection and analysis; examples of current experiments. Prerequisites: PHYSICS 170, PHYSICS 171, and PHYSICS 172, or equivalents.

APPPHYS 315. Methods in Computational Biology. 3 Units.
Methods of bioinformatics and biomolecular modeling from the standpoint of biophysical chemistry. Methods of genome analysis; cluster analysis, phylogenetic trees, microarrays; protein, RNA and DNA structure and dynamics, structural and functional homology; protein-protein interactions and cellular networks; molecular dynamics methods using massively parallel algorithms.
Same as: BIOPHYS 315

APPPHYS 322. Advanced Topics in x-ray scattering. 3 Units.
This course covers advanced topics in x-ray scattering including: diffuse scattering from static and dynamic disorder such as from defects or phonons; inelastic methods such as x-ray Raman and Compton scattering for measuring electronic structure and elementary excitations; and inelastic scattering in the time and frequency domain. Course combines lectures on basic principles with a review of foundational and current literature. May be repeat for credit.
Same as: PHOTON 322

APPPHYS 324. Introduction to Accelerator Physics. 3 Units.
Physics of particle beams in linear and circular accelerators. Transverse and longitudinal beam dynamics, equilibrium emittances in electron storage rings, high-brightness electron sources, RF acceleration and emittance preservation, bunch compression and associated collective effects, accelerator physics design for x-ray FELs, advanced accelerator concepts.

APPPHYS 325. Synchrotron Radiation and Free Electron Lasers: Principles and Applications.. 3 Units.
Synchrotron radiation sources for scientific exploration, and x-ray FELs for studies of ultrafast processes at the atomic scale. Fundamental concepts in electron and photon beams, bending magnet and undulator radiation, one-dimensional and three-dimensional FEL theory and simulations, self-amplified spontaneous emission, seeding and other improvement schemes, x-ray methodology, techniques and instrumentation for the study of ultrafast phenomena. Includes selected laboratory tours of the Linac Coherent Light Source and/or Stanford Synchrotron Radiation Lightsource at SLAC. Prerequisite: graduate-level electrodynamics, or consent of instructor.
Same as: PHOTON 325

APPPHYS 345. Advanced Numerical Methods for Data Analysis and Simulation. 3 Units.
Gaussian and unit sphere quadrature, singular value decomposition and principal component analysis, Krylov methods, non-linear fitting and super-resolution, independent component analysis, 3d reconstruction, "shrink-wrap", hidden Markov methods, support vector machines, simulated annealing, molecular dynamics and parallel tempering, Markov state methods, Monte Carlo methods for constrained systems.

APPPHYS 376. Literature of Cavity QED and Cavity Optomechanics. 3 Units.
Cavity quantum electrodynamics and optomechanics in modern quantum optics, photonics and quantum engineering. Review of basic concepts and survey of key literature in seminar format. May be repeat for credit.

APPPHYS 383. Introduction to Atomic Processes. 3 Units.
Atomic spectroscopy, matrix elements using the Coulomb approximation, summary of Racah algebra, oscillator and line strengths, Einstein A coefficients. Radiative processes, Hamiltonian for two- and three-state systems, single- and multi-photon processes, linear and nonlinear susceptibilities, density matrix, brightness, detailed balance, and electromagnetically induced transparency. Inelastic collisions in the impact approximation, interaction potentials, Landau-Zener formulation. Continuum processes, Saha equilibrium, autoionization, and recombination.

APPPHYS 384. Advanced Topics in AMO Physics. 3 Units.
This course will develop the subject of Strong-Field QED. Topics to be covered include: The structure of the quantum vacuum;relativistic laser-vacuum interactions;linear and non-linear Compton and Breit-Wheeler pair-production processes;vacuum polarization and vacuum tunneling; the radiation reaction problem in strong fields;applications in astrophysics and cosmology. The course will also cover experimental methods, including petawatt lasers with focused intensities sufficient to destabilize the vacuum. Prerequisites: familiarity with quantum mechanics, electrodynamics, and special relativity.

APPPHYS 390. Dissertation Research. 1-15 Unit.
.

APPPHYS 392. Topics in Molecular Biophysics: Biophysics of Functional RNA (BIOPHYS 392). 3 Units.
Survey of methods used to relate RNA sequences to the structure and function of transcribed RNA molecules. Computation of contributions of the counter-ion cloud to the dependence of free energy on conformation of the folded RNA. The relation of structure to function of ribozymes, riboswitches, and the formation of ribosomal proteins.
Same as: BIOPHYS 392

APPPHYS 393. Biophysics of Solvation. 3 Units.
Statistical mechanics of water-protein or water-DNA (or RNA) interactions; effects of coulomb forces on molecular hydration shells and ion clouds; limitations of the Poisson-Boltzmann equations; DNA collapse, DNA-protein interactions; structure-function relationships in ion channels.
Same as: BIOPHYS 393

APPPHYS 453A. Collective Instabilities in Accelerators. 3 Units.
A beam in an accelerator can become unstable if its intensity is too high. Topics include the physical mechanism causing these instabilities; establishing the framework by introducing the concepts of wakefield and impedance; various instability mechanisms with a special emphasis on the underlying physical principles; new types of instabilities encountered in modern high performance accelerators such as the fast ion and the electron cloud instabilities. Course may be repeated when a different course is offered as a Special Topics.
Same as: PHOTON 453A

APPPHYS 470. Condensed Matter Seminar. 1 Unit.
Current research and literature; offered by faculty, students, and outside specialists. May be repeated for credit.

APPPHYS 483. Optics and Electronics Seminar. 1 Unit.
Current research topics in lasers, quantum electronics, optics, and photonics by faculty, students, and invited outside speakers. May be repeated for credit.

APPPHYS 802. TGR PhD Dissertation. 0 Units.
.

ARCHAEOLOGY

Courses offered by the Archaeology Program are listed under the subject code ARCHLGY on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=ARCHLGY&filter-catalognumber-ARCHLGY=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=ARCHLGY&filter-catalognumber-ARCHLGY=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=ARCHLGY&filter-catalognumber-ARCHLGY=on).

Archaeology is the study of the past through its material remains that survive into the present. Archaeology is a discipline that offers direct access to the experiences of a wide range of people in numerous cultures across the globe. Increasingly, archaeology bridges past and present societies through the study of the human heritage and its role in contemporary societies. Stanford's Archaeology Program provides students with an interdisciplinary approach to the material remains of past societies, drawing in equal parts on the humanities, social sciences, and natural sciences.

The Archaeology curriculum draws on faculty from a wide range of University departments and schools. To complete the requirements for the major, students must take courses from the offerings of the program and from the listings of other University departments. The program culminates in a Bachelor of Arts (B.A.) in Archaeology.

Mission of the Undergraduate Program in Archaeology

The mission of the undergraduate program in Archaeology is to provide students with a broad and rigorous introduction to the analysis of the material culture of past societies, drawing on the questions and methods of the humanities, social sciences, and natural sciences. Students in the major learn to relate these analyses to the practice of archaeology in the contemporary world. The program seeks to help each student achieve a high level of understanding through concentrated study of a particular research area. Courses in the major complete a comprehensive curriculum that draws on faculty from a wide range of University departments and programs. Archaeology majors are well prepared for advanced training in professional schools such as education, law, and journalism and, depending upon their choice of upper-division course, graduate programs in the humanities, social sciences, and natural sciences.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to:

1. demonstrate an understanding of core knowledge of the history of thought and basic theoretical foundations in archaeology.
2. write clearly and persuasively, communicating ideas about archaeology to multiple audiences and different communities, from the scholarly and to the general public in a variety of formats.
3. learn about the development of archaeology as a discipline and the major trends that have influenced thinking and writing about archaeology today.
4. demonstrate their mastery of the broad historical and theoretical trends in the field through critique of research within archaeology.

Bachelor of Arts in Archaeology

The Department of Archaeology offers a Bachelor of Arts in Archaeology. Eligible students may also pursue a Bachelor of Arts with Honors (p. 993). The department also offers a minor in Archaeology (p. 993).

Suggested Preparation for the Major

All majors must complete 65 units with an overall minimum grade of 'C', which must form a coherent program of study and be approved by the student's faculty advisor and the program director.

Students who plan to pursue graduate work in Archaeology should be aware of the admission requirements of the particular departments to which they intend to apply. These vary greatly. Early planning is advisable to guarantee completion of major and graduate school requirements.

How to Declare the Major

To declare a major in Archaeology, students should apply for the B.A. in Archaeology on Axess and contact the student services officer who provides an application form, answers initial questions, and helps the student choose a faculty advisor. Students should declare by the beginning of their junior year.

Degree Requirements

The B.A. in Archaeology requires a minimum of 65 units in the major, with an overall minimum grade of 'C', and no more than 10 units may be taken for pass/no pass credit. The major requirements are divided among four components. A course may only be used once to fulfill a component.

Quantitative skills and computing ability are indispensable to archaeologists. To fulfill the analytical methods and skills requirements, students must take one statistics course, and may choose to fulfill the remainder of the unit requirements with a variety of courses on archaeological skills and methods.

Archaeological skills include archaeological formation processes, botanical analysis, cartography, ceramic analysis, dating methods, faunal analysis, geographic information systems, geology, geophysics, genetics, osteology, remote sensing, soil chemistry, and statistics.

With the approval of the instructor and Archaeology director, undergraduates may fulfill part of this requirement from graduate-level courses (typically courses with catalog numbers of 200 or higher).

Course Requirements

		Units
1. Core Courses [1]		**20**
Must be taken for a letter grade (minimum passing grade of 'B')		
ARCHLGY 1	Introduction to Archaeology (Gateway)	5
ARCHLGY 102	Archaeological Methods (Intermediate)	5
ARCHLGY 103	History of Archaeological Thought (Intermediate)	5
ARCHLGY 107A	Archaeology as a Profession	5
2. Analytical Methods and Skills		**15**
Complete one of the following:		
PSYCH 10/ STATS 60	Introduction to Statistical Methods: Precalculus	
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	

Fulfill the remainder of your methods and skills requirements by choosing from the following courses:

ARCHLGY 21Q	Eight Great Archaeological Sites in Europe	
ARCHLGY 86	Digital Methods for Archaeology and Anthropology	
ARCHLGY 115	The Social life of Human Bones	
ARCHLGY 119	Zooarchaeology: An Introduction to Faunal Remains	
ARCHLGY 124	Archaeology of Food: production, consumption and ritual	
ARCHLGY 125	Archaeological Field Survey Methods	
ARCHLGY 126	Archaeobotany	
ARCHLGY 134	Museum Cultures: Material Representation in the Past and Present	
ANTHRO 175	Human Skeletal Anatomy	
ARCHLGY 104	Digital Methods in Archaeology	
3. Theory [2]		**10**
Topics include archaeological, art-historical, sociocultural, historical, and material culture theory. With the approval of the instructor, undergraduates may fulfill part of this requirement from graduate-level courses (typically courses with catalog numbers of 200 or higher).		
Complete at least 10 units of the following:		
ANTHRO 34	Animals and Us	
ANTHRO 90B	Theory of Cultural and Social Anthropology	
ANTHRO 113	Culture and Epigenetics: Towards A Non-Darwinian Synthesis	
ARCHLGY 151	Ten Things: An Archaeology of Design	
ARCHLGY 156	Design of Cities	
ARCHLGY 130	Senior research seminar for Archaeology majors and minors	
4. Electives		**20**
Courses are arranged around a regional or thematic focus, and therefore, may appear more than once. Students have the option of taking courses around a theme or concentration, and are encouraged to do so by consulting with their faculty adviser(s) to design a course plan.		
Courses other than those on this list can be used to fulfill this requirement with prior approval of the student's faculty adviser and program director. With the approval of instructor, undergraduates may fulfill part of this requirement from graduate-level courses, typically courses numbered 200 or higher.		
Complete any of the courses listed below:		
World Archaeology: Mediterranean		
ARCHLGY 81	Introduction to Roman Archaeology	
ARCHLGY 83	Pots, People, and Press: Greek Archaeology in the Media	
ARCHLGY 96	The Secret Lives of Statues from Ancient Egypt to Confederate Monuments	
ARCHLGY 118	Engineering the Roman Empire	
ARCHLGY 145	Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean	
ARCHLGY 165	Roman Gladiators	
CLASSICS 52	Introduction to Roman Archaeology	
World Archaeology: Americas		
ARCHLGY 84	Incas, Spaniards, and Africans: Archaeology of the Kingdom of Peru	
ARCHLGY 102B	Incas and their Ancestors: Peruvian Archaeology	
World Archaeology: Asia		
ARCHLGY 111	Emergence of Chinese Civilization from Caves to Palaces	
ARCHLGY 135	Constructing National History in East Asian Archaeology	
Heritage		
ARCHLGY 95	Monumental Pasts: Cultural Heritage and Politics	
ARCHLGY 135	Constructing National History in East Asian Archaeology	
ARCHLGY 173	Heritage Institutions Inside Out: The Power of Bureaucracies	
Urbanism and Cities		
ARCHLGY 156	Design of Cities	3-5
5. Archaeological Fieldwork		
Students must take part in a Stanford Archaeology Center field project directed by a Stanford faculty member, and enroll in any coursework that is required for participation in the field project. Projects are typically offered during summer months and funding may be provided. In 2019, field schools were located in: Peru, Bosnia, and Italy. The response to COVID-19 may impact field school offerings in 2021.		
6. Collateral Language Requirement		
All Archaeology majors must demonstrate competence in a foreign language beyond the first-year level. Students can meet this requirement by completing a course beyond the first-year level with a grade of 'B' or better, and are encouraged to choose a language that has relevance to their archaeological region or topic of interest. Students may petition to take an introductory-level course in a second language to fulfill this requirement by demonstrating the connection between the language(s) and their research interest(s).		
7. Research and Independent Study		
Students may count up to 5 units of research and independent study toward the Archaeology major.		
Including but not limited to:		
ARCHLGY 190	Archaeology Directed Reading/Independent Study	
ARCHLGY 195	Independent Study/Research	
ARCHLGY 199	Honors Independent Study	
Total Units		**65**

1 ARCHLGY 1 Introduction to Archaeology is recommended as a first course. Many upper-level courses in Archaeology require this course as a prerequisite. Students should normally take the capstone course in their final year of course work in the major.

2 As a note, ARCHLGY 130 Senior research seminar for Archaeology majors and minors is offered to students in their final year of study as either a stand-alone course on designing research projects and writing, or as a touchpoint for students who are launching the writing phase of their honors thesis.

Related Courses

Archaeology is an interdisciplinary program. Students should meet with their advisor about degree requirements and the applicability of courses from other University departments to the Archaeology major or minor. Applicable courses are commonly found in Anthropology (ANTHRO), Classics (CLASSICS), and East Asian Languages and Cultures (EALC), but are not limited to these departments. Students should consult their advisor and the program director for course approvals.

Additional Information

Overseas Studies Courses in Archaeology

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu/) web site or the Bing Overseas Studies

(http://bosp.stanford.edu/) web site. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

Honors Program

The honors program in Archaeology gives qualified majors the chance to work closely with faculty on an individual research project culminating in an honors thesis. Students may begin honors research from a number of starting points, including topics introduced in the core or upper-division courses, independent interests, research on artifacts in Stanford's collections, or fieldwork experiences.

Interested Archaeology majors of junior standing may apply for admission by submitting an honors application form, including a 4-5 page statement of the project, a transcript, and a letter of recommendation from the faculty member supervising the honors thesis to the student services specialist, no later than the end of the fourth week of the Spring Quarter. Archaeology majors are eligible to apply for honors candidacy. The thesis is due in early May of the senior year and is read by the candidate's advisor and a second reader appointed by the undergraduate committee.

return to top of page (p. 991)

Minor in Archaeology

A minor in Archaeology provides an introduction to the study of the material cultures of past societies. It can complement many majors, including but not limited to Anthropology, Applied Physics, Art and Art History, Classics, Earth Systems, Geological and Environmental Sciences, History, Engineering, and Religious Studies.fie

Students must complete the declaration process, including the planning form submission and Axess registration, by the last day of the quarter, two quarters prior to degree conferral; for example, by the last day of Autumn Quarter if Spring graduation is the intended quarter of graduation.

Degree Requirements

To minor in Archaeology, students must complete at least 27 units of relevant course work, including:

		Units
1. Core Program [1]		**10**
Complete the following:		
ARCHLGY 1	Introduction to Archaeology (Gateway Course, Required)	5
Complete one of the following:		
ARCHLGY 103	History of Archaeological Thought	
ARCHLGY 107A	Archaeology as a Profession	
2. Archaeological Skills		**2-5**
Archaeological skills include dating methods, faunal analysis, botanical analysis, ceramic analysis, geology, geophysics, soil chemistry, remote sensing, osteology, genetics, statistics, cartography, and geographic information systems.		
Complete 2-5 units from the following:		
PSYCH 10	Introduction to Statistical Methods: Precalculus	
ECON 102A	Introduction to Statistical Methods (Postcalculus) for Social Scientists	
ARCHLGY 21Q	Eight Great Archaeological Sites in Europe	
ARCHLGY 86	Digital Methods for Archaeology and Anthropology	
ARCHLGY 115	The Social life of Human Bones	
ARCHLGY 119	Zooarchaeology: An Introduction to Faunal Remains	
ARCHLGY 124	Archaeology of Food: production, consumption and ritual	
ARCHLGY 125	Archaeological Field Survey Methods	
ARCHLGY 126	Archaeobotany	
ARCHLGY 134	Museum Cultures: Material Representation in the Past and Present	
ANTHRO 175	Human Skeletal Anatomy	
ARCHLGY 104	Digital Methods in Archaeology	
3. Theory		**5**
Topics include archaeological, art historical, sociocultural, historical, and material culture theory.		
Complete 5 units from the following:		
ANTHRO 34	Animals and Us	
ANTHRO 90B	Theory of Cultural and Social Anthropology	
ANTHRO 113	Culture and Epigenetics: Towards A Non-Darwinian Synthesis	
ARCHLGY 151	Ten Things: An Archaeology of Design	
ARCHLGY 156	Design of Cities	
ARCHLGY 130	Senior research seminar for Archaeology majors and minors	
4. Electives		**10**
Students have the option of taking courses around a theme or concentration, and are encouraged to do so by consulting their faculty advisers to design a course plan.		
Complete 10 units from the following:		
World Archaeology: Mediterranean		
ARCHLGY 96	The Secret Lives of Statues from Ancient Egypt to Confederate Monuments	
ARCHLGY 118	Engineering the Roman Empire	
ARCHLGY 145	Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean	
ARCHLGY 165	Roman Gladiators	
CLASSICS 52	Introduction to Roman Archaeology	
World Archaeology: Americas		
ARCHLGY 84	Incas, Spaniards, and Africans: Archaeology of the Kingdom of Peru	
ARCHLGY 102B	Incas and their Ancestors: Peruvian Archaeology	
ARCHLGY 111B	Muwekma: Landscape Archaeology and the Narratives of California Natives	
ARCHLGY 83	Pots, People, and Press: Greek Archaeology in the Media	
World Archaeology: Asia		
ARCHLGY 111	Emergence of Chinese Civilization from Caves to Palaces	
ARCHLGY 135	Constructing National History in East Asian Archaeology	
Heritage		
ARCHLGY 95	Monumental Pasts: Cultural Heritage and Politics	
ARCHLGY 135	Constructing National History in East Asian Archaeology	
ARCHLGY 173	Heritage Institutions Inside Out: The Power of Bureaucracies	
Urbanism and Cities		
ARCHLGY 156	Design of Cities	3-5
Total Units		**27**

[1] ARCHLGY 1 Introduction to Archaeology is recommended as a first course, and many of the upper-level courses in Archaeology require this course as a prerequisite. Students have the option to take ARCHLGY 103 History of Archaeological Thought or ARCHLGY 107A Archaeology as a Profession to fulfill the rest of the 10 unit core requirement for the minor.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Archaeology Center counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade. The Archaeology Center still requires that any students who pursue an honors thesis complete their thesis with a 'B+' or higher to earn the honors distinction.

Director: Ian Hodder (Anthropology)

Director of Undergraduate Studies: Ian Hodder (Anthropology)

Department Faculty:

Professors: Ian Hodder (Anthropology), Li Liu (East Asian Languages and Cultures, on leave 2019-20), Lynn Meskell (Anthropology), Ian Morris (Classics), Michael Shanks (Classics)

Associate Professors: Giovanna Ceserani (Classics), Jody Maxmin (Art and Art History, Classics), John Rick (Anthropology, emeritus), Jennifer Trimble (Classics), Barbara Voss (Anthropology)

Assistant Professors: Andrew Bauer (Anthropology), Justin Leidwanger (Classics), Krish Seetah (Anthropology)

Academic Staff: Christina Hodge (Academic Curator & Collections Manager), Laura Jones (Campus Archaeologist)

Postdoctoral Fellows: Jiajing Wang, Elisabeth Niklasson, Brendan Weaver, Megan Rhodes Victor

Affiliated Faculty:

Professors: Rob Dunbar (Earth Sciences), Mark Lewis (Chinese Culture, Religious Studies), J. Moldowan (Geological and Environmental Sciences), Amos Nur (Earth Sciences), Peter Vitousek (Earth System Science)

Associate Professors: Paulla Ebron (Anthropology), James A. Fox (Anthropology, Iberian and Latin American Cultures, Linguistics, on leave A), Grant Parker (Classics)

Overseas Studies Courses in Archaeology

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

		Units
OSPCPTWN 16		2
OSPCPTWN 36	The Archaeology of Southern African Hunter Gatherers	4
OSPAUSTL 40	Australian Studies: History, Society and Culture Down Under	3

Courses

ARCHLGY 1. Introduction to Archaeology. 3-5 Units.
Aims, methods, and data in the study of human society's development from early hunters through late prehistoric civilizations. Archaeological sites and remains characteristic of the stages of cultural development for selected geographic areas, emphasizing methods of data collection and analysis appropriate to each.
Same as: ANTHRO 3

ARCHLGY 12. Peopling of the Globe: Changing Patterns of Land Use and Consumption Over the Last 50,000 Years. 3-5 Units.
Fossil, genetic and archaeological evidence suggest that modern humans began to disperse out of Africa about 50,000 years ago. Subsequently, humans have colonized every major landmass on earth. This class introduces students to the data and issues regarding human dispersal, migration and colonization of continents and islands around the world. We explore problems related to the timing and cause of colonizing events, and investigate questions about changing patterns of land use, demography and consumption. Students are introduced to critical relationships between prehistoric population changes and our contemporary environmental crisis.
Same as: ANTHRO 18, EARTHSYS 21

ARCHLGY 16. Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America. 5 Units.
What does it mean to be a Native American in the 21st century? Beyond traditional portrayals of military conquests, cultural collapse, and assimilation, the relationships between Native Americans and American society. Focus is on three themes leading to in-class moot court trials: colonial encounters and colonizing discourses; frontiers and boundaries; and sovereignty of self and nation. Topics include gender in native communities, American Indian law, readings by native authors, and Indians in film and popular culture.
Same as: ANTHRO 16, NATIVEAM 16

ARCHLGY 21Q. Eight Great Archaeological Sites in Europe. 3-5 Units.
Preference to sophomores. Focus is on excavation, features and finds, arguments over interpretation, and the place of each site in understanding the archaeological history of Europe. Goal is to introduce the latest archaeological and anthropological thought, and raise key questions about ancient society. The archaeological perspective foregrounds interdisciplinary study: geophysics articulated with art history, source criticism with analytic modeling, statistics interpretation. A web site with resources about each site, including plans, photographs, video, and publications, is the basis for exploring.
Same as: CLASSICS 21Q

ARCHLGY 34. Animals and Us. 5 Units.
The human-animal relationship is dynamic, all encompassing and durable. Without exception, all socio-cultural groups have evidenced complex interactions with the animals around them, both domesticated and wild. However, the individual circumstances of these interactions are hugely complicated, and involve much more than direct human-animal contact, going far beyond this to incorporate social, ecological and spiritual contexts.n This course delves into this complexity, covering the gamut of social roles played by animals, as well as the methods and approaches to studying these, both traditional and scientific. While the notion of `animals as social actors is well acknowledged, their use as proxies for human autecology (the relationship between a species and its environment) is also increasingly recognized as a viable mechanism for understanding our cultural and economic past. It will piece together the breadth of human-animal relationships using a wide geographic range of case studies.
Same as: ANTHRO 34

ARCHLGY 43N. The Archaeological Imagination. 3 Units.
More than excavating ancient sites and managing collections of old things, Archaeology is a way of experiencing the world: imagining past lives through ruins and remains; telling the story of a prehistoric village through the remains of the site and its artifacts; dealing with the return of childhood memories; designing a museum for a community. The archaeological imagination is a creative capacity mobilized when we experience traces and vestiges of the past, when we gather, classify, conserve and restore, when we work with such remains to deliver stories, reconstructions, accounts, explanations, or whatever. This class will explore such a wide archaeological perspective in novels, poetry, fantasy literature, the arts, movies, online gaming, and through some key debates in contemporary archaeology about human origins, the spread of urban life, the rise and fall of ancient empires.
Same as: CLASSICS 43N

ARCHLGY 47. Introduction to Digital Archaeology. 4 Units.
While the tools of Digital Archaeology frequently change, using digital tools has been part of the discipline for decades. These tools and approaches provide new forms of research, visualization, and outreach to archaeological investigations. This course is designed to introduce students of archaeology to the digital research methods useful to the discipline, and provide them with hands-on experience in three types of digital method: digital mapping, visualization, and 3D modeling. The goal of the course is for students to learn about the state of digital archaeology, to become familiar with common methods, and become aware of the resources available for research.
Same as: CLASSICS 57

ARCHLGY 54N. Archaeology in the Digital Age. 3 Units.
Like so many fields, archaeology is being transformed by new opportunities and challenges of technologies inconceivable only a generation ago: online tourist photographs are assisting replication of an arch destroyed by terrorists, detailed scans reveal how tools were manufactured and used 2000 years ago, and excavated remains historically texture lost worlds for games like Assassin¿s Creed. These artifacts and sites allow us to recreate human pasts in different ways, but only if we can make the most of every partial clue that archaeology uncovers. How do approaches like laser scanning and digital modeling help us maximize archaeological documentation and analysis? How will 3D visualization bring archaeological finds to the public in more innovative, immersive, and democratic ways than ever before? How can we put the past into the hands of a global community anywhere and at any time through interactive digital reconstructions and physical replicas? Can 4D approaches integrating time help us understand ancient social processes through digital approaches? What ethical questions of practice, ownership, and display arise as archaeology confronts each of these new opportunities? How do such developments force us to reexamine the complex ways in which technologies are changing our relationship with the human past? This seminar bridges the theoretical and the practical, allowing students to develop hands-on projects¿using 3D analysis of objects on campus¿that ask fundamental questions about how artifacts worked in the past, how they speak in the present, and how new digital tools can transform their voices in the future. Trips to collections on campus and in the area, as well as visits from diverse experts in the field and case studies from the instructor¿s own excavation (a Roman shipwreck of marble architectural materials) allow engagement with emerging technological approaches to the archaeological record.

ARCHLGY 58. Egypt in the Age of Heresy. 3-5 Units.
Perhaps the most controversial era in ancient Egyptian history, the Amarna period (c.1350-1334 BCE) was marked by great sociocultural transformation, notably the introduction of a new 'religion' (often considered the world's first form of monotheism), the construction of a new royal city, and radical departures in artistic and architectural styles. This course will introduce archaeological and textual sources of ancient Egypt, investigating topics such as theological promotion, projections of power, social structure, urban design, interregional diplomacy, and historical legacy during the inception, height, and aftermath of this highly enigmatic period. Students with or without prior background are equally encouraged.
Same as: AFRICAAM 58A, AFRICAST 58, CLASSICS 58

ARCHLGY 60N. Digging for Answers: 5 Big Questions of Our Time. 3-5 Units.
The aim in this course is to explore the archaeological evidence for long-term change with regard to 5 major questions of our time: Where do we come from? Has inequality increased? Have we become more violent? Why do we have so much stuff? What is the relationship between humans and climate change? You will be introduced to recent publications for class debate, and will also be introduced to the ways in which archaeologists use evidence in order to explore the 5 themes. We will go to Stanford¿s archaeological collections so that you can have hands-on experience of artifacts and will be able to problem solve using data from the instructor¿s own excavations. We will also visit labs (archaeological and genomic for example), local museums and local archaeological excavations.
Same as: ANTHRO 60N

ARCHLGY 75Q. Mad Dogs and Englishmen: Archaeology and the Modern History of the Ancient Near East. 3 Units.
The decades between the early-nineteenth and mid-twentieth centuries saw substantial change in the region Europeans referred to as the Near East, characterized by the decline of the Ottoman empire, the disarray of World War I, and the establishment of modern national borders. You will learn to analyze, interpret, and critically evaluate archaeological data and the ways in which that data is used to construct an historical narrative. Readings include ancient texts in translation; archaeological field records and reports; travelogues, personal letters and autobiographies; and scholarly articles on the art and archaeology of the Near East.

ARCHLGY 78. Disruption and Diffusion: The Archaeology of Innovation. 3-5 Units.
This undergraduate seminar uses engagement with canonical archaeological topics and questions about the emergence of civilization to introduce students to critical perspectives on the nature of novelty, progress, and modernity. The first weeks of the course will be spent learning about archaeological hypotheses and debates on early human innovation (e.g. urban development, agriculture). Later weeks will focus on developing a robust theoretical framework through which to better understand and interrogate claims about the origin of innovation.
Same as: ANTHRO 78A

ARCHLGY 79. Mediterranean Archaeology Today: Heritage, Ethics, and Practice in a Changing World. 3-5 Units.
While archaeology engages with material remains from the past, it is embedded in and inseparable from contemporary practice. This seminar discusses a wide range of ethical dilemmas raised by archaeology in the 21st century. It aims to develop an acquaintance with legal and ethical codes as well as disciplinary practices that relate to cultural heritage, with a strong focus on the ancient Mediterranean world. Such issues will be approached primarily through discussion and debate of current case studies including: ownership and destruction of cultural property, colonialism and decolonization, ethical responsibilities in scientific practice, and cultural, nationalistic, religious, and popular uses of heritage. By the end of the term, students should be able to apply critical reasoning to a variety of ethical issues related to heritage of the Mediterranean world and beyond, and to articulate (in oral and written form) responses to current controversial topics about the human past.

ARCHLGY 80. Heritage and Human Rights. 3-5 Units.
What does archaeology have to say about human rights? Is there a right to cultural heritage? How can archaeology and heritage help protect rights¿or encroach upon them? Themes we will address in this course include the archaeological investigation of human rights topics; the right to heritage; conflicts of different rights regimes in heritage contexts; and ethical considerations about rights during research and heritage management. These questions will take us to cases as diverse as forensic investigation of the disappeared in Argentina, the archaeology of homelessness in the U.K., the destruction of heritage as cultural genocide in Bosnia and the Middle East, and the rights of indigenous groups in Australia and the U.S. to control cultural heritage.
Same as: ANTHRO 80A

ARCHLGY 81. Introduction to Roman Archaeology. 3-5 Units.
(Formerly CLASSART 81.) This course will introduce you to the material culture of the ancient Roman world, from spectacular imperial monuments in the city of Rome to cities and roads around the Mediterranean, from overarching environmental concerns to individual human burials, from elite houses and army forts to the the lives of slaves, freedmen and gladiators. Key themes will be change and continuity over time; the material, spatial and visual workings of power; how Roman society was materially changed by its conquests and how conquered peoples responded materially to Roman rule.
Same as: CLASSICS 52

ARCHLGY 83. Pots, People, and Press: Greek Archaeology in the Media. 3-5 Units.
Archaeological discovery has long captured the popular imagination, and the media undoubtedly plays a crucial role in this phenomenon. In the case of Greek archaeology, much of this imagination has been intertwined with the legacies of ancient Greek culture(s) in the construction of modern identities and ideologies, including the concept of ¿Western Civilization.¿ This course explores the intersections between academic research, media narratives, and the social, political, and cultural context of Greek archaeology from the 19th century to the present. Through a diachronic range of case studies, we will engage with a selection of media accounts and representations, alongside scholarly work and commentaries. In doing so, the class will more broadly examine issues surrounding archaeological evidence and interpretation, narrative formation, the reception and appropriation of the past, conceptualizations of race and ethnicity, nationalism and archaeology, and cultural heritage management. No prior knowledge of Greek archaeology is required.
Same as: CLASSICS 93

ARCHLGY 84. Incas, Spaniards, and Africans: Archaeology of the Kingdom of Peru. 3-5 Units.
Students are introduced to Andean archaeology from the rise of the Inca empire through the Spanish colonial period. We will explore archaeological evidence for the development of late pre-Hispanic societies in western South America, the Spanish conquest, and the origins of key Spanish colonial institutions in the Andean region: the Church, coerced indigenous labor, and African slavery. Central to this course is an archaeological interrogation of the underpinnings and legacies of colonialism, race, and capitalism in the region. Students will also consider the material culture of daily life and those living on the social margins, both in pre-Hispanic societies and under Spanish rule.

ARCHLGY 86. Digital Methods for Archaeology and Anthropology. 3-5 Units.
Digital tools can be a powerful way of collecting, analyzing and presenting data in social-cultural anthropology and archaeology. This survey course is designed for students from all backgrounds interested in developing practical skills in computational methods, no previous computational experience is required. Over the span of four 2.5 week units, we will develop foundational skills for 1) text processing, 2) geospatial analysis (e.g GIS), 3) bioinformatics and paleogenetics, and 4) data visualization. Each unit will take a deep dive into the way these approaches have been used in anthropology in published case studies. This will be complemented by digital lab activities (suitable for remote or in-person learning) to develop skills and complete an independent project of your choosing with the tools learned in this course. The goal is to set you up with digital tools that are useful to you in academic, journalistic, and other related endeavors.

ARCHLGY 92. Introduction to Greek Art and Archaeology. 5 Units.
This course will introduce students to the art and archaeology of Greece and the Greek world from the Neolithic through Early Roman periods. By integrating both historical and current approaches to the archaeology of Greece, this course aims to supplement the typical chronological narrative of the development of Greek material culture with various thematic explorations (e.g. nationalism in archaeology, social complexity, postcolonial approaches), as well as to critically evaluate mechanisms of interpretation in Greek archaeology over time.
Same as: CLASSICS 92

ARCHLGY 95. Monumental Pasts: Cultural Heritage and Politics. 3-5 Units.
What is heritage? Who decides what and how pasts matter? Our pasts loom monumental in multiple senses. At the intersection of archaeology and anthropology, the emerging discipline of heritage is often described as the politics of the past. What people choose to take from their histories varies and is often contested. Heritage shapes and is shaped by power. This course introduces contemporary themes and debates in cultural heritage. Together we'll develop a critical stance toward dominant perspectives to understand how pasts are used, erased, reclaimed, and mobilized in the present, for the future. In doing so we'll think through concepts such as materiality, intangibility, monumentality, value, memory, identity, community, nationalism, and universality. Our case studies will range from contemporary debates over Jim Crow era monuments in the USA, to UNESCO World Heritage List politics, and the development of community identities. We will also reflect on heritage at a personal scale and its relationship to belonging. Course materials will include readings and media from around the globe. Students will participate through seminar discussions, proposing and presenting topics of their choice, regular journal entries, and a choice of final project¿podcast, paper, or exhibition plan.

ARCHLGY 96. The Secret Lives of Statues from Ancient Egypt to Confederate Monuments. 3-5 Units.
Statues, human-shaped sculptures, walk a fine line between being inert matter and living entities. Throughout human existence, humans have recognized that statues are not alive even as they understand that statues are capable of becoming potent allies or enemies. They are capable of engendering profound emotional responses, embodying potent ideas, and co-opting the past in service of the present. However, the same materiality that endows statues with these exceptional capacities also makes them vulnerable to humans intent on acquiring otherwise-expensive materials cheaply, commiting sectarian violence by proxy, and obliterating the material manifestations of others¿ memories.nnIn this course, we will study sixteen (groups of) statues thematically. To do this, we will draw on a wide variety of disciplines, including archaeology, art history, history, law, media studies, museum studies, and religious studies, to articulate how people in diverse places and times have revered and reviled statues precisely because they are uncanny objects that seem to have an all-too-human kind of agency. In so doing, we will gain appreciation for and insight into how and why the statues in our own lives are significant.
Same as: ARTHIST 104A, CLASSICS 96

ARCHLGY 97. Archaeology Internship. 1-10 Unit.
Opportunity for students to pursue their specialization in an institutional setting such as a laboratory, clinic, research institute, museums or government agency. May be repeated for credit. Prior instructor consent needed.

ARCHLGY 100D. Chavin de Huantar Research |Seminar. 3-5 Units.
Archaeological analytical techniques appropriate for data recovered during archaeological fieldwork in Chavin de Huantar, Peru. Open to all interested students; fieldwork participants are expected to take the course. Students work on data from the previous field season to produce synthetic written reports, focusing on specific methodological issues.
Same as: ANTHRO 100D

ARCHLGY 102. Archaeological Methods. 5 Units.
Methodological issues related to the investigation of archaeological sites and objects. Aims and techniques of archaeologists including: location and excavation of sites; dating of places and objects; analysis of artifacts and technology and the study of ancient people, plants, and animals. How these methods are employed to answer the discipline's larger research questions.
Same as: ANTHRO 91A

ARCHLGY 102B. Incas and their Ancestors: Peruvian Archaeology. 3-5 Units.
The development of high civilizations in Andean S. America from hunter-gatherer origins to the powerful, expansive Inca empire. The contrasting ecologies of coast, sierra, and jungle areas of early Peruvian societies from 12,000 to 2,000 B.C.E. The domestication of indigenous plants which provided the economic foundation for monumental cities, ceramics, and textiles. Cultural evolution, and why and how major transformations occurred.
Same as: ANTHRO 106, ANTHRO 206A

ARCHLGY 103. History of Archaeological Thought. 5 Units.
Introduction to the history of archaeology and the forms that the discipline takes today, emphasizing developments and debates over the past five decades. Historical overview of culture, historical, processual and post-processual archaeology, and topics that illustrate the differences and similarities in these theoretical approaches.
Same as: CLASSICS 170

ARCHLGY 104. Digital Methods in Archaeology. 3-5 Units.
Archaeologists have long adapted and incorporated available digital tools into their methodological toolkits. The recent explosion in computing power and availability has led to a proliferation of digital apparatus in archaeology and sparked dynamic theoretical and methodological discussions within the discipline. This course provides an overview of digital tools and methods utilized by archaeologists through all stages of research.

ARCHLGY 105. Global Heritage: Conflict, Reconciliation, and Diplomacy. 3-5 Units.
Archaeological studies from the 1990s framed cultural heritage as a resource that created attachments to place and to the past as a means to buttress national and cultural identities. But heritage can no longer be viewed as simply a marker of a singular, national identity. As a global era ushers in new regimes of heritage management, heritage becomes embroiled in a multitude of interactions whether acting as a fulcrum of transnational governance or functioning at the crux of community empowered utilizations and initiatives.nnThis course will trace what happens to heritage as it has been drawn into a world of global interactions while also maintaining more local forms of attachment. The class will address three themes (conflict, reconciliation, and diplomacy), all of which result from the multi-scalar relations that emerge from heritage financing, management, and preservation in a transnational arena. While the class will discuss cases that include both tangible and intangible heritage, the focus of the course will center around tangible elements of the past, including heritage sites and archaeological artifacts. Combining readings from the field of international relations, archaeology, and heritage studies, the class will question if and how heritage can be used in local settings while also producing international exchanges.
Same as: ANTHRO 117C

ARCHLGY 106. The Archaeology of Climate. 3 Units.
This course reviews the long-term relationships between human societies and Earth's climatic systems. It provides a critical review of how archaeologists have approached climate change through various case studies and historical paradigms (e.g., societal `collapse,¿ resilience, historical ecology) and also addresses feedbacks between past human land use and global climate change, including current debates about the onset of the Anthropocene.
Same as: ANTHRO 103

ARCHLGY 107A. Archaeology as a Profession. 5 Units.
Academic, contract, government, field, laboratory, museum, and heritage aspects of the profession.
Same as: ANTHRO 101A

ARCHLGY 108. Ancient DNA and the Human Past. 3-5 Units.
The rapidly growing field of paleogenomics has brought together researchers from a wide variety of fields and perspectives in the social and natural sciences. This survey course is designed for students from all backgrounds interested in developing practical skills in ancient DNA methods, contextual research, analysis and interpretation. We will also focus on exploring and discussing ethics in the field and the implications of the growing interest of public audiences with ancient DNA (such as the 23andMe direct-to-consumer genetic test for Neanderthal ancestry). Throughout the course, we will also explore a variety of related topics by taking a deep dive into the archaeology context and analytical approaches of published case studies. For a final project, you will explore a site, topic or study of your choosing with the tools learned in this course and evaluate the potential for ancient DNA to uncover new findings there.

ARCHLGY 109. Religions of Ancient Eurasia. 3-5 Units.
This course will explore archaeological evidence for the ritual and religions of Ancient Eurasia, including Greco-Roman polytheism, early Christianity, and early Buddhism. Each week, we will discuss the most significant themes, methods, and approaches that archaeologists are now using to study religious beliefs and rituals. Examples will focus on the everyday social, material, and symbolic aspects of religion. The course will also consider the role of archaeological heritage in religious conflicts today and the ethical dilemmas of archaeology in the 21st century.
Same as: CLASSICS 165

ARCHLGY 109A. Archaeology of the Modern World. 3-5 Units.
Historical archaeology, also called the archaeology of the modern world, investigates the material culture and spatial history of the past five centures. As a discipline, historical archaeology has been characterized by (1) a methodological conjunction between history and archaeology; (2) a topical focus on the ¿three Cs¿: colonization, captivity, and capitalism ¿ forces which arguably are constitutive of the modern world; and (3) an epistemological priority to recovering the perspectives of ¿people without history.¿ Each of these three trends is widely debated yet they continue to profoundly shape the field. This seminar provides an in-depth examination of the emergence and development of this historical archaeology, with a focus on current issues in theory and method. For undergraduates, the prerequisite is Anthro 3 or consent of instructor.
Same as: ANTHRO 109A, ANTHRO 209A

ARCHLGY 110. Environmental Archaeology. 5 Units.
This course investigates the field of environmental archaeology. Its goals are twofold: 1) to critically consider the intellectual histories of environmental archaeology, and, 2) to survey the various techniques and methods by which archaeologists assess historical environmental conditions through material proxies. The course will include lab activities.
Same as: ANTHRO 110, ANTHRO 210

ARCHLGY 111. Emergence of Chinese Civilization from Caves to Palaces. 3-4 Units.
Introduces processes of cultural evolution from the Paleolithic to the Three Dynasties in China. By examining archaeological remains, ancient inscriptions, and traditional texts, four major topics will be discussed: origins of modern humans, beginnings of agriculture, development of social stratification, and emergence of states and urbanism.
Same as: CHINA 176, CHINA 276

ARCHLGY 111B. Muwekma: Landscape Archaeology and the Narratives of California Natives. 3-5 Units.
This course explores the unique history of San Francisco Bay Area tribes with particular attention to Muwekma Ohlone- the descendent community associated with the landscape surrounding and including Stanford University. The story of Muwekma provides a window into the history of California Indians from prehistory to Spanish exploration and colonization, the role of Missionaries and the controversial legacy of Junipero Serra, Indigenous rebellions throughout California, citizenship and land title during the 19th century, the historical role of anthropology and archaeology in shaping policy and recognition of Muwekma, and the fight for acknowledgement of Muwekma as a federally recognized tribe. We will visit local sites associated with this history and participate in field surveys of the landscape of Muwekma.
Same as: ANTHRO 111C, NATIVEAM 111B

ARCHLGY 113. Culture and Epigenetics: Towards A Non-Darwinian Synthesis. 4-5 Units.
The course examines the impact of new research in epigenetics on our understanding of long-term cultural change. The course examines the various attempts that have been made over recent decades to find a synthesis between cultural and biological evolution. These approaches, often termed neo-Darwinian, include memes, dual inheritance theory, theories of cultural selection and transmission, niche construction theory and macro-evolutionary approaches. Research in all these areas will be examined, with particular reference to explanations for the origins of agriculture, but also including other transformations, and critiqued. New research in epigenetics offers an alternative non-Darwinian evolutionary perspective that avoids many of the problems and pitfalls in the neo-Darwinian approaches. Cultural evolution comes to be viewed as cumulative, directional and Lamarckian, since heritable epigenetic variation can underlie evolutionary change. Epigenetics opens the way for human cultural entanglements to become the drivers for evolutionary change, thus allowing the full range of social processes studied in the social and cultural sciences to take their place in the study and analysis of long-term change.
Same as: ANTHRO 113, ANTHRO 213

ARCHLGY 114. Rights and Ethics in Heritage. 5 Units.
Heritage is a human thing: made by people and mobilized for their own purposes, it has a range of effects on communities. This course focuses on the human dimension of heritage with special attention to questions of rights and ethics. Where can we locate the intersections of heritage and rights? How do communities and governing structures negotiate control over and participation in heritage, and with what impacts on people? Which ethical challenges arise and how have archaeologists, heritage managers, museums, legislators, community leaders, and others approached these issues?nnThe first half of this seminar course focuses on the theoretical and contextual basis for these discussions. We will address topics such as cultural ownership and participation as well as the global and governing contexts within which heritage is mobilized. Building on this, the second half examines cases in which different rights, needs, and goals come into conflict: museum practice, public memory, upheaval stemming from violence or disaster, and the ethics of the material world itself. Throughout, we will highlight heritage in relation to communities, rights, and responsibilities, all while thinking through ethical modes of heritage research and practice.
Same as: ANTHRO 114, ANTHRO 214

ARCHLGY 115. The Social life of Human Bones. 3-5 Units.
Skeletal remains serve a primary function of support and protection for the human body. However, beyond this, they have played a range of social roles once an individual is deceased. The processes associated with excarnation, interment, exhumation and reburial all speak to the place that the body, and its parts, play in our cultural as well as physical landscape.n This course builds on introductory courses in human skeletal anatomy by adding the social dynamics that govern the way humans treat other humans once they have died. It draws on anthropological, biological and archaeological research, with case studies spanning a broad chronological and spatial framework to provide students with an overview of social practice as it relates to the human body.
Same as: ANTHRO 115, ANTHRO 215

ARCHLGY 116. Heritage Development in the Global South. 3-5 Units.
Heritage is a site of both promise and contestation in the Global South. These nations use it for a wide range of purposes: Peru¿s thriving tourism sector rests on a basis of heritage attractions, South Africa negotiates a post-apartheid identity through heritage, and India places increasing numbers of sites on the World Heritage List. Outlining different modes of heritage production and interpretation, this class investigates heritage regimes on scales ranging from local communities and national governance to international recognition. We will examine the role of heritage in building communities and identity; the place of heritage within economic development; the efforts of Global South countries to negotiate the legacies of colonialism and global inequality through managing their pasts; and the deployment of heritage as part of international power struggles within worldwide structures like UNESCO. Drawing on anthropology, heritage studies, and archaeology, students will gain a deeper understanding of how heritage is used by Global South countries to produce identity, support development, domesticate the past, and build the future.
Same as: ANTHRO 118C

ARCHLGY 118. Engineering the Roman Empire. 3-5 Units.
Enter the mind, the drafting room, and the building site of the Roman architects and engineers whose monumental projects impressed ancient and modern spectators alike. This class explores the interrelated aesthetics and mechanics of construction that led to one of the most extensive building programs undertaken by a pre-modern state. Through case studies ranging from columns, domes and obelisks to road networks, machines and landscape modification, we investigate the materials, methods, and knowledge behind Roman innovation, and the role of designed space in communicating imperial identity.
Same as: CLASSICS 168

ARCHLGY 119. Zooarchaeology: An Introduction to Faunal Remains. 5 Units.
As regularly noted, whether historic or pre-historic, animal bones are often the most commonly occurring artefacts on archaeological sites. As bioarchaeological samples, they offer the archaeologist an insight into food culture, provisioning, trade and the social aspects of human-animal interactions. The course will be taught through both practical and lecture sessions: the `hands-on¿ component is an essential complement to the lectures. The lectures will offer grounding in the main methodological approaches developed, as well as provide case-studies to illustrate where and how the methods have been applied. The practical session will walk students through the skeletal anatomy of a range of species. It will guide students on the identification of different parts of the animal, how to age / sex individuals, as well as recognize taphonomic indicators and what these mean to reconstructing post-depositional modifications.
Same as: ANTHRO 119, ANTHRO 219

ARCHLGY 120A. Bioethics and Ancient DNA. 3-5 Units.
The first ancient human genome was sequenced just 10 years ago. From a single genome in 2010 to what has been hailed as a `scientific revolution¿ today, the field of paleogenomics has expanded rapidly. 10 years on we will explore how the field is grappling with emerging issues related to ethical and responsible research, including sampling practices, collaborative community partnerships, and accessibility of research findings to the broader public. How have researchers successfully leveraged multiple voices, perspectives, and priorities engaged with ancient DNA to explore the human past? What are the possibilities of engagement beyond the practical and project-based level? How do these new alliances formed around paleogenomics inform the ethics of sampling, participation, and interpretation? In this course, we will thoughtfully and critically engage with aDNA research in the present to envision possible futures for the field.
Same as: ANTHRO 120, ANTHRO 220

ARCHLGY 124. Archaeology of Food: production, consumption and ritual. 3-5 Units.
This course explores many aspects of food in human history from an archaeological perspective. We will discuss how the origins of agriculture helped to transform human society; how food and feasting played a prominent role in the emergence of social hierarchies and the development of civilization; and how various foodways influenced particular cultures. We will also conduct experimental studies to understand how certain methods of food procurement, preparation, and consumption can be recovered archaeologically.
Same as: ARCHLGY 224

ARCHLGY 125. Archaeological Field Survey Methods. 3 Units.
Practicum applying a variety of survey techniques to discover, map, and record archaeological sites. Basic cartographic skills for archaeologists and an introduction to GIS tools, GPS instruments, and geophysical techniques. Participants should be able to walk 3 - 4 miles over uneven terrain or make special arrangements with the instructor for transportation.
Same as: ARCHLGY 225, ASNAMST 125A

ARCHLGY 126. Archaeobotany. 5 Units.
Archaeobotany, also known as paleoethnobotany, is the study of the interrelationships of plants and humans through the archaeological record. Knowledge and understanding of Archaeobotany sufficient to interpret, evaluate, and understand archaeobotanical data. Dominant approaches in the study of archaeobotanical remains: plant macro-remains, pollen, phytoliths, and starch grains in the identification of diet and environmental reconstruction.
Same as: ARCHLGY 226

ARCHLGY 127. HERITAGE POLITICS. 3-5 Units.
Heritage is a matter of the heart and not the brain, David Lowenthal once said. It does not seek to explore the past, but to domesticate it and enlist it for present causes. From the drafting of the first royal decrees on ancient monuments in the 17th century, political interests have had a hand in deciding which traditions, monuments and sites best represent and best serve the needs of the nation. The sum of these domestication efforts, the laws, institutions and practices established to protect and manage heritage, is what we call heritage governance. In this seminar you will learn about the politics of 21st century heritage governance at national and international level. Students will become familiar with key conventions and learn about the functioning of heritage institutions. We will also examine the hidden practices and current political developments that impact heritage governance: how UNESCO heritage sites become bargaining tools in international relations, how EU heritage policies are negotiated in the corridors of Brussels, and how the current re-nationalization of Western politics can affect what we come to know as our common past.
Same as: ANTHRO 127D, ARCHLGY 227

ARCHLGY 128. Europe Before the Romans: Early Complex Societies. 3-5 Units.
This course will provide a broad introduction to theories of change in early complex societies and polities. Over the course of the quarter, we will examine a series of hotly debated theoretical frameworks. From the beginning, you will develop a case study for your final research paper using an appropriate theoretical framework. The course will look at a series of global case studies but will focus specifically on western Europe¿s protohistoric Iron Age (c.800¿100BCE), a period of technological innovation, rich art and cultural expression, rapidly growing connectivity and trade, alongside rapid social and political change.
Same as: CLASSICS 128

ARCHLGY 129. Archaeology of Gender and Sexuality. 5 Units.
How archaeologists study sex, sexuality, and gender through the material remains left behind by past cultures and communities. Theoretical and methodological issues; case studies from prehistoric and historic archaeology.
Same as: ANTHRO 111, FEMGEN 119

ARCHLGY 130. Senior research seminar for Archaeology majors and minors. 3-5 Units.
The aim of this research seminar is to provide an opportunity for students to experience and participate in research projects that bring together various aspects of the archaeology courses taken during the student's time at Stanford. The research projects will be tailored to the specific interests of the individual students involved and will involve individualized and independent research. In some cases the projects will grow out of Honors Theses, or out of fieldwork or internships undertaken. The projects will be individually supervised by the faculty teacher and will be designed to incorporate theory, method as well as particular information from particular regions and time periods. The projects will involve independent problem solving and writing up of results.

ARCHLGY 131. The Use and Abuse of Prehistory. 3-5 Units.
To borrow Glyn Daniel¿s phrase, the ¿Idea of Prehistory,¿ invokes notions of deep time, human origins, and mysterious monuments. While the origins of prehistoric research in the 19th century were connected to the emerging sciences of geology, evolution, and archaeology, they were just as intertwined with nation-state building, colonialism, and race science. This course examines the development of prehistory through a thematic and critical lens. How have Western conceptualizations of time and writing affected the definition and study of prehistory? What are some of the colonial legacies in both research agendas and museum collections? Do new methods always provide new answers? What role has gender played in prehistoric interpretation? Drawing from case studies in the Mediterranean, the Americas, Europe, and Africa, we will explore various archaeological approaches to prehistory from the late 19th century to the present, as well as how the idea of prehistory itself has evolved, expanded, or been abandoned altogether.
Same as: ANTHRO 131A, CLASSICS 138

ARCHLGY 134. Museum Cultures: Material Representation in the Past and Present. 3-5 Units.
Students will open the "black box" of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores "museum cultures": representations of self and other within museums and institutional cultures of the museum world itself.n3 credits (no final project) or 5 credits (final project). May be repeat for credit.
Same as: ARCHLGY 234, ARTHIST 284B

ARCHLGY 135. Constructing National History in East Asian Archaeology. 3-5 Units.
Archaeological studies in contemporary East Asia share a common concern, to contribute to building a national narrative and cultural identity. This course focuses on case studies from China, Korea, and Japan, examining the influence of particular social-political contexts, such as nationalism, on the practice of archaeology in modern times.
Same as: ARCHLGY 235, CHINA 175, CHINA 275

ARCHLGY 137. Political Exhumations. Killing Sites Research in Comparative Perspective. 3-5 Units.
The course discusses the politics and practices of exhumation of individual and mass graves. The problem of exhumations will be considered as a distinct socio-political phenomenon characteristic of contemporary times and related to transitional justice. The course will offer analysis of case studies of political exhumations of victims of the Dirty War in Argentina, ethnic cleansing in former Yugoslavia, the Holocaust, communist violence in Poland, the Rwandan genocide, and the Spanish Civil War. The course will make use of new interpretations of genocide studies, research of mass graves, such as environmental and forensic approaches.
Same as: ANTHRO 137D, ARCHLGY 237, DLCL 237, REES 237

ARCHLGY 143. Classical Archaeology Today: Ethical Issues of Excavation, Ownership, and Display. 3-5 Units.
(Formerly CLASSART 143.) While Classical archaeology engages with material remains from the Greco-Roman past, it is embedded within and inseparable from contemporary practice. Through an examination of case studies, legal statutes, professional codes, and disciplinary practices, this seminar discusses ethical dilemmas raised by Classical archaeology in the 21st century. We will focus on broad issues ranging from ownership, looting, reconstruction, and collecting to nationalism, religion, tourism, and media, with an eye toward defining ethical ¿best practices¿ for Classical archaeology.

ARCHLGY 145. Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean. 3-5 Units.
Why do we care about shipwrecks? What can sunken sites and abandoned ports tell us about our past? Focusing primarily on the archaeological record of shipwrecks and harbors, along with literary evidence and contemporary theory, this course examines how and why ancient mariners ventured across the "wine-dark seas" of the Mediterranean for travel, warfare, pilgrimage, and especially commerce. We will explore interdisciplinary approaches to the development of maritime contacts and communication from the Bronze Age through the end of Roman era. At the same time, we will engage with practical techniques of maritime archaeology, which allows us to explore the material record first hand.
Same as: CLASSICS 154

ARCHLGY 147B. World Heritage in Global Conflict. 5 Units.
Heritage is always political, it is typically said. Such a statement might refer to the everyday politics of local stakeholder interests on one end of the spectrum, or the volatile politics of destruction and erasure of heritage during conflict, on the other. If heritage is always political then one might expect that the workings of World Heritage might be especially fraught given the international dimension. In particular, the intergovernmental system of UNESCO World Heritage must navigate the inherent tension between state sovereignty and nationalist interests and the wider concerns of a universal regime. The World Heritage List has over 1000 properties has many such contentious examples, including sites in Iraq, Mali, Syria, Crimea, Palestine and Cambodia. As an organization UNESCO was born of war with an explicit mission to end global conflict and help the world rebuild materially and morally, but has found it¿s own history increasingly entwined with that of international politics and violence.
Same as: ANTHRO 147B, ANTHRO 247B

ARCHLGY 148. Ceramic Analysis for Archaeologists. 3-5 Units.
The analysis and interpretation of ceramic remains allow archaeologists to accomplish varied ends: establish a time scale, document interconnections between different areas, and suggest what activities were carried out at particular sites. The techniques and theories used to bridge the gap between the recovery of ceramics and their interpretation within archaeological contexts is the focus of this seminar.
Same as: ARCHLGY 248

ARCHLGY 151. Ten Things: An Archaeology of Design. 3 Units.
Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgewood teapot, Edison's electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology.
Same as: CLASSICS 151

ARCHLGY 154. Animism, Gaia, and Alternative Approaches to the Environment. 3-5 Units.
Indigenous knowledges have been traditionally treated as a field of research for anthropologists and as mistaken epistemologies, i.e., un-scientific and irrational folklore. However, within the framework of environmental humanities, current interest in non-anthropocentric approaches and epistemic injustice, animism emerged as a critique of modern epistemology and an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge will be presented as a (potentially) decolonizing and liberating practice. This course may be of interest to anthropology, archaeology and literature students working in the fields of ecocriticism and the environmental humanities/social sciences, students interested in the Anthropocene, geologic/mineral, bio-, eco- and geosocial collectives, symbiotic life-forms and non-human agencies. The course is designed as a research seminar for students interested in theory of the humanities and social sciences and simultaneously helping students to develop their individual projects and thesis.
Same as: ANTHRO 154C, ANTHRO 254C, ARCHLGY 254, DLCL 254, REES 254

ARCHLGY 156. Design of Cities. 3-5 Units.
Long-term, comparative and archaeological view of urban planning and design. Cities are the fastest changing components of the human landscape and are challenging our relationships with nature. They are the historical loci of innovation and change, are cultural hotspots, and present a tremendous challenge through growth, industrial development, the consumption of goods and materials. We will unpack such topics by tracking the genealogy of qualities of life in the ancient Near Eastern city states and those of Graeco-Roman antiquity, with reference also to prehistoric built environments and cities in the Indus Valley and through the Americas. The class takes an explicitly human-centered view of urban design and one that emphasizes long term processes.
Same as: CLASSICS 156, CLASSICS 256

ARCHLGY 165. Roman Gladiators. 3-5 Units.
In modern America, gladiators are powerful representatives of ancient Rome (Spartacus, Gladiator). In the Roman world, gladiators were mostly slaves and reviled, barred from certain positions in society and doomed to short and dangerous lives. A first goal of this course is to analyze Roman society not from the top down, from the perspective of politicians, generals and the literary elite, but from the bottom up, from the perspective of gladiators and the ordinary people in the stands. A second goal is to learn how work with very different kinds of evidence: bone injuries, ancient weapons, gladiator burials, laws, graffiti written by gladiators or their fans, visual images of gladiatorial combats, and the intricate architecture and social control of the amphitheater. A final goal is to think critically about modern ideas of Roman ¿bloodthirst.¿ Are these ideas justified, given the ancient evidence?.

ARCHLGY 166. The Body in Roman Art. 4-5 Units.
(Formerly CLASSART 105.) Ancient and modern ideas about the body as ideal and site of lived experience. Themes include representation, portrayal, power, metamorphosis, and replication. Works that exemplify Roman ideas of heroism and power versus works portraying nude women, erotic youth, preserved corpses, and suffering enemies. Recommended: background in ancient Mediterranean art, archaeology, history, or literature. May be repeated for credit.
Same as: CLASSICS 166

ARCHLGY 169. Archaeology of Britannia. 3-4 Units.
Life in the Roman Empire: this course is a broad introduction to the archaeology of one of the best known provinces of the empire.
Same as: CLASSICS 169

ARCHLGY 173. Heritage Institutions Inside Out: The Power of Bureaucracies. 5 Units.
Anyone interested in how objects, places and customs become heritage should be interested in bureaucracies. Given that dealing with bureaucratic procedures often cause something of an allergic reaction among people, heritage researchers included, it is perhaps no wonder that they have long been neglected as acts of heritage-making; considered less attractive research subjects than archaeological field ventures, World Heritage sites and grass root heritage communities. Yet it is precisely in the everyday practices of regional, national and international bureaucracies in the administrative tasks, paper shuffling and decisions taken across shiny tables that much of the power to define, select and configure the values of heritage lie. nThe main task of this course is to introduce bureaucracies as agents in sustaining and producing heritage regimes, and to discuss how to go about the study of such institutions. Drawing on the research of an emergent group of scholars dealing with UNESCO, the European Union, international corporations and national governments, the first set of seminars will explore the logics of Western bureaucracy and discuss specific examples relating to heritage. The second set of seminars will discuss some methods and analytical approaches to studying heritage bureaucracies, particularly ethnography and Actor Network Theory. Leaning on contemporary research in political anthropology, the points and pitfalls of document analysis, participant observation and interviewing will be covered, as will the challenges of analyzing such knowledge and turning it into academic text.

ARCHLGY 188. Matter and Mattering: Transdisciplinary Thinking about Things. 4-5 Units.
Things sit at the nexus of cross-cutting heterogeneous processes; tracing the entanglements of any prominent thing or class of things demands a transdisciplinary approach that recruits expertise from the natural sciences, social sciences and humanities. For example, carbon is a key factor in global warming for reasons that are as much socio-historical as bio-physical, and we could not begin to sketch the full significance of carbon without considering such diverse frames of reference. Our growing appreciation in the social sciences and humanities of the agency, polyvalence and catalytic role of things has given rise to The New Materialist and Post-Humanist movements, which in turn raise questions about intra-action and observational perspective that are echoed in the modern physical and life sciences. In this class we will explore these theoretical convergences in considering themes such as `things-in-themselves¿, networks and open systems, assemblages and entanglements. We will also examine specific examples such as oil, metal (guns), dams, viruses, electricity, mushrooms; each thing will be explored both in terms of its social and ethical entanglements and in terms of its material properties and affordances. There will also be hands-on encounters with objects in labs and a couple of local field trips. The key question throughout will be `why and how does matter matter in society today?.
Same as: ANTHRO 188, ANTHRO 288, APPPHYS 188

ARCHLGY 190. Archaeology Directed Reading/Independent Study. 1-5 Unit.
.

ARCHLGY 195. Independent Study/Research. 1-5 Unit.
Students conducting independent study and or research with archaeology faculty members.

ARCHLGY 199. Honors Independent Study. 5-6 Units.
Independent study with honors faculty adviser.

ARCHLGY 222. Pottery Analysis for Archaeologists: The Social and Material Dimensions of Ceramic Containers. 5 Units.
Due to the dominance of pottery in the archaeological record for the past 10,000 years, its analysis has attracted a great deal of research attention, making it imperative that all archaeologists have at least a working knowledge of ceramics. This course provides classroom and laboratory perspectives for understanding the information about ancient society, economy, and culture that can be plausibly derived from pottery and the visual, structural, and compositional methods that best help obtain that information.

ARCHLGY 224. Archaeology of Food: production, consumption and ritual. 3-5 Units.
This course explores many aspects of food in human history from an archaeological perspective. We will discuss how the origins of agriculture helped to transform human society; how food and feasting played a prominent role in the emergence of social hierarchies and the development of civilization; and how various foodways influenced particular cultures. We will also conduct experimental studies to understand how certain methods of food procurement, preparation, and consumption can be recovered archaeologically.
Same as: ARCHLGY 124

ARCHLGY 225. Archaeological Field Survey Methods. 3 Units.
Practicum applying a variety of survey techniques to discover, map, and record archaeological sites. Basic cartographic skills for archaeologists and an introduction to GIS tools, GPS instruments, and geophysical techniques. Participants should be able to walk 3 - 4 miles over uneven terrain or make special arrangements with the instructor for transportation.
Same as: ARCHLGY 125, ASNAMST 125A

ARCHLGY 226. Archaeobotany. 5 Units.
Archaeobotany, also known as paleoethnobotany, is the study of the interrelationships of plants and humans through the archaeological record. Knowledge and understanding of Archaeobotany sufficient to interpret, evaluate, and understand archaeobotanical data. Dominant approaches in the study of archaeobotanical remains: plant macro-remains, pollen, phytoliths, and starch grains in the identification of diet and environmental reconstruction.
Same as: ARCHLGY 126

ARCHLGY 227. HERITAGE POLITICS. 3-5 Units.
Heritage is a matter of the heart and not the brain, David Lowenthal once said. It does not seek to explore the past, but to domesticate it and enlist it for present causes. From the drafting of the first royal decrees on ancient monuments in the 17th century, political interests have had a hand in deciding which traditions, monuments and sites best represent and best serve the needs of the nation. The sum of these domestication efforts, the laws, institutions and practices established to protect and manage heritage, is what we call heritage governance. In this seminar you will learn about the politics of 21st century heritage governance at national and international level. Students will become familiar with key conventions and learn about the functioning of heritage institutions. We will also examine the hidden practices and current political developments that impact heritage governance: how UNESCO heritage sites become bargaining tools in international relations, how EU heritage policies are negotiated in the corridors of Brussels, and how the current re-nationalization of Western politics can affect what we come to know as our common past.
Same as: ANTHRO 127D, ARCHLGY 127

ARCHLGY 233. EXPERIMENTAL ARCHAEOLOGY. 3-5 Units.
This course is designed for graduate students who are interested in experimental study in archaeology. We will discuss the current issues in the discipline, particularly related to archaeological research on food and foodways. We will conduct experimental study and laboratory analyses to investigate ancient human behavior in food fermentation. The archaeological methods include analyses of use-wear on stone tools and various microbotanical remains (starch, phytoliths, fibers, fungi, etc.) on artifacts.

ARCHLGY 234. Museum Cultures: Material Representation in the Past and Present. 3-5 Units.
Students will open the "black box" of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores "museum cultures": representations of self and other within museums and institutional cultures of the museum world itself.n3 credits (no final project) or 5 credits (final project). May be repeat for credit.
Same as: ARCHLGY 134, ARTHIST 284B

ARCHLGY 235. Constructing National History in East Asian Archaeology. 3-5 Units.
Archaeological studies in contemporary East Asia share a common concern, to contribute to building a national narrative and cultural identity. This course focuses on case studies from China, Korea, and Japan, examining the influence of particular social-political contexts, such as nationalism, on the practice of archaeology in modern times.
Same as: ARCHLGY 135, CHINA 175, CHINA 275

ARCHLGY 237. Political Exhumations. Killing Sites Research in Comparative Perspective. 3-5 Units.
The course discusses the politics and practices of exhumation of individual and mass graves. The problem of exhumations will be considered as a distinct socio-political phenomenon characteristic of contemporary times and related to transitional justice. The course will offer analysis of case studies of political exhumations of victims of the Dirty War in Argentina, ethnic cleansing in former Yugoslavia, the Holocaust, communist violence in Poland, the Rwandan genocide, and the Spanish Civil War. The course will make use of new interpretations of genocide studies, research of mass graves, such as environmental and forensic approaches.
Same as: ANTHRO 137D, ARCHLGY 137, DLCL 237, REES 237

ARCHLGY 248. Ceramic Analysis for Archaeologists. 3-5 Units.
The analysis and interpretation of ceramic remains allow archaeologists to accomplish varied ends: establish a time scale, document interconnections between different areas, and suggest what activities were carried out at particular sites. The techniques and theories used to bridge the gap between the recovery of ceramics and their interpretation within archaeological contexts is the focus of this seminar.
Same as: ARCHLGY 148

ARCHLGY 254. Animism, Gaia, and Alternative Approaches to the Environment. 3-5 Units.
Indigenous knowledges have been traditionally treated as a field of research for anthropologists and as mistaken epistemologies, i.e., un-scientific and irrational folklore. However, within the framework of environmental humanities, current interest in non-anthropocentric approaches and epistemic injustice, animism emerged as a critique of modern epistemology and an alternative to the Western worldview. Treating native thought as an equivalent to Western knowledge will be presented as a (potentially) decolonizing and liberating practice. This course may be of interest to anthropology, archaeology and literature students working in the fields of ecocriticism and the environmental humanities/social sciences, students interested in the Anthropocene, geologic/mineral, bio-, eco- and geosocial collectives, symbiotic life-forms and non-human agencies. The course is designed as a research seminar for students interested in theory of the humanities and social sciences and simultaneously helping students to develop their individual projects and thesis.
Same as: ANTHRO 154C, ANTHRO 254C, ARCHLGY 154, DLCL 254, REES 254

ARCHLGY 299. INDEPENDENT STUDY/RESEARCH. 1-5 Unit.
nnINDEPENDENT STUDY/RESEARCH.

ARCHLGY 307. Historical Archaeology of Race and Class in the Americas. 3-5 Units.
The history of ¿race¿ in the Americas is one intimately tied to the formation of typologies of human bodies at work and the political, economic, and health disparities made manifest from imposed difference. This seminar is divided into three themes: How have historical archaeologists approached the issues of inequality, racialization, and class in the Americas? How do we as archaeological professionals recognize the legacies of racial and class inequities within our own disciplinary praxis? And, how can we mobilize public and activist archaeologies to solve real-world problems? Rooted in an examination of traditional scholarship and emergent themes, such as the production of ¿whiteness,¿ biopolitics, and indigenous archaeologies, this seminar explores the idea that archaeology can develop tools to address inequities in the Americas. This course also has a built-in quarter-long digital public archaeology ¿lab,¿ making use of local assemblages from the Stanford Archaeology Collection.

ARCHLGY 319. Archaeological Theory: Graeco-Roman Antiquity. 3-5 Units.
The ways that archaeology is a medium of understanding Classical antiquity. We will selectively and deeply review themes in archaeological theory as they inform the academic study of Graeco-Roman antiquity. The aim is not to acquire comprehensive coverage of contemporary archaeological theory, but to focus on concepts, methodologies and practices that have a strong connection with agendas in contemporary Classics, and to explore interdisciplinary links through social and cultural theory and critique, performance studies, science studies (including the history and sociology of technology), design studies and approaches to material culture.

ARCHLGY 327. Doing Business in Classical Antiquity: Mediterranean Exchange. 3-5 Units.
Exchange was everywhere in the Mediterranean, from the individual household to the state. Yet the specific models by which goods changed hands were as varied as the ideas and values that moved alongside them. This seminar will explore theoretical approaches to commercial and non-commercial exchange, drawing primarily on the crucial but uneven bodies of archaeological evidence and historical sources in an effort to investigate the simple but hardly straightforward question of how business was undertaken in the Greco-Roman world.
Same as: CLASSICS 352

ARCHLGY 335. Models in Archaeology. 3-5 Units.
(Formerly CLASSART 335.) This seminar explores how we can use archaeological sources to build models of Graeco-Roman antiquity. A model is defined as a systematic and schematic representation of the way the ancient world worked, and particularly by using social and cultural theory. We will take in classic works of Marx and Weber, as well as contemporary approaches. A key objective is for class members to connect this most important aspect of social science to their own research project.

ARCHLGY 342. Archaeology of Roman Slavery. 3-5 Units.
The archaeological study of Roman slavery has been severely limited by a focus on identifying the traces of slaves in the material record. This seminar explores a range of newer and more broadly conceived approaches to understanding slavery and slaves' experiences, including spatial analysis, bioarchaeology, epigraphy, visual imagery, and comparative archaeologies of slavery. Students will learn about the current state of research, work with different kinds of evidence and a range of methodologies, and develop original research projects of their own.

ARCHLGY 353. Archaeology: Post-Humanist Agendas. 3-5 Units.
How do people and their artifacts connect? Just what is the subject of archaeological history? A seminar reviewing the latest materialist approaches in archaeology and heritage studies.
Same as: CLASSICS 353

ARCHLGY 355. Landscape & Archaeology. 3-5 Units.
TBD.
Same as: CLASSICS 355

ARCHLGY 356. Mediterranean Regionalism. 3-5 Units.
The ancient world enjoys scholarly traditions of both grand pan-Mediterranean narratives and focused studies of the individual landscapes and peoples who comprise them. Within archaeology, these latter explorations generally rely on expedient geographical designations, modern political boundaries, or survey areas as focused ¿regions¿ for discussion. Defining and interrogating the regions created and experienced by ancient peoples and assembling these into a coherent larger ancient picture proves far more difficult. This seminar explores the varied forms of ancient regionalisms¿from archaeological (architecture, ceramics, coinage, sculpture, etc.) to social (language, religion, etc.)¿and tools for investigating such patterns of human interaction.
Same as: CLASSICS 356

ARCHLGY 367. Mediterranean Networks. 3-5 Units.
The the ancient Mediterranean was highly interconnected is common knowledge, and the idea of integration has become a defining factory in current approaches to Greco-Roman cultural identities. Yet how connectivity functiond, and how we should effectively analyze it, are less well understood. This seminar highlights emerging network approaches--both broad theoretical network paradigms and specific network science methodologies--as conceptual tools for archaeological and historical investigations of cultural interaction (economic, religious, artistic, colonial, etc.) across the Mediterranean world.

ARCHLGY 376. Methods, Theories, and Practice in Chinese Archaeology. 2-5 Units.
This course is designed for graduate students who are interested in Chinese archaeology. We will discuss the current issues in the discipline, particularly related to archaeological research on food and foodways. We will conduct experimental study and laboratory analyses to investigate ancient human behavior in food procurement, preparation, and consumption. The archaeological methods include analyses of use-wear on stone tools and various microbotanical remains (starch, phytoliths, etc.) on artifacts.
Same as: CHINA 376

ART AND ART HISTORY

Courses offered by the Department of Art & Art History are listed on the Stanford Bulletin's ExploreCourses web site under the subject codes ARTHIST (Art History) (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=ARTHIST&filter-catalognumber-ARTHIST=on), ARTSTUDI (Art Practice) (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=ARTSTUDI&filter-catalognumber-ARTSTUDI=on), FILMSTUD (Film Studies) (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=FILMSTUD&filter-catalognumber-FILMSTUD=on), and FILMPROD (Film Practice) (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=FILMPROD&filter-catalognumber-FILMPROD=on).

Mission of the Department of Art and Art History

The department offers courses of study in:

1. Art History
2. Art Practice (studio)
3. Film and Media Studies
4. Film Production

leading to the following degrees: B.A. degree in Art History; B.A. degree in Art Practice; B.A. degree in Film and Media Studies; M.F.A. degree in Art Practice; M.F.A. degree in Documentary Film and Video; Ph.D. degree in Art History.

The undergraduate program is designed to help students think critically about the visual arts and visual culture. Courses focus on the meaning of images and media, and their historical development, roles in society, and relationships to disciplines such as literature, music, and philosophy. Work performed in the classroom, studio, and screening room is designed to develop a student's powers of perception, capacity for visual analysis, and knowledge of technical processes.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program.

Students in historical studies are expected to demonstrate:

1. knowledge and awareness of art and/or film terminology and concepts;
2. ability to develop effective and nuanced lines of interpretation;
3. improved critical thinking skills using primary and secondary source materials;
4. improvement in analytical writing skills and close reading skills;
5. ability to form and validate their own and others' opinions through knowledge of artistic movements and sociohistorical events.

Students in creative art are expected to demonstrate:

1. enhanced awareness of the role of art in intellectual and cultural life;
2. problem solving skills to organize, analyze and interpret visual information;
3. mastery of techniques and materials of a discipline with awareness of historical and current practices;
4. selection of materials, processes, form, and content to achieve poetic and expressive relationships to artistic media;
5. ability to apply critical analysis to the student's own work and the work of others;
6. effective techniques for the preparation and presentation of work consistent with professional practices in the field.

Learning Outcomes (Graduate)

The purpose of the master's programs is to further develop knowledge and skills in Art and Art History and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates in Art History (including Film and Media Studies) who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in their respective disciplines. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to knowledge in their fields and to interpret and present the results of their research.

Iris and and B. Gerald Cantor Center For Visual Arts

The Cantor Arts Center at Stanford University is a major resource for the department. The Cantor presents art from around the world in 24 galleries: from Africa to the Americas to Asia, and from ancient to contemporary periods. The Cantor offers changing selections from its 30,000-object collection; the Rodin Sculpture Garden; special exhibitions; and a variety of educational programs. Through collaborations with the teaching program, student internships, and student activities, the Cantor provides a rich resource for Stanford students.

Art History

Undergraduate Program in Art History

The discipline of Art History teaches students how to analyze and interpret works of fine art (paintings, drawings, prints, and sculpture), photography and moving image media (film, video, television, and digital art), material culture (ritual objects, fashion, advertisements, and the decorative, applied, and industrial arts), and the built environment (architecture, urbanism, and design). The department takes it as axiomatic that the skills of visual literacy and analysis are not innate but may be acquired through training and practice. Objects of study are drawn from the cultures of Africa, Asia, the Americas, from the Middle East; from Western, Central, and Eastern Europe; and from antiquity to the present.

Art History is a historical discipline that seeks to reintegrate the work of art into the original context of its making and reception, foregrounding its significant status as both historical document and act of social communication. At the same time, Art History seeks to understand the ways in which the work of art transcends the historical moment of its production, taking on different meanings in later historical periods, including the present. As part of their visual training, students of Art History become proficient in cultural analysis and historical interpretation. Art History thus envisions itself as uniquely well positioned to train students from a variety of disciplines in the light of the dramatic visual turn that has gripped the humanities and the sciences over the course of the last decade, with more and more disciplines becoming vitally interested in visual forms and modes of communication.

Graduate Program in Art History

The doctoral program in Art History at Stanford is relatively small, and affords the graduate student the opportunity to work intensively with individual members of the faculty. The Doctor of Philosophy degree is taken in a particular field, supported by a background in the general history of art. Doctoral candidates also undertake collateral studies in other graduate departments or in one of the University's interdisciplinary programs.

Art Practice (Studio)

Undergraduate Program in Art Practice (Studio)

The Art Practice program offers production-based courses founded on the concepts, skills and cultural viewpoints that characterize contemporary art practice. The goal is to educate students, both majors and minors, in the craft, culture, and theory of current fine art practices to prepare them for successful careers as artists. The art practice program is designed to develop in-depth skills in more than one area of the visual arts. It emphasizes the expressive potential of an integration of media, often via a cross-disciplinary, interactive path. Through collaboration and connections with scientists, engineers, and humanities scholars, the program addresses a breadth of topical and artistic concerns central to a vital undergraduate education.

Graduate Program in Painting, Sculpture, New Genres, and Photography

The program provides a demanding course of study designed to challenge advanced students. Participants are chosen for the program on the basis of work that indicates high artistic individuality, achievement, and promise. Candidates should embody the intellectual curiosity and broad interests appropriate to, and best served by, work and study within the University context.

Film and Media Studies

Undergraduate Program in Film and Media Studies

The Bachelor of Arts in Film and Media Studies provides an introduction to film aesthetics, history, national cinematic traditions, modes of production in narrative, documentary, and experimental films, the incorporation of moving image media by contemporary artists, and the proliferation of new forms of digital media. The program is designed to develop the critical vocabulary and intellectual framework for understanding the role of cinema and related media within broad cultural and historical concepts.

Graduate Program in Documentary Film and Video

The Master of Fine Arts program in documentary production provides a historical, theoretical, and critical framework within which students master the conceptual and practical skills for producing nonfiction film and video. The M.F.A. is a terminal degree program with a two-year, full-time curriculum representing a synthesis of film praxis and film and media history, theory, and criticism. Courses provide an intellectual and theoretical framework within which students' creative work is developed. Students proceed through the program as a cohort. The program does not permit leaves of absence.

The M.F.A. degree is designed to prepare graduate students for professional careers in film, video, and digital media. Graduates are qualified to teach at the university level. The philosophy of the program is predicated on a paradigm of independent media that values artistic expression, social awareness, and an articulated perspective. Students become conversant with the documentary tradition as well as with alternative media and new directions in documentary. Training in documentary production is combined with the development of research skills in film criticism and analysis. Electives in film studies, art history, and studio art provide an intellectual and theoretical framework within which creative work is realized. The parallel focus on production and studies prepares students for an academic position that may require teaching both film studies and production.

Art and Art History Department Course Catalog Numbering System

The first digit of the ARTHIST and FILMSTUD course number indicates its general level of sophistication.

Digit	Area
001-099	Introductory
100-199	Undergraduate level lectures
200-299	Undergraduate seminars/individual work
300-399	Graduate level lectures
400-599	Graduate seminars/individual work

Art History

Digit	Area
001-099	Introductory
100-104	Ancient
105-109	Medieval
110-119	Renaissance
120-139	Early Modern
140-159	Modern
160-179	Contemporary
180-189	Asia
190-195	Africa and the Americas
200-299	Seminars and Colloquia
410-499	Historical Studies
500-599	Critical Studies
600-699	Graduate Research

Art Practice (Studio)

Digit	Area
001-099	Courses for Non-Major (Lower Level)
100-199	Lower Level Undergraduate Courses
200-299	Upper Level Undergraduate Courses
300-399	Graduate Seminars

Film and Media Studies

Digit	Area
004-103	Introductory
111-118	Genre
130-139	National Cinemas
140-149	Aesthetics
150-159	Other
220-299	Undergraduate Seminars
400-660	Graduate Seminars

Film Production

Digit	Area
001-199	Undergraduate Courses
300-399	Graduate Courses
400-499	Graduate Courses for MFA Doc Film Students Only

Bachelor of Arts in Art History

The Department of Art and Art History offers: a Bachelor of Arts in Art History (p. 1006) • a Bachelor of Arts in Art Practice (Studio) (p. 1008) • a Bachelor of Arts in Film and Media Studies (p. 1010). The department also offers a minors (p. 1013) in Art History (p. 1013), Art Practice (Studio) (p. 1013), and Film and Media Studies (p. 1014).

Suggested Preparation for the Major

Students considering a major in art history should take either ARTHIST 1A Decolonizing the Western Canon: Introduction to Art and Architecture from Prehistory to Medieval or ARTHIST 1B How to Look at Art and Why: An Introduction to the History of Western Painting, during their freshman or sophomore year.

How to Declare the Major

Students who wish to major in Art History must meet with the Student Services Specialist. At that time, the student selects a faculty advisor, declares the major on Axess, and selects a concentration.

Concentrations

Concentrations within the major are approved by the student's major advisor; they are not declared on Axess and they do not appear on the transcript nor on the diploma. Concentrations include:

- Topical concentrations: art and gender; art, politics, race, and ethnicity; art, science, and technology; urban studies
- Genre concentrations: architecture; painting; sculpture; film studies; prints and media; decorative arts and material culture
- Historical and national concentrations: ancient and medieval; Renaissance and early modern; modern and contemporary; America; Africa; Asia; the Americas
- Interdisciplinary concentrations: art and literature; art and history; art and religion; art and economics; art and medicine (with advisor consent a maximum of two concentration courses may be taken outside the department).

Degree Requirements

All undergraduate majors complete a minimum of 65 units (15 courses that carry 4 or 5 units each). Courses must be taken for a letter grade.

Completing a full year of ITALIC or SLE can count as an Art History elective.

Majors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the major declaration.

Eligible students may also pursue a Bachelor of Arts in Art History with Honors (p. 1007).

Required Courses

Courses may not be offered every year and are subject to change. Consult an academic advisor if a course is not listed below.

1. Core Courses (20 units)

Complete four core courses.

2. Foundation Courses (20 units)

In order that students acquire a broad overview of different historical periods and different geographic regions, majors must take five Art History lecture courses, one from each of the following five categories.

3. Seminar Courses for Majors (10 units)

Writing in the Major (5 units): ARTHIST 294 Writing and the Visual: The Art of Art Writing. This course is designed for Art History majors in their junior year, equipping them with the scholarly tools necessary for writing about art in a variety of contexts as they progress through the major. This course fulfills the requirements of Writing in the Major (WIM).

Capstone Junior Seminar (5 units): ARTHIST 296 Junior Seminar: Methods & Historiography of Art History. This course is designed to introduce majors to methods and theories underlying the practice of Art History. The seminar is offered annually, typically during Autumn Quarter.

4. Seminar Requirement (5 units)

The student needs one additional seminar course within his or her area of concentration.

5. Area of Concentration (8-10 units)

The department encourages students to pursue their interests by designing an area of concentration tailored to their own intellectual concerns. This area of concentration provides the student with an in-depth understanding of a coherent topic in Art History and consists of three Art History courses: one must be a seminar, and two of the three courses must be in a single field or concentration constructed by the student in consultation with his or her faculty advisor. Students must submit an area of concentration form, signed by their faculty advisor, by the Winter Quarter of the junior year.

6. Art Practice Course (4 units)

Majors are required to complete at least one introductory Art Practice course.

		Units
1. Core Courses		**20**
Select four of the following:		
ARTHIST 1A	Decolonizing the Western Canon: Introduction to Art and Architecture from Prehistory to Medieval	
ARTHIST 1B	How to Look at Art and Why: An Introduction to the History of Western Painting	
ARTHIST 2	Asian Arts and Cultures	
ARTHIST 3	Introduction to World Architecture	
FILMSTUD 4	Introduction to Film Study: French Cinema in Focus	
2. Foundation Courses		**20**
Take one course from each of the following categories:		
Ancient and Medieval		
Select one of the following:		
ARTHIST 100N	The Artist in Ancient Greek Society (meets WAY A-II)	
ARTHIST 101	Introduction to Greek Art I: The Archaic Period (meets WAY A-II)	
ARTHIST 102	Introduction to Greek Art II: The Classical Period (meets WAY A-II)	
ARTHIST 105B	Medieval Journeys: Introduction through the Art and Architecture	
ARTHIST 106	Byzantine Art and Architecture, 300-1453 C.E.	
Renaissance and Early Modern		
Select one of the following:		
ARTHIST 142A	The Architecture of Thought: Artists and Thinkers Design for Themselves	
Modern, Contemporary, and the U.S		
Select one of the following:		

ARTHIST 118A	Space, Public Discourse and Revolutionary Practices	
ARTHIST 143A	American Architecture	
ARTHIST 144B	Modern Design from the Eiffel Tower to Yves Saint Laurent	
ARTHIST 146	American Dream, American Nightmare: A History of the United States in Art and Literature	
ARTHIST 147	Modernism and Modernity	
ARTHIST 151	Migration and Diaspora in American Art, 1800-Present	
ARTHIST 156A	Warhol: Painting, Photography, Performance	
ARTHIST 160		
ARTHIST 176		
ARTHIST 186B	Asian American Art: 1850-Present	
ARTHIST 191	African American Art	
ARTHIST 194	U.S. Latinx Art	
Asia, Africa, and the Americas		
Select one of the following:		
ARTHIST 182B	Cultures in Competition: Arts of Song-Era China	
ARTHIST 185	Arts of China in the Early Modern World, 1550-1800	
ARTHIST 188B	From Shanghai Modern to Global Contemporary: Frontiers of Modern Chinese Art	
Film & Media Studies		
Select one of the following:		
FILMSTUD 4	Introduction to Film Study: French Cinema in Focus (meets WAY A-II; cannot be double-counted if taken as core course)	
FILMSTUD 6	Introduction to Media	
FILMSTUD 100B	History of World Cinema II: Currents in Francophone Film, 1970-present (meets WAY A-II)	
FILMSTUD 100C	History of World Cinema III, 1960-Present (meets WAY A-II)	
FILMSTUD 101	Close Cinematic Analysis (meets WAY A-II)	
FILMSTUD 102	Theories of the Moving Image (meets WAY A-II)	
FILMSTUD 115	Documentary Issues and Traditions	
3. Seminar Courses for Majors		
Take each of the following		
Writing in the Major (WIM)		
ARTHIST 294	Writing and the Visual: The Art of Art Writing	5
Capstone Junior Seminar		
ARTHIST 296	Junior Seminar: Methods & Historiography of Art History	5
4. Seminar Requirement		**5**
One additional seminar course within the area of concentration		
ARTHIST 193	Jacob Lawrence's Twentieth Century: African American Art and Culture	
ARTHIST 203	Artists, Athletes, Courtesans and Crooks	
ARTHIST 208	Hagia Sophia	
ARTHIST 208B	The Art of Medieval Spain: Muslims, Christians, Jews	
ARTHIST 210	Giotto	
ARTHIST 211		
ARTHIST 215C	What is Contemporary Art?	
ARTHIST 217B	Architectural Design Theory	
ARTHIST 243B	Photography and Time	
ARTHIST 245	Art, Business & the Law	
ARTHIST 278	Introduction to Curating	
5. Area of Concentration		**8-10**
Take two courses chosen in consulation with the advisor		
6. Art Practice Course		**4**
Complete at least one introductory Art Practice course.		
Total Units		67-69

Other Information

Overseas Study or Study Abroad

Students can take a maximum of two courses (10 units) away from Stanford; this includes transfer courses from other universities and Stanford Overseas Studies. A student must meet with his or her advisor and with the Student Services Specialist before planning an overseas campus program.

Honors Program in Art History

The purpose of the honors program is to extend and deepen work done in Art History classes. The honors thesis topic typically emerges out of prior course work; it should be focused and have clear parameters. Ordinarily, an honors thesis is not an exploration of an area that the student has never studied before.

Admission to the Honor Program

The minimum requirement for admission to the honors program is an overall GPA of 3.5, and at least 3.5 in Art History courses. Students must complete at least five Art History courses at Stanford by the end of their junior year, and four must be completed by the end of Winter Quarter; with the advisor's approval, two of these courses may be taken at an overseas campus or Stanford in Washington. Students interested in pursuing honors should consult a potential thesis advisor on the Art History faculty during the Autumn Quarter of junior year. Thesis advisors must be in residence during Autumn Quarter of the student's senior year, and it is recommended that they be in residence throughout the senior year. Students considering honors should contact the Director of the Honors Program in their junior year as soon as they begin to think about writing an honors thesis. Those wishing to do so must announce their intention to write an honors thesis by submitting an intent form signed by their thesis advisor (who need not be the student's academic advisor) by February 1 of their junior year.

Submission of the Thesis Proposal Package

Candidates for the honors program must submit a five-page (double-spaced) thesis proposal, including bibliography and illustrations, and one completed paper that demonstrates the student's ability to conceptualize and write cogently about art historical issues. The deadline for submitting the complete package to the department's Student Services Specialist is the third week of Spring Quarter of the candidate's junior year. Upon approval by a majority of the faculty at its regular meeting in early May, the candidate is accepted into the honors program.

Research and Writing of the Honors Thesis

Once admitted to the honors program, students work with the director of the honors program and their thesis advisor to define the scope of study, establish a research and writing timetable, and enlist one other faculty member, ideally but not necessarily in the Department of Art and Art History, to serve as a second reader. The summer between junior and senior years is usually devoted to refining the topic and pursuing any off-campus research. Students are encouraged to apply for VPUE research

grants (https://undergrad.stanford.edu/opportunities/research/) to help finance trips or expenses related to research for their honors thesis.

During their senior year, students must register for 10 units of ARTHIST 297 Honors Thesis Writing, 5 units of which may count towards the student's concentration in Art History. Students are required to register for 2-5 units each quarter during their senior year, for a total of 10 units.

Submission and Approval of the Honors Thesis

With the guidance of the director of the honors program, students and thesis advisors should plan their work so that a complete, final manuscript is submitted to the thesis advisor and the second reader by the beginning of the seventh week of the student's final quarter at Stanford. The thesis advisor assigns a letter grade; both the advisor and the second reader must approve the honors thesis in order to qualify the student to graduate with honors.

return to top of page (p. 1006)

Bachelor of Arts in Art Practice (Studio)

The Department of Art and Art History offers: a Bachelor of Arts in Art History (p. 1006) • a Bachelor of Arts in Art Practice (Studio) (p. 1008) • a Bachelor of Arts in Film and Media Studies (p. 1010). The department also offers a minors (p. 1013) in Art History (p. 1013), Art Practice (Studio) (p. 1013), and Film and Media Studies (p. 1014).

How to Declare the Major

To declare the major, students must meet with the Student Services Specialist. At that time the student selects a faculty advisor. Art Practice majors are required to meet with both their advisor and the Student Services Specialist during the first two weeks of each quarter to have course work approved and make certain they are meeting degree requirements. Majors are required to attend an orientation session presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet, as well as familiarizing students with artists' resources and the department's artist book collection. This requirement should be completed no later than the quarter following the major declaration.

Students may apply for the Honors Program in Art Practice during their junior year; for details, see the "Honors (p. 1007)" section below.

Transfer Credit Evaluation

Upon declaring an Art Practice major, a student transferring from another school must have his or her work evaluated by the Director of Undergraduate Studies (DUS) in Art Practice. A maximum of 10 transfer units may be applied toward the minimum 65 total units required for the major. A student wishing to have more than 10 units applied toward the major must submit a petition to the Director of Undergraduate Studies in Art Practice and then have their work reviewed by a studio committee.

Degree Requirements

All undergraduate majors complete a minimum of 65 units including six lower level courses, six upper level courses, and four art history courses, including the WIM course ARTHIST 294 Writing and the Visual: The Art of Art Writing.

All courses must be taken for a letter grade and must be passed with a letter grade of 'C' or better.

Students are encouraged to move through the requirements for the major in the sequence outlined. Students are exposed to a range of practices early in their development in order to have a good basis of comparison if they choose to focus on a particular medium. This sequence of courses also broadens the students' skills and enables them to combine materials and methods. In all courses, students are expected to pass mid-term and final reviews and critiques of their work.

Students are required to take upper level ARTSTUDI 230 Interdisciplinary Art Survey in their junior year and ARTSTUDI 249 Advanced Undergraduate Seminar in their senior year.

University units earned by placement tests or advanced placement work in secondary school are not counted within the 65 units.

The studio requirements are divided into lower level (introductory, 100 level) and upper level (advanced, 200 level) course work. At the lower level, students focus on exploring various mediums and building a strong foundation in contemporary art. Upper level courses are designed to stretch the student's understanding of materials, techniques, site, and social relevance. Experimental and challenging in nature, these courses cross area boundaries.

Completing a full year of ITALIC can count towards either one Art History elective or one lower level Art Practice course. Independent study supervised by a member of the permanent faculty is also available to the advanced student.

Most art practice courses are studio-based. Enrolled students are typically required to purchase their own supplies or materials depending on the medium of the class, and the scale of individual student work.

Course Requirements

Courses may not be offered every year and are subject to change. Consult an academic advisor if a course is not listed above.

		Units
1. Lower Level Courses		**24**
Select six of the following:		
ARTSTUDI 19N	An Artist's Life: Diverse Voices and Changing Contexts	
ARTSTUDI 130	Interactive Art: Making it with Arduino	
ARTSTUDI 131	Sound Art I	
ARTSTUDI 136	The Portable Studio	
ARTSTUDI 140	Drawing I	
ARTSTUDI 141	Plein Air Painting	
ARTSTUDI 145	Painting I	
ARTSTUDI 147	Art Book Object	
ARTSTUDI 148	Monotype	
ARTSTUDI 148A	Introduction to Lithography	
ARTSTUDI 148B	Introduction to Printmaking	
ARTSTUDI 148P	The Hybrid Print	
ARTSTUDI 150N	Queer Sculpture	
ARTSTUDI 151	Sculpture I	
ARTSTUDI 155	Social Sculpture	
ARTSTUDI 160	Intro to Digital / Physical Design	
ARTSTUDI 161	Constructing Color	
ARTSTUDI 162	Embodied Interfaces	
ARTSTUDI 163	Drawing with Code	
ARTSTUDI 164	Design in Public Places	
ARTSTUDI 165	Social Media and Performative Practices	
ARTSTUDI 166	Sculptural Screens / Malleable Media	
ARTSTUDI 167	Introduction to Animation	
ARTSTUDI 168	Data as Material	
ARTSTUDI 169	Virtual Reality: the possibility and peril of immersive artwork	
ARTSTUDI 170	Photography I: Black and White	
ARTSTUDI 171	Introduction to Photography	

ARTSTUDI 173E	Cell Phone Photography	
ARTSTUDI 174B	Creativity in the Age of Facebook: Making Art for and from Networks	
ARTSTUDI 175	Sound Installation	
ARTSTUDI 176	Time Shifts	
ARTSTUDI 177	Video Art	
ARTSTUDI 178	Art and Electronics	
ARTSTUDI 179	Digital Art I	
ARTSTUDI 181	From Dissection to Monster	
ARTSTUDI 182	Queered Tech and Speculative Design	
ARTSTUDI 184	Art and Environmental Engagement	
ARTSTUDI 185	Interactive Storytelling	
2. Upper Level Courses		
Required Courses		
ARTSTUDI 230	Interdisciplinary Art Survey (take in junior year)	4
ARTSTUDI 249	Advanced Undergraduate Seminar (take in senior year)	4
Select four optional courses from the following list:		16
ARTSTUDI 233	Let's Make a Monster: Critical Making	
ARTSTUDI 236	Future Media, Media Archaeologies	
ARTSTUDI 239	Intermedia Workshop	
ARTSTUDI 240	Drawing II	
ARTSTUDI 241A	Drawing from Life	
ARTSTUDI 242	Drawing and Creative Writing	
ARTSTUDI 245	Painting II	
ARTSTUDI 247	Collage	
ARTSTUDI 247A	Art Book Object	
ARTSTUDI 252	Sculpture II	
ARTSTUDI 254	Kinetic Sculpture	
ARTSTUDI 256	Advanced Installation	
ARTSTUDI 258	Resisting Monuments at the End of the World	
ARTSTUDI 264	Advanced Interaction Design	
ARTSTUDI 266	Sculptural Screens / Malleable Media	
ARTSTUDI 267	Emerging Technology Studio	
ARTSTUDI 270	Advanced Photography Seminar	
ARTSTUDI 271	The View Camera	
ARTSTUDI 275	Photography II: Digital	
ARTSTUDI 276	The Photographic Book	
ARTSTUDI 277	Intermediate Photography Seminar	
ARTSTUDI 277A	Video Art II	
ARTSTUDI 278	Photography II: Black and White	
ARTSTUDI 284	Art and Biology	
ARTSTUDI 288	Intermediate Photography: Documentary	
3. Art History Courses		
Required		
ARTHIST 294	Writing and the Visual: The Art of Art Writing	5
Three other art history courses, one must be from the modern art series.		12-15
One Film & Media Studies course may satisfy an Art History elective. One alternative Art History elective may be taken outside the department, such as an art history class offered by the Institute for Diversity in the Arts, in consultation with the major advisor.		
Total Units		65-68

Other Information

Overseas Study or Study Abroad

Students can take a maximum of two courses (10 units) away from Stanford; this includes transfer courses from other universities and Stanford Overseas Studies. A student must meet with his or her advisor and with the Student Services Specialist before planning an overseas campus program.

Honors Program in Art Practice

The purpose of the honors program is to extend and deepen work done in Art Practice classes. The honors thesis exhibition topic typically emerges out of prior course work. Ordinarily, an honors thesis exhibition is not an exploration of an area that the student has never studied before. Completion of the program is noted on the diploma and on the transcript

Admission to the Honors Program

The honors program is open to art practice majors only. The minimum requirement for admission to the honors program is an overall GPA of 3.5, and at least 3.5 in Art Practice courses. Students must complete at least five Art Practice courses at Stanford by the end of their junior year, and four must be completed by the end of Winter Quarter. With advisor approval, two of these courses may be taken at an overseas campus.

Students interested in pursuing honors should consult a potential thesis advisor on the Art Practice faculty during the Autumn Quarter of junior year. Thesis advisors must be in residence during Autumn Quarter of the student's senior year. Students considering honors should contact the Director of the Honors Program in their junior year. Those wishing to do so must announce their intention to write an honors thesis exhibition proposal by submitting an intent form signed by their thesis advisor, who need not be the student's academic advisor, by March 1 of their junior year.

Submission of the Thesis Proposal Package

The thesis proposal package must include:

1. A two-page Honors Thesis Exhibition Project Proposal description of the artwork/project, including an outline of research and goals signed by the thesis advisor.
2. Artwork Samples: 10 JPEGS of recent work (scaled to 8"x 10", no larger than 1MB each) or 5 minutes of video/audio clips. If video/audio work only is submitted, it may consist of up to 15 minutes of clips. Upload via Slideroom application.
3. Artwork Sample Descriptions: List each artwork and descriptions of submitted artwork (title, date, medium, dimensions, length if applicable, explanation if needed). Upload via Slideroom application.
4. Course plan for senior year and copy of academic transcript.

Research and Writing of the Honors Thesis

Once admitted to the honors program, students work with the director of the honors program and their thesis advisor to define the scope of study, establish a research and artwork completion timetable, and enlist one other faculty member, ideally but not necessarily on the Art Practice faculty, to serve as a second reader. The summer between junior and senior years is usually devoted to refining the topic and pursuing any off-campus research. Students are encouraged to apply for UAR research grants (https://undergrad.stanford.edu/opportunities/research/get-funded/apply-uar-student-grants/) to help finance trips or expenses related to research for their honors thesis.

During their senior year, students must register for 6 units of ARTSTUDI 297 Honors Thesis Exhibition and 4 units of ARTSTUDI 297S AP HONORS SEMINAR, for a total of 10 units. Students are required to enroll in 2 units of ARTSTUDI 297 and 1-2 units of ARTSTUDI 297S each

quarter (Autumn, Winter, and Spring). Up to 4 units may count towards one of the six upper level courses required for the major.

Submission and Approval of the Honors Thesis

With the guidance of the director of the honors program, students and thesis advisors should plan their work so that a complete art exhibition is installed in the first three weeks of Spring Quarter of their senior year with the Exhibitions Manager for the Department of Art and Art History. The student arranges a meeting with the advisors while the exhibition is on display. The thesis advisor assigns a letter grade; both the main advisor and the second advisor must approve the honors thesis in order to qualify the student to graduate with honors.

Bachelor of Arts in Film and Media Studies

The Department of Art and Art History offers: a Bachelor of Arts in Art History (p. 1006) • a Bachelor of Arts in Art Practice (Studio) (p. 1008) • a Bachelor of Arts in Film and Media Studies (p. 1010). The department also offers a minors (p. 1013) in Art History (p. 1013), Art Practice (Studio) (p. 1013), and Film and Media Studies (p. 1014).

Students who declared Film and Media Studies major prior to the academic year 2018-19 should refer to a previous edition of the Bulletin (http://exploredegrees.stanford.edu/archive/#text) for requirements or contact their department major advisor with specific questions.

Suggested Preparation for the Major

Students considering a major in film and media studies should take FILMSTUD 4 Introduction to Film Study: French Cinema in Focus , and are encouraged to take either ARTHIST 1A Decolonizing the Western Canon: Introduction to Art and Architecture from Prehistory to Medieval or ARTHIST 1B How to Look at Art and Why: An Introduction to the History of Western Painting, during their freshman or sophomore year. These courses anchor the major through exposure to film language, genre, and visual and narrative structures. Majors are required to take one course in the fundamentals of film and video production.

Suggested or Recommended Courses (all of which meet major requirements)

		Units
ARTHIST 1A	Decolonizing the Western Canon: Introduction to Art and Architecture from Prehistory to Medieval (meets WAY A-II and ED)	5
ARTHIST 1B	How to Look at Art and Why: An Introduction to the History of Western Painting (meets WAY A-II)	5
FILMSTUD 4	Introduction to Film Study: French Cinema in Focus (meets WAY A-II)	5
FILMSTUD 101	Close Cinematic Analysis (meets WAY A-II)	4

How to Declare the Major

Students who wish to declare the Film and Media Studies major must meet with the Student Services Specialist. At that time, the student selects a faculty advisor in consultation with the Student Services Specialist and FMS faculty, declares the major on Axess, and selects a concentration. Majors are required to attend an orientation session, presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the major declaration.

Concentrations

Concentrations within the major are approved by the student's major advisor and are not declared on Axess; they do not appear on the transcript nor on the diploma. Concentrations include:

- Culture and Criticism
- Screenwriting

Degree Requirements

A student declaring a major in Film and Media Studies must complete 61 units of coursework as detailed below. All courses must be taken for a letter grade. Students must declare their concentration by Winter Quarter of their junior year.

All courses for the major must be taken for a letter grade.

Course Requirements

Courses may not be offered every year and are subject to change. Consult an academic advisor if a course is not listed below.

		Units
Required Courses		
Foundation:		
Choose one of the following:		5
ARTHIST 1A	Decolonizing the Western Canon: Introduction to Art and Architecture from Prehistory to Medieval (meets WAY A-II and ED)	
ARTHIST 1B	How to Look at Art and Why: An Introduction to the History of Western Painting (meets WAY A-II)	
ARTHIST Elective		
FILMSTUD 4	Introduction to Film Study: French Cinema in Focus (meets WAY A-II)	5
FILMSTUD 6	Introduction to Media	5
Core:		
FILMSTUD 100A	History of World Cinema I, 1895-1929	4
FILMSTUD 100B	History of World Cinema II: Currents in Francophone Film, 1970-present (meets WAY A-II)	4
FILMSTUD 101	Close Cinematic Analysis (WIM Course, meets WAY A-II)	4
FILMSTUD 102	Theories of the Moving Image (meets WAY A-II)	4
Capstone (see below for details):		
FILMSTUD 290	Movies and Methods: Contemporary Black Filmmakers	5
Studio (one of the following):		
FILMPROD 114	Introduction to Film and Video Production (meets WAY CE)	5
FILMSTUD Equivalent, when offered		
Concentration Electives		**20**
Five elective courses around one of the two concentrations: Culture and Criticism or Screenwriting. Each elective should be taken for a minimum of 4 units. One of five may be a production-oriented course (FILMPROD) other than FILMPROD 114. For the Screenwriting concentration, at least one out of five must be a FILMSTUD course.		
FILMSTUD 107N	Documentary Film: Telling it Like it Is?	
FILMSTUD 115	Documentary Issues and Traditions	
FILMSTUD 119	Science Fiction: Cyborgs & Human Simulacra in the Cinema	

FILMSTUD 120	Superhero Theory
FILMSTUD 125	Horror Film
FILMSTUD 127	Monster Movies: Frankenstein & Film
FILMSTUD 129	Animation and the Animated Film
FILMSTUD 132A	Indian Cinema
FILMSTUD 135	Around the World in Ten Films
FILMSTUD 211N	Childish Enthusiasms and Perishable Manias
FILMSTUD 232	Chinese Cinema
FILMSTUD 233	Let's Make a Monster: Critical Making
FILMSTUD 245B	History and Politics in Russian and Eastern European Cinema
FILMSTUD 256	Horror Comics
FILMSTUD 259	Game Studies
FILMPROD 101	Screen Writing I: Visual Writing
FILMPROD 101T	Writing the Television Pilot
FILMPROD 103	Adaptation
FILMPROD 104	Screenwriting II: Intermediate Screenwriting
FILMPROD 105	Script Analysis
FILMSTUD 410A	Documentary Perspectives I: Politics of the Subject
COMM 1B	Media, Culture, and Society
Total Units	61

Capstone Experience

FILMSTUD 290, required for all majors in their senior year. This course is also open as an elective, with instructor approval, to students who are not seniors. The Senior Seminar provides majors with an opportunity to synthesize their previous work in Film and Media Studies and work in an advanced setting with a faculty member.

Other Information

Overseas Study or Study Abroad

Students can take a maximum of two courses (10 units) away from Stanford; this includes transfer courses from other universities and Stanford Overseas Studies. A student must meet with their advisor and with the Student Services Specialist before planning an overseas campus program.

Crosslisted Courses

For courses crosslisted between Film and Media Studies and another Stanford department or program, FMS majors should enroll for the FILMSTUD course listing.

Honors Program in Film and Media Studies

The purpose of the honors program is to extend and deepen work done in Film and Media Studies classes. The honors thesis topic typically emerges out of prior coursework; it should be focused and have clear parameters. Ordinarily, an honors thesis is not an exploration of an area that the student has never studied before.

Admission to the Program

The minimum requirement for admission to the honors program is an overall GPA of 3.5, and at least 3.5 in Film and Media Studies courses. Students must complete at least five Film and Media Studies courses at Stanford by the end of their junior year, and four must be completed by the end of Winter Quarter; with the advisor's approval, two of these courses may be taken at an overseas campus. Students interested in pursuing honors should consult a potential thesis advisor on the Film and Media Studies faculty during the Autumn Quarter of junior year. Thesis advisors must be in residence during Autumn Quarter of the student's senior year, and it is highly recommended that they be in residence throughout the senior year. Students considering honors should contact the director of the honors program in their junior year as soon as they begin to think about writing an honors thesis. Those wishing to do so must announce their intention to write an honors thesis by submitting an intent form signed by their thesis advisor (who need not be the student's academic advisor) by February 1 of their junior year.

Submission of the Thesis Proposal Package

Candidates for the honors program must submit a five-page (double-spaced) thesis proposal, including bibliography, a tentative schedule for research and writing, and one completed paper that demonstrates the student's ability to conceptualize and write cogently about film or media. The deadline for submitting the complete package to the department's Student Services Specialist is March 1 of the candidate's junior year. Upon approval by a majority of the faculty at its regular meeting in early May, the candidate is accepted into the honors program.

Research and Writing of the Honors Thesis

Once admitted to the honors program, students work with the director of the honors program and their thesis advisor to define the scope of study, establish a research and writing timetable, and enlist one other faculty member, ideally but not necessarily in the Department of Art and Art History, to serve as a second reader. The summer between junior and senior years is usually devoted to refining the topic and pursuing any off-campus research. Students are encouraged to apply for UAR research grants to help finance trips or expenses related to research for their honors thesis.

During their senior year, students are strongly encouraged to enroll in the Bing Honors College meeting the two weeks before Autumn Quarter. They must also register for 10 units of FILMSTUD 297 Honors Thesis Writing, 5 units of which may count towards the student's concentration in Film and Media Studies. Students are required to register for two to five units each quarter during their senior year, for a total of ten units.

Submission and Approval of the Honors Thesis

With the guidance of the director of the honors program, students and thesis advisors should plan their work so that a complete, final manuscript is submitted to the thesis advisor and the second reader by April 1. The thesis advisor assigns a letter grade; both the advisor and the second reader must approve the honors thesis in order to qualify the student to graduate with honors.

Required Course

		Units
FILMSTUD 297	Honors Thesis Writing	2-5

The joint major program (JMP) was discontinued at the end of the academic year 2018-19. Students may no longer declare this program. All students with declared joint majors are permitted to complete their degree; faculty and departments are committed to providing the necessary advising support.

See the "Joint Major Program (p. 33)" section of this bulletin for a description of University requirements for the JMP. See also the Undergraduate Advising and Research JMP (https://majors.stanford.edu/more-ways-explore/joint-majors-csx/) web site and its associated FAQs.

Students completing the JMP receive a B.A.S. (Bachelor of Arts and Science).

Joint Major Program in Art Practice and Computer Science

Art Practice Major Requirements in the Joint Major Program

See the "Computer Science Joint Major Program (p. 714)" section of this bulletin for details on Computer Science requirements.

Students majoring in the Art Practice and Computer Science joint major program must complete five lower level courses and six upper level courses in art practice, and four art history courses, including the WIM course. Students in the JMP are excused from completing one lower level course, reducing the required unit count of the Art Practice major from 65 to 61 units. All courses comprising the major must be taken for a letter grade.

Most art practice courses are studio-based. Enrolled students are typically required to purchase their own supplies or materials depending on the medium of the class, and the scale of individual student work.

Students majoring in the joint major program in Art Practice and Computer Science must complete the modified degree requirements for Art Practice by completing the following:

1. Five lower level courses (20 units)
   a.

		Units
ARTSTUDI 130	Interactive Art: Making it with Arduino	4
ARTSTUDI 131	Sound Art I	4
ARTSTUDI 136	The Portable Studio	4
ARTSTUDI 140	Drawing I	4
ARTSTUDI 141	Plein Air Painting	4
ARTSTUDI 145	Painting I	4
ARTSTUDI 147	Art Book Object	4
ARTSTUDI 148	Monotype	4
ARTSTUDI 148A	Introduction to Lithography	4
ARTSTUDI 148B	Introduction to Printmaking	4
ARTSTUDI 148P	The Hybrid Print	4
ARTSTUDI 150Q	Queer Sculpture	4
ARTSTUDI 151	Sculpture I	4
ARTSTUDI 155	Social Sculpture	4
ARTSTUDI 156Q	Installation Art in Time and Space	4
ARTSTUDI 160	Intro to Digital / Physical Design	3-4
ARTSTUDI 162	Embodied Interfaces	4
ARTSTUDI 163	Drawing with Code	4
ARTSTUDI 164	Design in Public Places	4
ARTSTUDI 165	Social Media and Performative Practices	4
ARTSTUDI 167	Introduction to Animation	3-4
ARTSTUDI 168	Data as Material	4
ARTSTUDI 170	Photography I: Black and White	4
ARTSTUDI 171	Introduction to Photography	4
ARTSTUDI 173E	Cell Phone Photography	4
ARTSTUDI 174B	Creativity in the Age of Facebook: Making Art for and from Networks	4
ARTSTUDI 176	Time Shifts	4
ARTSTUDI 177	Video Art	4

ARTSTUDI 278	Photography II: Black and White	4
ARTSTUDI 284	Art and Biology	4
ARTSTUDI 288	Intermediate Photography: Documentary	4

4. Four Art History courses (17-20 units)
   a. ARTHIST 294 Writing and the Visual: The Art of Art Writing (5 units)
   b. Three other Art History courses, one must be from the modern art series. One Film and Media Studies course may satisfy an Art History elective.
5. Senior Capstone Project

*Courses may not be offered every year and are subject to change. Consult an academic adviser if a course is not listed above.

The senior seminar (4 units) in conjunction with the computer science capstone course (3-5 units) enables students to produce a creative and in-depth senior capstone project that highlights the integration of the two disciplines. An adviser from each program guides and assesses the project throughout the academic year. The completed project is included in the Senior Exhibit.

Example capstone projects might include an interactive installation that combines various sensors with computer graphic techniques, a screen based artwork that requires sophisticated data visualization, a sculpture involving new forms of projection mapping, or a social media artwork integrating a new type of mobile application. These works would qualify as effective contemporary artworks, and also illustrate unique command of and innovations within the field of computer science.

Dropping a Joint Major Program

To drop the joint major, students must submit the Declaration or Change of Undergraduate Major, Minor, Honors, or Degree Program (https://stanford.box.com/change-UG-program/). Students may also consult the Student Services Center (http://studentservicescenter.stanford.edu/) with questions concerning dropping the joint major.

Transcript and Diploma

Students completing a joint major graduate with a B.A.S. degree. The two majors are identified on one diploma separated by a hyphen. There will be a notation indicating that the student has completed a "Joint Major." The two majors are identified on the transcript with a notation indicating that the student has completed a "Joint Major."

This page has information on the department's: Minor in Art History (p. 1013) • Minor in Art Practice (Studio) (p. 1013) • Minor in Film and Media Studies (p. 1014)

Minor in Art History

How to Declare the Minor

Upon declaring the minor, students must select a faculty advisor with whom they plan their course of study and electives. A proposed course of study must be approved by the advisor and placed in the student's departmental file.

Minors are required to attend an orientation session, presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the minor declaration.

Degree Requirements

A student declaring a minor in Art History must complete 25 units of course work in one of the following four tracks: Open, Modern, Asian, or Architecture.

Courses must be taken for a letter grade. Only one class may be taken for credit outside of the Stanford campus; this includes courses taken in the Overseas Studies Program.

Course Requirements

A student with a minor in Art History must complete six Art History courses for a total of 25 units.

		Units
Open Track		
Select one of the following:		5
ARTHIST 1A	Decolonizing the Western Canon: Introduction to Art and Architecture from Prehistory to Medieval	
ARTHIST 1B	How to Look at Art and Why: An Introduction to the History of Western Painting	
Plus five Art History lecture courses or seminars in any field.		20
Modern Track		
Select one of the following:		5
ARTHIST 1A	Decolonizing the Western Canon: Introduction to Art and Architecture from Prehistory to Medieval	
ARTHIST 1B	How to Look at Art and Why: An Introduction to the History of Western Painting	
Plus five Art History lecture courses or seminars in any aspect of 19th- to 20th-century art.		20
Asian Track		
ARTHIST 2	Asian Arts and Cultures	5
Plus five Art History lecture courses or seminars in Asian Art (ARTHIST 1A OR ARTHIST 1B may be one of the five courses).		20
Architecture Track		
ARTHIST 3	Introduction to World Architecture	5
Plus five Art History lecture courses or seminars in Architectural History (ARTHIST 1A OR ARTHIST 1B may be one of the five courses).		20
Total Units for Any Track		**25**

Minor in Art Practice (Studio)

How to Declare the Minor

Upon declaring the minor, students must select a faculty advisor to have the course work approved and to make certain they are meeting degree requirements.

Minors are required to attend an orientation session, presented by the professional staff of the Art and Architecture Library, which introduces the tools of research and reference available on campus or through the internet. This requirement should be completed no later than the quarter following the minor declaration.

Degree Requirements

A student declaring a minor in Art Practice must complete 36 units of Art Practice and Art History course work.

Courses must be taken for a letter grade. Only one class may be taken for credit outside of the Stanford campus; this includes courses taken in the Overseas Studies Program.

Most art practice courses are studio-based. Enrolled students are typically required to purchase their own supplies or materials depending on the medium of the class, and the scale of individual student work.

Course Requirements

Courses may not be offered every year and are subject to change. Consult an academic advisor if a course is not listed below.

Three lower level courses (100 number courses) for a total of 12 units:

		Units

Minor in Film and Media Studies

How to Declare the Minor

Upon declaring the minor, students select an advisor with whom they plan their course of study and electives. A proposed course of study must be approved by the advisor and placed in the student's departmental file.

Minors are required to attend an orientation session presented by the professional staff of the Art & Architecture Library, which introduces the many tools of research and reference available on campus or through the Internet. This requirement should be completed no later than the quarter following the minor declaration.

Degree Requirements

A minor in Film and Media Studies requires 29 units and consists of four core courses and three elective courses for a total of seven courses. All courses must be taken for a letter grade.

The deadline for students to declare their minor is no later than the last day of the quarter, three quarters before degree conferral. For example, a student graduating in June must declare the minor no later than the last day of autumn quarter of their senior year.

Upon declaring the minor, a proposed course of study must be submitted to the Student Services Specialist and approved by the advisor. All students must attend an orientation session presented by the Art & Architecture Library, to be completed no later than one quarter following the declaration.

Course Requirements

Courses may not be offered every year and are subject to change. Consult an academic advisor if a course is not listed below.

Courses that use film and media to simply illustrate a cultural topic may not be considered. Only courses that center on film and media and use the methods of film and media study may be used towards completion of the minor.

Only one class may be taken for credit outside the Stanford campus, including Stanford Overseas Studies programs. For courses crosslisted between Film and Media Studies and another Stanford department or program, FMS minors should enroll for the FILMSTUD course listing.

Elective Courses for the Minor

Three elective courses. No more than one elective can be chosen from courses in another department and only if it is approved by the Film and Media Studies coordinator and core faculty for its stress on methods of film analysis. Electives may include courses in national cinemas, film genres, experimental and documentary film, or film theory.

		Units
Required Courses		
FILMSTUD 4	Introduction to Film Study: French Cinema in Focus (meets WAY A-II)	5

FILMSTUD 6	Introduction to Media	3-5
FILMSTUD 102	Theories of the Moving Image (meets WAY A-II)	4
Select one of the following:		4
FILMSTUD 100A	History of World Cinema I, 1895-1929	
FILMSTUD 100B	History of World Cinema II: Currents in Francophone Film, 1970-present (meets WAY A-II)	
Elective Courses		
Up to two Film Production courses may count towards completion of the minor. Art Practice courses may not be used towards the requirements. Various Film and Media Studies courses may meet the elective requirement in any given year. If you have a question regarding a specific course, please contact the Student Services Specialist.		
Select three courses		12-15
FILMSTUD 101	Close Cinematic Analysis	
FILMSTUD 107N	Documentary Film: Telling it Like it Is?	
FILMSTUD 115	Documentary Issues and Traditions	
FILMSTUD 119	Science Fiction: Cyborgs & Human Simulacra in the Cinema	
FILMSTUD 120	Superhero Theory	
FILMSTUD 125	Horror Film	
FILMSTUD 127	Monster Movies: Frankenstein & Film	
FILMSTUD 129	Animation and the Animated Film	
FILMSTUD 132A	Indian Cinema	
FILMSTUD 135	Around the World in Ten Films	
FILMSTUD 233	Let's Make a Monster: Critical Making	
FILMSTUD 245B	History and Politics in Russian and Eastern European Cinema	
FILMSTUD 256	Horror Comics	
FILMSTUD 259	Game Studies	
FILMSTUD 410A	Documentary Perspectives I: Politics of the Subject	
FILMSTUD 411	Childish Enthusiasms, Perishable Manias	
FILMPROD 101	Screen Writing I: Visual Writing	
FILMPROD 101T	Writing the Television Pilot	
FILMPROD 103	Adaptation	
FILMPROD 104	Screenwriting II: Intermediate Screenwriting	
FILMPROD 105	Script Analysis	
FILMPROD 114	Introduction to Film and Video Production	
COMM 1B	Media, Culture, and Society	
Total Units		28-33

return to top of page (p. 1006)

Master of Arts in Art History

University requirements for the M.A. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

Admission

The Master of Arts in Art History is only available to doctoral students in Art and Art History, as a step toward fulfilling requirements for the Ph.D.

Degree Requirements

Units

Completing a total of at least 45 units of graduate work at Stanford in the history of art in courses at the 200 level and above, including a seminar in art historiography/visual theory.

Languages

Reading knowledge of at least one foreign language, preferably German, French, or Italian. Students in Chinese and Japanese art are ordinarily expected to demonstrate reading competence in modern and classical Chinese or Japanese, depending on the student's area of focus. Final determination of which foreign languages fulfill the requirement is made in consultation with the student's primary adviser.

Papers

Submission of one paper from among those written during the year that demonstrates depth of research and capacity to build an argument. The paper should be perfected under the supervision of a member of the department faculty.

Area Coverage

Demonstration to the faculty, by course work and/or examination, that the student has adequate knowledge of the major areas of the history of art represented in the department curriculum.

Master of Fine Arts in Art Practice (Studio)

University requirements for the M.F.A. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

Admission

The applicant must have a B.A., B.F.A, or B.S. from an accredited school. It is expected that the applicant will have a strong background in art practice, either an undergraduate degree or at least three years of independent studio practice. Students accepted to the program are admitted for the beginning of the following Autumn Quarter. No applicants for mid-year entrance are considered.

Portfolio Specifications—See the department's Graduate Admission (https://art.stanford.edu/academics/graduate-programs/masters-program/how-apply/) web site for portfolio requirements.

Fields of Study or Degree Options

Fields of study for the M.F.A. degree are offered in Painting, Sculpture, New Genres, and Photography. These fields of study are not declared on Axess; they are not printed on the transcript or the diploma.

Degree Requirements

Residency

Completing a minimum of two years (six academic quarters) of graduate work in residence at Stanford.

Units

The student must complete 48 units of study. Students must discuss their programs of study with their academic adviser and the department's student services manager to ensure that an appropriate program of study is chosen.

Seminar Requirement

Six quarters (36 units), which includes one (Spring) or two weekly seminars (Autumn and Winter) and Studio Practice, as well as an individual tutorial with a selected member of the faculty; all seminars must be taken for a letter grade.

		Units
First Year Seminar Requirements		
ARTSTUDI 342A	MFA: Object Seminar (2 units per quarter-Autumn and Winter)	4
ARTSTUDI 342B	MFA: Concept Seminar (2 units per quarter-Autumn and Winter)	4
ARTSTUDI 342C	M.F.A Seminar	2
ARTSTUDI 342	MFA Project: Tutorial (1 unit per quarter)	3
Second-Year Seminar Requirements		
ARTSTUDI 342A	MFA: Object Seminar (4 units per quarter-Autumn and Winter)	8
ARTSTUDI 342B	MFA: Concept Seminar (4 units per quarter-Autumn and Winter)	8
ARTSTUDI 342C	M.F.A Seminar	2
ARTSTUDI 342	MFA Project: Tutorial (1 unit per quarter)	3

Elective Requirement

Three courses of academic electives (12 units) are required in the first year. These courses can be chosen from a large variety of disciplines in consultation with the Director of Graduate Studies (DGS). All electives must be approved by the DGS prior to enrollment.

Faculty Reviews

The student is expected to pass four formal academic reviews conducted by the faculty. The purpose of these reviews is to evaluate development and to assess the progress of the student.

- At the end of the first quarter, any student judged to be making inadequate progress is placed on probation and requires an additional review at the end of the second quarter.
- At the end of the third quarter, at which time recommendation to proceed to the second year is determined.
- At the start of the fifth quarter. If the review is not satisfactory the student is placed on probation and an additional review is scheduled at the end of the fifth quarter.
- At the time of the M.F.A. exhibition.

Thesis

The thesis consists of two portions: an exhibition at the end of the final quarter, and a written paper addressing the development of work completed over the two-year period at Stanford, to be completed during the fifth quarter. Both the written portion and participation in the M.F.A. exhibition at the end of the year are required.

Graduate Student Teaching

Regardless of their source of funding, students are required to assist with the department's teaching program for a minimum of eight hours per week over the period of six quarters; the particulars of this assignment are at the department's discretion.

Graduate students may propose to solo teach an undergraduate art class in their second year, subject to faculty and department approval.

The department reserves the right to make use of graduate paintings, sculptures, and photographs in exhibitions serving the interests of the graduate program.

Graduate students must remain in residence at Stanford for the duration (six academic quarters) of the program.

Master of Fine Arts in Documentary Film

University requirements for the M.F.A. are described in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin.

Admission

The program requires residency for two consecutive years. The admissions committee seeks applicants who have some work experience beyond their undergraduate years and can articulate why they want to learn documentary film production. The committee looks for evidence of the likelihood of success in a rigorous academic program that emphasizes creative work. The conceptual and technical skills required for documentary work are sufficiently different from fictional narrative to make the Stanford program inappropriate for students interested in narrative filmmaking. The program does not allow for deferred admission or a mid-year enrollment.

Portfolio

The department requires a film or video work for which the applicant has had creative control. The sample work must be well labeled and accompanied by a brief synopsis, running time of the clips, the circumstances of production, and the applicant's role. Total running time for the work sample should not exceed 15 minutes and may consist of more than one project. Work on which the applicant had only a production assistant role is not appropriate for submission. Student work, however, is appropriate for consideration. Applicants who have had only minimal film or video production experience should submit an example of their best creative work in any medium.

Portfolio Specifications—See the department's Graduate Admission (https://art.stanford.edu/academics/graduate-programs/mfa-documentary-film-and-video/mfa-documentary-film-and-video-admissions/) web site for portfolio requirements.

Fields of Study or Degree Options

Fields of study for the M.F.A. degree are offered in Documentary Film.

Degree Requirements

Residency

Completing two years (six quarters) of graduate work in residence at Stanford.

Units

A minimum of 62 units is required for the M.F.A. degree. In the production core, students are required to conceptualize and visualize their ideas in a series of writing and producing courses that focus on documentary story structure. These courses are taken in tandem with project-based production courses that provide training in the technical and conceptual aspects of cinematography, sound recording, and editing. Discussion of form and content is a signature component of the writing and production courses. The production core is complemented by a series of required film studies courses in documentary plus elective courses in the history, aesthetics, ideology, and theory of all genres of moving image media. All courses, except for FILMPROD core courses, must be taken for a letter grade.

M.F.A. Thesis Project

In the second year of the program, each student produces a 15-20 minute documentary that constitutes the thesis project. In FILMPROD 405 Producing Practicum: The Non-Fiction Film, students research and develop their project and write a proposal for submission. A project may not begin production until the written proposal has been approved. Most of the production and post-production occurs (in Winter and Spring quarters) in FILMPROD 406A and FILMPROD 406B.

Required Courses

1. Core Production courses; core courses must be taken in sequence:

		Units
FILMPROD 400	Film/Video Writing and Directing	3
FILMPROD 401	Nonfiction Film Production	3

FILMPROD 402	Digital Video	4
FILMPROD 403	Advanced Documentary Directing	3
FILMPROD 404	Advanced Video Production	3
FILMPROD 405	Producing Practicum: The Non-Fiction Film	4
FILMPROD 406A	Documentary M.F.A. Thesis Seminar I	5
FILMPROD 406B	Documentary M.F.A.Thesis Seminar II	5

2. Core Film Studies courses:

		Units
FILMSTUD 410A	Documentary Perspectives I: Politics of the Subject	4
FILMSTUD 410B	Documentary Perspectives II	4

3. Electives (to be chosen in consultation with the student's adviser):

	Units
Art History—one course	4
Studio Art —one course	4
Film Studies—three courses	12
Choice Elective—one course	4

Doctor of Philosophy in Art History

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 65)" section of this bulletin. An expanded explanation of department requirements is given in the Art History Graduate Student Handbook.

Admission

In addition to University requirements, the department requires as part of the application a research paper of approximately 15-20 pages, preferably in or near the student's field of primary interest and demonstrating the student's capacity to pursue independent investigation of an art historical problem. All applicants must have been awarded a B.A., B.F.A., or B.S. from an accredited university.

Degree Requirements

To be eligible for the doctoral degree, the student must complete a minimum of three years of full-time graduate work in Art History, at least two years of which must be in residence at Stanford. Doctoral students must complete a minimum of 135 units. Of these 135, the student must complete at least 100 units of graduate course work at the 200 level or above, including all required courses, with a minimum of 62 units in Art History lecture courses and seminars. All courses must be taken for a letter grade. Students entering the program with an M.A. degree from another institution may petition to apply up to 45 units toward the Ph.D. degree.

1. **Collateral Studies**
   The student is required to take at least three courses in relevant fields of study outside the department (e.g., anthropology, classics, history, literature, philosophy, or feminist, gender, and sexuality studies), determined in consultation with department advisers. These courses are intended to strengthen the student's interdisciplinary study of art history.
2. **Distribution Requirements**
   There are seven areas of distribution: 1) Pre-Modern (Ancient & Medieval), 2) Early Modern (Renaissance/Baroque), 3) 18th Century & 19th Century, 4) Modern/Contemporary, 5) Film and Media Studies, 6) Non-Western: Asia, Africa & Oceana, 7) Architectural History.
   Students must take at least one course in each of five different areas outside of the student's area of concentration. Fulfilling the distribution requirement with graduate seminars is highly recommended. If students have entered the Stanford program with an M.A., they may transfer courses taken at the graduate level to fulfill up to two areas of the distribution requirement.
3. **Language Requirement**
   Students in Western Art must demonstrate reading knowledge of two foreign languages. Students in Asian Art are required to demonstrate competence in one Asian language (equivalent to three years of study) and at least one year of study in a second (which may be a classical version of Chinese or Japanese). One of the language requirements should be satisfied by the end of the first year while the second should be fulfilled by the end of the second year. Students entering with an M.A. should already have satisfied one language requirement prior to admission. Foreign language requirements for the Ph.D. are fulfilled by taking the reading examination given each quarter by the various language departments.
4. **Graduate Student Teaching**
   As a required part of their training, Ph.D. students must participate in the department's teaching program.
   a. Students are required to take ARTHIST 405A Graduate Pedagogy.
   b. Students are required to serve as a teaching assistant for a minimum of four quarters. Further opportunities for teaching may be available.
   c. At least one quarter assignment must be in a course from the following list:
      i.

		Units
ARTHIST 1A	Decolonizing the Western Canon: Introduction to Art and Architecture from Prehistory to Medieval	5
ARTHIST 1B	How to Look at Art and Why: An Introduction to the History of Western Painting	5
ARTHIST 2	Asian Arts and Cultures	5
ARTHIST 3	Introduction to World Architecture	5
FILMSTUD 4	Introduction to Film Study: French Cinema in Focus	5

5. **Admission to Candidacy**
   A graduate student's progress is formally reviewed by the faculty at the end of Spring Quarter of the second year in the context of admission to candidacy. The applicant for candidacy must assemble a candidacy file showing that he/she has completed department qualifying procedures and apply for candidacy at the beginning of Spring Quarter of the second year (those entering the program with an M.A. may apply for candidacy earlier in the second year). All students must be admitted to candidacy by the end of their second year. This is contingent upon the completion of all language requirements, distribution requirements, 45 units of course work (as further detailed in the department's Graduate Handbook), and the University's requirements for candidacy as described in the "Candidacy (http://exploredegrees.stanford.edu/graduatedegrees/#doctoraltext)" section of this bulletin. The graduate student does not become a formal candidate for the Ph.D. degree until he/she has satisfied these requirements and been accepted as a candidate by the department faculty. Failure to advance to candidacy may result in the dismissal of the student from the program.
6. **The Qualifying Exam**
   The qualifying exam, ideally to be taken in the Winter Quarter of the student's third year of Ph.D. study, consists of a written and an oral component. These parts of the exam are administered on separate days during the same week, with the written part taking place first. Both parts of the exam are graded on a system of High Pass/Pass/Fail. If a student fails one or both parts of the exam, the student is allowed to retake that portion or portions of the exam that s/he has failed. For a detailed account of the format of the written and oral exams, see the graduate student handbook for the Department of Art

and Art History. To prepare for the exam, students must enroll in up to two 5-unit exam preparation courses (ARTHIST 620), one per quarter.

		Units
ARTHIST 620	Qualifying Examination Preparation	5

7. **Dissertation Colloquium**
   a. Each student participates in a Colloquium with her/his dissertation committee in May or June of the third year. Faculty on leave or away from campus are expected to Skype in for the meeting. At least two weeks prior to that meeting, the student submits an approximately 5-page paper (an early draft of the prospectus) that the committee reads in preparation for the meeting.
   b. The purpose of the meeting is to give the student guidance and momentum going into a summer of dissertation-proposal writing—a summer in which the student may be participating in a dissertation-writing workshop offered by the department.
8. **Dissertation and Oral Defense Requirements**
   a. *Reading Committee:* After passing the Qualifying Exam, each student is responsible for the formation of a dissertation reading committee consisting of a principal adviser, who chairs the reading committee, and two other readers. Normally, both readers are drawn from the department faculty; however, it is possible for one of the readers to be drawn from outside the department. Additionally, a student may choose to invite a fourth reader, from within or outside the department. A faculty member from another university must be approved by the principal adviser in advance of an invitation to join the committee.
   b. *Dissertation Proposal:*
9. By the beginning of Autumn Quarter in the fourth year, students should have identified a dissertation subject and written a proposal of approximately 15 pages in consultation with their principal adviser.
10. To prepare the proposal, students may take one 5-unit independent study course:
11.

		Units
ARTHIST 640	Dissertation Proposal Preparation	5

12. The student must submit the dissertation proposal previously approved by the members of her/his dissertation reading committee for the consideration of the full Art History faculty at least two weeks prior to the October or November faculty meetings in the student's fourth year.
13. In the event that a proposal is not approved, the faculty establishes conditions for its resubmission and reconsideration at a later date.

c. *Dissertation:*

- There is a required review by the Ph.D. Committee (via Skype or in person) of the first chapter completed. The timing of this review should be determined in consultation with the principal adviser.
- The dissertation must be completed within five years of the date of the student's admission to candidacy for the Ph.D. degree. A candidate requesting more than five years must apply for an extension of candidacy.
- The final draft of the dissertation must be in all the readers' hands at least four weeks before the date of the oral defense.

d. Oral Defense Examinations: The oral defense consists primarily of a presentation and critical discussion of the dissertation but may range, at the committee's discretion, over a wider field. The student is expected to describe dissertation research methods and findings at some length and to answer all questions and criticisms put by members of the examining committee. At the end of the defense, the committee votes to pass or fail the student on the defense. In the case of failure on the defense, the examiners may establish criteria for reconsideration of a resubmitted dissertation. If the defense is passed, the committee may make recommendations for changes in the dissertation manuscript before it is submitted to the University as the final requirement for the granting of the Ph.D. degree in the History of Art. After these changes have been incorporated, the manuscript is given a final review and approval by the student's principal adviser.

Ph.D. Minor in Art History

For a minor in Art History, a candidate is required to complete 24 units of graduate-level Art History courses (300 level or above); all courses must be taken for a letter grade.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Art & Art History department counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Graduate Degree Requirements

Grading

The Art & Art History department has not changed its policy concerning 'CR' (credit) or 'S' (satisfactory) grades in degree requirements requiring a letter grade for academic year 2020-21.

Graduate Advising Expectations

The Department of Art and Art History is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the adviser and the advisee are expected to maintain professionalism and integrity.

Faculty advisers guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking

responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Emeriti: (Professors) Kristina Branch, Wanda M. Corn, David Hannah, Joel Leivick, Suzanne Lewis, Michael Marrinan, Dwight C. Miller, Kristine Samuelson, Paul V. Turner, Bryan Wolf

Chair: Alexander Nemerov

Area Director for Art History: Richard Vinograd

Area Director for Film and Media Studies: Pavle Levi

Area Director for Art Practice: Enrique Chagoya

Director of Undergraduate Studies in Art History: Jody Maxmin

Director of Undergraduate Studies in Art Practice: Xiaoze Xie

Director of Undergraduate Studies in Film and Media Studies: Scott Bukatman

Director of Graduate Studies in Art History: Richard Meyer

Director of Graduate Studies in Art Practice: Paul DeMarinis

Director of Graduate Studies in Documentary Film: Jamie Meltzer

Director of Honors Program: Adam Tobin

Professors: Scott Bukatman (Film and Media Studies), Enrique Chagoya (Art Practice), Paul DeMarinis (Art Practice), Jan Krawitz (Documentary Film), Pavle Levi (Film and Media Studies), Richard Meyer (Art History), Alexander Nemerov (Art History), Bissera Pentcheva (Art History), Nancy J. Troy (Art History), Richard Vinograd (Art History), Gail Wight (Art Practice), Xiaoze Xie (Art Practice)

Associate Professors: Terry Berlier (Art Practice), Shane Denson (Film and Media Studies), Jean Ma (Film and Media Studies), Jody Maxmin (Art History), Jamie Meltzer (Documentary Film), Karla Oeler (Film and Media Studies), Camille Utterback (Art Practice)

Assistant Professors: Fabio Barry (Art History), Jonathan Calm (Art Practice), Usha Iyer (Film and Media Studies), Srdan Keca (Documentary Film), Marci Kwon (Art History), Emanuele Lugli (Art History), Rose Salseda (Art History)

Senior Lecturer: Adam Tobin (Film and Media Studies)

Lecturers: Jamil Hellu (Art Practice), Dionne Lee (Art Practice), Jenny Odell (Art Practice), Sarah Peck (Art Practice), Christine Seror (Art Practice), Anja Ulfeldt (Art Practice)

Overseas Studies Courses in Art History

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

Art History Courses

ARTHIST 1A. Decolonizing the Western Canon: Introduction to Art and Architecture from Prehistory to Medieval. 5 Units.
Traditional Art History viewed the Renaissance as its pinnacle; it privileged linear perspective and lifelikeness and measured other traditions against this standard, neglecting art from the Near East, Egypt, the Middle Ages, or Islam. This course will disrupt this colonizing vision by conceptualizing artworks as "methexis" (participation, liveliness, or enactment) as opposed to mimesis (imitation or lifelikeness). We will study the development of the Western canon and its systematic eradication of difference through a renewed understanding of what an artwork is.
Same as: CLASSICS 56

ARTHIST 1B. How to Look at Art and Why: An Introduction to the History of Western Painting. 5 Units.
This course explores the relation of art to life¿how and why works of art, even from hundreds of years ago, matter in a person¿s life. It trains students to find the words to share their thoughts about art with their peers, friends, and family. Some fundamental questions the course considers: How do we get beyond the idea that the study and making of art are elite, ¿privileged¿ activities apart from the real world? How do we develop a sense of discernment¿of deciding for ourselves which artists matter, and which don¿t¿without being a snob? How can works of art teach us to feel the wonder of being alive and our deep debt to the past, to the dead? Focusing on painters such as Michelangelo, Rembrandt, Goya, Manet, Morisot, and Charlotte Salomon, this course will pursue these questions with the aim of challenging and encouraging students to develop their own ways of thinking and feeling¿generously and ethically¿about the past and the present. Sections will focus on original works of art at the Cantor Arts Center. No prerequisites required.

ARTHIST 2. Asian Arts and Cultures. 5 Units.
An exploration of the visual arts of East and South Asia from ancient to modern times, in their social, religious, literary and political contexts. Analysis of major monuments of painting, sculpture and architecture will be organized around themes that include ritual and funerary arts, Buddhist art and architecture across Asia, landscape and narrative painting, culture and authority in court arts, and urban arts in the early modern world.
Same as: JAPAN 60

ARTHIST 3. Introduction to World Architecture. 5 Units.
This course offers an expansive and wide-ranging introduction to architecture and urban design from the earliest human constructions to the mid-20th century. The examples range from the Americas to Europe, the Middle East, South and East Asia. The diverse technologies and materialities of building are addressed throughout and an overriding concern is to understand architecture as a sensible manifestation of particular cultures, whether societies or individuals. To the same ends, student writing assignments will involve the analysis of local space, whether a room or a building, and then the built environment at large.
Same as: CLASSICS 54

ARTHIST 36. Dangerous Ideas. 1 Unit.
Ideas matter. Concepts such as revolution, tradition, and hell have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like immigration, universal basic income, and youth play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these "dangerous" ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.
Same as: COMPLIT 36A, EALC 36, ENGLISH 71, ETHICSOC 36X, FRENCH 36, HISTORY 3D, MUSIC 36H, PHIL 36, POLISCI 70, RELIGST 36X, SLAVIC 36

ARTHIST 57Q. 10 American Photographs. 3 Units.
Preference to sophomores. "The humor, the sadness, the EVERYTHING-ness and American-ness of these pictures!" wrote Jack Kerouac of photographer Robert Frank's iconic collection, The Americans. This seminar takes Kerouac's enthusiasm and applies it to ten American photographs, a new one each week. Examples span the medium's history and were taken as art, science, commerce, journalism, or personal mementos. Close study of the photo of the week will address how it looks and why; its history, from initial responses to later reception; and its relationship to the larger American visual and cultural context. Also under discussion: What story does this set of pictures tell about Americanness? What might another set of photos convey?.
Same as: AMSTUD 57Q

ARTHIST 80N. The Portrait: Identities in Question. 3 Units.
Most of us hold libraries of hundreds or thousands of ¿portraits¿ ¿ more or less instantly available posed images of ourselves and others. For most of human history, before the development of portable and digital cameras, portraiture was a much rarer and more deliberate social act and cultural practice, involving special materials and techniques, encounters with expert portraitists or photographers, and established settings for display. What almost all portraits, of whatever time or cultural place, have in common are presentations of social identities, roles, or persona, as well as a potential fascination and power that may be based in our neurological capacities for facial recognition and ¿mind-reading¿ through facial expressions. n This introductory seminar will explore many aspects of this basically simple category of thing ¿ images of particular persons. Our point of departure will be from the history of art, focusing on portrait sculptures, paintings, and photographs from many eras and cultures, some of which are among the most studied and discussed of all artistic monuments. We will consider techniques and approaches of portrait making, including the conventions that underlie seemingly realistic portraits, posing, the portrait situation, and portrait genres. Our primary focus will be on the multiple purposes of portraiture, from commemoration, political glorification, and self-fashioning to making claims of social status, cultural role, and personal identity. We will also discuss the changing status of portraiture under modern states of social dislocation, technological change, and psychoanalytic interrogation, and in postmodern conditions of multi-mediated realities and distributed subjectivities. Along the way, we will see that our understandings of portraiture benefits from the approaches and insights of many fields ¿ political and social history, anthropology, neuroscience, and literary studies among others.

ARTHIST 100N. The Artist in Ancient Greek Society. 3 Units.
Given the importance of art to all aspects of their lives, the Greeks had reason to respect their artists. Yet potters, painters and even sculptors possessed little social standing. Why did the Greeks value the work of craftsmen but not the men themselves? Why did Herodotus dismiss those who worked with their hands as "mechanics?" What prompted Homer to claim that "there is no greater glory for a man than what he achieves with his own hands," provided that he was throwing a discus and not a vase on a wheel? Painted pottery was essential to the religious and secular lives of the Greeks. Libations to the gods and to the dead required vessels from which to pour them. Economic prosperity depended on the export of wine and oil in durable clay containers. At home, depictions of gods and heroes on vases reinforced Greek values and helped parents to educate their children. Vases depicting Dionysian excess were produced for elite symposia, from which those who potted and painted them were excluded. Sculptors were less lowly but still regarded as "mechanics," with soft bodies and soft minds (Xenophon), "indifferent to higher things" (Plutarch). The seminar addresses such issues as we work to acknowledge our own privilege and biases. Students will read and discuss texts, write response papers and present slide lectures on aspects of the artist's profession.
Same as: CLASSICS 18N

ARTHIST 101. Introduction to Greek Art I: The Archaic Period. 4 Units.
The class considers the development of Greek art from 1000-480 and poses the question, how Greek was Greek art? In the beginning, as Greece emerges from 200 years of Dark Ages, their art is cautious, conservative and more abstract than life-like, closer to Calder than Michelangelo. While Homer describes the rippling muscles (and egos) of Bronze Age heroes, his fellow painters and sculptors prefer abstraction. This changes in the 7th century, when travel to and trade with the Near East transform Greek culture. What had been an insular society becomes cosmopolitan, enriched by the sophisticated artistic traditions of lands beyond the Aegean "frog pond." Imported Near Eastern bronzes and ivories awaken Greek artists to a wider range of subjects, techniques and ambitions. Later in the century, Greeks in Egypt learn to quarry and carve hard stone from Egyptian masters. Throughout the 6th century, Greek artists absorb what they had borrowed, compete with one another, defy their teachers, test the tolerance of the gods and eventually produce works of art that speak with a Greek accent. By the end of the archaic period, images of gods and mortals bear little trace of alien influence or imprint, yet without the contributions of Egypt and the Near East, Greek art as we know it would have been unthinkable.
Same as: CLASSICS 161

ARTHIST 102. Introduction to Greek Art II: The Classical Period. 4 Units.
The class begins with the art, architecture and political ideals of Periclean Athens, from the emergence of the city as the political and cultural center of Greece in 450 to its defeat in the Peloponnesian War in 404. It then considers how the Athenians (shell-shocked from war and three outbreaks of plague) and the rest of 4th century Greece rebuild their lives and the monuments that define them. Earlier 5th century traditions endure, with subtle changes, in the work of sculptors such as Kephisodotos. Less subtle are the outlook and output of his son Praxiteles. In collaboration with Phryne, his muse and mistress, Praxiteles challenged the canons and constraints of the past with the first female nude in the history of Greek sculpture. His gender-bending gods and men were equally audacious, their shiny surfaces reflecting Plato's discussion of Eros and androgyny. Scopas was also a man of his time, but pursued different interests. Drawn to the interior lives of men and woman, his tormented Trojan War heroes and victims are still scarred by memories of the Peloponnesian War, and a world away from the serene faces of the Parthenon. His Maenad, who has left this world for another, belongs to the same years as Euripides' Bacchae and, at the same time, anticipates the torsion and turbulence of Bernini and the Italian Baroque. The history and visual culture of these years remind us that we are not alone, that the Greeks grappled as we do with the inevitability and consequences of war, disease and inner daemons.
Same as: CLASSICS 162

ARTHIST 103S. Introduction to American Art. 3 Units.
How do images tell stories about the people who made them and the places they depict? How can we encounter the histories of America in works of art and why should we care about encountering them? This course will explore such questions by surveying some of the most compelling paintings, sculptures, films, photographs, prints, and decorative arts produced in the United States from the Colonial period to our present moment. In class lectures and discussions, our goal will be to articulate how pictures from the past shape and construct our sense of American history. Works by important artists such as Jackson Pollock, Andy Warhol, Jean-Michel Basquiat, Kara Walker, John Singer Sargent, Winslow Homer, Georgia O'Keeffe, and Jacob Lawrence, among others, will help students to understand and express how Images have power, and how art continues to matter today.
Same as: AMSTUD 103S

ARTHIST 104A. The Secret Lives of Statues from Ancient Egypt to Confederate Monuments. 3-5 Units.
Statues, human-shaped sculptures, walk a fine line between being inert matter and living entities. Throughout human existence, humans have recognized that statues are not alive even as they understand that statues are capable of becoming potent allies or enemies. They are capable of engendering profound emotional responses, embodying potent ideas, and co-opting the past in service of the present. However, the same materiality that endows statues with these exceptional capacities also makes them vulnerable to humans intent on acquiring otherwise-expensive materials cheaply, commiting sectarian violence by proxy, and obliterating the material manifestations of others¿ memories.nnIn this course, we will study sixteen (groups of) statues thematically. To do this, we will draw on a wide variety of disciplines, including archaeology, art history, history, law, media studies, museum studies, and religious studies, to articulate how people in diverse places and times have revered and reviled statues precisely because they are uncanny objects that seem to have an all-too-human kind of agency. In so doing, we will gain appreciation for and insight into how and why the statues in our own lives are significant.
Same as: ARCHLGY 96, CLASSICS 96

ARTHIST 105B. Medieval Journeys: Introduction through the Art and Architecture. 5 Units.
The course explores the experience and imagination of medieval journeys through an interdisciplinary, cross-cultural, and skills-based approaches. As a foundations class, this survey of medieval culture engages in particular the art and architecture of the period. The Middle Ages is presented as a network of global economies, fueled by a desire for natural resources, access to luxury goods and holy sites. We will study a large geographical area encompassing the British Isles, Europe, the Mediterranean, Central Asia, India, and East Africa and trace the connectivity of these lands in economic, political, religious, and artistic terms from the fourth to the fourteenth century C.E. The students will have two lectures and one discussion session per week. Depending on the size of the class, it is possible that a graduate student TA will run the discussion session. Our goal is to give a skills-oriented approach to the Middle Ages and to engage students in creative projects that will satisfy either the Ways-Creative Expression requirement or Ways-Engaging Difference. NOTE: for AY 2018-19 HISTORY 115D Europe in the Middle Ages, 300-1500 counts for DLCL 123.
Same as: ARTHIST 305B, DLCL 123

ARTHIST 106. Byzantine Art and Architecture, 300-1453 C.E.. 5 Units.
This course explores the art and architecture of the Eastern Mediterranean: Constantinople, Jerusalem, Alexandria, Antioch, Damascus, Thessaloniki, and Palermo, 4th-15th centuries. Applying an innovative approach, we will probe questions of phenomenology and aesthetics, focusing our discussion on the performance and appearance of spaces and objects in the changing diurnal light, in the glitter of mosaics and in the mirror reflection and translucency of marble.
Same as: ARTHIST 306, CLASSICS 171

ARTHIST 108. Virginity and Power: Mary in the Middle Ages. 4 Units.
The most influential female figure in Christianity whose state cult was connected with the idea of empire. The production and control of images and relics of the Virgin and the development of urban processions and court ceremonies though which political power was legitimized in papal Rome, Byzantium, Carolingian and Ottonian Germany, Tuscany, Gothic France, and Russia.
Same as: ARTHIST 308

ARTHIST 110. French Painting from Watteau to Monet. 3-5 Units.
This course offers a survey of painting in France from 1700 to around 1900. It introduces major artists, artworks, and the concepts used by contemporary observers and later art historians to make sense of this extraordinarily rich period. Overarching themes discussed in the class will include the dueling legacies of coloristic virtuosity and classical formalism, new ways of representing visual perception, the opposing artistic effects of absorption and theatricality, the rise and fall of official arts institutions, and the participation of artists and artworks in political upheaval and social change. The course ends with an interrogation of the concept of modernity and its emergence out of dialogue and conflict with artists of the past. Students will learn and practice formal analysis of paintings, as well as interpretations stressing historical context.
Same as: ARTHIST 310, FRENCH 110, FRENCH 310

ARTHIST 111. Introduction to Italian Renaissance, 1420-1580. 4 Units.
New techniques of pictorial illusionism and the influence of the humanist revival of antiquity in the reformulation of the pictorial arts in 15th-century Italy. How different Italian regions developed characteristic artistic cultures through mutual interaction and competition.
Same as: ARTHIST 311

ARTHIST 112. EARLY EUR ART. 0-60 Units.
.

ARTHIST 114. Mystical Naturalism: Van Eyck, Dürer, and the Northern Renaissance. 4 Units.
A survey of the major innovations in Northern European painting ca. 1400-1600, in light of the social status of the artist between city and court. In the early fifteenth century painters began to render an idealized world down to its smallest details in ways that engaged new devotional practices. Later Hieronymus Bosch would identify the painter¿s imagination with the bizarre and grotesque. In response to Renaissance humanism, some painters introduced classical mythology and allegorical subjects in their works, and many traveled south to absorb Italianate pictorial styles. We will be visiting art museums in San Francisco and Stanford. May be repeat for credit.
Same as: ARTHIST 314

ARTHIST 114A. The Dome: From the Pantheon to the Millennium. 4-5 Units.
This course traces the history of the dome over two millennia, from temples to the gods to Temples of the State, and from cosmic archetype to architectural fetish. The narrative interweaves the themes of the dome as image of the Cosmos, religious icon, national landmark, and political monument. It examines the dome not only as a venue for structural innovation, but also metaphysical geometry and transcendent illusionism.nIndividual case studies will familiarize you with major architects from Hadrian to Richard Rogers and historical milestones from the Dome of the Rock to the Capitol in Washington DC. May be repeat for credit.
Same as: ARTHIST 314A, CLASSICS 121, CLASSICS 221

ARTHIST 115. The Italian Renaissance, or the Art of Success. 3-5 Units.
How come that, even if you have never set foot in Italy, you have heard of Leonardo, Michelangelo, and Raphael? What made them so incredibly famous, back then as well as today? This course examines the shooting of those, and other, artists to fame. It provides in-depth analyses of their innovative drawing practices and the making of masterpieces, taking you through a virtual journey across some of the greatest European and American collections. At the same time, this course also offers a study of the mechanics of success, how opportunities are created and reputations managed, and what role art plays in the construction of class and in today's national politics.".
Same as: ARTHIST 315

ARTHIST 116N. Making Sense of the World: Art, Medicine, and Science in Venice. 3 Units.
In 1500 Venice was the place you wanted to be. It wasn't just the capital of the world: it was also its scientific center. This course explores the conversation between the arts and the sciences in Renaissance Venice, and, thanks to remote teaching, it will do so from Venice! Students will discover the oldest anatomical theatre and many of Venice's arresting paintings to reflect on the blurred distinction between art and science, questioning if such a divide makes sense today.

ARTHIST 117. Picturing the Papacy, 1300-1850. 4 Units.
Popes deployed art and architecture to glorify their dual spiritual and temporal authority, being both Christ's vicars on earth and rulers of state. After the return of the papacy from Avignon, Rome underwent numerous campaigns of renovation that staged a continuity between the pontiffs and the ancient Roman emperors. Patronage of art and architecture became important tools in the fight against Protestantism. Artists include Botticelli, Michelangelo, Caravaggio, and Bernini.
Same as: ARTHIST 317

ARTHIST 118. Titian, Veronese, Tintoretto. 4 Units.
The course addresses the ways in which Venetian painters of the sixteenth century redefined paradigms of color, design, and invention. Themes to be examined include civic piety, new kinds of mythological painting, the intersection between naturalism and eroticism, and the relationship between art and rituals of church and statecraft.
Same as: ARTHIST 318

ARTHIST 118A. Space, Public Discourse and Revolutionary Practices. 3-4 Units.
This course examines the mediums of public art that have been voices of social change, protestnand expressions of community desire. It will offer a unique glimpse into Iran¿sncontemporary art and visual culture through the investigation of public art practices such asngraffiti and street art, as well as older traditions of Naghali and Iranian Coffeehouse Painting.nnBeginning Iranian case studies will be expanded in comparison with global examples that spannprojects that include Insite (San Diego/Tijuana), Project Row Houses (Houston, TX) the DMZnProject (Korea), Munster Skulpture Projects (Germany), among others. Students will alsonexamine the infrastructural conditions of public art, such as civic, public, and private funding,nrelationships with local communities, and the life of these projects as they move in and out ofnthe artworld. This encompassing view anchors a legacy of Iranian cultural contributions in largerntrajectories of art history, contemporary art, and community arts practice. Guest artists,ncurators, and researchers with site visits included. Students will propose either new public artnproposals, exhibitions, or research to provoke their own ideas while engaging the ever changingnstate of public discourse in these case studies.
Same as: CSRE 95I, GLOBAL 145

ARTHIST 118N. Pagan Mythology and the Making of Modern Europe. 3 Units.
Once a religion looses its claim to truth it enters the sphere of the mythic. From the fifteenth through the seventeenth century, European artists turned to the legends and poetry of Greco-Roman paganism for pictorial subjects. What roles could Venus and Mars, Mercury and Minerva play in a Christian culture? Artists and humanists had different answers to this question. As relics from the past the stories of the ancient gods could serve as the prehistory of worldly and religious institutions and hence legitimize them. Or pagan myth, because of its alien nature, could convey fantasies of the body, which could not be articulated otherwise. Among the artists who explored creatively the ancient legends were Donatello, Botticelli, Michelangelo, Raphael, Velazquez, Rubens, Rembrandt, Bernini, and Poussin. Next to ancient authors such as Homer and Ovid we shall be reading excerpts from the humanists Dante, Boccaccio, Petrarch, and Vasari as we explore word/image relationships. The seminar includes excursions to the Cantor Arts Center at Stanford University to look at Old Master prints from the museum¿s storage, not normally on display, and we shall study paintings and sculptures with mythological subjects in the Legion of Honor, the Fine Arts Museum of San Francisco.

ARTHIST 119. Love at First Sight: Visual Desire, Attraction, and the Pleasures of Art. 3-5 Units.
Why do dating sites rely on photographs? Why do we believe that love is above all a visual force? How is pleasure, even erotic pleasure, achieved through looking? While the psychology of impressions offers some answers, this course uncovers the ways poets, songwriters, and especially artists have explored myths and promoted ideas about the coupling of love and seeing. Week by week, we will be reflecting on love as political critique, social disruption, and magical force. And we will do so by examining some of the most iconic works of art, from Dante's writings on lovesickness to Caravaggio's Narcissus, studying the ways that objects have shifted from keepsakes to targets of our cares. While exploring the visual roots and evolutions of what has become one of life's fundamental drives, this course offers a passionate survey of European art from Giotto's kiss to Fragonard's swing that elicits stimulating questions about the sensorial nature of desire and the human struggle to control emotions.
Same as: ARTHIST 319, FRENCH 149, FRENCH 349, ITALIAN 149, ITALIAN 349

ARTHIST 120. Superhero Theory. 3-5 Units.
With their fantastic powers, mutable bodies, multiple identities, complicated histories, and visual dynamism, the American superhero has been a rich vehicle for fantasies (and anxieties) for 80+ years across multiple media: comics, film, animation, TV, games, toys, apparel. This course centers upon the body of the superhero as it incarnates allegories of race, queerness, hybridity, sexuality, gendered stereotypes/fluidity, politics, vigilantism, masculinity, and monstrosity. They also embody a technological history that encompasses industrial, atomic, electronic, bio-genetic, and digital.
Same as: AMSTUD 120B, ARTHIST 320, FILMSTUD 120, FILMSTUD 320

ARTHIST 123N. Thinking about Visual Attention : from Balzac to Facebook. 3 Units.
Writing in 1829, the French author Honoré de Balzac celebrated the acute visual attention of the flâneur, a character he closely associates with modern life: "To flâne is to take pleasure, to collect flashes of wit, to admire sublime scenes of unhappiness, of love, of joy as well as graceful or grotesque portraits, to thrust one's attention into the depths of a thousand lives." In July 2012 the Huffington Report pointed to a fact of modern life: "On city streets, in suburban parking lots and in shopping centers, there is usually someone strolling while talking on a phone, texting with his head down, listening to music, or playing a video game. The problem isn't as widely discussed as distracted driving, but the danger is real." These two very different ways of circulating in urban space suggest that a major shift in how we humans relate to our environment has occurred over the course of nearly two centuries--especially in the densely populated spaces of modern cities. Where the great spectacle of urban life was a marvel of the nineteenth century, today's inhabitants want mainly to block it out by insulating themselves in a cocoon of favorite music or personal conversation, whether by voice or text, that they risk stepping into traffic, colliding with lightposts, or bumping into others similarly self-absorbed. This seminar proposes to think about the hows and whys of that important shift from the unique perspective of art history, a field of study especially attuned to the limits and exigencies of visual acuity. We will explore the topic across a range of media, from daguerreotypes to stereoscopes, from paintings to films, from television screen to the hand-held displays of our smartphones.

ARTHIST 124. The Age of Naturalism, Painting in Europe1830-1874. 4 Units.
Survey of European painting from the heyday of Romanticism to the first Impressionist exhibition. Lectures and readings focus on the tensions between traditional forms and ambitions of history painting and the challenge of "modern" subjects drawn from contemporary life. Attention to the impact of painting in the open-air, and the effect of new imaging technologies- notably lithography and photography - to provide "popular" alternatives to the hand-wrought character and elitist appeal of "high art" cultural forms.
Same as: ARTHIST 324

ARTHIST 127A. African Art and Politics, c. 1900 - Present. 4 Units.
This course explores the relationship between art and politics in twentieth century Africa. Artistic production and consumption is considered in the context of various major political shifts, from the experience of colonialism to the struggle against Apartheid. Each week we will look closely at different works of art and examine how artists and designers responded to such challenges as independence, modernization and globalization. We will look at painting, sculpture, religious art, public and performance art, photography and film. How western perceptions and understanding of African art have shifted, and how museums have framed African art throughout the twentieth century will remain important points of discussion throughout the course.
Same as: AFRICAST 127

ARTHIST 132. American Art and Culture, 1528-1910. 4 Units.
The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others.
Same as: AMSTUD 132, ARTHIST 332

ARTHIST 135. William Blake: A Literary and Visual Exploration of the Illuminated Poetry. 5 Units.
An introduction to the illuminated world of William Blake¿poet, prophet, revolutionary, and visionary artist. The course will address Blake's visual iconography, belief system and ideology, unique mythology, and method of relief etching that allowed him to make every illuminated book a unique work of art, among them, The Songs of Innocence and Experience; The Marriage of Heaven and Hell; The Book of Thel; Visions of the Daughters of Albion; The Book of Urizen; America a Prophecy; and Europe a Prophecy.

ARTHIST 140N. Couture Culture: Fashion, Art & Modernism from Manet to Mondrian. 3-4 Units.
This course examines the ways in which fashion has figured in the construction of modern experience and how it has been represented in the visual arts, primarily in Europe and the United States between about 1850 and 1965. Alongside the emergence of haute couture, the rise of the ready-to-wear industry during this period coincided with the consolidation of the department store; these institutions contributed to the development of a culture of consumption and display that continues to shape our lives today. Manet, Degas and other Impressionist painters were sensitive the nuances of fashion, which they, like Baudelaire, saw as an aspect of modernity indispensable to their art. Clothing was no less significant in the context of the Russian revolution, when Alexander Rodchenko, for example, outfitted himself in a home-made version of workers' overalls in order to reinforce his identification with factory laborers and thereby to suggest the breaking down of class distinctions. The course also explores the significance of fashion for an abstract painter like Piet Mondrian, but, more to the point, we look at how Mondrian's work was appropriated to the world of fashion by Yves Saint-Laurent, who assured that Mondrian's signature geometric style would become instantly recognizable and eventually function as a hugely popular brand. The circuits through which we can trace the historical trajectory of fashion will illuminate its importance for understanding many facets of modern culture.

ARTHIST 141. Modern and Contemporary World Architecture: A Cultural History in Twenty Five Buildings. 4 Units.
This survey course is a guided tour of twenty five case studies from the last hundred years; interrogates how architecture responds to the aesthetic, technological, political, and cultural issues of the societies they belong to, all over the world.
Same as: CEE 32X

ARTHIST 142. Architecture Since 1900. 4 Units.
Art 142 is an introduction to the history of architecture since 1900 and how it has shaped and been shaped by its cultural contexts. The class also investigates the essential relationship between built form and theory during this period.
Same as: CEE 32G

ARTHIST 142A. The Architecture of Thought: Artists and Thinkers Design for Themselves. 3-5 Units.
This course investigates houses, hideaways, and studios that artists and thinkers have designed for themselves with varying degrees of self-consciousness, from subconscious images of the self to knowing stages for the contemplative life. Case studies range from antiquity to the present, from the studio-house of Peter Paul Rubens to that of Kurt Schwitters; from the house-museum of Sir John Soane to the Vittoriale of Gabriele D'Annunzio; from the philosophical dwelling of the Emperor Hadrian to that of Ludwig Wittgenstein.
Same as: ARTHIST 342A

ARTHIST 143A. American Architecture. 4 Units.
A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today's globalized world.
Same as: AMSTUD 143A, ARTHIST 343A, CEE 32R

ARTHIST 144. On Looking: Art, Obscenity, and the Ethics of Spectatorship. 4 Units.
This course considers the ethics of looking at art, photography, and other forms of visual representation that have been declared obscene or indecent, whether by religious authorities, government officials, community representatives, or legal opinions. What are the ethical stakes of looking at such materials? And what are the ethical implications of looking away and insisting that others do so as well? nnThe creation of vanguard art since the late 19th-century has often been linked to the concept of transgression. Is it, we will ask, the modern artist's responsibility to challenge accepted standards of representation and the protocols of looking? If so, how are we, as viewers and students of art, to distinguish between legitimate art and unfit obscenity?.

ARTHIST 144B. Modern Design from the Eiffel Tower to Yves Saint Laurent. 4 Units.
Iconic episodes in the history of modern European and American design, including production, consumption, circulation and display -- from iron architecture of the department store and the universal exhibition to the branding practices of Andy Warhol and Yves Saint Laurent.
Same as: ARTHIST 344B

ARTHIST 145. Culture Wars: Art and Social Conflict in the USA, 1890-1950. 4 Units.
This course examines social conflicts and political controversies in American culture through the lens of visual art and photography. We consider how visual images both reflect and participate in the social and political life of the nation and how the terms of citizenship have been represented¿and, at times, contested¿by artists throughout the first half of the 20th century. The class explores the relation between American art and the body politic by focusing on issues of poverty, war, censorship, consumerism, class identity, and racial division.
Same as: AMSTUD 145M, ARTHIST 345, FEMGEN 145

ARTHIST 146. American Dream, American Nightmare: A History of the United States in Art and Literature. 4 Units.
Studying the American past, a person could despair or dream or both. In this course, we will move chronologically from the Revolutionary War to the present to consider artists and writers--some famous, some obscure--who've portrayed hope, who've portrayed anger and grief, who've taken it upon themselves to make contact with life as they've experienced and imagined it. Throughout, we will treat art and literature not as an illustration of facts, and not as a solution to social problems, but as a touchstone to who Americans have been and who they might become.

ARTHIST 146X. What is Contemporary Art, and Where Did it Come From?. 3 Units.
"Contemporary art challenges us to question our assumptions," wrote philanthropist and collector Eli Broad. "It asks us to think beyond the limits of conventional wisdom." This course aims to introduce both the difficulties and the great rewards presented by Contemporary Art (1970 to the present). Examining the historical foundations of Contemporary Art in the 18th, 19th, and 20th centuries, we will learn about the century's most game-changing art practices and movements such as cubism, abstract expressionism, conceptual art, and performance art. Working from the assumption that art in its moment of production was always contemporary, the course will organize content through various thematic lenses such as "portraiture and vision", "the photographic", and "the hand and the mind." Lectures occur both as traditional classroom sessions as well as on-site sessions at Stanford University's public sculpture collection, the Cantor Art Center, and the Anderson Collection, emphasizing close and direct engagement with artworks. Drawing on these experiences and on close readings of key texts, assignments will range from short essays to online curation to gallery talks. Students will develop and enhance their critical visual literacy and ability to grapple with the unknown through skills of creative synthesis, identifying patterns across time and space, and exercising conceptual and visual analysis. Broadly, the goals of the class are to understand the present through the past, to demystify the often confusing nature of contemporary art, and to question why art matters and how.

ARTHIST 147. Modernism and Modernity. 4 Units.
This course focuses on European and American art and visual culture between the mid-nineteenth and the mid-twentieth centuries. We will begin and end in Paris, exploring visual expressions of modernism as they were shaped by industrialization and urban renewal, the fantasies and realities of Orientalism and colonial exploitation, changing gender expectations, racial difference, and world war. Encompassing a wide range of media, the course explores modernism as a compelling dream of utopian possibilities challenged by the conditions of social life in the context of diversity and difference.
Same as: ARTHIST 347

ARTHIST 148. Art and the First Amendment: Testing the Limits of Expression. 5 Units.
This course will take place in Washington D.C.
Same as: SIW 148

ARTHIST 149S. Art After the A-bomb: American and European Art, 1945-1989. 4 Units.
This course surveys the major movements, figures, and themes in American and European art during the Cold War, from the drop of the A-bomb in 1945 to the fall of the Berlin Wall in 1989. It examines the formative relationship between art and politics in this explosive period. We will consider the changed role of the avant-garde after the catastrophes of World War II; the use and abuse of modern art as propaganda; spectacular postwar affluence and the rise of the culture industry; multimedia, intermedia, and the invention of new communications technologies; the burgeoning military-industrial complex and the Vietnam War; the revolutionary efforts of second-wave feminism, sexual liberation, and the counterculture; and the charged debates of the ¿culture wars¿ and the crisis of representation in the 1980s. What was art¿s social, cultural, and political function in the recent past¿and how is this role instructive in the present? Topics include Abstract Expressionism, Color Field Painting, Neo-Dada, Pop, Op, Fluxus, Happenings, Minimalism, Conceptualism, Performance, Institutional Critique, Process Art, Systems Art, Earth Art, Video Art, and theories of modernism and postmodernism. We will visit the Cantor Arts Center to view original works.

ARTHIST 151. Migration and Diaspora in American Art, 1800-Present. 4 Units.
This lecture course explores American art through the lens of immigration, exile, and diaspora. We will examine a wide range of work by immigrant artists and craftsmen, paying special attention to issues of race and ethnicity, assimilation, displacement, and political turmoil. Artists considered include Emmanuel Leutze, Thomas Cole, Joseph Stella, Chiura Obata, Willem de Kooning, Mona Hatoum, and Julie Mehretu, among many others. How do works of art reflect and help shape cultural and individual imaginaries of home and belonging?.
Same as: AMSTUD 151, ARTHIST 351, ASNAMST 151D, CSRE 151D

ARTHIST 152. The American West. 5 Units.
The American West is characterized by frontier mythology, vast distances, marked aridity, and unique political and economic characteristics. This course integrates several disciplinary perspectives into a comprehensive examination of Western North America: its history, physical geography, climate, literature, art, film, institutions, politics, demography, economy, and continuing policy challenges. Students examine themes fundamental to understanding the region: time, space, water, peoples, and boom and bust cycles.
Same as: AMSTUD 124A, ENGLISH 124, HISTORY 151, POLISCI 124A

ARTHIST 153. Warhol's World. 5 Units.
Andy Warhol's art has never before been more widely exhibited, published, or licensed for commercial use, product design, and publication than it is today. For all Warhol's promiscuous visibility and global cachet at the current moment, there is much we have yet to learn about his work and the conditions of its making. This course considers the wide world of Warhol's art and life, including his commercial work of the 1950s, Pop art and films of the 1960s, and celebrity portraiture of the 1970s and 80s. Of particular interest throughout will be Warhol's photography as it reflects his interest in wealth and celebrity on the one hand and on the everyday life of everyday people on the other. The course will include multiple visits to Contact Warhol: Photography without End, an exhibition co-curated by Prof. Meyer on view throughout the quarter at the Cantor Arts Center.
Same as: AMSTUD 153, ARTHIST 353, FEMGEN 153, TAPS 153W, TAPS 353W

ARTHIST 154. The American Civil War: A Visual History. 4 Units.
A painting of men charging across a field, a photograph of dead bodies in a ditch, a fragment of metal, a sliver of bone, and a brass button: how do we make sense of the visual record of the American Civil War (1861-65)? From the Capitol Dome to a skeleton dug up in a highway project a hundred years after the last battle, the course will consider the strange and scattered remnants of a famous era. Drawing on the poetry of Walt Whitman, Emily Dickinson, and Herman Melville, the paintings of Winslow Homer, the photographs of Alexander Gardner, and the oratory of Abraham Lincoln, the course will examine what cannot be portrayed: the trauma of war.
Same as: AMSTUD 154X, ARTHIST 354

ARTHIST 154B. Who We Be: Art, Images & Race in Post-Civil Rights America. 2-4 Units.
Over the past half-century, the U.S. has seen profound demographic and cultural change. But racial progress still seems distant. After the faith of the civil rights movement, the fervor of multiculturalism, and even the brief euphoria of a post-racial moment, we remain a nation divided. Resegregation is the norm. The culture wars flare as hot as ever.nnThis course takes a close examination of visual culture¿particularly images, works, and ideas in the contemporary arts, justice movements, and popular culture¿to discuss North American demographic and cultural change and cultural politics over the past half-century. From the Watts uprising to the #BlackLivesMatter movement, from multiculturalism through hip-hop to post-identity art, we will deeply explore the questions: How do Americans see race now? Do we see each other any more clearly than before?.
Same as: AFRICAAM 188, CSRE 88

ARTHIST 154C. American Art Since 1776. 3 Units.
How have artworks and artifacts shaped life and culture in the United States? This course considers a variety of objects, from canonical eighteenth-century paintings to decorative art, children's books, outsider art, and other creative expressions often overlooked in traditional surveys. How do art historians come to know such objects and, importantly, the past with them? How might we understand the historical implications of visual and material culture and share them in our writing? Close and creative looking, methodologies from art history and material culture studies, and an engagement with the wider visual, material, and literary worlds of these years will help us explore these and other questions. A final paper produced in stages throughout the term will afford students an opportunity to produce a six-page art historical essay of their own on an artwork or artifact of their choosing, preferably in a local collection. What might these objects and their study reveal to us about our history, present, and future?.

ARTHIST 155C. Abstract Expressionism: Painting/Modern/America. 4 Units.
The course will focus on American abstract painting from the 1930s to the 1960s, emphasizing the works of art at the Anderson Collection at Stanford. We will focus on looking closely at pictures by Jackson Pollock, Mark Rothko, Willem de Kooning, and other renowned abstract painters, developing skills of speaking and writing about these works of art. We will also place these pictures in their mid-20th century context: World War II and the Cold War; Hollywood and popular culture generally; Beat literature; and locations such as New York and San Francisco.
Same as: AMSTUD 155C

ARTHIST 156. American and European Art, 1945-1968. 4 Units.
Examines the pivotal figures, movements, themes and practices of art in the United States and Europe, from the conclusion of World War 2 to the end of the 1960s. Emphasis is on the changed nature of the avant-garde after the catastrophic events of midcentury. Topics include: modern art, ideology and the Cold War; the rise of consumer society and the "Society of the Spectacle"; concepts of medium specificity; the impact of new media and technologies on postwar art making; the role of the artist as worker and activist. Movements include: Abstract Expressionism, Art Informel, Pop, minimalism, process, performance conceptual art. An introductory art history course is recommended.
Same as: ARTHIST 356

ARTHIST 156A. Warhol: Painting, Photography, Performance. 4 Units.
This course focuses on the career of Andy Warhol as a means to consider the broader history of American art and culture since 1950. It examines little-studied aspects of Warhol¿s visual production (e.g. his career as a commercial artist in the 1950s and his everyday photographs of the 1970s and 1980s) alongside his now-canonical Pop paintings of the 1960s. Warhol?s critical and scholarly reception will be scrutinized in detail, as will published interviews of and writings by the artist. Finally, we will consider Warhol¿s legacy and wide-ranging influence on American culture in the decades since his death in 1987.
Same as: ARTHIST 356A, TAPS 156A, TAPS 356A

ARTHIST 156N. Art and the Power of Place: Site, Location, Environment. 3 Units.
Many iconic works in the history of art draw their power and significance from the place in which they are sited or installed. The cave paintings of Altamira, Spain; Michelangelo's Sistine Chapel and the monumental "earthworks" made in the deserts of the American Southwest during the 1960s are just a few examples showcasing the important relationship between art and place. In this seminar we will explore how works of art throughout history create a sense of place; and how place, in turn, changes the interpretation of works of art. We will learn how to analyze works of art in terms of their immediate contexts and surroundings, whether temples, museums, spaces of the city or unexpected environments, charting the historical meanings of place in the process. We will look at a range of examples throughout time, from prehistory to the present day. A critical feature of the seminar will be to consider works of art outside the classroom, on both the Stanford campus and beyond. Possible field trips include visits to Alcatraz Prison (where the famous Chinese artist, Ai Weiwei, will install a new work in the fall of 2014).

ARTHIST 157A. Histories of Photography. 4 Units.
This course investigates multiple histories of photography. It begins in early nineteenth-century Europe with the origins of the medium and ends in the United States on September 11, 2001, a day that demonstrated the limits of photographic seeing. Rather than stabilizing any single trajectory of technological iterations, the course is more interested in considering the ¿work¿ performed by photography. Through historical case studies, it considers how `to photograph¿ is to order and to construct the world; to incite action and to persuade; to describe and to document; to record and to censor; to wound; to heal.
Same as: ARTHIST 357A

ARTHIST 157B. Picture This: A History of Photography from the Civil War to the Selfie. 4 Units.
TBA.

ARTHIST 158S. Iconography to Instagram: A History of Images and Information. 3 Units.
This class will survey how artists, designers and cultures have historically used images as a means to organize and communicate information. How do representations convey meaning in a manner different from language? What do visual conventions reveal about the cultures and technologies that shape them? How and why might artists and viewers subvert the legibility of images? To address these questions, this course proceeds by way of close visual analysis of key works, while exploring their historical, technological, social and artistic contexts. nn Topics to be explored include: iconography and interpretation; the relationship between maps and painting; the importance of printmaking to the Renaissance and the Scientific Revolution; the visual culture of the newspaper as reflected in (and satirized by) Cubist and Dadaist art; the political impact of photography (illustrated by a visit to an exhibition of Lewis Hine¿s photographs at the Cantor Center for Visual Arts); the rhetorical conventions of television news and advertising. Later weeks will address representational norms which have emerged in the wake of digital technology: multi-screen displays, Powerpoint and interactive infographics, concluding with a discussion around the data-gathering functions of social media platforms such as Instagram. Ultimately, students will learn the fundamentals of visual communication across media and history, but will also reflect on art¿s enduring ability to transcend and resist a purely informational role in culture.

ARTHIST 159. American Photographs, 1839-1971: A Cultural History. 4 Units.
This course concentrates on many important American photographers, from the era of daguerreotypes to near the end of the pre-digital era. We study photographs of the Civil War, western exploration, artistic subjects, urban and rural poverty, skyscrapers, crime, fashion, national parks, and social protest, among other topics. Among the photographers we study: Carleton Watkins, Eadweard Muybridge, Walker Evans, Dorothea Lange, Garry Winogrand, and Diane Arbus. Emphasis on developing students' abilities to discuss and write about photography; to see it.
Same as: AMSTUD 159X, ARTHIST 359

ARTHIST 159B. American Photography Since 1960. 5 Units.
Since the publication of Robert Frank's THE AMERICANS (1958), many distinguished American photographers have emerged, creating a density and power of expression that arguably rivals and even surpasses the extraordinary achievements of earlier photographers in this country. Garry Winogrand's street photography, Diane Arbus's portraits, Ralph Eugene Meatyard's grotesque masks, Danny Lyon's impassioned social outsiders, William Eggleston's deadpan sidewalks and suburban tables, and on to photographers of our moment--these are just a few of the topics the course will cover. Careful attention to individual pictures; careful consideration of what it is to be an artist, and a critic.
Same as: AMSTUD 159B, ARTHIST 359B

ARTHIST 162. Visual Arts Cuba (1959 - 2015). 3-5 Units.
The evolution of culture in post-1959 Cuba, with a strong focus on visual arts in all media and film will be introduced in this course. Historical examples will be discussed through lectures, readings and the presentation of audiovisual material. Students will develop their research, critical thinking, and writing through assignments, discussions, and the completion of a final paper. This is a discussion-heavy course, so come prepared to read, write and talk.
Same as: ARTHIST 362

ARTHIST 162B. Art and Social Criticism. 5 Units.
Visual artists have long been in the forefront of social criticism in America. Since the 1960s, various visual strategies have helped emergent progressive political movements articulate and represent complex social issues. Which artists and particular art works/projects have become key anchors for discourses on racism, sexism, economic and social inequality, immigrant rights and climate change? We will learn about a spectrum of political art designed to raise social awareness, spark social change and rouse protest. The Art Workers Coalition's agit-prop opposing the Vietnam War and ACT-UP's emblematic signs and symbols during the AIDS/HIV crisis of the 1980s galvanized a generation into action. Works such as Judy Chicago's The Dinner Party (1979), Fred Wilson's Mining the Museum (1992), and Glenn Ligon's paintings appropriating fragments from African-American literature all raised awareness by excavating historical evidence of the long legacy resisting marginalization. For three decades feminist artists Adrian Piper, Barbara Kruger and the Guerilla Girls have combined institutional critique and direct address into a provocative form of criticality. Recent art for social justice is reaching ever broadening publics by redrawing the role of artist and audience exemplified by the democratization of poster making and internet campaigns of Occupy and the Movement for Black Lives. We will also consider the collective aesthetic activisms in the Post-Occupy era including Global Ultra Luxury Faction, Climate Justice art projects, and the visual culture of Trump era mass protests. Why are each of these examples successful as influential and enduring markers of social criticism? What have these socially responsive practices contributed to our understanding of American history?.
Same as: AFRICAAM 102B, AMSTUD 102, CSRE 102A, FEMGEN 102

ARTHIST 163. Queer America. 4 Units.
This class explores queer art, photography and politics in the United States since 1930. Our approach will be grounded in close attention to the history and visual representation of sexual minorities in particular historical moments and social contexts. We will consider the cultural and political effects of World War II, the Cold War, the civil rights movement, psychedelics, hippie culture and sexual liberation, lesbian separatism, the AIDS crisis, and marriage equality.
Same as: AMSTUD 163, FEMGEN 163

ARTHIST 164A. Technology and the Visual Imagination. 4 Units.
An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.
Same as: ARTHIST 364A, FILMSTUD 164A, FILMSTUD 364A

ARTHIST 165A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.
The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.
Same as: ARTHIST 365A, FILMSTUD 165A, FILMSTUD 365A

ARTHIST 165B. American Style and the Rhetoric of Fashion. 4 Units.
Focus on the visual culture of fashion, especially in an American context. Topics include: the representation of fashion in different visual media (prints, photographs, films, window displays, and digital images); the relationship of fashion to its historical context and American culture; the interplay between fashion and other modes of discourse, in particular art, but also performance, music, economics; and the use of fashion as an expression of social status, identity, and other attributes of the wearer. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.
Same as: AMSTUD 127, FILMSTUD 165B

ARTHIST 166. Representing Fashion. 4 Units.
Course on the representation of fashion in the 20th and 21st century, with focus on American fashion photography. Topics include: history of fashion illustration, fashion photography, and fashion films; intersection of art and commerce; role of designers, photographers, editors, and models; studio v. street photography; the place of mass media, alternative magazines, and online publications; and use of media, photography, and design theory for interpretation of fashion representations. Illustrators and artists include Lepape, Erte, Avedon, Penn, Klein, Newton, Sherman, and Leibovitz.
Same as: AMSTUD 128

ARTHIST 167. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.
Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each week¿s theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.
Same as: ARTHIST 367, FILMSTUD 167B, FILMSTUD 367B

ARTHIST 168A. A.I.-Activism-Art. 3-5 Units.
Lecture/studio course exploring arts and humanities scholarship and practice engaging with, and generated by, emerging emerging and exponential technologies. Our course will explore intersections of art and artificial intelligence with an emphasis on social impact and racial justice. Open to all undergraduates.
Same as: CSRE 106A, ENGLISH 106A

ARTHIST 173. Issues in Contemporary Art. 4 Units.
Major figures, themes, and movements of contemporary art from the 80s to the present. Readings on the neo-avant garde; postmodernism; art and identity politics; new media and technology; globalization and participatory aesthetics. Prerequisite: ARTHIST 155, or equivalent with consent of instructor.
Same as: ARTHIST 373

ARTHIST 173N. Race, Gender, and Sexuality in Contemporary Art. 3 Units.
From Pop to postmodernism, contemporary art in the United States has often taken up issues of race, gender, and sexuality. In this seminar, we will study how artists from the 1960s to the present have drawn upon a wide range of media (including painting, photography, sculpture, performance, video, and the internet) to address racial injustice, gender inequity, and the surveillance of sexuality. Guest speakers will include contemporary artists confronting these issues in our current, highly charged moment.

ARTHIST 178. Ethnicity and Dissent in United States Art and Literature. 4 Units.
The role of the visual arts of the U.S. in the construction and contesting of racial, class, and gender hierarchies. Focus is on artists and writers from the 18th century to 1990s. How power, domination, and resistance work historically. Topics include: minstrelsy and the invention of race; mass culture and postmodernity; hegemony and language; memory and desire; and the borderlands.
Same as: AMSTUD 178, ARTHIST 378

ARTHIST 181. Pacific Dreams: Art in California. 3-4 Units.
This lecture course will explore the rich and diverse history of art made in California, with special focus on the interchanges between the fine arts and subcultural expression. From the Carleton Watkins' exquisite mammoth plate photographs of Yosemite to the cool sci-fi experiments of Light and Space artists such as James Turrell; from the feminist experiments of Judy Chicago to the black magic of Betye Saar's ritualistic objects, artists have explored California's landscape, history, and diverse population in myriad ways. Topics of study will include art in San Francisco Chinatown; Hollywood and contemporary performance; psychedelia and the counterculture; Afrofuturism; and glam, punk rock, and hardcore in Los Angeles. Special attention will be paid to issues of immigration, race, and ethnicity in California.

ARTHIST 182B. Cultures in Competition: Arts of Song-Era China. 4 Units.
The Song dynasty (mid-10th to late 13th c.) was a period of extraordinary diversity and technical accomplishment in Chinese painting, ceramics, calligraphy, architecture and sculpture. Artistic developments emerged within a context of economic dynamism, urban growth, and competition in dynastic, political, cultural and social arenas ¿ as between Chinese and formerly nomadic neighboring regimes, or between reformers and conservatives. This course will consider major themes and topics in Song art history, including innovations in architectural and ceramic technologies; developments in landscape painting and theory; the rise of educated artists; official arts and ideologies of Song, Liao and Jin court regimes; new roles for women as patrons and cultural participants; and Chan and popular Buddhist imagery.
Same as: ARTHIST 382B

ARTHIST 183. Theatre of the World: Contemporary Chinese Art. 4 Units.
This course examines the intense and profound changes in Chinese Art from the end of Cultural Revolution to the first decades of the twenty-first century. Multiple course meetings will take place in the San Francisco Museum of Modern Art, where the exhibition Art and China after 1989: Theater of the World will be on view. We will explore how artists express their ways of grappling with the social, political, economic, and personal issues through art. Major topics include cultural multiplicity, global challenge, consumerism, site specificity, and deconstructing and reconstructing of identities, among others. Our discussions will constantly incorporate factors of China's domestic context, global network, and artists' individual connections in order for students to understand the rich and complex dynamics of Chinese contemporary art.
Same as: ARTHIST 383

ARTHIST 183N. Making Paradises on the Silk Road: Buddhist Arts of the Dunhuang Grottoes. 3 Units.
The cave temples of Dunhuang in far northwest China are the greatest repository of Chinese and Central Asian Buddhist arts from the medieval period of 5th to 14th centuries. This seminar will focus on caves that will be exhibited as full-scale replicas as part of the Getty Malibu Museum's International Dunhuang exhibition, which we will visit in a seminar field trip to Los Angeles. We will explore the spatial arrangement of sculptures and wall paintings, the imagery of Pure Land paradise scenes and narrative story cycles, and the embodied experience of movement around the caves. Through readings, discussions, VR simulation viewings, and exhibition visits we will also explore varied approaches to understanding the patronage, artistic styles, production techniques, devotional practices, and significance of these sacred spaces.

ARTHIST 184. Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting. 4 Units.
Changes marking the transition from medieval to early modern Japanese society that generated a revolution in visual culture, as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch.
Same as: ARTHIST 384, JAPAN 184, JAPAN 284

ARTHIST 185. Arts of China in the Early Modern World, 1550-1800. 4 Units.
The dynamic period of late Ming and early Qing dynasty China, roughly 1500-1800 CE, was marked by political crisis and conquest, but also by China's participation in global systems of trade and knowledge exchanges involving porcelain, illustrated books, garden designs and systems of perspectival representation. Topics will include Innovations in urban centers of painting and print culture, politically inflected painting, and cultural syncretism in court painting and garden design.
Same as: ARTHIST 385

ARTHIST 186B. Asian American Art: 1850-Present. 4 Units.
What does it mean, and what has it meant historically, to be "Asian American" in the United States? This lecture course explores this question through the example of artists, craftspeople, and laborers of Asian descent. We will consider their work alongside the art, visual culture, and literature of the United States. Key themes will include the history of immigration law; questions of home and belonging; art, activism, and community; interethnic solidarity; and gender and queerness. Artists and authors will include Isamu Noguchi, Grace Lee Boggs, Nam June Paik, Yoko Ono, Theresa Hak Kyung Cha, Grace Lee Boggs, Zarina, Carlos Villa, Takashi Murakami, Anne Cheng, Lisa Lowe, among many others. In addition to learning the history of Asian Americans and reading key texts in Asian American studies, this course will also teach the foundational skills of close looking and primary source research.
Same as: AMSTUD 186D, ASNAMST 186B

ARTHIST 187. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868. 4 Units.
Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan.
Same as: ARTHIST 387, JAPAN 185, JAPAN 285

ARTHIST 188A. The History of Modern and Contemporary Japanese and Chinese Architecture and Urbanism. 4 Units.
The recent rapid urbanization and architectural transformation of Asia; focus is on the architecture of Japan and China since the mid-19th century. History of forms, theories, and styles that serve as the foundation for today's buildings and cityscapes. How Eastern and Western ideas of modernism have merged or diverged and how these forces continue to shape the future of Japanese and Chinese architecture and urban form.
Same as: ARTHIST 388A

ARTHIST 188B. From Shanghai Modern to Global Contemporary: Frontiers of Modern Chinese Art. 4 Units.
Chinese artistic developments in an era of revolution and modernization, from Shanghai Modern and New National Painting though the politicized art of the Cultural Revolution and post-Mao era re-entry into international arenas.
Same as: ARTHIST 388B

ARTHIST 189C. Global Currents: Early Modern Art Enterprises, Economies, and Imaginaries. 4 Units.
Episodes of global artistic exchange from the 16th to 19th centuries involving commodities (porcelains and textiles), technologies (printmaking, perspective, and cartography), and imaginaries (Chinoiserie, East Asian Occidenteries, Orientalism, Japonisme). The role of enterprises, institutions, and power relations in artistic economies, from the Portuguese Empire, Jesuit mission networks and East India Companies to imperialist systems.
Same as: ARTHIST 389C

ARTHIST 190A. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 3 Units.
This interdisciplinary seminar explores pressing questions relating to the protection, practice and repatriation of the cultural heritage of Indigenous peoples from North America and beyond. Using an innovative combination of in-class lectures and videos of interviews with renowned experts, including Indigenous leaders, scholars, artists and performers and museum professionals from around the world, this seminar will explore and problematize, among other subjects: the impact of colonialism, urbanization and other political, legal, economic, religious and cultural forces on understandings and definitions of "indigenous" and "cultural heritage"; the development of international law relating to Indigenous peoples¿ cultural rights; international, domestic, and tribal heritage protection and repatriation laws/initiatives including the 2007 United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), the 1990 US Native American Graves Protection and Repatriation Act (NAGPRA), and others; past and present Western museum practices and guidelines relating to display, preservation, provenance research and repatriation of indigenous cultural material; the meaning of repatriation to Indigenous peoples and other stakeholders; and resolving repatriation disputes, including by alternative dispute resolution (ADR) processes. While case studies will relate primarily to Indigenous peoples of North America, comparisons will be drawn with the situation of Indigenous peoples in other regions, such as Oceania and Russia. Each week students will brainstorm actionable ideas for amending/supplementing current frameworks in order to give force to the cultural rights enumerated in UNDRIP. The overall seminar experience will involve discussions of lectures and video content, assigned readings, quizzes, a class visit to the Cantor Center Native Americas collection, and visits to our classroom by experts. Elements used in grading: class participation, attendance and a final project (one-day take-home exam; or research paper or film project with instructor's consent).
Same as: ARTHIST 490A, PUBLPOL 190, PUBLPOL 290

ARTHIST 191. African American Art. 5 Units.
This course explores major art and political movements, such as the Harlem Renaissance, the Black Arts Movement, and #BlackLivesMatter, that have informed and were inspired by African American artists. Students will read pivotal texts written by Black artists, historians, philosophers and activists; consider how artists have contended with issues of identity, race, gender, and sexuality; and learn about galleries, collections, and organizations founded to support the field. Attendance on the first day of class is a requirement for enrollment.
Same as: AFRICAAM 191B, CSRE 191

ARTHIST 192B. Art of the African Diaspora. 4 Units.
This introduction to the art of the African Diaspora uses art and visual culture as means to explore the history and impact of the global spread of African peoples from slavery until the present day. Lectures and discussions will examine a range of artistic practices from street festivals and Afro-Caribbean religious traditions to the work of studio-trained artists of international repute.

ARTHIST 193. Jacob Lawrence's Twentieth Century: African American Art and Culture. 5 Units.
This course explores African American art and culture through the lens of the Cantor Arts Center's rich holdings of work by Jacob Lawrence (1917-2000). Our approach will combine close looking with attention to Lawrence's cultural, political, and social contexts. Using Lawrence as starting point, we also will consider the work of African American artists such as Charles Alston, Norman Lewis, Aaron Douglas, Betye Saar, and Kara Walker in relation to historical events including the Harlem Renaissance, the Great Depression, World War II, and the Civil Rights Movement. Key themes include the interactions of art, music, and film; the history of radical black thought; as well as issues of curatorial display and conservation.
Same as: CSRE 193

ARTHIST 194. U.S. Latinx Art. 5 Units.
This course surveys art made by Latinas/os/xs who have lived and worked in the United States since the 1700s, including Chicanos, Nuyoricans, and other Black, Brown, and Indigenous artists. While exploring the diversity of Latinx art, students will consider artists' relationships to identity, race, ethnicity, gender, and sexuality. Students will also study how artists have responded to and challenged discrimination, institutional exclusion, and national debates through their work. Attendance on the first day of class is a requirement for enrollment.
Same as: CHILATST 195, CSRE 195

ARTHIST 202. Inherent Vice. 5 Units.
Taught jointly by an art historian and a senior conservator, this research seminar focuses on selected objects (mostly) of modern and contemporary art many in Stanford collections -- that pose significant condition and/or conservation challenges for long term maintenance and display. Together we will examine the objects in the conservation lab and/or the gallery; students will then confer with appropriate museum staff, consult relevant curatorial and conservation files, research and debate potential treatments, and write up reports of their findings. Issues of aesthetics, ethics and other problems bearing on the material longevity of art will be explored together in class discussions as a foundation for thinking about the preservation and exhibition of works of art.
Same as: ARTHIST 402

ARTHIST 203. Artists, Athletes, Courtesans and Crooks. 5 Units.
The seminar examines a range of topics devoted to the makers of Greek art and artifacts, the men and women who used them in life and the afterlife, and the miscreants - from Lord Elgin to contemporary tomb-looters and dealers - whose deeds have damaged, deracinated and desecrated temples, sculptures and grave goods. Readings include ancient texts in translation, books and articles by classicists and art historians, legal texts and lively page-turners. Students will discuss weekly readings, give brief slide lectures and a final presentation on a topic of their choice, which need not be confined to the ancient Mediterranean.
Same as: CLASSICS 163

ARTHIST 203A. Philosophies Behind Architecture: The Work of Antoni Gaudí as a Response to Modernity.. 3-5 Units.
The emergence of modern and contemporary Architecture in the West is intimately linked to the background culture that spread across the intellectual centers of Europe and the US between early nineteenth century and the Second World War. Catalan architect Antoni Gaudí (1852-1926) is a major representative of a style of architecture that asks and answers the questions posed by modernity and industrialization with an attitude of resistance. The purpose of this course is to pair these two perspectives: first, an exploration of the history of the most influential movements in Architecture and Interior Design since 1850 and the philosophies and historical events that explain their impact. Second, an elucidation of the originality and relevance of Antoni Gaudí in light of this international context. The course will combine texts by Marx, Smith, Nietzsche, Benjamin, Emerson, Walt Whitman, or Nelson Goodman with those of Cerdà, William Morris, or Adolf Loos, so as to shed light on the most representative buildings and interiors of the period: from the 1851 Crystal Palace of London to the state of La Sagrada Família in 1926, the year Gaudí died. The poles of this history will be represented by industrialization on one side, and autographic craftsmanship on the other. In particular, we will disentangle the tension between creativity and uniformization and their influence in the building of an entire artistic sensibility and culture, in architecture as in politics.
Same as: ILAC 203

ARTHIST 206. The Alchemy of Art: Substance and Transformation in Artistic Practice. 3 Units.
This seminar considers materiality and processes of material transformation as core elements of artistic practice and the history of making, largely from Sumer (3rd Millennium BCE) until the Early Modern period (18th Century in the West), but with several modern comparisons. Major points of focus will include pre-modern perceptions of the elemental properties of materials as matter, the reflexive relationship between materials and imagination, and the diverse ways in which societies have associated specific substances with social and cultural values. Humanistic perspectives on such issues are augmented by complementary insights from the physical sciences, and references are made to current ideas regarding material agency, affordances, and the imperfect separability of nature and culture. Indeed, a central question underlying all the readings is how to distinguish natural from synthetic: where does nature end and art begin, or maybe where does nature stop?.
Same as: ARTHIST 406

ARTHIST 207. The Resurrected Body: Animacy in Medieval Art. 5 Units.
This course explores the relationship of spirit and matter in medieval art and architecture, more specifically how the changing appearance of objects and spaces evokes the presence of the metaphysical as glitter, reverberation, and shadow. We will engage objects and monuments across the Mediterranean, studying the way they were staged in order to produce the perception of liveliness. The phenomenology of liveliness will be tied to the development of the theology of resurrection of the body.
Same as: ARTHIST 407

ARTHIST 207A. Bodies that Remain: Art and Death in the Middle Ages. 3-5 Units.
This seminar investigates medieval attitudes towards dead bodies through the material culture of death, from the cult of relics, to tomb sculpture, to monumental architecture. The place of death in Jewish, Christian, and Muslim communities in medieval Europe will be analyzed by putting these works of art in conversation with texts dealing with death as both biological event and powerful symbol.

ARTHIST 207C. Phenomenology and Aesthetics in Medieval Art. 5 Units.
This course explores the phenomenal aspects of the medieval image and space such as glitter, shadow, smoke, reverberation and how these presence effects were conceptualized in medieval culture as animation. Focus is on a select group of monuments as well as engagement with medieval objects at the Cantor Art Museum and the facsimiles of medieval manuscripts kept at the Art Library and Special Collections. Among the monuments we will study are the Alhambra in Spain, the Apocalypse MSS, the Cantigas of Alfonso X, the Byzantine Joshua Roll, the Homiles of the Monk Kokkinobaphos, the Ashburnhamensis Pentateuch, and the Rossano Gospels.
Same as: ARTHIST 407C

ARTHIST 207D. Race and Ethnicity in Premodern Europe. 3-5 Units.
How do historians, art historians, and literary historians of premodern Europe shape their research and their teaching around questions of race? How do current debates on race theory shape our perception of the past and deepen historical inquiry? This graduate colloquium focuses on the most recent publications on race in medieval and early modern studies to reflect on such questions while examining the challenges that race studies put on historical definitions, research methodologies, as well as teaching institutions.
Same as: ARTHIST 407D, HISTORY 215B, HISTORY 315B

ARTHIST 208. Hagia Sophia. 5 Units.
This seminar uncovers the aesthetic principles and spiritual operations at work in Hagia Sophia, the church dedicated to Holy Wisdom in Constantinople. Rather than a static and inert structure, the Great Church emerges as a material body that comes to life when the morning or evening light resurrects the glitter of its gold mosaics and when the singing of human voices activates the reverberant and enveloping sound of its vast interior. Drawing on art and architectural history, liturgy, musicology, and acoustics, this course explores the Byzantine paradigm of animation arguing that it is manifested in the visual and sonic mirroring, in the chiastic structure of the psalmody, and in the prosody of the sung poetry. Together these elements orchestrate a multi-sensory experience that has the potential to destabilize the divide between real and oneiric, placing the faithful in a space in between terrestrial and celestial. A short film on aesthetics and samples of Byzantine chant digitally imprinted with the acoustics of Hagia Sophia are developed as integral segments of this research; they offer a chance for the student to transcend the limits of textual analysis and experience the temporal dimension of this process of animation of the inert.
Same as: ARTHIST 408, CLASSICS 173, CLASSICS 273

ARTHIST 208B. The Art of Medieval Spain: Muslims, Christians, Jews. 5 Units.
The seminar reveals the religious and ethnic hybridity of the art medieval Spain, where the lives, material cultures, and artistic practices of Muslims, Christians, and Jews were more intertwined than any other region of the medieval world. We work thematically rather than strictly chronologically in order to build a model of engagement with medieval art in which the movement of ideas and objects between the three major religions is in itself a focus of study.
Same as: ARTHIST 408B

ARTHIST 209C. Theories of the Image: Byzantium, Islam and the Latin West. 5 Units.
This seminar explores the role of images in the three major powers of the medieval Mediterranean: the Umayyads, the Carolingians, and the Byzantines. For each the definition of an image- sura, imago, or eikon respectively-became an important means of establishing religious identity and a fault-line between distinct cultural traditions. This course troubles the identification of image with figural representation and presents instead a performative paradigm where chant or recitation are treated as images. As such, students will be able to see the connections between medieval image theory and contemporary art practices such as installation.
Same as: ARTHIST 409, CLASSICS 158, CLASSICS 258, REES 409

ARTHIST 210. Giotto. 5 Units.
Often hailed as ¿the father of western painting,¿ Giotto was seen as a revolutionary figure even in his own day. We will begin with Giotto¿s critical reception, his artistic predecessors and contemporaries, and his work for patrons ranging from the Franciscan order to the king of Naples. We will most closely examine Giotto¿s masterpiece, the frescoes of the Arena Chapel in Padua, and consider topics including Giotto¿s figural realism, the layered readings of the program, its use of visual rhetoric, and issues of gender, sexuality, and ethnicity.
Same as: ARTHIST 410B

ARTHIST 212. Renaissance Florence, 1440-1540. 5 Units.
Notions of cultural superiority in light of changes in Florentine society as it went from being a republic to a duchy ruled by the Medici. Artists and architects such as Donatello, Brunelleschi, Botticelli, Michelangelo, and Pontormo praised as having revived the arts and returned them to a level of ancient splendor. The role of the sacred in daily life and uses of the pagan past for poetic and scholarly expressions and as vehicles for contemporary experience.

ARTHIST 213. Renaissance Print Culture: Art in the Cantor Arts Center. 5 Units.
The seminar takes place in the Cantor Arts Center and provides a unique opportunity to study original works of art from the museum's storage. Beginning in the fifteenth century new techniques of reproduction changed the pictorial culture of Europe. Some engravings called attention to the engraver's virtuosity, and the private nature of the medium was explored for erotic imagery. By the sixteenth century printed images were used for political and religious propaganda during the societal upheavals.

ARTHIST 215C. What is Contemporary Art?. 5 Units.
This course focuses on the production, criticism, and curating of contemporary art. Through a series of required readings, intensive class discussions, class trips, and first-hand encounters with art objects and exhibitions, we will investigate current understandings of contemporary art. We will also consider the history of contemporary art by looking at how art of the past was understood in its own moment, when it was new and now.

ARTHIST 216. Collecting for the Cantor. 3 Units.
Students in this course will conduct the necessary art historical and collections research to select a work of art on paper for acquisition by the Cantor Arts Center. Readings and discussions will consider the history of collecting, as well as cultural, ethical, logistical, and economic questions involved in collection building. Prerequisite: one Art History course.

ARTHIST 217. Architecture, Mysticism, and Myth. 5 Units.
This course examines global origin myths for architecture, for example cosmic symbolism (e.g. the Mandala/dome), and the magic of technologies (e.g. the "petrification" of the wooden hut in permanent architecture). Examples range from Ethiopian rockcut churches, to the Parthenon, to the Ise Grand Shrine, to Fire Temples, and Navajo lodges. The course concludes with the modern mythology of industrialisation and the mechanised building.
Same as: ARTHIST 417

ARTHIST 217B. Architectural Design Theory. 5 Units.
This seminar focuses on the key themes, histories, and methods of architectural theory -- a form of architectural practice that establishes the aims and philosophies of architecture. Architectural theory is primarily written, but it also incorporates drawing, photography, film, and other media. nnOne of the distinctive features of modern and contemporary architecture is its pronounced use of theory to articulate its aims. One might argue that modern architecture is modern because of its incorporation of theory. This course focuses on those early-modern, modern, and late-modern writings that have been and remain entangled with contemporary architectural thought and design practice. nnRather than examine the development of modern architectural theory chronologically, it is explored architectural through thematic topics. These themes enable the student to understand how certain architectural theoretical concepts endure, are transformed, and can be furthered through his/her own explorations.nCEE 32B is a crosslisting of ARTHIST 217B/417B.
Same as: ARTHIST 417B

ARTHIST 218A. Michelangelo: Gateway to Early Modern Italy. 3-5 Units.
Revered as one of the greatest artists in history, Michelangelo Buonarroti's extraordinarily long and prodigious existence (1475-1564) spanned the Renaissance and the Reformation in Italy. The celebrity artist left behind not only sculptures, paintings, drawings, and architectural designs, but also an abundantly rich and heterogeneous collection of artifacts, including direct and indirect correspondence (approximately 1400 letters), an eclectic assortment of personal notes, documents and contracts, and 302 poems and 41 poetic fragments. This course will explore the life and production of Michelangelo in relation to those of his contemporaries. Using the biography of the artist as a thread, this interdisciplinary course will draw on a range of critical methodologies and approaches to investigate the civilization and culture of Italy in the fifteenth and sixteenth centuries. Course themes will follow key tensions that defined the period and that found expression in Michelangelo: physical-spiritual, classical-Christian, tradition-innovation, individual-collective.
Same as: ARTHIST 418A, ITALIAN 237, ITALIAN 337

ARTHIST 219. Caravaggio, Vermeer, and the Life of Paintings. 5 Units.
Focusing on great paintings by seventeenth-century European painters--Caravaggio's Medusa, Vermeer's Girl with the Pearl Earring, Rembrandt's Self-Portraits, and many others--this seminar will consider how and why artists these artists strove to overcome the boundary between representation and the real and make the world "present" to the viewer. Reading authors such as George Steiner and Jacques Derrida, we will develop a definition of the word "presence" and consider the various critiques of it.nnNOTE: This seminar is for undergraduates only.

ARTHIST 221E. Peripheral Dreams: The Art and Literature of Miró, Dalí, and other Surrealists in Catalonia. 3-5 Units.
Why was Salvador Dalí fascinated with the architecture of Gaudí? Why did André Breton, Paul Éluard and Federico García Lorca visit Barcelona? Moreover, why did Catalonia become such an important cradle for Surrealism? Why is the (Catalan) landscape such a relevant presence in the work of Miró and Dalí? Through a critical analysis and discussion of selected works of art and literature, this seminar focuses and follows the trajectories of Miró and Dalí, from Barcelona to Paris to New York, and explores the role of their Catalan background as a potentially essential factor in their own contributions to Surrealism and the reception of their work. The course will provide the materials and guide the student to conduct research on a specific work(s) of art, architecture, literature or cinema either by Miró, Dalí or one of his peers in relation to their cultural, social and political context. The course is intended for graduate students in Iberian and Comparative Literature, Art History, Cultural Studies, and related fields. Taught in English by Jordi Falgàs i Casanovas.
Same as: ILAC 281E

ARTHIST 223. Living in the Material World: Imagination and Agency. 5 Units.
This seminar deals with the materials that artists have chosen in art and construction from antiquity to the early modern era. The particular focus is upon pre-modern perceptions of the inherent properties of materials, from amber and ivory to marble and granite, as well as the diverse ways in which societies have associated particular substances with social and cultural values. Particular emphasis is laid upon the architectural use of materials.
Same as: ARTHIST 423

ARTHIST 224. Architecture as Performance from Antiquity to the Enlightenment. 5 Units.
This seminar examines the nature of architectural representation in the western tradition, from antiquity until the 18th century. It considers the ancient theatre as an icon of representation and the afterlife of the stage building as a model for western architecture, including ephemera. It concludes a distinction between the theatrical and the more recent concept of the theatrical.
Same as: ARTHIST 424

ARTHIST 224N. The Popular Culture of Abstract Art. 3 Units.
Is abstract art inherently elitist? Or gendered? How does it differ from (mere) decoration? Is there a chasm that necessarily separates abstract and popular art? Can you think of examples in which those categories might overlap? This course is designed to deconstruct the boundaries that tend to make abstract art seem remote and difficult to understand, while pop(ular) art typically seems fun and accessible. How can we complicate these clichés to construct a more compelling narrative of modern art?n nSeminar participants will have many opportunities to see and study original works at Stanford's Cantor Arts Center and the Anderson Collection, as well as a trip to SFMOMA. Artists studied include Georges Braque, Constantin Brancusi, Marcel Duchamp, Piet Mondrian, Andy Warhol, Roy Lichtenstein, and Jackson Pollock.

ARTHIST 226. New Landscapes of China: Ecologies, Media, Imaginaries. 4-5 Units.
An exploration of new forms of landscape art in China's contemporary era, 1980s-present. Studies of new media platforms for landscape related imagery, imagined landscapes, and expanded concepts of landscape in an era of heightened ecological consciousness.
Same as: ARTHIST 426

ARTHIST 229D. Topophilia: Place in Japanese Visual Culture through 19th Century. 5 Units.
Attachments to "place" and "home" are hard-wired into the biology of humans and animals alike, although such attachments vary according to specific times, cultures, and states of mind. Can we speak of a "Japanese sense of place" and if so, what is distinctive about it? Seminar explores religious visions and ritual fields; narratives of itinerancy; cityscapes; topographic taxonomies. Knowledge of Japanese culture is beneficial but not mandatory.
Same as: JAPANGEN 229

ARTHIST 230B. Image and Text in Chinese Painting. 3-5 Units.
An examination of many types of interactions between images and texts in Chinese painting. These include poetic lines inscribed on paintings (as response or as a theme given to the artist to paint), paintings that emulate or transform ancient poetic couplets, or illustrate poetic and literary narratives, and calligraphic inscriptions. Attention will be given both to comparative perspectives and to the special aesthetic and intellectual consequences that the conjunction of the literary and visual modes give to Chinese artistic expression. [Undergraduate enrollment with consent of one of the instructors].
Same as: ARTHIST 430B, CHINA 230, CHINA 430

ARTHIST 238C. Art and the Market. 3-5 Units.
This course examines the relationship between art and the market, from the château-builders of the French Renaissance to avant-garde painters in the nineteenth-century Salon des Refusés. Using examples drawn from France, this course explores the relationship between artists and patrons, the changing status of artists in society, patterns of shifting taste, and the effects of museums on making and collecting art. Students will read a mixture of historical texts about art and artists, fictional works depicting the process of artistic creation, and theoretical analyses of the politics embedded in artworks. They will engage in sustained analysis of individual artworks, as well as the market structures in which such artworks were produced and bought. The course will be taught in English, with the option of readings in French for departmental majors.
Same as: FRENCH 238

ARTHIST 240. Millennium Approaches: The Art of the 1990s. 3-5 Units.
This seminar will examine the art historical legacy of the 1990s, the decade of Bill Clinton, Beavis and Butthead, and Y2K. By placing art in conversation with music, popular culture, and political events, we will explore the dark underbelly of the decade's facade of sunny optimism. Key topics will include the the end of the Cold War, multiculturalism, American interventionism, the AIDS crisis, and early internet culture. Artists covered will include Felix Gonzalez-Torres, Kim Gordon, Mike Kelly, the Young British Artists, Gregg Bordowitz, Lorna Simpson, Zoe Leonard, Byron Kim, and Glenn Ligon. What is the relationship between art, popular culture, and history? How did the 1990s help shape our current culture?.
Same as: ARTHIST 440

ARTHIST 242B. Megacities. 5 Units.
In this course we will examine the meaning, processes, and challenges of urbanization. Through a series of targeted readings across history and geography and through the study of varied means of representation (anthropology, literature, cartography, film, etc), the class will analyze the ways in which urban forms have come into being and created, met, and/or ignored challenges such as disease, water, transport, religious and class conflict, colonialism, labor, and trade. Students will read anthropology in conjunction with other disciplines (literature, urban planning, public health, architecture, and economics) to learn the ways in which ethnographies of immigration, urban poverty, class disparity, economic development and indicators, noise, and transportation substantively augment our understandings of how people live within globalization.
Same as: ANTHRO 42, LIFE 142, URBANST 142

ARTHIST 243. Black Divinities: Race, God, and Nation in the Photography of Deana Lawson. 5 Units.
In recent years the Brooklyn-based photographer Deana Lawson (born 1979) has become rightly famous for her rapturous yet grounded large-sized photographs of everyday black people--those she meets in her neighborhood, as well as on her travels to Brazil, Jamaica, and the Congo. In this seminar we will look closely at Lawson's photographs, considering how she gains her subjects' trust, how she uses props and locations, how she explores her own feelings and the legacies and possibilities of being black.
Same as: AFRICAAM 143

ARTHIST 243B. Photography and Time. 5 Units.
This course examines the relationship between photography and temporality from the nineteenth century until the present day. We will study how the new medium interacted with other nineteenth-century technologies to produce a mechanized and standardized time, as well as attempts to use photography to destabilize such objective temporalities. In the twentieth century, we consider the dominant theorization of photography as an art that addresses time, history, and memory through study of critical texts by Benjamin, Barthes, and Bazin, among others. The course concludes by interrogating the applicability of these analogue theories to contemporary photographic practices. Attention to the technical labor of making photographs and the materiality of photographs in the archive will be central to the course, enabled by visits to the Cantor and Special Collections.

ARTHIST 243C. The Art of Travel. 5 Units.
This undergraduate seminar explores a variety of objects upon which we see the marks of makers smitten and/or stymied by new technologies of transportation ¿ objects about the steamship, the railroad, the automobile, the airplane, the space shuttle, the internet. Among many types of material culture, the course considers scrimshaw, album quilts, maps, paintings, photographs, city plans, hood ornaments, and advertisements from the early Republic to the present. How do objects mark geographic movement, and the social relationships forged in the process? What do these marks tell us about how we, as contemporary viewers, experience the world?.

ARTHIST 243N. Beyond Words: Early Books and the Design of the Reading Experience. 3 Units.
Copiously drawing from the Stanford Archives, this seminar will study the revolutionary design of the first printed books to ask questions about the nature of reading and the commodification of culture. Besides being trained in typography and printing techniques, the students will explore early modern books as multi-layered objects in which texts, images, cutouts, colors, and a multitude of materials constructed new frameworks for attention and fantasies while contributing to the globalization of media.

ARTHIST 244. The Visual Culture of the American Home Front, 1941-1945. 5 Units.
How does home front of WWII look now? What sort of meanings appear with the vantage of more than sixty years' distance? Examining Hollywood films from those years -films made during the war but mostly not directly about the war - the seminar focuses on developing students' abilities to write emotion-based criticism and history. Weekly short papers, each one in response to a film screening, are required. Among the films screened: Shadow of a Doubt, Gaslight, I Walked with a Zombie, The Best Years of Our Lives.
Same as: AMSTUD 244

ARTHIST 245. Art, Business & the Law. 4 Units.
This course examines art at the intersection of business and the law from a number of different angles, focusing on how the issues raised by particular case studies, whether legal, ethical and/or financial, impact our understanding of how works of art circulate, are received, evaluated and acquire different meanings in given social contexts. Topics include the design, construction and contested signification of selected war memorials; the rights involved in the display and desecration of the American flag; censorship of sexually charged images; how the value of art is appraised; institutional critique and the art museum, among others.
Same as: SIW 245

ARTHIST 246A. California Dreaming: West Coast Art and Visual Culture, 1848 - present. 5 Units.
This seminar examines art, photography, and other forms of cultural production (e.g. film, advertisements, postcards) in and about California from the middle of the 19th century to the present. It approaches California as a contested political, historical and geographical site and as a series of images and alternative "lifestyles." How have artists pictured the state's diverse landscapes, both natural and commercial, as well as its complex history of labor, immigration, ethnicity, tourism, and social division?.

ARTHIST 246B. Pop Art. 5 Units.
A new course on the history and meaning of Pop art in the United States and abroad. The course will feature close study of paintings, photographs, and prints at the Cantor Art Center. The course will be given in the Denning Family Resource Room, located in The Anderson Collection building. If you have any questions regarding the location, please contact Linda Esquivel at lindae@stanford.edu.
Same as: AMSTUD 246B

ARTHIST 246N. Pacific Dreams: Art in California. 3 Units.
This course will explore the rich history of art in California from 1850-present. From Chiura Obata¿s exquisite views of Yosemite to ASCO¿s urgent political performances in the streets of Los Angeles, artists have engaged California¿s landscape, history, and diverse populations in myriad ways. Topics of study will include art in San Francisco Chinatown, Hollywood and contemporary art, psychedelia and the counterculture, African American performance and Afrofuturism, and punk rock in Los Angeles. Special attention will be paid to issues of immigration, race, and ethnicity in California. The course will include multiple museum visits and trips to important artistic sites in the Bay Area.

ARTHIST 248A. Architecture & Gender. 4 Units.
This advanced seminar introduces students to the seemingly inconspicuous relation between architecture and gender. The course studies how modern societies create easily, controlled docile spaces, thus pursuing the absent bodies of its members - be it through symbolic or material means. This troubled history of the powers of architecture to neglect sexuality and impose strict gender roles is analyzed in class discussions through recent feminist and queer theoretical approaches and tested on case studies.
Same as: CEE 32Y

ARTHIST 248B. Architecture, Urbanism, and Visual Culture in Early Modern Rome. 5 Units.
This seminar investigates architecture in Rome, from Michelangelo to Piranesi. It examines the origins of modern urbanism; the piazza as ceremonial theater; the water network and fountain displays; palace design inside and out; religious institutions, from convents to confraternities; church design inside and out; the devotional and illusionistic space of the family chapel; festival architecture; light symbolism and geometry; the use of new materials and technologies; the relationship of early modern architecture to painting and sculpture; and the question of a unity of the arts.

ARTHIST 252. Transatlantic American Art. 5 Units.
This is an American art history course from a transatlantic perspective, considering the ties between the United States and England from the colonial era to World War I, a period in which both nations underwent a similar trajectory of industrialization, urbanization, democratization, and expansionism/imperialism. We will explore the ways in which American attitudes towards England oscillated between anxious emulation and proud repudiation, as the ideas of ¿British culture¿ and ¿Englishness¿ became catalysts for national self-definition and touchstones for gendered and racialized metaphors of national vigor or decline. We will also examine how American artists received aesthetic conventions and artistic genres from Britain, and how the geography of the American landscape and questions of national character and taste challenged these traditions.

ARTHIST 252A. Art and Power: From Royal Spectacle to Revolutionary Ritual. 3-5 Units.
From the Palace of Versailles to grand operas to Jacques-Louis David's portraits of revolutionary martyrs, rarely have the arts been so powerfully mobilized by the State as in early modern France. This course examines how the arts were used from Louis XIV to the Revolution in order to broadcast political authority across Europe. We will also consider the resistance to such attempts to elicit shock-and-awe through artistic patronage. By studying music, architecture, garden design, the visual arts, and theater together, students will gain a new perspective on works of art in their political contexts. But we will also examine the libelous pamphlets and satirical cartoons that turned the monarchy¿s grandeur against itself, ending the course with an examination of the new artistic regime of the French Revolution. The course will be taught in English with the option of French readings for departmental majors.
Same as: FRENCH 252

ARTHIST 255. Hidden Histories: Art and Misrepresentation. 5 Units.
What happens when art functions as a decoy, taking us away from stories that it refuses to tell? We will explore three modern artists who grapple, in unpredictable ways, with the historical events that have shaped them: Philip Guston and the Holocaust; Martin Puryear and the Civil Rights movement; and South African artist William Kentridge and apartheid. When appropriate, we will look at objects at the Cantor Art Center (Stanford) as well as museums in the Bay Area. The course will provide the foundation for an exhibition at the Cantor Arts Center and the Yale University Art Gallery in 2016.

ARTHIST 256. What Was Photography?. 4 Units.
Digital imaging has largely replaced darkroom work over the past quarter century, yet analog practices still dominate theories of photography. Working closely with the Capital Group Foundation Collection at the Cantor, this class will explore how those theories relate to vintage photographic prints and whether they are still relevant to the photography being produced today. Students will select one photographer within the Collection and create a set of writings that help contemporary viewers see these mid-century American artists through diverse contemporary perspectives.
Same as: ARTHIST 456

ARTHIST 262. Office of Metropolitan Architecture: Workshop of the New. 4-5 Units.
This seminar investigates all aspects of the work of the Office of Metropolitan Architecture (OMA) and its leader Rem Koolhaas. Topics for class research and inquiry include but are not be limited to: Koolhaas's early work at the Architectural Association and the founding of OMA, the publications of OMA and their style of presentation and theoretical foundations, the importance of AMO, and the architects who have left OMA and founded their own practices and how these differ from OMA. Each student completes an in-depth research paper and an in-class presentation.

ARTHIST 263B. The View through the Windshield: Cars and the American Landscape. 4 Units.
Both cars and the landscape are fundamental to American identity. This seminar will consider the relationship between them: how they have shaped each other, how one mediates the experience of the other, and how American artists such as Ansel Adams, Edward Hopper, and Ed Ruscha have represented both. We will discuss the relationship between nature and technology; the aesthetics of highways and parkways; the phenomenology of driving and road trips; maps and way finding; and the future of cars, mapping, and the landscape.

ARTHIST 264A. Picturing the Cosmos. 5 Units.
This seminar explores the place of images in how we understand and imagine the universe. The course draws on art, science, and popular culture, and pays particular attention to the ways they inform each other. Examples include: star maps, science fiction films, appropriated astronomical images, and telescopic views of stars, planets, and nebulae. Using these representations as well as accompanying readings we will discuss the importance of aesthetics for conceptions of the cosmos; the influence of technology on representations; strategies for representing concepts that exceed the limits of human vision; and the ways that views of the universe reflect and shape their cultural context. Open to undergraduates and graduates.

ARTHIST 264B. Starstuff: Space and the American Imagination. 5 Units.
Course on the history of twentieth and twenty-first century American images of space and how they shape conceptions of the universe. Covers representations made by scientists and artists, as well as scientific fiction films, TV, and other forms of popular visual culture. Topics will include the importance of aesthetics to understandings of the cosmos; the influence of media and technology on representations; the social, political, and historical context of the images; and the ways representations of space influence notions of American national identity and of cosmic citizenship.
Same as: AMSTUD 143X, FILMSTUD 264B

ARTHIST 265A. Word and Image. 3-5 Units.
What impact do images have on our reading of a text? How do words influence our understanding of images or our reading of pictures? What makes a visual interpretation of written words or a verbal rendering of an image successful? These questions will guide our investigation of the manifold connections between words and images in this course on intermediality and the relations and interrelations between writing and art from classical antiquity to the present. Readings and discussions will include such topics as the life and afterlife in word and image of Ovid's "Metamorphoses," Dante's "Divine Comedy," Ludovico Ariosto's "Orlando Furioso," and John Milton's "Paradise Lost;" the writings and creative production of poet-artists Michelangelo Buonarroti, William Blake, and Dante Gabriel Rossetti; innovations in and correspondences between literature and art in the modern period, from symbolism in the nineteenth century through the flourishing of European avant-garde movements in the twentieth century.

ARTHIST 268. Encountering Contemporary Chinese Painting: Media and Themes. 5 Units.
Two spring quarter exhibitions -- oil paintings and drawings by Zeng Fanzhi at the Anderson Collection, and Ink Worlds with works by two dozen major ink painters, calligraphers and video essayists at the Cantor -- convey part of the diversity of contemporary Chinese art practice. This seminar will explore media and techniques, artistic careers and strategies, and questions of cultural identity, history, place, language and the visionary presented by these artists and exhibitions.
Same as: ARTHIST 468

ARTHIST 273. Visual Culture of the Arctic. 5 Units.
In what ways does contemporary art address the slowly unfolding catastrophes of melting ice and thawing permafrost in the Arctic due to climate change? How might contemporary art and experimental cinema help us come to grips with the emotional disturbance of living amidst the deep-seated changes that are happening in our environment? These are the key questions this course attempts to answer.nThe first part of the class attempts to outline the complex history of Arctic visual and cultural representations through an interdisciplinary lens. The second part focuses on the more recent artistic and cinematic responses to climate change in the arctic. For their final projects, students will be able to combine analytical writing with creative projects that could take the form of photography, installation art, web-based art, fiction, video or poetry.
Same as: FILMSTUD 273

ARTHIST 273N. What is Contemporary Art?. 3 Units.
This course focuses on the production, criticism, and curating of contemporary art. Through a series of required readings, intensive class discussions, class trips, and first-hand encounters with art objects and exhibitions, we will investigate current understandings of contemporary art. We will also consider the history of contemporary art by looking at how art of the past was understood in its own moment, when it was new and now.

ARTHIST 278. Introduction to Curating. 5 Units.
Gain hands-on curatorial experience at the Cantor Arts Center by developing an exhibition in the Oceanic gallery about the Global Southn(the Indian Ocean region). Explore and debate strategies for presenting diverse art forms, conduct research, prepare wall texts and labels, and participate in designing the exhibition space in collaboration with fellow students, faculty, and Cantor staff members.

ARTHIST 280B. The World of Chen Hongshou (1598-1652). 5 Units.
Planned to coincide with a special international exhibition at the Berkeley Art Museum of works by the seventeenth century figure painter and print designer Chen Hongshou (1598-1652), this seminar will explore his art and cultural environment. Along with close study of his original paintings, we will study his connections with printmaking and publishing, fiction and drama culture, and his literary, social and patronage networks.
Same as: ARTHIST 480B

ARTHIST 281. Chinese Portraiture. 4 Units.
Exploration of recent studies of Chinese portraiture, with a focus on modern and contemporary eras. Portrait practices in treaty port cities; photographic portraits, portraits and modernity; political portraits in public arenas, self-erasure in contemporary portraiture, women's self-portraits, and experimental video portraits will be among the potential topics of discussion.
Same as: ARTHIST 481

ARTHIST 283. Chinese Buddhist Painting: Visions and Practices. 5 Units.
This course explores how Chinese Buddhist art adapts to changes in the religious visions, imagination, and practices of Buddhism in China. It focuses primarily on Buddhist paintings but will occasionally include other types of artistic devices, such as space for display, architectural design, and sculpture, to reach a better understanding of the viewing and the religious experiences. Striving beyond the discussion of style and iconography, we will broaden our pursuits by incorporating various issues such as the domestication of a foreign religion, the relationship between Buddhist literature and images, fusion with popular literature, social connections among eminent monks, scholars and artists, and political use of Buddhist images.
Same as: ARTHIST 483

ARTHIST 284B. Museum Cultures: Material Representation in the Past and Present. 3-5 Units.
Students will open the "black box" of museums to consider the past and present roles of institutional collections, culminating in a student-curated exhibition. Today, museums assert their relevance as dynamic spaces for debate and learning. Colonialism and restitution, the politics of representation, human/object relationships, and changing frameworks of authority make museum work widely significant and consistently challenging. Through thinking-in-practice, this course reflexively explores "museum cultures": representations of self and other within museums and institutional cultures of the museum world itself.n3 credits (no final project) or 5 credits (final project). May be repeat for credit.
Same as: ARCHLGY 134, ARCHLGY 234

ARTHIST 287. Pictures of the Floating World: Images from Japanese Popular Culture. 5 Units.
Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles.
Same as: ARTHIST 487X, JAPAN 287

ARTHIST 287A. The Japanese Tea Ceremony: The History, Aesthetics, and Politics Behind a National Pastime. 5 Units.
The Japanese tea ceremony, the ultimate premodern multimedia phenomenon, integrates architecture, garden design, ceramics, painting, calligraphy, and other treasured objects into a choreographed ritual wherein host, objects, and guests perform designated roles on a tiny stage sometimes only six feet square.. In addition to its much-touted aesthetic and philosophical aspects, the practice of tea includes inevitable political and rhetorical dimensions. This course traces the evolution of tea practice from its inception within the milieu of courtier diversions, Zen monasteries, and warrior villas, through its various permutations into the 20th century, where it was manipulated by the emerging industrialist class for different-but ultimately similar-ends.
Same as: JAPAN 188, JAPAN 288

ARTHIST 288B. The Enduring Passion for Ink: Contemporary Chinese Ink Painting. 5 Units.
Contemporary Chinese ink painters are exploring new ground. They push the limits of the medium, creating installations and performances, mixing ink with other media, and advancing age-tested brushstrokes and compositions. The recent flurry of exhibitions attests to contemporary ink painting¿s increasing importance. nnThis seminar introduces major figures (Xu Bing, Liu Dan, Zheng Chongbin, Li Huasheng, etc.) and movements in contemporary Chinese ink art. Emphasis is placed on improving writing abilities and on in-class reports and discussion. Topics for discussion include readings, individual works of art, and broad issues in contemporary art. Prerequisite: courses in Art History and/or Studio Art OR permission of instructor. open to undergraduates and graduates.

ARTHIST 289A. Making the Masterpiece in Song Dynasty China. 5 Units.
Studies of canon formation involving Song Dynasty (10-13th c.) Chinese works of painting, calligraphy, ceramics, and architecture. The roles of early art writing and criticism; collecting histories; art historical theory; / copying, imitation, and reproductive practices; period and regional taste; and modern museological and art historical discourses in identifying and constructing a canon of Song masterworks.
Same as: ARTHIST 489A

ARTHIST 290. Curricular Practical Training. 1-3 Unit.
CPT course required for international students completing degree.

ARTHIST 291. Riot!: Visualizing Civil Unrest in the 20th and 21st Centuries. 5 Units.
This course explores the visual legacy of civil unrest in the United States. Focusing on the 1965 Watts Rebellion, the 1992 Los Angeles Riots, and the 2014 Ferguson Uprising, students will closely examine photographs, television broadcasts, newspapers, magazines, and film and video representations of unrest. In addition, students will visually analyze the works of artists who have responded to the instances of police brutality and/or challenged the systemic racism, xenophobia, and anti-black violence leading to and surrounding these events.nnNOTE: Instructor consent required for undergraduate students. Please contact the instructor for permission to enroll.
Same as: AFRICAAM 291, AFRICAAM 491, ARTHIST 491

ARTHIST 292. Romancing the Stone: Crystal Media from Babylon to Superman. 3-5 Units.
This seminar investigates the importance of rock crystal and its imitations as material, medium, and metaphor from antiquity until modernity. The objects examined include rings, reliquaries, lenses, and the Crystal Aesthetic in early twentieth-century architecture and even Superman's Fortress of Solitude. The texts range from Pliny to Arabic Poetry to Romance Literature to modern manifestos.
Same as: ARTHIST 492, FRENCH 292, FRENCH 392

ARTHIST 294. Writing and the Visual: The Art of Art Writing. 5 Units.
This course, Writing the Visual: The Art of Art Writing, will explore the relationship between writing and visual art, which has been theorized as everything from an act of translation and interpretation to one of collaboration or competition. Oscar Wilde even suggested that, "criticism is itself an art." Students will study these varied approaches to art writing and put them into practice by responding to artworks seen in person around the Bay Area, with the goal of publishing a print journal of student writing at the end of the quarter. Through direct engagement with these writerly modes, students will also develop a personal stance on writing about art, championing one form of art writing in a scholarly essay.

ARTHIST 295. Visual Arts Internship. 1-5 Unit.
Professional experience in a field related to the Visual Arts for six to ten weeks. Internships may include work for galleries, museums, art centers, and art publications. Students arrange the internship, provide a confirmation letter from the hosting institution, and must receive consent from the faculty coordinator to enroll in units. To supplement the internship students maintain a journal. Evaluations from the student and the supervisor, together with the journal, are submitted at the end of the internship. Restricted to declared majors and minors. May be repeated for credit.

ARTHIST 296. Junior Seminar: Methods & Historiography of Art History. 5 Units.
Historiography and methodology. Through a series of case studies, this course introduces a range of influential critical perspectives in art history as a discipline and a practice. The goal is to stimulate thinking about what it means to explore the history of art today, to expose and examine our assumptions, expectations and predilections as we undertake to learn and write about works of art, their meanings and their status in the world.

ARTHIST 297. Honors Thesis Writing. 2-5 Units.
May be repeated for credit.

ARTHIST 298. Individual Work: Art History. 1-5 Unit.
Prerequisite: student must have taken a course with the instructor and/or completed relevant introductory course(s). Instructor consent and completion of the Independent Study Form are required prior to enrollment. All necessary forms and payment are required by the end of Week 2 of each quarter. Please contact the Undergraduate Coordinator in McMurtry 108 for more information. May be repeated for credit.

ARTHIST 302B. Coffee, Sugar, and Chocolate: Commodities and Consumption in World History, 1200-1800. 4-5 Units.
Many of the basic commodities that we consider staples of everyday life became part of an increasingly interconnected world of trade, goods, and consumption between 1200 and 1800. This seminar offers an introduction to the material culture of the late medieval and early modern world, with an emphasis on the role of European trade and empires in these developments. We will examine recent work on the circulation, use, and consumption of things, starting with the age of the medieval merchant, and followed by the era of the Columbian exchange in the Americas that was also the world of the Renaissance collector, the Ottoman patron, and the Ming connoisseur. This seminar will explore the material horizons of an increasingly interconnected world, with the rise of the Dutch East India Company and other trading societies, and the emergence of the Atlantic economy. It concludes by exploring classic debates about the "birth" of consumer society in the eighteenth century. How did the meaning of things and people's relationships to them change over these centuries? What can we learn about the past by studying things?.
Same as: HISTORY 202B, HISTORY 302B

ARTHIST 305B. Medieval Journeys: Introduction through the Art and Architecture. 5 Units.
The course explores the experience and imagination of medieval journeys through an interdisciplinary, cross-cultural, and skills-based approaches. As a foundations class, this survey of medieval culture engages in particular the art and architecture of the period. The Middle Ages is presented as a network of global economies, fueled by a desire for natural resources, access to luxury goods and holy sites. We will study a large geographical area encompassing the British Isles, Europe, the Mediterranean, Central Asia, India, and East Africa and trace the connectivity of these lands in economic, political, religious, and artistic terms from the fourth to the fourteenth century C.E. The students will have two lectures and one discussion session per week. Depending on the size of the class, it is possible that a graduate student TA will run the discussion session. Our goal is to give a skills-oriented approach to the Middle Ages and to engage students in creative projects that will satisfy either the Ways-Creative Expression requirement or Ways-Engaging Difference. NOTE: for AY 2018-19 HISTORY 115D Europe in the Middle Ages, 300-1500 counts for DLCL 123.
Same as: ARTHIST 105B, DLCL 123

ARTHIST 306. Byzantine Art and Architecture, 300-1453 C.E.. 5 Units.
This course explores the art and architecture of the Eastern Mediterranean: Constantinople, Jerusalem, Alexandria, Antioch, Damascus, Thessaloniki, and Palermo, 4th-15th centuries. Applying an innovative approach, we will probe questions of phenomenology and aesthetics, focusing our discussion on the performance and appearance of spaces and objects in the changing diurnal light, in the glitter of mosaics and in the mirror reflection and translucency of marble.
Same as: ARTHIST 106, CLASSICS 171

ARTHIST 308. Virginity and Power: Mary in the Middle Ages. 4 Units.
The most influential female figure in Christianity whose state cult was connected with the idea of empire. The production and control of images and relics of the Virgin and the development of urban processions and court ceremonies though which political power was legitimized in papal Rome, Byzantium, Carolingian and Ottonian Germany, Tuscany, Gothic France, and Russia.
Same as: ARTHIST 108

ARTHIST 310. French Painting from Watteau to Monet. 3-5 Units.
This course offers a survey of painting in France from 1700 to around 1900. It introduces major artists, artworks, and the concepts used by contemporary observers and later art historians to make sense of this extraordinarily rich period. Overarching themes discussed in the class will include the dueling legacies of coloristic virtuosity and classical formalism, new ways of representing visual perception, the opposing artistic effects of absorption and theatricality, the rise and fall of official arts institutions, and the participation of artists and artworks in political upheaval and social change. The course ends with an interrogation of the concept of modernity and its emergence out of dialogue and conflict with artists of the past. Students will learn and practice formal analysis of paintings, as well as interpretations stressing historical context.
Same as: ARTHIST 110, FRENCH 110, FRENCH 310

ARTHIST 311. Introduction to Italian Renaissance, 1420-1580. 4 Units.
New techniques of pictorial illusionism and the influence of the humanist revival of antiquity in the reformulation of the pictorial arts in 15th-century Italy. How different Italian regions developed characteristic artistic cultures through mutual interaction and competition.
Same as: ARTHIST 111

ARTHIST 314. Mystical Naturalism: Van Eyck, Dürer, and the Northern Renaissance. 4 Units.
A survey of the major innovations in Northern European painting ca. 1400-1600, in light of the social status of the artist between city and court. In the early fifteenth century painters began to render an idealized world down to its smallest details in ways that engaged new devotional practices. Later Hieronymus Bosch would identify the painter¿s imagination with the bizarre and grotesque. In response to Renaissance humanism, some painters introduced classical mythology and allegorical subjects in their works, and many traveled south to absorb Italianate pictorial styles. We will be visiting art museums in San Francisco and Stanford. May be repeat for credit.
Same as: ARTHIST 114

ARTHIST 314A. The Dome: From the Pantheon to the Millennium. 4-5 Units.
This course traces the history of the dome over two millennia, from temples to the gods to Temples of the State, and from cosmic archetype to architectural fetish. The narrative interweaves the themes of the dome as image of the Cosmos, religious icon, national landmark, and political monument. It examines the dome not only as a venue for structural innovation, but also metaphysical geometry and transcendent illusionism.nIndividual case studies will familiarize you with major architects from Hadrian to Richard Rogers and historical milestones from the Dome of the Rock to the Capitol in Washington DC. May be repeat for credit.
Same as: ARTHIST 114A, CLASSICS 121, CLASSICS 221

ARTHIST 315. The Italian Renaissance, or the Art of Success. 3-5 Units.
How come that, even if you have never set foot in Italy, you have heard of Leonardo, Michelangelo, and Raphael? What made them so incredibly famous, back then as well as today? This course examines the shooting of those, and other, artists to fame. It provides in-depth analyses of their innovative drawing practices and the making of masterpieces, taking you through a virtual journey across some of the greatest European and American collections. At the same time, this course also offers a study of the mechanics of success, how opportunities are created and reputations managed, and what role art plays in the construction of class and in today's national politics.".
Same as: ARTHIST 115

ARTHIST 317. Picturing the Papacy, 1300-1850. 4 Units.
Popes deployed art and architecture to glorify their dual spiritual and temporal authority, being both Christ's vicars on earth and rulers of state. After the return of the papacy from Avignon, Rome underwent numerous campaigns of renovation that staged a continuity between the pontiffs and the ancient Roman emperors. Patronage of art and architecture became important tools in the fight against Protestantism. Artists include Botticelli, Michelangelo, Caravaggio, and Bernini.
Same as: ARTHIST 117

ARTHIST 318. Titian, Veronese, Tintoretto. 4 Units.
The course addresses the ways in which Venetian painters of the sixteenth century redefined paradigms of color, design, and invention. Themes to be examined include civic piety, new kinds of mythological painting, the intersection between naturalism and eroticism, and the relationship between art and rituals of church and statecraft.
Same as: ARTHIST 118

ARTHIST 319. Love at First Sight: Visual Desire, Attraction, and the Pleasures of Art. 3-5 Units.
Why do dating sites rely on photographs? Why do we believe that love is above all a visual force? How is pleasure, even erotic pleasure, achieved through looking? While the psychology of impressions offers some answers, this course uncovers the ways poets, songwriters, and especially artists have explored myths and promoted ideas about the coupling of love and seeing. Week by week, we will be reflecting on love as political critique, social disruption, and magical force. And we will do so by examining some of the most iconic works of art, from Dante's writings on lovesickness to Caravaggio's Narcissus, studying the ways that objects have shifted from keepsakes to targets of our cares. While exploring the visual roots and evolutions of what has become one of life's fundamental drives, this course offers a passionate survey of European art from Giotto's kiss to Fragonard's swing that elicits stimulating questions about the sensorial nature of desire and the human struggle to control emotions.
Same as: ARTHIST 119, FRENCH 149, FRENCH 349, ITALIAN 149, ITALIAN 349

ARTHIST 320. Superhero Theory. 3-5 Units.
With their fantastic powers, mutable bodies, multiple identities, complicated histories, and visual dynamism, the American superhero has been a rich vehicle for fantasies (and anxieties) for 80+ years across multiple media: comics, film, animation, TV, games, toys, apparel. This course centers upon the body of the superhero as it incarnates allegories of race, queerness, hybridity, sexuality, gendered stereotypes/fluidity, politics, vigilantism, masculinity, and monstrosity. They also embody a technological history that encompasses industrial, atomic, electronic, bio-genetic, and digital.
Same as: AMSTUD 120B, ARTHIST 120, FILMSTUD 120, FILMSTUD 320

ARTHIST 324. The Age of Naturalism, Painting in Europe1830-1874. 4 Units.
Survey of European painting from the heyday of Romanticism to the first Impressionist exhibition. Lectures and readings focus on the tensions between traditional forms and ambitions of history painting and the challenge of "modern" subjects drawn from contemporary life. Attention to the impact of painting in the open-air, and the effect of new imaging technologies- notably lithography and photography - to provide "popular" alternatives to the hand-wrought character and elitist appeal of "high art" cultural forms.
Same as: ARTHIST 124

ARTHIST 332. American Art and Culture, 1528-1910. 4 Units.
The visual arts and literature of the U.S. from the beginnings of European exploration to the Civil War. Focus is on questions of power and its relation to culture from early Spanish exploration to the rise of the middle classes. Cabeza de Vaca, Benjamin Franklin, John Singleton Copley, Phillis Wheatley, Charles Willson Peale, Emerson, Hudson River School, American Genre painters, Melville, Hawthorne and others.
Same as: AMSTUD 132, ARTHIST 132

ARTHIST 342A. The Architecture of Thought: Artists and Thinkers Design for Themselves. 3-5 Units.
This course investigates houses, hideaways, and studios that artists and thinkers have designed for themselves with varying degrees of self-consciousness, from subconscious images of the self to knowing stages for the contemplative life. Case studies range from antiquity to the present, from the studio-house of Peter Paul Rubens to that of Kurt Schwitters; from the house-museum of Sir John Soane to the Vittoriale of Gabriele D'Annunzio; from the philosophical dwelling of the Emperor Hadrian to that of Ludwig Wittgenstein.
Same as: ARTHIST 142A

ARTHIST 343A. American Architecture. 4 Units.
A historically based understanding of what defines American architecture. What makes American architecture American, beginning with indigenous structures of pre-Columbian America. Materials, structure, and form in the changing American context. How these ideas are being transformed in today's globalized world.
Same as: AMSTUD 143A, ARTHIST 143A, CEE 32R

ARTHIST 344B. Modern Design from the Eiffel Tower to Yves Saint Laurent. 4 Units.
Iconic episodes in the history of modern European and American design, including production, consumption, circulation and display -- from iron architecture of the department store and the universal exhibition to the branding practices of Andy Warhol and Yves Saint Laurent.
Same as: ARTHIST 144B

ARTHIST 345. Culture Wars: Art and Social Conflict in the USA, 1890-1950. 4 Units.
This course examines social conflicts and political controversies in American culture through the lens of visual art and photography. We consider how visual images both reflect and participate in the social and political life of the nation and how the terms of citizenship have been represented¿and, at times, contested¿by artists throughout the first half of the 20th century. The class explores the relation between American art and the body politic by focusing on issues of poverty, war, censorship, consumerism, class identity, and racial division.
Same as: AMSTUD 145M, ARTHIST 145, FEMGEN 145

ARTHIST 347. Modernism and Modernity. 4 Units.
This course focuses on European and American art and visual culture between the mid-nineteenth and the mid-twentieth centuries. We will begin and end in Paris, exploring visual expressions of modernism as they were shaped by industrialization and urban renewal, the fantasies and realities of Orientalism and colonial exploitation, changing gender expectations, racial difference, and world war. Encompassing a wide range of media, the course explores modernism as a compelling dream of utopian possibilities challenged by the conditions of social life in the context of diversity and difference.
Same as: ARTHIST 147

ARTHIST 351. Migration and Diaspora in American Art, 1800-Present. 4 Units.
This lecture course explores American art through the lens of immigration, exile, and diaspora. We will examine a wide range of work by immigrant artists and craftsmen, paying special attention to issues of race and ethnicity, assimilation, displacement, and political turmoil. Artists considered include Emmanuel Leutze, Thomas Cole, Joseph Stella, Chiura Obata, Willem de Kooning, Mona Hatoum, and Julie Mehretu, among many others. How do works of art reflect and help shape cultural and individual imaginaries of home and belonging?.
Same as: AMSTUD 151, ARTHIST 151, ASNAMST 151D, CSRE 151D

ARTHIST 353. Warhol's World. 5 Units.
Andy Warhol's art has never before been more widely exhibited, published, or licensed for commercial use, product design, and publication than it is today. For all Warhol's promiscuous visibility and global cachet at the current moment, there is much we have yet to learn about his work and the conditions of its making. This course considers the wide world of Warhol's art and life, including his commercial work of the 1950s, Pop art and films of the 1960s, and celebrity portraiture of the 1970s and 80s. Of particular interest throughout will be Warhol's photography as it reflects his interest in wealth and celebrity on the one hand and on the everyday life of everyday people on the other. The course will include multiple visits to Contact Warhol: Photography without End, an exhibition co-curated by Prof. Meyer on view throughout the quarter at the Cantor Arts Center.
Same as: AMSTUD 153, ARTHIST 153, FEMGEN 153, TAPS 153W, TAPS 353W

ARTHIST 354. The American Civil War: A Visual History. 4 Units.
A painting of men charging across a field, a photograph of dead bodies in a ditch, a fragment of metal, a sliver of bone, and a brass button: how do we make sense of the visual record of the American Civil War (1861-65)? From the Capitol Dome to a skeleton dug up in a highway project a hundred years after the last battle, the course will consider the strange and scattered remnants of a famous era. Drawing on the poetry of Walt Whitman, Emily Dickinson, and Herman Melville, the paintings of Winslow Homer, the photographs of Alexander Gardner, and the oratory of Abraham Lincoln, the course will examine what cannot be portrayed: the trauma of war.
Same as: AMSTUD 154X, ARTHIST 154

ARTHIST 356. American and European Art, 1945-1968. 4 Units.
Examines the pivotal figures, movements, themes and practices of art in the United States and Europe, from the conclusion of World War 2 to the end of the 1960s. Emphasis is on the changed nature of the avant-garde after the catastrophic events of midcentury. Topics include: modern art, ideology and the Cold War; the rise of consumer society and the "Society of the Spectacle"; concepts of medium specificity; the impact of new media and technologies on postwar art making; the role of the artist as worker and activist. Movements include: Abstract Expressionism, Art Informel, Pop, minimalism, process, performance conceptual art. An introductory art history course is recommended.
Same as: ARTHIST 156

ARTHIST 356A. Warhol: Painting, Photography, Performance. 4 Units.
This course focuses on the career of Andy Warhol as a means to consider the broader history of American art and culture since 1950. It examines little-studied aspects of Warhol¿s visual production (e.g. his career as a commercial artist in the 1950s and his everyday photographs of the 1970s and 1980s) alongside his now-canonical Pop paintings of the 1960s. Warhol?s critical and scholarly reception will be scrutinized in detail, as will published interviews of and writings by the artist. Finally, we will consider Warhol¿s legacy and wide-ranging influence on American culture in the decades since his death in 1987.
Same as: ARTHIST 156A, TAPS 156A, TAPS 356A

ARTHIST 357A. Histories of Photography. 4 Units.
This course investigates multiple histories of photography. It begins in early nineteenth-century Europe with the origins of the medium and ends in the United States on September 11, 2001, a day that demonstrated the limits of photographic seeing. Rather than stabilizing any single trajectory of technological iterations, the course is more interested in considering the ¿work¿ performed by photography. Through historical case studies, it considers how `to photograph¿ is to order and to construct the world; to incite action and to persuade; to describe and to document; to record and to censor; to wound; to heal.
Same as: ARTHIST 157A

ARTHIST 359. American Photographs, 1839-1971: A Cultural History. 4 Units.
This course concentrates on many important American photographers, from the era of daguerreotypes to near the end of the pre-digital era. We study photographs of the Civil War, western exploration, artistic subjects, urban and rural poverty, skyscrapers, crime, fashion, national parks, and social protest, among other topics. Among the photographers we study: Carleton Watkins, Eadweard Muybridge, Walker Evans, Dorothea Lange, Garry Winogrand, and Diane Arbus. Emphasis on developing students' abilities to discuss and write about photography; to see it.
Same as: AMSTUD 159X, ARTHIST 159

ARTHIST 359B. American Photography Since 1960. 5 Units.
Since the publication of Robert Frank's THE AMERICANS (1958), many distinguished American photographers have emerged, creating a density and power of expression that arguably rivals and even surpasses the extraordinary achievements of earlier photographers in this country. Garry Winogrand's street photography, Diane Arbus's portraits, Ralph Eugene Meatyard's grotesque masks, Danny Lyon's impassioned social outsiders, William Eggleston's deadpan sidewalks and suburban tables, and on to photographers of our moment--these are just a few of the topics the course will cover. Careful attention to individual pictures; careful consideration of what it is to be an artist, and a critic.
Same as: AMSTUD 159B, ARTHIST 159B

ARTHIST 362. Visual Arts Cuba (1959 - 2015). 3-5 Units.
The evolution of culture in post-1959 Cuba, with a strong focus on visual arts in all media and film will be introduced in this course. Historical examples will be discussed through lectures, readings and the presentation of audiovisual material. Students will develop their research, critical thinking, and writing through assignments, discussions, and the completion of a final paper. This is a discussion-heavy course, so come prepared to read, write and talk.
Same as: ARTHIST 162

ARTHIST 364A. Technology and the Visual Imagination. 4 Units.
An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.
Same as: ARTHIST 164A, FILMSTUD 164A, FILMSTUD 364A

ARTHIST 365A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.
The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.
Same as: ARTHIST 165A, FILMSTUD 165A, FILMSTUD 365A

ARTHIST 367. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.
Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each week¿s theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.
Same as: ARTHIST 167, FILMSTUD 167B, FILMSTUD 367B

ARTHIST 373. Issues in Contemporary Art. 4 Units.
Major figures, themes, and movements of contemporary art from the 80s to the present. Readings on the neo-avant garde; postmodernism; art and identity politics; new media and technology; globalization and participatory aesthetics. Prerequisite: ARTHIST 155, or equivalent with consent of instructor.
Same as: ARTHIST 173

ARTHIST 378. Ethnicity and Dissent in United States Art and Literature. 4 Units.
The role of the visual arts of the U.S. in the construction and contesting of racial, class, and gender hierarchies. Focus is on artists and writers from the 18th century to 1990s. How power, domination, and resistance work historically. Topics include: minstrelsy and the invention of race; mass culture and postmodernity; hegemony and language; memory and desire; and the borderlands.
Same as: AMSTUD 178, ARTHIST 178

ARTHIST 382B. Cultures in Competition: Arts of Song-Era China. 4 Units.
The Song dynasty (mid-10th to late 13th c.) was a period of extraordinary diversity and technical accomplishment in Chinese painting, ceramics, calligraphy, architecture and sculpture. Artistic developments emerged within a context of economic dynamism, urban growth, and competition in dynastic, political, cultural and social arenas ¿ as between Chinese and formerly nomadic neighboring regimes, or between reformers and conservatives. This course will consider major themes and topics in Song art history, including innovations in architectural and ceramic technologies; developments in landscape painting and theory; the rise of educated artists; official arts and ideologies of Song, Liao and Jin court regimes; new roles for women as patrons and cultural participants; and Chan and popular Buddhist imagery.
Same as: ARTHIST 182B

ARTHIST 383. Theatre of the World: Contemporary Chinese Art. 4 Units.
This course examines the intense and profound changes in Chinese Art from the end of Cultural Revolution to the first decades of the twenty-first century. Multiple course meetings will take place in the San Francisco Museum of Modern Art, where the exhibition Art and China after 1989: Theater of the World will be on view. We will explore how artists express their ways of grappling with the social, political, economic, and personal issues through art. Major topics include cultural multiplicity, global challenge, consumerism, site specificity, and deconstructing and reconstructing of identities, among others. Our discussions will constantly incorporate factors of China's domestic context, global network, and artists' individual connections in order for students to understand the rich and complex dynamics of Chinese contemporary art.
Same as: ARTHIST 183

ARTHIST 384. Aristocrats, Warriors, Sex Workers, and Barbarians: Lived Life in Early Modern Japanese Painting. 4 Units.
Changes marking the transition from medieval to early modern Japanese society that generated a revolution in visual culture, as exemplified in subjects deemed fit for representation; how commoners joined elites in pictorializing their world, catalyzed by interactions with the Dutch.
Same as: ARTHIST 184, JAPAN 184, JAPAN 284

ARTHIST 385. Arts of China in the Early Modern World, 1550-1800. 4 Units.
The dynamic period of late Ming and early Qing dynasty China, roughly 1500-1800 CE, was marked by political crisis and conquest, but also by China's participation in global systems of trade and knowledge exchanges involving porcelain, illustrated books, garden designs and systems of perspectival representation. Topics will include Innovations in urban centers of painting and print culture, politically inflected painting, and cultural syncretism in court painting and garden design.
Same as: ARTHIST 185

ARTHIST 387. Arts of War and Peace: Late Medieval and Early Modern Japan, 1500-1868. 4 Units.
Narratives of conflict, pacification, orthodoxy, nostalgia, and novelty through visual culture during the change of episteme from late medieval to early modern, 16th through early 19th centuries. The rhetorical messages of castles, teahouses, gardens, ceramics, paintings, and prints; the influence of Dutch and Chinese visuality; transformation in the roles of art and artist; tensions between the old and the new leading to the modernization of Japan.
Same as: ARTHIST 187, JAPAN 185, JAPAN 285

ARTHIST 388A. The History of Modern and Contemporary Japanese and Chinese Architecture and Urbanism. 4 Units.
The recent rapid urbanization and architectural transformation of Asia; focus is on the architecture of Japan and China since the mid-19th century. History of forms, theories, and styles that serve as the foundation for today's buildings and cityscapes. How Eastern and Western ideas of modernism have merged or diverged and how these forces continue to shape the future of Japanese and Chinese architecture and urban form.
Same as: ARTHIST 188A

ARTHIST 388B. From Shanghai Modern to Global Contemporary: Frontiers of Modern Chinese Art. 4 Units.
Chinese artistic developments in an era of revolution and modernization, from Shanghai Modern and New National Painting though the politicized art of the Cultural Revolution and post-Mao era re-entry into international arenas.
Same as: ARTHIST 188B

ARTHIST 389C. Global Currents: Early Modern Art Enterprises, Economies, and Imaginaries. 4 Units.
Episodes of global artistic exchange from the 16th to 19th centuries involving commodities (porcelains and textiles), technologies (printmaking, perspective, and cartography), and imaginaries (Chinoiserie, East Asian Occidenteries, Orientalism, Japonisme). The role of enterprises, institutions, and power relations in artistic economies, from the Portuguese Empire, Jesuit mission networks and East India Companies to imperialist systems.
Same as: ARTHIST 189C

ARTHIST 401. World War Two: Place, Loss, History. 5 Units.
A consideration of how the Second World War still goes on today in the form of haunted absences and vivid representations. Studying literature and art in detail, the seminar will center on some of the places where those absences and representations gather: Portbou, Pearl Harbor, Auschwitz, Guadalcanal, London, Berlin, Hamburg, Rome, Omaha Beach, Peleliu, Monte Cassino, Hollywood. Writers and artists include: James Jones, Georges Didi-Huberman, Walter Benjamin, Eduardo Cadava, W.G. Sebald, Rachel Whiteread, Ingeborg Bachman, Wis¿awa Szymborska, Eugene Sledge, Hans Erich Nossack, Jorie Graham, Gerhard Richter, Dani Karavan, Tom Lea, W. Eugene Smith, Val Lewton, and Terrence Malick.
Same as: GERMAN 343

ARTHIST 402. Inherent Vice. 5 Units.
Taught jointly by an art historian and a senior conservator, this research seminar focuses on selected objects (mostly) of modern and contemporary art many in Stanford collections -- that pose significant condition and/or conservation challenges for long term maintenance and display. Together we will examine the objects in the conservation lab and/or the gallery; students will then confer with appropriate museum staff, consult relevant curatorial and conservation files, research and debate potential treatments, and write up reports of their findings. Issues of aesthetics, ethics and other problems bearing on the material longevity of art will be explored together in class discussions as a foundation for thinking about the preservation and exhibition of works of art.
Same as: ARTHIST 202

ARTHIST 405. Art, Ekphrasis, and Music in Byzantium and Islam. 5 Units.
Focus is on the interrelation of art, architecture, verbal description, poetry, and music, including the singing of psalms and recitation of the Qur'an. How ekphrasis, the style of writing vividly intended to transform the listeners into spectators, structures the perception of and response to artistic production be it an art object, building, or a musical performance. The role of ekphrasis in animating the inanimate and the importance of breath and spirit, which become manifest in visual, acoustic, olfactory, and gustatory terms. Religious and courtly settings: Hagia Sophia, the Great Palace of Constantinople, the Dome of the Rock, the palaces of Baghdad and Samarra, the mosque at Cordoba, Medinat al-Zahra and the Alhambra. Greek and Arabic writers on ekphrasis in translation, juxtaposing the medieval material to the ancient theories of ekphrasis and modern scholarship.
Same as: CLASSICS 376

ARTHIST 405A. Graduate Pedagogy. 2 Units.
This course is designed for graduate students in Art History and Film Studies preparing to work as teaching assistants in the Department of Art and Art History. The seminar will focus on a range of theoretical and practical concerns pertaining to the successful conceptualization, organization, and execution of class lectures and discussion sections. Students will be exposed to a variety of perspectives and strategies related to quality teaching at the college level.

ARTHIST 406. The Alchemy of Art: Substance and Transformation in Artistic Practice. 3 Units.
This seminar considers materiality and processes of material transformation as core elements of artistic practice and the history of making, largely from Sumer (3rd Millennium BCE) until the Early Modern period (18th Century in the West), but with several modern comparisons. Major points of focus will include pre-modern perceptions of the elemental properties of materials as matter, the reflexive relationship between materials and imagination, and the diverse ways in which societies have associated specific substances with social and cultural values. Humanistic perspectives on such issues are augmented by complementary insights from the physical sciences, and references are made to current ideas regarding material agency, affordances, and the imperfect separability of nature and culture. Indeed, a central question underlying all the readings is how to distinguish natural from synthetic: where does nature end and art begin, or maybe where does nature stop?.
Same as: ARTHIST 206

ARTHIST 407. The Resurrected Body: Animacy in Medieval Art. 5 Units.
This course explores the relationship of spirit and matter in medieval art and architecture, more specifically how the changing appearance of objects and spaces evokes the presence of the metaphysical as glitter, reverberation, and shadow. We will engage objects and monuments across the Mediterranean, studying the way they were staged in order to produce the perception of liveliness. The phenomenology of liveliness will be tied to the development of the theology of resurrection of the body.
Same as: ARTHIST 207

ARTHIST 407C. Phenomenology and Aesthetics in Medieval Art. 5 Units.
This course explores the phenomenal aspects of the medieval image and space such as glitter, shadow, smoke, reverberation and how these presence effects were conceptualized in medieval culture as animation. Focus is on a select group of monuments as well as engagement with medieval objects at the Cantor Art Museum and the facsimiles of medieval manuscripts kept at the Art Library and Special Collections. Among the monuments we will study are the Alhambra in Spain, the Apocalypse MSS, the Cantigas of Alfonso X, the Byzantine Joshua Roll, the Homiles of the Monk Kokkinobaphos, the Ashburnhamensis Pentateuch, and the Rossano Gospels.
Same as: ARTHIST 207C

ARTHIST 407D. Race and Ethnicity in Premodern Europe. 3-5 Units.
How do historians, art historians, and literary historians of premodern Europe shape their research and their teaching around questions of race? How do current debates on race theory shape our perception of the past and deepen historical inquiry? This graduate colloquium focuses on the most recent publications on race in medieval and early modern studies to reflect on such questions while examining the challenges that race studies put on historical definitions, research methodologies, as well as teaching institutions.
Same as: ARTHIST 207D, HISTORY 215B, HISTORY 315B

ARTHIST 408. Hagia Sophia. 5 Units.
This seminar uncovers the aesthetic principles and spiritual operations at work in Hagia Sophia, the church dedicated to Holy Wisdom in Constantinople. Rather than a static and inert structure, the Great Church emerges as a material body that comes to life when the morning or evening light resurrects the glitter of its gold mosaics and when the singing of human voices activates the reverberant and enveloping sound of its vast interior. Drawing on art and architectural history, liturgy, musicology, and acoustics, this course explores the Byzantine paradigm of animation arguing that it is manifested in the visual and sonic mirroring, in the chiastic structure of the psalmody, and in the prosody of the sung poetry. Together these elements orchestrate a multi-sensory experience that has the potential to destabilize the divide between real and oneiric, placing the faithful in a space in between terrestrial and celestial. A short film on aesthetics and samples of Byzantine chant digitally imprinted with the acoustics of Hagia Sophia are developed as integral segments of this research; they offer a chance for the student to transcend the limits of textual analysis and experience the temporal dimension of this process of animation of the inert.
Same as: ARTHIST 208, CLASSICS 173, CLASSICS 273

ARTHIST 408B. The Art of Medieval Spain: Muslims, Christians, Jews. 5 Units.
The seminar reveals the religious and ethnic hybridity of the art medieval Spain, where the lives, material cultures, and artistic practices of Muslims, Christians, and Jews were more intertwined than any other region of the medieval world. We work thematically rather than strictly chronologically in order to build a model of engagement with medieval art in which the movement of ideas and objects between the three major religions is in itself a focus of study.
Same as: ARTHIST 208B

ARTHIST 408C. Architecture, Acoustics and Ritual in Byzantium. 1-3 Unit.
Onassis Seminar "Icons of Sound: Architecture, Acoustics and Ritual in Byzantium". This year-long seminar explores the creation and operations of sacred space in Byzantium by focusing on the intersection of architecture, acoustics, music, and ritual. Through the support of the Onassis Foundation (USA), nine leading scholars in the field share their research and conduct the discussion of their pre-circulated papers. The goal is to develop a new interpretive framework for the study of religious experience and assemble the research tools needed for work in this interdisciplinary field.nnNOTE: This course is only offered on the graduate level and undergraduates would be admitted by request (sending a letter expressing interest to the instructor and specifying what other courses in music or art history has prepared them to tackle this subject) and special permission only.
Same as: MUSIC 408C, REES 408C, RELIGST 308C

ARTHIST 409. Theories of the Image: Byzantium, Islam and the Latin West. 5 Units.
This seminar explores the role of images in the three major powers of the medieval Mediterranean: the Umayyads, the Carolingians, and the Byzantines. For each the definition of an image- sura, imago, or eikon respectively-became an important means of establishing religious identity and a fault-line between distinct cultural traditions. This course troubles the identification of image with figural representation and presents instead a performative paradigm where chant or recitation are treated as images. As such, students will be able to see the connections between medieval image theory and contemporary art practices such as installation.
Same as: ARTHIST 209C, CLASSICS 158, CLASSICS 258, REES 409

ARTHIST 409A. Image, Icon, Idol: Theories and Practices in Byzantium, Islam, and the Latin West. 5 Units.
This course explores the phenomenon of iconoclasm, iconophobia, and aniconism as markers of a vast and profound cultural transformation of the Mediterranean in the period from the seventh to the ninth centuries. As the Arabs established the Umayyad caliphate in the seventh century, quickly conquering Holy Land, Egypt, and advancing all the way to Spain, they perpetrated an identity crisis in the region. By the seventh century three large political entities formed in the Mediterranean ¿ the Umayyads, the Carolingians, and the Byzantines ¿ each competed for legitimacy; all three emerged from the ashes of Late Antique culture, yet each tried to carve out an identity out of this common foundation. In this parting of the ways, the three cultures took among others the issue of what constituted an image and what role it played in devotion. Eik¿n, imago, ¿ura became the basis on which to built differences and accuse the other political players of idolatry.

ARTHIST 410. The Masters: Raphael. 3-5 Units.
Five hundred years after Raphael mysteriously died (April 6, 1520), this seminar reflects on his contributions to the arts. Raphael's art is often defined as a negation of death. He painted eternal myths, unearthly saints, and timeless beauties. His sketches served as exemplars and the very paragon of drawing for hundreds of years. So much so that art historians have done little more than admire his art. How come Raphael has resisted criticism for half a millennium? What does his unremitting fame tell us about the state of art history? While studying eight of Raphael's masterpieces in depth, this course also reflects on the shortcomings and potentials of art history as a critical discipline. [Undergraduate enrollment with consent of one of the instructors].

ARTHIST 410B. Giotto. 5 Units.
Often hailed as ¿the father of western painting,¿ Giotto was seen as a revolutionary figure even in his own day. We will begin with Giotto¿s critical reception, his artistic predecessors and contemporaries, and his work for patrons ranging from the Franciscan order to the king of Naples. We will most closely examine Giotto¿s masterpiece, the frescoes of the Arena Chapel in Padua, and consider topics including Giotto¿s figural realism, the layered readings of the program, its use of visual rhetoric, and issues of gender, sexuality, and ethnicity.
Same as: ARTHIST 210

ARTHIST 411. Childish Enthusiasms, Perishable Manias. 5 Units.
Universities are sites of gravitas, but what of levitas -- a lighter, more playful category? Does intellectually credible work depend upon a â¿¿critical distanceâ¿ between scholar and object of study? Can we take something seriously without imposing a seriousness that it may not possess (or want)? How to retain (or recover) the intensely pleasurable relation to objects that we were allowed when younger? The seminar is predicated upon the proposition that effective scholarship need not suck the joy from the world.
Same as: FILMSTUD 411

ARTHIST 413. Michelangelo. 5 Units.
Michelangelo's long career in light of recent scholarship. Topics include the status of the cult image, the paragon between poetry and the pictorial arts, painting and questions of literary genre, and Counter Reformation reactions to his art.

ARTHIST 415. Baroque: 1900-2000. 5 Units.
The seminar, which is largely methodological and historiographic, problematizes issues of periodization. The course examines different approaches to the question of "what is baroque," from Alois Riegl and Erwin Panofsky to Michel Foucault, Svetlana Alpers and Giovanni Careri.

ARTHIST 416. Bernini and Baroque Rome. 5 Units.
This seminar examines the career of Gianlorenzo Bernini (1598-1680), sculptor, architect, painter, stage designer and playwright, the premier artist of the popes. It will examine his cultural, political and religious milieu and lay particular emphasis on the theoretical relations between the arts that his oeuvre is seen to embody. In the process it will also review the genre of artistic biography, the historiography of the baroque and the myths of dynamism, theatricality, eroticism (and others) always associated with the period, and Bernini's work in particular. Limited to PhD students in Art History and Film Studies, and advanced undergraduates with permission of instructor.

ARTHIST 416A. Michelangelo Architect. 5 Units.
The architecture of Michelangelo Buonarroti (1475-1564), "Father and Master of all the Arts," redefined the possibilities of architectural expression for generations. This course considers his civic, ecclesiastic, and palatial works. It proceeds from his beginnings in Medicean Florence to his fulfillment in Papal Rome. It examines the anxiety of influence following his death and his enduring legacy in modernism. Topics include: Michelangelo's debt to Classical and Early Renaissance prototypes; his transformation of the canon; the iterative sketch as disegno; architecture and the body; the queering of architectural language; sketch, scale, and materiality; Modernism and Michelangelo. The historiography of Michelangelo has predominantly favored studies in painting and sculpture. Our focus on architecture encourages students to test new ideas and alternative approaches to his work.
Same as: CEE 33A, ITALIAN 216

ARTHIST 417. Architecture, Mysticism, and Myth. 5 Units.
This course examines global origin myths for architecture, for example cosmic symbolism (e.g. the Mandala/dome), and the magic of technologies (e.g. the "petrification" of the wooden hut in permanent architecture). Examples range from Ethiopian rockcut churches, to the Parthenon, to the Ise Grand Shrine, to Fire Temples, and Navajo lodges. The course concludes with the modern mythology of industrialisation and the mechanised building.
Same as: ARTHIST 217

ARTHIST 417B. Architectural Design Theory. 5 Units.
This seminar focuses on the key themes, histories, and methods of architectural theory -- a form of architectural practice that establishes the aims and philosophies of architecture. Architectural theory is primarily written, but it also incorporates drawing, photography, film, and other media. nnOne of the distinctive features of modern and contemporary architecture is its pronounced use of theory to articulate its aims. One might argue that modern architecture is modern because of its incorporation of theory. This course focuses on those early-modern, modern, and late-modern writings that have been and remain entangled with contemporary architectural thought and design practice. nnRather than examine the development of modern architectural theory chronologically, it is explored architectural through thematic topics. These themes enable the student to understand how certain architectural theoretical concepts endure, are transformed, and can be furthered through his/her own explorations.nCEE 32B is a crosslisting of ARTHIST 217B/417B.
Same as: ARTHIST 217B

ARTHIST 418A. Michelangelo: Gateway to Early Modern Italy. 3-5 Units.
Revered as one of the greatest artists in history, Michelangelo Buonarroti's extraordinarily long and prodigious existence (1475-1564) spanned the Renaissance and the Reformation in Italy. The celebrity artist left behind not only sculptures, paintings, drawings, and architectural designs, but also an abundantly rich and heterogeneous collection of artifacts, including direct and indirect correspondence (approximately 1400 letters), an eclectic assortment of personal notes, documents and contracts, and 302 poems and 41 poetic fragments. This course will explore the life and production of Michelangelo in relation to those of his contemporaries. Using the biography of the artist as a thread, this interdisciplinary course will draw on a range of critical methodologies and approaches to investigate the civilization and culture of Italy in the fifteenth and sixteenth centuries. Course themes will follow key tensions that defined the period and that found expression in Michelangelo: physical-spiritual, classical-Christian, tradition-innovation, individual-collective.
Same as: ARTHIST 218A, ITALIAN 237, ITALIAN 337

ARTHIST 419. The Poetics of Softness. 5 Units.
This seminar probes the meaning of softness in the theory and practice of early modern Southern European art. As this seminar will investigate, softness is intrinsically tied to the creative process, to the challenges of visualization and art making. What does it mean for a sculptor to depict fingers digging into marble flesh? How did the painter rise to the challenge of depicting subtle forms - clouds, atmosphere, the beating pulse, hair and animal fur? Why were some of the first histories of art relayed as the progression from hard to soft forms? Through the investigation of the concepts and artworks of artists such as Leonardo, Giorgione, Raphael, Correggio, and Bernini, this seminar will explore softness as an aesthetic category. Materiality, enlivenment, perfection and imperfection in art theory, old-age style, and the ekphrastic tradition will be topics of particular interest. Participants are invited to pursue research papers in their fields of specialty.

ARTHIST 420. Art and Invisibility: The Dissemblance of Labour.. 3-5 Units.
Labor has been at the center of political and philosophical analyses from Jean-Jacques Rousseau to Simone Weil. While uncovering essential stages in the conceptualization of labor--is labor work? How does it differ from process?--this course reframes the question of the nature of labor and artmaking in relation to invisibility. How come entire stages of production have disappeared from history? How have patrons, builders, and artists managed to erase their presence from their artifacts? To what extent do art historical narratives still pursue ideologies of exclusion or, at least, of carelessness when they get to who did what? By pairing specific case studies from the eleventh to the twentieth centuries with select passages from A-list thinkers of labor (Agamben, Arendt, Aristotle), this course offers both a history of a troublesome concept and a series of opportunities to rethink the agendas of a discipline that has often turned a blind eye to specific aspects of making. Interdisciplinary in spirit--we focus on select groups of paintings, buildings, organizations, and co-operations--the course also serves as an occasion for introspective analyses, thus helping future researchers to re-think the ways they work and the political motives of their investigations.

ARTHIST 421. Art and Visual Culture in Europe: The 1920s and 30s. 5 Units.
This seminar focuses attention on European art institutions, exhibitions, journals, and movements, most of which intersected with one another across national borders during the interwar period, including Cubism, De Stijl, Purism, Art Deco, the Bauhaus, and Surrealism. Media include painting, architecture, photography, film, fashion and (graphic) design. We will examine period sources in Stanford library special collections and visit the permanent collection at SFMOMA.

ARTHIST 422. Reception and Literacy in Roman Art. 5 Units.
(Formerly CLASSART 322.) Beyond a focus on artists and patrons: how Roman art was seen and understood by its contemporary viewers. Themes include memory, performance, gender, replication, and constructions of space. Goal is to draft a differentiated model of viewing and literacy, with attention to collective experience, hierarchy, access, and subversion.
Same as: CLASSICS 373

ARTHIST 423. Living in the Material World: Imagination and Agency. 5 Units.
This seminar deals with the materials that artists have chosen in art and construction from antiquity to the early modern era. The particular focus is upon pre-modern perceptions of the inherent properties of materials, from amber and ivory to marble and granite, as well as the diverse ways in which societies have associated particular substances with social and cultural values. Particular emphasis is laid upon the architectural use of materials.
Same as: ARTHIST 223

ARTHIST 423B. Art That Moves: Affect, Kinesis, Mobility, 1300-1700. 5 Units.
The early modern artist who imbues his subjects with movement is praised by his critics above all others, for he can do what is impossible: give life to dead matter. Movement is sometimes suggested, a trick of the eye that leads the spectator to anticipate a moment just about to unfold. Other times, the artist is said to conjure a living figure, whose flesh trembles with breath and a beating pulse. This seminar explores these and other examples of movement, instances that negotiate the relationship between depicted and actual movement with the emotion it stirs (affect). We will also study movement¿s relation to narrative and descriptive language (history and ekphrasis), and art¿s ability to move through time (Warburg¿s Pathosformel) and space (artworks and artists that travel). A study of movement uncovers multiple contradictions and possibilities in the history of art.

ARTHIST 424. Architecture as Performance from Antiquity to the Enlightenment. 5 Units.
This seminar examines the nature of architectural representation in the western tradition, from antiquity until the 18th century. It considers the ancient theatre as an icon of representation and the afterlife of the stage building as a model for western architecture, including ephemera. It concludes a distinction between the theatrical and the more recent concept of the theatrical.
Same as: ARTHIST 224

ARTHIST 426. New Landscapes of China: Ecologies, Media, Imaginaries. 4-5 Units.
An exploration of new forms of landscape art in China's contemporary era, 1980s-present. Studies of new media platforms for landscape related imagery, imagined landscapes, and expanded concepts of landscape in an era of heightened ecological consciousness.
Same as: ARTHIST 226

ARTHIST 429. Vienna and Hamburg : Readings in the Science of Art History. 5 Units.
The place of art history in a university curriculum was established in Europe only during the course of the nineteenth century, and only after demonstrating that its methods are rigorous and that its goals have little to do with subjective connoisseurship or personal taste. The ambition was to develop a properly ¿scientific¿ [wissenschaftlich] practice able to claim legitimacy among the traditional disciplines of university study and research. Two German-speaking centers were critical to this development : the Institute for Austrian Historical Research in Vienna and the Warburg Library for the Science of Culture at the University of Hamburg. The best-known author of the first is Alois Riegl, while the second counts Aby Warburg, Erwin Panofsky, and Ernst Cassirer among its members. Recent books on both centers, and the availability of texts in English by others of each group now make it possible to revisit their debates about ¿scientific¿ art history that shaped the field as we know it today. This seminar will read closely a selection of these texts with the aim of understanding more fully our own intellectual history and its impact upon discussions concerning the place of our discipline within the humanities today.

ARTHIST 430. Cinema and Ideology. 5 Units.
The relationship between cinema and ideology from theoretical and historical perspectives, emphasizing Marxist and psychoanalytic approaches. The practice of political filmmaking, and the cinema as an audiovisual apparatus and socio-cultural institution. Topics include: dialectics; revolutionary aesthetics; language and power; commodity fetishism; and nationalism. Filmmakers include Dziga Vertov, Jean-Luc Godard, Bruce Conner, and Marco Ferreri. Theoretical writers include Karl Marx, Sergei Eisenstein, and Slavoj Zizek. Prerequisite: consent of instructor.
Same as: FILMSTUD 430

ARTHIST 430B. Image and Text in Chinese Painting. 3-5 Units.
An examination of many types of interactions between images and texts in Chinese painting. These include poetic lines inscribed on paintings (as response or as a theme given to the artist to paint), paintings that emulate or transform ancient poetic couplets, or illustrate poetic and literary narratives, and calligraphic inscriptions. Attention will be given both to comparative perspectives and to the special aesthetic and intellectual consequences that the conjunction of the literary and visual modes give to Chinese artistic expression. [Undergraduate enrollment with consent of one of the instructors].
Same as: ARTHIST 230B, CHINA 230, CHINA 430

ARTHIST 432. Rethinking American Art. 5 Units.
A re-examination of American art of the 18th and 19th centuries, focusing on works in the collection of the de Young Museum, San Francisco. The class will meet weekly at the de Young, where we will be joined by Professor Margaretta Lovell and students from the University of California, Berkeley. Each student will pursue an in-depth study of a single work in the Museum's superb American collections, using documents of social and cultural history. We will pay particular attention to recent scholarship, questions of genre (landscape, portrait, still life and images of everyday life), and the "biography of objects" (the way works of art shift in context and interpretation over time).nGraduate seminar open to advanced undergraduates with the instructor¿s approval.

ARTHIST 440. Millennium Approaches: The Art of the 1990s. 3-5 Units.
This seminar will examine the art historical legacy of the 1990s, the decade of Bill Clinton, Beavis and Butthead, and Y2K. By placing art in conversation with music, popular culture, and political events, we will explore the dark underbelly of the decade's facade of sunny optimism. Key topics will include the the end of the Cold War, multiculturalism, American interventionism, the AIDS crisis, and early internet culture. Artists covered will include Felix Gonzalez-Torres, Kim Gordon, Mike Kelly, the Young British Artists, Gregg Bordowitz, Lorna Simpson, Zoe Leonard, Byron Kim, and Glenn Ligon. What is the relationship between art, popular culture, and history? How did the 1990s help shape our current culture?.
Same as: ARTHIST 240

ARTHIST 440A. The Art Market. 5 Units.
This seminar is designed to examine aspects of the art market in the current moment and since the mid 19th century. Participants will have an opportunity to engage with problems and perspectives that, until recently, have generally been overlooked or marginalized in narratives of the history of art. Each week, students will write a response to the readings to be shared in advance of the class meeting, and each week, discussion will be initiated by a different student. In individual research projects culminating in a seminar paper, students will be encouraged to focus on how the art market may have impacted the production, reception, and/or circulation of a work or works by a particular artist. .

ARTHIST 441. Overlooked/Understudied. 5 Units.
This seminar focuses on overlooked artists and understudied artworks in the U.S. from the late 19th century to the present. Rather than reclaiming marginality for its own sake, we will consider how the practice of looking at the overlooked art changes familiar narratives of canonical art.

ARTHIST 442. Art History in the First Person. 5 Units.
Course Description: This seminar considers the use of the first person voice in a wide range of writings about art, from fiction to criticism to scholarship. Insofar as graduate students have typically been discouraged from using the first person voice in their scholarly work, we will question the benefits and drawbacks of doing so in particular cases. To what ends have different writers put the first person voice and how do they integrate it with others strategies of written expression? How might we distinguish among different forms of speaking from the position of ¿I¿ in art-historical writing? What kind of ¿I¿ is at stake¿personal, professional, intellectual, imaginary, or otherwise?nnRequirements: Students will be required to attend all seminar meetings and participate actively in discussion. They will submit two types of writing assignments: The first, which each student will prepare on a rotating basis, will be a 2-page response to a selected reading that will serve to launch discussion of that text in seminar. The second, longer paper (12-15 pages) will involve original research on a selected object or exhibition and the writing of a paper that adopts the first person voice to some degree or explains its necessary rejection.

ARTHIST 443. Networks: A Visual History. 3-5 Units.
Networks are maps for thinking. They illustrate connections while shaping mental journeys, transforming our self-reflexivity along the way. In this course, we will study the metamorphoses of networks, from medieval genealogies to Renaissance cartographic systems and from modern mnemotechnic diagrams to today's visualizations of brain connectivity to ask questions about the politics of connectivity, the deceptions of graphic simplicity, and the capacity of infographics to turn into art.

ARTHIST 445. What's not American about American Art?. 5 Units.
This seminar focuses on American art as a history of migration (of people but also of visual objects) across national and continental boundaries. We examine trans-Atlantic and trans-Pacific dialogues and consider how anxieties about foreigners, immigrants, and political dissidents shaped American art and culture at particular moments in the 20th century. In the second half of the course, we consider a series of museum exhibitions that repositioned American art as a history of social conflict and exclusion.

ARTHIST 448. The Body in Film and other Media. 5 Units.
In this seminar, we will consider the body on screen as well as the body before the screen i.e. the spectator but also the profilmic body of the actor to examine corporeal performance and reception. The dancing body, the comic body, dead and live bodies, the monstrous body, the body in pain, the virtual body all raise questions about embodiment, liveness, and performance. We will read the body in audiovisual culture through an engagement with affect theory, focusing on the labor of performance, the construction of stardom, spatial and temporal configurations of the performing body, and the production of affect and sensation in the spectating body. Through a discussion of make-up, fashion, the labor of producing the idealized star body from the meat-and-bones body of the actor, or body genres where the spectator's body is beside itself with sexual pleasure, fear and terror, or overpowering sadness, we will inquire into ideologies of discipline and desire that undergird mediatized bodies. nnNo prior engagement with film studies is required. Students are encouraged to write seminar papers that build on current research interests.nnNOTE: Instructor consent required for undergraduate students (only seniors may enroll). Please contact the instructor for permission to enroll if you're an undergraduate senior.
Same as: FILMSTUD 448

ARTHIST 450. Art in the Age of Precarity. 5 Units.
Art and precarity in the age of neoliberalism. How artists and critics engage questions of immaterial labor, human capital, structural racism, environmental crisis, the anthropocene and other current issues in their work. The question of art as activism and social practice relative to such themes. Enrollment contingent upon permission of instructor; permission numbers will be provided by staff upon professor's approval.

ARTHIST 452. Ghosts. 5 Units.
Is history a form of ghost story? Historians summon the past--making it live in the present. Even the most empirical history is a kind of necromancy: the historian conjures the past, making it appear before our eyes. Tables and figures and other statistical data, no less than other other objective information, flutter in front of the reader like other sorts of ectoplasm in the crystal ball. In this course we will consider ghost stories and ghost paintings for what they reveal about the historian's occult craft. We will devote special attention to Stanford's campus as a haunted place, and students will write their final papers on some ghostly aspect of the university.

ARTHIST 453. Reading Walter Benjamin. 5 Units.
Few cultural critics are so often cited by scholars in the humanities as Walter Benjamin. The impact of his writings has been decisive to some of the most influential art historians of recent memory, although usually based on a small number of texts (the Kunstwerk essay, the writings on photography, the flâneur, and cinema). Literary historians have turned to somewhat different studies with great profit, notably his writings on Baudelaire, translation, and German tragic drama. The publication of Benjamin¿s entire oeuvre in English has made his work more accessible to a broad range of scholars with diverse interests; one direction emerging from this familiarity is a deeper awareness of his commitment to materialist history. With the palpable collapse of ¿social art history¿ amongst younger art historians, dispersed ambitions of where ¿visual studies¿ might lead, and the return to aesthetic meditations derived from protracted analyses of single works, it may be the time to re-read Benjamin with an eye towards understanding his ambitions for a ¿materialist history.¿ That is the objective of this seminar : we will read deeply in Benjamin¿s writings, configure some ideas of what history meant to him, and attempt to export some of those practices to our current art-historical projects.

ARTHIST 454. The Image in Question : French theory after Foucault. 5 Units.
TBD.

ARTHIST 456. What Was Photography?. 4 Units.
Digital imaging has largely replaced darkroom work over the past quarter century, yet analog practices still dominate theories of photography. Working closely with the Capital Group Foundation Collection at the Cantor, this class will explore how those theories relate to vintage photographic prints and whether they are still relevant to the photography being produced today. Students will select one photographer within the Collection and create a set of writings that help contemporary viewers see these mid-century American artists through diverse contemporary perspectives.
Same as: ARTHIST 256

ARTHIST 457. Abstract Expressionism. 5 Units.
Coinciding with the opening of the Anderson Collection in the fall of 2014, this seminar considers the expanded field of Abstract Expressionism relative to both domestic and international cultural politics. Topics: Modernism and existentialism; transnational avant-gardes; interdisciplinary approaches to the visual image at mid-century; the ideologies of formalism and autonomous art; cold war aesthetics. Pollock. de Kooning, Guston, Newman, Rothko, Still, Gorky others. Close readings of Greenberg, Rosenberg and critics associated with Partisan Review and little magazines. Enrollment limited by application only; Phd students only with preference to Art History.

ARTHIST 458. Warhol and After. 5 Units.
This seminar focuses on the wide-ranging career of Andy Warhol as a means to consider the broader history of American art and culture since 1950. It examines little-studied aspects of Warhol¿s visual production (e.g. his career as a commercial artist in the 1950s, his everyday photographs of the 1970s and 1980s) as well as now-canonical Pop paintings of the early-to-mid 1960s. Warhol¿s critical and scholarly reception will be scrutinized in detail, as will published interviews of and writings by the artist. Finally, we will consider Warhol¿s legacy and influence on American art in the decades since his death in 1987.

ARTHIST 460. Meta-Pictures. 5 Units.
What happens to a painting or a photograph when it depicts another representation inside itself? Either as a window or as a literal other picture, or even in the portrayal of a shadow cast by a tree (itself a kind of representation), works of art change their nature, expanding their claims on our imagination, when they portray these "other worlds" that both consolidate and destroy the main picture they inhabit. Focusing on Victor Stoichita's The Self-Aware Image (1997), among other texts, we will discuss Renaissance and Baroque painting primarily but with ample room for students to write final papers on meta-pictures from many eras and places.

ARTHIST 461. The American Civil War: An Experiential History. 5 Units.
Can one write a history of lived experience, of ephemeral states that never were represented? Can one look at representations of paintings, photographs, and literature to see where these ephemeral states might be trapped, or might otherwise be pictured? Feeling that the real war did not get in the books (for the most part), the course examines those books and other representations and so many things that never attained so exalted a form to look at the war anew. Methodological readings as well as readings about the Civil War.

ARTHIST 462. The Sense of Place in American Art. 5 Units.
The course will focus on places in American art, literature, and material culture--how places are imagined; how they are conceived in opposition to the pure flow of forgettable experience; how what happens in a place somehow remains.

ARTHIST 463. Grad Seminar: American - Ekphrasis. 5 Units.
Description is a prime skill for an art historian. How to make a reader (or listener) see a work, whether it is illustrated or not, is arguably the most fundamental and important task and pleasure in this discipline. How to make a world--both for oneself and for one's audience--is the larger purpose of such imagistic writing. Considering historical and more recent examples of ekphrasis, the course will concentrate on works of art in the Cantor Arts Center, requiring each student to select a work that will become the basis for a quarter-long writing project.

ARTHIST 464. American Art and Anthropology. 5 Units.
This graduate seminar will address the intertwined histories of American art and anthropology from 1850-1950. During this period, the discipline of anthropology underwent a fundamental shift from a preoccupation with scientific racism to an emphasis on cultural pluralism. How did anthropology¿s transforming conception of ¿culture¿ inflect interethnic artistic exchange and the emergence of American modernism? Key subjects of inquiry will include racial objectification, the colonial gaze, ¿outsider¿ art, documentary and ethnographic film, and cultural appropriation.

ARTHIST 465. Media Technology Theory. 3-5 Units.
This course surveys major theoretical approaches to the study of media technologies, including Frankfurt School critical theory, media archaeology, actor network theory, science and technology studies, platform studies and theories of critical making. By the end of the course, students should have a rich familiarity with the literature in this area, as well as with exemplary empirical studies conducted within each tradition. Preference to Ph.D. students in Communication and Art and Art History. Consent of instructor required for non-PhD students.
Same as: COMM 384, FILMSTUD 465A

ARTHIST 465A. Word and Image. 3-5 Units.
What impact do images have on our reading of a text? How do words influence our understanding of images or our reading of pictures? What makes a visual interpretation of written words or a verbal rendering of an image successful? These questions will guide our investigation of the manifold connections between words and images in this course on intermediality and the relations and interrelations between writing and art from classical antiquity to the present. Readings and discussions will include such topics as the life and afterlife in word and image of Ovid's "Metamorphoses," Dante's "Divine Comedy," Ludovico Ariosto's "Orlando Furioso," and John Milton's "Paradise Lost;" the writings and creative production of poet-artists Michelangelo Buonarroti, William Blake, and Dante Gabriel Rossetti; innovations in and correspondences between literature and art in the modern period, from symbolism in the nineteenth century through the flourishing of European avant-garde movements in the twentieth century.
Same as: ARTHIST 265A, COMPLIT 225, ITALIAN 265, ITALIAN 365

ARTHIST 466. Queer America. 5 Units.
This class explores queer art, photography and politics in the United States since 1930. Our approach will be grounded in close attention to the history and visual representation of sexual minorities in particular historical moments and social contexts. We will consider the cultural and political effects of World War II, the Cold War, the civil rights movement, psychedelics, hippie culture and sexual liberation, lesbian separatism, the AIDS crisis, and marriage equality.
Same as: FEMGEN 466

ARTHIST 467. Cubism: Theory, Practice, & History. 5 Units.
This course explores historiography and method in the history of art through a consideration of the multiple constructions of French Cubism as a complex of styles, a set of theoretical problems, and a historical phenomenon. We will explore how issues raised by, and about, Cubism have been articulated in recent literature on the subject. Prerequisite: this course is open only to graduate students or by permission of the instructor.

ARTHIST 468. Encountering Contemporary Chinese Painting: Media and Themes. 5 Units.
Two spring quarter exhibitions -- oil paintings and drawings by Zeng Fanzhi at the Anderson Collection, and Ink Worlds with works by two dozen major ink painters, calligraphers and video essayists at the Cantor -- convey part of the diversity of contemporary Chinese art practice. This seminar will explore media and techniques, artistic careers and strategies, and questions of cultural identity, history, place, language and the visionary presented by these artists and exhibitions.
Same as: ARTHIST 268

ARTHIST 470. Globalization and Contemporary Art. 5 Units.
Enrollment restricted to graduate students. Globalization as the most important paradigm for the production, circulation, and reception of contemporary art since the 1990s. The expanding terrain of the art world; biennial culture; new economies of scale and the art market along with its critique in the discourses of empire and multitudes. Debates on the thematics of hybridity; post-Fordism; the flat world and capital flows; exteriority and site specificity; and new models of collectivism in recent art.

ARTHIST 471. Art & Fashion. 5 Units.
This course will engage the interface between art and fashion through the lens of a Cantor Arts Center 2018 exhibition: The Art of the Brand: Mondrian, Saint Laurent and Pop Art in America. Students will write essays on objects in the exhibition for publication in the accompanying catalogue and for wall texts. The course explores the concept of branding as a means to organize new thinking about the relationship between classic modernism, fashion, and the ways in which pop artists (Lichtenstein, Segal, Warhol, Wesselmann) dealt with abstraction and figuration, originality and reproduction, elite and mass culture, in the process reinventing Mondrian¿s style as a brand that brings Warhol¿s Campbell¿s treatment of soup cans to mind.

ARTHIST 472. Mellon Curating Course. 5 Units.
This course focuses on the production, criticism, and curating of art. It encompasses both the study of curatorial work and the organization of an exhibition at the Cantor. Through a series of required readings, intensive class discussions, class trips, guest lectures, and first-hand encounters with art objects and exhibitions, we will investigate the history and contemporary practice of curating. Our work together will culminate in an exhibition at the Cantor organized by class members in close consultation with Cantor staff. The show will open in late fall 2015-16 and will be on view for approximately 12-15 weeks. Students are expected to enroll in both the Spring 2014-15 and Fall 2015-16 quarters. For graduate students only and with the approval of the faculty. Course will be co-taught by Richard Meyer and Connie Wolf.

ARTHIST 473. Couture Culture. 5 Units.
This seminar examines the relationship between art, fashion and representation in Europe and the United States at key moments between 1860 and the present. Beginning with Baudelaire, Impressionism, the rise of the department store and the emergence of haute couture, we will look at what might be described as the love/hate relationship between art and fashion that has been a recurring feature of modern and contemporary art, design and architecture, culminating in the spectacular fashion exhibitions mounted at the Guggenheim, Metropolitan, Victoria & Albert and other major art museums in recent years. Students will pursue related research projects of their choice. NOTE: Instructor consent required for undergraduate students. Please contact the instructor for permission to enroll.

ARTHIST 474A. Uncanny Lives: Encounters with the Humanoid. 5 Units.
From murderous dolls to evil doppelgängers, humanoid doubles haunt the Western cultural imagination. Beginning with an in-depth look at the contested concept of the "uncanny", the seminar traces the history of anxiety about non-human humans in the West. An interdisciplinary inquiry, this course draws its sources from art, film, literature, psychology, and science.

ARTHIST 475. Media Cultures of the Cold War. 3-5 Units.
The intersection of politics, aesthetics, and new media technologies in the U.S. between the end of WW II and the fall of the Berlin Wall. Topics include the aesthetics of thinking the unthinkable in the wake of the atom bomb; abstract expressionism and 'modern man' discourse; game theory, cybernetics, and new models of art making; the rise of television, intermedia, and the counterculture; and the continuing influence of the early cold war on contemporary media aesthetics. Readings from primary and secondary sources in art history, communication, and critical theory.
Same as: COMM 386

ARTHIST 477. Folk, Outsider, Self-Taught. 5 Units.
This seminar will consider the subject of self-taught artists, who form a shadow history of American art. We will examine their work and reception by fine artists and institutions in the United States, looking specifically at how they aligned with, departed from, or helped define received art historical narratives. Special attention will be paid to issues of collecting and display, the shifting terms used to designate "self-taught," and theoretical and ethical concerns raised by the study of self-taught artists. Key themes will include theories of the archive, race, spirituality and enchantment, and disability. How might study of self-taught artists transform our understanding of canonical art historical movements? How does self-taught art challenge what it means to write about, research, and encounter objects in the world?.

ARTHIST 477A. An Other Art: Creativity and Neurodiversity. 4 Units.
From its initial institutional recognition in the first decades of the 20th century, there were repeated attempts to bring creative work of the mentally ill within the fold of art: from pioneering psychiatric work informed by psychoanalysis, to its exaltation by French Surrealists, to Art Brut, to the budding industry of Outsider Art. Still, created outside of art institutions this kind of art is an expression of an inner necessity of artists, and not of their skills and professional savvy. Regardless of the level of recognition, creations of neuro-diverse people remain on distant margins not only of art institutions, but of the society. As such, this art marks the limits of the social as conceived in western contemporary culture. In this seminar, we will explore neuro-diversity in different art forms, from visual works, to music, to performance, all the way to the works that escape categorization, such as the spatial aesthetics of the homeless. Through the seminar, we will pay special attention to the social position of this, most vulnerable of all forms of artistic production: the stigma attached to madness, neglect of neuro diverse people, and social, political, and economic challenges related to (de)institutionalization of the mentally ill in the United States.
Same as: TAPS 340

ARTHIST 478. Problems in the History of Collecting, Circulation and Display. 5 Units.
This graduate seminar involves intensive study of art collecting, circulation and display through the lens of one of the principal institutions of art history: the museum. It will include a site visit to the Solomon R. Guggenheim Museum to gain a comprehensive view of this complex institution as a basis for seminar-related research and writing. Limited to PhD students in Art History and Film Studies, or by permission of the instructor.

ARTHIST 479. The Days: On the Writing of Specific Dates in History. 5 Units.
What is the value of writing a whole essay or dissertation or book on a specific date in history? What does such an approach reveal and obscure? What challenges does it place on the *writer* of history? Exploring a series of case histories in weekly meetings, the seminar will also ask that each student write a paper on a specific date, evoking that one day on the calendar as a moment of unforgettable importance.

ARTHIST 480B. The World of Chen Hongshou (1598-1652). 5 Units.
Planned to coincide with a special international exhibition at the Berkeley Art Museum of works by the seventeenth century figure painter and print designer Chen Hongshou (1598-1652), this seminar will explore his art and cultural environment. Along with close study of his original paintings, we will study his connections with printmaking and publishing, fiction and drama culture, and his literary, social and patronage networks.
Same as: ARTHIST 280B

ARTHIST 481. Chinese Portraiture. 4 Units.
Exploration of recent studies of Chinese portraiture, with a focus on modern and contemporary eras. Portrait practices in treaty port cities; photographic portraits, portraits and modernity; political portraits in public arenas, self-erasure in contemporary portraiture, women's self-portraits, and experimental video portraits will be among the potential topics of discussion.
Same as: ARTHIST 281

ARTHIST 482A. Approaching Dunhuang: Methods and Debates. 5 Units.
This seminar will explore recent scholarly approaches to the visual arts of the Buddhist cave shrine complex at Dunhuang in northwest China between the 5th and 9th c. CE. Topics will include real and virtual spatiality of the cave shrines; questions of function (ritual, memorial, meditative, visualization); textual and doctrinal relationships of images and spaces; patronage and political contexts; production techniques; narrative and paradise iconographies; icons and illustrations. The seminar group will visit the concurrent major Dunhuang exhibition at the Getty Museum in Los Angeles and focus especially on banner paintings, sculptures, and replica cave shrines (275, 285, 320) represented in the exhibition.

ARTHIST 483. Chinese Buddhist Painting: Visions and Practices. 5 Units.
This course explores how Chinese Buddhist art adapts to changes in the religious visions, imagination, and practices of Buddhism in China. It focuses primarily on Buddhist paintings but will occasionally include other types of artistic devices, such as space for display, architectural design, and sculpture, to reach a better understanding of the viewing and the religious experiences. Striving beyond the discussion of style and iconography, we will broaden our pursuits by incorporating various issues such as the domestication of a foreign religion, the relationship between Buddhist literature and images, fusion with popular literature, social connections among eminent monks, scholars and artists, and political use of Buddhist images.
Same as: ARTHIST 283

ARTHIST 485. The Situation of the Artist in Traditional Japan. 5 Units.
Topics may include: workshop production such as that of the Kano and Tosa families; the meaning of the signature on objects including ceramics and tea wares; the folk arts movement; craft guilds; ghost painters in China; individualism versus product standardization; and the role of lineage. How works of art were commissioned; institutions supporting artists; how makers purveyed their goods; how artists were recognized by society; the relationship between patrons¿ desires and artists¿ modes of production.
Same as: JAPANGEN 220

ARTHIST 485A. Exhibiting East Asian Art. 1-5 Unit.
This seminar will explore the history, conceptual approaches, design, and practicalities of museum-based exhibitions of East Asian art. Through readings, field trips, and site-based exercises the seminar will look to inform the planned reinstallation of the Cantor Center's East Asian galleries. Open to graduate and undergraduate students with interests in art history, museology, design, and cultural representation. Permission of the instructor required.

ARTHIST 486A. Exhibition Seminar: Contemporary Chinese Calligraphy and Painting. 5 Units.
This two-quarter seminar will be a planning workshop for an upcoming exhibition of contemporary Chinese ink painting at the Cantor Center for Visual Arts. Drawn from a major private collection, objects in the exhibition will represent leading artists and trends in contemporary Chinese ink painting, printmaking, and calligraphy. Seminar participants will be involved in all aspects of the project, from conceptualizing exhibition themes, researching artists and works, object selection and exhibition design to writing labels, wall texts, and essays for a planned accompanying publication. Limited enrollment; prior consent of instructor required. May be repeat for credit.

ARTHIST 487X. Pictures of the Floating World: Images from Japanese Popular Culture. 5 Units.
Printed objects produced during the Edo period (1600-1868), including the Ukiyo-e (pictures of the floating world) and lesser-studied genres such as printed books (ehon) and popular broadsheets (kawaraban). How a society constructs itself through images. The borders of the acceptable and censorship; theatricality, spectacle, and slippage; the construction of play, set in conflict against the dominant neo-Confucian ideology of fixed social roles.
Same as: ARTHIST 287, JAPAN 287

ARTHIST 489. Connoisseurship Studies of Chinese Painting, Calligraphy, and Seals. 5 Units.
This course focuses on taking connoisseurship out of the classroom and into the collecting world. With many classes being held at the Asian Art Museum and private collections in the Bay Area, students will learn not only what the role connoisseurship plays in the current art landscape, but how a museum works. Combines case studies in the field, reading material, eyes-on experience, and discussion, this class will address the topics of utilizing resources, conducting research, cultivating collectors, building collections, and curating exhibitions through the lens of connoisseurship.

ARTHIST 489A. Making the Masterpiece in Song Dynasty China. 5 Units.
Studies of canon formation involving Song Dynasty (10-13th c.) Chinese works of painting, calligraphy, ceramics, and architecture. The roles of early art writing and criticism; collecting histories; art historical theory; / copying, imitation, and reproductive practices; period and regional taste; and modern museological and art historical discourses in identifying and constructing a canon of Song masterworks.
Same as: ARTHIST 289A

ARTHIST 490. Curatorial Activism in the Arts of Africa. 5 Units.
Enrollment restricted to graduate students and advanced undergraduates. What is contemporary in African art and how does one curate the contemporary in and through African art? The course examines curatorial practices and activist projects. Topics include redefining museum exhibitions and collections of African art at the Cantor Arts Center and museums around the world; breaking away from stereotypical representations of the arts and cultures of Africa; controversial issues and dilemmas; curatorial activities directed toward cultural, social, and political activism; strategic modes of display and design; subjectivity vs. objectivity; and fostering critical dialogues about the arts and cultures of Africa.

ARTHIST 490A. Indigenous Cultural Heritage: Protection, Practice, Repatriation. 3 Units.
This interdisciplinary seminar explores pressing questions relating to the protection, practice and repatriation of the cultural heritage of Indigenous peoples from North America and beyond. Using an innovative combination of in-class lectures and videos of interviews with renowned experts, including Indigenous leaders, scholars, artists and performers and museum professionals from around the world, this seminar will explore and problematize, among other subjects: the impact of colonialism, urbanization and other political, legal, economic, religious and cultural forces on understandings and definitions of "indigenous" and "cultural heritage"; the development of international law relating to Indigenous peoples¿ cultural rights; international, domestic, and tribal heritage protection and repatriation laws/initiatives including the 2007 United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), the 1990 US Native American Graves Protection and Repatriation Act (NAGPRA), and others; past and present Western museum practices and guidelines relating to display, preservation, provenance research and repatriation of indigenous cultural material; the meaning of repatriation to Indigenous peoples and other stakeholders; and resolving repatriation disputes, including by alternative dispute resolution (ADR) processes. While case studies will relate primarily to Indigenous peoples of North America, comparisons will be drawn with the situation of Indigenous peoples in other regions, such as Oceania and Russia. Each week students will brainstorm actionable ideas for amending/supplementing current frameworks in order to give force to the cultural rights enumerated in UNDRIP. The overall seminar experience will involve discussions of lectures and video content, assigned readings, quizzes, a class visit to the Cantor Center Native Americas collection, and visits to our classroom by experts. Elements used in grading: class participation, attendance and a final project (one-day take-home exam; or research paper or film project with instructor's consent).
Same as: ARTHIST 190A, PUBLPOL 190, PUBLPOL 290

ARTHIST 491. Riot!: Visualizing Civil Unrest in the 20th and 21st Centuries. 5 Units.
This course explores the visual legacy of civil unrest in the United States. Focusing on the 1965 Watts Rebellion, the 1992 Los Angeles Riots, and the 2014 Ferguson Uprising, students will closely examine photographs, television broadcasts, newspapers, magazines, and film and video representations of unrest. In addition, students will visually analyze the works of artists who have responded to the instances of police brutality and/or challenged the systemic racism, xenophobia, and anti-black violence leading to and surrounding these events.nnNOTE: Instructor consent required for undergraduate students. Please contact the instructor for permission to enroll.
Same as: AFRICAAM 291, AFRICAAM 491, ARTHIST 291

ARTHIST 492. Romancing the Stone: Crystal Media from Babylon to Superman. 3-5 Units.
This seminar investigates the importance of rock crystal and its imitations as material, medium, and metaphor from antiquity until modernity. The objects examined include rings, reliquaries, lenses, and the Crystal Aesthetic in early twentieth-century architecture and even Superman's Fortress of Solitude. The texts range from Pliny to Arabic Poetry to Romance Literature to modern manifestos.
Same as: ARTHIST 292, FRENCH 292, FRENCH 392

ARTHIST 493. The Art of Punk: Sound, Aesthetics and Performance. 5 Units.
This seminar explores the sonic and visual aesthetics of punk rock since the 1970s. While studying music, videos, zines, and album covers, students will examine the convergence of art with politics among artists, such as Lydia Lunch, Vaginal Davis, and Shizu Saldamando, and bands, including Crass, the Plasmatics, and Los Illegals, as well as punk subgenres, like No Wave, Riot Grrrl, and Queercore. Likewise, students will consider how issues of identity, race, gender and sexuality informed artists and their work.
Same as: CSRE 393

ARTHIST 494. Complicating Minimal Art: Race, Gender, and Sexuality. 5 Units.
In this seminar, students will uncover the sociopolitical complexities of Minimalism, a movement and style of art defined by pared-down geometric forms that emerged in the 1950s and continues to be popular today. Through a critical engagement with Minimalism's art historical narrative and art world controversies, students will consider the influence of key historical events on artists and their work, such as the Civil Rights Movement, Vietnam War, and AIDS Epidemic, as well as issues of race, gender, and sexuality. In the process, students will recover the contributions people of color, women, and queer artists have made to Minimal art.
Same as: CSRE 394

ARTHIST 497. American Mystics. 5 Units.
This seminar will consider the role of mysticism in American art and culture. Long denigrated as irrational or escapist, mysticism in fact offers a site from which to investigate and challenge entrenched assumptions of linear time, historical positivism, hierarchies of taste, and rationality that remain the epistemic grounding of art history. Topics covered will include Transcendentalism¿s debt to Buddhism; the Aesthetic Movement; Aleister Crowley, Kenneth Anger, and occultism; Rastafarianism; Afrofuturism; psychedelia, drugs, and the counterculture, among many others. Readings will include work by Max Weber; Theodor Adorno; Sylvia Wynter; Toni Morrison; Marcel Mauss; and Ashon Crawley. Special attention will be paid to issues of race, ethnicity, and decolonizing methodologies.

ARTHIST 502. Methods and Debates. 5 Units.
This course introduces graduate students to a range of interpretive methods within art history and visual culture studies. In addition to scrutinizing multiple schools of thought and critical debates within the field, the seminar pays particular attention to the style and strategies of writing taken up by individual critics and scholars. How ¿ and to whom ¿ does the art historian¿s voice speak in different moments, visual contexts, and interpretive communities?.

ARTHIST 600. Art History Bibliography and Library Methods. 1 Unit.
.

ARTHIST 600A. Art History Proseminar. 1 Unit.
.

ARTHIST 610. Teaching Praxis. 1-5 Unit.
.

ARTHIST 620. Qualifying Examination Preparation. 5 Units.
For Art History Ph.D. candidates. Prerequisite: consent of instructor.

ARTHIST 640. Dissertation Proposal Preparation. 5 Units.
(Staff).

ARTHIST 650. Dissertation Research. 5 Units.
(Staff).

ARTHIST 660. Independent Study. 1-15 Unit.
For graduate students only. Approved independent research projects with individual faculty members.

ARTHIST 660E. Extended Seminar. 4 Units.
May be repeated for credit. (Staff).

ARTHIST 670. Dissertation Seminar. 3-5 Units.
For graduate students writing and researching dissertations and dissertation proposals. How to define research projects, write grant proposals, and organize book-length projects.

ARTHIST 680. Curricular Practical Training. 1-3 Unit.
CPT course required for international students completing degree. Prerequisite: Art History Ph.D. candidate.

ARTHIST 802. TGR Dissertation. 0 Units.
.

Art Studio Courses

ARTSTUDI 10A. Digital Workshop for Artists. 1 Unit.
This one-unit pass/fail introductory workshop class is designed for students who are new to working with code and electronics, and will give them the technical background necessary to feel comfortable in digital studio classes such as Embodied Interfaces (162), Drawing with Code (163), Making it With Arduino (130), and other Emerging Media courses. By teaching introductory electronics and programming concepts in a step-by-step, hands-on manner with a focus on creative practice, this workshop class provides an accessible introduction to using electronics in students' own artistic endeavors. Students will learn to program LED strips, read sensors with Arduino, start to code in Processing, and become familiar with methods for connecting all three. Through guided tutorials and creative exploration in class, students will learn a basic skillset for creative practice using electronics and software interfaces, with a focus on skills students can use in their work in future classes. No technical experience required.

ARTSTUDI 11A. Drawing: Means & Alternate Means. 2 Units.
The first half of the quarter students explore more traditional ways of drawing(still life,models,etc..) to develop a hand/eye relationship. The class will focus on seeing and documenting what is in front of them. The second half of the quarter expands into using alternative means of mark making to deconstruct and re-construct ideas learned in the first half of the quarter. String, tape, body parts and shadows are all fair game. This will be a lively class. The students are graded on their attendance, participation, weekly assignments and one final assignment consisting of two finished works, one being traditional, the other experimental.

ARTSTUDI 17A. Black and White Darkroom. 2 Units.
A beginning black & white darkroom photography class with an emphasis on project conceptualization and the utilization of local environments. Students in addition to learning photography basics, will complete a cohesive, short body(s) of work. Students work collectively to realize a group exhibition. Theme and title of the exhibition are chosen at the beginning of the quarter and projects will be developed within its framework.

ARTSTUDI 19N. An Artist's Life: Diverse Voices and Changing Contexts. 4 Units.
This course is designed for students considering an Art Practice minor or major. In this course, students gain confidence and experience connecting to their artistic voices as we explore the myriad possible career paths artists take to build sustainable careers. The course consists of a series of studio projects, each centered around a different artist whose career and art practice we study. The example artists will be primarily artists of color, or artists from communities which are underrepresented in the art world, with practices and careers ranging from the conventional to the more unusual. The goal of these artist selections is to model the possibilities of an art career for students who do not easily see themselves well represented in the mainstream art world, while also broadening all students¿ understanding of the many different methods for making work and practicing as an artist today.

ARTSTUDI 122A. Expressive Techniques in Multimedia Installation And Live Art. 4 Units.
The course focus on multimedia installation and live performances. The theme of the course will be an offshoot of the campus wide celebration of the 200th year anniversary of the ¿Frankenstein¿ novel written by Mary Shelly. For the course the issues of advance medical science in the areas of artificial life forms, stem cell research, biological ethical questions, fictional and non fictional approaches and mythical creation stories will be included. Students will obtain an understanding of alternative ways to speak to issues using various art forms.
Same as: TAPS 122A

ARTSTUDI 130. Interactive Art: Making it with Arduino. 4 Units.
Students use electronics and software to create kinetic and interactive elements in artwork. No prior knowledge of electronics or software is required. Students learn to program the Arduino, a small easy-to-use microprocessor control unit (see http://www.arduino.cc/). Learn to connect various sensors such as light, motion, sound and touch and use them to control software. Learn to interface actuators like motors, lights and solenoids to create movement. Learn to connect the Arduino to theMAX/MSP/Jitter programming environment to create media-intensive video and audio environments. Explore the social dimensions of electronic art. (lower level).
Same as: ARTSTUDI 231A

ARTSTUDI 131. Sound Art I. 4 Units.
Acoustic, digital and analog approaches to sound art. Familiarization with techniques of listening, recording, digital processing and production. Required listening and readings in the history and contemporary practice of sound art. (lower level).
Same as: MUSIC 154A

ARTSTUDI 136. The Portable Studio. 4 Units.
With a decrease in available real estate and an increase in virtual real estate via the Internet and new technologies, contemporary artists are developing new means of creative production that do not necessarily require the use of a traditional art studio. This interdisciplinary course follows this line of thought and will function as a means to explore systems of art-making through nomadic practices outside of the traditional art studio. The overall goal of this course is to challenge students to think differently about the nature of studio practice, where they will explore themes of public versus private, and physical versus virtual space through the creation of time-based artwork. By way of lectures, readings, and class assignments students will be introduced to sound, video, social practice, and performance art that will be developed and presented though unconventional means with an emphasis on site. No previous experience required.

ARTSTUDI 139. Portraiture and Facial Anatomy for Artists. 4 Units.
Focus is on the art of portraiture and underlying structures of the face, fundamental anatomical elements such as the skull and muscles of facial expressions, and the intersections between human anatomy and art. Studio sessions incorporate plastic models, dry bones, cadaveric specimens, and live models. Encourages use of proper anatomical terminology for describing structures and their relationships.
Same as: SURG 241

ARTSTUDI 140. Drawing I. 4 Units.
Functional anatomy and perspective as they apply to problems of drawing the form in space. Individual and group instruction as students work from still life set-ups, nature, and the model. Emphasis is on the development of critical skills and perceptual drawing techniques for those with little or no previous experience with pastels, inks, charcoal, conte, and pencil. Lectures alternate with studio work. (lower level).

ARTSTUDI 140A. Drawing from Observation. 2 Units.
This introductory course will provide students a technical foundation on how to accurately translate information from the eye to the hand. Line, value, and form will be employed to render a range of materials, surfaces, and objects. As the quarter progresses, students will create drawings that distort or juxtapose elements, views, or multiple scenes inside and outside the classroom. Through personal invention, the narrative elements of time and affect will be explored. Historical precedents will be discussed, giving attention to one-point and two-point perspective, Cubism, as well as other traditions and methods of organizing pictorial space. Materials will include graphite pencil, charcoal, and ink wash. All artworks will be made over the span of the class period times.

ARTSTUDI 141. Plein Air Painting. 4 Units.
Plein Air (Outdoor) Painting is a wonderful way to build skills, explore your relationship to site, and unlock your voice and hand. We will paint at different locations on and off-campus, learning a variety of painting techniques in changing weather and light. This class is great for both true beginners and advanced students. Basic painting skills are incorporated throughout the quarter, with advanced options at each stage. Acrylic paint is versatile and fast-drying; we will use it to get a range of effects from washy watercolor, blended oil effects, and building the surface sculpturally, painting on different surfaces. As we move, we will consider the elements of site and the materiality of paint: water, earth, architecture and the nuance of human gesture. History and memory are parsed in both the visible and hidden worlds around us. On-site paintings are not touched after class; rather they exist as an ephemeral moments in time. Three outside projects allow each person to paint at their own pace, and spend more time developing ideas and skills. In this class, process is privileged and ¿failure¿ is embraced. Adventure is our priority; weather is our co-creator. Final projects will be based on individual concepts, allowing each person to stretch creatively and develop their own voice.

ARTSTUDI 141A. Drawing from Life. 2-4 Units.
The subject of this course is Life as we know it, and artists at all levels will learn to communicate their questions, concerns, and perspectives on paper. The drawing process empowers students to express themselves in their already unique visual languages, while the objects will be testimonies to their personal, cultural, spiritual, and revolutionary experiences. We begin by developing or refining students' fundamental techniques through indoor and outdoor observational drawing. Our focus shifts toward representational and conceptual strategies for storytelling that reference students¿ archives, popularized content, literature, historical references and more. Through drawing, we discuss and examine a diverse range of contemporary art to address the legacy of visual art. All preparation must be done between class meetings, and all artworks will be made during class to maximize the studio art-making experience.
Same as: ARTSTUDI 241A

ARTSTUDI 141S. Drawing Outdoors. 3 Units.
In this introductory class, we take drawing out into the world, exploring different environments, techniques, and approaches as we go. The fundamental nuts-and-bolts of basic drawing techniques: light logic, depicting depth and drawing the figure, are integrated into each environment. From the Stanford campus: its cafe's, architecture and landscaping, to redwoods and water, to more urban settings, drawings will range from high-speed gestures to longer, more contemplative work. Through pen, graphite, charcoal, ink, watercolor/gouache and mixed media, we explore dichotomous relationships, as well as those in seemingly perfect harmony. We move from the inanimate to animate, figure and architecture, motion and stillness, to the micro and macro, considering how even the smallest patch of earth may be as monumental as Hoover Tower. Both beginning and advanced students are welcome. Summer.

ARTSTUDI 142. Mixed-Media Drawing: Art & Aesthetics of Social Media. 2 Units.
Why do we ¿like¿ the images we do on social media platforms? Do we only respond to images which pique our emotions, beliefs, and desires? Or do specific design elements in these images influence our preferences? This course challenges you to observe patterns in your social media ¿liking¿ habits and critique the formal and conceptual properties of social media¿s visual landscape. In this class you will learn to ¿see¿ digital content differently by using social media to make your own physical artworks. We will develop mixed media drawing techniques rooted in the principles of design and art history for responding to our observations. Class projects will be experienced on personal devices and in exhibition spaces.

ARTSTUDI 142A. A Deep Dive in Artmaking During the Time of Covid-19. 2 Units.
In this hands-on course, we produce a body of work that responds to key concepts examined in contemporary art with a specific emphasis on the impact of artmaking due to Covid-19. During this historical moment, we explore alternative possibilities of the artmaking process, geared to adjust to implementations of shelter in place, social distancing, and the reduction of resources. This course provides the opportunity to experiment with unconventional art media and develop new methods of engaging with each other and the community.

ARTSTUDI 144. PRINTMAKING AND ACTIVISM. 3 Units.
Hands-on studio course that introduces students to a variety of printmaking techniques, while exploring printed matter's role in activism in both history and in current events. This course introduces students to printmaking and graphic art techniques as tools for political activism, and explores how students can print as a tool in dialogue towards social change. Prior printmaking experience is helpful not necessary for this course.

ARTSTUDI 144B. Eye for Color: Interaction of Color. 2 Units.
This course will explore different types of color phenomenon through cutting and arranging colored paper and mixing paint. The goal of the course is to enhance sensitivity to color relationships. There is no such thing as a bad color or a good color, it is all relative to context. Students in this course will gain the ability to recognize and identify different types of color phenomena that exist in art and nature. The development of observation and articulation when dealing with color comes from experience, trial and error, and in doing so, one develops an individual eye for color.

ARTSTUDI 145. Painting I. 4 Units.
Introduction to techniques, materials, and vocabulary in oil painting. Still life, landscape, and figure used as subject matter. Emphasis is on painting and drawing from life. (lower level).

ARTSTUDI 145B. Painting for Non-Majors: Painting With the Figure. 2 Units.
This class will deal with the figure as it is represented in two dimensional form, within the general context of painting, accounting not only for the figure, but also the painting as a whole. A variety of historical and contemporary approaches to painting the figure will be introduced, and then explored through the application of acrylic paint. Students will work from a variety of sources including, but not limited to: digital media, occasional live and inanimate models, still life, and photographs. Emphasis will be laid on a comprehensive approach to composition that deals with the human figure, representationally, abstractly, and freely - without the requirement of prior experience in art.

ARTSTUDI 145C. Introduction to Abstraction. 2 Units.
This studio course will provide an introduction to abstract and non-objective painting and sculpture. Through a series of prompts and exercises, students will strengthen their understanding of composition, color, line, form, and material. Studio-based projects will draw upon the history of abstraction, as well as incorporate found objects and imagery to ground exploration in the immediate environment. As a class, we will consider the contemporary relevance of abstract and non-objective artworks. What does it mean to create a work of art today that is not figuratively legible? How is such work otherwise legible? Through technical exercises developed by Walter Gropius and Joseph Albers of the Bauhaus, students will develop foundational skills in composition and color theory. Experimentation, intuitive decision making, and developing one's own approach will be encouraged throughout.

ARTSTUDI 146. Photoshop and Painting. 2 Units.
This is a focused introduction to still life painting and Photoshop. Students will learn to indicate simple form with a single light source and then learn to paint form lights, various forms, and cast shadows. Students will also gain an understanding of warm and cool colors. Emphasis is on composition, cropping, overlapping and placement in the picture plane. Students will also learn the basics of photoshop and how it can be used as an aesthetic tool to benefit students work.

ARTSTUDI 146B. Art of Reclamation. 2 Units.
This course explores reclamation, the rich process of claiming something back or reasserting a right. Through the layering of different materials to create compositions of text and image, this course will explore what the art of reclamation means at an individual, group, and community level. Can mixed media art spark intersectional dialogue? How does combining disparate materials communicate radical messages to others? Through group discussions, readings, writing sessions, and critiques we will explore the topics of the body, race, gender, and land as they relate to art practice. Students will be encouraged to experiment with two and three-dimensional approaches to four main projects. Demonstrations will consist of collage, stenciling, and image making via paint, ink, and charcoal.

ARTSTUDI 147. Art Book Object. 4 Units.
This mixed introductory and upper level studio course explores contemporary aesthetic interpretations of the book as an art object. Students learn to use both traditional and digital tools and techniques for creating artists' books, and integrate those into final works of art. The course familiarizes students with basic bookbinding processes and forms, as well as various modes of printing and production that facilitate limited artist editions. In addition to making books, we view numerous artists' books in the Bowes Art & Architecture Library collection as well as the collection of the instructor, and meet with practicing artists and book makers. Students create a number of small books, each focused on a particular process but using content of their choice. Upper level students propose and create a more fully evolved final project involving at least one bookbinding process independently researched in consultation with the instructor.
Same as: ARTSTUDI 247A

ARTSTUDI 147S. DRAWING AND PAINTING. 3 Units.
The introductory course teaches the basic tools of drawing and oil painting. We will take advantage of Stanford's beautiful campus to draw and paint outside along with studio work and slide discussions in the classroom. Exercises begin with gestural mark-making, moving through linear perspective and tonal studies using a variety of media from graphite and charcoal to bamboo brush and ink. The introduction to oil painting explores the ways we build layers up to a finished work. Students will enter painting through color theory, strategies of abstract painting, and exposure to influential painters. Each student will acquire familiarity with foundational techniques and materials while developing their personal voice in assigned projects. No previous painting or drawing experience is necessary. Options will be provided for advanced students.

ARTSTUDI 148. Monotype. 4 Units.
Introduction to printmaking using monotype, a graphic art medium used by such artists as Blake, Degas, Gauguin, and Pendergast. May be repeated for credit. Prerequisite: 140. (lower level). May be repeated 2 times for total of 8 units.

ARTSTUDI 148A. Introduction to Lithography. 4 Units.
The classic technique of printing from limestones and metal plates. Students will learn techniques to draw and etch their imagery onto the stone/plate. The prints will be created in numbered editions. Students will have the opportunity to work in color on a variety of sizes. There will be visits to the campus museum print collection.

ARTSTUDI 148B. Introduction to Printmaking. 4 Units.
Techniques such as monotype, monoprint, photocopy transfers, linocut and woodcut, intaglio etching. Demonstrations of these techniques. Field trips to local print collections or print exhibitions. (lower level).

ARTSTUDI 148P. The Hybrid Print. 4 Units.
This class explores experimental printmaking methods where digital and traditional practices collide. It focuses on the interchange between conventional and new methods of printmaking, and possibilities for the print beyond paper and the flat picture plane in contemporary art. Techniques will be demonstrated in class, and students will pursue projects using these techniques, developing their own conceptual interests. We will explore digital processes using large format printers, as well as digitally augmented traditional printmaking methods such as monoprints, collographs, woodblock and linocut, aided by dye sublimation, vinyl cutting, and 3-d printing. Students will have access to a wide array of both digital and traditional tools, and will develop projects using a combination of methods, resulting in a body of work. Discussions will address the expansive nature of contemporary fine art printmaking.
Same as: ARTSTUDI 248P

ARTSTUDI 149. Fiber and Wearable Art. 2 Units.
In this project-based studio course, students will investigate how wearable art is situated in the conversations around contemporary art. Particular attention will be directed to how artists confront ideas around the body, gender identity, performance, and experimental costumes. Final projects will be contextualized through final photo or video documentation. Students will examine the way materiality and craft can inform concept and will have the opportunity to use a variety of machinery to think about their projects. No sewing experience necessary.

ARTSTUDI 150. Sculpture: Votives, Totems and Sanctuaries. 4 Units.
The focus of this course is to discover how meaning is inscribed into the objects and places we make. Using three forms both ancient and contemporary¿ the votive, the totem and the sanctuary¿we will consider a variety of cultural precedents made with spiritual and/or religious intensions. Students will research the origins and philosophies of chosen examples, glean formal terms, such as size, scale, composition, color and materiality and create new works with both personal and cultural meanings.

ARTSTUDI 150N. Queer Sculpture. 3 Units.
Outlaw sensibilities, self-made kinships, chosen lineages, utopic futurity, exilic commitment, and rage at institutions that police the borders of the normal these are among the attitudes that make up queer in its contemporary usage. -David J. Getsy. nnnThis hands-on studio based course explores queer as a form of art production. Artists and thinkers use queer to signal defiance to the mainstream and an embrace of difference, uniqueness and self-determination. To be intolerable is to demand that the normal, the natural and the common be challenged. To do this is not to demand inclusion, but rather to refuse to accept any operations of exclusion and erasure that make up the normal and posit compulsory sameness. Queer Sculpture is also about the strategic effort to appropriate and subvert conventional art practices and tactics that may involve everything from shifts in the content of a work and its targeted audience to the methods by which it is produced and its formal properties. The political imperatives of a queer or queered position will shape thematic investigations of practices related to utopic futurity, anti-assimilationist practices, failure, abstraction, the archive, camp, drag and alternative families. Classes will require reading, discussing, and making. Students will produce artwork for critiques and participate in discussions of the readings. The course includes guest artists and fieldtrips to local LGBTQ archives.

ARTSTUDI 150Q. Queer Sculpture. 4 Units.
Outlaw sensibilities, self-made kinships, chosen lineages, utopic futurity, exilic commitment, and rage at institutions that police the borders of the normal these are among the attitudes that make up queer in its contemporary usage. David J. GetsynnThis hands on studio based course explores queer as a form of art production. Artists and thinkers use queer to signal defiance to the mainstream and an embrace of difference, uniqueness and self-determination. To be intolerable is to demand that the normal, the natural and the common be challenged. To do this is not to demand inclusion, but rather to refuse to accept any operations of exclusion and erasure that make up the normal and posit compulsory sameness. Queer Sculpture is also about the strategic effort to appropriate and subvert conventional art practices and tactics that may involve everything from shifts in the content of a work and its targeted audience to the methods by which it is produced and its formal properties. The political imperatives of a queer or queered position will shape thematic investigations of practices related to utopic futurity, anti-assimilationist practices, failure, abstraction, the archive, camp, drag and alternative families. Classes will require reading, discussing, and making. Students will produce artwork for critiques and participate in discussions of the readings. The course includes guest artists and fieldtrips to local LGBTQ archives.

ARTSTUDI 151. Sculpture I. 4 Units.
Traditional and non-traditional approaches to sculpture production through working with materials including wood, metal, and plaster. Conceptual and technical skills, and safe and appropriate use of tools and materials. Impact of material and technique upon form and content; the physical and expressive possibilities of diverse materials. Historical and contemporary forming methods provide a theoretical basis for studio work. Field trips; guest lecturers.

ARTSTUDI 152. Soft Sculpture. 2 Units.
Textiles lend themselves to be formed and constructed to fit around three-dimensional objects and become a skin to the object within. They can hold materials inside of them, produce imagery, and divide space. This sculpture course investigates fibers and their ability to transform forms and space. Students learn sewing techniques, upholstery techniques, and how to make sewing patterns to create sculptures. Through projects and workshops, students consider the relationships of textiles to the human figure, interior and exterior settings, and traditions in craft.

ARTSTUDI 153. Ecology of Materials. 4 Units.
Studio-based sculpture course. Materials used in sculpture and environmental concerns surrounding them. Artists concerned with environmental impact and the interconnection of art with other fields. The impact of material and technique upon form and content; understanding the physical and expressive possibilities of diverse materials. Conceptual and technical considerations. Group discussions, critiques, readings, video presentations, a field trip to a local artist-in-residence program, and visiting lecturers. (lower level).

ARTSTUDI 154X. TBD. 2 Units.
TBD.

ARTSTUDI 155. Social Sculpture. 4 Units.
This course investigates the immediacy of the body as material and sculpture in order to investigate private and social spaces. Actions are often used to understand or question the function and psychological aspects of a space and are documented for the perpetuation of these ideas. Throughout the quarter we will investigate the body as material and develop site specific performances enacted for: Private/Domestic and Public Space; Constructed Space & Physical Space; ecological systems; and generate both Individual & Collaborative based Actions, Interventions, & Events.".
Same as: TAPS 155

ARTSTUDI 156Q. Installation Art in Time and Space. 4 Units.
This hands on studio based sculpture course focuses on developing concepts, and creating a site-specific installation art project.
This class will addresses the impact of material and technique upon form and content; therefore understanding the physical and expressive possibilities of diverse materials. Conceptual and technical considerations will be addressed. Students will learn traditional building techniques as needed (wood shop, metal shop, mold making, found object) as well as anti-object techniques. Students will make 3-4 projects that will culminate in a final site-specific installation. We will look at contemporary artists working in the field of installation art. Group discussions, critiques, readings, video presentations, field trips and visiting artists will augment the class. Installation Art is based on the merger of Space and Time and on a relationship between the artist and the visitor. Utilizing your interests and abilities in a variety of subjects and media, you will create environments that immerse the viewer in a sensory/ intellectual/ emotional experience. The material and methods you use can range from everyday objects, to highly personalized forms, from appropriated sounds to surveillance video, from large wall drawings to interactive switches for the participant to manipulate. The class will consist of demonstrations of art skills particularly useful in installation (sculptural, video, audio, interactive media, etc), presentations by the professor, research and reports and journal entries, and weekly critique. Installation Art is a pervasive, varied, global practice for art-making that acts as a gathering place for expression in all media addressing all subjects in a wide range of styles by broad grouping of artists.".

ARTSTUDI 158. Hybrid Sculpture. 4 Units.
Study of concepts, aesthetics, procedures and practice of sculpting on the computer with 3D modeling tools for generation of form, environment and or character as related to your conceptual ideas. Relate traditional sculpture principles of form, material, site and utilize 3D modeling to virtually give rise to an installation or sculpture. Includes output to 2D and 3D rapid prototyping printers, laser cutters, and CNC router. Conceptual and technical skills, and safe and appropriate use of tools and materials. Impact of material and technique upon form and content; the physical and expressive possibilities of diverse materials. Historical and contemporary forming methods provide a theoretical basis for studio work. Field trips; guest lecturers.

ARTSTUDI 160. Intro to Digital / Physical Design. 3-4 Units.
Contemporary production processes ¿ both manufacturing and media processes often span the digital and the physical. 3D Depth cameras can scan real world models or movements, which can be manipulated or adjusted digitally, then re-output to the physical world via a myriad of 2D and 3D printing and laser cutting technologies. Crowd sourced information is uploaded to social media, which in turn guides our physical meeting places. Google street-view maps our physical world, and augmented reality displays overlay it. How as artists or designers to we grapple with and use this digital / physical permeability to create new experiences and meaning for our current time? This introductory studio course explores various tool sets as well as artists working across these genres. This course is a good baseline exploration for anyone interested in designing or making art with emerging contemporary tools.

ARTSTUDI 160X. Tele-Reality: Live-Streaming Art. 2 Units.
This course examines the field of live-feed media through the lens of art practice, exploring previous experiments and the potential of the medium. Using social media outlets and user-to-user communication platforms¿such as Youtube, FaceTime, Twitch, Instagram, and closed-circuit cameras¿students will create moments for captive audiences using displacement as a medium. By nature, live streaming is a fleeting digital performance that combines television, theater, and film practices with internet platforms and physical venues to present single performances or series of performances, pre-recorded footage, or improvisational scenes. nnLive-streaming opens an opportunity for borderless expression, to express social change, to share non-mainstream messages, and allows access to massive communication to diverse voices and perspectives.

ARTSTUDI 161. Constructing Color. 4 Units.
This hands-on introductory level studio art class addresses color through traditional, digital, and experimental mediums. Students learn to compose and communicate via color, experimenting with light, paint, pigments, dye, code, context, and culture. In addition to exploring color as a powerful tool, students build personal palettes and learn to use color as an essential component in conceptualizing a work of art. Students create numerous short color experiments, a personal reference notebook, and a final work of art in any medium, using processes explored in class.

ARTSTUDI 162. Embodied Interfaces. 4 Units.
Our computers, phones and devices see us predominantly as fingers and eyes staring at screens. What would happen if our technology acknowledged more of our rich physical presence and capabilities in its design? How have artists and designers used different sensing technologies to account for more of our embodied selves in their works? In this studio course we explore various sensing technologies and design artworks that engage our whole selves. Interfaces explored range from the practical to the poetic. Sensors may involve flex sensors, heat sensors, microphones and simple camera tracking technology. We analyze different tools for their appropriateness for different tasks and extend them through our designs.

ARTSTUDI 163. Drawing with Code. 4 Units.
This studio course will engage coding practices as drawing tools. What makes a good algorithmic composition? How do we craft rule-sets and parameters to shape an interesting work? What changes if we conceive of still outputs, ongoing processes, or interactive processes as the "finished" work? We will look at the history of algorithmic drawing, including analog precedents like Sol LeWitt and other conceptual artists, along with current pioneers like John Simon Jr., Casey Reas, and LIA. Outputs will involve prints as well as screen-based works. Some basic coding experience is helpful, but not required. Assignments are based on conceptual principals that students can engage with at different coding skill levels. This is a good way for non CS students to explore coding practices as well as for CS students to hone their skills. We will work primarily in the free Processing software for our explorations.
Same as: ARTSINST 142

ARTSTUDI 164. Design in Public Places. 4 Units.
How does our design of public spaces and elements of our built environment influence and control people's movements and expressions in these spaces? Can re-designing a trashcan or a stairway change how people throw away their trash or use the stairs? What are the principles of democracy, surveillance, or personal expression at stake in our current shared spaces? How have artists and designers used their skills to question or re-direct people's behavior in these public spheres, or in other spheres of shared cultural heritage? Strategies include re-designing components of the built environment, but also other strategies of intervention, tactical media and reality hacking.

ARTSTUDI 165. Social Media and Performative Practices. 4 Units.
How can social media, mobile applications, or other more traditional media be used to engage people in new social situations? Could you design an app that gets people to talk with strangers (Miranda July), or a poster that causes a revolt in an office space (Packard Jennings), or a truck that changes how people think about nursing mothers (Jill Miller)? What about platforms that encourage political dialog or social changes? This studio course examines how contemporary artists and designers engage people in a process of social dialog, critique and political change through the existing media and non-traditional art practices.nnWith the constant development of new apps and social media platforms and the pressure from society of everyone having an online presence, the class will investigate and focus specifically on how these tools can be used as a resource to create and present artworks creatively. The students in this class will be introduced to a variety of artwork examples and study different artist¿s approach to media, technically as well as conceptually. Experimentation is highly emphasized throughout this course, as the goal is for the students to create and produce works that uses social media in new ways to tell stories, connect with, mystify or surprise the audience.nnA selection of software such as Photoshop, Premiere Pro, After Affects, and other tools will be introduced in class that will assist the students in producing work for the required assignments.

ARTSTUDI 166. Sculptural Screens / Malleable Media. 4 Units.
In this mixed intro and upper level studio course, students will experiment with video and computational outputs embedded in physical scenarios. What new physical formats are made possible by contemporary screen and projection-mapping technologies? How can we make expressive use of LCD screens, pico projectors, i-pad arrays, and LEDs? The class will address the screen as sculptural medium by examining established artists like Nam June Paik, Michael Snow, Tony Oursler, and Pippilotti Rist, as well as exploring emerging contemporary artists tackling this medium. Prerequisites to take the class at the 266 upper level include one of the following: Intro to Digital/Physical Design, Embodied Interfaces, Media Archaeologies, Making it with Arduino, Digital Art 1, Electronic Art or permission of instructor. The intro level 166 course can be taken with no prerequisites.
Same as: ARTSTUDI 266

ARTSTUDI 167. Introduction to Animation. 3-4 Units.
Projects in animation techniques including flipbook, cutout/collage, stop-motion such as claymation, pixilation, and puppet animation, rotoscoping, and time-lapse. Films. Computers used as post-production tools, but course does not cover computer-generated animation. (lower level).

ARTSTUDI 168. Data as Material. 4 Units.
How can data be used as material in art and design projects? Beyond straight-forward ideas of data-visualization, this studio course investigates how we construct meaning from sets of information, and how the construction of those sets determines the meaning itself. This course also investigates different display aesthetics and how this is also a strategy for generating meaning. Artists studied include those who use various forms of personal, public, and social data as part of their practice. Historical examples from conceptual artists and other genres are considered along with contemporary artists working with data in digital or hybrid digital/physical formats.

ARTSTUDI 169. Virtual Reality: the possibility and peril of immersive artwork. 4 Units.
How can we use virtual reality systems to create powerful, beautiful and socially engaged artworks? Is it possible to use technically sophisticated (and sometimes frustrating) tools to share our unique personal visions? What can working in virtual reality teach us about our embodied reality and sense of presence? How might we question the hype and techno-utopianism surrounding VR, by using the medium itself? What is left out of the current conversation around VR that you would like to explore? nnIn this introductory studio art course, students will learn to create artworks using virtual reality systems. We will use the HTC Vive, Oculus Rift, and Daydream VR headsets, as well as more accessible phone-based augmented reality systems to explore this medium. Through lectures and research presentations, we will familiarize ourselves with the artistic history of VR - from foundational works from the 1990¿s through current examples - in order to inform our own work. nnStudents will become familiar with the fundamental studio art practice of analyzing and critiquing their own and others¿ projects. Learning to analyze artwork in turn helps students create works with more emotional and conceptual impact. nnWhile there are no official prerequisites for this course, familiarity with any kind of scripting language or coding environment will be helpful as Unity will be used as the main authoring environment.

ARTSTUDI 170. Photography I: Black and White. 4 Units.
Through film and dark room instruction, students learn to use a SLR 35-mm camera and to operate manual settings (focus, aperture, shutter speed). They develop an awareness of light and its various properties and possibilities. Students become familiar with black and white darkroom techniques creating contact sheets and to evaluating prints, make corrections and re-print. They acquire essential knowledge of historical and contemporary black and white art photography, including standards of quality and image sequencing. They get a basic sense of aesthetics and of the critical discourse that exists around the cultural significance of images.

ARTSTUDI 171. Introduction to Photography. 4 Units.
This is an introductory course in photography that explores lens-based practices and the imperative of visual literacy in today¿s world. The history of photography starts now, in a context of image-making that proceeds all around us with unprecedented immediacy and proliferation. We cover fundamental principles of camera operation, composition and image editing. Through digital instruction, students learn to use DSLR or Mirrorless cameras and to operate manual settings (focus, aperture, shutter speed, ISO, color temp/white balance). They learn basic file management as well as the use of Adobe Lightroom software. Students acquire an essential knowledge of contemporary art photography, including standards of quality and image sequencing. They get a basic sense of aesthetics and of the critical discourse that exists around the cultural significance of images. Students provide their own DSLR or mirrorless camera.

ARTSTUDI 171S. Photography I: Digital. 3 Units.
Through digital instruction, students learn to use a DSLR camera and to operate manual settings (focus, aperture, shutter speed, ISO, color temp/white balance). They become familiar with basic scanning techniques (appropriated images, not negatives) on a flatbed scanner, and basic digital printing (in color). They learn basic file management as well as the use of Adobe Lightroom software. They are taught to operate 17"-wide Epson digital printers, to print digital proof sheets, and to evaluate prints, correct files and re-print. Students acquire an essential knowledge of contemporary art photography, including standards of quality and image sequencing. They get a basic sense of aesthetics and of the critical discourse that exists around the cultural significance of images.

ARTSTUDI 172. Art and Teratology. 4 Units.
This studio course looks at the relationships between biology and art, particularly as they relate to the topic of "monsters". Rather than addressing the ways in which art has assisted the biological sciences (as in medical illustration), we'll focus on the ways in which biology has influenced the art-making practice. Course material will address our changing conceptions of biology and the monstrous, and the ways in which artists engage these cultural shifts. Students are responsible for creating art works that address these themes and others that emerge from class discussions and presentations, in any medium of their choosing.

ARTSTUDI 173A. Introductory Photography: Blue. 4 Units.
This introductory course into photography invites students to experience, reflect on and be inspired by images of blue. They will create work using the process of cyanotyping, the low-cost photographic printing technique of a century ago that now functions as an Instagram filter. Using these blue-prints as a touchstone, we will explore blue as a physical, natural, artistic and spiritual manifestation. Students provide their own cell phone camera of choice, and software will be provided.

ARTSTUDI 173E. Cell Phone Photography. 4 Units.
The course combines the critical analysis of cell phone photography with the creation of photographic art works that explore this specific medium's experimental, social and documentary potential. The increasing ubiquity of cell phone photography has had a widespread impact on the practice of photography as an art form. We will consider and discuss the ways in which the platforms of cell phone photography (Instagram, Snapchat) are democratizing image-making and transforming notions of authorship and subjectivity to an unprecedented extent, but also how the use of new technological tools help expand notions of creativity and aesthetic standards.

ARTSTUDI 173S. Cell Phone Photography. 3 Units.
The course combines the critical analysis of cell phone photography with the creation of photographic art works that explore this specific medium's experimental, social and documentary potential. The increasing ubiquity of cell phone photography has had a widespread impact on the practice of photography as an art form. We will consider and discuss the ways in which the platforms of cell phone photography (Instagram, Snapchat) are democratizing image-making and transforming notions of authorship and subjectivity to an unprecedented extent, but also how the use of new technological tools help expand notions of creativity and aesthetic standards.

ARTSTUDI 173X. Photo. 2 Units.
TBD.

ARTSTUDI 174. Interdisciplinary Animation. 2 Units.
There is no medium or form of study that animation cannot touch and expand ¿ it is interdisciplinary. At its core, animation enables the practitioner to find inherent life in materials and thereby transform them. Structured in-class experiments cover foundational animation techniques and expand previously held definitions of animation. Regular screenings introduce students to a wide array of animation practice. Students will work experimentally to find and open their own doorway into animation, creating a personal project.

ARTSTUDI 174B. Creativity in the Age of Facebook: Making Art for and from Networks. 4 Units.
This class explores the history, practice and technique of creating art on and for the internet. Discussions, projects and readings focus on the ways in which internet art embodies changing ideas about artistic creation, technology, and interactivity as a way of blurring the line between artist and audience. Setting recent work against the backdrop of earlier moments in contemporary art (found object art, photomontage), this course also situates internet art in the pre-internet tradition of finding new perspectives on, and meanings in, overfamiliar or banal media surroundings. In collaborative and individual projects, students will create visual compositions on online platforms such as NewHive and explore social media interventions, Twitter experiments, crowdsourced work, collections of online found imagery, supercuts, GIFs, and "choose your own adventure"- style online storytelling.

ARTSTUDI 175. Sound Installation. 4 Units.
This class will cover creative, historical and theoretical aspects of sited artworks based in sound. We will create, install and critique new works that use sound with special attention the ways that sound intersects with time, space and architecture. Attention will be given both to sound as immaterial signal and to sound in its relation to visual environments and objects. The class is intended for artists, composers and others who want to explore the spatial, social and aesthetic dimensions of sound. Assigned readings will cover sound practices in the contexts of art, music, sound studies and anthropology. Experience in sound recording or production, signal processing and spatialization, or installation are valuable but not required. Curiosity and attention to sounds are.
Same as: MUSIC 192F

ARTSTUDI 176. Time Shifts. 4 Units.
In this course, we examine how both individual perceptions and artistic representations of time have historically shifted with changes in technology. What are the current possibilities to extend/re-imagine how we represent time using digital tools? How do these possibilities, in turn, re-inform traditional media? This is a conceptual and experimental class with a studio focus. Examples are mainly from an art context, but include interaction design, information visualization, and scientific illustration of time-based events and processes. Students should have previous experience with a set of digital tools - Photoshop, FinalCutPro, AfterEffects, or a programming language that will allow you to digitally manipulate images. Assignments include exercises using traditional media, and digitally based projects. Occasional writing assignments also required.

ARTSTUDI 177. Video Art. 4 Units.
Video holds the ability to bear witness and reconstruct realities of space and time. In this class we study the development of the medium in the 1970s and how artists have since used it as an experimental apparatus. Projects involve creating short video works through narrative, performative, and abstracted approaches. This class explores conceptual possibilities of recording and editing video by utilizing camera technique, lighting, sound design, found footage, and nonlinear digital editing. (lower level).

ARTSTUDI 178. Art and Electronics. 4 Units.
Analog electronics and their use in art. Basic circuits for creating mobile, illuminated, and responsive works of art. Topics: soldering; construction of basic circuits; elementary electronics theory; and contemporary electronic art. (lower level).

ARTSTUDI 179. Digital Art I. 4 Units.
Contemporary electronic art focusing on digital media. Students create works exploring two- and three-dimensional, and time-based uses of the computer in fine art. History and theoretical underpinnings. Common discourse and informative resources for material and inspiration. Topics: imaging and sound software, web art, and rethinking the comptuer as interface and object. (lower level).

ARTSTUDI 181. From Dissection to Monster. 4 Units.
The focus of this class is to create an artwork that explores the relationship between creators and the `monsters¿ they create. The course explores the role of the artist as an innovator, experimenter, inventor, entrepreneur, and creative researcher. Students will perform a robust dissection and mapping of a modern technology and then emerge an artwork incorporating the constituent parts and informed by the dissection. n nAlmost anything that we create can become monstrous. One hopes for the best, but never knows just how it might play out. The story of humankind is partially a history of the twists and turns posited by technological innovation. The complex relationship between intention and context sometimes converge in mysterious and unpredictable ways resulting inn corruption in creative strategies, machines, architecture, designs and creative expression. n nThee class is inspired by the classic Gothic literature, Frankenstein, by Marry Shelly., a tragic story about Victor Frankenstein¿s failure to accept responsibility for the consequences of bringing new life into the world.

ARTSTUDI 182. Queered Tech and Speculative Design. 4 Units.
What does it mean to `queer¿ something? Expanding this term's meaning beyond gender and sexuality, `to queer¿ is to question, challenge, subvert, and reimagine social norms and structures of power. In this course, we build from queer theory to consider invisible assumptions and biases in everyday objects, then design technologies that propose new ways of being. For example: What would a clock look like if it were designed for a world without capitalist notions of productivity? Students will create three electronic artworks using Arduino micro-controllers, sensors, light, motors, and sound. Tutorials will provide fundamental instruction in electronics and programming. This is an introductory art course with no prerequisites.

ARTSTUDI 182B. Conceptual Art. 2 Units.
Through experience-based exercises this class will build upon students understanding of conceptual art. Student will be guided in the exploration of their ideas beginning with the parameters set by the camera and later by specific place(s) and space(s) in and around campus. Throughout the quarter students will learn to process and poetically interpret their ideas as well time, space, the self and current sociopolitical issues in a manner that best suites each idea. In class activities will address curiosities to invoke a deeper investigation of each student's relationship to art and/or their individual field of study. This seminar will include a survey of art historical examples to help stimulate ideas, discussions and activities. Visiting artists as well as off-campus studio visits will further inform the course.

ARTSTUDI 183. Sports in Contemporary Art. 4 Units.
Sport and Art are generally viewed as the polar opposites. You are either interested in art or sport. You can't be both.nThis course examines and questions this generalization and begins with a historical overview of artworks and artists, who uses sport, physical activity, and games as inspiration in their work.nWhether in the form of figurative representations of athletes, to inventing new games, and experiments in order to create artworks that comments on issues as broad as identity, race, gender as well as provoke audience participation through interactive installations and other playful strategies.nBesides from the historical overview and examples presented in the class, the students will be given 4 different assignments, which will allow the students to explore the concept of art in sport and vice versa and produce their own projects in response. The course is interdisciplinary in its form, but students will be introduced to a variety of disciplines and media such as Digital Video and Photography, Performance, Sculpture, and Installation Art.nOne of the goals of this course is to demonstrate the many commonalities between art and sport and to encourage a dialogue about this topic as well as bring the two seemingly divergents more together.nSome artist that will be discussed are:nDavid Hammons, Collier Schorr, Paul Pfeiffer, Anne Imhof, Camille Henrot, Gabriel Orozco, Allora & Calzadilla, Chi Kai-Yuan, Hank Willis Thomas, Ana Soler, Jørgen Leth, Cassils and Lee Walton to mention a few.

ARTSTUDI 184. Art and Environmental Engagement. 4 Units.
The aim of this course is to use the tools of art as a means to actively engage with the natural world. Students will be required to go beyond surface representations and dig deep with their work to uncover conceptual, ecological and historical meaning. Whether the focus is on a plant, animal, mineral, or an ecological system, students will be encouraged to investigate and interact with their subjects. Scientists who experiment in the field will be brought in to discuss their research and working processes. Collaborations are welcome. We will examine the work by artists, from past to present, who address the environment in a critical way. Students will work on creative projects with the goal to open new avenues of dialogue between culture and nature.

ARTSTUDI 185. Interactive Storytelling. 4 Units.
This course explores strategies for crafting interactive stories. It takes students from story-teller to game designer to book maker. Through a series of narrative exercises, readings, lectures, and technical demos; students create a story-based game and a companion printed risograph zine. The story's visual and spatial structure are authored using Twine, a free online tool that lets anyone new to programming create their own interactive games in a web page. The zine will act as a guide for building the storyworld and an archive for the concepts being explored.

ARTSTUDI 230. Interdisciplinary Art Survey. 4 Units.
This course is designed to develop diversity of concepts and strategies within the student's artistic practice. The course includes a survey of artists using different media taught in the department's studio program such as painting, drawing, video and digital art, printmaking, photography, and sculpture. This seminar-style class seeks to expand the artistic practice outside of traditional media boundaries and focuses on the translation of concepts across various media. Art Practice majors and minors only. (upper level).

ARTSTUDI 231A. Interactive Art: Making it with Arduino. 4 Units.
Students use electronics and software to create kinetic and interactive elements in artwork. No prior knowledge of electronics or software is required. Students learn to program the Arduino, a small easy-to-use microprocessor control unit (see http://www.arduino.cc/). Learn to connect various sensors such as light, motion, sound and touch and use them to control software. Learn to interface actuators like motors, lights and solenoids to create movement. Learn to connect the Arduino to theMAX/MSP/Jitter programming environment to create media-intensive video and audio environments. Explore the social dimensions of electronic art. (lower level).
Same as: ARTSTUDI 130

ARTSTUDI 233. Let's Make a Monster: Critical Making. 5 Units.
Ever since Frankenstein unleashed his monster onto the world in Mary Shelley¿s novel from 1818, the notion of ¿technology-out-of-control¿ has been a constant worry of modern societies, plaguing more optimistic visions of progress and innovation with fears that modern machines harbor potentials that, once set in motion, can no longer be tamed by their human makers. In this characteristically modern myth, the act of making ¿ and especially technological making ¿ gives rise to monsters. As a cautionary tale, we are therefore entreated to look before we leap, to go slow and think critically about the possible consequences of invention before we attempt to make something radically new. However, this means of approaching the issue of human-technological relations implies a fundamental opposition between thinking and making, suggesting a split between cognition as the specifically human capacity for reflection versus a causal determinism-without-reflection that characterizes the machinic or the technical. Nevertheless, recent media theory questions this dichotomy by asserting that technologies are inseparable from humans¿ abilities to think and to act in the world, while artistic practices undo the thinking/making split more directly and materially, by taking materials ¿ including technologies ¿ as the very medium of their critical engagement with the world. Drawing on impulses from both media theory and art practice, ¿critical making¿ names a counterpart to ¿critical thinking¿ ¿ one that utilizes technologies to think about humans¿ constitutive entanglements with technology, while recognizing that insight often comes from errors, glitches, malfunctions, or even monsters. Co-taught by a practicing artist and a media theorist, this course will engage students in hands-on critical practices involving both theories and technologies. Let¿s make a monster!.
Same as: FILMSTUD 233, FILMSTUD 433

ARTSTUDI 236. Future Media, Media Archaeologies. 3-4 Units.
Hand-on. Media technologies from origins to the recent past. Students create artworks based on Victorian era discoveries and inventions, early developments in electronic media, and orphaned technologies. Research, rediscover, invent, and create devices of wonder and impossible objects. Readings in history and theory. How and what media technologies mediate.
Same as: MUSIC 236

ARTSTUDI 239. Intermedia Workshop. 3-4 Units.
Students develop and produce intermedia works. Musical and visual approaches to the conceptualisation and shaping of time-based art. Exploration of sound and image relationship. Study of a wide spectrum of audiovisual practices including experimental animation, video art, dance, performance, non-narrative forms, interactive art and installation art. Focus on works that use music/sound and image as equal partners. Limited enrollment. Prerequisites: consent of instructors, and one of FILMPROD 114, ARTSTUDI 131, 138, 167, 177, 179, or MUSIC 123, or equivalent. May be repeated for credit.
Same as: MUSIC 155, MUSIC 255

ARTSTUDI 240. Drawing II. 4 Units.
Intermediate/advanced. Observation, invention, and construction. Development of conceptual and material strategies, with attention to process and purpose. May be repeated for credit. Prerequisite: 140 or consent of instructor. (upper level).

ARTSTUDI 241A. Drawing from Life. 2-4 Units.
The subject of this course is Life as we know it, and artists at all levels will learn to communicate their questions, concerns, and perspectives on paper. The drawing process empowers students to express themselves in their already unique visual languages, while the objects will be testimonies to their personal, cultural, spiritual, and revolutionary experiences. We begin by developing or refining students' fundamental techniques through indoor and outdoor observational drawing. Our focus shifts toward representational and conceptual strategies for storytelling that reference students¿ archives, popularized content, literature, historical references and more. Through drawing, we discuss and examine a diverse range of contemporary art to address the legacy of visual art. All preparation must be done between class meetings, and all artworks will be made during class to maximize the studio art-making experience.
Same as: ARTSTUDI 141A

ARTSTUDI 242. Drawing and Creative Writing. 4 Units.
This class integrates drawing and the written word through a mix of hands-on drawing studio time and writing workshops. We will create drawings that integrate text and create texts inspired by drawings. We will also study and take inspiration from literature and art that plays with images and the written word. In the process, we will come up with experiments for what to do with images and words, for how to poach them, cross-pollinate them, orchestrate them, distill them, resist them or unflatten them.nPrerequisite: Drawing 1 or permission of instructor.

ARTSTUDI 243. Anatomy for Artists. 3 Units.
Lectures highlight the intersections and influences between human anatomy and art. Studio sessions provide an opportunity for students to immerse in anatomically inspired studio projects. Drawing, mixed media, and some painting mediums will be used during the studio sessions. Plastic models, dry bones, cadaveric specimens, and live models will be used for the studio sessions. Class time includes art instruction, creation and feedback. May be repeated for credit. Honing individual style is encouraged; both beginning and advanced students are welcome.
Same as: SURG 243

ARTSTUDI 244. Advance Figure Drawing. 4 Units.
Figurative depiction is explored across a wide range of media and techniques. Throughout the quarter, artist and figure are explored as subject/object, metaphor, player, and director. Beginning with traditional approaches across various media (graphite and charcoal, ink/brush, soft and oil pastels, mixed media), we move into various methods of distortion. Using both live models and our own bodies, performance and depictive strategies are employed to create work which examines identity and power relationships. In the final two weeks, we have two live models working together. Work will excise/reassemble found and staged images, juxtaposing figures, creating tension and implied narratives in space. Four outside projects push skills and concept, amplifying each artist¿s hand and voice.nnPrerequisite: Drawing 1 or instructor approval.

ARTSTUDI 245. Painting II. 4 Units.
Symbolic, narrative, and representational self-portraits. Introduction to the pictorial strategies, painting methods, and psychological imperatives of Dürer, Rembrandt, Cézanne, Kahlo, Beckmann, Schiele, and Munch. Students paint from life, memory, reproductions, and objects of personal significance to create a world in which they describe themselves. May be repeated for credit. Prerequisites: 140, 145, or consent of instructor. (upper level).

ARTSTUDI 246. Individual Work: Drawing and Painting. 1-5 Unit.
Prerequisite: student must have taken a course with the instructor and/or completed relevant introductory studio course(s). Instructor consent and completion of the Independent Study Form are required prior to enrollment. All necessary forms are required by the end of Week 2 of each quarter. Please contact the Student Services Specialist in McMurtry 108 for more information. May be repeated for credit.

ARTSTUDI 247. Collage. 4 Units.
Collage has influenced painting and drawing practices, as well as film and photography through juxtaposition, scale shifts, and reappropriation of the found image. Although many iconic works in this medium date to the 20th century, this course focuses on collage as a vibrant, contemporary form. nnLectures on artists using collage with new vigor. Studio component focused on experimentation and exploration. Student work is encouraged to speak to personal, aesthetic, or political concerns, using findings from magazines, advertisements, internet, and other sources. Working with Photoshop, scans and with print, we will use collage elements to create new and stunning compositions of contemporary life.nnPrerequisites: 140, 145, or consent of instructor. (upper level). May be repeated for credit.

ARTSTUDI 247A. Art Book Object. 4 Units.
This mixed introductory and upper level studio course explores contemporary aesthetic interpretations of the book as an art object. Students learn to use both traditional and digital tools and techniques for creating artists' books, and integrate those into final works of art. The course familiarizes students with basic bookbinding processes and forms, as well as various modes of printing and production that facilitate limited artist editions. In addition to making books, we view numerous artists' books in the Bowes Art & Architecture Library collection as well as the collection of the instructor, and meet with practicing artists and book makers. Students create a number of small books, each focused on a particular process but using content of their choice. Upper level students propose and create a more fully evolved final project involving at least one bookbinding process independently researched in consultation with the instructor.
Same as: ARTSTUDI 147

ARTSTUDI 248P. The Hybrid Print. 4 Units.
This class explores experimental printmaking methods where digital and traditional practices collide. It focuses on the interchange between conventional and new methods of printmaking, and possibilities for the print beyond paper and the flat picture plane in contemporary art. Techniques will be demonstrated in class, and students will pursue projects using these techniques, developing their own conceptual interests. We will explore digital processes using large format printers, as well as digitally augmented traditional printmaking methods such as monoprints, collographs, woodblock and linocut, aided by dye sublimation, vinyl cutting, and 3-d printing. Students will have access to a wide array of both digital and traditional tools, and will develop projects using a combination of methods, resulting in a body of work. Discussions will address the expansive nature of contemporary fine art printmaking.
Same as: ARTSTUDI 148P

ARTSTUDI 249. Advanced Undergraduate Seminar. 3-4 Units.
This course aims to prepare senior Art Practice majors for future artistic careers by developing rigorous practice and critical research and presentation skills. Class engagement includes informal discussions, written reflections, and critiques with professionals in the field. Students will create meaningful work for the Senior Art Exhibition and generate further opportunities for themselves in project funding, residencies, exhibitions, commissions, and graduate education.nnCourse for Art Practice majors only. Art Practice minors may interview for possible inclusion. (upper level).

ARTSTUDI 250. Individual Work: Sculpture. 1-5 Unit.
Prerequisite: student must have taken a course with the instructor and/or completed relevant introductory studio course(s). Instructor consent and completion of the Independent Study Form are required prior to enrollment. All necessary forms are required by the end of Week 2 of each quarter. Please contact the Student Services Specialist in McMurtry 108 for more information. May be repeated for credit.

ARTSTUDI 252. Sculpture II. 4 Units.
Builds upon 151. Installation and non-studio pieces. Impact of material and technique upon form and content; the physical and expressive possibilities of diverse materials. Historical and contemporary forming methods provide a theoretical basis for the studio work. Field trips; guest lecturers. (upper level).

ARTSTUDI 254. Kinetic Sculpture. 3-4 Units.
This course is focused on developing a practical, hands on understanding of kinetic mechanisms applied to objects and materials in sculpture and installation. Class time will take the form of lectures and technical demos, and hands-on labs where you will be exposed to different strategies for making movement in the physical world. Topics investigated include Rube Goldberg machines, devices of wonder, interactivity, audience experience and participation.

ARTSTUDI 255. Sonic Crossroads. 4 Units.
Through the history of music, sound art, acoustic ecology, literature, film, visual arts and performance, this course will examine the territory where sound meets space, sight, symbol, ritual, activism, self consciousness and language. Students will engage in conversations, experiments and exercises that will enhance their awareness of the sonic phenomena and the ¿time canvas¿ as a space of creation and communication.

ARTSTUDI 256. Advanced Installation. 4 Units.
This hands on studio based sculpture course focuses on developing concepts, and creating a site-specific installation art project.
This class will addresses the impact of material and technique upon form and content; therefore understanding the physical and expressive possibilities of diverse materials. Conceptual and technical considerations will be addressed. Students will learn traditional building techniques as needed (wood shop, metal shop, mold making, found object) as well as anti-object techniques. Students will make 3-4 projects that will culminate in a final site-specific installation. We will look at contemporary artists working in the field of installation art. Group discussions, critiques, readings, video presentations, field trips and visiting artists will augment the class. Installation Art is based on the merger of Space and Time and on a relationship between the artist and the visitor. Utilizing your interests and abilities in a variety of subjects and media, you will create environments that immerse the viewer in a sensory/ intellectual/ emotional experience. The material and methods you use can range from everyday objects, to highly personalized forms, from appropriated sounds to surveillance video, from large wall drawings to interactive switches for the participant to manipulate. The class will consist of demonstrations of art skills particularly useful in installation (sculptural, video, audio, interactive media, etc), presentations by the professor, research and reports and journal entries, and weekly critique. Installation Art is a pervasive, varied, global practice for art-making that acts as a gathering place for expression in all media addressing all subjects in a wide range of styles by broad grouping of artists.".

ARTSTUDI 256V. Vital Signs: Performance in the 21st Century. 1 Unit.
The first decade and a half of the 21st century have been transformative for performance art. On the one hand, it brought an unprecedented cultural acceptance of this art form, which is now featured in most prestigious museums and art festivals; on the other, the most recent generation of performance artists is showing a great awareness of the historicity and complexity of this form. In this class, we will try to recognize and investigate these and other prominent features of performance art produced since the turn of the millennium. We will use as our primary case studies performances that will be featured in the series Vital Signs: Contemporary Performance Art Series, hosted by TAPS in 2017-2018. The primary objective of the series is to highlight and showcase underrepresented performance forms such as experimental performance art, durational art, and body art, among others, by artists from communities that remain invisible or underrepresented in mainstream performing arts. The series is curated by the Los Angeles-based artist Cassils, who has been listed by the Huffington Post as 'one of ten transgender artists who are changing the landscape of contemporary art' and has achieved international recognition for a rigorous engagement with the body as a form of social sculpture. Cassils's curatorial vision is to present established performance artists alongside emerging artists. Each quarter, a pair of artists will visit Stanford for two days (Thursday-Friday). On day one of their visit they will offer a workshop or a public performance, and on the second day they will engage in a public dialogue. The class will meet each quarter for three weeks: before, during, and after the artists' visit. This way, the students will have an opportunity to prepare for the visit, engage with the visiting artists, and reflect on their work. They will receive their grades upon completion of the class, in the spring of 2018.
Same as: TAPS 156V, TAPS 256V

ARTSTUDI 257. Advanced Sculpture Seminar. 1-5 Unit.
Students engage in professional sculpture (studio) practices that prepare them to apply and extend the skills, methods and techniques they have learned in previous courses, including technical and conceptual skills in woodworking, metal working, mold making, and other sculptural production. These practices involve working collaboratively, taking on short-term projects, handling an increased sculpture work flow, actively participating in regular critiques, and contributing to and showing work in a small final exhibition. Students refine their aesthetic, tap the interdisciplinary network of influences they have built, and work independently to become adept at presenting their ideas and building a portfolio to show the art they have produced to potential clients in a 'real world' professional context. Anyone interested in taking this class should apply with a project in mind that they aim to develop over the length of the course. Since these projects will require a considerable amount of independent work outside class time, students should submit a 1-to-2-page description outlining what they want to focus on and a portfolio featuring some images of work they have already created in that realm. Upon careful evaluation, students with the strongest proposals will be selected. This course may be repeated for credit.

ARTSTUDI 258. Resisting Monuments at the End of the World. 4 Units.
This hands-on contemporary art class explores falling monuments and rising memorials around the world. Departing from individualistic hero narratives of traditional monuments we address collective agency and new forms of shared power. Students make models and sculptures of reimagined anti-monuments through weekly assignments. Classes require reading, discussing, making artwork for critiques, and include lectures, artist examples, and guest artists.

ARTSTUDI 261. Individual Work: Emerging Practices in Design & Technology. 1-5 Unit.
Prerequisite: student must have taken a course with the instructor and/or completed relevant introductory studio course(s). Instructor consent and completion of the Independent Study Form are required prior to enrollment. All necessary forms are required by the end of Week 2 of each quarter. Please contact the Student Services Specialist in McMurtry 108 for more information. May be repeated for credit.

ARTSTUDI 262. Performing with Digital Media. 4 Units.
This interdisciplinary studio course will explore time-based media through the practice of live visual performance with an emphasis on digital means of production. Through a series of individual and collaborative assignments, students will learn to utilize software and sensors as a means of controlling and manipulating moving imagery in a performative context. Art historical references of animation, video art, installation, and audio/visual performance will guide conceptual frameworks for class instruction, lectures, and projects. No previous experience is required.

ARTSTUDI 264. Advanced Interaction Design. 4 Units.
This upper level studio course will continue and create a sustained investigation into designed interactivity in real space. Students will create interactive installations, or public interventions using sensors or other computational devices. Prerequisites include one of the following - Embodied Interfaces, Media Archaeologies, Making it with Arduino, Digital Art 1, Electronic Art or permission of instructor.

ARTSTUDI 266. Sculptural Screens / Malleable Media. 4 Units.
In this mixed intro and upper level studio course, students will experiment with video and computational outputs embedded in physical scenarios. What new physical formats are made possible by contemporary screen and projection-mapping technologies? How can we make expressive use of LCD screens, pico projectors, i-pad arrays, and LEDs? The class will address the screen as sculptural medium by examining established artists like Nam June Paik, Michael Snow, Tony Oursler, and Pippilotti Rist, as well as exploring emerging contemporary artists tackling this medium. Prerequisites to take the class at the 266 upper level include one of the following: Intro to Digital/Physical Design, Embodied Interfaces, Media Archaeologies, Making it with Arduino, Digital Art 1, Electronic Art or permission of instructor. The intro level 166 course can be taken with no prerequisites.
Same as: ARTSTUDI 166

ARTSTUDI 267. Emerging Technology Studio. 4 Units.
This course is an upper level studio course featuring a different guest artist each year whose artwork makes use of emerging technologies. Course material will be based on the guest artist's area of expertise. Past examples include artists whose work focuses on Data Visualization, Live Digital Performance and Virtual Reality. Prerequisites are determined by the subject matter, and course enrollment is decided by the instructor on the first day of class. Please attend the first class for admission. For spring 2020, Emerging Technology Studio will be taught by Veronica Graham (www.vagraham.com) on the topic of ¿World Building - inside and outside of Virtual Reality¿. Each week the course will focus on a different aspect of building a world, with an emphasis on crafting narratives that connect the virtual environment with a physical space. Veronica Graham is a new media artist and printmaker whose work spans comics, sculpture, and VR artworks. Inspired by today's rapidly changing environment, she sees her art practice as a form of world building. Each of her works is the creation of place or artifact, calling attention to how fiction is woven into our reality.

ARTSTUDI 270. Advanced Photography Seminar. 4 Units.
Students interested in taking this class should apply with a project proposal they aim to develop over the length of the course. Since these projects require a considerable amount of independent work outside of class time, each student must submit a 1-to-2-page description outlining the subject they want to focus on, and a portfolio featuring some images of work they have already created in that realm. Upon careful evaluation, students with the strongest proposals will be selected. At the beginning of the course, all students will be provided with the necessary equipment and tools of support needed to execute their projects. The culmination of the course will be a carefully prepared final showing of work through different media - exhibition, print, virtual format - that each require their own specific lay-out and mode of presentation. This course may be repeated for credit.nnPrerequisite: ARTSTUDI 277 or equivalent.

ARTSTUDI 270A. CREATING EXPERIMENTAL CINEMA. 4 Units.
This course is dedicated to creating at the crossroads of art and cinema. This experimental video art course will address practical filmmaking, taking as its baseline assumption the notion that experimentation is crucial to overcoming encrusted social, aesthetic, intellectual, and ideological norms. Over the course of the quarter, students will build familiarity with the the myriad components of cinematic creation, including directing, editing, camera operation, lighting, sound design, After Effects and color grading. They will create cinematic video informed by viewing and discussion of key works from the history of experimental cinema.No prerequisite required.

ARTSTUDI 271. The View Camera. 4 Units.
Students will learn how to use large-format 4x5 view cameras, and explore the ways in which large-format photography enables the creation of exceptionally clear images on a par with digital imaging. They will develop sheet film and print black-and-white images in analog format. To connect the camera to contemporary digital practices students will learn to scan and digitally print from their negatives. Specific attention will be given to mastering perspective control and in-camera manipulation of the image. From a historical point of view, the course will analyze and discuss images created with view cameras by a wide range of artists from the early days of photography to the present. Students will put their skills into practice and pursue their own aesthetic by producing a portfolio of images. Prerequisite: ARTSTUDI 170, ARTSTUDI 171, or equivalent.

ARTSTUDI 271A. Intermediate Photography: Home as Studio Space. 4 Units.
This course investigates ideas of home as a creative art studio space. Students are encouraged to actively engage with various modes of conceptual experimentation by considering home as a site for creative liberation instead of confinement. Considering the current social order regarding shelter-in-place and lockdown protocols, students will move beyond exercises of observing and seeing to purposely engage in acts of photographic creation. While taking full advantage of what is available at home, students will be asked to respond to the current moment by following a range of photographic assignments. This is an intermediate course in photography, with an ongoing emphasis on operating manual camera settings (focus, aperture, shutter speed, ISO, color temp/ white balance). Students continue to work with Lightroom as a file management system, are introduced to Photoshop, and focus on the importance of photo editing/selection and sequencing.nnPrerequisite: ARTSTUDI 170 or ARTSTUDI 171 or ARTSTUDI 173E or equivalent.

ARTSTUDI 271B. Intermediate Photography: Composite and Time. 4 Units.
This course introduces students to the use of several techniques and methodologies that combine multiple images into a single composite photograph. Students develop skills to pre-visualize and plan the work they envision through high definition range capture, panoramic stitching, and focus stacking. They explore the nature and concept of Time in photographic imagery through various techniques, such as creating more than one timescale into an image, `recreating¿ one time in another, building the representation of time into a work, and visualizing passing time in the process of making work. This is an intermediate course in photography, with an ongoing emphasis on operating manual camera settings (focus, aperture, shutter speed, ISO, color temp/ white balance). Students continue to work with Lightroom as a file management system, are introduced to Photoshop, and focus on the importance of photo editing/selection and sequencing. Prerequisite: ARTSTUDI 170 or ARTSTUDI 171 or ARTSTUDI 173E or equivalent.

ARTSTUDI 271C. Intermediate Photography: Performance. 4 Units.
This course introduces students to the role performance can play in a lens-based practice, centered in the belief that art can be defined through gesture as well as object. We study the work of various prominent artists to gauge their influence and to deepen our understanding of the ways in which photography can constitute performance as a conceptual exercise. Assignments and projects guide us to consider the relationship between body and lens, action and documentation, motion and stillness. This is an intermediate course in photography, with an ongoing emphasis on operating manual camera settings (focus, aperture, shutter speed, ISO, color temp/ white balance). Students continue to work with Lightroom as a file management system, are introduced to Photoshop, and focus on the importance of photo editing/selection and sequencing. Prerequisite: ARTSTUDI 170 or ARTSTUDI 171 or ARTSTUDI 173E or equivalent.

ARTSTUDI 271D. Intermediate Photography: Constructed Image. 4 Units.
This course begins with the idea that all photographs are constructed. Students explore conceptual photographic practices through the frame of images as constructs, examining the various choices and expanded practices involved in the process of creating a photograph. Students are introduced to contemporary topics, historical positions, and examinations of various studio practices. Students examine different means of constructing representations of reality, building images and building spaces, within systems of making. This is an intermediate course in photography, with an ongoing emphasis on operating manual camera settings (focus, aperture, shutter speed, ISO, color temp/ white balance). Students continue to work with Lightroom as a file management system, are introduced to Photoshop, and focus on the importance of photo editing/selection and sequencing. Prerequisite: ARTSTUDI 170 or ARTSTUDI 171 or ARTSTUDI 173E or equivalent.

ARTSTUDI 271E. Intermediate Photography: New Landscapes. 4 Units.
This course investigates notions of landscape photography by expanding upon its traditional, geography-based paradigm of pictorial beauty. Students explore how the perception and representation of landscapes relate to physical and cognitive mapping, as well as engagements with myth and memory, in order to visualize how we experience and imagine the spaces that extend around us. They develop technical processes that allow them to intervene in landscapes, such as altering their appearance within the camera in post-production, manipulating the construction of existing places, or building installations in public spaces. This is an intermediate course in photography, with an ongoing emphasis on operating manual camera settings (focus, aperture, shutter speed, ISO, color temp/ white balance). Students continue to work with Lightroom as a file management system, are introduced to Photoshop, and focus on the importance of photo editing/selection and sequencing. Prerequisite: ARTSTUDI 170 or ARTSTUDI 171 or ARTSTUDI 173E or equivalent.

ARTSTUDI 272. Individual Work: Photography. 1-5 Unit.
Prerequisite: student must have taken a course with the instructor and/or completed relevant introductory studio course(s). Instructor consent and completion of the Independent Study Form are required prior to enrollment. All necessary forms are required by the end of Week 2 of each quarter. Please contact the Student Services Specialist in McMurtry 108 for more information. May be repeated for credit.

ARTSTUDI 273. Individual Work: Experimental Media. 1-5 Unit.
Prerequisite: student must have taken a course with the instructor and/or completed relevant introductory studio course(s). Instructor consent and completion of the Independent Study Form are required prior to enrollment. All necessary forms are required by the end of Week 2 of each quarter. Please contact the Student Services Specialist in McMurtry 108 for more information. May be repeated for credit.

ARTSTUDI 275. Photography II: Digital. 4 Units.
Students continue to use DLSR cameras, with an ongoing emphasis on operating manual settings (focus, aperture, shutter speed, ISO, color temp/ white balance). They are taught intermediate-level digital printing (in color) using large-format printers. They continue to work with Lightroom as a file management system and are introduced to Photoshop. Students gain a deeper insight into and stronger grasp of practices in contemporary digital photography, with a continuing focus on the importance of photo editing/selection and sequencing, as well as questions around the conceptual and practical implications and limits of photographic images. Prerequisite: ARTSTUDI 171 or equivalent. May be repeat for credit.

ARTSTUDI 276. The Photographic Book. 4 Units.
This course explores the historical development and artistic potential of photography books. Students will learn about book structures, signatures, binding styles, printing methods and publication platforms (from conventional print to web-based). They will focus on how to group and sequence photographic images to produce a coherent, thematically organized body of work, and examine the creative possibilities of integrating image and text. Students will have access to numerous campus resources to do research and develop ideas, including the extensive photo book collections of the Bowes Art & Architecture Library and the Cantor Museum. They will have to execute a photographic project of their own design and produce a hand-made book. Prerequisite: ARTSTUDI 170, ARTSTUDI 171, or equivalent.

ARTSTUDI 277. Intermediate Photography Seminar. 4 Units.
Students engage in professional photographic practices that prepare them to apply and expand upon the skills, methods and techniques they have learned in previous courses. They explore different themes in photography and take an in-depth look at the creative process of artists whose visions are based on the development of projects and bodies of work over an extended period of time. Students learn to refine their aesthetic over time by developing three such projects of their own, which involve significant independent work and active participation in critiques, with the goal of becoming adept at presenting their ideas and building a portfolio to show their work in a professional context. Students provide their own photographic equipment, will be provided with software and introduced to tools of support that will help them to more effectively execute their projects. This course may be repeated for credit.nnPrerequisite: Students should have taken at least three 200 level Intermediate Photography Topics Classes prior to enrolling in this Seminar or equivalent.

ARTSTUDI 277A. Video Art II. 4 Units.
Video, criticism, and contemporary media theory investigating the time image. Students create experimental video works, addressing the integration of video with traditional art media such as sculpture and painting. Non-linearity made possible by Internet and DVD-based video. No prerequisite required.

ARTSTUDI 278. Photography II: Black and White. 4 Units.
Students are introduced to and provided with medium-format film cameras, which they learn to use with an ongoing emphasis on operating manual settings (focus, aperture, shutter speed). Students are introduced to metering for film using hand-held light meters in a further study of light. They hone their printing skills and learn finer printing techniques using fiber-based paper. They also explore the full range of black and film stocks and get to experiment with alternative techniques like pinhole photography, photograms and Holga cameras. Students gain a deeper insight into and stronger grasp of practices in contemporary black and white photography, with a continuing focus on the importance of photo editing/selection and sequencing, as well as questions around the conceptual and practical implications and limits of photographic images. Prerequisite: ARTSTUDI 170 or equivalent.

ARTSTUDI 279. Photo III B/W. 4 Units.
TBD.

ARTSTUDI 284. Art and Biology. 4 Units.
The relationship between biology and art. Rather than how art has assisted the biological sciences as in medical illustration, focus is on how biology has influenced art making practice. New technologies and experimental directions, historical shifts in artists' relationship to the living world, the effects of research methods on the development of theory, and changing conceptions of biology and life. Projects address these themes and others that emerge from class discussions and presentations. (upper level).

ARTSTUDI 286. Intermediate Photography: Portraiture. 4 Units.
This course explores contemporary practices of portrait photography, examining its history and discourse on representations of race, gender, class, and sexuality. We look at the complexities of portraiture in terms of skill sets and processes, aesthetics and styles, ideology and identity, while engaging with such dualities as private/public, professional/amateur, and traditional/innovative. At a time when pictures are being produced and disseminated in unprecedented proliferation, we look into the pursuit of constructing meaning beyond pose and persona. This is an intermediate course in photography, with an ongoing emphasis on operating manual camera settings (focus, aperture, shutter speed, ISO, color temp/ white balance). Students continue to work with Lightroom as a file management system, are introduced to Photoshop, and focus on the importance of photo editing/selection and sequencing. Prerequisite: ARTSTUDI 170 or ARTSTUDI 171 or ARTSTUDI 173E or equivalent.

ARTSTUDI 287. Animation II. 4 Units.
This course expands upon techniques and storytelling methods learned in Animation I. We continue to survey the field of independent animation primarily through short films and other social digital platforms. As our media consumption is increasingly comprised of videos ranging from a few seconds to 'longer' formats such as 10 minutes, the ability to generate and manipulate sound, image, and time for personal expression is more relevant than ever. This interdisciplinary knowledge is to be expanded upon over a lifetime in settings such as the artist¿s studio and applied fields such as AR/VR and user interfaces. Projects will concentrate on visual style (abstract to representational), storytelling, and personal expression. Emphasis will be placed on storyboarding to produce cohesive visual statements. Experimentation strongly encouraged. This is NOT an Anime class.

ARTSTUDI 288. Intermediate Photography: Documentary. 4 Units.
The documentary image has constituted a keystone of the photographic medium since the earliest days of its existence. In this class, we approach documentary photography from a contemporary perspective and in a context of active engagement with the world we inhabit. What do the ethics and aesthetics of documenting reality involve in an era when the instant representation of ourselves and our environment has become routine daily procedure? How can today's visual documentarian meet the challenge of creating work that meaningfully and critically relates to the complex global issues and struggles defining the current historical moment? This is an intermediate course in photography, with an ongoing emphasis on operating manual camera settings (focus, aperture, shutter speed, ISO, color temp/ white balance). Students continue to work with Lightroom as a file management system, are introduced to Photoshop, and focus on the importance of photo editing/selection and sequencing. Prerequisite: ARTSTUDI 170 or ARTSTUDI 171 or ARTSTUDI 173E or equivalent.

ARTSTUDI 290. Curricular Practical Training. 1-3 Unit.
CPT course required for international students completing degree.

ARTSTUDI 295. Visual Arts Internship. 1-4 Unit.
Professional experience in a field related to the Visual Arts for six to ten weeks. Internships may include work for galleries, museums, art centers, and art publications. Students arrange the internship, provide a confirmation letter from the hosting institution, and must receive consent from the faculty coordinator to enroll in units. To supplement the internship students maintain a journal. Evaluations from the student and the supervisor, together with the journal, are submitted at the end of the internship. Restricted to declared majors and minors. May be repeated for credit.

ARTSTUDI 297. Honors Thesis Exhibition. 2 Units.
May be repeated for credit.

ARTSTUDI 297S. AP HONORS SEMINAR. 1-2 Unit.
Led by the Director of Undergraduate Studies in Art Practice, the Honors Seminar provides students the opportunity to create projects for the honors exhibition and complete the written thesis under the guidance of faculty advisors, and assisted with MFA mentors as well as guest critiques from art world professionals. It is geared towards developing a professional practice in the field of fine art.

ARTSTUDI 310A. Directed Reading: Studio. 1-15 Unit.
.

ARTSTUDI 310B. Directed Reading: Studio. 1-15 Unit.
.

ARTSTUDI 310C. Directed Reading: Studio. 1-15 Unit.
.

ARTSTUDI 342. MFA Project: Tutorial. 1-15 Unit.
Students construct an individual tutorial with an instructor selected from the studio art faculty, including visiting artists. The student must take tutorials with at least three different faculty members during the six-quarter program. Prior approval of advisor is required.

ARTSTUDI 342A. MFA: Object Seminar. 1-15 Unit.
Weekly seminars, studio practice, and individual tutorials. Student work is critiqued on issues of identity, presentation, and the development of coherent critical language. May be repeated for credit. Restricted to M.F.A. studio students only.

ARTSTUDI 342B. MFA: Concept Seminar. 1-15 Unit.
Weekly seminars, studio practice, and individual tutorials. Modes of conceptualization to broaden the base of cognitive and generative processes. May be repeated for credit. Restricted to M.F.A. studio students only.

ARTSTUDI 342C. M.F.A Seminar. 1-15 Unit.
Professional practices; preparation of documentation; exhibition and presentation. Restricted to M.F.A. studio students only. May be repeat for credit total units allowed 45 and total completion 6.

ARTSTUDI 350A. Art & Design I: History and Theory. 3 Units.
This two part graduate level course is required for all first year JPD students (both MFA and ME students), and open to all MFA Art Practice students. The first quarter of the course is a seminar, which focuses on the history of design practices and theories in a broad range of fields including design, art, and architecture. We will examine how well known concepts such as "The Bauhaus", "the designer", "Design Thinking", and metaphors such as "workshop", "school", "laboratory", "studio", or "post-studio" arise, and how they shape the artist or designer's work in a particular cultural context. Through reading, writing, and discussion, students will attempt to define their current position within a historical context and chart their future vision. The course may involve guest lectures and visits to various collections and archives.

ARTSTUDI 350B. Art & Design II: Personal Practice. 3 Units.
This two part graduate level course is required for all first year JPD students (both MFA and ME students), and open to all MFA Art Practice students. The second quarter of the course is a studio class, which examines our personal relationships to various creative processes (technical, procedural, and conceptual). Our goal is to gain new insights into our creative processes and find new possibilities within our available working methods. We will investigate issues such as constraint, iteration, collaboration, delegation, daily practice, and tools. Assignments such as "handmade-readymade-fablab" will challenge students to work with various processes and conceptual frameworks within single projects. The course will include four major projects, many minor studio exercises, readings, and discussion.

ARTSTUDI 360A. Design Masters Project I. 4 Units.
This two part graduate level seminar and studio course is required for second year JPD MFA students, and open to second year JPD ME students and all MFA art practice students. The first quarter of this course examines artists as contextually engaged problem solvers and provocateurs. What strategies have artists used to draw attention to, and drive change regarding issues they care about? How is art used to change habits, shift the directions of cultural discussions, and make the invisible visible? We will study artists and designers who use innovative techniques to these ends such as Merle Ukeles, Krzysztof Wodiczko, Eduardo Kac, Jon Rubin, Amy Franceschini, Alfredo Jaar, Stamen Design (cab spotting), and Rebar. In addition to readings and discussions, students will create and critique a series of four studio projects that engage participants to rethink a specific site or situation.

ARTSTUDI 360B. Design Masters Project II. 4 Units.
This two part graduate level seminar and studio course is required for second year JPD MFA students, and open to second year JPD ME students and all MFA art practice students. In this second quarter of the course, students will refine and expand one of their assignments from Sites/Situations I to create a completed site-specific installation, intervention, or product/object, which provokes discussion or change in our community. Works will be realized at various sites around campus, or in the community at large. Issues such as budget, public safety and code will be addressed. Time will be allotted for documentation, critique, and assessment of these projects.

ARTSTUDI 360C. Master's Project: Design. 2-4 Units.
Students enroll concurrently in ME 316. Over the course of the year, students create and present two master's theses involving the synthesis of aesthetics and technological concerns in the service of human need and possibility.

ARTSTUDI 361. MFA First Year Seminar: Context. 1-15 Unit.
tbd.

ARTSTUDI 390. Curricular Practical Training. 1-3 Unit.
CPT course required for international students completing degree.

ARTSTUDI 801. TGR Project. 0 Units.
.

Film Production Courses

FILMPROD 101. Screen Writing I: Visual Writing. 5 Units.
A writing workshop that is an exploration of visual storytelling. Beginning with visual literacy, the class progresses from basic cinematic techniques through scene exercises to revisions and ultimately to connecting scenes in order to build sequences of script pages. Open to all majors; may substitute for ENGL 190F prerequisite for FP104.

FILMPROD 101T. Writing the Television Pilot. 5 Units.
A writing workshop in which students are introduced to the basic structures and genre of television pilots and to writing within the screenwriting/television writing form. Students will develop, outline, and workshop their own original pilot episode and series bible. Serves as a prerequisite for FP104 Intermediate Screenwriting. Enrollment by decision of instructor. nnStudents interested in applying need to email Adam Tobin (adtobin@stanford.edu) by the end of fall quarter for a link to the course application.

FILMPROD 103. Adaptation. 4 Units.
A close analysis of film adaptation, using various source materials to examine the demands form makes on content and the creative choices made in adaptation to film. Source materials will include plays, fiction, biography, history, graphic novels, and reference to video games and amusement park rides. A weekly film screening is a requirement of the course.

FILMPROD 104. Screenwriting II: Intermediate Screenwriting. 5 Units.
Priority to Film and Media Studies majors and minors, and seniors. Craft, form, and approaches to writing for the screen. Students will write, workshop and rewrite the first act of a feature screenplay and create rough outline material for the rest of the film. Prerequisites: FP101, FP101T or ENGL190F and consent of the instructor.

FILMPROD 105. Script Analysis. 4 Units.
Analysis of screenplay, film, and television from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings.
Same as: FILMPROD 305

FILMPROD 106. Image and Sound: Filmmaking for the Digital Age. 3 Units.
Despite the rise of emerging forms like two-minute YouTube videos, six second Vines, or interactive storytelling modules, many core principles of visual storytelling remain unchanged. In this hands-on film production class students will learn a broad set of filmmaking fundamentals (basic history, theory, and practice) and will apply them creating film projects using tools such as iPhones, consumer cameras and FCPX.

FILMPROD 106S. Image and Sound: Filmmaking for the Digital Age. 3 Units.
Despite the rise of emerging forms like two-minute YouTube videos, six second Vines, or interactive storytelling modules, many core principles of visual storytelling remain unchanged. In this hands-on film production class students will learn a broad set of filmmaking fundamentals (basic history, theory, and practice) and will apply them creating film projects using tools such as iPhones, consumer cameras and FCPX.

FILMPROD 110. Screen Writing III: Advanced Screenwriting. 5 Units.
Advanced writing workshop in which students develop and complete a feature-length screenplay. Prerequisites: FP101 Screenwriting and approval of the instructor. Enrollment is limited.

FILMPROD 114. Introduction to Film and Video Production. 5 Units.
Hands-on. Techniques of film and video making including conceptualization, visualization, story structure, cinematography, sound recording, and editing. Enrollment limited to 12 students. Priority to junior/senior Film & Media Studies majors.Admission determined on the first day of class.

FILMPROD 115. Immersive Cinema: Experiments in Virtual Reality. 4 Units.
In this exploratory workshop, students will use a variety of tools (360 video/ VR cameras and binaural sound design, digital video, and traditional sound recorders) to tell immersive "stories". Students will use the conceptual framework of experimental cinema and documentary film to inform their work, while also pushing toward a new artistic language in the still-emerging form of VR storytelling. Over the course of the quarter, students will work in teams to create a series of short immersive pieces with an emphasis on experimentation. The class has no prerequisites and is open to all students.

FILMPROD 116. Script to Screen. 5 Units.
Script to Screen is a hybrid writing/production course that guides students through a series of narrative film exercises. Students will write and workshop scripts for short fiction films, and then, by filming them, learn to apply the fundamentals of digital video production. Initial classwork will include visual writing exercises, DSLR cinematography instruction, script work, and basic fiction film production and post-production. Priority goes to film studies majors.nnStudents interested in applying need to email Professor Meltzer (jmelt@stanford.edu) by the end of fall quarter for a link to the course application.

FILMPROD 117. Advanced Video Production. 5 Units.
This course introduces the fundamentals of digital video production. Special emphasis is placed on the development of interview and observational sync-sound filming techniques. Students acquire hands-on experience in shooting, sound recording, lighting, and editing. Critiques of creative work emphasizes the conceptual, aesthetic, and technical aspects of digital video production. Prerequisite: Filmprod 114 or Filmprod 10AX.

FILMPROD 121. New York Films. 5 Units.
This course will be taught at Stanford in New York in winter quarter.

FILMPROD 148. Archival Cinema: Excavating the Future. 4 Units.
This course examines the practices of appropriation of archival material in cinema, and the problems of representation inherent to them. The practical component consists of a series of creative assignments in which students are asked to use archival material, including some from Stanford's collections, to produce short moving image pieces.
Same as: FILMPROD 348, FILMSTUD 148, FILMSTUD 348

FILMPROD 305. Script Analysis. 4 Units.
Analysis of screenplay, film, and television from the writer's perspective, with focus on ideation, structure, and dramatic tension in narrative features. Sources include screenplays and screenings.
Same as: FILMPROD 105

FILMPROD 348. Archival Cinema: Excavating the Future. 4 Units.
This course examines the practices of appropriation of archival material in cinema, and the problems of representation inherent to them. The practical component consists of a series of creative assignments in which students are asked to use archival material, including some from Stanford's collections, to produce short moving image pieces.
Same as: FILMPROD 148, FILMSTUD 148, FILMSTUD 348

FILMPROD 400. Film/Video Writing and Directing. 3 Units.
Restricted to M.F.A. documentary students. Emphasis is on the development of the research, conceptualization, visualization, and preproduction skills required for nonfiction filmmaking. Prerequisite: consent of instructor.

FILMPROD 401. Nonfiction Film Production. 3 Units.
Restricted to M.F.A documentary students. 16mm production techniques and concepts. Multiple short exercises and a final project with multitrack sound design. Enrollment limited to students in MFA Documentary Film Program. Prerequisite: consent of instructor.

FILMPROD 402. Digital Video. 4 Units.
Restricted to M.F.A. documentary students. Fundamentals of digital storytelling. Working with small format cameras, interviewing techniques, and nonlinear editing skills. Prerequisite: consent of instructor.

FILMPROD 403. Advanced Documentary Directing. 3 Units.
Restricted to M.F.A. documentary students. Further examination of structure, emphasizing writing and directing nonfiction film. Prerequisite: consent of instructor.

FILMPROD 404. Advanced Video Production. 3 Units.
Restricted to M.F.A. documentary students. Techniques of visual storytelling and observational shooting. Final quarter of professional training in documentary video production. Prerequisite: consent of instructor.

FILMPROD 405. Producing Practicum: The Non-Fiction Film. 4 Units.
Restricted to M.F.A. documentary students. Advanced producing principles through the preproduction of the M.F.A. thesis project, including development of a professional film proposal. Practical training in fundraising. Prerequisite: consent of instructor.

FILMPROD 406A. Documentary M.F.A. Thesis Seminar I. 5 Units.
Restricted to M.F.A. documentary students. Production of film or video project. Focus is on shooting strategies, ethical challenges, and practical production issues. Prerequisite: consent of instructor.

FILMPROD 406B. Documentary M.F.A.Thesis Seminar II. 5 Units.
Restricted to M.F.A. documentary students. Editing and post-production of film or video project. Emphasis is on aesthetic choices (structure, narration, music), distribution, contracts, and audience. Prerequisite: consent of instructor.

FILMPROD 408. CULTURE/CINEMA/SENSATION. 5 Units.
This course brings together a critical introduction to works of ethnographic film (i.e. films concerned primarily with the representation of culture) and a selective exploration of works of avant-garde film (i.e. films concerned with, among other dimensions, the possibilities of cinema) in order to consider the conceptual and aesthetic foundations/ provocations of sensory ethnography, a neologism for an approach to cinema that seeks the new, the open-ended, the corporeal, the sensorial, and the affective.

FILMPROD 801. TGR Project. 0 Units.
.

Film Studies Courses

FILMSTUD 4. Introduction to Film Study: French Cinema in Focus. 5 Units.
This course provides an introduction to film through the lens of French national cinema. We study the historical formation of the moving image in France (and beyond); from its humble beginnings as a novel attraction, to its rise as a major medium in its own right, appreciated for both its commercial and artistic appeal. We examine the work of a number of influential auteurs and key periods in the development of French national cinema: including the work of early masters Jean Vigo and Jean Renoir, members of the French New Wave Jean-Luc Godard and Agnès Varda, as well as contemporary filmmakers Mathieu Kassovitz and Olivier Assayas. In addition to undertaking a historical overview of French cinema, this course familiarizes students with a variety of approaches to the analysis of film style and form: mise-en-scène, cinematography, editing, sound, performance, etc. While no prior knowledge of French cinema or film analysis is required, a willingness to engage deeply and critically with film is fundamental.

FILMSTUD 4S. Language of Film. 3 Units.
This course familiarizes students with various elements of film language (cinematography, editing, sound, etc.) and introduces them to a range of approaches to cinematic analysis (authorship, genre, close formal reading, socio-historical considerations). Different types of films (narrative, documentary, and experimental) will be surveyed. Classical narrative cinema will be compared with alternative modes of story-telling.

FILMSTUD 6. Introduction to Media. 3-5 Units.
What is a medium? This course starts from the assumption that the answer to this question is not as obvious as it might at first appear. Clearly, we know some media when we see them: radio, film, and television are in many ways paradigmatic media of the twentieth century. But what about the computational, networked media of the twenty-first century? Are these still media in the same sense, or has the nature of media changed with the emergence of digital technologies? And what, for that matter, about pre-technical media? Is painting a medium in the same sense that oil or acrylic are media, or in the sense that we speak of mixed media? Is language a medium? Are numbers? Is the body?
As we shall see, the question of what a medium is raises a number of other questions of a theoretical or even philosophical nature. How is our experience of the world affected or shaped by media? Are knowledge and perception possible apart from media, or are they always mediated by the apparatuses, instruments, or assemblages of media? What is the relation between the forms and the contents of media, and how does this relation bear on questions of aesthetics, science, technology, or politics? The lecture-based course addresses these and other questions and seeks in this way to introduce a way of thinking about media that goes beyond taken-for-granted ideas and assumptions, and that has a potentially transformative effect on a wide range of theoretical and practical interests.nnFilm & Media Studies majors and minors must enroll for 5 units.
Same as: FILMSTUD 306

FILMSTUD 6B. Media and Visual Culture. 5 Units.
TBA.

FILMSTUD 7. Introduction to Television Studies. 5 Units.
Television is arguably the most influential and ubiquitous mass medium of the last half century. Because of its familiarity and popularity, it is also often the medium most overlooked, dismissed, and maligned. Drawing from the history of television and of television scholarship, this course builds a theoretical framework for understanding this pivotal cultural form. Course covers interdisciplinary approaches to studying TV texts, TV audiences, and TV industries, including questions of the boundaries of television (from independent and avant-garde video to convergence). In the process students develop methodological tools as critical television viewers.

FILMSTUD 50Q. The Video Essay: Writing with Video about Film and Media. 3 Units.
In this course, we will explore what it means to write with video, and we will learn to make effective and engaging video essays about historical and contemporary audiovisual media. Specifically, we will examine formal, aesthetic, and rhetorical strategies for communicating in the medium of video, and we will conduct a series of hands-on exercises utilizing digital video editing software to construct arguments, analyses, and interpretations of film and other media (including television, video games, and online media). Compared with traditional, text-based engagements, the video essay offers a remarkably direct mode of communicating critical and analytical ideas. In this medium, authors no longer struggle to describe audiovisual contents in words that can never do justice to the rich array of details that are immediately apparent to spectators eyes and ears; instead, video essayists can simply show their viewers what they want them to see. This does not mean, however, that it is any easier to write effectively with video than it is to compose an essay with pen and paper. Similar types of expository and argumentative planning are involved in both forms, while the new technology introduces its own characteristic challenges and choices, including decisions about the spatial and temporal organization and transformation of audiovisual materials, the addition of onscreen text, voiceover commentary, and visual effects. By taking a hands-on approach, we will develop our skills with editing software such as Adobe Premiere Pro and Apple's Final Cut Pro while also cultivating our awareness of the formal and narrative techniques employed in films and other moving-image media. Through weekly assignments and group critique sessions, we will learn to express ourselves more effectively and creatively in audiovisual media. As a culmination of our efforts, we will assemble a group exhibition of our best video essays for public display on campus.nnNo previous experience is required, but a willingness to learn new technologies (in particular, video editing software) is important.

FILMSTUD 100A. History of World Cinema I, 1895-1929. 4 Units.
This course begins at the end of the nineteenth century, when the purpose of cinema was questioned and debated, film grammar was just being invented, distribution and exhibition were haphazard, and writers internationally were registering surprise and wonder at the new medium. It ends with modernist masterpieces of the 1920s, subtle (and still relevant) critical debates about the aesthetics and politics of film, and the development of viable sound technologies. What could film have become and did not? How did storytelling come to dominate the development of the new medium? How and why did various national cinemas develop distinctive stylesâ¿¿classical Hollywood, French Impressionism, German Expressionism, Russian montageâ¿¿that shape screen arts to this day? How did influential critics understand cinema and the ways it could reflect and effect social change? To explore these questions you will work mainly with primary textsâ¿¿the films themselves, and criticism written contemporaneously with them. Lectures will help you place these filmic and critical texts within a larger narrative about the first thirty-five years of cinema.
Same as: FILMSTUD 300A

FILMSTUD 100B. History of World Cinema II: Currents in Francophone Film, 1970-present. 4 Units.
This course surveys developments in global French-language cinema since 1970, a period marked by a radical reconsideration of national identity, social and sexual politics, and collective memory. Special attention is given to an international roster of francophone films and filmmakers outside of France, from Quebec to Martinique, Belgium to Senegal. Directors like Mati Diop, Euzha Palcy, Chantal Akerman, Abderrahmane Sissako, and Xavier Dolan offer new and shifting currents with which to rethink a decolonized national cinema, sociopolitical turmoil, and the role of the contemporary film viewer.

FILMSTUD 100C. History of World Cinema III, 1960-Present. 3-5 Units.
This course will provide an overview of cinema from around the world since 1960, highlighting the cultural, political, and economic forces that have shaped various film movements over the last six decades. We will study some key film movements and national cinemas towards developing a historical appreciation of a variety of commercial and art film traditions. Through an exploration of films from Europe, Africa, Asia, and Latin America, we shall examine the industrial histories of non-Hollywood film production and exhibition practices that produce the particular cinematic cultures of each region.
Same as: FILMSTUD 300C

FILMSTUD 101. Close Cinematic Analysis. 3-4 Units.
The close analysis of film, with an emphasis on sound, music, and audio-visuality. Films from various historical periods, national cinemas, directors, and genres. Prerequisite: FILMSTUD 4 or equivalent. Recommended: ARTHIST 1 or FILMSTUD 102. Course can be repeated twice for a max of 8 units. This course fulfills the WIM requirement for Film and Media Studies majors.
Same as: FILMSTUD 301

FILMSTUD 102. Theories of the Moving Image. 4 Units.
What makes the moving image unique in its capacity for telling stories, influencing thoughts, and stirring emotions? What are the potentials and risks of cinema's affective power? This course looks at concepts developed by filmmakers, film critics, and philosophers to explain affinities between mind and moving image, to envision cinema¿s promise, and to identify its limitations. We will read a range of authors, some classic, some contemporary, including André Bazin, Laura Mulvey, and D. A. Miller. Films will include classics such as Julie Dash's Daughters of the Dust (1991) and recent releases such as Hirokazu Koreeda's Shoplifters (2018). Students will learn to speak and write confidently about influential theories and methods in the field of film and media studies. They will learn to formulate research questions that are in dialogue with vital concepts. Through close analysis, they will assess how theories of film and media speak, or fail to speak, to their own experience. And ideally, students will venture to engage in theoretical speculation of their own.
Same as: FILMSTUD 302

FILMSTUD 103S. Anima to Anime. 3 Units.
From Anima to Anime is an introductory level course designed to familiarize students with key concepts and issues surrounding animated media in East Asian. It is by no means an exhaustive survey of the region¿s national animation traditions, be that of Japan, Korea, or Greater China. Rather, this course takes an emphatically transnational approach arguing that animation serves as an important site where national forms, traditional materials, and techniques converge with powerful currents of internationalism and modernism. We will thus look to pay close attention to the way shared cultural, aesthetic, and technological norms participate in the ongoing definition of a ¿regional¿ animated media in East Asia. In addition, we will look at how East Asian animation has given rise to significant global trends, including developments in mass media communication, franchising, adaptation, youth culture, consumption and fandom, as well as modes of play and mediated self-expression.

FILMSTUD 104. Introduction to the Movies- How Movies Are Developed, Produced, Marketed and Exhibited. 4 Units.
How are movies created? How are scripts developed and selected for production? How are films actually made and marketed? How are they shown in various media? Who decides what in all of these processes and what information do the decision-makers rely on?nnThis course will follow the life cycle of a movie, from its inception as an idea, article, book, etc., to its release in theaters and other media as a finished product. Guest speakers will discuss the evolution of the film industry, creative development of scripts, how deals are structured to acquire intellectual property, film finance, and how movies are physically produced and then marketed, distributed and exhibited in theaters and in other media. We will use two films as case studies ¿ The Chronicles of Narnia ¿ Voyage of the Dawn Treader and Chasing Mavericks.
Same as: FILMSTUD 304

FILMSTUD 105. The Films of Ernst Lubitsch. 4 Units.
Ernst Lubitsch was: a stage actor in Berlin; a comic actor in early German cinema; Germany's most profitable director in the early 1920s; a director of subtle silent comedies in Hollywood in the later `20s; an innovative director of sound musicals and comedies in the 1930s; head of production for Paramount Pictures; and one of the few directors whose name and likeness were familiar to audiences across America, one famed for what became known as The Lubitsch Touch. The course considers Lubitsch in all these contexts. Charts intersections with collaborators, genre conventions, sexuality and censorship, and studio control. Lubitsch's style depends on performance, so attention will be given to film acting as he came to shape it.
Same as: FILMSTUD 305

FILMSTUD 107N. Documentary Film: Telling it Like it Is?. 3 Units.
Documentary films have become a "lingua franca," thanks to ubiquitous streaming services and our devotion to screen time. Offering compelling stories, intriguing "characters," and a lingering resonance, they often function as a Rorschach test that elicits divergent responses. This course decodes the narrative technique, point of view, authorship, and aesthetic approach of nonfiction films that explore scintillating and provocative subject matter. The student develops "visual literacy" skills as we interrogate the inferred relationship between documentary, objectivity, and "truth." In this seminar-style class, we peel back the veneer of the films we watch, examining both form and content.

FILMSTUD 110. Science Fiction Cinema. 4 Units.
Science fiction film's sense of wonder depends upon the development and revelation of new ways of seeing. The American science fiction film emphasizes the fundamental activity of human perception, its relation to bodily experience and the exploration of other worlds, new cities, and other modes of being, in such new technological spaces as the cyberspaces of the information age. It is perhaps the Hollywood genre most directly concerned with the essence of cinema itself.
Same as: FILMSTUD 310

FILMSTUD 110N. Darkness in Light: The Filmic Imagination of Horror. 3 Units.
Preference to freshmen. From its beginnings, the cinema evinced an affinity with the phantom realm of specters, ghosts, and supernatural beings. Not only does horror have deep and diverse roots in the international history of film; it emerges as a trope of film itself, as a medium of shadows, dematerialized presence, life drained of substance. Overview of filmic imaginations of horror with a focus on the U.S., Europe, and Japan. Theories of horror, from the fantastic to the uncanny; unpacking these in light of key moments in the genre's development. The merits of vampires versus zombies. Ongoing debates through the lens of horror about cinematic representation, from Andre Bazin's idea of the mummy complex to Linda Williams' thesis of body genres to Jeffrey Sconce's notion of haunted media. Introduction to film analysis and interpretation; no prior experience in film studies required. Required weekly screening.

FILMSTUD 112. Women in French Cinema: 1958-. 3-5 Units.
Women as objects and subjects of the voyeuristic gaze inherent to cinema. The myth of the feminine idol in French films in historical and cultural context since the New Wave until now. The mythology of stars as the imaginary vehicle that helped France to change from traditional society to modern, culturally mixed nation. The evolution of female characters, roles, actresses, directors in the film industry. Filmmakers include Vadim, Buñuel, Truffaut, Varda, Chabrol, Colline Serreau, Tonie Marshall. Discussion in English; films in French with English subtitles.
Same as: FEMGEN 192, FRENCH 192

FILMSTUD 114. Reading Comics. 4 Units.
The modern medium of comics, a history that spans 150 years. The flexibility of the medium encountered through the genres of humorous and dramatic comic strips, superheroes, undergrounds, independents, journalism, and autobiography. Innovative creators including McCay, Kirby, Barry, Ware, and critical writings including McCloud, Eisner, Groenstee. Topics include text/image relations, panel-to-panel relations, the page, caricature, sequence, seriality, comics in the context of the fine arts, and relations to other media.
Same as: AMSTUD 114X, FILMSTUD 314

FILMSTUD 114S. Introduction to Comic Studies. 3 Units.
The modern medium of comics, a history that spans 150 years. The flexibility of the medium encountered through the genres of humorous and dramatic comic strips, superheroes, undergrounds, independents, journalism, and autobiography. Innovative creators including McCay, Kirby, Barry, Ware, and critical writings including McCloud, Eisner, Groenstee. Topics include text/image relations, panel-to-panel relations, the page, caricature, sequence, seriality, comics in the context of the fine arts, and relations to other media.

FILMSTUD 115. Documentary Issues and Traditions. 4 Units.
Issues include objectivity/subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. Parallel focus on form and content.
Same as: FILMSTUD 315

FILMSTUD 116. International Documentary. 4 Units.
Historical, aesthetic, and formal developments of documentary through nonfiction films in Europe, Asia, Latin America, and Africa.
Same as: FILMSTUD 316

FILMSTUD 117. Media and Message: The Experience of Informatoin. 4 Units.
We live in an information age, and information comes to us through various media. But different media embody information differently, and are experienced differently. How do these differences impact the ways we come to understand the world and our place in it? One example: Photography, cinema, and console games all attempt to communicate the experience of war, but each does so in its own way -- a Robert Capa photograph of the moment when a soldier is shot is different from the sensory and narrative immersion of Saving Private Ryan, which is different from the interactive experience of Call of Duty. Following Marshall McLuhan's dictum that "the medium is the message," this course will examine the ways that different media present, organize, and structure information as forms that are "read" or experienced. The course will consider such historical media as illuminated books, print, painting, and photography, and such recent forms as cinema, television, comics, presentation software, and interactive and computational media. Readings will be drawn from across disciplines, and will include McLuhan, Sontag, Merleau-Ponty, Goffman, Jenkins, Hayles, and others. Fiction, film screenings, and comics reading will also be part of the course.

FILMSTUD 119. Science Fiction: Cyborgs & Human Simulacra in the Cinema. 4 Units.
The human simulacrum has a long history in mythology, fairy tales and children¿s stories, as well as in the genres of horror and science fiction. This course explores synthetic human narratives in the cinema. Stories of artificially created life, living statues, automata, body snatchers, robots, cyborgs and electronic simulations all direct our attention to our assumed definitions of the human.The fantasies and anxieties that undergird these stories engage with such issues as labor, gender, sexuality, death, emotion, rationality, embodiment, consumerism, reproductive technologies, and power relations. Attention will also be given the relation of cinema¿s human simulacra to changing cinematic technologies. Films will include Metropolis, Pinocchio, Robocop, Bride of Frankenstein, The Golem, A.I., My Fair Lady, Her, Blade Runner, and the HBO iteration of Westworld. Readings will include essays, as well as some fiction and possibly comics.
Same as: AMSTUD 119, FILMSTUD 319

FILMSTUD 120. Superhero Theory. 3-5 Units.
With their fantastic powers, mutable bodies, multiple identities, complicated histories, and visual dynamism, the American superhero has been a rich vehicle for fantasies (and anxieties) for 80+ years across multiple media: comics, film, animation, TV, games, toys, apparel. This course centers upon the body of the superhero as it incarnates allegories of race, queerness, hybridity, sexuality, gendered stereotypes/fluidity, politics, vigilantism, masculinity, and monstrosity. They also embody a technological history that encompasses industrial, atomic, electronic, bio-genetic, and digital.
Same as: AMSTUD 120B, ARTHIST 120, ARTHIST 320, FILMSTUD 320

FILMSTUD 125. Horror Film. 3-4 Units.
From its beginnings, the cinema evinced an affinity with the phantom realm of specters, ghosts, and supernatural beings. Not only does horror have deep and diverse roots in the international history of film; it emerges as a trope of film itself, as a medium of shadows, dematerialized presence, life drained of substance. Overview of filmic imaginations of horror with a focus on the U.S., Europe, and Japan. Theories of horror, from the fantastic to the uncanny; unpacking these in light of key moments in the genre's development. The merits of vampires versus zombies. Ongoing debates through the lens of horror about cinematic representation, from Linda Williams' thesis of body genres to Jeffrey Sconce's notion of haunted media.

FILMSTUD 127. Monster Movies: Frankenstein & Film. 4 Units.
When Mary Shelley bid [her] hideous progeny go forth and prosper in the 1831 introduction to the revised edition of her novel, she could scarcely have imagined how successful her tale would be in reproducing itself. It is estimated that over 200 film adaptations of Frankenstein have been produced, spanning from Thomas Edison's 1910 single-reel silent film to digitally-enhanced CGI spectacles like Van Helsing (2004) and I, Frankenstein (2014). The films seldom fail to say something about the social settings in which they were produced, and quite often they comment reflexively on the medium of film itself. The monsters depicted can thus be interrogated in terms of the social-semiotic processes by which certain subjectivities and bodies are constituted as the normative ideals of humanity while others are excluded as aberrations. On the other hand, the films offer a register of the historically contingent relations between humans and their technologies not least among them, the relation of the spectator to the cinematic medium and apparatus. nIn this lecture-based course, we shall therefore investigate monstrosity on a number of levels: from the social level at which people are defined on the basis of gender, race, class, or disability in relation to privileged forms of embodiment and subjectivity, all the way up to the technological level at which human beings are arguably being reconfigured at present into cyborgs or human-technological hybrids. We will approach these and other questions by way of a selection of Frankenstein films, which we will view, read about, and discuss in detail. It will be important, though, that we not lose sight of the filmic nature of our texts; one objective of the course should therefore be a better understanding of the formal properties of the medium of film how things are depicted, not just what is thematized.

FILMSTUD 129. Animation and the Animated Film. 3-5 Units.
The fantasy of an image coming to life is ancient, but not until the cinema was this fantasy actualized. The history of the movies begins with optical toys, and contemporary cinema is dominated by films that rely on computer animation. This course considers the underlying fantasies of animation in art and lit, its phenomenologies, its relation to the uncanny, its status as a pure cinema, and its place in film theory. Different modes of production and style to be explored include realist animation, abstract animation; animistic animation; animated drawings, objects, and puppets; CGI, motion capture, and live/animation hybrids.
Same as: AMSTUD 129, FILMSTUD 329

FILMSTUD 132A. Indian Cinema. 5 Units.
This course will provide an overview of cinema from India, the world's largest producer of films. We will trace the history of Indian cinema from the silent era, through the studio period, to state-funded art filmmaking to the contemporary production of Bollywood films as well as the more unconventional multiplex cinema. We will examine narrative conventions, stylistic techniques, and film production and consumption practices in popular Hindi language films from the Bombay film industry as well as commercial and art films in other languages. This outline of different cinematic modes will throw light on the social, political, and economic transformations in the nation-state over the last century.
Same as: FILMSTUD 332A

FILMSTUD 133. Contemporary Chinese Auteurs. 4 Units.
New film cultures and movements in Taiwan, Hong Kong, and mainland China in the 80s. Key directors including Jia Zhangke, Wu Wenguang, Tsai Ming-liang, Hou Hsiao-hsien, Wong Kar-wai, Ann Hui. Topics include national cinema in the age of globalization, the evolving parameters of art cinema, and authorship.
Same as: FILMSTUD 333

FILMSTUD 133B. Technology and American Visual Culture. 4 Units.
An exploration of the dynamic relationship between technology and the ways we see and represent the world, with a focus on American visual culture from the 19th century through the present. We study the history of different tools from telescopes and microscopes to digital detectors that have changed and enhanced our visual capabilities; the way technological shifts, such as the introduction of electric lights or train travel, have shaped our visual imagination and aesthetic sensibilities; and how technology has inspired or responded to visual art. Special attention is paid to how different media, such as photography, cinema, and computer screens, translate the visual experience into a representation; the automation of vision; and the intersection of technology with notions of time and space.
Same as: AMSTUD 133

FILMSTUD 134. The Art Cinema of India. 5 Units.
India is the world's largest producer of films, and Bollywood is currently its most visible cinematic product on the festival circuit as well as university curricula. This course, probably the first of its kind in the American academic setting, will focus instead on the various art cinemas of India. From the well-known Satyajit Ray to his important contemporaries, Ritwik Ghatak and Mrinal Sen, from the social realist New Wave cinemas of the 70s and 80s to contemporary indie films, we will engage with the history of the "parallel cinema" movement. Considering the relationship of Indian art cinema to Third Cinema and to European art cinema will bring attention to transnational networks and exhibition circuits. The course will engage with scholarship on art cinema more broadly to understand how films are categorized as such through narrative, form, audience, auteurism, funding, censorship, and relationship to the nation-state.
Same as: FILMSTUD 334

FILMSTUD 135. Around the World in Ten Films. 3-4 Units.
This is an introductory-level course about the cinema as a global language. We will undertake a comparative study of select historical and contemporary aspects of international cinema, and explore a range of themes pertaining to the social, cultural, and political diversity of the world. A cross-regional thematic emphasis and inter-textual methods of narrative and aesthetic analysis, will ground our discussion of films from Italy, Japan, United States, India, China, France, Brazil, Nigeria, Russia, Iran, Mexico, and a number of other countries. Particular emphasis will be placed on the multi-cultural character and the regional specificities of the cinema as a "universal language" and an inclusive "relational network."nnThere are no prerequisites for this class. It is open to all students; non-majors welcome.
Same as: FILMSTUD 335, GLOBAL 135

FILMSTUD 136. Gender and Sexuality in Chinese Cinema. 4 Units.
Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required.
Same as: FILMSTUD 336

FILMSTUD 137. Love in the Time of Cinema. 3-5 Units.
Romantic coupling is at the heart of mainstream film narratives around the world. Through a range of film cultures, we will examine cinematic intimacies and our own mediated understandings of love and conjugality formed in dialog with film and other media. We will consider genres, infrastructures, social activities (for example, the drive-in theater, the movie date, the Bollywood wedding musical, 90s queer cinema), and examine film romance in relation to queerness, migration, old age, disability, and body politics more broadly.
Same as: FILMSTUD 337, GLOBAL 110, GLOBAL 211

FILMSTUD 140. Film Aesthetics: Editing. 4 Units.
Practical and theoretical approaches to editing and montage. The role of editing in film meaning, and cognitive and emotional impact on the viewer. Developments in the history and theory of cinema including continuity system, Soviet montage, French new wave, postwar and American avant garde. Aesthetic functions, spectatorial effects, and ideological implications of montage. Film makers include Eisenstein, Godard, and Conner.
Same as: FILMSTUD 340

FILMSTUD 145. Politics and Aesthetics in East European Cinema. 4 Units.
From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica.
Same as: FILMSTUD 345

FILMSTUD 146. Art Animation. 2-4 Units.
While anime has spread around the world, Japanese art animators have been busy developing a parallel tradition, built from a more personal, experimental, and idiosyncratic approach to the medium. Looking closely at key works from major artists in the field, this course explores art animation from a variety of perspectives: animation scene; philosophical attempts to account for animated movement; and art animation's unique perspective on Japanese culture.
Same as: JAPAN 152, JAPAN 252

FILMSTUD 147. Iberian and Latin American Experimental Cinemas, 1960s to the Present. 4 Units.
This class will offer a panorama of Iberian and Latin American experimental film cultures from the 1960 to the present. We will focus on developments and formations mainly in Mexico, Brasil, Argentina, and Spain, but will cast side glances at Bolivia, Peru, Cuba, Paraguay and Uruguay. Among our main thematic interests will be the representation of the body and sexuality; abstraction; politics; the reading of history; personal subgenres (the essay and the diary film); and collage and appropriation. Readings will range from general theoretical statements on experimental film aesthetics to specific historical and critical excavations of experimental film by contemporary critics and historians.
Same as: FILMSTUD 347

FILMSTUD 148. Archival Cinema: Excavating the Future. 4 Units.
This course examines the practices of appropriation of archival material in cinema, and the problems of representation inherent to them. The practical component consists of a series of creative assignments in which students are asked to use archival material, including some from Stanford's collections, to produce short moving image pieces.
Same as: FILMPROD 148, FILMPROD 348, FILMSTUD 348

FILMSTUD 150. Cinema and the City. 4 Units.
Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international narrative traditions, industrial films, experimental cinema, documentaries, and musical sequences. Recommended: 4 or equivalent.
Same as: FILMSTUD 350

FILMSTUD 151. Experimental Cinema Workshop. 5 Units.
This is a hands-on course situated at the intersection of theory and practice of sound and image. Select readings in film, video, and digital media theory, as well as screenings and class discussions, will pave the way for a number of thematically focused practical exercises in ¿analytic audio-vision.¿nnTopics and individual and group assignments will vary from quarter to quarter. Combining creative expression and aesthetic/interpretive inquiry, the class has no prerequisites and is open to all students.
Same as: FILMSTUD 351

FILMSTUD 152. Hollywood/Bollywood: The Musical Two Ways. 3-5 Units.
A comparative approach to the musical as Hollywood genre and as fundamental mode in Bollywood (where even horror movies have song-and-dance sequences!). The pleasurable interplay among song, dance, and screen directs us to the interplay of cultural identities (regional, racial, gendered, sexual). Through cinematic travels between America and India, we will examine how the utopian, liberatory energies of musical numbers - physical, emotional, aesthetic, and social - illuminate relations of narrative and spectacle, stardom and performance, gender and space, color and sound.
Same as: FILMSTUD 352

FILMSTUD 157. Film Noir from Bogart to Mulholland Drive. 4 Units.
Why did prosperous mid-20th-century America produce a dark cinema of hard-boiled characters, gritty urban settings, stark high-contrast lighting, and convoluted plots? Key examples and the recent legacy of film noir: 40s and 50s Hollywood movies featuring anti-heroes, femmes fatales, shattered dreams, violence, and a heaviness of mood. Film noir's influences included pulp fiction; B-movie production-budgets; changes in Hollywood genres; left-populist aesthetic movements; a visual style imported by European émigré directors; innovations in camera and film technology; changes in gender roles; combat fatigue; and anxieties about the economy, communism and crime. Directors, writers, cinematographers and actors. Film viewings, readings and analyses.
Same as: FILMSTUD 357

FILMSTUD 164A. Technology and the Visual Imagination. 4 Units.
An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.
Same as: ARTHIST 164A, ARTHIST 364A, FILMSTUD 364A

FILMSTUD 165A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.
The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.
Same as: ARTHIST 165A, ARTHIST 365A, FILMSTUD 365A

FILMSTUD 165B. American Style and the Rhetoric of Fashion. 4 Units.
Focus on the visual culture of fashion, especially in an American context. Topics include: the representation of fashion in different visual media (prints, photographs, films, window displays, and digital images); the relationship of fashion to its historical context and American culture; the interplay between fashion and other modes of discourse, in particular art, but also performance, music, economics; and the use of fashion as an expression of social status, identity, and other attributes of the wearer. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.
Same as: AMSTUD 127, ARTHIST 165B

FILMSTUD 167B. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.
Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each week¿s theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.
Same as: ARTHIST 167, ARTHIST 367, FILMSTUD 367B

FILMSTUD 173. Digital and Interactive Media. 3-5 Units.
This course introduces a variety of ways of thinking about digital and interactive media. As examples, we will think about the impact of algorithmic processes on cinema and other moving-image media; we will consider the relation of narrative to interactivity in video games and related forms; and we will look carefully at the perceptual and embodied relations of human users to computational systems of various sorts. Engaging with a wide range of historical and contemporary media forms (including those used for entertainment, artistic expression, social interaction, politics, work, play, and other things in between), this course hopes to illuminate the transformative roles that digital and interactive media play in our lives.

FILMSTUD 178. Film and History of Latin American Revolutions and Counterrevolutions. 3-5 Units.
Note: Students who have completed HISTORY 78N or 78Q should not enroll in this course. In this course we will watch and critique films made about Latin America's 20th century revolutions focusing on the Cuban, Chilean and Mexican revolutions. We will analyze the films as both social and political commentaries and as aesthetic and cultural works, alongside archivally-based histories of these revolutions.
Same as: HISTORY 78, HISTORY 178, ILAC 178

FILMSTUD 210A. Documentary Perspectives I: Politics of the Subject. 4 Units.
Historical, political, aesthetic, and formal developments of documentary film. Subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. Prerequisite: consent of instructor.
Same as: FILMSTUD 410A

FILMSTUD 211N. Childish Enthusiasms and Perishable Manias. 3 Units.
This course has a simple premise: Effective scholarship need not suck the joy from the world. G. K. Chesterton once wrote that 'it is the duty of every poet, and even of every critic, to dance in respectful imitation of the child.' What could it mean to do scholarship that respects a child's playful and exploratory engagement with the world? Such questions will be filtered through such 'unserious' media as amusement parks, comics, cartoons, musicals, and kidlit.

FILMSTUD 212. Masculinity and Violence in American Cinema. 5 Units.
By the end of this course you should be able closely to analyze genre films in a historically and theoretically informed manner. Using select male genres (Westerns, boxing films, crime films) as a prism, we will look at the way film form (plot, mise-en-scene, cinematography, editing, genre) has inspired, and resisted, key theoretical and critical approaches such as feminist film theory, gender studies, and ideological analysis. In lecture, we will also devote time to such topics as writing a strong thesis statement, using multiple discipline-specific search engines for research, and writing abstracts/conference-paper proposals.

FILMSTUD 213. Theories of Melodrama. 5 Units.
Commonly derided for being over the top, with films in this mode put down as weepies, tear-jerkers, and women's films, melodrama as a genre and a cinematic mode has been reclaimed by feminist-queer-film scholars as providing a powerful site of ideological struggle and sustained engagement with individual and social subjection and suffering. Melodrama, a transgeneric mode of emotional dramaturgy, centered around body and community, delay and chance, realism and excess, affords radical critiques of discourses of gender, sexuality, race, class, and nation. We will consider melodrama's careful calibration of sensation and affect through its employment of cinematic form (color, music, editing etc.), and sweeping performative gestures. Through an analysis of films from Europe, Asia, Africa, Latin America, by auteurs such as Douglas Sirk, Ritwik Ghatak, Wong Kar-wai, Rainer Werner Fassbinder, and Pedro Almodovar, among others, we will study global and transnational flows in the adoption of the politics and aesthetics of the melodramatic mode. The seminar is conceived to be interdisciplinary and participants are encouraged to work with texts from disciplines other than film studies as well, including theatre, visual arts, music, dance, literature etc.
Same as: FILMSTUD 413

FILMSTUD 215. Post-Cinema. 3-5 Units.
In this seminar, we will try to come to terms with twenty-first century motion pictures by thinking through a variety of concepts and theoretical approaches designed to explain their relations and differences from the cinema of the previous century. We will consider the impact of digital technologies on film, think about the cultural contexts and aesthetic practices of contemporary motion pictures, and try to understand the experiential dimensions of spectatorship in today's altered viewing conditions.nnIn addition to viewing a wide range of recent and contemporary films, we will also engage more directly and materially with post-cinematic moving images: we will experiment with scholarly and experimental uses of non-linear video editing for the purposes of film analysis, cinemetrics, and a variety of academic and creative responses to post-cinematic media.nnThe course addresses key issues in recent film and media theory and, especially in its hands-on components, encourages experimentation with methods of digital humanities, computational media art, and other creative practices.
Same as: FILMSTUD 415

FILMSTUD 216. The Films of Robert Altman. 4 Units.
A collaborative consideration of Robert Altman¿s prolific and varied work as a director. The course will examine well-known films such as the narratively and stylistically innovative Nashville, creative genre revisions such as McCabe and Mrs. Miller, The Long Goodbye, and Gosford Park; and the culturally iconic M.A.S.H. We will also pay close attention to less famous work such as Secret Honor, and Buffalo Bill and the Indians, or Sitting Bull¿s History Lesson with the aim of describing and assessing a complex oeuvre. There will be a course bibliography, but required reading will be relatively light to make time for both careful and extensive viewing.
Same as: FILMSTUD 416

FILMSTUD 220. Being John Wayne. 5 Units.
John Wayne's imposing corporeality and easy comportment combined to create an icon of masculinity, the American West, and America itself. Focus is on the films that contributed most to the establishment, maturation, and deconstruction of the iconography and mythology of the John Wayne character. The western and war film as genres; the crisis of and performance of masculinity in postwar culture; gender and sexuality in American national identity; relations among individualism, community, and the state; the Western and national memory; and patriotism and the Vietnam War.
Same as: AMSTUD 220B, TAPS 220A

FILMSTUD 221. Out of Order. 4 Units.
This course explores the rise of nonlinear approaches to storytelling in global narrative cinema in the second half of the twentieth century. We will begin with Rashomon and end somewhere around Inception, also considering examples from Hong Kong, Senegal, France, and Mexico. Readings will touch on film analysis, history and politics, and narrative theory.

FILMSTUD 223. How to Watch TV. 3-5 Units.
¿How to watch TV¿ may seem like the most obvious thing in the world. Yet when we look at the historical development of television as a technological, social, and cultural form, we find that people have engaged with it in a variety of different ways. There is not, in other words, a single right way to watch TV. This is because television itself has undergone transformations on all of these levels: Technologically, changes such as those from black-and-white to color, analog to digital, standard to high-definition, and broadcast to cable to interactive all play a role in changing our relation to what ¿television¿ is. Socially, changes in television¿s integration in corporate and industrial structures, its mediation of political realities, and its ability to reflect and shape our interactions with one another all play a role in transforming who ¿we¿ as viewers are. And culturally, varieties of programming including live broadcasting, prerecorded content, and on-demand streaming of news, movies, sit-coms, and prestige dramas series all indicate differences and distinctions in what it means to ¿watch¿ TV. In this course, we will engage with these and other aspects of television as a medium in order to rethink not only how but why we watch TV.

FILMSTUD 224. Films of Stanley Kubrick. 4-5 Units.
This seminar will explore the cinema of Stanley Kubrick, a widely acclaimed film auteur known for works such as 2001: A Space Odyssey, A Clockwork Orange, and Barry Lyndon. The seminar will focus on close analysis of practically all of Kubrick's films, from a variety of methodological perspectives (authorship, formal/stylistic analysis, book-to-screen adaptation, and more.nnNOTE: Instructor's permission required before the first day of class.
Same as: FILMSTUD 424

FILMSTUD 232. Chinese Cinema. 5 Units.
This course surveys a range of critical perspectives and debates on Chinese cinema. It is organized on the basis of weekly topics, such as genre, historiography, gender, modernity, and the idea of national cinema. Consent of instructor required.
Same as: FILMSTUD 432

FILMSTUD 233. Let's Make a Monster: Critical Making. 5 Units.
Ever since Frankenstein unleashed his monster onto the world in Mary Shelley¿s novel from 1818, the notion of ¿technology-out-of-control¿ has been a constant worry of modern societies, plaguing more optimistic visions of progress and innovation with fears that modern machines harbor potentials that, once set in motion, can no longer be tamed by their human makers. In this characteristically modern myth, the act of making ¿ and especially technological making ¿ gives rise to monsters. As a cautionary tale, we are therefore entreated to look before we leap, to go slow and think critically about the possible consequences of invention before we attempt to make something radically new. However, this means of approaching the issue of human-technological relations implies a fundamental opposition between thinking and making, suggesting a split between cognition as the specifically human capacity for reflection versus a causal determinism-without-reflection that characterizes the machinic or the technical. Nevertheless, recent media theory questions this dichotomy by asserting that technologies are inseparable from humans¿ abilities to think and to act in the world, while artistic practices undo the thinking/making split more directly and materially, by taking materials ¿ including technologies ¿ as the very medium of their critical engagement with the world. Drawing on impulses from both media theory and art practice, ¿critical making¿ names a counterpart to ¿critical thinking¿ ¿ one that utilizes technologies to think about humans¿ constitutive entanglements with technology, while recognizing that insight often comes from errors, glitches, malfunctions, or even monsters. Co-taught by a practicing artist and a media theorist, this course will engage students in hands-on critical practices involving both theories and technologies. Let¿s make a monster!.
Same as: ARTSTUDI 233, FILMSTUD 433

FILMSTUD 245B. History and Politics in Russian and Eastern European Cinema. 5 Units.
From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica. Permission of instructor required prior to the first day of classes.
Same as: FILMSTUD 445B, REES 301B

FILMSTUD 249. Eye of the Beholder: Subjective Cinema. 5 Units.
This course proposes to look at how even the most seemingly objective films are shaped by a subjective eye. An eye which is molded by gender, race, culture and class - all of which influence the entire film-making process and experience from how something is framed to how it is cut and and how it is perceived it. How we look at something, for how long we look at it and in what context we are shown something is as important as what we are looking at. Similarly the subjective eye of the viewer shapes how he or she understands and interprets the film. Whether the viewer is an insider or outsider to the subject completely changes expectations and reactions to the film. So then what are we really talking about when we talk about documentary films? What makes a documentary a documentary? Why is such a categorization valuable? necessary? useful? nThe course will combine analysis of films, theoretical texts, and some practical ¿production" exercises.
Same as: FILMSTUD 449

FILMSTUD 251. Media in Transition. 5 Units.
In a culture obsessed with new media, we are bombarded with hype about the present as a revolutionary phase of convergence. But everything old was once new, and pioneering media of the past also had to negotiate existing technologies, ideologies, and fantasies. This seminar is organized around case studies of transitional media moments from the long 20th century, including proto-cinema, ham radio, early television, hypertext, and digital film. In exploring the material and discursive aspects of remediation through theoretical, historical, and media archaeological readings, we will ask: what is a medium and how do they emerge and evolve.

FILMSTUD 252. Currents in Media Theory. 5 Units.
This seminar explores a set of currents in media theory (and related fields), which we will seek to navigate together as a group. We will focus on approaches, discourses, conversations, and paradigms that seek to explain the mediations, modulations, and triangulations of our experience within a changing landscape of technological, social, political, and other forces. Special attention will be given to contemporary works of theory and/or works that are enjoying a renewed contemporary reception.
Same as: FILMSTUD 452

FILMSTUD 253. Aesthetics and Phenomenology. 3-5 Units.
This course explores central topics in aesthetics where aesthetics is understood both in the narrow sense of the philosophy of art and aesthetic judgment, and in a broader sense as it relates to questions of perception, sensation, and various modes of embodied experience. We will engage with both classical and contemporary works in aesthetic theory, while special emphasis will be placed on phenomenological approaches to art and aesthetic experience across a range of media and/or mediums (including painting, sculpture, film, and digital media). nnPhD students in the Art History program may take the class to fulfill degree requirements in Modern/Contemporary Art or Film & Media Studies, depending on the topic of their seminar paper.
Same as: FILMSTUD 453

FILMSTUD 256. Horror Comics. 5 Units.
This seminar will explore the vast array of horror comics. How does horror work in comics, as distinct from prose and cinema? How and why are non-moving images scary? The different narrational strategies of short stories, self-contained works, and continuing series will be explored, as will American, Japanese, and European approaches. Special attention will be given to Frankenstein, in novel, film, illustration, and comics. Example of such sub-genres as literary horror, horrific superheroes, cosmic (Lovecraftian) horror, ecological horror, as well as the horrors of bodies, sexuality, and adolescence will be encountered.nnStudents will read many comics, some comics theory, and will do an in-class presentation on a comic or topic of their choosing. The course is a seminar, so discussion will be continuous and required. Enrollment limited.
Same as: AMSTUD 256A

FILMSTUD 259. Game Studies. 5 Units.
This course aims to introduce students to the emerging, interdisciplinary field of game studies. We will investigate what games (including but not limited to digital games) are, why we play them, and what the functions of this activity might be. The bulk of the course will be devoted specifically to digital games, which we will approach from a variety of perspectives: from historical, cultural, industrial/commercial, media-theoretical, and formal (narratological/ludological) perspectives, among others. Thus, we will seek to understand the contexts in which video games emerged and evolved, the settings in which they have been played, and the discourses and practices that have determined their place in social and cultural life. In addition, we will ask difficult questions about the mediality of digital games: What is the relation of digital to non-digital games? Are they both games in the same sense, or do digital media redefine what games are or can be? How do digital games relate to other (digital as well as non-digital) non-game media, such as film, television, print fiction, or non-game computer applications? Of course, to engage meaningfully with these questions at all will require us to investigate theories of mediality (including inter- and transmediality) more generally. Finally, though, we will be interested in the formal and experiential parameters that define (different types of) digital games in particular. What does it feel like to play (various) digital games? What are the relations between storytelling and the activity of gameplaying in them? What is the relation between these aspects and the underlying mechanics of digital games, as embodied in hardware and software? What is the role of the human body? Because these questions can only be approached on the basis of personal experience, students will be expected to spend some time playing digital games and reflecting critically on their gameplay.
Same as: FILMSTUD 459

FILMSTUD 264B. Starstuff: Space and the American Imagination. 5 Units.
Course on the history of twentieth and twenty-first century American images of space and how they shape conceptions of the universe. Covers representations made by scientists and artists, as well as scientific fiction films, TV, and other forms of popular visual culture. Topics will include the importance of aesthetics to understandings of the cosmos; the influence of media and technology on representations; the social, political, and historical context of the images; and the ways representations of space influence notions of American national identity and of cosmic citizenship.
Same as: AMSTUD 143X, ARTHIST 264B

FILMSTUD 273. Visual Culture of the Arctic. 5 Units.
In what ways does contemporary art address the slowly unfolding catastrophes of melting ice and thawing permafrost in the Arctic due to climate change? How might contemporary art and experimental cinema help us come to grips with the emotional disturbance of living amidst the deep-seated changes that are happening in our environment? These are the key questions this course attempts to answer.nThe first part of the class attempts to outline the complex history of Arctic visual and cultural representations through an interdisciplinary lens. The second part focuses on the more recent artistic and cinematic responses to climate change in the arctic. For their final projects, students will be able to combine analytical writing with creative projects that could take the form of photography, installation art, web-based art, fiction, video or poetry.
Same as: ARTHIST 273

FILMSTUD 280. Curricular Practical Training. 1-5 Unit.
CPT course required for international students completing degree. Students must obtain a new I-20 with CPT authorization prior to the employment start date. Professional experience in a field related to the cinematic arts (film, television, media) for six to ten weeks. Internships may include work for production companies, producers, studios, networks, films, television series, directors, screenwriters, non-profit organizations, academic publications and related workplaces. Students arrange the internship, provide a confirmation letter from the hosting institution, and must receive consent from the faculty coordinator to enroll in units. Students submit three self-assessments, and evaluations from the student and the supervisor are submitted at the end of the internship. Restricted to declared majors and minors. May be repeated for credit.

FILMSTUD 281. Contemporary Asian Filmmakers. 4 Units.
Films and moving image works by contemporary filmmakers from Asia, including Hou Hsiao-hsien, Tsai Ming-liang, and Apichatpong Weerasethakul. Topics include explorations of national and local histories, aesthetics of slowness and duration, and crossings between the movie theater and the gallery.
Same as: FILMSTUD 481

FILMSTUD 290. Movies and Methods: Contemporary Black Filmmakers. 5 Units.
Despite the systemic inequalities of the Hollywood system, there is a robust, stylistically diverse cohort of African-American writer/directors at work, including Barry Jenkins, Ava DuVernay, and Ryan Coogler. Jenkins' films (Moonlight, If Beale Street Could Talk), are aesthetically lush, intimate, and understated. DuVernay (When They See Us) foregrounds racial history and injustice in her feature films, television, and documentary work. Coogler followed his realist Fruitvale Station with two powerful genre films with black protagonists (Creed, Black Panther - this last the highest-grossing film by a black director).
Same as: AMSTUD 290, FILMSTUD 490

FILMSTUD 295. Films & Media Studies Internship. 1-5 Unit.
Professional experience in a field related to the cinematic arts (film, television, media) for six to ten weeks. Internships may include work for production companies, producers, studios, networks, films, television series, directors, screenwriters, non-profit organizations, academic publications and related workplaces. Students arrange the internship, provide a confirmation letter from the hosting institution, and must receive consent from the faculty coordinator to enroll in units. Students submit weekly self-assessments, and evaluations from the student and the supervisor are submitted at the end of the internship. Summer internships may be credited in fall quarter. Restricted to declared majors and minors. May be repeated for credit.

FILMSTUD 297. Honors Thesis Writing. 2-5 Units.
May be repeated for credit.

FILMSTUD 299. Independent Study: Film and Media Studies. 1-5 Unit.
Prerequisite: student must have taken a course with the instructor and/or completed relevant introductory course(s). Instructor consent and completion of the Independent Study Form are required prior to enrollment. All necessary forms and payment are required by the end of Week 2 of each quarter. Please contact the Undergraduate Coordinator in McMurtry 108 for more information. May be repeated for credit.

FILMSTUD 300A. History of World Cinema I, 1895-1929. 4 Units.
This course begins at the end of the nineteenth century, when the purpose of cinema was questioned and debated, film grammar was just being invented, distribution and exhibition were haphazard, and writers internationally were registering surprise and wonder at the new medium. It ends with modernist masterpieces of the 1920s, subtle (and still relevant) critical debates about the aesthetics and politics of film, and the development of viable sound technologies. What could film have become and did not? How did storytelling come to dominate the development of the new medium? How and why did various national cinemas develop distinctive stylesâ¿¿classical Hollywood, French Impressionism, German Expressionism, Russian montageâ¿¿that shape screen arts to this day? How did influential critics understand cinema and the ways it could reflect and effect social change? To explore these questions you will work mainly with primary textsâ¿¿the films themselves, and criticism written contemporaneously with them. Lectures will help you place these filmic and critical texts within a larger narrative about the first thirty-five years of cinema.
Same as: FILMSTUD 100A

FILMSTUD 300C. History of World Cinema III, 1960-Present. 3-5 Units.
This course will provide an overview of cinema from around the world since 1960, highlighting the cultural, political, and economic forces that have shaped various film movements over the last six decades. We will study some key film movements and national cinemas towards developing a historical appreciation of a variety of commercial and art film traditions. Through an exploration of films from Europe, Africa, Asia, and Latin America, we shall examine the industrial histories of non-Hollywood film production and exhibition practices that produce the particular cinematic cultures of each region.
Same as: FILMSTUD 100C

FILMSTUD 301. Close Cinematic Analysis. 3-4 Units.
The close analysis of film, with an emphasis on sound, music, and audio-visuality. Films from various historical periods, national cinemas, directors, and genres. Prerequisite: FILMSTUD 4 or equivalent. Recommended: ARTHIST 1 or FILMSTUD 102. Course can be repeated twice for a max of 8 units. This course fulfills the WIM requirement for Film and Media Studies majors.
Same as: FILMSTUD 101

FILMSTUD 302. Theories of the Moving Image. 4 Units.
What makes the moving image unique in its capacity for telling stories, influencing thoughts, and stirring emotions? What are the potentials and risks of cinema's affective power? This course looks at concepts developed by filmmakers, film critics, and philosophers to explain affinities between mind and moving image, to envision cinema¿s promise, and to identify its limitations. We will read a range of authors, some classic, some contemporary, including André Bazin, Laura Mulvey, and D. A. Miller. Films will include classics such as Julie Dash's Daughters of the Dust (1991) and recent releases such as Hirokazu Koreeda's Shoplifters (2018). Students will learn to speak and write confidently about influential theories and methods in the field of film and media studies. They will learn to formulate research questions that are in dialogue with vital concepts. Through close analysis, they will assess how theories of film and media speak, or fail to speak, to their own experience. And ideally, students will venture to engage in theoretical speculation of their own.
Same as: FILMSTUD 102

FILMSTUD 304. Introduction to the Movies- How Movies Are Developed, Produced, Marketed and Exhibited. 4 Units.
How are movies created? How are scripts developed and selected for production? How are films actually made and marketed? How are they shown in various media? Who decides what in all of these processes and what information do the decision-makers rely on?nnThis course will follow the life cycle of a movie, from its inception as an idea, article, book, etc., to its release in theaters and other media as a finished product. Guest speakers will discuss the evolution of the film industry, creative development of scripts, how deals are structured to acquire intellectual property, film finance, and how movies are physically produced and then marketed, distributed and exhibited in theaters and in other media. We will use two films as case studies ¿ The Chronicles of Narnia ¿ Voyage of the Dawn Treader and Chasing Mavericks.
Same as: FILMSTUD 104

FILMSTUD 305. The Films of Ernst Lubitsch. 4 Units.
Ernst Lubitsch was: a stage actor in Berlin; a comic actor in early German cinema; Germany's most profitable director in the early 1920s; a director of subtle silent comedies in Hollywood in the later `20s; an innovative director of sound musicals and comedies in the 1930s; head of production for Paramount Pictures; and one of the few directors whose name and likeness were familiar to audiences across America, one famed for what became known as The Lubitsch Touch. The course considers Lubitsch in all these contexts. Charts intersections with collaborators, genre conventions, sexuality and censorship, and studio control. Lubitsch's style depends on performance, so attention will be given to film acting as he came to shape it.
Same as: FILMSTUD 105

FILMSTUD 306. Introduction to Media. 3-5 Units.
What is a medium? This course starts from the assumption that the answer to this question is not as obvious as it might at first appear. Clearly, we know some media when we see them: radio, film, and television are in many ways paradigmatic media of the twentieth century. But what about the computational, networked media of the twenty-first century? Are these still media in the same sense, or has the nature of media changed with the emergence of digital technologies? And what, for that matter, about pre-technical media? Is painting a medium in the same sense that oil or acrylic are media, or in the sense that we speak of mixed media? Is language a medium? Are numbers? Is the body? As we shall see, the question of what a medium is raises a number of other questions of a theoretical or even philosophical nature. How is our experience of the world affected or shaped by media? Are knowledge and perception possible apart from media, or are they always mediated by the apparatuses, instruments, or assemblages of media? What is the relation between the forms and the contents of media, and how does this relation bear on questions of aesthetics, science, technology, or politics? The lecture-based course addresses these and other questions and seeks in this way to introduce a way of thinking about media that goes beyond taken-for-granted ideas and assumptions, and that has a potentially transformative effect on a wide range of theoretical and practical interests.nnFilm & Media Studies majors and minors must enroll for 5 units.
Same as: FILMSTUD 6

FILMSTUD 310. Science Fiction Cinema. 4 Units.
Science fiction film's sense of wonder depends upon the development and revelation of new ways of seeing. The American science fiction film emphasizes the fundamental activity of human perception, its relation to bodily experience and the exploration of other worlds, new cities, and other modes of being, in such new technological spaces as the cyberspaces of the information age. It is perhaps the Hollywood genre most directly concerned with the essence of cinema itself.
Same as: FILMSTUD 110

FILMSTUD 314. Reading Comics. 4 Units.
The modern medium of comics, a history that spans 150 years. The flexibility of the medium encountered through the genres of humorous and dramatic comic strips, superheroes, undergrounds, independents, journalism, and autobiography. Innovative creators including McCay, Kirby, Barry, Ware, and critical writings including McCloud, Eisner, Groenstee. Topics include text/image relations, panel-to-panel relations, the page, caricature, sequence, seriality, comics in the context of the fine arts, and relations to other media.
Same as: AMSTUD 114X, FILMSTUD 114

FILMSTUD 315. Documentary Issues and Traditions. 4 Units.
Issues include objectivity/subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. Parallel focus on form and content.
Same as: FILMSTUD 115

FILMSTUD 316. International Documentary. 4 Units.
Historical, aesthetic, and formal developments of documentary through nonfiction films in Europe, Asia, Latin America, and Africa.
Same as: FILMSTUD 116

FILMSTUD 319. Science Fiction: Cyborgs & Human Simulacra in the Cinema. 4 Units.
The human simulacrum has a long history in mythology, fairy tales and children¿s stories, as well as in the genres of horror and science fiction. This course explores synthetic human narratives in the cinema. Stories of artificially created life, living statues, automata, body snatchers, robots, cyborgs and electronic simulations all direct our attention to our assumed definitions of the human.The fantasies and anxieties that undergird these stories engage with such issues as labor, gender, sexuality, death, emotion, rationality, embodiment, consumerism, reproductive technologies, and power relations. Attention will also be given the relation of cinema¿s human simulacra to changing cinematic technologies. Films will include Metropolis, Pinocchio, Robocop, Bride of Frankenstein, The Golem, A.I., My Fair Lady, Her, Blade Runner, and the HBO iteration of Westworld. Readings will include essays, as well as some fiction and possibly comics.
Same as: AMSTUD 119, FILMSTUD 119

FILMSTUD 320. Superhero Theory. 3-5 Units.
With their fantastic powers, mutable bodies, multiple identities, complicated histories, and visual dynamism, the American superhero has been a rich vehicle for fantasies (and anxieties) for 80+ years across multiple media: comics, film, animation, TV, games, toys, apparel. This course centers upon the body of the superhero as it incarnates allegories of race, queerness, hybridity, sexuality, gendered stereotypes/fluidity, politics, vigilantism, masculinity, and monstrosity. They also embody a technological history that encompasses industrial, atomic, electronic, bio-genetic, and digital.
Same as: AMSTUD 120B, ARTHIST 120, ARTHIST 320, FILMSTUD 120

FILMSTUD 329. Animation and the Animated Film. 3-5 Units.
The fantasy of an image coming to life is ancient, but not until the cinema was this fantasy actualized. The history of the movies begins with optical toys, and contemporary cinema is dominated by films that rely on computer animation. This course considers the underlying fantasies of animation in art and lit, its phenomenologies, its relation to the uncanny, its status as a pure cinema, and its place in film theory. Different modes of production and style to be explored include realist animation, abstract animation; animistic animation; animated drawings, objects, and puppets; CGI, motion capture, and live/animation hybrids.
Same as: AMSTUD 129, FILMSTUD 129

FILMSTUD 332. East Asian Cinema. 4 Units.
Social, historical, and aesthetic dimensions of the cinemas of Japan, Hong Kong, Taiwan, mainland China, and Korea. Topics such as nation and gender, form and genre, and local and transnational conditions of practice and reception. Screenings include popular and art films from the silent to contemporary eras, including, Zhang Yimou, Wong Kar-wai, Hou Hsiao-hsien, Ozu Yasujiro, Kurosawa Akira, and Im Kwon-taek.

FILMSTUD 332A. Indian Cinema. 5 Units.
This course will provide an overview of cinema from India, the world's largest producer of films. We will trace the history of Indian cinema from the silent era, through the studio period, to state-funded art filmmaking to the contemporary production of Bollywood films as well as the more unconventional multiplex cinema. We will examine narrative conventions, stylistic techniques, and film production and consumption practices in popular Hindi language films from the Bombay film industry as well as commercial and art films in other languages. This outline of different cinematic modes will throw light on the social, political, and economic transformations in the nation-state over the last century.
Same as: FILMSTUD 132A

FILMSTUD 333. Contemporary Chinese Auteurs. 4 Units.
New film cultures and movements in Taiwan, Hong Kong, and mainland China in the 80s. Key directors including Jia Zhangke, Wu Wenguang, Tsai Ming-liang, Hou Hsiao-hsien, Wong Kar-wai, Ann Hui. Topics include national cinema in the age of globalization, the evolving parameters of art cinema, and authorship.
Same as: FILMSTUD 133

FILMSTUD 334. The Art Cinema of India. 5 Units.
India is the world's largest producer of films, and Bollywood is currently its most visible cinematic product on the festival circuit as well as university curricula. This course, probably the first of its kind in the American academic setting, will focus instead on the various art cinemas of India. From the well-known Satyajit Ray to his important contemporaries, Ritwik Ghatak and Mrinal Sen, from the social realist New Wave cinemas of the 70s and 80s to contemporary indie films, we will engage with the history of the "parallel cinema" movement. Considering the relationship of Indian art cinema to Third Cinema and to European art cinema will bring attention to transnational networks and exhibition circuits. The course will engage with scholarship on art cinema more broadly to understand how films are categorized as such through narrative, form, audience, auteurism, funding, censorship, and relationship to the nation-state.
Same as: FILMSTUD 134

FILMSTUD 335. Around the World in Ten Films. 3-4 Units.
This is an introductory-level course about the cinema as a global language. We will undertake a comparative study of select historical and contemporary aspects of international cinema, and explore a range of themes pertaining to the social, cultural, and political diversity of the world. A cross-regional thematic emphasis and inter-textual methods of narrative and aesthetic analysis, will ground our discussion of films from Italy, Japan, United States, India, China, France, Brazil, Nigeria, Russia, Iran, Mexico, and a number of other countries. Particular emphasis will be placed on the multi-cultural character and the regional specificities of the cinema as a "universal language" and an inclusive "relational network."nnThere are no prerequisites for this class. It is open to all students; non-majors welcome.
Same as: FILMSTUD 135, GLOBAL 135

FILMSTUD 336. Gender and Sexuality in Chinese Cinema. 4 Units.
Representations of gender and sexuality in the cinemas of China, Taiwan, and Hong Kong, covering key periods and genres such as the golden age of Shanghai film, Hong Kong action pictures, opera films, post-socialist art films, and new queer cinema. Historical and contemporary perspectives on cinematic constructions of femininity, masculinity, and sexuality as they relate to issues of nationalism, modernity, globalization, and feminist and queer politics. Weekly screening required.
Same as: FILMSTUD 136

FILMSTUD 337. Love in the Time of Cinema. 3-5 Units.
Romantic coupling is at the heart of mainstream film narratives around the world. Through a range of film cultures, we will examine cinematic intimacies and our own mediated understandings of love and conjugality formed in dialog with film and other media. We will consider genres, infrastructures, social activities (for example, the drive-in theater, the movie date, the Bollywood wedding musical, 90s queer cinema), and examine film romance in relation to queerness, migration, old age, disability, and body politics more broadly.
Same as: FILMSTUD 137, GLOBAL 110, GLOBAL 211

FILMSTUD 340. Film Aesthetics: Editing. 4 Units.
Practical and theoretical approaches to editing and montage. The role of editing in film meaning, and cognitive and emotional impact on the viewer. Developments in the history and theory of cinema including continuity system, Soviet montage, French new wave, postwar and American avant garde. Aesthetic functions, spectatorial effects, and ideological implications of montage. Film makers include Eisenstein, Godard, and Conner.
Same as: FILMSTUD 140

FILMSTUD 345. Politics and Aesthetics in East European Cinema. 4 Units.
From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica.
Same as: FILMSTUD 145

FILMSTUD 347. Iberian and Latin American Experimental Cinemas, 1960s to the Present. 4 Units.
This class will offer a panorama of Iberian and Latin American experimental film cultures from the 1960 to the present. We will focus on developments and formations mainly in Mexico, Brasil, Argentina, and Spain, but will cast side glances at Bolivia, Peru, Cuba, Paraguay and Uruguay. Among our main thematic interests will be the representation of the body and sexuality; abstraction; politics; the reading of history; personal subgenres (the essay and the diary film); and collage and appropriation. Readings will range from general theoretical statements on experimental film aesthetics to specific historical and critical excavations of experimental film by contemporary critics and historians.
Same as: FILMSTUD 147

FILMSTUD 348. Archival Cinema: Excavating the Future. 4 Units.
This course examines the practices of appropriation of archival material in cinema, and the problems of representation inherent to them. The practical component consists of a series of creative assignments in which students are asked to use archival material, including some from Stanford's collections, to produce short moving image pieces.
Same as: FILMPROD 148, FILMPROD 348, FILMSTUD 148

FILMSTUD 350. Cinema and the City. 4 Units.
Utopian built environments of vast perceptual and experiential richness in the cinema and city. Changing understandings of urban space in film. The cinematic city as an arena of social control, social liberation, collective memory, and complex experience. Films from international narrative traditions, industrial films, experimental cinema, documentaries, and musical sequences. Recommended: 4 or equivalent.
Same as: FILMSTUD 150

FILMSTUD 351. Experimental Cinema Workshop. 5 Units.
This is a hands-on course situated at the intersection of theory and practice of sound and image. Select readings in film, video, and digital media theory, as well as screenings and class discussions, will pave the way for a number of thematically focused practical exercises in ¿analytic audio-vision.¿nnTopics and individual and group assignments will vary from quarter to quarter. Combining creative expression and aesthetic/interpretive inquiry, the class has no prerequisites and is open to all students.
Same as: FILMSTUD 151

FILMSTUD 352. Hollywood/Bollywood: The Musical Two Ways. 3-5 Units.
A comparative approach to the musical as Hollywood genre and as fundamental mode in Bollywood (where even horror movies have song-and-dance sequences!). The pleasurable interplay among song, dance, and screen directs us to the interplay of cultural identities (regional, racial, gendered, sexual). Through cinematic travels between America and India, we will examine how the utopian, liberatory energies of musical numbers - physical, emotional, aesthetic, and social - illuminate relations of narrative and spectacle, stardom and performance, gender and space, color and sound.
Same as: FILMSTUD 152

FILMSTUD 355. Comics and the City. 4 Units.
Urban history and life informs the history, stories, structures and aesthetics of the comics, coinciding with the emergence of the modern metropolis in America and Europe and is rooted in the same industrial, commercial, and social transformations. Comics and cartoons were fixtures of urbane humor publications of the 19th century and became a valued fixture of the American newspaper in the very earliest part of the 20th. The characters in early comic strips were often denizens of the urban world, whether immigrants fresh off the boat or the nouveau riche. Many strips were grounded in quotidian urban experience. Later comics use the city as setting, aesthetic, and metaphor. The mean streets of Jacques Tardi's noirish cities abut the rather sunnier and shinier example of Superman's Metropolis. Science fiction comics and manga give us the impacted and often destructed cities of the future. The graphic novel adaptation of Paul Auster's City of Glass maps the grid pattern of the comics page onto the gridded streets of Manhattan. Chris Ware's Building Stories series uses one apartment building to follow the myriad and sometimes intersecting lines found therein. Assigned readings include many comics alongside urban and comics scholarship. Artists to be considered include Outcault, Swinnerton, McCay, Eisner, Katchor, Tatsumi, Doucet, Tardi, Otomo. Hergé, Mazzuchelli, Chaykin, Miller, Ware, Pekar, Crumb, Gloeckner.

FILMSTUD 357. Film Noir from Bogart to Mulholland Drive. 4 Units.
Why did prosperous mid-20th-century America produce a dark cinema of hard-boiled characters, gritty urban settings, stark high-contrast lighting, and convoluted plots? Key examples and the recent legacy of film noir. 40s and 50s Hollywood movies featuring anti-heroes, femmes fatales, shattered dreams, violence, and a heaviness of mood. Film noir's influences included pulp fiction; B-movie production-budgets; changes in Hollywood genres; left-populist aesthetic movements; a visual style imported by European émigré directors; innovations in camera and film technology; changes in gender roles; combat fatigue; and anxieties about the economy, communism and crime. Directors, writers, cinematographers and actors. Film viewings, readings and analyses.
Same as: FILMSTUD 157

FILMSTUD 364A. Technology and the Visual Imagination. 4 Units.
An exploration of the dynamic relationship between technology and the ways we see and represent the world. The course examines technologies from the Renaissance through the present day, from telescopes and microscopes to digital detectors, that have changed and enhanced our visual capabilities as well as shaped how we imagine the world. We also consider how these technologies influenced and inspired the work of artists. Special attention is paid to how different technologies such as linear perspective, photography, cinema, and computer screens translate the visual experience into a representation; the automation of vision; and the intersection of technology with conceptions of time and space.
Same as: ARTHIST 164A, ARTHIST 364A, FILMSTUD 164A

FILMSTUD 365A. Fashion Shows: From Lady Godiva to Lady Gaga. 4 Units.
The complex and interdependent relationship between fashion and art. Topics include: the ways in which artists have used fashion in different art forms as a means to convey social status, identity, and other attributes of the wearer; the interplay between fashion designers and various art movements, especially in the 20th century; the place of prints, photography, and the Internet in fashion, in particular how different media shape how clothes are seen and perceived. Texts by Thorstein Veblen, Roland Barthes, Dick Hebdige, and other theorists of fashion.
Same as: ARTHIST 165A, ARTHIST 365A, FILMSTUD 165A

FILMSTUD 367B. Beyond the Fuzzy-Techie Divide: Art, Science, Technology. 4 Units.
Although art and science are often characterized as "two cultures" with limited common interests or language, they share an endeavor: gaining insight into our world. They even rely on common tools to make discoveries and visually represent their conclusions. To clarify and interrogate points of similarity and difference, each week¿s theme (time, earth, cosmos, body) explores the efforts of artists and scientists to understand and represent it and the role of technology in these efforts. Focus on contemporary examples.
Same as: ARTHIST 167, ARTHIST 367, FILMSTUD 167B

FILMSTUD 402. FRANKFURT SCHOOL Media & Study. 5 Units.
Formal, historical, and cultural issues in the study of film. Classical narrative cinema compared with alternative narrative structures, documentary films, and experimental cinematic forms. Issues of cinematic language and visual perception, and representations of gender, ethnicity, and sexuality. Aesthetic and conceptual analytic skills with relevance to cinema.

FILMSTUD 404. Postwar American Avant Garde Cinema. 5 Units.
History and theory of post-WW II American independent and experimental film. Emphasis is on issues of audiovisual form, structure, and medium specificity. Films and writings include Maya Deren, Stan Brakhage, Michael Snow, and Hollis Frampton.

FILMSTUD 406. Montage. 5 Units.
Graduate seminar in film aesthetics. Theoretical and practical approaches to editing/montage. Stylistic, semiotic, epistemological, and ideological functions of montage considered in film-historical contexts including: development of the continuity system of editing; flourishing of the Soviet montage school; and achievements of the post-war new waves. Filmmakers include D. W. Griffith, Sergei Eisenstein, Jean-Luc Godard, and Dusan Makavejev.

FILMSTUD 408. Attention. 5 Units.
Throughout the twentieth century, cinema has been theorized as a machine that molds the senses and produces new forms of attention. This course delves into debates about the impact of audio-visual media on a history of attention, from the rise of reproductive technologies (bringing concerns about the replacement of contemplation by distraction) to the contemporary landscape (where reactions to a perceived crisis of attention are front and center). Readings will draw from not just film studies, but also art history, music, and literature. Assignments will emphasize presentations that expand the range of case studies and exercise in reflecting on the conditions of the attention we pay as scholars and critics. Permission of instructor required.

FILMSTUD 410A. Documentary Perspectives I: Politics of the Subject. 4 Units.
Historical, political, aesthetic, and formal developments of documentary film. Subjectivity, ethics, censorship, representation, reflexivity, responsibility to the audience, and authorial voice. Prerequisite: consent of instructor.
Same as: FILMSTUD 210A

FILMSTUD 410B. Documentary Perspectives II. 4 Units.
Restricted to M.F.A. documentary film students. Continuation of 410A. Topics in nonfiction media. Presentations and screenings by guest filmmakers. Prerequisite: consent of instructor.

FILMSTUD 411. Childish Enthusiasms, Perishable Manias. 5 Units.
Universities are sites of gravitas, but what of levitas -- a lighter, more playful category? Does intellectually credible work depend upon a â¿¿critical distanceâ¿ between scholar and object of study? Can we take something seriously without imposing a seriousness that it may not possess (or want)? How to retain (or recover) the intensely pleasurable relation to objects that we were allowed when younger? The seminar is predicated upon the proposition that effective scholarship need not suck the joy from the world.
Same as: ARTHIST 411

FILMSTUD 413. Theories of Melodrama. 5 Units.
Commonly derided for being over the top, with films in this mode put down as weepies, tear-jerkers, and women's films, melodrama as a genre and a cinematic mode has been reclaimed by feminist-queer-film scholars as providing a powerful site of ideological struggle and sustained engagement with individual and social subjection and suffering. Melodrama, a transgeneric mode of emotional dramaturgy, centered around body and community, delay and chance, realism and excess, affords radical critiques of discourses of gender, sexuality, race, class, and nation. We will consider melodrama's careful calibration of sensation and affect through its employment of cinematic form (color, music, editing etc.), and sweeping performative gestures. Through an analysis of films from Europe, Asia, Africa, Latin America, by auteurs such as Douglas Sirk, Ritwik Ghatak, Wong Kar-wai, Rainer Werner Fassbinder, and Pedro Almodovar, among others, we will study global and transnational flows in the adoption of the politics and aesthetics of the melodramatic mode. The seminar is conceived to be interdisciplinary and participants are encouraged to work with texts from disciplines other than film studies as well, including theatre, visual arts, music, dance, literature etc.
Same as: FILMSTUD 213

FILMSTUD 414. Methods and Theories in Film and Media Studies. 5 Units.
This seminar offers an overview of methods in film and media studies. It covers key debates and interventions that have shaped the field, such as the paradigm of classical cinema, historical reception studies, genre and authorship, political modernism, psychoanalytic theories of spectatorship, senses and aesthetics, and industry history. In exploring how these different approaches have expanded the discipline, students will gain a sense of the methodological stakes of their own research.

FILMSTUD 415. Post-Cinema. 3-5 Units.
In this seminar, we will try to come to terms with twenty-first century motion pictures by thinking through a variety of concepts and theoretical approaches designed to explain their relations and differences from the cinema of the previous century. We will consider the impact of digital technologies on film, think about the cultural contexts and aesthetic practices of contemporary motion pictures, and try to understand the experiential dimensions of spectatorship in today's altered viewing conditions.nnIn addition to viewing a wide range of recent and contemporary films, we will also engage more directly and materially with post-cinematic moving images: we will experiment with scholarly and experimental uses of non-linear video editing for the purposes of film analysis, cinemetrics, and a variety of academic and creative responses to post-cinematic media.nnThe course addresses key issues in recent film and media theory and, especially in its hands-on components, encourages experimentation with methods of digital humanities, computational media art, and other creative practices.
Same as: FILMSTUD 215

FILMSTUD 416. The Films of Robert Altman. 4 Units.
A collaborative consideration of Robert Altman¿s prolific and varied work as a director. The course will examine well-known films such as the narratively and stylistically innovative Nashville, creative genre revisions such as McCabe and Mrs. Miller, The Long Goodbye, and Gosford Park; and the culturally iconic M.A.S.H. We will also pay close attention to less famous work such as Secret Honor, and Buffalo Bill and the Indians, or Sitting Bull¿s History Lesson with the aim of describing and assessing a complex oeuvre. There will be a course bibliography, but required reading will be relatively light to make time for both careful and extensive viewing.
Same as: FILMSTUD 216

FILMSTUD 423. Seriality. 5 Units.
In this seminar, we will think about serial forms and serialization processes across a range of media and investigate their relations to our aesthetic experiences, media-technological apparatuses, and sociocultural formations. We will focus especially on the popular, commercial forms of seriality that have emerged since the nineteenth century and dominated large sections of popular culture in the forms of serialized novels, film and radio serials, and television series. But this investigation will be relevant as well for the study of high art, or art forms situated outside the realm of the popular. This is true not only for movements, like Pop Art, that engage explicitly with popular culture, but also for a wide range of artistic practices that are affected or informed by industrial processes and utilize for their expressive or aesthetic purposes the formal techniques of seriality. Ultimately, we may inquire whether there is a deeper relation between seriality and mediality more generally whether media rely for their conceptual definition or practical efficacy upon a serial interplay between repetition and variation. On the other hand, however, we will attend also to the possible differences between industrial, pre-industrial, and digital forms of serialization and think about the role of seriality in media-historical shifts and transformations.nThe course seeks to illuminate forms and phenomena that are central to our cultural and aesthetic experience of the world. In addition to engaging with a wide range of readings and viewings assigned by the instructor, participants are invited to contribute actively to the courses comparative focus with materials, projects, and presentations of their own.

FILMSTUD 424. Films of Stanley Kubrick. 4-5 Units.
This seminar will explore the cinema of Stanley Kubrick, a widely acclaimed film auteur known for works such as 2001: A Space Odyssey, A Clockwork Orange, and Barry Lyndon. The seminar will focus on close analysis of practically all of Kubrick's films, from a variety of methodological perspectives (authorship, formal/stylistic analysis, book-to-screen adaptation, and more.nnNOTE: Instructor's permission required before the first day of class.
Same as: FILMSTUD 224

FILMSTUD 430. Cinema and Ideology. 5 Units.
The relationship between cinema and ideology from theoretical and historical perspectives, emphasizing Marxist and psychoanalytic approaches. The practice of political filmmaking, and the cinema as an audiovisual apparatus and socio-cultural institution. Topics include: dialectics; revolutionary aesthetics; language and power; commodity fetishism; and nationalism. Filmmakers include Dziga Vertov, Jean-Luc Godard, Bruce Conner, and Marco Ferreri. Theoretical writers include Karl Marx, Sergei Eisenstein, and Slavoj Zizek. Prerequisite: consent of instructor.
Same as: ARTHIST 430

FILMSTUD 432. Chinese Cinema. 5 Units.
This course surveys a range of critical perspectives and debates on Chinese cinema. It is organized on the basis of weekly topics, such as genre, historiography, gender, modernity, and the idea of national cinema. Consent of instructor required.
Same as: FILMSTUD 232

FILMSTUD 433. Let's Make a Monster: Critical Making. 5 Units.
Ever since Frankenstein unleashed his monster onto the world in Mary Shelley¿s novel from 1818, the notion of ¿technology-out-of-control¿ has been a constant worry of modern societies, plaguing more optimistic visions of progress and innovation with fears that modern machines harbor potentials that, once set in motion, can no longer be tamed by their human makers. In this characteristically modern myth, the act of making ¿ and especially technological making ¿ gives rise to monsters. As a cautionary tale, we are therefore entreated to look before we leap, to go slow and think critically about the possible consequences of invention before we attempt to make something radically new. However, this means of approaching the issue of human-technological relations implies a fundamental opposition between thinking and making, suggesting a split between cognition as the specifically human capacity for reflection versus a causal determinism-without-reflection that characterizes the machinic or the technical. Nevertheless, recent media theory questions this dichotomy by asserting that technologies are inseparable from humans¿ abilities to think and to act in the world, while artistic practices undo the thinking/making split more directly and materially, by taking materials ¿ including technologies ¿ as the very medium of their critical engagement with the world. Drawing on impulses from both media theory and art practice, ¿critical making¿ names a counterpart to ¿critical thinking¿ ¿ one that utilizes technologies to think about humans¿ constitutive entanglements with technology, while recognizing that insight often comes from errors, glitches, malfunctions, or even monsters. Co-taught by a practicing artist and a media theorist, this course will engage students in hands-on critical practices involving both theories and technologies. Let¿s make a monster!.
Same as: ARTSTUDI 233, FILMSTUD 233

FILMSTUD 436. Chinese Cinema. 5 Units.
Course surveys a range of critical perspectives and debates on Chinese cinema. It is organized on the basis of weekly topics, such as genre, historiography, gender, modernity, and the idea of national cinema. Consent of instructor required.

FILMSTUD 440. Sound Technology. 5 Units.
Development of sound technology and reproduction in context of modernity, with some emphasis on the crossings of sound and image in the history and theory of technological reproduction. Topics include phonography, recording, and mass culture (Adorno, Sterne, Thompson, Lastra); cinematic sound and music (Chion, Altman, Gorbman); filmic and compositional practices in the American avant-garde (Joseph, Kahn); acoustic ecology (Schafer). Weekly screenings or listenings.

FILMSTUD 442. Hollywood Musical. 5 Units.
Physical, emotional, aesthetic, and social liberation mark this most colorful of film genres. Musicals are a place for staging issues of identity, including the impact of African American and Jewish culture, and issues of gay reception and interpretation. Attention to technologies of sound and color, the relation to vaudeville and Broadway, and ethnic and aesthetic diversity. Musicals as the epitome of filmic illusionism and the Hollywood studio system; the implications of their seduction of audiences; the meaning of spectacle, the centrality of performance. Busby Berkeley, Fred Astaire, Judy Garland, Bob Fosse, Stanley Donen, Gene Kelly, Vincente Minnelli.

FILMSTUD 445B. History and Politics in Russian and Eastern European Cinema. 5 Units.
From 1945 to the mid-80s, emphasizing Polish, Hungarian, Czech, Slovak, and Yugoslav contexts. The relationship between art and politics; postwar establishment of film industries; and emergence of national film movements such as the Polish school, Czech new wave, and new Yugoslav film. Thematic and aesthetic preoccupations of filmmakers such as Wajda, Jancso, Forman, and Kusturica. Permission of instructor required prior to the first day of classes.
Same as: FILMSTUD 245B, REES 301B

FILMSTUD 448. The Body in Film and other Media. 5 Units.
In this seminar, we will consider the body on screen as well as the body before the screen i.e. the spectator but also the profilmic body of the actor to examine corporeal performance and reception. The dancing body, the comic body, dead and live bodies, the monstrous body, the body in pain, the virtual body all raise questions about embodiment, liveness, and performance. We will read the body in audiovisual culture through an engagement with affect theory, focusing on the labor of performance, the construction of stardom, spatial and temporal configurations of the performing body, and the production of affect and sensation in the spectating body. Through a discussion of make-up, fashion, the labor of producing the idealized star body from the meat-and-bones body of the actor, or body genres where the spectator's body is beside itself with sexual pleasure, fear and terror, or overpowering sadness, we will inquire into ideologies of discipline and desire that undergird mediatized bodies. nnNo prior engagement with film studies is required. Students are encouraged to write seminar papers that build on current research interests.nnNOTE: Instructor consent required for undergraduate students (only seniors may enroll). Please contact the instructor for permission to enroll if you're an undergraduate senior.
Same as: ARTHIST 448

FILMSTUD 449. Eye of the Beholder: Subjective Cinema. 5 Units.
This course proposes to look at how even the most seemingly objective films are shaped by a subjective eye. An eye which is molded by gender, race, culture and class - all of which influence the entire film-making process and experience from how something is framed to how it is cut and and how it is perceived it. How we look at something, for how long we look at it and in what context we are shown something is as important as what we are looking at. Similarly the subjective eye of the viewer shapes how he or she understands and interprets the film. Whether the viewer is an insider or outsider to the subject completely changes expectations and reactions to the film. So then what are we really talking about when we talk about documentary films? What makes a documentary a documentary? Why is such a categorization valuable? necessary? useful? nThe course will combine analysis of films, theoretical texts, and some practical ¿production" exercises.
Same as: FILMSTUD 249

FILMSTUD 450. Screened Thought. 5 Units.
This seminar considers the varied ways film represents thought. What forms of thinking do films enable and forestall? How do particular films, and film genres, activate or elide characters' cognition, interiority, self-consciousness, reflection, etc.? How do formal techniques such as point-of-view, superimposition, flashbacks, framing, and voiceover change the image of thought that cinema inherits from philosophy, literature and other artistic traditions? We'll consider these questions through a range of films and film theory as well as critical and philosophical texts.

FILMSTUD 452. Currents in Media Theory. 5 Units.
This seminar explores a set of currents in media theory (and related fields), which we will seek to navigate together as a group. We will focus on approaches, discourses, conversations, and paradigms that seek to explain the mediations, modulations, and triangulations of our experience within a changing landscape of technological, social, political, and other forces. Special attention will be given to contemporary works of theory and/or works that are enjoying a renewed contemporary reception.
Same as: FILMSTUD 252

FILMSTUD 453. Aesthetics and Phenomenology. 3-5 Units.
This course explores central topics in aesthetics where aesthetics is understood both in the narrow sense of the philosophy of art and aesthetic judgment, and in a broader sense as it relates to questions of perception, sensation, and various modes of embodied experience. We will engage with both classical and contemporary works in aesthetic theory, while special emphasis will be placed on phenomenological approaches to art and aesthetic experience across a range of media and/or mediums (including painting, sculpture, film, and digital media). nnPhD students in the Art History program may take the class to fulfill degree requirements in Modern/Contemporary Art or Film & Media Studies, depending on the topic of their seminar paper.
Same as: FILMSTUD 253

FILMSTUD 458. The Face on Film. 5 Units.
The seminar will discuss the workings of the face: as privileged object of representation, as figure of subjectivity, as mode and ethic of address, through film theory and practice. How has the cinema responded to the mythic and iconic charge of the face, to the portrait's exploration of model and likeness, identity and identification, the revelatory and masking play of expression, the symbolic and social registers informing the human countenance? At this intersection of archaic desires and contemporary anxieties, the face will serve as our medium by which to reconsider, in the cinematic arena, some of the oldest questions on the image. Among the filmmakers and writers who will inform our discussion are Aumont, Balázs, Barthes, Bazin, Bresson, Doane, Dreyer, Epstein, Hitchcock, Koerner, Kuleshov, Warhol, and others.

FILMSTUD 459. Game Studies. 5 Units.
This course aims to introduce students to the emerging, interdisciplinary field of game studies. We will investigate what games (including but not limited to digital games) are, why we play them, and what the functions of this activity might be. The bulk of the course will be devoted specifically to digital games, which we will approach from a variety of perspectives: from historical, cultural, industrial/commercial, media-theoretical, and formal (narratological/ludological) perspectives, among others. Thus, we will seek to understand the contexts in which video games emerged and evolved, the settings in which they have been played, and the discourses and practices that have determined their place in social and cultural life. In addition, we will ask difficult questions about the mediality of digital games: What is the relation of digital to non-digital games? Are they both games in the same sense, or do digital media redefine what games are or can be? How do digital games relate to other (digital as well as non-digital) non-game media, such as film, television, print fiction, or non-game computer applications? Of course, to engage meaningfully with these questions at all will require us to investigate theories of mediality (including inter- and transmediality) more generally. Finally, though, we will be interested in the formal and experiential parameters that define (different types of) digital games in particular. What does it feel like to play (various) digital games? What are the relations between storytelling and the activity of gameplaying in them? What is the relation between these aspects and the underlying mechanics of digital games, as embodied in hardware and software? What is the role of the human body? Because these questions can only be approached on the basis of personal experience, students will be expected to spend some time playing digital games and reflecting critically on their gameplay.
Same as: FILMSTUD 259

FILMSTUD 465. Post War American Avant-Garde Film. 5 Units.
Permission of instructor required for enrollment.

FILMSTUD 465A. Media Technology Theory. 3-5 Units.
This course surveys major theoretical approaches to the study of media technologies, including Frankfurt School critical theory, media archaeology, actor network theory, science and technology studies, platform studies and theories of critical making. By the end of the course, students should have a rich familiarity with the literature in this area, as well as with exemplary empirical studies conducted within each tradition. Preference to Ph.D. students in Communication and Art and Art History. Consent of instructor required for non-PhD students.
Same as: ARTHIST 465, COMM 384

FILMSTUD 481. Contemporary Asian Filmmakers. 4 Units.
Films and moving image works by contemporary filmmakers from Asia, including Hou Hsiao-hsien, Tsai Ming-liang, and Apichatpong Weerasethakul. Topics include explorations of national and local histories, aesthetics of slowness and duration, and crossings between the movie theater and the gallery.
Same as: FILMSTUD 281

FILMSTUD 490. Movies and Methods: Contemporary Black Filmmakers. 5 Units.
Despite the systemic inequalities of the Hollywood system, there is a robust, stylistically diverse cohort of African-American writer/directors at work, including Barry Jenkins, Ava DuVernay, and Ryan Coogler. Jenkins' films (Moonlight, If Beale Street Could Talk), are aesthetically lush, intimate, and understated. DuVernay (When They See Us) foregrounds racial history and injustice in her feature films, television, and documentary work. Coogler followed his realist Fruitvale Station with two powerful genre films with black protagonists (Creed, Black Panther - this last the highest-grossing film by a black director).
Same as: AMSTUD 290, FILMSTUD 290

FILMSTUD 620. Area Core Examination Preparation. 5 Units.
For Art History Ph.D. candidates. Prerequisite: consent of instructor.

FILMSTUD 660. Independent Study. 1-15 Unit.
For graduate students only. Approved independent research projects with individual faculty members.

FILMSTUD 660E. Extended Seminar. 4 Units.
May be repeated for credit. (Staff).

FILMSTUD 680. Curricular Practical Training. 1-3 Unit.
CPT course required for international students completing degree.

ARTS INSTITUTE

The Stanford Arts Institute offers interdisciplinary arts curricula and research programs, drawing on the wide-ranging intellectual resources of Stanford University. The Institute forges arts connections across the University; presents arts events; incubates new arts projects; and supports artists and cultural groups across campus. Since its founding in 2006, the Stanford Arts Institute has been a catalyst helping the Stanford arts community to grow, experiment, and advance art thinking and making.

Courses offered by the Stanford Arts Institute are listed under the subject code ARTSINST (http://explorecourses.stanford.edu/search/?q=ARTSINST&view=catalog&page=0&academicYear=&collapse=&filter-catalognumber-ARTSINST=on&filter-coursestatus-Active=on&filter-departmentcode-ARTSINST=on&filter-catalognumber-ARTSINST=on) on the Stanford Bulletin's ExploreCourses web site.

Honors in the Arts

Web site: https://arts.stanford.edu/for-students/academics/honors-in-the-arts/ (https://arts.stanford.edu/for-students/academics/capstone-in-the-arts/)

Information concerning the 2021-22 program will be available on February 15, 2021.

The Stanford Arts Institute offers an interdisciplinary Honors in the Arts program, for interested undergraduates in any major. The program supports collaborative or individual projects that combine the critical and creative imaginations. Projects must be completed in one year. All students will work with mentors and also participate in a weekly workshop.

Honors in the Arts can be completed in addition to honors work in a student's home department or alongside another capstone program, such as the Senior Reflection in Biology (http://web.stanford.edu/~suemcc/TSR/).

Admission

Students must have an overall GPA of 3.4 or higher. Students with demonstrated strengths relevant to the program may petition the GPA requirement at the time of application.

To qualify for admission, students must identify three courses, at least two of which must be completed by the end of the third year, that have provided the necessary foundation for the capstone project. The Creativity Course Guide (https://arts.stanford.edu/for-students/creativity-course-guide/) and the Interdisciplinary Course Guide (https://arts.stanford.edu/for-students/interdisciplinary-course-guide/) include courses that provide an introduction to the study of the arts disciplines as well as incorporating the arts in an interdisciplinary context.

Students interested in pursuing Honors in the Arts apply in the spring of their junior year. Students should visit the Honors in the Arts website (https://arts.stanford.edu/for-students/academics/capstone-in-the-arts/) or contact the program manager for more information.

How to Apply

Admission to the program is competitive. Students apply for entry into the program during the Spring Quarter of their junior year.

Eligibility requirements include:

- Stanford senior during the academic year following the Spring Quarter application.
- A minimum overall GPA of 3.4 is normally required. However, applicants can submit a GPA petition if needed.
- Completion of previous courses and/or creative projects that have prepared the student to execute an interdisciplinary capstone project.

Application materials include:

- Honors project proposal which addresses the following:
  a. the concept for the interdisciplinary capstone project or research
  b. a description of the student's background in the disciplines to be drawn upon for the project
  c. why the project cannot be completed in your major department
  d. a statement of the relevance of Honors in the Arts to the student's education both at Stanford and beyond
- Unofficial transcript
- A completed Faculty Reference Form (provided in the application)
- Portfolio of relevant work. The details for the portfolio vary depending on a student's main medium of expression. If the following limits present a significant obstacle, please contact Devin Garnick (dgarnick@stanford.edu):
  - Creative writers should submit work that best exemplifies their strengths as a writer. Most writers submit about 12 pages of prose, 5-7 poems, or a short scene from a play, depending on the proposed project.
  - Artists working in visual, audio, or other forms of visual or digital media should submit work that most exemplifies their strengths in the relevant form. The committee accepts the following: up to 5 images (compiled in a single pdf file), 5 minutes of video or audio, pdfs, and linked external media (such as YouTube, Vimeo, and SoundCloud).

See the Honors in the Arts website (https://arts.stanford.edu/for-students/academics/capstone-in-the-arts/) for additional information on applying to the program.

Preparation for Honors in the Arts

To qualify for admission, students must identify three courses, at least two of which must be completed by the end of the third year, that have provided the necessary foundation for the capstone project. The Creativity Course Guide (https://arts.stanford.edu/for-students/creativity-course-guide/) and the Interdisciplinary Course Guide (https://arts.stanford.edu/for-students/interdisciplinary-course-guide/) include courses that provide an introduction to the study of the arts disciplines as well as incorporating the arts in an interdisciplinary context.

Requirements

Students admitted to the program are required to take the following sequence of courses (6-15 units total) during their senior year:

- Autumn Quarter, Senior Year: ARTSINST 200A Honors in the Arts Workshop (2-5 units)
- Winter Quarter, Senior Year: ARTSINST 200B Honors in the Arts Workshop (2-5 units)
- Spring Quarter, Senior Year: ARTSINST 200C Honors in the Arts Workshop (2-5 units)

In addition to the above courses, students admitted to the program are required to take the following courses or actions prior to their senior year:

- Prior to Spring Quarter, junior year: Two preparatory courses for interdisciplinary study (4-8 units)
- Prior to Spring Quarter, junior year, or concurrent with Autumn Quarter of senior year: One further preparatory course for interdisciplinary study (2-4 units)
- Spring Quarter, junior year: Apply for admission to Honors in the Arts
- Spring Quarter, junior year: Confirm preparatory courses with honors program director

Each Spring, students present their honors projects during a public symposium.

To receive Honors in the Arts, students must fulfill all the requirements and receive an 'A-' or higher on their capstone project.

Requirements and further information can be found on the Honors in the Arts website (https://arts.stanford.edu/for-students/academics/capstone-in-the-arts/).

Honors Projects

All accepted projects are eligible for modest financial support for materials needed to complete the project.

Through a yearlong process, students develop a capstone project that goes beyond the traditional boundaries of their major.

- Honors projects are typically creative projects involving an arts practice element. Honors projects may also be scholarly research projects involving a multidisciplinary approach.
- Students can apply with an individual or team-based project. For team-based projects (2-5 students per team), applicants must delineate what expertise each student brings to the project.
- Students must receive at least an 'A-' on the capstone project. Students who receive a grade of less than an 'A-' but greater than 'NP' receive credit for the workshops but do not receive honors.
- Mentors: Each student works closely with a graduate student mentor or a lecturer to develop and shape the capstone project. Students in the program are responsible for setting up regular meetings with their mentor throughout the academic year. The workshop class also allows for weekly progress reports and strategies for advancing the work.

Requirements and further information can be found here on the Honors in the Arts (https://arts.stanford.edu/for-students/academics/honors-in-the-arts/) website.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Stanford Arts Institute counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade. The Stanford Arts Institute recommends all Honors in the Arts students in the Honors in the Arts program enroll for a letter grade, as this provides clear feedback to students on their work.

Other Undergraduate Policies

For the 2020-21 academic year, the Honors in the Arts program requires students to enroll in all three (3) workshops offered (ARTSINST 200A, ARTSINST 200B, ARTSINST 200C). Exceptions can be made for students who take a leave of absence for one quarter in the 2020-21 academic year. In this case, students will need to get explicit permission from the program director and the course lecturer before the start of the school year. Students who are granted this exception must enroll in two (2) of the three (3) workshops offered.

All Arts Immersion trips have been cancelled during the 2020-21 academic year due to travel restrictions related to COVID-19. Please visit the Arts Immersion (https://arts.stanford.edu/for-students/academics/arts-immersion/) website for updates.

Arts Immersions

New York City Arts Immersion

The Stanford Arts Institute offers an Arts Immersion trip to New York City during Spring Break.

Students travel with Stanford faculty and Arts Institute staff for a week-long engagement with the arts, meeting institutional leaders, policy makers, and arts practitioners. On past trips, students have visited museums, galleries, concert halls; they have seen dance rehearsals, opera, and a Broadway show; and they have had the chance to meet with alumni in the arts. In the Spring Quarter class ARTSINST 11Q Art in the Metropolis, students revisit their immersion experience by reading critical literature and participating in rigorous discussion.

See the Arts Immersion (https://arts.stanford.edu/for-students/academics/arts-immersion/) website and subscribe to the Arts Update (https://arts.stanford.edu/for-students/artsupdate/) for more information and updates.

Admission

Applications are welcomed from all undergraduate class years. Before applying, students should be aware that they must enroll in and attend the Spring Quarter course: ARTSINST 11Q/TAPS 11Q Art in the Metropolis.

	Units
ARTSINST/TAPS 11Q Art in the Metropolis (required)	3

Visit the Arts Immersion (https://arts.stanford.edu/for-students/academics/arts-immersion/) website to submit a complete application.

Chair: Jisha Menon

Director of Undergraduate Studies: Jisha Menon

Courses

ARTSINST 11Q. Art in the Metropolis. 3 Units.
This seminar is offered in conjunction with the annual "Arts Immersion" trip to New York that takes place over the spring break and is organized by the Stanford Arts Institute (SAI). Participation in the trip is a requirement for taking part in the seminar (and vice versa). The trip is designed to provide a group of students with the opportunity to immerse themselves in the cultural life of New York City guided by faculty and SAI staff. Students will experience a broad range and variety of art forms (visual arts, theater, opera, dance, etc.) and will meet with prominent arts administrators and practitioners, some of whom are Stanford alumni. For further details and updates about the trip, see https://arts.stanford.edu/for-students/academics/arts-immersion/new-york/.
Same as: ENGLISH 11Q, MUSIC 11Q, TAPS 11Q

ARTSINST 100. The Questions of Clay: Craft, Creativity and Scientific Process. 5 Units.
Students will create individual studio portfolios of ceramic work and pursue technical investigations of clay properties and the firing process using modern scientific equipment. Emphasis on development of creative process; parallels between science and traditional craft; integration of creative expression with scientific method and analysis. Prior ceramics experience desirable but not necessary. Limited enrollment. Prerequisites: any level of background in physics, Instructor permission.
Same as: APPPHYS 100

ARTSINST 100B. The Questions of Cloth: Weaving, Pattern Complexity and Structures of Fabric. 4 Units.
Students will learn to weave on a table loom while examining textile structures from historic, artistic and scientific perspectives. Emphasis on analyzing patterns and structures generated by weaving, with elementary introductions to information-scientific notions of algorithmic complexity, image compression, and source coding. This class is primarily intended for non-STEM majors with little or no prior experience in working with textiles. Limited enrollment. Prerequisites: Instructor permission.
Same as: APPPHYS 100B

ARTSINST 141. Network Performance Practice. 2-4 Units.
JackTrip software, developed at Stanford, provides the means for ultra-low-latency, uncompressed sound transmission for live music-making. Remote ensemble rehearsals, coaching, music lessons, jamming and concert broadcasting during the COVID-19 pandemic are making use of the technology. The open-source project has developed rapidly in the past 6 months, especially in its ability to support large ensembles of home-to-home connections. The course will cover recent features, history and theory of JackTrip and engage in a series of practical, participatory performance sessions. Students will learn the software and related network and audio principles with a focus on intuition building and ear training. Course participants will work from home and be able to use CCRMA facilities remotely. The course can be audited or coordinated with another course.
Same as: MUSIC 153A

ARTSINST 141B. Internet Ensemble Tech Force. 1 Unit.
This course inaugurates an Internet Ensemble Tech Force which is needed urgently worldwide and locally to support music ensembles going online. Calling it urgent is not an exaggeration. We can provide a valuable service and that's the purpose of the course. Course participants will quickly come up to speed on low-latency audio collaboration technology and will then pair with ensembles interested in using it. Ensemble rehearsals, coaching and concert broadcasting are planned for the quarter. 153B participants will work from home and be able to use CCRMA facilities remotely. The course can be audited or coordinated with another course. Let's help make group playing possible during this public health challenge.
Same as: MUSIC 153B

ARTSINST 142. Drawing with Code. 4 Units.
This studio course will engage coding practices as drawing tools. What makes a good algorithmic composition? How do we craft rule-sets and parameters to shape an interesting work? What changes if we conceive of still outputs, ongoing processes, or interactive processes as the "finished" work? We will look at the history of algorithmic drawing, including analog precedents like Sol LeWitt and other conceptual artists, along with current pioneers like John Simon Jr., Casey Reas, and LIA. Outputs will involve prints as well as screen-based works. Some basic coding experience is helpful, but not required. Assignments are based on conceptual principals that students can engage with at different coding skill levels. This is a good way for non CS students to explore coding practices as well as for CS students to hone their skills. We will work primarily in the free Processing software for our explorations.
Same as: ARTSTUDI 163

ARTSINST 150. The Changing World of Popular Music. 2 Units.
This course will cover changes in the business, economics, and practices of the popular music industry. It will provide a brief historical overview of the industry and its business models. The majority of the course will focus on the industry as it works today and on forces that are causing it to change rapidly. The course will feature guest artists and executives with current experience in the field, as well as project-based assignments designed to give students hands-on experience. Topics will include: economics and business models of commercial music business, music production, music distribution, marketing, leadership in the music industry and artist management.
Same as: MUSIC 150P

ARTSINST 150G. Performing Race, Gender, and Sexuality. 4 Units.
In this theory and practice-based course, students will examine performances by and scholarly texts about artists who critically and mindfully engage race, gender, and sexuality. Students will cultivate their skills as artist-scholars through written assignments and the creation of performances in response to the assigned material. Attendance and written reflection about a live performance event on campus are required. Students will also learn various meditation practices as tools for making and critiquing performance, in both our seminar discussions and performance workshops. We will approach mindfulness as method and theory in our own practice, as well as in relation to the works studied. We will also consider the ethics and current debates concerning the mindfulness industry. Examples of artists studied include James Luna, Nao Bustamante, Renee Cox, William Pope.L, Cassils, boychild, Curious, Adrian Piper, Xandra Ibarra, Valérie Reding, Guillermo Gomez-Peña, and Ana Mendieta.
Same as: CSRE 150G, CSRE 350G, FEMGEN 150G, LIFE 150G, TAPS 150G

ARTSINST 197. Industry Immersion: Film and Media. 1 Unit.
This course is designed to give students the opportunity to immerse themselves in the exciting and ever-changing TV and Film industries. The entertainment industry as a whole is facing issues and trends surrounding inclusivity and equity, the democratization of content development, and evolving revenue and distribution models. This course will introduce and explore these topics via readings, lectures, workshops and projects. Eight weeks of the course will include visits to our class by influential industry professionals who will share information about their company and current role, and their perspectives on one or more of the topics above. In addition to the lecture, each class will include a workshop element drawn from everyday efforts to address these issues. Guest lecturers will have a range of experience and viewpoints of the changing landscape of the industry. The course will be 10 weeks long. Priority will be given to Sophomores, Juniors and Seniors interested in careers in TV and Film. Credit will be based on attendance, class participation, assignments and a final presentation.

ARTSINST 197B. Industry Immersion: Fashion. 2 Units.
This course is designed to give students the opportunity to immerse themselves in the expanding and evolving fashion industry. Currently the three most relevant issues and trends impacting the fashion industry are designing for diverse audiences, sustainable practices, and the impact of technology. nnThis course will introduce and explore these topics via readings, lectures, workshops and projects. Six weeks of the course will include visits to our class by influential industry professionals who will share information about their company and current role, and their perspectives on one or more of the topics above. In addition to the lecture, each class will include a workshop element drawn from everyday efforts to address these issues. Guest lecturers will have a range of experience and viewpoints of the changing landscape. Credit will be based on attendance, class participation, assignments and a final presentation.

ARTSINST 199. Independent Study. 1-5 Unit.
May be repeated for credit.

ARTSINST 200A. Honors in the Arts Workshop. 2-5 Units.
First in a three-quarter series required of all Honors in the Arts participants. Students initiate and develop interdisciplinary creative projects with the support of peers and mentors in a small, workshop format. Required enrollment in 200 A,B,C.

ARTSINST 200B. Honors in the Arts Workshop. 2-5 Units.
Second in a three-quarter series required of all Honors in the Arts participants. Students initiate and develop interdisciplinary creative projects with the support of peers and mentors in a small, workshop format. Required enrollment in 200 A,B,C.

ARTSINST 200C. Honors in the Arts Workshop. 2-5 Units.
Third in a three-quarter series required of all Honors in the Arts participants. Students initiate and develop interdisciplinary creative projects with the support of peers and mentors in a small, workshop format. Required enrollment in 200 A,B,C.

ASTRONOMY

Astronomy courses are offered primarily through the Physics department, with subject code PHYSICS (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PHYSICS&filter-catalognumber-PHYSICS=on) on the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=PHYSICS&filter-catalognumber-PHYSICS=on) website.

Although Stanford University does not have a degree program in astronomy or astrophysics, teaching and research in various branches of these disciplines are ongoing activities in the departments of Applied Physics, Physics, SLAC National Accelerator Laboratory, and Hansen Experimental Physics Laboratory (HEPL).

For the convenience of students interested in astronomy, astrophysics, and cosmology, a course program for undergraduate and graduate study is listed in the "Astronomy Cognate Courses (p. 1084)" section of this bulletin. The list includes introductory courses for the student who wishes to be informed about the fields of astronomy without the need for prerequisites beyond high school algebra and physics. Courses in astronomy numbered below 100 are designed to serve this group of students. Astronomy courses numbered 100-199 serve the student interested in an initial scientific study of astronomy. The courses numbered 200 and above are for graduate students and advanced undergraduates, subject to prior approval by the course instructor.

Undergraduate Programs in Astronomy

The University does not offer a separate undergraduate major in Astronomy. Students who intend to pursue graduate study in astronomy or space science are encouraged to major in physics, following the advanced sequence if possible, or in electrical engineering if the student has a strongly developed interest in radioscience. The course descriptions for these basic studies are listed under the appropriate department sections of this bulletin. Students desiring guidance in developing an astronomy-oriented course of study should contact the chair of the Astronomy Program Committee. The following courses are suitable for undergraduates and are recommended to students considering advanced study in astronomy or astrophysics:

		Units
PHYSICS 100	Introduction to Observational Astrophysics	4
PHYSICS 160	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 161	Introduction to Cosmology and Extragalactic Astrophysics	3
Students planning study in astronomy beyond the B.S. are urged to take:		
PHYSICS 262	General Relativity	3

The above-mentioned courses are required for physics majors who choose the curriculum with a concentration in astrophysics (see the "Physics (p. 1917)" section of this bulletin).

Stanford Student Observatory

The student observatory, located in the hills to the west of the campus, is equipped with a 24-inch and other small reflecting telescopes. It is used for instruction of the observation-oriented courses, PHYSICS 50 Astronomy Laboratory and Observational Astronomy and PHYSICS 100 Introduction to Observational Astrophysics.

The Department of Physics offers a minor in Physics with a concentration in Astronomy.

Minor in Physics with Concentration in Astronomy

Students wishing to pursue advanced work in astrophysical sciences should major in Physics (p. 1919) and concentrate in astrophysics. However, students outside of Physics with a general interest in astronomy may organize their studies by completing one of the following Physics minor concentration programs.

Students who take the 20, 40, or 60 series at Stanford in support of their major may count those units towards the minor.

An undergraduate Physics minor with a concentration in Astronomy requires the following courses:

Non-Technical

For students whose majors do not require the PHYSICS 40 or 60 series:

		Units
PHYSICS 21	Mechanics, Fluids, and Heat	4
PHYSICS 23	Electricity, Magnetism, and Optics	4
PHYSICS 25 & PHYSICS 26	Modern Physics and Modern Physics Laboratory	5
PHYSICS 50	Astronomy Laboratory and Observational Astronomy	3-4
or PHYSICS 100	Introduction to Observational Astrophysics	
Select two of the following:		6
PHYSICS 15	Stars and Planets in a Habitable Universe	
PHYSICS 16	The Origin and Development of the Cosmos	
PHYSICS 17	Black Holes and Extreme Astrophysics	
Total Units		22-23

Technical

For students whose majors require the PHYSICS 40 or 60 series:

		Units
Select one of the following Series:		14-17
Series A		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45 & PHYSICS 46	Light and Heat and Light and Heat Laboratory	
PHYSICS 70	Foundations of Modern Physics	
Series B		
PHYSICS 61	Mechanics and Special Relativity	
PHYSICS 63	Electricity, Magnetism, and Waves	
PHYSICS 65	Quantum and Thermal Physics	
PHYSICS 67	Introduction to Laboratory Physics	
And take the following three courses:		
PHYSICS 100	Introduction to Observational Astrophysics	4
PHYSICS 160	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 161	Introduction to Cosmology and Extragalactic Astrophysics	3
Total Units		24-27

Students are also encouraged to take the electricity and magnetism/optics lab of the appropriate PHYSICS series , PHYSICS 24 , PHYSICS 44 or PHYSICS 64 for 1 additional unit.

Graduate Programs in Astronomy

Graduate programs in astronomy and astrophysics and related topics are carried out primarily in the Department of Physics but also the departments of Applied Physics and Electrical Engineering. Students should consult the course listings, degree requirements, and research programs of these departments for more detailed information.

Graduate research opportunities are available in many areas of theoretical and observational astronomy. For further information, see the Kavli Institute of Particle Astrophysics and Cosmolog (http://kipac.stanford.edu)y website.

		Units
Students planning to conduct research in astrophysics but lacking a background in astrophysics and/or gravitation should take 2-3 appropriate courses from the following list:		
PHYSICS 260	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 261	Introduction to Cosmology and Extragalactic Astrophysics	3
PHYSICS 262	General Relativity	3
All students planning to conduct research in astronomy and astrophysics are strongly encouraged to take:		
PHYSICS 301	Astrophysics Laboratory (not offered 2020-2021)	3
PHYSICS 360	Modern Astrophysics	3
PHYSICS 361	Cosmology and Extragalactic Astrophysics (not offered 2020-21)	3
In addition, astrophysics students should consider these courses as appropriate to their thesis topic:		
PHYSICS 269	Neutrinos in Astrophysics and Cosmology	3
PHYSICS 362	The Early Universe (not offered 2020-21)	3
PHYSICS 364	Gravitational Radiation, Black Holes and Neutron Stars (not offered 2020-2021)	3
PHYSICS 366	Statistical Methods in Astrophysics	2
PHYSICS 367	Special Topics in Astrophysics: Structure Formation and nGalaxy Formation	2

Each year a number of "special topics" course are offered. Refer to courses in the PHYSICS 360 range for more details. Students interested in research programs in space physics involving spacecraft studies of the planets, their satellites, and their near-space environments should see the "Center for Space Science and Astrophysics (p. 2516)" section of this bulletin.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Department of Physics counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Astronomy Cognate Courses

Elementary Lectures

The following courses provide a descriptive knowledge of astronomical objects and astrophysics. PHYSICS 15, PHYSICS 16, and PHYSICS 17 are for students not majoring in the sciences and are taught in different quarters by different instructors, and may be taken individually or in any order.

		Units
PHYSICS 15	Stars and Planets in a Habitable Universe	3
PHYSICS 16	The Origin and Development of the Cosmos	3
PHYSICS 17	Black Holes and Extreme Astrophysics	3

Observatory

The following courses allow students to use the on-campus Stanford Student Observatory, and are intended to familiarize students with observational methods and analysis of astronomical data. PHYSICS 50 is for general students, while PHYSICS 100 involves more advanced observations and is intended for students with a college level background in physics.

		Units
PHYSICS 50	Astronomy Laboratory and Observational Astronomy	3
PHYSICS 100	Introduction to Observational Astrophysics	4

Advanced Undergraduate

The following courses are for students with a more advanced knowledge of basic physics and mathematics, and form the core courses for a concentration in astrophysics for Physics majors.

		Units
PHYSICS 160	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 161	Introduction to Cosmology and Extragalactic Astrophysics	3

Graduate

		Units
PHYSICS 260	Introduction to Stellar and Galactic Astrophysics	3
PHYSICS 261	Introduction to Cosmology and Extragalactic Astrophysics	3
PHYSICS 262	General Relativity	3
PHYSICS 269	Neutrinos in Astrophysics and Cosmology	3
PHYSICS 301	Astrophysics Laboratory (Not offered 2020-21)	3
PHYSICS 312	Basic Plasma Physics (Not offered 2020-21)	3
PHYSICS 361	Cosmology and Extragalactic Astrophysics (Not offered 2020-21)	3
PHYSICS 362	The Early Universe (Not offered 2020-21)	3
PHYSICS 366	Statistical Methods in Astrophysics	2

PHYSICS 368	Computational Cosmology and Astrophysics (Not Offered 2020-21)	2

Emeriti: (Professors) Peter A. Sturrock, G. Leonard Tyler, Robert V. Wagoner

Professors: Tom Abel (Physics, SLAC), Steve Allen (Physics, SLAC), Roger Blandford (Physics, SLAC), Pat Burchat (Physics), Blas Cabrera (Physics), Sarah Church (Physics), Kent Irwin (Physics, SLAC), Steven Kahn (Physics, SLAC), Chao-Lin Kuo (Physics, SLAC), Bruce Macintosh (Physics), Peter Michelson (Physics), Vahé Petrosian (Physics, Applied Physics), Roger W. Romani (Physics), Risa Wechsler (Physics, SLAC)

Professor (Research): Philip H. Scherrer (Physics)

BIOLOGY

Courses offered by the Department of Biology are listed under the subject code BIO on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on).

The department provides:

- a major program leading to the B.S. degree
- a minor program
- a coterminal program leading to the M.S. degree
- a doctoral program leading to the Ph.D. degree, and
- courses designed for the non-major.

Mission of the Undergraduate Program in Biology

The mission of the undergraduate program in Biology is to provide students with in-depth knowledge in the discipline, from molecular biology to ecology. Students in the program learn to think and analyze information critically, to draw connections among the different areas of biology, and to communicate their ideas effectively to the scientific community. The major exposes students to the scientific process through a set of core courses and electives from a range of subdisciplines. The Biology major serves as preparation for professional careers, including medicine, dentistry, veterinary sciences, teaching, consulting, research, and field studies.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. the ability to use discipline-specific tools and content knowledge to analyze and interpret scientific data, to evaluate the significance of the data, and to articulate conclusions supportable by the data.
2. the ability, independently and collaboratively, to formulate testable scientific hypotheses and to design approaches to obtain data to test the respective hypotheses.
3. the ability to communicate content understanding and research outcomes effectively using various media.

Mission of the Graduate Program in Biology

For graduate-level students, the department offers resources and experience learning from and working with world-renowned faculty involved in research on ecology, neurobiology, population biology, plant and animal physiology, biochemistry, immunology, cell and developmental biology, genetics, and molecular biology.

The M.S. degree program offers general or specialized study to individuals seeking biologically oriented course work, and to undergraduate science majors wishing to increase or update their science background or obtain advanced research experience.

The training for a Ph.D. in Biology is focused on learning skills required to be a successful research scientist and teacher, including how to ask important questions and then devise and carry out experiments to answer these questions. Students work closely with an established advisor and meet regularly with a committee of faculty members to ensure that they understand the importance of diverse perspectives on experimental questions and approaches. Students learn how to evaluate critically pertinent original literature in order to stay abreast of scientific progress in their areas of interest. They also learn how to make professional presentations, write manuscripts for publication, and become effective teachers.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Biology and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Biology. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Biology and to interpret and present the results of such research.

Facilities

The offices, labs, and personnel of the Department of Biology are located in the Anne T. and Robert M. Bass Biology Research, Gilbert Biological Sciences, James H. Clark Center, ChEM-H and the Wu Tsai Neurosciences Institute, and Jerry Yang and Akiko Yamazaki Environment and Energy (Y2E2) buildings. Along with the Carnegie Institution of Washington all are on the main campus. Jasper Ridge Biological Preserve (JRBP) is located near Stanford University's campus in the eastern foothills of the Santa Cruz Mountains. Hopkins Marine Station is on Monterey Bay in Pacific Grove.

Jasper Ridge Biological Preserve encompasses geologic, topographic, and biotic diversity within its 1,189 acres and provides a natural laboratory for researchers from around the world, educational experiences for students and docent-led visitors, and refuge for native plants and animals. See the JRBP (http://jrbp.stanford.edu) web site.

Hopkins Marine Station, located 90 miles from the main University campus in Pacific Grove, was founded in 1892 as the first marine laboratory on the west coast of North America. For more information, including courses taught at Hopkins Marine Station with the subject code BIOHOPK, see the "Hopkins Marine Station" section of this bulletin.

The Robin Li and Melissa Ma Science Library (http://library.stanford.edu/libraries/science/about/), located in the Sapp Center for Science Teaching and Learning, supports research and teaching for the Department of Biology and other related disciplines. A specialized library is maintained at Hopkins Marine Station.

Biology Course Numbering System

The department uses the following course numbering system:

Number	Level
000-099	Introductory and Foundations
100-199	Undergraduate
200-299	Advanced Undergraduate, Coterminal and PhD
300+	PhD

Bachelor of Science in Biology

The undergraduate major in Biology can serve as a stepping-stone for a wide variety of career opportunities. For students planning to attend

medical, dental, or veterinary school, or graduate school in biological and applied sciences, the biology major provides a strong foundation in the basic life sciences. This foundation of knowledge, plus laboratory experience, also prepares students well for research and technical positions in universities, government, and industry.

While a major in Biology provides an excellent background for these technical careers, it can also serve as a valuable and satisfying focus of a liberal arts education for those not planning careers in science-related fields. An understanding of basic biological principles is of increasing importance in today's world. A knowledgeable and concerned citizenry is the best guarantee that these issues will be resolved most effectively. Finally, an understanding of the processes of life can heighten our perception and appreciation of the world around us, in terms of its beauty, variety, and uniqueness.

How to Declare a Major in Biology

Each undergraduate interested in the Biology major is required to select a department faculty advisor as part of the major declaration process.

Advising

Members of the Biology faculty are available for advising on such academic matters as choice of courses, research, suggested readings, and career plans. The student services office maintains a current list of faculty advisors, advising availability, and research interests.

The student services staff and BioBridge (https://biology.stanford.edu/academics/undergraduate-program/advising/biobridge-peer-advising/), the department's peer advising group, are prepared to answer questions on administrative matters, such as requirements for the major, approved out-of-department electives, transfer course evaluations, and petition procedures. This office also distributes the department's Bachelor of Science Handbook (https://biology.stanford.edu/academics/undergraduate-program/forms/), which delineates policies and requirements, as well as other department forms and informational handouts.

Degree Requirements

Candidates for the general Biology B.S. degree must complete the following requirements, which ranges from 88-102 total units. There is also an option to add honors to the major, regardless of whether a student wishes to complete the general major or a specific field of study. Honors requirements are explained in detail in the "Honors (https://exploredegrees.stanford.edu/schoolofhumanitiesandsciences/biology/#honorstext)" tab. Requirements for specific fields of study are explained in the Fields of Study (p. 1088) section below.

Course Requirements

Students with a field of study should consult their advisor for courses in Foundations, Foundational Breadth and Electives.

		Units
Introductory		**4**
Complete one course from (see Departmental website for current Introductory Seminars and THINK options to substitute for BIO 60-series courses):		
BIO 60	Problem solving in infectious disease	
BIO 61	Science as a Creative Process	
BIO 62	Microbiology Experiments	
Foundational		
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175N	Marine Science and Conservation in a Changing World	
BIO 82	Genetics	
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 85	Evolution	
BIO 86	Cell Biology	
Foundational Lab		
BIO 45	Introduction to Laboratory Research in Cell and Molecular Biology	
BIO 46	Introduction to Research in Ecology and Evolutionary Biology	
or BIO 47	Introduction to Research in Ecology and Evolutionary Biology	
or BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	
or BIOHOPK 175N	Marine Science and Conservation in a Changing World	
Foundational Breadth		**33-47**
Chemistry		
(One course from this section may be taken credit/no credit)		
The following CHEM courses are required:		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	
or CHEM 31M	Chemical Principles: From Molecules to Solids	
CHEM 33	Structure and Reactivity of Organic Molecules	
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	
Mathematics		
Select one of the following options:		5-10
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications (or beyond)	
CME 100	Vector Calculus for Engineers	
Physics		
Select one of the following Series:		
PHYSICS 20 Series		
PHYSICS 21	Mechanics, Fluids, and Heat	
PHYSICS 22	Mechanics, Fluids, and Heat Laboratory	
PHYSICS 23	Electricity, Magnetism, and Optics	
PHYSICS 24	Electricity, Magnetism, and Optics Laboratory	
PHYSICS 40 Series		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Statistics		
Select one of the following courses:		
BIO/STATS 141	Biostatistics [1]	
BIOHOPK 174H	Experimental Design and Probability [1]	
STATS 60	Introduction to Statistical Methods: Precalculus	
Electives		**23**
See addtional information for how to complete electives.		
Writing In the Major (WIM)		
Complete one course from:		
BIO 46	Introduction to Research in Ecology and Evolutionary Biology	

BIO 47	Introduction to Research in Ecology and Evolutionary Biology	
BIO 168	Explorations in Stem Cell Biology	
BIO 196A	Biology Senior Reflection	
BIO 199W	Senior Honors Thesis: How to Effectively Write About Scientific Research	
BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	
BIOHOPK 175H	Marine Science and Conservation in a Changing World	
Total Units		65-84

[1] If taken to fulfill the foundational breadth requirement, these courses do not count toward the 23 elective unit requirement.

Fields of Study

In addition to the undergraduate general major, the department offers the following seven fields of study for students wishing to concentrate their studies in particular areas of biology. These fields of study are declared on Axess at the time of the major declaration; they appear on both the transcript and on the diploma.

Biochemistry and Biophysics

Candidates for the Biochemistry and Biophysics field of study must complete the following, as well WIM requirement above, for a total ranging from 90-102 units:

Foundational Courses

(must be taken for a letter grade):

		Units
All of the following:		16
BIO 82	Genetics	
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 86	Cell Biology	
Select 1 of the following:		4
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	
BIO 85	Evolution	

Required Foundational Breadth Courses

(One course from this section may be taken credit/no credit):

		Units
Chemistry		
The following CHEM courses are required:		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31M	Chemical Principles: From Molecules to Solids	
CHEM 33	Structure and Reactivity of Organic Molecules	5
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
Mathematics		
Select one of the following options:		5-10
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications (or beyond)	
CME 100	Vector Calculus for Engineers	
Physics		
PHYSICS 40 Series		12
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Statistics		
Select one of the following courses:		3-5
BIO/STATS 141	Biostatistics [1]	
BIOHOPK 174H	Experimental Design and Probability [1]	
STATS 60	Introduction to Statistical Methods: Precalculus	
Total Units		35-47

[1] If taken to fulfill the foundational breadth requirement, these courses do not count toward the 23 elective unit requirement.

Electives

23 units required. Students must take the 3 required courses listed, as well as three courses in Biochemistry and Biophysics from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
3 Required Courses:		
CHEM 141	The Chemical Principles of Life I	4
CHEM 143	The Chemical Principles of Life II	4
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications	5
or CME 100	Vector Calculus for Engineers	
Select three of the following:		9-13
APPPHYS 236	Biology by the Numbers	
APPPHYS 294	Cellular Biophysics	
BIO 126	Introduction to Biophysics	
BIO 132	Advanced Imaging Lab in Biophysics	
BIO 152	Imaging: Biological Light Microscopy	
BIO 154	Molecular and Cellular Neurobiology	
BIO 214	Advanced Cell Biology	
BIOE 101	Systems Biology	
BIOE 103	Systems Physiology and Design	
BIOE 220	Introduction to Imaging and Image-based Human Anatomy	
BIOE 231	Protein Engineering	
BIOE 241	Biological Macromolecules	
BIOMEDIN 210	Modeling Biomedical Systems	
BIOPHYS 241	Biological Macromolecules	
BIOPHYS 242	Methods in Molecular Biophysics	
CHEM 183	Biochemistry II	
CHEM 184	Biological Chemistry Laboratory	
CHEM 185	Biophysical Chemistry	
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	
CSB 210	Cell Signaling	
CSB 220	Chemistry of Biological Processes	
EE 236A	Modern Optics	

MCP 256	How Cells Work: Energetics, Compartments, and Coupling in Cell Biology	
PHYSICS 105	Intermediate Physics Laboratory I: Analog Electronics	
STATS 191	Introduction to Applied Statistics	

Computational Biology

Candidates for the Computational Biology field of study must complete the following, as well as the WIM requirement above, for a total ranging from 90-102 units:

Required Foundational Breadth Courses

(One course from this section may be taken credit/no credit):

		Units
Chemistry		
The following CHEM courses are required:		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31M	Chemical Principles: From Molecules to Solids	
CHEM 33	Structure and Reactivity of Organic Molecules	5
Mathematics		
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
Select one of the following options:		5-10
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications (or beyond)	
CME 100	Vector Calculus for Engineers	
Physics		
Select one of the following Series:		10-12
PHYSICS 20 Series		
PHYSICS 21	Mechanics, Fluids, and Heat	
PHYSICS 22	Mechanics, Fluids, and Heat Laboratory	
PHYSICS 23	Electricity, Magnetism, and Optics	
PHYSICS 24	Electricity, Magnetism, and Optics Laboratory	
PHYSICS 40 Series		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Statistics		
The following course is required:		5
BIO/STATS 141	Biostatistics [1]	
Total Units		35-47

[1] If taken to fulfill the foundational breadth requirement, this course cannot count toward the 23 elective unit requirement.

Electives

23 units required. Students must take the 2 required courses listed, as well as three courses in Computational Biology from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
2 Required Courses:		
CS 106A	Programming Methodology	3-5
or CS 106B	Programming Abstractions	
or CS 106X	Programming Abstractions	
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications	5
or CME 100	Vector Calculus for Engineers	
Select three of the following:		9-13
APPPHYS 315	Methods in Computational Biology	
BIO 126	Introduction to Biophysics	
BIO 182	Modeling Cultural Evolution	
BIO 183	Theoretical Population Genetics	
BIO 268	Statistical and Machine Learning Methods for Genomics	
BIODS 215	Topics in Biomedical Data Science: Large-scale inference	
BIOE 101	Systems Biology	
BIOE 103	Systems Physiology and Design	
BIOE 212	Introduction to Biomedical Informatics Research Methodology	
BIOMEDIN 215	Data Science for Medicine	
BIOMEDIN 217	Translational Bioinformatics	
CS 235	Computational Methods for Biomedical Image Analysis and Interpretation	
CS 270	Modeling Biomedical Systems	
CS 271	Artificial Intelligence in Healthcare	
CS 272	Introduction to Biomedical Informatics Research Methodology	
CS 273A	The Human Genome Source Code	
CS 273B	Deep Learning in Genomics and Biomedicine	
CS 273C	Cloud Computing for Biology and Healthcare	
CS 274	Representations and Algorithms for Computational Molecular Biology	
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	
GENE 211	Genomics	
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	
IMMUNOL 207	Essential Methods in Computational and Systems Immunology	
STATS 215	Statistical Models in Biology	

Ecology and Evolution

Candidates for the Ecology and Evolution field of study must complete the following, as well as the WIM requirement above, for a total ranging from 88-102 units:

Foundational Courses

(must be taken for a letter grade):

		Units
All of the following:		12
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175	Marine Science and Conservation in a Changing World	

BIO 82	Genetics	
BIO 85	Evolution	
Select 2 of the following:		8
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 86	Cell Biology	

Electives

23 units required. Students must take five courses in Ecology and Evolution from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
Select 5 of the following:		15-23
BIO 105A	Ecology and Natural History of Jasper Ridge Biological Preserve	
BIO 105B	Ecology and Natural History of Jasper Ridge Biological Preserve	
BIO 113	Fundamentals of Molecular Evolution	
BIO 116	Ecology of the Hawaiian Islands	
BIO 117	Biology and Global Change	
BIO 121	ORNITHOLOGY	
BIO 129	Fundamentals and Frontiers in Plant Biology	
BIO 130	Ecosystems of California	
BIO 138	Ecosystem Services: Frontiers in the Science of Valuing Nature	
BIO 140	The Science of Extreme Life of the Sea	
BIO 144	Conservation Biology: A Latin American Perspective	
BIO 145	Ecology and Evolution of Animal Behavior	
BIO 147	Ecosystem Ecology and Biogeochemistry	
BIO 150	Human Behavioral Biology	
BIO 161	Organismal Biology Lab	
BIO 172	Ecological Dynamics: Theory and Applications	
BIO 174	Human Skeletal Anatomy	
BIO 176	The Developmental Basis of Animal Body Plan Evolution	
BIO 178	Microbiology Literature	
BIO 182	Modeling Cultural Evolution	
BIO 183	Theoretical Population Genetics	
BIO 221	ORNITHOLOGY	
BIO 227	Foundations of Community Ecology	
BIOHOPK 161H	Invertebrate Zoology	
BIOHOPK 163H	Oceanic Biology	
BIOHOPK 173H	Marine Conservation Biology	
BIOHOPK 174H	Experimental Design and Probability	
BIOHOPK 182H	Stanford at Sea	
BIOHOPK 187H	Sensory Ecology	
BIOHOPK 268H	Disease Ecology: from parasites evolution to the socio-economic impacts of pathogens on nations	
EARTHSYS 128	Evolution of Terrestrial Ecosystems	
EARTHSYS 142	Remote Sensing of Land	
EARTHSYS 144	Fundamentals of Geographic Information Science (GIS)	
EARTHSYS 158	Geomicrobiology	
OSPAUSTL 10	Coral Reef Ecosystems	

1 Only 6 units can be counted from BIOHOPK 182H.

2 OSPAUSTL 10, 28, 32 count as 2 units each for a total of 6 units toward electives.

Marine Biology

Candidates for the Marine Biology field of study must complete the following, as well as the WIM requirement above, for a total ranging from 88-102 units:

Foundational Courses

(must be taken for a letter grade):

		Units
All of the following:		12
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175	Marine Science and Conservation in a Changing World	
BIO 82	Genetics	
BIO 85	Evolution	
Select 2 of the following:		8
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 86	Cell Biology	

Electives

23 units required. Students must take five courses in Marine Biology from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
Select 5 of the following:		15-23
BIO 116	Ecology of the Hawaiian Islands	
BIO 136	Macroevolution	
BIO 153	Cellular Neuroscience: Cell Signaling and Behavior	
BIOHOPK 150H	Ecological Mechanics	
BIOHOPK 173H	Marine Conservation Biology	
BIOHOPK 177H	Dynamics and Management of Marine Populations	
BIOHOPK 179H	Physiological Ecology of Marine Megafauna	
BIOHOPK 182H	Stanford at Sea	
BIOHOPK 185H	Ecology and Conservation of Kelp Forest Communities	
BIOHOPK 187H	Sensory Ecology	
EARTHSYS 117	Earth Sciences of the Hawaiian Islands	
EARTHSYS 118	Heritage, Environment, and Sovereignty in Hawaii	
OSPAUSTL 10	Coral Reef Ecosystems	

1 Only 6 units can be counted from BIOHOPK 182H.

2 OSPAUSTL 10, 28, 32 count as 2 units each for a total of 6 units toward electives. Together, these courses count as two courses toward the Marine Biology requirement.

Microbes and Immunity

Candidates for the Microbes and Immunity field of study must complete the following, as well as the WIM requirement above, for a total ranging from 88-102 units:

Electives

23 units required. Students must take the 3 required courses listed, as well as two courses in Microbiology and Immunology from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
3 Required Courses:		
BIO 178	Microbiology Literature (offered in 2019-20)	3
or		
MI 185		
CHEM 141	The Chemical Principles of Life I	4
CHEM 143	The Chemical Principles of Life II	4
Select two of the following:		4-8
BIO 119	Evolution of Marine Ecosystems	
BIO 120	Prokaryotic Biology - A Quantitative Approach	
BIO 132	Advanced Imaging Lab in Biophysics	
BIO 177	Plant Microbe Interaction	
BIO 178	Microbiology Literature	
BIO 180	Microbial Physiology	
BIO 230	Molecular and Cellular Immunology	
BIOHOPK 274	Hopkins Microbiology Course	
CEE 177	Aquatic Chemistry and Biology	
CEE 274A	Environmental Microbiology I	
CEE 274B	Microbial Bioenergy Systems	
CEE 274D	Pathogens and Disinfection	
CEE 274P	Environmental Health Microbiology Lab	
EARTHSYS 158	Geomicrobiology	
IMMUNOL 201	Advanced Immunology I	
IMMUNOL 202	Advanced Immunology II	
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	
IMMUNOL 209	Translational Immunology	
IMMUNOL 275	Tumor Immunology	
IMMUNOL 286	Neuroimmunity	
MI 185		
MI 210	Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites	

Molecular, Cellular, and Developmental Biology

Candidates for the Molecular, Cellular, and Developmental Biology field of study must complete the following, as well as the WIM requirement above, for a total ranging from 88-102 units:

Foundational Courses

(must be taken for a letter grade):

		Units
All of the following:		16
BIO 82	Genetics	
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 86	Cell Biology	
Select 1 of the following:		4
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175N	Marine Science and Conservation in a Changing World	
BIO 85	Evolution	

Electives

23 units required. Students must take the 3 required courses listed, as well as two courses in Molecular, Cellular, and Developmental Biology from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
3 Required Courses:		
BIO 158	Developmental Neurobiology	4
or BIO 160	Developmental Biology	
CHEM 141	The Chemical Principles of Life I	4
CHEM 143	The Chemical Principles of Life II	4
Select two of the following:		5-10
BIO 110	The Chromatin-Regulated Genome	
BIO 124	Topics in Cancer Biology	
BIO 154	Molecular and Cellular Neurobiology	
BIO 158	Developmental Neurobiology	
BIO 160	Developmental Biology	
BIO 168	Explorations in Stem Cell Biology	
BIO 171	Principles of Cell Cycle Control	
BIO 177	Plant Microbe Interaction	
BIOE 101	Systems Biology	
BIOE 283	Mechanotransduction in Cells and Tissues	
BIOHOPK 155H	Developmental Biology and Evolution	
BIOPHYS 242	Methods in Molecular Biophysics	
CBIO 243	Principles of Cancer Systems Biology	
CS 273A	The Human Genome Source Code	
CS 273B	Deep Learning in Genomics and Biomedicine	
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	
CSB 210	Cell Signaling	
DBIO 210	Developmental Biology	
GENE 211	Genomics	
GENE 235	C. Elegans Genetics	
NBIO 258	Information and Signaling Mechanisms in Neurons and Circuits	
STEMREM 201A	Stem Cells and Human Development: From Embryo to Cell Lineage Determination	
STEMREM 202	Stem Cells and Translational Medicine	

Neurobiology

Candidates for the Neurobiology field of study must complete the following, as well as the WIM requirement above, for a total ranging from 88-102 units:

Foundational Courses

(must be taken for a letter grade):

		Units
All of the following:		16
BIO 82	Genetics	
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 86	Cell Biology	
Select 1 of the following:		4
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	
BIO 85	Evolution	

Electives

23 units required. Students must take the 5 required courses listed. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
5 Required Courses:		
BIO 149	The Neurobiology of Sleep	4-6
or BIO 150	Human Behavioral Biology	
or NBIO 206	The Nervous System	
BIO 154	Molecular and Cellular Neurobiology	4
BIO 158	Developmental Neurobiology	4
CHEM 141	The Chemical Principles of Life I	4
CHEM 143	The Chemical Principles of Life II	4

Additional Information

Electives

23 units required, distributed as follows:

- Biology (BIO) or Hopkins Marine Station (BIOHOPK) courses numbered 100 or above.
- Approved out-of-department electives (https://drive.google.com/file/d/11dF9EHqjeWCweNzA6IkfHdtm4LNHl6o_/view/?usp=sharing) (list also available in the student services office).
- One course applied toward the elective unit requirement may be taken CR/NC.
- BIO 168, BIO 196A, and BIO 199W can also count toward the elective requirement.
- No more than 6 units from any combination of these courses may be applied toward the total number of elective units:

		Units
BIO 196A	Biology Senior Reflection	3
BIO 196B	Biology Senior Reflection	3
BIO 196C	Biology Senior Reflection	3
BIO 198	Directed Reading in Biology	1-15
BIO 198X	Out-of-Department Directed Reading	1-15
BIO 199	Advanced Research Laboratory in Experimental Biology	1-15
BIO 199W	Senior Honors Thesis: How to Effectively Write About Scientific Research	3
BIO 199X	Out-of-Department Advanced Research Laboratory in Experimental Biology	1-15
BIO 290	Teaching Practicum in Biology	1-5
BIO 291	Development and Teaching of Core Experimental Laboratories	1-2
BIO 296	Teaching and Learning in Biology	1
BIOHOPK 198H	Directed Instruction or Reading	1-15
BIOHOPK 199H	Undergraduate Research	1-15
BIOHOPK 290H	Teaching Practicum in Biology	1-15

Typical Schedule for a Four-Year Program

First Year	Units		
	Autumn	Winter	Spring
Chemical Principles I (CHEM 31A)		5	
Calculus (MATH 19)		3	
Freshman requirements, seminars, or WAYS		8	
Chemical Principles II (CHEM 31B)			5
Calculus (MATH 20)			3
Problem solving in infectious disease (BIO 60)			4
Freshman requirements, seminars, or WAYS			4
Structure and Reactivity of Organic Molecules (CHEM 33)			5
Calculus (MATH 21)			4
Introduction to Statistical Methods: Precalculus (STATS 60)			5
Freshman requirements, seminars, or WAYS			4
Year Total:		16	16 18

Second Year	Units		
	Autumn	Winter	Spring
Genetics (BIO 82)		4	
WAYS, PWR		8	
Understanding the Natural and Unnatural World through Chemistry (CHEM 121)		5	
Biochemistry & Molecular Biology (BIO 83)			4
Physiology (BIO 84)			4
Introduction to Laboratory Research in Cell and Molecular Biology (BIO 45)			4
WAYS			4
Cell Biology (BIO 86)			4
Introduction to Research in Ecology and Evolutionary Biology (BIO 47)			4
WAYS			3
Biology Electives			3
Year Total:		17	16 14

Third Year	Units		
	Autumn	Winter	Spring
Abroad			
Evolution (BIO 85)			4
Electives			4
WAYS			4
Electives			7
Year Total:			12 7

Fourth Year	Units		
	Autumn	Winter	Spring
Electives		3	
Mechanics, Fluids, and Heat (PHYSICS 21)		4	
Mechanics, Fluids, and Heat Laboratory (PHYSICS 22)		1	
Electives			3
Electricity, Magnetism, and Optics (PHYSICS 23)			4
Electricity, Magnetism, and Optics Laboratory (PHYSICS 24)			1
Electives			3
Year Total:		8	8 3

Total Units in Sequence: 135

[1] This schedule varies slightly if the student takes CHEM 31M in place of CHEM 31A & CHEM 31B.

[2] The schedule varies slightly depending on which 5 Bio Foundations courses the student chooses to take, and if any of them will be taken at Hopkins Marine Station.

Honors

To graduate with departmental honors, a student must conduct an independent research project typically over the course of at least one year; projects are started no later than Autumn or Winter Quarter of the junior year. Research must be done in a Biology Department lab or a lab in another department for which the student has obtained prior approval. Administrative steps include:

1. Submit an approved honors proposal to the department's student services office two quarters prior to graduation. For instance, students graduating Spring Quarter must submit petitions no later than Autumn Quarter of the same academic year.
2. Complete at least 10 units of an approved research project in from the same lab. Students conducting research in a lab outside of the department of Biology must submit an Out of Department Research Petition (https://biology.stanford.edu/academics/undergraduate-research/research/) either before they start their research, or if research was started prior to declaring the Biology major, as soon as their major declaration is approved. Only research units from BIO or BIOHOPK are counted toward the 10 unit requirement:

		Units
BIO 199	Advanced Research Laboratory in Experimental Biology	1-15
BIO 199X	Out-of-Department Advanced Research Laboratory in Experimental Biology	1-15
BIOHOPK 199H	Undergraduate Research	1-15

3. Obtain at least a 3.0 (B) grade point average (GPA) in all Biology major requirements taken at Stanford (foundational, breadth, and elective courses). Grades earned from these teaching and research are not computed into this GPA:

		Units
BIO 198	Directed Reading in Biology	1-15
BIO 198X	Out-of-Department Directed Reading	1-15
BIO 199	Advanced Research Laboratory in Experimental Biology	1-15
BIO 199X	Out-of-Department Advanced Research Laboratory in Experimental Biology	1-15
BIO 290	Teaching Practicum in Biology	1-5
BIO 291	Development and Teaching of Core Experimental Laboratories	1-2
BIO 296	Teaching and Learning in Biology	1
BIOHOPK 199H	Undergraduate Research	1-15
BIOHOPK 290H	Teaching Practicum in Biology	1-15

4. If graduating in Spring, participate in the annual Achauer Undergraduate Biology Honors Symposium by presenting a poster or giving an oral presentation. The symposium is typically held at the end of May. Students graduating in Autumn, Winter, or Summer Quarter must produce a poster in the quarter in which they graduate to be displayed at the symposium, however their attendance is optional.
5. Complete and, by the published deadline within the quarter graduation is expected, submit online an honors thesis approved by at least two readers. At least one reader must be from the faculty of the Department of Biology, and both readers must be Academic Council members. The title page of the honors thesis must include student name, thesis title, name and department of research sponsor, and name and department of second reader. Students must submit this page with original ink signatures to the student services office by the published deadline for the quarter in which graduation is expected.

Further information on the honors program is available on the Honors Program and Undergraduate Research in Biology (https://biology.stanford.edu/academics/undergraduate-program/honors-program/) web site.

Fields of Study

In addition to the undergraduate general major, the department offers the following seven fields of study for students wishing to concentrate their studies in particular areas of biology:

1. Biochemistry and Biophysics
2. Computational Biology
3. Ecology and Evolution
4. Marine Biology
5. Microbes and Immunity
6. Molecular, Cellular, and Developmental Biology
7. Neurobiology

These fields of study are declared on Axess at the time of the major declaration; they appear on both the transcript and on the diploma.

Writing in the Major for the B.S. Degree in Biology with a Field of Study

Students must take one of the following courses to fulfill the Writing in the Major requirement in Biology:

		Units
BIO 46	Introduction to Research in Ecology and Evolutionary Biology	
BIO 47	Introduction to Research in Ecology and Evolutionary Biology	
BIO 168	Explorations in Stem Cell Biology	
BIO 196A	Biology Senior Reflection	
BIO 199W	Senior Honors Thesis: How to Effectively Write About Scientific Research	
BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	
BIOHOPK 175H	Marine Science and Conservation in a Changing World	

Note: BIO 168, BIO 196A,and BIO 199W can also count toward the elective requirement.

Biochemistry and Biophysics

Candidates for the Biochemistry and Biophysics field of study must complete the following, as well WIM requirement above, for a total ranging from 90-102 units:

Introductory Course

(must be taken for a letter grade; see Departmental (https://biology.stanford.edu/academics/undergraduate-program/biology-undergraduate-major/)website for current Introductory Seminars and THINK options to substitute for BIO 60-series courses):

		Units
Select one of the following:		4
BIO 60	Problem solving in infectious disease	

BIO 61	Science as a Creative Process
BIO 62	Microbiology Experiments

Foundational Courses

(must be taken for a letter grade):

		Units
All of the following:		16
BIO 82	Genetics	
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 86	Cell Biology	
Select 1 of the following:		4
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	
BIO 85	Evolution	

Foundational Lab Courses

		Units
Two Courses Required:		
BIO 45	Introduction to Laboratory Research in Cell and Molecular Biology	4
BIO 46	Introduction to Research in Ecology and Evolutionary Biology	4-5
or BIO 47	Introduction to Research in Ecology and Evolutionary Biology	
or BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	

Required Foundational Breadth Courses

(One course from this section may be taken credit/no credit):

		Units
Chemistry		
The following CHEM courses are required:		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31M	Chemical Principles: From Molecules to Solids	
CHEM 33	Structure and Reactivity of Organic Molecules	5
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
Mathematics		
Select one of the following options:		5-10
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications (or beyond)	
CME 100	Vector Calculus for Engineers	
Physics		
PHYSICS 40 Series		12
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Statistics		
Select one of the following courses:		3-5
BIO/STATS 141	Biostatistics [1]	
BIOHOPK 174H	Experimental Design and Probability [1]	
STATS 60	Introduction to Statistical Methods: Precalculus	
Total Units		35-47

[1] If taken to fulfill the foundational breadth requirement, these courses do not count toward the 23 elective unit requirement.

Electives

23 units required. Students must take the 3 required courses listed, as well as three courses in Biochemistry and Biophysics from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
3 Required Courses:		
CHEM 141	The Chemical Principles of Life I	4
CHEM 143	The Chemical Principles of Life II	4
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications	5
or CME 100	Vector Calculus for Engineers	
Select three of the following:		9-13
APPPHYS 236	Biology by the Numbers	
APPPHYS 294	Cellular Biophysics	
BIO 126	Introduction to Biophysics	
BIO 132	Advanced Imaging Lab in Biophysics	
BIO 152	Imaging: Biological Light Microscopy	
BIO 154	Molecular and Cellular Neurobiology	
BIO 214	Advanced Cell Biology	
BIOE 101	Systems Biology	
BIOE 103	Systems Physiology and Design	
BIOE 220	Introduction to Imaging and Image-based Human Anatomy	
BIOE 231	Protein Engineering	
BIOE 241	Biological Macromolecules	
BIOMEDIN 210	Modeling Biomedical Systems	
BIOPHYS 241	Biological Macromolecules	
BIOPHYS 242	Methods in Molecular Biophysics	
CHEM 183	Biochemistry II	
CHEM 184	Biological Chemistry Laboratory	
CHEM 185	Biophysical Chemistry	
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	
CSB 210	Cell Signaling	
CSB 220	Chemistry of Biological Processes	
EE 236A	Modern Optics	
MCP 256	How Cells Work: Energetics, Compartments, and Coupling in Cell Biology	
PHYSICS 105	Intermediate Physics Laboratory I: Analog Electronics	
STATS 191	Introduction to Applied Statistics	

Computational Biology

Candidates for the Computational Biology field of study must complete the following, as well as the WIM requirement above, for a total ranging from 90-102 units:

Introductory Course

(must be taken for a letter grade; see Departmental (https://biology.stanford.edu/academics/undergraduate-program/biology-undergraduate-major/)website for current Introductory Seminars and THINK options to substitute for BIO 60-series courses):

		Units
Select one of the following:		4
BIO 60	Problem solving in infectious disease	
BIO 61	Science as a Creative Process	
BIO 62	Microbiology Experiments	

Foundational Courses

(must be taken for a letter grade):

		Units
Select 5 of the following:		20
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175	Marine Science and Conservation in a Changing World	
BIO 82	Genetics	
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 85	Evolution	
BIO 86	Cell Biology	

Foundational Lab Courses

		Units
Two Courses Required:		
BIO 45	Introduction to Laboratory Research in Cell and Molecular Biology	4
BIO 46	Introduction to Research in Ecology and Evolutionary Biology	4-5
or BIO 47	Introduction to Research in Ecology and Evolutionary Biology	
or BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	

Required Foundational Breadth Courses

(One course from this section may be taken credit/no credit):

		Units
Chemistry		
The following CHEM courses are required:		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31M	Chemical Principles: From Molecules to Solids	
CHEM 33	Structure and Reactivity of Organic Molecules	5
Mathematics		
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
Select one of the following options:		5-10
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications (or beyond)	
CME 100	Vector Calculus for Engineers	
Physics		
Select one of the following Series:		10-12
PHYSICS 20 Series		
PHYSICS 21	Mechanics, Fluids, and Heat	
PHYSICS 22	Mechanics, Fluids, and Heat Laboratory	
PHYSICS 23	Electricity, Magnetism, and Optics	
PHYSICS 24	Electricity, Magnetism, and Optics Laboratory	
PHYSICS 40 Series		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Statistics		
The following course is required:		5
BIO/STATS 141	Biostatistics [1]	
Total Units		35-47

[1] If taken to fulfill the foundational breadth requirement, this course cannot count toward the 23 elective unit requirement.

Electives

23 units required. Students must take the 2 required courses listed, as well as three courses in Computational Biology from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
2 Required Courses:		
CS 106A	Programming Methodology	3-5
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications	5
or CME 100	Vector Calculus for Engineers	
Select three of the following:		9-13
APPPHYS 315	Methods in Computational Biology	
BIO 126	Introduction to Biophysics	
BIO 182	Modeling Cultural Evolution	
BIO 183	Theoretical Population Genetics	
BIO 268	Statistical and Machine Learning Methods for Genomics	
BIODS 215	Topics in Biomedical Data Science: Large-scale inference	
BIOE 101	Systems Biology	
BIOE 103	Systems Physiology and Design	
BIOE 212	Introduction to Biomedical Informatics Research Methodology	
BIOMEDIN 215	Data Science for Medicine	
BIOMEDIN 217	Translational Bioinformatics	
CS 235	Computational Methods for Biomedical Image Analysis and Interpretation	
CS 270	Modeling Biomedical Systems	
CS 271	Artificial Intelligence in Healthcare	

CS 272	Introduction to Biomedical Informatics Research Methodology
CS 273A	The Human Genome Source Code
CS 273B	Deep Learning in Genomics and Biomedicine
CS 273C	Cloud Computing for Biology and Healthcare
CS 274	Representations and Algorithms for Computational Molecular Biology
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells
GENE 211	Genomics
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology
IMMUNOL 207	Essential Methods in Computational and Systems Immunology
STATS 215	Statistical Models in Biology

Ecology and Evolution

Candidates for the Ecology and Evolution field of study must complete the following, as well as the WIM requirement above, for a total ranging from 88-102 units:

Introductory Course

(must be taken for a letter grade; see Departmental (https://biology.stanford.edu/academics/undergraduate-program/biology-undergraduate-major/)website for current Introductory Seminars and THINK options to substitute for BIO 60-series courses):

		Units
Select one of the following:		4
BIO 60	Problem solving in infectious disease	
BIO 61	Science as a Creative Process	
BIO 62	Microbiology Experiments	

Foundational Courses

(must be taken for a letter grade):

		Units
All of the following:		12
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175	Marine Science and Conservation in a Changing World	
BIO 82	Genetics	
BIO 85	Evolution	
Select 2 of the following:		8
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 86	Cell Biology	

Foundational Lab Courses

		Units
Two Courses Required:		
BIO 45	Introduction to Laboratory Research in Cell and Molecular Biology	4
BIO 46	Introduction to Research in Ecology and Evolutionary Biology	4-5
or BIO 47	Introduction to Research in Ecology and Evolutionary Biology	
or BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	

Required Foundational Breadth Courses

(One course from this section may be taken credit/no credit):

		Units
Chemistry		
The following CHEM courses are required:		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31M	Chemical Principles: From Molecules to Solids	
CHEM 33	Structure and Reactivity of Organic Molecules	5
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
Mathematics		
Select one of the following options:		5-10
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications (or beyond)	
CME 100	Vector Calculus for Engineers	
Physics		
Select one of the following Series:		10-12
PHYSICS 20 Series		
PHYSICS 21	Mechanics, Fluids, and Heat	
PHYSICS 22	Mechanics, Fluids, and Heat Laboratory	
PHYSICS 23	Electricity, Magnetism, and Optics	
PHYSICS 24	Electricity, Magnetism, and Optics Laboratory	
PHYSICS 40 Series		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Statistics		
Select one of the following courses:		3-5
BIO/STATS 141	Biostatistics [1]	
BIOHOPK 174H	Experimental Design and Probability [1]	
STATS 60	Introduction to Statistical Methods: Precalculus	
Total Units		33-47

[1] If taken to fulfill the foundational breadth requirement, these courses do not count toward the 23 elective unit requirement.

Electives

23 units required. Students must take five courses in Ecology and Evolution from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
Select 5 of the following:		15-23
BIO 105A	Ecology and Natural History of Jasper Ridge Biological Preserve	

BIO 105B	Ecology and Natural History of Jasper Ridge Biological Preserve
BIO 113	Fundamentals of Molecular Evolution
BIO 116	Ecology of the Hawaiian Islands
BIO 117	Biology and Global Change
BIO 121	ORNITHOLOGY
BIO 129	Fundamentals and Frontiers in Plant Biology
BIO 130	Ecosystems of California
BIO 138	Ecosystem Services: Frontiers in the Science of Valuing Nature
BIO 140	The Science of Extreme Life of the Sea
BIO 144	Conservation Biology: A Latin American Perspective
BIO 145	Ecology and Evolution of Animal Behavior
BIO 147	Ecosystem Ecology and Biogeochemistry
BIO 150	Human Behavioral Biology
BIO 161	Organismal Biology Lab
BIO 172	Ecological Dynamics: Theory and Applications
BIO 174	Human Skeletal Anatomy
BIO 176	The Developmental Basis of Animal Body Plan Evolution
BIO 178	Microbiology Literature
BIO 182	Modeling Cultural Evolution
BIO 183	Theoretical Population Genetics
BIO 221	ORNITHOLOGY
BIO 227	Foundations of Community Ecology
BIOHOPK 161H	Invertebrate Zoology
BIOHOPK 163H	Oceanic Biology
BIOHOPK 173H	Marine Conservation Biology
BIOHOPK 174H	Experimental Design and Probability
BIOHOPK 182H	Stanford at Sea
BIOHOPK 187H	Sensory Ecology
BIOHOPK 268H	Disease Ecology: from parasites evolution to the socio-economic impacts of pathogens on nations
EARTHSYS 128	Evolution of Terrestrial Ecosystems
EARTHSYS 142	Remote Sensing of Land
EARTHSYS 144	Fundamentals of Geographic Information Science (GIS)
EARTHSYS 158	Geomicrobiology
OSPAUSTL 10	Coral Reef Ecosystems

[1] Only 6 units can be counted from BIOHOPK 182H.

[2] OSPAUSTL 10, 28, 32 count as 2 units each for a total of 6 units toward electives.

Marine Biology

Candidates for the Marine Biology field of study must complete the following, as well as the WIM requirement above, for a total ranging from 88-102 units:

Introductory Course

(must be taken for a letter grade; see Departmental (https://biology.stanford.edu/academics/undergraduate-program/biology-undergraduate-major/)website for current Introductory Seminars and THINK options to substitute for BIO 60-series courses):

		Units
Select one of the following:		4
BIO 60	Problem solving in infectious disease	
BIO 61	Science as a Creative Process	
BIO 62	Microbiology Experiments	

Foundational Courses

(must be taken for a letter grade):

		Units
All of the following:		12
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175	Marine Science and Conservation in a Changing World	
BIO 82	Genetics	
BIO 85	Evolution	
Select 2 of the following:		8
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 86	Cell Biology	

Foundational Lab Courses

		Units
Two Courses Required:		
BIO 45	Introduction to Laboratory Research in Cell and Molecular Biology	4
BIO 46	Introduction to Research in Ecology and Evolutionary Biology	4-5
or BIO 47	Introduction to Research in Ecology and Evolutionary Biology	
or BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	

Required Foundational Breadth Courses

(One course from this section may be taken credit/no credit):

		Units
Chemistry		
The following CHEM courses are required:		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31M	Chemical Principles: From Molecules to Solids	
CHEM 33	Structure and Reactivity of Organic Molecules	5
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
Mathematics		
Select one of the following options:		5-10
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications (or beyond)	
CME 100	Vector Calculus for Engineers	
Physics		
Select one of the following Series:		10-12
PHYSICS 20 Series		
PHYSICS 21	Mechanics, Fluids, and Heat	

PHYSICS 22	Mechanics, Fluids, and Heat Laboratory	
PHYSICS 23	Electricity, Magnetism, and Optics	
PHYSICS 24	Electricity, Magnetism, and Optics Laboratory	
PHYSICS 40 Series		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Statistics		
Select one of the following courses:		3-5
BIO/STATS 141	Biostatistics [1]	
BIOHOPK 174H	Experimental Design and Probability [1]	
STATS 60	Introduction to Statistical Methods: Precalculus	
Total Units		33-47

[1] If taken to fulfill the foundational breadth requirement, these courses do not count toward the 23 elective unit requirement.

Electives

23 units required. Students must take five courses in Marine Biology from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
Select 5 of the following:		15-23
BIO 116	Ecology of the Hawaiian Islands	
BIO 136	Macroevolution	
BIO 153	Cellular Neuroscience: Cell Signaling and Behavior	
BIOHOPK 150H	Ecological Mechanics	
BIOHOPK 173H	Marine Conservation Biology	
BIOHOPK 177H	Dynamics and Management of Marine Populations	
BIOHOPK 179H	Physiological Ecology of Marine Megafauna	
BIOHOPK 182H	Stanford at Sea	
BIOHOPK 185H	Ecology and Conservation of Kelp Forest Communities	
BIOHOPK 187H	Sensory Ecology	
EARTHSYS 117	Earth Sciences of the Hawaiian Islands	
EARTHSYS 118	Heritage, Environment, and Sovereignty in Hawaii	
OSPAUSTL 10	Coral Reef Ecosystems	

[1] Only 6 units can be counted from BIOHOPK 182H.

[2] OSPAUSTL 10, 28, 32 count as 2 units each for a total of 6 units toward electives. Together, these courses count as two courses toward the Marine Biology requirement.

Microbes and Immunity

Candidates for the Microbes and Immunity field of study must complete the following, as well as the WIM requirement above, for a total ranging from 88-102 units:

Introductory Course

(must be taken for a letter grade; see Departmental (https://biology.stanford.edu/academics/undergraduate-program/biology-undergraduate-major/)website for current Introductory Seminars and THINK options to substitute for BIO 60-series courses):

		Units
Select one of the following:		4
BIO 60	Problem solving in infectious disease	
BIO 61	Science as a Creative Process	
BIO 62	Microbiology Experiments	

Foundational Courses

(must be taken for a letter grade):

		Units
Select 5 of the following:		20
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175	Marine Science and Conservation in a Changing World	
BIO 82	Genetics	
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
or BIOHOPK 84	Physiology	
BIO 85	Evolution	
or BIOHOPK 85	Evolution	
BIO 86	Cell Biology	

Foundational Lab Courses

		Units
Two Courses Required:		
BIO 45	Introduction to Laboratory Research in Cell and Molecular Biology	4
BIO 46	Introduction to Research in Ecology and Evolutionary Biology	4-5
or BIO 47	Introduction to Research in Ecology and Evolutionary Biology	
or BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	

Required Foundational Breadth Courses

(One course from this section may be taken credit/no credit):

		Units
Chemistry		
The following CHEM courses are required:		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31M	Chemical Principles: From Molecules to Solids	
CHEM 33	Structure and Reactivity of Organic Molecules	5
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
Mathematics		
Select one of the following options:		5-10
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications (or beyond)	
CME 100	Vector Calculus for Engineers	

Physics		
Select one of the following Series:		10-12
PHYSICS 20 Series		
PHYSICS 21	Mechanics, Fluids, and Heat	
PHYSICS 22	Mechanics, Fluids, and Heat Laboratory	
PHYSICS 23	Electricity, Magnetism, and Optics	
PHYSICS 24	Electricity, Magnetism, and Optics Laboratory	
PHYSICS 40 Series		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Statistics		
Select one of the following courses:		3-5
BIO/STATS 141	Biostatistics [1]	
BIOHOPK 174H	Experimental Design and Probability [1]	
STATS 60	Introduction to Statistical Methods: Precalculus	
Total Units		33-47

[1] If taken to fulfill the foundational breadth requirement, these courses do not count toward the 23 elective unit requirement.

Electives

23 units required. Students must take the 3 required courses listed, as well as two courses in Microbiology and Immunology from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
3 Required Courses:		
BIO 178	Microbiology Literature	3
or		
MI 185		
CHEM 141	The Chemical Principles of Life I	4
CHEM 143	The Chemical Principles of Life II	4
Select two of the following:		4-8
BIO 119	Evolution of Marine Ecosystems	
BIO 120	Prokaryotic Biology - A Quantitative Approach	
BIO 132	Advanced Imaging Lab in Biophysics	
BIO 177	Plant Microbe Interaction	
BIO 178	Microbiology Literature	
BIO 180	Microbial Physiology	
BIO 230	Molecular and Cellular Immunology	
BIOHOPK 274	Hopkins Microbiology Course	
CEE 177	Aquatic Chemistry and Biology	
CEE 274A	Environmental Microbiology I	
CEE 274B	Microbial Bioenergy Systems	
CEE 274D	Pathogens and Disinfection	
CEE 274P	Environmental Health Microbiology Lab	
EARTHSYS 158	Geomicrobiology	
IMMUNOL 201	Advanced Immunology I	
IMMUNOL 202	Advanced Immunology II	
IMMUNOL 206	Introduction to Applied Computational Tools in Immunology	
IMMUNOL 209	Translational Immunology	
IMMUNOL 275	Tumor Immunology	
IMMUNOL 286	Neuroimmunity	
MI 185		
MI 210	Advanced Pathogenesis of Bacteria, Viruses, and Eukaryotic Parasites	

Molecular, Cellular, and Developmental Biology

Candidates for the Molecular, Cellular, and Developmental Biology field of study must complete the following, as well as the WIM requirement above, for a total ranging from 88-102 units:

Introductory Course

(must be taken for a letter grade; see Departmental (https://biology.stanford.edu/academics/undergraduate-program/biology-undergraduate-major/)website for current Introductory Seminars and THINK options to substitute for BIO 60-series courses):

		Units
Select one of the following:		4
BIO 60	Problem solving in infectious disease	
BIO 61	Science as a Creative Process	
BIO 62	Microbiology Experiments	

Foundational Courses

(must be taken for a letter grade):

		Units
All of the following:		16
BIO 82	Genetics	
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 86	Cell Biology	
Select 1 of the following:		4
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	
BIO 85	Evolution	

Foundational Lab Courses

		Units
Two Courses Required:		
BIO 45	Introduction to Laboratory Research in Cell and Molecular Biology	4
BIO 46	Introduction to Research in Ecology and Evolutionary Biology	4-5
or BIO 47	Introduction to Research in Ecology and Evolutionary Biology	
or BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	

Required Foundational Breadth Courses

(One course from this section may be taken credit/no credit):

		Units
Chemistry		
The following CHEM courses are required:		

CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31M	Chemical Principles: From Molecules to Solids	
CHEM 33	Structure and Reactivity of Organic Molecules	5
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
Mathematics		
Select one of the following options:		5-10
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications (or beyond)	
CME 100	Vector Calculus for Engineers	
Physics		
Select one of the following Series:		10-12
PHYSICS 20 Series		
PHYSICS 21	Mechanics, Fluids, and Heat	
PHYSICS 22	Mechanics, Fluids, and Heat Laboratory	
PHYSICS 23	Electricity, Magnetism, and Optics	
PHYSICS 24	Electricity, Magnetism, and Optics Laboratory	
PHYSICS 40 Series		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Statistics		
Select one of the following courses:		3-5
BIO/STATS 141	Biostatistics [1]	
BIOHOPK 174H	Experimental Design and Probability [1]	
STATS 60	Introduction to Statistical Methods: Precalculus	
Total Units		33-47

[1] If taken to fulfill the foundational breadth requirement, these courses do not count toward the 23 elective unit requirement.

Electives

23 units required. Students must take the 3 required courses listed, as well as two courses in Molecular, Cellular, and Developmental Biology from the approved list. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
3 Required Courses:		
BIO 158	Developmental Neurobiology	4
or BIO 160	Developmental Biology	
CHEM 141	The Chemical Principles of Life I	4
CHEM 143	The Chemical Principles of Life II	4
Select two of the following:		5-10
BIO 110	The Chromatin-Regulated Genome	
BIO 124	Topics in Cancer Biology	
BIO 154	Molecular and Cellular Neurobiology	
BIO 158	Developmental Neurobiology	
BIO 160	Developmental Biology	
BIO 168	Explorations in Stem Cell Biology	
BIO 171	Principles of Cell Cycle Control	
BIO 177	Plant Microbe Interaction	
BIOE 101	Systems Biology	
BIOE 283	Mechanotransduction in Cells and Tissues	
BIOHOPK 155H	Developmental Biology and Evolution	
BIOPHYS 242	Methods in Molecular Biophysics	
CBIO 243	Principles of Cancer Systems Biology	
CS 273A	The Human Genome Source Code	
CS 273B	Deep Learning in Genomics and Biomedicine	
CS 279	Computational Biology: Structure and Organization of Biomolecules and Cells	
CSB 210	Cell Signaling	
DBIO 210	Developmental Biology	
GENE 211	Genomics	
GENE 235	C. Elegans Genetics	
NBIO 258	Information and Signaling Mechanisms in Neurons and Circuits	
STEMREM 201A	Stem Cells and Human Development: From Embryo to Cell Lineage Determination	
STEMREM 202	Stem Cells and Translational Medicine	

Neurobiology

Candidates for the Neurobiology field of study must complete the following, as well as the WIM requirement above, for a total ranging from 88-102 units:

Introductory Course

(must be taken for a letter grade; see Departmental (https://biology.stanford.edu/academics/undergraduate-program/biology-undergraduate-major/)website for current Introductory Seminars and THINK options to substitute for BIO 60-series courses):

		Units
Select one of the following:		4
BIO 60	Problem solving in infectious disease	
BIO 61	Science as a Creative Process	
BIO 62	Microbiology Experiments	

Foundational Courses

(must be taken for a letter grade):

		Units
All of the following:		16
BIO 82	Genetics	
BIO 83	Biochemistry & Molecular Biology	
BIO 84	Physiology	
BIO 86	Cell Biology	
Select 1 of the following:		4
BIO 81	Introduction to Ecology	
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175N	Marine Science and Conservation in a Changing World	
BIO 85	Evolution	

Foundational Lab Courses

		Units
Two Courses Required:		
BIO 45	Introduction to Laboratory Research in Cell and Molecular Biology	4

BIO 46	Introduction to Research in Ecology and Evolutionary Biology	4-5
or BIO 47	Introduction to Research in Ecology and Evolutionary Biology	
or BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	

Required Foundational Breadth Courses

(One course from this section may be taken credit/no credit):

		Units
Chemistry		
The following CHEM courses are required:		
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II	5-10
or CHEM 31M	Chemical Principles: From Molecules to Solids	
CHEM 33	Structure and Reactivity of Organic Molecules	5
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
Mathematics		
Select one of the following options:		5-10
MATH 19 & MATH 20 & MATH 21	Calculus and Calculus and Calculus	
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications (or beyond)	
CME 100	Vector Calculus for Engineers	
Physics		
Select one of the following Series:		10-12
PHYSICS 20 Series		
PHYSICS 21	Mechanics, Fluids, and Heat	
PHYSICS 22	Mechanics, Fluids, and Heat Laboratory	
PHYSICS 23	Electricity, Magnetism, and Optics	
PHYSICS 24	Electricity, Magnetism, and Optics Laboratory	
PHYSICS 40 Series		
PHYSICS 41	Mechanics	
PHYSICS 43	Electricity and Magnetism	
PHYSICS 45	Light and Heat	
Statistics		
Select one of the following courses:		3-5
BIO/STATS 141	Biostatistics [1]	
BIOHOPK 174H	Experimental Design and Probability [1]	
STATS 60	Introduction to Statistical Methods: Precalculus	
Total Units		33-47

[1] If taken to fulfill the foundational breadth requirement, these courses do not count toward the 23 elective unit requirement.

Electives

23 units required. Students must take the 5 required courses listed. The remainder of the 23 units of electives may be any BIO or BIOHOPK course at the 100-level or above, or from the list of approved out-of-department electives. Up to 6 units of teaching and research are allowed. Only one course can be taken credit/no credit.

		Units
5 Required Courses:		
BIO 149	The Neurobiology of Sleep	4-6
or BIO 150	Human Behavioral Biology	
or BIO 161	Organismal Biology Lab	
or NBIO 206	The Nervous System	
BIO 158	Developmental Neurobiology	4
or BIO 204	Neuroplasticity: From Synapses to Behavior	
BIO 126	Introduction to Biophysics	3-4
or BIO 154	Molecular and Cellular Neurobiology	
or BIO 267	Molecular Mechanisms of Neurodegenerative Disease	
CHEM 141	The Chemical Principles of Life I	4
CHEM 143	The Chemical Principles of Life II	4

Hopkins Marine Station

For additional information, see the "Biology, Hopkins Marine Station (p. 1124)" section of this bulletin or the Hopkins Marine Station web site (http://hopkins.stanford.edu).

Courses offered by the Department of Biology are listed under the subject code BIOHOPK on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOHOPK&filter-catalognumber-BIOHOPK=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on).

Summer Program at Hopkins Marine Station

The summer program is open to advanced undergraduate, graduate students, and postdoctoral students, and to teachers whose biological backgrounds, teaching, or research activities can benefit from a summer's study of marine life. Applications, deadlines, and further information are available at http://hopkins.stanford.edu.

Courses

Courses at Hopkins Marine Station can satisfy many requirements, from Ways to major and minor requirements in departments housed in the Schools of Engineering, Humanities and Sciences, and Earth Sciences. Students are encouraged to check with their department's student services office to see which courses at Hopkins may be used to fulfill major or minor requirements.

Students may go to Hopkins as early as Spring Quarter in the sophomore year, and can also go in the junior and/or senior year to take elective courses. The following Hopkins Marine Station courses may be used toward the Biology degree requirements:

Foundations and Foundational Labs

		Units
BIOHOPK 81	Introduction to Ecology	4
BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	5
BIOHOPK 175H	Marine Science and Conservation in a Changing World	16

Electives

		Units
BIOHOPK 150H	Ecological Mechanics	3
BIOHOPK 152H	Physiology of Global Change	2

BIOHOPK 153H	Current Topics and Concepts in Quantitative Fish Dynamics and Fisheries Management	1
BIOHOPK 154H	Animal Diversity: An Introduction to Evolution of Animal Form and Function from Larvae to Adults	7
BIOHOPK 155H	Developmental Biology and Evolution	4
BIOHOPK 156H	Hands-On Neurobiology: Structure, Function and Development	6
BIOHOPK 160H	Developmental Biology in the Ocean: Diverse Embryonic & Larval Strategies of marine invertebrates	5-8
BIOHOPK 161H	Invertebrate Zoology	5
BIOHOPK 162H	Comparative Animal Physiology	5
BIOHOPK 163H	Oceanic Biology	4
BIOHOPK 165H	The Extreme Life of the Sea	3
BIOHOPK 166H	Molecular Ecology	5
BIOHOPK 167H	Nerve, Muscle, and Synapse	5
BIOHOPK 168H	Disease Ecology: from parasites evolution to the socio-economic impacts of pathogens on nations	3
BIOHOPK 173H	Marine Conservation Biology	4
BIOHOPK 173HA	Marine Conservation Biology - Seminar and Discussion Only	1-2
BIOHOPK 174H	Experimental Design and Probability	3
BIOHOPK 177H	Dynamics and Management of Marine Populations	4
BIOHOPK 179H	Physiological Ecology of Marine Megafauna	3
BIOHOPK 181H	Physiology of Global Change	2
BIOHOPK 182H	Stanford at Sea (only 6 units may count towards the major)	16
BIOHOPK 184H	Holistic Biology (only 6 units may count towards the major)	16
BIOHOPK 185H	Ecology and Conservation of Kelp Forest Communities	5
BIOHOPK 187H	Sensory Ecology	4
BIOHOPK 264H	POPULATION GENOMICS	1-2
BIOHOPK 274	Hopkins Microbiology Course	9-12

Research and/or Teaching (maximum 6 units combined)

		Units
BIOHOPK 198H	Directed Instruction or Reading	1-15
BIOHOPK 199H	Undergraduate Research	1-15
BIOHOPK 290H	Teaching Practicum in Biology	1-15
BIOHOPK 300H	Research	1-15

See Biology degree requirements above for further information. Many of the Hopkins Marine Station courses may be used to fulfill department major requirements.

Minor in Biology

Students interested in the minor in Biology must declare the minor and submit their course plan online via Axess no later than two quarters prior to the student's intended quarter of degree conferral. The Biology minor requires a minimum of six courses meeting the following criteria:

- All courses must be taken for a letter grade.
- All courses must be worth or approved for 3 or more units.
- At least 3 courses must be taken at the 100-level or higher. The only courses below 100 that are allowable are BIO/BIOHOPK courses at the 60- and 80- level, and OSPAUSTL 10, 28, or 32. Note: OSPAUSTL 10, 28, 32 together count as 2 courses toward the minor.
- Courses used to fulfill the minor may not be used to fulfill any other department degree requirements (minor or major).
- Stanford Introductory Seminars may not be used to fulfill the minor requirements.
- All courses must be chosen from the offerings of the Department of Biology or the Hopkins Marine Station, or from the list of a (https://stanford.box.com/v/OODEMinor/)pproved out-of-department electives for the minor (https://drive.google.com/file/d/1c1ZypomL3W-M9I3a5kf2kfdPbPWysZOw/view/?usp=sharing). Any approved out of department elective must be approved for at least 3 units.
- At least two courses from the Biology Foundations must be taken:

		Units
BIO 81	Introduction to Ecology	4
or BIOHOPK 81	Introduction to Ecology	
or BIOHOPK 175H	Marine Science and Conservation in a Changing World	
BIO 82	Genetics	4
BIO 83	Biochemistry & Molecular Biology	4
BIO 84	Physiology	4
BIO 85	Evolution	4
BIO 86	Cell Biology	4

- A third Bio Foundations course may be taken OR students may take one introductory Biology course from the following list:

		Units
BIO 60	Problem solving in infectious disease	4
BIO 61	Science as a Creative Process	4
BIO 62	Microbiology Experiments	4

- The Biology Core Laboratory courses do not count towards the minor:

		Units
BIO 45	Introduction to Laboratory Research in Cell and Molecular Biology	4
BIO 46	Introduction to Research in Ecology and Evolutionary Biology	4
BIO 47	Introduction to Research in Ecology and Evolutionary Biology	4
BIOHOPK 47	Introduction to Research in Ecology and Ecological Physiology	5
BIOHOPK 175H	Marine Science and Conservation in a Changing World	16

- If taken for at least 3 units, independent research conducted in a Biology lab may count as 1 course. Note: Research done in a non-Biology lab cannot be counted toward the minor. Directed reading, either in department or out of the department, also cannot count toward the minor.

		Units
BIO 199	Advanced Research Laboratory in Experimental Biology	1-15
BIOHOPK 199H	Undergraduate Research	1-15
Not allowable:		
BIO 198	Directed Reading in Biology	
BIO 198X	Out-of-Department Directed Reading	
BIO 199X	Out-of-Department Advanced Research Laboratory in Experimental Biology	

Master of Science in Biology

For information on the University's basic requirements for the M.S. degree, see the "Graduate Degrees (p. 65)" section of this bulletin. Students considering this degree option should meet with staff in the student services office prior to applying.

The M.S. degree program offers general or specialized study to individuals seeking biologically oriented course work and to undergraduate science majors wishing to increase or update their science background or obtain advanced research experience. Students who have majored in related fields are eligible to apply, but course work equivalent to the preparation of a Stanford B.S. in Biology may be required in addition to the general requirements. This includes course work in biology, chemistry, physics and mathematics. The M.S. program does not have an M.S. with thesis option.

Admissions

The department only accepts M.S. program applications from matriculated Stanford students:

1. undergraduates wishing to pursue a coterminal M.S. degree.
2. graduate students from other Stanford programs wishing to pursue an M.S. degree.
3. current Biology Ph.D. students wishing to discontinue the Ph.D. program with an M.S. degree.

Undergraduates must apply in Autumn Quarter to begin the program in Spring Quarter or in Spring Quarter to begin the program the following Autumn or Winter Quarter. Graduate students may apply by the third week of any academic quarter.

Required application materials

1. Completed Coterminal Online Application (https://applyweb.com/stanterm/)
2. A statement of purpose which explains why the student wishes to enter the program and what the student plans to accomplish while in the program. The statement should also supply information about the student's science capabilities if his or her undergraduate academic record does not accurately reflect them.
3. Unofficial Stanford transcript.
4. Two letters of recommendation, preferably from Biology faculty members in this department. If two such letters are not available, letters from faculty familiar with the student's ability to succeed in a graduate science curriculum are acceptable.
5. Application fee: an application fee is charged to all students regardless of outcome; application fee is applied directly to students' accounts.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements. Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

General Requirements

The M.S. program consists of Department of Biology and/or Hopkins Marine Station course work, approved out-of-department electives, and foundational breadth courses totaling at least 45 units at or above the 100-level (with the exception of BIO 196 A, B, & C), distributed as follows:

1. A minimum of 23 of the 45 units must be courses designated primarily for graduate students.
2. A minimum of 36 units must be chosen from the offerings in the Department of Biology (BIO) (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on), Hopkins Marine Station (BIOHOPK) (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&page=0&catalog=&q=biohopk&collapse=), the list of approved out-of-department electives (https://stanford.app.box.com/v/out-of-department-electives/), research, teaching and/or foundational breadth courses.

		Units
BIO 198	Directed Reading in Biology	1-15
BIO 198X	Out-of-Department Directed Reading	1-15
BIO 290	Teaching Practicum in Biology	1-5
BIO 291	Development and Teaching of Core Experimental Laboratories	1-2
BIO 300	Graduate Research	1-10
BIO 300X	Out-of-Department Graduate Research	1-10
BIOHOPK 198H	Directed Instruction or Reading	1-15
BIOHOPK 290H	Teaching Practicum in Biology	1-15
BIOHOPK 300H	Research	1-15

   a. a maximum of 18 units may be a combination of Biology research, directed reading and/or teaching:
   b. a maximum of 9 units may be foundational breadth courses in chemistry, mathematics, statistics, computer science, and/or physics beyond the level required for the undergraduate degree in Biology and at least at the 100-level.
3. No more than 9 units may be other Stanford course work relevant to a student's professional development. Students are required to petition for courses that fall into this category using the General Petition form (https://stanford.app.box.com/v/general-petition/).

Each candidate designs a coherent program of study in consultation with her or his department advisor. Although there are no specific courses required, program proposals must adhere to department parameters.

In addition to the unit requirements outlined above, students must adhere to the following:

1. A program proposal, signed by the student's advisor and approved by the chair of the M.S. committee, must be filed by the third week of the first quarter of enrollment. A revised program proposal is required to be filed whenever there are changes to a student's previously approved program proposal.
2. Students may take only 6 units CR/NC.
3. Students must maintain a GPA of 3.0 or higher.

4. Students must receive a grade of 'B-' or better in all courses taken for the degree.

Students not meeting these minimum requirements are subject to departmental academic review and/or dismissal.

The department's Master of Science Handbook (listed on the department website (https://biology.stanford.edu/academics/coterminal-masters-program/forms/)) has additional information about the program, University policy, and the department.

Doctor of Philosophy in Biology

For information on the University's basic requirements for the Ph.D. degree, see the "Graduate Degrees (p. 65)" section of this bulletin. The training for a Ph.D. in Biology is focused on learning skills required for being a successful research scientist and teacher, including how to ask important questions and then devise and carry out experiments to answer these questions. Students work closely with an established adviser and meet regularly with a committee of faculty members to ensure that they understand the importance of diverse perspectives on experimental questions and approaches. Students learn how to evaluate critically pertinent original literature in order to stay abreast of scientific progress in their areas of interest. They also learn how to make professional presentations, write manuscripts for publication, and become effective teachers.

Admissions

Students seeking entrance to graduate study in Biology ordinarily should have the equivalent of an undergraduate major in Biology at Stanford. However, students from other disciplines, particularly the physical sciences, are also encouraged to apply. Such students are advised at the time of initial registration on how they should complete background training during the first year of graduate study. In addition to the usual basic undergraduate courses in biology, it is recommended that preparation for graduate work include courses in chemistry through organic chemistry, general physics, and mathematics through calculus.

Application, Admission, and Financial Aid

Prospective graduate students must apply via Stanford's online graduate application (http://gradadmissions.stanford.edu/).

The training for a Ph.D. in Biology is focused on helping students achieve their goals of being a successful research scientist and teacher, at the highest level. Students work closely with an established adviser and meet regularly with a committee of faculty members to facilitate their progress. The Biology Ph.D. program is part of the larger Biosciences (https://biosciences.stanford.edu/) community of Ph.D. programs at Stanford, which includes Ph.D. programs in Stanford School of Medicine.

There are three tracks within the Biology Ph.D. program: 1) Cellular, Molecular and Organismal Biology, 2) Ecology and Evolution, and 3) Hopkins Marine Station. All are focused on excellence in research and teaching in their respective areas; where there are differences between the tracks, they are indicated in the links below.

Applicants are not required to take the Graduate Record Examination (GRE) general test nor the GRE subject test, but applicants who have taken either of these exams may choose to report their scores.

Admission to the Ph.D. program is competitive and in recent years it has been possible to offer admission to approximately 9-10 percent of the applicants.

Applicants who are eligible should apply for nationally competitive predoctoral fellowships, especially those offered by the National Science Foundation.

Admitted students are typically offered financial support in the form of Stanford Graduate Fellowships, research assistantships, NIH traineeships or biology fellowships.

General Requirements

All students must be enrolled in exactly 10 units during autumn, winter, spring and summer quarters until reaching Terminal Graduate Registration (TGR) status and are required to pass all courses in which they are enrolled. Students must earn a grade of 'B-' or better in all courses applicable to the degree that are taken for a letter grade.Satisfactory completion of each year's general and track specific requirements listed below is required for satisfactory progress towards the degree. Students not making satisfactory degree progress are subject to departmental academic review and/or dismissal.

1. **First year advising**
   Each entering student meets with their Biology First Year Facilitator (BFF) within the first two weeks of Autumn Quarter, Winter Quarter, Spring Quarter. Students in the Eco/Evo track must also meet with their first-year advising committee during this time. The committee reviews the student's previous academic work and current goals and advises the student on a program of Stanford courses, some of which may be required and others recommended. Completion of the core curriculum listed below under "Track Specific Requirements" is required of all students.
2. **Ethics**
   Students must take a course on the ethical conduct of research. One of the two following courses should be taken in the first year of the program:

		Units
MED 255	The Responsible Conduct of Research (Required for all CMOB students)	1
OR		
BIO 313	Ethics in the Anthropocene (BIO 313 is intended for Ecology/Evolution and Hopkins students only.)	1

3. **Teaching**
   Teaching experience and training are part of the graduate curriculum. Each student assists in teaching one course in
   a. the intro/foundational level (BIO 40s, 60s, and 80s level courses).
      Note: Hopkins students complete at least one TA requirement on campus during the first year. Any remaining TA requirements can be completed at Hopkins.

		Units
BIO 45	Introduction to Laboratory Research in Cell and Molecular Biology (Formerly 44X)	4
BIO 46	Introduction to Research in Ecology and Evolutionary Biology (Formerly 44Y)	4
BIO 47	Introduction to Research in Ecology and Evolutionary Biology (Formerly 44Y)	4
BIO 60	Problem solving in infectious disease	4
BIO 61	Science as a Creative Process	4
BIO 62	Microbiology Experiments	4
BIO 81	Introduction to Ecology	4
BIOHOPK 81	Introduction to Ecology	4
BIO 82	Genetics	4
BIO 83	Biochemistry & Molecular Biology	4
BIO 84	Physiology	4
BIOHOPK 84	Physiology	4
BIO 85	Evolution	4

BIOHOPK 85	Evolution	4
BIO 86	Cell Biology	4

b. and a second course that can be either an intro/foundational course or other Biology or Hopkins Marine Station course.

c. The opportunities to gain teaching experience and training in specific courses are assigned using the departmental matching system during the Spring and Summer quarters prior to the next academic year.

4. **Seminars**
Graduate seminars devoted to current literature and research in particular fields of biology are an important means of attaining professional perspective and competence. Seminars are presented under individual course listings or are announced by the various research groups. Topics of current biological interest are presented by speakers from Stanford and other institutions. During the first year of study, graduate students are required to attend seminars and make one formal seminar presentation which must be evaluated by a minimum of two Biology faculty members.
5. **Fellowship application**
All eligible first year students must apply for a National Science Foundation (NSF) Graduate Research Fellowship.
6. **Advisor/lab selection**
By June 1, each first-year student is required to have selected a lab in which to perform dissertation research and to have been accepted by the faculty member in charge.
7. **Qualifying exam and admission to candidacy**
During the second year, students are required to write a dissertation proposal which is evaluated by a committee of faculty (the dissertation proposal committee) in an oral presentation. Track-specific deadlines are listed below. All students must be admitted to candidacy by the end of their second year. This is contingent upon satisfactory completion of course work, all first and second year requirements, the dissertation proposal and the University's requirements for candidacy outlined in the "Candidacy (p. 67)" section of this bulletin; additional details may also be found in the Biology Ph.D. Handbook (https://stanford.box.com/v/PhDHandbook/). If a student does not meet the requirements for admission to candidacy by the end of the second year, the student is subject to dismissal from the Ph.D. program.
8. **Committee meetings**
Students must meet regularly with their advising committees. For more details, see the Biology Ph.D. Handbook (https://stanford.box.com/v/PhDHandbook/).
9. **Individual Development Plan meetings**
Students must meet once a year with their adviser by August 1 of that academic year. For more details, see the Biology Ph.D. Handbook (https://stanford.box.com/v/PhDHandbook/).
10. **Publishable manuscript**
Each student must complete one publishable manuscript (paper) for which s/he is the major contributor.
11. **Residency requirement**
Graduate students are expected to maintain a significant physical presence on campus unless the degree program has granted an exception, for example to conduct field work (GAP 3.1.1 (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-1/page-3-1-1/)). Unless permission is granted by the department (for example, for field work) enrolled graduate students must maintain a significant physical presence on campus throughout each quarter a student is enrolled. A minimum of 135 units of graduate registration is required of each candidate at the time of graduation.
12. **Doctoral dissertation**
A substantial draft of the dissertation must be submitted to the student's oral examination committee at least one month before the oral exam is scheduled to take place. The dissertation must be presented to an oral examination committee (p. 67) comprised of at least five faculty members. In addition, the final written dissertation must be approved by the student's reading committee (p. 67) (a minimum of three approved faculty), and submitted to the Registrar's Office. Upon completion of this final requirement, a student is eligible for conferral of the degree.

Track Specific Requirements

In addition to the general requirements listed above, students must also complete requirements within their concentration. Written petitions for exemptions to core curriculum and lab rotation requirements are considered by the advising committee and the chair of the graduate studies committee. Approval is contingent upon special circumstances and is not routinely granted.

Cellular, Molecular, and Organismal Biology (CMOB)

1. Courses: Students are required to take the following courses prior to Spring Quarter of the 4th year, except for the required first year courses as noted:

		Units
BIOS 200	Foundations in Experimental Biology (must be taken Autumn quarter of the first year)	5
BIO 301	Frontiers in Biology (satisfies first-year seminar requirement; must be taken Autumn quarter of first year)	1-3
One additional course in each of the four scientific areas decided upon by the student and the advising committee [1]		
1. Cell Biology		
2. Biology of Molecules		
3. Genetics/Genomics		
4. Quantitative Methods		

2. Lab Rotations*:* First-year students are required to do their first rotation in the lab of a Department of Biology faculty member for at least five weeks. The total rotation time in labs of Department of Biology faculty must be at least ten weeks. Students are encouraged to do at least two rotations in the Department of Biology.
3. Two-part qualifying exam: Each student must pass the exam in their second year.
   a. *Dissertation proposal:* During Autumn Quarter of the second year, the student must prepare a written dissertation proposal that outlines the student's projected dissertation research, including an expert assessment of the current literature; deadline is November 1.
   b. *Oral examination:* Held after submission of the written proposal to the dissertation proposal committee. It is an evaluation of the student's ability to summarize the field of study, generate a working hypothesis, develop a degree plan that could be completed in 3-4 years, understand the logic of experimental design, develop a decision tree based on (all) possible results of experiments and draw conclusions and adapt hypotheses depending on results. Deadline is November 15.
4. Seminar Presentation: The seminar requirement is fulfilled by presenting a minimum of a 30-minute talk. The student must arrange for at least two faculty members from the Department of Biology to attend the seminar and evaluate the presentation. Evaluation consists of meeting with each faculty member within one week following the seminar to obtain comments. If the faculty members approve the presentation, they sign the form at this time. In some cases, they may require an additional talk before signing. The

Seminar Evaluation form must be submitted to the student services office no later than June 1 of year three in the program.

[1] Up to two of these courses may be "mini courses" in the Biosciences (BIOS).

Ecology and Evolution

1. Courses: Students are required to take the following courses in their first year:

		Units
BIO 302	Current Topics and Concepts in Population Biology, Ecology, and Evolution	1
BIO 303	Current Topics and Concepts in Population Biology, Ecology, and Evolution	1
BIO 304	Current Topics and Concepts in Population Biology, Ecology, and Evolution	1
Students specializing in ecology and evolution may be required to take additional courses as advised by committee.		

2. Lab Rotations: EcoEvo Ph.D. students may rotate with and select as the primary Ph.D. adviser any faculty member with a primary appointment in one of the Biosciences Home Programs. While rotations are not required in order to choose the primary adviser, they are certainly possible. Many students collaborate with faculty in addition to their primary adviser in order to increase breadth and depth. This is usually accomplished with the advice and encouragement of the primary Ph.D. adviser.
3. First-year paper*:* The paper should be read, commented upon and agreed to as satisfactory by two EcoEvo faculty by June 1. This can be satisfied in a number of ways which all involve new writing, undertaken since entering the Stanford program. These may include:
   a. A new draft research manuscript (a previously published paper is not acceptable).
   b. Some other piece of new writing, such as a review paper from a course, or an initial literature review of a potential thesis topic. In this case the paper should ordinarily be not less than 10 double-spaced pages in usual sized font, and not more than 10 single spaced pages, plus references. It should be written in the style of a standard scientific paper.
4. Two-part qualifying exam: Each student must pass the exam in their second year.
   a. *Dissertation proposal:* During Spring Quarter of the second year, the student must prepare a written dissertation proposal that outlines the student's projected dissertation research, including an expert assessment of the current literature; deadline is June 1.
   b. *Oral examination:* Held after submission of the written proposal to the dissertation proposal committee. The student should prepare a presentation of the goals of the thesis, typically including preliminary data, models, etc. as appropriate which are relevant to at least the first goal, and should be prepared thereafter to discuss questions raised by the committee in professional scientific depth. Deadline is June 15.

Students are strongly encouraged to speak directly with their adviser and committee if they have specific questions or concerns regarding the format and content of the written proposal and/or procedures for the oral examination

Hopkins Marine Station

1. Courses: Students are required to take the following courses prior to Spring Quarter of the fourth year, except for the required first year courses as noted:

		Units
Seminar series (student should make selection in consultation with their advisor)		
BIO 301	Frontiers in Biology	1-3
OR		
BIO 302	Current Topics and Concepts in Population Biology, Ecology, and Evolution	1
BIO 303	Current Topics and Concepts in Population Biology, Ecology, and Evolution	1
BIO 304	Current Topics and Concepts in Population Biology, Ecology, and Evolution	1
Two additional Hopkins Marine Station courses (BIOHOPK). These may include BIOS mini courses offered at Hopkins.		
Students may also be required to take a set of courses to be determined by the advising committee.		

2. Lab Rotations: As with all students in the Biology Department, Hopkins Ph.D. students may rotate with and select as the primary Ph.D. adviser any faculty member with a primary appointment in one of the Biosciences home programs. In order to increase breadth and depth, many Hopkins students rotate through labs on main campus during their first year before moving to Hopkins, and continue to collaborate with faculty in addition to their primary adviser at Hopkins. This is usually accomplished with the advice and encouragement of the primary Ph.D. adviser.
3. First-Year Paper: The paper should be read, commented upon and agreed to as satisfactory by two faculty by June 1. This paper should be a step toward the development of a dissertation proposal and may consist of an analysis of new data or a literature review and synthesis. This can be satisfied in a number of ways that all involve new writing, undertaken since entering the Stanford program. These may include:
   a. A new draft research manuscript; a previously published paper is not acceptable because it may have received much editorial modification in the review process.
   b. Some other piece of new writing, such as a review paper from a course, or an initial literature review of a potential thesis topic. In this case the paper should ordinarily be not less than 10 or more than 20 double-spaced pages in usual sized font, plus references. It should be written in the style of a standard scientific paper.
4. Two-part qualifying exam: Each student must pass the exam in their second year. Students at Hopkins have the option of following the process of either the CMOB or Eco/Evo tracks (see above).
5. Graduate Student Symposium: All second- and fourth-year students are required to present at an annual student symposium (typically in February).
   a. Second-Year Students: The first half of the symposium gives second-year graduate students a forum to present plans for their graduate work. Because each student's research is different, there is no one-size-fits-all plan for these talks. But in general, these 20 minute presentations are meant to answer the questions: "What broad area of marine biology am I pursuing for my Ph.D.? What is known about this now? What am I planning broadly to contribute? What preliminary or initial data do I have?"
   b. Fourth-Year Students: The presentation for fourth-year students comes in two parts:
      i. Each student prepares a written overview of their doctoral research, including progress to date and plans for the final thesis. The document should be single spaced, 11-point (or larger) font, and should not exceed 3 pages (including figures and tables, but excluding references). In addition to this research overview, each student submits an up-to-date CV,

and the research overview and CV should be submitted no later than one week before the symposium date. This deadline gives a panel of judges time to review the documents prior to the symposium. Please combine the research statement and CV into a single PDF file, and email it to both the director and associate director.

ii. In the second half of the symposium, each fourth-year student presents to the judges and a general audience a 20-minute report on their Ph.D. research. Along with the written research overview, this is intended to give each student a chance to pull together their data and analyses to date, lay out initial conclusions, and explore what they mean in the context of their overall research interests and goals. As with the research overviews, these talks give students a chance to concentrate on what progress they have made along the complex path of their Ph.D., and what they are particularly excited about. Laying out plans for finishing the thesis should be a part of these talks, but should not be the main topic.

iii. After the symposium, the judges meet to choose the most outstanding combination of research statement and oral presentation. This student receives the Lederberg Award.

Note: Written petitions for exemptions to requirements are considered by a student's Advising Committee and the Graduate Studies Committee Chair. Approval is contingent on special circumstances and is not routinely granted.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Department of Biology counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Graduate Degree Requirements

Grading

The Department of Biology counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Other Graduate Policies

Students entering the program during the 2020-21 academic year are allowed to rotate in a non-Biology department lab during their first rotation.

Graduate Advising Expectations

The Department of Biology is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee.

All first-year Biology graduate students have an assigned a Biology First-Year Facilitator (BFF). Faculty mentorship in the BFF program is focused on helping students integrate into the department culture through non-judgmental advocacy. BFFs support students as they manage their lab rotations and chose appropriate coursework. Emphasis is placed on cultivating a supportive relationship between faculty and student during what is often a stressful period of transition. The student services office (SSO) and the Director of Graduate Studies (DGS) have primary responsibility for ensuring students fulfill departmental requirements (coursework, TAships) and submit the appropriate forms on time.

Course Advising Workshops are organized to assist students in the selection of classes for the next quarter. The workshop consists of student, faculty, and SSO representatives who can advise on appropriate coursework to take. Students and faculty establish a course of study, taking into consideration: (1) area of specialization; (2) training in accessory areas such as language, math, physical sciences and computer science; and (3) breadth in biology.

Graduate students are expected to select a thesis advisor before the end of the first year of the program. Students are encouraged to work collaboratively with their advisors to establish a dissertation project and form a Dissertation Reading Committee. Advancement to doctoral candidacy is expected to occur during the second year of the program.

Thesis advisers are expected to meet with graduate students at least once each year to discuss and help develop the students' Individual Development Plans (IDP). Additionally, advisers and students should meet on a regular basis throughout the year to discuss the student's professional development in key areas such as selecting courses, designing and conducting research, developing teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship. They should proactively seek academic and professional guidance and take responsibility for informing themselves of policies and degree requirements for the Biology Ph.D. program.

As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

Academic progress and student completion of program requirements and milestones are monitored by the program director and staff, and are discussed by faculty at an annual meeting devoted to assessing graduate student progress. A detailed description of the program's requirements, milestones, and advising expectations are listed in the Biology Ph.D. Student Handbook, found on the program web site.

The Director of Graduate Studies (DGS) is available during office hours and by appointment. In addition, each Autumn the DGS meets with each cohort of graduate students to discuss what aspects of the Ph.D. program areas warrant improvement. Together with the DGS, the Graduate Studies Committee acts as a mechanism to address these concerns and update advising policies. The committee is formed from faculty and student representatives of CMOB, EcoEvo, and Hopkins tracks.

Additionally, the program adheres to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-

mentoring/) (VPGE) and in the Graduate Academic Policies (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/) (GAP).

Emeriti Professors: Paul R. Ehrlich, David Epel, Philip C. Hanawalt, Patricia P. Jones, Donald Kennedy, Harold A. Mooney, W. James Nelson, Peter Ray, Joan Roughgarden, Robert D. Simoni, George N. Somero, Ward B. Watt, Norman K. Wessells, Dow O. Woodward

Emeritus Professor (Teaching): Carol L. Boggs

Chair: Martha S. Cyert

Director of Graduate Studies: Jose R. Dinneny

Director of Undergraduate Studies: Tadashi Fukami

Professors: Dominique Bergmann, Barbara A. Block, Steven M. Block, Larry B. Crowder, Martha S. Cyert, Gretchen C. Daily, Giulio De Leo, Mark W. Denny, Rodolfo Dirzo, Marcus W. Feldman, Russell D. Fernald, Christopher B. Field, Judith Frydman, William F. Gilly, Deborah M. Gordon, Or Gozani, Elizabeth A. Hadly, H. Craig Heller, Christine Jacobs-Wagner, Richard G. Klein, Ron R. Kopito, Sharon R. Long, Liqun Luo, Susan K. McConnell, Fiorenza Micheli, Mary Beth Mudgett, Stephen R. Palumbi, Dmitri Petrov, Jonathan Pritchard, Noah A. Rosenberg, Robert M. Sapolsky, Mark J. Schnitzer, Carla J. Shatz, Kang Shen, Michael A. Simon, Tim P. Stearns, Marc Tessier-Lavigne, Stuart H. Thompson, Alice Ting, Shripad Tuljapurkar, Peter Vitousek, Virginia Walbot

Professor (Research): Anthony Barnosky

Associate Professors: Xiaoke Chen, Jose R. Dinneny, Hunter B. Fraser, Tadashi Fukami, Christopher Lowe, Ashby Morrison, Kabir Peay, M. Kristy Red-Horse, Jan M. Skotheim

Associate Professor (Research): Mary Hynes

Assistant Professors: Jonas B. Cremer, Scott J. Dixon, Jessica L. Feldman, Jeremy A. Goldbogen, Erin Mordecai, Lauren O'Connell, Molly Schumer

Courtesy Emeritus Professor: Kathryn Barton

Courtesy Professors: Joseph Berry, Devaki Bhaya, Carlos D. Bustamante, Daniel Fisher, Arthur R. Grossman, Joseph S. Lipsick, Alfred Spormann, Irving Weissman

Courtesy Associate Professors: David Ehrhardt, Jonathan Payne, Sue Rhee, Zhiyong Wang

Courtesy Assistant Professor: Paula V. Welander

Lecturers: Daria Hekmat-Scafe, Jamie Imam, Waheeda Khalfan, Shyamala D. Malladi, Jesse E. D. Miller, Andrew Todhunter,

Librarian: Michael Newman

Overseas Studies Courses in Biology

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

		Units
BIO 121	ORNITHOLOGY	2
BIOE 103	Systems Physiology and Design	4
OSPAUSTL 10	Coral Reef Ecosystems	3
OSPAUSTL 28	Terrestrial Ecology and Conservation	3
OSPAUSTL 32	Coastal Ecosystems	3

Courses

BIO 2N. Ecology and Evolution of Infectious Disease in a Changing World. 3 Units.
This seminar will explore the ways in which anthropogenic change, climate change, habitat destruction, land use change, and species invasions effects the ecology and evolution of infectious diseases. Topics will include infectious diseases of humans, wildlife, livestock, and crops, effects of disease on threatened species, disease spillover, emerging diseases, and the role of disease in natural systems. Course will be taught through a combination of popular and scientific readings, discussion, and lecture. .

BIO 3. Frontiers in Marine Biology. 1 Unit.
An introduction to contemporary research in marine biology, including ecology, conservation biology, environmental toxicology, behavior, biomechanics, evolution, neurobiology, and molecular biology. Emphasis is on new discoveries and the technologies used to make them. Weekly lectures by faculty from the Hopkins Marine Station.

BIO 3N. Views of a Changing Sea: Literature & Science. 3 Units.
The state of a changing world ocean, particularly in the eastern Pacific, will be examined through historical and contemporary fiction, non-fiction and scientific publications. Issues will include harvest and mariculture fisheries, land-sea interactions and oceanic climate change in both surface and deep waters.

BIO 6N. Ocean Conservation: Pathways to Solutions. 3 Units.
We will learn how to design pathways to solutions by integrating social sciences and governance into our case studies. We will address both conventional (fisheries management, reducing the impacts of global shipping, marine protected areas) and emerging research and management approaches (marine spatial planning, dynamic ocean management, environmental DNA). Oceans are facing long-term challenges, like overfishing and pollution that we know how to solve, and emerging challenges, like climate change and ocean plastics, for which solutions are more elusive. Ultimately to achieve long-term sustainability, solutions have to work for both people and the planet. These puzzles offer challenging complex systems problems that will require our best interdisciplinary thinking to solve.

BIO 7N. Conservation Photography. 3 Units.
Introduction to the field of conservation photography and the strategic use of visual communication in addressing issues concerning the environment and conservation. Students will be introduced to basic digital photography, digital image processing, and the theory and application of photographic techniques. Case studies of conservation issues will be examined through photographs and multimedia platforms including images, video, and audio. Lectures, tutorials, demonstrations, and optional field trips will culminate in the production of individual and group projects.

BIO 7SL. Introduction to Biology Lab. 2 Units.
Optional laboratory to be taken with BIO7S. Introduction to basic biological laboratory techniques, including microscopy, identification of biomolecules, assaying enzyme activity, genetic manipulation of microorganisms, assaying the effects of gene mutation on protein function, and using PCR to genotype organisms.

BIO 8N. Human Origins. 3 Units.
A survey of the anatomical and behavioral evidence for human evolution and of the increasingly important information from molecular genetics. Emphasis on the split between the human and chimpanzee lines 6-7 million years ago, the appearance of the australopiths by 4.1 million years ago, the emergence of the genus Homo about 2.5 million years ago, the spread of Homo from Africa 1.7-1.6 million years ago, the subsequent divergence of Homo into different species on different continents, and the expansion of fully modern humans (Homo sapiens) from Africa about 50,000 years ago to replace the Neanderthals and other non-modern Eurasians.

BIO 8S. Introduction to Human Physiology. 4 Units.
Normal functioning and pathophysiology of major organ systems: nervous, respiratory, cardiovascular, renal, digestive, and endocrine. Additional topics include integrative physiology, clinical case studies, and applications in genomics-based personalized medicine.

BIO 10N. Using Physics to Explain Biology: Mechanistic Approaches to Plankton Ecology. 3 Units.
People often think of physics and biology as entirely separate scientific pursuits, but in fact the two can be productively combined. All plants and animals live in a physical environment, and the laws of physics that govern that environment often determine how organisms function and interact. In this seminar, we will explore the confluence of physics and biology through an in-depth look at how phytoplankton and zooplankton -- the small algae and animals that form the base of the oceans' food web -- are affected by the physical properties of their watery world. You will be amazed by our ability to explain the ecology of these organisms, and how important that ecology is to life on earth.

BIO 12N. Sensory Ecology of Marine Animals. 3 Units.
Animals living in the oceans experience a highly varied range of environmental stimuli. An aquatic lifestyle requires an equally rich range of sensory adaptations, including some that are totally foreign to us. In this course we will examine sensory system in marine animals from both an environmental and behavioral perspective and from the point of view of neuroscience and information systems engineering.

BIO 16. Conservation Storytelling: Pre-course for BOSP South Africa. 1 Unit.
Limited to students admitted to the BOSP South Africa overseas seminar. Through 5 workshop meetings, students will develop and pitch story ideas, form teams in which a writer and a photographer agree to collaborate on a story, and conduct background research prior to departing for South Africa.

BIO 16N. Island Ecology. 3 Units.
Preference to freshmen. How ecologists think about the world. Focus is on the Hawaiian Islands: origin, geology, climate, evolution and ecology of flora and fauna, and ecosystems. The reasons for the concentration of threatened and endangered species in Hawaii, the scientific basis for their protection and recovery. How knowledge of island ecosystems can contribute to ecology and conservation biology on continents.

BIO 19S. Science of Covid-19. 4 Units.
This course is designed to help students apply knowledge from an introductory high school biology course to problems related to Covid-19. We will examine how the virus SARS-CoV-2 attacks the human body, how the immune system responds, how testing works, and how this information can be used to design drugs and vaccines to halt the spread of the virus. There has been an explosion of research papers and many claims in the media about the virus. We will evaluate the claims critically and explore the underlying science by reading a few selected papers.

BIO 24N. Visions of Paradise: Garden Design. 3 Units.
Through literature readings and field trips to local gardens learn the principles and esthetics of classic garden designs: Italian Renaissance, botanical teaching, Japanese, English cottage, and others. Design a personal vision of paradise with details of species, visual and scent impact, water features, and hardscape. Open your eyes to a new appreciation of the world of plants and learn some physiology and genetics that explains the specific properties of individual species.

BIO 25Q. Cystic fibrosis: from medical conundrum to precision medicine success story. 3 Units.
The class will explore cystic fibrosis (CF), the most prevalent fatal genetic disease in the US, as a scientific and medical whodunit. Through reading and discussion of medical and scientific literature, we will tackle questions that include: how was life expectancy with CF increased from weeks to decades without understanding the disease mechanism? Why is the disease so prevalent? Is there an advantage to being a carrier? Is CF a single disease or a continuum of physiological variation ¿or- what is a disease? How did research into CF lead to discovery of the underlying cause of most other genetic diseases as well?nnThrough critical reading of the scientific and medical literature, class discussion, field trips and meetings with genetic counselors, caregivers, patients, physicians and researchers, we will work to build a deep understanding of this disease, from the biochemical basis to the current controversies over pathogenic mechanisms, treatment strategies and the ethics and economics of genetic testing and astronomical drug costs.

BIO 27S. Evolution: From DNA to Dinosaurs. 3 Units.
This course centers on the fundamental idea of evolution, which impacts fields as disparate as genetics to paleontology. You will learn about the history of evolutionary thought, including Darwin¿s idea of evolution by natural selection, and explore evolutionary timescales both small and large. Topics include population genetics, genomics, molecular evolution, evolutionary forces, formation of new species, evolutionary divergences in the history of life, and evidence of evolution, including patterns from DNA and the fossil record.

BIO 28S. Molecular Genetics and Biotechnology. 3 Units.
This course covers the fundamentals of molecular genetics, including principles of how genes work, how gene expression is regulated in both prokaryotes and eukaryotes, and how signals are passed from cells to cells that are far away. We will also explore key advances in biotechnology, including cloning, sequencing, and next-generation sequencing, and discuss case studies involving cancer, Huntington¿s Disease, and more.

BIO 30. Ecology for Everyone. 4 Units.
Ecology is the science of interactions and the changes they generate. This project-based course links individual behavior, population growth, species interactions, and ecosystem function. Introduction to measurement, observation, experimental design and hypothesis testing in field projects. The goal is to learn to think analytically about everyday ecological processes, including those that you participate in, which involve bacteria, fungi, plants, animals and humans. The course uses basic statistics to analyze data; there are no math prerequisites except arithmetic. Open to everyone, including those who may be headed for more advanced courses in ecology and environmental science. The online version will meet synchronously and involve preparation outside of class for interactive discussions during class time. We will organize field projects that you can do wherever you are. Projects begin in the first week of the quarter. For questions please contact Prof. Gordon at dmgordon@stanford.edu.

BIO 35N. Climate change ecology: Is it too late?. 3 Units.
This Introductory Seminar will explore the consequences of climate change on ecological communities, focusing on two emerging concepts: "disequilibrium," which emphasizes that it can take long time for communities to respond to climate change because of species interactions, and "historical contingency," which proposes that the order in which species invade and disappear as communities re-assemble in response to climate change will determine which species will persist. The seminar will involve lecture, discussion, writing, and visit to Jasper Ridge Biological Preserve.

BIO 45. Introduction to Laboratory Research in Cell and Molecular Biology. 4 Units.
Investigate yeast strains that are engineered to express the human tumor suppressor protein, p53, and use modern molecular methods to identify the functional consequences of p53 mutations isolated from tumor cells. Learn about the protein's role as Guardian of the Genome through lectures and by reading and discussing journal articles. Use molecular visualization programs to examine the structure of normal and mutant p53 proteins. Learn about the assays used to study the ability of mutant p53 to direct expression of several reporter genes. During guided reflection, investigate further and identify what could be wrong with the p53 mutants you have been studying. Learn how to ask a question, test a hypothesis, conduct experiments and analyze data, and present your findings through a team oral presentation, as well as a scientific poster. Although there are no pre-requisites to enroll in this class, it will be helpful if you have already taken or are concurrently enrolled in the appropriate Biology Foundation classes (or HumBio core classes). Additionally, it will also be helpful if you have already taken CHEM 31M, or 31A & B.

BIO 46. Introduction to Research in Ecology and Evolutionary Biology. 4 Units.
The goal of this course is to develop an understanding of how to conduct biological research, using topics in Ecology as practical examples. This includes the complete scientific process: assessing background literature, generating testable hypotheses, learning techniques for data collection, analyzing data using appropriate statistical methods, and writing and sharing results. To build these skills, this course focuses on the microorganisms associated with lichen epiphytes and their interactions with air pollution and other environmental variables. Students, working in teams, develop novel research hypotheses and execute the necessary experiments and measurements to test these hypotheses. Because the course will be online this year, we will analyze data collected in previous years rather than conducting field and lab experiments in person. In addition, students will learn how to manipulate, visualize, and analyze data in R. The capstone of the course is a research paper in the style of a peer-reviewed journal article, as well as an educational video designed for a general audience that communicates research findings. IMPORTANT NOTE: Students who require BIO 46 to satisfy the WIM requirement for the Biology major MUST take this course for a letter grade (except in 2020-21).

BIO 47. Introduction to Research in Ecology and Evolutionary Biology. 4 Units.
The goal of this course is to develop an understanding of how to conduct biological research, using a topic in Ecology, Evolutionary Biology, and Plant Biology as a practical example. This includes the complete scientific process: assessing background literature, generating testable hypotheses, learning techniques for field- and lab-based data collection, analyzing data using appropriate statistical methods, and finally writing and sharing results. To build these skills, this course will focus on nectar microbes at Stanford's nearby Jasper Ridge Biological Preserve. Students, working in teams, will develop novel research hypotheses, design the necessary experiments and measurements to test these hypotheses. The capstone of the course will be an oral defense of students' findings, as well as a research paper written in the style of a peer-reviewed journal article. Students will use data collected both in the lab and at Jasper Ridge Biological Preserve. Although there are no pre-requisites to enroll in the class, it will be helpful if you have already taken BIO 81 or relevant HumBio core class. nNote: Satisfies WIM (if taken for a letter grade) in Biology.

BIO 50S. Introduction to Cancer Biology. 3 Units.
Introduction to the molecular basis of cancer. This course will examine the biological processes that are disrupted in cancer, such as DNA repair, cell cycle control and signaling pathways, as well as the science behind some current treatments. Prerequisites: general biology.

BIO 51S. The Gene: The History and Science of our Genetic Code. 3 Units.
This discussion-based course will use the novel ¿The gene¿ by Siddhartha Mukherjee and other selected readings to explore the science behind our genetic code. We will cover topics such as regulation of gene expression, inheritance, genetic testing, manipulation of the genome, and the relationship between genetics and identity. Prerequisites: Instructor consent, AP Biology Recommended.

BIO 52. I, Scientist: Diversity Improves the Scientific Practice. 1 Unit.
Disciplinary priorities, research agendas, and innovations are determined by the diversity of participants and problem-solving is more successful with a broad range of approaches. Using case studies in scientific research, we propose to use these insights to help our students learn why a diverse scientific community leads to better discovery and improves the relevance of science to society. Our premise is that a diverse set of perspectives will impact not only how we learn science, but how we do science.
Same as: CSRE 52H

BIO 53. Conservation Photography. 3 Units.
Introduction to the field of conservation photography and the strategic use of visual communication in addressing issues concerning the environment and conservation. Students will be introduced to basic digital photography, digital image processing, and the theory and application of photographic techniques. Case studies of conservation issues will be examined through photographs and multimedia platforms including images, video, and audio. Lectures, tutorials, demonstrations, and optional field trips will culminate in the production of individual and group projects. This course is identical to Bio 7N, so students enrolled in the former should not take this course. Open to undergraduates and graduate students. Students must have access to a DSLR camera and lenses - we can accept up to 20 students who can share 10 course-provided cameras and lenses, by application. Application for camera use: https://forms.gle/1yAD3my8GoDseXw59.

BIO 57. THE STATE OF HUMANS AND THE PLANET. 4 Units.
How does human well-being affect their environment and the reverse? The goals of this course are to examine ways of measuring human and environmental well-being, their main interactions now and in the next several decades, and to identify challenges and gaps in our knowledge.

BIO 60. Problem solving in infectious disease. 4 Units.
Why is Lyme disease spreading? How does HIV become drug resistant? How do other animals affect our disease risk? In BIO 60 students will examine actual case studies to experience how different scientific approaches are used to battle infectious disease. They will evaluate information presented in the popular media and the scientific literature, and will directly participate in the scientific process through hands-on collection, documentation and analyses of authentic scientific data. Students will cultivate their scientific curiosity by discovering the natural world with a Foldscope, the `origami paper microscope¿ (https://microcosmos.foldscope.com). Students will build critical thinking skills by creating hypotheses, and designing experiments that pertain to problems in infectious disease. Students will work in teams to expand their thinking and will practice communicating science to different audiences.

BIO 61. Science as a Creative Process. 4 Units.
What is the process of science, and why does creativity matter? We'll delve deeply into the applicability of science in addressing a vast range of real-world problems. This course is designed to teach the scientific method as it's actually practiced by working scientists. It will cover how to ask a well-posed question, how to design a good experiment, how to collect and interpret quantitative data, how to recover from error, and how to communicate findings. Facts matter! Course topics will include experimental design, statistics and statistical significance, formulating appropriate controls, modeling, peer review, and more. The course will incorporate a significant hands-on component featuring device fabrication, testing, and measurement. Among other "Dorm Science" activities, we'll be distributing Arduino microcontroller kits and electronic sensors, then use these items, along with other materials, to complete a variety of group and individual projects outside the classroom. The final course assignment will be to develop and write a scientific grant proposal to test a student-selected myth or scientific controversy. Although helpful, no prior experience with electronics or computer programming is required. Recommended for freshmen.
Same as: APPPHYS 61

BIO 62. Microbiology Experiments. 4 Units.
Micro-X is an on-ramp course in which we explore classic to modern bacteriology experiments with a focus on design and logic. Bacterial biochemistry, structure, metabolism, and genetics are covered in lecture. The lab includes microbial culture, microscopic examination, and bacteriophage discovery and characterization. Enrollment limited; application required. Apply at https://forms.gle/x37kwXvJxvQmN1sA6 by December 3rd to get preference for enrollment.

BIO 81. Introduction to Ecology. 4 Units.
This course will introduce you to the first principles of the science of ecology, the study of interactions between organisms and their environment. Prerequisites: None.

BIO 82. Genetics. 4 Units.
The focus of the course is on the basic mechanisms underlying the transmission of genetic information and on the use of genetic analysis to study biological and medical questions. Major topics will include: (1) the use of existing genetic variation in humans and other species to identify genes that play an important role in determining traits and disease-susceptibility, (2) the analysis of mutations in model organisms and their use in the investigation of biological processes and questions and (3) using genetic information for diagnosis and the potential for genetic manipulations to treat disease. Prerequisites: None, but BIO 83 is recommended. For 2021, Live Zoom lectures will be recorded and posted on Canvas for students with conflicts. Attendance at a discussion section held once a week is mandatory. For logistical questions about the course, please contact Waheeda Khalfan (wkhalfan@stanford.edu).

BIO 83. Biochemistry & Molecular Biology. 4 Units.
Introduction to the molecular and biochemical basis of life. Lecture topics include the structure and function of proteins, nucleic acids, lipids and carbohydrates, energy metabolism, signal transduction, epigenetics and DNA repair. The course will also consider how defects in these processes cause disease. Prerequisites: None.

BIO 84. Physiology. 4 Units.
The focus of Physiology is on understanding how organisms tackle the physical challenges of life on Earth. This course will provide an overview of animal and plant physiology and teach an understanding of how organisms maintain homeostasis, respond to environmental cues and coordinate behaviors across multiples tissues and organ systems. We will examine the structure and function of organs and organ systems and how those systems are controlled and regulated to maintain homeostasis. Control and regulation requires information as does the ability to respond to environmental stimuli, so we will give special consideration to hormonal and neural information systems. We will also be concerned with the interactions and integration of the activities of the different organ systems we study. Prerequisites: none. For 2021, Live Zoom lectures will be recorded and posted on Canvas for students with conflicts. Attendance at a discussion section held once a week is mandatory. There will be no exams in the course. For logistical questions about the course, please contact Waheeda Khalfan (wkhalfan@stanford.edu).

BIO 85. Evolution. 4 Units.
Understanding evolution is key to understanding the diversity of life on earth. We will be focusing on the fundamental principles of evolutionary biology from natural and sexual selection to the formation of new species. To understand these concepts we will delve into the mechanisms that underlie them. The course will also link these fundamental processes to important contemporary evolutionary topics such as the evolution of behavior, life history evolution, and human evolution. Prerequisites: BIO 60 or 61 or 62 or equivalent; recommended: BIO 82, or permission of instructor.

BIO 86. Cell Biology. 4 Units.
This course will focus on the basic structures inside cells and how they execute cellular functions. Topics include organelles, membrane trafficking, the cytoskeleton, cell division, and signal transduction. Classic and recent primary literature will be incorporated into lectures with an emphasis on state of the art experimental approaches. Prerequisites: BIO 83 is highly recommended.

BIO 89SI. Evolutionary Medicine. 2 Units.
Why are body systems prone to disease? This course will explore theories about the evolutionary basis of diseases, including cancer, diabetes, and psychiatric disease. Students with a background in genetics, physiology, and evolution will synthesize these fields to better understand human health and disease. The course will involve readings from and discussions about the primary literature.

BIO 102. Ecosystem Ecology and Biogeochemistry. 3 Units.
An introduction to ecosystem ecology and terrestrial biogeochemistry. This course will focus on the dynamics of carbon and other biologically essential elements in the Earth System, on spatial scales from local to global.

BIO 103. HUMAN AND PLANET HEALTH. 2 Units.
Two of the biggest challenges humanity has to face - promoting human health and halting environmental degradation ¿ are strongly linked. The emerging field of Planetary Health recognizes these inter-linkages and promotes creative, interdisciplinary solutions that protect human health and the health of the ecosystems on which we depend. Through a series of lectures and case-study discussions, students will develop an in-depth understanding of the ¿Planetary Health¿ concept, its foundation, goals, priority areas of action, methods of investigation, and the most relevant immediate challenges.
Same as: BIO 203

BIO 104. Advance Molecular Biology: Epigenetics and Proteostasis. 5 Units.
Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Prerequisite: Biology core or BIO 83 (BIO 82 and 86 are strongly recommended).
Same as: BIO 200

BIO 105A. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.
Ecology and Natural History of Jasper Ridge Biological Preserve an upper-division course, aims to help student learn ecology and natural history using a ¿living laboratory¿, the Jasper Ridge Preserve. The course¿s central goal is that, as a community of learning, we examine ¿via introductory discussions, followed by hands-on experiences in the field¿ the scientific basis of: ecological research, archaeology, edaphology, geology, hydrology, species interactions, land management, and multidisciplinary environmental education. The 10 sessions that compose the academic program are led by the instructors, faculty (world-experts on the themes of each session), and JRBP staff. In addition, this class trains students to become JRBP Docents that therefore join the Jasper Ridge education affiliates community. nnAfter completing this course and as new affiliates of Jasper Ridge, participants will be able to lead research-focused educational tours, assist with classes and research, and attend continuing education activities available to members of the JRBP community.
Same as: EARTHSYS 105A

BIO 105B. Ecology and Natural History of Jasper Ridge Biological Preserve. 4 Units.
Ecology and Natural History of Jasper Ridge Biological Preserve an upper-division course, aims to help student learn ecology and natural history using a ¿living laboratory¿, the Jasper Ridge Preserve. The course¿s central goal is that, as a community of learning, we examine ¿via introductory discussions, followed by hands-on experiences in the field¿ the scientific basis of: ecological research, archaeology, edaphology, geology, hydrology, species interactions, land management, and multidisciplinary environmental education. The 10 sessions that compose the academic program are led by the instructors, faculty (world-experts on the themes of each session), and JRBP staff. In addition, this class trains students to become JRBP Docents that therefore join the Jasper Ridge education affiliates community. nnAfter completing this course and as new affiliates of Jasper Ridge, participants will be able to lead research-focused educational tours, assist with classes and research, and attend continuing education activities available to members of the JRBP community.
Same as: EARTHSYS 105B

BIO 109A. Building Blocks for Chronic Disease. 3 Units.
Researchers have come a long way in developing therapies for chronic disease but a gap remains between current solutions and the ability to address the disease in full. This course provides an overview to the underlying biology of many of these diseases and how they may connect to each other. A "think outside of the box" approach to drug discovery is needed to bridge such a gap in solutions, and this course teaches the building blocks for that approach. Could Legoland provide the answer? This is a guest lecture series with original contributions from prominent thought leaders in academia and industry. Interaction between students and guest lecturers is expected. Students with a major, minor or coterm in Biology: 109A/209A or 109B/209B may count toward degree program but not both.
Same as: BIOC 109A, BIOC 209A, HUMBIO 158

BIO 109B. Advances in Therapeutic Development: Neuronal Signaling and Immunology. 3 Units.
This is a seminar course focused on teaching students about novel research and applications in the fields of neuroscience and immunology. The course will cover topics that range from the neuronal pathways in opioid addiction and the mechanics of pain, to advances in immunotherapy. Students will engage with diverse material from leading neuroscience and cancer immunotherapy experts in the Bay Area. Guest lecturers will visit from both academia and neighboring pharmaceutical/biotechnology companies. Active participation is required. Prerequisite: Biology or Human Biology core. Students with a major, minor or coterm in Biology: 109A/209A or 109B/209B may count toward degree program, but not both.
Same as: BIOC 109B

BIO 110. The Chromatin-Regulated Genome. 3 Units.
Maintenance of the genome is a prerequisite for life. In eukaryotes, all DNA-templated processes are tightly connected to chromatin structure and function. This course will explore epigenetic and chromatin regulation of cellular processes related to aging, cancer, stem cell pluripotency, metabolic homeostasis, and development. Course material integrates current literature with a foundational review of histone modifications and nucleosome composition in epigenetic inheritance, transcription, replication, cell division and DNA damage responses. Prerequisite: BIO 41 or BIO 83 or consent of instructor.
Same as: BIO 210

BIO 112. Human Physiology. 4 Units.
Human physiology will be examined by organ systems: cardiovascular, respiratory, renal, gastrointestinal and endocrine. Molecular and cell biology and signaling principles that underlie organ development, pathophysiology and opportunities for regenerative medicine are discussed, as well as integrative control mechanisms and fetal development. Prerequisite: Human Biology core or Biology Foundations or equivalent or consent of instructor.
Same as: HUMBIO 133

BIO 113. Fundamentals of Molecular Evolution. 4 Units.
The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Prerequisites: Biology core or BIO 82, 85 or graduate standing in any department, and consent of instructor.
Same as: BIO 244

BIO 114. bioBUDS (Building Up Developing Scientists): Science In & Beyond the Lab. 2 Units.
Your unique knowledge, experiences, and goals to enhance our collective understanding of life around us. BUDS aims to expand the idea of what it means to be a scientist and aid in the process of becoming community-driven scientists in and beyond the lab. We will spotlight graduate students and associations from historically underrepresented groups for their perspectives on research and broader STEM careers. All journal clubs and workshops are open to all students regardless of department affiliation, experience-level, or field.

BIO 115. The Hidden Kingdom - Evolution, Ecology and Diversity of Fungi. 4 Units.
Fungi are critical, yet often hidden, components of the biosphere. They regulate decomposition, are primary partners in plant symbiosis and strongly impact agriculture and economics. Students will explore the fascinating world of fungal biology, ecology and evolution via lecture, lab, field exercises and Saturday field trips that will provide traditional and molecular experiences in the collection, analysis and industrial use of diverse fungi. Students will chose an environmental niche, collect and identify resident fungi, and hypothesize about their community relationship. Prerequisite: BIO 81, 85 recommended.
Same as: BIO 239

BIO 116. Ecology of the Hawaiian Islands. 4 Units.
Terrestrial and marine ecology and conservation biology of the Hawaiian Archipelago. Taught in the field in Hawaii as part of quarter-long sequence of courses including Earth Sciences and Anthropology. Topics include ecological succession, plant-soil interactions, conservation biology, biological invasions and ecosystem consequences, and coral reef ecology. Restricted to students accepted into the Earth Systems of Hawaii Program.
Same as: EARTHSYS 116

BIO 117. Biology and Global Change. 4 Units.
The biological causes and consequences of anthropogenic and natural changes in the atmosphere, oceans, and terrestrial and freshwater ecosystems. Topics: glacial cycles and marine circulation, greenhouse gases and climate change, tropical deforestation and species extinctions, and human population growth and resource use. Prerequisite: Biology or Human Biology core or BIO 81 or graduate standing.
Same as: EARTHSYS 111, EARTHSYS 217, ESS 111

BIO 119. Evolution of Marine Ecosystems. 3-4 Units.
Life originally evolved in the ocean. When, why, and how did the major transitions occur in the history of marine life? What triggered the rapid evolution and diversification of animals in the Cambrian, after more than 3.5 billion years of Earth's history? What caused Earth's major mass extinction events? How do ancient extinction events compare to current threats to marine ecosystems? How has the evolution of primary producers impacted animals, and how has animal evolution impacted primary producers? In this course, we will review the latest evidence regarding these major questions in the history of marine ecosystems. We will develop familiarity with the most common groups of marine animal fossils. We will also conduct original analyses of paleontological data, developing skills both in the framing and testing of scientific hypotheses and in data analysis and presentation.
Same as: EARTHSYS 122, GEOLSCI 123, GEOLSCI 223B

BIO 120. Prokaryotic Biology - A Quantitative Approach. 3 Units.
To live, microbes have to successfully coordinate various cellular processes, in line with available resources and what environmental conditions demand. This course introduces quantitative advances in understanding this coordination and their consequences across scales: from molecular biology via growth to population dynamics and ecology. Dry lab sessions complement lectures to introduce computational approaches. Python based analysis tools will be introduced. Prerequisite: MATH 51 or MATH 19, 20,21. Recommended: microbiology (e.g. BIO 62 or 162) and molecular biology/biochemistry/genetics courses (e.g. BIO 82 or 83) and basic familiarity with coding.
Same as: BIO 220

BIO 121. ORNITHOLOGY. 2 Units.
Advanced undergraduate survey of ornithology, introducing students to the biology of birds and giving them to tools to use birds as model systems for research. Topics will include avian evolution, physiology, adaptations, behavior, and ecology. Focus throughout on identification of California birds and applications to current bird conservation issues. Course will include lectures and a field component which will expose students to standard avian research techniques such as mistnetting, banding, and point count surveys. Prerequisite: BIO 81 or BIO 105 or instructor approval.
Same as: BIO 221

BIO 124. Topics in Cancer Biology. 3 Units.
This discussion-based course will explore the scientific tools used to study the molecular and genetic basis of cancer and to develop treatments for this disease. Topics covered may include cancer models, traditional and targeted cancer therapies, and the development of resistance to treatment. Students will develop skills in critical reading of primary research articles and will also complete a final project. Prerequisites: Human Biology core or BIO 82, 83, 86, or with permission of instructor.

BIO 126. Introduction to Biophysics. 3-4 Units.
Core course appropriate for advanced undergraduate students and graduate students with prior knowledge of calculus and a college physics course. Introduction to how physical principles offer insights into modern biology, with regard to the structural, dynamical, and functional organization of biological systems. Topics include the roles of free energy, diffusion, electromotive forces, non-equilibrium dynamics, and information in fundamental biological processes.
Same as: APPPHYS 205, BIO 226

BIO 129. Fundamentals and Frontiers in Plant Biology. 3 Units.
This course will serve as a primer for all levels of graduate, co-term, and upper-level undergraduates interested in learning about the fundamental aspects of plant biology, the latest advances in tools, techniques, and theories that link basic science with translational science and applications for solving major societal challenges of today and tomorrow. In addition, this course will serve to introduce the breadth of plant research on campus and help solidify a cohort of students interested in plant biology.
Same as: BIO 229

BIO 130. Ecosystems of California. 4 Units.
California is home to a huge diversity of ecosystem types and processes. This course provides an introduction to the natural history, systematics, and ecosystem ecology of California ecosystems, based on a combination of lectures, student-led projects, and weekend field trips. Ecosystems to be explored will range from coasts to mountains and from desert to wetlands. Requirements include three essays and participation in three field trips (of six options).
Same as: EARTHSYS 130A

BIO 132. Advanced Imaging Lab in Biophysics. 4 Units.
Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, basic cell biology, and consent of instructor.
Same as: APPPHYS 232, BIO 232, BIOPHYS 232, GENE 232

BIO 134. Molecular and cellular analysis of human cancer cell lines. 4 Units.
This laboratory course will use cultured mammalian cells to study whether drug treatment can restore function to mutant versions of the tumor suppressor p53. Students will perform a variety of cellular and molecular techniques, including RT-PCR and immunofluorescence, to test certain abilities of their mutant in the presence and absence of the drug. The project will culminate with student-designed experiments testing a functional aspect of p53 and presentation of the results for both expert and lay audiences. Strongly suggested prerequisite: BIO 45, BIO 82, 83, 86.

BIO 135. Neuroethology. 3 Units.
Neuroethology is the study of the neural basis of animal behavior. We will explore the neural mechanisms of natural behaviors in a diverse set of organisms. Topics include molecular mechanisms of nervous system function, predator-prey interactions, social behavior, and other complex behaviors like learning and memory, navigation, and communication. Assessment includes group oral presentations of scientific papers, weekly homework prompts that lead into a mini grant proposal, and scientific writing and communication with the broader public on a neuroethological topic. Prerequisites: BIO 84.
Same as: BIO 235

BIO 136. Macroevolution. 3 Units.
The course will focus on the macroevolution of animals. We will be exploring how paleobiology and developmental biology/genomics have contributed to our understanding of the origins of animals, and how patterns of evolution and extinction have shaped the diversity of animal forms we observe today.
Same as: BIO 236, GEOLSCI 136, GEOLSCI 236

BIO 137. Plant Genetics. 3-4 Units.
Gene analysis, mutagenesis, transposable elements; developmental genetics of flowering and embryo development; biochemical genetics of plant metabolism; scientific and societal lessons from transgenic plants. Prerequisite: Biology core or consent of instructor. Satisfies WIM in Biology.

BIO 138. Ecosystem Services: Frontiers in the Science of Valuing Nature. 3 Units.
This course explores the science of valuing nature, beginning with its historical origins and then a primary focus on its recent development and frontiers. The principal aim of the course is to enable new research and real-world applications of InVEST (Integrated Valuation of Ecosystem Services and Tradeoffs) tools and approaches. We will discuss the interconnections between people and nature and key research frontiers, such as in the realms of biodiversity, resilience, human health, poverty alleviation, and sustainable development. The science we¿ll explore is in the service of decisions, and we will use examples from real life to illustrate why this science is so critical to informing why, where, how, and how much people need nature. Prerequisite. Basic to intermediate GIS skills are required (including working with raster, vector and tabular data; loading and editing rasters, shapefiles, and tables into a GIS; understanding coordinate systems; and performing basic raster math).
Same as: BIO 238, EARTHSYS 139, EARTHSYS 239

BIO 140. The Science of Extreme Life of the Sea. 3 Units.
Covers the way marine animals and plants live in extreme environments by examining morphological, ecological, and genetic adaptations to low temperature, high heat, deep water, etc. We also cover extreme lifestyles such as fast swimming, small and large body size, and novel reproductive systems. Lecture material is punctuated with a series of tutorials on narrative writing skills in science, especially creative non-fiction, memoirs, braided essays and short fiction. The goal is to integrate quantitative thinking about the life sciences with creative writing that brings facts to life. Prerequisites: core courses in biology, creative writing, environmental sciences or engineering. Two lectures back to back on Tuesdays with a Writing Intermezzo between.

BIO 141. Biostatistics. 5 Units.
Introductory statistical methods for biological data: describing data (numerical and graphical summaries); introduction to probability; and statistical inference (hypothesis tests and confidence intervals). Intermediate statistical methods: comparing groups (analysis of variance); analyzing associations (linear and logistic regression); and methods for categorical data (contingency tables and odds ratio). Course content integrated with statistical computing in R.
Same as: STATS 141

BIO 142. Molecular Geomicrobiology Laboratory. 3-4 Units.
In this course, students will be studying the biosynthesis of cyclic lipid biomarkers, molecules that are produced by modern microbes that can be preserved in rocks that are over a billion years old and which geologist use as molecular fossils. Students will be tasked with identifying potential biomarker lipid synthesis genes in environmental genomic databases, expressing those genes in a model bacterial expression system in the lab, and then analyzing the lipid products that are produced. The overall goal is for students to experience the scientific research process including generating hypotheses, testing these hypotheses in laboratory experiments, and communicating their results through a publication style paper. Prerequisites: BIO83 and CHEM 121 or permission of the instructor.
Same as: EARTHSYS 143, ESS 143, ESS 243

BIO 144. Conservation Biology: A Latin American Perspective. 3 Units.
Principles and application of the science of preserving biological diversity. Conceptually, this course is designed to explore the major components relevant to the conservation of biodiversity, as exemplified by the Latin American region. The conceptual frameworks and principles, however, should be generally applicable, and provide insights for all regions of the world. All students will be expected to conduct a literature research exercise leading to a written report, addressing a topic of their choosing, derived from any of the themes discussed in class. Prerequisite: BIO 101 or BIO 43 or HUMBIO 2A or BIO 81 and 84 or consent of instructor.
Same as: BIO 234, HUMBIO 112

BIO 145. Ecology and Evolution of Animal Behavior. 3 Units.
Ecological and evolutionary perspectives on animal behavior, with an emphasis on social and collective behavior. This is a project-based course in a lecture/seminar format. Seminars will be based on discussion of journal articles. Independent research projects on the behavior of animals on campus. Prerequisites: Biology or Human Biology core or BIO 81 and 85 or consent of instructor; Biology/ES 30. Recommended: statistics.
Same as: BIO 245

BIO 146. Genes and Disease. 3 Units.
Students in this course will uncover key principles of genetics and molecular biology through investigation of case studies of human disease and novel therapeutic approaches in development. This course will require close reading and discussion of primary literature and will emphasize and support the development of critical skills in scientific communication. Students will utilize a variety of mediums to convey scientific information to a range of audiences in a series of projects completed during the quarter. Prerequisites: BIO 82, 83 and 86 or equivalent.

BIO 147. Ecosystem Ecology and Biogeochemistry. 3 Units.
An introduction to ecosystem ecology and terrestrial biogeochemistry. This course will focus on the dynamics of carbon and other biologically essential elements in the Earth System, on spatial scales from local to global. Prerequisites: Biology 117, Earth Systems 111, or graduate standing.
Same as: BIO 240, EARTHSYS 147, EARTHSYS 247

BIO 148. Evolution of Terrestrial Ecosystems. 4 Units.
The what, when, where, and how do we know it regarding life on land through time. Fossil plants, fungi, invertebrates, and vertebrates (yes, dinosaurs) are all covered, including how all of those components interact with each other and with changing climates, continental drift, atmospheric composition, and environmental perturbations like glaciation and mass extinction. The course involves both lecture and lab components. Graduate students registering at the 200-level are expected to write a term paper, but can opt out of some labs where appropriate.
Same as: BIO 228, EARTHSYS 128, GEOLSCI 128, GEOLSCI 228

BIO 149. The Neurobiology of Sleep. 4 Units.
The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. nnPreference to seniors and graduate students. nnEnrollment limited to 16.
Same as: BIO 249, HUMBIO 161

BIO 150. Human Behavioral Biology. 5 Units.
Multidisciplinary. How to approach complex normal and abnormal behaviors through biology. How to integrate disciplines including sociobiology, ethology, neuroscience, and endocrinology to examine behaviors such as aggression, sexual behavior, language use, and mental illness.
Same as: HUMBIO 160

BIO 151. Mechanisms of Neuron Death. 3 Units.
For undergraduates with backgrounds in neuroscience. Cell and molecular biology of neuron death during neurological disease. Topics: the amyloid diseases (Alzheimer's), prion diseases (kuru and Creutzfeldt-Jakob), oxygen radical diseases (Parkinson's and ALS), triplet repeat diseases (Huntington's), and AIDS-related dementia. Assessment based on in-class participation and short weekly papers. Enrollment limited to 15; application required. Apply at https://forms.gle/UE8EcQi3jS6do31a7 by 4:30pm on Wednesday, September 9, 2020.

BIO 152. Imaging: Biological Light Microscopy. 3 Units.
This intensive laboratory and discussion course will provide participants with the theoretical and practical knowledge to utilize emerging imaging technologies based on light microscopy. Topics include microscope optics, resolution limits, Köhler illumination, confocal fluorescence, two-photon, TIRF, FRET, photobleaching, super-resolution (SIM, STED, STORM/PALM), tissue clearing/CLARITY/light-sheet microscopy, and live-cell imaging. Applications include using fluorescent probes to analyze subcellular localization and live cell-translocation dynamics. We will be using a flipped classroom for the course in that students will watch iBiology lectures before class, and class time will be used for engaging in extensive discussion. Lab portion involves extensive in-class use of microscopes in the CSIF and NMS core microscopy facilities.
Same as: MCP 222

BIO 153. Cellular Neuroscience: Cell Signaling and Behavior. 4 Units.
Neural interactions underlying behavior. Prerequisites: PSYCH 1 or basic biology.
Same as: PSYCH 120

BIO 154. Molecular and Cellular Neurobiology. 4 Units.
For advanced undergraduate students. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases. Highly recommended: BioCore or BIO 82, 83, 86, or consent of instructor.

BIO 155. Cell and Developmental Biology of Plants. 3 Units.
In this course we will learn how plants are built at different organizational scales from the cell, tissue, organ and organ system level. We will also learn about the experimental methods used to study plants at these different organizational levels and how to interpret and evaluate experiments that use such methods. Broadly relevant skills that will be cultivated in the course include: evaluating primarily literature, identifying gaps in knowledge, formulating research questions and designing new experimental strategies. Prerequisites: BIO 80 series.
Same as: BIO 255

BIO 156. California Wildfires: Forest Fire Ecology, Management, and Policy. 3 Units.
Widespread wildfires have become an annual occurrence throughout California with massive implications for both the natural world and human society. The impacts of these fires are likely to grow with further climate change and land-use intensification. This class will take an interdisciplinary perspective on forest fires including the physiological, environmental, and social implications of the fires themselves, as well as the result of wildfire policy on nature and human beings, with a particular focus on equity of impacts across class and racial lines.

BIO 158. Developmental Neurobiology. 4 Units.
For advanced undergraduates and coterminal students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and trophic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Prerequisites: BIO 82, 83, 84, 86.
Same as: BIO 258

BIO 160. Developmental Biology. 4 Units.
This course will cover the molecular mechanisms underlying the generation of diverse cell types and tissues during embryonic and post-embryonic animal development. Topics include the role of cell-cell communication in controlling developmental decisions, the organization and patterning of large groups of cells via morphogen signaling, the specification of individual cell types, and the role of stem cells in development. The course emphasizes the experimental logic and methods of research in developmental biology and includes discussions of research papers.

BIO 161. Organismal Biology Lab. 4 Units.
This laboratory is a genuine research experience course where students contribute to original research in a field of organismal biology. This year, the course will focus on the physiology of chemical defenses in poisonous amphibians through three modules. In the first module focusing on chemistry, students will work with metabolomics data to interpret and visualize chemical signatures of poison frog defense. In the second module focusing on physiology, students will learn to analyze gene expression differences in various tissues from RNA sequencing data. In the third module focusing on ecology, students will learn to analyze animal diet and foraging strategies through metabarcoding. Finally, students will integrate these datasets together for an organismal perspective on chemical defenses. Students will work collaboratively to analyze data and will learn to communicate their findings clearly through oral and written formats.

BIO 162. Mechanisms of Tissue Regeneration. 3 Units.
Many organisms possess a remarkable ability to repair and regenerate damaged organs and tissues. This course will explore the cellular and developmental mechanisms used to achieve regeneration. Students will learn the basic developmental and cellular mechanisms underlying the original formation of organs during normal development and how these mechanisms are modified during the regenerative process. The course will also consider how our expanding knowledge of regeneration mechanisms could be used to promote medically useful regeneration in humans. The course will involve extensive reading and analysis of primary literature. Prerequisites: BIO 86 and BIO160 or by consent of instructor.

BIO 168. Explorations in Stem Cell Biology. 3 Units.
A discussion-based course for advanced undergraduates. The purpose of this course is to introduce students to key topics in stem cell biology and foster the development of strong scientific writing skills. We will review and discuss some landmark and current primary literature in the stem cell field. Topics will include embryonic and adult stem cells, cellular reprogramming and stem cells in disease and regenerative medicine. Students will present a current research paper in their preferred stem cell topic area and compose a novel research proposal. Prerequisites: Biology or Human Biology core or BIO 82, 83, 86. Satisfies WIM in Biology.

BIO 171. Principles of Cell Cycle Control. 3 Units.
Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature.
Same as: BIO 271, CSB 271

BIO 172. Ecological Dynamics: Theory and Applications. 4 Units.
Structured population models with age and phenotypic variation. Integral population models, model fitting and dynamics. Fitness and dynamic heterogeneity. Examples from natural populations (sheep, roe deer, plants, birds). Graduate students will be responsible for additional problem sets. Prerequisites: calculus and linear algebra.
Same as: BIO 272

BIO 173. Chemical Biology. 3 Units.
Chemical biology is an integrative discipline that seeks to apply chemical tools and approaches to understand biology. This course will introduce students to various methods and approaches used in this field, with an emphasis on the use of natural products and synthetic small molecules as probes of biological function. Specific examples will be used to illustrate the ramifications of chemical biology with molecular, cell and developmental biology. The interaction between disease and drug discovery will be considered in detail. Prerequisites: BIO 83, and BIO 82 and/or BIO 84.

BIO 174. Human Skeletal Anatomy. 5 Units.
Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.
Same as: ANTHRO 175, ANTHRO 275, BIO 274, HUMBIO 180

BIO 175. Collective Behavior and Distributed Intelligence. 3 Units.
This course will explore possibilities for student research projects based on presentations of faculty research. We will cover a broad range of topics within the general area of collective behavior, both natural and artificial. Students will build on faculty presentations to develop proposals for future projects.
Same as: SYMSYS 275

BIO 176. The Developmental Basis of Animal Body Plan Evolution. 4 Units.
Animals are grouped into phyla with defined organizational characteristics such as multicellularity, axis organization, and nervous system organization, as well as morphological novelties such as eyes, limbs and segments. This course explores the developmental and molecular origins of there animal innovations. Offered alternate years. Prerequisites: None.
Same as: BIO 276

BIO 177. Plant Microbe Interaction. 3 Units.
Molecular basis of plant symbiosis and pathogenesis. Topics include mechanisms of recognition and signaling between microbes and plant hosts, with examples such as the role of small molecules, secreted peptides, and signal transduction pathways in symbiotic or pathogenic interactions. Readings include landmark papers together with readings in the contemporary literature. Prerequisites: Biology core and two or more upper division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry.
Same as: BIO 277

BIO 178. Microbiology Literature. 3 Units.
For advanced undergraduates and first-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; recent literature on bacterial pathogens such as Salmonella, Vibrio, and/or Yersinia. Diverse experimental approaches: biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Declared Biology majors must have taken BIO 82 (Genetics) and BIO 83 (Biochemistry). Enrollment for undergraduates is limited to Biology majors in junior or senior year. Co-term or Ph.D. students in basic life sciences departments such as Biology, Bioengineering, and Genetics may also enroll in BIO 278. Apply at https://forms.gle/4NTtcBdWYMqRFvGc9.
Same as: BIO 278

BIO 179. Integrated Valuation of Ecosystem Services and Tradeoffs. 1-3 Unit.
This course explores the science of valuing nature, through two interwoven pathways. One is biophysical, focused on human dependence and impacts on Earth¿s life-support systems. If well managed, lands, waters, and biodiversity yield a flow of vital benefits that sustain and fulfill human life. A wild bee buzzes through a farm, pollinating vegetables as it goes. Nearby, wetlands remove chemicals from the farm¿s runoff, protecting a source of drinking water. In parklands at a city¿s edge, kids play and adults walk and talk, their exposure to nature promoting physical activity and improved mental health. The trees help maintain a favorable climate, locally and globally. We¿ll develop a framework and practical tools for quantifying this stream of benefits from nature to people.nThe second pathway is social, economic, and philosophical, weaving through concepts of well-being, human development, and conservation ¿ and the ethics and effects of their pursuit. We will look back, ahead into the future, and inward, taking a global view and considering diverse cultural perspectives. Our discussions will be situated in the context of the COVID-19 pandemic, movements for racial justice and socioeconomic equity, and efforts to enable people and nature to thrive in cities and countries worldwide.nAll of the science we¿ll explore is in service of decisions. We will dive into real-world examples to see how science can inform why, where, how, and how much people need nature. We will learn the basics of the InVEST tools (for Integrated Valuation of Ecosystem Services and Tradeoffs) to quantify benefits of nature, the equitability in access to these benefits, and the transformation of policy, finance, management, and practice to sustain and enhance them. nThe course is intended for diverse, advanced students, with interests in research and in moving from science to action for a more just and sustainable world. The instructors aim to provide an enjoyable and productive opportunity to connect ¿ remotely and yet with a lot of heart as well as intellectual drive and commitment, bringing empathy, flexibility and hopefully some humor to the day-to-day challenges we are all facing in different difficult ways. Prerequisite: Basic to intermediate GIS (Geographic Information Systems) skills are necessary. We will help with these, but not teach GIS specifically in class. Basic skills include, for example: working with raster, vector and tabular data; loading rasters, shapefiles, and tables into a GIS; changing the symbology of rasters and shapefiles in your chosen GIS; editing raster and shapefile attribute tables; understanding coordinate systems and how to re-project layers; looking at individual raster cell values; and performing basic raster math.
Same as: BIO 279

BIO 180. Microbial Physiology. 3 Units.
Introduction to the physiology of microbes including cellular structure, transcription and translation, growth and metabolism, mechanisms for stress resistance and the formation of microbial communities. These topics will be covered in relation to the evolution of early life on Earth, ancient ecosystems, and the interpretation of the rock record. Recommended: introductory biology and chemistry.
Same as: EARTHSYS 255, ESS 255, GEOLSCI 233A

BIO 182. Modeling Cultural Evolution. 3 Units.
Seminar. Quantitative models for the evolution of socially transmitted traits. Rates of change of learned traits in populations and patterns of cultural diversity as a function of innovation and cultural transmission. Learning in constant and changing environments. Possible avenues for gene-culture coevolution.
Same as: BIO 282

BIO 183. Theoretical Population Genetics. 3 Units.
Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and their influence on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor.
Same as: BIO 283

BIO 187. Mathematical Population Biology. 3 Units.
Mathematical models in population biology, in biological areas including demography, ecology, epidemiology, evolution, and genetics. Mathematical approaches include techniques in areas such as combinatorics, differential equations, dynamical systems, linear algebra, probability, and stochastic processes. Math 50 or 60 series is required, and at least two of (Bio 81, Bio 82, Bio 85) are strongly recommended.
Same as: CME 187

BIO 193. Interdisciplinary Approaches to Human Health Research. 1 Unit.
For undergraduate students participating in the Stanford ChEM-H Undergraduate Scholars Program. This course will expose students to interdisciplinary research questions and approaches that span chemistry, engineering, biology, and medicine. Focus is on the development and practice of scientific reading, writing, and presentation skills intended to complement hands-on laboratory research. Students will read scientific articles, write research proposals, make posters, and give presentations.
Same as: BIOE 193, CHEM 193, CHEMENG 193

BIO 196A. Biology Senior Reflection. 3 Units.
Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C. Satisfies WIM in Biology. May be repeat for credit.

BIO 196B. Biology Senior Reflection. 3 Units.
Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C. May be repeat for credit.

BIO 196C. Biology Senior Reflection. 3 Units.
Capstone course series for seniors. Creative, self-reflective and scientifically relevant projects conceived, produced and exhibited over the course of three quarters. Explore scientific content of personal interest through creative forms including but not limited to writing, music, fine arts, performing arts, photography, film or new media. A written essay on the creative process and scientific significance of the selected topic will accompany the creative work. Completed projects may be included in a creative portfolio. Required enrollment in 196A,B,C. May be repeat for credit.

BIO 198. Directed Reading in Biology. 1-15 Unit.
Individually arranged under the supervision of members of the faculty.

BIO 198X. Out-of-Department Directed Reading. 1-15 Unit.
Individually arranged under the supervision of members of the faculty. Credit for work arranged with out-of-department faculty is restricted to Biology majors and requires department approval. See https://biology.stanford.edu/academics/undergraduate-research/directed-reading for information and petitions. May be repeated for credit.

BIO 199. Advanced Research Laboratory in Experimental Biology. 1-15 Unit.
Individual research taken by arrangement with in-department instructors. See http://biohonors.stanford.edu for information on research sponsors, units, and credit for summer research. May be repeated for credit.

BIO 199W. Senior Honors Thesis: How to Effectively Write About Scientific Research. 3 Units.
The goal of this class is to train students in effective scientific communication. It is designed to serve students working on their senior honors research to help facilitate the completion of their honors thesis. Topics covered will include elevator pitches, creating and improving the sections of the thesis, oral presentations and posters in the context of students¿ individual research projects. Emphasis will be on building and practicing the skills for 1) completing your thesis, poster and presentations and 2) gaining a conceptual understanding of effective scientific writing and communication that will be applicable more broadly. Satisfies the WIM requirement in Biology.

BIO 199X. Out-of-Department Advanced Research Laboratory in Experimental Biology. 1-15 Unit.
Individual research by arrangement with out-of-department instructors. Credit for 199X is restricted to declared Biology majors and requires department approval. See https://biology.stanford.edu/academics/undergraduate-research/research for information on research sponsors, units, petitions, deadlines, credit for summer research, and out-of-Stanford research. May be repeated for credit.

BIO 200. Advance Molecular Biology: Epigenetics and Proteostasis. 5 Units.
Molecular mechanisms that govern the replication, recombination, and expression of eukaryotic genomes. Topics: DNA replication, DNA recombination, gene transcription, RNA splicing, regulation of gene expression, protein synthesis, and protein folding. Prerequisite: Biology core or BIO 83 (BIO 82 and 86 are strongly recommended).
Same as: BIO 104

BIO 202. Ecological Statistics. 3 Units.
Intended for graduate students (and advanced undergraduates in special circumstances with consent of instructors) in biology and related environmental sciences, this course is an introduction to statistical methods for ecological data analysis, using the programming language R. The course will have lectures, discussions, and independent research projects using the students¿ own data or simulated or publicly available data.

BIO 203. HUMAN AND PLANET HEALTH. 2 Units.
Two of the biggest challenges humanity has to face - promoting human health and halting environmental degradation ¿ are strongly linked. The emerging field of Planetary Health recognizes these inter-linkages and promotes creative, interdisciplinary solutions that protect human health and the health of the ecosystems on which we depend. Through a series of lectures and case-study discussions, students will develop an in-depth understanding of the ¿Planetary Health¿ concept, its foundation, goals, priority areas of action, methods of investigation, and the most relevant immediate challenges.
Same as: BIO 103

BIO 204. Neuroplasticity: From Synapses to Behavior. 3 Units.
This course will focus on neuroplasticity from a broad perspective, from molecular cellular mechanism to its involvement in behavior and diseases. Emphasis will be on: a) molecular and cellular mechanisms underlying various forms of neuroplasticity; b) the neuroplasticity during brain development; c) the neuroplasticity in adult brain with respect to learning and memory; and d) maladaptive neuroplasticity in neurodegenerative disease and drug addiction. This course is designed for Ph.D. students from both the Biology and Neuroscience programs. Open to advanced undergraduates by consent of instructor.

BIO 208. Spanish in Science/Science in Spanish. 2 Units.
For graduate and undergraduate students interested in the natural sciences and the Spanish language. Students will acquire the ability to communicate in Spanish using scientific language and will enhance their ability to read scientific literature written in Spanish. Emphasis on the development of science in Spanish-speaking countries or regions. Course is conducted in Spanish and intended for students pursuing degrees in the sciences, particularly disciplines such as ecology, environmental science, sustainability, resource management, anthropology, and archeology.
Same as: EARTHSYS 207, LATINAM 207

BIO 210. The Chromatin-Regulated Genome. 3 Units.
Maintenance of the genome is a prerequisite for life. In eukaryotes, all DNA-templated processes are tightly connected to chromatin structure and function. This course will explore epigenetic and chromatin regulation of cellular processes related to aging, cancer, stem cell pluripotency, metabolic homeostasis, and development. Course material integrates current literature with a foundational review of histone modifications and nucleosome composition in epigenetic inheritance, transcription, replication, cell division and DNA damage responses. Prerequisite: BIO 41 or BIO 83 or consent of instructor.
Same as: BIO 110

BIO 211. Proteostasis: From Basic Principles to Aging and Neurodegeneration. 3 Units.
The control of cellular protein homeostasis, also called Proteostasis, is emerging as the central cellular process controlling the stability, function and quality control of the proteome and central to our understanding of a vast range of diseases. The proteostasis machinery maintains the function of destabilized and mutant proteins; assists the degradation of damaged and aggregated proteins and monitors the health of the proteome, adjusting it in response to environmental or metabolic stresses. Proteostasis disfunction is linked to diseases ranging from neurodegeneration to aging.nThis class will introduce students to the exciting cutting edge discoveries in this field through presentations by leaders in the field and discussions of primary literature illustrating how understanding proteostasis can be leveraged to understand fundamental biological processes, such as evolution and aging and to ameliorate a wide range of diseases.

BIO 214. Advanced Cell Biology. 4 Units.
For Ph.D. students. Taught from the current literature on cell structure, function, and dynamics. Topics include complex cell phenomena such as cell division, apoptosis, signaling, compartmentalization, transport and trafficking, motility and adhesion, and differentiation. Weekly reading of current papers from the primary literature. Advanced undergraduates may participate with the permission of the Course Director.
Same as: BIOC 224, MCP 221

BIO 220. Prokaryotic Biology - A Quantitative Approach. 3 Units.
To live, microbes have to successfully coordinate various cellular processes, in line with available resources and what environmental conditions demand. This course introduces quantitative advances in understanding this coordination and their consequences across scales: from molecular biology via growth to population dynamics and ecology. Dry lab sessions complement lectures to introduce computational approaches. Python based analysis tools will be introduced. Prerequisite: MATH 51 or MATH 19, 20,21. Recommended: microbiology (e.g. BIO 62 or 162) and molecular biology/biochemistry/genetics courses (e.g. BIO 82 or 83) and basic familiarity with coding.
Same as: BIO 120

BIO 221. ORNITHOLOGY. 2 Units.
Advanced undergraduate survey of ornithology, introducing students to the biology of birds and giving them to tools to use birds as model systems for research. Topics will include avian evolution, physiology, adaptations, behavior, and ecology. Focus throughout on identification of California birds and applications to current bird conservation issues. Course will include lectures and a field component which will expose students to standard avian research techniques such as mistnetting, banding, and point count surveys. Prerequisite: BIO 81 or BIO 105 or instructor approval.
Same as: BIO 121

BIO 222. Exploring Neural Circuits. 3 Units.
Seminar. The logic of how neural circuits control behavior; how neural circuits are assembled during development and modified by experience. Emphasis is on primary literature. Topics include: neurons as information processing units; simple and complex circuits underlying sensory information processing and motor control; and development and plasticity of neural circuits. Advanced undergraduates and graduate students with background in physical science, engineering, and biology may apply to enroll. Enrollment is by application only. Recommended: background in neuroscience.

BIO 223. Stochastic and Nonlinear Dynamics. 3 Units.
Theoretical analysis of dynamical processes: dynamical systems, stochastic processes, and spatiotemporal dynamics. Motivations and applications from biology and physics. Emphasis is on methods including qualitative approaches, asymptotics, and multiple scale analysis. Prerequisites: ordinary and partial differential equations, complex analysis, and probability or statistical physics.
Same as: APPPHYS 223, BIOE 213, PHYSICS 223

BIO 226. Introduction to Biophysics. 3-4 Units.
Core course appropriate for advanced undergraduate students and graduate students with prior knowledge of calculus and a college physics course. Introduction to how physical principles offer insights into modern biology, with regard to the structural, dynamical, and functional organization of biological systems. Topics include the roles of free energy, diffusion, electromotive forces, non-equilibrium dynamics, and information in fundamental biological processes.
Same as: APPPHYS 205, BIO 126

BIO 227. Foundations of Community Ecology. 3 Units.
Discussion of classic papers in community ecology (Forbes, Clements, Gleason, Grinnell, Lindeman, Preston, Elton, Hutchinson, May, MacArthur, Odum, Connell, Paine, Tilman, etc.) and contemporary papers on related topics, to develop historical perspectives to understand current issues and identify future directions. Prerequisite for undergraduates: consent of instructor.

BIO 228. Evolution of Terrestrial Ecosystems. 4 Units.
The what, when, where, and how do we know it regarding life on land through time. Fossil plants, fungi, invertebrates, and vertebrates (yes, dinosaurs) are all covered, including how all of those components interact with each other and with changing climates, continental drift, atmospheric composition, and environmental perturbations like glaciation and mass extinction. The course involves both lecture and lab components. Graduate students registering at the 200-level are expected to write a term paper, but can opt out of some labs where appropriate.
Same as: BIO 148, EARTHSYS 128, GEOLSCI 128, GEOLSCI 228

BIO 229. Fundamentals and Frontiers in Plant Biology. 3 Units.
This course will serve as a primer for all levels of graduate, co-term, and upper-level undergraduates interested in learning about the fundamental aspects of plant biology, the latest advances in tools, techniques, and theories that link basic science with translational science and applications for solving major societal challenges of today and tomorrow. In addition, this course will serve to introduce the breadth of plant research on campus and help solidify a cohort of students interested in plant biology.
Same as: BIO 129

BIO 230. Molecular and Cellular Immunology. 4 Units.
Mechanisms of immune responses in health and disease. Innate and adaptive immunity; development of the immune system; molecular biology, structure, and function of antibodies and T-cell receptors; cellular basis and regulation of immune responses; infectious diseases and vaccines; allergy, inflammation, and autoimmunity. COVID-19 will be featured as a major example. Lectures and discussion in class and in sections. For upper class undergraduate and graduate students who have not had an introductory immunology course. Prerequisites for undergraduates: Biology Core, Human Biology Core, or BIO 83 and 86, or consent of instructor. For graduate students: College-level molecular biology, biochemistry, and cell biology, or consent of instructor.

BIO 230A. Molecular and Cellular Immunology Literature Review. 1 Unit.
Special discussion section for graduate students. Supplement to BIO 230. Pre- or corequisite: BIO 230 or other introductory immunology course.

BIO 231. Structural Equation Modeling for Ecologists. 1 Unit.
We will focus on learning to use structural equation modeling (SEM) as a technique for ecological inference. Class will include short lectures, paper discussions, and SEM coding workshops in R. Meetings will generally last only 60 minutes.

BIO 232. Advanced Imaging Lab in Biophysics. 4 Units.
Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, basic cell biology, and consent of instructor.
Same as: APPPHYS 232, BIO 132, BIOPHYS 232, GENE 232

BIO 234. Conservation Biology: A Latin American Perspective. 3 Units.
Principles and application of the science of preserving biological diversity. Conceptually, this course is designed to explore the major components relevant to the conservation of biodiversity, as exemplified by the Latin American region. The conceptual frameworks and principles, however, should be generally applicable, and provide insights for all regions of the world. All students will be expected to conduct a literature research exercise leading to a written report, addressing a topic of their choosing, derived from any of the themes discussed in class. Prerequisite: BIO 101 or BIO 43 or HUMBIO 2A or BIO 81 and 84 or consent of instructor.
Same as: BIO 144, HUMBIO 112

BIO 235. Neuroethology. 3 Units.
Neuroethology is the study of the neural basis of animal behavior. We will explore the neural mechanisms of natural behaviors in a diverse set of organisms. Topics include molecular mechanisms of nervous system function, predator-prey interactions, social behavior, and other complex behaviors like learning and memory, navigation, and communication. Assessment includes group oral presentations of scientific papers, weekly homework prompts that lead into a mini grant proposal, and scientific writing and communication with the broader public on a neuroethological topic. Prerequisites: BIO 84.
Same as: BIO 135

BIO 236. Macroevolution. 3 Units.
The course will focus on the macroevolution of animals. We will be exploring how paleobiology and developmental biology/genomics have contributed to our understanding of the origins of animals, and how patterns of evolution and extinction have shaped the diversity of animal forms we observe today.
Same as: BIO 136, GEOLSCI 136, GEOLSCI 236

BIO 238. Ecosystem Services: Frontiers in the Science of Valuing Nature. 3 Units.
This course explores the science of valuing nature, beginning with its historical origins and then a primary focus on its recent development and frontiers. The principal aim of the course is to enable new research and real-world applications of InVEST (Integrated Valuation of Ecosystem Services and Tradeoffs) tools and approaches. We will discuss the interconnections between people and nature and key research frontiers, such as in the realms of biodiversity, resilience, human health, poverty alleviation, and sustainable development. The science we¿ll explore is in the service of decisions, and we will use examples from real life to illustrate why this science is so critical to informing why, where, how, and how much people need nature. Prerequisite. Basic to intermediate GIS skills are required (including working with raster, vector and tabular data; loading and editing rasters, shapefiles, and tables into a GIS; understanding coordinate systems; and performing basic raster math).
Same as: BIO 138, EARTHSYS 139, EARTHSYS 239

BIO 239. The Hidden Kingdom - Evolution, Ecology and Diversity of Fungi. 4 Units.
Fungi are critical, yet often hidden, components of the biosphere. They regulate decomposition, are primary partners in plant symbiosis and strongly impact agriculture and economics. Students will explore the fascinating world of fungal biology, ecology and evolution via lecture, lab, field exercises and Saturday field trips that will provide traditional and molecular experiences in the collection, analysis and industrial use of diverse fungi. Students will chose an environmental niche, collect and identify resident fungi, and hypothesize about their community relationship. Prerequisite: BIO 81, 85 recommended.
Same as: BIO 115

BIO 240. Ecosystem Ecology and Biogeochemistry. 3 Units.
An introduction to ecosystem ecology and terrestrial biogeochemistry. This course will focus on the dynamics of carbon and other biologically essential elements in the Earth System, on spatial scales from local to global. Prerequisites: Biology 117, Earth Systems 111, or graduate standing.
Same as: BIO 147, EARTHSYS 147, EARTHSYS 247

BIO 244. Fundamentals of Molecular Evolution. 4 Units.
The inference of key molecular evolutionary processes from DNA and protein sequences. Topics include random genetic drift, coalescent models, effects and tests of natural selection, combined effects of linkage and natural selection, codon bias and genome evolution. Prerequisites: Biology core or BIO 82, 85 or graduate standing in any department, and consent of instructor.
Same as: BIO 113

BIO 245. Ecology and Evolution of Animal Behavior. 3 Units.
Ecological and evolutionary perspectives on animal behavior, with an emphasis on social and collective behavior. This is a project-based course in a lecture/seminar format. Seminars will be based on discussion of journal articles. Independent research projects on the behavior of animals on campus. Prerequisites: Biology or Human Biology core or BIO 81 and 85 or consent of instructor; Biology/ES 30. Recommended: statistics.
Same as: BIO 145

BIO 247. Genomic approaches to the study of human disease. 3 Units.
This course will cover a range of genetic and genomic approaches to studying human phenotypic variation and disease. We will discuss the genetic basis of Mendelian and complex diseases, as well as clinical applications including prenatal testing, and pediatric and cancer diagnostics. The course will include lectures as well as critical reading and discussion of the primary literature. Prerequisite: BIO 82 or equivalent. Open to advanced undergraduate students.
Same as: GENE 247

BIO 249. The Neurobiology of Sleep. 4 Units.
The neurochemistry and neurophysiology of changes in brain activity and conscious awareness associated with changes in the sleep/wake state. Behavioral and neurobiological phenomena including sleep regulation, sleep homeostasis, circadian rhythms, sleep disorders, sleep function, and the molecular biology of sleep. nnPreference to seniors and graduate students. nnEnrollment limited to 16.
Same as: BIO 149, HUMBIO 161

BIO 251. Quantitative Evolutionary Dynamics and Genomics. 3 Units.
The genomics revolution has fueled a renewed push to model evolutionary processes in quantitative terms. This course will provide an introduction to quantitative evolutionary modeling through the lens of statistical physics. Topics will range from the foundations of theoretical population genetics to experimental evolution of laboratory microbes. Course work will involve a mixture of pencil-and-paper math, writing basic computer simulations, and downloading and manipulating DNA sequence data from published datasets. This course is intended for upper level physics and math students with no biology background, as well as biology students who are comfortable with differential equations and probability.
Same as: APPPHYS 237

BIO 254. Molecular and Cellular Neurobiology. 3-5 Units.
For graduate students. Includes lectures for BIO 154. Cellular and molecular mechanisms in the organization and functions of the nervous system. Topics: wiring of the neuronal circuit, synapse structure and synaptic transmission, signal transduction in the nervous system, sensory systems, molecular basis of behavior including learning and memory, molecular pathogenesis of neurological diseases.
Same as: NBIO 254

BIO 255. Cell and Developmental Biology of Plants. 3 Units.
In this course we will learn how plants are built at different organizational scales from the cell, tissue, organ and organ system level. We will also learn about the experimental methods used to study plants at these different organizational levels and how to interpret and evaluate experiments that use such methods. Broadly relevant skills that will be cultivated in the course include: evaluating primarily literature, identifying gaps in knowledge, formulating research questions and designing new experimental strategies. Prerequisites: BIO 80 series.
Same as: BIO 155

BIO 258. Developmental Neurobiology. 4 Units.
For advanced undergraduates and coterminal students. The principles of nervous system development from the molecular control of patterning, cell-cell interactions, and trophic factors to the level of neural systems and the role of experience in influencing brain structure and function. Topics: neural induction and patterning cell lineage, neurogenesis, neuronal migration, axonal pathfinding, synapse elimination, the role of activity, critical periods, and the development of behavior. Prerequisites: BIO 82, 83, 84, 86.
Same as: BIO 158

BIO 267. Molecular Mechanisms of Neurodegenerative Disease. 4 Units.
The epidemic of neurodegenerative disorders such as Alzheimer's and Parkinson's disease occasioned by an aging human population. Genetic, molecular, and cellular mechanisms. Clinical aspects through case presentations.nnnThis class is open to both graduate and undergraduate students, but requires sufficient backgrounds in college level genetics, cell biology and biochemistry. Undergraduates who are interested are required to contact the course director first.
Same as: GENE 267, NENS 267

BIO 268. Statistical and Machine Learning Methods for Genomics. 3 Units.
Introduction to statistical and computational methods for genomics. Sample topics include: expectation maximization, hidden Markov model, Markov chain Monte Carlo, ensemble learning, probabilistic graphical models, kernel methods and other modern machine learning paradigms. Rationales and techniques illustrated with existing implementations used in population genetics, disease association, and functional regulatory genomics studies. Instruction includes lectures and discussion of readings from primary literature. Homework and projects require implementing some of the algorithms and using existing toolkits for analysis of genomic datasets.
Same as: BIOMEDIN 245, CS 373, STATS 345

BIO 271. Principles of Cell Cycle Control. 3 Units.
Genetic analysis of the key regulatory circuits governing the control of cell division. Illustration of key principles that can be generalized to other synthetic and natural biological circuits. Focus on tractable model organisms; growth control; irreversible biochemical switches; chromosome duplication; mitosis; DNA damage checkpoints; MAPK pathway-cell cycle interface; oncogenesis. Analysis of classic and current primary literature.
Same as: BIO 171, CSB 271

BIO 272. Ecological Dynamics: Theory and Applications. 4 Units.
Structured population models with age and phenotypic variation. Integral population models, model fitting and dynamics. Fitness and dynamic heterogeneity. Examples from natural populations (sheep, roe deer, plants, birds). Graduate students will be responsible for additional problem sets. Prerequisites: calculus and linear algebra.
Same as: BIO 172

BIO 273A. Environmental Microbiology I. 3 Units.
Basics of microbiology and biochemistry. The biochemical and biophysical principles of biochemical reactions, energetics, and mechanisms of energy conservation. Diversity of microbial catabolism, flow of organic matter in nature: the carbon cycle, and biogeochemical cycles. Bacterial physiology, phylogeny, and the ecology of microbes in soil and marine sediments, bacterial adhesion, and biofilm formation. Microbes in the degradation of pollutants. Prerequisites: CHEM 33,CHEM 121 (formerly CHEM 35), and BIOSCI 83, CHEMENG 181, or equivalents.
Same as: CEE 274A, CHEMENG 174, CHEMENG 274

BIO 273B. Microbial Bioenergy Systems. 3 Units.
Introduction to microbial metabolic pathways and to the pathway logic with a special focus on microbial bioenergy systems. The first part of the course emphasizes the metabolic and biochemical principles of pathways, whereas the second part is more specifically directed toward using this knowledge to understand existing systems and to design innovative microbial bioenergy systems for biofuel, biorefinery, and environmental applications. There also is an emphasis on the implications of rerouting of energy and reducing equivalents for the fitness and ecology of the organism. Prerequisites: CHEMENG 174 or 181 and organic chemistry, or equivalents.
Same as: CEE 274B, CHEMENG 456

BIO 274. Human Skeletal Anatomy. 5 Units.
Study of the human skeleton (a. k. a. human osteology), as it bears on other disciplines, including medicine, forensics, archaeology, and paleoanthropology (human evolution). Basic bone biology, anatomy, and development, emphasizing hands-on examination and identification of human skeletal parts, their implications for determining an individual's age, sex, geographic origin, and health status, and for the evolutionary history of our species. Three hours of lecture and at least three hours of supervised and independent study in the lab each week.
Same as: ANTHRO 175, ANTHRO 275, BIO 174, HUMBIO 180

BIO 274S. Hopkins Microbiology Course. 3-12 Units.
(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A and CEE 274B, or equivalents.
Same as: BIOHOPK 274, CEE 274S, ESS 253S

BIO 276. The Developmental Basis of Animal Body Plan Evolution. 4 Units.
Animals are grouped into phyla with defined organizational characteristics such as multicellularity, axis organization, and nervous system organization, as well as morphological novelties such as eyes, limbs and segments. This course explores the developmental and molecular origins of there animal innovations. Offered alternate years. Prerequisites: None.
Same as: BIO 176

BIO 277. Plant Microbe Interaction. 3 Units.
Molecular basis of plant symbiosis and pathogenesis. Topics include mechanisms of recognition and signaling between microbes and plant hosts, with examples such as the role of small molecules, secreted peptides, and signal transduction pathways in symbiotic or pathogenic interactions. Readings include landmark papers together with readings in the contemporary literature. Prerequisites: Biology core and two or more upper division courses in genetics, molecular biology, or biochemistry. Recommended: plant genetics or plant biochemistry.
Same as: BIO 177

BIO 278. Microbiology Literature. 3 Units.
For advanced undergraduates and first-year graduate students. Critical reading of the research literature in prokaryotic genetics and molecular biology, with particular applications to the study of major human pathogens. Classic and foundational papers in pathogenesis, genetics, and molecular biology; recent literature on bacterial pathogens such as Salmonella, Vibrio, and/or Yersinia. Diverse experimental approaches: biochemistry, genomics, pathogenesis, and cell biology. Prerequisites: Declared Biology majors must have taken BIO 82 (Genetics) and BIO 83 (Biochemistry). Enrollment for undergraduates is limited to Biology majors in junior or senior year. Co-term or Ph.D. students in basic life sciences departments such as Biology, Bioengineering, and Genetics may also enroll in BIO 278. Apply at https://forms.gle/4NTtcBdWYMqRFvGc9.
Same as: BIO 178

BIO 279. Integrated Valuation of Ecosystem Services and Tradeoffs. 1-3 Unit.
This course explores the science of valuing nature, through two interwoven pathways. One is biophysical, focused on human dependence and impacts on Earth¿s life-support systems. If well managed, lands, waters, and biodiversity yield a flow of vital benefits that sustain and fulfill human life. A wild bee buzzes through a farm, pollinating vegetables as it goes. Nearby, wetlands remove chemicals from the farm¿s runoff, protecting a source of drinking water. In parklands at a city¿s edge, kids play and adults walk and talk, their exposure to nature promoting physical activity and improved mental health. The trees help maintain a favorable climate, locally and globally. We¿ll develop a framework and practical tools for quantifying this stream of benefits from nature to people.nThe second pathway is social, economic, and philosophical, weaving through concepts of well-being, human development, and conservation ¿ and the ethics and effects of their pursuit. We will look back, ahead into the future, and inward, taking a global view and considering diverse cultural perspectives. Our discussions will be situated in the context of the COVID-19 pandemic, movements for racial justice and socioeconomic equity, and efforts to enable people and nature to thrive in cities and countries worldwide.nAll of the science we¿ll explore is in service of decisions. We will dive into real-world examples to see how science can inform why, where, how, and how much people need nature. We will learn the basics of the InVEST tools (for Integrated Valuation of Ecosystem Services and Tradeoffs) to quantify benefits of nature, the equitability in access to these benefits, and the transformation of policy, finance, management, and practice to sustain and enhance them. nThe course is intended for diverse, advanced students, with interests in research and in moving from science to action for a more just and sustainable world. The instructors aim to provide an enjoyable and productive opportunity to connect ¿ remotely and yet with a lot of heart as well as intellectual drive and commitment, bringing empathy, flexibility and hopefully some humor to the day-to-day challenges we are all facing in different difficult ways. Prerequisite: Basic to intermediate GIS (Geographic Information Systems) skills are necessary. We will help with these, but not teach GIS specifically in class. Basic skills include, for example: working with raster, vector and tabular data; loading rasters, shapefiles, and tables into a GIS; changing the symbology of rasters and shapefiles in your chosen GIS; editing raster and shapefile attribute tables; understanding coordinate systems and how to re-project layers; looking at individual raster cell values; and performing basic raster math.
Same as: BIO 179

BIO 282. Modeling Cultural Evolution. 3 Units.
Seminar. Quantitative models for the evolution of socially transmitted traits. Rates of change of learned traits in populations and patterns of cultural diversity as a function of innovation and cultural transmission. Learning in constant and changing environments. Possible avenues for gene-culture coevolution.
Same as: BIO 182

BIO 283. Theoretical Population Genetics. 3 Units.
Models in population genetics and evolution. Selection, random drift, gene linkage, migration, and inbreeding, and their influence on the evolution of gene frequencies and chromosome structure. Models are related to DNA sequence evolution. Prerequisites: calculus and linear algebra, or consent of instructor.
Same as: BIO 183

BIO 287A. Advanced Topics in Mathematical Evolutionary Biology. 3 Units.
Focused examination of specific topics in mathematical evolutionary biology. Course themes may include: mathematical properties of statistics used in human population genetics, mathematics of evolutionary trees, and the intersection of population genetics and phylogenetics.

BIO 290. Teaching Practicum in Biology. 1-5 Unit.
Open to upper-division undergraduates and graduate students. Practical, supervised teaching experience in a biology lab or lecture course. Training often includes attending lectures, initiating and planning discussion sections, and assisting in the preparation course materials. May be repeated for credit.nPrerequisite: consent of instructor.

BIO 291. Development and Teaching of Core Experimental Laboratories. 1-2 Unit.
Development and Teaching of Core Experimental LaboratoriesnPreparation for teaching the core experimental lab courses (45 and 47). Emphasis is on practicing the lab, speaking, and writing skills. Taken simultaneously while teaching (for BIO 45) or during the previous quarter (for teaching BIO 47). May be repeated for credit. Meeting times TBD.

BIO 292. Curricular Practical Training. 1 Unit.
This course is required for international students who are participating in professional internships in organizations (e.g. research institutes, education, medicine, business, policy) with a focus in the biological sciences. Students will be engaged in on-the-job training under the guidance of experienced, on-site supervisors. This course meets the requirements for curricular practical training (CPT) for students with F-1D/S status. Prior to the internship, students are required to submit a concise report detailing the proposed project and work activities. After the internship, students are required to submit a summary of the work completed, skills learned, and reflection of the professional growth gained as a result of the internship. This course may be repeated for credit. Prerequisite: Qualified offer of employment and consent of advisor.

BIO 294. Cellular Biophysics. 3 Units.
Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.
Same as: APPPHYS 294, BIOPHYS 294

BIO 296. Teaching and Learning in Biology. 1 Unit.
This course provides students teaching in the Department of Biology with basic training, support, and professional development in their teaching roles. Topics include student engagement, assessment, feedback and more. Should be taken concurrently with the first teaching position.

BIO 299. Biology PhD Lab Rotation. 1-10 Unit.
Limited to first year Biology PhD students. Lab rotations with Biosciences faculty.

BIO 300. Graduate Research. 1-10 Unit.
For graduate students only. Individual research by arrangement with in-department instructors.

BIO 300X. Out-of-Department Graduate Research. 1-10 Unit.
Individual research by arrangement with out-of-department instructors. Master's students: credit for work arranged with out-of-department instructors is restricted to Biology students and requires approved department petition. See http://biohonors.stanford.edu for more information. May be repeated for credit.

BIO 301. Frontiers in Biology. 1-3 Unit.
Limited to and required of first-year Ph.D. students in molecular, cellular, and developmental biology. Current research in molecular, cellular, and developmental biology emphasizing primary research literature. Held in conjunction with the department's Monday seminar series. Students and faculty meet weekly before the seminar for a student presentation and discussion of upcoming papers.

BIO 302. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.
Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course isnnopen only to Biology PhD students and is not open to auditors.".

BIO 303. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.
Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course isnnopen only to Biology PhD students and is not open to auditors.".

BIO 304. Current Topics and Concepts in Population Biology, Ecology, and Evolution. 1 Unit.
Required of first-year PhD students in population biology, and ecology and evolution. Major conceptual issues and developing topics. This course isnnopen only to Biology PhD students and is not open to auditors.

BIO 305. Managing Your PhD. 1 Unit.
The course will focus on 5 themes for effectively managing your PhD: professionalism, scholarship, well-being, community-engagement and career development. We will meet every other week and have an active discussion-based class meeting for 2 hours. At the end of the quarter students and instructors will co-organize a departmental half-day workshop on a particular topic relevant to the topics covered in the class.

BIO 313. Ethics in the Anthropocene. 1 Unit.
Today, in the Anthropocene, humankind impacts the environment on a massive scale, with severe outcomes for species, ecosystems, and landscapes. The consequences of this impact raise many ethical questions, with new dilemmas forcing us to consider new moral values and re-consider old ones. In this course, we will become acquainted with environmental and conservation ethics and philosophy, and acquire the toolkit of concepts and ideas that will allow us to tackle the current environmental ethical debates. We will explore the role of ethics in the environmental and conservation sciences by discussing the philosophical foundations for moral values in the Anthropocene, as well as by examining practical current-day issues, such as reintroductions, invasive species and conservation advocacy.

BIO 329. Matrix Methods for Dynamic Models and Data Analysis. 1 Unit.
Types of matrices in dynamic & stochastic models, covariances, rectangular data, networks. Spectral theorem, asymptotics, stability theory, Nonnegative matrices, ergodicity, Markov chains. Hermitian, covariance, SVD. Perturbation theory. Random matrix products, Lyapunov exponents. Open to Ph.D. students in Biology. Prerequisites: Calculus (AP level) required. Some knowledge of linear algebra, R, preferred.

BIO 330. Stochastic Methods for Simulation, Dynamics and Data Analysis. 1 Unit.
Markov chains: ergodicity, CLT, passage times, absorption. Simulation: random numbers, chains. Poisson processes: applications and simulation. Time series models. MCMC essentials. Open to Ph.D. students in Biology. Prerequisites: Calculus (AP level) and basic linear algebra required. Facility with linear algebra, R, preferred.

BIO 332. Evolutionary Genomics. 2 Units.
We will read classic and modern papers relevant to evolutionary genomics, and discuss. We will cover a broad range of topics, methods, and species.

BIO 342. Plant Biology Seminar. 1-3 Unit.
Topics in plant biology presented at a weekly seminar. Topics announced at the beginning of each quarter. Current literature. May be repeated for credit. See https://dpb.carnegiescience.edu/events.

BIO 346. Advanced Seminar in Microbial Molecular Biology. 1 Unit.
Enrollment limited to PhD students associated with departmental research groups in genetics or molecular biology.
Same as: CSB 346, GENE 346

BIO 355. Coral Reefs of the Western Pacific: Interdisciplinary Perspectives, Emerging Crises, and Solutions. 1 Unit.
This new graduate-level course focusses on the complex interplay of biology, physics, chemistry, and human activities that both promotes and limits the development of coral reefs. We will examine the ecology of these biodiverse systems as well as the service they provide in terms of rapid nutrient recycling, coastal protection, and maintenance of large populations of fish. New advances in our understanding of coral reefs will be highlighted, including the role of climate variability and micro- and mesoscale fluid flow in controlling reef growth and persistence, the physiology, genomics, and physics underpinning thermal resilience in corals, contributing and mitigating factors involved in the current decline of coral reefs, ocean acidification, fishing, reef-scale trophic modeling, ecological interactions and trophic cascades, and reefs as part of complex seascapes and linkages with other marine ecosystems. The course will conclude with an analysis of science to policy case studies and future opportunities. The faculty leaders collectively have over 100 years of field experience working in coral reefs of the Pacific and despite our forced online teaching and learning format will endeavor to bring the coral reef field experience to life for this class.
Same as: BIOHOPK 355, CEE 363I, ESS 355

BIO 380. Career Exploration and Planning. 1 Unit.
Thinking about and planning for life beyond graduate school is one of the most anxiety-provoking activities students face. In this course, students will share their personal stories and dilemmas about career decisions, discuss various career options with a PhD in life sciences, and learn to design their own path. There will be three career panels with invited guests from various career tracks, including research, teaching, administration, industry, startup, investment, law, journalism, policy, and more. Open to Biology PhD students in year 3 or beyond. The class will meet at Carnegie Institution for Science's conference room building 600, located at 260 Panama St, Stanford, CA 94305.

BIO 383. Seminar in Population Genetics. 1-3 Unit.
Literature review, research, and current problems in the theory and practice of population genetics and molecular evolution. May be repeated for credit. Prerequisite: consent of instructor.

BIO 384. Theoretical Ecology. 1-3 Unit.
Recent and classical research papers in ecology, and presentation of work in progress by participants. Prerequisite: consent of instructor.

BIO 386. Conservation and Population Genomics. 1 Unit.
This once a week reading and discussion group will focus on adaptive capacity: how fast and how well species, populations and individual organisms react to climate change. A rapid change in environment imposes strong changes in ecological communities. Phenotypic plasticity can change physiology or morphology, patterns of natural selection can alter gene frequencies, demographic changes can shift species ranges, changes in species interactions can change communities in species composition. This seminar will explore what we know about adaptive capacity of different communities and different species. How fast can adaptation happen? How much can adaptation `solve¿ the problems generated by climate change? How do we measure adaptive capacity? We will pull readings from the literature and structure this topic into sections. Students will present their own or published work on adaptive capacity to provide examples and frame questions. At the end, we will design an international zoom symposium to highlight, define and articulate the role that adaptive capacity can play in managing and protecting complex ecosystems in the face of climate change.

BIO 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.
Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.
Same as: BIOC 459, BIOE 459, CHEM 459, CHEMENG 459, PSYCH 459

BIO 802. TGR Dissertation. 0 Units.
.

BIOLOGY, HOPKINS MARINE STATION

Courses offered by the Hopkins Marine Station are listed under the subject code BIOHOPK on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOHOPK&filter-catalognumber-BIOHOPK=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIO&filter-catalognumber-BIO=on).

The Hopkins Marine Station, located 90 miles from the main University campus in Pacific Grove, was founded in 1892 as the first marine laboratory on the west coast of North America. The modern laboratory facilities on the 11-acre campus on Cabrillo Point house nine faculty, all members of the Department of Biology. The Miller Library has a collection of literature in marine science. The Hopkins faculty offers undergraduate and graduate courses in biology which focus on the marine realm and involve topics including oceanography, environmental and comparative physiology, molecular evolution, biomechanics, cellular biology, conservation biology, and neurobiology and behavior. Most courses have laboratory sections that exploit the potential of working with readily available marine plants and animals. Small class sizes encourage close student-faculty interactions. Undergraduates have opportunities to carry out research projects with Hopkins faculty during the academic year or summer months.

Courses at Hopkins Marine Station can satisfy many requirements, from Ways to major and minor requirements in departments housed in the Schools of Engineering, Humanities and Sciences, and Earth, Evergy, and Environmental Sciences. Students are encouraged to check with their department's student services office to see which courses at Hopkins may be used to fulfill major or minor requirements.

Summer Program at Hopkins Marine Station

The summer program is open to advanced undergraduate, graduate students, and postdoctoral students, and to teachers whose biological backgrounds, teaching, or research activities can benefit from a summer's study of marine life. Applications, deadlines, and further information are available at the Hopkins Marine Station (http://hopkins.stanford.edu) web site.

Emeriti Professors: David Epel, George N. Somero

Director: Mark W. Denny

Professors: Barbara A. Block, Larry Crowder, Giulio De Leo, Mark W. Denny, William F. Gilly, Fiorenza Micheli, Stephen R. Palumbi, Stuart H. Thompson

Associate Professor: Christopher Lowe

Assistant Professor: Jeremy A. Goldbogen

Lecturer: Robin Elahi

Courses

BIOHOPK 14. Bio-logging and Bio-telemetry. 3 Units.
Bio-logging is a rapidly growing discipline that includes diverse fields such as consumer electronics, medicine, and marine biology. The use of animal-attached digital tags is a powerful approach to study the movement and ecology of individuals over a wide range of temporal and spatial scales. This course is an introduction to bio-logging methods and analysis. Using whales as a model system, students will learn how use multi-sensor tags to study behavioral biomechanics.

BIOHOPK 43. Plant Biology, Evolution, and Ecology. 5 Units.
Introduction to biology in a marine context. Principles of plant biology: physiology, structure, diversity. Principles of evolution: macro and microevolution, population genetics. Ecology: the principles governing the distribution and abundance of organisms; population, community, and ecosystem ecology. Equivalent to BIO 43. Corequisite: BIOHOPK 47.

BIOHOPK 47. Introduction to Research in Ecology and Ecological Physiology. 5 Units.
This course is a field-based inquiry into rocky intertidal shores that introducesnstudents to ecology and environmental physiology and the research methods used to study them. Students will learn how to detect patterns quantitatively in nature through appropriate sampling methods & statistical analysis. Following exploration of appropriate background material in class and through exploration of the scientific literature, students will learn how to formulate testable hypotheses regarding the underlying causes of the patterns they discern. A variety of different aspects of ecology and physiology will be investigated cooperatively by the students during the quarter, culminating in development of an individual final paper in the form of a research proposal based on data collected during the course. The course will provide a broad conceptual introduction to the underlying biological principles that influence adaptation to the planet¿s dynamic habitats, as well as inquiry-based experience in how to explore and understand complex systems in nature. nThis course fulfills the same laboratory requirement as BIO 47. Satisfies WIM in Biology.

BIOHOPK 81. Introduction to Ecology. 4 Units.
The course is designed to provide background on key concepts in ecology, familiarize students with key ecological processes and ecosystems, and the methods used in ecological studies. The course will further build students' skills in critical scientific thinking, reading the literature, and scientific communication. A major goal of the course is to train students to ask questions in ecology, and to design, conduct and report studies addressing these questions. Thus, emphasis is also placed, in additional to general ecological concepts, on field observations, experimental design, and the analysis, interpretation and presentation of ecological data (through computer laboratories, written assignments and presentations). Written assignments, presentations and discussions are designed to provide experience in organizing and presenting information and to expose students to multiple perspectives on ecological processes and their applications.nThis course fulfills the same requirement as BIO 81.
Same as: BIOHOPK 183H

BIOHOPK 84. Physiology. 4 Units.
This course will examine basic physiological systems of vertebrate and invertebrate animals, including nerve and muscle, heart and circulation, kidney and osmoregulation, metabolism, and thermoregulation. nThis course fulfills the same requirement as BIO 84.

BIOHOPK 85. Evolution. 4 Units.
Principles of micro- and macro-evolution from molecular genetics to the development of biological diversity. Adaptation, divergence and natural selection in the past and in contemporary ecological settings. Evolution of humans and human-caused evolution. Emphasis on major body plans in the sea and ocean examples of major evolutionary processes.nThis course fulfills the same requirements as BIO 85.

BIOHOPK 140H. Statistical Modeling. 3 Units.
(Graduate students register for 240H.) Introduction to applied statistical modeling in a Bayesian framework. Topics will include probability, regression, model comparison, and hierarchical modeling. We will take a hands-on, computational approach (R, Stan) to gain intuition so that students can later design their own inferential models. Prerequisites for this course include introductory statistics and some calculus or linear algebra, as well as previous exposure to scientific computing. Open to graduate students; undergraduate students may enroll with consent of instructor.
Same as: BIOHOPK 240H

BIOHOPK 142H. Historical Ecology of Marine Invertebrates. 5 Units.
This course is an exploration of the local invertebrate fauna at Hopkins Marine Station, through the lens of a long-term monitoring study initiated by Hewatt in 1931. During week 1, lectures will provide an overview of the major phyla represented on rocky intertidal shores. In the laboratory, students will focus on species identification. These skills will be put to use in week 2, when we will quantify patterns of invertebrate biodiversity along the Hewatt transect. During week 3, students will investigate a relevant taxonomic or quantitative problem. This course will meet 12-5pm, Monday-Friday. January 13-31, 2020. Open to graduate students; undergraduate students may enroll with consent of instructor.
Same as: BIOHOPK 242H

BIOHOPK 143H. Quantitative methods for marine ecology and conservation. 4 Units.
The goal of this course is to learn the foundations of ecological modelling with a specific (but not exclusive) focus on marine conservation and sustainable exploitation of renewable resources. Students will be introduced to a range of methods ¿ from basic to advanced ¿to characterize population structure, conduct demographic analyses, estimate extinction risk, identify temporal trends and spatial patterns, quantify the effect of environmental determinants and anthropogenic pressures on the dynamics of marine populations, describe the potential for adaptation to climate change. This course will emphasize learning by doing, and will rely heavily on practical computer laboratories, in R and/or Phyton, based on data from our own research activities or peer reviewed publications. Students with a background knowledge of statistics, programming and calculus will be most welcome.
Same as: BIOHOPK 243H, CEE 164H, CEE 264H

BIOHOPK 150H. Ecological Mechanics. 3 Units.
(Graduate students register for 250H.) The principles of life's physical interactions. We will explore basic physics. fluid mechanics, thermal dynamics, and materials science to see how the principles of these fields can be used to investigate ecology at levels from the individual to the community. Topics include: diffusion, boundary layers, fluid-dynamic forces, locomotion, heat-budget models, fracture mechanics, adhesion, beam theory, the statistics of extremes, and the theory of self-organization. Open to students from all backgrounds. Some familiarity with basic physics and calculus advantageous but not necessary.
Same as: BIOHOPK 250H

BIOHOPK 152H. Physiology of Global Change. 2 Units.
(Graduate students register for 252H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits.
Same as: BIOHOPK 252H

BIOHOPK 153H. Current Topics and Concepts in Quantitative Fish Dynamics and Fisheries Management. 1 Unit.
(Graduate students register for 253H) The course will focus on extensive reading of seminal and reference papers published in the literature in the last decade on modeling population biology, community dynamics and fishery management in the marine environment. Basic knowledge of population dynamics is welcome. The goal is to develop an appreciation on both traditional and cutting-edge modeling approaches to study the dynamics and management of marine populations subjected to natural or anthropogenic shocks and pressures.
Same as: BIOHOPK 253H

BIOHOPK 154H. Animal Diversity: An Introduction to Evolution of Animal Form and Function from Larvae to Adults. 7 Units.
Survey of invertebrate diversity, emphasizing form and function of both adult and larval life history stages. Focuses on how morphology, life histories, and development contribute to current views of the evolutionary diversification of multicellular animals. Labs are a hands-on exploration of animal diversity using local marine species as examples, as well as techniques of obtaining, handling, and maintaining larvae from early development through settlement. Lectures, labs, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructors.
Same as: BIOHOPK 254H

BIOHOPK 155H. Developmental Biology and Evolution. 4 Units.
(Graduate students register for 255) This course focusses on how animals form their basic body plans; from the formation of their germ layers; ectoderm, endoderm and mesoderm, to how they are organized along the main developmental axes; the anteroposterior and dorsoventral axes. The course will focus in part on the molecular mechanisms that underlie these developmental decisions from work carried out in established developmental model species. However, we will also explore the current understanding of how these mechanisms evolved from new insights from emerging models representing a broad range of animal phyla. The setting at Hopkins Marine Station will allow us to carry out experiments from animals collected in the field, and the course will involve a substantial lab component to complement concepts and approaches presented in lecture. nPre-requisites : Biocore or by permission of instructor.
Same as: BIOHOPK 255H

BIOHOPK 156H. Hands-On Neurobiology: Structure, Function and Development. 6 Units.
This laboratory course will examine neural and neuromuscular systems at a cellular level in selected vertebrate and invertebrate taxa using anatomical, physiological and molecular approaches. Intracellular dye injections and confocal microscopy will be used to visualize neuronal structure. Ca-imaging will permit functional analysis of living neurons. Electrical recording methods will be used to explore principles of excitability, synaptic transmission, sensory pathways and neural integration. Development of neural systems will be studied using molecular visualization methods. Work in the lab will be supplemented with informal lectures and discussions, and results of the labs will be reviewed weekly. Two 4-hour afternoon lab sessions per week.
Same as: BIOHOPK 256H

BIOHOPK 157H. Creative Writing & Science: The Artful Interpreter. 5 Units.
What role does creativity play in the life of a scientist? How has science inspired great literature? How do you write accessibly and expressively about things like whales, DNA or cancer? This course usually begins with a field trip to Hopkins Marine Station where Stanford labs buzz with activity alongside barking seals and crashing waves. While we won't be able to visit Monterey Bay this quarter, the spirit of interdisciplinary exchange will not be lost, and students will be encouraged to get outside and engage with their local environments. As historian Jill Lepore writes of Rachel Carson: ¿She could not have written Silent Spring if she hadn't, for decades, scrambled down rocks, rolled up her pant legs, and waded into tide pools, thinking about how one thing can change another...¿n nAs a small workshop course writing process and the study of literary craft form the foundation of our work together. For inspiration we will read nonfiction by scientists who write for wide audiences and literary giants who draw from science. Students will explore the intersection between creative expression and scientific curiosity, completing three short essays and offering supportive peer feedback throughout the quarter. This course is open to all undergraduates. Note: Students must attend the first class meeting to retain their roster spot.
Same as: BIOHOPK 257H, ENGLISH 157H

BIOHOPK 158H. Science Meets Literature on the Monterey Peninsula. 5 Units.
(Graduate students register for 258H.) This course will consider the remarkable nexus of scientific research and literature that developed on the Monterey Peninsula in the first half of the 20th century and how the two areas of creativity influenced each other. The period of focus begins with the 1932 association of John and Carol Steinbeck, Ed Ricketts, and Joseph Campbell, all of whom were highly influenced by the Carmel poet, Robinson Jeffers ¿ and ends with the novels Cannery Row (1945) and Sweet Thursday (1954). An indisputable high-tide mark, Sea of Cortez: A Leisurely of Travel and Research (1941) will be considered in detail. Weekend field trips will include intertidal exploration, a tour of the Jeffers Tor House in Carmel, and whale watching on Monterey Bay.
Same as: BIOHOPK 258H, ENGLISH 158H

BIOHOPK 159H. Molecular Ecology Lab. 1 Unit.
Graduate students register for 259H. This course will allow students to learn lab approaches to analyzing DNA to answer questions in parentage, population biology, and species identification. Students will spend 2-3 hours each week in the lab extracting DNA, analyzing sequences, and testing hypotheses. Molecular projects will interface with local research projects and course content.
Same as: BIOHOPK 259H

BIOHOPK 160H. Developmental Biology in the Ocean: Diverse Embryonic & Larval Strategies of marine invertebrates. 5-8 Units.
(Graduate students register for 261H). Lab course is designed to introduce students to the diversity in the early developmental strategies of marine invertebrates and how an understanding of these microscopic life histories is key to understanding the evolutionary diversification of phyla and the distribution of their more familiar adults. Emphasis is on hands-on collection, spawning, observation and manipulation of embryos and their larvae.
Same as: BIOHOPK 260H

BIOHOPK 161H. Invertebrate Zoology. 5 Units.
(Graduate students register for 261H.) Survey of invertebrate diversity emphasizing form and function in a phylogenetic framework. Morphological diversity, life histories, physiology, and ecology of the major invertebrate groups, concentrating on local marine forms as examples. Current views on the phylogenetic relationships and evolution of the invertebrates. Lectures, lab, plus field trips.
Same as: BIOHOPK 261H

BIOHOPK 162H. Comparative Animal Physiology. 5 Units.
(Graduate students register for 262H.) How animals work. Topics: physiology of respiration, circulation, energy metabolism, thermal regulation, osmotic regulation, muscle physiology, and locomotion. Evolutionary and ecological physiology. Lectures, lab, and field research. An option to combine the course work with a more intensive research focus, with more units, is available. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Consent of instructor.
Same as: BIOHOPK 262H

BIOHOPK 163H. Oceanic Biology. 4 Units.
(Graduate students register for 263H.) How the physics and chemistry of the oceanic environment affect marine plants and animals. Topics: seawater and ocean circulation, separation of light and nutrients in the two-layered ocean, oceanic food webs and trophic interactions, oceanic environments, biogeography, and global change. Lectures, discussion, and field trips. Satisfies Central Menu Area 4 for Bio majors. Recommended: PHYSICS 21 or 51, CHEM 31, or consent of instructor.
Same as: BIOHOPK 263H

BIOHOPK 165H. The Extreme Life of the Sea. 3 Units.
(Graduate students register for 265H). Lecture course that explores the way marine species live in extreme ocean habitats. We will cover the deepest, hottest, coldest, and shallowest habitats and the biggest, fastest, most fecund, oldest and smallest species. We will focus on the molecular, physiological and ecological adaptations that allow species to thrive in these unusual environments.
Same as: BIOHOPK 265H

BIOHOPK 166H. Molecular Ecology. 5 Units.
(Graduate students register for 266H.) How modern technologies in gene sequencing, detection of nuclear nucleotide polymorphisms, and other approaches are used to gather data on genetic variation that allow measurement of population structure, infer demographic histories, inform conservation efforts, and advance understanding of the ecology of diverse types of organisms.
Same as: BIOHOPK 266H

BIOHOPK 167H. Nerve, Muscle, and Synapse. 5 Units.
(Graduate students register for 267H.) Fundamental aspects of membrane excitability, nerve conduction, synaptic transmission, and excitation-contraction coupling. Emphasis is on biophysical, molecular, and cellular level analyses of these processes in vertebrate and invertebrate systems. Labs on intra- and extracellular recording and patch clamp techniques. Lectures, discussions, and labs. Satisfies Central Menu Area 3 for Bio majors Prerequisites: PHYSICS 23, 28, 43, or equivalent; CHEM 31, calculus; or consent of instructor.
Same as: BIOHOPK 267H

BIOHOPK 168H. Disease Ecology: from parasites evolution to the socio-economic impacts of pathogens on nations. 3 Units.
(Graduate students register for 268H.) Course will lead participants on a journey through the dynamics of infectious diseases that will start at the smallest level from within-host parasite dynamics and will progressively scale up to parasite evolution, disease ecology, public health policies, disease driven poverty traps and the socio-economic impact of infectious diseases on nations. The course will be organized around case studies, including among the others, schistosomiasis, malaria, cholera and sleeping sickness. Participants will have the opportunity to develop a capstone project.
Same as: BIOHOPK 268H

BIOHOPK 173H. Marine Conservation Biology. 4 Units.
(Graduate students register for 273H.). Introduction to the key concepts of ecology and policy relevant to marine conservation issues at the population to ecosystems level. Focus on the origin and maintenance of biodiversity and conservation applications from both the biology and policy perspectives (for example, endangered species, captive breeding, reserve design, habitat fragmentation, ecosystem restoration/rehabilitation). Also includes emerging approaches such as ecosystem based management, ocean planning, and coupled social-ecological systems. The course will include lectures, readings and discussions of primary literature, and attendance at seminars with visiting scholars. Prerequisite: introductory biology; suggested: a policy and/or introductory ecology course.
Same as: BIOHOPK 273H

BIOHOPK 173HA. Marine Conservation Biology - Seminar and Discussion Only. 1-2 Unit.
(Graduate students register for 273HA.). Introduction to the key concepts of ecology and policy relevant to marine conservation issues at the population to ecosystems level. Focus on the origin and maintenance of biodiversity and conservation applications from both the biology and policy perspectives (for example, endangered species, captive breeding, reserve design, habitat fragmentation, ecosystem restoration/rehabilitation). Also includes emerging approaches such as ecosystem based management, ocean planning, and coupled social-ecological systems. The course will include lectures, readings and discussions of primary literature, and attendance at seminars with visiting scholars. Prerequisite: introductory biology; suggested: a policy and/or introductory ecology course.nStudents should enroll in this course if they are only joining the seminar and discussion. Students who will engage in the full course should enroll in BIOHOPK 173H/273H.
Same as: BIOHOPK 273HA

BIOHOPK 174H. Experimental Design and Probability. 3 Units.
(Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on experimental design and the use of linear models in testing hypotheses (e.g., analysis of variance, regression). Students will use R to explore and analyze locally relevant biological datasets. No programming or statistical background is assumed. Prerequisite: consent of instructor.
Same as: BIOHOPK 274H

BIOHOPK 175H. Marine Science and Conservation in a Changing World. 16 Units.
Graduate students register for 275H. This hands-on, experiential course provides a broad foundation in marine science, and explores emerging opportunities for innovation in the study of life in the sea. Students are resident at Stanfords Hopkins Marine Station in Pacific Grove (90 miles south of main campus) where the diverse organisms and environments of Monterey Bay provide the focus for the course. Class meets daily with lectures, discussions, labs, and field work throughout the day. Three linked concentrations¿each 3 weeks long¿are taught sequentially to address (1) the extraordinary diversity of marine organisms and habitats, (2) the physiology and behavior of marine animals, and (3) the principles of marine ecology. Connecting these concentrations is a weekly seminar-based discussion of topics in marine conservation. This design permits deep concentration on each subject, and places emphasis on discussion, group dialog, individual exploration, and experiential learning. In the final week of the quarter, students complete an individual capstone project of their choosing. For the Biology major, this course fulfills the same requirements as BIO 47 and BIO 81. Satisfies WIM in Biology.
Same as: BIOHOPK 275H

BIOHOPK 177H. Dynamics and Management of Marine Populations. 4 Units.
(Graduate students register for 277H.) Course examines the ecological factors and processes that control natural and harvested marine populations. Course emphasizes mathematical models as tools to assess the dynamics of populations and to derive projections of their demographic fate under different management scenarios. Course objectives will be met by a combination of theoretical lectures, assigned readings and class discussions, case study analysis and interactive computer sessions.
Same as: BIOHOPK 277H

BIOHOPK 179H. Physiological Ecology of Marine Megafauna. 3 Units.
(Graduate students register for 279H.) The ocean is home to the largest animals of all-time. How, when, and why did gigantism evolve in different taxa? What are the consequences of large body size? This course will focus on how biological processes scale with body size, with an emphasis on oceanic megafauna including marine mammals, birds, fishes, and reptiles. In particular, the course will explore the functional mechanisms that generate the scaling relationships for physiological and ecological traits, such as metabolism, ecosystem function and body size evolution. Students will also be introduced to state-of-the-art technologies used to student marine megafauna in some of the most logistically challenging habitats on earth.
Same as: BIOHOPK 279H

BIOHOPK 181H. Physiology of Global Change. 2 Units.
(Graduate students register for 281H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits.
Same as: BIOHOPK 281H

BIOHOPK 182H. Stanford at Sea. 16 Units.
(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major. 2020-21 academic year offering of this course is dependent on COVID-19 regulations.
Same as: BIOHOPK 323H, EARTHSYS 323, ESS 323

BIOHOPK 183H. Introduction to Ecology. 4 Units.
The course is designed to provide background on key concepts in ecology, familiarize students with key ecological processes and ecosystems, and the methods used in ecological studies. The course will further build students' skills in critical scientific thinking, reading the literature, and scientific communication. A major goal of the course is to train students to ask questions in ecology, and to design, conduct and report studies addressing these questions. Thus, emphasis is also placed, in additional to general ecological concepts, on field observations, experimental design, and the analysis, interpretation and presentation of ecological data (through computer laboratories, written assignments and presentations). Written assignments, presentations and discussions are designed to provide experience in organizing and presenting information and to expose students to multiple perspectives on ecological processes and their applications.nThis course fulfills the same requirement as BIO 81.
Same as: BIOHOPK 81

BIOHOPK 184H. Holistic Biology. 16 Units.
(Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems is examined from complementary points of view, including scientific, historical, philosophical and literary. Lectures and discussions will focus on the writings of Ed Ricketts and John Steinbeck, poetry of Robinson Jeffers and on historical and contemporary works concerning marine and fresh-water systems, resource management and climate change. A group project with individual contributions will be carried out and presented at a symposium. This course will involve a significant amount of creative writing, and it satisfies the Writing in Major requirement for Biology. It is open to all majors and classes. Only 6 units may count towards the Biology major.
Same as: BIOHOPK 284H

BIOHOPK 185H. Ecology and Conservation of Kelp Forest Communities. 5 Units.
(Graduate students register for 285H.) Five week course. Daily lectures, labs, and scuba dives focused on scientific diving and quantitative ecological methods in kelp forests.. Topics include identification and natural history of resident organisms, ecological processes, and subtidal field techniques. Class projects contribute to long-term monitoring at Hopkins Marine Station. It is recommended (but not required) that students complete the Stanford Scientific Diver Training session, typically offered prior to the start of the course. Prerequisites: consent of instructor; rescue scuba certification and scuba equipment.
Same as: BIOHOPK 285H

BIOHOPK 187H. Sensory Ecology. 4 Units.
(Graduate students register for 287H.) Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature. The laboratory portion of the class explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior.
Same as: BIOHOPK 287H

BIOHOPK 198H. Directed Instruction or Reading. 1-15 Unit.
May be taken as a prelude to research and may also involve participation in a lab or research group seminar and/or library research. Credit for work arranged with out-of-department instructors restricted to Biology majors and requires department approval. May be repeated for credit. (Staff).

BIOHOPK 199H. Undergraduate Research. 1-15 Unit.
Qualified undergraduates undertake individual work in the fields listed under 300H. Arrangements must be made by consultation or correspondence.

BIOHOPK 234H. Topics in Comparative and Environmental Physiology. 1 Unit.
Seminar and discussion focused on current topics and research at the interface of physiology and ecology.

BIOHOPK 240H. Statistical Modeling. 3 Units.
(Graduate students register for 240H.) Introduction to applied statistical modeling in a Bayesian framework. Topics will include probability, regression, model comparison, and hierarchical modeling. We will take a hands-on, computational approach (R, Stan) to gain intuition so that students can later design their own inferential models. Prerequisites for this course include introductory statistics and some calculus or linear algebra, as well as previous exposure to scientific computing. Open to graduate students; undergraduate students may enroll with consent of instructor.
Same as: BIOHOPK 140H

BIOHOPK 242H. Historical Ecology of Marine Invertebrates. 5 Units.
This course is an exploration of the local invertebrate fauna at Hopkins Marine Station, through the lens of a long-term monitoring study initiated by Hewatt in 1931. During week 1, lectures will provide an overview of the major phyla represented on rocky intertidal shores. In the laboratory, students will focus on species identification. These skills will be put to use in week 2, when we will quantify patterns of invertebrate biodiversity along the Hewatt transect. During week 3, students will investigate a relevant taxonomic or quantitative problem. This course will meet 12-5pm, Monday-Friday. January 13-31, 2020. Open to graduate students; undergraduate students may enroll with consent of instructor.
Same as: BIOHOPK 142H

BIOHOPK 243H. Quantitative methods for marine ecology and conservation. 4 Units.
The goal of this course is to learn the foundations of ecological modelling with a specific (but not exclusive) focus on marine conservation and sustainable exploitation of renewable resources. Students will be introduced to a range of methods ¿ from basic to advanced ¿to characterize population structure, conduct demographic analyses, estimate extinction risk, identify temporal trends and spatial patterns, quantify the effect of environmental determinants and anthropogenic pressures on the dynamics of marine populations, describe the potential for adaptation to climate change. This course will emphasize learning by doing, and will rely heavily on practical computer laboratories, in R and/or Phyton, based on data from our own research activities or peer reviewed publications. Students with a background knowledge of statistics, programming and calculus will be most welcome.
Same as: BIOHOPK 143H, CEE 164H, CEE 264H

BIOHOPK 250H. Ecological Mechanics. 3 Units.
(Graduate students register for 250H.) The principles of life's physical interactions. We will explore basic physics. fluid mechanics, thermal dynamics, and materials science to see how the principles of these fields can be used to investigate ecology at levels from the individual to the community. Topics include: diffusion, boundary layers, fluid-dynamic forces, locomotion, heat-budget models, fracture mechanics, adhesion, beam theory, the statistics of extremes, and the theory of self-organization. Open to students from all backgrounds. Some familiarity with basic physics and calculus advantageous but not necessary.
Same as: BIOHOPK 150H

BIOHOPK 252H. Physiology of Global Change. 2 Units.
(Graduate students register for 252H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits.
Same as: BIOHOPK 152H

BIOHOPK 253H. Current Topics and Concepts in Quantitative Fish Dynamics and Fisheries Management. 1 Unit.
(Graduate students register for 253H) The course will focus on extensive reading of seminal and reference papers published in the literature in the last decade on modeling population biology, community dynamics and fishery management in the marine environment. Basic knowledge of population dynamics is welcome. The goal is to develop an appreciation on both traditional and cutting-edge modeling approaches to study the dynamics and management of marine populations subjected to natural or anthropogenic shocks and pressures.
Same as: BIOHOPK 153H

BIOHOPK 254H. Animal Diversity: An Introduction to Evolution of Animal Form and Function from Larvae to Adults. 7 Units.
Survey of invertebrate diversity, emphasizing form and function of both adult and larval life history stages. Focuses on how morphology, life histories, and development contribute to current views of the evolutionary diversification of multicellular animals. Labs are a hands-on exploration of animal diversity using local marine species as examples, as well as techniques of obtaining, handling, and maintaining larvae from early development through settlement. Lectures, labs, plus field trips. Satisfies Central Menu Area 3 for Bio majors. Prerequisite: Biology core or consent of instructors.
Same as: BIOHOPK 154H

BIOHOPK 255H. Developmental Biology and Evolution. 4 Units.
(Graduate students register for 255) This course focusses on how animals form their basic body plans; from the formation of their germ layers; ectoderm, endoderm and mesoderm, to how they are organized along the main developmental axes; the anteroposterior and dorsoventral axes. The course will focus in part on the molecular mechanisms that underlie these developmental decisions from work carried out in established developmental model species. However, we will also explore the current understanding of how these mechanisms evolved from new insights from emerging models representing a broad range of animal phyla. The setting at Hopkins Marine Station will allow us to carry out experiments from animals collected in the field, and the course will involve a substantial lab component to complement concepts and approaches presented in lecture. nPre-requisites : Biocore or by permission of instructor.
Same as: BIOHOPK 155H

BIOHOPK 256H. Hands-On Neurobiology: Structure, Function and Development. 6 Units.
This laboratory course will examine neural and neuromuscular systems at a cellular level in selected vertebrate and invertebrate taxa using anatomical, physiological and molecular approaches. Intracellular dye injections and confocal microscopy will be used to visualize neuronal structure. Ca-imaging will permit functional analysis of living neurons. Electrical recording methods will be used to explore principles of excitability, synaptic transmission, sensory pathways and neural integration. Development of neural systems will be studied using molecular visualization methods. Work in the lab will be supplemented with informal lectures and discussions, and results of the labs will be reviewed weekly. Two 4-hour afternoon lab sessions per week.
Same as: BIOHOPK 156H

BIOHOPK 257H. Creative Writing & Science: The Artful Interpreter. 5 Units.
What role does creativity play in the life of a scientist? How has science inspired great literature? How do you write accessibly and expressively about things like whales, DNA or cancer? This course usually begins with a field trip to Hopkins Marine Station where Stanford labs buzz with activity alongside barking seals and crashing waves. Students who will engage in the full course should enroll in BIOHOPK 173H/273H.
Same as: BIOHOPK 173HA

BIOHOPK 274. Hopkins Microbiology Course. 3-12 Units.
(Formerly GES 274S.) Four-week, intensive. The interplay between molecular, physiological, ecological, evolutionary, and geochemical processes that constitute, cause, and maintain microbial diversity. How to isolate key microorganisms driving marine biological and geochemical diversity, interpret culture-independent molecular characterization of microbial species, and predict causes and consequences. Laboratory component: what constitutes physiological and metabolic microbial diversity; how evolutionary and ecological processes diversify individual cells into physiologically heterogeneous populations; and the principles of interactions between individuals, their population, and other biological entities in a dynamically changing microbial ecosystem. Prerequisites: CEE 274A and CEE 274B, or equivalents.
Same as: BIO 274S, CEE 274S, ESS 253S

BIOHOPK 274H. Experimental Design and Probability. 3 Units.
(Graduate students register for 274H.) Variability is an integral part of biology. Introduction to probability and its use in designing experiments to address biological problems. Focus is on experimental design and the use of linear models in testing hypotheses (e.g., analysis of variance, regression). Students will use R to explore and analyze locally relevant biological datasets. No programming or statistical background is assumed. Prerequisite: consent of instructor.
Same as: BIOHOPK 174H

BIOHOPK 275H. Marine Science and Conservation in a Changing World. 16 Units.
Graduate students register for 275H. This hands-on, experiential course provides a broad foundation in marine science, and explores emerging opportunities for innovation in the study of life in the sea. Students are resident at Stanfords Hopkins Marine Station in Pacific Grove (90 miles south of main campus) where the diverse organisms and environments of Monterey Bay provide the focus for the course. Class meets daily with lectures, discussions, labs, and field work throughout the day. Three linked concentrations¿each 3 weeks long¿are taught sequentially to address (1) the extraordinary diversity of marine organisms and habitats, (2) the physiology and behavior of marine animals, and (3) the principles of marine ecology. Connecting these concentrations is a weekly seminar-based discussion of topics in marine conservation. This design permits deep concentration on each subject, and places emphasis on discussion, group dialog, individual exploration, and experiential learning. In the final week of the quarter, students complete an individual capstone project of their choosing. For the Biology major, this course fulfills the same requirements as BIO 47 and BIO 81. Satisfies WIM in Biology.
Same as: BIOHOPK 175H

BIOHOPK 276H. Estimates and Errors: The Theory of Scientific Measurement. 3 Units.
Measurement plays a fundamental role in science, but many biologists have no formal training in what it means to measure something. Errors are inevitable in any measurement. Which are inherent, and which can be controlled? How do errors propagate? How can you decide which data to reject? When are uncertainties normal? In this course we will work our way into the theory of measurement, covering some topics that overlap with inferential statistics (but from a new and perhaps more intuitive perspective), and extending beyond those basics to include spectral analysis and the dangers of measurement in the digital realm.

BIOHOPK 277H. Dynamics and Management of Marine Populations. 4 Units.
(Graduate students register for 277H.) Course examines the ecological factors and processes that control natural and harvested marine populations. Course emphasizes mathematical models as tools to assess the dynamics of populations and to derive projections of their demographic fate under different management scenarios. Course objectives will be met by a combination of theoretical lectures, assigned readings and class discussions, case study analysis and interactive computer sessions.
Same as: BIOHOPK 177H

BIOHOPK 279H. Physiological Ecology of Marine Megafauna. 3 Units.
(Graduate students register for 279H.) The ocean is home to the largest animals of all-time. How, when, and why did gigantism evolve in different taxa? What are the consequences of large body size? This course will focus on how biological processes scale with body size, with an emphasis on oceanic megafauna including marine mammals, birds, fishes, and reptiles. In particular, the course will explore the functional mechanisms that generate the scaling relationships for physiological and ecological traits, such as metabolism, ecosystem function and body size evolution. Students will also be introduced to state-of-the-art technologies used to student marine megafauna in some of the most logistically challenging habitats on earth.
Same as: BIOHOPK 179H

BIOHOPK 280. Short Course on Ocean Policy. 3 Units.
The course will introduce graduate students in the natural and social sciences to ocean policy and governance in the US at national, regional, state, and local levels. Together with leaders in ocean science and policy, students will examine pressing issues in ocean sustainability from natural science, social science, and legal and policy perspectives, with an emphasis on the role of science in the policy and governance processes. Students will learn and apply practical skills in communication, leadership and interdisciplinary problem-solving through participation in a group project, interactive discussions and simulations, and field trips. Prerequisite: consent of instructor and by application due in winter.

BIOHOPK 281H. Physiology of Global Change. 2 Units.
(Graduate students register for 281H.) Global change is leading to significant alterations in several environmental factors, including temperature, ocean acidity and oxygen availability. This course focuses on: (i) how these environmental changes lead to physiological stress and (ii) how, and to what extent, are organisms able to adapt through short-term acclimatization and evolutionary adaptation to cope with these stresses. A major focus of the class is to link changes in species' distribution patterns with underlying physiological mechanics that establish environmental optima and tolerance limits.
Same as: BIOHOPK 181H

BIOHOPK 284H. Holistic Biology. 16 Units.
(Graduate students register for 284H.) For majors and non-majors. Complexity in natural systems is examined from complementary points of view, including scientific, historical, philosophical and literary. Lectures and discussions will focus on the writings of Ed Ricketts and John Steinbeck, poetry of Robinson Jeffers and on historical and contemporary works concerning marine and fresh-water systems, resource management and climate change. A group project with individual contributions will be carried out and presented at a symposium. This course will involve a significant amount of creative writing, and it satisfies the Writing in Major requirement for Biology. It is open to all majors and classes. Only 6 units may count towards the Biology major.
Same as: BIOHOPK 184H

BIOHOPK 285H. Ecology and Conservation of Kelp Forest Communities. 5 Units.
(Graduate students register for 285H.) Five week course. Daily lectures, labs, and scuba dives focused on scientific diving and quantitative ecological methods in kelp forests.. Topics include identification and natural history of resident organisms, ecological processes, and subtidal field techniques. Class projects contribute to long-term monitoring at Hopkins Marine Station. It is recommended (but not required) that students complete the Stanford Scientific Diver Training session, typically offered prior to the start of the course. Prerequisites: consent of instructor; rescue scuba certification and scuba equipment.
Same as: BIOHOPK 185H

BIOHOPK 287H. Sensory Ecology. 4 Units.
(Graduate students register for 287H.) Topics: the ways animals receive, filter, and process information gleaned from the environment, sensory receptor mechanisms, neural processing, specialization to life underwater, communication within and between species, importance of behavior to ecosystem structure and dynamics, impact of acoustic and light pollution on marine animals. Emphasis is on the current scientific literature. The laboratory portion of the class explores sensory mechanisms using neurobiological methods and methods of experimental animal behavior.
Same as: BIOHOPK 187H

BIOHOPK 290H. Teaching Practicum in Biology. 1-15 Unit.
Open to upper-division undergraduates and graduate students. Practical supervised teaching experience in a biology or lecture course. Training often includes attending lectures, initiating and planning discussion sections, and assisting in the preparation of course materials. May be repeated for credit. Prerequisite: consent of instructor.

BIOHOPK 291H. Teaching of Stanford at Sea. 10 Units.
Only open to graduate students who are teaching assistants for Stanford at Sea. Provides practical experience in teaching field oceanography and marine biology. Serving as an assistant in a lecture course (five weeks) is coupled with acting as a laboratory teaching assistant on board an oceanographic research vessel during a five-week research cruise with the Stanford at Sea course. Prerequisite: consent of instructor.

BIOHOPK 299H. Advanced Topics in Marine Conservation. 2 Units.
Graduate students only. Topics will change from year to year but will include such topics as sustainable fisheries, protected areas, ocean planning, social-ecological systems, dynamic management, sustainable seafood, and impacts of climate change.

BIOHOPK 300H. Research. 1-15 Unit.
Graduate study involving original work undertaken with staff in the fields indicated. B. Block: Comparative Vertebrate Physiology (biomechanics, metabolic physiology and phylogeny of pelagic fishes, evolution of endothermy); L. Crowder: Marine ecology, fisheries, bycatch, integrating science and policy, marine conservation; G. De Leo: Population dynamics and management, wildlife diseases, environmental policies and sustainable development; M. Denny: Biomechanics (the mechanical properties of biological materials and their consequences for animal size, shape, and performance); W. Gilly: Neurobiology (analysis of giant axon systems in marine invertebrates from molecular to behavioral levels); J. Goldbogen: Physiological and Behavioral Ecology (functional morphology and biomechanics of marine organisms): C. Lowe: Evolution of Development (origin of chordates, early evolution of body plans); F. Micheli: Marine Ecology (species interactions and community ecology, scale-dependent aspects of community organization, marine conservation and design of multi-species marine protected areas, behavioral ecology); S. Palumbi: Molecular Evolution (mechanisms of speciation, genetic differentiations of populations, use of molecular tools in conservation biology, design of marine protected areas); S. Thompson: Neurobiology (neuronal control of behavior and mechanisms of ion permeation, signal transduction, calcium homeostasis, and neutrotransmission);.

BIOHOPK 315H. Career Development for Graduate Students. 2 Units.
The course will cover multiple skills required to succeed in graduate school and beyond, including fund raising, publishing, selecting career options, job application and negotiation, and teaching, through lectures, group discussions, and practical excercises.

BIOHOPK 320H. Physical Biology. 3 Units.
Physics, mathematics, and biology are often studies as separate subjects. In this two-week intensive course we will attempt to bring them together in a dynamic combination of lectures and hands on projects. We will draw on the diverse flora and fauna of Monterey Bay for our experimental organisms, and will take advantage of the facilities at Hopkins Marine Station to explore questions at levels ranging from molecules to ecological communities.

BIOHOPK 323H. Stanford at Sea. 16 Units.
(Graduate students register for 323H.) Five weeks of marine science including oceanography, marine physiology, policy, maritime studies, conservation, and nautical science at Hopkins Marine Station, followed by five weeks at sea aboard a sailing research vessel in the Pacific Ocean. Shore component comprised of three multidisciplinary courses meeting daily and continuing aboard ship. Students develop an independent research project plan while ashore, and carry out the research at sea. In collaboration with the Sea Education Association of Woods Hole, MA. Only 6 units may count towards the Biology major. 2020-21 academic year offering of this course is dependent on COVID-19 regulations.
Same as: BIOHOPK 182H, EARTHSYS 323, ESS 323

BIOHOPK 330H. Scientific Writing. 2 Units.
This writer's seminar will workshop the elements of good scientific writing by focusing on a paper's Introduction. We will chart the elements of an effective Introduction, designed for different audiences and types of scientific journals. The course will provide participants with the chance to craft an Introduction to a current paper or proposal and have it evaluated in light of the ideal structure we define.

BIOHOPK 355. Coral Reefs of the Western Pacific: Interdisciplinary Perspectives, Emerging Crises, and Solutions. 1 Unit.
This new graduate-level course focusses on the complex interplay of biology, physics, chemistry, and human activities that both promotes and limits the development of coral reefs. We will examine the ecology of these biodiverse systems as well as the service they provide in terms of rapid nutrient recycling, coastal protection, and maintenance of large populations of fish. New advances in our understanding of coral reefs will be highlighted, including the role of climate variability and micro- and mesoscale fluid flow in controlling reef growth and persistence, the physiology, genomics, and physics underpinning thermal resilience in corals, contributing and mitigating factors involved in the current decline of coral reefs, ocean acidification, fishing, reef-scale trophic modeling, ecological interactions and trophic cascades, and reefs as part of complex seascapes and linkages with other marine ecosystems. The course will conclude with an analysis of science to policy case studies and future opportunities. The faculty leaders collectively have over 100 years of field experience working in coral reefs of the Pacific and despite our forced online teaching and learning format will endeavor to bring the coral reef field experience to life for this class.
Same as: BIO 355, CEE 363I, ESS 355

BIOHOPK 801H. TGR Project. 0 Units.
.

BIOHOPK 802H. TGR Dissertation. 0 Units.
.

BIOPHYSICS

Courses offered by the Biophysics Program are listed under the subject code BIOPHYS (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOPHYS&filter-catalognumber-BIOPHYS=on) on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOPHYS&filter-catalognumber-BIOPHYS=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOPHYS&filter-catalognumber-BIOPHYS=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=BIOPHYS&filter-catalognumber-BIOPHYS=on).

The Biophysics Program offers instruction and research opportunities leading to the Ph.D. in Biophysics. Students admitted to the program may perform their graduate research in any appropriate department.

The Stanford Biophysics Program is an interdisciplinary, interdepartmental training program leading to the Ph.D. Degree in biophysics. The program centers on understanding biological function in terms of physical and chemical principles. The Program comprises faculty from 16 departments in the Schools of Humanities and Sciences, Medicine, Engineering, and the Stanford Synchrotron Radiation Laboratory. Research in the Program involves two overlapping branches of biophysics: the application of physical and chemical principles and methods to solving biological problems, and the development of new methods.

The Biophysics Program aims to train students in quantitative approaches to biological problems, while also developing their perspective in choosing forefront biological problems. A balanced academic program is tailored to the diverse backgrounds of the students. The program requires graduate-level coursework in physical and biological sciences, participation in seminar series, and most importantly achievement of a high level of proficiency in independent research.

Learning Outcomes (Graduate)

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Biophysics. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Biophysics and to interpret and present the results of such research.

Graduate Program in Biophysics

For information on the University's basic requirements for the Ph.D. degree, see the "Graduate Degrees (http://exploredegrees.stanford.edu/graduatedegrees/)" section of this bulletin.

Admissions

A small number of qualified applicants are admitted to the program each year. Applicants should present strong undergraduate backgrounds in the physical sciences and mathematics. The graduate course program, beyond the stated requirements, is worked out for each student individually with the help of appropriate advisers from the Committee on Biophysics. GRE general score is not required and GRE subject score is optional.

The recommendations for applying to the Ph.D. Program in Biophysics include:

		Units
CHEM 123	Organic Polyfunctional Compounds	3
CHEM 171	Foundations of Physical Chemistry	4
CHEM 173	Physical Chemistry II	3
CHEM 175	Physical Chemistry III	3
BIOC 200	Applied Biochemistry	2

Course Requirements

Ph.D. students in the Program in Biophysics are required to complete the following course requirements:

		Units
BIOPHYS 241	Biological Macromolecules	3-5
or BIOE 300A	Molecular and Cellular Bioengineering	
BIOPHYS 242	Methods in Molecular Biophysics (offered every other year)	3
BIOPHYS 250	Seminar in Biophysics	1
MED 255	The Responsible Conduct of Research	1
and 4 graduate-level courses in physical or biological science, with		
at least 1 course in physical science		
at least 1 course in literature-based biological science		

Lab Rotation and Settlement

During the first year of graduate school in Biophysics, students are encouraged to complete a minimum two quarters of rotations in any faculty labs of their choice, a third rotation is allowed if necessary. Once the students finish their rotations, they make an official decision on which faculty's lab to settle in. If the faculty is not part of Biophysics, then the student needs to have an additional co-advising faculty member on their committee who is in Biophysics. Once the student settles in a lab, s/he is required to complete the first Individual Development Plan (IDP) and begin forming the reading committee.

Individual Development Plan (IDP)

In light of the benefits to trainee development and the likelihood that the IDP program will be a factor in NIH funding decisions, the Committee on Graduate Admissions and Policy (CGAP) has adopted a new policy requiring all Biosciences Ph.D. candidates and their mentors in the Schools of Medicine and H&S to create and discuss the Individual Development Plan (IDP) (https://biosciences.stanford.edu/current/idp/) on an annual basis.

1. Complete the first IDP meeting with the adviser within 30 days of joining the thesis lab.
2. IDP meetings are required annually, in addition to and separate from thesis committee meetings (see below).

Reading Committee

See the "Degree-Specific Requirements (Doctoral Degrees) (p. 67)" section of this bulletin for University rules concerning doctoral degrees. See GAP 4.8 (http://gap.stanford.edu/4-8.html), for further details on the Doctoral Dissertation Reading Committee.

Once a student have chosen a research adviser and begun thesis-related research, s/he is required to select a reading committee. The student's reading committee should be in place no later than Autumn Quarter of the third year in the program. The individuals selected by the student serve as an advising and consultative group for the duration of their graduate studies. They evaluate the student's dissertation proposal and constitute the core of their the defense committee. Students should consult with their research adviser on the selection of their reading committee.

The doctoral dissertation reading committee consists of the principal dissertation adviser and, typically, two other readers. The doctoral dissertation reading committee must have at least three members and may not have more than five members. All members of the reading committee approve the dissertation. At least one member must be from the student's major department. Normally, all committee members are members of the Stanford University Academic Council or are emeritus Academic Council members.

The reading committee, as proposed by the student and agreed to by the prospective members, is endorsed by the chair of the major department on this Doctoral Dissertation Reading Committee form (https://stanford.app.box.com/docdiss-reading-committee-form/). The student's department chair may, in some cases, approve the appointment of a reader who is not a current or emeritus member of the Academic Council (via the Petition for Non-Academic Council Doctoral Committee Members form (https://stanford.app.box.com/doc-ctte-non-acad-council/)), if that person is particularly well qualified to consult on the dissertation topic and holds a Ph.D. or equivalent foreign degree). All examiners must hold a Ph.D. degree (or foreign equivalent). Former Stanford Academic Council members and non-Academic Council members may thus on occasion serve on a reading committee.

Any member of the Academic Council may serve as the principal dissertation adviser. If former Academic Council members, emeritus Academic Council members, or non-Academic Council members are to serve as the principal dissertation adviser, the appointment of a co-adviser who is currently on the Academic Council is required. This is to ensure representation for the student in the department by someone playing a major adviser role in completion of the dissertation. However, a co-adviser is not required during the first two years following retirement for emeritus Academic Council members who are recalled to active service. If the reading committee has four or five members, at least three members (comprising the majority) must be current or emeritus members of the Academic Council.

Qualifying Exam

Once students enter their third year of graduate studies, they are required to arrange a meeting with their committee to present to them a proposed thesis related research project (dissertation proposal). The meeting is called the qualifying exam, and should be completed no later than the end of Autumn Quarter of the student's third year. In anticipation of the exam, the student should prepare an approximately 10-page summary of their proposed research and/or any progress they have made at that time. The precise format (e.g., inclusion of a timeline, methods section, etc.) is flexible, and naturally can conform to the particular style of papers or proposals coming from their thesis lab. The main goal of the written portion is to briefly summarize the student's progress so far and carefully plan out their future thesis research plans with committee feedback and advice.

At the meeting, the student should be prepared to make a 30-45 minute presentation of their research where they discuss their results to date and propose further experiments. Audiovisual aids are not required, but may be useful if available. After completing the qualifying exam, students need to arrange annual thesis committee meetings with their committee members to review academic progress each year. Completing the qualifying exam serves to meet the student's first thesis committee meeting requirement. The thesis committee meetings should be completed once a year during the student's 3rd and 4th years, and twice a year past their fifth year and above.

Candidacy

Admission to candidacy for the doctoral degree is granted by the major department following a student's successful completion of qualifying procedures. Students are expected to be admitted to candidacy by the end of the second year of doctoral study. Candidacy is valid for five years, subject to satisfactory academic progress.

Terminal Graduate Registration (TGR)

Doctoral students who have been admitted to candidacy, completed all required courses and degree requirements other than the University oral exam and dissertation, completed 135 units or 10.5 quarters of residency (if under the old residency policy), and submitted a Doctoral Dissertation Reading Committee form, may request Terminal Graduate Registration (TGR) status to complete their dissertations. Students with more than one active graduate degree program must complete residency units between all active/completed degree programs in order to apply for TGR status. See the "Residency Policy for Graduate Students (p. 72)" section of this bulletin for additional information.

Dissertation/Oral Exam

The student must prepare a dissertation proposal defining the research to be undertaken, including methods of procedure. This proposal should be submitted by Autumn Quarter of the third year, and it must be approved by a committee of at least three members, including the principal research adviser, and at least one member from the Biophysics Program. The candidate must defend the dissertation proposal in an oral examination. The dissertation reading committee normally evolves from the dissertation proposal review committee.
The student must present a Ph.D. dissertation as the result of independent investigation that expresses a contribution to knowledge in the field of biophysics. The student must pass the University oral exam, taken only after the student has substantially completed the dissertation research. The examination is preceded by a public seminar in which the research is presented by the candidate.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Graduate Degree Requirements

Grading

The Program of Biophysics counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B-' or better level.

Graduate Advising Expectations

Academic advising by our faculty is a critical component of our graduate students' education. The Biophysics Program is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee. Both the adviser and the advisee are expected to maintain professionalism and integrity.

All matriculating students are assigned the program director as a faculty adviser to help them design their academic program. Before advancing to candidacy for the degree, students are expected to identify a group of at least three thesis advisers (also known as the dissertation reading committee), including a primary thesis adviser. The thesis advisers are selected by the student on the basis of expertise relevant to the thesis project, after undertaking two to three rotations of approximately one quarter in length each.

Thesis advisers meet with students at least once each year to discuss students' Individual Development Plan(s) (IDPs). Additionally, students should meet with their adviser(s) on a regular basis throughout each year for guidance in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

Academic progress and student completion of program requirements and milestones are monitored by the program staff and director, and are discussed at meetings of the executive committee.

Requirements and milestones, as well as more detailed descriptions of the program's expectations of advisers and students, are listed in the Student Handbook, found on the program website (http://med.stanford.edu/biophysics.html).

Additionally, the program adheres to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/) and in the Graduate Academic Policies (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/).

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Director of Graduate Studies:

- KC Huang (Bioengineering)

Emeritus:

- Philip C. Hanawalt (Biology, Dermatology)
- Harden M. McConnell (Chemistry)
- Stephen J. Smith (Molecular & Cellular Physiology)
- Norbert Pelc (Bioengineering, Radiology)

Professors:

- Russ Altman (Bioengineering, Genetics, Medicine - Biomedical Informatics)
- Manuel Amieva (Microbiology & Immunology, Pediatrics)
- Steve M. Block (Applied Physics, Biology)
- Steven Boxer (Chemistry)
- Anne Brunet (Genetics)
- Axel Brunger (Molecular & Cellular Physiology)
- Wah Chiu (Bioengineering)
- Gilbert Chu (Oncology, Biochemistry)
- Steven Chu (Physics, Molecular & Cellular Physiology)
- Jennifer Cochran (Bioengineering)
- Bianxiao Cui (Chemistry)
- Hongjie Dai (Chemistry)
- Mark Davis (Microbiology & Immunology)
- Sebastian Doniach (Physics, Applied Physics)
- James Ferrell (Chemical & Systems Biology, Biochemistry)
- Daniel Fisher (Applied Physics)
- Judith Frydman (Biology, Genetics)
- Chris Garcia (Molecular & Cellular Physiology, Structural Biology)
- Gary H. Glover (Radiology)
- Miriam Goodman (Molecular & Cellular Physiology)
- Daniel Herschlag (Biochemistry)
- Keith O. Hodgson (Chemistry)
- KC Huang (Bioengineering)
- Theodore Jardetzky (Structural Biology)
- Shamit Kachru (Physics)
- Peter S. Kim (Biochemistry)
- Brian Kobilka (Molecular & Cellular Physiology)
- Eric Kool (Chemistry)
- Ron Kopito (Biology)
- Roger D. Kornberg (Structural Biology)
- Craig Levin (Radiology)
- Michael Levitt (Structural Biology)
- Richard Lewis (Molecular & Cellular Physiology)
- Sharon Long (Biology)
- Crystal Mackall (Pediatrics, Medicine)
- Todd Martinez (Chemistry)
- Tobias Meyer (Chemical & Systems Biology)
- W. E. Moerner (Chemistry)
- Vijay Pande (Chemistry)
- Joseph D. Puglisi (Structural Biology)
- Stephen Quake (Bioengineering, Applied Physics)
- Jianghong Rao (Radiology)
- Mark Schnitzer (Biology, Applied Physics)
- Jan Skotheim (Biology)
- Edward I. Solomon (Chemistry)
- James A. Spudich (Biochemistry)
- Alice Y. Ting (Genetics)
- Shreyas Vasanawala (Radiology)
- Anthony Wagner (Psychology)
- Soichi Wakatsuki (Photon Science, Structural Biology)
- Thomas Wandless (Chemical & Systems Biology)
- William I. Weis (Structural Biology, Molecular & Cellular Physiology)
- Richard Zare (Chemistry)

Associate Professors:

- Annelise Barron (Bioengineering)
- Zev Bryant (Bioengineering)
- David Camarillo (Bioengineering)
- Jose R. Dinneny (Biology)
- Lynette Cegelski (Chemistry)
- Rhiju Das (Biochemistry)
- Adam de la Zerda (Structural Biology)
- Ron Dror (Computer Science)
- Alexander Dunn (Chemical Engineering)
- William Greenleaf (Genetics)
- Pehr Harbury (Biochemistry)
- Michael Kapiloff (Ophthalmology)
- Jin Billy Li (Genetics)

- Jan Liphardt (Bioengineering)
- Merritt Maduke (Molecular & Cellular Physiology)
- Ashby Morrison (Biology)Mo
- Manu Prakash (Bioengineering)
- Andrew Spakowitz (Chemical Engineering)
- Sindy Tang (Mechanical Engineering)

Assistant Professors:

- Monther Abu-Remaileh (Chemical Engineering)
- Raag Airan (Radiology)
- Lacramioara Bintu (Bioengineering)
- Alistair Boettiger (Developmental Biology)
- Onn Brandman (Biochemistry)
- Ovijit Chaudhuri (Mechanical Engineering)
- Gheorghe Chistol (Chemical & Systems Biology)
- Shaul Druckmann (Neurobiology, Psychiatry & Behavioral Sciences)
- Liang Feng (Molecular & Cellular Physiology)
- Polly Fordyce (Genetics)
- Xiaojing Gao (Chemical Engineering)
- Olivier Gevaert (Biomedical Informatics, Biomedical Data Science)
- Benjamin Good (Applied Physics)
- Keren Haroush (Neurobiology)
- Possu Huang (Bioengineering)
- Anshul Kundaje (Genetics, Computer Science)
- Lingyin Li (Biochemistry)
- Jonathan Long (Pathology)
- Julia Palacios (Biomedical Data Sciences, Statistics)
- Johannes Reiter (Radiology, Biomedical Data Science)
- Grant M. Rotskoff (Chemistry)
- Manish Saggar (Psychiatry & Behavioral Sciences)
- Julia Salzman (Biochemistry)
- Mary Teruel (Chemical & Systems Biology)
- Bo Wang (Bioengineering)
- Roseanna Zia (Chemical Engineering)
- Brad Zuchero (Neurosurgery)

Courses

BIOPHYS 196. INTERACTIVE MEDIA AND GAMES. 1 Unit.
Interactive media and games increasingly pervade and shape our society. In addition to their dominant roles in entertainment, video games play growing roles in education, arts, and science. This seminar series brings together a diverse set of experts to provide interdisciplinary perspectives on these media regarding their history, technologies, scholarly research, industry, artistic value, and potential future.
Same as: BIOE 196, CS 544

BIOPHYS 227. Functional MRI Methods. 3 Units.
Basics of functional magnetic resonance neuroimaging, including data acquisition, analysis, and experimental design. Journal club sections. Cognitive neuroscience and clinical applications. Prerequisites: basic physics, mathematics; neuroscience recommended.
Same as: BIOE 227, RAD 227

BIOPHYS 232. Advanced Imaging Lab in Biophysics. 4 Units.
Laboratory and lectures. Advanced microscopy and imaging, emphasizing hands-on experience with state-of-the-art techniques. Students construct and operate working apparatus. Topics include microscope optics, Koehler illumination, contrast-generating mechanisms (bright/dark field, fluorescence, phase contrast, differential interference contrast), and resolution limits. Laboratory topics vary by year, but include single-molecule fluorescence, fluorescence resonance energy transfer, confocal microscopy, two-photon microscopy, microendoscopy, and optical trapping. Limited enrollment. Recommended: basic physics, basic cell biology, and consent of instructor.
Same as: APPPHYS 232, BIO 132, BIO 232, GENE 232

BIOPHYS 241. Biological Macromolecules. 3-5 Units.
The physical and chemical basis of macromolecular function. Topics include: forces that stabilize macromolecular structure and their complexes; thermodynamics and statistical mechanics of macromolecular folding, binding, and allostery; diffusional processes; kinetics of enzymatic processes; the relationship of these principles to practical application in experimental design and interpretation. The class emphasizes interactive learning, and is divided among lectures, in-class group problem solving, and discussion of current and classical literature. Enrollment limited to 30. Prerequisites: Background in biochemistry and physical chemistry recommended but material available for those with deficiency in these areas; undergraduates with consent of instructor only.
Same as: BIOC 241, BIOE 241, SBIO 241

BIOPHYS 242. Methods in Molecular Biophysics. 3 Units.
Experimental methods in molecular biophysics from theoretical and practical standpoints. Emphasis is on X-ray diffraction, electron microscopy, nuclear magnetic resonance, and fluorescence spectcroscopy. Prerequisite: physical chemistry or consent of instructor.
Same as: SBIO 242

BIOPHYS 244. Mechanotransduction in Cells and Tissues. 3 Units.
Mechanical cues play a critical role in development, normal functioning of cells and tissues, and various diseases. This course will cover what is known about cellular mechanotransduction, or the processes by which living cells sense and respond to physical cues such as physiological forces or mechanical properties of the tissue microenvironment. Experimental techniques and current areas of active investigation will be highlighted. This class is for graduate students only.
Same as: BIOE 283, ME 244

BIOPHYS 250. Seminar in Biophysics. 1 Unit.
Required of Biophysics graduate students. Presentation of current research projects and results by faculty in the Biophysics program. May be repeated for credit. BIOPHYS 250 is a seminar course intended only for first year Biophysics and Structural Biology graduate students, to help them decide on which faculty labs they want to settle in.

BIOPHYS 279. Computational Biology: Structure and Organization of Biomolecules and Cells. 3 Units.
Computational techniques for investigating and designing the three-dimensional structure and dynamics of biomolecules and cells. These computational methods play an increasingly important role in drug discovery, medicine, bioengineering, and molecular biology. Course topics include protein structure prediction, protein design, drug screening, molecular simulation, cellular-level simulation, image analysis for microscopy, and methods for solving structures from crystallography and electron microscopy data. Prerequisites: elementary programming background (CS 106A or equivalent) and an introductory course in biology or biochemistry.
Same as: BIOE 279, BIOMEDIN 279, CME 279, CS 279

BIOPHYS 294. Cellular Biophysics. 3 Units.
Physical biology of dynamical and mechanical processes in cells. Emphasis is on qualitative understanding of biological functions through quantitative analysis and simple mathematical models. Sensory transduction, signaling, adaptation, switches, molecular motors, actin and microtubules, motility, and circadian clocks. Prerequisites: differential equations and introductory statistical mechanics.
Same as: APPPHYS 294, BIO 294

BIOPHYS 297. Bio-Inorganic Chemistry. 3 Units.
(Formerly Chem 297) Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function (election transfer; dioxygen binding, activation and reduction to water). Prerequisites: Chem 153 and Chem 173, or equivalents.
Same as: CHEM 257

BIOPHYS 300. Graduate Research. 1-18 Unit.
Investigations sponsored by individual faculty members. Prerequisite: consent of instructor.

BIOPHYS 311. Biophysics of Multi-cellular Systems and Amorphous Computing. 2-3 Units.
Provides an interdisciplinary perspective on the design, emergent behavior, and functionality of multi-cellular biological systems such as embryos, biofilms, and artificial tissues and their conceptual relationship to amorphous computers. Students discuss relevant literature and introduced to and apply pertinent mathematical and biophysical modeling approaches to various aspect multi-cellular systems, furthermore carry out real biology experiments over the web. Specific topics include: (Morphogen) gradients; reaction-diffusion systems (Turing patterns); visco-elastic aspects and forces in tissues; morphogenesis; coordinated gene expression, genetic oscillators and synchrony; genetic networks; self-organization, noise, robustness, and evolvability; game theory; emergent behavior; criticality; symmetries; scaling; fractals; agent based modeling. The course is geared towards a broadly interested graduate and advanced undergraduates audience such as from bio / applied physics, computer science, developmental and systems biology, and bio / tissue / mechanical / electrical engineering. Prerequisites: Previous knowledge in one programming language - ideally Matlab - is recommended; undergraduate students benefit from BIOE 42, or equivalent.
Same as: BIOE 211, BIOE 311, DBIO 211

BIOPHYS 315. Methods in Computational Biology. 3 Units.
Methods of bioinformatics and biomolecular modeling from the standpoint of biophysical chemistry. Methods of genome analysis; cluster analysis, phylogenetic trees, microarrays; protein, RNA and DNA structure and dynamics, structural and functional homology; protein-protein interactions and cellular networks; molecular dynamics methods using massively parallel algorithms.
Same as: APPPHYS 315

BIOPHYS 342A. Mechanobiology and Biofabrication Methods. 3 Units.
Cell mechanobiology topics including cell structure, mechanical models, and chemo-mechanical signaling. Review and apply methods for controlling and analyzing the biomechanics of cells using traction force microscopy, AFM, micropatterning and cell stimulation. Practice and theory for the design and application of methods for quantitative cell mechanobiology.
Same as: BIOE 342A, ME 342A

BIOPHYS 371. Computational Biology in Four Dimensions. 3 Units.
Cutting-edge research on computational techniques for investigating and designing the three-dimensional structure and dynamics of biomolecules, cells, and everything in between. These techniques, which draw on approaches ranging from physics-based simulation to machine learning, play an increasingly important role in drug discovery, medicine, bioengineering, and molecular biology. Course is devoted primarily to reading, presentation, discussion, and critique of papers describing important recent research developments. Prerequisite: CS 106A or equivalent, and an introductory course in biology or biochemistry. Recommended: some experience in mathematical modeling (does not need to be a formal course).
Same as: BIOMEDIN 371, CME 371, CS 371

BIOPHYS 392. Topics in Molecular Biophysics: Biophysics of Functional RNA (BIOPHYS 392). 3 Units.
Survey of methods used to relate RNA sequences to the structure and function of transcribed RNA molecules. Computation of contributions of the counter-ion cloud to the dependence of free energy on conformation of the folded RNA. The relation of structure to function of ribozymes, riboswitches, and the formation of ribosomal proteins.
Same as: APPPHYS 392

BIOPHYS 393. Biophysics of Solvation. 3 Units.
Statistical mechanics of water-protein or water-DNA (or RNA) interactions; effects of coulomb forces on molecular hydration shells and ion clouds; limitations of the Poisson-Boltzmann equations; DNA collapse, DNA-protein interactions; structure-function relationships in ion channels.
Same as: APPPHYS 393

BIOPHYS 399. Directed Reading in Biophysics. 1-18 Unit.
Prerequisite: consent of instructor.

BIOPHYS 801. TGR Project. 0 Units.
.

BIOPHYS 802. TGR Dissertation. 0 Units.
.

CHEMISTRY

Courses offered by the Department are listed under the subject code CHEM on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=CHEM&filter-catalognumber-CHEM=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=CHEM&filter-catalognumber-CHEM=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=CHEM&filter-catalognumber-CHEM=on).

For further information about the Department of Chemistry, see the department's web site (https://chemistry.stanford.edu/).

Chemistry is about the nature of matter, how to make it, how to measure it, how to model it. In that sense chemistry really matters; it is essential to explaining all the real world. It holds the key to making new drugs, creating new materials, and understanding and controlling material properties of all sorts. It is no wonder then that chemistry is called the "Central Science." Traditionally, it is divided into subdisciplines, such as organic, inorganic, physical, biological, theoretical, and analytical, but these distinctions blur as it is increasingly appreciated how all of science, let alone chemistry, is interconnected.

A deeper understanding of chemistry enables students to participate in research and studies involving biotechnology, nanotechnology, catalysis, human health, materials, earth and environmental sciences, and more. Together, faculty, postdoctoral scholars, graduate and undergraduate students actively work side by side developing new probes of biological molecules, modeling protein folding and reactivity, manipulating carbon nanotubes, developing new oxidation and polymerization catalysts, and synthesizing organic molecules to probe ion-channels. The overarching theme of these pursuits is a focus at the atomic and molecular levels, whether this concerns probing the electronic structure and reactivity of molecules as small as dihydrogen or synthesizing large polymer assemblies. The ability to synthesize new molecules and materials and to modify existing biological structures allows the properties of complex systems to be analyzed and harnessed with huge benefit to both the scientific community and society at large.

Undergraduate Program

Mission

The mission of the undergraduate program in Chemistry is to provide students with foundational knowledge in the subdisciplines of chemistry as well as depth in one or more advanced areas, including cutting-edge research. Introductory course work allows students to gain hands-on experience with chemical phenomena, gather data, and propose models and explanations for their observations, thus participating in the scientific process from the start. In advanced labs and lectures, students build an in-depth knowledge of the molecular principles of chemistry empowering them to become molecular engineers comfortable with the methodologies necessary to solve complex problems and effectively articulate their ideas to the scientific community. Ultimately the analytical thinking and problem solving skills developed within the chemistry major make students successful candidates for a wide range of careers in chemistry and beyond, including engineering, teaching, consulting, medicine, law, science writing, and science policy.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to:

1. demonstrate the knowledge and skills required to solve problems in the synthesis, measurement, and modeling of chemical systems.
2. apply this set of chemical knowledge and skills to analyze scientific data, evaluate and interpret its significance, and articulate conclusions supportable by the data.
3. be able to construct a scientific hypothesis and devise appropriate experiments to test and evaluate this hypothesis.
4. communicate scientific research effectively in written and spoken form.

Placement Test for First-Year Undergraduates

All students who are interested in taking general chemistry at Stanford must take the Autumn 2020 General Chemistry Placement Test before Autumn quarter begins, regardless of chemistry background. See How To Choose Your First Class (https://chemistry.stanford.edu/academics/undergraduate-program/how-choose-your-first-class/) for further details on the Placement Test.

Graduate Program

The University's basic requirements for the M.S. and Ph.D. degrees are discussed in the "Graduate Degrees (p. 65)" section of this bulletin.

GRE Admissions Requirement

The general GRE and subject test in Chemistry are optional for 2020, but strongly recommended as part of the admissions application for the Ph.D. in Chemistry.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Chemistry and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in the field of chemistry. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of chemistry and to interpret and present the results of such research.

Fellowships and Scholarships

In addition to University and school fellowships and scholarships open to properly qualified students, there are several department fellowships in chemistry awarded based on merit. Teaching assistantships and research assistantships are provided to eligible graduate students. Teaching assistantships beyond the required quarters are available for those interested. Graduate fellowships, scholarships, and teaching assistantships are administered through the Department of Chemistry student services office.

Teaching Credentials

The requirements for certification to teach chemistry in the secondary schools of California may be ascertained by consulting the section on credentials under the "Graduate School of Education, Masters, Stanford Teacher Education Program (STEP) (p. 462)" section of this bulletin and the credential administrator of the School of Education.

Chemical Physics

Students with an exceptionally strong background in physics and mathematics may, with special arrangement, pursue a program of studies in chemical physics.

Bachelor of Science in Chemistry

The Department of Chemistry offers a Bachelor of Science in Chemistry. Eligible students may also pursue a Bachelor of Science with Honors (p. 1141). The department also offers a minor in Chemistry (http://exploredegrees.stanford.edu/schoolofhumanitiesandsciences/chemistry/schoolofhumanitiesandsciences/chemistry/#minortext).

The Bachelor of Science in Chemistry is listed as the official major on the transcript and on the diploma. Students may elect to pursue an unofficial concentration in Biological Chemistry. This unofficial concentration is not listed on the transcript nor on the diploma.

Degree Requirements

Additional information on the undergraduate program can be found on the Department of Chemistry website under Academics beginning with the section on the major for the B.S. Degree (https://chemistry.stanford.edu/academics/undergraduate-program/major/).

All degree courses must be taken for a letter grade.

Course Requirements

Students entering (i.e., matriculating) Stanford in Autumn 2019 and later are required to complete CS 106A Programming Methodology prior to CHEM 131 and CHEM 171. MATH 53 is not a requirement for students who entered Stanford in Autumn 2019 and later.

Lab Courses

For those entering the program above CHEM 33, the short course CHEM 100 Chemical Laboratory and Safety Skills is required; this course is only offered the second week of Autumn Quarter (not offered or required in AY 2020-21).

Lab courses have a mandatory, non-refundable fee. Students must obtain a department-approved lab coat and safety glasses. The department makes these available for purchase at the lowest possible price during the first few days of each quarter.

Traditional Chemistry Concentration

Requirements for students who entered Stanford in Autumn 2020 and later. For more senior students, consult the Bulletin (http://exploredegrees.stanford.edu/archive/#text) matching the year of matriculation (i.e., starting at) Stanford.

		Units
Introductory Courses		
Select one of the following:		5-10
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II (5 units each)	
CHEM 31M	Chemical Principles: From Molecules to Solids (5 units)	5
CHEM 33	Structure and Reactivity of Organic Molecules	5
Foundational Courses		
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
CHEM 131	Instrumental Analysis Principles and Practice	5
CHEM 151	Inorganic Chemistry I	4
CHEM 171	Foundations of Physical Chemistry	4
CS 106A	Programming Methodology	5
MATH 19	Calculus	3
MATH 20	Calculus	3
MATH 21	Calculus	4
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications	5
PHYSICS 41	Mechanics	4
PHYSICS 42	Classical Mechanics Laboratory	1
PHYSICS 43	Electricity and Magnetism	4
PHYSICS 44	Electricity and Magnetism Lab	1
Advanced Courses		
CHEM 123	Organic Polyfunctional Compounds	3
CHEM 124	Organic Chemistry Laboratory	3
CHEM 126	Synthesis Laboratory	3
CHEM 153	Inorganic Chemistry II	3
CHEM 173	Physical Chemistry II	3
CHEM 174	Electrochemical Measurements Lab	3
CHEM 175	Physical Chemistry III	3
CHEM 176	Spectroscopy Laboratory	3
Total Units		87-92

Biological Chemistry Concentration

Requirements for students entering Stanford Autumn 2019 and later. For more senior students, consult the Bulletin (http://exploredegrees.stanford.edu/archive/#text) matching the year of matriculation (i.e., starting at) Stanford. The graduate-level elective course requirement has been dropped for all students.

		Units
Introductory Courses		
Select one of the following:		5-10
CHEM 31A & CHEM 31B	Chemical Principles I and Chemical Principles II (5 units each)	
CHEM 31M	Chemical Principles: From Molecules to Solids	5
CHEM 33	Structure and Reactivity of Organic Molecules	5
Foundational Courses		
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
CHEM 131	Instrumental Analysis Principles and Practice	5
CHEM 151	Inorganic Chemistry I	4
CHEM 171	Foundations of Physical Chemistry	4
CHEM 181	Biochemistry I	4
Select one of the following BIO courses:		4
BIO 82	Genetics (4 units)	
BIO 84	Physiology (4 units)	
BIO 86	Cell Biology (4 units)	
CS 106A	Programming Methodology	5
MATH 19	Calculus	3
MATH 20	Calculus	3
MATH 21	Calculus	4
MATH 51	Linear Algebra, Multivariable Calculus, and Modern Applications	5

CHEM 123	Organic Polyfunctional Compounds	3
CHEM 124	Organic Chemistry Laboratory	3
CHEM 126	Synthesis Laboratory	3

CHEM 173	Physical Chemistry II	3
CHEM 176	Spectroscopy Laboratory	3
CHEM 183	Biochemistry II	3
CHEM 184	Biological Chemistry Laboratory	3
CHEM 185	Biophysical Chemistry	3
Total Units		95-100

Additional Information

Chemistry Major Schedule

Below are possible schedules for students entering Stanford in Autumn 2019 and later wanting to complete the traditional concentration and the biological chemistry concentration, each followed by an accelerated schedule.

Schedule for Traditional Chemistry Concentration

First Year	Units		
	Autumn	Winter	Spring
Chemical Principles I (CHEM 31A)		5	
Calculus (MATH 19)		3	
Chemical Principles II (CHEM 31B)			5
Calculus (MATH 20)			3
Programming Methodology (CS 106A)			5
Structure and Reactivity of Organic Molecules (CHEM 33)			5
Calculus (MATH 21)			4
Year Total:		8	13 9

Second Year	Units		
	Autumn	Winter	Spring
Understanding the Natural and Unnatural World through Chemistry (CHEM 121)		5	
Linear Algebra, Multivariable Calculus, and Modern Applications (MATH 51)		5	
Inorganic Chemistry I (CHEM 151)			4
Mechanics (PHYSICS 41)			4
Classical Mechanics Laboratory (PHYSICS 42)			1
Instrumental Analysis Principles and Practice (CHEM 131)			5
Foundations of Physical Chemistry (CHEM 171)			4
Year Total:		10	9 9

Third Year	Units		
	Autumn	Winter	Spring
Organic Polyfunctional Compounds (CHEM 123)		3	
Organic Chemistry Laboratory (CHEM 124)		3	
Synthesis Laboratory (CHEM 126)			3
Electricity and Magnetism (PHYSICS 43)			4
Electricity and Magnetism Lab (PHYSICS 44)			1
Year Total:		6	3 5

Fourth Year	Units		
	Autumn	Winter	Spring
Physical Chemistry II (CHEM 173)		3	
Electrochemical Measurements Lab (CHEM 174)		3	
Physical Chemistry III (CHEM 175)			3
Spectroscopy Laboratory (CHEM 176)			3
Inorganic Chemistry II (CHEM 153)			3
Year Total:		6	6 3

Total Units in Sequence: 87

Accelerated Schedule for the Traditional Chemistry Concentration

First Year	Units		
	Autumn	Winter	Spring
Chemical Principles: From Molecules to Solids (CHEM 31M)		5	
Programming Methodology (CS 106A)		5	
Structure and Reactivity of Organic Molecules (CHEM 33)			5
Mechanics (PHYSICS 41)			4
Classical Mechanics Laboratory (PHYSICS 42)			1
Understanding the Natural and Unnatural World through Chemistry (CHEM 121)			5
Electricity and Magnetism (PHYSICS 43)			4
Electricity and Magnetism Lab (PHYSICS 44)			1
Year Total:		10	10 10

Second Year	Units		
	Autumn	Winter	Spring
Organic Polyfunctional Compounds (CHEM 123)		3	
Organic Chemistry Laboratory (CHEM 124)		3	
Linear Algebra, Multivariable Calculus, and Modern Applications (MATH 51)		5	
Synthesis Laboratory (CHEM 126)			3
Inorganic Chemistry I (CHEM 151)			4
Instrumental Analysis Principles and Practice (CHEM 131)			5
Foundations of Physical Chemistry (CHEM 171)			4
Year Total:		11	7 9

Third Year	Units		
	Autumn	Winter	Spring
Physical Chemistry II (CHEM 173)		3	
Electrochemical Measurements Lab (CHEM 174)		3	
Physical Chemistry III (CHEM 175)			3
Spectroscopy Laboratory (CHEM 176)			3
Inorganic Chemistry II (CHEM 153)			3
Year Total:		6	6 3

Total Units in Sequence: 72

Schedule for Biological Chemistry Concentration

First Year	Units		
	Autumn	Winter	Spring
Chemical Principles I (CHEM 31A)		5	
Calculus (MATH 19)		3	
Chemical Principles II (CHEM 31B)			5
Calculus (MATH 20)			3
Programming Methodology (CS 106A)			5
Structure and Reactivity of Organic Molecules (CHEM 33)			5
Calculus (MATH 21)			4
Year Total:		8	13 9

Second Year	Units		
	Autumn	Winter	Spring
Understanding the Natural and Unnatural World through Chemistry (CHEM 121)		5	
Linear Algebra, Multivariable Calculus, and Modern Applications (MATH 51)		5	
Inorganic Chemistry I (CHEM 151)			4
Mechanics (PHYSICS 41)			4
Classical Mechanics Laboratory (PHYSICS 42)			1
Instrumental Analysis Principles and Practice (CHEM 131)			5
Foundations of Physical Chemistry (CHEM 171)			4
Year Total:		10	9 9

Third Year	Units		
	Autumn	Winter	Spring
Biochemistry I (CHEM 181)		4	
Organic Polyfunctional Compounds (CHEM 123)		3	
Organic Chemistry Laboratory (CHEM 124)		3	
Synthesis Laboratory (CHEM 126)			3
Biochemistry II (CHEM 183)			3
Physiology (BIO 84)			4
Biological Chemistry Laboratory (CHEM 184)			3
Electricity and Magnetism (PHYSICS 43)			4
Electricity and Magnetism Lab (PHYSICS 44)			1
Year Total:		10	10	8

Fourth Year	Units		
	Autumn	Winter	Spring
Physical Chemistry II (CHEM 173)		3	
Spectroscopy Laboratory (CHEM 176)			3
Biophysical Chemistry (CHEM 185)			3
Year Total:		3	3	3

Total Units in Sequence:	95

Accelerated Schedule for the Biological Chemistry Concentration

First Year	Units		
	Autumn	Winter	Spring
Chemical Principles: From Molecules to Solids (CHEM 31M)		5	
Programming Methodology (CS 106A)		5	
Structure and Reactivity of Organic Molecules (CHEM 33)			5
Mechanics (PHYSICS 41)			4
Classical Mechanics Laboratory (PHYSICS 42)			1
Understanding the Natural and Unnatural World through Chemistry (CHEM 121)			5
Electricity and Magnetism (PHYSICS 43)			4
Electricity and Magnetism Lab (PHYSICS 44)			1
Year Total:		10	10	10

Second Year	Units		
	Autumn	Winter	Spring
Organic Polyfunctional Compounds (CHEM 123)		3	
Organic Chemistry Laboratory (CHEM 124)		3	
Linear Algebra, Multivariable Calculus, and Modern Applications (MATH 51)		5	
Inorganic Chemistry I (CHEM 151)			4
Synthesis Laboratory (CHEM 126)			3
Physiology (BIO 84)			4
Instrumental Analysis Principles and Practice (CHEM 131)			5
Foundations of Physical Chemistry (CHEM 171)			4
Year Total:		11	11	9

Third Year	Units		
	Autumn	Winter	Spring
Physical Chemistry II (CHEM 173)		3	
Biochemistry I (CHEM 181)		4	
Spectroscopy Laboratory (CHEM 176)			3
Biochemistry II (CHEM 183)			3
Biological Chemistry Laboratory (CHEM 184)			3
Biophysical Chemistry (CHEM 185)			3
Year Total:		7	6	6

Total Units in Sequence:	80

Related Courses

Courses offered by other departments that may be of interest to Chemistry majors include:

		Units
BIO 82	Genetics	4
BIO 84	Physiology	4
BIO 86	Cell Biology	4
CHEMENG 20	Introduction to Chemical Engineering	4
CHEMENG 100	Chemical Process Modeling, Dynamics, and Control	3
CHEMENG 110B	Multi-Component and Multi-Phase Thermodynamics	3
CHEMENG 120A	Fluid Mechanics	4
CHEMENG 120B	Energy and Mass Transport	4
CS 106B	Programming Abstractions	3-5
CHEMENG 130A	Microkinetics - Molecular Principles of Chemical Kinetics	3
ENGR 50	Introduction to Materials Science, Nanotechnology Emphasis	4
MATH 106	Functions of a Complex Variable	3
MATH 109	Applied Group Theory	3
MATH 113	Linear Algebra and Matrix Theory	3
MATH 131P	Partial Differential Equations	3
MATSCI 151	Microstructure and Mechanical Properties	4
PHYSICS 110	Advanced Mechanics	4
STATS 110	Statistical Methods in Engineering and the Physical Sciences	5
STATS 116	Theory of Probability	4

Honors Program

A bachelor's degree in Chemistry with honors is available to those students interested in chemical research. Admission to the honors program requires a grade point average (GPA) of 3.3 in science courses and an overall GPA of 3.0 in all University courses. Beyond the standard B.S. course requirements for each track, 9 units of research credit and 9 units of course work need to be completed during the junior and senior academic years. A thesis, approved by the honors advisor, must be completed during the senior year. The thesis must be submitted to the research advisor, at least one week before the end of regular classes in Spring Quarter, and must be completed by May 15 to be considered for the Firestone award. The use of a single course for multiple requirements for honors, major, minor, or coterminal requirements is not allowed. Students who wish to be admitted to the honors program should register with the Student Services Manager in Spring Quarter of their junior year.

CHEM 190 Advanced Undergraduate Research research units towards honors may be completed, after being accepted into the program, in any laboratory within Chemistry or with courtesy faculty in Chemistry. Other chemical research can be approved through a formal petitioning of the Undergraduate Studies Committee. At least 3 units must be completed during the senior year. Participation in a summer research program in an academic setting between junior and senior years may be used in lieu of 3 units of CHEM 190 Advanced Undergraduate Research. For each quarter, a progress report reflecting the units undertaken is required. This report must be signed by the honors advisor, and filed in the department student services office before the last day of finals in the quarter during which the research is performed.

The 9 units of course work for honors must be completed from courses approved by the Undergraduate Studies Committee and taken for a letter

grade. At least six of these units need to be taken from the following CHEM courses:

		Units
CHEM 153	Inorganic Chemistry II	3
CHEM 174	Electrochemical Measurements Lab	3
CHEM 175	Physical Chemistry III	3
CHEM 181	Biochemistry I	4
CHEM 183	Biochemistry II	3
CHEM 184	Biological Chemistry Laboratory	3
CHEM 185	Biophysical Chemistry	3
CHEM 221	Advanced Organic Chemistry I	3
CHEM 223	Advanced Organic Chemistry II	3
CHEM 225	Advanced Organic Chemistry III (not offered in AY2020-21)	3
CHEM 232	Applications of NMR Spectroscopy	3
CHEM 251	Advanced Inorganic Chemistry	3
CHEM 253	Fundamentals of Inorganic Chemistry (not offered in AY2020-21)	3
CHEM 255	Advanced Inorganic Chemistry (not offered in AY2020-21)	3
CHEM 257	Bio-Inorganic Chemistry (not offered in AY2020-21)	3
CHEM 261	Computational Chemistry (not offered in AY2020-21)	3
CHEM 271	Advanced Physical Chemistry	3
CHEM 273	Advanced Physical Chemistry	3
CHEM 275	Advanced Physical Chemistry - Single Molecules and Light	3
CHEM 277	Materials Chemistry and Physics (not offered in AY2020-21)	3
CHEM 281	Therapeutic Science at the Chemistry - Biology Interface	3
CHEM 283	Synthesis and Analysis at the Chemistry-Biology Interface	3
CHEM 289	Concepts and Applications in Chemical Biology	3

Minor in Chemistry

Courses required for a minor must be taken for a letter grade and all courses below are required:

		Units
CHEM 33	Structure and Reactivity of Organic Molecules	5
CHEM 121	Understanding the Natural and Unnatural World through Chemistry	5
CHEM 123	Organic Polyfunctional Compounds	3
CHEM 124	Organic Chemistry Laboratory	3
CHEM 131	Instrumental Analysis Principles and Practice	5
CHEM 151	Inorganic Chemistry I	4
CHEM 171	Foundations of Physical Chemistry	4
Total Units		29

Master of Science in Chemistry

The Master of Science is available only to current Ph.D. students or as part of a coterminal program. Applicants for the M.S. degree in Chemistry are required to complete, in addition to the requirements for the bachelor's degree, a minimum of 45 graduate-level units and a M.S. thesis. Of the 45 units, approximately two-thirds must be in the department and must include at least 12 units of graduate level lecture courses exclusive of the thesis.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken three quarters prior to the first graduate quarter, or later, are eligible for consideration for transfer to the graduate career. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

		Units
Of the 12 units, at least 6 units must be from:		
CHEM 221	Advanced Organic Chemistry I	3
CHEM 223	Advanced Organic Chemistry II	3
CHEM 225	Advanced Organic Chemistry III	3
CHEM 232	Applications of NMR Spectroscopy	3
CHEM 251	Advanced Inorganic Chemistry	3
CHEM 253	Fundamentals of Inorganic Chemistry	3
CHEM 255	Advanced Inorganic Chemistry	3
CHEM 257	Bio-Inorganic Chemistry	3
CHEM 261	Computational Chemistry	3
CHEM 271	Advanced Physical Chemistry	3
CHEM 273	Advanced Physical Chemistry	3
CHEM 275	Advanced Physical Chemistry - Single Molecules and Light	3
CHEM 277	Materials Chemistry and Physics	3
CHEM 281	Therapeutic Science at the Chemistry - Biology Interface	3
CHEM 283	Synthesis and Analysis at the Chemistry-Biology Interface	3
CHEM 285	Biophysical Chemistry	3

Doctor of Philosophy in Chemistry

Process to Candidacy

Graduate students are eligible to become formal candidates for the Ph.D. degree after taking the department placement examinations, satisfactory completion of most of the formal lecture course requirements, and satisfactory progress on a dissertation research project determined by passing a progress report with one's thesis committee. There is no foreign language requirement for the Ph.D. degree. Admission to

candidacy for the Ph.D. degree must be done before July of the second year of graduate registration.

Placement Examinations

Each new graduate student must take placement examinations upon entrance. These consist of three written examinations of two hours each in the fields of inorganic, organic, and physical chemistry, and cover such material as ordinarily is given in a rigorous one-year undergraduate course in each of these subjects. Students concentrating in biophysical chemistry or chemical physics must take examinations in biophysical or chemical physics, physical chemistry, and organic or inorganic chemistry. Students concentrating in chemical biology must take examinations in biophysical, organic chemistry, and physical chemistry or inorganic chemistry. All placement examinations are given the week before instruction begins in Autumn Quarter, and must be taken at that time. Each new graduate student meets with a member of the graduate study committee to define a program of courses based on results of the placement examinations.

General Requirements

After taking the departmental placement examinations, students select a research advisor by interviewing members of the Chemistry faculty. An Application to Start Research form is submitted to the Department as research begins under the supervision of the advisor. All students in good standing are required to start research by the end of February, during Winter Quarter of the first year of graduate registration.

Candidates for the Ph.D. degree are required to participate continually in the department colloquium (CHEM 300 Department Colloquium) and in the division seminar of the major subject (CHEM 329 Organic Chemistry Seminar, CHEM 359 Inorganic Chemistry Seminar, or CHEM 379 Physical Chemistry Seminar).

Candidates for advanced degrees must have a minimum grade point average (GPA) of 3.0 for all Chemistry lecture courses as well as for all courses taken during graduate study. Required courses must be taken for a letter grade. Most course work ends in the second year of studies, and students will then focus on full-time dissertation research.

Students may major in organic, chemical biology, physical, biophysical, chemical physics, or inorganic chemistry. All graduate students are required to take six graduate-level lecture courses (course numbers greater than 199) of at least 3 units each in chemistry or related disciplines (e.g., biochemistry, electrical engineering, mathematics, chemical engineering, chemical and systems biology, physics, materials science), to be selected in consultation with their research advisor and the Graduate Study Committee. All six courses must be taken for a letter grade. At least three of the six courses must be taken within the Chemistry Department. A minimum of four courses should be completed by the end of the first year.

Course Requirements for entering classes beginning with 2018-19

		Units
All students must complete:		
CHEM 211A	Research Progress in Chemistry (in the second year)	1
CHEM 211B	Chemistry Research Seminar Presentation (in the third year)	1
CHEM 211C	Chemistry Research Proposal (in the fourth year)	1
Students majoring in physical or biophysical chemistry or chemical physics must also complete:		
CHEM 271	Advanced Physical Chemistry (in the first year)	3
CHEM 273	Advanced Physical Chemistry (in the first year)	3

Course Requirements for entering classes prior to 2018-19

Requirements for students who entered Stanford prior to 2018-19, please consult the Bulletin (http://exploredegrees.stanford.edu/archive/#text) matching the year of matriculation (i.e., starting at) Stanford.

Continuous enrollment in CHEM 301 Research in Chemistry is expected after the student has chosen a research supervisor.

Post-Candidacy

Before candidates may request scheduling of the University oral examination, clearance must be obtained from the dissertation advisor and an academic review meeting made with the Student Services Manager for the Department of Chemistry.

During the period in which a dissertation is being read by members of the faculty, candidates must be available for personal consultation until the dissertation has received final department approval.

Ph.D. Minor in Chemistry

Candidates for the Ph.D. degree in other departments who wish to obtain a minor in chemistry must complete, with a GPA of 3.0 or higher, 20 graduate-level units in Chemistry including four lecture courses of at least three units each.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a “credit” or “no credit” grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Chemistry Undergraduate Program has changed its policy concerning 'CR' (credit) and 'S' (satisfactory) grades in degree requirements. The program will accept letter, 'CR', or 'S' grades for all major and minor course work for academic year 2020-21.

Graduate Degree Requirements

Grading

The Department of Chemistry has not changed its policy concerning 'CR' (credit) or 'S' (satisfactory) grades in graduate degree requirements requiring a letter grade for academic year 2020-21.

Graduate Advising Expectations

The Department of Chemistry is committed to providing academic advising in support of graduate student scholarly and professional development. This advising relationship entails collaborative and

sustained engagement with mutual respect by both the advisor and advisee.

1. The advisor is expected to meet at least monthly with the graduate student to discuss on-going research.
2. There should be a yearly independent development plan (IDP) meeting between the graduate student and advisor. Topics include research progress, expectations for completion of Ph.D., areas for both the student and advisor to improve in their joint research effort.
3. A research advisor should provide timely feedback on manuscripts and thesis chapters.
4. Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.
5. If there is a significant issue concerning the graduate student's progress in research, the advisor must communicate this to the student and to the Graduate Studies Committee in writing. This feedback should include the issues, what needs to be done to overcome these issues, and by when.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin. Academic advising by Stanford faculty is a critical component of all graduate students' education and additional resources can be found in the Policies and Best Practices for Advising Relationships at Stanford (http://stanford.box.com/shared/static/73oj7zqvy9h0fezqf310onbuunv91nyl.pdf) and the Guidelines for Faculty-Student Advising at Stanford (https://stanford.box.com/shared/static/mespm59bcanq03o4pppu7r4n9p4sb6t6.pdf).

Emeriti: (Professors) Hans C. Andersen, John I. Brauman, James P. Collman, Wray H. Huestis, Robert Pecora, Barry M. Trost

Chair: Steven G. Boxer

Vice Chair: T. Daniel P. Stack

Director of Graduate Studies: Edward I. Solomon

Director of Undergraduate Studies: Christopher E. D. Chidsey

Professors: Steven G. Boxer, Carolyn R. Bertozzi, James K. Chen, Bianxiao Cui, Hongjie Dai, Justin Du Bois, Michael D. Fayer, Keith O. Hodgson, Chaitan Khosla, Eric T. Kool, Todd J. Martínez, W. E. Moerner, Edward I. Solomon, Robert M. Waymouth, Paul A. Wender, Richard N. Zare

Associate Professors: Noah Z. Burns, Lynette Cegelski, Christopher E. D. Chidsey, Matthew Kanan, Hemamala Karunadasa, Thomas E. Markland, T. Daniel P. Stack, Yan Xia

Assistant Professors: Steven M. Banik (start date 1/1/2021), Laura Dassama, Fang Liu, Grant Rotskoff

Courtesy Professors: Zhenan Bao, Stacey F. Bent, Yi Cui, Kelly Gaffney, Jianghong Rao, Andrew Spakowitz, Alice Y. Ting

Adjunct Professors: Christopher Walsh

Lecturers: Megan K. Brennan, Jennifer Schwartz Poehlmann, Kevin Sibucao

Courses

CHEM 10. Exploring Research and Problem Solving Across the Sciences. 1 Unit.
Development and practice of critical problem solving and study skills using a wide variety of scientific examples that illustrate the broad yet integrated nature of current research. Students will build a problem solving tool-kit and apply chemical and mathematical concepts to solve problems related to energy, climate change, water resources, medicine, and food & nutrition. Note: course offered in August prior to start of fall quarter, and only Leland Scholar Program participants will register.

CHEM 25N. Science in the News. 3 Units.
Preference to freshmen. Possible topics include: diseases such as avian flu, HIV, and malaria; environmental issues such as climate change, atmospheric pollution, and human population; energy sources in the future; evolution; stem cell research; nanotechnology; and drug development. Focus is on the scientific basis for these topics as a basis for intelligent discussion of societal and political implications. Sources include the popular media and scientific media for the nonspecialist, especially those available on the web.

CHEM 29N. Chemistry in the Kitchen. 3 Units.
This course examines the chemistry relevant to food and drink preparation, both in homes and in restaurants, which makes what we consume more pleasurable. Good cooking is more often considered an art rather than a science, but a small bit of understanding goes a long way to make the preparation and consumption of food and drink more enjoyable. The intention is to have demonstrations and tastings as a part of every class meeting. We will examine some rather familiar items in this course: eggs, dairy products, meats, breads, vegetables, pastries, and carbonated beverages. We shall playfully explore the chemistry that turns food into meals. A high-school chemistry background is assumed; bring to class a good appetite and a healthy curiosity.

CHEM 31A. Chemical Principles I. 5 Units.
31A is the first course in a two-quarter sequence designed to provide a robust foundation in key chemical principles for students with limited background in chemistry. The course engages students in group problem-solving activities throughout the class periods to deepen their ability to analyze and solve chemical problems. Students will also participate in weekly labs that will apply and expand upon class content. Due to social distancing guidelines, labs will be held over live Zoom. Students can opt-in to receive an at home lab kit that will allow them to conduct low-risk portions of the labs from their location. TAs will demonstrate and guide students through hands-on portions, as well as supplement with further in-depth video labs, virtual simulations, and problem solving practice. n31A will provide practice developing conceptual models that can explain qualitatively and quantitatively a wide range of chemical phenomena and will be immediately applied to real world challenges. Students practice dimensional analysis, stoichiometry, and molecular naming that enables them to write chemical reactions, quantify reaction yield, and calculate empirical and molecular formulas. Using these skills, students estimate carbon efficiency of fossil fuels and identify unknowns in forensic analysis. Stoichiometry is reinforced through study of gases and their properties, through which students calculate the pressure exerted on a deep-sea diver. Students examine atomic and molecular structure by quantifying interactions among nuclei, electrons, atoms and molecules and explain trends in reactivity, such as why potassium metal catches fire in water. They explore how these interactions determine the structures and properties of pure substances, mixtures, proteins, and even DNA using three conceptual models for bonding: Lewis Dot, VSEPR, and Molecular Orbital Theory. They investigate the types and amounts of energy changes that accompany these interactions, phase changes, and chemical reactions, such as measuring the caloric content of food and dissecting an instant hand warmer. By the end of the course, students will be prepared to explore chemical reactivity in greater depth in 31B. nAll students who are interested in taking general chemistry at Stanford must take the Autumn 2020 General Chemistry Placement Test before Autumn quarter begins, regardless of chemistry background. Students with no AP/IB background are given enrollment priority in the 31A/B sequence.

CHEM 31B. Chemical Principles II. 5 Units.
Chem 31B is the second course in this two-quarter sequence, therefore only students who have completed Chem 31A may enroll in 31B. As with 31A, students will continue to engage in group problem-solving activities throughout class and participate in weekly laboratory activities. Labs and write-ups will allow students to more deeply explore and observe the different facets of chemical reactivity, including rates (kinetics), energetics (thermodynamics), and reversibility (equilibrium) of reactions. Through experimentation and discussion, students will determine what forces influence the rate of chemical reactions and learn how this can be applied to enzyme reactivity. Students will quantify chemical concentrations during a reaction, and predict the direction in which a reaction will shift in order to achieve equilibrium, including solubility equilibria. They will use these methods to estimate the possible levels of lead and other toxic metals in drinking water. Special emphasis will be placed on acid/base equilibria , allowing students to explore the role of buffers and antacids in our bodies, as well as ocean acidification and the impact on coral reefs. Students will then bring together concepts from both kinetics and equilibrium, in a deeper discussion of thermodynamics, to understand what ultimately influences the spontaneity of a reaction. Students will build a relationship between free energy, temperature, and equilibrium constants to be able to calculate the free energy of a reaction and understand how processes in our body are coupled to harness excess free energy to do useful work. Finally we will explore how we harness work from redox reactions, building both voltaic cells (i.e. batteries) and electrolytic cells in lab, and using reduction potentials to predict spontaneity and potential of a given reaction. We will look at the applications of redox chemistry in electric and fuel cell vehicles. The course's particular emphasis on understanding the driving forces of a reaction, especially the influence of thermodynamics versus kinetics, will prepare students for further study of predicting organic chemical reactivity and equilibria from structure in Chem 33. Prerequisite: Chem 31A.

CHEM 31M. Chemical Principles: From Molecules to Solids. 5 Units.
A one-quarter course for students who have taken chemistry previously. This course will introduce the basic chemical principles that dictate how and why reactions occur and the structure and properties of important molecules and extended solids that make up our world. As the Central Science, a knowledge of chemistry provides a deep understanding of concepts in fields ranging from materials, environmental science, and engineering to pharmacology and metabolism. Discussions of molecular structure will describe bonding models including Lewis structures, resonance, crystal-field theory, and molecular-orbital theory. We will reveal the chemistry of materials of different dimensionality, with emphasis on symmetry, bonding, and electronic structure of molecules and solids. We will also discuss the kinetics and thermodynamics that govern reactivity and dictate solubility and acid-base equilibria. A two-hour weekly laboratory section accompanies the course to introduce laboratory techniques and reiterate lecture concepts through hands-on activities. Specific discussions will include the structure, properties, and applications of molecules used in medicine, perovskites used in solar cells, and the dramatically different properties of materials with the same composition (for example: diamond, graphite, graphene). There will be three lectures, one two-hour laboratory session, and an optional 80-minute problem solving session each week. The course will assume familiarity with stoichiometry, unit conversions, and gas laws. All students who are interested in taking general chemistry at Stanford must take the Autumn 2020 General Chemistry Placement Test before Autumn quarter begins, regardless of chemistry background. Generally students earning an AP chemistry score of 4 or higher place into 31M. Students earning an AP score of 5 are also welcome to take the Autumn 2020 Chemistry 33 Placement Test to see if Chem33 is a more appropriate placement. Same as: MATSCI 31.
Same as: MATSCI 31

CHEM 33. Structure and Reactivity of Organic Molecules. 5 Units.
An introduction to organic chemistry, the molecular foundation to understanding of life, medicine, imaging, energy, and material science. Students will learn structural and bonding models of organic molecules that provide insights into chemical, physical, and reactivity properties, in addition to their biological activities, collectively contributing to the molecularization and thus advancement of many science disciplines. Combining these models with kinetic and thermodynamic analyses allows molecular conversions to be rationalized. Translation of this knowledge to more complex systems enables the synthesis of novel molecules or materials that can positively impact our science, society and environment. A two-hour weekly lab section accompanies the course to introduce the techniques of separation and identification of organic compounds. Prerequisite: CHEM 31B or CHEM 31M.

CHEM 90. Directed Instruction/Reading. 1-2 Unit.
Undergraduates pursue a reading program under supervision of a faculty member in Chemistry; may also involve participation in lab. Prerequisites: superior work in CHEM 31A, 31B, 31M, 31X, or 33; and consent of instructor.

CHEM 91. Exploring Chemical Research at Stanford. 1 Unit.
Preference to freshmen and sophomores. Department faculty describe their cutting-edge research and its applications.

CHEM 100. Chemical Laboratory and Safety Skills. 1 Unit.
(Not offered in AY 2020-21) This short course is only held in the second week of Autumn quarter. It provides training in basic chemical laboratory procedures and chemical safety to fulfill the safety training requirement for CHEM 121 and more advanced laboratory courses. Includes on-line and in-lab training. Successful completion of all course components required for credit. Prerequisite: introductory organic chemistry.

CHEM 121. Understanding the Natural and Unnatural World through Chemistry. 5 Units.
Students enrolled in this course will appreciate the transformative power of molecular science on the modern world and how foundational knowledge of chemistry enables profound discoveries in biological, pharmaceutical, agrochemical, engineering, energy, and materials science research. This course integrates the lessons of CHEM 31 and CHEM 33 through an examination of the structure-function properties of carbon-based molecules. Specific emphasis is given to the chemistry of carbonyl- and amine-derived compounds, polyfunctionalized molecules, reaction kinetics and thermodynamics, mechanistic arrow-pushing, and retrosynthetic analysis. Students will be empowered with a conceptual understanding of chemical reactivity, physical organic chemistry, and the logic of chemical synthesis. The singular nature of molecular design and synthesis to make available functional molecules and materials will be revealed. A three-hour lab section provides hands on experience with modern chemical methods for preparative and analytical chemistry. Prerequisite CHEM 33 or co-requisite CHEM 100 (not required in AY 2020-21).

CHEM 123. Organic Polyfunctional Compounds. 3 Units.
Analysis of molecular symmetry and spectroscopy, aromaticity, aromatic reactivity, heterocyclic chemistry, chemistry of peptides and DNA. Prerequisite: CHEM 121.

CHEM 124. Organic Chemistry Laboratory. 3 Units.
This is a laboratory course that serves as a stepping stone toward independent research in organic chemistry. Through several 1-2 step syntheses, this course trains students on basic organic laboratory techniques on purification of products, including extraction, distillation, recrystallization, thin layer chromatography, and column chromatography, as well as characterization of product structures using IR, GC-MS, and NMR spectroscopy. This course reviews MS, IR, and 1H and 13C NMR spectroscopy knowledge from Chem 33 and 121 with an emphasis on the practical interpretation of spectra, so that students can become independent in using these techniques to identify the purity and structures of organic compounds.nPrerequisite: Chem 121. Corequisite: Chem 123.

CHEM 126. Synthesis Laboratory. 3 Units.
This is a laboratory course that will provide a true experience of what it is like to perform research in synthetic organic chemistry. Emphasis will be on proper reaction setup, reaction monitoring, and complete characterization of final products using chromatographic and spectroscopic methods. Students will be utilizing modern electronic notebooks to prepare for and document their experiments. Concludes with an individual synthesis project. Prerequisites: Chem 124.

CHEM 131. Instrumental Analysis Principles and Practice. 5 Units.
The core objectives of the course will focus upon introducing and providing hands-on practice with analytical separation, spectroscopic identification, and calibrated quantification with strong technical communication (for the Writing-in-the-Major requirement) emphasized throughout the course. Lectures will focus on theory, and laboratory activities will provide hands-on practice with the GC, LC, XPS, ICP, MS, and UV/Vis instruments. Data analysis will be emphasized throughout the course with Python being the primary tool for plotting and computations. Statistical measurements will be introduced to gauge the quality and validity of data. Lectures will be three times a week with a required four-hour laboratory section. The course will conclude with a student-developed project, focusing upon separation and quantification, and a poster presentation. The course should be completed prior to CHEM courses 174,176, or 184. Prerequisite: CHEM 33 or CHEM 100.

CHEM 141. The Chemical Principles of Life I. 4 Units.
This is the first course in a two-quarter sequence (Chem 141/143), which will examine biological science through the lens of chemistry. In this sequence students will gain a qualitative and quantitative understanding of the molecular logic of cellular processes, which include expression and transmission of the genetic code, enzyme kinetics, biosynthesis, energy storage and consumption, membrane transport, and signal transduction. Connections to foundational principles of chemistry will be made through structure-function analyses of biological molecules. Integrated lessons in structural, mechanistic, and physical chemistry will underscore how molecular science and molecular innovation have impacted biology and medicine. Prerequisites: CHEM 121, MATH 21 or equivalent.

CHEM 143. The Chemical Principles of Life II. 4 Units.
(Not offered in AY2020-21) This is the second course in a two-quarter sequence (Chem 141/143), which will continue the discussion of biological science through the lens of chemistry. In this sequence students will gain a qualitative and quantitative understanding of the molecular logic of cellular processes, which include expression and transmission of the genetic code, enzyme kinetics, biosynthesis, energy storage and consumption, membrane transport, and signal transduction. Connections to foundational principles of chemistry will be made through structure-function analyses of biological molecules. Integrated lessons in structural, mechanistic, and physical chemistry will underscore how molecular science and molecular innovation have impacted biology and medicine. Prerequisite: Chem 141.

CHEM 151. Inorganic Chemistry I. 4 Units.
Bonding, stereochemical, and symmetry properties of discrete inorganic molecules are covered along with their mechanisms of ligand and electron exchange. Density function calculations are extensively used in these analyses in computer and problem set exercises. Prerequisites: CHEM 33.

CHEM 153. Inorganic Chemistry II. 3 Units.
The theoretical aspects of inorganic chemistry. Group theory; many-electron atomic theory; molecular orbital theory emphasizing general concepts and group theory; ligand field theory; application of physical methods to predict the geometry, magnetism, and electronic spectra of transition metal complexes. Prerequisites: CHEM 151, 173.

CHEM 155. Advanced Inorganic Chemistry. 3 Units.
Chemical reactions of organotransition metal complexes and their role in homogeneous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: one year of physical chemistry.
Same as: CHEM 255

CHEM 156. Single-Crystal X-ray Diffraction. 3 Units.
(Formerly 150) Practical X-ray crystallography for small molecule compounds, which will emphasize crystal growth, measurement strategies, structure solution and refinement, and report generation. Example structures will include absolute configuration of organic compounds (with the heaviest atom being oxygen), metal containing complexes, disordered small molecules and twinning. Students will learn how to get from a new compound to a single crystal, and then to a cif-file ready for publication submission. They will gain knowledge of the underlying theory and concepts for each step of structure determination.
Same as: CHEM 256

CHEM 171. Foundations of Physical Chemistry. 4 Units.
Quantum and statistical thermodynamics: obtaining quantum mechanical energy levels and connecting them to thermodynamic properties using statistical mechanics. Emphasis will be on quantum mechanics of ideal systems (e.g. particle in a box, particle in a ring, harmonic oscillator, hydrogen atom) and their connection to and uses in thermodynamics (laws of thermodynamics, properties of gases, chemical equilibria, thermal motion and energy barriers, and rates of chemical reactions). Homeworks and discussion sections will employ the Python programming language for hands-on experience with simulating chemical systems. Prerequisites: CHEM 33; PHYS 41; CS106A; either MATH 51 or CME 100.

CHEM 173. Physical Chemistry II. 3 Units.
Introduction to quantum chemistry: the basic principles of wave mechanics, the harmonic oscillator, the rigid rotator, infrared and microwave spectroscopy, the hydrogen atom, atomic structure, molecular structure, valence theory. Prerequisites: CHEM 171; either MATH 53 or PHYSICS 43; CME 102 and CME 104.

CHEM 174. Electrochemical Measurements Lab. 3 Units.
Introduction to modern electrochemical measurement in a hands-on, laboratory setting. Students assemble and use electrochemical cells including indicator, reference, working and counter electrodes, with macro, micro and ultramicro geometries, salt bridges, ion-selective membranes, electrometers, potentiostats, galvanostats, and stationary and rotated disk electrodes. The later portion of the course will involve a student-generated project to experimentally characterize some electrochemical system. Prerequisites: CHEM 131 (formerly 134) and CHEM 171, MATH 51, PHYSICS 44 or equivalent.
Same as: CHEM 274

CHEM 175. Physical Chemistry III. 3 Units.
Molecular theory of kinetics and statistical mechanics: transport and reactions in gases and liquids, ensembles and the Boltzmann distribution law, partition functions, molecular simulation, structure and dynamics of liquids. Diffusion and activation limited reactions, potential energy surfaces, collision theory and transition-state theory. Prerequisites: CHEM 171, CHEM 173.

CHEM 176. Spectroscopy Laboratory. 3 Units.
Use of spectroscopic instrumentation to obtain familiarity with important types of spectrometers and spectroscopic methods and to apply them to study molecular properties and time dependent processes. Methods include electronic ultraviolet/ visible absorption, fast fluorescence with time correlated single photon counting, Raman and fluorescence microscopy, Fourier transform infrared absorption, and nuclear magnetic resonance. Prerequisite: CHEM 173.

CHEM 181. Biochemistry I. 4 Units.
Structure and function of major classes of biomolecules, including proteins, carbohydrates and lipids. Mechanistic analysis of properties of proteins including catalysis, signal transduction and membrane transport. Students will also learn to critically analyze data from the primary biochemical literature. Satisfies Central Menu Area 1 for Bio majors. Prerequisites: Chem 121 (formerly 35).
Same as: CHEMENG 181, CHEMENG 281

CHEM 183. Biochemistry II. 3 Units.
Focus on metabolic biochemistry: the study of chemical reactions that provide the cell with the energy and raw materials necessary for life. Topics include glycolysis, gluconeogenesis, the citric acid cycle, oxidative phosphorylation, photosynthesis, the pentose phosphate pathway, and the metabolism of glycogen, fatty acids, amino acids, and nucleotides as well as the macromolecular machines that synthesize RNA, DNA, and proteins. Medical relevance is emphasized throughout. Satisfies Central Menu Area 1 for Bio majors. Prerequisite: CHEM 181 or CHEM 141 or CHEMENG 181/281.
Same as: CHEMENG 183, CHEMENG 283

CHEM 184. Biological Chemistry Laboratory. 3 Units.
Modern techniques in biological chemistry including protein purification, characterization of enzyme kinetics, heterologous expression of His-tagged fluorescent proteins, site-directed mutagenesis, and a course-based undergraduate research experience (CURE) module. Prerequisite: CHEM 181.

CHEM 185. Biophysical Chemistry. 3 Units.
Primary literature based seminar/discussion course covering classical and contemporary papers in biophysical chemistry. Topics include (among others): protein structure and stability, folding, single molecule fluorescence and force microscopy, simulations, ion channels, GPCRs, and ribosome structure/function. Course is restricted to undergraduates: required for majors on the Biological Chemistry track, but open to students from the regular track. Prerequisites: Chem 171, Chem 173 and Chem 181.

CHEM 190. Advanced Undergraduate Research. 1-5 Unit.
Limited to undergraduates who have completed Chem 121 (formerly 35) and/or Chem 134, or by special arrangement with a faculty member. May be repeated 8 times for a max of 27 units. Prerequisite: CHEM 121 (formerly 35) or 134. Corequisite: CHEM 300.

CHEM 193. Interdisciplinary Approaches to Human Health Research. 1 Unit.
For undergraduate students participating in the Stanford ChEM-H Undergraduate Scholars Program. This course will expose students to interdisciplinary research questions and approaches that span chemistry, engineering, biology, and medicine. Focus is on the development and practice of scientific reading, writing, and presentation skills intended to complement hands-on laboratory research. Students will read scientific articles, write research proposals, make posters, and give presentations.
Same as: BIO 193, BIOE 193, CHEMENG 193

CHEM 196. Creating and Leading New Ventures in Engineering and Science-based Industries. 3 Units.
Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects.
Same as: CHEM 296, CHEMENG 196, CHEMENG 296

CHEM 200. Research and Special Advanced Work. 1-15 Unit.
Qualified graduate students undertake research or advanced lab work not covered by listed courses under the direction of a member of the teaching staff.

CHEM 211A. Research Progress in Chemistry. 1 Unit.
Required of all second year Ph.D. students. Students present their research progress and plans in brief written and oral summaries.

CHEM 211B. Chemistry Research Seminar Presentation. 1 Unit.
Required of all third year Ph.D. students. Students present their research project as a seminar.

CHEM 211C. Chemistry Research Proposal. 1 Unit.
Required of all fourth year Ph.D. students. Students formulate, write, and orally defend an original research proposal.

CHEM 221. Advanced Organic Chemistry I. 3 Units.
Physical Organic Chemistry. This course is focused on understanding the important physical principles in organic chemistry, including bonding and structural analysis; molecular interactions; thermodynamics; kinetics; methods to investigate reactive intermediates, reactivity, and elucidate reaction mechanism. Prerequisite: Chem 123 (formerly 131).

CHEM 223. Advanced Organic Chemistry II. 3 Units.
Physical Organic Chemistry. This course is focused on understanding the important physical principles in organic chemistry, including bonding and structural analysis; molecular interactions; thermodynamics; kinetics; methods to investigate reactive intermediates, reactivity, and elucidate reaction mechanism. Prerequisite: Chem 123 (formerly 131).

CHEM 225. Advanced Organic Chemistry III. 3 Units.
Chemistry is driven by one's understanding of structure and mechanism and ones ability to make molecules. This course is intended to address the universal mechanistic and structural foundations of organic chemistry with an emphasis on new synthetic methods, selectivity analysis, computer-based strategies for the design and synthesis of complex molecules, concepts for innovative problems solving and, importantly, how to put these skills together in the generation of impactful ideas and proposals directed at solving problems in science as required for a career in molecular science. Prerequisite: CHEM 223 or consent of instructor.

CHEM 232. Applications of NMR Spectroscopy. 3 Units.
(Formerly 235) The uses of NMR spectroscopy in chemical and biochemical sciences, emphasizing data acquisition for liquid samples and including selection, setup, and processing of standard and advanced experiments.

CHEM 251. Advanced Inorganic Chemistry. 3 Units.
(Formerly Chem 253) Electronic structure and physical properties of transition metal complexes. Ligand field and molecular orbital theories, magnetism and magnetic susceptibility, electron paramagnetic resonance including hyperfine interactions and zero field splitting and electronic absorption spectroscopy including vibrational interactions. Prerequisite: advanced undergrad-level inorganic course (equivalent to CHEM 153).

CHEM 253. Fundamentals of Inorganic Chemistry. 3 Units.
(Formerly Chem 251) Intended for first-year graduate students and advanced undergraduate students, as a review of how basic concepts in inorganic chemistry can be applied to materials of all dimensionalities. Specific topics will include: symmetry (group theory), bonding models (crystal field theory, valence bond theory, molecular orbital theory, and the Bloch theorem) and electronic structure, and properties/reactivity of molecules and extended solids. Prerequisite: introductory undergraduate-level inorganic course (equivalent to CHEM 151).

CHEM 255. Advanced Inorganic Chemistry. 3 Units.
Chemical reactions of organotransition metal complexes and their role in homogeneous catalysis. Analogous patterns among reactions of transition metal complexes in lower oxidation states. Physical methods of structure determination. Prerequisite: one year of physical chemistry.
Same as: CHEM 155

CHEM 256. Single-Crystal X-ray Diffraction. 3 Units.
(Formerly 150) Practical X-ray crystallography for small molecule compounds, which will emphasize crystal growth, measurement strategies, structure solution and refinement, and report generation. Example structures will include absolute configuration of organic compounds (with the heaviest atom being oxygen), metal containing complexes, disordered small molecules and twinning. Students will learn how to get from a new compound to a single crystal, and then to a cif-file ready for publication submission. They will gain knowledge of the underlying theory and concepts for each step of structure determination.
Same as: CHEM 156

CHEM 257. Bio-Inorganic Chemistry. 3 Units.
(Formerly Chem 297) Overview of metal sites in biology. Metalloproteins as elaborated inorganic complexes, their basic coordination chemistry and bonding, unique features of the protein ligand, and the physical methods used to study active sites. Active site structures are correlated with function (election transfer; dioxygen binding, activation and reduction to water). Prerequisites: Chem 153 and Chem 173, or equivalents.
Same as: BIOPHYS 297

CHEM 258C. Research Progress in Inorganic Chemistry. 1 Unit.
Required of all second-, third-, and fourth-year Ph.D. candidates in inorganic chemistry. Students present their research progress in written and oral forms (A); present a seminar in the literature of the field of research (B); and formulate, write, and orally defend a research proposal (C). Second-year students register for A; third-year students register for B; fourth-year students register for C.

CHEM 261. Computational Chemistry. 3 Units.
Introduction to computational chemistry methodology with a focus on interpretation of and applications to experimental research. Project-based and hands-on experience with molecular dynamics simulation, determining reaction pathways, Monte Carlo simulation and modeling, and machine learning for applications in chemistry. Prerequisite: knowledge of undergraduate level quantum mechanics and statistical mechanics at the levels of Chem 173 and Chem 175.

CHEM 271. Advanced Physical Chemistry. 3 Units.
The principles of quantum mechanics. General formulation, mathematical methods, and applications of quantum theory. Different representations of quantum theory, i. e., the Dirac, Schrödinger, matrix, and density matrix methods. Time independent exactly solvable problems and approximate methods including time independent perturbation theory and the variational method. Atomic energy calculations, angular momentum, and introduction to molecular structure methods. Time dependent methods. Time dependent perturbation theory applied to various problems such as absorption and emission of radiation. Time dependent density matrix formalism applied to coherent coupling of radiation fields to molecular systems, e. g., NMR and optical spectroscopy. Prerequisite: Chem. 175 or equivalent course.

CHEM 273. Advanced Physical Chemistry. 3 Units.
Statistical mechanics is a fundamental bridge that links microscopic world of quantum mechanics to macroscopic thermodynamic properties. We discuss the principles and methods of statistical mechanics from the ensemble point of view. Applications include statistical thermodynamics, quantum systems, heat capacities of gases and solids, chemical equilibrium, pair correlation functions in liquids, and phase transitions. Prerequisite: CHEM 271.

CHEM 274. Electrochemical Measurements Lab. 3 Units.
Introduction to modern electrochemical measurement in a hands-on, laboratory setting. Students assemble and use electrochemical cells including indicator, reference, working and counter electrodes, with macro, micro and ultramicro geometries, salt bridges, ion-selective membranes, electrometers, potentiostats, galvanostats, and stationary and rotated disk electrodes. The later portion of the course will involve a student-generated project to experimentally characterize some electrochemical system. Prerequisites: CHEM 131 (formerly 134) and CHEM 171, MATH 51, PHYSICS 44 or equivalent.
Same as: CHEM 174

CHEM 275. Advanced Physical Chemistry - Single Molecules and Light. 3 Units.
Covers optical single-molecule detection, spectroscopy, and imaging for detection of motional dynamics, super-resolution structure beyond the diffraction limit, and nanoscale interactions and orientations mostly in biological materials. May include an in-class laboratory component. Recommended: CHEM 271 or PHYSICS 230 and CHEM 273 or equivalent.

CHEM 277. Materials Chemistry and Physics. 3 Units.
(Not offered in AY2020-21) Topics: structures and symmetries and of solid state crystalline materials, chemical applications of group theory in solids, quantum mechanical electronic band structures of solids, phonons in solids, synthesis methods and characterization techniques for solids including nanostructured materials, selected applications of solid state materials and nanostructures. May be repeated for credit.

CHEM 279. Chemophysical analyses of costs to lower atmospheric concentrations of greenhouse gases. 3 Units.
Many methods have been proposed to reduce future concentration of CO2, CH4 and other greenhouse gases in the atmosphere from stricter emission regulations, to lower carbon energy sources, to more distribution of existing resources over space and time, to atmospheric capture and sequestration of gases already in the atmosphere. All methods would impose costs in some form. What can chemical and physical analyses tell us about the costs of different approaches? In this graduate-level seminar, students will read primary literature examining the chemical and physical challenges and limitations of various approaches and, by rigorous assessment of the theory and data available to date, will seek to estimate a credible range of future costs for each approach. Prerequisite: Previous study of thermodynamics, kinetics and quantum mechanics at the level of Chemistry 171 and 173.

CHEM 280. Single-Molecule Spectroscopy and Imaging. 3 Units.
Theoretical and experimental techniques necessary to achieve single-molecule sensitivity in laser spectroscopy: interaction of radiation with spectroscopic transitions; systematics of signals, noise, and signal-to-noise; modulation and imaging methods; and analysis of fluctuations; applications to modern problems in biophysics, cellular imaging, physical chemistry, single-photon sources, and materials science. Prerequisites: CHEM 271, previous or concurrent enrollment in CHEM 273.

CHEM 281. Therapeutic Science at the Chemistry - Biology Interface. 3 Units.
(Formerly Chem 227) Explores the design and enablement of new medicines that were born from a convergence of concepts and techniques from chemistry and biology. Topics include an overview of the drug development process, design of of small molecule medicines with various modes of action, drug metabolism and pharmacogenomics, biologic medicines including protein- and nucleic acid-based therapeutics, glycoscience and glycomimetic drugs, and cell-based medicines derived from synthetic biology. Prerequisite: undergraduate level organic chemistry and biochemistry as well as familiarity with concepts in cell and molecular biology.

CHEM 283. Synthesis and Analysis at the Chemistry-Biology Interface. 3 Units.
(Formerly 226) Focus on the combined use of organic chemistry and molecular biology to make, manipulate and measure biomacromolecules, with special focus on DNA and RNA. Synthetic and enzymatic methods for design and construction of oligonucleotides and nucleic acids; methods for bioconjugation and labeling; fluorescence tools; intracellular delivery strategies; selection and evolution methods; CRISPR mechanisms. Prerequisite: One year of undergraduate organic chemistry. Completion of a course in molecular biology is strongly recommended.

CHEM 285. Biophysical Chemistry. 3 Units.
Primary literature based seminar/discussion course covering classical and contemporary papers in biophysical chemistry. This is intended to provide an introduction to critical analysis of papers in the literature through intensive discussion and evaluation. Topics include (among others): protein structure and stability, folding, single molecule fluorescence and force microscopy, simulations, ion channels, GPCRs, and ribosome structure/function. Course is limited to 15 students and priority will be given to first year Chemistry graduate students.

CHEM 289. Concepts and Applications in Chemical Biology. 3 Units.
Current topics include chemical genetics, activity-based probes, inducible protein degradation, DNA/RNA chemistry and molecular evolution, protein labeling, carbohydrate engineering, fluorescent proteins and sensors, optochemical/optogenetic methods, mass spectrometry, and genome-editing technologies.
Same as: CSB 260

CHEM 291. Introduction to Nuclear Magnetic Resonance. 3 Units.
Introduction to quantum and classical descriptions of NMR; analysis of pulse sequences and nuclear spin coherences via density matrices and the product operator formalism; NMR spectrometer design; Fourier analysis of time-dependent observable magnetization; NMR relaxation in liquids and solids; NMR strategies for biological problem solving. Prerequisite: Chem 173.

CHEM 296. Creating and Leading New Ventures in Engineering and Science-based Industries. 3 Units.
Open to seniors and graduate students interested in the creation of new ventures and entrepreneurship in engineering and science intensive industries such as chemical, energy, materials, bioengineering, environmental, clean-tech, pharmaceuticals, medical, and biotechnology. Exploration of the dynamics, complexity, and challenges that define creating new ventures, particularly in industries that require long development times, large investments, integration across a wide range of technical and non-technical disciplines, and the creation and protection of intellectual property. Covers business basics, opportunity viability, creating start-ups, entrepreneurial leadership, and entrepreneurship as a career. Teaching methods include lectures, case studies, guest speakers, and individual and team projects.
Same as: CHEM 196, CHEMENG 196, CHEMENG 296

CHEM 299. Teaching of Chemistry. 1-3 Unit.
Required of all teaching assistants in Chemistry. Techniques of teaching chemistry by means of lectures and labs.

CHEM 300. Department Colloquium. 1 Unit.
Required of graduate students. May be repeated for credit.

CHEM 301. Research in Chemistry. 2 Units.
Required of graduate students who have passed the qualifying examination. Open to qualified graduate students with the consent of the major professor. Research seminars and directed reading deal with newly developing areas in chemistry and experimental techniques. May be repeated for credit. Search for adviser name on Axess.

CHEM 321. Topics in Stereochemistry. 3 Units.
Most areas of modern organic chemistry require of an understanding of stereochemical concepts. This course will discuss relevant developments in three central fields of stereochemistry, (1) conformational analysis, with particular emphasis in the influence of stereoelectronic interactions, (2) asymmetric synthesis, with specific applications in the stereoselective synthesis of a- and b-amino acids, and (3) sustainable chemistry and asymmetric organocatalysis. A solid foundation in organic chemistry is expected.

CHEM 329. Organic Chemistry Seminar. 1 Unit.
(Formerly 229) Required of graduate students majoring in organic chemistry. Students giving seminars register for CHEM 231.

CHEM 359. Inorganic Chemistry Seminar. 1 Unit.
(Formerly 259) Required of graduate students majoring in inorganic chemistry.

CHEM 371. Time-dependent statistical mechanics I. 3 Units.
First of a two-quarter sequence on the extension of the principles of statistical thermodynamics to systems away from equilibrium. We will explore the connection between the observable properties of such systems and the properties of their microscopic constituents. It will introduce students to many of the theoretical tools that researchers use to understand different kinds of time-dependent phenomena. The sequence will include coverage of the following topics: Phase space and the Liouville equation; equilibrium time correlation functions (TCFs); simple models of TCFs; linear response theory and transport coefficients; projection operators and generalized equations of motion; functional calculus and the Fokker-Planck, Langevin and generalized Langevin equations; chemical reaction dynamics and the Kramers equation; fluctuation theorems and non-equilibrium work relations; path integrals in the study of stochastic processes. Prerequisites: CHEM 175 or CHEM 273 or equivalent course in equilibrium statistical mechanics.

CHEM 373. Time-dependent statistical mechanics II. 3 Units.
Second of a two-quarter sequence surveying the statistical mechanical principles used in the study of time-dependent phenomena. It will continue to develop the themes introduced in CHEM 371, while illustrating their application to a variety of exactly solvable model systems, with examples drawn from the current research literature. Prerequisite: CHEM 371.

CHEM 379. Physical Chemistry Seminar. 1 Unit.
(Formerly 279) Required of graduate students majoring in physical chemistry. May be repeated for credit.

CHEM 390. Curricular Practical Training for Chemists. 1 Unit.
For Chemistry majors who need work experience as part of their program of study. Confer with Chem student services office for signup.

CHEM 459. Frontiers in Interdisciplinary Biosciences. 1 Unit.
Students register through their affiliated department; otherwise register for CHEMENG 459. For specialists and non-specialists. Sponsored by the Stanford BioX Program. Three seminars per quarter address scientific and technical themes related to interdisciplinary approaches in bioengineering, medicine, and the chemical, physical, and biological sciences. Leading investigators from Stanford and the world present breakthroughs and endeavors that cut across core disciplines. Pre-seminars introduce basic concepts and background for non-experts. Registered students attend all pre-seminars; others welcome. See http://biox.stanford.edu/courses/459.html. Recommended: basic mathematics, biology, chemistry, and physics.
Same as: BIO 459, BIOC 459, BIOE 459, CHEMENG 459, PSYCH 459

CHEM 802. TGR Dissertation. 0 Units.
.

CLASSICS

Courses offered by the Department of Classics are listed on the *Stanford Bulletin's* ExploreCourses web site under the subject code CLASSICS (https://explorecourses.stanford.edu/search/?q=CLASSICS&view=catalog&page=0&academicYear=&filter-coursestatus-Active=on&filter-departmentcode-CLASSICS=on&collapse=&filter-catalognumber-CLASSICS=on).

The study of Classics has traditionally centered on the literature and material culture of ancient Greece and Rome, including Greek and Latin language, literature, philosophy, history, art, and archaeology. At Stanford, Classics also explores connections with other ancient cultures and with the modern world, as well as specialized fields such as ancient economics, law, papyrology, and science. The department's faculty approaches Classics from an interdisciplinary perspective that crosses geographical, temporal, and thematic territories. Studying ancient epic poetry can lead to looking at modern cinema afresh; ancient Athenian politics opens new perspectives on modern politics; and the study of Rome presents parallels with other empires just as Latin illuminates the history of English and the Romance languages. In short, Classics at Stanford is an interdisciplinary subject concerned not only with Greek and Roman civilization but also with the interaction of cultures and societies that influenced the ancient Mediterranean basin and continue to influence human society across the globe.

Mission of the Undergraduate Program in Classics

The mission of the undergraduate program in Classics is to provide students with a broad background centered on the literature and material culture of ancient Greece and Rome, including Greek and Latin language, literature, philosophy, history, art, and archaeology. At Stanford, students in the Classics program also explore the connections between ancient cultures and the modern world as well as specialized fields such as ancient economics, law, papyrology, and science. The program's faculty approaches Classics from an interdisciplinary perspective that crosses geographical, temporal and thematic territories. The program is concerned not only with Greek and Roman civilization but also with the interaction of cultures and societies that influenced the ancient Mediterranean basin and continue to influence human society across the globe.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. The ability to develop effective and nuanced lines of interpretation.
2. Critical thinking skills using primary source materials.
3. Facility with the methodologies and presuppositions underlying interpretive positions in secondary literature and in their own work.
4. Well-developed analytical writing skills and close reading skills.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in Classics and to prepare students for a professional career or doctoral studies. This is achieved through completion of courses, in the primary field as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in Classics. Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to make original contributions to the knowledge of Classics and to interpret and present the results of such research.

Course Numbering

CLASSICS courses are numbered according to level and area of study.

Digit	Area
001-099	Introductory Courses
100-199	Undergraduate Language, Core, Electives and Independent Study
200-299	Advanced Undergraduate, Coterminal, MA and PhD
300-399	Graduate Seminars and Dissertation Research

Bachelor of Arts in Classics

The Department of Classics offers a Bachelor of Arts in Classics. Eligible students may also pursue a Bachelor of Arts with Honors (p. 1154). The department also offers a minor in Classics (p. 1154).

Suggested Preparation for the Major

Those interested in majoring in Classics are encouraged to declare by spring of sophomore year but are urged to discuss their plans with the Director of Undergraduate Studies as early as possible. Students who choose the Greek and Latin field of study should begin the curriculum as soon as possible because it is difficult to complete the language requirements without an early start; those with no previous knowledge of Latin or Greek should begin study in the freshman year, in a summer program following freshman year, or at the beginning of the sophomore year.

How to Declare the Major

To declare the major, a student must fill out the Declaration of Major on Axess and meet with the Director of Undergraduate Studies in the Department of Classics. At that time, the Director of Undergraduate Studies assists the student to select a department adviser. To build a mentoring relationship, students should meet with their adviser at least once a quarter. At the time of declaration, the student should also meet with the Department of Classics' student services officer. Each student's progress towards fulfillment of the major requirements is recorded in a file kept in the student services officer's office. It is the student's responsibility to work with the adviser and student services officer to keep this file up to date.

Degree Requirements

A letter grade is required for all courses taken for the major. No course receiving a grade lower than 'C' is counted toward fulfilling major requirements. Enrollment in an independent study section (CLASSICS 198 Directed Readings) requires the prior approval of the Director of Undergraduate Studies, and a maximum of three such enrollments for a maximum total of 10 units may be counted toward the major. University credit earned by placement tests or advanced placement work in secondary school is not counted towards any major requirement in the department. Work done at other universities or colleges is subject to department evaluation and the University's transfer credit process. Counting graduate courses or cognate courses towards the major requires advance approval by the Director of Undergraduate Studies. Students are encouraged to meet with the Director of Undergraduate Studies to discuss options for pursuing a period of study in the Mediterranean region (see Study Abroad below).

Course Requirements

The B.A. degree may be earned by fulfilling the requirements for one of the following fields of study (subplans). These fields of study are declared on Axess; they appear on the transcript but not on the diploma.

Subplans

Classical Studies

This major is recommended for students who wish to study classical civilizations in depth but do not wish to study the languages to the extent required by the Greek, Latin or Greek and Latin options described below. It is not suitable for students who wish to do graduate work in Classics or to teach Latin or Greek in high school, as the language work is insufficient for these purposes. Students must complete at least 60 units of approved courses including:

		Units
Writing in the Major (WIM)		**5**
CLASSICS 150	Majors Seminar: The Augustan Age	5
Latin or Greek at the intermediate-level or higher		**10-20**
at least two courses in Latin or Greek at the intermediate-level or higher [1]		10
CLASSICS 11L	Intermediate Latin: Introduction to Literature	
CLASSICS 12L	Intermediate Latin: Cicero and Catullus	
CLASSICS 13L	Intermediate Latin: Vergil	
CLASSICS 101L	Advanced Latin: Livy	
CLASSICS 102L	Advanced Latin: Early Latin	
CLASSICS 103L	Advanced Latin: Lucan's Pharsalia	
CLASSICS 11G	Intermediate Greek: Prose	
CLASSICS 12G	Intermediate Greek: Herodotus	
CLASSICS 13G	Intermediate Greek: Homer	
CLASSICS 101G	Advanced Greek: Plato	
CLASSICS 102G	Advanced Greek: Aeschylus	
CLASSICS 103G	Advanced Greek: Lyric Poetry	
or one course in one of the languages at the intermediate-level or higher, plus the beginning series of the other language [1]		20
CLASSICS 1L	Beginning Latin	
CLASSICS 2L	Beginning Latin	
CLASSICS 3L	Beginning Latin	
CLASSICS 1G	Beginning Greek	
CLASSICS 2G	Beginning Greek	
CLASSICS 3G	Beginning Greek	
Electives		**35-45**
remaining units from your choice of CLASSICS courses [2]		
Total Units		**60**

1. Language courses may be repeated for credit towards the degree only with advance written permission from the Director of Undergraduate Studies. Only listed courses can be used to fulfill the language requirement.
2. ESF 7 Education as Self-Fashioning: The Transformation of the Self/ESF 7A Education as Self-Fashioning: The Transformation of the Self (note that this is the same course) and Autumn Quarter SLE may count toward the major.

Ancient History

Students must complete at least 60 units of approved courses and must satisfy the following requirements:

		Units
Writing in the Major (WIM)		**5**
CLASSICS 150	Majors Seminar: The Augustan Age	5
Core Requirement		**6-10**
Complete any two survey courses in ancient history:		
CLASSICS 81	Ancient Empires: Near East	
CLASSICS 82	The Egyptians	
CLASSICS 83	The Greeks	
CLASSICS 84	The Romans	
Depth Requirement		**33**
Complete at least 33 units of ancient history and civilization courses. [1]		
Breadth Requirements		**12-15**
Complete at least 4 units in each of the following three areas [2]		
1. Archaeology and art; suggested courses include:		4-5
CLASSICS 151	Ten Things: An Archaeology of Design	
CLASSICS 154	Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean	
CLASSICS 161	Introduction to Greek Art I: The Archaic Period	
CLASSICS 162	Introduction to Greek Art II: The Classical Period	
CLASSICS 163	Artists, Athletes, Courtesans and Crooks	
CLASSICS 168	Engineering the Roman Empire	
2. Comparative ancient civilizations: complete a course on the ancient world outside the Mediterranean and western Asia. Suggested courses include:		4-5
ANTHRO 106	Incas and their Ancestors: Peruvian Archaeology	
ANTHRO 115B		
3. Historical and social theory. Suggested courses include:		4-5
ANTHRO 1	Introduction to Cultural and Social Anthropology	
ANTHRO 90B	Theory of Cultural and Social Anthropology	
SOC 1	Introduction to Sociology	
SOC 140	Introduction to Social Stratification	
SOC 142	Sociology of Gender	
SOC 170	Classics of Modern Social Theory	
HUMBIO 2B	Culture, Evolution, and Society	
Total Units		**60**

1. Latin, Ancient Greek, and IntroSems courses may count toward this requirement if approved by the Director of Undergraduate Studies.
2. The courses chosen must be approved in advance by the Director of Undergraduate Studies and are normally chosen from the list of areas noted.

Greek

Students must complete at least 60 units of approved courses including:

		Units
Writing in the Major (WIM)		**5**
CLASSICS 150	Majors Seminar: The Augustan Age	5
Ancient Greek at the intermediate-level or higher		**31**
At least 31 units of Ancient Greek courses at the intermediate-level or higher. It is recommended that these include CLASSICS 105A/B, though this series should not be taken until students have completed three years of Greek. [1,2]		
CLASSICS 11G	Intermediate Greek: Prose	
CLASSICS 12G	Intermediate Greek: Herodotus	

CLASSICS 13G	Intermediate Greek: Homer	
CLASSICS 101G	Advanced Greek: Plato	
CLASSICS 102G	Advanced Greek: Aeschylus	
CLASSICS 103G	Advanced Greek: Lyric Poetry	
Additional Courses		**9-15**
At least three additional CLASSICS courses from CLASSICS 31-99 or 110-197 [3]		
Electives		**9-15**
Remaining units from your choice of CLASSICS courses (Latin, Biblical Greek, Sanskrit or ancient history recommended).		
Total Units		**60**

1. Language courses may be repeated for credit towards the degree only with advance written permission from the Director of Undergraduate Studies.
2. CLASSICS 6G Biblical Greek or CLASSICS 7G Biblical Greek (not both) may count toward the Ancient Greek intermediate-level language requirement.
3. ESF 7/ESF 7A (note that this is the same course) and Autumn Quarter SLE and/or IntroSems may count toward this requirement. Beginning Greek may count as long as at least 31 units at the intermediate or advance-level are completed

Latin

Students must complete at least 60 units of approved courses including:

		Units
Writing in the Major (WIM)		**5**
CLASSICS 150	Majors Seminar: The Augustan Age	5
Latin at the intermediate-level or higher		**31**
At least 31 units of Latin courses at the intermediate-level or higher. It is recommended that this include CLASSICS 104A/B, though this series should not be taken until students have completed three years of Latin. [1,2]		
CLASSICS 11L	Intermediate Latin: Introduction to Literature	
CLASSICS 12L	Intermediate Latin: Cicero and Catullus	
CLASSICS 13L	Intermediate Latin: Vergil	
CLASSICS 101L	Advanced Latin: Livy	
CLASSICS 102L	Advanced Latin: Early Latin	
CLASSICS 103L	Advanced Latin: Lucan's Pharsalia	
Additional Courses		**9-15**
At least three additional CLASSICS courses from CLASSICS 31-99 or 110-197 [3]		
Electives		**9-15**
Remaining units from your choice of CLASSICS courses (Ancient Greek, Biblical Greek or ancient history recommended)		
Total Units		**60**

1. Language courses may be repeated for credit towards the degree only with advance written permission from the Director of Undergraduate Studies.
2. CLASSICS 6L Latin 400-1700 CE may count toward the Latin intermediate-level language requirement. May be repeated for credit toward the degree with advance written permission from the Director of Undergraduate Studies.
3. ESF 7/ESF 7A (note that this is the same course), Autumn Quarter SLE and/or IntroSems may count toward this requirement. Beginning Latin may count as long as at 31 units at the intermediate or advance-level are completed.

Greek and Latin

Students must complete at least 65 units of approved courses including:

		Units
Writing in the Major (WIM)		**5**
CLASSICS 150	Majors Seminar: The Augustan Age	5
Latin		**30**
At least 30 units of Latin courses at the intermediate-level and higher. [1, 2]		
OR at least 30 units of Latin at the beginning-level and higher, as long as Greek is at the intermediate-level and higher		
CLASSICS 1L	Beginning Latin	
CLASSICS 2L	Beginning Latin	
CLASSICS 3L	Beginning Latin	
CLASSICS 11L	Intermediate Latin: Introduction to Literature	
CLASSICS 12L	Intermediate Latin: Cicero and Catullus	
CLASSICS 13L	Intermediate Latin: Vergil	
CLASSICS 101L	Advanced Latin: Livy	
CLASSICS 102L	Advanced Latin: Early Latin	
CLASSICS 103L	Advanced Latin: Lucan's Pharsalia	
CLASSICS 104A	Latin Syntax I	
CLASSICS 104B	Latin Syntax II	
Greek		**30**
At least 30 units of Ancient Greek courses at the intermediate-level or higher. [1, 2]		
OR at least 30 units of Greek at the beginning-level and higher, as long as Latin is at the intermediate-level and higher		
CLASSICS 1G	Beginning Greek	
CLASSICS 2G	Beginning Greek	
CLASSICS 3G	Beginning Greek	
CLASSICS 11G	Intermediate Greek: Prose	
CLASSICS 12G	Intermediate Greek: Herodotus	
CLASSICS 13G	Intermediate Greek: Homer	
CLASSICS 101G	Advanced Greek: Plato	
CLASSICS 102G	Advanced Greek: Aeschylus	
CLASSICS 103G	Advanced Greek: Lyric Poetry	
CLASSICS 105A	Greek Syntax: Prose Composition	
CLASSICS 105B		
Recommended additional course work in Biblical Greek, Sanskrit or ancient history [3]		
Total Units		**65**

1. Language courses may be repeated for credit towards the degree only with advance written permission from the Director of Undergraduate Studies. CLASSICS 6G Biblical Greek or CLASSICS 7G Biblical Greek (not both) and CLASSICS 6L Latin 400-1700 CE may count as intermediate language levels.
2. It is recommended that this include CLASSICS 104A and CLASSICS 104B (for Latin); and CLASSICS 105A and CLASSICS 105B (for Greek). But this series should not be taken until completion of advanced-level course work in the relevant language.
3. Sanskrit is only allowed if both Greek and Latin requirements are fulfilled with course work at the intermediate-level and above.

Focus

Students may apply a focus in Philosophy and Literature to the Classical Studies, Latin, or Greek subplans. This focus is not declared on Axess and is not printed on the transcript or diploma.

Philosophy and Literature Focus

A focus is not reflected in the transcript or diploma but provides a guided curriculum for those interested in this interdisciplinary study. Students who choose this focus must still complete the Majors' Seminar and language courses required by their chosen track. In addition, all students must take a set of core requirements and breadth requirements as described below.

Core Requirements for all Philosophy and Literature Focuses

		Units
Core Courses		
Complete the following:		
PHIL 81	Philosophy and Literature	5
PHIL 80	Mind, Matter, and Meaning	5
one course in each of the following areas:		
1. Aesthetics, ethics, and social and political philosophy		**3-5**
PHIL 170	Ethical Theory	
PHIL 170D	Trust and Trustworthiness	
2. Philosophy of language, mind, metaphysics, and epistemology		**3-5**
PHIL 180	Metaphysics	
PHIL 180A	Realism, Anti-Realism, Irrealism, Quasi-Realism	
3. History of philosophy (course with subject code PHIL at the 100-level or above)		**3-5**
Classics or Philosophy		**6-10**
Two related courses in Classics or Philosophy. Discuss your course selection in advance with the Director of Undergraduate Studies.		
Capstone Seminar		**3-5**
One capstone seminar. Discuss your course selection in advance with the Director of Undergraduate Studies.		

Breadth Requirements

	Units
Breadth Requirements for Classical Studies: Philosophy and Literature Focus	
one CLASSICS course in ancient history	3-5
one CLASSICS course in art and archaeology	3-5
one CLASSICS course in literature in translation	
one CLASSICS course in philosophy and history of science	3-5
one CLASSICS course in religion/mythology	3-5
Breadth Requirements for Greek: Philosophy and Literature Focus	
one CLASSICS course in ancient history or archaeology	3-5
one CLASSICS course in religion, philosophy, or ancient science	3-5
one CLASSICS course in literature in translation	3-5
Breadth Requirements for Latin: Philosophy and Literature Focus	
one CLASSICS course in ancient history or archaeology	3-5
one CLASSICS course in literature in translation	3-5
one CLASSICS course in religion, philosophy, or ancient science	3-5

Additional Information

Study Abroad

Classics students may travel for several reasons: to complete accredited course work (typically language courses or history surveys) for transfer towards the degree, to participate in archaeological digs of ancient sites, and to perform independent travel-research related to an honors project or independent study. Students considering academic programs sponsored by other institutions are encouraged to review Stanford's policies on transfer credit and to discuss possible programs with the Director of Undergraduate Studies before applying. Students seeking archaeological dig experience should inquire for opportunities through the Classics Department and through the Stanford Archaeology Center (http://archaeology.stanford.edu). Students who would like to construct an independent travel-research project should discuss their goals and itinerary with the Director of Undergraduate Studies.

While Classics-specific course work is not always available through the Bing Overseas Program, students sometimes find Classics faculty at Bing campuses who are willing to provide independent instruction for credit. Pre-approval of courses and independent study syllabi by the Director of Undergraduate Studies is required for credit towards the major or minor.

Some departmental funding is available for summer language programs in the United States, and departmental funds are also available for travel and study in the Mediterranean. Students are encouraged to seek out multiple sources of funding, including offerings from UAR to supplement their departmental applications. After discussing their plans with the Director of Undergraduate Studies, students submit a departmental research grant application that includes expenses, a statement of purpose, and an endorsement by the student's faculty adviser. Limited funding is available each year; preference is shown to majors and students with strong records.

Honors Program

A minimum grade point average (GPA) of 3.6 within the major is required for students to enroll in the honors program. To be considered for honors in Classics, the student must select a professor who can supervise his or her honors thesis. A preliminary proposal, approved by the supervisor, is due April 15 of the junior year, and a final version is due on the first day of classes in Autumn Quarter of the senior year. The proposal must outline the project in detail, list relevant courses that have been taken, and name the supervisor. The department gives approval only if a suitable faculty supervisor is available and if it is satisfied that the student has a sufficient basis of knowledge derived from department course work in the general areas the thesis covers, such as art, Greek, Latin, history, literature, or philosophy. If the proposal is approved, the student may sign up for CLASSICS 199 Undergraduate Thesis: Senior Research during the senior year for a maximum of 6 units per term, up to an overall total of 10 units. These units may be counted towards fulfillment of the student's major requirements if relevant. The final thesis is due in early May of senior year. Honors are awarded only if the essay receives a grade of 'B+' or higher from the supervisor and a second reader, who is chosen by the department. In addition, students must do an honors thesis presentation in early June and graduate with a GPA of 3.6 or higher within the major to receive honors.

return to top of page (p. 1151)

Minor in Classics

The Director of Undergraduate Studies meets with each student who opts for the minor to discuss curriculum choices and assigns the student an adviser in the relevant field. Students are required to work closely with their advisers to create a cohesive curriculum within each area. Students who minor in Classics are required to take CLASSICS 150 Majors Seminar: The Augustan Age, which is writing intensive.

Degree Requirements

Students may choose among four fields of study for the minor in Classics: Classical Languages, Ancient History, Literature and Philosophy, and Classical Studies. These fields of study are not declared in Axess and are not printed on the transcript or diploma.

Classical Languages

Students are required to take a minimum of five courses in Greek or in Latin. In addition to the five required courses, students must take CLASSICS 150 Majors Seminar: The Augustan Age. Students wishing

to combine Greek and Latin may only do so if courses for one of the two languages are all intermediate level or above. Choose from the following courses:

		Units
Required Course		**5**
CLASSICS 150	Majors Seminar: The Augustan Age	5
Classical Languages		**15**
CLASSICS 1L	Beginning Latin	
CLASSICS 2L	Beginning Latin	
CLASSICS 3L	Beginning Latin	
CLASSICS 11L	Intermediate Latin: Introduction to Literature	
CLASSICS 12L	Intermediate Latin: Cicero and Catullus	
CLASSICS 13L	Intermediate Latin: Vergil	
CLASSICS 101L	Advanced Latin: Livy	
CLASSICS 102L	Advanced Latin: Early Latin	
CLASSICS 103L	Advanced Latin: Lucan's Pharsalia	
CLASSICS 1G	Beginning Greek	
CLASSICS 2G	Beginning Greek	
CLASSICS 3G	Beginning Greek	
CLASSICS 11G	Intermediate Greek: Prose	
CLASSICS 12G	Intermediate Greek: Herodotus	
CLASSICS 13G	Intermediate Greek: Homer	
CLASSICS 101G	Advanced Greek: Plato	
CLASSICS 102G	Advanced Greek: Aeschylus	
CLASSICS 103G	Advanced Greek: Lyric Poetry	
Total Units		**20**

Ancient History

Students are required to take a minimum of five courses in history, art history, and archaeology. Courses taken outside of the department may be substituted for one or more of these courses with prior, written approval from the Director of Undergraduate Studies. In addition to the five required courses, students must take CLASSICS 150 Majors Seminar: The Augustan Age. Courses offered in Latin and Greek that focus on historical topics or authors may count toward this minor with prior, written approval from the Director of Undergraduate Studies. Choose from the following courses:

		Units
Required Course		**5**
CLASSICS 150	Majors Seminar: The Augustan Age	5
Ancient History		**15**
CLASSICS 52	Introduction to Roman Archaeology	
CLASSICS 54	Introduction to World Architecture	
CLASSICS 56	Decolonizing the Western Canon: Introduction to Art and Architecture from Prehistory to Medieval	
CLASSICS 81	Ancient Empires: Near East	
CLASSICS 82	The Egyptians	
CLASSICS 83	The Greeks	
CLASSICS 84	The Romans	
CLASSICS 154	Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean	
CLASSICS 156	Design of Cities	
CLASSICS 158	Theories of the Image: Byzantium, Islam and the Latin West	
CLASSICS 164	Introduction to Greek Art I: The Archaic Period	
CLASSICS 162	Introduction to Greek Art II: The Classical Period	
CLASSICS 163	Artists, Athletes, Courtesans and Crooks	
CLASSICS 168	Engineering the Roman Empire	
CLASSICS 181	Classical Seminar: Origins of Political Thought	
Total Units		**20**

Literature and Philosophy

Students are required to take a minimum of five courses in classical literature or philosophy, including classical science. Courses taken outside of the department (for instance, from the Philosophy department) may be substituted for one or more of these courses with prior, written approval from the Director of Undergraduate Studies. In addition to the five required courses, students must take CLASSICS 150 Majors Seminar: The Augustan Age. Courses offered in Latin and Greek that focus on philosophical or literary topics or authors may count toward the minor. Students may count up to 4 units of ESF 7/7A. Choose from the following courses:

		Units
Required Course		**5**
CLASSICS 150	Majors Seminar: The Augustan Age	5
Literature and Philosophy		**15**
CLASSICS 16N	Sappho: Erotic Poetess of Lesbos	
CLASSICS 42	Philosophy and Literature	
CLASSICS 136	The Greek Invention of Mathematics	
CLASSICS 197	Aristotle's Logic	
CLASSICS 123		
CLASSICS 181	Classical Seminar: Origins of Political Thought	
Total Units		**20**

Classical Studies

Students are required to take a minimum of five courses in Classics (any course with subject code CLASSICS) plus CLASSICS 150 Majors Seminar: The Augustan Age. Students may count up to 4 units of Autumn Quarter SLE and/or 4 units of ESF 7/7A towards the breadth requirement.

Required Course		**5**
CLASSICS 150	Majors Seminar: The Augustan Age	5
Classical Studies		**15**
Students are required to take a minimum of five courses in Classics (any course with subject code CLASSICS)		
Total Units		**20**

Master of Arts in Classics

University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

I. Language and Literature, II. Philosophy Fields of Study

Students who have completed an undergraduate major in Classics (Greek, Latin, or Greek and Latin fields of study) or equivalent may be accepted as candidates for the M.A. degree in Classics and may expect to complete the program in twelve months (usually three quarters of course work plus three months study for the thesis or examination). Students with an undergraduate major in Classics (Ancient History or Classical Studies fields of study) or without an undergraduate major in Classics may also be accepted as candidates, though they may require a

longer period of study before completing the requirements for the degree. These requirements are:

1. A minimum of 25 of the 45 units must be graduate-level courses (generally 200-level or higher, but not always). The remaining units must be at the 100-level or higher.
2. Completion of one Greek language course at the 100 level (if the undergraduate major field of study was Latin) or one Latin language course at the 100 level (if the undergraduate major field of study was Greek). This requirement is waived for students with an undergraduate major in Classics with a field of study in Greek and Latin.
3. Passing a Greek or Latin language examination testing the candidate's ability to translate into English from a selected list of Greek or Latin authors. This exam is a minimum of two hours, requiring a grade of "B" or higher to pass.
4. Completion of the syntax sequence in at least one language. For Latin, this is CLASSICS 204A Latin Syntax I and CLASSICS 204B Latin Syntax II. For Greek, this is CLASSICS 205A Greek Syntax: Prose Composition and CLASSICS 205B .
5. Writing a thesis, or passing of an examination on a particular author or topic, or having written work accepted by the graduate committee as an equivalent. Three completed and satisfactory seminar papers are normally an acceptable equivalent, provided each paper has earned the grade of B+ or higher.
6. Students must pass a modern language reading exam in one of the following languages: German, French or Italian. In exceptional circumstances, the Graduate Studies Committee may permit a different language, e.g., Modern Greek or Russian, to be substituted in keeping with research plans. Students are allowed to use paper and online dictionaries. Exams are offered once a quarter (Autumn, Winter, Spring). Incoming graduates may choose to be tested as early as the Autumn Quarter. The department strongly encourages students to take modern language exams as early as possible in the program. If the first attempt to pass the exam is unsuccessful, the student is allowed to retake the test only once. Failing the second examination means automatic dismissal from the program. A grade of 'B-' or higher is required to pass.
7. Completion and approval of a Program Proposal for a Master's Degree form during the first quarter of enrollment, at least five days prior to the Final Study List deadline.

Candidates for the Ph.D. degree in Classics may also, on the recommendation of the department, become candidates for the M.A. degree. In this case, requirement 5 above is waived provided that the student has completed some work beyond the course requirements listed under requirements 1 and 2 above. Current Stanford graduate students in other degree programs may be considered for the M.A. degree, but must be admitted into the program and must complete all requirements listed above.

III. Classical Archaeology

Students who have completed an undergraduate major in Classics with a Classical Archaeology field of study, or in a closely related field, may be accepted as candidates for the M.A. degree in Classics with a Classical Archaeology field of study, and may expect to complete the program in twelve months (usually three quarters of course work plus three months study for the thesis or examination). Students without an undergraduate major in Classics with a Classical Archaeology field of study may also be accepted as candidates, though they may require a longer period of study before completing the requirements for the degree. These requirements are:

1. A minimum of 25 of the 45 units must be graduate-level courses (generally 200-level or higher, but not always). The remaining units must be at the 100-level or higher.
2. Completion with a grade of 'B' or higher of at least 15 units of graduate-level courses in classical archaeology, in addition to CLASSICS 331 Words and Things in the History of Classical Scholarship. (see 4).
3. Passing a Greek or Latin language examination testing the candidate's ability to translate into English from a selected list of Greek or Latin authors. This exam is a minimum of two hours, requiring a grade of "B" or higher to pass.
4. Completion with a grade of 'B' or higher of CLASSICS 331 Words and Things in the History of Classical Scholarship, or an equivalent course on the history of thought in classical archaeology approved by the Graduate Studies Committee.
5. Writing a thesis, or passing an exam on a particular topic, or having written work accepted by the graduate committee as an equivalent. Three completed and satisfactory seminar papers are normally an acceptable equivalent, provided each paper has earned the grade of B + or higher.
6. Students must pass a modern language reading exam in one of the following languages: German, French or Italian. In exceptional circumstances, the Graduate Studies Committee may permit a different language, e.g., Modern Greek or Russian, to be substituted in keeping with research plans. Students are allowed to use paper and online dictionaries. Exams are offered once a quarter (Autumn, Winter, Spring). Incoming graduates may choose to be tested as early as the Autumn Quarter. The department strongly encourages students to take modern language exams as early as possible in the program. If the first attempt to pass the exam is unsuccessful, the student is allowed to retake the test only once. Failing the second examination means automatic dismissal from the program. A grade of 'B-' or higher is required to pass.
7. Completion and approval of a Program Proposal for a Master's Degree form during the first quarter of enrollment, at least five days prior to the Final Study List deadline.

Candidates for the Ph.D. degree may also, on the recommendation of the department, become candidates for the M.A. degree. In their case, requirement 5 above is waived provided that the student has completed some work beyond the course requirements listed under requirements 1 and 2 above. Current Stanford graduate students in other degree programs may be considered for the M.A. degree, but must be admitted into the program and must complete all requirements listed above.

IV. Ancient History

Students who have completed an undergraduate major in Classics with an Ancient History field of study, or in a closely related field may be accepted as candidates for the M.A. degree in Classics with an Ancient History field of study, and may expect to complete the program in twelve months (usually three quarters of course work plus three months study for the thesis or examination). Students without an undergraduate major in Classics with an Ancient History field of study may also be accepted as candidates, though they may require a longer period of study before completing the requirements for the degree. These requirements are:

1. A minimum of 30 of the 45 units must be graduate-level courses (generally 20-level or higher, but not always) and the remaining 15 units of work must be at the 100-level or higher.
2. Satisfactory completion of 20 units of graduate-level courses in Classics and of 10 units of graduate-level courses in other programs.
3. Satisfactory completion of 15 additional units of courses in either ancient Greek or Latin at the 100-level or higher.
4. Writing a thesis, or passing an exam on a particular topic, or having written work accepted by the Graduate Committee as an equivalent. Three completed and satisfactory seminar papers are normally an acceptable equivalent, provided each paper has earned the grade of B + or higher.

5. Students must pass a modern language reading exam in one of the following languages: German, French or Italian. In exceptional circumstances, the Graduate Studies Committee may permit a different language, e.g., Modern Greek or Russian, to be substituted in keeping with research plans. Students are allowed to use paper and online dictionaries. Exams are offered once a quarter (Autumn, Winter, Spring). Incoming graduates may choose to be tested as early as the Autumn Quarter. The department strongly encourages students to take modern language exams as early as possible in the program. If the first attempt to pass the exam is unsuccessful, the student is allowed to retake the test only once. Failing the second examination means automatic dismissal from the program. A grade of 'B-' or higher is required to pass.
6. Completion and approval of a Program Proposal for a Master's Degree form during the first quarter of enrollment, at least five days prior to the Final Study List deadline.

Candidates for the Ph.D. degree may also (on the recommendation of the department) become candidates for the M.A. degree. In their case, requirement 4 above is waived provided that they have completed some work beyond the course requirements listed under requirements 1 and 2 above. Current Stanford graduate students in other degree programs may be considered for the M.A. degree, but must be admitted into the program and must complete all requirements listed above.

Coterminal Master's Degree in Classics

Stanford students in any undergraduate major who wish to pursue graduate work in Classics may apply for Stanford's coterminal master's program. Students considering a coterm are encouraged to consult with the Director of Undergraduate Studies and the department's student services officer about their plans before filing an application. Applicants must have a minimum GPA of 3.7 in the major, and no Incomplete grades on record. Undergraduate course work in Greek and Latin and one of the required modern languages is normally a prerequisite for graduate-level work.

To apply, students must complete the Coterminal Online Application (https://applyweb.com/stanterm/), submit two letters of recommendation from Classics faculty, an unofficial copy of their undergraduate transcript, a 1-3 page statement of purpose and a 10-15 page writing sample. GRE scores are not required. Applications are due in early January of the intended graduation year for the undergraduate degree; please see the departmental website (http://classics.stanford.edu) for the specific deadline.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Doctor of Philosophy in Classics

University requirements for the Ph.D. are described in the "Graduate Degrees" section of this bulletin. There are four specializations within the Classics Ph.D. program: language and literature; classical archaeology; ancient history; and the joint program in ancient philosophy. These specializations appear on the transcript and the diploma.

I. Language and Literature

Candidates for the Ph.D. degree in Classics with specialization in language and literature must fulfill the following requirements:

1. Complete 135 units of academic credit or equivalent in study beyond the bachelor's degree by the end of Autumn Quarter of the fourth year, including:

		Units
CLASSICS 201L	Latin Core I: Catiline	
CLASSICS 202L	Latin Core II: Age of Nero	
CLASSICS 203L	Latin Core III: History of Literature	
CLASSICS 201G	Survey of Greek Literature: Archaic Greek	
CLASSICS 202G	Survey of Greek Literature: Classical Greek	
CLASSICS 203G	Survey of Greek Literature: Hellenistic and Late Greek	
Three language courses from the options below, including at least one from each language: [1]		
CLASSICS 204A	Latin Syntax I	
CLASSICS 204B	Latin Syntax II	
CLASSICS 205A	Greek Syntax: Prose Composition	
CLASSICS 206A	The Semantics of Grammar I	
CLASSICS 206B	The Semantics of Grammar II	
CLASSICS 210	Latin Prose Composition	
CLASSICS 350	History of Classical Languages: Dialects of Ancient Greek	
Plus twelve graduate seminars, nine of which must be Classics seminars, and one of the remaining three of which must be outside the department. The other two seminars may be in Classics, from other departments (with the graduate director's approval), and/or directed readings. [2,3,4]		

[1] CLASSICS 204A must be combined with CLASSICS 206A to count as one course and CLASSICS 204B must be combined with CLASSICS 206B to count as one course.

[2] No more than two directed readings may be counted towards this requirement.

[3] Classics seminars are sometimes offered for a spread of units (3, 4 or 5).

[4] Special Topics courses (CLASSICS 200G and CLASSICS 200L) do not count for seminar credit. They do not fulfill any degree requirements for Language and Literature track students.

2. Maintain satisfactory progress throughout the degree program. The Classics department sets a higher standard for satisfactory progress than the University minimum requirements. To maintain that standard, students are expected to:
   - Enroll in all four academic quarters as instructed by the Classics Department

- maintain good grades (within the Classics department, this normally means grades in the A range; an accumulation of grades of B+ or lower may indicate problems).
- pass all required exams by the required deadlines
- write a minimum of three seminar papers per year in the first two years
- demonstrate high-quality research and writing
- take no more than one incomplete grade at a time (unless given special permission by the Director of Graduate Studies)
- take incomplete grades only occasionally and finish any incompletes in a timely manner
- demonstrate effective teaching when serving as a Teaching Assistant or Teaching Fellow

Students who fail to maintain satisfactory progress have research travel, conference and discretionary funds withheld until the situation is redressed.

3. Students must apply and be approved to advance to candidacy by the end of Summer Quarter of their second year.
4. Examinations:
   - As soon as students arrive, they must take diagnostic exams in Greek and Latin. Depending on performance, students may be required to enroll in undergraduate language classes in that language to improve their skills to the level required for graduate work.
   - Students must take Greek and Latin translation exams at the end of each core/survey sequence (Spring Quarter of the first and second years). Students are exempted from the final exam in Spring Quarter core/survey in order to prepare for these translations exams. These exams are based on the Greek and Latin reading lists available on the Classics Department (http://classics.stanford.edu) website. Greek Survey and Latin Core courses cover less than half of the material on which the translation exams test, and students need to prepare much of the work on their own. It is possible to take both exams in the first year if the student chooses. However, the student cannot choose to delay the first year exam to take both in the second year. The exam consists of translating four passages from a selection of six to eight passages, and students are allowed three hours. A grade of 'B-' or higher, on every passage, is required to pass. If a student does not attain a 'B-', the exam must be retaken and passed later in the summer before registering for the Autumn Quarter, in order to continue in the program. The exam can only be retaken once.
   - Students must pass two modern language translation exams: (1) German and (2) French or Italian. In exceptional circumstances, the Graduate Studies Committee may permit a different language, e.g., Modern Greek or Russian, to be substituted for (2), in keeping with dissertation research plans. Students are allowed to use paper and online dictionaries. Exams are offered once per quarter in autumn, winter and spring. Incoming graduates may choose to be tested as early as Autumn Quarter of their first year. The department strongly encourages students to take modern language exams as early as possible in the program (at least one modern language by the end of Spring Quarter of the first year), and certainly after any summer language courses they may have taken. Students have two opportunities to pass the modern language examinations. Failing the second opportunity means automatic dismissal from the program. Students are required to pass the first modern language exam by the end of Spring Quarter of the second year, and the second modern language exam by the end of Spring Quarter of the third year, in order to maintain satisfactory progress. A grade of 'B-' or higher is required to pass.
   - Students must take general examinations in Greek literature and Latin literature, and choose two more exams from the following fields: Ancient philosophy, Greek history, Roman history, Greek archaeology and Roman archaeology. A minimum of one general exam must be taken by the first week of the student's second year (generally late Summer or early Autumn Quarter). The remaining exams must be taken by the first week of the student's third year (generally late summer or early Autumn Quarter). Moving the timing of any of the exams, or increasing the number of exams requires prior consultation and approval by the Director of Graduate Studies. All exam choices must be approved by the Director of Graduate Studies in the Spring Quarter prior to the examination. To prepare for the exams, students must take at least one course in each of their chosen exam fields (in the case of ancient philosophy, a seminar or its equivalent) and may also consult with the faculty examiner. Reading lists for each of the exams are posted on the Classics Department website.
   - The University Oral Examination is the defense of the candidate's dissertation. In order to take this exam, a significant portion of the dissertation must be completed and approved by the dissertation adviser(s), the exam committee must have been established and approved by the department chair, and a date and time must have been arranged with the department. The exam consists of a public presentation with a question and answer period, followed by a private examination between the student and the exam committee.
5. During the third year, the candidate, in consultation with the dissertation proposal adviser (often the same as the dissertation adviser) writes a dissertation proposal, which is evaluated by a committee of faculty (dissertation proposal committee). The dissertation proposal defense should take place by the end of Autumn Quarter of the fourth year. If the proposal does not pass, the defense is repeated in the following quarter and must be passed. Failure to pass on the second attempt results in dismissal of the student from the program.
6. Students are required to teach four one-quarter courses under department supervision. This teaching requirement is normally completed during the second and third years of study. Under certain circumstances, summer teaching may satisfy this requirement.

II. Classical Archaeology

Candidates for the Ph.D. degree in Classics with a specialization in classical archaeology must fulfill the requirements following below.

Students are encouraged to enroll in or audit other undergraduate courses that may fill gaps in their undergraduate training. All students are expected to take part in archaeological fieldwork in the classical world areas. At least three consecutive quarters of coursework must be taken at Stanford.

1. Complete 135 units of academic credit or equivalent in study beyond the bachelor's degree by the end of Autumn Quarter of the fourth year, including:

		Units
CLASSICS 331	Words and Things in the History of Classical Scholarship [1]	
At least three graduate (200 or 300) level courses in Latin or Greek literature [2,3]		9-15
CLASSICS 201L	Latin Core I: Catiline	
CLASSICS 202L	Latin Core II: Age of Nero	
CLASSICS 203L	Latin Core III: History of Literature	
CLASSICS 201G	Survey of Greek Literature: Archaic Greek	
CLASSICS 202G	Survey of Greek Literature: Classical Greek	
CLASSICS 203G	Survey of Greek Literature: Hellenistic and Late Greek	

The interdepartmental graduate core sequence in archaeology. The Archaeology Center announces the courses which fulfill this requirement. The core sequence currently comprises a seminar in archaeology theory and a course on archaeological methods.

ANTHRO 303	Introduction to Archaeological Theory	
ANTHRO 307	Archaeological Methods	
At least one further course outside the Classics department. [4]		3-5
At least five graduate seminars in classical archaeology. Suggested courses: [4]		15-25
CLASSICS 360	Ancient Mediterranean Ports	
CLASSICS 369	Mobility and Migration in the Ancient Mediterranean and Beyond	
CLASSICS 370	Topics in Roman Art and Visual Culture	
At least three graduate seminars in ancient history. Suggested courses: [4]		9-15
CLASSICS 381	Classical Seminar: Origins of Political Thought	
CLASSICS 382	High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests	
CLASSICS 393	Ancient inequalities	

1 Must be taken as early as possible in the candidate's Stanford career.

2 Classical Archaeology and History tracks may elect one or more Special Topics courses (CLASSICS 200G and CLASSICS 200L) in lieu of a quarter or quarters of the same language Survey. Literature and Philosophy tracks cannot substitute Special Topics for Survey. Special Topics courses do not count for seminar credit. These courses are repeatable for credit.

3 Students who enter the program with only one ancient language at the level needed for graduate study are strongly encouraged to take additional coursework to reach graduate (200 and above) level in another language.

4 Students may petition to count independent study courses in place of up to two required courses, but no more.

2. Maintain satisfactory progress throughout the degree program. The Classics department sets a higher standard for satisfactory progress than the University minimum requirements. To maintain that standard, students are expected to:

- Enroll in all four academic quarters as instructed by the Classics department
- Maintain good grades (within the Classics department, this normally means grades in the A range; an accumulation of grades of B+ or lower may indicate problems).
- pass all required exams by the required deadlines
- write a *minimum* of three seminar papers per year in the first three years
- demonstrate high-quality research and writing
- take no more than one incomplete grade at a time (unless given special permission by the Director of Graduate Studies)
- take incomplete grades only occasionally and finish any incompletes in a timely manner
- demonstrate effective teaching when serving as a Teaching Assistant or Teaching Fellow

Students who fail to maintain satisfactory progress have research travel, conference and discretionary funds withheld until the situation is redressed.

3. Students must apply and be approved to advance to candidacy by the end of the Summer Quarter of their second year.

4. Examinations:

- As soon as students arrive, they must take diagnostic exams in Greek and Latin. Depending on performance, students may be required to enroll in undergraduate language classes in that language to improve their skills to the level required for graduate work.
- Students must pass two modern language translation exams: (1) German and (2) French or Italian. In exceptional circumstances, the Graduate Studies Committee may permit a different language, e.g., Modern Greek or Russian, to be substituted for (2), in keeping with dissertation research plans. Students are allowed to use paper and online dictionaries. Exams are offered once per quarter in autumn, winter and spring. Incoming graduates may choose to be tested as early as Autumn Quarter of their first year. The department strongly encourages students to take modern language exams as early as possible in the program (at least one modern language by the end of the first year), and certainly after any summer language courses they may have taken. Students have two opportunities to pass the modern language examinations. Failing the second opportunity means automatic dismissal from the program. Students are required to pass the first modern language exam by the end of the second year, and the second modern language exam by the end of the third year, in order to maintain satisfactory progress. A grade of 'B-' or higher is required to pass.
- Students must demonstrate graduate-level competency with an ancient language in one of two ways:

  Option 1: Greek or Latin translation exam. This examination must be taken in Spring Quarter of the first year or Spring Quarter of the second year. A grade of 'B-' or higher on every passage is required to pass. If a student does not meet that standard, the exam must be retaken and passed later in the summer before registering for Autumn Quarter, in order to continue in the program. The exam can only be retaken once.

  Option 2: Students must complete the course and take the final offered at the end of each quarter of Greek Survey or Latin Core. Students must earn a 'B-' or higher on each final to pass.

- Students must take general examinations in Greek archaeology and Roman archaeology, and choose two more exams from the following fields: Ancient philosophy, Greek history, Roman history, Greek literature and Latin literature. A minimum of one general exam must be taken by the first week of the student's second year (generally late Summer or early Autumn Quarter). The remaining exams must be taken by the first week of the student's third year (generally late summer or early Autumn Quarter). Moving the timing of any of the exams, or increasing the number of exams requires prior consultation and approval by the Director of Graduate Studies. All exam choices must be approved by the Director of Graduate Studies in the Spring Quarter prior to the examination. To prepare for the exams, students must take at least one course in each of their chosen exam fields (in the case of ancient philosophy, a seminar or its equivalent) and may also consult with the faculty examiner. Reading lists for each of the exams are posted on the Classics website.
- The University oral examination is the defense of the candidate's dissertation. In order to take this exam, a significant portion of the dissertation must be completed and approved by the dissertation adviser(s), the exam committee must have been established and approved by the department chair, and a date and time must have been arranged with the department. The exam consists of a public presentation with a question and answer period, followed by a private examination between the student and the exam committee.

5. During the third year, the candidate, in consultation with the dissertation proposal adviser (often the same as the dissertation adviser) writes a dissertation proposal, which is evaluated by a committee of faculty (dissertation proposal committee). The dissertation proposal defense should take place by the end of Autumn Quarter of the fourth year. If the proposal does not pass, the defense is repeated in the

following quarter and must be passed. Failure to pass on the second attempt results in dismissal of the student from the program.

6. Students are required to teach four one-quarter courses under department supervision. This teaching requirement is normally completed during the second and third years of study. Under certain circumstances, summer teaching may satisfy this requirement.

III. Ancient History

Candidates for the Ph.D. degree in Classics with specialization in ancient history must fulfill the following requirements:

1. Complete 135 units of academic credit or equivalent in study beyond the bachelor's degree at the end of the Autumn Quarter of the fourth year, including:

HISTORY 304	Approaches to History	
Two proseminars. These introduce students to primary sources of evidence for ancient history that require special training: papyrology, epigraphy, paleography, numismatics, and archaeology. [1,2]		8-10
CLASSICS 213	Proseminar: Documentary Papyrology	
CLASSICS 214	Proseminar: Ancient Numismatics	
CLASSICS 215	Paleography of Medieval and Early Modern Manuscripts	
CLASSICS 216	Advanced Paleography	
CLASSICS 219	Methods and approaches for ancient historians	
Three skills courses relevant to the individual student's chosen research approach. For example, a student could take classes in economics, demography, legal history, or anthropology. Courses can also be used to learn other ancient or modern languages, either by course work or directed reading. [1]		9-15
Ten graduate seminars (200-level or above). At least five of these seminars must be taken in the department. [2,3]		30-50
ANCIENT LANGUAGE COURSEWORK		
Option 1: Students focus more on one ancient language by taking 15 units of the core or survey series (CLASSICS 201L/202L/203L or CLASSICS 201G/202G/203G) and 5 units of the alternate series, plus the Prose Composition courses in the primary ancient language selected: [4,5]		30
CLASSICS 205A	Greek Syntax: Prose Composition	
CLASSICS 210	Latin Prose Composition	
CLASSICS 204A	Latin Syntax I	
CLASSICS 206A	The Semantics of Grammar I	
Option 2: Students emphasize broader linguistic skills. This requires students to take both ancient language series. [4]		30
CLASSICS 201L	Latin Core I: Catiline	
CLASSICS 202L	Latin Core II: Age of Nero	
CLASSICS 203L	Latin Core III: History of Literature	
CLASSICS 201G	Survey of Greek Literature: Archaic Greek	
CLASSICS 202G	Survey of Greek Literature: Classical Greek	
CLASSICS 203G	Survey of Greek Literature: Hellenistic and Late Greek	

1 Students must consult their advisers and the Director of Graduate Studies to determine the appropriate coursework.

2 With the approval of their advisers and graduate director, students may take seminars outside of the department or at another university with which Stanford has an exchange agreement to fulfill this requirement.

3 Two of these seminars may be replaced by directed readings with adviser and graduate director approval.

4 Classical Archaeology and History tracks may elect one or more Special Topics courses (CLASSICS 200G and CLASSICS 200L) in lieu of a quarter or quarters of the same language Survey. Literature and Philosophy tracks cannot substitute Special Topics for Survey. Special Topics courses do not count for seminar credit. These courses are repeatable for credit.

5 Students whose primary ancient language is Latin may select either CLASSICS 210 or CLASSICS 204A + CLASSICS 206A.

2. Maintain satisfactory progress throughout the degree program. The Classics department sets a higher standard for satisfactory progress than the University minimum requirements. To maintain that standard, students are expected to:

- Enroll in all four academic quarters as instructed by the Classics department
- Maintain good grades (within the Classics department, this normally means grades in the A range; an accumulation of grades of B+ or lower may indicate problems).
- pass all required exams by the required deadlines
- write a *minimum* of three seminar papers per year in the first three years
- demonstrate high-quality research and writing
- take no more than one incomplete grade at a time (unless given special permission by the Director of Graduate Studies)
- take incomplete grades only occasionally and finish any incompletes in a timely manner
- demonstrate effective teaching when serving as a Teaching Assistant or Teaching Fellow

Students who fail to maintain satisfactory progress have research travel, conference and discretionary funds withheld until the situation is redressed.

3. Students must apply and be approved to advance to candidacy by the end of Summer Quarter of their second year.

4. Examinations:

- As soon as students arrive, they must take diagnostic exams in Greek and Latin, as well as Greek and Roman history. Depending on performance, students may be required to enroll in undergraduate language classes in that language to improve their skills to the level required for graduate work. The history exams are mainly on narrative history, especially important names, dates, and events. Depending on performance, students may be asked to sit in on the undergraduate history courses and take a directed reading or a graduate survey if offered.
- Students must take the final offered at the end of each quarter of Greek Survey or Latin Core (for Option 1 above) or both Greek Survey and Latin Core (for Option 2 above). Students must earn a 'B-' or higher on each final to pass.
- Students must pass two modern language translation exams: (1) German and (2) French or Italian. In exceptional circumstances, the Graduate Studies Committee may permit a different language, e.g., Modern Greek or Russian, to be substituted for (2), in keeping with dissertation research plans. Students are allowed to use paper and online dictionaries. Exams are offered once per quarter in autumn, winter and spring. Incoming graduates may choose to be tested as early as Autumn Quarter of their first year. The department strongly encourages students to take modern language exams as early as possible in the program (at least one modern language by the end of Spring Quarter of their first year), and certainly after any summer language courses they may have taken. Students have two opportunities to pass the modern language examinations. Failing the second opportunity means automatic dismissal from the program. Students are required to pass the first modern language exam by the

end of Spring Quarter of the second year, and the second modern language exam by the end of Spring Quarter of the third year, in order to maintain satisfactory progress. A grade of 'B-' or higher is required to pass.

- Students must take general examinations in Greek history and Roman history, and choose two more exams from the following fields: Ancient philosophy, Greek archaeology, Roman archaeology, Greek literature and Latin literature. A minimum of one general exam must be taken by the first week of the student's third year (generally late summer or early Autumn Quarter). The remaining exams must be taken by the first week of the student's third year (generally late summer or early Autumn Quarter). Moving the timing of any of the exams, or increasing the number of exams requires prior consultation and approval by the Director of Graduate Studies. All exam choices must be approved by the Director of Graduate Studies in the Spring Quarter prior to the examination. To prepare for the exams, students must take at least one course in each of their chosen exam fields (in the case of ancient philosophy, a seminar or its equivalent) and may also consult with the faculty examiner. Reading lists for each of the exams are posted on the Classics website.
- The University oral examination is the defense of the candidate's dissertation. In order to take this exam, a significant portion of the dissertation must be completed and approved by the dissertation adviser(s), the exam committee must have been established and approved by the department chair, and a date and time must have been arranged with the department. The exam consists of a public presentation with a question and answer period, followed by a private examination between the student and the exam committee.

5. During the third year, the candidate, in consultation with the dissertation proposal adviser (often the same as the dissertation adviser) writes a dissertation proposal, which is evaluated by a committee of faculty (dissertation proposal committee). The dissertation proposal defense should take place by the end of Autumn Quarter of the fourth year. If the proposal does not pass, the defense is repeated in the following quarter and must be passed. Failure to pass on the second attempt results in dismissal of the student from the program.

6. Students are required to teach four one-quarter courses under department supervision. This teaching requirement is normally completed during the second and third years of study. Under certain circumstances, summer teaching may satisfy this requirement.

IV. Joint Program in Ancient Philosophy

This specialization is jointly administered by the departments of Classics and Philosophy and is overseen by a joint committee composed of members of both departments. It provides students with the training, specialist skills, and knowledge needed for research and teaching in ancient philosophy while producing scholars who are fully trained as either philosophers or classicists.

Graduate students admitted by the Classics department receive their Ph.D. from the Classics department. This specialization includes training in ancient and modern philosophy. Each student in the program is advised by a committee consisting of one professor from each department.

1. Candidates for the Ph.D. degree in Classics with specialization in ancient philosophy must fulfill the following requirements:

	Units
Students must take three courses in the Philosophy department [1]	9-15
One course in logic which can be fulfilled at the 100-level or higher	
One course in aesthetics, ethics, or political philosophy (200-level or higher)	
One course in metaphysics, epistemology, philosophy of mind, or philosophy of science.	
At least three courses in ancient philosophy at the 200 level or above, one of which must be in the Philosophy department. [1]	9-15

[1] All courses taken in the Philosophy department count for seminar credit (i.e., as contributing to the 12-seminar requirement in the Language and Literature track in the Classics department).

2. Complete 135 units of academic credit or equivalent in study beyond the bachelor's degree at the end of Autumn Quarter of the fourth year. This includes all the requirements listed for the language and literature specialization in the graduate program in Classics (see above). Students must also take the below courses focusing on philosophy.

3. *Examinations:* The requirements are the same as those listed in the language and literature specialization, except that one of the four areas of general examination must be taken in ancient philosophy in addition to the exams in Greek literature and Latin literature.

4. *Dissertation Proposal:* The requirements are the same as those listed in the language and literature specialization.

5. *Teaching:* The requirements are the same as those listed in the language and literature specialization.

Classics and a Minor Field

The Ph.D. in Classics may be combined with a minor in another field, such as anthropology, history, humanities, or classical linguistics. Requirements for the minor field vary but can include about six graduate-level courses in the field and one written examination, plus a portion of the University oral exam (dissertation defense). Students must consult with the department in which the minor is offered for exact requirements. The following timetable would be typical:

- First Year: coursework, almost entirely in Classics. One translation exam taken in June. One or both modern language exams taken.
- Second Year: coursework, both in Classics and the minor field. Second translation exam completed. French and German exams completed.
- Third Year: coursework, both in Classics and the minor field. General examinations in Classics.
- Fourth Year: remaining coursework, both in Classics and the minor field. General examination in the minor field. Preparation for dissertation.
- Fifth Year: dissertation, University oral examination.

Ph.D. Minor in Classics

For a graduate minor, the department recommends at least 20 units in Latin or Greek at the intermediate-level or above, and at least one course at the graduate (200) level or above. Students interested in this minor must discuss their proposed course plan with the Director of Graduate Studies as well as their Ph.D. department before obtaining Classics department approval.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans,

departments, and programs consider adopting local policies to count courses taken for a “credit” or “satisfactory” grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Department of Classics counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Graduate Degree Requirements

Grading

The Department of Classics has not changed its policy concerning 'CR' (credit) or 'S' (satisfactory) grades in degree requirements requiring a letter grade for academic year 2020-21.

Graduate Advising Expectations

The Department of Classics is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the adviser and the advisee.

The goal of advising in the graduate program is to help students in selecting courses that best suit their intellectual goals, in designing and conducting research, navigating degree requirements, exploring academic and professional opportunities, and preparing for their post-graduate careers.

Graduate students are expected to be active collaborators in the advising relationship. They are responsible for seeking academic and professional guidance and for informing themselves of policies and degree requirements for the Ph.D. or M.A. program.

An important part of the advisee-advisor relationship is for students to discuss their own expectations for the adviser-advisee relationship with the adviser and revisiting these expectations periodically.

Director of Graduate Studies (DGS)

A Department faculty member serves as the Director of Graduate Studies (DGS). The DGS monitors the degree progress of all M.A. and Ph.D. students, offers advice on meeting Department and University requirements, coordinates Departmental advising and TA assignments, and approves petitions for funding or other needs before submission to the Graduate Committee (see below).

Track Adviser

Ph.D. and M.A. students are admitted to one of four tracks within the Classics Department, each with its own requirements (Archaeology, History, Literature, and Philosophy). Each track also has an individual adviser in the pre-dissertation stage, who advises on track-specific coursework and training in research methodologies, and professional development. Entering students should meet routinely (at least once per quarter) with both the DGS and with the track adviser, who approve a course of study, monitor progress, and provide advice about funding opportunities, strategies for scheduling general and other exams required for degree progress, and to provide support in the event that difficulties arise.

Student Services Officer (SSO)

In addition, the Department’s Student Services Officer serves as the student's primary contact regarding Department and University procedures and can provide information, assistance, and the appropriate forms and procedures for academic and financial matters.

Academic progress and student completion of program requirements and milestones are monitored by the SSO, which is reviewed as necessary by the DGS and are discussed by faculty at an annual meeting devoted to assessing graduate student progress. Students who have made satisfactory academic progress are normally advanced to candidacy at the end of their second year in residency by faculty vote at this annual review meeting.

Graduate Studies Committee

The DGS, the three track advisers (the DGS serves as track adviser for his or her track), and the SSO constitute the Graduate Studies Committee. All requests for funding that fall outside of allowed discretionary spending, extraordinary travel away from campus, petitions for leave of absence, and any disciplinary issues that may arise must be reviewed and, as necessary, approved by the Graduate Studies Committee.

Dissertation Adviser and Reading Committee

In the course of their second year, if not sooner, Ph.D. students choose a faculty member who serves as their dissertation proposal adviser who helps guide the writing of the dissertation. The student and the proposal adviser work together to begin defining a topic and determining what preliminary reading or other work needs to be done. The student must choose the two other faculty members who, with the dissertation proposal adviser, form the dissertation proposal defense committee (typically the Reading Committee). At the time that the student has successfully defended his or her dissertation proposal (normally at the beginning of the fourth year), the dissertation proposal adviser typically assumes the responsibilities of the dissertation adviser. Dissertation advisers and students should meet on a regular basis throughout the year to discuss the student's professional development in key areas such as designing and conducting research, developing teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Students are encouraged to work closely with at least two or three faculty members early in the Ph.D. program to benefit from their various perspectives and to learn which faculty members might be particularly appropriate as their dissertation adviser and other members of their Reading Committee.

Expectations

Ph.D. and M.A. students are expected to meet regularly with their advisers and to keep them informed about their academic progress. To facilitate this, each student must meet with the DGS and the Track Adviser at the beginning of Autumn Quarter and again in Winter Quarter and in early in Spring Quarter during their first two years in the program. DGS and Track Advisers are available at the beginning of each quarter for these meetings.

Once Ph.D. students have successfully defended their dissertation proposals (normally at the beginning of the fourth year in residence) and have completed all of their required teaching assignments, with the consent of their advisers and the Graduate Studies Committee, they may petition to conduct research away from campus for one or more quarters (typically in Greece, Italy, or other regions of the Mediterranean). Students doing so are required to be in regular contact with their dissertation adviser and reading committee. Students must have a written schedule for communicating regularly. In addition, all students must respond promptly to all communications from their advisers and the SSO.

If the dissertation adviser relationship is not conducive to academic progress or is in some other way problematic, the student is responsible for contacting the DGS and/or the SSO and/or the Chair to discuss the issues. The DGS and SSO work with the student to address any concerns; in some instances, this might lead to a change of adviser. Students are

encouraged to voice concerns sooner rather than later, in order for any potential issues to be addressed as early as possible.

Additional Resources

A detailed description of the program's requirements, milestones, and advising expectations are listed in the Classics Ph.D. Handbook found on the program website (https://classics.stanford.edu/requirements-forms/). Additionally, the program adheres to the advising guidelines and responsibilities listed by the Office of the Vice Provost for Graduate Education (https://vpge.stanford.edu/academic-guidance/advising-mentoring/) (VPGE) and in the Graduate Academic Policies (https://gap.stanford.edu/handbooks/gap-handbook/chapter-3/subchapter-3/page-3-3-1/) (GAP).

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Emeriti (Professors): Marsh H. McCall, Jr., Susan Treggiari

Chair: Grant Parker

Director of Graduate Studies: Susan A. Stephens

Director of Undergraduate Studies: John Klopacz

Professors: David Cohen, Andrew M. Devine, Richard P. Martin, Ian Morris, Reviel Netz, Andrea Nightingale (on leave Winter Quarter), Josiah Ober (on leave Autumn Quarter), Anastasia-Erasmia Peponi, M. Rush Rehm, Richard Saller (on leave Winter and Spring Quarters), Walter Scheidel, Michael Shanks, Susan A. Stephens

Associate Professors: Giovanna Ceserani, Christopher B. Krebs (on leave), Jody Maxmin, Grant Parker, Jennifer Trimble

Assistant Professors: Justin Leidwanger, Hans Bork

Courtesy Professors: Fabio Barry, Chris Bobonich, Alan Code, Charlotte Fonrobert, Ian Hodder, Michael Penn, Bissera Pentcheva, Caroline Winterer, Yiqun Zhou

Lecturers: John Klopacz, Kilian Mallon, John Tennant

Adjunct Lecturer: Maud Gleason

Courses

CLASSICS 1G. Beginning Greek. 5 Units.
No knowledge of Greek is assumed. Vocabulary and syntax of the classical language.

CLASSICS 1L. Beginning Latin. 5 Units.
(Formerly CLASSLAT 1.) Vocabulary and syntax of the classical language. No previous knowledge of Latin is assumed.

CLASSICS 2G. Beginning Greek. 5 Units.
Continuation of CLASSICS 1G. Vocabulary and syntax of the classical language.

CLASSICS 2L. Beginning Latin. 5 Units.
(Formerly CLASSLAT 2.) Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 1L or equivalent placement.

CLASSICS 3G. Beginning Greek. 5 Units.
Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 2G or equivalent placement. CLASSICS 3G fulfills University language requirement.

CLASSICS 3L. Beginning Latin. 5 Units.
Vocabulary and syntax of the classical language. Prerequisite: CLASSICS 2L or equivalent placement. CLASSICS 3L fulfills the University language requirement.

CLASSICS 4L. Intensive Beginning Latin. 12 Units.
Equivalent to a year of beginning Latin (three quarters; CLASSICS 1L, 2L and 3L), this course is designed to teach the fundamentals of the Latin language in eight weeks. We will focus primarily on acquiring the basics of Latin grammar, morphology, and vocabulary and developing basic reading skills. At the end of the course, students should be able to read easy Latin prose and poetry. We will be using Wheelock's Latin textbook and meeting three hours a day, four days a week. Grades will depend on class participation and on performance in weekly quizzes and in a final written exam. Classics majors and minors must take course for letter grade. CLASSICS 4L fulfills the University language requirement.

CLASSICS 6G. Biblical Greek. 3-5 Units.
This is a one term intensive class in Biblical Greek. After quickly learning the basics of the language, we will then dive right into readings from the New Testament and the Septuagint, which is the ancient Greek translation of the Hebrew Bible. No previous knowledge of Greek required. If demand is high for a second term, an additional quarter will be offered in the Spring.
Same as: JEWISHST 5, RELIGST 171A

CLASSICS 6L. Latin 400-1700 CE. 3-5 Units.
Readings in later Latin, drawing on the vast bodies of texts from the late antique, medieval and early modern periods. Each week students will prepare selections in advance of class meetings; class time will be devoted to translation and discussion. Students taking this course will gain exposure to a wide range of later Latin texts; hone translation skills; and develop an awareness of the grammatical and stylistic features of post-classical Latin. The course is aimed both at classical Latinists seeking to broaden their reading experience and at medievalists and early modernists seeking to consolidate their Latin language skills. May be repeat for credit.nnPrior experience in Latin is required, preferably CLASSICS 11L. Equivalent accepted. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies. Does not fulfill the language requirement in Classical Studies track.
Same as: CLASSICS 208L, RELIGST 173X

CLASSICS 7G. Biblical Greek. 3-5 Units.
This is a continuation of the Winter Quarter Biblical Greek Course. Pre-requisite: CLASSICS 6G or a similar introductory course in Ancient Greek.
Same as: JEWISHST 5B

CLASSICS 9N. What Didn't Make It into the Bible. 4 Units.
Over two billion people alive today consider the Bible to be sacred scripture. But how did the books that made it into the bible get there in the first place? Who decided what was to be part of the bible and what wasn't? How would history look differently if a given book didn't make the final cut and another one did? Hundreds of ancient Jewish and Christian texts are not included in the Bible. "What Didn't Make It in the Bible" focuses on these excluded writings. We will explore the Dead Sea Scrolls, Gnostic gospels, hear of a five-year-old Jesus throwing temper tantrums while killing (and later resurrecting) his classmates, peruse ancient romance novels, explore the adventures of fallen angels who sired giants (and taught humans about cosmetics), tour heaven and hell, encounter the garden of Eden story told from the perspective of the snake, and learn how the world will end. The course assumes no prior knowledge of Judaism, Christianity, the bible, or ancient history. It is designed for students who are part of faith traditions that consider the bible to be sacred, as well as those who are not. The only prerequisite is an interest in exploring books, groups, and ideas that eventually lost the battles of history and to keep asking the question "why." In critically examining these ancient narratives and the communities that wrote them, you will investigate how religions canonize a scriptural tradition, better appreciate the diversity of early Judaism and Christianity, understand the historical context of these religions, and explore the politics behind what did and did not make it into the bible.
Same as: JEWISHST 4, RELIGST 4

CLASSICS 9R. Humanities Research Intensive. 2 Units.
Everyone knows that scientists do research, but how do you do research in the humanities? This five-day course, taught over spring break, will introduce you to the excitement of humanities research, while preparing you to develop an independent summer project or to work as a research assistant for a Stanford professor. Through hands-on experience with archival materials in Special Collections and the East Asia Library, you will learn how to formulate a solid research question; how to gather the evidence that will help you to answer that question; how to write up research results; how to critique the research of your fellow students; how to deliver your results in a public setting; and how to write an effective grant proposal. Students who complete this course become Humanities Research Intensive Fellows and receive post-program mentorship during spring quarter, ongoing opportunities to engage with faculty and advanced undergraduates, and eligibility to apply for additional funding to support follow-up research. Freshmen and sophomores only. All majors and undeclared students welcome. No prior research experience necessary. Enrollment limited: apply by 11/4/19 at hri-fellows.stanford.edu.
Same as: EALC 9R, ENGLISH 9R, HISTORY 9R

CLASSICS 11G. Intermediate Greek: Prose. 5 Units.
Transition to reading Greek prose. Students will build upon knowledge of morphology and syntax acquired in beginning Greek to develop confidence and proficiency in reading a variety of Greek texts from mythology to selections of classical and biblical prose.

CLASSICS 11L. Intermediate Latin: Introduction to Literature. 5 Units.
Phonology, morphology, semantics, and syntax. Readings in prose and poetry. Analysis of literary language, including rhythm, meter, word order, narrative, and figures of speech.

CLASSICS 12G. Intermediate Greek: Herodotus. 5 Units.
Intensive reading of selections from the Histories, with review of morphology and syntax, aimed at developing familiarity with fundamentals of Greek prose style and appreciation for the artistry of the first fully-extant Greek historical writing. The rest of the Histories will be read in English translation. Each class meeting includes translation of prepared Greek texts, sight reading, discussion, and short lecture or report. Classics majors and minors must take course for letter grade. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 12L. Intermediate Latin: Cicero and Catullus. 5 Units.
In this class, you will practice with and reinforce the advanced vocabulary, forms, and syntax of classical Latin you have previously acquired. While the primary emphasis of this course is on developing fluency in reading Latin, you will have opportunities to discuss and research the biographical, political, and literary issues raised by the readings. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 12N. Income and wealth inequality from the Stone Age to the present. 4 Units.
Rising inequality is a defining feature of our time. How long has economic inequality existed, and when, how and why has the gap between haves and have-nots widened or narrowed over the course of history? This seminar takes a very long-term view of these questions. It is designed to help you appreciate dynamics and complexities that are often obscured by partisan controversies and short-term perspectives, and to provide solid historical background for a better understanding of a growing societal concern.
Same as: HISTORY 12N

CLASSICS 13G. Intermediate Greek: Homer. 5 Units.
This course serves as an introduction to Homeric Greek and to Homer's Odyssey specifically. We will be reading selections from the Odyssey in the original Greek to develop an understanding of the syntax, vocabulary, and dialect of Homeric Greek. Throughout the class, we will explore key questions and debates within Homeric scholarship. In addition, we will read the whole of the Odyssey in English, which will allow us to broaden our discussions to questions of narrative structure and characterization. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 13L. Intermediate Latin: Vergil. 5 Units.
Vocabulary, forms and syntax. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 14. Greek and Latin Roots of English. 3 Units.
(Formerly CLASSGEN 9) Goal is to improve vocabulary, comprehension of written English, and standardized test scores through learning the Greek and Latin components of English. Focus is on patterns and processes in the formation of the lexicon. Terminology used in medicine, business, education, law, and humanities; introduction to principles of language history and etymology. Greek or Latin not required.

CLASSICS 14N. Ecology in Philosophy and Literature. 3-5 Units.
What can we do to help the environment? How do our conceptions of the environment affect our actions? In this class, we examine the basic principles of ecological thinking in Western culture. We explore the ways that different writers represent and conceive of the natural world. We also analyze different environmental philosophies. We will address the following questions: What is nature? Who decides what is "natural"? How do humans differ from other animals? Do these differences make us superior beings? How do our eating habits affect the earth? What are the philosophical arguments for vegetarianism and veganism? How have the technologies of television, cell phones, and computers affected our relationship to the natural world? To what extent do we dwell in cyberspace? How does this affect our habitation on earth? How does modern technology inform the way that we think and act in the world? To help us answer these questions, we read nature writers (Edward Abbey, Annie Dillard), philosophers (Descartes, Heidegger), short stories (Kafka, Ursula le Guin), novelists (Conrad, Tournier) and contemporary writers (Peter Singer, Michael Pollan, Elizabeth Kolbert).

CLASSICS 15N. Saints, Warriors, Queens, and Cows. 3 Units.
The literature of medieval Ireland (600-1400 AD) is rich in tales about war and adventure, pagan gods, and otherworld voyages. The sagas of kings and queens sit side by side (sometimes in the same medieval manuscripts) with stories of holy men and women, and exquisite poetry in praise of nature or important persons. We will explore this largely unfamiliar but fascinating world through careful reading of the primary texts, backed up by some secondary works on history, myth, and society. In addition, the influence of early Irish literature on such later writers as W. B. Yeats and Flann O'Brien will be investigated. Readings include heroic stories of Finn and Cú Chulainn; the Cattle Raid of Cooley; the Voyage of Bran; satires; bardic praise-poems; monastic poems; and Sweeney Astray (Buile Shuibhne).

CLASSICS 16N. Sappho: Erotic Poetess of Lesbos. 3 Units.
Preference to freshmen. Sappho's surviving fragments in English; traditions referring to or fantasizing about her disputed life. How her poetry and legend inspired women authors and male poets such as Swinburne, Baudelaire, and Pound. Paintings inspired by Sappho in ancient and modern times, and composers who put her poetry to music.
Same as: FEMGEN 24N

CLASSICS 17N. To Die For: Antigone and Political Dissent. 3 Units.
(Formerly CLASSGEN 6N.) Preference to freshmen. Tensions inherent in the democracy of ancient Athens; how the character of Antigone emerges in later drama, film, and political thought as a figure of resistance against illegitimate authority; and her relevance to contemporary struggles for women's and workers' rights and national liberation. Readings and screenings include versions of *Antigone* by Sophocles, Anouilh, Brecht, Fugard/Kani/Ntshona, Paulin, Glowacki, Gurney, and von Trotta.
Same as: TAPS 12N

CLASSICS 18N. The Artist in Ancient Greek Society. 3 Units.
Given the importance of art to all aspects of their lives, the Greeks had reason to respect their artists. Yet potters, painters and even sculptors possessed little social standing. Why did the Greeks value the work of craftsmen but not the men themselves? Why did Herodotus dismiss those who worked with their hands as "mechanics?" What prompted Homer to claim that "there is no greater glory for a man than what he achieves with his own hands," provided that he was throwing a discus and not a vase on a wheel? Painted pottery was essential to the religious and secular lives of the Greeks. Libations to the gods and to the dead required vessels from which to pour them. Economic prosperity depended on the export of wine and oil in durable clay containers. At home, depictions of gods and heroes on vases reinforced Greek values and helped parents to educate their children. Vases depicting Dionysian excess were produced for elite symposia, from which those who potted and painted them were excluded. Sculptors were less lowly but still regarded as "mechanics," with soft bodies and soft minds (Xenophon), "indifferent to higher things" (Plutarch). The seminar addresses such issues as we work to acknowledge our own privilege and biases. Students will read and discuss texts, write response papers and present slide lectures on aspects of the artist's profession.
Same as: ARTHIST 100N

CLASSICS 19N. Eloquence Personified: How To Speak Like Cicero. 3 Units.
This course is an introduction to Roman rhetoric, Cicero's Rome, and the active practice of speaking well. Participants read a short rhetorical treatise by Cicero, analyze one of his speeches as well as more recent ones by, e.g., Kennedy, Martin Luther King Jr., and Obama, and watch their oratorical performances. During the remainder of the term they practice rhetoric, prepare and deliver in class two (short) speeches, and write an essay.

CLASSICS 20N. Technologies of Civilization: Writing, Number and Money. 3-4 Units.
The technological keys to the growth of civilization that enabled the creation of complex societies and enhanced human cognition. The role of cognition in shaping history and the role of history in shaping cognition. Global perspective, emphasizing the Western tradition and its ancient Greek roots.

CLASSICS 21Q. Eight Great Archaeological Sites in Europe. 3-5 Units.
Preference to sophomores. Focus is on excavation, features and finds, arguments over interpretation, and the place of each site in understanding the archaeological history of Europe. Goal is to introduce the latest archaeological and anthropological thought, and raise key questions about ancient society. The archaeological perspective foregrounds interdisciplinary study: geophysics articulated with art history, source criticism with analytic modeling, statistics interpretation. A web site with resources about each site, including plans, photographs, video, and publications, is the basis for exploring.
Same as: ARCHLGY 21Q

CLASSICS 26N. The Roman Empire: Its Grandeur and Fall. 4 Units.
Preference to freshmen. Explore themes on the Roman Empire and its decline from the 1st through the 5th centuries C.E.. What was the political and military glue that held this diverse, multi-ethnic empire together? What were the bases of wealth and how was it distributed? What were the possibilities and limits of economic growth? How integrated was it in culture and religion? What were the causes and consequences of the conversion to Christianity? Why did the Empire fall in the West? How suitable is the analogy of the U.S. in the 21st century?.
Same as: HISTORY 11N

CLASSICS 28N. Inequality: the Last 100,000 Years. 3 Units.
(Formerly CLASSHIS 13N.) This seminar traces the evolution of resource inequality from the Stone Age to the present. Only this long-term perspective reveals the forces that drive inequality and allows us to address two key questions: what causes inequality, and what factors have been capable of reducing it, at least for a while? We are going to confront challenging arguments: that inequality has been closely tied up with overall economic and human development, and that over the long course of history, war, revolution and pestilence were the most effective equalizers of income and wealth. This class will help you appreciate contexts and complexities that are usually obscured by partisan polemics and short-term thinking. Seminar participants will be directly involved in the instructor's current research project on the history of inequality.
Same as: HISTORY 15N

CLASSICS 29N. Ancient Myth in Modern Poetry. 3 Units.
For millennia, the myths of ancient Greece and Rome have been objects of fascination and tools for exploring humanity's most abiding concerns: self, society, birth, death and the afterlife, the cosmos and the divine. In the 20th and 21st centuries, the power and beauty of these archaic narratives have inspired scores of poets, including such well-known figures as Yeats, Heaney, Eliot, Pound, H.D., Seferis, Rilke, Auden, Mandelshtam and Tsvetaeva. We will delve into this rich poetic heritage, savoring the full range of modern responses, while paying attention to the many meanings of the old stories that they echo or challenge. All readings in English; no prior experience of any sort assumed. Aspiring writers and lovers of mythology welcomed.

CLASSICS 29Q. Questioning the Gods: Religious Thought and Literature in Classical Antiquity. 3 Units.
Ancient Greek and Roman literature and philosophy dealing with theology and ethics. What is a god, and why should gods care about you or me? Do you have a soul, and if so what might happen to it when you die? Should you try to be a good person, and if so, how? Learn viewing fundamental questions like these through the eyes of ancient Greek and Roman thinkers. We will read tragedies and epic poetry, wrestle with the philosophical arguments, and apply forms scientific reasoning developed more than 2,000 years ago. This course offers highly sophisticated perspectives on religious and ethical issues that are still vitally important today, as well as a firm grasp of the culture of classical antiquity and the means it offers of understanding the world and our place in it.

CLASSICS 30N. Making fun of History: Insults, Mockery and Abuse Language in Antiquity. 3 Units.
People have mocked one another for as long as there has been language with which to do it, but insults can be difficult to pin down: a word or phrase may seem mocking to one person but neutral, funny, or even friendly to another. Even praise can be insulting, in some situations. Context is key.nnIn this course we will study abusive speech in the context of ancient Greece and Rome. Primary readings will range from Homer and Aristophanes to Plautus and Seneca, as well asnvernacular sources such as ancient wall-graffiti and curse tablets. Throughout we will usenmodern sources such as film, music, and political speeches for comparison. We will alsonexplore different sociological, anthropological, and linguistic models for understanding thensocial role of insult. Studying the slippery phenomenon of insult reveals a great deal aboutnhuman communication, human nature, and the Classical tradition.nnNo knowledge of Latin, Greek, or Linguistics is assumed or required for this course.

CLASSICS 31. Greek Mythology. 3-5 Units.
The heroic and divine in the literature, mythology, and culture of archaic Greece. Interdisciplinary approach to the study of individuals and society. Illustrated lectures. Readings in translation of Homer, Hesiod, and the poets of lyric and tragedy. Weekly participation in a discussion section is required during regular academic quarters (Aut, Win, Spr).

CLASSICS 34. Ancient Athletics. 3-4 Units.
How the Olympic Games developed and how they were organized. Many other Greek festivals featured sport and dance competitions, including some for women, and showcased the citizen athlete as a civic ideal. Roman athletics in contrast saw the growth of large-scale spectator sports and professional athletes. Some toured like media stars; others regularly risked death in gladiatorial contests and chariot-racing. We will also explore how large-scale games were funded and how they fostered the development of sports medicine. Weekly participation in a discussion section is required; enroll in sections on coursework.

CLASSICS 35. The Good Life: An Introduction to Ancient Greek Ethical Philosophy. 3-5 Units.
The ancient Greeks longed for happiness, but life often led to suffering and anxiety. In ancient Greece, the traditional value system focused on gaining honor, wealth, power, and success¿external goods that could be taken away at any time. The Greek philosophers Socrates, Plato, and Aristotle set forth ethical theories designed to alleviate suffering and anxiety. They rejected the traditional Greek value system, focusing on inner goodness rather than on external rewards. Developing inner goodness was the only way to live a happy and fulfilled life. In this class, we read Greek tragedies by Sophocles and Euripides that represent traditional Greek values. We examine the values, motivation, and choices of tragic characters who faced difficult ethical dilemmas¿choices that led to misery and ruin. What were their tragic flaws? Could they have avoided their fates by adopting a different value system? We also examine the ethical theories of Socrates, Plato, and Aristotle. We analyze their discussions of justice, courage, friendship, love, and self-knowledge. Do these philosophical theories offer a valid way to live a happy life? Can we develop these virtues? If so, how do we do this? Do we need to have these virtues to live a happy life? Do the ancient philosophers offer useful solutions to ethical questions in our own day? Can their philosophies help us to become better and happier people?.

CLASSICS 37. Great Books, Big Ideas from Ancient Greece and Rome. 3 Units.
This course will journey through ancient Greek and Roman literature from Homer to St. Augustine, in constant conversation with the other HumCore travelers in the Ancient Middle East, Africa and South Asia, and Early China. It will introduce participants to some of its fascinating features and big ideas (such as the idea of history); and it will reflect on questions including: What is an honorable life? Who is the Other? How does a society fall apart? Where does human subjectivity fit into a world of matter, cause and effect? Should art serve an exterior purpose? Do we have any duties to the past? This course is part of the Humanities Core: https://humanitiescore.stanford.edu/.
Same as: DLCL 11, HUMCORE 112

CLASSICS 40. Greek Philosophy. 4 Units.
We shall cover the major developments in Greek philosophical thought, focusing on Plato, Aristotle, and the Hellenistic schools (the Epicureans, the Stoics, and the Skeptics). Topics include epistemology, metaphysics, psychology, ethics and political theory. No prereqs, not repeatable.
Same as: PHIL 100

CLASSICS 41. Herodotus. 4-5 Units.
For Ancient History field of study majors; others by consent of instructor. Close reading technique. Historical background to the Greco-Persian Wars; ancient views of empire, culture, and geography; the wars and their aftermath; ancient ethnography and historiography, including the first narrative of ancient Egypt.

CLASSICS 42. Philosophy and Literature. 3-5 Units.
What, if anything, does reading literature do for our lives? What can literature offer that other forms of writing cannot? Can fictions teach us anything? Can they make people more moral? Why do we take pleasure in tragic stories? This course introduces students to major problems at the intersection of philosophy and literature. It addresses key questions about the value of literature, philosophical puzzles about the nature of fiction and literary language, and ways that philosophy and literature interact. Readings span literature, film, and philosophical theories of art. Authors may include Sophocles, Dickinson, Toni Morrison, Proust, Woolf, Walton, Nietzsche, and Sartre. Students master close reading techniques and philosophical analysis, and write papers combining the two. This is the required gateway course for the Philosophy and Literature major tracks. Majors should register in their home department.
Same as: COMPLIT 181, ENGLISH 81, FRENCH 181, GERMAN 181, ILAC 181, ITALIAN 181, PHIL 81, SLAVIC 181

CLASSICS 43. Exploring the New Testament. 4 Units.
To explore the historical context of the earliest Christians, students will read most of the New Testament as well as many documents that didn't make the final cut. Non-Christian texts, Roman art, and surviving archeological remains will better situate Christianity within the ancient world. Students will read from the Dead Sea Scrolls, explore Gnostic gospels, hear of a five-year-old Jesus throwing divine temper tantrums while killing (and later resurrecting) his classmates, peruse an ancient marriage guide, and engage with recent scholarship in archeology, literary criticism, and history.
Same as: JEWISHST 86, RELIGST 86

CLASSICS 43N. The Archaeological Imagination. 3 Units.
More than excavating ancient sites and managing collections of old things, Archaeology is a way of experiencing the world: imagining past lives through ruins and remains; telling the story of a prehistoric village through the remains of the site and its artifacts; dealing with the return of childhood memories; designing a museum for a community. The archaeological imagination is a creative capacity mobilized when we experience traces and vestiges of the past, when we gather, classify, conserve and restore, when we work with such remains to deliver stories, reconstructions, accounts, explanations, or whatever. This class will explore such a wide archaeological perspective in novels, poetry, fantasy literature, the arts, movies, online gaming, and through some key debates in contemporary archaeology about human origins, the spread of urban life, the rise and fall of ancient empires.
Same as: ARCHLGY 43N

CLASSICS 44. Epic! Life, death, and glory in the Iliad and Odyssey. 4-5 Units.
The two epics attributed to the ancient Greek poet Homer enshrine a vivid world of experience centered on the deeds and misdeeds of warriors and divinities, kings and queens, in the last days and aftermath of the Trojan War. The course examines these remarkable poems in detail, with attention to their political, social, historical and artistic contexts, as well as to their reception in art, literature, film and music over the last two millennia. No prior knowledge of Homer or Greek literature necessary.

CLASSICS 45. Ancients and Moderns: Africa and South Asia in World Literature. 3 Units.
How might we make sense of culturally significant texts and text equivalents? We'll compare different answers to abiding human questions, such as: Where do we come from? Why do origins matter? What role do different media (written, spoken, otherwise performed, or visual) play in conveying a sense of the past from one generation to another? In what ways is our access to such cultural productions framed by colonial histories, with their discrepant experiences and perspectives? Readings include the Ramayana; the Bhagavad-Gita; Chinua Achebe, Things Fall Apart; and Chimamanda Adichie, `The headstrong historian'. This course is part of the Humanities Core sequence.
Same as: HUMCORE 117

CLASSICS 47. Ancient Knowledge, New Frontiers: How the Greek Legacy Became Islamic Science. 3 Units.
What contributions did Arabic and Islamic civilization make to the history of science? This course will read key moments in Greek and Islamic science and philosophy and ask questions about scientific method, philosophy, and religious belief. We will read Ibn Sina (Avicenna), Ibn Haytham, and Baha al-Din al-Amili, among others. What is the scientific method and is it universal across time and place? What is Islamic rationality? What is Greek rationality? Who commits to empiricism and who relies on inherited ideas? This course is part of the Humanities Core: https://humanitiescore.stanford.edu/.
Same as: COMPLIT 107A, HUMCORE 121

CLASSICS 52. Introduction to Roman Archaeology. 3-5 Units.
(Formerly CLASSART 81.) This course will introduce you to the material culture of the ancient Roman world, from spectacular imperial monuments in the city of Rome to cities and roads around the Mediterranean, from overarching environmental concerns to individual human burials, from elite houses and army forts to the the lives of slaves, freedmen and gladiators. Key themes will be change and continuity over time; the material, spatial and visual workings of power; how Roman society was materially changed by its conquests and how conquered peoples responded materially to Roman rule.
Same as: ARCHLGY 81

CLASSICS 54. Introduction to World Architecture. 5 Units.
This course offers an expansive and wide-ranging introduction to architecture and urban design from the earliest human constructions to the mid-20th century. The examples range from the Americas to Europe, the Middle East, South and East Asia. The diverse technologies and materialities of building are addressed throughout and an overriding concern is to understand architecture as a sensible manifestation of particular cultures, whether societies or individuals. To the same ends, student writing assignments will involve the analysis of local space, whether a room or a building, and then the built environment at large.
Same as: ARTHIST 3

CLASSICS 56. Decolonizing the Western Canon: Introduction to Art and Architecture from Prehistory to Medieval. 5 Units.
Traditional Art History viewed the Renaissance as its pinnacle; it privileged linear perspective and lifelikeness and measured other traditions against this standard, neglecting art from the Near East, Egypt, the Middle Ages, or Islam. This course will disrupt this colonizing vision by conceptualizing artworks as "methexis" (participation, liveliness, or enactment) as opposed to mimesis (imitation or lifelikeness). We will study the development of the Western canon and its systematic eradication of difference through a renewed understanding of what an artwork is.
Same as: ARTHIST 1A

CLASSICS 57. Introduction to Digital Archaeology. 4 Units.
While the tools of Digital Archaeology frequently change, using digital tools has been part of the discipline for decades. These tools and approaches provide new forms of research, visualization, and outreach to archaeological investigations. This course is designed to introduce students of archaeology to the digital research methods useful to the discipline, and provide them with hands-on experience in three types of digital method: digital mapping, visualization, and 3D modeling. The goal of the course is for students to learn about the state of digital archaeology, to become familiar with common methods, and become aware of the resources available for research.
Same as: ARCHLGY 47

CLASSICS 58. Egypt in the Age of Heresy. 3-5 Units.
Perhaps the most controversial era in ancient Egyptian history, the Amarna period (c.1350-1334 BCE) was marked by great sociocultural transformation, notably the introduction of a new 'religion' (often considered the world's first form of monotheism), the construction of a new royal city, and radical departures in artistic and architectural styles. This course will introduce archaeological and textual sources of ancient Egypt, investigating topics such as theological promotion, projections of power, social structure, urban design, interregional diplomacy, and historical legacy during the inception, height, and aftermath of this highly enigmatic period. Students with or without prior background are equally encouraged.
Same as: AFRICAAM 58A, AFRICAST 58, ARCHLGY 58

CLASSICS 60. Reading Aristotle's Ethics: Happiness and the Virtues of Character. 1 Unit.
How should I live? What should I do to live a happy life? And what does happiness have to do with ethics? What might the best human life look like? What kind of friendships contribute to happiness--and to justice? In the Nicomachean Ethics Aristotle offers us a vision of human flourishing that has nurtured thinkers, secular and religious, for thousands of years and continues to shape political and ethical thinking. In this study group we read and reflect upon the first few books of the Ethics, on happiness and the virtues of character, slowly and carefully. Each week you will be expected to read a short, but dense, section of the Ethics, and to share responsibility for asking questions.
Same as: SLE 60

CLASSICS 61. Reading Aristotle's Ethics, Part 2. 1 Unit.
In this course we continue our reading of Aristotle's Nicomachean Ethics, moving from the individual moral virtues to his formative discussion of justice and equity. We then move on to Aristotle's development of the intellectual virtues and their relation to ethics. Much of our attention will be focused on friendship, without which, as Aristotle says, no one would wish to live, and which is central to virtue and happiness. At the same time we strive to develop our capacity for friendship in ourselves, using Aristotle's discussion to help us reflect on our own lives.
Same as: SLE 61

CLASSICS 76. Global History: The Ancient World. 3-5 Units.
World history from the origins of humanity to the Black Death. Focuses on the evolution of complex societies, wealth, violence, hierarchy, and large-scale belief systems.
Same as: HISTORY 1A

CLASSICS 81. Ancient Empires: Near East. 4-5 Units.
Why do imperialists conquer people? Why do some people resist while others collaborate? This course tries to answer these questions by looking at some of the world's earliest empires. The main focus is on the expansion of the Assyrian and Persian Empires between 900 and 300 BC and the consequences for the ancient Jews, Egyptians, and Greeks. The main readings come from the Bible, Herodotus, and Assyrian and Persian royal inscriptions, and the course combines historical and archaeological data with social scientific approaches. Weekly participation in a discussion section is required.
Same as: HISTORY 117

CLASSICS 82. The Egyptians. 3-5 Units.
This course traces the emergence and development of the distinctive cultural world of the ancient Egyptians over nearly 4,000 years. Through archaeological and textual evidence, we will investigate the social structures, religious beliefs, and expressive traditions that framed life and death in this extraordinary region. Students with or without prior background are equally encouraged.
Same as: AFRICAAM 30, HISTORY 48, HISTORY 148

CLASSICS 83. The Greeks. 4-5 Units.
250 years ago, for almost the first time in history, a few societies rejected kings who claimed to know what the gods wanted and began moving toward democracy. Only once before had this happened--in ancient Greece. This course asks how the Greeks did this, and what they can teach us today. It uses texts and archaeology to trace the material and military sides of the story as well as cultural developments, and looks at Greek slavery and misogyny as well as their achievements. Weekly participation in a discussion section is required.
Same as: HISTORY 101

CLASSICS 84. The Romans. 3-5 Units.
How did a tiny village create a huge empire and shape the world, and why did it fail? Roman history, imperialism, politics, social life, economic growth, and religious change. Weekly participation in a discussion section is required; enroll in sections on Coursework.
Same as: HISTORY 102A

CLASSICS 88. Origins of History in Greece and Rome. 4-5 Units.
What¿s the history of `History¿? The first ancient historians wrote about commoners and kings, conquest and power¿those who had it, those who wanted it, those without it. Their powerful ways of recounting the past still resonate today and can be harnessed to tell new stories. We will look at how ancients like Herodotus, Thucydides, Tacitus, and Livy turned stories about the past into compelling narratives of loss, growth and decline¿inventing ¿History¿ as we know it. All readings in English.
Same as: HISTORY 114

CLASSICS 92. Introduction to Greek Art and Archaeology. 5 Units.
This course will introduce students to the art and archaeology of Greece and the Greek world from the Neolithic through Early Roman periods. By integrating both historical and current approaches to the archaeology of Greece, this course aims to supplement the typical chronological narrative of the development of Greek material culture with various thematic explorations (e.g. nationalism in archaeology, social complexity, postcolonial approaches), as well as to critically evaluate mechanisms of interpretation in Greek archaeology over time.
Same as: ARCHLGY 92

CLASSICS 93. Pots, People, and Press: Greek Archaeology in the Media. 3-5 Units.
Archaeological discovery has long captured the popular imagination, and the media undoubtedly plays a crucial role in this phenomenon. In the case of Greek archaeology, much of this imagination has been intertwined with the legacies of ancient Greek culture(s) in the construction of modern identities and ideologies, including the concept of ¿Western Civilization.¿ This course explores the intersections between academic research, media narratives, and the social, political, and cultural context of Greek archaeology from the 19th century to the present. Through a diachronic range of case studies, we will engage with a selection of media accounts and representations, alongside scholarly work and commentaries. In doing so, the class will more broadly examine issues surrounding archaeological evidence and interpretation, narrative formation, the reception and appropriation of the past, conceptualizations of race and ethnicity, nationalism and archaeology, and cultural heritage management. No prior knowledge of Greek archaeology is required.
Same as: ARCHLGY 83

CLASSICS 96. The Secret Lives of Statues from Ancient Egypt to Confederate Monuments. 3-5 Units.
Statues, human-shaped sculptures, walk a fine line between being inert matter and living entities. Throughout human existence, humans have recognized that statues are not alive even as they understand that statues are capable of becoming potent allies or enemies. They are capable of engendering profound emotional responses, embodying potent ideas, and co-opting the past in service of the present. However, the same materiality that endows statues with these exceptional capacities also makes them vulnerable to humans intent on acquiring otherwise-expensive materials cheaply, commiting sectarian violence by proxy, and obliterating the material manifestations of others¿ memories.nnIn this course, we will study sixteen (groups of) statues thematically. To do this, we will draw on a wide variety of disciplines, including archaeology, art history, history, law, media studies, museum studies, and religious studies, to articulate how people in diverse places and times have revered and reviled statues precisely because they are uncanny objects that seem to have an all-too-human kind of agency. In so doing, we will gain appreciation for and insight into how and why the statues in our own lives are significant.
Same as: ARCHLGY 96, ARTHIST 104A

CLASSICS 101G. Advanced Greek: Plato. 3-5 Units.
Selections from Plato's Symposium. Review of Greek grammar and syntax with a view to transitioning students from Intermediate Greek to fluent reading of Attic prose. Special attention as well to 5th-century BC political and social context, history of Greek rhetoric, and introduction to Plato's philosophical system. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 101L. Advanced Latin: Livy. 3-5 Units.
Livy's Books I through V recount Rome's greatest characters, myths, and legends from the city's foundation to the sack by the Gauls around 390BCE. This course will examine Livy's account of the early history of Rome; Romulus and Remus, the early kings, the fall of the Tarquins, the founding of the Republic, and the early wars against the Etruscans, Latins, and Celts in Italy. How did Livy make his narrative exciting and instructive to his readers? What virtues and flaws does Livy give to the men and women of the early republic, and why? We will pay close attention to grammar, vocabulary, and improvement of reading fluency. Classics majors and minors must take for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 102G. Advanced Greek: Aeschylus. 3-5 Units.
As the only extant tragedy from Greek antiquity that features characters who explicitly reflect on their black skin color, Aeschylus' Suppliant Women destabilizes a monolithic definition of alterity. In this tragedy, fifty black Egyptian Greek women transform from frightened maidens into astute performers who force their audience to contend with their perceived differences. While reading this ancient Greek tragedy, students will increase their knowledge of Greek grammar and syntax, become familiar with essential aspects of Greek tragedy, and explore Aeschylus' place within the tragic tradition. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 102L. Advanced Latin: Early Latin. 3-4 Units.
Most of the literature that we read in Latin is from a relatively late period of the language's history. However, Latin-speaking people wrote sophisticated texts hundreds of years before Cicero and Caesar, although much of this early writing has been lost to history. But not all! In this class we will explore the rich remains of Early Latin, with readings that include archaic inscriptions, early Latin prose from Cato the Elder, selections from the comedies of Plautus and Terence, and fragments from Andronius, Naevius, and Ennius, the first known writers of Latin epic poetry. In parallel, we will also explore the history of the Latin language during this early period, emphasizing the historical developments that distinguish Early Latin from Classical Latin, as well as the historical reasons so much early Latin writing was not preserved. Students should be able to read Latin at an Intermediate-to-Advanced level, but no experience with linguistics, Early Latin, or Roman History is expected or required. Classics majors and minors must take course for letter grade. May be repeated for credit with advance approval from the Director of Undergraduate Studies.
Same as: CLASSICS 209L

CLASSICS 103G. Advanced Greek: Lyric Poetry. 3-5 Units.
Invectives, love songs, drinking songs, elegies, and choral odes from 700-500 B.C.E. Readings include Sappho, Alcaeus, Archilochus, Mimnermus, Alcman, Solon, and Pindar. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies. Classics majors and minors must take for a letter grade and may repeat for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 103L. Advanced Latin: Lucan's Pharsalia. 3-5 Units.
In the year 60 CE, Marcus Annaeus Lucanus was a favorite of of the emperor Nero; five years later he was compelled to end his own life as a participant in the Pisonian conspiracy. In these last years of his life, he wrote the 10 books of his likely incomplete Pharsalia, also known as De Bello Civili. This epic looks back over a century to what the author describes not just a civil wars but as bella plus quam civilia. In this class, we will follow Lucan's epic to the extremes of graphic violence in Latin, pitting Roman against Roman, man against snake, and corpse against witch. We will explore Lucan's masterwork against the landscape of the Neronian era and in comparison with other writing of this so-called silver age of Latin literature. Readings will be in the original Latin with the addition of relevant secondary scholarship. We will review questions of grammar and syntax, rhetorical terms, and historical context as needed. Classics majors and minors must take course for letter grade. May be repeated for credit with advance approval from the Director of Undergraduate Studies.

CLASSICS 104A. Latin Syntax I. 4 Units.
Intensive review of Latin syntax. See CLASSICS 206A/B for supplemental courses. Students should take both syntax and semantics in the same quarters. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204A.
Same as: CLASSICS 204A

CLASSICS 104B. Latin Syntax II. 4 Units.
Intensive review of Latin syntax. See CLASSICS 206A/B for supplemental courses. Students should take both syntax and semantics in the same quarters. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204B.
Same as: CLASSICS 204B

CLASSICS 105A. Greek Syntax: Prose Composition. 5 Units.
The goal of this course is to provide a thorough review of Greek syntax, reinforced by reading selected short passages of Attic Greek in some detail, in order to develop a much greater command of the language and to increase reading skills as well as an understanding of the stylistic features of the major prose genres.
Same as: CLASSICS 205A

CLASSICS 110. Gods and Humans in Greek Philosophical Thought. 4-5 Units.
We will examine several key aspects of Greek religion: the Greek conception of the gods; how humans got messages from the gods through oracles, divination, and epiphanies; and the festival of the Eleusinian Mysteries. We will read fragments of Heraclitus and Parmenides, and Plato¿ Apology, Republic 6-7, and Phaedrus to investigate these philosophers¿ new conceptions of gods and humans. What kinds of divinities did the philosophers conceive of? How could a human achieve divine wisdom? To what extent did the philosophers use traditional religious ideas? nnAdvanced undergrads may register.

CLASSICS 112. Introduction to Greek Tragedy: Gods, Heroes, Fate, and Justice. 4 Units.
Gods and heroes, fate and free choice, gender conflict, the justice or injustice of the universe: these are just some of the fundamental human issues that we will explore in about ten of the tragedies of Aeschylus, Sophocles, and Euripides.
Same as: TAPS 167

CLASSICS 115. Virtual Italy: Methods for Historical Data Science. 4-5 Units.
Classical Italy attracted thousands of travelers throughout the 1700s. Referring to their journey as the "Grand Tour," travelers pursued intellectual passions, promoted careers, and satisfied wanderlust, all while collecting antiquities to fill museums and estates back home. What can computational approaches tell us about who traveled, where and why? We will read travel accounts; experiment with parsing; and visualize historical data. Final projects to form credited contributions to the Grand Tour Project, a cutting-edge digital platform. No prior programming experience necessary.
Same as: ENGLISH 115, HISTORY 238C, ITALIAN 115

CLASSICS 116. Human Rights in Comparative and Historical Perspective. 3-5 Units.
This course examines core human rights issues and concepts from a comparative and historical perspective. In the beginning part of the course we will focus on current debates about the universality of human rights norms, considering the foundation of the international human rights regime and claims that it is a product of western colonialism, imperialism, or hegemony. We will then discuss a series of issues where the debates about universality are particularly acute: gender inequality and discrimination, sexual violence, child marriage and forced marriage more generally, and other related topics. We will also consider the way in which issues of gender-based violence arise in the context of internal and international conflicts.
Same as: ETHICSOC 106, HUMRTS 106

CLASSICS 118. Slavery, human trafficking, and the moral order: ancient and modern. 3 Units.
Slavery and trafficking in persons in the Greco-Roman world were legal and ubiquitous; today slavery is illegal in most states and regarded as a grave violation of human rights and as a crime against humanity under international law. In recent trends, human trafficking has been re-conceptualized as a form of "modern day slavery. " Despite more than a century since the success of the abolition movement, slavery and trafficking continue in the 21st century on a global scale. The only book for the course is: Peter Garnsey, Ideas of Slavery from Aristotle to Augustine, Cambridge University Press.
Same as: CLASSICS 218, HUMRTS 109

CLASSICS 121. The Dome: From the Pantheon to the Millennium. 4-5 Units.
This course traces the history of the dome over two millennia, from temples to the gods to Temples of the State, and from cosmic archetype to architectural fetish. The narrative interweaves the themes of the dome as image of the Cosmos, religious icon, national landmark, and political monument. It examines the dome not only as a venue for structural innovation, but also metaphysical geometry and transcendent illusionism.nIndividual case studies will familiarize you with major architects from Hadrian to Richard Rogers and historical milestones from the Dome of the Rock to the Capitol in Washington DC. May be repeat for credit.
Same as: ARTHIST 114A, ARTHIST 314A, CLASSICS 221

CLASSICS 124. Ancient and Modern Medicine. 3-4 Units.
Imagine a world where the Universe has a built-in purpose and point. How would this belief impact man's place in nature? Imagine a world where natural substances have "powers." How might this impact diet and pharmacology? Magical vs. scientific healing: a clear divide? Disease and dehumanization: epilepsy, rabies. Physical and mental health: black bile and melancholy. The ethical and scientific assumptions hidden in medical language and imagery. How ancient medicine and modern medicine (especially alternative medicine) illuminate each other.

CLASSICS 125. The Hindu Epics and the Ethics of Dharma. 4 Units.
The two great Hindu Epics, the Mahabharata and Ramayana, offer a sustained reflection on the nature of virtuous living in the face of insoluble ethical dilemmas. Their treatment of the concept of dharma, understood simultaneously as ethical action and the universal order that upholds the cosmos, lies at the heart of both Gandhian non-violent resistance and communalist interreligious conflict. This course will focus on a reading of selections from the Epics in English translation, supplemented with a consideration of how the texts have been interpreted in South Asian literary history and contemporary politics and public life in India.
Same as: RELIGST 123

CLASSICS 126. The archaeology of death. 3-5 Units.
Death is a universal human experience, but one that evokes a wide range of cultural and material responses. Archaeologists have used mortuary and bioarchaeological evidence to try to understand topics as diverse as paleodemography, human health and disease, social structure and inequalities, ritual, and identity and personhood. As such, the archaeology of death has become a locus for lively debates about archaeological interpretation. Furthermore, the study of human remains and mortuary contexts raises a set of complex ethical and political issues. We will explore these themes using a range of archaeological and anthropological case studies from different times and places.

CLASSICS 128. Europe Before the Romans: Early Complex Societies. 3-5 Units.
This course will provide a broad introduction to theories of change in early complex societies and polities. Over the course of the quarter, we will examine a series of hotly debated theoretical frameworks. From the beginning, you will develop a case study for your final research paper using an appropriate theoretical framework. The course will look at a series of global case studies but will focus specifically on western Europe¿s protohistoric Iron Age (c.800¿100BCE), a period of technological innovation, rich art and cultural expression, rapidly growing connectivity and trade, alongside rapid social and political change.
Same as: ARCHLGY 128

CLASSICS 130. The Grandeur of Epic: Poetry, Narrative, and World from Homer to Evolutionary Biology. 3-5 Units.
Explores the mystery and power of epic. This ancient word, which at its root means "what is spoken," first classified certain traditions of archaic Greek poetry, especially Homer's Iliad and Odyssey. It now appears everywhere from slang to contemporary scientific discourse. Though some might dismiss its proliferation as an accident of everyday speech, the course will take the phenomenon of "epic" seriously, asking what it is about this oldest of genres that continues to inspire our collective imagination. Readings will include works of epic as well as theoretical and philosophical works on narrative, religion, and science. We will read substantial selections from the Iliad, Hesiod's poems, the Hebrew Bible, the Gospels, Charles Darwin's On the Origin of Species, J.R.R. Tolkien's Silmarillion, and Ursula K. Le Guin's A Wizard of Earthsea.

CLASSICS 135. Ekphrasis in Antiquity and Beyond. 3-5 Units.
What is "Ekphrasis"? How was it theorized and practiced in antiquity and what is its appeal in the Renaissance and in modern times? Description, interpretation, and the senses; the relationship between the verbal and the visual in antiquity from Homer to Philostratus ; comparison between ancient and modern practices of ekphrasis.

CLASSICS 136. The Greek Invention of Mathematics. 3-5 Units.
How was mathematics invented? A survey of the main creative ideas of ancient Greek mathematics. Among the issues explored are the axiomatic system of Euclid's Elements, the origins of the calculus in Greek measurements of solids and surfaces, and Archimedes' creation of mathematical physics. We will provide proofs of ancient theorems, and also learn how such theorems are even known today thanks to the recovery of ancient manuscripts.

CLASSICS 138. The Use and Abuse of Prehistory. 3-5 Units.
To borrow Glyn Daniel¿s phrase, the ¿Idea of Prehistory,¿ invokes notions of deep time, human origins, and mysterious monuments. While the origins of prehistoric research in the 19th century were connected to the emerging sciences of geology, evolution, and archaeology, they were just as intertwined with nation-state building, colonialism, and race science. This course examines the development of prehistory through a thematic and critical lens. How have Western conceptualizations of time and writing affected the definition and study of prehistory? What are some of the colonial legacies in both research agendas and museum collections? Do new methods always provide new answers? What role has gender played in prehistoric interpretation? Drawing from case studies in the Mediterranean, the Americas, Europe, and Africa, we will explore various archaeological approaches to prehistory from the late 19th century to the present, as well as how the idea of prehistory itself has evolved, expanded, or been abandoned altogether.
Same as: ANTHRO 131A, ARCHLGY 131

CLASSICS 145. Early Christian Gospels. 4 Units.
An exploration of Christian gospels of the first and second century. Emphasis on the variety of images and interpretations of Jesus and the good news, the broader Hellenistic and Jewish contexts of the gospels, the processes of developing and transmitting gospels, and the creation of the canon. Readings include the Gospel of John, the Gospel of Mark, the Gospel of Thomas, the Gospel of Mary and other canonical and non-canonical gospels.
Same as: RELIGST 132D

CLASSICS 150. Majors Seminar: The Augustan Age. 5 Units.
Required of Classics majors and minors in junior or senior year; students contemplating honors should take this course in junior year. Advanced skills course involving close reading, critical thinking, editing, and writing. In-class and take-home writing and revising exercises. Final paper topic may be on any subject related to Classics. Fulfills WIM requirement for Classics. nOut of the ashes of the Roman Republic, Augustus crafted a new, autocratic regime that survived for centuries¿a transformative moment in European history. How did Augustus establish stability after the turmoil and bloodshed of the 1st century BCE? Why did the Augustan Age produce some of the greatest literary and artistic works in European history? This course will examine the political and social revolution engineered by Augustus and explore monumental achievements such as Virgil¿s Aeneid and the Pantheon.

CLASSICS 151. Ten Things: An Archaeology of Design. 3 Units.
Connections among science, technology, society and culture by examining the design of a prehistoric hand axe, Egyptian pyramid, ancient Greek perfume jar, medieval castle, Wedgewood teapot, Edison's electric light bulb, computer mouse, Sony Walkman, supersonic aircraft, and BMW Mini. Interdisciplinary perspectives include archaeology, cultural anthropology, science studies, history and sociology of technology, cognitive science, and evolutionary psychology.
Same as: ARCHLGY 151

CLASSICS 154. Sailing the Wine-Dark Sea: Maritime Archaeology of the Ancient Mediterranean. 3-5 Units.
Why do we care about shipwrecks? What can sunken sites and abandoned ports tell us about our past? Focusing primarily on the archaeological record of shipwrecks and harbors, along with literary evidence and contemporary theory, this course examines how and why ancient mariners ventured across the "wine-dark seas" of the Mediterranean for travel, warfare, pilgrimage, and especially commerce. We will explore interdisciplinary approaches to the development of maritime contacts and communication from the Bronze Age through the end of Roman era. At the same time, we will engage with practical techniques of maritime archaeology, which allows us to explore the material record first hand.
Same as: ARCHLGY 145

CLASSICS 156. Design of Cities. 3-5 Units.
Long-term, comparative and archaeological view of urban planning and design. Cities are the fastest changing components of the human landscape and are challenging our relationships with nature. They are the historical loci of innovation and change, are cultural hotspots, and present a tremendous challenge through growth, industrial development, the consumption of goods and materials. We will unpack such topics by tracking the genealogy of qualities of life in the ancient Near Eastern city states and those of Graeco-Roman antiquity, with reference also to prehistoric built environments and cities in the Indus Valley and through the Americas. The class takes an explicitly human-centered view of urban design and one that emphasizes long term processes.
Same as: ARCHLGY 156, CLASSICS 256

CLASSICS 157. The Archaeology of Cyprus. 3-5 Units.
This seminar course introduces students to the island of Cyprus in the eastern Mediterranean and its archaeology, from the origins of human occupation to the end of antiquity. Readings and discussions of material culture and texts will explore the history and practice of Cypriot archaeology in relation to those of Greece and the Near East. Key themes will include: islands and insularity, continuity vs. change, sex and identity, the rise of the state, regionalism, and imperial conquest. Suitable for both graduate and undergraduate students.
Same as: CLASSICS 257

CLASSICS 158. Theories of the Image: Byzantium, Islam and the Latin West. 5 Units.
This seminar explores the role of images in the three major powers of the medieval Mediterranean: the Umayyads, the Carolingians, and the Byzantines. For each the definition of an image- sura, imago, or eikon respectively-became an important means of establishing religious identity and a fault-line between distinct cultural traditions. This course troubles the identification of image with figural representation and presents instead a performative paradigm where chant or recitation are treated as images. As such, students will be able to see the connections between medieval image theory and contemporary art practices such as installation.
Same as: ARTHIST 209C, ARTHIST 409, CLASSICS 258, REES 409

CLASSICS 159. Appropriations of Greek Art. 4-5 Units.
Upper division seminar. The history of the appropriation of Greek art by Rome, the Renaissance, Lord Elgin, and Manet. Enrollment limited to 6. Prerequisite: ARTHIST 102 or consent of instructor.

CLASSICS 160. Design Thinking for the Creative Humanities. 3-5 Units.
This class introduces Design Thinking to students in the Humanities and Social Sciences. Under a growth mindset of creative exploration and experiment, we will share a tool kit drawn from design thinking and the arts to develop our imaginative capacity to innovate. The standpoint is that creative imagination is not a property of the artistic or design genius but comprises skills and competencies that can be easily learned and adapted to all sorts of circumstances ¿ personal, organizational, business, community.
Same as: CLASSICS 260

CLASSICS 161. Introduction to Greek Art I: The Archaic Period. 4 Units.
The class considers the development of Greek art from 1000-480 and poses the question, how Greek was Greek art? In the beginning, as Greece emerges from 200 years of Dark Ages, their art is cautious, conservative and more abstract than life-like, closer to Calder than Michelangelo. While Homer describes the rippling muscles (and egos) of Bronze Age heroes, his fellow painters and sculptors prefer abstraction. This changes in the 7th century, when travel to and trade with the Near East transform Greek culture. What had been an insular society becomes cosmopolitan, enriched by the sophisticated artistic traditions of lands beyond the Aegean "frog pond." Imported Near Eastern bronzes and ivories awaken Greek artists to a wider range of subjects, techniques and ambitions. Later in the century, Greeks in Egypt learn to quarry and carve hard stone from Egyptian masters. Throughout the 6th century, Greek artists absorb what they had borrowed, compete with one another, defy their teachers, test the tolerance of the gods and eventually produce works of art that speak with a Greek accent. By the end of the archaic period, images of gods and mortals bear little trace of alien influence or imprint, yet without the contributions of Egypt and the Near East, Greek art as we know it would have been unthinkable.
Same as: ARTHIST 101

CLASSICS 162. Introduction to Greek Art II: The Classical Period. 4 Units.
The class begins with the art, architecture and political ideals of Periclean Athens, from the emergence of the city as the political and cultural center of Greece in 450 to its defeat in the Peloponnesian War in 404. It then considers how the Athenians (shell-shocked from war and three outbreaks of plague) and the rest of 4th century Greece rebuild their lives and the monuments that define them. Earlier 5th century traditions endure, with subtle changes, in the work of sculptors such as Kephisodotos. Less subtle are the outlook and output of his son Praxiteles. In collaboration with Phryne, his muse and mistress, Praxiteles challenged the canons and constraints of the past with the first female nude in the history of Greek sculpture. His gender-bending gods and men were equally audacious, their shiny surfaces reflecting Plato's discussion of Eros and androgyny. Scopas was also a man of his time, but pursued different interests. Drawn to the interior lives of men and woman, his tormented Trojan War heroes and victims are still scarred by memories of the Peloponnesian War, and a world away from the serene faces of the Parthenon. His Maenad, who has left this world for another, belongs to the same years as Euripides' Bacchae and, at the same time, anticipates the torsion and turbulence of Bernini and the Italian Baroque. The history and visual culture of these years remind us that we are not alone, that the Greeks grappled as we do with the inevitability and consequences of war, disease and inner daemons.
Same as: ARTHIST 102

CLASSICS 163. Artists, Athletes, Courtesans and Crooks. 5 Units.
The seminar examines a range of topics devoted to the makers of Greek art and artifacts, the men and women who used them in life and the afterlife, and the miscreants - from Lord Elgin to contemporary tomb-looters and dealers - whose deeds have damaged, deracinated and desecrated temples, sculptures and grave goods. Readings include ancient texts in translation, books and articles by classicists and art historians, legal texts and lively page-turners. Students will discuss weekly readings, give brief slide lectures and a final presentation on a topic of their choice, which need not be confined to the ancient Mediterranean.
Same as: ARTHIST 203

CLASSICS 165. Religions of Ancient Eurasia. 3-5 Units.
This course will explore archaeological evidence for the ritual and religions of Ancient Eurasia, including Greco-Roman polytheism, early Christianity, and early Buddhism. Each week, we will discuss the most significant themes, methods, and approaches that archaeologists are now using to study religious beliefs and rituals. Examples will focus on the everyday social, material, and symbolic aspects of religion. The course will also consider the role of archaeological heritage in religious conflicts today and the ethical dilemmas of archaeology in the 21st century.
Same as: ARCHLGY 109

CLASSICS 166. The Body in Roman Art. 4-5 Units.
(Formerly CLASSART 105.) Ancient and modern ideas about the body as ideal and site of lived experience. Themes include representation, portrayal, power, metamorphosis, and replication. Works that exemplify Roman ideas of heroism and power versus works portraying nude women, erotic youth, preserved corpses, and suffering enemies. Recommended: background in ancient Mediterranean art, archaeology, history, or literature. May be repeated for credit.
Same as: ARCHLGY 166

CLASSICS 167. Archaeology of Roman Slavery. 4-5 Units.
The archaeology of Roman slavery embodies a paradox: slavery was ubiquitous in Roman society but did not leave distinct material traces that archaeologists can easily identify. Explore that paradox by examining ancient writings on Roman slavery in conjunction with built spaces, visual images, and artifacts. Discuss more recent slave societies for purposes of comparison and contrast. Learn to analyze different kinds of historical and archaeological evidence, how to reconstruct social and spatial dynamics, and how ancient Roman slavery and society worked.

CLASSICS 168. Engineering the Roman Empire. 3-5 Units.
Enter the mind, the drafting room, and the building site of the Roman architects and engineers whose monumental projects impressed ancient and modern spectators alike. This class explores the interrelated aesthetics and mechanics of construction that led to one of the most extensive building programs undertaken by a pre-modern state. Through case studies ranging from columns, domes and obelisks to road networks, machines and landscape modification, we investigate the materials, methods, and knowledge behind Roman innovation, and the role of designed space in communicating imperial identity.
Same as: ARCHLGY 118

CLASSICS 169. Archaeology of Britannia. 3-4 Units.
Life in the Roman Empire: this course is a broad introduction to the archaeology of one of the best known provinces of the empire.
Same as: ARCHLGY 169

CLASSICS 170. History of Archaeological Thought. 5 Units.
Introduction to the history of archaeology and the forms that the discipline takes today, emphasizing developments and debates over the past five decades. Historical overview of culture, historical, processual and post-processual archaeology, and topics that illustrate the differences and similarities in these theoretical approaches.
Same as: ARCHLGY 103

CLASSICS 171. Byzantine Art and Architecture, 300-1453 C.E.. 5 Units.
This course explores the art and architecture of the Eastern Mediterranean: Constantinople, Jerusalem, Alexandria, Antioch, Damascus, Thessaloniki, and Palermo, 4th-15th centuries. Applying an innovative approach, we will probe questions of phenomenology and aesthetics, focusing our discussion on the performance and appearance of spaces and objects in the changing diurnal light, in the glitter of mosaics and in the mirror reflection and translucency of marble.
Same as: ARTHIST 106, ARTHIST 306

CLASSICS 173. Hagia Sophia. 5 Units.
This seminar uncovers the aesthetic principles and spiritual operations at work in Hagia Sophia, the church dedicated to Holy Wisdom in Constantinople. Rather than a static and inert structure, the Great Church emerges as a material body that comes to life when the morning or evening light resurrects the glitter of its gold mosaics and when the singing of human voices activates the reverberant and enveloping sound of its vast interior. Drawing on art and architectural history, liturgy, musicology, and acoustics, this course explores the Byzantine paradigm of animation arguing that it is manifested in the visual and sonic mirroring, in the chiastic structure of the psalmody, and in the prosody of the sung poetry. Together these elements orchestrate a multi-sensory experience that has the potential to destabilize the divide between real and oneiric, placing the faithful in a space in between terrestrial and celestial. A short film on aesthetics and samples of Byzantine chant digitally imprinted with the acoustics of Hagia Sophia are developed as integral segments of this research; they offer a chance for the student to transcend the limits of textual analysis and experience the temporal dimension of this process of animation of the inert.
Same as: ARTHIST 208, ARTHIST 408, CLASSICS 273

CLASSICS 177. Describing and Identifying Ancient Coins. 3-5 Units.
In numismatics, as in all other disciplines dealing with documentary sources of the ancient world (like epigraphy and papyrology), it is essential to work hands-on with the primary material. This course, an optional accompaniment to the graduate seminar in ancient numismatics, will focus on practical work with ancient coins from the collection at the Cantor Arts Center. students will learn how to describe and identify ancient coins and how to properly catalogue and classify them. A special focus will be on the identification of fakes. Participants will be trained to use the main reference works on ancient coinages in the Frank L. Kovacs library, recently donated to Stanford University.
Same as: CLASSICS 277

CLASSICS 178. Ancient Greek Political Thought. 3-5 Units.
This class traces some of the intellectual roots of modern political thought to authors of classical antiquity, such as Herodotus, Thucydides, Plato, Xenophon, and Aristotle. We will read portions of their work, in translation, as well as discuss the historical background. Topics will include: political duty, citizenship, and leadership; the origins and rise of Athenian direct democracy; the development of Greek law, constitutional change, and responses to civic strife and civil war.

CLASSICS 180. Introduction to Coptic I. 1-5 Unit.
For graduate students and advanced undergraduates. Introductory grammar of Sahidic Coptic. Recommended: knowledge of other ancient languages. Enrollment by permission of instructor.
Same as: CLASSICS 280

CLASSICS 181. Classical Seminar: Origins of Political Thought. 3-5 Units.
Political philosophy in classical antiquity, centered on reading canonical works of Thucydides, Plato, Aristotle against other texts and against the political and historical background. Topics include: interdependence, legitimacy, justice; political obligation, citizenship, and leadership; origins and development of democracy; law, civic strife, and constitutional change.
Same as: CLASSICS 381, ETHICSOC 130A, PHIL 176A, PHIL 276A, POLISCI 230A, POLISCI 330A

CLASSICS 184. Ancient and Modern Slavery. 3-5 Units.
The ancient Greeks and Roman created the largest and most durable slave system in world history. It formed one of the foundations of classical civilization. While cruelty and exploitation were ever-present features, ancient slavery was not race-based and many slaves came to be freed and fully integrated into society. We will investigate this complex institution from a comparative perspective and in the context of the experience of modern colonial slavery.

CLASSICS 185. Reading the Archimedes Palimpsest. 3-5 Units.
In this course we learn to read Medieval Greek manuscripts, concentrating on the most exciting of them all: the Archimedes Palimpsest. We begin by learning the Greek mathematical language, through a brief reading of Euclid. Following that, we learn how to read Euclid from manuscript and, following that, we proceed to read the Archimedes palimpsest itself. Course requires one year of Greek.

CLASSICS 188. Greek Philosophy on Poetry and the Arts. 3-5 Units.
Focus on Plato and Aristotle in English translations; detailed interpretation of both the well-known and the less-known works of the two philosophers on the topic. How their ideas about poetry and the arts were reinterpreted and sometimes misinterpreted by influential modern thinkers. Undergraduate course for juniors and seniors.

CLASSICS 194. Greece and Rome: A new model of antiquity. 3-5 Units.
Join archaeologist Michael Shanks in a tour through more than a thousand years of history, 700 BCE to 450 CE, debunking a host of myths and misconceptions about Graeco-Roman antiquity and offering a fresh view of what was driving the motor of ancient history. Drawing on new approaches that have hardly escaped academic journals and seminar rooms, we will avoid the plot of the well-worn stories and focus on the way the ancient world worked around the key concern of membership ¿ who belonged to civic community and who didn¿t, on what grounds, and with what consequences. The class will take you back to the origins of city life in the Near East, to the princely societies of Bronze Age Europe to show how the scene was set for the success of the city states of the Mediterranean, and how important it is to maintain a big perspective on Greece and Rome. Not afraid to offer critique of orthodoxy, we will share alternative views of familiar and unfamiliar features of antiquity, in the arts and culture, the likes of poetry and portraiture, philosophy and religious institutions, and in politics, including misunderstandings of Athenian democracy and Roman military might. You will come away from the class with a new view of antiquity and why we should still be fascinated by its relevance to today. Advanced undergraduates are welcome to register.

CLASSICS 197. Aristotle's Logic. 3-5 Units.
In this seminar we read through Aristotle's Prior Analytics, paying close attention to the relation between Aristotle's logic to Greek mathematics, and to its place within Aristotle's overall philosophy. Knowledge of Greek is not required. Open to advanced undergraduate students.
Same as: PHIL 347

CLASSICS 198. Directed Readings. 1-15 Unit.
(Formerly CLASSGEN 160.) May be repeated for credit.
Same as: Undergraduate

CLASSICS 199. Undergraduate Thesis: Senior Research. 1-10 Unit.
(Formerly CLASSGEN 199.) May be repeated for credit.

CLASSICS 200G. Special Topics: Greek Magic Texts. 4-5 Units.
This is a graduate level survey of magic and magic practices in Greek literary sources. We will read primary sources discussing magic, witchcraft, erotic spells, and ghosts from Herodotus through Lucian.

CLASSICS 201G. Survey of Greek Literature: Archaic Greek. 3-5 Units.
Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

CLASSICS 201L. Latin Core I: Catiline. 3-5 Units.
In-depth reading (in selection or parts) of Cicero's Catilinarians, Pro Caelio, letters, the Rhetorica ad Herennium, and Sallust's Bellum Catilinae. In class we'll translate and analyze these texts, reviewing grammatical issues as needed and concentrating on elements of style. One consistent conceptual interest will be in the persona of Catiline. The philological commentaries by A.R. Dyck (In Cat.), R.G. Austin (Pro Cael.), and J.T. Ramsey (BC) will be our guides in our detailed reading. Participants will become familiar with these key literary works, their respective genres, and the significance of rhetoric; they will deepen their understanding of different prose styles; and they will sharpen their Latin translation skills.

CLASSICS 201LA. Survey of Latin Literature: Special Topics. 3-5 Units.
One-year sequence focusing on the origins, development, and interaction of Latin literature, history, and philosophy. Greek and Latin material taught in alternate years. Focus is on translation, textual criticism, genre, the role of Greece in shaping Roman literature, and oral versus written discourse.

CLASSICS 202G. Survey of Greek Literature: Classical Greek. 3-5 Units.
Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

CLASSICS 202GB. Survey of Greek Literature: Special Topics. 3-5 Units.
Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

CLASSICS 202L. Latin Core II: Age of Nero. 3-5 Units.
In-depth reading of a major poet or a themed selection of poetry, e.g. Vergil, Horace or Ovid. Courses may be theme-based, e.g. Aeneas in Vergil and Ovid, or genre-based, combining representative selections of epic, elegy or satire from various authors. Goals will be to acquire detailed knowledge of selected literary works and genres, become familiar with key scholarly debates, and sharpen translation skills by focused reading in the same or similar styles. Students will be responsible for an agreed amount of Latin reading each week, with the intention that less proficient readers especially will ramp up over the course of the term towards increased fluency. Most class time should be devoted to Latin translation and stylistic analysis; short tests, examinations and written assignments will reflect these goals. Assessment will be in the form of two midterms plus a final examination, with a view to the Reading List examination.

CLASSICS 203G. Survey of Greek Literature: Hellenistic and Late Greek. 3-5 Units.
Required two-year sequence focusing on the origins, development, and interaction of Greek and Latin literature, history, and philosophy. Greek and Latin material taught in alternate years.

CLASSICS 203L. Latin Core III: History of Literature. 3-5 Units.
Selected coverage of the translation/general reading list, with readings chosen so as to broaden experience beyond Core I-II, and to plac texts from those courses in a broader frame. Overall, this course will help prepare students for translation and general examinations, though naturally it can only gesture in that direction: full preparation is the student's responsibility. Since the aim of Core III will be to place Latin literature in a broader historical context, readings from overviews such as G.B. Conte, Latin Literature: a history and Michael von Albrecht's A History of Roman Literature will be useful. The course will also be wider in scope than Latin Core I-II, and for the sake of efficiency, will be organized by genre, with particular emphasis on Comedy, Satire, and the Novel. Philological commentaries by D. Christenson (Pl. Amph.), S. M. Braund (Juv.), and M. Smith (Petr.) will provide our major reading, along with shorter selections from Terence, Horace, and Apuleius. Course readings will also include some key scholarly works, in order to help students reach a high-level overview of Latin literary history. Limited class time will be devoted to Latin translation and stylistic analysis; discussion will instead emphasize historical developments. Course assessments will include regular writing assignments and several exams, with a view to preparing students for the Latin Literature examination.

CLASSICS 204A. Latin Syntax I. 4 Units.
Intensive review of Latin syntax. See CLASSICS 206A/B for supplemental courses. Students should take both syntax and semantics in the same quarters. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204A.
Same as: CLASSICS 104A

CLASSICS 204B. Latin Syntax II. 4 Units.
Intensive review of Latin syntax. See CLASSICS 206A/B for supplemental courses. Students should take both syntax and semantics in the same quarters. Prerequisite for undergraduates: three years of Latin. First-year graduate students register for CLASSICS 204B.
Same as: CLASSICS 104B

CLASSICS 205A. Greek Syntax: Prose Composition. 5 Units.
The goal of this course is to provide a thorough review of Greek syntax, reinforced by reading selected short passages of Attic Greek in some detail, in order to develop a much greater command of the language and to increase reading skills as well as an understanding of the stylistic features of the major prose genres.
Same as: CLASSICS 105A

CLASSICS 206A. The Semantics of Grammar I. 2 Units.
Some theoretical linguistics for Classics students, particularly Latin teachers. Concentrates on the meaning of the inflectional categories. 206A: Sets and functions, Tense, Aspect, Argument Structure, Location. 206B: Quantification, Plurality, Modification, Negation, Modality.

CLASSICS 206B. The Semantics of Grammar II. 2 Units.
Some theoretical linguistics for Classics students, particularly Latin teachers. Concentrates on the meaning of the inflectional categories. 206A: Sets and functions, Tense, Aspect, Argument Structure, Location. 206B: Quantification, Plurality, Modification, Negation, Modality.

CLASSICS 207L. The Pastoral in Post-Classical Literature. 1 Unit.
For modern readers, the words pastoral and bucolic evoke picturesque scenes of pastureland and flocks of sheep an Arcadian paradise first envisaged by the classical poets Theocritus and Virgil. This weekly reading group traces the long legacy of pastoral poetry in post-classical Latin literature, including the works of Dante, Petrarch, Boccaccio, Sannazaro, and Milton. Through the songs of their shepherds, we will rediscover the pastoral landscape as a site of intergenerational conflict between poets from antiquity to the Renaissance. All readings will be done in the original Latin. Prerequisite: at least one full year of Latin or permission of instructor. Course may be taken independently or as an optional extra weekly session of CLASSICS 102L Advanced Latin: Virgil's Eclogues and Georgics (in the latter case, please register for CLASSICS 102L).

CLASSICS 208L. Latin 400-1700 CE. 3-5 Units.
Readings in later Latin, drawing on the vast bodies of texts from the late antique, medieval and early modern periods. Each week students will prepare selections in advance of class meetings; class time will be devoted to translation and discussion. Students taking this course will gain exposure to a wide range of later Latin texts; hone translation skills; and develop an awareness of the grammatical and stylistic features of post-classical Latin. The course is aimed both at classical Latinists seeking to broaden their reading experience and at medievalists and early modernists seeking to consolidate their Latin language skills. May be repeat for credit.nnPrior experience in Latin is required, preferably CLASSICS 11L. Equivalent accepted. Classics majors and minors may repeat for credit with advance approval from the Director of Undergraduate Studies. Does not fulfill the language requirement in Classical Studies track.
Same as: CLASSICS 6L, RELIGST 173X

CLASSICS 209L. Advanced Latin: Early Latin. 3-4 Units.
Most of the literature that we read in Latin is from a relatively late period of the language's history. However, Latin-speaking people wrote sophisticated texts hundreds of years before Cicero and Caesar, although much of this early writing has been lost to history. But not all! In this class we will explore the rich remains of Early Latin, with readings that include archaic inscriptions, early Latin prose from Cato the Elder, selections from the comedies of Plautus and Terence, and fragments from Andronius, Naevius, and Ennius, the first known writers of Latin epic poetry. In parallel, we will also explore the history of the Latin language during this early period, emphasizing the historical developments that distinguish Early Latin from Classical Latin, as well as the historical reasons so much early Latin writing was not preserved. Students should be able to read Latin at an Intermediate-to-Advanced level, but no experience with linguistics, Early Latin, or Roman History is expected or required. Classics majors and minors must take course for letter grade. May be repeated for credit with advance approval from the Director of Undergraduate Studies.
Same as: CLASSICS 102L

CLASSICS 210. Latin Prose Composition. 5 Units.
Latin Prose Composition pursues two goals: to help students consolidate their knowledge of Latin syntax by way of translating English sentences and (short) passages into Ciceronian Latin; and to help them appreciate differences in style by way of imitating the styles of different authors and periods, working within various subject-areas and genres. To these ends we will study selected grammatical problems, read (longer) passages in Latin (for the first half of the term, this reading will largely consist of Cicero¿s Pro Marcello), reserving particular attention for stylistics. Students will have to submit written translations from English into Latin every week; during the term¿s final third, they should expect to be working on longer compositions too (around 150 words in length).

CLASSICS 212. Introduction to Latin Epigraphy. 2-3 Units.
(Formerly CLASSGEN 219.) How to engage with epigraphic evidence through translation and contextualization of inscriptions. The materiality of inscriptions, geographical variation, and current scholarly debates in scholarship. How to use this evidence in research.

CLASSICS 213. Proseminar: Documentary Papyrology. 3-5 Units.
The focus will be on documentary papyrology. Students will be introduced to the basics of the discipline.

CLASSICS 214. Proseminar: Ancient Numismatics. 3-5 Units.
Graduate proseminar. Introductory overview of the heterogeneous coinages of antiquity, from the earliest coins of the Mediterranean to classical and Hellenistic Greek coins, Roman Republican, Imperial and provincial coinages as well as various ancient Oriental coinages. Topics include: numismatic terminology; techniques of coin production in antiquity; numismatic methodology (die studies; hoard studies; metrological analyses); quantifying coin production and ancient financial history; coins vs. other forms of money in antiquity; the study of ancient coinages in the Early Modern world. Students are expected to prepare talks on specific topics to be agreed upon. Required for ancient history graduate students; others by consent of instructor.

CLASSICS 215. Paleography of Medieval and Early Modern Manuscripts. 3-5 Units.
Introductory course in the history of writing and of the book, from the late antique period until the advent of printing. Opportunity to learn to read and interpret medieval manuscripts through hands-on examination of original materials in Special Collections of Stanford Libraries as well as through digital images. Offers critical training in the reading of manuscripts for students from departments as diverse as Classics, History, Philosophy, Religious Studies, English, and the Division of Languages Cultures and Literatures.
Same as: DLCL 209, HISTORY 309G, RELIGST 204

CLASSICS 216. Advanced Paleography. 5 Units.
This course will train students in the transcription and editing of original Medieval and Early Modern textual materials from c. 1000 to 1600, written principally in Latin and English (but other European languages are possible, too). Students will hone their archival skills, learning how to describe, read and present a range of manuscripts and single-leaf documents, before turning their hand to critical interpretation and editing. Students, who must already have experience of working with early archival materials, will focus on the full publication of one individual fragment or document as formal assessment.
Same as: HISTORY 315, RELIGST 329X

CLASSICS 218. Slavery, human trafficking, and the moral order: ancient and modern. 3 Units.
Slavery and trafficking in persons in the Greco-Roman world were legal and ubiquitous; today slavery is illegal in most states and regarded as a grave violation of human rights and as a crime against humanity under international law. In recent trends, human trafficking has been re-conceptualized as a form of "modern day slavery. " Despite more than a century since the success of the abolition movement, slavery and trafficking continue in the 21st century on a global scale. The only book for the course is: Peter Garnsey, Ideas of Slavery from Aristotle to Augustine, Cambridge University Press.
Same as: CLASSICS 118, HUMRTS 109

CLASSICS 219. Methods and approaches for ancient historians. 3-5 Units.
The interests and evidence used by classical historians have evolved over the past 50 years from a discipline based largely on literary texts and interested in political and military history. In recent decades interest have shifted to include a heavier emphasis on economic, social and cultural history encompassing issues of gender, cultural representation and identity, and economic performance. Whereas the traditional historiography of the earlier 20th c largely coincided with our elite male-authored texts, the newer interests require different types of evidence and analytic skills. This proseminar offers a very brief exposure to a wide range of approaches and evidence, including demography, numismatics, material culture, epigraphy, law, and digital tools. The expectation is that you will identify those that you will need for your research and will pursue them in future coursework or summer workshops.

CLASSICS 220. Pedagogy Workshop for Language Teaching. 1 Unit.
The primary goal of the course is to prepare students to teach elementary and secondary languages, both at Stanford and at other institutions. Much of the pedagogical material discussed will be applicable to other kinds of Classics teaching, but language instruction will be the focus. Secondary goals are to prepare students for pedagogy-related questions as they enter the job market, and to introduce pedagogy-facing career options. Course discussions will range broadly from ethical and philosophical questions about pedagogy to practical and logistical issues specific to graduate teaching. Readings, class visits, and in-class demonstrations will inform meeting discussions. The only requirement for enrolled students is full and engaged participation each week.This course is intended for Classics PhD students only.

CLASSICS 221. The Dome: From the Pantheon to the Millennium. 4-5 Units.
This course traces the history of the dome over two millennia, from temples to the gods to Temples of the State, and from cosmic archetype to architectural fetish. The narrative interweaves the themes of the dome as image of the Cosmos, religious icon, national landmark, and political monument. It examines the dome not only as a venue for structural innovation, but also metaphysical geometry and transcendent illusionism.nIndividual case studies will familiarize you with major architects from Hadrian to Richard Rogers and historical milestones from the Dome of the Rock to the Capitol in Washington DC. May be repeat for credit.
Same as: ARTHIST 114A, ARTHIST 314A, CLASSICS 121

CLASSICS 244. Classical Seminar: Rethinking Classics. 4-5 Units.
Literary and philosophical texts from Antiquity (including Homer, the Greek tragedians, Plato, Aristotle, Virgil, and Augustine). In each case, we will examine the cultural contexts in which each text was composed (e.g. political regimes and ideologies; attitudes towards gender and sexuality; hierarchies of class and status; discourses on "barbarians" and resident aliens). We will study various theoretical approaches to these books in an effort to "rethink" these texts in the 21st century.
Same as: DLCL 321

CLASSICS 256. Design of Cities. 3-5 Units.
Long-term, comparative and archaeological view of urban planning and design. Cities are the fastest changing components of the human landscape and are challenging our relationships with nature. They are the historical loci of innovation and change, are cultural hotspots, and present a tremendous challenge through growth, industrial development, the consumption of goods and materials. We will unpack such topics by tracking the genealogy of qualities of life in the ancient Near Eastern city states and those of Graeco-Roman antiquity, with reference also to prehistoric built environments and cities in the Indus Valley and through the Americas. The class takes an explicitly human-centered view of urban design and one that emphasizes long term processes.
Same as: ARCHLGY 156, CLASSICS 156

CLASSICS 257. The Archaeology of Cyprus. 3-5 Units.
This seminar course introduces students to the island of Cyprus in the eastern Mediterranean and its archaeology, from the origins of human occupation to the end of antiquity. Readings and discussions of material culture and texts will explore the history and practice of Cypriot archaeology in relation to those of Greece and the Near East. Key themes will include: islands and insularity, continuity vs. change, sex and identity, the rise of the state, regionalism, and imperial conquest. Suitable for both graduate and undergraduate students.
Same as: CLASSICS 157

CLASSICS 258. Theories of the Image: Byzantium, Islam and the Latin West. 5 Units.
This seminar explores the role of images in the three major powers of the medieval Mediterranean: the Umayyads, the Carolingians, and the Byzantines. For each the definition of an image- sura, imago, or eikon respectively-became an important means of establishing religious identity and a fault-line between distinct cultural traditions. This course troubles the identification of image with figural representation and presents instead a performative paradigm where chant or recitation are treated as images. As such, students will be able to see the connections between medieval image theory and contemporary art practices such as installation.
Same as: ARTHIST 209C, ARTHIST 409, CLASSICS 158, REES 409

CLASSICS 260. Design Thinking for the Creative Humanities. 3-5 Units.
This class introduces Design Thinking to students in the Humanities and Social Sciences. Under a growth mindset of creative exploration and experiment, we will share a tool kit drawn from design thinking and the arts to develop our imaginative capacity to innovate. The standpoint is that creative imagination is not a property of the artistic or design genius but comprises skills and competencies that can be easily learned and adapted to all sorts of circumstances ¿ personal, organizational, business, community.
Same as: CLASSICS 160

CLASSICS 262. Sex and the Early Church. 4 Units.
Sex and the Early Church examines the ways first- through sixth-century Christians addressed questions regarding human sexuality. We will pay particular attention to the relationship between sexuality and issues of gender, culture, power, and resistance. We will read a Roman gynecological manual, an ancient dating guide, the world's first harlequin romance novels, ancient pornography, early Christian martyrdom accounts, stories of female and male saints, instructions for how to best battle demons, visionary accounts, and monastic rules. These will be supplemented by modern scholarship in classics, early Christian studies, gender studies, queer studies, and the history of sexuality. The purpose of our exploration is not simply to better understand ancient views of gender and sexuality. Rather, this investigation of a society whose sexual system often seems so surprising aims to denaturalize many of our own assumptions concerning gender and sexuality. In the process, we will also examine the ways these first centuries of what eventually became the world's largest religious tradition has profoundly affected the sexual norms of our own time. The seminar assumes no prior knowledge of Judaism, Christianity, the bible, or ancient history.
Same as: FEMGEN 262, RELIGST 262, RELIGST 362

CLASSICS 273. Hagia Sophia. 5 Units.
This seminar uncovers the aesthetic principles and spiritual operations at work in Hagia Sophia, the church dedicated to Holy Wisdom in Constantinople. Rather than a static and inert structure, the Great Church emerges as a material body that comes to life when the morning or evening light resurrects the glitter of its gold mosaics and when the singing of human voices activates the reverberant and enveloping sound of its vast interior. Drawing on art and architectural history, liturgy, musicology, and acoustics, this course explores the Byzantine paradigm of animation arguing that it is manifested in the visual and sonic mirroring, in the chiastic structure of the psalmody, and in the prosody of the sung poetry. Together these elements orchestrate a multi-sensory experience that has the potential to destabilize the divide between real and oneiric, placing the faithful in a space in between terrestrial and celestial. A short film on aesthetics and samples of Byzantine chant digitally imprinted with the acoustics of Hagia Sophia are developed as integral segments of this research; they offer a chance for the student to transcend the limits of textual analysis and experience the temporal dimension of this process of animation of the inert.
Same as: ARTHIST 208, ARTHIST 408, CLASSICS 173

CLASSICS 277. Describing and Identifying Ancient Coins. 3-5 Units.
In numismatics, as in all other disciplines dealing with documentary sources of the ancient world (like epigraphy and papyrology), it is essential to work hands-on with the primary material. This course, an optional accompaniment to the graduate seminar in ancient numismatics, will focus on practical work with ancient coins from the collection at the Cantor Arts Center. students will learn how to describe and identify ancient coins and how to properly catalogue and classify them. A special focus will be on the identification of fakes. Participants will be trained to use the main reference works on ancient coinages in the Frank L. Kovacs library, recently donated to Stanford University.
Same as: CLASSICS 177

CLASSICS 280. Introduction to Coptic I. 1-5 Unit.
For graduate students and advanced undergraduates. Introductory grammar of Sahidic Coptic. Recommended: knowledge of other ancient languages. Enrollment by permission of instructor.
Same as: CLASSICS 180

CLASSICS 297. Dissertation Proposal Preparation. 1-10 Unit.
This course is to be taken twice during the third year of the Classics PhD program. It takes the form of a tutorial based on weekly meetings, leading to the writing of the dissertation prospectus. To register, a student obtain permission from the prospective faculty advisor.

CLASSICS 298. Directed Reading in Classics. 1-15 Unit.
This course is offered for students requiring specialized training in an area not covered by existing courses. To register, a student must obtain permission from the Classics Department and the faculty member who is willing to supervise the reading. This course can be repeated for credit, not to exceed 20 units total.
Same as: Graduate Students

CLASSICS 301. Gateways to Classics. 1 Unit.
(Formerly CLASSGEN 300A.) Focus on skills, methodologies and approaches in the study of Classics topics, with attention both to histories of the disciplines and to new developments. Required for first-year Classics graduate students.

CLASSICS 302. Workshop on Teaching in Classics. 1 Unit.
Introduction to pedagogical theories and techniques relevant to careers as Classics instructors. Classics faculty and advanced graduate students will lead sessions on language instruction, class discussions, assignments and feedback, and course design. Participants will read selections from modern scholarship on teaching and learning and engage in hands-on exercises.

CLASSICS 304. Developing a Classics Dissertation Prospectus. 1-3 Unit.
This workshop concentrates on the development process of writing a successful dissertation proposal and clarifies expectations of the defense process. Includes peer reviews of draft proposals with an aim to present provisional proposals by the end of term. Highly recommended for current third-year Classics Ph.D. students.

CLASSICS 311. The Poetics of the Odyssey. 4-5 Units.
An intensive study of the entire poem, with particular attention given to problems of narrative construction, characterization, diction, and themes. Basic knowledge of Homeric language and versemaking is a prerequisite. Reading will cover about 500 lines of Greek each week in addition to secondary readings (several book chapters or articles).

CLASSICS 315. Aristotle and the Object of Mathematical Reasoning. 4 Units.
The concept of definition plays a central role in Aristotle's treatment of both philosophical and scientific inquiry, as well as explanation. A definition is an account of what something is, and some definitions are used to guide causal inquiry whereas others function as explanatory starting points. In this course we will examine texts from his logic, natural science and metaphysics in order to see what the different kinds of definition are, how they obtained, and how they are capture the nature or essence of a definable object. Particular attention will be given to the role of matter in the definition of the form of a natural substance, state, process or activity. For instance, what role does a specification of physiological processes play in the definitions of emotions such as anger? No knowledge of Greek is required. May be repeat for credit.
Same as: PHIL 318

CLASSICS 318. Aristophanes: Comedy, and Democracy. 4-5 Units.
Intensive study of three plays in Greek (Knights, Peace, Ecclesiazusae) and the rest of the corpus in English, with reference to formal features and a focus on how Old Comedy related to the democratic practices of Athens.

CLASSICS 328. Augustine on Memory, Time, and the Self. 3-5 Units.
(Formerly CLASSGEN 336.) This course examines Augustine's "Confessions" as an autobiographical discourse. It investigates his theories of memory and of time and address different theories of the "self." How does memory and the passing of time affect the notion of the self? Does Augustine's "subjective" theory of time offer an identifiable self? Is the self constructed by narratives? We will locate these issues in their cultural context by investigating Christian and pagan discourses and practices in Late Antiquity.

CLASSICS 330. Satire. 3-5 Units.
The concept of "satire" as a social and literary force will be examined with equal attention given to examples in Greek and Latin. Texts to be analyzed include Greek iambos from the 7th century BC to early Byzantine times; selected portions of Old Comedy; Herodas; Lucian; Lucilius; Horace, Ovid, Juvenal, Persius, and Martial. Particular attention will be paid to authorial self-fashioning; limitations on verbal abuse; and ideas of propriety. All texts to be read in the original languages, with supplementary readings in English and on occasion French, German or Italian.

CLASSICS 331. Words and Things in the History of Classical Scholarship. 4-5 Units.
How have scholars used ancient texts and objects since the revival of the classical tradition? How did antiquarians study and depict objects and relate them to texts and reconstructions of the past? What changed and what stayed the same as humanist scholarship gave way to professional archaeologists, historians, and philologists? Focus is on key works in the history of classics, such as Erasmus and Winckelmann, in their scholarly, cultural, and political contexts, and recent critical trends in intellectual history and the history of disciplines.
Same as: HISTORY 303F

CLASSICS 336. Plato on Eros and Beauty. 3-5 Units.
We read Plato's Symposium and Phaedrus; topics: love, beauty, language (oral and written). Graduate seminar, but open to seniors.
Same as: PHIL 306C

CLASSICS 337. The Second Sophistic. 3-5 Units.
The class will introduce students to the most important aspects of the Second Sophistic: linguistic and literary classicism, rhetoric and performance, typical literary forms. Particular emphasis will be on the social and political background of the movement (Greek identity, social distinction, sophists and gender). For students who wish to take the class for 4 or 5 units, part of the readings will be in the original Greek.

CLASSICS 346. Aristotle's Protrepticus and its Background. 2-4 Units.
In this seminar, we shall read Aristotle's Protrepticus. This is an early work of Aristotle that attempts to turn the reader to a philosophic life and it is by far the least read of his works on ethics. It was only recovered in the 19th century and only in the past 15 years or so do we have a reliable text. Thus studies of it are very much underdeveloped. We shall also read as background some other protreptic works by Plato and the rhetorician Isocrates. 2 unit option is only for Philosophy PhD students beyond the second year.
Same as: PHIL 315

CLASSICS 347. Greek Epigram. 4-5 Units.
Greek verse inscriptions first appeared in the 8th century BCE and have been found throughout the Greek speaking Mediterranean. Their popularity continued until the early Byzantine periods. This course will treat the unique dynamics of epigram as a form that migrated from stone to text, the variety of ways in which its narrative potential was exploited within dedicated poetry books, its reception in Roman literature, and its relationships with other genres (especially epic and elegy).

CLASSICS 348. Philodemus: An Epicurean Thinker on Poetry and Music. 3-5 Units.
We will read and discuss Philodemus¿ surviving works on poetry and music as well as the particularly stimulating debates his influential ideas have inspired in classical scholarship over the last decades. An approach to Epicurean aesthetic thought will serve as introduction and background to the seminar.

CLASSICS 349. Classical Aesthetics and the Shaping of Modern Aesthetic Thought. 3-5 Units.
We will focus on the birth of modern aesthetic thought in 18th and 19th-century Europe and how influential thinkers such as Batteux, Baumgarten, Lessing, Kant, Schiller, Schelling, Hegel, and Nietzsche used Greek and Roman literature, art, and philosophy in shaping their divergent ideas about the essence and role of the aesthetic in human perception and culture. Open to senior undergraduate students, please contact instructor.

CLASSICS 350. History of Classical Languages: Dialects of Ancient Greek. 4-5 Units.
An intensive study of the history of ancient Greek through close reading and analysis of selected literary and epigraphic texts. Attention will be paid to developments in phonology and morphology in the light of reconstructed Common Greek and Indo-European forms. Some secondary readings in French and German. No prior experience in comparative-historical linguistics required.

CLASSICS 352. Doing Business in Classical Antiquity: Mediterranean Exchange. 3-5 Units.
Exchange was everywhere in the Mediterranean, from the individual household to the state. Yet the specific models by which goods changed hands were as varied as the ideas and values that moved alongside them. This seminar will explore theoretical approaches to commercial and non-commercial exchange, drawing primarily on the crucial but uneven bodies of archaeological evidence and historical sources in an effort to investigate the simple but hardly straightforward question of how business was undertaken in the Greco-Roman world.
Same as: ARCHLGY 327

CLASSICS 353. Archaeology: Post-Humanist Agendas. 3-5 Units.
How do people and their artifacts connect? Just what is the subject of archaeological history? A seminar reviewing the latest materialist approaches in archaeology and heritage studies.
Same as: ARCHLGY 353

CLASSICS 355. Landscape & Archaeology. 3-5 Units.
TBD.
Same as: ARCHLGY 355

CLASSICS 356. Mediterranean Regionalism. 3-5 Units.
The ancient world enjoys scholarly traditions of both grand pan-Mediterranean narratives and focused studies of the individual landscapes and peoples who comprise them. Within archaeology, these latter explorations generally rely on expedient geographical designations, modern political boundaries, or survey areas as focused ¿regions¿ for discussion. Defining and interrogating the regions created and experienced by ancient peoples and assembling these into a coherent larger ancient picture proves far more difficult. This seminar explores the varied forms of ancient regionalisms¿from archaeological (architecture, ceramics, coinage, sculpture, etc.) to social (language, religion, etc.)¿and tools for investigating such patterns of human interaction.
Same as: ARCHLGY 356

CLASSICS 358. The Archaeology of Ancient Mediterranean Environments. 4-5 Units.
This seminar examines the interplay between classical archaeologists¿ conceptions and analyses of ancient Mediterranean environments. These themes loom large now - during what might be called the ¿environmental turn¿ of the Anthropocene in the humanities and social sciences - and their increasing resonance provides the basis for critical reflection of the discipline¿s past and future trends. Topics will include: environmental determinism, ¿non-human¿ agency, the role of science in archaeological/historical practice, and the compartmentalization of environment/climate as analytic focus.

CLASSICS 360. Ancient Mediterranean Ports. 3-5 Units.
As ¿nodes of density in the matrix of connectivity¿ (Horden and Purcell 2000), ports provided the fundamental infrastructure for interaction on which ancient Mediterranean societies were built. This seminar explores the interrelated cultural and environmental factors behind maritime landscape development, as well as the comparative and complementary roles played by diverse port facilities in the socioeconomic life of local Mediterranean communities, from massive built harbors to unassuming beachside anchorages.

CLASSICS 363. Race in Greco-Roman Antiquity. 3-5 Units.
This course will investigate representations of black people in ancient Greek and Roman antiquity. In addition to interrogating the conflation of the terms "race" and "blackness" as it applies to this time period, students will learn how to critique the interference of racial ideologies in modern scholarship, and they will cross-examine the role that race and cultural imperialism have played in the formation of the current discipline of Classics. Students will be invited to incorporate materials that they deem crucial into this discussion of skin color in Greco-Roman antiquity. Therefore, this course will benefit greatly from those with a broad spectrum of interests related to this topic.
Same as: CSRE 363

CLASSICS 364. Longinus On the Sublime. 3-5 Units.
What is the sublime and what makes this text one of the most influential works of literary criticism, both ancient and modern? Detailed discussion of the text in the context of ancient debates; its reception in early modern and modern times.

CLASSICS 368. Gender, family, and household in ancient Rome. 4-5 Units.
The family and household were the fundamental units of production and reproduction in the Roman empire, embodying values and cultural assumptions about hierarchies of gender and status. This seminar will investigate the norms and assumptions as well as the demographic and economic realities, using literary, legal, and epigraphic evidence. Special attention will be paid to marginal members of the household, such as female and male slaves, freedwomen, and alumni (foster children).

CLASSICS 369. Mobility and Migration in the Ancient Mediterranean and Beyond. 3-5 Units.
Movement is fundamental to the human experience, and few regions and periods were so strongly defined by movement as the ancient Mediterranean. This seminar explores concepts of mobility and migration through their varied material remains, situating the Classical world in dialog with urgent contemporary issues of decolonization, environmental and economic migration, and border regimes. We consider how differing mobilities affected people¿s lives and informed their views of themselves and others, and how politics of mobility played out within Mediterranean connectivity. The nature and experience of past mobilities and migrations, and growing scholarly interest in their complexity, provide a lens through which to detect and interrogate its historical and ongoing impacts.

CLASSICS 370. Topics in Roman Art and Visual Culture. 3-5 Units.
Ancient Roman visual culture both reflected and actively shaped political, social, cultural and economic situations. Artworks, imagery and things seen played roles in constructing experience, intervening in human relationships, representing meaning, and framing possibility in particular ways. This seminar explores some of the most exciting recent work on Roman art and visual culture. Topics may include viewing and reception, materiality and object relations, framing, and others.

CLASSICS 373. Reception and Literacy in Roman Art. 5 Units.
(Formerly CLASSART 322.) Beyond a focus on artists and patrons: how Roman art was seen and understood by its contemporary viewers. Themes include memory, performance, gender, replication, and constructions of space. Goal is to draft a differentiated model of viewing and literacy, with attention to collective experience, hierarchy, access, and subversion.
Same as: ARTHIST 422

CLASSICS 376. Art, Ekphrasis, and Music in Byzantium and Islam. 5 Units.
Focus is on the interrelation of art, architecture, verbal description, poetry, and music, including the singing of psalms and recitation of the Qur'an. How ekphrasis, the style of writing vividly intended to transform the listeners into spectators, structures the perception of and response to artistic production be it an art object, building, or a musical performance. The role of ekphrasis in animating the inanimate and the importance of breath and spirit, which become manifest in visual, acoustic, olfactory, and gustatory terms. Religious and courtly settings: Hagia Sophia, the Great Palace of Constantinople, the Dome of the Rock, the palaces of Baghdad and Samarra, the mosque at Cordoba, Medinat al-Zahra and the Alhambra. Greek and Arabic writers on ekphrasis in translation, juxtaposing the medieval material to the ancient theories of ekphrasis and modern scholarship.
Same as: ARTHIST 405

CLASSICS 378. Ancient Greek Law and Justice. 3-5 Units.
The development and practice of law and legal procedure in the ancient Greek world, emphasizing the well documented case of classical Athens. Constitutional, criminal, and civil law, approached through analysis of actual laws and speeches by litigants in Athenian courtrooms. Review of a growing scholarship juxtaposing Greek law to other prominent legal traditions and exploring the role of law in Greek social relations, economics, and literature, and its relationship to Greek conceptions of justice.
Same as: POLISCI 337L

CLASSICS 380. Ancient Empires. 4-5 Units.
What is an empire? How did they begin? Why have some imperialists been successful, while others failed dismally? Why do some people collaborate with imperialism, while others resist fiercely? This seminar examines the empires of the ancient East Mediterranean between 800 and 300 BC, focusing on two great imperial powers (Assyria, Persia) and three smaller societies on the receiving end of imperial conquest (Israel, Egypt, Greece), and asking why societies that were successful in resisting imperialism often then tried to create empires themselves. The evidence used comes mainly from epigraphy, the Hebrew Bible, and Herodotus. Some background in ancient history and/or comparative politics preferred.

CLASSICS 381. Classical Seminar: Origins of Political Thought. 3-5 Units.
Political philosophy in classical antiquity, centered on reading canonical works of Thucydides, Plato, Aristotle against other texts and against the political and historical background. Topics include: interdependence, legitimacy, justice; political obligation, citizenship, and leadership; origins and development of democracy; law, civic strife, and constitutional change.
Same as: CLASSICS 181, ETHICSOC 130A, PHIL 176A, PHIL 276A, POLISCI 230A, POLISCI 330A

CLASSICS 382. High-Stakes Politics: Case Studies in Political Philosophy, Institutions, and Interests. 3-5 Units.
Normative political theory combined with positive political theory to better explain how major texts may have responded to and influenced changes in formal and informal institutions. Emphasis is on historical periods in which catastrophic institutional failure was a recent memory or a realistic possibility. Case studies include Greek city-states in the classical period and the northern Atlantic community of the 17th and 18th centuries including upheavals in England and the American Revolutionary era.
Same as: POLISCI 231, POLISCI 331

CLASSICS 384A. Ancient Greek Economic Development. 4-5 Units.
(Formerly CLASSHIS 330A.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.
Same as: POLISCI 430A

CLASSICS 384B. Ancient Greek Economic Development. 1-5 Unit.
(Formerly CLASSHIS 330B.) Drawing on Herodotus and other literary sources, ancient historians have traditionally seen classical Greece as a very poor land. Recent research, however (much of it conducted here at Stanford), suggests that Greece in fact saw substantial economic growth and rising standards of living across the first millennium BCE. This seminar tests the poor Hellas/wealthy Hellas models against literary and archaeological data. We will develop and test hypotheses to explain the rate and pace of economic change in the Greek world.
Same as: POLISCI 430B

CLASSICS 388. Histories of Greece. 3-5 Units.
The first modern historical rewritings of ancient Greece: What made them modern? How did they shape what Greek history is today? Texts and things in the modern recovery of the Greek past; women, colonies, democracy and art as modern subjects of ancient Greek history; modern historiographical methods and theories in their social and cultural contexts; modern historicity and the Greek past. Reading includes ancient historians, Renaissance antiquarians, eighteenth-century Greek histories and Enlightenment writings on ancient Greeks, and current intellectual history scholarship.

CLASSICS 390. Origins of Political Thought. 3-5 Units.
Political philosophy in classical antiquity, focusing on canonical works of Thucydides, Plato, Aristotle, and Cicero. Historical background. Topics include: political obligation, citizenship, and leadership; origins and development of democracy; and law, civic strife, and constitutional change. This course is open to PhD students only. Non-PhD students should enroll in POLISCI 230A/330A (also listed as CLASSICS 181/381, PHIL 176A/276A) Classical Seminar: Origins of Political Thought.
Same as: PHIL 276D, POLISCI 430

CLASSICS 391. Early Empires: Han and Rome. 4-5 Units.
(Formerly CLASSHIS 344.) This course systematically compares the Han Empire and the Roman Empire in order to provide insight into the distinctive features of the empires as a political and social type. Topics examined will include geographic frames, the nature of the ruler, the role of the city, the form and function of military forces, religious aspects, legal codes, structures of kinship, and the relation of these states to the outside world.

CLASSICS 393. Ancient inequalities. 5 Units.
This seminar explores the history and archaeology of socio-economic inequality in the ancient world (broadly defined) from a comparative and transdisciplinary perspective.

CLASSICS 395. The Greeks and the Rational: Deliberation, Strategy, and Choice in Ancient Greek Political Thought. 3-5 Units.
The course explores the role of practical reasoning (instrumental rationality) in the ethical-political works of e.g. Plato and Aristotle, in the historical-political projects of e.g. Herodotus and Thucydides, and in the design of classical Greek institutions. We ask to what degree ancient Greeks shared intuitions concerning the rationality of choice with contemporary decision and game theorists. The Greek tradition recognized the limits of expected utility maximization in predicting or explaining the actual behavior of individuals, groups, and states, and sought to explain divergences from predicted rational behavior. Greek social theorists may, therefore, also have shared some of the intuitions of contemporary behavioral economists. Topics will include individual rationality, rationality of groups and states, the origins of social order, emergence and persistence of monarchical and democratic regimes, conflict and cooperation in interstate relations, competition and cooperation in exchange. Examining the Greek tradition of thought on practical reasoning has some implications for we might think about deliberation and bargaining in contemporary democratic-political, interpersonal-ethical, and interstate contexts. PREREQUISITES: Students in the course are expected to have a background in EITHER classical studies (literature, history, or philosophy), OR Greek political thought (Origins of Political Thought or equivalent) OR in formal/positive political theory. Registration for undergraduates is with permission of instructor (email jober@stanford.edu).
Same as: POLISCI 238R, POLISCI 438R

CLASSICS 396. Humanities+Design: Visualizing the Grand Tour. 4-5 Units.
Study of the eighteenth-century Grand Tour of Italy through visualization tools of the digital age. Critical readings in both visual epistemology and current Grand Tour studies; interrogating the relationship between quantitative and qualitative approaches in digital humanities; what new insights in eighteenth-century British travel to Italy does data visualization offer us? Students will transform traditional texts and documents into digital datasets, developing individual data analysis projects using text mining, data capture and visualization techniques.
Same as: DLCL 396, HISTORY 336E

CLASSICS 399. Dissertation Research in Classics. 1-10 Unit.
This course is elected once a student is ready to begin research for the dissertation, usually shortly after admission to candidacy. To register, a student must obtain permission from the faculty member who is willing to supervise the research.

CLASSICS 801. TGR M.A. Project. 0 Units.
(Formerly CLASSGEN 801.).

CLASSICS 802. TGR Ph.D. Dissertation. 0 Units.
(Formerly CLASSGEN 802.).

COMMUNICATION

Courses offered by the Department of Communication are listed under the subject code COMM on the Stanford Bulletin's ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=COMM&filter-catalognumber-COMM=on).

Stanford's Department of Communication focuses on media in all its forms. The department studies the processes and effects of mass communication: the nature and social role of the various media; their structure, function, and ethics; and their impact on the political system, culture, and society. In this context, it considers not only traditional mass media, such as newspapers, magazines, radio, television, and film, but also information technology, online media, virtual reality, and the Internet. Students are trained as social scientists who can study the media and as potential practitioners in the use of the media in journalism, mass communications, and digital media. The department combines theory and practice and fosters individual research opportunities for its students, employing both quantitative and qualitative approaches.

The Department of Communication engages in research in communication and offers curricula leading to the B.A., M.A., and Ph.D. degrees. The M.A. degree prepares students for a career in journalism. The department also offers current Stanford University undergraduates a coterminal program with an M.A. emphasis in Media Studies. The Ph.D. degree leads to careers in university teaching and research-related specialties.

The John S. Knight Journalism (JSK) Fellowships champions innovators and entrepreneurs from around the world as they reinvent journalism. Each year, the program gives up to 20 fellows the resources to test their ideas for improving the quality of news and information reaching the public, while challenging misinformation and disinformation; holding the powerful accountable; strengthening local news; and fighting bias, intolerance and injustice.

Mission of the Undergraduate Program in Communication

The mission of the undergraduate program in Communication is to expose students to a broad-based understanding of communication theory and research. Students in this major are expected to become familiar with the fundamental concerns, theoretical approaches, and methods of the field, and to acquire advanced knowledge in one or more sub-areas of the discipline. This is accomplished by several levels of study: a core curriculum; intermediate-level electives; and optional internships. Majors also have the opportunity to do advanced research projects. The department is committed to providing students with analytical and critical skills needed for success in graduate programs, professional schools, or immediate career entry.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. an understanding of core knowledge within the discipline of communication.
2. the ability to communicate ideas clearly and persuasively in writing.
3. the ability to analyze a problem and draw correct inferences using qualitative and/or quantitative analysis.
4. the ability to evaluate theory and critique research within the discipline of communication.

Learning Outcomes (Graduate)

The purpose of the master's program is to further develop knowledge and skills in communication and to prepare students for professional careers or doctoral studies. This is achieved through completion of courses in the primary field, as well as related areas, and experience with independent work and specialization.

The Ph.D. is conferred upon candidates who have demonstrated substantial scholarship and the ability to conduct independent research and analysis in communication. Through completion of advanced coursework and rigorous training in research, the doctoral program prepares students to make original contributions to the knowledge of communication and to interpret and present the results of such research.

Admission

Prospective Undergraduates: Applications are available at Undergraduate Admissions (http://admission.stanford.edu).

Prospective Coterminal Students: See the University Registrar's (https://registrar.stanford.edu/students/coterminal-degree-programs/applying-coterm/) web site for information on how to apply.

Prospective Graduate Students: Applications are available online at Graduate Admissions (http://gradadmissions.stanford.edu).

The department requires that applicants to the doctoral program submit verbal, quantitative, and analytic scores from the Graduate Record Examination (GRE). Admission to each graduate degree program is competitive and based on the pool of applicants each year rather than on standard criteria that can be stated in advance. See Communication Department admission procedures and requirements (https://comm.stanford.edu/phd/applications/) for detailed information about admission to the department.

Stanford students who are completing an M.A. degree and who desire entry into the Ph.D. program must file a Graduate Program Authorization Petition (https://registrar.stanford.edu/students/graduate-degree-progress/graduate-program-authorization-petition/) in Axess. Such students are considered alongside all other doctoral applicants.

Bachelor of Arts in Communication

The Department of Communication offers a Bachelor of Arts in Communication. Eligible students may also pursue a Bachelor of Arts with Honors (p. 1183). The department also offers a minor in Communication (p. 1183).

The undergraduate curriculum is intended for liberal arts students who wish to develop an understanding of communication in society, drawing on the perspective of the social sciences. Undergraduates majoring in Communication are expected to become acquainted with the fundamental concerns, theoretical approaches and methods of the field, and to acquire advanced knowledge in one or more of the sub-areas of communication: institutions, processes, and effects.

While the department does not attempt to provide comprehensive practical training at the undergraduate level, the curriculum provides a diverse range of internship opportunities, including professional print journalism, some of which are funded by the department's Rebele Internship Program. The department is committed to providing students with analytical and critical skills for future success in graduate programs, professional schools, or immediate career entry.

Preparation for the Major

Before declaring the major, students must have completed or be concurrently enrolled in one of the following core courses. Completion of any of these courses counts toward major requirements.

		Units
COMM 1	Introduction to Communication	5
or COMM 1B	Media, Culture, and Society	
COMM 106	Communication Research Methods	5
COMM 108	Media Processes and Effects	5

How to Declare the Major in Communication

Students interested in declaring the major should apply via Axess and meet with the student services administrator in Building 120, Room 110A, during scheduled office hours.

Degree Requirements

The major is structured to provide several levels of study: a core curriculum intended to expose students to a broad-based understanding of communication theory and research, and a number of intermediate-level options and electives. Majors also have the opportunity to do advanced research in the form of an honors thesis.

To be recommended for the B.A. degree in Communication, the student must complete at least 60 units (approximately 12 courses) in the department. No more than 10 units of course work outside of the department or transfer credit may be applied to meet department requirements.

Communication majors must receive a letter grade for all Communication courses unless they are offered only for satisfactory/no credit (S/NC), and must maintain a grade point average (GPA) of 2.0 (C) in courses towards the major. Only courses with a grade of 'C-' or above count towards the major. Therefore, majors who receive a grade of 'D+' or below in one of the core courses must repeat the course.

Course Requirements

Core Courses and Statistics Requirement

All undergraduate majors are required to complete a set of core communication courses.

The department also requires completion of or concurrent registration in an introductory statistics course (STATS 60 Introduction to Statistical Methods: Precalculus) when registering for COMM 106 Communication Research Methods in preparation for courses in methodology and advanced courses in communication processes and effects. It is recommended that this be done as soon as possible so as not to prevent registration in a course requiring statistical understanding.

Area Courses

In addition to the core courses and the statistics requirement, undergraduate majors select courses from the two areas described below. Many of the courses require core courses as prerequisites. Majors select a total of four area courses, taking at least one from each area. The Writing in the Major (WIM) course also fulfills one of the area course requirements.

Area I: Communication Processes and Effects

Area I emphasizes the ways in which communication scholars conduct research in, and consider the issues of, human communication. These studies aim to provide expert guidance for social policy makers and media professionals.

Area II: Communication Systems and Institutions

Area II considers the roles and interaction of institutions such as broadcasting, journalism, constitutional law, and business within communication and mass communication contexts.

		Units
Statistics Prerequisite		
Completion of or concurrent enrollment in STATS 60 required when enrolling in COMM 106. STATS 60 does not count towards total required major units.		
STATS 60	Introduction to Statistical Methods: Precalculus	
Core Courses		
Core courses are usually offered only once each year.		
COMM 1	Introduction to Communication	5
or COMM 1B	Media, Culture, and Society	
COMM 106	Communication Research Methods	5
COMM 108	Media Processes and Effects	5
WIM (Writing in the Major) Course: select one of the following		
COMM 104W	Reporting, Writing, and Understanding the News	5
or COMM 120W	The Rise of Digital Culture	
or COMM 137W	The Dialogue of Democracy	
or COMM 142W	Media Economics	
or COMM 143W	Communication Policy and Regulation	
or COMM 177SW	Specialized Writing and Reporting: Sports Journalism	
or COMM 186W	Media, Technology, and the Body	
Area Courses		**15**
Select a total of four courses, at least one from each area.		
Area I: Communication Processes and Effects		
COMM 124	Truth, Trust, and Tech	
COMM 135	Deliberative Democracy and its Critics	
COMM 137W	The Dialogue of Democracy	
COMM 145	Personality and Digital Media	
COMM 162	Campaigns, Voting, Media, and Elections	
COMM 164	The Psychology of Communication About Politics in America	
COMM 166	Virtual People	
COMM 172	Media Psychology	
COMM 326	Advanced Topics in Human Virtual Representation	
Area II: Communication Systems and Institutions		
COMM 104W	Reporting, Writing, and Understanding the News	
COMM 116	Journalism Law	
COMM 120W	The Rise of Digital Culture	
COMM 125	Perspectives on American Journalism	
COMM 142W	Media Economics	
COMM 143W	Communication Policy and Regulation	
COMM 151	The First Amendment: Freedom of Speech and Press	
COMM 152	Constitutional Law	
COMM 153	Political Campaigning in the Internet Age	
COMM 154	The Politics of Algorithms	
COMM 157	Information Control in Authoritarian Regimes	
COMM 158	Censorship and Propaganda	
COMM 177B	Big Local Journalism: a project-based class	
COMM 177I	Investigative Watchdog Reporting	
COMM 177P	Programming in Journalism	
COMM 177SW	Specialized Writing and Reporting: Sports Journalism	

COMM 177T	Building News Applications	
COMM 177Y	Specialized Writing and Reporting: Foreign Correspondence	
COMM 184	Race and Media	
COMM 186W	Media, Technology, and the Body	
Electives		**20-30**
The remainder of the 60 required units may be fulfilled with any elective Communication courses or crosslisted courses in other departments.		
Total Units		**60**

Honors Program

The honors program provides Communication majors the opportunity to undertake a significant program of research in an individual professor/student mentoring relationship. The aim is to guide students through the process of research, analysis, drafting, rethinking, and redrafting, which is essential to excellence in scholarship. Working one-on-one with a faculty advisor, seniors earn 15 Communication units culminating in an honors thesis.

The designation "with honors" is awarded by the Department of Communication to those graduating seniors who, in addition to having completed all requirements for the Communication major:

1. complete an honors thesis;
2. maintain a distinguished GPA in all Communication course work;
3. are recommended by the Communication faculty.

In order to be eligible for the honors program, interested majors complete the following requirements:

1. Achieve a GPA of 3.3 in Communication courses
2. Complete the core communication courses for the Communication major including the statistics requirement
3. Receive a grade of 'B+' or better in COMM 106 Communication Research Methods
4. Select an advisor
5. Submit an application to the department by the end of their junior year. See the department's honors web site to download an application form (https://comm.stanford.edu/mm/2013/02/HonorsApp.pdf).

Students are expected to make steady progress on their honors thesis throughout the year.

A final copy of the honors thesis must be submitted to the thesis advisor for review and grading and a second copy uploaded to the Stanford Digital Repository (https://sdr.stanford.edu) by the end of week eight of Spring Quarter of the student's senior year (exact date to be arranged).

Honors work may be used to fulfill Communication elective credit, but must be completed and a letter grade submitted prior to graduation. A student failing to fulfill all honors requirements may still receive independent study credit for work completed, which may be applied toward fulfilling major requirements.

Minor in Communication

Preparation

Before declaring the minor, students must have completed or be concurrently enrolled in one of the following:

		Units
COMM 1	Introduction to Communication	5
COMM 1B	Media, Culture, and Society	5
COMM 106	Communication Research Methods	5
COMM 108	Media Processes and Effects	5

Students interested in declaring the minor should do so no later than the deadline for their application to graduate by applying via Axess and meeting with the student services administrator in building 120, room 110A.

Program of Study

The minor is structured to provide a foundation for advanced course work in communication through a broad-based understanding of communication theory and research.

Students are required to take 35 units (approximately 7 courses), not counting statistics, to complete the minor. The curriculum consists of three introductory communication core courses that include:

		Units
COMM 1	Introduction to Communication	5
or COMM 1B	Media, Culture, and Society	
COMM 106	Communication Research Methods	5
COMM 108	Media Processes and Effects	5

Core courses are usually offered only once each year. The department also requires completion of -- or concurrent registration in -- an introductory statistics course (STATS 60 Introduction to Statistical Methods: Precalculus) when registering for COMM 106 Communication Research Methods in preparation for courses in methodology and advanced courses in communication processes and effects. It is recommended that this be done as soon as possible so as not to prevent registration in a course requiring statistical understanding. The statistics course does not count toward the 35 units to complete the Communication minor.

In addition to the three core courses and the statistics course, students are required to take one course in each of the two areas as specified below.

The remainder of the 35 required units may be fulfilled with any intermediate-level elective Communication courses or crosslisted courses in other departments. No more than 5 units of course work outside of the department or transfer credit may be applied to meet department requirements. Communication minors must receive a letter grade for all Communication courses unless they are offered only for satisfactory/no credit (S/NC), and must maintain a grade point average (GPA) of 2.0 (C) in courses towards the minor. Only courses with a grade of C- or above count towards the minor. Some courses are not offered every year. Refer to ExploreCourses (http://explorecourses.stanford.edu/) for details.

Area I: Communication Processes and Effects

		Units
Select one of the following:		
COMM 124	Truth, Trust, and Tech	5
COMM 135	Deliberative Democracy and its Critics	3-5
COMM 137W	The Dialogue of Democracy	4-5
COMM 145	Personality and Digital Media	5
COMM 162	Campaigns, Voting, Media, and Elections	5
COMM 164	The Psychology of Communication About Politics in America	5
COMM 166	Virtual People	5
COMM 172	Media Psychology	5
COMM 326	Advanced Topics in Human Virtual Representation	1-5

Area II: Communication Systems/Institutions

		Units
Select one of the following:		
COMM 104W	Reporting, Writing, and Understanding the News	5
COMM 116	Journalism Law	5
COMM 120W	The Rise of Digital Culture	5
COMM 125	Perspectives on American Journalism	5
COMM 142W	Media Economics	5
COMM 143W	Communication Policy and Regulation	5
COMM 151	The First Amendment: Freedom of Speech and Press	5
COMM 152	Constitutional Law	3
COMM 153	Political Campaigning in the Internet Age	3
COMM 154	The Politics of Algorithms	5
COMM 157	Information Control in Authoritarian Regimes	5
COMM 158	Censorship and Propaganda	5
COMM 177B	Big Local Journalism: a project-based class	5
COMM 177I	Investigative Watchdog Reporting	5
COMM 177P	Programming in Journalism	5
COMM 177SW	Specialized Writing and Reporting: Sports Journalism	5
COMM 177T	Building News Applications	5
COMM 177Y	Specialized Writing and Reporting: Foreign Correspondence	5
COMM 184	Race and Media	5
COMM 186W	Media, Technology, and the Body	5

Elective courses
Totaling 10 units.

Master of Arts in Communication — Journalism Subplan

University requirements for the master's degree are described in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin. Work to fulfill graduate degree requirements must be in courses numbered 100 or above.

The department awards both a terminal and a coterminal M.A. degree in Communication with a subplan in Journalism. The department also offers a coterminal M.A. degree in Communication with a subplan in Media Studies (p.). The subplan prints on the transcript, but not on the diploma.

Stanford Journalism Program

The master's program in Journalism focuses on the knowledge and skills required to report, analyze, and write authoritatively about public issues and digital media. The curriculum combines a sequence of specialized reporting and writing courses with seminars and courses devoted to deepening the students' understanding of the roles and responsibilities of American news media in their coverage of public issues.

The program emphasizes preparation for the practice of journalism and a critical perspective from which to understand it. The program's objective is twofold:

1. to graduate talented reporters and writers to foster public understanding of the significance and consequences of public issues and the debates they engender; and
2. to graduate thoughtful journalists to respond openly and eloquently when called upon to explain and defend the methods and quality of their reporting and writing.

See the program's Mission Statement (https://journalism.stanford.edu/mission/).

Admission to the Terminal Master's Program in Communication

Detailed information on application requirements is available on the Graduate Program in Journalism (https://journalism.stanford.edu/admissions/applications/) website. GRE scores are not required. Application Deadline: December 1, 2020 at 11:59 p.m. Recommenders have until January 4, 2021 to submit their online recommendation letters.

Prospective applicants to the terminal master's program in Communication with a subplan in Journalism must submit the following:

1. Application: see Graduate Admissions (https://gradadmissions.stanford.edu/applying/).
2. Statement of purpose.
3. Three journalistic samples
4. Transcripts
5. Resume
6. Three letters of recommendation
7. TOEFL test scores for non-native speakers of English. Exemptions are granted to applicants who have earned (or will earn, before enrolling at Stanford) a U.S. bachelor's, master's, or doctoral degree from a college or university accredited by a regional accrediting association in the United States, or the international equivalent degree from a university of recognized standing in a country in which all instruction is provided in English.

Admission to the Coterminal Master's Program in Communication

Detailed information on application requirements is available on the Coterminal M.A. in Communication – Journalism Track website. See the Registrar's Office information about coterminal degree programs (https://registrar.stanford.edu/students/coterminal-degree-programs/) and contact the Student Services Manager to discuss your options.

Applicants must submit their application and, if admitted, respond to the offer of admission no later than the quarter prior to the expected completion of their undergraduate degree. Applicants must have declared an undergraduate major and earned a minimum of 120 units toward graduation (UTG) as shown on the undergraduate unofficial transcript (including allowable advanced placement (AP) and transfer credit) and completed at least six academic quarters.

Online applications must be submitted no later than January 27, 2021 to start the program in Spring Quarter 2021-22.

Applicants submit the following:

- Application for Admission to Coterminal Master's Program (https://www.applyweb.com/stanterm/)
- Preliminary program proposal
- Statement of purpose
- Three letters of recommendation and recommendation forms from Stanford professors
- Three samples of journalistic work
- Undergraduate coterm program approval form (available on the eForms portal in Axess)
- A current unofficial Stanford transcript

GRE scores are not required.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Degree Requirements

The M.A. degree in Communication (Journalism) requires a minimum of 45 units. Coterminal Journalism students may count coursework taken after summer of freshman year towards the 45 units of unduplicated work with approval by the Director of the Graduate Program in Journalism.

Except for COMM 289P Journalism Thesis, all courses must be taken for a letter grade unless they are offered only for satisfactory/no credit (S/NC). To remain in good academic standing, students must maintain a grade point average (GPA) of 3.0 or better. Graduation requires a GPA of 3.0 or better.

Course Requirements

The curriculum includes the following required courses, including a master's project class:

		Units
Required Courses		
COMM 216	Journalism Law	4
COMM 225	Perspectives on American Journalism	4
COMM 273D	Public Affairs Data Journalism I	4
COMM 274D	Public Affairs Data Journalism II	4
COMM 275	Multimedia Storytelling: Reporting and Production Using Audio, Still Images, and Video	3-4
COMM 279	News Reporting & Writing Fundamentals	3-4
COMM 289P	Journalism Thesis (see below)	2-4
Two Specialized Reporting Courses		
Take two specialized reporting courses, chosen from a list of about twelve, and three approved electives from among graduate-level courses in the Department of Communication, or from among courses on campus that deal substantively with issues of public importance.		
Total Units		45

Journalism Project

Journalism Thesis (COMM 289P), a requirement for graduation, is intended as an opportunity for students to showcase their talents as writers and reporters. It is also an opportunity to undertake an in-depth critique of an area of journalism in which the author has a special interest. Work on the project usually begins during the second to last quarter and continues through the student's final quarter in the form of the class Journalism Thesis (COMM 289P). Completed master's projects must be submitted to the project advisor no later than the last day of classes in the student's final quarter. The project represents a major commitment of time, research, and writing. Although it is not a requirement that the project be published, it must be judged by a member of the faculty to be of a quality acceptable for publication. At a minimum, the project should demonstrate the rigor and discipline required of good scholarship and good journalism; it should offer ample evidence of students' ability to gather, analyze, and synthesize information in a manner that goes beyond what ordinarily appears in daily news media.

Master of Arts in Communication — Media Studies

University requirements for the master's degree are described in the "Graduate Degrees (http://www.stanford.edu/dept/registrar/bulletin/4901.htm)" section of this bulletin. Work to fulfill graduate degree requirements must be in courses numbered 100 or above.

The department offers a coterminal M.A. degree in Communication with a subplan in Media Studies. The department also awards both a terminal and a coterminal M.A. degree in Communication with a subplan in Journalism (http://exploredegrees.stanford.edu/communication/#maincommunicationtext). The subplan prints on the transcript, but not on the diploma.

The coterminal M.A. Degree Program in Communication (Media Studies) is a small program that permits current Stanford undergraduates to study for a bachelor's and a master's degree simultaneously. The program provides a broad introduction to scholarly literature in mass communication. With early and careful planning, students may be able to complete the coterminal master's degree in Communication by the end of their senior year or within one to two additional quarters. See the Registrar's Office information about coterminal degree programs (https://registrar.stanford.edu/students/coterminal-degree-programs/) and contact the Student Services Manager to discuss your options.

The following majors are some of those that best provide a grounding in a theoretical tradition relevant to the study of communication: communication, computer science, economics, English, history, linguistics, philosophy, political science, psychology, public policy, STS, sociology, and symbolic systems.

Admission

Coterminal Master's Program in Communication — Media Studies

See the Coterminal M.A. in Communication – Media Studies Track (https://comm.stanford.edu/coterminal-masters/media-studies/) website for additional information on application requirements.

Applicants must submit their application and, if admitted, respond to the offer of admission no later than the quarter prior to the expected completion of their undergraduate degree. Applicants must have declared an undergraduate major and earned a minimum of 120 units toward graduation (UTG) as shown on the undergraduate unofficial transcript (including allowable advanced placement (AP) and transfer credit) and completed at least six academic quarters.

A $125 application fee is assessed for each coterminal application. This fee will be added to the student's university bill once the applicant has been admitted and accepted the offer of admission.

Application Deadline: January 27, 2021 at 3:00 p.m to start the program in Spring Quarter 2020-21. Recommenders have until February 1, 2021 to submit their online recommendation letters.

Requirements include:

- Application for Admission to Coterminal Master's Program (https://www.applyweb.com/stanterm/)
- Preliminary program proposal
- Statement of purpose
- Master's project advising confirmation form
- Letters of recommendation from two Stanford professors other than the coterminal advisor
- A written statement from a Communication professor agreeing to act as a graduate advisor
- Undergraduate coterm program approval form (available on the eForms portal in Axess)
- A current unofficial Stanford transcript

GRE scores are not required.

University Coterminal Requirements

Coterminal master's degree candidates are expected to complete all master's degree requirements as described in this bulletin. University requirements for the coterminal master's degree are described in the "Coterminal Master's Program (p. 56)" section. University requirements for the master's degree are described in the "Graduate Degrees (p. 65)" section of this bulletin.

After accepting admission to this coterminal master's degree program, students may request transfer of courses from the undergraduate to the graduate career to satisfy requirements for the master's degree. Transfer of courses to the graduate career requires review and approval of both the undergraduate and graduate programs on a case by case basis.

In this master's program, courses taken during or after the first quarter of the sophomore year are eligible for consideration for transfer to the graduate career; the timing of the first graduate quarter is not a factor. No courses taken prior to the first quarter of the sophomore year may be used to meet master's degree requirements.

Course transfers are not possible after the bachelor's degree has been conferred.

The University requires that the graduate advisor be assigned in the student's first graduate quarter even though the undergraduate career may still be open. The University also requires that the Master's Degree Program Proposal be completed by the student and approved by the department by the end of the student's first graduate quarter.

Degree Requirements

Media studies track students must satisfy the following requirements:

1. *Required Units and GPA:* Students must complete a minimum of 45 units in Communication and related areas, including items 2 and 3 below. Courses must be taken for a letter grade if offered. Courses in related areas outside the department must be approved by the student's advisor. A minimum of 36 units must be in the Communication department. No more than two courses (not including the statistics prerequisite) may be at the 100 level. To remain in good academic standing students must maintain a grade point average (GPA) of 3.0 or better. Graduation requires a GPA of 3.0 or better.
2. *Statistics prerequisite:* Completion of a statistics course (typically STATS 160 Introduction to Statistical Methods: Precalculus) is required for admission into the media studies coterminal program. The coterm advisor may approve other statistics courses as a substitute. The department may occasionally admit a coterminal student who has not yet completed this requirement. Such students should plan to take statistics during their first quarter in the program, as this constitutes an important foundation for much of the master's coursework. Units from the statistics course do not count toward the 45 units required for the M.A. in media studies. Students may enroll for the statistics course for either a letter grade or credit.
3. *Core Requirements: S*tudents must complete COMM 206 Communication Research Methods and COMM 208 Media Processes and Effects. COMM 206 and COMM 208 cannot be waived. SOC 280A Foundations of Social Research is accepted as an alternative to COMM 206 with the units counting toward the maximum of nine total units outside of the department. There is no alternative course for COMM 208.
4. *Six Media Studies Courses:* Students must complete a minimum of six additional communication courses concerned with the study of media from the following list. Not all the listed courses are offered every year and the list may be updated from one year to the next.
5. In addition to the core requirements and six media studies courses from the list below, students earn elective credit by completing additional communication courses (including COMM 299 Individual Work) or up to 9 units from non-COMM courses from the pre-approved list or approved by the student's advisor.
6. *The Media Studies M.A. Project:* Students following the media studies track enroll in COMM 290 Media Studies M.A. Project to complete a project over two consecutive quarters that must be preapproved and supervised by the advisor. The completed M.A. project must be submitted to the advisor no later than the last day of classes of the second consecutive quarter.

		Units

COMM 385	Media as Ways of Knowing	1-5
Elective Credit		
Additional communication courses (including COMM 299 Individual Work) or up to 9 units from non-COMM courses from the pre-approved list or approved by the student's advisor		
Media Studies M.A. Project		
COMM 290	Media Studies M.A. Project	2-4
Total Units		**45**

Doctor of Philosophy in Communication

Admission

Prospective graduate students should see the Office of Graduate Admissions (http://gradadmissions.stanford.edu/) website and the Applications and Financial Aid (https://comm.stanford.edu/phd/applications/)section of the department website for detailed information and application materials. Applicants must take the Graduate Record Examination (GRE) general test administered by the Educational Testing Service (ETS). The Communication Department does not require any GRE subject tests.

Degree Requirements

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

The minimum number of academic units required for the Ph.D. at Stanford is 135, up to 45 of which can be transferred either from a master's degree at the University or from another accredited institution.

The department offers a Ph.D. in Communication, which focuses on theory and research. First-year students are required to complete introductory courses in communication theory and research, research methods, and statistics. These core courses, grounded in the social science literature, emphasize how people respond to media and how media institutions function. In addition, Ph.D. students must complete a minimum of three literature survey courses and related advanced seminars in Communication. Students also take significant course work outside the department in their area of interest. Each student builds a research specialty relating communication to current faculty interests in such areas as ethics, computational journalism, information processing, information technology, law, online communities, politics and voting, and virtual reality. Regardless of the area of specialization, the Ph.D. program is designed primarily for students interested in university research and teaching or other research or analyst positions.

Students must complete the following department requirements for the Ph.D. degree in Communication. Additional information is available in the Degree Requirements and Department Procedures for Ph.D. Students and Ph.D. Advisors (https://comm.stanford.edu/mm/2013/02/comm-phd-procedures.pdf) (pdf).

1. Complete all departmental course requirements listed below with grades of 'B+' or above, with the exception of STATS 160 ('B' minimum) and an advanced methods course ('B-' minimum). Required courses:

		Units
COMM 206	Communication Research Methods	4
COMM 208	Media Processes and Effects	4
COMM 301	Communication Research, Curriculum Development and Pedagogy	1
COMM 311	Theory of Communication	1-5
COMM 314	Ethnographic Methods	1-5
COMM 317	The Philosophy of Social Science	1-5
COMM 318	Quantitative Social Science Research Methods	1-5
STATS 160	Introduction to Statistical Methods: Precalculus	5

One advanced methods course.

2. Pass the general qualifying examinations by the end of the second academic year of study.

3. Apply for candidacy by the end of the first week of the student's sixth quarter.

4. Complete three 200-level courses and the associated 300-level courses with grades of 'B+' or above by the end of the 9th quarter.

5. Complete at least two pre-dissertation research projects (the Major Project and the Minor Project) by the end of the student's 11th academic quarter.

6. Demonstrate proficiency in tools required in the area of research specialization. Identified with the advice of the faculty, such tools may include detailed theoretical knowledge, advanced statistical methods, a foreign language, computer programming, or other technical skills. Pass an Area Examination by the end of the 12th quarter.

7. Teach or assist in teaching at least two courses offered by the Department of Communication, preferably two different courses, at least one of which is ideally a core undergraduate course:

		Units
COMM 1	Introduction to Communication	5
COMM 1B	Media, Culture, and Society	5
COMM 106	Communication Research Methods	5
COMM 108	Media Processes and Effects	5

8. Complete a dissertation proposal and proposal meeting approved by the dissertation committee.

9. Complete a dissertation satisfactory to a reading committee of three or more faculty members in the Department of Communication and one faculty member outside of the Department of Communication.

10. Pass the University oral examination, which is a defense of the dissertation.

Because the multifaceted nature of the department makes it possible for the Ph.D. student to specialize in areas that draw on different related disciplines, the plan of study is individualized and developed between the faculty advisor and the student.

Ph.D. candidacy is valid for five years.

Additional information is available on the Ph.D. program page (https://comm.stanford.edu/phd/) of the department web site.

Ph.D. Minor in Communication

Candidates for the Ph.D. degree in other departments who elect a minor in Communication are required to complete a minimum of 20 units of graduate courses in the Department of Communication, including a total of three theory or research methods courses, and are examined by a representative of the department. A department advisor in consultation with the individual student determines the particular communication theory and methods courses.

Joint Degree Program in Communication with the School of Law

J.D./PH.D.

The Department of Communication and the School of Law offer a joint degree program leading to a J.D. combined with a Ph.D. in Communication.

The J.D./Ph.D. degree program offers students the opportunity to pursue academic, public policy, and private practice careers at the intersection of a variety of cutting edge debates in theory and policy, including: legal and normative First Amendment theories of speech and the press; media and communications economy and policy issues; questions of the relationship between citizens and the state, especially regarding mass surveillance and big data; and cultural and normative questions about the implications of the shift to the digital realm.

Students interested in the joint degree program must apply and gain entrance separately to the School of Law and the Communication Ph.D. program, and, as an additional step, must secure permission from both academic units to pursue degrees in those units as part of a joint degree program. Interest in the joint degree program should be noted on the student's admission applications and may be considered by the admission committee of each program. Alternatively, an enrolled student in either program may apply for admission to the other program and for joint degree status in both academic units after commencing study in either program.

Joint degree students may elect to begin their course of study in either the School of Law or the Communication Ph.D. program. Faculty advisors from each academic unit participate in the planning and supervising of the student's joint program. Students must be enrolled full time in the Law School for the first year of Law School, and are required to be enrolled full time for the first year of the Ph.D. program in Communication. At all other times, enrollment may be in either academic unit, and students may choose courses from either program regardless of where enrolled. Students must satisfy the requirements for both the J.D. and the Ph.D. degrees as specified in this bulletin or by the School of Law. The sequencing and schedules for individual joint degree students may vary substantially depending on the student's background and interests, and on the guidance of faculty advisors from both academic units.

No more than 54 quarter hours of approved courses may be counted toward both degrees, but no more than 36 quarter hours of courses that originate outside the Law School may count toward the Law degree. To the extent that courses under this joint degree program originate outside the Law School but count toward the Law degree, the Law School credits permitted under Section 17(1) of the Law School Regulations are reduced on a unit-per-unit basis, but not below zero. Students must complete 192 quarter units to complete both degrees.

Joint degree students are eligible for the same funding arrangements in both academic units, including scholarships and grants, as students who are not pursuing a joint degree plus one additional quarter of funding from the Communication Ph.D. Program.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Department of Communication counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Graduate Degree Requirements

Grading

The Department of Communication counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade.

Graduate Advising Expectations

The Department of Communication is committed to providing academic advising in support of graduate student scholarly and professional development. When most effective, this advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity.

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Ph.D. in Communication

Students are assigned a temporary advisor upon admission to the department. By the end of the third quarter of the first year, students confirm in writing that they will remain with or change their advisor. The faculty advisor must be an Academic Council member and a member of the Communication department.

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, developing teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

It is the responsibility of the student to meet with their advisor at least once per quarter during the academic year to discuss academic standing and graduate degree progress.

In addition, the Director of Graduate Studies is always available to Ph.D. students for consultation.

Requirements and milestones, as well as more detailed descriptions of the program's expectations of advisors and students, are listed in the "Degree Requirements and Department Procedures for Ph.D. Students and Ph.D. Advisors" available on the department website (http://comm.stanford.edu/).

Master's Program in Communication—Journalism Track

Before the start of graduate study, normally during Summer Quarter, each student is assigned an academic advisor: a member of our journalism faculty who provides guidance in course selection, course planning, and exploring short- and long-term career opportunities and professional pathways. The advisor serves as the first resource for consultation and advice about a student's academic program.

The Director of the Graduate Program in Journalism initially serves as the advisor for all coterminal journalism master's students until a final academic advisor is assigned.

In addition, the Director of the Graduate Program in Journalism is always available to journalism master's students for consultation.

Master's Program in Communication—Media Studies Track

To be accepted to the coterminal master's program in Communication, Media Studies track, students must find a professor in the Department of Communication to serve as coterminal advisor.

The coterminal advisor provides extensive guidance on a research project proposed in the student's statement of purpose, helping students go through the process of conceptualization, study planning, data collection, analysis, and writing. The coterminal advisor also assists the student with course selection and course planning and serves as the first resource for consultation and advice about a student's academic program.

In addition, the Director of the Graduate Program in Coterminal Media Studies is always available for consultation.

Emeriti: (Professor) Theodore L. Glasser, Donald F. Roberts; (Professor, Teaching) Marion Lewenstein

Chair: James T. Hamilton

Director, Doctoral Program in Communication: Jeremy Bailenson

Director, John S. Knight Journalism Fellowships: Dawn E. Garcia

Director, Graduate Program in Journalism: James T. Hamilton

Director, Graduate Program in Coterminal Media Studies: Byron Reeves

Director, Undergraduate Studies: Fred Turner

Professors: Jeremy Bailenson, James S. Fishkin, James T. Hamilton, Jeffrey T. Hancock, Shanto Iyengar, Jon Krosnick, Nilam Ram, Byron B. Reeves, Fred Turner

Assistant Professors: Angèle Christin, Gabriella Harari, Xiaochang Li, Jennifer Pan

Courtesy Professors: Nathaniel Persily, Walter Powell

Lorry I. Lokey Visiting Professor in Professional Journalism: Cheryl Phillips, Serdar Tumgoren

Hearst Professionals in Residence: Geralyn Migielicz

Carlos Kelly McClatchy Visiting Lecturer: Janine Zacharia

Lecturers: R.B. Brenner, Gary Pomerantz, James Wheaton

Overseas Studies Courses in Communication

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

Courses

COMM 1. Introduction to Communication. 5 Units.
Our world is being transformed by media technologies that change how we interact with one another and perceived the world around us. These changes are all rooted in communication practices, and their consequences touch on almost all aspects of life. In COMM 1 we will examine the effects of media technologies on psychological life, on industry, and on communities local and global through theorizing and demonstrations and critiques of a wide range of communication products and services.

COMM 1B. Media, Culture, and Society. 5 Units.
The institutions and practices of mass media, including television, film, radio, and digital media, and their role in shaping culture and social life. The media's shifting relationships to politics, commerce, and identity.
Same as: AMSTUD 1B

COMM 18Q. Democracy & Data. 3 Units.
This course explores the entanglement of democracy with data, from the history of the census and opinion polling, to three contemporary challenges associated with the rise of ¿big data¿: surveillance by corporations and states; algorithmic prediction and decision-making; and information disorder in the digital public sphere. Throughout, we will consider how big data and computational technologies might lead us to rethink central concepts in democratic theory, including consent and freedom; property and (self-)ownership; identity and difference; security, privacy, and the commons. Literature will be drawn from a range of disciplines, including science and technology studies, critical information and media studies, and the history of political thought.

COMM 51A. Race in Science. 1 Unit.
What are the roles of race and racism in science, technology, and medicine? 3-course sequence; each quarter can be taken independently. Fall quarter focuses on science. What is the science of race and racism? How does race affect scientific work? Weekly guest speakers will address such issues as the psychology and anthropology of race and racism; how race, language, and culture affect education; race in environmental science and environmental justice; the science of reducing police violence; and the role of race in genomic research. Talks will take a variety of forms, from panel discussions to interviews and lectures. Weekly assignments: read a related article and participate in an online discussion.
Same as: AFRICAAM 51A, CEE 151A, CSRE 51A, HUMBIO 71A, STS 51A

COMM 51B. Race in Technology. 1 Unit.
What are the roles of race and racism in science, technology, and medicine? 3-course sequence; each quarter can be taken independently. Winter quarter focuses on technology. How do race and racism affect the design and social impact of technology, broadly defined? Can new or different technology help to reduce racial bias? Invited speakers will address the role of race in such issues as energy infrastructure, nuclear arms control, algorithmic accountability, machine learning, artificial intelligence, and synthetic biology. Talks will take a variety of forms, ranging from panel discussions to interviews and lectures. Weekly assignments: read a related article and participate in an online discussion.
Same as: AFRICAAM 51B, BIOE 91B, CEE 151B, CSRE 51B, HUMBIO 71B, STS 51B

COMM 100S. Introduction to Digital Labor. 3 Units.
Digital technologies have had a profound influence on our economy, the ways we communicate, and the ways in which we work. This course will provide a lens through which to understand digital labor and digital work today. We will explore the ideological and cultural values of Silicon Valley and their role in shaping the new business models of the Internet Age (such as crowdsourcing, the sharing economy, and humans-as-a-service). We will examine the past, present, and future of mechanisms of workplace control (from clocks to algorithmic management) and the implications of the digital turn on spatial and material dimensions of labor. Finally, we will turn our attention toward possible futures of work, given the increasing presence of automation and artificial intelligence in the workplace. By engaging with social scientific analyses and popular media, students will leave the course with a greater appreciation of worker perspectives and challenges in the digital era.

COMM 102S. Technology and Inequality. 3 Units.
This course will provide an introduction to information inequalities arising in the digital era. By working through various literature in media such as media economics and digital divide, we will explore how content personalization via the algorithms could reproduce or amplify long-standing inequalities in race, class, and gender. This course also functions as an introduction to entry-level data science whereby you develop basic programming skills (Python) and apply them to your group project. By the end of the course, you will have developed skills to think critically of technology¿s impact on our democracy and to present evidence-based analysis of your research interests. No prior programming experience is necessary to take this class.

COMM 104W. Reporting, Writing, and Understanding the News. 5 Units.
Techniques of news reporting and writing. The value and role of news in democratic societies. Gateway class to journalism. Prerequisite for all COMM 177/277 classes. Limited enrollment. Preference to COMM majors.

COMM 106. Communication Research Methods. 4-5 Units.
(Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor. (Cardinal Course certified by the Haas Center).
Same as: COMM 206

COMM 107S. Media, Culture, and the Politics of Gender. 3 Units.
This course aims to provide a survey of various media and their role in the discursive construction of gender in and through culture. The first three weeks serve as an introduction to the historical and sociopolitical dimensions of gender, its intersection with media, and theoretical approaches to understanding it and political approaches to challenging it. Beginning with historical constructions of the gender binary, Foucault's Herculine Barbin - an unearthed diary of a French hermaphrodite who lived an adolescent life in a Catholic orphanage for girls from about 1860-1870, is reclassified as a man, and commits suicide - provides a provocative look at the historical construction of gender binaries. nnnThe remainder of the course then tackles a range of media and examples of how they portray gender as well as examples of how they may be used to subvert oppressive gender roles or binaries, focusing on: the novel, film, music videos, news, and social media. Far from exhaustive, the readings and the topics covered are to provide a better, broader, but still-limited understanding of how media and culture construct gender, and how this also dramatically impacts the lives of queer and gender nonconforming individuals. For this reason, while the course does deal extensively with notions of masculinity, sexualization and objectification of, or the effects of sexism on, cisgendered women, a heavy focus of the course across many topics is on transgender individuals in media. These individuals, like Herculine in her time, unsettle this simplistic opposition through their very being and representation in public.

COMM 108. Media Processes and Effects. 4-5 Units.
(Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1.
Same as: COMM 208

COMM 112S. Welcome to Cyberspace: An Introduction to the Internet. 3 Units.
In this introductory-level class we will investigate the Internet as a material technology created in a specific historical and cultural context and explore how its architecture has shaped the ways we work, think, and relate to each other in 2018. First, we will learn what the Internet is, how it works, and why it came to be. Next, by working through a variety of historical and analytical texts, we will examine the reality and mythologies of cyberspace. Key areas of interest include economics, law, and how people use the Internet to connect. Over the course of the quarter, you will gain skills to think critically and analytically about issues related to the Internet in today's world and articulate your own positions on them.

COMM 114S. Propaganda, Misinformation, and Disinformation. 3 Units.
This course will examine the concepts of propaganda, misinformation, and disinformation, primarily in the political sphere. The first part of the course will explore varying definitions of these concepts and how political actors have manipulated information to support their political aims in totalitarian, authoritarian, and democratic contexts. The second part of the course will examine how reliance on digital media has altered the landscape for political manipulation and current efforts to combat these phenomena. In addition to lectures, students will engage in class discussion and group work.

COMM 115S. Introduction to Augmented Reality. 3 Units.
Augmented reality is a medium which allows people to overlay digital objects, people, and information onto the real world. The technology is being developed urgently by most large technology companies including Apple, Google, and Facebook. This course will discuss the social science theories which are relevant to AR, the engineering challenges both in terms of hardware and software, and the potential applications and downsides of the medium.

COMM 116. Journalism Law. 4-5 Units.
(Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major. Preference for enrollment in COMM 116 will be: Communications Majors and Co-Terms, then Seniors from other disciplines. Total enrollment in COMM 116/216 combined will be limited to 20.
Same as: COMM 216

COMM 120W. The Rise of Digital Culture. 4-5 Units.
From Snapchat to artificial intelligence, digital systems are reshaping our jobs, our democracies, our love lives, and even what it means to be human. But where did these media come from? And what kind of culture are they creating? To answer these questions, this course explores the entwined development of digital technologies and post-industrial ways of living and working from the Cold War to the present. Topics will include the historical origins of digital media, cultural contexts of their deployment and use, and the influence of digital media on conceptions of self, community, and state. Priority to juniors, seniors, and graduate students.
Same as: AMSTUD 120, COMM 220

COMM 124. Truth, Trust, and Tech. 4-5 Units.
Deception is one of the most significant and pervasive social phenomena of our age. Lies range from the trivial to the very serious, including deception between friends and family, in the workplace, and in security and intelligence contexts. At the same time, information and communication technologies have pervaded almost all aspects of human communication, from everyday technologies that support interpersonal interactions to, such as email and instant messaging, to more sophisticated systems that support organization-level interactions. Given the prevalence of both deception and communication technology in our personal and professional lives, an important set of questions have recently emerged about how humans adapt their deceptive practices to new communication and information technologies, including how communication technology affects the practice of lying and the detection of deception, and whether technology can be used to identify deception.
Same as: COMM 224

COMM 125. Perspectives on American Journalism. 4-5 Units.
An examination of American journalism, focusing on how news is produced, distributed, and financially supported. Emphasis on current media controversies and puzzles, and on designing innovations in discovering and telling stories. (Graduate students register for COMM 225.).
Same as: AMSTUD 125, COMM 225

COMM 135. Deliberative Democracy and its Critics. 3-5 Units.
This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.
Same as: AMSTUD 135, COMM 235, COMM 335, ETHICSOC 135F, POLISCI 234P, POLISCI 334P

COMM 137W. The Dialogue of Democracy. 4-5 Units.
All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized.
Same as: AMSTUD 137, COMM 237, POLISCI 232T, POLISCI 332T

COMM 138. Deliberative Democracy Practicum: Applying Deliberative Polling. 3-5 Units.
In this course, students will work directly on a real-world deliberative democracy project using the method of Deliberative Polling. Students in this course will work in partnership with the Center for Deliberative Democracy at Stanford, a research center devoted to the research in democracy and public opinion around the world. This unique practicum will allow students to work on an actual Deliberative Polling project on campus. In just one quarter, the students will prepare for, implement, and analyze the results for an Deliberative Polling project. This is a unique opportunity that allows students to take part in the entire process of a deliberative democracy project. Through this practicum, students will learn and apply quantitative and qualitative research methods. Students will explore the underlying challenges and complexities of what it means to actually do community-engaged research in the real world. As such, this course will provide students with skills and experience in research design in deliberative democracy, community and stakeholder engagement, and the practical aspects of working in local communities. This practicum is a collaboration between the Center for Deliberative Democracy and the Haas Center for Public Service. CDD website: http://cdd.stanford.edu; Hass Center website: https://haas.stanford.edu.
Same as: COMM 238

COMM 142W. Media Economics. 4-5 Units.
Uses economics to examine the generation and consumption of information in communication markets. Covers concepts that play a large role in information economics, including public goods, economies of scale, product differentiation, and externalities. Looks at individuals' information demands as consumers, producers, audience members, and voters. Topics include economics of Internet, sustainability of accountability journalism, and marketplace of ideas.
Same as: COMM 242

COMM 143W. Communication Policy and Regulation. 4-5 Units.
Focuses on the development, implementation, and evaluation of policies affecting communication markets. Policy issues include universal service, digital divide, Internet regulation, intellectual property, privacy, television violence, content diversity, media ownership, antitrust, and impact of news on government accountability. Examines political economy of communication policy and the evolution of policies across time.
Same as: COMM 243

COMM 145. Personality and Digital Media. 4-5 Units.
Personality describes people's characteristic patterns of thinking, feeling, and behaving. This course will introduce students to the ways personality is expressed in digital devices (e.g., computers, smartphones) and platforms (e.g., social networks, virtual worlds). Readings and lectures will introduce students to theories of personality, the practice of assessing personality, and the broader societal implications of having mediated personalities. Course assignments will require students to apply the course concepts to explore personality expression in various digitally mediated contexts.
Same as: COMM 245

COMM 148. Conversations on Journalism, Identity, and Social Justice. 1 Unit.
In this one-credit seminar, students will learn from U.S. journalists who are on the front lines of covering social justice and identity at a pivotal time in American history. The speakers will include JSK Community Impact Fellows, diverse journalists who are working to address information gaps in their communities, especially underserved communities of color. Students will be active participants in the conversations and express their thoughts in written reflections. Instructors will be Michael Bolden, R.B. Brenner, and Dawn Garcia.
Same as: COMM 248

COMM 151. The First Amendment: Freedom of Speech and Press. 4-5 Units.
The First Amendment: Freedom of Speech and Press (7084): Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. This course is crosslisted in the university and undergraduates are eligible to take it. Elements used in grading: Law students will be evaluated based on class participation and a final exam. Non-law students will be evaluated on class participation, a midterm and final exam, and nonlaw students will participate in a moot court on a hypothetical case. Non-law students will also have an additional one hour discussion section each week led by a teaching assistant. Cross-listed with Communication (COMM 151, COMM 251) and Political Science (POLISCI 125P). nnnClass time will be 11:10-12:40 on Mondays and Wednesdays.
Same as: COMM 251, ETHICSOC 151, POLISCI 125P

COMM 152. Constitutional Law. 3 Units.
This course covers Supreme Court case law concerning governmental powers, equal protection, and certain fundamental rights. The course investigates the constitutional foundation for democratic participation in the United States, covering topics such as the Fourteenth Amendment's protections against discrimination on grounds of race, gender, and other classifications, as well as the individual rights to voting and intimate association, and an introduction to First Amendment rights of free speech and press. Students will be evaluated on class participation, a midterm moot court with both a written and oral component, and a take-home final exam. Lectures will be twice per week and a discussion section once per week.
Same as: COMM 252, POLISCI 126P

COMM 153. Political Campaigning in the Internet Age. 3 Units.
This course will acquaint students with the changing environment for campaigns posed by the rise of the Internet. So much of the traditional way analysts have understood campaigns has revolved around television as the primary mode of campaign communication. The rise of the Internet, nonlinear television programming, and mobile communication enables new forms of campaigning. This course will examine the relevant social science on these topics, while at the same time bringing in guest lecturers from industry, campaigns, and media. Requirements: Students will be required to complete a 25 page research paper on a topic relevant to the course.
Same as: COMM 253

COMM 153A. Policy, Politics and the 2020 Elections: What 2020 Means for Future Campaigns and Elections. 2 Units.
(Same as LAW 7057). This course looks back at the 2020 election campaign and tries to discern lessons and takeaways for future campaigns and elections. It will provide students with a behind-the-scenes understanding of how campaigns work. Each week, we will explore a different topic related to high-profile campaigns -- policy formation, communications, grassroots strategy, digital outreach, campaign finance -- and feature prominent guest speakers who have served and will serve in senior roles on both Democratic and Republican campaigns, including the Trump and Biden teams.
Same as: COMM 253A, POLISCI 72, PUBLPOL 146, PUBLPOL 246

COMM 153B. Free Speech, Democracy and the Internet. 2-3 Units.
Crosslisted with LAW 7082. This course, which will be cotaught by Monika Bickert from Facebook, will cover contemporary challenges to democracy presented by the Internet. Topics will include disinformation, polarization, hate speech, media transformation, election integrity, and legal regulation of internet platforms in the U.S. and abroad. Guest speakers from academia and industry will present on these topics in each class session, followed by a discussion. Students will be responsible for one-page papers each week on the readings and a research paper to be turned in at the fall paper deadline. Students can take the class for either 2 or 3 units, depending on the research paper length. This class is crosslisted in the university and undergraduates are eligible to take it. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.
Same as: COMM 253B

COMM 154. The Politics of Algorithms. 4-5 Units.
Algorithms have become central actors in today's digital world. In areas as diverse as social media, journalism, education, healthcare, and policing, computing technologies increasingly mediate communication processes. This course will provide an introduction to the social and cultural forces shaping the construction, institutionalization, and uses of algorithms. In so doing, we will explore how algorithms relate to political issues of modernization, power, and inequality. Readings will range from social scientific analyses to media coverage of ongoing controversies relating to Big Data. Students will leave the course with a better appreciation of the broader challenges associated with researching, building, and using algorithms.
Same as: COMM 254, CSRE 154T, SOC 154, SOC 254C

COMM 157. Information Control in Authoritarian Regimes. 4-5 Units.
Does information help autocrats and dictators stay in power? Or does information help topple authoritarian regimes? This course will examine how authoritarian regimes try to control information through surveillance, propaganda, and censorship, what influences the effectiveness of these information control measures, and how changes in technology (Internet, social media, mobile) affect the dynamics of information control.
Same as: COMM 257, COMM 357

COMM 158. Censorship and Propaganda. 4-5 Units.
While the internet and other digital technologies have amplified the voice of ordinary citizens, the power of governments and other large organizations to control and to manipulate information is increasingly apparent. In this course, we will examine censorship and propaganda in the age of the internet and social media. What constitutes censorship and propaganda in the digital age? Who conducts censorship and propaganda, and how? What are the consequences and effects of censorship and propaganda in this era of information proliferation? How have censorship and propaganda changed from previous eras? Students will take a hands-on, project-based approach to exploring these questions.
Same as: COMM 258

COMM 162. Campaigns, Voting, Media, and Elections. 4-5 Units.
This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players -- candidates, parties, journalists, and voters -- in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process.
Same as: COMM 262, POLISCI 120B

COMM 164. The Psychology of Communication About Politics in America. 4-5 Units.
Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.
Same as: COMM 264, POLISCI 124L, POLISCI 324L, PSYCH 170

COMM 166. Virtual People. 4-5 Units.
(Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.
Same as: COMM 266

COMM 171. Moving Pictures: Video Journalism for Mobile and Social Platforms. 3-5 Units.
(Graduate students register for 271.) Examine video journalism's crucial role in digital news media across mobile and social media platforms. What are the specific needs of mobile platforms? How is new technology utilized to produce effective video news content? We'll examine case studies and hear from guest speakers about innovations in video journalism. Students produce short video journalism pieces using mobile tools, optimized for viewing on mobile devices. Prerequisite: COMM 104 or prior video journalism experience (contact instructor); Journalism MA student; or instructor's consent.
Same as: COMM 271

COMM 172. Media Psychology. 4-5 Units.
(Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening.
Same as: COMM 272

COMM 173E. Data Challenge Lab. 3-5 Units.
In this lab, students develop the practical skills of data science by solving a series of increasingly difficult, real problems. Skills developed include: data manipulation, data visualization, exploratory data analysis, and basic modeling. The data challenges each student undertakes are based upon their current skills. Students receive one-on-one coaching and see how expert practitioners solve the same challenges. Limited enrollment; application required. See http://datalab.stanford.edu for more information.
Same as: ENGR 150

COMM 176. Advanced Digital Media Journalism. 4-5 Units.
In-depth reporting and production using audio, images and video. Focus on an in-depth journalism project with appropriate uses of digital media: audio, photography, graphics, and video. Topics include advanced field techniques and approaches (audio, video, still) and emphasis on creating a non-fiction narrative arc in a multimedia piece of 10-12 minutes. Prerequisite: COMM 275 or consent of instructor.
Same as: COMM 276

COMM 177B. Big Local Journalism: a project-based class. 4-5 Units.
This class will tackle data-driven journalism, in collaboration with other academic and journalistic partners.nnThe class is centered around one or more projects rooted in local data-driven journalism but with potential for regional or national journalistic stories and impact. Students work in interdisciplinary teams to negotiate for public records and data, analyze data and report out stories. Some of the work may be published by news organizations or may be used to advance data journalism projects focused on public accountability. Students will gain valuable knowledge and skills in how to negotiate for public records, how to critically analyze data for journalistic purpose and build out reporting and writing skills. Students with a background in journalism (especially data journalism), statistics, computer science, law, or public policy are encouraged to participate. Enrollment is limited. Prerequisite: consent of instructor . May be repeated for credit. (Cardinal Course certified by the Haas Center).
Same as: COMM 277B

COMM 177C. Specialized Writing and Reporting: Health and Science Journalism. 4-5 Units.
Practical, collaborative, writing-intensive advanced journalistic reporting and writing course in the specific practices and standards of health and science journalism. Science and journalism students learn how to identify and write engaging stories about medicine, global health, science, and related environmental issues; how to assess the quality and relevance of science news; how to cover the health and science beats effectively and efficiently; and how to build bridges between the worlds of journalism and science. Instructed Winter Quarter 2019 by Dr. Seema Yasmin, http://www.seemayasmin.com. nnnLimited enrollment: preference to students enrolled in or considering the Earth Systems Master of Arts, Environmental Communication Program and the Graduate Journalism Program. Prerequisite: EarthSys 191/291, COMM 104w, or consent of instructor. Admission by application only, available from dr.yasmin@stanford.edu (Meets Earth Systems WIM requirement.).
Same as: COMM 277C, EARTHSYS 177C, EARTHSYS 277C

COMM 177D. Specialized Writing and Reporting: Narrative Journalism. 4-5 Units.
(Graduate students register for COMM 277D.) How to report, write, edit, and read long-form narrative nonfiction, whether for magazines, news sites or online venues. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best long-form narrative stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor.
Same as: COMM 277D

COMM 177E. Specialized Writing and Reporting: Telling True Stories. 4-5 Units.
Whether covering news, culture or sports, journalism feature writers combine factual reporting with vivid storytelling in a variety of forms – from profiles to essays to narratives. In a course designed as a writer's workshop, students will learn to think, report and write in scenes; to write from the point of view of one or more subjects; to report with a heightened sense of observation; and to focus on the most telling details in a story. Prerequisite: COMM 104W or consent of instructor.
Same as: COMM 277E

COMM 177I. Investigative Watchdog Reporting. 4-5 Units.
Graduate students register for COMM 277I.) Learn how to apply an investigative and data mindset to journalism, from understanding how to background an individual or entity using online databases to compiling or combining disparate sets of information in ways that unveil wrongdoing or mismanagement. Focuses on mining texts, tracking associations, and using visualizations. Stories produced apply investigative techniques to beat reporting, breaking news, and long form journalism. Prerequisite: COMM 104W, or consent of instructor.
Same as: COMM 277I

COMM 177P. Programming in Journalism. 4-5 Units.
This course introduces general purpose programming skills commonly used in the news. Students will gain basic proficiency in the Unix shell and Python programming while practicing skills such as web scraping, acquiring data from public APIs, cleaning and transforming data, and working with spreadsheets and databases. Automation and reproducibility will be important themes in the course. Exercises and projects will focus on helping students understand the nuances of obtaining and preparing data for use in data analysis and web applications for the news. Students must have basic SQL skills for this course.
Same as: COMM 277P

COMM 177SW. Specialized Writing and Reporting: Sports Journalism. 4-5 Units.
(Graduate students register for COMM 277S.) Workshop. An examination of American sports writing from the 1920's Golden Age of Sports to present. Students become practitioners of the sports writing craft in an intensive laboratory. Hones journalistic skills such as specialized reporting, interviewing, deadline writing, creation of video projects, and conceptualizing and developing stories for print and online.
Same as: COMM 277S

COMM 177T. Building News Applications. 4-5 Units.
This course introduces students to the process of building interactive web applications and visualizations for the news. Students will study examples from the news industry and gain proficiency in a range of technical languages, skills and tools: version control, HTML, CSS, Javascript, Python, web protocols, and web hosting and deployment. Class exercises and projects will focus on the use of these technologies to produce applications that tell a story and engage the public. Students must have basic proficiency in Python, SQL and the Unix shell.
Same as: COMM 277T

COMM 177Y. Specialized Writing and Reporting: Foreign Correspondence. 4-5 Units.
(Graduate students register for COMM 277Y.) Study how being a foreign correspondent has evolved and blend new communication tools with clear narrative to tell stories from abroad in a way that engages a diversifying American audience in the digital age. Prerequisite: COMM 104W, COMM 279, or consent of instructor.
Same as: COMM 277Y

COMM 180. Ethics, Public Policy, and Technological Change. 5 Units.
Examination of recent developments in computing technology and platforms through the lenses of philosophy, public policy, social science, and engineering. Course is organized around four main units: algorithmic decision-making and bias; data privacy and civil liberties; artificial intelligence and autonomous systems; and the power of private computing platforms. Each unit considers the promise, perils, rights, and responsibilities at play in technological developments. Prerequisite: CS106A.
Same as: CS 182, ETHICSOC 182, PHIL 82, POLISCI 182, PUBLPOL 182

COMM 184. Race and Media. 4-5 Units.
This course explores the co-construction of media practices and racial identity in the US. We will ask how media have shaped how we think about race. And we will explore the often surprising ways ideas about race have shaped media practices and technologies in turn. The course will draw on contemporary debates as well as historical examples and will cover themes such as representation and visual culture, media industries and audience practices, and racial bias in digital technology.
Same as: COMM 284

COMM 186W. Media, Technology, and the Body. 4-5 Units.
This course considers major themes in the cultural analysis of the body in relation to media technologies. How do media and information technologies shape our understanding of the body and concepts of bodily difference such as race, gender, and disability? We will explore both classic theories and recent scholarship to examine how technologies mediate the body and bodily practices in various domains, from entertainment to engineering, politics to product design.
Same as: COMM 286

COMM 195. Honors Thesis. 5 Units.
Qualifies students to conduct communication research. Student must apply for department honors thesis program during Spring Quarter of junior year.

COMM 199. Individual Work. 1-5 Unit.
For students with high academic standing. May be repeated for credit.

COMM 206. Communication Research Methods. 4-5 Units.
(Graduate students register for COMM 206.) Conceptual and practical concerns underlying commonly used quantitative approaches, including experimental, survey, content analysis, and field research in communication. Pre- or corequisite: STATS 60 or consent of instructor. (Cardinal Course certified by the Haas Center).
Same as: COMM 106

COMM 208. Media Processes and Effects. 4-5 Units.
(Graduate students register for COMM 208.) The process of communication theory construction including a survey of social science paradigms and major theories of communication. Recommended: 1 or PSYCH 1.
Same as: COMM 108

COMM 212. Models of Democracy. 3-5 Units.
Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments.
Same as: COMM 312

COMM 216. Journalism Law. 4-5 Units.
(Graduate students register for 216.) Laws and regulation impacting journalists. Topics include libel, privacy, news gathering, protection sources, fair trial and free press, theories of the First Amendment, and broadcast regulation. Prerequisite: Journalism M.A. student or advanced Communication major. Preference for enrollment in COMM 116 will be: Communications Majors and Co-Terms, then Seniors from other disciplines. Total enrollment in COMM 116/216 combined will be limited to 20.
Same as: COMM 116

COMM 220. The Rise of Digital Culture. 4-5 Units.
From Snapchat to artificial intelligence, digital systems are reshaping our jobs, our democracies, our love lives, and even what it means to be human. But where did these media come from? And what kind of culture are they creating? To answer these questions, this course explores the entwined development of digital technologies and post-industrial ways of living and working from the Cold War to the present. Topics will include the historical origins of digital media, cultural contexts of their deployment and use, and the influence of digital media on conceptions of self, community, and state. Priority to juniors, seniors, and graduate students.
Same as: AMSTUD 120, COMM 120W

COMM 224. Truth, Trust, and Tech. 4-5 Units.
Deception is one of the most significant and pervasive social phenomena of our age. Lies range from the trivial to the very serious, including deception between friends and family, in the workplace, and in security and intelligence contexts. At the same time, information and communication technologies have pervaded almost all aspects of human communication, from everyday technologies that support interpersonal interactions to, such as email and instant messaging, to more sophisticated systems that support organization-level interactions. Given the prevalence of both deception and communication technology in our personal and professional lives, an important set of questions have recently emerged about how humans adapt their deceptive practices to new communication and information technologies, including how communication technology affects the practice of lying and the detection of deception, and whether technology can be used to identify deception.
Same as: COMM 124

COMM 225. Perspectives on American Journalism. 4-5 Units.
An examination of American journalism, focusing on how news is produced, distributed, and financially supported. Emphasis on current media controversies and puzzles, and on designing innovations in discovering and telling stories. (Graduate students register for COMM 225.).
Same as: AMSTUD 125, COMM 125

COMM 230A. Digital Civil Society. 3 Units.
Digital technologies are changing the way members of the civil society come together to change the world. The 'civil society' includes social movements, grassroots activism, philanthropists, unions, nonprofits, NGOs, charities, and cooperatives, among others. Their mission is to effect important social and political transformations to bring about what they see as a better world. But their work and strategies are subject to significant changes in the digital era. The course will analyze the opportunities and challenges digital technologies present for associational life, free expression, privacy, and collective action. We will cover a wide range of key themes, including digital rights advocacy and racial justice, community-owned networks and de-colonial design, activist resistance to surveillance technologies, algorithmic bias, Black Twitter, and digital misinformation, micro-targeting and voter suppression. The course is global in scope (we will read authors and study cases from America, Europe, Asia, and Africa), taught by a multidisciplinary team (history, communication, computational social science, education), and is committed to a syllabus centering on the scholarship, expertise, and voices of marginalized communities.No prerequisite.
Same as: AFRICAAM 230A, CSRE 230A

COMM 230B. Digital Civil Society. 3 Units.
Digital technologies have fundamentally changed how people come together to make change in the world, a sphere of action commonly called 'civil society'. How did this happen, what's being done about it, and what does it mean for democratic governance and collective action in the future? This course analyzes the opportunities and challenges technology presents to associational life, free expression, individual privacy, and collective action. Year-long seminar sequence for advanced undergraduates or master's students. Each quarter may be taken independently. Winter Quarter focuses on the 2000s and considers the emergence of social media platforms, the rise of mobile connectivity, institutional shifts in journalism, and major developments in intellectual property, state surveillance, and digital activism.

COMM 230C. Digital Civil Society. 3 Units.
Digital technologies have fundamentally changed how people come together to make change in the world, a sphere of action commonly called 'civil society'. How did this happen, what's being done about it, and what does it mean for democratic governance and collective action in the future? This course analyzes the opportunities and challenges technology presents to associational life, free expression, individual privacy, and collective action. Year-long seminar sequence for advanced undergraduates or master's students. Each quarter may be taken independently. Spring focuses on emergent trends related to democracy and associational life, from the 2010s and into the future. Topics include the Arab Spring, global political propaganda, 'born digital' organizations, the development of electronic governments, and biotechnologies.
Same as: CSRE 230C

COMM 230X. Digital Civil Society +1 Series. 1 Unit.
Speaker series examining the history, theory, legal challenges, policy frameworks and economic choices that have shaped digital networks and technologies, and how those technologies have in turn changed the nature and role of civil society in democracies.

COMM 235. Deliberative Democracy and its Critics. 3-5 Units.
This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.
Same as: AMSTUD 135, COMM 135, COMM 335, ETHICSOC 135F, POLISCI 234P, POLISCI 334P

COMM 237. The Dialogue of Democracy. 4-5 Units.
All forms of democracy require some kind of communication so people can be aware of issues and make decisions. This course looks at competing visions of what democracy should be and different notions of the role of dialogue in a democracy. Is it just campaigning or does it include deliberation? Small scale discussions or sound bites on television? Or social media? What is the role of technology in changing our democratic practices, to mobilize, to persuade, to solve public problems? This course will include readings from political theory about democratic ideals - from the American founders to J.S. Mill and the Progressives to Joseph Schumpeter and modern writers skeptical of the public will. It will also include contemporary examinations of the media and the internet to see how those practices are changing and how the ideals can or cannot be realized.
Same as: AMSTUD 137, COMM 137W, POLISCI 232T, POLISCI 332T

COMM 238. Deliberative Democracy Practicum: Applying Deliberative Polling. 3-5 Units.
In this course, students will work directly on a real-world deliberative democracy project using the method of Deliberative Polling. Students in this course will work in partnership with the Center for Deliberative Democracy at Stanford, a research center devoted to the research in democracy and public opinion around the world. This unique practicum will allow students to work on an actual Deliberative Polling project on campus. In just one quarter, the students will prepare for, implement, and analyze the results for an Deliberative Polling project. This is a unique opportunity that allows students to take part in the entire process of a deliberative democracy project. Through this practicum, students will learn and apply quantitative and qualitative research methods. Students will explore the underlying challenges and complexities of what it means to actually do community-engaged research in the real world. As such, this course will provide students with skills and experience in research design in deliberative democracy, community and stakeholder engagement, and the practical aspects of working in local communities. This practicum is a collaboration between the Center for Deliberative Democracy and the Haas Center for Public Service. CDD website: http://cdd.stanford.edu; Hass Center website: https://haas.stanford.edu.
Same as: COMM 138

COMM 242. Media Economics. 4-5 Units.
Uses economics to examine the generation and consumption of information in communication markets. Covers concepts that play a large role in information economics, including public goods, economies of scale, product differentiation, and externalities. Looks at individuals' information demands as consumers, producers, audience members, and voters. Topics include economics of Internet, sustainability of accountability journalism, and marketplace of ideas.
Same as: COMM 142W

COMM 243. Communication Policy and Regulation. 4-5 Units.
Focuses on the development, implementation, and evaluation of policies affecting communication markets. Policy issues include universal service, digital divide, Internet regulation, intellectual property, privacy, television violence, content diversity, media ownership, antitrust, and impact of news on government accountability. Examines political economy of communication policy and the evolution of policies across time.
Same as: COMM 143W

COMM 245. Personality and Digital Media. 4-5 Units.
Personality describes people's characteristic patterns of thinking, feeling, and behaving. This course will introduce students to the ways personality is expressed in digital devices (e.g., computers, smartphones) and platforms (e.g., social networks, virtual worlds). Readings and lectures will introduce students to theories of personality, the practice of assessing personality, and the broader societal implications of having mediated personalities. Course assignments will require students to apply the course concepts to explore personality expression in various digitally mediated contexts.
Same as: COMM 145

COMM 248. Conversations on Journalism, Identity, and Social Justice. 1 Unit.
In this one-credit seminar, students will learn from U.S. journalists who are on the front lines of covering social justice and identity at a pivotal time in American history. The speakers will include JSK Community Impact Fellows, diverse journalists who are working to address information gaps in their communities, especially underserved communities of color. Students will be active participants in the conversations and express their thoughts in written reflections. Instructors will be Michael Bolden, R.B. Brenner, and Dawn Garcia.
Same as: COMM 148

COMM 251. The First Amendment: Freedom of Speech and Press. 4-5 Units.
The First Amendment: Freedom of Speech and Press (7084): Introduction to the constitutional protections for freedom of speech, press, and expressive association. All the major Supreme Court cases dealing with issues such as incitement, libel, hate speech, obscenity, commercial speech, and campaign finance. There are no prerequisites, but a basic understanding of American government would be useful. This course is crosslisted in the university and undergraduates are eligible to take it. Elements used in grading: Law students will be evaluated based on class participation and a final exam. Non-law students will be evaluated on class participation, a midterm and final exam, and nonlaw students will participate in a moot court on a hypothetical case. Non-law students will also have an additional one hour discussion section each week led by a teaching assistant. Cross-listed with Communication (COMM 151, COMM 251) and Political Science (POLISCI 125P). nnnClass time will be 11:10-12:40 on Mondays and Wednesdays.
Same as: COMM 151, ETHICSOC 151, POLISCI 125P

COMM 252. Constitutional Law. 3 Units.
This course covers Supreme Court case law concerning governmental powers, equal protection, and certain fundamental rights. The course investigates the constitutional foundation for democratic participation in the United States, covering topics such as the Fourteenth Amendment's protections against discrimination on grounds of race, gender, and other classifications, as well as the individual rights to voting and intimate association, and an introduction to First Amendment rights of free speech and press. Students will be evaluated on class participation, a midterm moot court with both a written and oral component, and a take-home final exam. Lectures will be twice per week and a discussion section once per week.
Same as: COMM 152, POLISCI 126P

COMM 253. Political Campaigning in the Internet Age. 3 Units.
This course will acquaint students with the changing environment for campaigns posed by the rise of the Internet. So much of the traditional way analysts have understood campaigns has revolved around television as the primary mode of campaign communication. The rise of the Internet, nonlinear television programming, and mobile communication enables new forms of campaigning. This course will examine the relevant social science on these topics, while at the same time bringing in guest lecturers from industry, campaigns, and media. Requirements: Students will be required to complete a 25 page research paper on a topic relevant to the course.
Same as: COMM 153

COMM 253A. Policy, Politics and the 2020 Elections: What 2020 Means for Future Campaigns and Elections. 2 Units.
(Same as LAW 7057). This course looks back at the 2020 election campaign and tries to discern lessons and takeaways for future campaigns and elections. It will provide students with a behind-the-scenes understanding of how campaigns work. Each week, we will explore a different topic related to high-profile campaigns -- policy formation, communications, grassroots strategy, digital outreach, campaign finance -- and feature prominent guest speakers who have served and will serve in senior roles on both Democratic and Republican campaigns, including the Trump and Biden teams.
Same as: COMM 153A, POLISCI 72, PUBLPOL 146, PUBLPOL 246

COMM 253B. Free Speech, Democracy and the Internet. 2-3 Units.
Crosslisted with LAW 7082. This course, which will be cotaught by Monika Bickert from Facebook, will cover contemporary challenges to democracy presented by the Internet. Topics will include disinformation, polarization, hate speech, media transformation, election integrity, and legal regulation of internet platforms in the U.S. and abroad. Guest speakers from academia and industry will present on these topics in each class session, followed by a discussion. Students will be responsible for one-page papers each week on the readings and a research paper to be turned in at the fall paper deadline. Students can take the class for either 2 or 3 units, depending on the research paper length. This class is crosslisted in the university and undergraduates are eligible to take it. Elements used in grading: Attendance, Class Participation, Written Assignments, Final Paper.
Same as: COMM 153B

COMM 254. The Politics of Algorithms. 4-5 Units.
Algorithms have become central actors in today's digital world. In areas as diverse as social media, journalism, education, healthcare, and policing, computing technologies increasingly mediate communication processes. This course will provide an introduction to the social and cultural forces shaping the construction, institutionalization, and uses of algorithms. In so doing, we will explore how algorithms relate to political issues of modernization, power, and inequality. Readings will range from social scientific analyses to media coverage of ongoing controversies relating to Big Data. Students will leave the course with a better appreciation of the broader challenges associated with researching, building, and using algorithms.
Same as: COMM 154, CSRE 154T, SOC 154, SOC 254C

COMM 257. Information Control in Authoritarian Regimes. 4-5 Units.
Does information help autocrats and dictators stay in power? Or does information help topple authoritarian regimes? This course will examine how authoritarian regimes try to control information through surveillance, propaganda, and censorship, what influences the effectiveness of these information control measures, and how changes in technology (Internet, social media, mobile) affect the dynamics of information control.
Same as: COMM 157, COMM 357

COMM 258. Censorship and Propaganda. 4-5 Units.
While the internet and other digital technologies have amplified the voice of ordinary citizens, the power of governments and other large organizations to control and to manipulate information is increasingly apparent. In this course, we will examine censorship and propaganda in the age of the internet and social media. What constitutes censorship and propaganda in the digital age? Who conducts censorship and propaganda, and how? What are the consequences and effects of censorship and propaganda in this era of information proliferation? How have censorship and propaganda changed from previous eras? Students will take a hands-on, project-based approach to exploring these questions.
Same as: COMM 158

COMM 262. Campaigns, Voting, Media, and Elections. 4-5 Units.
This course examines the theory and practice of American campaigns and elections. First, we will attempt to explain the behavior of the key players -- candidates, parties, journalists, and voters -- in terms of the institutional arrangements and political incentives that confront them. Second, we will use current and recent election campaigns as "laboratories" for testing generalizations about campaign strategy and voter behavior. Third, we examine selections from the academic literature dealing with the origins of partisan identity, electoral design, and the immediate effects of campaigns on public opinion, voter turnout, and voter choice. As well, we'll explore issues of electoral reform and their more long-term consequences for governance and the political process.
Same as: COMM 162, POLISCI 120B

COMM 264. The Psychology of Communication About Politics in America. 4-5 Units.
Focus is on how politicians and government learn what Americans want and how the public's preferences shape government action; how surveys measure beliefs, preferences, and experiences; how poll results are criticized and interpreted; how conflict between polls is viewed by the public; how accurate surveys are and when they are accurate; how to conduct survey research to produce accurate measurements; designing questionnaires that people can understand and use comfortably; how question wording can manipulate poll results; corruption in survey research.
Same as: COMM 164, POLISCI 124L, POLISCI 324L, PSYCH 170

COMM 266. Virtual People. 4-5 Units.
(Graduate students register for COMM 266.) The concept of virtual people or digital human representations; methods of constructing and using virtual people; methodological approaches to interactions with and among virtual people; and current applications. Viewpoints including popular culture, literature, film, engineering, behavioral science, computer science, and communication.
Same as: COMM 166

COMM 271. Moving Pictures: Video Journalism for Mobile and Social Platforms. 3-5 Units.
(Graduate students register for 271.) Examine video journalism's crucial role in digital news media across mobile and social media platforms. What are the specific needs of mobile platforms? How is new technology utilized to produce effective video news content? We'll examine case studies and hear from guest speakers about innovations in video journalism. Students produce short video journalism pieces using mobile tools, optimized for viewing on mobile devices. Prerequisite: COMM 104 or prior video journalism experience (contact instructor); Journalism MA student; or instructor's consent.
Same as: COMM 171

COMM 272. Media Psychology. 4-5 Units.
(Graduate students register for COMM 272.) The literature related to psychological processing and the effects of media. Topics: unconscious processing; picture perception; attention and memory; emotion; the physiology of processing media; person perception; pornography; consumer behavior; advanced film and television systems; and differences among reading, watching, and listening.
Same as: COMM 172

COMM 273D. Public Affairs Data Journalism I. 4 Units.
Even before the ubiquity of Internet access and high-powered computers, public accountability reporting relied on the concerted collection of observations and analytical problem-solving. We study the methods, and the data, used to discover leads and conduct in-depth reporting on public affairs, including election finance and safety regulations. Students gain practical experience with the digital tools and techniques of computer-assisted reporting. Prerequisite: Only open to Journalism M.A. students.

COMM 274D. Public Affairs Data Journalism II. 4 Units.
Learn how to find, create and analyze data to tell news stories with public service impact. Uses relational databases, advanced queries, basic statistics, and mapping to analyze data for storytelling. Assignments may include stories, blog posts, and data visualizations, with at least one in-depth project based on data analysis. Prerequisites: COMM 273D or Journalism M.A. student.

COMM 275. Multimedia Storytelling: Reporting and Production Using Audio, Still Images, and Video. 3-4 Units.
Multimedia assignments coordinated with deadline reporting efforts in COMM 273 from traditional news beats using audio, still photography, and video. Use of digital audio recorders and audio production to leverage voice-over narration, interviews, and natural sound; use of digital still cameras and audio to produce audio slideshows; and the combination of these media with video in post-production with Final Cut Pro. Prerequisite: Only open to Journalism M.A. students. Corequisite: COMM 273.

COMM 276. Advanced Digital Media Journalism. 4-5 Units.
In-depth reporting and production using audio, images and video. Focus on an in-depth journalism project with appropriate uses of digital media: audio, photography, graphics, and video. Topics include advanced field techniques and approaches (audio, video, still) and emphasis on creating a non-fiction narrative arc in a multimedia piece of 10-12 minutes. Prerequisite: COMM 275 or consent of instructor.
Same as: COMM 176

COMM 277B. Big Local Journalism: a project-based class. 4-5 Units.
This class will tackle data-driven journalism, in collaboration with other academic and journalistic partners.nnThe class is centered around one or more projects rooted in local data-driven journalism but with potential for regional or national journalistic stories and impact. Students work in interdisciplinary teams to negotiate for public records and data, analyze data and report out stories. Some of the work may be published by news organizations or may be used to advance data journalism projects focused on public accountability. Students will gain valuable knowledge and skills in how to negotiate for public records, how to critically analyze data for journalistic purpose and build out reporting and writing skills. Students with a background in journalism (especially data journalism), statistics, computer science, law, or public policy are encouraged to participate. Enrollment is limited. Prerequisite: consent of instructor . May be repeated for credit. (Cardinal Course certified by the Haas Center).
Same as: COMM 177B

COMM 277C. Specialized Writing and Reporting: Health and Science Journalism. 4-5 Units.
Practical, collaborative, writing-intensive advanced journalistic reporting and writing course in the specific practices and standards of health and science journalism. Science and journalism students learn how to identify and write engaging stories about medicine, global health, science, and related environmental issues; how to assess the quality and relevance of science news; how to cover the health and science beats effectively and efficiently; and how to build bridges between the worlds of journalism and science. Instructed Winter Quarter 2019 by Dr. Seema Yasmin, http://www.seemayasmin.com. nnnLimited enrollment: preference to students enrolled in or considering the Earth Systems Master of Arts, Environmental Communication Program and the Graduate Journalism Program. Prerequisite: EarthSys 191/291, COMM 104w, or consent of instructor. Admission by application only, available from dr.yasmin@stanford.edu (Meets Earth Systems WIM requirement.).
Same as: COMM 177C, EARTHSYS 177C, EARTHSYS 277C

COMM 277D. Specialized Writing and Reporting: Narrative Journalism. 4-5 Units.
(Graduate students register for COMM 277D.) How to report, write, edit, and read long-form narrative nonfiction, whether for magazines, news sites or online venues. Tools and templates of story telling such as scenes, characters, dialogue, and narrative arc. How the best long-form narrative stories defy or subvert conventional wisdom and bring fresh light to the human experience through reporting, writing, and moral passion. Prerequisite: 104 or consent of instructor.
Same as: COMM 177D

COMM 277E. Specialized Writing and Reporting: Telling True Stories. 4-5 Units.
Whether covering news, culture or sports, journalism feature writers combine factual reporting with vivid storytelling in a variety of forms -- from profiles to essays to narratives. In a course designed as a writer's workshop, students will learn to think, report and write in scenes; to write from the point of view of one or more subjects; to report with a heightened sense of observation; and to focus on the most telling details in a story. Prerequisite: COMM 104W or consent of instructor.
Same as: COMM 177E

COMM 277I. Investigative Watchdog Reporting. 4-5 Units.
Graduate students register for COMM 277I.) Learn how to apply an investigative and data mindset to journalism, from understanding how to background an individual or entity using online databases to compiling or combining disparate sets of information in ways that unveil wrongdoing or mismanagement. Focuses on mining texts, tracking associations, and using visualizations. Stories produced apply investigative techniques to beat reporting, breaking news, and long form journalism. Prerequisite: COMM 104W, or consent of instructor.
Same as: COMM 177I

COMM 277P. Programming in Journalism. 4-5 Units.
This course introduces general purpose programming skills commonly used in the news. Students will gain basic proficiency in the Unix shell and Python programming while practicing skills such as web scraping, acquiring data from public APIs, cleaning and transforming data, and working with spreadsheets and databases. Automation and reproducibility will be important themes in the course. Exercises and projects will focus on helping students understand the nuances of obtaining and preparing data for use in data analysis and web applications for the news. Students must have basic SQL skills for this course.
Same as: COMM 177P

COMM 277S. Specialized Writing and Reporting: Sports Journalism. 4-5 Units.
(Graduate students register for COMM 277S.) Workshop. An examination of American sports writing from the 1920's Golden Age of Sports to present. Students become practitioners of the sports writing craft in an intensive laboratory. Hones journalistic skills such as specialized reporting, interviewing, deadline writing, creation of video projects, and conceptualizing and developing stories for print and online.
Same as: COMM 177SW

COMM 277T. Building News Applications. 4-5 Units.
This course introduces students to the process of building interactive web applications and visualizations for the news. Students will study examples from the news industry and gain proficiency in a range of technical languages, skills and tools: version control, HTML, CSS, Javascript, Python, web protocols, and web hosting and deployment. Class exercises and projects will focus on the use of these technologies to produce applications that tell a story and engage the public. Students must have basic proficiency in Python, SQL and the Unix shell.
Same as: COMM 177T

COMM 277Y. Specialized Writing and Reporting: Foreign Correspondence. 4-5 Units.
(Graduate students register for COMM 277Y.) Study how being a foreign correspondent has evolved and blend new communication tools with clear narrative to tell stories from abroad in a way that engages a diversifying American audience in the digital age. Prerequisite: COMM 104W, COMM 279, or consent of instructor.
Same as: COMM 177Y

COMM 279. News Reporting & Writing Fundamentals. 3-4 Units.
Learn beat reporting and writing skills including source development, interviewing, and story structure for news and features. Emphasis on developing news judgment, clear writing skills, and an ability to execute stories on deadline. Exercises and assignments mimic a newsroom. Students pursue local beats with a focus on public issues and complement written pieces with relevant data analyses and multimedia components. Prerequisite: Only open to Journalism M.A. students. Corequisite: COMM 275.

COMM 280. Immersive (VR/AR) Journalism in the Public Sphere. 4 Units.
The immersive space (cinematic VR, virtual reality, and augmented reality) is journalism's newest and most exciting reporting and storytelling tool. We survey best practices and methods in this emerging medium and learn 360-degree video production and postproduction. Teams will illuminate issues and provoke conversation in the public sphere. Prerequisite: Preference to Journalism M.A. students. Please contact instructor for permission number to enroll.

COMM 281. Exploring Computational Journalism. 3 Units.
This project-based course will explore the field of computational journalism, including the use of Data Science, Info Visualization, AI, and emerging technologies to help journalists discover and tell stories, understand their audience, advance free speech, and build trust. Admission by application; please email Serdar Tumgoren at tumgoren@stanford.edu to request application.
Same as: CS 206

COMM 284. Race and Media. 4-5 Units.
This course explores the co-construction of media practices and racial identity in the US. We will ask how media have shaped how we think about race. And we will explore the often surprising ways ideas about race have shaped media practices and technologies in turn. The course will draw on contemporary debates as well as historical examples and will cover themes such as representation and visual culture, media industries and audience practices, and racial bias in digital technology.
Same as: COMM 184

COMM 286. Media, Technology, and the Body. 4-5 Units.
This course considers major themes in the cultural analysis of the body in relation to media technologies. How do media and information technologies shape our understanding of the body and concepts of bodily difference such as race, gender, and disability? We will explore both classic theories and recent scholarship to examine how technologies mediate the body and bodily practices in various domains, from entertainment to engineering, politics to product design.
Same as: COMM 186W

COMM 289P. Journalism Thesis. 2-4 Units.
MA thesis course. Focuses on development of in-depth journalism project, culminating in work of publishable quality.

COMM 290. Media Studies M.A. Project. 1-2 Unit.
Individual research for coterminal Media Studies students.

COMM 299. Individual Work. 1-4 Unit.
.

COMM 301. Communication Research, Curriculum Development and Pedagogy. 1 Unit.
Designed to prepare students for teaching and research in the Department of Communication. Students will be trained in developing curriculum and in pedagogical practices, and will also be exposed to the research programs of various faculty members in the department. Required of all Ph.D. students.

COMM 307. Summer Institute in Political Psychology. 3 Units.
Lectures, discussion groups, and workshops addressing many applications of psychology to the analysis of political behavior. Public opinion, international relations, political decision-making, attitudes and beliefs, prejudice, social influence and persuasion, terrorism, news media influence, foreign policy, socialization, social justice.

COMM 308. Graduate Seminar in Political Psychology. 1-3 Unit.
For students interested in research in political science, psychology, or communication. Methodological techniques for studying political attitudes and behaviors. May be repeated for credit.

COMM 311. Theory of Communication. 1-5 Unit.
Basic communication theory for first-year Ph.D. students in the Department of Communication. Introduction to basic writings and concepts in communication research. The goal is an introduction to issues in the field that are common in communication research. First half of the class will emphasize classic literature about field organization, history and theory. Second half will emphasize contemporary theory in areas that students select.

COMM 312. Models of Democracy. 3-5 Units.
Ancient and modern varieties of democracy; debates about their normative and practical strengths and the pathologies to which each is subject. Focus is on participation, deliberation, representation, and elite competition, as values and political processes. Formal institutions, political rhetoric, technological change, and philosophical critique. Models tested by reference to long-term historical natural experiments such as Athens and Rome, recent large-scale political experiments such as the British Columbia Citizens' Assembly, and controlled experiments.
Same as: COMM 212

COMM 314. Ethnographic Methods. 1-5 Unit.
This course offers an introduction to the practice and politics of ethnographic fieldwork. It provides a "how to" of ethnographic research, in which students will conduct an ethnographic project of their own, complemented by weekly readings and discussions. In the process, we will discuss the theory and epistemology of fieldwork, along with the practicalities and politics of fieldwork in different domains. We will examine different stages of ethnographic research (entering the field, conducting and recording fieldwork, exiting the field and writing it up), different methods (observations, interviews, "going along"), as well as distinct styles of ethnographic work (virtual ethnography, organizational ethnography, narrative ethnography, etc.). The course will serve as a participative workshop for students to exchange field notes, share practical advice, and consolidate their research interests. Prerequisite: Must be Communication student, or obtain approval from instructor.
Same as: SOC 319

COMM 317. The Philosophy of Social Science. 1-5 Unit.
Approaches to social science research and their theoretical presuppositions. Readings from the philosophy of the social sciences. Research design, the role of experiments, and quantitative and qualitative research. Cases from communication and related social sciences. Prerequisite: consent of instructor.

COMM 318. Quantitative Social Science Research Methods. 1-5 Unit.
An introduction to a broad range of social science research methods that are widely used in PhD work. Prerequisite: consent of instructor.

COMM 322. Advanced Studies in Behavior and Social Media. 1-5 Unit.
This course will focus on advanced research on social media with an emphasis on interpersonal dynamics. The course will emphasize key theories from psychology and communication that bear on behavior and social media. Students will develop a research project in the course that draws on one of the primary methods from the social media space.

COMM 324. Language and Technology. 3-5 Units.
In this course we develop a model of how language reflects social and psychological dynamics in social media and other technologically-mediated contexts. The course lays out the main stages of analyzing language to understand social dynamics, including using theory to identify key discourse features, feature extraction, and classification and prediction. The course will draw on action-oriented language approaches to understand how people use language (e.g., grounding and joint action models), and then build on this approach to understand how discourse features from natural language can be used to answer questions from a wide range of social science questions, and ultimately, to the design of new technologies. Instructor consent required to enroll.

COMM 326. Advanced Topics in Human Virtual Representation. 1-5 Unit.
Topics include the theoretical construct of person identity, the evolution of that construct given the advent of virtual environments, and methodological approaches to understanding virtual human representation. Prerequisite: PhD student or consent of instructor.

COMM 335. Deliberative Democracy and its Critics. 3-5 Units.
This course examines the theory and practice of deliberative democracy and engages both in a dialogue with critics. Can a democracy which emphasizes people thinking and talking together on the basis of good information be made practical in the modern age? What kinds of distortions arise when people try to discuss politics or policy together? The course draws on ideas of deliberation from Madison and Mill to Rawls and Habermas as well as criticisms from the jury literature, from the psychology of group processes and from the most recent normative and empirical literature on deliberative forums. Deliberative Polling, its applications, defenders and critics, both normative and empirical, will provide a key case for discussion.
Same as: AMSTUD 135, COMM 135, COMM 235, ETHICSOC 135F, POLISCI 234P, POLISCI 334P

COMM 339. Questionnaire Design for Surveys and Laboratory Experiments: Social and Cognitive Perspectives. 4 Units.
The social and psychological processes involved in asking and answering questions via questionnaires for the social sciences; optimizing questionnaire design; open versus closed questions; rating versus ranking; rating scale length and point labeling; acquiescence response bias; don't-know response options; response choice order effects; question order effects; social desirability response bias; attitude and behavior recall; and introspective accounts of the causes of thoughts and actions.
Same as: POLISCI 421K, PSYCH 231

COMM 345. Personality Expression in Digitally Mediated Contexts. 1-5 Unit.
Digital devices (e.g., computers, smartphones, wearables) and platforms (e.g., social media sites, forums, virtual worlds) mediate much of our daily life. Each time we use digital media for communication, information seeking, or entertainment, we leave behind psychologically revealing digital footprints. In this course, we will explore how digital footprints can be used to understand individual differences in thinking, feeling, and behaving. Class activities and assignments will require students to apply the concepts to their own research projects. Course enrollment limited to PhD-level students.

COMM 346. Advanced Topics on Individual Differences in Media Psychology. 3 Units.
This will be a project-based course for graduate students to take a deep dive on a specific topic within media psychology. All topics will share an underlying focus on individual differences. Example topics include: describing individual differences in use of digital devices (e.g., computers, smartphones, wearables) and platforms (e.g., social media, forums, virtual worlds), explaining what may be driving such differences (e.g., psychological factors, contextual factors), applying and developing methodological approaches for understanding and assessing mediated personalities, and exploring applications of psychologically tailoring media to people¿s characteristics and contexts. Students will work collaboratively with the instructor and other students in the course to produce a novel work by the end of the quarter.

COMM 350. New Media and Journalism. 1-5 Unit.
New media technologies are transforming how people create and consume information. In this course, we study journalism as an organized field of practice to examine what digital technologies change -- and what they don't change -- about production, diffusion, and reception of news around the globe. The course will cover topics such as changing professional boundaries in a networked environment; the decentralization of news production with social media platforms; the changes in editorial judgement related to automation; the construction of algorithmic audiences; and the promises and challenges associated with data journalism. Moving beyond simplistic analyses of the internet as a universal explanation for all changes in journalism, this course explores how new technologies interact with existing practices, representations, and institutions.
Same as: SOC 326

COMM 354. Work, Technology, and Communication. 1-5 Unit.
Workplace cultures and professional communities are currently being profoundly reconfigured through digital technologies, algorithmic tools, and online platforms. Many of these developments are recent. Yet previous waves of technological innovation came with comparable effects on work practices, occupational identities, and organizational dynamics. This graduate seminar explores the relationship between work, technology, and communication from a science and technology studies (STS) perspective. The students will read classic studies of workplace cultures as well as recent research on digital labor in order to better understand how work is changing in the twenty-first century.

COMM 357. Information Control in Authoritarian Regimes. 4-5 Units.
Does information help autocrats and dictators stay in power? Or does information help topple authoritarian regimes? This course will examine how authoritarian regimes try to control information through surveillance, propaganda, and censorship, what influences the effectiveness of these information control measures, and how changes in technology (Internet, social media, mobile) affect the dynamics of information control.
Same as: COMM 157, COMM 257

COMM 360G. Political Communication. 3-5 Units.
An overview of research in political communication with particular reference to work on the impact of the mass media on public opinion and voting behavior. Limited to Ph.D. students.
Same as: POLISCI 425

COMM 361. Law of Democracy. 3-5 Units.
Combined with LAW 7036 (formerly Law 577). This course is intended to give students a basic understanding of the themes in the legal regulation of elections and politics. We will cover all the major Supreme Court cases on topics of voting rights, reapportionment/redistricting, ballot access, regulation of political parties, campaign finance, and the 2000 presidential election controversy. The course pays particular attention to competing political philosophies and empirical assumptions that underlie the Court's reasoning while still focusing on the cases as litigation tools used to serve political ends. Elements used in grading: Class participation and one day take home final exam. (POLISCI 327C; LAW 577).
Same as: POLISCI 327C

COMM 362. Topics in Political Communication: Media Bias, Selective Exposure, and Political Polarization. 1-5 Unit.
This course surveys theories of media bias, biased processing of information, and the empirical challenges facing researchers attempting to link changes in the composition of audiences to attitudinal and behavioral outcomes. (Limited to PhD students).
Same as: POLISCI 425S

COMM 365. Advanced Longitudinal and Multivariate Methods in Social Science Research. 1-5 Unit.
This course offers a project-based orientation to methodological issues associated with the analysis of multivariate and/or longitudinal data in the social sciences. General areas to be covered include the manipulation/organization/description of the types of empirical data obtained in social science research, and the application/implementation of multivariate analysis techniques to those data. Students will, through hands-on analysis of their data, acquire experiences in the formulation of research questions and study designs that are appropriately tethered to a variety of advanced analytical methods. Limited to PhD students and consent of instructor.
Same as: PSYCH 289

COMM 372G. Seminar in Psychological Processing. 1-5 Unit.
Limited to Ph.D. students. Advanced topics. Prerequisite: 272 or consent of instructor.

COMM 378. Media and Time. 1-5 Unit.
As media technologies change, they radically restructure our experience of time. This course will bring together readings from media psychology and media history in order to understand this process. Students will explore issues such as the acceleration of everyday life, new modes of screen use, and the transformation of cultural categories such as ¿narrative¿ and ¿the event¿. Ultimately the course aims to help prepare students to consider time in scholarship about media.

COMM 380. Curriculum Practical Training. 1-5 Unit.
Practical experience in the communication industries. Prerequisite: consent of instructor. Meets requirements for Curricular Practical Training for students on F-1 visas. (Staff).

COMM 382. Big Data and Causal Inference. 1-5 Unit.
Massive datasets are increasingly available for research as digital technologies pervade our lives. These data represent new opportunities for social science research, but prominent examples of data science research bear little resemblance to the research designs of social scientific inquiry. In this course, we use machine learning and statistical tools on large-scale datasets to answer social science questions of cause and effect. Familiarity with Python recommended. Enrollment limited to PhD students in COMM or Social Science who have completed or are currently taking graduate quantitative methods sequences in Economics, Political Science, Sociology, or Statistics. Contact ohtammy@stanford.edu for a permission number to enroll (please include a current CV).

COMM 382B. Research Seminar in Computational Social Science. 1-3 Unit.
Technological advances have generated massive datasets available to use for research. Graduate students are increasingly well trained in computational and statistical techniques, but often encounter resistance from publishers and reviewers when applying these techniques. This is a graduate research seminar in which students will carefully read cutting-edge works in computational social science, and discuss in detail their theory, data and empirical methods, and overall scientific contribution. We will consider what makes these works successful, and participants will present in the seminar. Instructor approval required for non-Ph.D. students to enroll. May be repeated for credit.

COMM 384. Media Technology Theory. 3-5 Units.
This course surveys major theoretical approaches to the study of media technologies, including Frankfurt School critical theory, media archaeology, actor network theory, science and technology studies, platform studies and theories of critical making. By the end of the course, students should have a rich familiarity with the literature in this area, as well as with exemplary empirical studies conducted within each tradition. Preference to Ph.D. students in Communication and Art and Art History. Consent of instructor required for non-PhD students.
Same as: ARTHIST 465, FILMSTUD 465A

COMM 385. Media as Ways of Knowing. 1-5 Unit.
How do the tools and techniques of capturing, representing, storing, and transmitting information shape how and what we know? And how might such instruments influence the relationship between epistemic practices and forms social, cultural, and political life? This course will draw on scholarship across the history of science, science and technology studies, and media theory to consider the role media technologies play in how knowledge is produced, circulated, and authorized. Instructor consent required. Limited to PhD students or with consent of instructor.

COMM 386. Media Cultures of the Cold War. 3-5 Units.
The intersection of politics, aesthetics, and new media technologies in the U.S. between the end of WW II and the fall of the Berlin Wall. Topics include the aesthetics of thinking the unthinkable in the wake of the atom bomb; abstract expressionism and 'modern man' discourse; game theory, cybernetics, and new models of art making; the rise of television, intermedia, and the counterculture; and the continuing influence of the early cold war on contemporary media aesthetics. Readings from primary and secondary sources in art history, communication, and critical theory. Same as: ARTHIST 475

COMM 390. Communication Colloquium. 1 Unit.
The Communication Colloquium is a monthly seminar held throughout the academic year, in which leading scholars present their research findings. The Colloquium is intended for PhD students in Communication, and priority will be given to COMM PhD students. Attendance of all sessions is required to receive credit.

COMM 399. Advanced Individual Work. 1-9 Unit.
.

COMM 801. TGR Project. 0 Units.
.

COMM 802. TGR Dissertation. 0 Units.
.

COMPARATIVE LITERATURE

Courses offered by the Department of Comparative Literature are listed under the subject code COMPLIT on the (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=COMPLIT&filter-catalognumber-COMPLIT=on) Stanford Bulletin's (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=COMPLIT&filter-catalognumber-COMPLIT=on) ExploreCourses web site (http://explorecourses.stanford.edu/CourseSearch/search/?view=catalog&catalog=&page=0&q=COMPLIT&filter-catalognumber-COMPLIT=on).

The Department of Comparative Literature offers courses in the history and theory of literature through comparative approaches. The department accepts candidates for the degrees of Bachelor of Arts and Doctor of Philosophy. The department is a part of the Division of Literatures, Cultures, and Languages (p. 1298).

The field of Comparative Literature provides students the opportunity to study imaginative literature in a wide array of contexts: historical, formal, theoretical, and more. While other literary disciplines focus on works of literature within national or linguistic traditions, Comparative Literature draws on multiple contexts in order to examine the nature of literary phenomena from around the globe and from different historical moments, while exploring how literature interacts with other elements of culture and society. We study fictional narratives, performance, and poetry as well as cinema, music, and emerging aesthetic media.

Along with the traditional models of comparative literature that compare two or more national literary cultures and examine literary phenomena in light of literary theory, the department encourages study of the relationship between literature and philosophy and the enrichment of literary study with other disciplinary methodologies. Comparative Literature also embraces the study of aspects of literature that overgo national boundaries, such as transnational literary movements or the creative adaptation of particular genres to local cultures. In each case, students emerge from the program with enhanced verbal and writing skills, a command of literary studies, the ability to read analytically and critically, and a more global knowledge of literature.

Mission of the Undergraduate Program in Comparative Literature

The mission of the undergraduate program in Comparative Literature is to develop students' verbal and written communication skills, their ability to read analytically and critically, and their global knowledge of literary cultures and the specific properties of literary texts. The program provides students with the opportunity to study imaginative literature with several methods and a consciousness of methodology.

A Comparative Literature major prepares a student as a reader and interpreter of literature through sophisticated examination of texts and the development of a critical vocabulary with which to discuss them. Along with providing core courses that introduce students to major literary phenomena in a comparative frame, the program of study accommodates the interests of students in areas such as specific regions, historical periods, and interdisciplinary connections between literature and other fields such as philosophy, music, the visual arts, gender and queer theory, and race and ethnicity. Attention to verbal expression and interpretive argument serves students who will proceed into careers requiring strong language and communication skills and cross-cultural knowledge of the world.

Learning Outcomes (Undergraduate)

The department expects undergraduate majors in the program to be able to demonstrate the following learning outcomes. These learning outcomes are used in evaluating students and the department's undergraduate program. Students are expected to demonstrate:

1. the ability to interpret a literary text in a non-native language or to compare literary texts from different linguistic traditions, which may be read in translation.
2. a self-reflective understanding of the critical process necessary to read and understand texts.
3. skills in writing effectively about literature.
4. skills in oral communication and public speaking about literature.

Graduate Programs in Comparative Literature

The department offers a Doctor of Philosophy and a Ph.D. minor in Comparative Literature.

Learning Outcomes (Graduate)

Through completion of advanced course work and rigorous skills training, the doctoral program prepares students to

1. make original contributions to the knowledge of Comparative Literature and to interpret and present the results of such research,
2. teach literary analysis and interpretation at all levels with broad historical, cultural and linguistic understanding, and
3. apply such analysis, interpretation and understanding to a range of fields and vocations.

Bachelor of Arts in Comparative Literature

The major in Comparative Literature requires students to enroll in a set of core courses offered by the department, to complete electives in the department, and to enroll in additional literature courses, or other courses approved by the Chair of Undergraduate Studies, offered by other departments. This flexibility to combine literature courses from several departments and to address literature from multiple traditions is the hallmark of the Comparative Literature major. Students may count courses which read literature in translation; however, every student, especially those planning to pursue graduate study in Comparative Literature, is strongly encouraged to develop a command of non-native languages.

Declaring the Major

Students declare the major in Comparative Literature through Axess. Students must meet with the Chair of Undergraduate Studies to discuss appropriate courses and options within the major, and to plan the course of study. All Comparative Literature degree programs are administered by the DLCL undergraduate student services office located in Pigott Hall, room 128.

Advising

Upon declaring the major, each student is assigned an advisor by the Chair of Undergraduate Studies. Students should consult with their advisors at least once a quarter. While the Chair monitors progress to completion of the degree, the advisor oversees the student's general intellectual development and offers advice about courses and projects. Students are also encouraged to develop relationships with other faculty members who may act as mentors.

Overseas Campuses and Abroad Programs

The Department of Comparative Literature encourages study abroad, both for increased proficiency in language and the opportunity for

advanced course work. Course work done at campuses other than Stanford is counted toward the major at the discretion of the Chair of Undergraduate Studies and is contingent upon the Office of the University Registrar's approval of transfer credit. To that end, students abroad are advised to save syllabi, notes, papers, and correspondence.

Degree Requirements

All majors in Comparative Literature (including honors) are required to complete the following requirements. All courses applied to the major must be taken for a letter grade, and a grade point average (GPA) of 2.0 or better must be achieved in each core course.

1. COMPLIT 101 What Is Comparative Literature?. This gateway to the major is normally taken by the end of sophomore year. It provides an introduction to literature and its distinctions from other modes of linguistic expression, and a fundamental set of interpretive skills. This course fulfills the Writing in the Major requirement.
2. *Core Courses (5 units each)*
   Students should complete these courses as soon as possible. Each course draws on examples from multiple traditions to explore fundamental issues in its genre.

		Units
COMPLIT 121	Poems, Poetry, Worlds	5
COMPLIT 122	Literature as Performance	5
COMPLIT 123	The Novel and the World	5

3. COMPLIT 199. This senior seminar is designed as a culmination to the course of study while providing reflection on the nature of the discipline. Topics vary.
4. *Electives:* Majors must complete at least 40 units of electives. 15 of the 40 units must be COMPLIT courses (excluding COMPLIT 194). The remaining courses should form a coherent intellectual focus requiring approval from the Chair of Undergraduate Studies and may be drawn from Comparative Literature offerings, from other literature departments, or from other fields of interdisciplinary relevance. Up to 10 units of Thinking Matters or SLE courses may be counted towards the elective requirement.
5. Students whose major concentration involves languages other than their native language(s) are encouraged to receive the Foreign Language Proficiency Notation. Those students who achieve this notation may count up to 15 units of language classes towards their electives in the Comparative Literature Major. The Foreign Language Proficiency Notation is administered by the Stanford Language Center, involves an Oral Proficiency Interview and Writing Proficiency Test, and results in a notation on the student's official Stanford transcript. Students should achieve a minimum rating of Advanced Low (for cognate languages) or Intermediate High (for non-cognate languages) on the Foreign Service Institute/American Council on the Teaching of Foreign Languages proficiency scale. Successful completion of the OPI is required to proceed with the WPT. Students are recommended to take the OPI in or before the Winter of their senior year.
6. Electives are subject to advisor consultation and approval.
7. *Total unit load:* Students must complete course work for a total of at least 65 units.

Comparative Literature and Philosophy Subplan

Undergraduates may major in the Comparative Literature and Philosophy subplan that is declared in Axess and apprears on a student's transcript and diploma. Students in this subplan take courses alongside students from other departments that also have specialized options associated with the program for the study of Philosophical and Literary Thought. Each student in this subplan is assigned an advisor in Comparative Literature, and student schedules and courses of study must be approved in writing by the Chair of Undergraduate Studies of Comparative Literature, and the Chair of Undergraduate Studies of the program. See the Philosophy + Literature @ Stanford (https://philit.stanford.edu/programs/philosophyandliterature.html) website.

A total of 65 units must be completed for this option, including the following requirements:

1. Seven courses taught by Comparative Literature faculty. Of the seven, the following five (5 units each) are required courses:

		Units
COMPLIT 101	What Is Comparative Literature?	5
COMPLIT 121	Poems, Poetry, Worlds	5
COMPLIT 122	Literature as Performance	5
COMPLIT 123	The Novel and the World	5
COMPLIT 199	Senior Seminar	5
The remaining two courses must be instructed by Comparative Literature faculty and approved by the Chair of Undergraduate Studies. Up to five units of SLE may be counted in lieu of one of these two courses.		

2. *Philosophy and Literature Gateway Course* (4 units) COMPLIT 181 Philosophy and Literature. This course should be taken as early as possible in the student's career, normally in the sophomore year.
3. *Philosophy Writing in the Major* (5 units)*:* PHIL 80 Mind, Matter, and Meaning. Prerequisite: introductory Philosophy course.
4. *Aesthetics, Ethics, Political Philosophy* (ca. 4 units): One course from the PHIL 170 series.
5. *Language, Mind, Metaphysics, and Epistemology* (ca. 4 units): One course from the PHIL 180 series.
6. *History of Philosophy (*ca. 8 units)*:* Two courses in the history of philosophy, numbered above PHIL 100. Up to five units of SLE may be counted in lieu of one of these two courses.
7. *Related Courses* (ca. 8 units)*:* Two upper division courses relevant to the study of philosophy and literature as identified by the committee in charge of the program. A list of approved courses may be found on Philosophy and Literature (http://philit.stanford.edu/programs/relevance.html) web site.
8. One course, typically in translation, in a literature distant from that of the student's concentration and offering an outside perspective on that literary tradition.
9. COMPLIT 199 (https://exploredegrees.stanford.edu/search/?P=COMPLIT%20199) Senior Seminar.
10. *Capstone:* Students must do one of the following: (a) take one of the officially-designated Philosophy and Literature capstone seminars listed below, subject to approval in writing by the Chair of Undergraduate Studies of Comparative Literature and by the undergraduate advisor for the literature and philosophy initiative; (b) write an honors thesis on a topic at the intersection of literature and philosophy (see Honors Program for general instructions); or (c) write a 5,000-word paper on a topic of their choosing, serving as the culmination of their work in the field. To make time to write the paper, students must enroll in a 3-unit, letter-grade independent study with a faculty member (or affiliate) in the Philosophy and Literature Focal Group. The paper must involve both philosophy and literature, and the topic must be approved by the faculty member by the add/drop deadline.

		Units
COMPLIT 283A	Modern Notions of 'The Holy'	3-5
PHIL 194W	Capstone Seminar: Imagination in Fiction and Philosophy	4
PHIL 194Z	Capstone: Living a Meaningful Literary Life	4

Other courses found on the Philosophy and Literature web site.

11. *Seminar Paper Requirement:* Students must write at least one seminar paper that is interdisciplinary in nature. This paper brings together material from courses taken in philosophy and literature, and may be an honors paper (see below), an individual research paper (developed through independent work with a faculty member), or a paper integrating materials developed for two separate courses (by arrangement with the two instructors). Though it may draw on previous course work, the paper must be an original composition, 18-20 pages in length. It must be submitted to the Chair of Undergraduate Studies and receive approval no later than the end of Winter Quarter in the fourth year of study.

- Substitutions and transfer credit are not normally permitted for the PHIL 170 series class or the PHIL 180 series class, and are never permitted for PHIL 80, COMPLIT 181, or the capstone seminar.
- Units devoted to acquiring language proficiency are not counted toward the 65-unit requirement.

Honors Program

Students majoring in any DLCL department (i.e., Comparative Literature, French and Italian, German Studies, Iberian and Latin American Cultures, and Slavic Languages and Literatures) who have an overall grade point average (GPA) of 3.3 or above and who maintain a 3.5 (GPA) in their major courses, are eligible to participate in the DLCL's honors program.

Declaring Honors

Prospective honors students must choose a senior thesis adviser from among their home department's regular faculty in their junior year by May 1. During Spring Quarter of the junior year, a student interested in the honors program should consult with the Chair of Undergraduate Studies of their home department to submit a thesis proposal (2-5 pages), DLCL Honors application, and an outline of planned course work for their senior year. When their applications are approved by their home department, students will request honors through Axess.

Honors theses vary considerably in length as a function of their topic, historical scope, and methodology. They may make use of previous work developed in seminars and courses, but display an enhanced comparative or theoretical scope. Quality rather than quantity is the key criterion. Honors theses range from 40 to 90 pages not including bibliography and notes.

Honors students are encouraged to participate in the DLCL program hosted by Bing Honors College. This DLCL Honors College is designed to help students develop their projects and is offered at the end of the summer before senior year. Applications must be submitted through the Bing program. For more information, view the Bing Honors (https://undergrad.stanford.edu/programs/bhc/) web site.

Program Requirements

A minimum of 10 units total, described below, and a completed thesis is required. Honors essays are due to the thesis adviser no later than 5:00 p.m. on May 15, of the terminal year. If an essay is found deserving of a grade of 'A-' or better by the thesis adviser, honors are granted at the time of graduation.

1. Spring Quarter of the junior year (optional): DLCL 189C Honors Thesis Seminar, 2-4 units S/NC, under the primary thesis adviser. Drafting or revision of the thesis proposal. The proposal is reviewed by the Chair of Undergraduate Studies and the Director of the department and will be approved or returned for submission.
2. Autumn Quarter of the senior year (required): DLCL 189A Honors Thesis Seminar, 4 units S/NC, taught by a DLCL appointed faculty member. Course focuses on researching and writing the honors thesis.
3. Winter Quarter of the senior year (required): DLCL 189B Honors Thesis Seminar, 2-4 units S/NC, under the primary thesis adviser. Focus is on writing under guidance of primary adviser.
4. Spring Quarter of the senior year (option; mandatory if not taken during junior year): DLCL 189C Honors Thesis Seminar, 2-4 units S/NC, under the primary thesis adviser. Honors essays are due to the thesis adviser and student services officer no later than 5:00 p.m. on May 15 of the terminal year.
5. Spring Quarter of the senior year (required) DLCL 199 Honors Thesis Oral Presentation, 1 unit S/NC. Enroll with primary thesis adviser.

The honors thesis in the DLCL embodies Stanford's excellence in course work and research. It is simultaneously one element of the student's intellectual legacy and part of the University's official history. The faculty considers the honors thesis to be far more than a final paper; rather, it is the product of solid research that contributes to conversations taking place within a larger scholarly community and representative of the intellectual vitality of the discipline. For all of these reasons, DLCL honors theses will be visible to future scholars researching similar questions through full online access through the Stanford Digital Repository (https://library.stanford.edu/research/stanford-digital-repository/) (SDR) and may be used as course materials for future Stanford honors preparatory courses. For similar purposes, a printed copy may also be kept in DLCL spaces. Students who wish to limit the availability or formats in which the thesis may be shared may do so by filling out the appropriate form with the DLCL student affairs officer.

Minor in Comparative Literature

The undergraduate minor in Comparative Literature represents a condensed (22-unit minimum) version of the major. It is designed for students who are unable to pursue the major but nonetheless seek an opportunity to gain a deeper understanding of literature.

Declaring the Minor

Students declare the minor in Comparative Literature through Axess. Students should meet with the Chair of Undergraduate Studies to discuss appropriate courses and options within the minor, and to plan the course of study. The minor plan is administered through the Division of Literatures, Cultures, and Languages (DLCL) undergraduate student services office in Pigott Hall, room 128.

Requirements

- Plans for the minor are reviewed with the Chair of Undergraduate Studies.
- 22 unit minimum course plan.
- All courses must be taken for a letter grade.
- Courses may not duplicate course work for other major or minor programs.
- Up to 5 units of SLE or Independent Study may count towards one of the four additional Comparative Literature courses with approval from the Chair of Undergraduate Studies.

Courses

Course requirements for the minor in Comparative Literature are:

		Units
COMPLIT 101	What Is Comparative Literature?	5
Select one of the following:		5
COMPLIT 121	Poems, Poetry, Worlds	
COMPLIT 122	Literature as Performance	

COMPLIT 123	The Novel and the World	
At least four other Comparative Literature courses.		12-20

Minor in Modern Languages

The Division of Literatures, Cultures, and Languages offers an undergraduate minor in Modern Languages for students demonstrating competency in two modern languages and literatures. This minor draws on literature and language courses offered in this and other literature departments.See the "Literatures, Cultures, and Languages (p. 1301)" section of this bulletin for requirements.

Doctor of Philosophy in Comparative Literature

University requirements for the Ph.D. are described in the "Graduate Degrees (p. 65)" section of this bulletin.

The Ph.D. program is designed for students whose linguistic background, breadth of interest in literature, and curiosity about the problems of literary scholarship and theory (including the relation of literature to other disciplines) make this program more appropriate to their needs than the Ph.D. in one of the national literatures. Students take courses in at least three literatures (one may be that of the native language), to be studied in the original. The program is designed to encourage familiarity with the major approaches to literary study prevailing today.

Before starting graduate work at Stanford, students should have completed an undergraduate program with a strong background in one literature and some work in a second literature in the original language. Since the program demands an advanced knowledge of two non-native languages and a reading knowledge of a third non-native language, students should at the time of application have an advanced enough knowledge of one of the three to take graduate-level courses in that language when they enter the program. They should be making enough progress in the study of a second language to enable them to take graduate courses in that language not later than the beginning of the second year, and earlier if possible. Language courses at the 100- or 200-level may be taken with approval from the Director of the department or the Chair of Graduate Studies. Applicants are expected to take an intensive course in the third language before entrance.

Students are admitted under a financial plan that attempts to integrate financial support and completion of residence requirements with their training as prospective university teachers. Assuming satisfactory academic progress, fellowship support as a Ph.D. student is for five years.

Application Procedures

Competition for entrance into the program is extremely keen. The program is kept small so that students have as much opportunity as possible to work closely with faculty throughout the period of study. Applicants should review all course and examination requirements, advancement requirements, and teaching obligations carefully before applying to the program. Because of the special nature of comparative literary studies, the statement of purpose included in the application for admission must contain the following information:

1. A detailed description of the applicant's present degree of proficiency in each of the languages studied, indicating the languages in which the applicant is prepared to do graduate work at present and outlining plans to meet additional language requirements of the program.
2. A description of the applicant's area of interest (for instance, theoretical problems, genres, periods) within literary study and the reasons for finding comparative literature more suitable to his or her needs than the study of a single literature. Applicants should also indicate their most likely prospective primary field, including the literatures on which they intend to concentrate.
3. An explanation of how the applicant's undergraduate education has prepared her or him for work in our program. If there are any gaps in the applicant's preparation, a plan to address those gaps should be discussed.
4. The applicant's reasons for wishing to study in the department.

The application itself must also include:

1. The results of the general section of the Graduate Record Examination. These results should be sent to Stanford University, ETS code 4704.
2. A letter of recommendation that focuses on the applicant's language skills, or a current ACTFL Oral Proficiency Interview (OPI) certificate, or a critical paper written in a non-native language.
3. Recommendations from faculty members in at least two of the literatures in which the student proposes to work, if possible.
4. A writing sample that the candidate considers to represent his or her best work, preferably demonstrating a comparative analysis.

For further information see the Graduate Admissions (http://gradadmissions.stanford.edu/) web site.

Degree Requirements

A candidate for the Ph.D. degree must complete three years (nine quarters) of full-time work, or the equivalent, in graduate study beyond the bachelor's degree. The student must take 135 units of graduate work and submit the doctoral dissertation. At least three consecutive quarters of course work must be taken at Stanford.

Languages

Students must present three non-native languages, two of them sufficiently to qualify for graduate courses in these languages and the third sufficiently to demonstrate the ability to read a major author in this language. Two languages are certified by graduate-level course work specified below. Only the third language may be certified by examination. Language preparation must be sufficient to support graduate-level course work in at least one language during the first year and in the second language during the second year. Students must demonstrate a reading knowledge of the third non-native language no later than the beginning of the third year.

Literatures in the same language (such as Spanish and Spanish American) are counted as one. One of the student's three literatures usually is designated as the primary field, the other two as secondary fields, although some students may offer two literatures at the primary level (six or more graduate courses).

Teaching

Whatever their sources of financial support, students are normally expected to undertake a total of five quarters of supervised apprenticeships and teaching at half time. Students must complete those pedagogy courses required by the departments in which they teach.

Minimum Course Requirements

Students are advised that the range and depth of preparation necessary to support superior work on the dissertation, as well as demands in the present professional marketplace for coverage of both traditional and interdisciplinary areas of knowledge, render these requirements as bare minimums.

1. Preparatory Courses

		Units
DLCL 301	The Learning and Teaching of Second Languages	3
DLCL 369	Introduction to the Profession of Literary Studies	1-2

These courses are designed to acculturate first-year students into the intellectual, professional, and pedagogical modes of the discipline. Students who do not intend to teach language at Stanford or after should consult the Chair of Graduate Studies about whether to take DLCL 301 or replace it with another course on pedagogy.

2. A sufficient number of courses (six or more) in the student's primary field to ensure knowledge of the basic works in one national literature from its beginnings to the present.

3. At least four additional complementary courses, with most of the reading in the original, in two different national literatures (i.e., two courses in each literature).

Minimum course requirements must be completed before the student is scheduled to take the University oral examination. These requirements are kept to a minimum so that students have sufficient opportunity to seek out new areas of interest. A course is an offering of 3-5 units. Independent study may take the place of up to two of the required courses, but no more; no undergraduate courses may be counted toward the required 135 credits. Courses should be taken for letter grades when the option is available.

The principal conditions for continued registration of a graduate student are the timely and satisfactory completion of the university, department, and program requirements for the degree, and fulfillment of minimum progress requirements. Failure to meet these requirements results in corrective measures that may include a written warning, academic probation, and/or the possible release from the program.

4. All graduate students, starting with the 2020/21 cohort, must participate in the Comparative Literature Graduate Students Colloquium (CompColl) (students enroll in COMPLIT 397 Graduate Studies Colloquium for 1 unit per quarter). For more information, see the Graduate Handbook 2020-21.

Minimum course requirements must be completed before the student is scheduled to take the University oral examination. These requirements are kept to a minimum so that students have sufficient opportunity to seek out new areas of interest. A course is an offering of 3-5 units. Independent study may take the place of up to two of the required courses, but no more; no undergraduate courses may be counted toward the required 135 credits. Courses should be taken for letter grades when the option is available.

The principal conditions for continued registration of a graduate student are the timely and satisfactory completion of the university, department, and program requirements for the degree, and fulfillment of minimum progress requirements. Failure to meet these requirements results in corrective measures that may include a written warning, academic probation, and/or the possible release from the program.

Examinations

Three examinations are required. The first two are one hour in duration, the third two hours.

1. First One-Hour Examination. The genre examination is administered toward the end of the first year. It is designed to demonstrate the student's knowledge of a substantial number of literary works in a single genre, ranging over several centuries and over at least three national literatures, and the theoretical problems involved in the chosen genre and in the matter of genre in general. Students must focus on poetry, drama, or narrative (including the novel), combining core recommendations from the department with selections from their own areas of concentration. Any student who does not pass the exam has the opportunity to retake it before the end of the same spring quarter. Students who do not pass this exam a second time may be dismissed from the program.
2. Second One-Hour Examination. The theory exam is administered in the autumn quarter of the second year. It is intended to demonstrate the student's knowledge of a particular problem in the history of literary theory and criticism or the ability to develop a particular theoretical position. In either case, this exam should demonstrate wide reading in theoretical and critical texts from a variety of periods. Any student who does not pass the exam has the opportunity to retake the exam the second week of the winter quarter. Students who do not pass this exam a second time may be dismissed from the program.
3. University Oral Examination. This examination is normally taken during the autumn quarter of the third year. It covers a literary period of about a century in three or more literatures with primary emphasis on a single national literature or, in occasional cases, two national literatures. The reading list covers chiefly the major literary works of the period.

More information about the examinations is available in the Department Graduate Handbook.

Dissertation Reading Committee

The doctoral dissertation reading committee consists of the principal dissertation adviser and at least two other readers. The doctoral dissertation reading committee must have no fewer than three and no more than five members. At least one member must be from the student's major department. Normally, all committee members are members of the Stanford University Academic Council or are emeritus Academic Council members. The student's department Director may, in some cases, approve the appointment of a reader who is not a current or emeritus member of the Academic Council, if that person is particularly well qualified to consult on the dissertation topic and holds a Ph.D. or equivalent degree. Former Stanford Academic Council members and non-Academic Council members may thus, on occasion, serve on a reading committee. A non-Academic Council member (including former Academic Council members) may replace only one of three required members of dissertation reading committees. If the reading committee has four or five members, at least three members (comprising the majority) must be current or emeritus members of the Academic Council. For additional information, see the GAP's Policy on Dissertation Reading Committees (https://gap.stanford.edu/handbooks/gap-handbook/chapter-4/subchapter-8/page-4-8-1/). Students should complete and submit the Dissertation Reading Committee form (https://pangea.stanford.edu/sites/default/files/Doc_Diss_Reading_Dtte_form.pdf) upon applying for Terminal Graduate Registration status.

Prospectus Colloquium

The prospectus for the dissertation must be prepared in close consultation with the dissertation adviser during the months preceding the colloquium. It should offer a synthetic overview of the dissertation, describe its methodology and the project's relation to past scholarship on the topic, and lay out a complete plan of the chapters.

The prospectus colloquium normally takes place during the quarter after the University oral examination. It is the student's responsibility to set the date and time of the colloquium in consultation with the members of the dissertation reading committee and the department administrator.

If the outcome is favorable by majority vote of the committee, the student is free to proceed with work on the dissertation. If the proposal is found

to be unsatisfactory by majority vote, the dissertation readers may ask the student to revise the prospectus and hold a second colloquium.

Qualifying Procedures

Candidacy

Admission to candidacy is an important decision by the department based on its overall assessment of a student's ability to complete the Ph.D. program. According to University policy, students are expected to follow department qualifying procedures and apply for candidacy by the end of the second year in residence. In reviewing a student for admission to candidacy, the faculty considers a student's academic progress including but not limited to:

- advanced language proficiency
- course work
- performance on the qualifying (i.e. genre and theory) examinations
- successful completion of teaching assistantships
- completion of at least three units of work with each of four Stanford faculty members

Beyond the successful completion of department prerequisites, admission to candidacy depends on the faculty's evaluation of whether student has the potential to fulfill the requirements of the degree program. Candidacy is determined by faculty vote. Failure to advance to candidacy results in the dismissal of the student from the doctoral program. Candidacy is valid for five years and students are required to maintain active candidacy through conferral of the doctoral degree. All requirements for the degree must be completed before candidacy expires. The department conducts regular reviews of each student's academic performance, both before and after admission to candidacy. Failure to make satisfactory progress to degree may result in dismissal from the doctoral program. Additional information about University candidacy policy is available in the Bulletin (p.) and GAP (http://gap.stanford.edu/4-6.html).

Annual Review

The faculty provides students with timely and constructive feedback on their progress toward the Ph.D. Annual reviews provide a general assessment and identify developing problems that could impede progress. Possible outcomes of the yearly review include:

1. continuation of the student in good standing, or
2. placing the student on probation, with specific guidelines for the period on probation and the steps to be taken in order to be returned to good standing.

For students on probation at this point (or at any other subsequent points), possible outcomes of a review include:

1. restoration to good standing
2. continued probation, again with guidelines for necessary remedial steps
3. termination from the program. Students leaving the program at the end of the first or second year are usually permitted to complete the requirements to receive an M.A. degree, if this does not involve additional residency or financial support.

Ph.D. Minor in Comparative Literature

This minor is designed for students working toward the Ph.D. in the various national literature departments. Students working toward the Ph.D. in English are directed to the program in English and Comparative Literature described among offerings in the Department of English (p. 1384). Students must have:

1. A knowledge of at least two non-native languages:
   a. one non-native language sufficient to qualify for graduate-level courses in that language
   b. the second non-native language sufficient to read a major author in the original language.
2. A minimum of six graduate courses:
   a. three graduate courses must be in the department of the second literature
      i. except for students in the Asian languages, students must choose a second literature outside the department of their major literature.
   b. three graduate courses must be in the Department of Comparative Literature, including:
      i. a seminar in literary theory or criticism
      ii. at least two of the three courses in Comparative Literature should originate in a department other than the one in which the student is completing their degree.

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

The Comparative Literature Department counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of undergraduate degree requirements that otherwise require a letter grade.

Required Courses Policy

In academic year 2020-21, as Stanford operates on a four-quarter system, students may opt not to be enrolled in one of the four quarters of the year. Students may therefore be unable to take a Comparative Literature core class (COMPLIT 101, 121, 122, 123, 199) because they are on leave during the quarter it is offered. In these cases, the Chair of Undergraduate Studies will, in coordination with the student's departmental advisor, suggest appropriate substitute classes and approve one of them.

Graduate Degree Requirements

Grading

The Comparative Literature Department counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade.

Graduate Advising Expectations

The Department of Comparative Literature is committed to providing academic advising in support of graduate student scholarly and professional development. The overall goal of advising, both in the DLCL and the department, is to help graduate students make academic

and career choices wisely, and think ahead, in order to craft a long-term plan for their graduate student career and beyond. When most effective, the advising relationship entails collaborative and sustained engagement by both the advisor and the advisee. As a best practice, advising expectations should be periodically discussed and reviewed to ensure mutual understanding. Both the advisor and the advisee are expected to maintain professionalism and integrity. Advising is both an academically invaluable form for the transmission of expertise, as well as a key aspect of creating a strong departmental and Stanford community.

Faculty Advisors

Faculty advisors guide students in key areas such as selecting courses, designing and conducting research, developing of teaching pedagogy, navigating policies and degree requirements, and exploring academic opportunities and professional pathways.

- Upon enrolling, students plan their work under the direction of the Director of Graduate Studies or a faculty member designated by the program. When the student selects a more specialized advisor, the transition should involve oral or written communication between both advisors and the student concerning the student's progress, goals, and expectations. It is possible for doctoral students to choose two main advisors at the dissertation stage, provided all agree this is academically sound.
- Faculty advisors should meet with assigned students to discuss their selection of courses and to plan from a broader, longer-term perspective, including: discussion of program milestones and a basic timeline; an overview of Department and DLCL offerings beyond courses; student goals and interests and DLCL or Stanford programs that may be relevant; and (for doctoral students) how to transfer previous graduate coursework.
- Faculty advisors and graduate students should meet at least once per quarter to assess the advisee's course of study, performance over the past quarter, and plans for the next quarter, as well as longer term plans. If a student has two advisors, the student should meet at least once per quarter with each advisor and at least once per year with both advisors at the same time.
- For doctoral students, faculty should help their advisees plan for exams, research grant applications, develop research projects, and plan ahead for both the academic job market and the job search beyond academia.
- Faculty advisors should provide feedback about the student's progress to the department during the annual review process. For more information about the annual review, see the Graduate Handbook.

Graduate Students

Graduate students are active contributors to the advising relationship, proactively seeking academic and professional guidance and taking responsibility for informing themselves of policies and degree requirements for their graduate program.

- Upon enrolling, students plan their work under the direction of the Director of Graduate Studies or a faculty member designated by the program. As the student develops a field of expertise, the student chooses a program advisor to replace the Director of Graduate Studies role. The transition should involve oral or written communication between both advisors and the student concerning the student's progress, goals, and expectations.
- Graduate students and faculty advisors should meet at least once per quarter to assess the advisee's course of study, performance over the past quarter, and plans for the next quarter, as well as longer term plans. If a student has two advisors, the student should meet at least once per quarter with each advisor and at least once per year with both advisors at the same time.
- Students should consult with their advisors on all academic matters, including coursework, conference presentations and publications, research travel, and teaching plans.
- Students should provide a thorough self-evaluation each year for the annual review. For more information about the annual review, see the Graduate Handbook.

For a statement of University policy on graduate advising, see the "Graduate Advising (p. 80)" section of this bulletin.

Faculty in Comparative Literature

Director: Amir Eshel

Director of Graduate Studies: Amir Eshel

Director of Undergraduate Studies: Alexander Key

Professors: Russell Berman (also German Studies), Adrian Daub (also German Studies), Amir Eshel (also German Studies), Roland Greene (also English), Joshua Landy (also French and Italian), Haiyan Lee (also East Asian Languages and Cultures), David Palumbo-Liu (on leave Autumn), Patricia Parker (also English), Joan Ramon Resina (also Iberian and Latin American Cultures), José David Saldívar, Ramón Saldívar (also English, on leave Winter), Ban Wang (also East Asian Languages and Cultures)

Associate Professors: Vincent Barletta (also Iberian and Latin American Cultures), Monika Greenleaf (also Slavic Languages and Literatures), Alexander Key, Indra Levy (also East Asian Languages and Cultures)

Assistant Professors: Marie Huber

Senior Lecturers: Cintia Santana, Vered K. Shemtov

Lecturers: Burcu Karahan, Marie-Pierre Ulloa

Courtesy Professor: Nancy Ruttenburg

Emeriti: (Professors) John Bender (also English), John Freccero, Hans U. Gumbrecht, Elisabeth Mudimbe-Boyi, Mary Pratt

Courses

COMPLIT 10N. Shakespeare and Performance in a Global Context. 3 Units.
Preference to freshmen. The problem of performance including the performance of gender through the plays of Shakespeare. In-class performances by students of scenes from plays. The history of theatrical performance. Sources include filmed versions of plays, and readings on the history of gender, gender performance, and transvestite theater. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade. In AY 2020-21, a 'CR' grade will satisfy the WAYS requirement.

COMPLIT 11Q. Shakespeare, Playing, Gender. 3 Units.
Preference to sophomores. Focus is on several of the best and lesser known plays of Shakespeare, on theatrical and other kinds of playing, and on ambiguities of both gender and playing gender.

COMPLIT 31. Texts that Changed the World from the Ancient Middle East. 3-5 Units.
This course traces the story of the cradle of human civilization. We will begin with the earliest human stories, the Gilgamesh Epic and biblical literature, and follow the path of the development of law, religion, philosophy and literature in the ancient Mediterranean or Middle Eastern world, to the emergence of Jewish and Christian thinking. We will pose questions about how this past continues to inform our present: What stories, myths, and ideas remain foundational to us? How did the stories and myths shape civilizations and form larger communities? How did the earliest stories conceive of human life and the divine? What are the ideas about the order of nature, and the place of human life within that order? How is the relationship between the individual and society constituted? This course is part of the Humanities Core: https://humanitiescore.stanford.edu/.
Same as: HUMCORE 111, JEWISHST 150, RELIGST 150

COMPLIT 33. Humanities Core: Global Identity, Culture, and Politics from the Middle East. 3 Units.
How do we face the future? What resources do we have? Which power structures hold us back and which empower us? What are our identities at college in the Bay Area? In 1850s Lebanon, Abu Faris Shidyaq faced all these same questions (except the last one; he was a Christian magazine editor). In this course we will engage with claims about identity, culture, and politics that some might say come from the "Middle East" but that we understand as global. Ganzeer's graphic novel is as much for California as it is for Egypt. Ataturk's speech is about power and identity just like Donald Trump is about power and identity. In Turkish novels and in Arabic poetry, the people we engage in this course look to their pasts and our futures. What happens next? This is the third of three courses in the Middle Eastern track. These courses offer an unparalleled opportunity to study Middle Eastern history and culture, past and present. Take all three to experience a year-long intellectual community dedicated to exploring how ideas have shaped our world and future.future.
Same as: DLCL 33, HUMCORE 33

COMPLIT 36A. Dangerous Ideas. 1 Unit.
Ideas matter. Concepts such as revolution, tradition, and hell have inspired social movements, shaped political systems, and dramatically influenced the lives of individuals. Others, like immigration, universal basic income, and youth play an important role in contemporary debates in the United States. All of these ideas are contested, and they have a real power to change lives, for better and for worse. In this one-unit class we will examine these "dangerous" ideas. Each week, a faculty member from a different department in the humanities and arts will explore a concept that has shaped human experience across time and space. Some weeks will have short reading assignments, but you are not required to purchase any materials.

COMPLIT 37Q. Zionism and the Novel. 3 Units.
At the end of the nineteenth century, Zionism emerged as a political movement to establish a national homeland for the Jews, eventually leading to the establishment of the State of Israel in 1948. This seminar uses novels to explore the changes in Zionism, the roots of the conflict in the Middle East, and the potentials for the future. We will take a close look at novels by Israelis, both Jewish and Arab, in order to understand multiple perspectives, and we will also consider works by authors from the North America and from Europe. NOTE: To satisfy a WAYS requirement, this course must be taken for at least 3 units. In AY 2020-21, a 'CR' grade will satisfy the WAYS requirement.
Same as: JEWISHST 37Q

COMPLIT 43. Modernity and Novels in the Middle East. 3 Units.
This course will investigate cultural and literary responses to modernity in the Middle East. The intense modernization process that started in mid 19th century and lingers to this day in the region caused Arabic, Persian, and Turkish literary cultures to encounter rapid changes; borders dissolved, new societies and nations were formed, daily life westernized, and new literary forms took over the former models. In order to understand how writers and individuals negotiated between tradition and modernity and how they adapted their traditions into the modern life we will read both canonical and graphic novels comparatively from each language group and focus on the themes of nation, identity, and gender. All readings will be in English translation. This course is part of the Humanities Core: https://humanitiescore.stanford.edu/.
Same as: HUMCORE 131

COMPLIT 44. Humanities Core: How to be Modern in East Asia. 3-5 Units.
Modern East Asia was almost continuously convulsed by war and revolution in the 19th and 20th centuries. But the everyday experience of modernity was structured more profoundly by the widening gulf between the country and the city, economically, politically, and culturally. This course examines literary and cinematic works from China and Japan that respond to and reflect on the city/country divide, framing it against issues of class, gender, national identity, and ethnicity. It also explores changing ideas about home/hometown, native soil, the folk, roots, migration, enlightenment, civilization, progress, modernization, nationalism, cosmopolitanism, and sustainability. All materials are in English. This course is part of the Humanities Core: https://humanitiescore.stanford.edu/.
Same as: CHINA 24, HUMCORE 133, JAPAN 24, KOREA 24

COMPLIT 46. Atlantic Folds: Indigeneity and Modernity. 3 Units.
The Atlantic as an infinite doubling of ancient and modern. The Atlantic as an endless, watery cloth of African, American, and European folds, unfolding and refolding through bodies and ideas: blackness, whiteness, nature, nurture, water, blood, cannibal, mother, you, and I. The Atlantic as a concept, a space, a muse, a goddess. The Atlantic as birth and burial. One ocean under God, divisible, with salt enough for all who thirst. Authors include: Paul Gilroy, Gilles Deleuze, Chimamanda Adichie, Eduardo Viveiros de Castro, Davi Kopenawa, Pepetela, Beyoncé, and José Vasconcelos. This course is part of the Humanities Core: https://humanitiescore.stanford.edu/.
Same as: HUMCORE 135

COMPLIT 51Q. Comparative Fictions of Ethnicity. 4 Units.
We may "know" "who" we "are," but we are, after all, social creatures. How does our sense of self interact with those around us? How does literature provide a particular medium for not only self expression, but also for meditations on what goes into the construction of "the Self"? After all, don't we tell stories in response to the question, "who are you"? Besides a list of nouns and names and attributes, we give our lives flesh and blood in telling how we process the world. Our course focuses in particular on this question--Does this universal issue ("who am I") become skewed differently when we add a qualifier before it, like "ethnic"? Note: To be eligible for WAYS credit, you must take course for a Letter Grade.
Same as: AMSTUD 51Q, CSRE 51Q

COMPLIT 55N. Black Panther, Hamilton, Díaz, and Other Wondrous Lives. 3-5 Units.
This seminar concerns the design and analysis of imaginary (or constructed) worlds for narratives and media such as films, comics, and literary texts. The seminar's primary goal is to help participants understand the creation of better imaginary worlds - ultimately all our efforts should serve that higher purpose. Some of the things we will consider when taking on the analysis of a new world include: What are its primary features - spatial, cultural, biological, fantastic, cosmological? What is the world's ethos (the guiding beliefs or ideals that characterize the world)? What are the precise strategies that are used by the artist to convey the world to us and us to the world? How are our characters connected to the world? And how are we - the viewer or reader or player - connected to the world? Note: This course must be taken for a letter grade to be eligible for WAYS credit. In AY 2020-21, a `CR' grade will satisfy the WAYS requirement.
Same as: CSRE 55N

COMPLIT 57. Human Rights and World Literature. 5 Units.
Human rights may be universal, but each appeal comes from a specific location with its own historical, social, and cultural context. This summer we will turn to literary narratives and films from a wide number of global locations to help us understand human rights; each story taps into fundamental beliefs about justice and ethics, from an eminently human and personal point of view. What does it mean not to have access to water, education, free speech, for example? This course has two components. The first will be a set of readings on the history and ethos of modern human rights. These readings will come from philosophy, history, political theory. The second, and major component is comprised of novels and films that come from different locations in the world, each telling a compelling story. We will come away from this class with a good introduction to human rights history and philosophy and a set of insights into a variety of imaginative perspectives on human rights issues from different global locations. Readings include: Amnesty International, Freedom: Stories Celebrating the Universal Declaration of Human Rights, Andrew Clapham, Human Rights: A Very Short Introduction, James Dawes, That the World May Know, Walter Echo-Hawk, In the Light of Justice, Amitav Ghosh, The Hungry Tide, Bessie Head, The Word for World is Forest, Ursula LeGuin.

COMPLIT 70N. Animal Planet and the Romance of the Species. 3-4 Units.
Preference to freshmen.This course considers a variety of animal characters in Chinese and Western literatures as potent symbols of cultural values and dynamic sites of ethical reasoning. What does pervasive animal imagery tell us about how we relate to the world and our neighbors? How do animals define the frontiers of humanity and mediate notions of civilization and culture? How do culture, institutions, and political economy shape concepts of human rights and animal welfare? And, above all, what does it mean to be human in the pluralistic and planetary 21st century? Note: To be eligible for WAYS credit, you must take course for a Letter Grade.
Same as: CHINA 70N

COMPLIT 89. Investigating Identity Through Filipinx Fiction. 5 Units.
This course is both a reading seminar featuring canonical and contemporary Filipinx authors (including Mia Alvar, Carlos Bulosan, Elaine Castillo, Bienvenido Santos, Lysley Tenorio and José Rizal) and a writing workshop where students generate short stories exploring identity. Rizal's seminal novels Noli Me Tangere and El filibusterismo are ¿the earliest artistic expressions of the Asian colonial experience from the point of view of the oppressed¿ and through his work and the work of other Filipinx authors, we discover how both national and individual identities are not only challenged by adversity, trauma, violence, and war but also forged and strengthened by them. Note: First priority to undergrads. Students must attend the first class meeting to retain their roster spot.
Same as: ASNAMST 90E, ENGLISH 90E

COMPLIT 100. CAPITALS: How Cities Shape Cultures, States, and People. 3-5 Units.
This course takes students on a trip to major capital cities, at different moments in time: Renaissance Florence, Golden Age Madrid, Colonial Mexico City, Enlightenment and Romantic Paris, Existential and Revolutionary St. Petersburg, Roaring Berlin, Modernist Vienna, and bustling Buenos Aires. While exploring each place in a particular historical moment, we will also consider the relations between culture, power, and social life. How does the cultural life of a country intersect with the political activity of a capital? How do large cities shape our everyday experience, our aesthetic preferences, and our sense of history? Why do some cities become cultural capitals? Primary materials for this course will consist of literary, visual, sociological, and historical documents (in translation); authors we will read include Boccaccio, Dante, Sor Juana, Montesquieu, Baudelaire, Gogol, Irmgard Keun, Freud, and Borges. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade.
Same as: DLCL 100, FRENCH 175, GERMAN 175, HISTORY 206E, ILAC 175, ITALIAN 175, URBANST 153

COMPLIT 101. What Is Comparative Literature?. 5 Units.
How can we best talk about literature? What exactly is literature? What is theory? What is comparison? How do these questions fit into our lives? This course is an introduction to Comparative Literature suitable for all students. We will think about poetry, translation, trans feminism (and more), and we will read Maria Lugones, Etel Adnan, Hortense Spillers, and others. This course will be taught online and asynchronously; there will be recorded lectures, the bulk of the discussion will take place in live small groups, and students will submit regular recorded presentations in addition to writing and revising a paper.

COMPLIT 102. Film Series: Understanding Turkey Through Film. 1-2 Unit.
Join us in our quest to understand the great transformation in Turkey and its impact on its people through cinema. Set against the backdrop of the expansion of capitalism and the fundamental cultural, political and social change in the last decade, the movies in this series tell the uneasy stories of individuals whose lives are affected by this disruptive change. By examining the link between the individual experiences and societal change, the films confront issues such as globalization, gender and racial hierarchies, urban transformation, state repression, male domination, and the women's struggle in Turkey. The course consists of 8 Turkish film screenings each of which will be preceded by an introduction by Dr. Alemdaroglu or Dr. Karahan, artistically, historically and politically contextualizing the films, and will be followed by a Zoom discussion and Q&A session led by invited guest scholars of Anthropology, Film Studies, Political Science, Women and Gender Studies or film directors themselves. The students and interested Stanford community will be provided with the streaming links for the movies at the beginning of each week to screen them on their own time, and the discussion sessions will be held on the scheduled class time on Zoom. All films will be in Turkish with English subtitles.
Same as: COMPLIT 302

COMPLIT 104A. Voice, Dissent, Resistance: Antiracist and Antifascist Discourse and Action. 5 Units.
The rise of right-wing movements in the United States and in Europe signal a resurgence of nativist and ethno-nationalist politics that rely heavily on racism to advance fascist politics. This course will explore these phenomena both in terms of their historical development and their present-day appearances. The goal will be to understand how those involved in anti-racist and anti-fascist struggles have invented, created, and practiced discourses and actions that attempt to resist racism and fascism, and to evaluate their merits and weaknesses. Historical, philosophic, journalistic, and creative writings will be the basis of study. This is an experimental course driven by the urgency of recent political events. Students should have open minds and be willing to help shape the course.
Same as: COMPLIT 304

COMPLIT 107A. Ancient Knowledge, New Frontiers: How the Greek Legacy Became Islamic Science. 3 Units.
What contributions did Arabic and Islamic civilization make to the history of science? This course will read key moments in Greek and Islamic science and philosophy and ask questions about scientific method, philosophy, and religious belief. We will read Ibn Sina (Avicenna), Ibn Haytham, and Baha al-Din al-Amili, among others. What is the scientific method and is it universal across time and place? What is Islamic rationality? What is Greek rationality? Who commits to empiricism and who relies on inherited ideas? This course is part of the Humanities Core: https://humanitiescore.stanford.edu/.
Same as: CLASSICS 47, HUMCORE 121

COMPLIT 111Q. Texts and Contexts: Spanish/English Literary Translation Workshop. 4 Units.
This course introduces students to the theoretical knowledge and practical skills necessary to translate literary texts from Spanish to English and English to Spanish. Students will workshop and revise a translation project throughout the quarter. Topics may include comparative syntaxes, morphologies, and semantic systems; register and tone; audience; the role of translation in the development of languages and cultures; and the ideological and socio-cultural forces that shape translations.
Same as: DLCL 111Q, ILAC 111Q

COMPLIT 115. Vladimir Nabokov: Displacement and the Liberated Eye. 3-5 Units.
How did the triumphant author of "the great American novel" Lolita evolve from the young author writing at white heat for the tiny sad Russian emigration in Berlin? We will read his short stories and the novels The Luzhin Defense, Invitation to a Beheading, Lolita, Lolita the film, and Pale Fire, to see how Nabokov generated his sinister-playful forms as a buoyant answer to the "hypermodern" visual and film culture of pre-WWII Berlin, and then to America's all-pervading postwar "normalcy" in his pathological comic masterpieces Lolita and Pale Fire. Buy texts in translation at the Bookstore; Slavic grad students will supplement with reading and extra sessions in original Russian.
Same as: COMPLIT 315, SLAVIC 156, SLAVIC 356

COMPLIT 118. The Gothic in Literature and Culture. 3-5 Units.
This course introduces students to the major features of Gothic narrative, a form that emerges at the same time as the Enlightenment, and that retains its power into our present. Surveying Gothic novels, as well as novellas and short stories with Gothic elements, we will learn about the defining features of the form and investigate its meaning in the cultural imagination. Gothic narratives, the course will suggest, examine the power of irrational forces in a secular age: forces that range from barbaric human practices, to supernatural activity, to the re-enchantment of modern existence. We will also consider the importance for Gothic authors and readers of the relation among narrative. spectacle and the visual arts. Primary works may include Ann Radcliffe's <e>The Italian, Jane Austen's Northanger Abbey</e>, Victor Hugo's <e>The Hunchback of Notre Dame</e>, E.T.A. Hoffman's <e>The Sandman</e>, Mary Shelly's <e>Frankenstein</e>, and Edgar Allen Poe's <e>The Narrative of Arthur Gordon Pym</e>. We may also do a section on vampires, including Bram Stoker's <e>Dracula</e>, and its remake in film by F.W. Murnau and Werner Herzog. Critical selections by Edmund Burke, Sigmund Freud, Walter Benjamin, Michel Foucault, and Terry Castle, among others.
Same as: ENGLISH 138E

COMPLIT 119. The Turkish Novel. 3-5 Units.
Designed as a survey, this course will examine the modern Turkish novel from the early days of the Republic to the present day. We will examine the aesthetic, political, and social aspects of the Turkish novel by reading major samples of national, historical, philosophical, village, and modernist novels. Discussions will be conducted in English. Students will have an option to read the primary sources in Turkish or in English. Contact Burcu Karahan for meeting time and place.
Same as: COMPLIT 319

COMPLIT 121. Poems, Poetry, Worlds. 5 Units.
What is poetry? How does it speak in many voices to questions of philosophy, history, society, and personal experience? Why does it matter? The reading and interpretation of poetry in crosscultural comparison as experience, invention, form, sound, knowledge, and part of the world. The readings address poetry of several cultures (Brazil, Chile, France, Germany, Greece, Italy, Occitania, Peru) in comparative relation to that of the English-speaking world, and in light of classic and recent theories of poetry.
Same as: DLCL 141

COMPLIT 122. Literature as Performance. 5 Units.
The purpose of this course is to re-embed great dramatic texts in a history and theory of performance, using Bay Area and Stanford productions, audiovisual materials, and your own trans-medial projects to help us reconceive theater off the page, moving in time, space and thought.
Same as: DLCL 142

COMPLIT 123. The Novel and the World. 5 Units.
The European Design of the Novel. The course will trace the development of the modern literary genre par excellence through some of its great milestones from the 17th century to the present. Works by Cervantes, Austen, Flaubert, Dostoevsky, Queirós, Kafka, Woolf, Verga, and Rodoreda.
Same as: DLCL 143

COMPLIT 124C. Napoleon. 3-5 Units.
Who was Napoleon? A fierce patriot or a traitor of the Revolution? A beloved emperor or a merciless dictator? There is not one single or indeed final answer to these questions: in this course we shall learn to make a distinction between the historical figure (his life and actual deeds) and the literary character (how his detractors or enthusiasts represented him). We will explore the multi-faceted representations of Napoleon with a particular focus on his portraits in poems, novels, essays, paintings and sculptures. The syllabus will include readings and excerpts from Balzac, Stendhal, Dumas, Hugo, Thackeray, Tolstoy, Manzoni, Foscolo, Calvino. Taught in English.
Same as: FRENCH 124A

COMPLIT 127B. The Hebrew and Jewish Short Story. 3-5 Units.
Short stories from Israel, the US and Europe including works by Agnon, Kafka, Keret, Castel-Bloom, Kashua, Singer, Benjamin, Freud, biblical myths and more. The class will engage with questions related to the short story as a literary form and the history of the short story. Reading and discussion in English. Optional: special section with readings and discussions in Hebrew. Note: To be eligible for WAYS credit, you must take the course for a Letter Grade. In AY 2020-21, a 'CR' grade will satisfy the WAYS requirement.
Same as: JEWISHST 147B

COMPLIT 128. Literature of the former Yugoslavia. 3-5 Units.
What do Slavoj Zizek, Novak Djokovic, Marina Abramovic, Melania Trump, Emir Kusturica, and the captain of the Croatian national football team have in common? All were born in a country that no longer exists, the Socialist Federal Republic of Yugoslavia (1945-1992). This course will introduce masterpieces of Yugoslav literature and film, examining the social and political complexities of a multicultural society that collapsed into civil war (i.e. Bosnia, Kosovo) in the 1990s. In English with material available in Serbo-Croatian and Slovenian.
Same as: REES 128, SLAVIC 128

COMPLIT 131. Coming of Age in the Middle Ages. 3-5 Units.
It is often said that adolescence is a modern invention, and that people in earlier times expected children to act like adults as soon as they were physically able to do so. But the literature that survives from the European Middle Ages reveals a deep preoccupation with questions of how to form socially-competent individuals. What role did literature play in disseminating norms and models for adult behavior? This course introduces students to a range of works from 1100 to 1500CE that portray the process of becoming an adult or prescribe what it should look like: behavior manuals, treatises, epic narratives, romances, and literary 'letters' from parents to children. Students gain familiarity with a range of historic genres and develop skills in close reading and critical analysis. Readings are in English.

COMPLIT 132A. Nostalgia as a Global Form. 3 Units.
The course will explore the waves of nostalgia that have swept the globe in the past decades. We will look at contemporary expressions of nostalgia across different media, including literature, cinema, art, spoken word, street art and social media. We will examine nostalgic narratives related to a variety of cultural phenomena such as exile, migration, colonialism, globalization and technological advancements. We will focus on case studies from various countries such as Israel, the former Soviet Union, India and the UK, and explore them in their specific cultural context, while also exploring nostalgia as a global trend of Late Modernity. Our readings will be accompanied by fundamental theoretical texts on nostalgia, including writings by Svetlana Boym, Fred Davis, Zygmunt Bauman and others.

COMPLIT 133A. Literature and Society in Africa and the Caribbean. 4 Units.
This course explores texts and films from Francophone Africa and the Caribbean in the 20th and 21st centuries. The course will explore the connections between Sub-Saharan Africa, the Maghreb and the Caribbean through both foundational and contemporary works while considering their engagement with the historical and political contexts in which they were produced. This course will also serve to improve students' speaking and writing skills in French while sharpening their knowledge of the linguistic and conceptual tools needed to conduct literary analysis. The diverse topics discussed in the course will include national and cultural identity, race and class, gender and sexuality, orality and textuality, transnationalism and migration, colonialism and decolonization, history and memory, and the politics of language. Readings include the works of writers and filmmakers such as Djibril Tamsir Niane, Léopold Senghor, Aimé Césaire, Albert Memmi, Patrick Chamoiseau, Leonora Miano, Leila Slimani, Dani Laferrière and Ousmane Sembène. Taught in French. Students are highly encouraged to complete FRENLANG 124 or to successfully test above this level through the Language Center. This course fulfills the Writing in the Major (WIM) requirement.
Same as: AFRICAAM 133, AFRICAST 132, COMPLIT 233A, CSRE 133E, FRENCH 133, JEWISHST 143

COMPLIT 134A. Classics of Persian Literature. 3-5 Units.
Why do poems that were written hundreds of years ago still capture the imagination? How is love configured in the texts of a distant culture? Who sings the tales and who are the heroes? This course offers an introduction to the central works of Persian literature, from the 10th century to the present, across the genres of epic, romance, lyric, and novel. As we become acquainted with texts from a millennium of literary history, we will touch upon questions of performance (music and dance), storytelling, profane and divine love, the nature of spiritual quests, the development of narrative and poetic form, the formal and ethical aspects of translation, and, finally, the meaning of modernity in a non-Western context. Readings include: the Book of Kings by Ferdowsi (d.1020); Layla and Majnun by Nezami (d.1209); The Conference of the Birds by Attar (d.1221); selections from the Masnavi and Divan of Rumi (d.1273); the Rose Garden by Sa`di (d.1292), selections from the Divan of Hafez (d.1390); The Blind Owl by Sadegh Hedayat (d.1951); and selected modern poems. Taught in English.
Same as: COMPLIT 234

COMPLIT 138. Literature and the Brain. 3 Units.
Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer?.
Same as: COMPLIT 238, ENGLISH 118, ENGLISH 218, FRENCH 118, FRENCH 218, PSYC 126, PSYCH 118F

COMPLIT 139A. Jaguars and Labyrinths: A Survey of South American Short Fiction. 3-5 Units.
10 South American short stories in 10 weeks. We will read tales of jaguars and octopuses, labyrinthic cities and eerie parks, magicians and mediums, time loops and spatial stretches. Each of the works will offer a unique insight into South American literature, history, and culture. We will focus on 20th and 21st century stories that deal with the future of techno-science, the interaction between Western and indigenous worldviews, the intersection of fiction and reality, the relation between the human and the non-human, and the ecological planetary crisis. Authors include Clarice Lispector, Roberto Bolaño, Jorge Luis Borges, Julio Cortázar, João Guimarães Rosa, Vilém Flusser, and Conceição Evaristo. Taught in English, no previous knowledge of Spanish and Portuguese required. Note: Students with a background in Portuguese and/or Spanish may use this course as a platform to enhance their linguistic proficiency and their close-reading skills in the target languages.
Same as: ILAC 139

COMPLIT 142. The Literature of the Americas. 5 Units.
A wide-ranging overview of the literatures of the Americas inncomparative perspective, emphasizing continuities and crises that are common to North American, Central American, and South American literatures as well as the distinctive national and cultural elements of a diverse array of primary works. Topics include the definitions of such concepts as empire and colonialism, the encounters between worldviews of European and indigenous peoples, the emergence of creole and racially mixed populations, slavery, the New World voice, myths of America as paradise or utopia, the coming of modernism, twentieth-century avant-gardes, and distinctive modern episodes--the Harlem Renaissance, the Beats, magic realism, Noigandres--in unaccustomed conversation with each other.
Same as: AMSTUD 142, CSRE 142, ENGLISH 172E

COMPLIT 142B. Translating Japan, Translating the West. 3-4 Units.
Translation lies at the heart of all intercultural exchange. This course introduces students to the specific ways in which translation has shaped the image of Japan in the West, the image of the West in Japan, and Japan's self-image in the modern period. What texts and concepts were translated by each side, how, and to what effect? No prior knowledge of Japanese language necessary.
Same as: JAPAN 121, JAPAN 221

COMPLIT 145. Reflection on the Other: The Arab Israeli Conflict in Literature and Film. 3-5 Units.
How literary works outside the realm of Western culture struggle with questions such as identity, minority, and the issue of the Other. How the Arab is viewed in Hebrew literature, film and music and how the Jew is viewed in Palestinian works in Hebrew or Arabic (in translation to English). Historical, political, and sociological forces that have contributed to the shaping of these writers' views. Guest lectures about the Jew in Palestinian literature and music. Note: To be eligible for WAYS credit, you must take course for a Letter Grade.
Same as: AMELANG 126, JEWISHST 106

COMPLIT 147. Facts and Fictions: Writing the New World in Early Modernity. 3-5 Units.
How was knowledge about the colonies in America established? What was the role of fiction in this process? This course introduces students to major problems at the intersection of literature and history. It provides students with an overview of historical and fictional writings that shaped the early modern imagination about colonial spaces in Europe and the Americas. Students will look into the process whereby poets and novelists made unfamiliar places more familiar to their European and American audiences, as well as into how historians used myths and fictions to build knowledge about those foreign places and cultures. Readings span fictional prose, histories, epic poems, philosophical writings, engravings and maps. Authors may include St. Teresa, Camões, Cervantes, Inca Garcilaso, Catalina de Erauso, Mendes Pinto, Bacon, Sor Juana, Antonio Vieira, and Margaret Cavendish. Students will practice close reading techniques and historical analysis, writing papers combining the two. Texts will be available in English.
Same as: 1500-1700

COMPLIT 148. Transcultural Perspectives of South-East Asian Music and Arts. 2-4 Units.
This course will explore the links between aspects of South-East Asian cultures and their influence on modern and contemporary Western art and literature, particularly in France; examples of this influence include Claude Debussy (Gamelan music), Jacques Charpentier (Karnatak music), Auguste Rodin (Khmer art) and Antonin Artaud (Balinese theater). In the course of these interdisciplinary analyses - focalized on music and dance but not limited to it - we will confront key notions in relation to transculturality: orientalism, appropriation, auto-ethnography, nostalgia, exoticism and cosmopolitanism. We will also consider transculturality interior to contemporary creation, through the work of contemporary composers such as Tran Kim Ngoc, Chinary Ung and Tôn-Thât Tiêt. Viewings of sculptures, marionette theater, ballet, opera and cinema will also play an integral role. To satisfy a Ways requirement, this course must be taken for at least 3 units. In AY 2020-21, a letter grade or `CR¿ grade satisfies the Ways requirement. WIM credit in Music at 4 units and a letter grade.
Same as: COMPLIT 267, FRENCH 260A, MUSIC 146N, MUSIC 246N

COMPLIT 149. The Laboring of Diaspora & Border Literary Cultures. 3-5 Units.
Focus is given to emergent theories of culture and on comparative literary and cultural studies. How do we treat culture as a social force? How do we go about reading the presence of social contexts within cultural texts? How do ethno-racial writers re-imagine the nation as a site with many "cognitive maps" in which the nation-state is not congruent with cultural identity? How do diaspora and border narratives/texts strive for comparative theoretical scope while remaining rooted in specific local histories. Note: This course must be taken for a letter grade to be eligible for WAYS credit. In AY 2020-21, a "CR" grade will satisfy the WAYS requirement.
Same as: CSRE 149, ILAC 149

COMPLIT 154A. Film & Philosophy. 3 Units.
Issues of authenticity, morality, personal identity, and the value of truth explored through film; philosophical investigation of the filmic medium itself. Screenings to include Blade Runner (Scott), Do The Right Thing (Lee), The Seventh Seal (Bergman), Fight Club (Fincher), La Jetée (Marker), Memento (Nolan), and Eternal Sunshine of the Spotless Mind (Kaufman). Taught in English.
Same as: ENGLISH 154F, FRENCH 154, ITALIAN 154, PHIL 193C, PHIL 293C

COMPLIT 155A. The Mafia in Society, Film, and Fiction. 4 Units.
The mafia has become a global problem through its infiltration of international business, and its model of organized crime has spread all over the world from its origins in Sicily. At the same time, film and fiction remain fascinated by a romantic, heroic vision of the mafia. Compares both Italian and American fantasies of the Mafia to its history and impact on Italian and global culture. Taught in English.
Same as: ITALIAN 155

COMPLIT 159. Asian American Film and Popular Culture. 4 Units.
Tracing the evolution of Asian American cultural representations from the silent film era through the first generation of Asian American YouTube stars, this course examines the economic, political, and cultural influence of Asian American screen images on U.S. society. Through a focus on both mainstream and independent productions, we discuss the work of Asian American actors, audience members, media producers, consumers, and activists. Possible films and TV shows to be discussed include The Cheat (1915), Shanghai Express (1932), Flower Drum Song (1961), Chan is Missing (1983) Fall of the I Hotel (1983), Who Killed Vincent Chin? (1989), Sa-I-Gu, (1992), Saving Face (2004) Crazy Rich Asians (2018), To All the Boys I've Loved Before (2018), TV episodes of the Mindy Project, and work by early Asian American YouTube stars including Michelle Phan, HappySlip, and KevJumba.
Same as: AMSTUD 115, ASNAMST 115

COMPLIT 161E. Narrative and Narrative Theory. 5 Units.
An introduction to stories and storytelling--that is, to narrative. What is narrative? When is narrative fictional and when non-fictional? How is it done, word by word, sentence by sentence? Must it be in prose? Can it be in pictures? How has storytelling changed over time? Focus on various forms, genres, structures, and characteristics of narrative. nEnglish majors must take this class for 5 units.
Same as: ENGLISH 161

COMPLIT 178. Metamorphosis and Desire: Spenser, Marlowe, Shakespeare, Milton. 1-5 Unit.
A recurring motif in the myths of poetry's origins is a metamorphosis provoked by erotic desire, from the nymph Daphne transformed into a laurel tree as she escapes the god Apollo to the bard Orpheus dismembered by impassioned Maenads. This course explores the entanglement of these themes in Renaissance verse across plays by Shakespeare, epic poetry by Spenser and Milton, and narrative poems by Marlowe, Shakespeare, and their contemporaries in continental Europe. We will situate these works amid critical perspectives on desire, love, and gendered subjectivity in early modernity and against the classical background of Ovid's 'Metamorphoses', whose tales of eroticism and transformation shaped so much of Renaissance literary and artistic production.

COMPLIT 179. Rumi: Rhythms of Creation. 3-5 Units.
This course offers a comprehensive introduction to the thought, poetics, and legacy of one of the towering figures of Persian letters, Mawlana Jalal al-Din Rumi (1207-1273). After discussing the literary ancestors (Sana'i, `Attar), we will trace the mystico-philosophical foundations of Rumi's thought through close readings of the lyrical (Divan-e Shams) and narrative poems (Mathnavi-ye ma`navi), the prose works (Fihe ma fihe), and the letters. Literary analyses will be followed by an exploration of music as a structuring principle in Rumi's work and the role of sama` (spiritual audition) as a poetic practice. From there, we will look at the ritual and symbolism of the dervish dance, the foundation of the Mevlevi order, the interconnectedness of space (architecture) and poetic form that is exemplified in the Mevlevi dervish lodges, and the literary and philosophical echoes of Rumi in Ottoman culture, above all Seyh Galip's masterpiece Hüsn ü Ask (1782). The course will be complemented by digressions on Rumi in contemporary Persian and Turkish music, including live musical performances. Open to undergraduates and graduates. Taught in English.
Same as: COMPLIT 249

COMPLIT 181. Philosophy and Literature. 3-5 Units.
What, if anything, does reading literature do for our lives? What can literature offer that other forms of writing cannot? Can fictions teach us anything? Can they make people more moral? Why do we take pleasure in tragic stories? This course introduces students to major problems at the intersection of philosophy and literature. It addresses key questions about the value of literature, philosophical puzzles about the nature of fiction and literary language, and ways that philosophy and literature interact. Readings span literature, film, and philosophical theories of art. Authors may include Sophocles, Dickinson, Toni Morrison, Proust, Woolf, Walton, Nietzsche, and Sartre. Students master close reading techniques and philosophical analysis, and write papers combining the two. This is the required gateway course for the Philosophy and Literature major tracks. Majors should register in their home department.
Same as: CLASSICS 42, ENGLISH 81, FRENCH 181, GERMAN 181, ILAC 181, ITALIAN 181, PHIL 81, SLAVIC 181

COMPLIT 183. Self-Impersonation: Autobiography, Memoir, Fictional Autobiography. 5 Units.
This course will examine the intersecting genres of fiction, autobiography, and memoir. Topics will include the literary construction of selfhood and its constituent categories; the role of language in the development of the self; the relational nature of the self (vis-à-vis the family, "society," nation, God); the cultural status of "individuality"; conceptions of childhood; and the role of individual testimony in our understanding of family, religious and cultural identity. In addition to short theoretical works, authors may include: Marguerite Duras; Elena Ferrante; Sam Shepard; Gertrude Stein; Karl Ove Knausgaard; Marcel Proust; Vladimir Nabokov; Primo Levi; Roland Barthes; and J. M. Coetzee.
Same as: ENGLISH 183E

COMPLIT 184. READING RUMI. 3-5 Units.
Introduction to the work of Mawlana Jalal al-Din Rumi (1207-1273) in the original Persian. Through close readings of the poems and prose texts we will explore the ways in which Rumi's thought informs his poetic language and continues to resonate with us today. Topics to be touched upon in connection with the primary texts include: Islamic philosophy; theories of literature in the Arabo-Persian world; poetic genres in medieval Persian literature; meter, rhyme, and metaphor; and, finally, fundamental questions of translation and translatability. Special emphasis will be placed on understanding Rumi within the historical context. Readings in Persian. Two years of Persian at Stanford or equivalent required. Counts for the Persian track in the MELLAC minor.

COMPLIT 188. In Search of the Holy Grail: Percival's Quest in Medieval Literature. 3-5 Units.
This course focuses on one of the most famous inventions of the Middle Ages: the Holy Grail. The grail - a mysterious vessel with supernatural properties - is first mentioned in Chrétien de Troyes' "Perceval," but the story is soon rewritten by authors who alter the meaning of both the grail and the quest. By reading three different versions, we will explore how they respond differently to major topics in medieval culture and relevant to today: romantic love, family ties, education, moral guilt, and spiritual practice. The texts are: Chrétien de Troyes' "Perceval," Wolfram von Eschenbach's "Parzival," and the anonymous "Queste del Saint Graal." All readings will be available in English.
Same as: COMPLIT 388, GERMAN 188, GERMAN 388

COMPLIT 194. Independent Research. 1-5 Unit.
(Staff).

COMPLIT 199. Senior Seminar. 5 Units.
What is criticism? When we interpret literature today, are we fulfilling the critical vocation? What are the alternatives? We consider the origins of the idea of the critic in nineteenth-century culture, its development in the twentieth century, and its current exponents, revisionists, and dissenters. Senior seminar for Comparative Literature Senior majors only.

COMPLIT 204A. Digital Humanities Across Borders. 3-5 Units.
What if you could take a handwritten manuscript, or a pile of 100 books, and map all the locations that are referenced, or see which characters interact with one another, or how different translators adapted the same novel -- without reading through each text to manually compile those lists? Digital humanities tools and methods make it possible, but most tools and tutorials assume the texts are in English. If you work with text (literature, historical documents, fanfic, tweets, or any other textual material) in languages other than English, DLCL 204 is for you. In 1:1 consultation with the instructor, you'll chart your own path based on the language you're working with, the format of the text, and what questions you'd like to try to answer. No previous programming or other technical experience is required, just a reading knowledge of a language other than English (modern or historical). We'll cover the whole process of using digital tools, from start to finish: text acquisition, text enrichment, and analysis/visualization, all of which have applications in a wide range of job contexts within and beyond academia. You'll also have the chance to hear from scholars who are doing digital humanities work in non-English languages, about their experience working across the technical and linguistic borders within their discipline, and within the broader DH community. While this course will be online and primarily asynchronous, there will be opportunities for students to meet synchronously throughout the quarter in language- and tool-based affinity groups.
Same as: DLCL 204, ENGLISH 204

COMPLIT 207. Why is Climate Change Un-believable? Interdisciplinary Approaches to Environmental Action. 5 Units.
The science is there. The evidence is there. Why do people still refuse to recognize one of the greatest threats to human existence? Why can't, why won't they believe the truth? The time to act is slowly evaporating before our eyes. To answer this question requires an interdisciplinary approach that investigates many of the ways global warming has been analyzed, imagined, represented, and evaluated. Thus we welcome students of any major willing to embark on this common project and to participate fully. We will challenge ourselves to move between and amongst texts that are familiar and those we will bring into the conversation. There will be much that we miss, but we hope this course will at least begin a serious conversation in a unique way. The course will run on two parallel tracks: on the one hand, we will delve into textual representations and arguments; on the other hand, we will attempt to develop a sensibility for how climate change makes itself manifest in the physical world through a series of workshops and site visits in the Bay Area. The first track of this course will center on the discussion of three science fiction novels: The Hungry Tide by Amitav Ghosh, The Three Body Problem by Cixin Liu, and Parable of the Sower by Octavia Butler. The second track of this course is comprised of a series of workshops that aims to develop spatial and material literacy relevant to climate change awareness. It will engage topics such as: scale, atmosphere, measure, material reciprocity, and garbage repurposing. One of the primary goals of this course is to not only understand the problem of climate change, but also how to best act upon it. Thus the required final assignment for this class can be a recommendation for action based on a critical review of the topic of climate change and already existing activism. It can take the form of a paper, a video, an installation art project, a podcast, etc.. But in all cases your work must analytically engage the specific medium of literary expression.

COMPLIT 208. The Cosmopolitan Introvert: Modern Greek Poetry and its Itinerants. 3-5 Units.
Overview of the last century of Greek poetry with emphasis on modernism. Approximately 20 modern Greek poets (starting with Cavafy and Nobel laureates Seferis and Elytis and moving to more modern writers) are read and compared to other major European and American writers. The themes of the cosmopolitan itinerant and of the introvert, often co-existing in the same poet, connect these idiosyncratic voices. The course uses translations and requires no knowledge of Greek but original texts can also be shared with interested students. Note: The course is open to both undergraduate and graduate students.

COMPLIT 210. Poetic Forms. 4 Units.
A comparative discussion of the development and history of major poetic forms, from the Sonnet to Terza Rima and to prose poems. Special attention will be given discussing different rhythms and rhymes, and to translating forms. The readings will include poems by French, Yiddish, English/American and Hebrew writers. Part of the work will include experimenting with writing and/or translating poems that follow the poetic forms that are discussed in class.

COMPLIT 218A. Japanese Performance Traditions. 2-5 Units.
Japanese performance traditions present a distinct challenge to modern Western concepts of gender, performance, self-expression, and even the human body itself. This course introduces the socio-historical underpinnings of these traditions, and invites students to engage in a fundamental questioning of the relationship between performance, gender, and cross-cultural interpretation. This course is designed for students with interests in performance, gender, and media as well as those with an interest in Japan. Genres covered include Noh, Kabuki, Bunraku, and Butoh.
Same as: JAPAN 141, JAPAN 241

COMPLIT 220. Renaissance Africa. 3-5 Units.
Literature and Portuguese expansion into Africa during the sixteenth century. Emphasis on forms of exchange between Portuguese and Africans in Morocco, Angola/Congo, South Africa, the Swahili Coast, and Ethiopia. Readings in Portuguese and English. Taught in English.
Same as: AFRICAST 220E, ILAC 220E, ILAC 320E

COMPLIT 222A. Myth and Modernity. 3-5 Units.
Masters of German 20th- and 21st-Century literature and philosophy as they present aesthetic innovation and confront the challenges of modern technology, social alienation, manmade catastrophes, and imagine the future. Readings include Nietzsche, Freud, Rilke, Musil, Brecht, Kafka, Doeblin, Benjamin, Juenger, Arendt, Musil, Mann, Adorno, Celan, Grass, Bachmann, Bernhardt, Wolf, and Kluge. Taught in English. Note for German Studies grad students: GERMAN 322 will fulfill the grad core requirement since GERMAN 332 is not being offered this year. NOTE: Enrollment requires Professor Eshel's consent. Please contact him directly at eshel@stanford.edu and answer these 2 questions: "Why do you want to take this course?" and "What do you think you can add to the discussion?" Applications will be considered in the order in which they were received. Enrollment is limited to 20 students.
Same as: GERMAN 222, GERMAN 322, JEWISHST 242G, JEWISHST 342

COMPLIT 225. Word and Image. 3-5 Units.
What impact do images have on our reading of a text? How do words influence our understanding of images or our reading of pictures? What makes a visual interpretation of written words or a verbal rendering of an image successful? These questions will guide our investigation of the manifold connections between words and images in this course on intermediality and the relations and interrelations between writing and art from classical antiquity to the present. Readings and discussions will include such topics as the life and afterlife in word and image of Ovid's "Metamorphoses," Dante's "Divine Comedy," Ludovico Ariosto's "Orlando Furioso," and John Milton's "Paradise Lost;" the writings and creative production of poet-artists Michelangelo Buonarroti, William Blake, and Dante Gabriel Rossetti; innovations in and correspondences between literature and art in the modern period, from symbolism in the nineteenth century through the flourishing of European avant-garde movements in the twentieth century.
Same as: ARTHIST 265A, ARTHIST 465A, ITALIAN 265, ITALIAN 365

COMPLIT 228. Critical Translation Studies. 3-5 Units.
Seminal works of translation theory and scholarship from a wide array of disciplinary, regional, linguistic, and historical perspectives. Readings are in English, but students must have at least two years of training or the equivalent in another language, or permission from the instructor. (Important note: Students who wish to count this course toward requirements in the department of East Asian Languages and Cultures must have permission from their EALC advisor.).
Same as: JAPAN 123, JAPAN 223

COMPLIT 229B. Camus. 4-5 Units.
"The admirable conjunction of a man, of an action, and of a work" for Sartre, "the ideal husband of contemporary letters" for Susan Sontag, reading "Camus's fiction as an element in France's methodically constructed political geography of Algeria" for Edward Said, Camus embodies the very French figure of the "intellectuel engagé," or public intellectual. From his birth in 1913 into a poor European family in Algeria to the Nobel Prize in Literature in 1957, from the Mediterranean world to Paris, Camus engaged in the great ethical and political battles of his time, often embracing controversial positions. Through readings and films, we will explore his multiple legacies. Readings from Albert Camus, Jean-Paul Sartre, Assia Djebar, Kamel Daoud, Mouloud Feraoun, Alice Kaplan, Edward Said, Edwidge Danticat. Students will work on their production of written French, in addition to speaking French and reading comprehension. Taught in French. Students are highly encouraged to complete FRENLANG 124 or to successfully test above this level through the Language Center. This course fulfills the Writing in the Major (WIM) requirement.
Same as: CSRE 129, FRENCH 129, HISTORY 235F

COMPLIT 231B. Cultural Hybridity in Central-Eastern Europe. 2-5 Units.
Historically shaped by shifting borders and mixing of various cultures and languages, identities in-between have been in abundance in Central-Eastern Europe. This course offers a comprehensive study of the oeuvre of several major Central-European authors of modernity: the Ukrainian-Russian Nikolai Gogol (1809-1852), the Czech-German-Jewish Franz Kafka (1883-1924), the Austrian-Galician-Jewish Leopold von Sacher-Masoch (1836-1895), the Ukrainian-Galician Olha Kobylyans¿ka (1863-1942), the Russian-German Lou Andreas-Salomé (1861-1937), the Jewish-Polish-Galician Bruno Schulz (1892-1942), and the Polish-Argentinean Witold Gombrowicz (1904-1969). Performing their selves in two or more cultures, these writers were engaged in identity games and produced hybrid texts with which they intervened into the major culture as others. In the course, we will apply post-structuralist and post-colonial concepts such as minor language, heterotopia, in-betweenness, mimicry, indeterminacy, exile, displacement, and transnationalism to the study of the writers oeuvres. We will also master the sociolinguistic analysis of such multi-lingual phenomena as self-translation, code-switching, and calquing and examine various versions of the same text to uncover the palimpsest of hybrid identities.
Same as: SLAVIC 160, SLAVIC 360

COMPLIT 233A. Literature and Society in Africa and the Caribbean. 4 Units.
This course explores texts and films from Francophone Africa and the Caribbean in the 20th and 21st centuries. The course will explore the connections between Sub-Saharan Africa, the Maghreb and the Caribbean through both foundational and contemporary works while considering their engagement with the historical and political contexts in which they were produced. This course will also serve to improve students' speaking and writing skills in French while sharpening their knowledge of the linguistic and conceptual tools needed to conduct literary analysis. The diverse topics discussed in the course will include national and cultural identity, race and class, gender and sexuality, orality and textuality, transnationalism and migration, colonialism and decolonization, history and memory, and the politics of language. Readings include the works of writers and filmmakers such as Djibril Tamsir Niane, Léopold Senghor, Aimé Césaire, Albert Memmi, Patrick Chamoiseau, Leonora Miano, Leila Slimani, Dani Laferrière and Ousmane Sembène. Taught in French. Students are highly encouraged to complete FRENLANG 124 or to successfully test above this level through the Language Center. This course fulfills the Writing in the Major (WIM) requirement.
Same as: AFRICAAM 133, AFRICAST 132, COMPLIT 133A, CSRE 133E, FRENCH 133, JEWISHST 143

COMPLIT 234. Classics of Persian Literature. 3-5 Units.
Why do poems that were written hundreds of years ago still capture the imagination? How is love configured in the texts of a distant culture? Who sings the tales and who are the heroes? This course offers an introduction to the central works of Persian literature, from the 10th century to the present, across the genres of epic, romance, lyric, and novel. As we become acquainted with texts from a millennium of literary history, we will touch upon questions of performance (music and dance), storytelling, profane and divine love, the nature of spiritual quests, the development of narrative and poetic form, the formal and ethical aspects of translation, and, finally, the meaning of modernity in a non-Western context. Readings include: the Book of Kings by Ferdowsi (d.1020); Layla and Majnun by Nezami (d.1209); The Conference of the Birds by Attar (d.1221); selections from the Masnavi and Divan of Rumi (d.1273); the Rose Garden by Sa`di (d.1292), selections from the Divan of Hafez (d.1390); The Blind Owl by Sadegh Hedayat (d.1951); and selected modern poems. Taught in English.
Same as: COMPLIT 134A

COMPLIT 236. Literature and Transgression. 3-5 Units.
Close reading and analysis of erotic-sexual and aesthetic-stylistic transgression in selected works by such authors as Baudelaire, Wilde, Flaubert, Rachilde, Schnitzler, Kafka, Joyce, Barnes, Eliot, Bataille, Burroughs, Thomas Mann, Kathy Acker, as well as in recent digital literature and online communities. Along with understanding the changing cultural, social, and political contexts of what constitutes "transgression" or censorship, students will gain knowledge of influential theories of transgression and conceptual limits by Foucault, Blanchot, and contemporary queer and feminist writers.
Same as: FEMGEN 236

COMPLIT 236A. Casablanca - Algiers - Tunis : Cities on the Edge. 3-5 Units.
Casablanca, Algiers and Tunis embody three territories, real and imaginary, which never cease to challenge the preconceptions of travelers setting sight on their shores. In this class, we will explore the myriad ways in which these cities of North Africa, on the edge of Europe and of Africa, have been narrated in literature, cinema, and popular culture. Home to Muslims, Christians, and Jews, they are an ebullient laboratory of social, political, religious, and cultural issues, global and local, between the nineteenth and twenty-first centuries. We will look at mass images of these cities, from films to maps, novels to photographs, sketching a new vision of these magnets as places where power, social rituals, legacies of the Ottoman and French colonial pasts, and the influence of the global economy collude and collide. Special focus on class, gender, and race.
Same as: AFRICAAM 236B, CSRE 140S, FRENCH 236, FRENCH 336, HISTORY 245C, URBANST 140F

COMPLIT 237. Fascism after Fascism. 3-5 Units.
When World War II ended, most of the states that described themselves as "fascist" ended with it. Nevertheless, fascism haunted postwar democracy as an ever-present threat. The question of what exactly had characterized fascism, and what parts of it persisted within liberal democracies themselves, were continuously and contentiously debated. This question has emerged all the more forcefully in recent years as "illiberal," or "right-wing populist," movements and governments have begun to question the basic premises of liberal democracy. What was fascism, and what would it mean for it to return? This course considers writings by philosophers, historians, journalists and writers, and moves from early anti-fascist writings to critiques of online movements and neo-reactionaries.
Same as: GERMAN 237

COMPLIT 238. Literature and the Brain. 3 Units.
Recent developments in and neuroscience and experimental psychology have transformed the way we think about the operations of the brain. What can we learn from this about the nature and function of literary texts? Can innovative ways of speaking affect ways of thinking? Do creative metaphors draw on embodied cognition? Can fictions strengthen our "theory of mind" capabilities? What role does mental imagery play in the appreciation of descriptions? Does (weak) modularity help explain the mechanism and purpose of self-reflexivity? Can the distinctions among types of memory shed light on what narrative works have to offer?.
Same as: COMPLIT 138, ENGLISH 118, ENGLISH 218, FRENCH 118, FRENCH 218, PSYC 126, PSYCH 118F

COMPLIT 239. Queer Theory. 3-5 Units.
Do we really need a theory in order to be queer? Queer Theory emerged in response to feminist thought, and the study of the history of sexuality, building on their insights, but also uncovering their blind spots. Without Queer Theory, few of the discourses around desire, power and gender identity that we take for granted on college campuses today would exist. Yet there is also a real risk that reality has left the theory behind. In this course, we will try to answer the question: What do we need queer theory for? Do we still need it? And if so, of what kind? The course is designed to introduce students to core texts of queer theory, and to connect them to current debates, be this around trans rights, the representation of homosexuality or the fight against campus sexual assault.
Same as: FEMGEN 239, GERMAN 239

COMPLIT 243. The Age of Beloveds: Inflections of Desire in Persian and Ottoman Literature. 3-5 Units.
This course follows the trajectory of Islamicate love poetry from its emergence in medieval Persian letters to the court of the Ottoman Sultans. Our point of departure will be the emergence of a unique doctrine of love in Persian literature between the 11th and the 14th centuries, from the confluence of courtly, romantic and mystical ideas. Tracing the gradual imbrication of sacred and profane desire, we will study the advice on marital love in early Mirrors for Princes, the exaltation of heterosexual love in romances, the recasting of love in the context of a mystical erotology, and, finally, the enduring legacy of this discourse of love in ghazal poetry. We will then explore the theme of love, oscillating between heterosexual, homoerotic, and mystical in Ottoman lyric poetry by Sufi, Sultan, and woman poets, spreading over four hundred years until the 19th century. In looking at these texts, we will touch upon questions regarding the ideals and realities of love in Persian and Ottoman society, the protean nature and all-encompassing scope of longing in Perso-Ottoman letters, and the metaphysical implications of the hierarchical structure underlying the Persianate codes of love. Open to undergraduates and graduates. Taught in English.

COMPLIT 243A. From Idol to Equal: Changing Images of Love in 20th-Century Persian and Turkish Literature. 3-5 Units.
This course will explore the changing images of love in pivotal works of modern Persian and Turkish literature. Classes will include close readings and discussions of poems, short stories, and plays with particular attention to the constellation of lover/beloved, the theme of romantic love, and the cultural and historical background of these elements. Our starting point will be the adoption of the novel as a form in the late 19th century. From there, we will explore different figurations of love in key texts of the 20th century up to the Islamic Revolution in Iran (1978) and the *coup d'état* in Turkey (1980). Themes will include the end of empire and the demise of the concubine, the portrayal of the homeland as lover, secularization and the lifting of the veil, the figure of the female pioneer, the conflict of western and eastern morals, the prostitute as a new paradigm, the emergence of female writers, and avantgarde conceptions of love. Open to undergraduate and graduate students. All readings and discussions will be in English.

COMPLIT 243B. Advanced Readings in Arabic Literature and Science II. 3-5 Units.
Advanced reading in Arabic literature (adab) and science (`ilm) for graduate students. Open to undergraduates with four years or more of Arabic.

COMPLIT 243G. Advanced Readings in Arabic Literature and Science I. 3-5 Units.
Advanced reading in Arabic literature (adab) and science (`ilm) for graduate students. Open to undergraduates with four years or more of Arabic.

COMPLIT 244. Modern Persian Poetry. 3-5 Units.
Drawing on poems, songs, and films in addition to theoretical texts, this course retraces the struggle for a modern poetic language in Iran from the time of the Constitutional Revolution (1905/6) to the Islamic Revolution (1978/79), and beyond. Topics include: the unresolved relationship between tradition and modernity; poetry as a vehicle of enlightenment and revolution; the quest for a new poetic expression of love; the emerging possibility of a female voice in Persian poetry; the construction of historical memory through literature; responses to the experience of modern alienation; the figure of the poet as dissident; and the subversive force of poetic form itself. Poets to be read are Iraj, Bahar, Nima, Shamlu, Sepehri, Akhavan Sales, Forugh, and Esma'il Kho'i as well as some non-canonical figures. Open to undergraduates and graduates. Taught in English.

COMPLIT 245. Introductory Ottoman Turkish. 1-3 Unit.
This course is an introduction to basic orthographic conventions and grammatical characteristics of Ottoman Turkish through readings in printed material from the 19th and 20th centuries. Selected readings will range from poetry to prose, from state documents, newspaper and journal articles to reference works. Course is open to both undergraduate and graduate students. Prior knowledge of modern Turkish is required (Completion of COMPLIT 248A, COMPLIT 248B Reading Turkish I&II and COMPLIT 248C Advanced Turkish OR AMELANG 184 & 185 First & Second Year Turkish OR a solid knowledge of Turkish grammar.) Please contact the instructor for more information.

COMPLIT 245A. Arabic Cultures/Conversations. 1 Unit.
Arabic Cultures in Conversations. We will meet once a week for an hour to talk in Arabic about poetry, music, and culture.

COMPLIT 248A. Reading Turkish I. 2-4 Units.
Reading Turkish I is an introduction to the structures of the Turkish language necessary for reading. It is designed to develop reading competence in Turkish for graduate students. Undergraduates should consult the instructor before enrolling for the course. Essential grammar, syntax points, vocabulary, and reading skills will be emphasized. This is not a traditional language course that takes an integrated four-skill approach; since the goal is an advanced reading level, the focus is mainly on grammar, reading comprehension, and translation. With full concentration on reading, we will be able to cover advanced material in a short amount of time. The course is conducted in English, but students will be exposed to the sounds of Turkish, and will have the opportunity to practice pronunciation in class. NOTE: COMPLIT 248A Reading Turkish I is followed by COMPLIT 248B Reading Turkish II in the Winter and COMPLIT 248C Advanced Turkish for Research in the Spring.

COMPLIT 248B. Reading Turkish II. 2-4 Units.
This course is the continuation of COMPLIT 248A Reading Turkish I, which served as an introduction to the structures of the Turkish language necessary for reading. It is designed to develop reading competence in Turkish for graduate students. Undergraduates should consult the instructor before enrolling for the course. Essential grammar, syntax points, vocabulary, and reading skills will be emphasized. This is not a traditional language course that takes an integrated four-skill approach; it focuses only on reading, and as a result we will be able to cover advanced material in a short amount of time. This course is conducted in English, but students will be exposed to the sounds of Turkish, and will have the opportunity to practice pronunciation in class. COMPLIT 248B is followed by COMPLIT 248C Advanced Turkish for Research in the Spring.

COMPLIT 248C. Advanced Turkish-English Translation. 2-4 Units.
This course is the continuation of COMPLIT 248A Reading Turkish I and COMPLIT 248B Reading Turkish II. Refining advanced grammar, reading, and translation skills in modern Turkish through intensive reading and translation from a variety of source texts. Emphasis on Turkish cultural, historical, literary, and political texts depending on students' academic interests. Prerequisites COMPLIT 248A & B or prior knowledge of Turkish and consultation with the instructor is necessary.

COMPLIT 249. Rumi: Rhythms of Creation. 3-5 Units.
This course offers a comprehensive introduction to the thought, poetics, and legacy of one of the towering figures of Persian letters, Mawlana Jalal al-Din Rumi (1207-1273). After discussing the literary ancestors (Sana'i, `Attar), we will trace the mystico-philosophical foundations of Rumi's thought through close readings of the lyrical (Divan-e Shams) and narrative poems (Mathnavi-ye ma`navi), the prose works (Fihe ma fihe), and the letters. Literary analyses will be followed by an exploration of music as a structuring principle in Rumi's work and the role of sama` (spiritual audition) as a poetic practice. From there, we will look at the ritual and symbolism of the dervish dance, the foundation of the Mevlevi order, the interconnectedness of space (architecture) and poetic form that is exemplified in the Mevlevi dervish lodges, and the literary and philosophical echoes of Rumi in Ottoman culture, above all Seyh Galip's masterpiece Hüsn ü Ask (1782). The course will be complemented by digressions on Rumi in contemporary Persian and Turkish music, including live musical performances. Open to undergraduates and graduates. Taught in English.
Same as: COMPLIT 179

COMPLIT 249A. The Iranian Cinema: Image and Meaning. 1-3 Unit.
This course will focus on the analysis of ten Iranian films with the view of placing them in discourse on the semiotics of Iranian art and culture. The course will also look at the influence of a wide array of cinematic traditions from European, American, and Asian masters on Iranian cinema. Note: To satisfy a Ways requirement, this course must be taken for at least 3 units. In AY 2020-21, a letter grade or 'CR' grade satisfies the Ways requirement.
Same as: GLOBAL 249A

COMPLIT 249B. Iranian Cinema in Diaspora. 1-3 Unit.
Despite enormous obstacles, immigrant Iranian filmmakers, within a few decades (after the Iranian Revolution), have created a slow but steady stream of films outside Iran. They were originally started by individual spontaneous attempts from different corners of the world and by now we can identify common lines of interest amongst them. There are also major differences between them. These films have never been allowed to be screened inside Iran, and without any support from the global system of production and distribution, as independent and individual attempts, they have enjoyed little attention. Despite all this, Iranian cinema in exile is in no sense any less important than Iranian cinema inside Iran. In this course we will view one such film, made outside Iran, in each class meeting and expect to reach a common consensus in identifying the general patterns within these works and this movement. Questions such as the ones listed below will be addressed in our meetings each week: What changes in aesthetics and point of view of the filmmaker are caused by the change in his or her work environment? Though unwantedly these films are made outside Iran, how related are they to the known (recognized) cinema within Iran? And in fact, to what extent do these films express things that are left unsaid by the cinema within Iran? NOTE: to satisfy a Ways requirement, this course must be taken for at least 3 units. In AY 2020-21, a letter grade or 'CR' grade satisfies the Ways requirement.
Same as: GLOBAL 249B

COMPLIT 249C. Contemporary Iranian Theater. 1-3 Unit.
Today, Iranian plays both in traditional and contemporary styles are staged in theater festivals throughout the world and play their role in forming a universal language of theater which combine the heritages from countries in all five continents. Despite many obstacles, some Iranian plays have been translated into English and some prominent Iranian figures are successful stage directors outside Iran. Forty-six years ago when "Theater in Iran" (a monograph on the history of Iranian plays) by Bahram Beyzaie was first published, it put the then contemporary Iranian theater movement "which was altogether westernizing itself blindly" face to face with a new kind of self-awareness. Hence, today's generation of playwrights and stage directors in Iran, all know something of their theatrical heritage. In this course we will spend some class sessions on the history of theater in Iran and some class meetings will be concentrating on contemporary movements and present day playwrights. Given the dearth of visual documents, an attempt will be made to present a picture of Iranian theater to the student. Students are expected to read the recommended available translated plays of the contemporary Iranian playwrights and participate in classroom discussions. Note: to satisfy a Ways requirement, this course must be taken for at least 3 units. In AY 2020-21, a letter grade or 'CR' grade satisfies the Ways requirement.
Same as: GLOBAL 249C

COMPLIT 252A. Great Arabic Poetry. 3-5 Units.
Introduction to the canon of Arabic poetry from the sixth to the twenty-first century. Imru' al-Qays, al-Mutanabbi, Mahmud Darwish, and more. Readings in Arabic. Two years of Arabic at Stanford or equivalent required. Counts for the Arabic Track in the MELLAC Minor.

COMPLIT 252B. Great Arabic Prose. 3-5 Units.
Introduction to the best Arabic Literature from the 790s to 2016. Al-Jahiz, Naguib Mahfouz, and much more. Readings in Arabic. Two years of Arabic at Stanford or equivalent required. Counts for the Arabic Track in the MELLAC Minor. Note: This course must be taken for a minimum of 3 units and a letter grade to be eligible for WAYS credit.

COMPLIT 257. Simone Weil, Simone de Beauvoir, Hannah Arendt, and Adriana Cavarero. 3-5 Units.
What does it mean to say the personal is the political, or, in the case of Arendt, that the personal is not political, especially if you are a woman? This course explores how Weil, De Beauvoir, Arendt, and Caverero contend with the question of personhood, in its variegated social, political, ethical, and gendered dimensions. Particular attention will be given to a philosophy of social change and personal transformation, and to the enduring relevance of these women's thought to issues of our day. Texts include selections from "Gravity and Grace," "The Second Sex," "The Ethics of Ambiguity," "The Human Condition," "Between Past and Future," "Stately Bodies," and "Relating Narratives.".
Same as: COMPLIT 357A, FEMGEN 257X, FEMGEN 357X, FRENCH 257, FRENCH 357, ITALIAN 257, ITALIAN 357

COMPLIT 258A. Existentialism, from Moral Quest to Novelistic Form. 3-5 Units.
This seminar intends to follow the development of Existentialism from its genesis to its literary expressions in the European postwar. The notions of defining commitment, of moral ambiguity, the project of the self, and the critique of humanism will be studied in selected texts by Kierkegaard, Heidegger, Unamuno, Albert Camus, Jean-Paul Sartre, Simone de Beauvoir, and Joan Sales.
Same as: ILAC 211, ILAC 311

COMPLIT 263. A History of Silence in Literature. 3-5 Units.
An analysis of theological and mystical texts as well as secular works of poetry and prose, from the Middle Ages to the present, exploring both the specific nature and the philosophical implications of silence in literature. Following a historical trajectory, we will first look at silence in medieval thought: as the necessary silence of apophasy in the works of negative theology and as a memory space in accounts of mystical ascension from the Islamic tradition (Bayazid Bastami). After this will come an examination of various moments in more recent literary history: the silence in face of the sublime that pervades the Romantics; the metaphysical uprooting of Büchner's Lenz (1839) that is captured in the paradox of a silence whose screams reach across the horizon; the fragmentation of Hölderlin's late poetry; the crisis of language described in Hofmannsthal's Chandos Letter (1902), prefiguring Wittgenstein; the dissolution of words as a "language of space devoid of dialogue" in Antonin Artaud; the straining away from existence and speech in Beckett's The Unnamable (1953); and, finally, the silence of the breath turn, as an ethical injunction after the Holocaust in Paul Celan. Open to undergraduates and graduates. Taught in English.

COMPLIT 264. Crossing the Atlantic: Race and Identity in the African Diaspora. 3-5 Units.
This course interrogates the relationship between literature, culture, race and identity in the African diaspora. We will analyze racial discourses through literature, and various forms of cultural expression while examining the role of class and gender in these configurations. As we follow the historical and geographical trajectories of people of African descent in different parts of the world, students will explore literary and political movements with the objective of examining how race has been constructed and is performed in different regions of the diaspora. Our readings will take us from Martinique, Guadeloupe, Guyana, France, and Senegal to Cuba, Brazil, Haiti and the Dominican Republic. Topics discussed will include: Race, identity, gender, class, memory, oral tradition, Afro-Caribbean religions, Negrismo, Négritude, Antillanité, Créolité, colonialism, modernity and national belonging. Readings will include the works of: Jean Price-Mars, Léopold Senghor, Aimé Césaire, Léon Damas, Frantz Fanon, Nicolás Guillén, Nancy Morejon, Maryse Condé, Patrick Chamoiseau, Edouard Glissant, among others. Taught in English.
Same as: CSRE 265, FRENCH 264

COMPLIT 264T. Race, Gender, Justice. 4 Units.
The question of justice animates some of the most influential classics and contemporary plays in the dramatic canon. We will examine the relationship between state laws and kinship obligations in Sophocles¿s Antigone. We will trace the transnational circulation of this text and its adaptations in Gambaro¿s Argentinian Antigona Furiosa, and Fugard and Kani¿s South African The Island. We will read Shakespeare¿s Othello and consider questions of racism, misogyny, and intimate partner violence, investigate the reverberations of these themes in the OJ Simpson trial, and explore its afterlife in Toni Morrison¿s Desdemona. We will take up questions of sexual violence via John Patrick Shanley¿s Doubt and Ariel Dorfman¿s Chilean classic, Death and the Maiden. We will examine themes of police brutality and racial vulnerability in Anna Deavere Smith¿s Twilight and Aleshea Harris¿s What to Send Up When it Goes Down. Through close readings of plays, we will explore the inter-articulation of intimacy and violence, intimidation and transgression, vengeance and forgiveness within the context of larger struggles for gender and racial justice. We will read plays in light of contemporary reckonings with the US criminal justice system: the #MeToo movement and the Black Lives Matter movement. While the former appeals to the criminal justice system to restore victims¿ rights, the latter urges a thorough dismantling of the carceral state. How do we understand these divergent responses to augment or abolish punitive structures? This course fulfills the WIM (Writing in the Major) requirement. It provides students with systematic opportunities for developing writing skills in the field of Theatre and Performance Studies. By reading acclaimed playwrights and critical theorists, students learn not only close reading skills, but also practice writing effectively and persuasively for scholars in the field.
Same as: TAPS 264S

COMPLIT 267. Transcultural Perspectives of South-East Asian Music and Arts. 2-4 Units.
This course will explore the links between aspects of South-East Asian cultures and their influence on modern and contemporary Western art and literature, particularly in France; examples of this influence include Claude Debussy (Gamelan music), Jacques Charpentier (Karnatak music), Auguste Rodin (Khmer art) and Antonin Artaud (Balinese theater). In the course of these interdisciplinary analyses - focalized on music and dance but not limited to it - we will confront key notions in relation to transculturality: orientalism, appropriation, auto-ethnography, nostalgia, exoticism and cosmopolitanism. We will also consider transculturality interior to contemporary creation, through the work of contemporary composers such as Tran Kim Ngoc, Chinary Ung and Tôn-Thât Tiêt. Viewings of sculptures, marionette theater, ballet, opera and cinema will also play an integral role. To satisfy a Ways requirement, this course must be taken for at least 3 units. In AY 2020-21, a letter grade or `CR¿ grade satisfies the Ways requirement. WIM credit in Music at 4 units and a letter grade.
Same as: COMPLIT 148, FRENCH 260A, MUSIC 146N, MUSIC 246N

COMPLIT 268. Socialism: Theory, Literature, Practice. 3-5 Units.
The prospect of socialism has circulated in the cultural and political programs of many countries, and socialist programs have informed the real governance structures in some. This course examines some of the theoretical texts that have described socialism as well as critical responses. In addition, the treatment of socialism in literature will be discussed as well as considerations of the outcomes of institutionalized programs. Readings will include texts by authors such as Marx, Lenin, Hayek, Friedman, Koestler, Steinbeck, Wolf, Brauenig, Wright and others.
Same as: GERMAN 268

COMPLIT 281E. Pirandello, Sartre, and Beckett. 3-5 Units.
In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include The Late Mattia Pascal, Six Characters in Search of an Author, Henry IV; Nausea, No Exit, "Existentialism is a Humanism"; Molloy, Endgame, Krapp's Last Tape, Waiting for Godot. Taught in English.
Same as: COMPLIT 381E, FRENCH 214, FRENCH 314, ITALIAN 214, ITALIAN 314

COMPLIT 283A. Modern Notions of 'The Holy'. 3-5 Units.
This course explores the question, "What may we call 'holy' in the modern era?" by focusing on key writers and thinkers, who in various ways, and in different times raised this question: Friedrich Hölderlin, Hermann Cohen, Franz Kafka, Martin Heidegger, Martin Buber, Franz Rosenzweig, Else Lasker-Schüler, Walter Benjamin, Ernst Bloch, Hannah Arendt, Margarete Susman, Nelly Sachs, Paul Celan, and Judith Butler.nnThis course will be synchronous-conducted, but will also use an innovative, Stanford-developed, on-line platform called Poetic Thinking. Poetic Thinking allows students to share both their scholarly and creative work with each other. Based on the newest technology and beautifully designed, it will greatly enhance their course experience.
Same as: COMPLIT 383A, GERMAN 283A, GERMAN 383A, RELIGST 283A, RELIGST 383A

COMPLIT 285. Texts and Contexts: French-English Translation. 3-5 Units.
This course introduces students to the ways in which translation has shaped the image of France and the Francophone world. What texts and concepts were translated, how, where, and to what effect? Students will work on a translation project throughout the quarter and translate texts from French to English and English to French. Topics may include the role of translation in the development of cultures; the political dimension of translation, translation in the context of migration, and the socio-cultural frameworks that shape translations. Case studies: Camus, Fanon, Glissant, de Beauvoir, Meddeb, Duras. Prior knowledge of French language required.
Same as: CSRE 285, FRENCH 185, FRENCH 285

COMPLIT 286. Forming the world: Pragmatism and Aesthetics. 3-5 Units.
This course will explore key pragmatist philosophical and theoretical approaches to literature, the visual arts, and music. How are human lives mediated by and through aesthetic experience, in the realm of the private as well as the public. Rather than positing a metaphysical idea of beauty, the thinkers and artists we engage ask how texts and artworks render us sensitive to our multifaceted contingencies, and how we may speak and write about them. Readings and viewings include R. W. Emerson, Friedrich Nietzsche, Emily Dickinson, Martin Heidegger, John Dewey, T. W. Adorno, Hannah Arendt, Richard Rorty, Terrence Malick, J. M. Coetzee, Bruno Latour, Marilynne Robinson, Nancy Fraser, Rita Felski, Tania Bruguera, Yivve Citton, Richard Moose, Cheryl Misak, and Shannon Sullivan, among others.
Same as: GERMAN 286

COMPLIT 290A. Magic, Science, and Religion. 3-5 Units.
With the rise of the human sciences in the later nineteenth century, "magic," "science," and "religion" came to be understood as entirely separate domains, with different versions of truth and divergent methods of inquiry. But how has this division broken down in the past 150 years? How is it, for example, that other people's religion is "merely magic"? How does science still draw on religious categories, in particular to claim the universe is meaningful? How have new forms of magic shaped new age, global culture? We will examine these questions by pairing literary texts with readings from anthropology, history of science, religious studies, and cultural criticism. This course is taught in English.
Same as: COMPLIT 390A, FRENCH 290, FRENCH 390, ITALIAN 290, ITALIAN 390

COMPLIT 302. Film Series: Understanding Turkey Through Film. 1-2 Unit.
Join us in our quest to understand the great transformation in Turkey and its impact on its people through cinema. Set against the backdrop of the expansion of capitalism and the fundamental cultural, political and social change in the last decade, the movies in this series tell the uneasy stories of individuals whose lives are affected by this disruptive change. By examining the link between the individual experiences and societal change, the films confront issues such as globalization, gender and racial hierarchies, urban transformation, state repression, male domination, and the women's struggle in Turkey. The course consists of 8 Turkish film screenings each of which will be preceded by an introduction by Dr. Alemdaroglu or Dr. Karahan, artistically, historically and politically contextualizing the films, and will be followed by a Zoom discussion and Q&A session led by invited guest scholars of Anthropology, Film Studies, Political Science, Women and Gender Studies or film directors themselves. The students and interested Stanford community will be provided with the streaming links for the movies at the beginning of each week to screen them on their own time, and the discussion sessions will be held on the scheduled class time on Zoom. All films will be in Turkish with English subtitles.
Same as: COMPLIT 102

COMPLIT 304. Voice, Dissent, Resistance: Antiracist and Antifascist Discourse and Action. 5 Units.
The rise of right-wing movements in the United States and in Europe signal a resurgence of nativist and ethno-nationalist politics that rely heavily on racism to advance fascist politics. This course will explore these phenomena both in terms of their historical development and their present-day appearances. The goal will be to understand how those involved in anti-racist and anti-fascist struggles have invented, created, and practiced discourses and actions that attempt to resist racism and fascism, and to evaluate their merits and weaknesses. Historical, philosophic, journalistic, and creative writings will be the basis of study. This is an experimental course driven by the urgency of recent political events. Students should have open minds and be willing to help shape the course.
Same as: COMPLIT 104A

COMPLIT 307. Proust and His World. 3-5 Units.
This course is a chance to read together Proust's <e>A la recherche du temps perdu</e>. This seven-volume novel is a stylistic tour de force, a brilliant meditation on defining elements of modernity, and an eccentric meander through art, history and the self. We will look closely at Proust's narrative edifice, and its poetic achievements. We will augment our reading of the novel with secondary selections that enable us to explore the many themes and questions raised by the work, ranging from fashion as a serious mode of modern expression to the phenomenology of memory to the decadence of French culture on the eve of the First World War. We'll look at the importance of Proust for structuralist and post-structuralist critics of the 1960s-1980s, whose paradigms continue to resonate today. We'll also consider together the interest and limits of a single-author course, and the value of absorptive, "slow" reading in our multi-tasking era. Supplementary readings might include selections from Charles Baudelaire, John Ruskin, Henri Bergson, Gérard Genette, Gilles Deleuze, Eve Sedgwick, Maurice Samuels, and Caroline Weber. Reading knowledge of French strongly recommended.
Same as: FRENCH 307A

COMPLIT 315. Vladimir Nabokov: Displacement and the Liberated Eye. 3-5 Units.
How did the triumphant author of "the great American novel" Lolita evolve from the young author writing at white heat for the tiny sad Russian emigration in Berlin? We will read his short stories and the novels The Luzhin Defense, Invitation to a Beheading, Lolita, Lolita the film, and Pale Fire, to see how Nabokov generated his sinister-playful forms as a buoyant answer to the "hypermodern" visual and film culture of pre-WWII Berlin, and then to America's all-pervading postwar "normalcy" in his pathological comic masterpieces Lolita and Pale Fire. Buy texts in translation at the Bookstore; Slavic grad students will supplement with reading and extra sessions in original Russian.
Same as: COMPLIT 115, SLAVIC 156, SLAVIC 356

COMPLIT 316. Scholarship and Activism for Justice. 1 Unit.
In this weekly discussion group we will center on scholarship that addresses issues of social inequity and ways to act for change.

COMPLIT 319. The Turkish Novel. 3-5 Units.
Designed as a survey, this course will examine the modern Turkish novel from the early days of the Republic to the present day. We will examine the aesthetic, political, and social aspects of the Turkish novel by reading major samples of national, historical, philosophical, village, and modernist novels. Discussions will be conducted in English. Students will have an option to read the primary sources in Turkish or in English. Contact Burcu Karahan for meeting time and place.
Same as: COMPLIT 119

COMPLIT 320A. Epic and Empire. 5 Units.
Focus is on Virgil's Aeneid and its influence, tracing the European epic tradition (Ariosto, Tasso, Camoes, Spenser, and Milton) to New World discovery and mercantile expansion in the early modern period.
Same as: ENGLISH 314

COMPLIT 327. Genres of the Novel. 5 Units.
Provides students with an overview of some major genres in the history of the modern novel, along with major theorists in the critical understanding of the form. Novels might include works by Cervantes, Defoe, Lafayette, Radcliffe, Goethe, Scott, Balzac, Melville, and Woolf. Theorists might include Lukacs, Bakhtin, Jameson, Gallagher, Barthes, Kristeva, and Bourdieu. *PLEASE NOTE: Course for graduate students only.*.
Same as: ENGLISH 327, FRENCH 327

COMPLIT 334A. Concepts of Modernity I: Philosophical Foundations. 5 Units.
In the late eighteenth century, Immanuel Kant proclaimed his epoch to be "the genuine age of criticism." He went on to develop the critique of reason, which set the stage for many of the themes and problems that have preoccupied Western thinkers for the last two centuries. This fall quarter survey is intended as an introduction to these themes and problems. The general course layout draws equal parts on Koselleck's practice of "conceptual history" (Begriffsgeschichte) and on Jameson's "cognitive mapping." After consideration of an important, if often under-appreciated precedent (the baroque), we turn our attention to the conceptual triad of subject, reason and critique, followed by that of revolution, utopia and sovereignty. Authors may include Hegel, Marx, Nietzsche, Weber, Freud, Lukács, and others. This course is the first of a two-course sequence. Priority to graduate students in MTL, ILAC, and English.
Same as: ILAC 334A, MTL 334A

COMPLIT 334B. Concepts of Modernity II: Culture, Aesthetics, and Society in the Age of Globalization. 5 Units.
Emphasis on world-system theory, theories of coloniality and power, and aesthetic modernity/postmodernity in their relation to culture broadly understood.
Same as: ENGLISH 334B, MTL 334B

COMPLIT 348. US-Mexico Border Fictions: Writing La Frontera, Tearing Down the Wall. 3-5 Units.
A border is a force of containment that inspires dreams of being overcome, crossed, and cursed; motivates bodies to climb over walls; and threatens physical harm. This graduate seminar places into comparative dialogue a variety of perspectives from Chicana/o and Mexican/Latin American literary studies. Our seminar will examine fiction and cultural productions that range widely, from celebrated Mexican and Chicano/a authors such as Carlos Fuentes (La frontera de cristal), Yuri Herrera (Señales que precederan al fin del mundo), Willivaldo Delgaldillo (La Virgen del Barrio Árabe), Américo Paredes (George Washington Gómez: A Mexico-Texan Novel), Gloria Anzaldúa (Borderlands/La Frontera: The New Mestiza), and Sandra Cisneros (Carmelo: Puro Cuento), among others, to musicians whose contributions to border thinking and culture have not yet been fully appreciated such as Herb Albert, Ely Guerra, Los Tigres del Norte, and Café Tacvba. Last but not least, we will screen and analyze Orson Welles' iconic border films Touch of Evil and Rodrigo Dorfman's Los Sueños de Angélica. Proposing a diverse and geographically expansive view of the US-Mexico border literary and cultural studies, this seminar links the work of these authors and musicians to struggles for land and border-crossing rights, anti-imperialist forms of trans-nationalism, and to the decolonial turn in border thinking or pensamineto fronterizo. It forces us to take into account the ways in which shifts in the nature of global relations affect literary production and negative aesthetics especially in our age of (late) post-industrial capitalism.
Same as: ILAC 348

COMPLIT 353B. Hannah Arendt: Facing Totalitarianism. 3-5 Units.
Like hardly any other thinker of the modern age, Hannah Arendt's thought offers us timeless insights into the fabric of the modern age, especially regarding the perennial danger of totalitarianism. This course offers an in-depth introduction to Arendt's most important works in their various contexts, as well as a consideration of their reverberations in contemporary philosophy and literature. Readings include Arendt's The Origin of Totalitarianism, The Human Condition, Between Past and Future, Men in Dark Times, On Revolution,Eichmann in Jerusalem, and The Life of the Mind, as well as considerations of Hannah Arendt's work by Max Frisch, Jürgen Habermas, Seyla Benhabib, Judith Butler, Giorgio Agamben, and others. Special attention will be given to Arendt's writings on literature with an emphasis on Kafka, Brecht, Auden, Sartre, and Camus. This course will be synchronously conducted, but will also use an innovative, Stanford-developed, online platform called Poetic Thinking. Poetic Thinking allows students to share both their scholarly and creative work with each other. Based on the newest technology and beautifully designed, it greatly enhances their course experience.
Same as: GERMAN 253, GERMAN 353, JEWISHST 243A

COMPLIT 357A. Simone Weil, Simone de Beauvoir, Hannah Arendt, and Adriana Cavarero. 3-5 Units.
What does it mean to say the personal is the political, or, in the case of Arendt, that the personal is not political, especially if you are a woman? This course explores how Weil, De Beauvoir, Arendt, and Caverero contend with the question of personhood, in its variegated social, political, ethical, and gendered dimensions. Particular attention will be given to a philosophy of social change and personal transformation, and to the enduring relevance of these women's thought to issues of our day. Texts include selections from "Gravity and Grace," "The Second Sex," "The Ethics of Ambiguity," "The Human Condition," "Between Past and Future," "Stately Bodies," and "Relating Narratives.".
Same as: COMPLIT 257, FEMGEN 257X, FEMGEN 357X, FRENCH 257, FRENCH 357, ITALIAN 257, ITALIAN 357

COMPLIT 359A. Philosophical Reading Group. 1 Unit.
Discussion of one contemporary or historical text from the Western philosophical tradition per quarter in a group of faculty and graduate students. For admission of new participants, a conversation with Professor Robert Harrison is required. May be repeated for credit. Taught in English.
Same as: FRENCH 395, ITALIAN 395

COMPLIT 368A. Imagining the Oceans. 5 Units.
How has Western culture constructed the world's oceans since the beginning of global ocean exploration? How have imaginative visions of the ocean been shaped by marine science, technology, exploration, commerce and leisure? Primary authors read might include Cook, Banks, Equiano, Ricketts, and Steinbeck; Defoe, Cooper, Verne, Conrad, Woolf and Hemingway; Coleridge, Baudelaire, Moore, Bishop and Walcott. Critical readings include Schmitt, Rediker and Linebaugh, Baucom, Best, Corbin, Auden, Sontag and Heller-Roazen. Films by Sekula, Painlevé and Bigelow. Seminar coordinated with a 2015 Cantor Arts Center public exhibition. Visits to the Cantor; other possible field trips include Hopkins Marine Station and SF Maritime Historical Park. Open to graduate students only.
Same as: ENGLISH 368A, FRENCH 368A

COMPLIT 369. Introduction to the Profession of Literary Studies. 1-2 Unit.
A survey of how literary theory and other methods have been made institutional since the nineteenth century. The readings and conversation are designed for entering Ph.D. students in the national literature departments and comparative literature.
Same as: DLCL 369, FRENCH 369, GERMAN 369, ITALIAN 369

COMPLIT 371. Critical Theory and Ecology: A Cross-Cultural Perspective. 2-5 Units.
This class will bring together aesthetics, politics, and art around ecological questions. We will survey the key themes in ecocritical humanities and critiques of anthropocentrism by reading selected chapters from Literature and the Environment (Timothy Clark). We will move on to the Marxist eco critique of capitalist economy, human alienation from nature, alienated labor as well as Frankfurt school critiques of instrumental rationality. Major readings include The Enemy of Nature (Kovel), Creating an Ecological Society (Magdofff and Williams), chapters from The Robbery of Nature (Foster and Clark), and essays by Adorno and Benjamin. Taking a comparative perspective, we will study Chinese eco-narratives such as Waste Tide (Chen Qiufan) and Unfolding Beijing (Hao Jingfang).nnChinese is not required. PhD students are required to write a term paper of 20-25 pages. MA and undergraduate students will write two essays of 8 pages in response to the questions.n nTexts to be purchased. Literature and the Environment (Timothy Clark); Creating an Ecological Society (Magdofff and Williams); The Robbery of Nature (Foster and Clark). The rest of readings are available on Canvas.
Same as: CHINA 371

COMPLIT 377. Medieval Lyric: How Lyric Moves. 3-5 Units.
Through the study of various vernacular premodern traditions, this graduate level course examines the qualities that make texts "lyric" and place them into conversation with contemporary theories of lyric. The course will situate medieval lyric within the critical discourse of poetics, the Global South, the archive, and anachrony. We will consider the movement of verse within and among various material contexts (song, manuscript, artworks, objects, tombstones). Poets considered: troubadours, trouvères, Galician-Portugese cantigas d'amigo, Stilnovists, Dante, Petrarchan poetry, Jean Renart, Charles d'Orléans, Villon, Pound, Brazilian Concrete Poetry.
Same as: FRENCH 377, ITALIAN 377

COMPLIT 381E. Pirandello, Sartre, and Beckett. 3-5 Units.
In this course we will read the main novels and plays of Pirandello, Sartre, and Beckett, with special emphasis on the existentialist themes of their work. Readings include The Late Mattia Pascal, Six Characters in Search of an Author, Henry IV; Nausea, No Exit, "Existentialism is a Humanism"; Molloy, Endgame, Krapp's Last Tape, Waiting for Godot. Taught in English.
Same as: COMPLIT 281E, FRENCH 214, FRENCH 314, ITALIAN 214, ITALIAN 314

COMPLIT 383A. Modern Notions of 'The Holy'. 3-5 Units.
This course explores the question, "What may we call 'holy' in the modern era?" by focusing on key writers and thinkers, who in various ways, and in different times raised this question: Friedrich Hölderlin, Hermann Cohen, Franz Kafka, Martin Heidegger, Martin Buber, Franz Rosenzweig, Else Lasker-Schüler, Walter Benjamin, Ernst Bloch, Hannah Arendt, Margarete Susman, Nelly Sachs, Paul Celan, and Judith Butler.nnThis course will be synchronous-conducted, but will also use an innovative, Stanford-developed, on-line platform called Poetic Thinking. Poetic Thinking allows students to share both their scholarly and creative work with each other. Based on the newest technology and beautifully designed, it will greatly enhance their course experience.
Same as: COMPLIT 283A, GERMAN 283A, GERMAN 383A, RELIGST 283A, RELIGST 383A

COMPLIT 388. In Search of the Holy Grail: Percival's Quest in Medieval Literature. 3-5 Units.
This course focuses on one of the most famous inventions of the Middle Ages: the Holy Grail. The grail - a mysterious vessel with supernatural properties - is first mentioned in Chrétien de Troyes' "Perceval," but the story is soon rewritten by authors who alter the meaning of both the grail and the quest. By reading three different versions, we will explore how they respond differently to major topics in medieval culture and relevant to today: romantic love, family ties, education, moral guilt, and spiritual practice. The texts are: Chrétien de Troyes' "Perceval," Wolfram von Eschenbach's "Parzival," and the anonymous "Queste del Saint Graal." All readings will be available in English.
Same as: COMPLIT 188, GERMAN 188, GERMAN 388

COMPLIT 390A. Magic, Science, and Religion. 3-5 Units.
With the rise of the human sciences in the later nineteenth century, "magic," "science," and "religion" came to be understood as entirely separate domains, with different versions of truth and divergent methods of inquiry. But how has this division broken down in the past 150 years? How is it, for example, that other people's religion is "merely magic"? How does science still draw on religious categories, in particular to claim the universe is meaningful? How have new forms of magic shaped new age, global culture? We will examine these questions by pairing literary texts with readings from anthropology, history of science, religious studies, and cultural criticism. This course is taught in English.
Same as: COMPLIT 290A, FRENCH 290, FRENCH 390, ITALIAN 290, ITALIAN 390

COMPLIT 397. Graduate Studies Colloquium. 1 Unit.
Colloquium for graduate students in Comparative Literature. Taught in English. May be repeated for credit.

COMPLIT 398L. Literary Lab. 2-5 Units.
Gathering and analyzing data, constructing hypotheses and designing experiments to test them, writing programs [if needed], preparing visuals and texts for articles or conferences. Requires a year-long participation in the activities of the Lab.
Same as: ENGLISH 398L

COMPLIT 399. Individual Work. 1-15 Unit.
.

COMPLIT 680. Curricular Practical Training. 1-3 Unit.
CPT course required for international students completing degree.
Prerequisite: Comparative Literature Ph.D. candidate.

COMPLIT 802. TGR Dissertation. 0 Units.
.

COMPARATIVE STUDIES IN RACE AND ETHNICITY (CSRE)

Program Overview

The Undergraduate Program in Comparative Studies in Race and Ethnicity is home to five areas of study:

- Asian American Studies (courses listed as ASNAMST (https://explorecourses.stanford.edu/search/?q=ASNAMST&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=&filter-catalognumber-ASNAMST=on&filter-catalognumber-ASNAMST=on) on ExploreCourses)
- Chicana/o-Latina/o Studies (courses listed as CHILATST (https://explorecourses.stanford.edu/search/?q=CHILATST&view=catalog&page=0&catalog=71&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&filter-coursestatus-Active=on&collapse=) on ExploreCourses)

Students can pursue a major or minor in any of these five areas, and are encouraged to build their interdisciplinary study around a focus or issue area. Students can then select from more than 150 course options from across many departments and schools to put together a curriculum, in consultation with our staff and faculty. The major requires 60 units of study and a culminating research project (either a senior paper or honors thesis).

Mission of the Undergraduate Program in Comparative Studies in Race and Ethnicity

The Interdepartmental Program in Comparative Studies in Race and Ethnicity (CSRE) is an interdisciplinary program offering students the opportunity to investigate the significance of race and ethnicity in all areas of human life. The program's mission is to educate students to be leaders and produce knowledge for race and justice.

Devoted to a rigorous analysis of race and ethnicity and using a comparative and interdisciplinary approach, CSRE promotes and deepens students' understanding of the multiple meanings of racial and ethnic diversity both in the United States and abroad. The program prepares students for living and working effectively in a multicultural world.

The interdisciplinary and integrated nature of the academic programs means that students take courses from across the university including: anthropology, art, communication, economics, education, history, languages, linguistics, literature, music, philosophy, political science, psychology, religion, sociology, theater and performance, among others.

Bachelor of Arts

In order to earn a B.A. in any of the five CSRE programs, students must complete at least 60 units toward the major.

Minor

In order to earn a minor in any of the five CSRE programs, students must complete at least 30 units toward the minor.

Ph.D. Minor

The Ph.D. minor in Comparative Studies in Race & Ethnicity provides graduate students pursuing Doctoral Degree's broad interdisciplinary knowledge in the field and prepares them to teach courses in the subject. The goal of the program is to bring together graduate students and faculty from different departments, programs, and schools who analyze race and ethnicity in their research.

Learning Outcomes (Undergraduate)

The Program in Comparative Studies in Race and Ethnicity expects undergraduate majors in the program to be able to demonstrate the following learning outcomes:

1. an understanding of interdisciplinary approaches to the knowledge of experiences related to race and ethnicity in the United States;
2. an ability to employ diverse analytical resources and comparative modes of study as tools to frame and address research questions;
3. an ability to critically engage both primary and secondary sources, and properly use both types of evidence in crafting an argument;
4. an ability to actively and critically engage in verbal and/or written discussion of issues;
5. demonstration of analytical writing skills that convey their understanding of the topic;
6. an expanded ability to think critically about issues in political, social, scientific, economic, and cultural life stemming from the diversity of experiences related to race and ethnicity.

Special Programs

CSRE majors have several unique opportunities available to them. The program offers students an opportunity for support of full-time paid summer research internships for those who apply to the Community Based Research Fellowship and complete a self-designed research project in collaboration with a community agency. The Public Policy Institute is a two week, pre-Autumn Quarter seminar that provides exposure to critical public policy issues. The residence-based institute provides room and board and all seminar materials for participants. CSRE also sponsors quarterly luncheons and community programs for all majors and minors, and has a number of service learning courses that couple academic work with work in communities.

Bachelor of Arts in Asian American Studies

Director: Jeanne Tsai (Psychology)

Asian American Studies (AAS) provides an interdisciplinary approach to understanding the historical and current experiences of persons of Asian

ancestry in the United States. In using the term Asian American, the AAS faculty recognize that the term seeks to name a rapidly developing, complex, and heterogeneous population and that there is neither a single Asian American identity nor one community that comprises all Asian Americans. Asian Americans include those with ancestral ties to countries or regions in East Asia, South Asia, Southeast Asia, or the Philippines, among others.

AAS brings together courses that address the artistic, historical, humanistic, political, and social dimensions of Asian Americans and is an appropriate course of study for students interested in a variety of concerns related to Asian Americans, including: artistic and cultural contributions; current social significance; historical experiences; immigration, intellectual, and policy issues; relationships with other social groups; and the construction of the notion of Asian American as it addresses important theoretical and practical issues.

Students should visit the CCSRE website (https://ccsre.stanford.edu/academics/how-declare/) for instructions on how to declare the major.

General Requirements

A total of 60 units of course work are required for the major

1. A minimum grade of 'C-' is required for a student to count a class towards the Core, Major-Core Foundational, and Methods requirements. Additional units toward the major require a minimum 'D-' passing grade.
2. Comparative and Major-Core courses must be taken for the maximum units offered (4 or more) and for letter grade. Methods courses must be taken for a minimum of 3 units and for letter grade.
3. All majors, minors, and interdisciplinary honors students in the CSRE Family of Programs must take Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C).
4. Students may count 2 classes with the Satisfactory/No Credit (SNC) grading basis toward Additional Units.
   - Courses in which Credit/No Credit (CR/NC) is the only grading basis option may always be counted toward the major.
5. All majors are required to take at least one Community Engaged Learning course which must be CSRE, race, and/or ethnicity related.
   - Students may petition courses from outside departments to count, so long as they meet the race and/or ethnicity related requirement.
6. Students may petition up to 5 units of Internship for Public Service (CSRE 198) to count toward the major or minor when the work completed relates directly to race, ethnicity, or area of study. CSRE 198, however, may be repeated multiple times for University credit and the 180 units required to graduate.
7. Students may petition up to 5 units of Directed Reading classes (CSRE 200W) to count toward the major or minor. CSRE related courses offered only as Directed Reading (such as Muwekma House Seminar or ASB Prep courses) may be counted without a petition.
   a. Students must inform the student services coordinator and the Director of CSRE that they intend to petition a Directed Reading class to count toward their major before taking the class, and submit a petition for the class while they are in it.
   b. A syllabus with a series of readings, including themes, set by the instructor and the student must be submitted with the petition.
   c. The Directed Reading must include assignments that go beyond the readings, such as response papers, a final paper, and/or creative project.
   d. Units earned must align with the University's Unit of Credit (p. 87) policy, i.e., 1 unit being equal to 3 hours/week of work. Meetings with the instructor of the Directed Reading may count up to one hour per unit of work per week.
   e. In general, students are discouraged from using Directed Reading units toward their major unit requirement. Petitions are evaluated and approved by the Program Director on a case-by-case basis.
8. Students may major in two CSRE programs; see the "Multiple Majors (p. 32)" section of this bulletin for University rules concerning multiple majors. Such students may not double count courses between programs, with the exception of the course used to fulfill the Methodology requirement. In order to fulfill the WIM requirement, students write two papers during Autumn Quarter of the senior year, enrolling in both CSRE 200X and CSRE 201X.

Course Requirements

1. CSRE Core Courses

Asian American Studies majors must take the 15-unit CSRE core curriculum including Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C), an additional comparative-core course, and a senior seminar taken in Autumn Quarter of their senior year. One major-core course that focuses on a non-Asian ethnic group may be counted toward the 15-unit core requirement.

		Units
ANTHRO 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 149	The Laboring of Diaspora & Border Literary Cultures	3-5
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5
CSRE 200X	CSRE Senior Seminar	5
CSRE 245	Understanding Racial and Ethnic Identity Development	3-5
CSRE 246	Constructing Race and Religion in America	4-5
CSRE 389A	Race, Ethnicity, and Language: Racial, Ethnic, and Linguistic Formations	3-5
JEWISHST 106	Reflection on the Other: The Arab Israeli Conflict in Literature and Film	3-5
PSYCH 75	Introduction to Cultural Psychology	5

2. Major-Core Course

Majors are required to take one major-core course in Asian American Studies. Students who completed ENGLISH 43C/ENGLISH 143C in a previous year may count this toward their foundational course requirement.

		Units
ASNAMST 100	Introduction to Asian American Studies	5
ASNAMST 186B	Asian American Art: 1850-Present	4

3. Area Study

Majors must complete an additional 35 units of course work from an approved list. One course must have an international dimension, preferably a focus on Asia. The remaining courses must have an Asian American focus and primarily be selected from social science and humanities departments.

4. Language Study (optional)

Students may obtain credit for their study of a related Asian language towards their degree. If students take 15 or more units of an advanced, second-year Asian language relevant to Asian American Studies, they may apply 5 of those units toward their Asian American Studies degree.

5. Research/Methodology Requirement

Majors are required to complete 3-5 units of course work focused on research methods relevant to their disciplinary approach as a student in Asian American Studies. See the Methodology course list on ExploreCourses (https://explorecourses.stanford.edu/search/?q=CSRE%3A%3AMethodology&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-coursestatus-Active=on) for offerings this year.

6. Interdisciplinary Breadth Requirement

To fulfill the Interdisciplinary Breadth Requirement, students should take one 3-5 unit course from the Social Sciences and one 3-5 unit course from the Arts & Humanities that focus on race and ethnicity, especially if the courses are comparative.

- *Arts and Humanities classes include:* Art and Art History, Classics, Division of Literatures, Cultures, and Languages, Comparative Literature, French and Italian, German Studies, Iberian and Latin American Cultures, Slavic Languages and Literatures, East Asian Languages and Cultures, English, History, Linguistics, Music, Philosophy, Religious Studies, and Theater and Performance Studies
- *Social Science classes include:* Anthropology, Communication, Economics, Political Science, Psychology, and Sociology

7. International Dimension

Students in Asian American Studies are required to take one 3-5 unit course that explores issues of race and ethnicity in the context of a nation outside of the United States.

8. Community Engaged Learning Requirement

All students in one of the CSRE majors are required to complete at least one service-learning experience. This requirement may be fulfilled by enrolling in a service-learning course, participating in an identity, race, or ethnicity focused service-learning Alternative Spring Break, participating in the Community Based Research Fellowship program, or enrolling in CSRE 198 Internship for Public Service while completing independent service work. See the Community Engaged Learning course list (https://explorecourses.stanford.edu/search/?q=CSRE%3A%3ACEL&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-coursestatus-Active=on) on ExploreCourses for offerings this year.

9. Senior Paper or Honors Thesis

All Asian American Studies majors must complete a culminating research paper under the supervision of a faculty adviser. All majors take CSRE 200X CSRE Senior Seminar (5 units) which fulfills the program's WIM requirement. Additionally, Honors students must also enroll in CSRE 200Y CSRE Senior Honors Research (1-10 units) and CSRE 200Z CSRE Senior Honors Research (1-5 units) in Winter and Spring quarters to continue to access peer and faculty support as they write their theses. Senior Honors Research (CSRE 200Y and CSRE 200Z) courses cannot count for the 60 units towards your major but do count for the 180 units towards your bachelor's degree. Students must complete their theses with a minimum grade of 'B+' to receive honors in CSRE.

Bachelor of Arts in Chicana/o-Latina/o Studies

Director: Jonathan Rosa (Education)

Chicana/o-Latina/o Studies is an interdisciplinary major focusing on the U.S. population with origins in the countries of Mexico, Latin America, and/or South America. Students who major or minor in Chicana/o-Latina/o Studies have an opportunity to select from courses in the humanities, social sciences, and courses offered by affiliated faculty in the School of Education. The Chicana/o-Latina/o Studies program affords students an opportunity to explore the culture, society, economy, and politics of this important and growing segment of our national population.

Students should visit the CCSRE website (https://ccsre.stanford.edu/academics/how-declare/) for instructions on how to declare the major.

General Requirements

A total of 60 units of course work are required for the major.

1. A minimum grade of 'C-' is required for a student to count a class towards the Core, Major-Core Foundational, and Methods requirements. Additional units toward the major require a minimum 'D-' passing grade.
2. Comparative and Major-Core courses must be taken for the maximum units offered (4 or more) and for letter grade. Methods courses must be taken for a minimum of 3 units and for letter grade.
3. All majors, minors, and interdisciplinary honors students in the CSRE Family of Programs must take Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C).
4. Students may count 2 classes with the Satisfactory/No Credit (SNC) grading basis toward Additional Units.
   - Courses in which Credit/No Credit (CR/NC) is the only grading basis option may always be counted toward the major.
5. All majors are required to take at least one Community Engaged Learning course which must be CSRE, race, and/or ethnicity related.
   - Students may petition courses from outside departments to count, so long as they meet the race and/or ethnicity related requirement.
6. Students may petition up to 5 units of Internship for Public Service (CSRE 198) to count toward the major or minor when the work completed relates directly to race, ethnicity, or area of study. CSRE 198, however, may be repeated multiple times for University credit and the 180 units required to graduate.
7. Students may petition up to 5 units of Directed Reading classes (CSRE 200W) to count toward the major or minor. CSRE related courses offered only as Directed Reading (such as Muwekma House Seminar or ASB Prep courses) may be counted without a petition.
   a. Students must inform the student services coordinator and the Director of CSRE that they intend to petition a Directed Reading class to count toward their major before taking the class, and submit a petition for the class while they are in it.
   b. A syllabus with a series of readings, including themes, set by the instructor and the student must be submitted with the petition.
   c. The Directed Reading must include assignments that go beyond the readings, such as response papers, a final paper, and/or creative project.
   d. Units earned must align with the University's Unit of Credit (p. 87) policy, i.e., 1 unit being equal to 3 hours/week of work. Meetings with the instructor of the Directed Reading may count up to one hour per unit of work per week.
   e. In general, students are discouraged from using Directed Reading units toward their major unit requirement. Petitions are evaluated and approved by the Program Director on a case-by-case basis.
8. Students may major in two CSRE programs; see the "Multiple Majors (p. 32)" section of this bulletin for University rules concerning multiple majors. Such students may not double count courses between programs, with the exception of the course used to fulfill the Methodology requirement. In order to fulfill the WIM requirement, students write two papers during Autumn Quarter of the senior year, enrolling in both CSRE 200X and CSRE 201X.

Course Requirements

1. CSRE Core Curriculum

Chicana/o-Latina/o Studies majors must take the 15-unit CSRE core curriculum including Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C), an additional comparative-core course, and a senior seminar taken in Autumn Quarter of the senior year. One major-core course that focuses on a non-Latino origin group may be counted toward the 15-unit core requirement.

		Units
ANTHRO 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 149	The Laboring of Diaspora & Border Literary Cultures	3-5
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5
CSRE 200X	CSRE Senior Seminar	5
CSRE 245	Understanding Racial and Ethnic Identity Development	3-5
CSRE 246	Constructing Race and Religion in America	4-5
CSRE 389A	Race, Ethnicity, and Language: Racial, Ethnic, and Linguistic Formations	3-5
JEWISHST 106	Reflection on the Other: The Arab Israeli Conflict in Literature and Film	3-5
PSYCH 75	Introduction to Cultural Psychology	5

2. Major-Core Courses

Majors are required to take one foundational course in Chicana/o-Latina/o Studies. Students who completed CHICANST/SOC 166 in a previous year may count this toward their foundational course requirement.

		Units
CHILATST 180E	Introduction to Chicanx/Latinx Studies	5

3. Chicana/o-Latina/o Focus Courses

Majors must complete an additional 25-32 units of course work from an approved list. Courses must have a Chicanx/Latinx focus and primarily be selected from social science and humanities departments.

4. Language Study (optional)

Students may obtain credit for the study of the Spanish language towards their degree. If students take 15 or more units of advanced, second-year Spanish language relevant to Chicana/o-Latina/o Studies, they may apply 5 of those units toward their Chicana/o-Latina/o Studies degree.

5. Research/Methodology Requirement

Majors are required to complete 3-5 units of coursework focused on research methods relevant to their disciplinary approach as a student in Chicana/o-Latina/o Studies. See the Methodology course list on ExploreCourses (https://explorecourses.stanford.edu/search/?q=CSRE%3A%3AMethodology&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-coursestatus-Active=on) for offerings this year.

6. Interdisciplinary Breadth Requirement

To fulfill the Interdisciplinary Breadth Requirement, students should take one 3-5 unit course from the Social Sciences and one 3-5 unit course from the Arts & Humanities that focus on race and ethnicity, especially if the courses are comparative.

- *Arts and Humanities classes include:* Art and Art History, Classics, Division of Literatures, Cultures, and Languages, Comparative Literature, French and Italian, German Studies, Iberian and Latin American Cultures, Slavic Languages and Literatures, East Asian Languages and Cultures, English, History, Linguistics, Music, Philosophy, Religious Studies, and Theater and Performance Studies
- Social Science classes include: Anthropology, Communication, Economics, Political Science, Psychology, and Sociology

7. Community Engaged Learning Requirement

All students are required to complete at least one service-learning experience. This requirement may be fulfilled by enrolling in a service-learning course, participating in an identity, race, or ethnicity focused service-learning Alternative Spring Break, participating in the Community Summer Research Internship program, or enrolling in CSRE 198 Internship for Public Service while completing independent service work. See the Community Engaged Learning course list (https://explorecourses.stanford.edu/search/?q=CSRE%3A%3ACEL&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-coursestatus-Active=on) on ExploreCourses for offerings this year.

8. Senior Paper or Honors Thesis

All Chicana/o-Latina/o Studies majors must complete a culminating research paper under the supervision of a faculty adviser. All majors take CSRE 200X CSRE Senior Seminar (5 units) which fulfills the program's WIM requirement. Additionally, Honors students must also enroll in CSRE 200Y CSRE Senior Honors Research (1-10 units) and CSRE 200Z CSRE Senior Honors Research (1-5 units) in Winter and Spring quarters to continue to access peer and faculty support as they write their theses. Senior Honors Research (CSRE 200Y and CSRE 200Z) courses cannot count for the 60 units towards your major but do count for the 180 units towards your bachelor's degree. Students must complete their theses with a minimum grade of 'B+' to receive honors in CSRE.

Bachelor of Arts in Comparative Studies in Race and Ethnicity

Director: Vaughn Rasberry (English)

Comparative Studies in Race and Ethnicity does not focus on a particular ethnic group. Rather, a student in consultation with the adviser designs a curriculum in relation to a subplan area of focus (p. 1229) that compares various ethnic groups or explores topics that cut across group experiences in the United States and elsewhere in the world. For example, students may compare groups within the U.S., or compare groups in the U.S. to ethnic groups elsewhere, or study the diaspora of a single group or the sovereignty of indigenous peoples within and across different national contexts. Students in this major are able to take advantage of courses in over 22 fields offered by the affiliated faculty of CSRE.

Students should visit the CCSRE website (https://ccsre.stanford.edu/academics/how-declare/) for instructions on how to declare the major.

General Requirements

A total of 60 units of course work are required for the major.

1. A minimum grade of 'C-' is required for a student to count a class towards the Core, Major-Core Foundational, and Methods requirements. Additional units toward the major require a minimum 'D-' passing grade.

2. Comparative and Major-Core courses must be taken for the maximum units offered (4 or more) and for letter grade. Methods courses must be taken for a minimum of 3 units and for letter grade.
3. All majors, minors, and interdisciplinary honors students in the CSRE Family of Programs must take Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C).
4. Students may count 2 classes with the Satisfactory/No Credit (SNC) grading basis toward Additional Units.
   - Courses in which Credit/No Credit (CR/NC) is the only grading basis option may always be counted toward the major.
5. All majors are required to take at least one Community Engaged Learning course which must be CSRE, race, and/or ethnicity related.
   - Students may petition courses from outside departments to count, so long as they meet the race and/or ethnicity related requirement.
6. Students may petition up to 5 units of Internship for Public Service (CSRE 198) to count toward the major or minor when the work completed relates directly to race, ethnicity, or area of study. CSRE 198, however, may be repeated multiple times for University credit and the 180 units required to graduate.
7. Students may petition up to 5 units of Directed Reading classes (CSRE 200W) to count toward the major or minor. CSRE related courses offered only as Directed Reading (such as Muwekma House Seminar or ASB Prep courses) may be counted without a petition.
   a. Students must inform the student services coordinator and the Director of CSRE that they intend to petition a Directed Reading class to count toward their major before taking the class, and submit a petition for the class while they are in it.
   b. A syllabus with a series of readings, including themes, set by the instructor and the student must be submitted with the petition.
   c. The Directed Reading must include assignments that go beyond the readings, such as response papers, a final paper, and/or creative project.
   d. Units earned must align with the University's Unit of Credit (p. 87) policy, i.e., 1 unit being equal to 3 hours/week of work. Meetings with the instructor of the Directed Reading may count up to one hour per unit of work per week.
   e. In general, students are discouraged from using Directed Reading units toward their major unit requirement. Petitions are evaluated and approved by the Program Director on a case-by-case basis.
8. Students may major in two CSRE programs; see the "Multiple Majors (p. 32)" section of this bulletin for University rules concerning multiple majors. Such students may not double count courses between programs, with the exception of the course used to fulfill the Methodology requirement. In order to fulfill the WIM requirement, students write two papers during Autumn Quarter of the senior year, enrolling in both CSRE 200X and CSRE 201X.

Course Requirements

1. Core Curriculum

All CSRE majors enroll in the 15-unit core curriculum, which consists of Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C), an additional comparative-core course, and a senior seminar taken in Autumn Quarter of the senior year. One major-core course may be counted toward the 15-unit core requirement.

		Units
ANTHRO 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 149	The Laboring of Diaspora & Border Literary Cultures	3-5
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5
CSRE 200X	CSRE Senior Seminar	5
CSRE 245	Understanding Racial and Ethnic Identity Development	3-5
CSRE 246	Constructing Race and Religion in America	4-5
CSRE 389A	Race, Ethnicity, and Language: Racial, Ethnic, and Linguistic Formations	3-5
JEWISHST 106	Reflection on the Other: The Arab Israeli Conflict in Literature and Film	3-5
PSYCH 75	Introduction to Cultural Psychology	5

2. Subplan Focus Courses

Comparative Studies majors must complete 20-25 units of subplan specific course work toward the major See the Subplans (p. 1229) tab above.

3. CSRE Focus Courses

Comparative Studies majors must complete and additional10-16 units of course work specific to comparative studies in race and ethnicity outside of their subplan.

4. Research/Methodology Requirement

Majors are required to complete 3-5 units of course work focused on research methods relevant to their disciplinary approach as a student in Comparative Studies in Race & Ethnicity. See the Methodology course list on ExploreCourses (https://explorecourses.stanford.edu/search/?q=CSRE%3A%3AMethodology&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-coursestatus-Active=on) for offerings this year.

5. Interdisciplinary Breadth Requirement

To fulfill the Interdisciplinary Breadth Requirement, students should take one 3-5 unit course from the Social Sciences and one 3-5 unit course from the Arts & Humanities that focus on race and ethnicity, especially if the courses are comparative.

- Arts and Humanities classes Include: Art and Art History, Classics, Division of Literatures, Cultures, and Languages, Comparative Literature, French and Italian, German Studies, Iberian and Latin American Cultures, Slavic Languages and Literatures, East Asian Languages and Cultures, English, History, Linguistics, Music, Philosophy, Religious Studies, and Theater and Performance Studies
- Social Science classes Include: Anthropology, Communication, Economics, Political Science, Psychology, and Sociology

6. Community Engaged Learning Requirement

All students in one of the CSRE majors are required to complete at least one service-learning experience. This requirement may be fulfilled by enrolling in a service-learning course, participating in an identity, race, or ethnicity focused service-learning Alternative Spring Break, participating in the Community Summer Research Internship program, or enrolling in CSRE 198 Internship for Public Service while completing independent service work. See the Community Engaged Learning course list (https://explorecourses.stanford.edu/search/?q=CSRE%3A%3ACEL&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-coursestatus-Active=on) on ExploreCourses for offerings this year.

7. Senior Paper or Honors Thesis

All CSRE majors must complete a culminating research paper under the supervision of a faculty adviser. All majors take CSRE 200X CSRE

Senior Seminar (5 units) which fulfills the program's WIM requirement. Additionally, Honors students must also enroll in CSRE 200YCSRE Senior Honors Research (1-10 units) and CSRE 200Z CSRE Senior Honors Research (1-10 units)in Winter and Spring quarters to continue to access peer and faculty support as they write their theses. Senior Honors Research (CSRE 200Y and CSRE 200Z) courses cannot count for the 60 units towards your major but do count for the 180 units towards your bachelor's degree. Students must complete their theses with a minimum grade of 'B+' to receive honors in CSRE.

Overview

Officially declared subplans are available only to students majoring in Comparative Studies in Race & Ethnicity (CSRE).

20-25 units of subplan focused courses must also be taken in order to complete this requirement.

CSRE majors are required to declare a formal subplan, and may have the opportunity to design an individualized subplan if their interests are not already covered by the existing subplans. Subplans are noted on student transcripts and diplomas; individually designed thematic foci will appear as “Self-Designed” on the transcript and diploma. The following are the formal subplans:

Subplan in Education & Inequality

The subplan in Education & Inequality explores history, policy, and practice in education to understand how educational opportunity is shaped by issues of race, ethnicity, and difference. The goal of the subplan is to develop an understanding of the core issues facing educators and policy makers so that students may learn how they can contribute to the social and political discourse surrounding issues of education and opportunity policy in the U.S.

The concentration is declared on Axess; it appears on the transcript and diploma. Students interested in the Education & Inequality subplan should contact the CSRE undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Education & Inequality subplan:

		Units
AFRICAAM 112	Urban Education	3-5
AFRICAST 111	Education for All? The Global and Local in Public Policy Making in Africa	3-5
CHILATST 131	Raza Youth in Urban Schools: Mis-educating Chicana/o/x and Latina/o/x Communities	3-5
CSRE 11W	Service-Learning Workshop on Issues of Education Equity	1
CSRE 103B	Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices	3-5

Subplan in Environmental Justice

The Environmental Justice subplan allows students to expand their awareness of the environment’s significance to various racial and ethnic groups. What is the relationship between certain societies and groups and the environment? What far reaching impacts can the environment have on segments of the population? Water, air, and food are vital necessities impacted by political, economic, and social decisions and actions. Explore the inequalities that affect low-income and communities of color, and work toward just environments for all.

This subplan is declared on Axess, and appears on the transcript or diploma. Students interested in the Environmental Justice subplan should contact the CSRE undergraduate program office.

Students may find the following courses useful in fulfilling requirements for the Environmental Justice subplan:

		Units
ANTHRO 140C	Mobilizing Nature	3
ANTHRO 166	Political Ecology of Tropical Land Use: Conservation, Natural Resource Extraction, and Agribusiness	3-5
BIO 30	Ecology for Everyone	4
CSRE 125E	Shades of Green: Redesigning and Rethinking the Environmental Justice Movements	3-5
EARTHSYS 136	The Ethics of Stewardship	2-3
ECON 155	Environmental Economics and Policy	5
NATIVEAM 111B	Muwekma: Landscape Archaeology and the Narratives of California Natives	3-5

Subplan in Health & Wellness

The subplan in Health & Wellness is designed for students who are seeking an interdisciplinary exploration of health disparities, health access, and health policy. Through course work, students examine how health experiences are influenced by issues of race and ethnicity.

The subplan is declared on Axess, and appears on the transcript and diploma. Students interested in the Health & Wellness subplan should contact the CSRE undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Health & Wellness subplan:

		Units
ANTHRO 82	Medical Anthropology	5
ANTHRO 138	Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise	5
CSRE 41A	Genes and Identity	4
CSRE 138	Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise	5
EDUC 340	Psychology and American Indian/Alaska Native Mental Health	3-5
HUMBIO 120	Health Care in America: An Introduction to U.S. Health Policy	4

HUMBIO 121E	Ethnicity and Medicine	1-3
HUMBIO 122S	Social Class, Race, Ethnicity, and Health	4
HUMBIO 128	Community Health Psychology	4
NATIVEAM 240	Psychology and American Indian/Alaska Native Mental Health	3-5
PEDS 150	Social and Environmental Determinants of Health	3
PEDS 222	Beyond Health Care: the effects of social policies on health	3
PEDS 250	Social and Environmental Determinants of Health	3
PSYCH 101	Community Health Psychology	4
PWR 194DH	Topics in Writing and Rhetoric: Empathy, Ethics, and Compassion Meditation	4
AFRICAAM 28	Health Impact of Sexual Assault and Relationship Abuse across the Lifecourse	1-3
ANTHRO 82	Medical Anthropology	5
CHILATST 111	Curander@s, remedios y espiritualidad: Chican@/Latin@ healing practices	3-5
CSRE 41A	Genes and Identity	4
CSRE 94	Topics in Writing and Rhetoric: Empathy, Ethics, and Compassion Meditation	4
CSRE 138	Medical Ethics in a Global World: Examining Race, Difference and Power in the Research Enterprise	5
CSRE 144	Transforming Self and Systems: Crossing Borders of Race, Nation, Gender, Sexuality, and Class	5
HRP 89Q	Introduction to Cross Cultural Issues in Medicine	3
HUMBIO 120	Health Care in America: An Introduction to U.S. Health Policy	4
HUMBIO 121E	Ethnicity and Medicine	1-3
HUMBIO 122M	Challenges of Human Migration: Health and Health Care of Migrants and Autochthonous Populations	3
HUMBIO 122S	Social Class, Race, Ethnicity, and Health	4
HUMBIO 124C	Global Child Health	3-5
HUMBIO 128	Community Health Psychology	4
LIFE 145	Trauma, healing, and empowerment	3
NATIVEAM 240	Psychology and American Indian/Alaska Native Mental Health	3-5
PEDS 150	Social and Environmental Determinants of Health	3
PEDS 222	Beyond Health Care: the effects of social policies on health	3
SOC 152	The Social Determinants of Health	4

Subplan in Identity Diversity Aesthetics (IDA)

Students in the Comparative Studies in Race and Ethnicity major can choose a subplan focus in Identity Diversity Aesthetics (IDA).The Identity Diversity Aesthetics subplan is designed to explore the intersections of culture, race, the arts, and social transformation. In IDA courses taught by Stanford faculty, lecturers, and distinguished Visiting Artists, students learn how the arts, activism, and the academy interact to produce aesthetic and societal change.

The subplan is declared in Axess, and appears on the transcript and diploma. Students interested in IDA should contact the CSRE undergraduate program office.

Additionally, IDA subplan students must complete a creative senior project during CSRE 200X. Possible senior projects include a stage production, a set of recorded music, an anthology of creative writing, a curated or solo exhibition, or a community arts workshop. Students who elect to write an honors thesis may incorporate their project as the basis for their thesis.

Students may find the following courses useful in fulfilling requirements in the Identity Diversity Aesthetics (IDA) subplan:

		Units
AFRICAAM 3E	Michelle Obama in American Culture	1
AFRICAAM 5I	Hamilton: An American Musical	1
AFRICAAM 10A	Introduction to Identity, Diversity, and Aesthetics: Arts, Culture, and Pedagogy	1
AFRICAAM 21	African American Vernacular English	3-5
AFRICAAM 36	REPRESENT! Covering Race, Culture, and Identity In The Arts through Writing, Media, and Transmedia.	5
AFRICAAM 37	Contemporary Choreography: Chocolate Heads Performance Project	2
AFRICAAM 43	Introduction to English III: Introduction to African American Literature	3-5
AFRICAAM 45	Dance Improvisation from Freestyle to Hip Hop	1-2
AFRICAAM 71	Introduction to Capoeira: An African Brazilian Art Form	1
AFRICAAM 94	Public Space in Iran: Murals, Graffiti, Performance	3-4
AFRICAAM 117J	Race, Gender, and Sexuality in Contemporary American Film	4-5
AFRICAAM 128	Roots Modern Experience - Mixed Level	1
AFRICAAM 154G	Black Magic: Ethnicity, Race, and Identity in Performance Cultures	3-4
AFRICAAM 156	Performing History: Race, Politics, and Staging the Plays of August Wilson	4
AFRICAAM 159	James Baldwin & Twentieth Century Literature	5
AFRICAAM 160J	Conjure Art 101: Performances of Ritual, Spirituality and Decolonial Black Feminist Magic	2
AFRICAAM 188	Who We Be: Art, Images & Race in Post-Civil Rights America	2-4
AFRICAAM 194	Topics in Writing & Rhetoric: Contemporary Black Rhetorics: Black Twitter and Black Digital Cultures	4
AFRICAAM 194A	Topics in Writing & Rhetoric: Freedom's Mixtape: DJing Contemporary African American Rhetorics	4
AFRICAAM 200N	Funkentelechy: Technologies, Social Justice and Black Vernacular Cultures	5
AFRICAAM 258	Black Feminist Theater and Theory	4

Subplan in Politics, Policy & Equity

The Politics, Policy & Equity subplan is designed for students who wish to focus on the ways that political institutions, public policy, non-profits and social movements shape and are shaped by race and ethnicity. This subplan allows students the opportunity to examine the ramifications that politics and policy have on society through the lens of race and ethnicity.

The subplan is declared on Axess, and appears on the transcript and diploma. Students interested in the Politics, Policy & Equity subplan should contact the CSRE undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Politics, Policy & Equity subplan:

		Units
AMSTUD 183	Re- Imagining American Borders	5
COMPLIT 149	The Laboring of Diaspora & Border Literary Cultures	3-5
CSRE 14N	Growing Up Bilingual	3
CSRE 45Q	Understanding Race and Ethnicity in American Society	4
CSRE 108	Introduction to Feminist, Gender, and Sexuality Studies	4-5
CSRE 127A	Can't Stop Won't Stop: A History Of The Hip-Hop Arts	2-4
CSRE 149	The Laboring of Diaspora & Border Literary Cultures	3-5
CSRE 150	Race and Political Sociology	3
CSRE 164	Immigration and the Changing United States	4
CSRE 201B	The Undocumented Migration Project Exhibition at Stanford	3
EDUC 114N	Growing Up Bilingual	3

SOC 218	Social Movements and Collective Action	4

Subplan in Race, Gender & Sexuality

The Race, Gender & Sexuality subplan is designed for students who wish to explore the intersections between race, ethnicity, gender and sexuality. This subplan gives students the tools to analyze intersecting aspects of race, gender and sexuality. Students will examine the construction of power systems to better contextualize how certain identities become privileged over others. Students who select this subplan can use courses from a range of departments and programs to come away with a better understanding of how these three kinds of categories shape each other. Drawing from contributions of women of color feminism and queer of color studies, this concentration challenges normative constructions of 'race' and 'ethnicity' by equipping students with analytical tools from feminist theory, queer theory, post-colonial theory, critical race theory, and other critical methods.

The subplan is declared on Axess, and appears on the transcript or diploma. Students interested in Race, Gender & Sexuality should contact the CSRE undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Race, Gender & Sexuality subplan:

		Units
AMSTUD 106	Spectacular Trials: Sex, Race and Violence in Modern American Culture	5
CSRE 28SI	What is Whiteness? Historical and Contemporary Definitions of White Racial Identity in the U.S.	1-2
CSRE 63N	The Feminist Critique: The History and Politics of Gender Equality	3-4
CSRE 108	Introduction to Feminist, Gender, and Sexuality Studies	4-5
CSRE 162	The Politics of Sex: Work, Family, and Citizenship in Modern American Women's History	3-5
CSRE 183	Re- Imagining American Borders	5
CSRE 192E	History of Sexual Violence in America	4-5
FEMGEN 103	Feminist and Queer Theories and Methods Across the Disciplines	2-5
FEMGEN 188Q	Imagining Women: Writers in Print and in Person	4-5
HISTORY 257C	LGBTQ History of the United States	4-5
LINGUIST 156	Language, Gender, & Sexuality	4
NATIVEAM 103S	Gender in Native American Societies	5
AFRICAAM 28	Health Impact of Sexual Assault and Relationship Abuse across the Lifecourse	1-3
CHINA 115	Sex, Gender, and Power in Modern China	3-5
CSRE 63N	The Feminist Critique: The History and Politics of Gender Equality	3-4

CSRE 117	Expanding Engineering Limits: Culture, Diversity, and Equity	3
CSRE 141X	Activism and Intersectionality	3-4
CSRE 162	The Politics of Sex: Work, Family, and Citizenship in Modern American Women's History	3-5
CSRE 174S	When Half is Whole: Developing Synergistic Identities and Mestiza Consciousness	5
CSRE 188Q	Imagining Women: Writers in Print and in Person	4-5
CSRE 192E	History of Sexual Violence in America	4-5
FEMGEN 20Q	Making of the Modern Woman: Robots, Aliens, & the Feminine in Science Fiction	3
FEMGEN 135	Body Politics	1-2
LATINAM 248	Racial and Gender Inequalities in Latin America	3-5
SOC 155	The Changing American Family	4

Subplan in Race, Space & Belonging

The Race, Space & Belonging subplan allows students to examine issues of immigration, citizenship, empire and expansion, gentrification, segregation, urban, suburban, and rural spaces, human rights, public welfare, social justice and law. Students can take courses from a range of departments and programs to delve deeper into the ways in which race and ethnicity intertwine with access to space, nations, and resources.

The subplan is declared on Axess, and appears on the transcript or diploma. Students interested in the Race, Space & Belonging subplan should contact the CSRE undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Race, Space & Belonging subplan:

		Units
CSRE 260	Race and Ethnicity in Urban California	4-5
PEDS 250	Social and Environmental Determinants of Health	3
SOC 135	Poverty, Inequality, and Social Policy in the United States	3-4
SOC 155	The Changing American Family	4
URBANST 112	The Urban Underclass	4
URBANST 114	Urban Culture in Global Perspective	5
ANTHRO 27N	Ethnicity and Violence: Anthropological Perspectives	3-5
ANTHRO 42	Megacities	5
ASNAMST 110	The Development of the Southeast Asian American Communities: A comparative analysis	3
CSRE 14N	Growing Up Bilingual	3
CSRE 30Q	The Big Shift	4
CSRE 45Q	Understanding Race and Ethnicity in American Society	4
CSRE 141	Gentrification	5
CSRE 141S	Immigration and Multiculturalism	5
CSRE 147A	Race and Ethnicity Around the World	4
CSRE 149	The Laboring of Diaspora & Border Literary Cultures	3-5
CSRE 151D	Migration and Diaspora in American Art, 1800-Present	4
CSRE 156	The Changing American City	4
CSRE 164	Immigration and the Changing United States	4

POLISCI 141A	Immigration and Multiculturalism	5
SOC 152	The Social Determinants of Health	4
SOC 349	Race, Space, and Stratification	4

Subplan in Technology & Media

Technology's impact on society is large and the technology itself changes rapidly. From type, photographs, film and radio, to social media, artificial intelligence and algorithms, students in this subplan will look at the relationship between technology, media, race and ethnicity and the role technology played and continues to play in our society. What lenses can the study of race and ethnicity provide to engineering, computer science, and other STEM disciplines? How can technology be harnessed to actualize a more just and equitable world?

The concentration is declared on Axess, and it appears on the transcript and diploma. Students interested in the Technology & Media subplan should contact the CSRE undergraduate program office.

Students may find the following courses useful in fulfilling requirements in the Technology & Media subplan:

AFRICAAM 194	Topics in Writing & Rhetoric: Contemporary Black Rhetorics: Black Twitter and Black Digital Cultures	4
AFRICAAM 200N	Funkentelechy: Technologies, Social Justice and Black Vernacular Cultures	5
CHILATST 140	Migration in 21st Century Latin American Film	3-5
CS 106S	Coding for Social Good	1
CSRE 117	Expanding Engineering Limits: Culture, Diversity, and Equity	3
CSRE 154T	The Politics of Algorithms	4-5
ECON 47	Media Markets and Social Good	5
FEMGEN 20Q	Making of the Modern Woman: Robots, Aliens, & the Feminine in Science Fiction	3
HISTORY 1C	Global History: Modern Times	3-5
HISTORY 40	World History of Science	3
HISTORY 194G	Humanities Core: Technology and Media in Modern Japan	3-5
HISTORY 294J	Science, Power, and Knowledge: East Asia to 1900	3-5
INTLPOL 221	Politics of Data: Algorithmic Culture, Big Data, and Information Waste	3-4
MS&E 330	Law, Order, & Algorithms	3
PUBLPOL 147	Ending Poverty with Technology	5
PUBLPOL 148	Ending Poverty with Technology: A Practicum.	5
SOC 154	The Politics of Algorithms	4-5

Self-Designed Subplan

A proposal for a self-designed concentration should include a list of courses, a description of how each course meets the student's educational objectives, and a statement describing the self-designed subplan and how it differs from the subplans already offered. A proposal for a self-designed sublplan must be submitted in conjunction with a student's Major Declaration Proposal to be reviewed by the Undergraduate Program Director.

Students interested in designing their own subplan are strongly encouraged to meet with the Director of CSRE, the Associate Director of Academic Programs at CSRE, and/or the Student Services staff member at CSRE before the end of winter quarter of their sophomore year.

Bachelor of Arts in Jewish Studies

Director: Charlotte Fonrobert (Religious Studies)

The Jewish Studies major provides students with an understanding of Jewish history, language, literature, religion, thought and politics. Jewish culture originated in the ancient Near East and continues today in many different forms across the globe. Drawing from the Humanities, the Social Sciences and from courses offered by affiliated faculty in the School of Education, the Jewish Studies major seeks to help students understand Jewish identity, thought and self-expression within larger historical and social contexts, and to develop their ability to analyze human experience from different disciplinary perspectives.

In addition to the undergraduate major and minor offered through the interdepartmental program in CSRE, the Taube Center for Jewish Studies offers a full range of guest lectures, conferences, and symposia. Graduate students interested in Jewish Studies should see the separate Jewish Studies (p. 1712) section of this bulletin for program information, opportunities, and additional course descriptions.

Students should visit the CCSRE website (https://ccsre.stanford.edu/academics/how-declare/) for instructions on how to declare the major.

General Requirements

A total of 60 units of course work are required for the major.

1. A minimum grade of 'C-' is required for a student to count a class towards the Core, Major-Core Foundational, and Methods requirements. Additional units toward the major require a minimum 'D-' passing grade.
2. Comparative and Major-Core courses must be taken for the maximum units offered (4 or more) and for letter grade. Methods courses must be taken for a minimum of 3 units and for letter grade.
3. All majors, minors, and interdisciplinary honors students in the CSRE Family of Programs must take Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C).
4. Students may count 2 classes with the Satisfactory/No Credit (SNC) grading basis toward Additional Units.
   - Courses in which Credit/No Credit (CR/NC) is the only grading basis option may always be counted toward the major.
5. All majors are required to take at least one Community Engaged Learning course which must be CSRE, race, and/or ethnicity related.
   - Students may petition courses from outside departments to count, so long as they meet the race and/or ethnicity related requirement.
6. Students may petition up to 5 units of Internship for Public Service (CSRE 198) to count toward the major or minor when the work completed relates directly to race, ethnicity, or area of study. CSRE 198, however, may be repeated multiple times for University credit and the 180 units required to graduate.
7. Students may petition up to 5 units of Directed Reading classes (CSRE 200W) to count toward the major or minor. CSRE related courses offered only as Directed Reading (such as Muwekma House Seminar or ASB Prep courses) may be counted without a petition.
   a. Students must inform the student services coordinator and the Director of CSRE that they intend to petition a Directed Reading class to count toward their major before taking the class, and submit a petition for the class while they are in it.
   b. A syllabus with a series of readings, including themes, set by the instructor and the student must be submitted with the petition.
   c. The Directed Reading must include assignments that go beyond the readings, such as response papers, a final paper, and/or creative project.
   d. Units earned must align with the University's Unit of Credit (p. 87) policy, i.e., 1 unit being equal to 3 hours/week of work. Meetings with the instructor of the Directed Reading may count up to one hour per unit of work per week.
   e. In general, students are discouraged from using Directed Reading units toward their major unit requirement. Petitions are evaluated and approved by the Program Director on a case-by-case basis.
8. Students may major in two CSRE programs; see the "Multiple Majors (p. 32)" section of this bulletin for University rules concerning multiple majors. Such students may not double count courses between programs, with the exception of the course used to fulfill the Methodology requirement. In order to fulfill the WIM requirement, students write two papers during Autumn Quarter of the senior year, enrolling in both CSRE 200X and CSRE 201X.

Course Requirements

1. CSRE Core Curriculum

Jewish Studies majors must take the 15-unit CSRE core curriculum including Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C), an additional comparative-core course, and a senior seminar taken in Autumn Quarter of the senior year.

		Units
ANTHRO 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 149	The Laboring of Diaspora & Border Literary Cultures	3-5
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5
CSRE 200X	CSRE Senior Seminar	5
CSRE 245	Understanding Racial and Ethnic Identity Development	3-5
CSRE 246	Constructing Race and Religion in America	4-5
CSRE 389A	Race, Ethnicity, and Language: Racial, Ethnic, and Linguistic Formations	3-5
JEWISHST 106	Reflection on the Other: The Arab Israeli Conflict in Literature and Film	3-5
PSYCH 75	Introduction to Cultural Psychology	5

2. Major-Core Course

Majors are required to take one major-core course in Jewish Studies.

		Units
JEWISHST 185B	Jews in the Contemporary World: The American Jewish Present & Past in Popular Culture, Film, & TV	4-5

3. Jewish Studies Focus Courses

Jewish Studies majors complete 10-20 units of courses that focus on Jewish history, issues, and identity. courses must have a Jewish Studies focus and primarily be selected from social science and humanities departments.

4. Language

One year of Hebrew or another approved Jewish language. Students able to satisfy the first year Hebrew requirement through a proficiency exam are still expected to take an additional year of Hebrew at a higher level or a first year in an additional Jewish language. 12-15 units of language may be counted toward the 60 unit total required for the major.

5. Research/Methodology

Majors are required to complete 3-5 units of coursework focused on research methods relevant to their disciplinary approach as a student in Jewish Studies. See the Methodology course list on ExploreCourses (https://explorecourses.stanford.edu/search/?q=CSRE%3A%3AMethodology&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-coursestatus-Active=on) for offerings this year.

6. Interdisciplinary Breadth Requirement

To fulfill the Interdisciplinary Breadth Requirement, students should take one 3-5 unit course from the Social Sciences and one 3-5 unit course from the Arts & Humanities that focus on race and ethnicity, especially if the courses are comparative.

- Arts and Humanities classes Include: Art and Art History, Classics, Division of Literatures, Cultures, and Languages, Comparative Literature, French and Italian, German Studies, Iberian and Latin American Cultures, Slavic Languages and Literatures, East Asian Languages and Cultures, English, History, Linguistics, Music, Philosophy, Religious Studies, and Theater and Performance Studies
- Social Science classes Include: Anthropology, Communication, Economics, Political Science, Psychology, and Sociology

7. Community Engaged Learning Requirement

All students are required to complete at least one service-learning experience. This requirement may be fulfilled by enrolling in a service-learning course, participating in an identity, race, or ethnicity focused service-learning Alternative Spring Break, participating in the Community Summer Research Internship program, or enrolling in CSRE 198 Internship for Public Service while completing independent service work. See the Community Engaged Learning course list (https://explorecourses.stanford.edu/search/?q=CSRE%3A%3ACEL&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-coursestatus-Active=on) on ExploreCourses for offerings this year.

8. Senior Paper or Honors Thesis

All Jewish Studies majors must complete a culminating research paper under the supervision of a faculty adviser. All majors take CSRE 200X CSRE Senior Seminar (5 units) which fulfills the program's WIM requirement. Additionally, Honors students must also enroll in CSRE 200YCSRE Senior Honors Research (1-10 units) and CSRE 200Z CSRE Senior Honors Research (1-10 units)in Winter and Spring quarters to continue to access peer and faculty support as they write their theses. Senior Honors Research (CSRE 200Y and CSRE 200Z) courses cannot count for the 60 units towards your major but do count for the 180 units towards your bachelor's degree. Students must complete their theses with a minimum grade of 'B+' to receive honors in CSRE.

Bachelor of Arts in Native American Studies

Director: Teresa LaFromboise (Education)

Native American Studies (NAS) provides an intensive approach to understanding the historical and contemporary experiences of Native American people. Attention is paid not only to the special relationship between tribes and the federal government, but to issues across national boundaries, including tribal nations within Canada, and North, Central, and South America. In using the term Native American, the NAS faculty recognize the heterogeneous nature of this population. Native Americans include the Alaska Native population, which comprises Aleuts, Eskimo, and other Native American people residing in Alaska, as well as Native Hawaiian communities.

The purpose of the Native American Studies major and minor is to introduce students to approaches in the academic study of Native American people, history, and culture. Students who major in Native American Studies have the opportunity of doing advanced work in related fields, including literature, sociology, education, and law. All courses in the program promote the discussion of how academic knowledge about Native Americans relates to the historical and contemporary experiences of Native American people and communities.

Students should visit the CCSRE website (https://ccsre.stanford.edu/academics/how-declare/) for instructions on how to declare the major.

General Requirements

A total of 60 units of course work are required for the major.

1. A minimum grade of 'C-' is required for a student to count a class towards the Core, Major-Core Foundational, and Methods requirements. Additional units toward the major require a minimum 'D-' passing grade.
2. Comparative and Major-Core courses must be taken for the maximum units offered (4 or more) and for letter grade. Methods courses must be taken for a minimum of 3 units and for letter grade.
3. All majors, minors, and interdisciplinary honors students in the CSRE Family of Programs must take Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C).
4. Students may count 2 classes with the Satisfactory/No Credit (SNC) grading basis toward Additional Units.
   - Courses in which Credit/No Credit (CR/NC) is the only grading basis option may always be counted toward the major.
5. All majors are required to take at least one Community Engaged Learning course which must be CSRE, race, and/or ethnicity related.
   - Students may petition courses from outside departments to count, so long as they meet the race and/or ethnicity related requirement.
6. Students may petition up to 5 units of Internship for Public Service (CSRE 198) to count toward the major or minor when the work completed relates directly to race, ethnicity, or area of study. CSRE 198, however, may be repeated multiple times for University credit and the 180 units required to graduate.
7. Students may petition up to 5 units of Directed Reading classes (CSRE 200W) to count toward the major or minor. CSRE related courses offered only as Directed Reading (such as Muwekma House Seminar or ASB Prep courses) may be counted without a petition.
   a. Students must inform the student services coordinator and the Director of CSRE that they intend to petition a Directed Reading class to count toward their major before taking the class, and submit a petition for the class while they are in it.
   b. A syllabus with a series of readings, including themes, set by the instructor and the student must be submitted with the petition.
   c. The Directed Reading must include assignments that go beyond the readings, such as response papers, a final paper, and/or creative project.
   d. Units earned must align with the University's Unit of Credit (p. 87) policy, i.e., 1 unit being equal to 3 hours/week of work. Meetings with the instructor of the Directed Reading may count up to one hour per unit of work per week.
   e. In general, students are discouraged from using Directed Reading units toward their major unit requirement. Petitions are evaluated and approved by the Program Director on a case-by-case basis.
8. Students may major in two CSRE programs; see the "Multiple Majors (p. 32)" section of this bulletin for University rules concerning multiple majors. Such students may not double count courses between programs, with the exception of the course used to fulfill the Methodology requirement. In order to fulfill the WIM requirement, students write two papers during Autumn Quarter of the senior year, enrolling in both CSRE 200X and CSRE 201X.

Course Requirements

1. CSRE Core Curriculum

Native American Studies majors must take the 15-unit CSRE core curriculum, including Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C), an additional comparative-core course, and a senior seminar taken in Autumn Quarter of the senior year. One major-core course that focuses on a non-Native American group may be counted toward the 15-unit core requirement.

		Units
ANTHRO 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 149	The Laboring of Diaspora & Border Literary Cultures	3-5
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5
CSRE 200X	CSRE Senior Seminar	5
CSRE 245	Understanding Racial and Ethnic Identity Development	3-5
CSRE 246	Constructing Race and Religion in America	4-5
CSRE 389A	Race, Ethnicity, and Language: Racial, Ethnic, and Linguistic Formations	3-5
JEWISHST 106	Reflection on the Other: The Arab Israeli Conflict in Literature and Film	3-5
PSYCH 75	Introduction to Cultural Psychology	5

2. Major-Core Courses

Majors are required to take one major-core course in Native American Studies.

		Units
Select one of the following:		
NATIVEAM 138		4
NATIVEAM 139	American Indians in Contemporary Society	4
NATIVEAM 115	Introduction to Native American History	5
NATIVEAM 16	Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America	5

3. Area Study

Majors must complete an additional 25-32 units of course work from an approved list. Courses must have a Native American focus and primarily be selected from social science and humanities departments.

4. Language Study (optional)

Students may obtain credit for their study of a related native language towards their degree. If students take 15 or more units of an advanced, second-year native language, or first year special language course relevant to Native American Studies, they may apply 5 of those units toward their Native American Studies degree.

5. Research/Methodology Requirement

Majors are required to complete 3-5 units of coursework focused on research methods relevant to their disciplinary approach as a student in Native American Studies. See the Methodology course list on ExploreCourses (https://explorecourses.stanford.edu/search/?q=CSRE%3A%3AMethodology&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-coursestatus-Active=on) for offerings this year.

To fulfill the Interdisciplinary Breadth Requirement, students should take one 3-5 unit course from the Social Sciences and one 3-5 unit course from the Arts & Humanities that focus on race and ethnicity, especially if the courses are comparative.

- Arts and Humanities classes Include: Art and Art History, Classics, Division of Literatures, Cultures, and Languages, Comparative Literature, French and Italian, German Studies, Iberian and Latin American Cultures, Slavic Languages and Literatures, East Asian

Languages and Cultures, English, History, Linguistics, Music, Philosophy, Religious Studies, and Theater and Performance Studies
- Social Science classes Include: Anthropology, Communication, Economics, Political Science, Psychology, and Sociology

7. Community Engaged Learning Requirement

All students are required to complete at least one service-learning experience. This requirement may be fulfilled by enrolling in a service-learning course, participating in an identity, race, or ethnicity focused service-learning Alternative Spring Break, participating in the Community Summer Research Internship program, or enrolling in CSRE 198 Internship for Public Service while completing independent service work. See the Community Engaged Learning course list (https://explorecourses.stanford.edu/search/?q=CSRE%3A%3ACEL&view=catalog&page=0&academicYear=&filter-term-Autumn=on&filter-term-Winter=on&filter-term-Spring=on&filter-term-Summer=on&collapse=&filter-coursestatus-Active=on) on ExploreCourses for offerings this year.

8. Senior Paper or Honors Thesis

All Native American Studies majors must complete a culminating research paper under the supervision of a faculty adviser. All majors take CSRE 200X CSRE Senior Seminar (5 units) which fulfills the program's WIM requirement. Additionally, Honors students must also enroll in CSRE 200YCSRE Senior Honors Research (1-10 units) and CSRE 200Z CSRE Senior Honors Research (1-10 units)in Winter and Spring quarters to continue to access peer and faculty support as they write their theses. Senior Honors Research (CSRE 200Y and CSRE 200Z) courses cannot count for the 60 units towards your major but do count for the 180 units towards your bachelor's degree. Students must complete their theses with a minimum grade of 'B+' to receive honors in CSRE.

Honors Program in Comparative Studies in Race and Ethnicity

For Majors in Comparative Studies in Race and Ethnicity

The Interdepartmental Program in Comparative Studies in Race and Ethnicity offers a program leading to honors for majors in:

- Asian American Studies
- Chicana/o-Latina/o Studies
- Comparative Studies
- Jewish Studies
- Native American Studies

The honors program offers an opportunity to do independent research for a senior thesis. It is open to majors who have maintained a grade point average (GPA) of at least 3.5 in the major and 3.3 overall. The honors thesis is intended to enable students to synthesize skills to produce a document or project demonstrating a measure of competence in their specialty.

The application for honors must be submitted by the **Third Friday in May** of the students' junior year, but students are encouraged to apply earlier. The application includes a proposal describing the project that is approved by the faculty adviser and director of the undergraduate program. Students are required to identify both a faculty adviser and a second reader for the thesis project. The faculty adviser for the honors thesis must be an academic council faculty member and affiliated faculty of the student's major.

Honors students take CSRE 200X CSRE Senior Seminar, which fulfills the program's WIM requirement, and also enroll in CSRE 200Y CSRE Senior Honors Research and CSRE 200Z CSRE Senior Honors Research, in Winter and Spring quarters to continue to access peer and faculty support as they write their theses. Senior Honors Research (CSRE 200Y and CSRE 200Z) courses cannot count for the 60 units towards your major but do count for the 180 units towards your bachelor's degree. Students must complete their theses with a grade of 'B+' to receive honors in CSRE.

An honors colloquium held near the end of Spring Quarter affords students an opportunity to present their research formally. Prizes for best undergraduate honors thesis are awarded annually by the CSRE Program.

Applications are available in the CSRE Undergraduate Program office and on the program web site. (https://ccsre.stanford.edu/academics/opportunities-undergraduates/honors/)

For Majors in Other Departments

The Interdisciplinary Honors Program for Non-Majors in Comparative Studies in Race and Ethnicity is intended to complement study in any major. Students who participate in the honors program receive their degree from their program of study with departmental honors in Comparative Studies in Race and Ethnicity.

Honors certification will be open to students majoring in any field with a GPA in their chosen major of 3.5 and an overall GPA of 3.3. As a prerequisite, students apply for entry by the Third Friday in May of their junior year, but students are encouraged to apply earlier. During the application process, students outline a plan for course work and design an honors project in consultation with their proposed thesis adviser and the CSRE senior seminar coordinator.

The application describes how the student may fulfill the course requirements for interdisciplinary honors in CSRE and includes a proposal describing the project that is approved by the faculty adviser and director of the undergraduate program. Students are required to identify both a faculty adviser and a second reader for the thesis project. The faculty adviser for the honors thesis must be an academic council faculty member and affiliated faculty of the Center for Comparative Studies in Race and Ethnicity. Applications are available in the CSRE undergraduate program office and on the program web site. (https://ccsre.stanford.edu/academics/opportunities-undergraduates/honors/)

Students pursuing a minor in Asian American Studies, Chicana/o-Latina/o Studies, Comparative Studies in Race and Ethnicity, Jewish Studies or Native American Studies who wish to pursue honors in their area of study, apply through the process for non-majors. Students may use their course work for the minor toward the requirements of the interdisciplinary honors program.

Requirements:

Students applying for the interdisciplinary honors program in CSRE are required to take the following courses:

		Units
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5

And a second course identified as a comparative or major-core course within the CSRE Family of Programs.

Core Courses

		Units
ANTHRO 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 32	Theories in Race and Ethnicity: A Comparative Perspective	5
CSRE 149	The Laboring of Diaspora & Border Literary Cultures	3-5

CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5
CSRE 200X	CSRE Senior Seminar	5
CSRE 245	Understanding Racial and Ethnic Identity Development	3-5
CSRE 246	Constructing Race and Religion in America	4-5
CSRE 389A	Race, Ethnicity, and Language: Racial, Ethnic, and Linguistic Formations	3-5
JEWISHST 106	Reflection on the Other: The Arab Israeli Conflict in Literature and Film	3-5
PSYCH 75	Introduction to Cultural Psychology	5

Major-Core Courses

		Units
AFRICAAM 43	Introduction to English III: Introduction to African American Literature	3-5
AFRICAAM 105	Black Matters: Introduction to Black Studies	5
ASNAMST 186B	Asian American Art: 1850-Present	4
CHILATST 171	Mexicans in the United States	5
CHILATST 173	Mexican Migration to the United States	3-5
CHILATST 180E	Introduction to Chicanx/Latinx Studies	5
JEWISHST 185B	Jews in the Contemporary World: The American Jewish Present & Past in Popular Culture, Film, & TV	4-5
NATIVEAM 16	Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America	5
NATIVEAM 115	Introduction to Native American History	5
NATIVEAM 139	American Indians in Contemporary Society	4

These courses must be completed with a grade of 'B+' or better for the honors program.

In addition, students are required to take:

		Units
A core, foundational, thematic, or cognate course related to the topic of the proposal or honors research (selected in consultation with the thesis advisor)		
CSRE 200X	CSRE Senior Seminar	5
CSRE 200Y	CSRE Senior Honors Research (in Winter and Spring quarters)	1-10
CSRE 200Z	CSRE Senior Honors Research (in Winter and Spring quarters)	1-10

Throughout the year, students work with faculty adviser, secondary reader, and the senior seminar coordinator to complete their theses. Students must complete their theses with a minimum grade of 'B+' to receive honors in CSRE.

Asian American Studies Minor

A total of 30 units of approved course work is required for the minor. Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C), at least one Asian American Studies major-core course, and 20 units of Asian American focus courses are needed to fulfill the requirements for the minor. Students should visit the CCSRE website (https://ccsre.stanford.edu/academics/how-declare/) for instructions on how to declare the minor.

Students in Asian American Studies may find the following courses useful in fulfilling course requirements in the major or minor.

1. Comparative-Core Courses (5 units)

		Units
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5

2. Major-Core Courses (5 Units)

Students who completed ASNAMST 159/HISTORY 159 or ENGLISH 43C/143C in previous years may count this toward their Major-Core Course Requirement.

		Units
ARTHIST 186B	Asian American Art: 1850-Present	4
ASNAMST 100	Introduction to Asian American Studies	5

3. Asian American Studies Focus Courses (20 Units)

The rest of the Asian American Studies courses needed to complete the minor are any and all other ASNAMST Classes.

Chicana/o-Latina/o Studies Minor

A total of 30 units of approved course work is required for the minor. Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C), at least one Chicanx/Latinx Studies major-core course, and 20 units of Chicanx/Latinx focus courses are needed to fulfill the requirements for the minor. Students should visit the CCSRE website (https://ccsre.stanford.edu/academics/how-declare/) for instructions on how to declare the minor.

Students in Chicana/o-Latina/o Studies may find the following courses useful in fulfilling course requirements in the major or minor.

1. Comparative-Core Courses (5 Units)

		Units
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5

2. Major-Core Courses (5 Units)

		Units
CHILATST 180E	Introduction to Chicanx/Latinx Studies	5
CHILATST 171	Mexicans in the United States	5

3. Chicana/o-Latina/o Studies Focus Courses (20 Units)

The rest of the Chicana/o-Latina/o Studies courses needed to complete the minor are any and all other CHILATST Classes.

Comparative Studies Minor

A total of 30 units of approved course work is required for the minor. Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C), either one more comparative-core or major-core course, and 20 units of Comparative Studies in Race & Ethnicity focus courses are needed to fulfill the requirements for the minor. Students should visit the CCSRE website (https://ccsre.stanford.edu/academics/how-declare/) for instructions on how to declare the minor.

Students in Comparative Studies may find the following courses useful in fulfilling course requirements in the major or minor.

1. Comparative-Core Courses (5 Units)

		Units
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5

2. Major-Core Courses (5 Units)

		Units
AFRICAAM 43	Introduction to English III: Introduction to African American Literature	3-5
AFRICAAM 105	Black Matters: Introduction to Black Studies	5
ASNAMST 186B	Asian American Art: 1850-Present	4
CHILATST 171	Mexicans in the United States	5
CHILATST 173	Mexican Migration to the United States	3-5
CHILATST 180E	Introduction to Chicanx/Latinx Studies	5
JEWISHST 185B	Jews in the Contemporary World: The American Jewish Present & Past in Popular Culture, Film, & TV	4-5
NATIVEAM 16	Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America	5
NATIVEAM 115	Introduction to Native American History	5
NATIVEAM 139	American Indians in Contemporary Society	4

3. Comparative Studies in Race and Ethnicity Focus Courses (20 Units)

The rest of the Comparative Studies in Race and Ethnicity courses needed to complete the minor are any and all other CSRE Classes.

Jewish Studies Minor

Students who wish to minor in Jewish Studies must complete Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C), one Jewish Studies major-core course, at least one quarter of the Hebrew language or another approved Jewish language, and draw remaining courses from an approved list of Jewish Studies courses. A total of 30 units of approved course work is required for the Jewish Studies minor. Students should visit the CCSRE website (https://ccsre.stanford.edu/academics/how-declare/) for instructions on how to declare the minor.

Students in Jewish Studies may find the following courses useful in fulfilling course requirements in the major or minor.

1. Comparative-Core Courses (5 Units)

		Units
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5

2. Major-Core Courses (5 Units)

		Units
explorecourses:CSRE jewishst-foundational		
JEWISHST 185B	Jews in the Contemporary World: The American Jewish Present & Past in Popular Culture, Film, & TV	4-5

3. Jewish Studies Focus Courses (20 Units)

The rest of theJewish Studies courses needed to complete the minor are any and all other JEWISHST Classes.

Native American Studies Minor

A total of 30 units of approved course work is required for the minor. Introduction to Comparative Studies in Race and Ethnicity (CSRE 196C), at least one Native American Studies major-core course, and 20 units of Native American focus courses are needed to fulfill the requirements for the minor. Students should visit the CCSRE website (https://ccsre.stanford.edu/academics/how-declare/) for instructions on how to declare the minor.

Students in Native American Studies may find the following courses useful in fulfilling course requirements in the major or minor.

1. Comparative-Core Courses (5 Units)

		Units
CSRE 196C	Introduction to Comparative Studies in Race and Ethnicity	5

2. Major-Core Courses (5 Units)

		Units
NATIVEAM 115	Introduction to Native American History	5
NATIVEAM 16	Native Americans in the 21st Century: Encounters, Identity, and Sovereignty in Contemporary America	5
NATIVEAM 139	American Indians in Contemporary Society	4

3. Native American Studies Focus Courses (20 Units)

The rest of the Native American Studies courses needed to complete the minor are any and all other NATIVEAM Classes.

Directed Reading and Research

Directed reading and research allows students to focus on a special topic of interest. In organizing a reading or research plan, the student consults with the director of the major and one or more faculty members specializing in the area or discipline. Students who want to petition directed reading units to count toward a major or minor should see the guidelines in the requirements for their program of interest.

Courses that fulfill directed reading and research requirements:

		Units
ASNAMST 200R	Directed Research	1-5
ASNAMST 200W	Directed Reading	1-5
CHILATST 200R	Directed Research	1-5
CHILATST 200W	Directed Reading	1-5
CSRE 200R	Directed Research	1-5
CSRE 200W	Directed Reading	1-5
NATIVEAM 200R	Directed Research	1-5
NATIVEAM 200W	Directed Reading	1-5

Ph.D. Minor in Comparative Race and Ethnicity

The Ph.D. minor in Comparative Studies in Race & Ethnicity is sponsored by the Program in Modern Thought and Literature. The minor is administered by the Program in Comparative Studies in Race & Ethnicity.

The purpose of the Ph.D. minor in CSRE is to promote and deepen the understanding of participating Stanford graduate students in the multiple meanings of racial and ethnic diversity in the United States and abroad. The Ph.D. minor takes an interdisciplinary approach to interrogating the ways that race and ethnicity operate in the real world. It also explores the ways that traditional disciplines study individuals, cultures, institutions, and policy with respect to personal and group identity, speaking to how they are shaped by often conflicting social and biological perspectives. Its purpose is, therefore, to provide participating students with the knowledge and conceptual framework needed to continue meaningful work on these subjects.

Unique to the Ph.D. minor in CSRE is the simultaneous focus on student exposure to the models of pedagogy, community engagement, and professional development that instill the valuable practical, life-skills

needed to be a productive member of the university academy or private sectors.

Students who complete all the requirements receive the following notation on their transcript and diploma: Ph.D. Minor in Comparative Studies in Race & Ethnicity.

Students submit an annual progress report listing the courses completed towards the minor and courses planned in future quarters. This form is approved by both the main faculty adviser and the Comparative Studies in Race & Ethnicity faculty adviser. Students meet with their Comparative Studies in Race & Ethnicity faculty adviser to discuss their progress report.

Degree Requirements

Per University requirements, all coursework must be at the 200 level. Units taken for the minor can be counted as part of the overall Ph.D. residency requirement, consisting of 135 units of graduate coursework. They may not be used to also meet the requirements for a master's degree.

To receive the Ph.D. Minor in CSRE, participating graduate students are expected to attain the minimum of 20 units required by University policy. Specifically, students must fulfill the following coursework requirements:

1. CSRE 300 Theory and Methods for Comparative Studies in Race and Ethnicity
2. B. A second Theory course, such as:
   - ANTHRO 320A Race, Ethnicity, and Language: Racial, Ethnic, and Linguistic Formations, crosslisted as CSRE 389A, EDUC 389A, LINGUIST 253
   - CSRE 245 Understanding Racial and Ethnic Identity Development, crosslisted as EDUC 245
   - TAPS 314 Performing Identities
   - EDUC 337 Race, Ethnicity, and Linguistic Diversity in Classrooms: Sociocultural Theory and Practices
   - LAW 7016 Critical Race Theory
   - RELIGST 346 Constructing Race and Religion in America, crosslisted as CSRE 246, HISTORY 356G
   - ENGLISH 381B Theories of Race and Ethnicity
   - SOC 350 Sociology of Race
3. Two electives in graduate-level courses, one of which may be from the student's home department/school. (A list of possible electives will be posted here shortly.)
4. CSRE 301, a three quarter colloquium (1 unit each) focusing on pedagogy, community engagement, and professional development

COVID-19 Policies

On July 30, the Academic Senate adopted grading policies effective for all undergraduate and graduate programs, excepting the professional Graduate School of Business, School of Law, and the School of Medicine M.D. Program. For a complete list of those and other academic policies relating to the pandemic, see the "COVID-19 and Academic Continuity (p.)" section of this bulletin.

The Senate decided that all undergraduate and graduate courses offered for a letter grade must also offer students the option of taking the course for a "credit" or "no credit" grade and recommended that deans, departments, and programs consider adopting local policies to count courses taken for a "credit" or "satisfactory" grade toward the fulfillment of degree-program requirements and/or alter program requirements as appropriate.

Undergraduate Degree Requirements

Grading

Comparative Studies in Race and Ethnicity counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B-' or better level.

Graduate Degree Requirements

Grading

Comparative Studies in Race and Ethnicity counts all courses taken in academic year 2020-21 with a grade of 'CR' (credit) or 'S' (satisfactory) towards satisfaction of graduate degree requirements that otherwise require a letter grade provided that the instructor affirms that the work was done at a 'B-' or better level.

Asian American Studies

Director: Jeanne Tsai (Psychology)

Affiliated Faculty and Teaching Staff: Gordon Chang (History), Hien Do (Asian American Studies), Marci Kwon (Art History), Kathryn Gin Lum (Religious Studies), Pamela Lee (Art and Art History), Jean Ma (Art and Art History), David Palumbo-Liu (Comparative Literature), Stephen Sano (Music), Stephen Murphy-Shigematsu (Asian American Studies), Anthony Lising Antonio (Education), Linda Uyechi (Music), Barbara Voss (Anthropology), Christine Min Wotipka (Education), Sylvia Yanagisako (Anthropology)

Chicana/o-Latina/o Studies

Director: Jonathan Rosa (Education)

Affiliated Faculty and Teaching Staff: Albert Camarillo (History), Susana Gallardo (Chicana/o-Latina/o Studies), Angela Garcia (Anthropology), Kenji Hakuta (Education), Tomás Jiménez (Sociology), Ramón Martínez (Education), Melissa Michaelson (Chicana/o-Latina/o Studies), Ana Minian (History), Cherríe Moraga (Drama), Paula Moya (English), Amado Padilla (Education), José David Saldívar (Comparative Literature), Ramón Saldívar (English), Gary Segura (Political Science), Guadalupe Valdés (Education), Yvonne Yarbro-Bejarano (Iberian and Latin American Cultures)

Comparative Studies in Race & Ethnicity

Director: Vaughn Rasberry (English)

Core Affiliated Faculty:

- Anthropology: Duana Fullwiley, Angela Garcia, Barbara Voss, Sylvia Yanagisako
- Art & Art History: Jonathan Calm, Marci Kwon
- Comparative Literature: David Palumbo-Liu, José David Saldívar, Alexander Key
- Drama: Jennifer Brody, Harry Elam
- English: Michele Elam, Chang-rae Lee, Paula Moya, Vaughn Rasberry, Ramón Saldívar
- History: Al Camarillo, James Campbell, Gordon Chang, Allyson Hobbs, Ana Minian
- Iberian and Latin American Cultures: Lisa Surwillo, Hector Hoyos
- Linguistics: John Rickford
- Music: Stephen Sano, Charlie Kronengold
- Political Science: Lauren Davenport
- Psychology: Jennifer Eberhardt, Hazel Markus, Jeanne Tsai, Steven Roberts

- Religious Studies: Kathryn Gin Lum, Charlotte Fonrobert
- Sociology: Tomás Jiménez, Matthew Snipp, Aliya Saperstein, Jackelyn Hwang, Matthew Clair, Asad Asad
- Theater & Performance Studies: Jennifer DeVere Brody, Samer Al-Saber
- Taube Center for Jewish Studies: Vered Shemtov
- Graduate School Education: Anthony Antonio, Prudence Carter, Teresa LaFromboise, Guadalupe Valdés, Christine Min Wotipka, Ari Kelman, Jonathan Rosa, Ramón Martínez
- School of Law: Richard Banks, Richard Ford, Joan Petersilia

Affiliated Faculty and Teaching Staff: David Abernethy (Political Science, emeritus), Samer Al-Saber (Theater & Performance Studies), Asad Asad (Sociology), Arnetha Ball (Education), Lucius Barker (Political Science, emeritus), Donald Barr (Pediatrics), Bryan Brown (Education), Cheryl Brown (African and African American Studies), Martin Carnoy (Education), Clayborne Carson (History), Jeff Chang (Comparative Studies in Race and Ethnicity), Matthew Clair (Sociology), Karen Cook (Sociology), Michele Dauber (Law), Linda Darling-Hammond (Education), Carolyn Duffey (American Studies), Jennifer Eberhardt (Psychology), Ala Ebtekar (Comparative Studies in Race and Ethnicity), Paulla Ebron (Anthropology), Penny Eckert (Linguistics), James Ferguson (Anthropology), Shelley Fisher Fishkin (English), James Fishkin (Communication), Estelle Freedman (History), Susana Gallardo (Chicana/o Studies), Gabriel Garcia (Medicine), Kathryn Gin Lum (Religious Studies), Leah Gordon (Education), David Grusky (Sociology), Sean Hanretta (History), Gina Hernandez-Clarke (Comparative Studies in Race and Ethnicity), Miyako Inoue (Anthropology), Shanto Iyengar (Communication), Tomás Jiménez (Sociology), Gavin Jones (English), Terry Karl (Political Science), Pamela Karlan (Law), Matthew Kohrman (Anthropology), Jan Krawitz (Art and Art History), Jon Krosnick (Communication), Charlie Kronengold (Music), Teresa LaFromboise (Education), David Laitin (Political Science), Liisa Malkki (Anthropology), Hazel Markus (Psychology), Ramón Martínez (Education), Ruben Martinéz (Comparative Studies in Race and Ethnicity), Barbaro Martinez-Ruiz (Art and Art History), Douglas McAdam (Sociology), Jisha Menon (Theater and Performance Studies), Ana Minian (History), Elisabeth Mudimbe-Boyi (French and Italian), Thomas S. Mullaney (History), Stephen Murphy-Shigematsu (Asian American Studies), Hilton Obenzinger (American Studies), Susan Olzak (Sociology), Amado Padilla (Education), Arnold Rampersad (English), Vaughn Rasberry (English), Robert Reich (Political Science), Cecilia Ridgeway (Sociology), Richard Roberts (History), Aron Rodrigue (History), Jonathan Rosa (Education), Michael Rosenfeld (Sociology), Joel Samoff (History), Debra Satz (Philosophy), Vered Shemtov (Division of Literatures, Cultures and Languages), C. Matthew Snipp (Sociology), Paul Sniderman (Political Science), Jayashiri Srikantiah (Law), Ewart Thomas (Psychology), Jeanne L. Tsai (Psychology), Linda Uyechi (Music), Gregory Walton (Psychology), Richard White (History), Jeremy Weinstein (Political Science), Michael Wilcox (Anthropology), Bryan Wolf (Art and Art History), Sylvia Yanagisako (Anthropology), Yvonne Yarbro-Bejarano (Iberian and Latin American Cultures), Steven Zipperstein (History)

Teaching Fellows: Kyle Beckham, Maxwell Suechting

Senior Seminar Coordinator: Takuya Sawaoka

Jewish Studies

Director: Charlotte Fonrobert (Religious Studies)

Affiliated Faculty and Teaching Staff: Zachary Baker (Stanford University Libraries), Joel Beinin (History), Jonathan Berger (Music), Arnold Eisen (Religious Studies, emeritus), Amir Eshel (German Studies), John Felstiner (English, emeritus), Shelley Fisher Fishkin (English), Charlotte Fonrobert (Religious Studies), Avner Greif (Economics), Katherine Jolluck (History), Ari Kelman (Education), Jon Levitow (Language Center), Mark Mancall (History, emeritus), Norman Naimark (History), Reviel Netz (Classics), Jack Rakove (History), Aron Rodrigue (History), Noah Rosenberg (Biology), Gabriella Safran (Slavic Languages and Literatures), Vered Karti Shemtov (Language Center, Comparative Literature), Lee Shulman (Education, emeritus), Peter Stansky (History, emeritus), Marie-Pierre Ulloa (French), Amir Weiner (History), Sam Wineburg (Education), Steven Zipperstein (History)

Writer in Residence: Maya Arad

Native American Studies

Director: Teresa LaFromboise (Education)

Affiliated Faculty and Teaching Staff: JoEllen Anderson (Native American Studies), Jared Aldern (Native American Studies), Karen Biestman (Native American Studies), Kenneth Fields (English), Teresa LaFromboise (Education), Samantha Peralto (Language Center), Delphine Red Shirt Shaw (Native American Studies), C. Matthew Snipp (Sociology), Michael Wilcox (Anthropology)

Asian American Studies

Students in Asian American Studies may find the following related courses useful in fulfilling course requirements in the major or minor.

		Units
EDUC 181	Multicultural Issues in Higher Education	4
EDUC 193F	Psychological Well-Being on Campus: Asian American Perspectives	1
HISTORY 166B	Immigration Debates in America, Past and Present	3-5
PSYCH 217	Topics and Methods Related to Culture and Emotion	3-5
ASNAMST 31N	Behind the Big Drums: Exploring Taiko	3
ASNAMST 110	The Development of the Southeast Asian American Communities: A comparative analysis	3
ASNAMST 174S	When Half is Whole: Developing Synergistic Identities and Mestiza Consciousness	5
ASNAMST 186B	Asian American Art: 1850-Present	4

Chicana/o-Latina/o Studies

Students in Chicana/o-Latina/o Studies may find the following related courses useful in fulfilling course requirements in the major or minor.

		Units
EDUC 149	Theory and Issues in the Study of Bilingualism	3-5
EDUC 193B	Peer Counseling in the Chicano/Latino Community	1
EDUC 277	Education of Immigrant Students: Psychological Perspectives	4
HISTORY 166B	Immigration Debates in America, Past and Present	3-5
HISTORY 201	From Confederate Monuments to Wikipedia: The Politics of Remembering the Past	5
ILAC 193	The Cinema of Pedro Almodovar	3-5
POLISCI 327	Minority Behavior and Representation	5
RELIGST 203	Myth, Place, and Ritual in the Study of Religion	3-5
CHILATST 110	Sabias Creadoras y Activistas: Chicana/ Latina Ways of Knowing	4
CHILATST 201B	The Undocumented Migration Project Exhibition at Stanford	3

Comparative Studies in Race and Ethnicity

Students in Comparative Studies in Race and Ethnicity may find the following related courses useful in fulfilling course requirements in the major or minor.

		Units
AFRICAAM 21	African American Vernacular English	3-5
AFRICAAM 37	Contemporary Choreography: Chocolate Heads Performance Project	2

Overseas Studies Courses in Comparative Studies in Race and Ethnicity

The Bing Overseas Studies Program (http://bosp.stanford.edu) (BOSP) manages Stanford international and domestic study away programs for Stanford undergraduates. Students should consult their department or program's student services office for applicability of Overseas Studies courses to a major or minor program.

The BOSP course search site (https://undergrad.stanford.edu/programs/bosp/explore/search-courses/) displays courses, locations, and quarters relevant to specific majors.

For course descriptions and additional offerings, see the listings in the Stanford Bulletin's ExploreCourses (http://explorecourses.stanford.edu) or Bing Overseas Studies (http://bosp.stanford.edu).

Due to COVID-19, all BOSP programs have been suspended for Autumn Quarter 2020-21. All courses and quarters of operation are subject to change.

		Units
OSPCPTWN 38	Genocide: African Experiences in Comparative Perspective	3-5
OSPCPTWN 55	Arts of Change	3

Asian American Studies Courses

ASNAMST 27SI. Revolution and the Pilipinx Diaspora: Exploring Global Activism in Local Communities. 1-2 Unit.
This course aims to provide students with an opportunity to not only learn about current issues in the local Filipino American community, but also develop their own plans to take action on social justice issues. Through mediums of art and reflection, we will explore themes of diaspora and liberation by focusing on the Filipino experience and the local and vocal histories of activism in the Bay Area. We will be connecting local histories to the current global narrative while also connecting our past to our own identity formation as activists and community leaders. In doing so, we hope to explore the implications of local activism within the greater context of global organizing. The course will expose students to local community leaders and ways in which they can support and plug in to local initiatives.
Same as: CSRE 27SI

ASNAMST 31N. Behind the Big Drums: Exploring Taiko. 3 Units.
Preference to Freshman. Since 1992 generations of Stanford students have heard, seen, and felt the power of taiko, big Japanese drums, at Admit Weekend, NSO, or Baccalaureate. During a time of COVID, this online version of the seminar takes students behind the taiko. Taiko is a relative newcomer to the American music scene. The contemporary ensemble drumming form, or kumidaiko, developed in Japan in the 1950s. The first North American taiko groups emerged from the Japanese American community shortly after and coincided with increased Asian American activism. In the intervening years, taiko has spread into communities in the UK, Europe, Australia, and South America. What drives the power of these drums? In this course, we explore the musical, cultural, historical, and political perspectives of taiko through readings and discussion, conversations with taiko artists, and online taiko lessons. With the taiko as our focal point, we find intersections of Japanese music, Japanese American history, and Asian American activism, and explore relations between performance, cultural expression, community, and identity.
Same as: MUSIC 31N

ASNAMST 52D. Asian American Human Development: Cultural Perspectives on Psychology, Education and Critical Issues. 3 Units.
In this course, we will examine the critical issues in Asian American growth and development with particular attention given to current theoretical and research perspectives within a diverse society. We will consider topics related to their cultural identity, cognitive, and socio-emotional development, engaging in the ethnic discourse on Confucian history and culture, Eastern and Western thought and learning, tiger parenting, gender roles, the model minority stereotype, acculturation and bicultural identity, and mental health. This course uniquely integrates the fields of history, education, psychology, human biology, and ethnic studies as we seek to understand the underlying processes of the Asian American person as an individual and as an effective member of the larger society.
Same as: CSRE 52D

ASNAMST 90E. Investigating Identity Through Filipinx Fiction. 5 Units.
This course is both a reading seminar featuring canonical and contemporary Filipinx authors (including Mia Alvar, Carlos Bulosan, Elaine Castillo, Bienvenido Santos, Lysley Tenorio and José Rizal) and a writing workshop where students generate short stories exploring identity. Rizal's seminal novels Noli Me Tangere and El filibusterismo are ¿the earliest artistic expressions of the Asian colonial experience from the point of view of the oppressed¿ and through his work and the work of other Filipinx authors, we discover how both national and individual identities are not only challenged by adversity, trauma, violence, and war but also forged and strengthened by them. Note: First priority to undergrads. Students must attend the first class meeting to retain their roster spot.
Same as: COMPLIT 89, ENGLISH 90E

ASNAMST 91A. Asian American Autobiography/W. 3-5 Units.
This is a dual purpose class: a writing workshop in which you will generate autobiographical vignettes/essays as well as a reading seminar featuring prose from a wide range of contemporary Asian-American writers. Some of the many questions we will consider are: What exactly is Asian-American memoir? Are there salient subjects and tropes that define the literature? And in what ways do our writerly interactions both resistant and assimilative with a predominantly non-Asian context in turn recreate that context? We'll be working/experimenting with various modes of telling, including personal essay, the epistolary form, verse, and even fictional scenarios. First priority to undergrads. Students must attend the first class meeting to retain their roster spot.
Same as: AMSTUD 91A, CSRE 91D, ENGLISH 91A

ASNAMST 100. Introduction to Asian American Studies. 4 Units.
What is meant by the term Asian American? How have representations of Asian Americans influenced concepts of US citizenship and belonging? What are the social and political origins of the Asian American community? This course provides a critical introduction to the interdisciplinary field of Asian American studies. Drawing on historical, creative, and scholarly texts, the course examines the history and possibilities of Asian American community. To do this, we place the Asian American experience within a transnational context, paying particular attention to the ways that Asian American lives have been shaped by the legacies of US wars in Asia and by the history of US racism. In the process, we examine the role that representations of Asian Americans have played in shaping the boundaries of US citizenship and belonging. Throughout the course, we utilize our discussions of Asian American racialization and community formation to think critically about the social and political ramifications that the designation Asian American entails.
Same as: AMSTUD 100

ASNAMST 107. Asian American Leadership: Controversies, Dilemmas, and Decision-Making Strategies. 3-5 Units.
This course examines the experiences of Asian Americans in a variety of contemporary leadership contexts to identify the complexities of race, gender, class, and ethnicity for both understanding and responding to social relations of power. Through seminar discussion, readings, guest speakers, case studies, and experiential activities, students evaluate situated practices of Asian American leadership in consideration of longstanding themes that have animated the field of Asian American Studies: self- and collective identification, representation and equality, community organizing and advocacy, interracial coalition-building, and minority empowerment. Students explore how Asian American leadership is conceptualized, practiced, and assessed in relation to the following contexts: campus and community activism o f the Asian American movement of the 1960s to the present, institutional settings of employment, electoral politics, the field of Asian American Studies, and public intellectual life. A multidisciplinary approach will draw upon anthropology, psychology, political science, sociology, and Asian American Studies.

ASNAMST 110. The Development of the Southeast Asian American Communities: A comparative analysis. 3 Units.
This course will examine the establishment of the Cambodian, Hmong, and Vietnamese communities in the US. We will focus on the historical events that resulted in their immigration and arrival to the US as well as the similarities and differences in the ways in which they were received. In addition, the course will focus on issues that impacted in the development of these communities focusing on the social, political, and economic processes by which new immigrant groups are incorporated into the American society. The second part of the course will be devoted to analyzing contemporary issues including but not limited to: class status, educational attainment, ethnic identity, racialization, second generation, mass media representation, poverty, and economic mobility.

ASNAMST 115. Asian American Film and Popular Culture. 4 Units.
Tracing the evolution of Asian American cultural representations from the silent film era through the first generation of Asian American YouTube stars, this course examines the economic, political, and cultural influence of Asian American screen images on U.S. society. Through a focus on both mainstream and independent productions, we discuss the work of Asian American actors, audience members, media producers, consumers, and activists. Possible films and TV shows to be discussed include The Cheat (1915), Shanghai Express (1932), Flower Drum Song (1961), Chan is Missing (1983) Fall of the I Hotel (1983), Who Killed Vincent Chin? (1989), Sa-I-Gu, (1992), Saving Face (2004) Crazy Rich Asians (2018), To All the Boys I've Loved Before (2018), TV episodes of the Mindy Project, and work by early Asian American YouTube stars including Michelle Phan, HappySlip, and KevJumba.
Same as: AMSTUD 115, COMPLIT 159

ASNAMST 117D. Race, Gender, and Sexuality in Contemporary American Film. 4-5 Units.
This course introduces students to the theoretical and analytical frameworks necessary to critically understand constructions of race, gender, and sexuality in contemporary American film. Through a sustained engagement with a range of independent and Hollywood films produced since 2000, students analyze the ways that cinematic representations have both reflected and constructed dominant notions of race, gender, and sexuality in the United States. Utilizing an intersectional framework that sees race, gender, and sexuality as always defined by one another, the course examines the ways that dominant notions of difference have been maintained and contested through film in the United States. Readings include work by Michael Omi & Howard Winant, Patricia Hill Collins, Jodi Melamed, Stuart Hall, Lisa Duggan and bell hooks. Films to be discussed include Moonlight, Mosquita y Mari, Kumu Hina, Hustlers, and Crazy Rich Asians. To enroll in the course, please fill out the following form: https://forms.gle/RKqURW6niyB1LRyEA.
Same as: AFRICAAM 117J, AMSTUD 117, CSRE 117D, FEMGEN 117F

ASNAMST 118S. Critical Family History: Narratives of Identity and Difference. 4 Units.
This course examines family history as a site for understanding identity, power, and social difference in American society. Focusing in particular on the intersections of race, gender, and sexuality, we approach the family as an archive through which we might write alternative histories to the ones that dominate the national historical consciousness. To do this, we examine memoirs, oral histories, and first-person documentaries as historical texts that can be used to foreground marginalized historical voices. Students will then be asked to apply course readings and theories to their own family histories as a means of better understanding issues of identity and difference.
Same as: AFRICAAM 118X, AMSTUD 118, CSRE 118S

ASNAMST 123. Asian Americans and Environmental Justice. 3-5 Units.
One central tenet of the environmental justice movement is centering the leadership of frontline communities. Unfortunately, the struggles of Asian Americans on the frontlines of corporate environmental pollution and extraction are less visible and less well-known. In this course, we will explore the Asian American voices that have contributed to the development of the environmental justice movement and the leadership that is shaping the future of this movement.nThis course is designed to provide students with education about the history of the environmental justice movement, the future being envisioned, and the strategies that are needed to get to the vision. It will draw on lectures, readings, guest presentations, case studies, and the instructor's more than 15 years of experience with organizing and social justice campaigns. Students will learn about the principles guiding the environmental justice movement; the vision and framework of how we achieve a just transition to a regenerative economy; the process of organizing and campaign work to advance a community agenda; and skills in collecting, analyzing, and communicating information.
Same as: EARTHSYS 123

ASNAMST 125A. Archaeological Field Survey Methods. 3 Units.
Practicum applying a variety of survey techniques to discover, map, and record archaeological sites. Basic cartographic skills for archaeologists and an introduction to GIS tools, GPS instruments, and geophysical techniques. Participants should be able to walk 3 - 4 miles over uneven terrain or make special arrangements with the instructor for transportation.
Same as: ARCHLGY 125, ARCHLGY 225

ASNAMST 144. Transforming Self and Systems: Crossing Borders of Race, Nation, Gender, Sexuality, and Class. 5 Units.
Exploration of crossing borders within ourselves, and between us and them, based on a belief that understanding the self leads to understanding others. How personal identity struggles have meaning beyond the individual, how self healing can lead to community healing, how the personal is political, and how artistic self expression based in self understanding can address social issues. The tensions of victimization and agency, contemplation and action, humanities and science, embracing knowledge that comes from the heart as well as the mind. Studies are founded in synergistic consciousness as movement toward meaning, balance, connectedness, and wholeness. Engaging these questions through group process, journaling, reading, drama, creative writing, and storytelling. Study is academic and self-reflective, with an emphasis on developing and presenting creative works in various media that express identity development across borders.
Same as: CSRE 144, FEMGEN 144X

ASNAMST 151D. Migration and Diaspora in American Art, 1800-Present. 4 Units.
This lecture course explores American art through the lens of immigration, exile, and diaspora. We will examine a wide range of work by immigrant artists and craftsmen, paying special attention to issues of race and ethnicity, assimilation, displacement, and political turmoil. Artists considered include Emmanuel Leutze, Thomas Cole, Joseph Stella, Chiura Obata, Willem de Kooning, Mona Hatoum, and Julie Mehretu, among many others. How do works of art reflect and help shape cultural and individual imaginaries of home and belonging?.
Same as: AMSTUD 151, ARTHIST 151, ARTHIST 351, CSRE 151D

ASNAMST 157. An Introduction to Asian American Literature: The Short Story. 3 Units.
This course introduces students to Asian American literature and its sociohistorical contexts through close-reading a selection of short stories by writers from various ethnic groups.

ASNAMST 169D. Contemporary Asian American Stories. 5 Units.
This course will examine the aesthetics and politics of contemporary Asian American storytellers, with an emphasis on work produced within the past five years. We will investigate the pressures historically placed on Asian Americans to tell a certain kind of story¿e.g. the immigrant story in a realist mode¿and the ways writers have found to surprise, question, and innovate, moving beyond those boundaries to explore issues of race, sexuality, science, memory, citizenship, and belonging. Course materials will consist of novels, short stories, graphic narrative, and film, and may include work by Ocean Vuong, Mira Jacobs, Gish Jen, Charles Yu, and Adrian Tomine, as well as Lulu Wang¿s 2019 film The Farewell. This seminar will feature both analytical and creative components, and students will be encouraged to produce both kinds of responses to the material.
Same as: ENGLISH 169D

ASNAMST 174S. When Half is Whole: Developing Synergistic Identities and Mestiza Consciousness. 5 Units.
This is an exploration of the ways in which individuals construct whole selves in societies that fragment, label, and bind us in categories and boxes. We examine identities that overcome the destructive dichotomies of ¿us¿ and ¿them, ¿ crossing borders of race, ethnicity, culture, nation, sex, and gender. Our focus is on the development of hybrid and synergistic forms of identity and mestiza consciousness in which the whole is greater than the sum of its parts.
Same as: CSRE 174S

ASNAMST 186B. Asian American Art: 1850-Present. 4 Units.
What does it mean, and what has it meant historically, to be "Asian American" in the United States? This lecture course explores this question through the example of artists, craftspeople, and laborers of Asian descent. We will consider their work alongside the art, visual culture, and literature of the United States. Key themes will include the history of immigration law; questions of home and belonging; art, activism, and community; interethnic solidarity; and gender and queerness. Artists and authors will include Isamu Noguchi, Grace Lee Boggs, Nam June Paik, Yoko Ono, Theresa Hak Kyung Cha, Grace Lee Boggs, Zarina, Carlos Villa, Takashi Murakami, Anne Cheng, Lisa Lowe, among many others. In addition to learning the history of Asian Americans and reading key texts in Asian American studies, this course will also teach the foundational skills of close looking and primary source research.
Same as: AMSTUD 186D, ARTHIST 186B

ASNAMST 187. Geography, Time, and Trauma in Asian American Literature. 5 Units.
The notion that homes can be stable locations for cultural, racial, ethnic, and similarly situated identity categories. Tthe possibility that there really is no place like home for Asian American subjects. How geography, landscape, and time situate traumas within fictional Asian American narratives.
Same as: AMSTUD 261A

ASNAMST 189. The Vietnamese Experience in America. 3 Units.
The purpose of this course to study the experience of the Vietnamese refugees from their exodus after the Vietnam War to their resettlement in America, and to examine larger historical, social, political, and economic processes at work. We will focus on the processes that lead to the formation of this community the variables leading to various locations.

ASNAMST 193F. Psychological Well-Being on Campus: Asian American Perspectives. 1 Unit.
Topics: the Asian family structure, and concepts of identity, ethnicity, culture, and racism in terms of their impact on individual development and the counseling process. Emphasis is on empathic understanding of Asians in America. Group exercises.
Same as: EDUC 193F

ASNAMST 200R. Directed Research. 1-5 Unit.
May be repeated for credit.

ASNAMST 200W. Directed Reading. 1-5 Unit.
(Staff).

ASNAMST 201. Doing Community History: Asian Americans and the Pandemic. 5 Units.
Students utilize a community-engaged oral history methodology to produce short video documentaries focused on Asian Americans in the Covid-19 pandemic. In producing these collaborative digital history projects, students learn to evaluate the ways social power influences historical documentation at various levels including the making of sources, the construction of archives, and the telling of historical narratives. We ask: how have race and racism, ethnicity and community, gender and class, shaped the ways that the pandemic has influenced the lives of Asian Americans? To what extent have Asian American experiences with the pandemic been shaped by the recent global protests for racial justice and Black liberation? In studying the pandemic and its relationship to histories of race and racism, how should we understand the place of Asian Americans?.
Same as: AMSTUD 200R, HISTORY 200R

ASNAMST 261. Introduction to Asian American History. 5 Units.
This course provides an introduction to the field of Asian American history. Tracing this history between the arrival of the first wave of Asian immigrants to the US in the mid-nineteenth century and the present, we foreground the voices and personal histories of seemingly everyday Asian Americans. In the process, the course disrupts totalizing national historical narratives that center the US nation-state and its political leaders as the primary agents of historical change.
Same as: AMSTUD 261W, HISTORY 261E

ASNAMST 281. Asian Religions in America; Asian American Religions. 4 Units.
This course will analyze both the reception in America of Asian religions (i.e. of Buddhism in the 19th century), and the development in America of Asian American religious traditions.
Same as: AMSTUD 281, RELIGST 281, RELIGST 381

ASNAMST 287. Survey of Asian Health Issues. 1 Unit.
In this lecture series, students will explore Asian health topics. Specifically, the chronic disease risk and burden of Asians in the U.S. as a group is considered. Additionally, the necessity of the practice of disaggregation in the study and treatment of Asian Americans is emphasized. Topics will include cardiovascular disease, cancer, population health, precision health, pharmacogenomics and longevity in Asian-Americans. Class format is 30 minute lecture followed by 20 minutes for questions. No required readings. Opportunity to connect with guest speakers for research opportunities. Assignments will include short written reflections on lecture topics. This course is relevant for students interested in basic biology research, epidemiology, and public health policy, or clinical careers in medicine, psychology, or social work. Grading is satisfactory/no credit. All students are welcome, limit 25.
Same as: MED 287

ASNAMST 298. Race, Gender, & Sexuality in Chinese History. 5 Units.
This course examines the diverse ways in which identities--particularly race, ethnicity, gender and sexuality have been understood and experienced in Chinese societies, broadly defined, from the imperial period to the present day. Topics include changes in women's lives and status, racial and ethnic categorizations, homosexuality, prostitution, masculinity, and gender-crossing.
Same as: CSRE 298G, FEMGEN 298C, HISTORY 298C, HISTORY 398C

Chicana/o - Latina/o Studies Courses

CHILATST 1SI. English Language Learner Tutoring and Curriculum Development. 1 Unit.
The principal purpose of this course is to support Habla tutors in developing lesson plans and strategies to implement during their tutoring sessions with English language learners. The course equips students with a foundational understanding of English as a second language, practical experience with developing educational materials for language learning, and a collaborative space to reflect on the tutoring experience.

CHILATST 14N. Growing Up Bilingual. 3 Units.
This course is a Freshman Introductory Seminar that has as its purpose introducing students to the sociolinguistic study of bilingualism by focusing on bilingual communities in this country and on bilingual individuals who use two languages in their everyday lives. Much attention is given to the history, significance, and consequences of language contact in the United States. The course focuses on the experiences of long-term US minority populations as well as that of recent immigrants.
Same as: CSRE 14N, EDUC 114N

CHILATST 21. Visual Storytelling in Community: The Casa Zapata Mural Archive & History Project. 3 Units.
This mural history project was created by Stanford students at Casa Zapata over several years to explore and archive over twenty murals that are painted on the interior and exterior walls of this undergraduate residence in Lucie Stern Hall, Stanford University. The sheer number of painted works, many done with the direct involvement of students in collaboration with professional artists has become one of the largest repositories of visual storytelling through murals on any U.S. college campus. This course will explore the artists, content and methods of creating this treasure of work compiled over 4 decades. Research and programs to exhibit the murals are a critical component to the archive project. Student projects will contribute to efforts to share this body of mural works that has remained largely invisible to the public and critically unexplored at Stanford.

CHILATST 67. Contemporary Chicano & Latino Literature. 4 Units.
What does it mean to be Chicano and Latino in the United States today? And, how have U.S. writers portrayed the evolution of a Latino identity as it has changed from the age of the Civil Rights Movement to the age of Twitter? This class provides students with an overview of 20th and 21st century U.S. Latino/a literature by focusing on American authors writing after the 1960s to the present. We will read a range of writers, including Gloria Anzaldúa, Sandra Cisneros, Héctor Tobar, and Junot Díaz, and examine how these authors grapple with the artistic task of representing the different national cultures and histories (Mexican American, Puerto Rican, etc.) that inform the U.S. Latino experience. Throughout the quarter we will explore how these fictional narratives offer insights into the topics of American identity, immigration, assimilation, class status, Women of Color feminism, gender and sexuality. In addition, we will also consider contemporary representations from film and television, ultimately working toward a comprehensive analysis of how literary genres and popular cultural contribute to the meaning of Latinidad in the U.S.

CHILATST 109. GENTE: An incubator for transforming national narratives. 5 Units.
Nearly 80,000 individuals who identify as Latino or Latina, turn 18 every MONTH in the United States alone.. Yet despite the rapid growth in numbers and a presence on this continent that predates the country itself, Latina/os are still spoken of largely through the lens of immigration, and primarily during the window of election seasons. This course will design, engage, and deliver human centered strategies and relational activations for transforming national narratives while advancing well being. Our core questions include:n - Who defines a people, and who is involved in definition making? n - What are the ways to engage story beyond marketing concepts into a platform for human connection? n - How does one ¿hack¿ a national narrative?n - How do relational activations like pop up dinners and listening parties create personal doorways for transformation that can be scaled without sacrificing quality?nnPlease note, GENTE is more than an identity-based course. It is initiative that designs blueprints for change-making across identities by curating stories, values and common histories of individuals into a shared future of well being.

CHILATST 110. Sabias Creadoras y Activistas: Chicana/Latina Ways of Knowing. 4 Units.
(Open only to Undergraduates.) Chicana feminists have critically challenged masculine nationalist discourse as well as European and North American feminism. Through this course, we examine the diversity in thinking and methodology that defines these discourses from interdisciplinary and cross-cultural perspectives to understand the differential access to power experienced by Chicanas. How intersections of gender, race, class, and sexuality are informed and practiced by everyday lived experiences such as family life, religion/spirituality, education, and work; political/civic engagement is also central to this course.

CHILATST 111. Curander@s, remedios y espiritualidad: Chican@/Latin@ healing practices. 3-5 Units.
Understanding Chican@/Latin@ curandero traditions, remedios, brujeria and spirituality provides insights into the importance of such healing practices in everyday Chican@/Latin@ life. Through this course, we examine curanderismo and folk healing practices from interdisciplinary and cross-cultural perspectives to understand the mestizo and indigenous healing practices of Chican@s/Latin@s. How intersections of gender, race, class, and sexuality inform such practices and traditions is also explored in this course.

CHILATST 112. (Afro)Latinx in Reggaeton & Hip Hop: Blackness, Feminisms, and Performances. 3 Units.
This course surveys Latinx participation in Hip-Hop and Reggaetón, highlighting women artists, the Hispanophone Caribbean, and U.S. urban centers. Students will analyze texts, lyrics, performance, and social issues the music addresses from multiple disciplinary perspectives.

CHILATST 124C. Cultures of the U.S.-Mexico Borderlands. 3-5 Units.
Cultures of the U.S.-Mexico Borderlands: Since becoming president, Donald Trump has deported more than a million migrants and started building a multi-billion-dollar border wall. Although some of Trump¿s actions have seemed anomalous, they have all relied on and reaffirmed longstanding legacies of settler colonialism and racial capitalism. In this seminar, we will look at these legacies through the eyes of the Natives, Latinxs, whites, and others who have lived in the U.S.-Mexico borderlands. Within the confines of literature, we will read novelists like Willa Cather, essayists like Valeria Luiselli, and poets like Simon Ortiz (Acoma Pueblo). Meanwhile, across the more capacious category of culture, we will engage with promoters who encouraged whites to claim homesteads, periodistas who emboldened Latinxs to protect pueblos, and leaders who helped Natives fight for sovereignty. By blending literary studies and ethnic studies, we will gain a thorough grasp of the territories that have taken shape since the U.S.-Mexico War (1846¿48), especially the ones that we currently call Arizona, California, New Mexico, and Texas. From these concrete contexts, we will ask and answer more abstract questions: What are borders¿are they physical boundaries, or are they psychosocial conditions? Similarly, what are nations¿are they stable and homogeneous groups, or are they flexible and diverse communities? Ultimately, what are human beings¿can they be branded as illegal aliens, or do they have inalienable rights? During the quarter, we will work through these questions both collectively and individually: to enrich our in-class discussions, each five-unit student will complete a four- to five-page reading of a single source, a six- to eight-page paper on several sources, and a multimedia borderlands map.
Same as: AMSTUD 124, ENGLISH 124C

CHILATST 125S. Chicano/Latino Politics. 5 Units.
The political position of Latinos and Latinas in the U.S.. Focus is on Mexican Americans, with attention to Cuban Americans, Puerto Ricans, and other groups. The history of each group in the American polity; their political circumstances with respect to the electoral process, the policy process, and government; the extent to which the demographic category Latino is meaningful; and group identity and solidarity among Americans of Latin American ancestry. Topics include immigration, education, affirmative action, language policy, and environmental justice.
Same as: POLISCI 125S

CHILATST 131. Raza Youth in Urban Schools: Mis-educating Chicana/o/x and Latina/o/x Communities. 3-5 Units.
This course focuses on the experiences of Chicana/o/x and Latina/o/x youth in U.S. public schools. We will connect historical patterns with contemporary issues in some of this nation¿s largest urban school districts in order to uncover the ways in which urban schools both reflect and reproduce structural inequalities that marginalize Chicana/o/x and Latina/o/x youth. As we consider the origins and persistence of educational inequalities in relation to longstanding forms of violence, domination, and subordination, we will also highlight histories of activism and resistance, including organized struggles for educational justice in Chicana/o/x and Latina/o/x communities. Issues to be addressed include school (de)segregation, standardized testing, educational tracking, unequal opportunities to learn, deficit perspectives, bilingualism and bilingual education, immigration and undocumented students, ethnic studies curricula, and culturally relevant/responsive/sustaining approaches to pedagogy. This course will invite students to visit and observe in urban school settings, interview key stakeholders (students, parents, teachers, and/or policy makers), and reflect on their own K-12 schooling experiences in relation to course themes.
Same as: EDUC 131

CHILATST 140. Migration in 21st Century Latin American Film. 3-5 Units.
Focus on how images and narratives of migration are depicted in recent Latin American film. It compares migration as it takes place within Latin America to migration from Latin America to Europe and to the U.S. We will analyze these films, and their making, in the global context of an ever-growing tension between "inside" and "outside"; we consider how these films represent or explore precariousness and exclusion; visibility and invisibility; racial and gender dynamics; national and social boundaries; new subjectivities and cultural practices. Films include: Bolivia, Copacabana, La teta asustada, Norteado, Sin nombre, Migración, Ulises, among others. Films in Spanish, with English subtitles. Discussions and assignments in Spanish.
Same as: ILAC 140

CHILATST 148. Inglés Personal: Coaching Everyday Community English. 1-5 Unit.
This course is a 1 to 5 unit service learning course that prepares students to provide direct one-on-one service to adult English language learners in East Palo Alto and other surrounding communities. Students meet with and "coach" an adult learner on a weekly basis. Can be repeated for credit.
Same as: CSRE 148D, EDUC 148

CHILATST 162. Latin/x America in Motion: An Introduction to Dance Studies. 3-4 Units.
This course introduces students to the field of Dance Studies by examining the histories of Latin American and Caribbean dances and their relationship to developing notions of race and nation in the Americas. We will study the historical emergence and transformation of ¿indigeneity,¿ ¿blackness,¿ ¿whiteness,¿ and ¿Latin/@/x¿ and consider how dance practices interacted with these identifications. No prior experience with Dance or Latin America and the Caribbean necessary.
Same as: CSRE 162D, DANCE 162L, TAPS 162L, TAPS 262L

CHILATST 164. Immigration and the Changing United States. 4 Units.
The role of race and ethnicity in immigrant group integration in the U.S. Topics include: theories of integration; racial and ethnic identity formation; racial and ethnic change; immigration policy; intermarriage; hybrid racial and ethnic identities; comparisons between contemporary and historical waves of immigration.
Same as: CSRE 164, SOC 164, SOC 264

CHILATST 166. Mexicans, Mexican Americans, and Chicanos in American Society. 5 Units.
Contemporary sociological issues affecting Mexican-origin people in the U.S. Topics include: the immigrant experience, immigration policy, identity, socioeconomic integration, internal diversity, and theories of incorporation.
Same as: SOC 166, SOC 266

CHILATST 171. Mexicans in the United States. 5 Units.
This course explores the lives and experiences of Mexicans living in the United States, from 1848 to the present. Themes and topics include: the legacies of colonialism, the Mexican-American War, transnational migration, the effects of economic stratification, race and racialization, and the impact of sexual and gender ideologies on the lives of Mexicans residing north of the border.
Same as: AMSTUD 271, CSRE 171H, HISTORY 271

CHILATST 173. Mexican Migration to the United States. 3-5 Units.
(History 73 is 3 units; History 173 is 5 units.) This course is an introduction to the history of Mexican migration to the United States. Barraged with anti-immigrant rhetoric and calls for bigger walls and more restrictive laws, few people in the United States truly understand the historical trends that shape migratory processes, or the multifaceted role played by both US officials and employers in encouraging Mexicans to migrate north. Moreover, few have actually heard the voices and perspectives of migrants themselves. This course seeks to provide students with the opportunity to place migrants' experiences in dialogue with migratory laws as well as the knowledge to embed current understandings of Latin American migration in their meaningful historical context.
Same as: AMSTUD 73, HISTORY 73, HISTORY 173

CHILATST 177A. Well-Being in Immigrant Children & Youth: A Service Learning Course. 4 Units.
This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.
Same as: CSRE 177E, EDUC 177A, HUMBIO 29A

CHILATST 177B. Well-Being in Immigrant Children & Youth: A Service Learning Course. 4 Units.
This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.
Same as: CSRE 177F, EDUC 177B

CHILATST 177C. Well-Being in Immigrant Children & Youth: A Service Learning Course. 1-3 Unit.
This is an interdisciplinary course that will examine the dramatic demographic changes in American society that are challenging the institutions of our country, from health care and education to business and politics. This demographic transformation is occurring first in children and youth, and understanding how social institutions are responding to the needs of immigrant children and youth to support their well-being is the goal of this course.
Same as: CSRE 177G, EDUC 177C

CHILATST 179. Chicano & Chicana Theater: Politics In Performance. 4 Units.
This is a practicum course, where the basic tenets and evolving politic and philosophies of Chicano and Latin American liberationist theater are examined through direct engagement with its theatrical forms, including, social protest & agit-prop, myth & ritual, scripting through improvisation, in-depth character and solo work, collective conceptualization and more. The course will culminate in an end-of-the quarter play performance in the Nitery Theater (Old Union) and at a Mission District theater in San Francisco.
Same as: TAPS 379

CHILATST 180E. Introduction to Chicanx/Latinx Studies. 5 Units.
This course draws on intersectional and interdisciplinary approaches to introduce students to the range of issues, experiences, and methodologies that form the foundation of Latina/o/x studies. By considering the relationship between the creation of "Latinx" and "American" identities, students will critically reconsider the borders that constitute the U.S. as a political and cultural formation. The course balances depth and breadth in its study of the variety of perspectives and experiences that come to be associated with U.S. Latinxs. Thus, we will analyze the histories of predominant U.S. Latinx sub-groups, such as Mexicans/Chicanxs and Puerto Ricans, while also incorporating considerations of the ways in which broader populations with ties to Central America, South America, and the Caribbean play crucial roles in constituting U.S. Latinx identities. Topics include the U.S./Mexico border and the borderlands; (im)migration and diaspora; literary and cultural traditions; music and expressive practices; labor and structural inequality; social movements; Latinx urbanism; gender and sexuality; political and economic shifts; and inter- and intra-group relations. Sources include a range of social science and humanities scholarship. This course will meet at Sequoia High School. Transportation will be provided.
Same as: CSRE 180E, EDUC 179E

CHILATST 181. Latino Social Movements. 5 Units.
Social movements are cooperative attempts to change the world. This course reviews historically significant and contemporary political and social movements in Latino communities in the U.S., including the movements of the 1960s and events of the modern era such as the Spring 2006 marches and student walkouts, the 2010 resistance to Arizona¿s SB1070, and ongoing efforts in 2017 related to detention and deportation policies.
Same as: POLISCI 125M

CHILATST 183X. Practicum in English-Spanish School & Community Interpreting. 3-4 Units.
This practicum will assist students in developing a set of skills in English-Spanish interpreting that will prepare them to provide interpretation services in school and community settings. The course will build students' abilities to transfer intended meanings between two or more monolingual individuals of who are physically present in a school or community setting and who must communicate with each other for professional (and personal) purposes.
Same as: EDUC 183, EDUC 257

CHILATST 193B. Peer Counseling in the Chicano/Latino Community. 1 Unit.
Topics: verbal and non-verbal attending and communication skills, open and closed questions, working with feelings, summarization, and integration. Salient counseling issues including Spanish-English code switching in communication, the role of ethnic identity in self-understanding, the relationship of culture to personal development, and Chicana/o student experience in University settings. Individual training, group exercises, role play, and videotape practice.
Same as: EDUC 193B

CHILATST 195. U.S. Latinx Art. 5 Units.
This course surveys art made by Latinas/os/xs who have lived and worked in the United States since the 1700s, including Chicanos, Nuyoricans, and other Black, Brown, and Indigenous artists. While exploring the diversity of Latinx art, students will consider artists' relationships to identity, race, ethnicity, gender, and sexuality. Students will also study how artists have responded to and challenged discrimination, institutional exclusion, and national debates through their work. Attendance on the first day of class is a requirement for enrollment.
Same as: ARTHIST 194, CSRE 195

CHILATST 198. Internship for Public Service. 1-5 Unit.
Students should consult with CCSRE Director of Community Engaged Learning (ddmurray@stanford.edu) to develop or gain approval for an internship that addresses race/ethnicity, public service, and social justice. Students will read a selection of short readings relevant to their placement, write bi-weekly reflections, and meet bi-weekly with the Director of Community Engaged Learning. Units are determined by the number of hours per week at the internship (2 hours/week = 1 unit; 5 hours/week = 2 units; 8 hours/week = 3 units; etc.) Group meetings may be required. May be repeated for credit.
Same as: CSRE 198

CHILATST 200R. Directed Research. 1-5 Unit.
.

CHILATST 200W. Directed Reading. 1-5 Unit.
(Staff).

CHILATST 201B. The Undocumented Migration Project Exhibition at Stanford. 3 Units.
